A. Confounding variable: Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work. / Preregistration: Identifying a third factor that may account for an observed association between exposure and outcome.
B. Confounding variable: Identifying a third factor that may account for an observed association between exposure and outcome. / Preregistration: Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work.
C. Confounding variable: Comparing age groups during one data-collection period while recognizing age and cohort are confounded. / Preregistration: Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work.
D. Confounding variable: Identifying a third factor that may account for an observed association between exposure and outcome. / Preregistration: Explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult.

0121. A trainee must distinguish how Random assignment and Informed research consent guide practice. Which comparison is accurate?

A. Random assignment: Using a chance procedure to allocate enrolled participants to treatment conditions. / Informed research consent: Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work.
B. Random assignment: Comparing age groups during one data-collection period while recognizing age and cohort are confounded. / Informed research consent: Explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult.
C. Random assignment: Using a chance procedure to allocate enrolled participants to treatment conditions. / Informed research consent: Explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult.
D. Random assignment: Explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult. / Informed research consent: Using a chance procedure to allocate enrolled participants to treatment conditions.

0122. An interdisciplinary team reviews a child aged 14's case at the student wellness team. The behavior specialist recommends comparing age groups during one data-collection period while recognizing age and cohort are confounded. Which course concept best fits?

A. Random assignment
B. Confounding variable
C. Longitudinal design
D. Cross-sectional design

0123. A service team discusses a child aged 6 in the community service agency. Their proposed next step is identifying a third factor that may account for an observed association between exposure and outcome. Which course concept supports it?

A. Cross-sectional design
B. Longitudinal design
C. External validity
D. Confounding variable

0124. Choose the definition pair that correctly explains Random assignment first and Internal validity second.

A. Random assignment: A factor associated with both a presumed cause and outcome that can offer an alternative explanation. / Internal validity: The strength of evidence that a study's manipulation or exposure, rather than alternatives, explains the observed effect.
B. Random assignment: Allocation of participants to study conditions by chance to support baseline comparability. / Internal validity: Publicly documenting hypotheses, methods, and analysis plans before examining outcome data.
C. Random assignment: The strength of evidence that a study's manipulation or exposure, rather than alternatives, explains the observed effect. / Internal validity: Allocation of participants to study conditions by chance to support baseline comparability.
D. Random assignment: Allocation of participants to study conditions by chance to support baseline comparability. / Internal validity: The strength of evidence that a study's manipulation or exposure, rather than alternatives, explains the observed effect.

0125. At the family session, a clinical supervisor meets with a student aged 15. The practice priority is: using a chance procedure to allocate enrolled participants to treatment conditions. Which concept best captures that priority?

A. Cross-sectional design
B. Internal validity
C. Random assignment
D. Preregistration

0126. A assessment clinician is supporting a client in early adolescence in the student wellness team. The key practice is considering whether a sample and setting resemble the populations to which results are generalized. Which course concept is most relevant?

A. External validity
B. Operational definition
C. Preregistration
D. Random assignment

0127. A client in early adolescence and a assessment clinician are reviewing goals in the student wellness team. The agreed action is considering whether a sample and setting resemble the populations to which results are generalized. Which principle best accounts for it?

A. Informed research consent
B. Child assent in research
C. External validity
D. Confounding variable

0128. A trainee must distinguish how Operational definition and Confounding variable guide practice. Which comparison is accurate?

A. Operational definition: Defining observable criteria for a study variable before collecting data. / Confounding variable: Identifying a third factor that may account for an observed association between exposure and outcome.
B. Operational definition: Explaining a study to a child in accessible language and respecting dissent under applicable safeguards. / Confounding variable: Identifying a third factor that may account for an observed association between exposure and outcome.
C. Operational definition: Defining observable criteria for a study variable before collecting data. / Confounding variable: Using a chance procedure to allocate enrolled participants to treatment conditions.
D. Operational definition: Identifying a third factor that may account for an observed association between exposure and outcome. / Confounding variable: Defining observable criteria for a study variable before collecting data.

0129. Choose the response that best puts Informed research consent into practice.

A. Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work.
B. Explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult.
C. Considering whether a sample and setting resemble the populations to which results are generalized.
D. Evaluating whether rival explanations for a treatment effect have been addressed.

0130. Which option preserves the correct meaning of both Random assignment and Informed research consent?

A. Random assignment: Allocation of participants to study conditions by chance to support baseline comparability. / Informed research consent: Publicly documenting hypotheses, methods, and analysis plans before examining outcome data.
B. Random assignment: A design that compares different individuals or groups at one time point. / Informed research consent: Voluntary authorization to participate based on adequate disclosure, provided by an authorized adult when required.
C. Random assignment: Allocation of participants to study conditions by chance to support baseline comparability. / Informed research consent: Voluntary authorization to participate based on adequate disclosure, provided by an authorized adult when required.
D. Random assignment: Voluntary authorization to participate based on adequate disclosure, provided by an authorized adult when required. / Informed research consent: Allocation of participants to study conditions by chance to support baseline comparability.

0131. A case conference asks for a distinction between Longitudinal design and Preregistration. Which answer is sound?

A. Longitudinal design: A factor associated with both a presumed cause and outcome that can offer an alternative explanation. / Preregistration: Publicly documenting hypotheses, methods, and analysis plans before examining outcome data.
B. Longitudinal design: A design that measures the same individuals or units across multiple time points. / Preregistration: A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission.
C. Longitudinal design: A design that measures the same individuals or units across multiple time points. / Preregistration: Publicly documenting hypotheses, methods, and analysis plans before examining outcome data.
D. Longitudinal design: Publicly documenting hypotheses, methods, and analysis plans before examining outcome data. / Preregistration: A design that measures the same individuals or units across multiple time points.

0132. In the outpatient clinic, a youth worker describes the most appropriate support for a young person as evaluating whether rival explanations for a treatment effect have been addressed. Which framework is being applied?

A. Operational definition
B. Child assent in research
C. Internal validity
D. Cross-sectional design

0133. Which option pairs the definitions of Longitudinal design and Child assent in research correctly, in that order?

A. Longitudinal design: A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission. / Child assent in research: A design that measures the same individuals or units across multiple time points.
B. Longitudinal design: A design that measures the same individuals or units across multiple time points. / Child assent in research: Publicly documenting hypotheses, methods, and analysis plans before examining outcome data.
C. Longitudinal design: A factor associated with both a presumed cause and outcome that can offer an alternative explanation. / Child assent in research: A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission.
D. Longitudinal design: A design that measures the same individuals or units across multiple time points. / Child assent in research: A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission.

0134. A teacher and counselor is asked to justify a plan for a child aged 11 in the community service agency. It calls for explaining a study to a child in accessible language and respecting dissent under applicable safeguards. Which concept provides the rationale?

A. Informed research consent
B. Child assent in research
C. Operational definition
D. Cross-sectional design

0135. In a supervision review, a school-based clinician describes work with a client in early adolescence in the parent meeting: evaluating whether rival explanations for a treatment effect have been addressed. What concept is illustrated?

A. Random assignment
B. Confounding variable
C. Internal validity
D. Child assent in research

0136. What is the central meaning of Longitudinal design?

A. Publicly documenting hypotheses, methods, and analysis plans before examining outcome data.
B. A design that measures the same individuals or units across multiple time points.
C. Voluntary authorization to participate based on adequate disclosure, provided by an authorized adult when required.
D. The extent to which findings may apply across populations, settings, measures, and conditions beyond the study.

0137. Which paired example correctly applies Cross-sectional design first and External validity second?

A. Cross-sectional design: Comparing age groups during one data-collection period while recognizing age and cohort are confounded. / External validity: Explaining a study to a child in accessible language and respecting dissent under applicable safeguards.
B. Cross-sectional design: Considering whether a sample and setting resemble the populations to which results are generalized. / External validity: Comparing age groups during one data-collection period while recognizing age and cohort are confounded.
C. Cross-sectional design: Comparing age groups during one data-collection period while recognizing age and cohort are confounded. / External validity: Considering whether a sample and setting resemble the populations to which results are generalized.
D. Cross-sectional design: Identifying a third factor that may account for an observed association between exposure and outcome. / External validity: Considering whether a sample and setting resemble the populations to which results are generalized.

0138. For a teenage client in the supervision meeting, a school support specialist makes this practice the immediate priority: explaining a study to a child in accessible language and respecting dissent under applicable safeguards. Which concept fits best?

A. Confounding variable
B. Preregistration
C. Child assent in research
D. Cross-sectional design

0139. Choose the term that matches this definition: Voluntary authorization to participate based on adequate disclosure, provided by an authorized adult when required.

A. Child assent in research
B. Random assignment
C. Informed research consent
D. External validity

0140. Which applied comparison correctly identifies what belongs to Random assignment versus Confounding variable?

A. Random assignment: Using a chance procedure to allocate enrolled participants to treatment conditions. / Confounding variable: Identifying a third factor that may account for an observed association between exposure and outcome.
B. Random assignment: Identifying a third factor that may account for an observed association between exposure and outcome. / Confounding variable: Using a chance procedure to allocate enrolled participants to treatment conditions.
C. Random assignment: Following the same children over time to study within-person change. / Confounding variable: Identifying a third factor that may account for an observed association between exposure and outcome.
D. Random assignment: Using a chance procedure to allocate enrolled participants to treatment conditions. / Confounding variable: Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work.

0141. A trainee must distinguish how Longitudinal design and Child assent in research guide practice. Which comparison is accurate?

A. Longitudinal design: Following the same children over time to study within-person change. / Child assent in research: Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work.
B. Longitudinal design: Identifying a third factor that may account for an observed association between exposure and outcome. / Child assent in research: Explaining a study to a child in accessible language and respecting dissent under applicable safeguards.
C. Longitudinal design: Explaining a study to a child in accessible language and respecting dissent under applicable safeguards. / Child assent in research: Following the same children over time to study within-person change.
D. Longitudinal design: Following the same children over time to study within-person change. / Child assent in research: Explaining a study to a child in accessible language and respecting dissent under applicable safeguards.

0142. Which professional action most closely applies Longitudinal design?

A. Evaluating whether rival explanations for a treatment effect have been addressed.
B. Considering whether a sample and setting resemble the populations to which results are generalized.
C. Following the same children over time to study within-person change.
D. Using a chance procedure to allocate enrolled participants to treatment conditions.

0143. Which applied comparison correctly identifies what belongs to Informed research consent versus Child assent in research?

A. Informed research consent: Explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult. / Child assent in research: Explaining a study to a child in accessible language and respecting dissent under applicable safeguards.
B. Informed research consent: Following the same children over time to study within-person change. / Child assent in research: Explaining a study to a child in accessible language and respecting dissent under applicable safeguards.
C. Informed research consent: Explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult. / Child assent in research: Using a chance procedure to allocate enrolled participants to treatment conditions.
D. Informed research consent: Explaining a study to a child in accessible language and respecting dissent under applicable safeguards. / Child assent in research: Explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult.

0144. Which statement accurately contrasts the course concepts Longitudinal design and External validity?

A. Longitudinal design: The extent to which findings may apply across populations, settings, measures, and conditions beyond the study. / External validity: A design that measures the same individuals or units across multiple time points.
B. Longitudinal design: A precise specification of how a construct or variable is observed, measured, or manipulated. / External validity: The extent to which findings may apply across populations, settings, measures, and conditions beyond the study.
C. Longitudinal design: A design that measures the same individuals or units across multiple time points. / External validity: The extent to which findings may apply across populations, settings, measures, and conditions beyond the study.
D. Longitudinal design: A design that measures the same individuals or units across multiple time points. / External validity: The strength of evidence that a study's manipulation or exposure, rather than alternatives, explains the observed effect.

0145. In the school counseling office, a family therapist is considering this approach for a high-school student: identifying a third factor that may account for an observed association between exposure and outcome. Which framework does it represent?

A. Internal validity
B. Confounding variable
C. Preregistration
D. Longitudinal design

0146. Which pair of actions illustrates Internal validity and Preregistration, respectively?

A. Internal validity: Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work. / Preregistration: Evaluating whether rival explanations for a treatment effect have been addressed.
B. Internal validity: Evaluating whether rival explanations for a treatment effect have been addressed. / Preregistration: Using a chance procedure to allocate enrolled participants to treatment conditions.
C. Internal validity: Identifying a third factor that may account for an observed association between exposure and outcome. / Preregistration: Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work.
D. Internal validity: Evaluating whether rival explanations for a treatment effect have been addressed. / Preregistration: Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work.

0147. A student confuses Cross-sectional design with Child assent in research. Which explanation most accurately separates them?

A. Cross-sectional design: A design that compares different individuals or groups at one time point. / Child assent in research: Publicly documenting hypotheses, methods, and analysis plans before examining outcome data.
B. Cross-sectional design: A design that compares different individuals or groups at one time point. / Child assent in research: A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission.
C. Cross-sectional design: A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission. / Child assent in research: A design that compares different individuals or groups at one time point.
D. Cross-sectional design: A precise specification of how a construct or variable is observed, measured, or manipulated. / Child assent in research: A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission.

0148. In the community service agency, a school counselor describes the most appropriate support for a young person aged 16 as comparing age groups during one data-collection period while recognizing age and cohort are confounded. Which framework is being applied?

A. Informed research consent
B. Cross-sectional design
C. Internal validity
D. Preregistration

0149. A child aged 8 and a consultant are reviewing goals in the clinical planning session. The agreed action is explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult. Which principle best accounts for it?

A. Informed research consent
B. Cross-sectional design
C. Random assignment
D. Child assent in research

0150. A parent educator presents a support plan for a older adolescent client at the outpatient clinic. Its central feature is comparing age groups during one data-collection period while recognizing age and cohort are confounded. Which concept should be named?

A. Informed research consent
B. Operational definition
C. Cross-sectional design
D. Child assent in research

0151. A young adolescent client’s service team meets in the after-school program. The case coordinator recommends a change involving defining observable criteria for a study variable before collecting data. Which idea best explains it?

A. Confounding variable
B. Child assent in research
C. Operational definition
D. Random assignment

0152. In the school-based service, a group facilitator describes the most appropriate support for a client in late adolescence as using a chance procedure to allocate enrolled participants to treatment conditions. Which framework is being applied?

A. Internal validity
B. Confounding variable
C. Random assignment
D. Operational definition

0153. Which option preserves the correct meaning of both Cross-sectional design and Informed research consent?

A. Cross-sectional design: Voluntary authorization to participate based on adequate disclosure, provided by an authorized adult when required. / Informed research consent: A design that compares different individuals or groups at one time point.
B. Cross-sectional design: A design that compares different individuals or groups at one time point. / Informed research consent: Allocation of participants to study conditions by chance to support baseline comparability.
C. Cross-sectional design: A design that compares different individuals or groups at one time point. / Informed research consent: Voluntary authorization to participate based on adequate disclosure, provided by an authorized adult when required.
D. Cross-sectional design: A precise specification of how a construct or variable is observed, measured, or manipulated. / Informed research consent: Voluntary authorization to participate based on adequate disclosure, provided by an authorized adult when required.

0154. A school support specialist reviews a plan for a young person aged 16 in the counseling practicum. The plan emphasizes identifying a third factor that may account for an observed association between exposure and outcome. Which course idea does this reflect?

A. Confounding variable
B. Operational definition
C. Child assent in research
D. Internal validity

0155. A case conference reviews a community practitioner’s work with a older adolescent client in the supervision meeting: defining observable criteria for a study variable before collecting data. Which principle is central?

A. Informed research consent
B. Child assent in research
C. Operational definition
D. External validity

0156. Which applied comparison correctly identifies what belongs to Random assignment versus Cross-sectional design?

A. Random assignment: Using a chance procedure to allocate enrolled participants to treatment conditions. / Cross-sectional design: Defining observable criteria for a study variable before collecting data.
B. Random assignment: Comparing age groups during one data-collection period while recognizing age and cohort are confounded. / Cross-sectional design: Using a chance procedure to allocate enrolled participants to treatment conditions.
C. Random assignment: Considering whether a sample and setting resemble the populations to which results are generalized. / Cross-sectional design: Comparing age groups during one data-collection period while recognizing age and cohort are confounded.
D. Random assignment: Using a chance procedure to allocate enrolled participants to treatment conditions. / Cross-sectional design: Comparing age groups during one data-collection period while recognizing age and cohort are confounded.

0157. A case conference reviews a service navigator's work with a child aged 14 in the youth group: considering whether a sample and setting resemble the populations to which results are generalized. Which principle is central?

A. Longitudinal design
B. Child assent in research
C. Confounding variable
D. External validity

0158. A school-age child is receiving support in the caregiver consultation. The group facilitator is guided by this practice: recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work. Which principle best fits?

A. External validity
B. Child assent in research
C. Informed research consent
D. Preregistration

0159. Which choice aligns each practice with the correct idea, Longitudinal design or Child assent in research?

A. Longitudinal design: Following the same children over time to study within-person change. / Child assent in research: Explaining a study to a child in accessible language and respecting dissent under applicable safeguards.
B. Longitudinal design: Identifying a third factor that may account for an observed association between exposure and outcome. / Child assent in research: Explaining a study to a child in accessible language and respecting dissent under applicable safeguards.
C. Longitudinal design: Following the same children over time to study within-person change. / Child assent in research: Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work.
D. Longitudinal design: Explaining a study to a child in accessible language and respecting dissent under applicable safeguards. / Child assent in research: Following the same children over time to study within-person change.

0160. Which professional action most closely applies Internal validity?

A. Following the same children over time to study within-person change.
B. Explaining a study to a child in accessible language and respecting dissent under applicable safeguards.
C. Evaluating whether rival explanations for a treatment effect have been addressed.
D. Considering whether a sample and setting resemble the populations to which results are generalized.

0161. A trainee must explain Preregistration. Which answer is accurate?

A. A design that measures the same individuals or units across multiple time points.
B. The extent to which findings may apply across populations, settings, measures, and conditions beyond the study.
C. Publicly documenting hypotheses, methods, and analysis plans before examining outcome data.
D. A design that compares different individuals or groups at one time point.

0162. Which option is the clearest practical expression of Longitudinal design?

A. Explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult.
B. Following the same children over time to study within-person change.
C. Defining observable criteria for a study variable before collecting data.
D. Comparing age groups during one data-collection period while recognizing age and cohort are confounded.

0163. A case conference asks for a distinction between Longitudinal design and Cross-sectional design. Which answer is sound?

A. Longitudinal design: The strength of evidence that a study's manipulation or exposure, rather than alternatives, explains the observed effect. / Cross-sectional design: A design that compares different individuals or groups at one time point.
B. Longitudinal design: A design that measures the same individuals or units across multiple time points. / Cross-sectional design: A design that compares different individuals or groups at one time point.
C. Longitudinal design: A design that measures the same individuals or units across multiple time points. / Cross-sectional design: Voluntary authorization to participate based on adequate disclosure, provided by an authorized adult when required.
D. Longitudinal design: A design that compares different individuals or groups at one time point. / Cross-sectional design: A design that measures the same individuals or units across multiple time points.

0164. A school counselor is explaining a choice to a older adolescent client and caregiver in the classroom support meeting. The choice centers on using a chance procedure to allocate enrolled participants to treatment conditions. Which idea is illustrated?

A. Child assent in research
B. Random assignment
C. Informed research consent
D. Cross-sectional design

0165. Which option pairs the definitions of Informed research consent and Child assent in research correctly, in that order?

A. Informed research consent: Voluntary authorization to participate based on adequate disclosure, provided by an authorized adult when required. / Child assent in research: Allocation of participants to study conditions by chance to support baseline comparability.
B. Informed research consent: A design that measures the same individuals or units across multiple time points. / Child assent in research: A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission.
C. Informed research consent: A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission. / Child assent in research: Voluntary authorization to participate based on adequate disclosure, provided by an authorized adult when required.
D. Informed research consent: Voluntary authorization to participate based on adequate disclosure, provided by an authorized adult when required. / Child assent in research: A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission.

0166. In the parent meeting, a team asks how a youth worker can support a child aged 14. One proposed action is following the same children over time to study within-person change. Which idea does it represent?

A. Longitudinal design
B. Operational definition
C. Preregistration
D. Random assignment

0167. A assessment clinician and a middle-school student are discussing support in the multidisciplinary case conference. The selected practice is explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult. Which concept does this demonstrate?

A. Preregistration
B. Informed research consent
C. External validity
D. Cross-sectional design

0168. A case conference asks for a distinction between Random assignment and Preregistration. Which answer is sound?

A. Random assignment: Publicly documenting hypotheses, methods, and analysis plans before examining outcome data. / Preregistration: Allocation of participants to study conditions by chance to support baseline comparability.
B. Random assignment: Allocation of participants to study conditions by chance to support baseline comparability. / Preregistration: Publicly documenting hypotheses, methods, and analysis plans before examining outcome data.
C. Random assignment: Allocation of participants to study conditions by chance to support baseline comparability. / Preregistration: A factor associated with both a presumed cause and outcome that can offer an alternative explanation.
D. Random assignment: A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission. / Preregistration: Publicly documenting hypotheses, methods, and analysis plans before examining outcome data.

0169. Which comparison would correct a trainee's misunderstanding of Random assignment versus External validity?

A. Random assignment: A design that compares different individuals or groups at one time point. / External validity: The extent to which findings may apply across populations, settings, measures, and conditions beyond the study.
B. Random assignment: Allocation of participants to study conditions by chance to support baseline comparability. / External validity: A factor associated with both a presumed cause and outcome that can offer an alternative explanation.
C. Random assignment: Allocation of participants to study conditions by chance to support baseline comparability. / External validity: The extent to which findings may apply across populations, settings, measures, and conditions beyond the study.
D. Random assignment: The extent to which findings may apply across populations, settings, measures, and conditions beyond the study. / External validity: Allocation of participants to study conditions by chance to support baseline comparability.

0170. A group facilitator is asked to justify a plan for a young person in the clinical planning session. It calls for defining observable criteria for a study variable before collecting data. Which concept provides the rationale?

A. Operational definition
B. External validity
C. Child assent in research
D. Preregistration

0171. A case conference asks for a distinction between Operational definition and Internal validity. Which answer is sound?

A. Operational definition: The strength of evidence that a study's manipulation or exposure, rather than alternatives, explains the observed effect. / Internal validity: A precise specification of how a construct or variable is observed, measured, or manipulated.
B. Operational definition: Voluntary authorization to participate based on adequate disclosure, provided by an authorized adult when required. / Internal validity: The strength of evidence that a study's manipulation or exposure, rather than alternatives, explains the observed effect.
C. Operational definition: A precise specification of how a construct or variable is observed, measured, or manipulated. / Internal validity: The strength of evidence that a study's manipulation or exposure, rather than alternatives, explains the observed effect.
D. Operational definition: A precise specification of how a construct or variable is observed, measured, or manipulated. / Internal validity: A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission.

0172. Which option correctly matches each concept to its practice focus: Cross-sectional design and Confounding variable?

A. Cross-sectional design: Using a chance procedure to allocate enrolled participants to treatment conditions. / Confounding variable: Identifying a third factor that may account for an observed association between exposure and outcome.
B. Cross-sectional design: Comparing age groups during one data-collection period while recognizing age and cohort are confounded. / Confounding variable: Evaluating whether rival explanations for a treatment effect have been addressed.
C. Cross-sectional design: Comparing age groups during one data-collection period while recognizing age and cohort are confounded. / Confounding variable: Identifying a third factor that may account for an observed association between exposure and outcome.
D. Cross-sectional design: Identifying a third factor that may account for an observed association between exposure and outcome. / Confounding variable: Comparing age groups during one data-collection period while recognizing age and cohort are confounded.

0173. Select the best explanation of Internal validity.

A. A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission.
B. The strength of evidence that a study's manipulation or exposure, rather than alternatives, explains the observed effect.
C. Allocation of participants to study conditions by chance to support baseline comparability.
D. A factor associated with both a presumed cause and outcome that can offer an alternative explanation.

0174. In the school counseling office, the agreed focus for a service navigator working with a child aged 11 is explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult. Which concept names this focus?

A. Operational definition
B. Informed research consent
C. Internal validity
D. Longitudinal design

0175. Which choice aligns each practice with the correct idea, Random assignment or Confounding variable?

A. Random assignment: Using a chance procedure to allocate enrolled participants to treatment conditions. / Confounding variable: Identifying a third factor that may account for an observed association between exposure and outcome.
B. Random assignment: Following the same children over time to study within-person change. / Confounding variable: Identifying a third factor that may account for an observed association between exposure and outcome.
C. Random assignment: Identifying a third factor that may account for an observed association between exposure and outcome. / Confounding variable: Using a chance procedure to allocate enrolled participants to treatment conditions.
D. Random assignment: Using a chance procedure to allocate enrolled participants to treatment conditions. / Confounding variable: Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work.

0176. In a supervision quiz, how should Operational definition be distinguished from Random assignment?

A. Operational definition: A precise specification of how a construct or variable is observed, measured, or manipulated. / Random assignment: Voluntary authorization to participate based on adequate disclosure, provided by an authorized adult when required.
B. Operational definition: Allocation of participants to study conditions by chance to support baseline comparability. / Random assignment: A precise specification of how a construct or variable is observed, measured, or manipulated.
C. Operational definition: A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission. / Random assignment: Allocation of participants to study conditions by chance to support baseline comparability.
D. Operational definition: A precise specification of how a construct or variable is observed, measured, or manipulated. / Random assignment: Allocation of participants to study conditions by chance to support baseline comparability.

0177. A student confuses External validity with Child assent in research. Which explanation most accurately separates them?

A. External validity: Voluntary authorization to participate based on adequate disclosure, provided by an authorized adult when required. / Child assent in research: A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission.
B. External validity: The extent to which findings may apply across populations, settings, measures, and conditions beyond the study. / Child assent in research: A precise specification of how a construct or variable is observed, measured, or manipulated.
C. External validity: A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission. / Child assent in research: The extent to which findings may apply across populations, settings, measures, and conditions beyond the study.
D. External validity: The extent to which findings may apply across populations, settings, measures, and conditions beyond the study. / Child assent in research: A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission.

0178. A trainee must distinguish how Operational definition and Informed research consent guide practice. Which comparison is accurate?

A. Operational definition: Defining observable criteria for a study variable before collecting data. / Informed research consent: Evaluating whether rival explanations for a treatment effect have been addressed.
B. Operational definition: Defining observable criteria for a study variable before collecting data. / Informed research consent: Explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult.
C. Operational definition: Identifying a third factor that may account for an observed association between exposure and outcome. / Informed research consent: Explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult.
D. Operational definition: Explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult. / Informed research consent: Defining observable criteria for a study variable before collecting data.

0179. Which comparison would correct a trainee’s misunderstanding of Random assignment versus Child assent in research?

A. Random assignment: Allocation of participants to study conditions by chance to support baseline comparability. / Child assent in research: A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission.
B. Random assignment: A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission. / Child assent in research: Allocation of participants to study conditions by chance to support baseline comparability.
C. Random assignment: Allocation of participants to study conditions by chance to support baseline comparability. / Child assent in research: The strength of evidence that a study’s manipulation or exposure, rather than alternatives, explains the observed effect.
D. Random assignment: A design that compares different individuals or groups at one time point. / Child assent in research: A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission.

0180. Choose the response that best puts Child assent in research into practice.

A. Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work.
B. Explaining a study to a child in accessible language and respecting dissent under applicable safeguards.
C. Defining observable criteria for a study variable before collecting data.
D. Using a chance procedure to allocate enrolled participants to treatment conditions.

0181. A service team discusses a student aged 9 in the outpatient clinic. Their proposed next step is considering whether a sample and setting resemble the populations to which results are generalized. Which course concept supports it?

A. Confounding variable
B. Internal validity
C. External validity
D. Child assent in research

0182. Consider a student aged 12 receiving help in the telehealth session. The group facilitator focuses on considering whether a sample and setting resemble the populations to which results are generalized. Which term best describes the guiding idea?

A. External validity
B. Confounding variable
C. Cross-sectional design
D. Operational definition

0183. A trainee must choose a practice that exemplifies Confounding variable. Which action is the best fit?

A. Following the same children over time to study within-person change.
B. Identifying a third factor that may account for an observed association between exposure and outcome.
C. Explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult.
D. Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work.

0184. Which option pairs the definitions of External validity and Preregistration correctly, in that order?

A. External validity: A precise specification of how a construct or variable is observed, measured, or manipulated. / Preregistration: Publicly documenting hypotheses, methods, and analysis plans before examining outcome data.
B. External validity: The extent to which findings may apply across populations, settings, measures, and conditions beyond the study. / Preregistration: Publicly documenting hypotheses, methods, and analysis plans before examining outcome data.
C. External validity: Publicly documenting hypotheses, methods, and analysis plans before examining outcome data. / Preregistration: The extent to which findings may apply across populations, settings, measures, and conditions beyond the study.
D. External validity: The extent to which findings may apply across populations, settings, measures, and conditions beyond the study. / Preregistration: A factor associated with both a presumed cause and outcome that can offer an alternative explanation.

0185. Which statement most accurately defines Longitudinal design?

A. A design that measures the same individuals or units across multiple time points.
B. A precise specification of how a construct or variable is observed, measured, or manipulated.
C. The strength of evidence that a study’s manipulation or exposure, rather than alternatives, explains the observed effect.
D. A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission.

0186. Select the best explanation of Informed research consent.

A. Voluntary authorization to participate based on adequate disclosure, provided by an authorized adult when required.
B. A factor associated with both a presumed cause and outcome that can offer an alternative explanation.
C. Allocation of participants to study conditions by chance to support baseline comparability.
D. The extent to which findings may apply across populations, settings, measures, and conditions beyond the study.

0187. A consultant prepares for a session in the supervision meeting with a client in early adolescence. The intended approach is using a chance procedure to allocate enrolled participants to treatment conditions. Which concept is most relevant?

A. Random assignment
B. Cross-sectional design
C. Operational definition
D. Internal validity

0188. A case conference reviews a community practitioner's work with a preadolescent child in the school consultation: evaluating whether rival explanations for a treatment effect have been addressed. Which principle is central?

A. Child assent in research
B. Operational definition
C. Confounding variable
D. Internal validity

0189. A support meeting for a student aged 9 includes a counselor in the student wellness team. The practice under consideration is explaining a study to a child in accessible language and respecting dissent under applicable safeguards. Which concept guides it?

A. Cross-sectional design
B. Internal validity
C. Child assent in research
D. Operational definition

0190. For a middle-school student in the school-based service, a behavior specialist makes this practice the immediate priority: defining observable criteria for a study variable before collecting data. Which concept fits best?

A. Operational definition
B. Child assent in research
C. Random assignment
D. External validity

0191. A adolescent student's service team meets in the family session. The case coordinator recommends a change involving evaluating whether rival explanations for a treatment effect have been addressed. Which idea best explains it?

A. Cross-sectional design
B. Random assignment
C. Internal validity
D. Longitudinal design

0192. Which paired example correctly applies Internal validity first and Informed research consent second?

A. Internal validity: Identifying a third factor that may account for an observed association between exposure and outcome. / Informed research consent: Explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult.
B. Internal validity: Evaluating whether rival explanations for a treatment effect have been addressed. / Informed research consent: Defining observable criteria for a study variable before collecting data.
C. Internal validity: Explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult. / Informed research consent: Evaluating whether rival explanations for a treatment effect have been addressed.
D. Internal validity: Evaluating whether rival explanations for a treatment effect have been addressed. / Informed research consent: Explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult.

0193. Which applied comparison correctly identifies what belongs to Confounding variable versus Informed research consent?

A. Confounding variable: Identifying a third factor that may account for an observed association between exposure and outcome. / Informed research consent: Explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult.
B. Confounding variable: Explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult. / Informed research consent: Identifying a third factor that may account for an observed association between exposure and outcome.
C. Confounding variable: Identifying a third factor that may account for an observed association between exposure and outcome. / Informed research consent: Explaining a study to a child in accessible language and respecting dissent under applicable safeguards.
D. Confounding variable: Comparing age groups during one data-collection period while recognizing age and cohort are confounded. / Informed research consent: Explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult.

0194. Which comparison correctly distinguishes Operational definition from Preregistration?

A. Operational definition: Publicly documenting hypotheses, methods, and analysis plans before examining outcome data. / Preregistration: A precise specification of how a construct or variable is observed, measured, or manipulated.
B. Operational definition: A precise specification of how a construct or variable is observed, measured, or manipulated. / Preregistration: The extent to which findings may apply across populations, settings, measures, and conditions beyond the study.
C. Operational definition: Allocation of participants to study conditions by chance to support baseline comparability. / Preregistration: Publicly documenting hypotheses, methods, and analysis plans before examining outcome data.
D. Operational definition: A precise specification of how a construct or variable is observed, measured, or manipulated. / Preregistration: Publicly documenting hypotheses, methods, and analysis plans before examining outcome data.

0195. A trainee must choose a practice that exemplifies Preregistration. Which action is the best fit?

A. Considering whether a sample and setting resemble the populations to which results are generalized.
B. Identifying a third factor that may account for an observed association between exposure and outcome.
C. Explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult.
D. Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work.

0196. What is the central meaning of Operational definition?

A. Voluntary authorization to participate based on adequate disclosure, provided by an authorized adult when required.
B. A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission.
C. A design that compares different individuals or groups at one time point.
D. A precise specification of how a construct or variable is observed, measured, or manipulated.

0197. Which pair of actions illustrates Longitudinal design and Internal validity, respectively?

A. Longitudinal design: Comparing age groups during one data-collection period while recognizing age and cohort are confounded. / Internal validity: Evaluating whether rival explanations for a treatment effect have been addressed.
B. Longitudinal design: Following the same children over time to study within-person change. / Internal validity: Evaluating whether rival explanations for a treatment effect have been addressed.
C. Longitudinal design: Following the same children over time to study within-person change. / Internal validity: Defining observable criteria for a study variable before collecting data.
D. Longitudinal design: Evaluating whether rival explanations for a treatment effect have been addressed. / Internal validity: Following the same children over time to study within-person change.

0198. Which statement accurately contrasts the course concepts Confounding variable and Internal validity?

A. Confounding variable: A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission. / Internal validity: The strength of evidence that a study's manipulation or exposure, rather than alternatives, explains the observed effect.
B. Confounding variable: The strength of evidence that a study's manipulation or exposure, rather than alternatives, explains the observed effect. / Internal validity: A factor associated with both a presumed cause and outcome that can offer an alternative explanation.
C. Confounding variable: A factor associated with both a presumed cause and outcome that can offer an alternative explanation. / Internal validity: The strength of evidence that a study's manipulation or exposure, rather than alternatives, explains the observed effect.
D. Confounding variable: A factor associated with both a presumed cause and outcome that can offer an alternative explanation. / Internal validity: A design that compares different individuals or groups at one time point.

0199. A consultant and a child aged 6 are discussing support in the school counseling office. The selected practice is comparing age groups during one data-collection period while recognizing age and cohort are confounded. Which concept does this demonstrate?

A. Preregistration
B. Confounding variable
C. Child assent in research
D. Cross-sectional design

0200. A doctoral student reads the following description. Which concept does it define? A factor associated with both a presumed cause and outcome that can offer an alternative explanation.

A. Operational definition
B. Internal validity
C. Confounding variable
D. Preregistration

0201. Which pair of actions illustrates Random assignment and Longitudinal design, respectively?

A. Random assignment: Using a chance procedure to allocate enrolled participants to treatment conditions. / Longitudinal design: Following the same children over time to study within-person change.
B. Random assignment: Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work. / Longitudinal design: Following the same children over time to study within-person change.
C. Random assignment: Following the same children over time to study within-person change. / Longitudinal design: Using a chance procedure to allocate enrolled participants to treatment conditions.
D. Random assignment: Using a chance procedure to allocate enrolled participants to treatment conditions. / Longitudinal design: Defining observable criteria for a study variable before collecting data.

0202. Which choice aligns each practice with the correct idea, Confounding variable or Internal validity?

A. Confounding variable: Identifying a third factor that may account for an observed association between exposure and outcome. / Internal validity: Comparing age groups during one data-collection period while recognizing age and cohort are confounded.
B. Confounding variable: Evaluating whether rival explanations for a treatment effect have been addressed. / Internal validity: Identifying a third factor that may account for an observed association between exposure and outcome.
C. Confounding variable: Explaining a study to a child in accessible language and respecting dissent under applicable safeguards. / Internal validity: Evaluating whether rival explanations for a treatment effect have been addressed.
D. Confounding variable: Identifying a third factor that may account for an observed association between exposure and outcome. / Internal validity: Evaluating whether rival explanations for a treatment effect have been addressed.

0203. A assessment clinician is preparing a follow-up plan for a young person aged 18 in the child guidance clinic. The plan calls for defining observable criteria for a study variable before collecting data. Which concept names this approach?

A. Child assent in research
B. Operational definition
C. Informed research consent
D. Longitudinal design

0204. At the youth advocacy program, a play therapist meets with a child aged 14. The practice priority is: explaining a study to a child in accessible language and respecting dissent under applicable safeguards. Which concept best captures that priority?

A. External validity
B. Child assent in research
C. Operational definition
D. Confounding variable

0205. How should a practitioner distinguish the applications of Confounding variable and Internal validity?

A. Confounding variable: Identifying a third factor that may account for an observed association between exposure and outcome. / Internal validity: Evaluating whether rival explanations for a treatment effect have been addressed.
B. Confounding variable: Evaluating whether rival explanations for a treatment effect have been addressed. / Internal validity: Identifying a third factor that may account for an observed association between exposure and outcome.
C. Confounding variable: Explaining a study to a child in accessible language and respecting dissent under applicable safeguards. / Internal validity: Evaluating whether rival explanations for a treatment effect have been addressed.
D. Confounding variable: Identifying a third factor that may account for an observed association between exposure and outcome. / Internal validity: Comparing age groups during one data-collection period while recognizing age and cohort are confounded.

0206. How are Cross-sectional design and Informed research consent most accurately differentiated in this curriculum?

A. Cross-sectional design: A precise specification of how a construct or variable is observed, measured, or manipulated. / Informed research consent: Voluntary authorization to participate based on adequate disclosure, provided by an authorized adult when required.
B. Cross-sectional design: A design that compares different individuals or groups at one time point. / Informed research consent: Voluntary authorization to participate based on adequate disclosure, provided by an authorized adult when required.
C. Cross-sectional design: Voluntary authorization to participate based on adequate disclosure, provided by an authorized adult when required. / Informed research consent: A design that compares different individuals or groups at one time point.
D. Cross-sectional design: A design that compares different individuals or groups at one time point. / Informed research consent: Allocation of participants to study conditions by chance to support baseline comparability.

0207. Choose the practice comparison that best separates Operational definition from External validity.

A. Operational definition: Defining observable criteria for a study variable before collecting data. / External validity: Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work.
B. Operational definition: Considering whether a sample and setting resemble the populations to which results are generalized. / External validity: Defining observable criteria for a study variable before collecting data.
C. Operational definition: Identifying a third factor that may account for an observed association between exposure and outcome. / External validity: Considering whether a sample and setting resemble the populations to which results are generalized.
D. Operational definition: Defining observable criteria for a study variable before collecting data. / External validity: Considering whether a sample and setting resemble the populations to which results are generalized.

0208. In a supervision quiz, how should Random assignment be distinguished from Confounding variable?

A. Random assignment: A factor associated with both a presumed cause and outcome that can offer an alternative explanation. / Confounding variable: Allocation of participants to study conditions by chance to support baseline comparability.
B. Random assignment: A design that measures the same individuals or units across multiple time points. / Confounding variable: A factor associated with both a presumed cause and outcome that can offer an alternative explanation.
C. Random assignment: Allocation of participants to study conditions by chance to support baseline comparability. / Confounding variable: A factor associated with both a presumed cause and outcome that can offer an alternative explanation.
D. Random assignment: Allocation of participants to study conditions by chance to support baseline comparability. / Confounding variable: Publicly documenting hypotheses, methods, and analysis plans before examining outcome data.

0209. At the student-support meeting, a school support specialist meets with a older adolescent client. The practice priority is: following the same children over time to study within-person change. Which concept best captures that priority?

A. Preregistration
B. Longitudinal design
C. Operational definition
D. Informed research consent

0210. A member of a clinical team is supporting a student aged 15 in the school counseling office. The key practice is explaining a study to a child in accessible language and respecting dissent under applicable safeguards. Which course concept is most relevant?

A. Child assent in research
B. Internal validity
C. Longitudinal design
D. Operational definition

0211. Choose the definition pair that correctly explains Random assignment first and External validity second.

A. Random assignment: A design that compares different individuals or groups at one time point. / External validity: The extent to which findings may apply across populations, settings, measures, and conditions beyond the study.
B. Random assignment: Allocation of participants to study conditions by chance to support baseline comparability. / External validity: The extent to which findings may apply across populations, settings, measures, and conditions beyond the study.
C. Random assignment: The extent to which findings may apply across populations, settings, measures, and conditions beyond the study. / External validity: Allocation of participants to study conditions by chance to support baseline comparability.
D. Random assignment: Allocation of participants to study conditions by chance to support baseline comparability. / External validity: A factor associated with both a presumed cause and outcome that can offer an alternative explanation.

0212. A young adolescent client is receiving support in the student-support meeting. The youth worker is guided by this practice: explaining a study to a child in accessible language and respecting dissent under applicable safeguards. Which principle best fits?

A. Longitudinal design
B. Informed research consent
C. Confounding variable
D. Child assent in research

0213. In the multidisciplinary case conference, a youth worker describes the most appropriate support for a child aged 6 as defining observable criteria for a study variable before collecting data. Which framework is being applied?

A. Longitudinal design
B. External validity
C. Operational definition
D. Preregistration

0214. A supervisor asks how Confounding variable would appear in practice. Which choice should be selected?

A. Following the same children over time to study within-person change.
B. Explaining a study to a child in accessible language and respecting dissent under applicable safeguards.
C. Identifying a third factor that may account for an observed association between exposure and outcome.
D. Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work.

0215. During service review in the multidisciplinary case conference, a research trainee describes considering whether a sample and setting resemble the populations to which results are generalized. for a young person aged 18. Which course idea is most applicable?

A. Longitudinal design
B. Preregistration
C. Child assent in research
D. External validity

0216. A supervisor asks for an applied contrast between Cross-sectional design and Informed research consent. Which option fits?

A. Cross-sectional design: Comparing age groups during one data-collection period while recognizing age and cohort are confounded. / Informed research consent: Explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult.
B. Cross-sectional design: Explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult. / Informed research consent: Comparing age groups during one data-collection period while recognizing age and cohort are confounded.
C. Cross-sectional design: Comparing age groups during one data-collection period while recognizing age and cohort are confounded. / Informed research consent: Using a chance procedure to allocate enrolled participants to treatment conditions.
D. Cross-sectional design: Defining observable criteria for a study variable before collecting data. / Informed research consent: Explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult.

0217. A program coordinator is asked what should shape a student aged 9’s support in the outpatient clinic. The proposed focus is considering whether a sample and setting resemble the populations to which results are generalized. Which principle does it represent?

A. External validity
B. Longitudinal design
C. Confounding variable
D. Child assent in research

0218. Which option pairs the definitions of Operational definition and Longitudinal design correctly, in that order?

A. Operational definition: A design that measures the same individuals or units across multiple time points. / Longitudinal design: A precise specification of how a construct or variable is observed, measured, or manipulated.
B. Operational definition: A precise specification of how a construct or variable is observed, measured, or manipulated. / Longitudinal design: A design that measures the same individuals or units across multiple time points.
C. Operational definition: A factor associated with both a presumed cause and outcome that can offer an alternative explanation. / Longitudinal design: A design that measures the same individuals or units across multiple time points.
D. Operational definition: A precise specification of how a construct or variable is observed, measured, or manipulated. / Longitudinal design: Publicly documenting hypotheses, methods, and analysis plans before examining outcome data.

0219. Which paired example correctly applies Random assignment first and Informed research consent second?

A. Random assignment: Explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult. / Informed research consent: Using a chance procedure to allocate enrolled participants to treatment conditions.
B. Random assignment: Using a chance procedure to allocate enrolled participants to treatment conditions. / Informed research consent: Explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult.
C. Random assignment: Comparing age groups during one data-collection period while recognizing age and cohort are confounded. / Informed research consent: Explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult.
D. Random assignment: Using a chance procedure to allocate enrolled participants to treatment conditions. / Informed research consent: Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work.

0220. How are External validity and Informed research consent most accurately differentiated in this curriculum?

A. External validity: The extent to which findings may apply across populations, settings, measures, and conditions beyond the study. / Informed research consent: Voluntary authorization to participate based on adequate disclosure, provided by an authorized adult when required.
B. External validity: Voluntary authorization to participate based on adequate disclosure, provided by an authorized adult when required. / Informed research consent: The extent to which findings may apply across populations, settings, measures, and conditions beyond the study.
C. External validity: A precise specification of how a construct or variable is observed, measured, or manipulated. / Informed research consent: Voluntary authorization to participate based on adequate disclosure, provided by an authorized adult when required.
D. External validity: The extent to which findings may apply across populations, settings, measures, and conditions beyond the study. / Informed research consent: A design that compares different individuals or groups at one time point.

0221. A student confuses Random assignment with Confounding variable. Which explanation most accurately separates them?

A. Random assignment: A design that measures the same individuals or units across multiple time points. / Confounding variable: A factor associated with both a presumed cause and outcome that can offer an alternative explanation.
B. Random assignment: Allocation of participants to study conditions by chance to support baseline comparability. / Confounding variable: A factor associated with both a presumed cause and outcome that can offer an alternative explanation.
C. Random assignment: Allocation of participants to study conditions by chance to support baseline comparability. / Confounding variable: Publicly documenting hypotheses, methods, and analysis plans before examining outcome data.
D. Random assignment: A factor associated with both a presumed cause and outcome that can offer an alternative explanation. / Confounding variable: Allocation of participants to study conditions by chance to support baseline comparability.

0222. Choose the term that matches this definition: Allocation of participants to study conditions by chance to support baseline comparability.

A. Longitudinal design
B. Operational definition
C. Random assignment
D. External validity

0223. Which statement shows a sound practice-level distinction between Cross-sectional design and Internal validity?

A. Cross-sectional design: Evaluating whether rival explanations for a treatment effect have been addressed. / Internal validity: Comparing age groups during one data-collection period while recognizing age and cohort are confounded.
B. Cross-sectional design: Comparing age groups during one data-collection period while recognizing age and cohort are confounded. / Internal validity: Explaining a study to a child in accessible language and respecting dissent under applicable safeguards.
C. Cross-sectional design: Comparing age groups during one data-collection period while recognizing age and cohort are confounded. / Internal validity: Evaluating whether rival explanations for a treatment effect have been addressed.
D. Cross-sectional design: Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work. / Internal validity: Evaluating whether rival explanations for a treatment effect have been addressed.

0224. A research trainee is asked what should shape a adolescent student’s support in the school-based service. The proposed focus is following the same children over time to study within-person change. Which principle does it represent?

A. Longitudinal design
B. Internal validity
C. Cross-sectional design
D. Random assignment

0225. Identify the most precise label for this idea: Allocation of participants to study conditions by chance to support baseline comparability.

A. Random assignment
B. Confounding variable
C. Child assent in research
D. External validity

0226. Which pair of actions illustrates Operational definition and Random assignment, respectively?

A. Operational definition: Using a chance procedure to allocate enrolled participants to treatment conditions. / Random assignment: Defining observable criteria for a study variable before collecting data.
B. Operational definition: Defining observable criteria for a study variable before collecting data. / Random assignment: Explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult.
C. Operational definition: Defining observable criteria for a study variable before collecting data. / Random assignment: Using a chance procedure to allocate enrolled participants to treatment conditions.
D. Operational definition: Explaining a study to a child in accessible language and respecting dissent under applicable safeguards. / Random assignment: Using a chance procedure to allocate enrolled participants to treatment conditions.

0227. Which choice aligns each practice with the correct idea, Random assignment or Internal validity?

A. Random assignment: Using a chance procedure to allocate enrolled participants to treatment conditions. / Internal validity: Evaluating whether rival explanations for a treatment effect have been addressed.
B. Random assignment: Identifying a third factor that may account for an observed association between exposure and outcome. / Internal validity: Evaluating whether rival explanations for a treatment effect have been addressed.
C. Random assignment: Evaluating whether rival explanations for a treatment effect have been addressed. / Internal validity: Using a chance procedure to allocate enrolled participants to treatment conditions.
D. Random assignment: Using a chance procedure to allocate enrolled participants to treatment conditions. / Internal validity: Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work.

0228. Which choice aligns each practice with the correct idea, Random assignment or External validity?

A. Random assignment: Using a chance procedure to allocate enrolled participants to treatment conditions. / External validity: Identifying a third factor that may account for an observed association between exposure and outcome.
B. Random assignment: Comparing age groups during one data-collection period while recognizing age and cohort are confounded. / External validity: Considering whether a sample and setting resemble the populations to which results are generalized.
C. Random assignment: Considering whether a sample and setting resemble the populations to which results are generalized. / External validity: Using a chance procedure to allocate enrolled participants to treatment conditions.
D. Random assignment: Using a chance procedure to allocate enrolled participants to treatment conditions. / External validity: Considering whether a sample and setting resemble the populations to which results are generalized.

0229. A supervised trainee and a adolescent student are discussing support in the student wellness team. The selected practice is using a chance procedure to allocate enrolled participants to treatment conditions. Which concept does this demonstrate?

A. External validity
B. Child assent in research
C. Operational definition
D. Random assignment

0230. A trainee must distinguish how Child assent in research and Preregistration guide practice. Which comparison is accurate?

A. Child assent in research: Explaining a study to a child in accessible language and respecting dissent under applicable safeguards. / Preregistration: Identifying a third factor that may account for an observed association between exposure and outcome.
B. Child assent in research: Explaining a study to a child in accessible language and respecting dissent under applicable safeguards. / Preregistration: Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work.
C. Child assent in research: Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work. / Preregistration: Explaining a study to a child in accessible language and respecting dissent under applicable safeguards.
D. Child assent in research: Defining observable criteria for a study variable before collecting data. / Preregistration: Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work.

0231. A middle-school student and a consultant are reviewing goals in the youth group. The agreed action is following the same children over time to study within-person change. Which principle best accounts for it?

A. Longitudinal design
B. Preregistration
C. Operational definition
D. Random assignment

0232. At a case-planning meeting, the clinical supervisor proposes considering whether a sample and setting resemble the populations to which results are generalized. for a child of elementary-school age seen in the behavior-support review. Which concept does this illustrate?

A. External validity
B. Informed research consent
C. Preregistration
D. Random assignment

0233. Consider a client in late adolescence receiving help in the school-based service. The group facilitator focuses on using a chance procedure to allocate enrolled participants to treatment conditions. Which term best describes the guiding idea?

A. Random assignment
B. Child assent in research
C. Informed research consent
D. External validity

0234. Choose the practice comparison that best separates Operational definition from Preregistration.

A. Operational definition: Using a chance procedure to allocate enrolled participants to treatment conditions. / Preregistration: Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work.
B. Operational definition: Defining observable criteria for a study variable before collecting data. / Preregistration: Considering whether a sample and setting resemble the populations to which results are generalized.
C. Operational definition: Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work. / Preregistration: Defining observable criteria for a study variable before collecting data.
D. Operational definition: Defining observable criteria for a study variable before collecting data. / Preregistration: Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work.

0235. A case conference asks for a distinction between Confounding variable and Preregistration. Which answer is sound?

A. Confounding variable: Publicly documenting hypotheses, methods, and analysis plans before examining outcome data. / Preregistration: A factor associated with both a presumed cause and outcome that can offer an alternative explanation.
B. Confounding variable: A design that compares different individuals or groups at one time point. / Preregistration: Publicly documenting hypotheses, methods, and analysis plans before examining outcome data.
C. Confounding variable: A factor associated with both a presumed cause and outcome that can offer an alternative explanation. / Preregistration: Publicly documenting hypotheses, methods, and analysis plans before examining outcome data.
D. Confounding variable: A factor associated with both a presumed cause and outcome that can offer an alternative explanation. / Preregistration: Voluntary authorization to participate based on adequate disclosure, provided by an authorized adult when required.

0236. Which statement accurately contrasts the course concepts External validity and Child assent in research?

A. External validity: A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission. / Child assent in research: The extent to which findings may apply across populations, settings, measures, and conditions beyond the study.
B. External validity: The extent to which findings may apply across populations, settings, measures, and conditions beyond the study. / Child assent in research: A precise specification of how a construct or variable is observed, measured, or manipulated.
C. External validity: The extent to which findings may apply across populations, settings, measures, and conditions beyond the study. / Child assent in research: A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission.
D. External validity: Voluntary authorization to participate based on adequate disclosure, provided by an authorized adult when required. / Child assent in research: A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission.

0237. In a supervision quiz, how should Confounding variable be distinguished from Internal validity?

A. Confounding variable: A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission. / Internal validity: The strength of evidence that a study's manipulation or exposure, rather than alternatives, explains the observed effect.
B. Confounding variable: A factor associated with both a presumed cause and outcome that can offer an alternative explanation. / Internal validity: The strength of evidence that a study's manipulation or exposure, rather than alternatives, explains the observed effect.
C. Confounding variable: The strength of evidence that a study's manipulation or exposure, rather than alternatives, explains the observed effect. / Internal validity: A factor associated with both a presumed cause and outcome that can offer an alternative explanation.
D. Confounding variable: A factor associated with both a presumed cause and outcome that can offer an alternative explanation. / Internal validity: A design that compares different individuals or groups at one time point.

0238. Which comparison correctly distinguishes Cross-sectional design from External validity?

A. Cross-sectional design: A design that compares different individuals or groups at one time point. / External validity: The extent to which findings may apply across populations, settings, measures, and conditions beyond the study.
B. Cross-sectional design: A factor associated with both a presumed cause and outcome that can offer an alternative explanation. / External validity: The extent to which findings may apply across populations, settings, measures, and conditions beyond the study.
C. Cross-sectional design: A design that compares different individuals or groups at one time point. / External validity: A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission.
D. Cross-sectional design: The extent to which findings may apply across populations, settings, measures, and conditions beyond the study. / External validity: A design that compares different individuals or groups at one time point.

0239. A case discussion concerns a school-age child and a case coordinator in the community service agency. The practitioner is considering considering whether a sample and setting resemble the populations to which results are generalized. Which principle is involved?

A. External validity
B. Child assent in research
C. Preregistration
D. Longitudinal design

0240. During work in the supervision meeting, a school counselor identifies this need: identifying a third factor that may account for an observed association between exposure and outcome. Which idea should guide the response?

A. Preregistration
B. Operational definition
C. Confounding variable
D. Longitudinal design

0241. A planning meeting about a adolescent student includes a counselor. The proposed practice in the multidisciplinary case conference is recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work. Which idea underlies it?

A. Child assent in research
B. Cross-sectional design
C. Longitudinal design
D. Preregistration

0242. Which statement accurately contrasts the course concepts Confounding variable and External validity?

A. Confounding variable: A design that measures the same individuals or units across multiple time points. / External validity: The extent to which findings may apply across populations, settings, measures, and conditions beyond the study.
B. Confounding variable: A factor associated with both a presumed cause and outcome that can offer an alternative explanation. / External validity: The extent to which findings may apply across populations, settings, measures, and conditions beyond the study.
C. Confounding variable: A factor associated with both a presumed cause and outcome that can offer an alternative explanation. / External validity: A design that compares different individuals or groups at one time point.
D. Confounding variable: The extent to which findings may apply across populations, settings, measures, and conditions beyond the study. / External validity: A factor associated with both a presumed cause and outcome that can offer an alternative explanation.

0243. In the after-school program, a case coordinator is considering this approach for a young adolescent client: defining observable criteria for a study variable before collecting data. Which framework does it represent?

A. Informed research consent
B. Random assignment
C. Operational definition
D. Cross-sectional design

0244. Which comparison correctly distinguishes External validity from Informed research consent?

A. External validity: The extent to which findings may apply across populations, settings, measures, and conditions beyond the study. / Informed research consent: Voluntary authorization to participate based on adequate disclosure, provided by an authorized adult when required.
B. External validity: Voluntary authorization to participate based on adequate disclosure, provided by an authorized adult when required. / Informed research consent: The extent to which findings may apply across populations, settings, measures, and conditions beyond the study.
C. External validity: A precise specification of how a construct or variable is observed, measured, or manipulated. / Informed research consent: Voluntary authorization to participate based on adequate disclosure, provided by an authorized adult when required.
D. External validity: The extent to which findings may apply across populations, settings, measures, and conditions beyond the study. / Informed research consent: A design that compares different individuals or groups at one time point.

0245. Which pair of actions illustrates External validity and Child assent in research, respectively?

A. External validity: Explaining a study to a child in accessible language and respecting dissent under applicable safeguards. / Child assent in research: Considering whether a sample and setting resemble the populations to which results are generalized.
B. External validity: Considering whether a sample and setting resemble the populations to which results are generalized. / Child assent in research: Defining observable criteria for a study variable before collecting data.
C. External validity: Considering whether a sample and setting resemble the populations to which results are generalized. / Child assent in research: Explaining a study to a child in accessible language and respecting dissent under applicable safeguards.
D. External validity: Explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult. / Child assent in research: Explaining a study to a child in accessible language and respecting dissent under applicable safeguards.

0246. A team must select a support approach for a high-school student at the telehealth session. The caregiver working with a counselor recommends recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work. Which idea is most relevant?

A. Child assent in research
B. Confounding variable
C. Preregistration
D. Cross-sectional design

0247. A student confuses Operational definition with Longitudinal design. Which explanation most accurately separates them?

A. Operational definition: A design that measures the same individuals or units across multiple time points. / Longitudinal design: A precise specification of how a construct or variable is observed, measured, or manipulated.
B. Operational definition: A precise specification of how a construct or variable is observed, measured, or manipulated. / Longitudinal design: Publicly documenting hypotheses, methods, and analysis plans before examining outcome data.
C. Operational definition: A precise specification of how a construct or variable is observed, measured, or manipulated. / Longitudinal design: A design that measures the same individuals or units across multiple time points.
D. Operational definition: A factor associated with both a presumed cause and outcome that can offer an alternative explanation. / Longitudinal design: A design that measures the same individuals or units across multiple time points.

0248. Choose the term that matches this definition: A design that compares different individuals or groups at one time point.

A. Child assent in research
B. Cross-sectional design
C. Internal validity
D. External validity

0249. At a case-planning meeting, the behavior specialist proposes recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work. for a young adolescent client seen in the outpatient clinic. Which concept does this illustrate?

A. Child assent in research
B. Preregistration
C. Internal validity
D. Random assignment

0250. Which choice aligns each practice with the correct idea, Informed research consent or Preregistration?

A. Informed research consent: Explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult. / Preregistration: Using a chance procedure to allocate enrolled participants to treatment conditions.
B. Informed research consent: Explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult. / Preregistration: Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work.
C. Informed research consent: Identifying a third factor that may account for an observed association between exposure and outcome. / Preregistration: Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work.
D. Informed research consent: Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work. / Preregistration: Explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult.

0251. Which option preserves the correct meaning of both Longitudinal design and Confounding variable?

A. Longitudinal design: A design that measures the same individuals or units across multiple time points. / Confounding variable: A factor associated with both a presumed cause and outcome that can offer an alternative explanation.
B. Longitudinal design: A design that measures the same individuals or units across multiple time points. / Confounding variable: Voluntary authorization to participate based on adequate disclosure, provided by an authorized adult when required.
C. Longitudinal design: A precise specification of how a construct or variable is observed, measured, or manipulated. / Confounding variable: A factor associated with both a presumed cause and outcome that can offer an alternative explanation.
D. Longitudinal design: A factor associated with both a presumed cause and outcome that can offer an alternative explanation. / Confounding variable: A design that measures the same individuals or units across multiple time points.

0252. In a professional consultation about a young person aged 10, the assessment clinician describes this response in the school-based service: comparing age groups during one data-collection period while recognizing age and cohort are confounded. Which term is most apt?

A. Cross-sectional design
B. Longitudinal design
C. Child assent in research
D. Internal validity

0253. While consulting in the community service agency, a member of a clinical team supports a high-school student by using this approach: evaluating whether rival explanations for a treatment effect have been addressed. Which concept is being applied?

A. Internal validity
B. Cross-sectional design
C. Confounding variable
D. Operational definition

0254. For a client in early adolescence seen in the classroom support meeting, the service navigator recommends a plan built around following the same children over time to study within-person change. Which concept is reflected?

A. Preregistration
B. Child assent in research
C. Longitudinal design
D. External validity

0255. A planning meeting about a preadolescent child includes a play therapist. The proposed practice in the family resource center is following the same children over time to study within-person change. Which idea underlies it?

A. Longitudinal design
B. Confounding variable
C. Preregistration
D. External validity

0256. Which option correctly matches each concept to its practice focus: Cross-sectional design and Internal validity?

A. Cross-sectional design: Comparing age groups during one data-collection period while recognizing age and cohort are confounded. / Internal validity: Evaluating whether rival explanations for a treatment effect have been addressed.
B. Cross-sectional design: Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work. / Internal validity: Evaluating whether rival explanations for a treatment effect have been addressed.
C. Cross-sectional design: Evaluating whether rival explanations for a treatment effect have been addressed. / Internal validity: Comparing age groups during one data-collection period while recognizing age and cohort are confounded.
D. Cross-sectional design: Comparing age groups during one data-collection period while recognizing age and cohort are confounded. / Internal validity: Explaining a study to a child in accessible language and respecting dissent under applicable safeguards.

0257. In a supervision quiz, how should Confounding variable be distinguished from External validity?

A. Confounding variable: A design that measures the same individuals or units across multiple time points. / External validity: The extent to which findings may apply across populations, settings, measures, and conditions beyond the study.
B. Confounding variable: The extent to which findings may apply across populations, settings, measures, and conditions beyond the study. / External validity: A factor associated with both a presumed cause and outcome that can offer an alternative explanation.
C. Confounding variable: A factor associated with both a presumed cause and outcome that can offer an alternative explanation. / External validity: A design that compares different individuals or groups at one time point.
D. Confounding variable: A factor associated with both a presumed cause and outcome that can offer an alternative explanation. / External validity: The extent to which findings may apply across populations, settings, measures, and conditions beyond the study.

0258. A trainee must explain Random assignment. Which answer is accurate?

A. A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission.
B. A precise specification of how a construct or variable is observed, measured, or manipulated.
C. Allocation of participants to study conditions by chance to support baseline comparability.
D. The extent to which findings may apply across populations, settings, measures, and conditions beyond the study.

0259. Select the best explanation of External validity.

A. The extent to which findings may apply across populations, settings, measures, and conditions beyond the study.
B. A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission.
C. Publicly documenting hypotheses, methods, and analysis plans before examining outcome data.
D. A design that measures the same individuals or units across multiple time points.

0260. In a case note about a child aged 7, a mental-health professional working in the outpatient clinic records this priority: following the same children over time to study within-person change. What principle is reflected?

A. Preregistration
B. Operational definition
C. External validity
D. Longitudinal design

0261. Which comparison would correct a trainee’s misunderstanding of Internal validity versus External validity?

A. Internal validity: The extent to which findings may apply across populations, settings, measures, and conditions beyond the study. / External validity: The strength of evidence that a study’s manipulation or exposure, rather than alternatives, explains the observed effect.
B. Internal validity: The strength of evidence that a study’s manipulation or exposure, rather than alternatives, explains the observed effect. / External validity: The extent to which findings may apply across populations, settings, measures, and conditions beyond the study.
C. Internal validity: A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission. / External validity: The extent to which findings may apply across populations, settings, measures, and conditions beyond the study.
D. Internal validity: The strength of evidence that a study’s manipulation or exposure, rather than alternatives, explains the observed effect. / External validity: Publicly documenting hypotheses, methods, and analysis plans before examining outcome data.

0262. At a case-planning meeting, the play therapist proposes explaining a study to a child in accessible language and respecting dissent under applicable safeguards. for a child aged 14 seen in the youth advocacy program. Which concept does this illustrate?

A. Internal validity
B. Confounding variable
C. Child assent in research
D. Cross-sectional design

0263. A older adolescent client is receiving support in the classroom support meeting. The school counselor is guided by this practice: using a chance procedure to allocate enrolled participants to treatment conditions. Which principle best fits?

A. Random assignment
B. Internal validity
C. Longitudinal design
D. Cross-sectional design

0264. In the youth group, a team asks how a school counselor can support a young person aged 10. One proposed action is evaluating whether rival explanations for a treatment effect have been addressed. Which idea does it represent?

A. Confounding variable
B. Preregistration
C. Random assignment
D. Internal validity

0265. Identify the most precise label for this idea: A design that measures the same individuals or units across multiple time points.

A. Longitudinal design
B. Informed research consent
C. Confounding variable
D. External validity

0266. A young person aged 16 and a assessment clinician are reviewing goals in the school consultation. The agreed action is using a chance procedure to allocate enrolled participants to treatment conditions. Which principle best accounts for it?

A. Informed research consent
B. Random assignment
C. External validity
D. Internal validity

0267. How should a practitioner distinguish the applications of External validity and Preregistration?

A. External validity: Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work. / Preregistration: Considering whether a sample and setting resemble the populations to which results are generalized.
B. External validity: Considering whether a sample and setting resemble the populations to which results are generalized. / Preregistration: Identifying a third factor that may account for an observed association between exposure and outcome.
C. External validity: Considering whether a sample and setting resemble the populations to which results are generalized. / Preregistration: Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work.
D. External validity: Defining observable criteria for a study variable before collecting data. / Preregistration: Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work.

0268. During work in the child guidance clinic, a consulting counselor identifies this need: comparing age groups during one data-collection period while recognizing age and cohort are confounded. Which idea should guide the response?

A. Cross-sectional design
B. Informed research consent
C. Confounding variable
D. Operational definition

0269. While supporting a young person aged 16 in the after-school program, a parent educator adopts this practice: evaluating whether rival explanations for a treatment effect have been addressed. Which concept best explains the choice?

A. Preregistration
B. Internal validity
C. Informed research consent
D. Random assignment

0270. During work in the school consultation, a school counselor identifies this need: recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work. Which idea should guide the response?

A. Operational definition
B. Preregistration
C. Longitudinal design
D. Internal validity

0271. A support meeting for a student aged 17 includes a behavior specialist in the community youth program. The practice under consideration is following the same children over time to study within-person change. Which concept guides it?

A. Random assignment
B. Confounding variable
C. Preregistration
D. Longitudinal design

0272. Which pair of actions illustrates Longitudinal design and Cross-sectional design, respectively?

A. Longitudinal design: Following the same children over time to study within-person change. / Cross-sectional design: Comparing age groups during one data-collection period while recognizing age and cohort are confounded.
B. Longitudinal design: Evaluating whether rival explanations for a treatment effect have been addressed. / Cross-sectional design: Comparing age groups during one data-collection period while recognizing age and cohort are confounded.
C. Longitudinal design: Following the same children over time to study within-person change. / Cross-sectional design: Explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult.
D. Longitudinal design: Comparing age groups during one data-collection period while recognizing age and cohort are confounded. / Cross-sectional design: Following the same children over time to study within-person change.

0273. Which comparison correctly distinguishes Internal validity from Informed research consent?

A. Internal validity: A factor associated with both a presumed cause and outcome that can offer an alternative explanation. / Informed research consent: Voluntary authorization to participate based on adequate disclosure, provided by an authorized adult when required.
B. Internal validity: The strength of evidence that a study's manipulation or exposure, rather than alternatives, explains the observed effect. / Informed research consent: Voluntary authorization to participate based on adequate disclosure, provided by an authorized adult when required.
C. Internal validity: Voluntary authorization to participate based on adequate disclosure, provided by an authorized adult when required. / Informed research consent: The strength of evidence that a study's manipulation or exposure, rather than alternatives, explains the observed effect.
D. Internal validity: The strength of evidence that a study's manipulation or exposure, rather than alternatives, explains the observed effect. / Informed research consent: A precise specification of how a construct or variable is observed, measured, or manipulated.

0274. A youth worker is asked to justify a plan for a child aged 7 in the youth advocacy program. It calls for recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work. Which concept provides the rationale?

A. External validity
B. Preregistration
C. Confounding variable
D. Informed research consent

0275. During service review in the school-based service, a community practitioner describes explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult. for a client in early adolescence. Which course idea is most applicable?

A. Preregistration
B. Informed research consent
C. Random assignment
D. Internal validity

0276. Which paired example correctly applies Cross-sectional design first and Informed research consent second?

A. Cross-sectional design: Comparing age groups during one data-collection period while recognizing age and cohort are confounded. / Informed research consent: Using a chance procedure to allocate enrolled participants to treatment conditions.
B. Cross-sectional design: Comparing age groups during one data-collection period while recognizing age and cohort are confounded. / Informed research consent: Explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult.
C. Cross-sectional design: Explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult. / Informed research consent: Comparing age groups during one data-collection period while recognizing age and cohort are confounded.
D. Cross-sectional design: Defining observable criteria for a study variable before collecting data. / Informed research consent: Explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult.

0277. A student confuses Internal validity with Child assent in research. Which explanation most accurately separates them?

A. Internal validity: A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission. / Child assent in research: The strength of evidence that a study's manipulation or exposure, rather than alternatives, explains the observed effect.
B. Internal validity: The extent to which findings may apply across populations, settings, measures, and conditions beyond the study. / Child assent in research: A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission.
C. Internal validity: The strength of evidence that a study's manipulation or exposure, rather than alternatives, explains the observed effect. / Child assent in research: Publicly documenting hypotheses, methods, and analysis plans before examining outcome data.
D. Internal validity: The strength of evidence that a study's manipulation or exposure, rather than alternatives, explains the observed effect. / Child assent in research: A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission.

0278. What is the central meaning of Cross-sectional design?

A. A design that compares different individuals or groups at one time point.
B. A design that measures the same individuals or units across multiple time points.
C. Voluntary authorization to participate based on adequate disclosure, provided by an authorized adult when required.
D. A precise specification of how a construct or variable is observed, measured, or manipulated.

0279. Which statement accurately contrasts the course concepts Operational definition and Cross-sectional design?

A. Operational definition: Voluntary authorization to participate based on adequate disclosure, provided by an authorized adult when required. / Cross-sectional design: A design that compares different individuals or groups at one time point.
B. Operational definition: A precise specification of how a construct or variable is observed, measured, or manipulated. / Cross-sectional design: A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission.
C. Operational definition: A precise specification of how a construct or variable is observed, measured, or manipulated. / Cross-sectional design: A design that compares different individuals or groups at one time point.
D. Operational definition: A design that compares different individuals or groups at one time point. / Cross-sectional design: A precise specification of how a construct or variable is observed, measured, or manipulated.

0280. For a young person aged 18 in the youth advocacy program, a school support specialist makes this practice the immediate priority: comparing age groups during one data-collection period while recognizing age and cohort are confounded. Which concept fits best?

A. Child assent in research
B. Cross-sectional design
C. Longitudinal design
D. Random assignment

0281. Which named construct is captured by this account? A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission.

A. Preregistration
B. Random assignment
C. Internal validity
D. Child assent in research

0282. A young person aged 13's service team meets in the student-support meeting. The parent educator recommends a change involving considering whether a sample and setting resemble the populations to which results are generalized. Which idea best explains it?

A. Child assent in research
B. Random assignment
C. External validity
D. Preregistration

0283. Which statement accurately contrasts the course concepts Random assignment and Informed research consent?

A. Random assignment: Voluntary authorization to participate based on adequate disclosure, provided by an authorized adult when required. / Informed research consent: Allocation of participants to study conditions by chance to support baseline comparability.
B. Random assignment: Allocation of participants to study conditions by chance to support baseline comparability. / Informed research consent: Voluntary authorization to participate based on adequate disclosure, provided by an authorized adult when required.
C. Random assignment: Allocation of participants to study conditions by chance to support baseline comparability. / Informed research consent: Publicly documenting hypotheses, methods, and analysis plans before examining outcome data.
D. Random assignment: A design that compares different individuals or groups at one time point. / Informed research consent: Voluntary authorization to participate based on adequate disclosure, provided by an authorized adult when required.

0284. A supervisor asks for an applied contrast between Cross-sectional design and Preregistration. Which option fits?

A. Cross-sectional design: Using a chance procedure to allocate enrolled participants to treatment conditions. / Preregistration: Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work.
B. Cross-sectional design: Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work. / Preregistration: Comparing age groups during one data-collection period while recognizing age and cohort are confounded.
C. Cross-sectional design: Comparing age groups during one data-collection period while recognizing age and cohort are confounded. / Preregistration: Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work.
D. Cross-sectional design: Comparing age groups during one data-collection period while recognizing age and cohort are confounded. / Preregistration: Evaluating whether rival explanations for a treatment effect have been addressed.

0285. A supervisor asks for an applied contrast between Operational definition and Informed research consent. Which option fits?

A. Operational definition: Explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult. / Informed research consent: Defining observable criteria for a study variable before collecting data.
B. Operational definition: Defining observable criteria for a study variable before collecting data. / Informed research consent: Explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult.
C. Operational definition: Defining observable criteria for a study variable before collecting data. / Informed research consent: Evaluating whether rival explanations for a treatment effect have been addressed.
D. Operational definition: Identifying a third factor that may account for an observed association between exposure and outcome. / Informed research consent: Explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult.

0286. Which comparison correctly distinguishes Operational definition from Random assignment?

A. Operational definition: A precise specification of how a construct or variable is observed, measured, or manipulated. / Random assignment: Allocation of participants to study conditions by chance to support baseline comparability.
B. Operational definition: A precise specification of how a construct or variable is observed, measured, or manipulated. / Random assignment: Voluntary authorization to participate based on adequate disclosure, provided by an authorized adult when required.
C. Operational definition: Allocation of participants to study conditions by chance to support baseline comparability. / Random assignment: A precise specification of how a construct or variable is observed, measured, or manipulated.
D. Operational definition: A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission. / Random assignment: Allocation of participants to study conditions by chance to support baseline comparability.

0287. A student confuses Operational definition with Child assent in research. Which explanation most accurately separates them?

A. Operational definition: A precise specification of how a construct or variable is observed, measured, or manipulated. / Child assent in research: A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission.
B. Operational definition: A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission. / Child assent in research: A precise specification of how a construct or variable is observed, measured, or manipulated.
C. Operational definition: A design that compares different individuals or groups at one time point. / Child assent in research: A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission.
D. Operational definition: A precise specification of how a construct or variable is observed, measured, or manipulated. / Child assent in research: The extent to which findings may apply across populations, settings, measures, and conditions beyond the study.

0288. How should a practitioner distinguish the applications of Cross-sectional design and Preregistration?

A. Cross-sectional design: Using a chance procedure to allocate enrolled participants to treatment conditions. / Preregistration: Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work.
B. Cross-sectional design: Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work. / Preregistration: Comparing age groups during one data-collection period while recognizing age and cohort are confounded.
C. Cross-sectional design: Comparing age groups during one data-collection period while recognizing age and cohort are confounded. / Preregistration: Evaluating whether rival explanations for a treatment effect have been addressed.
D. Cross-sectional design: Comparing age groups during one data-collection period while recognizing age and cohort are confounded. / Preregistration: Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work.

0289. Which statement accurately contrasts the course concepts Random assignment and Confounding variable?

A. Random assignment: Allocation of participants to study conditions by chance to support baseline comparability. / Confounding variable: A factor associated with both a presumed cause and outcome that can offer an alternative explanation.
B. Random assignment: A factor associated with both a presumed cause and outcome that can offer an alternative explanation. / Confounding variable: Allocation of participants to study conditions by chance to support baseline comparability.
C. Random assignment: A design that measures the same individuals or units across multiple time points. / Confounding variable: A factor associated with both a presumed cause and outcome that can offer an alternative explanation.
D. Random assignment: Allocation of participants to study conditions by chance to support baseline comparability. / Confounding variable: Publicly documenting hypotheses, methods, and analysis plans before examining outcome data.

0290. A student confuses Cross-sectional design with Informed research consent. Which explanation most accurately separates them?

A. Cross-sectional design: A design that compares different individuals or groups at one time point. / Informed research consent: Voluntary authorization to participate based on adequate disclosure, provided by an authorized adult when required.
B. Cross-sectional design: A precise specification of how a construct or variable is observed, measured, or manipulated. / Informed research consent: Voluntary authorization to participate based on adequate disclosure, provided by an authorized adult when required.
C. Cross-sectional design: Voluntary authorization to participate based on adequate disclosure, provided by an authorized adult when required. / Informed research consent: A design that compares different individuals or groups at one time point.
D. Cross-sectional design: A design that compares different individuals or groups at one time point. / Informed research consent: Allocation of participants to study conditions by chance to support baseline comparability.

0291. A clinical supervisor is asked to evaluate a proposed service for a young person aged 18 in the school consultation. The defining feature is explaining a study to a child in accessible language and respecting dissent under applicable safeguards. Which concept fits?

A. Cross-sectional design
B. External validity
C. Random assignment
D. Child assent in research

0292. Identify the most precise label for this idea: A precise specification of how a construct or variable is observed, measured, or manipulated.

A. Operational definition
B. Confounding variable
C. Internal validity
D. Cross-sectional design

0293. Which pair of actions illustrates External validity and Preregistration, respectively?

A. External validity: Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work. / Preregistration: Considering whether a sample and setting resemble the populations to which results are generalized.
B. External validity: Defining observable criteria for a study variable before collecting data. / Preregistration: Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work.
C. External validity: Considering whether a sample and setting resemble the populations to which results are generalized. / Preregistration: Identifying a third factor that may account for an observed association between exposure and outcome.
D. External validity: Considering whether a sample and setting resemble the populations to which results are generalized. / Preregistration: Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work.

0294. Which statement shows a sound practice-level distinction between Internal validity and External validity?

A. Internal validity: Evaluating whether rival explanations for a treatment effect have been addressed. / External validity: Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work.
B. Internal validity: Evaluating whether rival explanations for a treatment effect have been addressed. / External validity: Considering whether a sample and setting resemble the populations to which results are generalized.
C. Internal validity: Considering whether a sample and setting resemble the populations to which results are generalized. / External validity: Evaluating whether rival explanations for a treatment effect have been addressed.
D. Internal validity: Explaining a study to a child in accessible language and respecting dissent under applicable safeguards. / External validity: Considering whether a sample and setting resemble the populations to which results are generalized.

0295. In a supervision quiz, how should Random assignment be distinguished from External validity?

A. Random assignment: A design that compares different individuals or groups at one time point. / External validity: The extent to which findings may apply across populations, settings, measures, and conditions beyond the study.
B. Random assignment: Allocation of participants to study conditions by chance to support baseline comparability. / External validity: A factor associated with both a presumed cause and outcome that can offer an alternative explanation.
C. Random assignment: The extent to which findings may apply across populations, settings, measures, and conditions beyond the study. / External validity: Allocation of participants to study conditions by chance to support baseline comparability.
D. Random assignment: Allocation of participants to study conditions by chance to support baseline comparability. / External validity: The extent to which findings may apply across populations, settings, measures, and conditions beyond the study.

0296. At the family resource center, a research trainee reviews whether a plan for a young person aged 10 is appropriate. The relevant practice is recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work. Which concept is tested?

A. Preregistration
B. Internal validity
C. Child assent in research
D. Cross-sectional design

0297. Which pair of actions illustrates Random assignment and Cross-sectional design, respectively?

A. Random assignment: Considering whether a sample and setting resemble the populations to which results are generalized. / Cross-sectional design: Comparing age groups during one data-collection period while recognizing age and cohort are confounded.
B. Random assignment: Using a chance procedure to allocate enrolled participants to treatment conditions. / Cross-sectional design: Defining observable criteria for a study variable before collecting data.
C. Random assignment: Comparing age groups during one data-collection period while recognizing age and cohort are confounded. / Cross-sectional design: Using a chance procedure to allocate enrolled participants to treatment conditions.
D. Random assignment: Using a chance procedure to allocate enrolled participants to treatment conditions. / Cross-sectional design: Comparing age groups during one data-collection period while recognizing age and cohort are confounded.

0298. A consultant is preparing a follow-up plan for a client in early adolescence in the supervision meeting. The plan calls for using a chance procedure to allocate enrolled participants to treatment conditions. Which concept names this approach?

A. Longitudinal design
B. Random assignment
C. External validity
D. Cross-sectional design

0299. Which comparison correctly distinguishes Operational definition from Child assent in research?

A. Operational definition: A precise specification of how a construct or variable is observed, measured, or manipulated. / Child assent in research: A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission.
B. Operational definition: A design that compares different individuals or groups at one time point. / Child assent in research: A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission.
C. Operational definition: A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission. / Child assent in research: A precise specification of how a construct or variable is observed, measured, or manipulated.
D. Operational definition: A precise specification of how a construct or variable is observed, measured, or manipulated. / Child assent in research: The extent to which findings may apply across populations, settings, measures, and conditions beyond the study.

0300. Which comparison would correct a trainee's misunderstanding of Confounding variable versus Child assent in research?

A. Confounding variable: Voluntary authorization to participate based on adequate disclosure, provided by an authorized adult when required. / Child assent in research: A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission.
B. Confounding variable: A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission. / Child assent in research: A factor associated with both a presumed cause and outcome that can offer an alternative explanation.
C. Confounding variable: A factor associated with both a presumed cause and outcome that can offer an alternative explanation. / Child assent in research: A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission.
D. Confounding variable: A factor associated with both a presumed cause and outcome that can offer an alternative explanation. / Child assent in research: The extent to which findings may apply across populations, settings, measures, and conditions beyond the study.

0301. A service team discusses a young person aged 16 in the telehealth session. Their proposed next step is explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult. Which course concept supports it?

A. Random assignment
B. Operational definition
C. Internal validity
D. Informed research consent

0302. In a supervision quiz, how should External validity be distinguished from Child assent in research?

A. External validity: Voluntary authorization to participate based on adequate disclosure, provided by an authorized adult when required. / Child assent in research: A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission.
B. External validity: A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission. / Child assent in research: The extent to which findings may apply across populations, settings, measures, and conditions beyond the study.
C. External validity: The extent to which findings may apply across populations, settings, measures, and conditions beyond the study. / Child assent in research: A precise specification of how a construct or variable is observed, measured, or manipulated.
D. External validity: The extent to which findings may apply across populations, settings, measures, and conditions beyond the study. / Child assent in research: A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission.

0303. How should a practitioner distinguish the applications of External validity and Informed research consent?

A. External validity: Defining observable criteria for a study variable before collecting data. / Informed research consent: Explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult.
B. External validity: Considering whether a sample and setting resemble the populations to which results are generalized. / Informed research consent: Comparing age groups during one data-collection period while recognizing age and cohort are confounded.
C. External validity: Considering whether a sample and setting resemble the populations to which results are generalized. / Informed research consent: Explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult.
D. External validity: Explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult. / Informed research consent: Considering whether a sample and setting resemble the populations to which results are generalized.

0304. Which option is the clearest practical expression of Confounding variable?

A. Following the same children over time to study within-person change.
B. Defining observable criteria for a study variable before collecting data.
C. Comparing age groups during one data-collection period while recognizing age and cohort are confounded.
D. Identifying a third factor that may account for an observed association between exposure and outcome.

0305. A trainee must choose a practice that exemplifies External validity. Which action is the best fit?

A. Defining observable criteria for a study variable before collecting data.
B. Following the same children over time to study within-person change.
C. Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work.
D. Considering whether a sample and setting resemble the populations to which results are generalized.

0306. A case discussion concerns a preadolescent child and a school-based clinician in the multidisciplinary case conference. The practitioner is considering comparing age groups during one data-collection period while recognizing age and cohort are confounded. Which principle is involved?

A. Child assent in research
B. External validity
C. Random assignment
D. Cross-sectional design

0307. Which comparison correctly distinguishes Random assignment from Preregistration?

A. Random assignment: Publicly documenting hypotheses, methods, and analysis plans before examining outcome data. / Preregistration: Allocation of participants to study conditions by chance to support baseline comparability.
B. Random assignment: Allocation of participants to study conditions by chance to support baseline comparability. / Preregistration: Publicly documenting hypotheses, methods, and analysis plans before examining outcome data.
C. Random assignment: Allocation of participants to study conditions by chance to support baseline comparability. / Preregistration: A factor associated with both a presumed cause and outcome that can offer an alternative explanation.
D. Random assignment: A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission. / Preregistration: Publicly documenting hypotheses, methods, and analysis plans before examining outcome data.

0308. In a supervision quiz, how should Operational definition be distinguished from Confounding variable?

A. Operational definition: A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission. / Confounding variable: A factor associated with both a presumed cause and outcome that can offer an alternative explanation.
B. Operational definition: A precise specification of how a construct or variable is observed, measured, or manipulated. / Confounding variable: Allocation of participants to study conditions by chance to support baseline comparability.
C. Operational definition: A factor associated with both a presumed cause and outcome that can offer an alternative explanation. / Confounding variable: A precise specification of how a construct or variable is observed, measured, or manipulated.
D. Operational definition: A precise specification of how a construct or variable is observed, measured, or manipulated. / Confounding variable: A factor associated with both a presumed cause and outcome that can offer an alternative explanation.

0309. Which course concept is defined as follows: A precise specification of how a construct or variable is observed, measured, or manipulated.

A. Confounding variable
B. External validity
C. Random assignment
D. Operational definition

0310. Which applied comparison correctly identifies what belongs to Child assent in research versus Preregistration?

A. Child assent in research: Explaining a study to a child in accessible language and respecting dissent under applicable safeguards. / Preregistration: Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work.
B. Child assent in research: Explaining a study to a child in accessible language and respecting dissent under applicable safeguards. / Preregistration: Identifying a third factor that may account for an observed association between exposure and outcome.
C. Child assent in research: Defining observable criteria for a study variable before collecting data. / Preregistration: Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work.
D. Child assent in research: Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work. / Preregistration: Explaining a study to a child in accessible language and respecting dissent under applicable safeguards.

0311. A case conference reviews a program coordinator’s work with a child aged 7 in the parent meeting: comparing age groups during one data-collection period while recognizing age and cohort are confounded. Which principle is central?

A. Internal validity
B. Cross-sectional design
C. Random assignment
D. Confounding variable

0312. An interdisciplinary team reviews a preadolescent child’s case at the family resource center. The play therapist recommends following the same children over time to study within-person change. Which course concept best fits?

A. External validity
B. Preregistration
C. Random assignment
D. Longitudinal design

0313. A case conference asks for a distinction between Confounding variable and Child assent in research. Which answer is sound?

A. Confounding variable: Voluntary authorization to participate based on adequate disclosure, provided by an authorized adult when required. / Child assent in research: A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission.
B. Confounding variable: A factor associated with both a presumed cause and outcome that can offer an alternative explanation. / Child assent in research: The extent to which findings may apply across populations, settings, measures, and conditions beyond the study.
C. Confounding variable: A factor associated with both a presumed cause and outcome that can offer an alternative explanation. / Child assent in research: A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission.
D. Confounding variable: A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission. / Child assent in research: A factor associated with both a presumed cause and outcome that can offer an alternative explanation.

0314. For a child aged 11 seen in the school counseling office, the service navigator recommends a plan built around explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult. Which concept is reflected?

A. Operational definition
B. Confounding variable
C. Informed research consent
D. Child assent in research

0315. A student aged 15 is receiving support in the youth group. The consulting counselor is guided by this practice: defining observable criteria for a study variable before collecting data. Which principle best fits?

A. Preregistration
B. Child assent in research
C. Cross-sectional design
D. Operational definition

0316. Which choice aligns each practice with the correct idea, External validity or Child assent in research?

A. External validity: Explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult. / Child assent in research: Explaining a study to a child in accessible language and respecting dissent under applicable safeguards.
B. External validity: Explaining a study to a child in accessible language and respecting dissent under applicable safeguards. / Child assent in research: Considering whether a sample and setting resemble the populations to which results are generalized.
C. External validity: Considering whether a sample and setting resemble the populations to which results are generalized. / Child assent in research: Defining observable criteria for a study variable before collecting data.
D. External validity: Considering whether a sample and setting resemble the populations to which results are generalized. / Child assent in research: Explaining a study to a child in accessible language and respecting dissent under applicable safeguards.

0317. Which choice aligns each practice with the correct idea, Random assignment or Longitudinal design?

A. Random assignment: Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work. / Longitudinal design: Following the same children over time to study within-person change.
B. Random assignment: Following the same children over time to study within-person change. / Longitudinal design: Using a chance procedure to allocate enrolled participants to treatment conditions.
C. Random assignment: Using a chance procedure to allocate enrolled participants to treatment conditions. / Longitudinal design: Following the same children over time to study within-person change.
D. Random assignment: Using a chance procedure to allocate enrolled participants to treatment conditions. / Longitudinal design: Defining observable criteria for a study variable before collecting data.

0318. A teacher and counselor is asked to justify a plan for a client in early adolescence in the student-support meeting. It calls for comparing age groups during one data-collection period while recognizing age and cohort are confounded. Which concept provides the rationale?

A. External validity
B. Cross-sectional design
C. Operational definition
D. Child assent in research

0319. A behavior specialist is asked to evaluate a proposed service for a child aged 6 in the community mental-health service. The defining feature is using a chance procedure to allocate enrolled participants to treatment conditions. Which concept fits?

A. Cross-sectional design
B. Informed research consent
C. Operational definition
D. Random assignment

0320. Which option is the clearest practical expression of Cross-sectional design?

A. Explaining a study to a child in accessible language and respecting dissent under applicable safeguards.
B. Comparing age groups during one data-collection period while recognizing age and cohort are confounded.
C. Following the same children over time to study within-person change.
D. Using a chance procedure to allocate enrolled participants to treatment conditions.

0321. An interdisciplinary team reviews a student aged 17’s case at the student-support meeting. The play therapist recommends explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult. Which course concept best fits?

A. Preregistration
B. Cross-sectional design
C. Informed research consent
D. Confounding variable

0322. Which comparison correctly distinguishes Longitudinal design from Internal validity?

A. Longitudinal design: The strength of evidence that a study’s manipulation or exposure, rather than alternatives, explains the observed effect. / Internal validity: A design that measures the same individuals or units across multiple time points.
B. Longitudinal design: A design that measures the same individuals or units across multiple time points. / Internal validity: The strength of evidence that a study’s manipulation or exposure, rather than alternatives, explains the observed effect.
C. Longitudinal design: A design that measures the same individuals or units across multiple time points. / Internal validity: A precise specification of how a construct or variable is observed, measured, or manipulated.
D. Longitudinal design: A design that compares different individuals or groups at one time point. / Internal validity: The strength of evidence that a study’s manipulation or exposure, rather than alternatives, explains the observed effect.

0323. Which statement accurately contrasts the course concepts Informed research consent and Preregistration?

A. Informed research consent: A factor associated with both a presumed cause and outcome that can offer an alternative explanation. / Preregistration: Publicly documenting hypotheses, methods, and analysis plans before examining outcome data.
B. Informed research consent: Publicly documenting hypotheses, methods, and analysis plans before examining outcome data. / Preregistration: Voluntary authorization to participate based on adequate disclosure, provided by an authorized adult when required.
C. Informed research consent: Voluntary authorization to participate based on adequate disclosure, provided by an authorized adult when required. / Preregistration: Allocation of participants to study conditions by chance to support baseline comparability.
D. Informed research consent: Voluntary authorization to participate based on adequate disclosure, provided by an authorized adult when required. / Preregistration: Publicly documenting hypotheses, methods, and analysis plans before examining outcome data.

0324. How are Internal validity and Preregistration most accurately differentiated in this curriculum?

A. Internal validity: The strength of evidence that a study’s manipulation or exposure, rather than alternatives, explains the observed effect. / Preregistration: Publicly documenting hypotheses, methods, and analysis plans before examining outcome data.
B. Internal validity: The strength of evidence that a study’s manipulation or exposure, rather than alternatives, explains the observed effect. / Preregistration: Allocation of participants to study conditions by chance to support baseline comparability.
C. Internal validity: A factor associated with both a presumed cause and outcome that can offer an alternative explanation. / Preregistration: Publicly documenting hypotheses, methods, and analysis plans before examining outcome data.
D. Internal validity: Publicly documenting hypotheses, methods, and analysis plans before examining outcome data. / Preregistration: The strength of evidence that a study’s manipulation or exposure, rather than alternatives, explains the observed effect.

0325. At the youth group, a service navigator reviews whether a plan for a child aged 14 is appropriate. The relevant practice is considering whether a sample and setting resemble the populations to which results are generalized. Which concept is tested?

A. Confounding variable
B. Operational definition
C. Child assent in research
D. External validity

0326. For a student aged 12 in the community service agency, a clinical supervisor makes this practice the immediate priority: following the same children over time to study within-person change. Which concept fits best?

A. Longitudinal design
B. Random assignment
C. Preregistration
D. Operational definition

0327. A school counselor is asked to justify a plan for a teenage client in the behavior-support review. It calls for explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult. Which concept provides the rationale?

A. Child assent in research
B. Informed research consent
C. External validity
D. Cross-sectional design

0328. A teacher and counselor is explaining a choice to a teenage client and caregiver in the after-school program. The choice centers on following the same children over time to study within-person change. Which idea is illustrated?

A. Child assent in research
B. Operational definition
C. Internal validity
D. Longitudinal design

0329. A support meeting for a young person aged 10 includes a play therapist in the parent meeting. The practice under consideration is using a chance procedure to allocate enrolled participants to treatment conditions. Which concept guides it?

A. External validity
B. Random assignment
C. Confounding variable
D. Internal validity

0330. Choose the practice comparison that best separates Internal validity from Informed research consent.

A. Internal validity: Evaluating whether rival explanations for a treatment effect have been addressed. / Informed research consent: Defining observable criteria for a study variable before collecting data.
B. Internal validity: Explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult. / Informed research consent: Evaluating whether rival explanations for a treatment effect have been addressed.
C. Internal validity: Evaluating whether rival explanations for a treatment effect have been addressed. / Informed research consent: Explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult.
D. Internal validity: Identifying a third factor that may account for an observed association between exposure and outcome. / Informed research consent: Explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult.

0331. Choose the response that best puts Cross-sectional design into practice.

A. Comparing age groups during one data-collection period while recognizing age and cohort are confounded.
B. Defining observable criteria for a study variable before collecting data.
C. Explaining a study to a child in accessible language and respecting dissent under applicable safeguards.
D. Identifying a third factor that may account for an observed association between exposure and outcome.

0332. While consulting in the school-based service, a assessment clinician supports a young person aged 10 by using this approach: comparing age groups during one data-collection period while recognizing age and cohort are confounded. Which concept is being applied?

A. Random assignment
B. Informed research consent
C. Cross-sectional design
D. Internal validity

0333. Which comparison correctly distinguishes Longitudinal design from Confounding variable?

A. Longitudinal design: A precise specification of how a construct or variable is observed, measured, or manipulated. / Confounding variable: A factor associated with both a presumed cause and outcome that can offer an alternative explanation.
B. Longitudinal design: A design that measures the same individuals or units across multiple time points. / Confounding variable: Voluntary authorization to participate based on adequate disclosure, provided by an authorized adult when required.
C. Longitudinal design: A design that measures the same individuals or units across multiple time points. / Confounding variable: A factor associated with both a presumed cause and outcome that can offer an alternative explanation.
D. Longitudinal design: A factor associated with both a presumed cause and outcome that can offer an alternative explanation. / Confounding variable: A design that measures the same individuals or units across multiple time points.

0334. A school-based clinician presents a support plan for a child aged 14 at the learning-support meeting. Its central feature is recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work. Which concept should be named?

A. Operational definition
B. Child assent in research
C. Random assignment
D. Preregistration

0335. Which option pairs the definitions of Longitudinal design and External validity correctly, in that order?

A. Longitudinal design: A design that measures the same individuals or units across multiple time points. / External validity: The extent to which findings may apply across populations, settings, measures, and conditions beyond the study.
B. Longitudinal design: A precise specification of how a construct or variable is observed, measured, or manipulated. / External validity: The extent to which findings may apply across populations, settings, measures, and conditions beyond the study.
C. Longitudinal design: The extent to which findings may apply across populations, settings, measures, and conditions beyond the study. / External validity: A design that measures the same individuals or units across multiple time points.
D. Longitudinal design: A design that measures the same individuals or units across multiple time points. / External validity: The strength of evidence that a study's manipulation or exposure, rather than alternatives, explains the observed effect.

0336. A supervisor asks how Child assent in research would appear in practice. Which choice should be selected?

A. Following the same children over time to study within-person change.
B. Explaining a study to a child in accessible language and respecting dissent under applicable safeguards.
C. Comparing age groups during one data-collection period while recognizing age and cohort are confounded.
D. Identifying a third factor that may account for an observed association between exposure and outcome.

0337. A student aged 9 and a supervised trainee are reviewing goals in the community youth program. The agreed action is defining observable criteria for a study variable before collecting data. Which principle best accounts for it?

A. Random assignment
B. Longitudinal design
C. Preregistration
D. Operational definition

0338. Identify the most precise label for this idea: A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission.

A. Child assent in research
B. External validity
C. Cross-sectional design
D. Internal validity

0339. For a child aged 8 in the telehealth session, a behavior specialist makes this practice the immediate priority: evaluating whether rival explanations for a treatment effect have been addressed. Which concept fits best?

A. Internal validity
B. Informed research consent
C. Child assent in research
D. Random assignment

0340. When reviewing a student aged 15's plan in the school consultation, the family therapist notes that the next step is explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult. Which concept guides this step?

A. External validity
B. Confounding variable
C. Random assignment
D. Informed research consent

0341. In a case note about a school-age child, a mental-health professional working in the counseling practicum records this priority: explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult. What principle is reflected?

A. Preregistration
B. Informed research consent
C. Confounding variable
D. External validity

0342. A planning meeting about a student aged 17 includes a play therapist. The proposed practice in the student-support meeting is explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult. Which idea underlies it?

A. Informed research consent
B. External validity
C. Longitudinal design
D. Internal validity

0343. Which choice aligns each practice with the correct idea, Longitudinal design or Internal validity?

A. Longitudinal design: Following the same children over time to study within-person change. / Internal validity: Evaluating whether rival explanations for a treatment effect have been addressed.
B. Longitudinal design: Comparing age groups during one data-collection period while recognizing age and cohort are confounded. / Internal validity: Evaluating whether rival explanations for a treatment effect have been addressed.
C. Longitudinal design: Evaluating whether rival explanations for a treatment effect have been addressed. / Internal validity: Following the same children over time to study within-person change.
D. Longitudinal design: Following the same children over time to study within-person change. / Internal validity: Defining observable criteria for a study variable before collecting data.

0344. Which pair of actions illustrates Operational definition and Child assent in research, respectively?

A. Operational definition: Comparing age groups during one data-collection period while recognizing age and cohort are confounded. / Child assent in research: Explaining a study to a child in accessible language and respecting dissent under applicable safeguards.
B. Operational definition: Defining observable criteria for a study variable before collecting data. / Child assent in research: Considering whether a sample and setting resemble the populations to which results are generalized.
C. Operational definition: Defining observable criteria for a study variable before collecting data. / Child assent in research: Explaining a study to a child in accessible language and respecting dissent under applicable safeguards.
D. Operational definition: Explaining a study to a child in accessible language and respecting dissent under applicable safeguards. / Child assent in research: Defining observable criteria for a study variable before collecting data.

0345. Which statement most accurately defines Internal validity?

A. Allocation of participants to study conditions by chance to support baseline comparability.
B. A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission.
C. The extent to which findings may apply across populations, settings, measures, and conditions beyond the study.
D. The strength of evidence that a study's manipulation or exposure, rather than alternatives, explains the observed effect.

0346. A supervisor asks how External validity would appear in practice. Which choice should be selected?

A. Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work.
B. Explaining a study to a child in accessible language and respecting dissent under applicable safeguards.
C. Considering whether a sample and setting resemble the populations to which results are generalized.
D. Following the same children over time to study within-person change.

0347. A supervisor asks for an applied contrast between Random assignment and Cross-sectional design. Which option fits?

A. Random assignment: Comparing age groups during one data-collection period while recognizing age and cohort are confounded. / Cross-sectional design: Using a chance procedure to allocate enrolled participants to treatment conditions.
B. Random assignment: Using a chance procedure to allocate enrolled participants to treatment conditions. / Cross-sectional design: Comparing age groups during one data-collection period while recognizing age and cohort are confounded.
C. Random assignment: Using a chance procedure to allocate enrolled participants to treatment conditions. / Cross-sectional design: Defining observable criteria for a study variable before collecting data.
D. Random assignment: Considering whether a sample and setting resemble the populations to which results are generalized. / Cross-sectional design: Comparing age groups during one data-collection period while recognizing age and cohort are confounded.

0348. In a supervision quiz, how should Longitudinal design be distinguished from Informed research consent?

A. Longitudinal design: A design that measures the same individuals or units across multiple time points. / Informed research consent: Voluntary authorization to participate based on adequate disclosure, provided by an authorized adult when required.
B. Longitudinal design: Voluntary authorization to participate based on adequate disclosure, provided by an authorized adult when required. / Informed research consent: A design that measures the same individuals or units across multiple time points.
C. Longitudinal design: A design that measures the same individuals or units across multiple time points. / Informed research consent: The extent to which findings may apply across populations, settings, measures, and conditions beyond the study.
D. Longitudinal design: A design that compares different individuals or groups at one time point. / Informed research consent: Voluntary authorization to participate based on adequate disclosure, provided by an authorized adult when required.

0349. When reviewing a young person's plan in the supervision meeting, the family therapist notes that the next step is following the same children over time to study within-person change. Which concept guides this step?

A. Cross-sectional design
B. Internal validity
C. Confounding variable
D. Longitudinal design

0350. In the classroom support meeting, a team asks how a teacher and counselor can support a student aged 17. One proposed action is considering whether a sample and setting resemble the populations to which results are generalized. Which idea does it represent?

A. Child assent in research
B. Random assignment
C. Cross-sectional design
D. External validity

0351. Which option preserves the correct meaning of both Cross-sectional design and Internal validity?

A. Cross-sectional design: A design that compares different individuals or groups at one time point. / Internal validity: A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission.
B. Cross-sectional design: The strength of evidence that a study's manipulation or exposure, rather than alternatives, explains the observed effect. / Internal validity: A design that compares different individuals or groups at one time point.
C. Cross-sectional design: A design that compares different individuals or groups at one time point. / Internal validity: The strength of evidence that a study's manipulation or exposure, rather than alternatives, explains the observed effect.
D. Cross-sectional design: Publicly documenting hypotheses, methods, and analysis plans before examining outcome data. / Internal validity: The strength of evidence that a study's manipulation or exposure, rather than alternatives, explains the observed effect.

0352. At a case-planning meeting, the school support specialist proposes following the same children over time to study within-person change. for a older adolescent client seen in the student-support meeting. Which concept does this illustrate?

A. Internal validity
B. Informed research consent
C. Random assignment
D. Longitudinal design

0353. A supervised trainee is preparing a follow-up plan for a preadolescent child in the after-school program. The plan calls for recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work. Which concept names this approach?

A. Informed research consent
B. Cross-sectional design
C. Preregistration
D. Longitudinal design

0354. A youth worker is asked to justify a plan for a child aged 8 in the caregiver consultation. It calls for identifying a third factor that may account for an observed association between exposure and outcome. Which concept provides the rationale?

A. Operational definition
B. Random assignment
C. Cross-sectional design
D. Confounding variable

0355. A supervisor asks for an applied contrast between Cross-sectional design and Child assent in research. Which option fits?

A. Cross-sectional design: Comparing age groups during one data-collection period while recognizing age and cohort are confounded. / Child assent in research: Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work.
B. Cross-sectional design: Comparing age groups during one data-collection period while recognizing age and cohort are confounded. / Child assent in research: Explaining a study to a child in accessible language and respecting dissent under applicable safeguards.
C. Cross-sectional design: Explaining a study to a child in accessible language and respecting dissent under applicable safeguards. / Child assent in research: Comparing age groups during one data-collection period while recognizing age and cohort are confounded.
D. Cross-sectional design: Defining observable criteria for a study variable before collecting data. / Child assent in research: Explaining a study to a child in accessible language and respecting dissent under applicable safeguards.

0356. A student confuses Random assignment with Cross-sectional design. Which explanation most accurately separates them?

A. Random assignment: A design that compares different individuals or groups at one time point. / Cross-sectional design: Allocation of participants to study conditions by chance to support baseline comparability.
B. Random assignment: The extent to which findings may apply across populations, settings, measures, and conditions beyond the study. / Cross-sectional design: A design that compares different individuals or groups at one time point.
C. Random assignment: Allocation of participants to study conditions by chance to support baseline comparability. / Cross-sectional design: A design that compares different individuals or groups at one time point.
D. Random assignment: Allocation of participants to study conditions by chance to support baseline comparability. / Cross-sectional design: A precise specification of how a construct or variable is observed, measured, or manipulated.

0357. Which option is the clearest practical expression of Random assignment?

A. Following the same children over time to study within-person change.
B. Identifying a third factor that may account for an observed association between exposure and outcome.
C. Using a chance procedure to allocate enrolled participants to treatment conditions.
D. Explaining a study to a child in accessible language and respecting dissent under applicable safeguards.

0358. While consulting in the youth advocacy program, a mental-health professional supports a adolescent student by using this approach: considering whether a sample and setting resemble the populations to which results are generalized. Which concept is being applied?

A. Random assignment
B. Operational definition
C. External validity
D. Child assent in research

0359. A research trainee is asked what should shape a young person aged 16’s support in the telehealth session. The proposed focus is explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult. Which principle does it represent?

A. Confounding variable
B. Informed research consent
C. Operational definition
D. External validity

0360. While supporting a child aged 6 in the school consultation, a caregiver working with a counselor adopts this practice: following the same children over time to study within-person change. Which concept best explains the choice?

A. Preregistration
B. Informed research consent
C. Longitudinal design
D. Confounding variable

0361. Which option correctly matches each concept to its practice focus: Operational definition and Internal validity?

A. Operational definition: Explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult. / Internal validity: Evaluating whether rival explanations for a treatment effect have been addressed.
B. Operational definition: Evaluating whether rival explanations for a treatment effect have been addressed. / Internal validity: Defining observable criteria for a study variable before collecting data.
C. Operational definition: Defining observable criteria for a study variable before collecting data. / Internal validity: Evaluating whether rival explanations for a treatment effect have been addressed.
D. Operational definition: Defining observable criteria for a study variable before collecting data. / Internal validity: Explaining a study to a child in accessible language and respecting dissent under applicable safeguards.

0362. A student aged 17’s service team meets in the clinical planning session. The caregiver working with a counselor recommends a change involving comparing age groups during one data-collection period while recognizing age and cohort are confounded. Which idea best explains it?

A. Informed research consent
B. Child assent in research
C. Cross-sectional design
D. External validity

0363. Which description belongs with the term Internal validity?

A. The strength of evidence that a study’s manipulation or exposure, rather than alternatives, explains the observed effect.
B. A design that measures the same individuals or units across multiple time points.
C. Publicly documenting hypotheses, methods, and analysis plans before examining outcome data.
D. Voluntary authorization to participate based on adequate disclosure, provided by an authorized adult when required.

0364. A consulting counselor is explaining a choice to a student aged 15 and caregiver in the youth group. The choice centers on defining observable criteria for a study variable before collecting data. Which idea is illustrated?

A. Operational definition
B. Preregistration
C. Cross-sectional design
D. Random assignment

0365. A consultant is preparing a follow-up plan for a child aged 11 in the school consultation. The plan calls for considering whether a sample and setting resemble the populations to which results are generalized. Which concept names this approach?

A. External validity
B. Cross-sectional design
C. Informed research consent
D. Random assignment

0366. Which comparison correctly distinguishes Internal validity from Preregistration?

A. Internal validity: The strength of evidence that a study's manipulation or exposure, rather than alternatives, explains the observed effect. / Preregistration: Publicly documenting hypotheses, methods, and analysis plans before examining outcome data.
B. Internal validity: A factor associated with both a presumed cause and outcome that can offer an alternative explanation. / Preregistration: Publicly documenting hypotheses, methods, and analysis plans before examining outcome data.
C. Internal validity: Publicly documenting hypotheses, methods, and analysis plans before examining outcome data. / Preregistration: The strength of evidence that a study's manipulation or exposure, rather than alternatives, explains the observed effect.
D. Internal validity: The strength of evidence that a study's manipulation or exposure, rather than alternatives, explains the observed effect. / Preregistration: Allocation of participants to study conditions by chance to support baseline comparability.

0367. Which professional action most closely applies External validity?

A. Considering whether a sample and setting resemble the populations to which results are generalized.
B. Comparing age groups during one data-collection period while recognizing age and cohort are confounded.
C. Defining observable criteria for a study variable before collecting data.
D. Evaluating whether rival explanations for a treatment effect have been addressed.

0368. Choose the definition pair that correctly explains Child assent in research first and Preregistration second.

A. Child assent in research: Publicly documenting hypotheses, methods, and analysis plans before examining outcome data. / Preregistration: A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission.
B. Child assent in research: A precise specification of how a construct or variable is observed, measured, or manipulated. / Preregistration: Publicly documenting hypotheses, methods, and analysis plans before examining outcome data.
C. Child assent in research: A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission. / Preregistration: Publicly documenting hypotheses, methods, and analysis plans before examining outcome data.
D. Child assent in research: A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission. / Preregistration: A factor associated with both a presumed cause and outcome that can offer an alternative explanation.

0369. In a case note about a teenage client, a consultant working in the community service agency records this priority: defining observable criteria for a study variable before collecting data. What principle is reflected?

A. Random assignment
B. Operational definition
C. Child assent in research
D. Informed research consent

0370. Which course concept is defined as follows: A design that compares different individuals or groups at one time point.

A. Cross-sectional design
B. Preregistration
C. Random assignment
D. Confounding variable

0371. Which applied comparison correctly identifies what belongs to Confounding variable versus Preregistration?

A. Confounding variable: Identifying a third factor that may account for an observed association between exposure and outcome. / Preregistration: Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work.
B. Confounding variable: Identifying a third factor that may account for an observed association between exposure and outcome. / Preregistration: Explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult.
C. Confounding variable: Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work. / Preregistration: Identifying a third factor that may account for an observed association between exposure and outcome.
D. Confounding variable: Comparing age groups during one data-collection period while recognizing age and cohort are confounded. / Preregistration: Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work.

0372. Which option preserves the correct meaning of both Internal validity and Child assent in research?

A. Internal validity: A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission. / Child assent in research: The strength of evidence that a study's manipulation or exposure, rather than alternatives, explains the observed effect.
B. Internal validity: The strength of evidence that a study's manipulation or exposure, rather than alternatives, explains the observed effect. / Child assent in research: A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission.
C. Internal validity: The extent to which findings may apply across populations, settings, measures, and conditions beyond the study. / Child assent in research: A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission.
D. Internal validity: The strength of evidence that a study's manipulation or exposure, rather than alternatives, explains the observed effect. / Child assent in research: Publicly documenting hypotheses, methods, and analysis plans before examining outcome data.

0373. A counselor reviews a plan for a student aged 12 in the community youth program. The plan emphasizes explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult. Which course idea does this reflect?

A. External validity
B. Informed research consent
C. Longitudinal design
D. Preregistration

0374. A trainee must explain Child assent in research. Which answer is accurate?

A. Allocation of participants to study conditions by chance to support baseline comparability.
B. A design that compares different individuals or groups at one time point.
C. A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission.
D. A precise specification of how a construct or variable is observed, measured, or manipulated.

0375. In a supervision quiz, how should Longitudinal design be distinguished from Preregistration?

A. Longitudinal design: A design that measures the same individuals or units across multiple time points. / Preregistration: A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission.
B. Longitudinal design: Publicly documenting hypotheses, methods, and analysis plans before examining outcome data. / Preregistration: A design that measures the same individuals or units across multiple time points.
C. Longitudinal design: A design that measures the same individuals or units across multiple time points. / Preregistration: Publicly documenting hypotheses, methods, and analysis plans before examining outcome data.
D. Longitudinal design: A factor associated with both a presumed cause and outcome that can offer an alternative explanation. / Preregistration: Publicly documenting hypotheses, methods, and analysis plans before examining outcome data.

0376. Which named construct is captured by this account? A design that measures the same individuals or units across multiple time points.

A. Longitudinal design
B. Random assignment
C. Informed research consent
D. Operational definition

0377. Identify the most precise label for this idea: The extent to which findings may apply across populations, settings, measures, and conditions beyond the study.

A. Confounding variable
B. Preregistration
C. External validity
D. Informed research consent

0378. Which named construct is captured by this account? The strength of evidence that a study's manipulation or exposure, rather than alternatives, explains the observed effect.

A. Internal validity
B. Random assignment
C. Operational definition
D. Preregistration

0379. Consider a middle-school student receiving help in the youth advocacy program. The teacher and counselor focuses on identifying a third factor that may account for an observed association between exposure and outcome. Which term best describes the guiding idea?

A. Confounding variable
B. Internal validity
C. Preregistration
D. Operational definition

0380. Choose the practice comparison that best separates Operational definition from Internal validity.

A. Operational definition: Defining observable criteria for a study variable before collecting data. / Internal validity: Evaluating whether rival explanations for a treatment effect have been addressed.
B. Operational definition: Evaluating whether rival explanations for a treatment effect have been addressed. / Internal validity: Defining observable criteria for a study variable before collecting data.
C. Operational definition: Explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult. / Internal validity: Evaluating whether rival explanations for a treatment effect have been addressed.
D. Operational definition: Defining observable criteria for a study variable before collecting data. / Internal validity: Explaining a study to a child in accessible language and respecting dissent under applicable safeguards.

0381. Which named construct is captured by this account? The extent to which findings may apply across populations, settings, measures, and conditions beyond the study.

A. Informed research consent
B. Longitudinal design
C. Preregistration
D. External validity

0382. While consulting in the multidisciplinary case conference, a supervised trainee supports a school-age child by using this approach: following the same children over time to study within-person change. Which concept is being applied?

A. Longitudinal design
B. Internal validity
C. Preregistration
D. Random assignment

0383. While consulting in the behavior-support review, a consultant supports a student aged 17 by using this approach: identifying a third factor that may account for an observed association between exposure and outcome. Which concept is being applied?

A. Operational definition
B. Confounding variable
C. External validity
D. Cross-sectional design

0384. A member of a clinical team is supporting a young person in the classroom support meeting. The key practice is comparing age groups during one data-collection period while recognizing age and cohort are confounded. Which course concept is most relevant?

A. Child assent in research
B. External validity
C. Random assignment
D. Cross-sectional design

0385. A doctoral student reads the following description. Which concept does it define? A design that compares different individuals or groups at one time point.

A. Cross-sectional design
B. Operational definition
C. Internal validity
D. Confounding variable

0386. A case conference asks for a distinction between Cross-sectional design and Informed research consent. Which answer is sound?

A. Cross-sectional design: A design that compares different individuals or groups at one time point. / Informed research consent: Allocation of participants to study conditions by chance to support baseline comparability.
B. Cross-sectional design: A precise specification of how a construct or variable is observed, measured, or manipulated. / Informed research consent: Voluntary authorization to participate based on adequate disclosure, provided by an authorized adult when required.
C. Cross-sectional design: A design that compares different individuals or groups at one time point. / Informed research consent: Voluntary authorization to participate based on adequate disclosure, provided by an authorized adult when required.
D. Cross-sectional design: Voluntary authorization to participate based on adequate disclosure, provided by an authorized adult when required. / Informed research consent: A design that compares different individuals or groups at one time point.

0387. A trainee must explain Operational definition. Which answer is accurate?

A. A design that measures the same individuals or units across multiple time points.
B. Publicly documenting hypotheses, methods, and analysis plans before examining outcome data.
C. A factor associated with both a presumed cause and outcome that can offer an alternative explanation.
D. A precise specification of how a construct or variable is observed, measured, or manipulated.

0388. A client in late adolescence's service team meets in the multidisciplinary case conference. The caregiver working with a counselor recommends a change involving explaining a study to a child in accessible language and respecting dissent under applicable safeguards. Which idea best explains it?

A. Longitudinal design
B. Informed research consent
C. Confounding variable
D. Child assent in research

0389. A student confuses Operational definition with Preregistration. Which explanation most accurately separates them?

A. Operational definition: Allocation of participants to study conditions by chance to support baseline comparability. / Preregistration: Publicly documenting hypotheses, methods, and analysis plans before examining outcome data.
B. Operational definition: Publicly documenting hypotheses, methods, and analysis plans before examining outcome data. / Preregistration: A precise specification of how a construct or variable is observed, measured, or manipulated.
C. Operational definition: A precise specification of how a construct or variable is observed, measured, or manipulated. / Preregistration: The extent to which findings may apply across populations, settings, measures, and conditions beyond the study.
D. Operational definition: A precise specification of how a construct or variable is observed, measured, or manipulated. / Preregistration: Publicly documenting hypotheses, methods, and analysis plans before examining outcome data.

0390. A team must select a support approach for a young adolescent client at the behavior-support review. The family therapist recommends evaluating whether rival explanations for a treatment effect have been addressed. Which idea is most relevant?

A. Operational definition
B. Preregistration
C. Internal validity
D. Random assignment

0391. Which option pairs the definitions of Cross-sectional design and Child assent in research correctly, in that order?

A. Cross-sectional design: A design that compares different individuals or groups at one time point. / Child assent in research: A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission.
B. Cross-sectional design: A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission. / Child assent in research: A design that compares different individuals or groups at one time point.
C. Cross-sectional design: A design that compares different individuals or groups at one time point. / Child assent in research: Publicly documenting hypotheses, methods, and analysis plans before examining outcome data.
D. Cross-sectional design: A precise specification of how a construct or variable is observed, measured, or manipulated. / Child assent in research: A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission.

0392. A consultant and a young person are discussing support in the school-based service. The selected practice is explaining a study to a child in accessible language and respecting dissent under applicable safeguards. Which concept does this demonstrate?

A. Child assent in research
B. Longitudinal design
C. Cross-sectional design
D. External validity

0393. Which comparison would correct a trainee's misunderstanding of Operational definition versus Internal validity?

A. Operational definition: A precise specification of how a construct or variable is observed, measured, or manipulated. / Internal validity: A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission.
B. Operational definition: The strength of evidence that a study's manipulation or exposure, rather than alternatives, explains the observed effect. / Internal validity: A precise specification of how a construct or variable is observed, measured, or manipulated.
C. Operational definition: A precise specification of how a construct or variable is observed, measured, or manipulated. / Internal validity: The strength of evidence that a study's manipulation or exposure, rather than alternatives, explains the observed effect.
D. Operational definition: Voluntary authorization to participate based on adequate disclosure, provided by an authorized adult when required. / Internal validity: The strength of evidence that a study's manipulation or exposure, rather than alternatives, explains the observed effect.

0394. In a professional consultation about a child aged 14, the member of a clinical team describes this response in the student-support meeting: defining observable criteria for a study variable before collecting data. Which term is most apt?

A. Longitudinal design
B. Operational definition
C. Child assent in research
D. Random assignment

0395. Which comparison would correct a trainee’s misunderstanding of Child assent in research versus Preregistration?

A. Child assent in research: A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission. / Preregistration: Publicly documenting hypotheses, methods, and analysis plans before examining outcome data.
B. Child assent in research: Publicly documenting hypotheses, methods, and analysis plans before examining outcome data. / Preregistration: A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission.
C. Child assent in research: A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission. / Preregistration: A factor associated with both a presumed cause and outcome that can offer an alternative explanation.
D. Child assent in research: A precise specification of how a construct or variable is observed, measured, or manipulated. / Preregistration: Publicly documenting hypotheses, methods, and analysis plans before examining outcome data.

0396. Select the best explanation of Confounding variable.

A. The extent to which findings may apply across populations, settings, measures, and conditions beyond the study.
B. A factor associated with both a presumed cause and outcome that can offer an alternative explanation.
C. Publicly documenting hypotheses, methods, and analysis plans before examining outcome data.
D. Voluntary authorization to participate based on adequate disclosure, provided by an authorized adult when required.

0397. A trainee must distinguish how Confounding variable and Preregistration guide practice. Which comparison is accurate?

A. Confounding variable: Identifying a third factor that may account for an observed association between exposure and outcome. / Preregistration: Explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult.
B. Confounding variable: Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work. / Preregistration: Identifying a third factor that may account for an observed association between exposure and outcome.
C. Confounding variable: Comparing age groups during one data-collection period while recognizing age and cohort are confounded. / Preregistration: Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work.
D. Confounding variable: Identifying a third factor that may account for an observed association between exposure and outcome. / Preregistration: Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work.

0398. Which statement shows a sound practice-level distinction between Internal validity and Child assent in research?

A. Internal validity: Explaining a study to a child in accessible language and respecting dissent under applicable safeguards. / Child assent in research: Evaluating whether rival explanations for a treatment effect have been addressed.
B. Internal validity: Evaluating whether rival explanations for a treatment effect have been addressed. / Child assent in research: Explaining a study to a child in accessible language and respecting dissent under applicable safeguards.
C. Internal validity: Considering whether a sample and setting resemble the populations to which results are generalized. / Child assent in research: Explaining a study to a child in accessible language and respecting dissent under applicable safeguards.
D. Internal validity: Evaluating whether rival explanations for a treatment effect have been addressed. / Child assent in research: Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work.

0399. A child aged 14 is receiving support in the family session. The teacher and counselor is guided by this practice: explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult. Which principle best fits?

A. Confounding variable
B. Operational definition
C. Informed research consent
D. Longitudinal design

0400. A community practitioner describes an intervention for a young person aged 10 in the child guidance clinic, centered on identifying a third factor that may account for an observed association between exposure and outcome. Which named idea is most relevant?

A. Longitudinal design
B. Confounding variable
C. External validity
D. Operational definition

0401. For a older adolescent client in the child guidance clinic, a clinical supervisor makes this practice the immediate priority: explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult. Which concept fits best?

A. External validity
B. Informed research consent
C. Internal validity
D. Preregistration

0402. Which description belongs with the term Longitudinal design?

A. Publicly documenting hypotheses, methods, and analysis plans before examining outcome data.
B. The strength of evidence that a study’s manipulation or exposure, rather than alternatives, explains the observed effect.
C. A design that measures the same individuals or units across multiple time points.
D. Voluntary authorization to participate based on adequate disclosure, provided by an authorized adult when required.

0403. While supporting a adolescent student in the parent meeting, a parent educator adopts this practice: defining observable criteria for a study variable before collecting data. Which concept best explains the choice?

A. Cross-sectional design
B. Random assignment
C. External validity
D. Operational definition

0404. Which statement accurately contrasts the course concepts Random assignment and Internal validity?

A. Random assignment: The strength of evidence that a study’s manipulation or exposure, rather than alternatives, explains the observed effect. / Internal validity: Allocation of participants to study conditions by chance to support baseline comparability.
B. Random assignment: A factor associated with both a presumed cause and outcome that can offer an alternative explanation. / Internal validity: The strength of evidence that a study’s manipulation or exposure, rather than alternatives, explains the observed effect.
C. Random assignment: Allocation of participants to study conditions by chance to support baseline comparability. / Internal validity: The strength of evidence that a study’s manipulation or exposure, rather than alternatives, explains the observed effect.
D. Random assignment: Allocation of participants to study conditions by chance to support baseline comparability. / Internal validity: Publicly documenting hypotheses, methods, and analysis plans before examining outcome data.

0405. Which description belongs with the term Confounding variable?

A. A factor associated with both a presumed cause and outcome that can offer an alternative explanation.
B. A design that measures the same individuals or units across multiple time points.
C. Allocation of participants to study conditions by chance to support baseline comparability.
D. A design that compares different individuals or groups at one time point.

0406. Which option pairs the definitions of Confounding variable and Internal validity correctly, in that order?

A. Confounding variable: A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission. / Internal validity: The strength of evidence that a study's manipulation or exposure, rather than alternatives, explains the observed effect.
B. Confounding variable: A factor associated with both a presumed cause and outcome that can offer an alternative explanation. / Internal validity: The strength of evidence that a study's manipulation or exposure, rather than alternatives, explains the observed effect.
C. Confounding variable: A factor associated with both a presumed cause and outcome that can offer an alternative explanation. / Internal validity: A design that compares different individuals or groups at one time point.
D. Confounding variable: The strength of evidence that a study's manipulation or exposure, rather than alternatives, explains the observed effect. / Internal validity: A factor associated with both a presumed cause and outcome that can offer an alternative explanation.

0407. A trainee must choose a practice that exemplifies Informed research consent. Which action is the best fit?

A. Evaluating whether rival explanations for a treatment effect have been addressed.
B. Identifying a third factor that may account for an observed association between exposure and outcome.
C. Using a chance procedure to allocate enrolled participants to treatment conditions.
D. Explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult.

0408. Choose the definition pair that correctly explains Longitudinal design first and Informed research consent second.

A. Longitudinal design: A design that measures the same individuals or units across multiple time points. / Informed research consent: Voluntary authorization to participate based on adequate disclosure, provided by an authorized adult when required.
B. Longitudinal design: Voluntary authorization to participate based on adequate disclosure, provided by an authorized adult when required. / Informed research consent: A design that measures the same individuals or units across multiple time points.
C. Longitudinal design: A design that measures the same individuals or units across multiple time points. / Informed research consent: The extent to which findings may apply across populations, settings, measures, and conditions beyond the study.
D. Longitudinal design: A design that compares different individuals or groups at one time point. / Informed research consent: Voluntary authorization to participate based on adequate disclosure, provided by an authorized adult when required.

0409. During service review in the community service agency, a therapist describes recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work. for a student aged 15. Which course idea is most applicable?

A. Longitudinal design
B. Operational definition
C. External validity
D. Preregistration

0410. Which description belongs with the term Random assignment?

A. A factor associated with both a presumed cause and outcome that can offer an alternative explanation.
B. Allocation of participants to study conditions by chance to support baseline comparability.
C. A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission.
D. The extent to which findings may apply across populations, settings, measures, and conditions beyond the study.

0411. A case discussion concerns a child aged 14 and a caregiver working with a counselor in the school-based service. The practitioner is considering identifying a third factor that may account for an observed association between exposure and outcome. Which principle is involved?

A. Confounding variable
B. External validity
C. Random assignment
D. Longitudinal design

0412. Select the best explanation of Random assignment.

A. A factor associated with both a presumed cause and outcome that can offer an alternative explanation.
B. A precise specification of how a construct or variable is observed, measured, or manipulated.
C. Voluntary authorization to participate based on adequate disclosure, provided by an authorized adult when required.
D. Allocation of participants to study conditions by chance to support baseline comparability.

0413. Which statement accurately contrasts the course concepts Operational definition and Confounding variable?

A. Operational definition: A precise specification of how a construct or variable is observed, measured, or manipulated. / Confounding variable: A factor associated with both a presumed cause and outcome that can offer an alternative explanation.
B. Operational definition: A factor associated with both a presumed cause and outcome that can offer an alternative explanation. / Confounding variable: A precise specification of how a construct or variable is observed, measured, or manipulated.
C. Operational definition: A precise specification of how a construct or variable is observed, measured, or manipulated. / Confounding variable: Allocation of participants to study conditions by chance to support baseline comparability.
D. Operational definition: A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission. / Confounding variable: A factor associated with both a presumed cause and outcome that can offer an alternative explanation.

0414. Choose the term that matches this definition: A factor associated with both a presumed cause and outcome that can offer an alternative explanation.

A. Longitudinal design
B. Confounding variable
C. External validity
D. Preregistration

0415. In a case note about a young adolescent client, a member of a clinical team working in the supervision meeting records this priority: considering whether a sample and setting resemble the populations to which results are generalized. What principle is reflected?

A. External validity
B. Random assignment
C. Longitudinal design
D. Confounding variable

0416. Choose the definition pair that correctly explains Random assignment first and Confounding variable second.

A. Random assignment: Allocation of participants to study conditions by chance to support baseline comparability. / Confounding variable: Publicly documenting hypotheses, methods, and analysis plans before examining outcome data.
B. Random assignment: A design that measures the same individuals or units across multiple time points. / Confounding variable: A factor associated with both a presumed cause and outcome that can offer an alternative explanation.
C. Random assignment: Allocation of participants to study conditions by chance to support baseline comparability. / Confounding variable: A factor associated with both a presumed cause and outcome that can offer an alternative explanation.
D. Random assignment: A factor associated with both a presumed cause and outcome that can offer an alternative explanation. / Confounding variable: Allocation of participants to study conditions by chance to support baseline comparability.

0417. A planning meeting about a young person aged 10 includes a school support specialist. The proposed practice in the family session is considering whether a sample and setting resemble the populations to which results are generalized. Which idea underlies it?

A. Informed research consent
B. External validity
C. Random assignment
D. Confounding variable

0418. A doctoral student reads the following description. Which concept does it define? Voluntary authorization to participate based on adequate disclosure, provided by an authorized adult when required.

A. Informed research consent
B. Internal validity
C. Longitudinal design
D. Confounding variable

0419. Which statement most accurately defines Child assent in research?

A. A precise specification of how a construct or variable is observed, measured, or manipulated.
B. A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission.
C. A design that compares different individuals or groups at one time point.
D. A factor associated with both a presumed cause and outcome that can offer an alternative explanation.

0420. Which comparison correctly distinguishes Random assignment from Cross-sectional design?

A. Random assignment: A design that compares different individuals or groups at one time point. / Cross-sectional design: Allocation of participants to study conditions by chance to support baseline comparability.
B. Random assignment: Allocation of participants to study conditions by chance to support baseline comparability. / Cross-sectional design: A precise specification of how a construct or variable is observed, measured, or manipulated.
C. Random assignment: Allocation of participants to study conditions by chance to support baseline comparability. / Cross-sectional design: A design that compares different individuals or groups at one time point.
D. Random assignment: The extent to which findings may apply across populations, settings, measures, and conditions beyond the study. / Cross-sectional design: A design that compares different individuals or groups at one time point.

0421. Choose the definition pair that correctly explains Confounding variable first and Preregistration second.

A. Confounding variable: A factor associated with both a presumed cause and outcome that can offer an alternative explanation. / Preregistration: Publicly documenting hypotheses, methods, and analysis plans before examining outcome data.
B. Confounding variable: A factor associated with both a presumed cause and outcome that can offer an alternative explanation. / Preregistration: Voluntary authorization to participate based on adequate disclosure, provided by an authorized adult when required.
C. Confounding variable: Publicly documenting hypotheses, methods, and analysis plans before examining outcome data. / Preregistration: A factor associated with both a presumed cause and outcome that can offer an alternative explanation.
D. Confounding variable: A design that compares different individuals or groups at one time point. / Preregistration: Publicly documenting hypotheses, methods, and analysis plans before examining outcome data.

0422. A trainee must distinguish how Internal validity and External validity guide practice. Which comparison is accurate?

A. Internal validity: Explaining a study to a child in accessible language and respecting dissent under applicable safeguards. / External validity: Considering whether a sample and setting resemble the populations to which results are generalized.
B. Internal validity: Evaluating whether rival explanations for a treatment effect have been addressed. / External validity: Considering whether a sample and setting resemble the populations to which results are generalized.
C. Internal validity: Considering whether a sample and setting resemble the populations to which results are generalized. / External validity: Evaluating whether rival explanations for a treatment effect have been addressed.
D. Internal validity: Evaluating whether rival explanations for a treatment effect have been addressed. / External validity: Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work.

0423. A supervisor asks for an applied contrast between Internal validity and Preregistration. Which option fits?

A. Internal validity: Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work. / Preregistration: Evaluating whether rival explanations for a treatment effect have been addressed.
B. Internal validity: Evaluating whether rival explanations for a treatment effect have been addressed. / Preregistration: Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work.
C. Internal validity: Evaluating whether rival explanations for a treatment effect have been addressed. / Preregistration: Using a chance procedure to allocate enrolled participants to treatment conditions.
D. Internal validity: Identifying a third factor that may account for an observed association between exposure and outcome. / Preregistration: Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work.

0424. Which paired example correctly applies Longitudinal design first and Preregistration second?

A. Longitudinal design: Following the same children over time to study within-person change. / Preregistration: Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work.
B. Longitudinal design: Following the same children over time to study within-person change. / Preregistration: Explaining a study to a child in accessible language and respecting dissent under applicable safeguards.
C. Longitudinal design: Identifying a third factor that may account for an observed association between exposure and outcome. / Preregistration: Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work.
D. Longitudinal design: Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work. / Preregistration: Following the same children over time to study within-person change.

0425. How should a practitioner distinguish the applications of Operational definition and Random assignment?

A. Operational definition: Defining observable criteria for a study variable before collecting data. / Random assignment: Using a chance procedure to allocate enrolled participants to treatment conditions.
B. Operational definition: Explaining a study to a child in accessible language and respecting dissent under applicable safeguards. / Random assignment: Using a chance procedure to allocate enrolled participants to treatment conditions.
C. Operational definition: Using a chance procedure to allocate enrolled participants to treatment conditions. / Random assignment: Defining observable criteria for a study variable before collecting data.
D. Operational definition: Defining observable criteria for a study variable before collecting data. / Random assignment: Explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult.

0426. Which option is the clearest practical expression of Internal validity?

A. Explaining a study to a child in accessible language and respecting dissent under applicable safeguards.
B. Evaluating whether rival explanations for a treatment effect have been addressed.
C. Explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult.
D. Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work.

0427. A member of a clinical team and a client in late adolescence are discussing support in the family session. The selected practice is identifying a third factor that may account for an observed association between exposure and outcome. Which concept does this demonstrate?

A. Internal validity
B. Informed research consent
C. Longitudinal design
D. Confounding variable

0428. During work in the parent meeting, a group facilitator identifies this need: explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult. Which idea should guide the response?

A. Longitudinal design
B. Confounding variable
C. Cross-sectional design
D. Informed research consent

0429. For a student aged 15 seen in the family resource center, the program coordinator recommends a plan built around identifying a third factor that may account for an observed association between exposure and outcome. Which concept is reflected?

A. Child assent in research
B. Confounding variable
C. Cross-sectional design
D. Informed research consent

0430. A doctoral student reads the following description. Which concept does it define? A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission.

A. Longitudinal design
B. Child assent in research
C. External validity
D. Informed research consent

0431. A doctoral student reads the following description. Which concept does it define? A design that measures the same individuals or units across multiple time points.

A. Confounding variable
B. Longitudinal design
C. Random assignment
D. Informed research consent

0432. When reviewing a older adolescent client’s plan in the youth group, the case coordinator notes that the next step is explaining a study to a child in accessible language and respecting dissent under applicable safeguards. Which concept guides this step?

A. Operational definition
B. Longitudinal design
C. Child assent in research
D. Random assignment

0433. While consulting in the student-support meeting, a member of a clinical team supports a child aged 14 by using this approach: defining observable criteria for a study variable before collecting data. Which concept is being applied?

A. Operational definition
B. Confounding variable
C. External validity
D. Informed research consent

0434. Which professional action most closely applies Informed research consent?

A. Explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult.
B. Comparing age groups during one data-collection period while recognizing age and cohort are confounded.
C. Defining observable criteria for a study variable before collecting data.
D. Explaining a study to a child in accessible language and respecting dissent under applicable safeguards.

0435. Choose the term that matches this definition: Publicly documenting hypotheses, methods, and analysis plans before examining outcome data.

A. Confounding variable
B. Longitudinal design
C. Preregistration
D. Informed research consent

0436. Which option preserves the correct meaning of both Longitudinal design and Cross-sectional design?

A. Longitudinal design: A design that compares different individuals or groups at one time point. / Cross-sectional design: A design that measures the same individuals or units across multiple time points.
B. Longitudinal design: A design that measures the same individuals or units across multiple time points. / Cross-sectional design: A design that compares different individuals or groups at one time point.
C. Longitudinal design: The strength of evidence that a study's manipulation or exposure, rather than alternatives, explains the observed effect. / Cross-sectional design: A design that compares different individuals or groups at one time point.
D. Longitudinal design: A design that measures the same individuals or units across multiple time points. / Cross-sectional design: Voluntary authorization to participate based on adequate disclosure, provided by an authorized adult when required.

0437. A supervised trainee prepares for a session in the parent meeting with a older adolescent client. The intended approach is identifying a third factor that may account for an observed association between exposure and outcome. Which concept is most relevant?

A. Preregistration
B. Confounding variable
C. Random assignment
D. Informed research consent

0438. Which comparison would correct a trainee's misunderstanding of Random assignment versus Preregistration?

A. Random assignment: Allocation of participants to study conditions by chance to support baseline comparability. / Preregistration: Publicly documenting hypotheses, methods, and analysis plans before examining outcome data.
B. Random assignment: A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission. / Preregistration: Publicly documenting hypotheses, methods, and analysis plans before examining outcome data.
C. Random assignment: Allocation of participants to study conditions by chance to support baseline comparability. / Preregistration: A factor associated with both a presumed cause and outcome that can offer an alternative explanation.
D. Random assignment: Publicly documenting hypotheses, methods, and analysis plans before examining outcome data. / Preregistration: Allocation of participants to study conditions by chance to support baseline comparability.

0439. A supervised trainee is supporting a student aged 9 in the community youth program. The key practice is defining observable criteria for a study variable before collecting data. Which course concept is most relevant?

A. Operational definition
B. Child assent in research
C. Preregistration
D. Internal validity

0440. A older adolescent client and a mental-health professional are reviewing goals in the family session. The agreed action is recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work. Which principle best accounts for it?

A. Informed research consent
B. Longitudinal design
C. Internal validity
D. Preregistration

0441. In the child guidance clinic, a school counselor describes the most appropriate support for a client in early adolescence as explaining a study to a child in accessible language and respecting dissent under applicable safeguards. Which framework is being applied?

A. Confounding variable
B. Child assent in research
C. External validity
D. Preregistration

0442. A case conference asks for a distinction between Cross-sectional design and External validity. Which answer is sound?

A. Cross-sectional design: A factor associated with both a presumed cause and outcome that can offer an alternative explanation. / External validity: The extent to which findings may apply across populations, settings, measures, and conditions beyond the study.
B. Cross-sectional design: A design that compares different individuals or groups at one time point. / External validity: A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission.
C. Cross-sectional design: A design that compares different individuals or groups at one time point. / External validity: The extent to which findings may apply across populations, settings, measures, and conditions beyond the study.
D. Cross-sectional design: The extent to which findings may apply across populations, settings, measures, and conditions beyond the study. / External validity: A design that compares different individuals or groups at one time point.

0443. Select the best explanation of Operational definition.

A. The strength of evidence that a study's manipulation or exposure, rather than alternatives, explains the observed effect.
B. A precise specification of how a construct or variable is observed, measured, or manipulated.
C. A design that compares different individuals or groups at one time point.
D. A design that measures the same individuals or units across multiple time points.

0444. How should a practitioner distinguish the applications of Confounding variable and External validity?

A. Confounding variable: Identifying a third factor that may account for an observed association between exposure and outcome. / External validity: Considering whether a sample and setting resemble the populations to which results are generalized.
B. Confounding variable: Following the same children over time to study within-person change. / External validity: Considering whether a sample and setting resemble the populations to which results are generalized.
C. Confounding variable: Identifying a third factor that may account for an observed association between exposure and outcome. / External validity: Comparing age groups during one data-collection period while recognizing age and cohort are confounded.
D. Confounding variable: Considering whether a sample and setting resemble the populations to which results are generalized. / External validity: Identifying a third factor that may account for an observed association between exposure and outcome.

0445. Which option preserves the correct meaning of both Operational definition and Child assent in research?

A. Operational definition: A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission. / Child assent in research: A precise specification of how a construct or variable is observed, measured, or manipulated.
B. Operational definition: A design that compares different individuals or groups at one time point. / Child assent in research: A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission.
C. Operational definition: A precise specification of how a construct or variable is observed, measured, or manipulated. / Child assent in research: A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission.
D. Operational definition: A precise specification of how a construct or variable is observed, measured, or manipulated. / Child assent in research: The extent to which findings may apply across populations, settings, measures, and conditions beyond the study.

0446. A team must select a support approach for a young person aged 10 at the youth advocacy program. The parent educator recommends explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult. Which idea is most relevant?

A. Child assent in research
B. Operational definition
C. Longitudinal design
D. Informed research consent

0447. Which option correctly matches each concept to its practice focus: Informed research consent and Child assent in research?

A. Informed research consent: Explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult. / Child assent in research: Using a chance procedure to allocate enrolled participants to treatment conditions.
B. Informed research consent: Explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult. / Child assent in research: Explaining a study to a child in accessible language and respecting dissent under applicable safeguards.
C. Informed research consent: Explaining a study to a child in accessible language and respecting dissent under applicable safeguards. / Child assent in research: Explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult.
D. Informed research consent: Following the same children over time to study within-person change. / Child assent in research: Explaining a study to a child in accessible language and respecting dissent under applicable safeguards.

0448. A school counselor is asked to justify a plan for a young person aged 18 in the family session. It calls for following the same children over time to study within-person change. Which concept provides the rationale?

A. Random assignment
B. External validity
C. Longitudinal design
D. Confounding variable

0449. Choose the definition pair that correctly explains Random assignment first and Informed research consent second.

A. Random assignment: Allocation of participants to study conditions by chance to support baseline comparability. / Informed research consent: Publicly documenting hypotheses, methods, and analysis plans before examining outcome data.
B. Random assignment: Voluntary authorization to participate based on adequate disclosure, provided by an authorized adult when required. / Informed research consent: Allocation of participants to study conditions by chance to support baseline comparability.
C. Random assignment: Allocation of participants to study conditions by chance to support baseline comparability. / Informed research consent: Voluntary authorization to participate based on adequate disclosure, provided by an authorized adult when required.
D. Random assignment: A design that compares different individuals or groups at one time point. / Informed research consent: Voluntary authorization to participate based on adequate disclosure, provided by an authorized adult when required.

0450. A teacher and counselor is explaining a choice to a child aged 14 and caregiver in the family session. The choice centers on explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult. Which idea is illustrated?

A. Preregistration
B. Informed research consent
C. Cross-sectional design
D. External validity

0451. A doctoral student reads the following description. Which concept does it define? Allocation of participants to study conditions by chance to support baseline comparability.

A. Cross-sectional design
B. Child assent in research
C. Preregistration
D. Random assignment

0452. A research trainee describes an intervention for a young person aged 13 in the parent meeting, centered on explaining a study to a child in accessible language and respecting dissent under applicable safeguards. Which named idea is most relevant?

A. Random assignment
B. External validity
C. Informed research consent
D. Child assent in research

0453. Which applied comparison correctly identifies what belongs to Operational definition versus Confounding variable?

A. Operational definition: Defining observable criteria for a study variable before collecting data. / Confounding variable: Using a chance procedure to allocate enrolled participants to treatment conditions.
B. Operational definition: Explaining a study to a child in accessible language and respecting dissent under applicable safeguards. / Confounding variable: Identifying a third factor that may account for an observed association between exposure and outcome.
C. Operational definition: Defining observable criteria for a study variable before collecting data. / Confounding variable: Identifying a third factor that may account for an observed association between exposure and outcome.
D. Operational definition: Identifying a third factor that may account for an observed association between exposure and outcome. / Confounding variable: Defining observable criteria for a study variable before collecting data.

0454. A team must select a support approach for a child aged 11 at the family session. The family therapist recommends defining observable criteria for a study variable before collecting data. Which idea is most relevant?

A. Internal validity
B. External validity
C. Confounding variable
D. Operational definition

0455. How should a practitioner distinguish the applications of Random assignment and Cross-sectional design?

A. Random assignment: Using a chance procedure to allocate enrolled participants to treatment conditions. / Cross-sectional design: Comparing age groups during one data-collection period while recognizing age and cohort are confounded.
B. Random assignment: Using a chance procedure to allocate enrolled participants to treatment conditions. / Cross-sectional design: Defining observable criteria for a study variable before collecting data.
C. Random assignment: Considering whether a sample and setting resemble the populations to which results are generalized. / Cross-sectional design: Comparing age groups during one data-collection period while recognizing age and cohort are confounded.
D. Random assignment: Comparing age groups during one data-collection period while recognizing age and cohort are confounded. / Cross-sectional design: Using a chance procedure to allocate enrolled participants to treatment conditions.

0456. How should a practitioner distinguish the applications of Cross-sectional design and Child assent in research?

A. Cross-sectional design: Explaining a study to a child in accessible language and respecting dissent under applicable safeguards. / Child assent in research: Comparing age groups during one data-collection period while recognizing age and cohort are confounded.
B. Cross-sectional design: Comparing age groups during one data-collection period while recognizing age and cohort are confounded. / Child assent in research: Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work.
C. Cross-sectional design: Comparing age groups during one data-collection period while recognizing age and cohort are confounded. / Child assent in research: Explaining a study to a child in accessible language and respecting dissent under applicable safeguards.
D. Cross-sectional design: Defining observable criteria for a study variable before collecting data. / Child assent in research: Explaining a study to a child in accessible language and respecting dissent under applicable safeguards.

0457. A trainee must distinguish how Internal validity and Informed research consent guide practice. Which comparison is accurate?

A. Internal validity: Explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult. / Informed research consent: Evaluating whether rival explanations for a treatment effect have been addressed.
B. Internal validity: Identifying a third factor that may account for an observed association between exposure and outcome. / Informed research consent: Explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult.
C. Internal validity: Evaluating whether rival explanations for a treatment effect have been addressed. / Informed research consent: Defining observable criteria for a study variable before collecting data.
D. Internal validity: Evaluating whether rival explanations for a treatment effect have been addressed. / Informed research consent: Explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult.

0458. In the family resource center, a parent educator is considering this approach for a school-age child: using a chance procedure to allocate enrolled participants to treatment conditions. Which framework does it represent?

A. Internal validity
B. External validity
C. Preregistration
D. Random assignment

0459. Which description belongs with the term Informed research consent?

A. A factor associated with both a presumed cause and outcome that can offer an alternative explanation.
B. Publicly documenting hypotheses, methods, and analysis plans before examining outcome data.
C. Voluntary authorization to participate based on adequate disclosure, provided by an authorized adult when required.
D. The strength of evidence that a study's manipulation or exposure, rather than alternatives, explains the observed effect.

0460. In a professional consultation about a school-age child, the supervised trainee describes this response in the multidisciplinary case conference: following the same children over time to study within-person change. Which term is most apt?

A. Longitudinal design
B. Operational definition
C. External validity
D. Confounding variable

0461. In the counseling practicum, a team asks how a school counselor can support a child of elementary-school age. One proposed action is defining observable criteria for a study variable before collecting data. Which idea does it represent?

A. Confounding variable
B. External validity
C. Operational definition
D. Cross-sectional design

0462. Which statement shows a sound practice-level distinction between Internal validity and Informed research consent?

A. Internal validity: Explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult. / Informed research consent: Evaluating whether rival explanations for a treatment effect have been addressed.
B. Internal validity: Evaluating whether rival explanations for a treatment effect have been addressed. / Informed research consent: Defining observable criteria for a study variable before collecting data.
C. Internal validity: Identifying a third factor that may account for an observed association between exposure and outcome. / Informed research consent: Explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult.
D. Internal validity: Evaluating whether rival explanations for a treatment effect have been addressed. / Informed research consent: Explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult.

0463. How are Random assignment and Preregistration most accurately differentiated in this curriculum?

A. Random assignment: Allocation of participants to study conditions by chance to support baseline comparability. / Preregistration: Publicly documenting hypotheses, methods, and analysis plans before examining outcome data.
B. Random assignment: A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission. / Preregistration: Publicly documenting hypotheses, methods, and analysis plans before examining outcome data.
C. Random assignment: Publicly documenting hypotheses, methods, and analysis plans before examining outcome data. / Preregistration: Allocation of participants to study conditions by chance to support baseline comparability.
D. Random assignment: Allocation of participants to study conditions by chance to support baseline comparability. / Preregistration: A factor associated with both a presumed cause and outcome that can offer an alternative explanation.

0464. Which option preserves the correct meaning of both Random assignment and Preregistration?

A. Random assignment: Allocation of participants to study conditions by chance to support baseline comparability. / Preregistration: Publicly documenting hypotheses, methods, and analysis plans before examining outcome data.
B. Random assignment: A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission. / Preregistration: Publicly documenting hypotheses, methods, and analysis plans before examining outcome data.
C. Random assignment: Publicly documenting hypotheses, methods, and analysis plans before examining outcome data. / Preregistration: Allocation of participants to study conditions by chance to support baseline comparability.
D. Random assignment: Allocation of participants to study conditions by chance to support baseline comparability. / Preregistration: A factor associated with both a presumed cause and outcome that can offer an alternative explanation.

0465. During service review in the family session, a service navigator describes comparing age groups during one data-collection period while recognizing age and cohort are confounded. for a middle-school student. Which course idea is most applicable?

A. Child assent in research
B. Cross-sectional design
C. External validity
D. Operational definition

0466. Which statement accurately contrasts the course concepts Confounding variable and Preregistration?

A. Confounding variable: A factor associated with both a presumed cause and outcome that can offer an alternative explanation. / Preregistration: Publicly documenting hypotheses, methods, and analysis plans before examining outcome data.
B. Confounding variable: A design that compares different individuals or groups at one time point. / Preregistration: Publicly documenting hypotheses, methods, and analysis plans before examining outcome data.
C. Confounding variable: A factor associated with both a presumed cause and outcome that can offer an alternative explanation. / Preregistration: Voluntary authorization to participate based on adequate disclosure, provided by an authorized adult when required.
D. Confounding variable: Publicly documenting hypotheses, methods, and analysis plans before examining outcome data. / Preregistration: A factor associated with both a presumed cause and outcome that can offer an alternative explanation.

0467. A supervisor asks for an applied contrast between Confounding variable and Internal validity. Which option fits?

A. Confounding variable: Identifying a third factor that may account for an observed association between exposure and outcome. / Internal validity: Comparing age groups during one data-collection period while recognizing age and cohort are confounded.
B. Confounding variable: Identifying a third factor that may account for an observed association between exposure and outcome. / Internal validity: Evaluating whether rival explanations for a treatment effect have been addressed.
C. Confounding variable: Evaluating whether rival explanations for a treatment effect have been addressed. / Internal validity: Identifying a third factor that may account for an observed association between exposure and outcome.
D. Confounding variable: Explaining a study to a child in accessible language and respecting dissent under applicable safeguards. / Internal validity: Evaluating whether rival explanations for a treatment effect have been addressed.

0468. At the school counseling office, a counselor meets with a child aged 8. The practice priority is: defining observable criteria for a study variable before collecting data. Which concept best captures that priority?

A. Confounding variable
B. Operational definition
C. Informed research consent
D. Internal validity

0469. A support meeting for a client in late adolescence includes a behavior specialist in the family resource center. The practice under consideration is explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult. Which concept guides it?

A. Cross-sectional design
B. Longitudinal design
C. Preregistration
D. Informed research consent

0470. Which statement shows a sound practice-level distinction between Cross-sectional design and Preregistration?

A. Cross-sectional design: Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work. / Preregistration: Comparing age groups during one data-collection period while recognizing age and cohort are confounded.
B. Cross-sectional design: Comparing age groups during one data-collection period while recognizing age and cohort are confounded. / Preregistration: Evaluating whether rival explanations for a treatment effect have been addressed.
C. Cross-sectional design: Comparing age groups during one data-collection period while recognizing age and cohort are confounded. / Preregistration: Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work.
D. Cross-sectional design: Using a chance procedure to allocate enrolled participants to treatment conditions. / Preregistration: Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work.

0471. A assessment clinician prepares for a session in the community youth program with a teenage client. The intended approach is evaluating whether rival explanations for a treatment effect have been addressed. Which concept is most relevant?

A. Child assent in research
B. Cross-sectional design
C. Internal validity
D. Longitudinal design

0472. A support meeting for a high-school student includes a counselor in the school consultation. The practice under consideration is comparing age groups during one data-collection period while recognizing age and cohort are confounded. Which concept guides it?

A. Longitudinal design
B. Cross-sectional design
C. Preregistration
D. Random assignment

0473. In a professional consultation about a student aged 17, the consultant describes this response in the behavior-support review: identifying a third factor that may account for an observed association between exposure and outcome. Which term is most apt?

A. Preregistration
B. Internal validity
C. Longitudinal design
D. Confounding variable

0474. Which professional action most closely applies Cross-sectional design?

A. Comparing age groups during one data-collection period while recognizing age and cohort are confounded.
B. Considering whether a sample and setting resemble the populations to which results are generalized.
C. Explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult.
D. Evaluating whether rival explanations for a treatment effect have been addressed.

0475. A student confuses Random assignment with Longitudinal design. Which explanation most accurately separates them?

A. Random assignment: Allocation of participants to study conditions by chance to support baseline comparability. / Longitudinal design: A design that measures the same individuals or units across multiple time points.
B. Random assignment: Allocation of participants to study conditions by chance to support baseline comparability. / Longitudinal design: A precise specification of how a construct or variable is observed, measured, or manipulated.
C. Random assignment: A design that measures the same individuals or units across multiple time points. / Longitudinal design: Allocation of participants to study conditions by chance to support baseline comparability.
D. Random assignment: Publicly documenting hypotheses, methods, and analysis plans before examining outcome data. / Longitudinal design: A design that measures the same individuals or units across multiple time points.

0476. Which option pairs the definitions of Random assignment and Longitudinal design correctly, in that order?

A. Random assignment: A design that measures the same individuals or units across multiple time points. / Longitudinal design: Allocation of participants to study conditions by chance to support baseline comparability.
B. Random assignment: Allocation of participants to study conditions by chance to support baseline comparability. / Longitudinal design: A precise specification of how a construct or variable is observed, measured, or manipulated.
C. Random assignment: Publicly documenting hypotheses, methods, and analysis plans before examining outcome data. / Longitudinal design: A design that measures the same individuals or units across multiple time points.
D. Random assignment: Allocation of participants to study conditions by chance to support baseline comparability. / Longitudinal design: A design that measures the same individuals or units across multiple time points.

0477. Which statement accurately contrasts the course concepts Longitudinal design and Preregistration?

A. Longitudinal design: Publicly documenting hypotheses, methods, and analysis plans before examining outcome data. / Preregistration: A design that measures the same individuals or units across multiple time points.
B. Longitudinal design: A design that measures the same individuals or units across multiple time points. / Preregistration: A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission.
C. Longitudinal design: A design that measures the same individuals or units across multiple time points. / Preregistration: Publicly documenting hypotheses, methods, and analysis plans before examining outcome data.
D. Longitudinal design: A factor associated with both a presumed cause and outcome that can offer an alternative explanation. / Preregistration: Publicly documenting hypotheses, methods, and analysis plans before examining outcome data.

0478. In the community youth program, a team asks how a group facilitator can support a young adolescent client. One proposed action is comparing age groups during one data-collection period while recognizing age and cohort are confounded. Which idea does it represent?

A. Internal validity
B. Child assent in research
C. External validity
D. Cross-sectional design

0479. Choose the definition pair that correctly explains Cross-sectional design first and Confounding variable second.

A. Cross-sectional design: A design that compares different individuals or groups at one time point. / Confounding variable: A factor associated with both a presumed cause and outcome that can offer an alternative explanation.
B. Cross-sectional design: A factor associated with both a presumed cause and outcome that can offer an alternative explanation. / Confounding variable: A design that compares different individuals or groups at one time point.
C. Cross-sectional design: Allocation of participants to study conditions by chance to support baseline comparability. / Confounding variable: A factor associated with both a presumed cause and outcome that can offer an alternative explanation.
D. Cross-sectional design: A design that compares different individuals or groups at one time point. / Confounding variable: The strength of evidence that a study's manipulation or exposure, rather than alternatives, explains the observed effect.

0480. A trainee must distinguish how Longitudinal design and Preregistration guide practice. Which comparison is accurate?

A. Longitudinal design: Following the same children over time to study within-person change. / Preregistration: Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work.
B. Longitudinal design: Following the same children over time to study within-person change. / Preregistration: Explaining a study to a child in accessible language and respecting dissent under applicable safeguards.
C. Longitudinal design: Identifying a third factor that may account for an observed association between exposure and outcome. / Preregistration: Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work.
D. Longitudinal design: Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work. / Preregistration: Following the same children over time to study within-person change.

0481. A case conference reviews a therapist's work with a young adolescent client in the classroom support meeting: explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult. Which principle is central?

A. Informed research consent
B. Preregistration
C. Random assignment
D. Internal validity

0482. Which comparison would correct a trainee's misunderstanding of Cross-sectional design versus External validity?

A. Cross-sectional design: A factor associated with both a presumed cause and outcome that can offer an alternative explanation. / External validity: The extent to which findings may apply across populations, settings, measures, and conditions beyond the study.
B. Cross-sectional design: The extent to which findings may apply across populations, settings, measures, and conditions beyond the study. / External validity: A design that compares different individuals or groups at one time point.
C. Cross-sectional design: A design that compares different individuals or groups at one time point. / External validity: The extent to which findings may apply across populations, settings, measures, and conditions beyond the study.
D. Cross-sectional design: A design that compares different individuals or groups at one time point. / External validity: A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission.

0483. Which option correctly matches each concept to its practice focus: Confounding variable and Informed research consent?

A. Confounding variable: Identifying a third factor that may account for an observed association between exposure and outcome. / Informed research consent: Explaining a study to a child in accessible language and respecting dissent under applicable safeguards.
B. Confounding variable: Explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult. / Informed research consent: Identifying a third factor that may account for an observed association between exposure and outcome.
C. Confounding variable: Comparing age groups during one data-collection period while recognizing age and cohort are confounded. / Informed research consent: Explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult.
D. Confounding variable: Identifying a third factor that may account for an observed association between exposure and outcome. / Informed research consent: Explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult.

0484. A case conference asks for a distinction between Child assent in research and Preregistration. Which answer is sound?

A. Child assent in research: A precise specification of how a construct or variable is observed, measured, or manipulated. / Preregistration: Publicly documenting hypotheses, methods, and analysis plans before examining outcome data.
B. Child assent in research: A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission. / Preregistration: A factor associated with both a presumed cause and outcome that can offer an alternative explanation.
C. Child assent in research: A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission. / Preregistration: Publicly documenting hypotheses, methods, and analysis plans before examining outcome data.
D. Child assent in research: Publicly documenting hypotheses, methods, and analysis plans before examining outcome data. / Preregistration: A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission.

0485. A service team discusses a young person in the child guidance clinic. Their proposed next step is recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work. Which course concept supports it?

A. Informed research consent
B. External validity
C. Preregistration
D. Operational definition

0486. Which course concept is defined as follows: A factor associated with both a presumed cause and outcome that can offer an alternative explanation.

A. Informed research consent
B. Longitudinal design
C. Random assignment
D. Confounding variable

0487. How should a practitioner distinguish the applications of Operational definition and Preregistration?

A. Operational definition: Using a chance procedure to allocate enrolled participants to treatment conditions. / Preregistration: Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work.
B. Operational definition: Defining observable criteria for a study variable before collecting data. / Preregistration: Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work.
C. Operational definition: Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work. / Preregistration: Defining observable criteria for a study variable before collecting data.
D. Operational definition: Defining observable criteria for a study variable before collecting data. / Preregistration: Considering whether a sample and setting resemble the populations to which results are generalized.

0488. In the student wellness team, a school-based clinician is considering this approach for a young person aged 10: following the same children over time to study within-person change. Which framework does it represent?

A. Confounding variable
B. Preregistration
C. Random assignment
D. Longitudinal design

0489. Which paired example correctly applies Operational definition first and External validity second?

A. Operational definition: Identifying a third factor that may account for an observed association between exposure and outcome. / External validity: Considering whether a sample and setting resemble the populations to which results are generalized.
B. Operational definition: Defining observable criteria for a study variable before collecting data. / External validity: Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work.
C. Operational definition: Defining observable criteria for a study variable before collecting data. / External validity: Considering whether a sample and setting resemble the populations to which results are generalized.
D. Operational definition: Considering whether a sample and setting resemble the populations to which results are generalized. / External validity: Defining observable criteria for a study variable before collecting data.

0490. When reviewing a client in early adolescence's plan in the parent meeting, the school-based clinician notes that the next step is evaluating whether rival explanations for a treatment effect have been addressed. Which concept guides this step?

A. External validity
B. Cross-sectional design
C. Internal validity
D. Longitudinal design

0491. A supervisor asks how Preregistration would appear in practice. Which choice should be selected?

A. Comparing age groups during one data-collection period while recognizing age and cohort are confounded.
B. Using a chance procedure to allocate enrolled participants to treatment conditions.
C. Defining observable criteria for a study variable before collecting data.
D. Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work.

0492. In the supervision meeting, a teacher and counselor describes the most appropriate support for a child aged 8 as recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work. Which framework is being applied?

A. Longitudinal design
B. Cross-sectional design
C. Informed research consent
D. Preregistration

0493. A case discussion concerns a student aged 17 and a school-based clinician in the outpatient clinic. The practitioner is considering explaining a study to a child in accessible language and respecting dissent under applicable safeguards. Which principle is involved?

A. Operational definition
B. Child assent in research
C. Internal validity
D. Cross-sectional design

0494. Which applied comparison correctly identifies what belongs to Confounding variable versus Internal validity?

A. Confounding variable: Explaining a study to a child in accessible language and respecting dissent under applicable safeguards. / Internal validity: Evaluating whether rival explanations for a treatment effect have been addressed.
B. Confounding variable: Identifying a third factor that may account for an observed association between exposure and outcome. / Internal validity: Comparing age groups during one data-collection period while recognizing age and cohort are confounded.
C. Confounding variable: Identifying a third factor that may account for an observed association between exposure and outcome. / Internal validity: Evaluating whether rival explanations for a treatment effect have been addressed.
D. Confounding variable: Evaluating whether rival explanations for a treatment effect have been addressed. / Internal validity: Identifying a third factor that may account for an observed association between exposure and outcome.

0495. A trainee must distinguish how Random assignment and Child assent in research guide practice. Which comparison is accurate?

A. Random assignment: Comparing age groups during one data-collection period while recognizing age and cohort are confounded. / Child assent in research: Explaining a study to a child in accessible language and respecting dissent under applicable safeguards.
B. Random assignment: Explaining a study to a child in accessible language and respecting dissent under applicable safeguards. / Child assent in research: Using a chance procedure to allocate enrolled participants to treatment conditions.
C. Random assignment: Using a chance procedure to allocate enrolled participants to treatment conditions. / Child assent in research: Explaining a study to a child in accessible language and respecting dissent under applicable safeguards.
D. Random assignment: Using a chance procedure to allocate enrolled participants to treatment conditions. / Child assent in research: Evaluating whether rival explanations for a treatment effect have been addressed.

0496. A planning meeting about a child aged 14 includes a behavior specialist. The proposed practice in the student wellness team is comparing age groups during one data-collection period while recognizing age and cohort are confounded. Which idea underlies it?

A. Preregistration
B. Cross-sectional design
C. Confounding variable
D. Child assent in research

0497. A planning meeting about a high-school student includes a behavior specialist. The proposed practice in the caregiver consultation is explaining a study to a child in accessible language and respecting dissent under applicable safeguards. Which idea underlies it?

A. Cross-sectional design
B. Child assent in research
C. Confounding variable
D. Internal validity

0498. Which pair of actions illustrates Operational definition and Preregistration, respectively?

A. Operational definition: Using a chance procedure to allocate enrolled participants to treatment conditions. / Preregistration: Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work.
B. Operational definition: Defining observable criteria for a study variable before collecting data. / Preregistration: Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work.
C. Operational definition: Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work. / Preregistration: Defining observable criteria for a study variable before collecting data.
D. Operational definition: Defining observable criteria for a study variable before collecting data. / Preregistration: Considering whether a sample and setting resemble the populations to which results are generalized.

0499. Choose the definition pair that correctly explains Operational definition first and Confounding variable second.

A. Operational definition: A precise specification of how a construct or variable is observed, measured, or manipulated. / Confounding variable: Allocation of participants to study conditions by chance to support baseline comparability.
B. Operational definition: A precise specification of how a construct or variable is observed, measured, or manipulated. / Confounding variable: A factor associated with both a presumed cause and outcome that can offer an alternative explanation.
C. Operational definition: A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission. / Confounding variable: A factor associated with both a presumed cause and outcome that can offer an alternative explanation.
D. Operational definition: A factor associated with both a presumed cause and outcome that can offer an alternative explanation. / Confounding variable: A precise specification of how a construct or variable is observed, measured, or manipulated.

0500. Which option pairs the definitions of Operational definition and Cross-sectional design correctly, in that order?

A. Operational definition: A design that compares different individuals or groups at one time point. / Cross-sectional design: A precise specification of how a construct or variable is observed, measured, or manipulated.
B. Operational definition: A precise specification of how a construct or variable is observed, measured, or manipulated. / Cross-sectional design: A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission.
C. Operational definition: A precise specification of how a construct or variable is observed, measured, or manipulated. / Cross-sectional design: A design that compares different individuals or groups at one time point.
D. Operational definition: Voluntary authorization to participate based on adequate disclosure, provided by an authorized adult when required. / Cross-sectional design: A design that compares different individuals or groups at one time point.

0501. During service review in the clinical planning session, a research trainee describes using a chance procedure to allocate enrolled participants to treatment conditions. for a student aged 9. Which course idea is most applicable?

A. Operational definition
B. Informed research consent
C. Random assignment
D. External validity

0502. Which comparison would correct a trainee’s misunderstanding of Internal validity versus Informed research consent?

A. Internal validity: The strength of evidence that a study’s manipulation or exposure, rather than alternatives, explains the observed effect. / Informed research consent: Voluntary authorization to participate based on adequate disclosure, provided by an authorized adult when required.
B. Internal validity: The strength of evidence that a study’s manipulation or exposure, rather than alternatives, explains the observed effect. / Informed research consent: A precise specification of how a construct or variable is observed, measured, or manipulated.
C. Internal validity: A factor associated with both a presumed cause and outcome that can offer an alternative explanation. / Informed research consent: Voluntary authorization to participate based on adequate disclosure, provided by an authorized adult when required.
D. Internal validity: Voluntary authorization to participate based on adequate disclosure, provided by an authorized adult when required. / Informed research consent: The strength of evidence that a study’s manipulation or exposure, rather than alternatives, explains the observed effect.

0503. A mental-health professional and a high-school student are discussing support in the family resource center. The selected practice is defining observable criteria for a study variable before collecting data. Which concept does this demonstrate?

A. Internal validity
B. Preregistration
C. Random assignment
D. Operational definition

0504. Which statement shows a sound practice-level distinction between Cross-sectional design and External validity?

A. Cross-sectional design: Considering whether a sample and setting resemble the populations to which results are generalized. / External validity: Comparing age groups during one data-collection period while recognizing age and cohort are confounded.
B. Cross-sectional design: Comparing age groups during one data-collection period while recognizing age and cohort are confounded. / External validity: Explaining a study to a child in accessible language and respecting dissent under applicable safeguards.
C. Cross-sectional design: Identifying a third factor that may account for an observed association between exposure and outcome. / External validity: Considering whether a sample and setting resemble the populations to which results are generalized.
D. Cross-sectional design: Comparing age groups during one data-collection period while recognizing age and cohort are confounded. / External validity: Considering whether a sample and setting resemble the populations to which results are generalized.

0505. A child aged 11 is receiving support in the family resource center. The youth worker is guided by this practice: comparing age groups during one data-collection period while recognizing age and cohort are confounded. Which principle best fits?

A. Informed research consent
B. Random assignment
C. Cross-sectional design
D. External validity

0506. A case conference asks for a distinction between Internal validity and Child assent in research. Which answer is sound?

A. Internal validity: A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission. / Child assent in research: The strength of evidence that a study's manipulation or exposure, rather than alternatives, explains the observed effect.
B. Internal validity: The strength of evidence that a study's manipulation or exposure, rather than alternatives, explains the observed effect. / Child assent in research: A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission.
C. Internal validity: The strength of evidence that a study's manipulation or exposure, rather than alternatives, explains the observed effect. / Child assent in research: Publicly documenting hypotheses, methods, and analysis plans before examining outcome data.
D. Internal validity: The extent to which findings may apply across populations, settings, measures, and conditions beyond the study. / Child assent in research: A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission.

0507. Select the best explanation of Preregistration.

A. A design that measures the same individuals or units across multiple time points.
B. A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission.
C. Publicly documenting hypotheses, methods, and analysis plans before examining outcome data.
D. A precise specification of how a construct or variable is observed, measured, or manipulated.

0508. A school-based clinician presents a support plan for a teenage client at the telehealth session. Its central feature is identifying a third factor that may account for an observed association between exposure and outcome. Which concept should be named?

A. External validity
B. Longitudinal design
C. Random assignment
D. Confounding variable

0509. Which option pairs the definitions of Cross-sectional design and Preregistration correctly, in that order?

A. Cross-sectional design: A design that compares different individuals or groups at one time point. / Preregistration: Publicly documenting hypotheses, methods, and analysis plans before examining outcome data.
B. Cross-sectional design: Publicly documenting hypotheses, methods, and analysis plans before examining outcome data. / Preregistration: A design that compares different individuals or groups at one time point.
C. Cross-sectional design: A design that compares different individuals or groups at one time point. / Preregistration: The strength of evidence that a study's manipulation or exposure, rather than alternatives, explains the observed effect.
D. Cross-sectional design: Allocation of participants to study conditions by chance to support baseline comparability. / Preregistration: Publicly documenting hypotheses, methods, and analysis plans before examining outcome data.

0510. In a supervision review, a school-based clinician describes work with a young person aged 16 in the community mental-health service: defining observable criteria for a study variable before collecting data. What concept is illustrated?

A. Operational definition
B. Cross-sectional design
C. Longitudinal design
D. Internal validity

0511. Which course concept is defined as follows: The strength of evidence that a study's manipulation or exposure, rather than alternatives, explains the observed effect.

A. External validity
B. Confounding variable
C. Random assignment
D. Internal validity

0512. A student aged 12 and a mental-health professional are reviewing goals in the after-school program. The agreed action is identifying a third factor that may account for an observed association between exposure and outcome. Which principle best accounts for it?

A. Cross-sectional design
B. Child assent in research
C. Random assignment
D. Confounding variable

0513. Which option correctly matches each concept to its practice focus: Confounding variable and Preregistration?

A. Confounding variable: Comparing age groups during one data-collection period while recognizing age and cohort are confounded. / Preregistration: Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work.
B. Confounding variable: Identifying a third factor that may account for an observed association between exposure and outcome. / Preregistration: Explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult.
C. Confounding variable: Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work. / Preregistration: Identifying a third factor that may account for an observed association between exposure and outcome.
D. Confounding variable: Identifying a third factor that may account for an observed association between exposure and outcome. / Preregistration: Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work.

0514. Which option preserves the correct meaning of both Internal validity and Informed research consent?

A. Internal validity: The strength of evidence that a study's manipulation or exposure, rather than alternatives, explains the observed effect. / Informed research consent: Voluntary authorization to participate based on adequate disclosure, provided by an authorized adult when required.
B. Internal validity: The strength of evidence that a study's manipulation or exposure, rather than alternatives, explains the observed effect. / Informed research consent: A precise specification of how a construct or variable is observed, measured, or manipulated.
C. Internal validity: Voluntary authorization to participate based on adequate disclosure, provided by an authorized adult when required. / Informed research consent: The strength of evidence that a study's manipulation or exposure, rather than alternatives, explains the observed effect.
D. Internal validity: A factor associated with both a presumed cause and outcome that can offer an alternative explanation. / Informed research consent: Voluntary authorization to participate based on adequate disclosure, provided by an authorized adult when required.

0515. Which pair of actions illustrates Random assignment and Confounding variable, respectively?

A. Random assignment: Using a chance procedure to allocate enrolled participants to treatment conditions. / Confounding variable: Identifying a third factor that may account for an observed association between exposure and outcome.
B. Random assignment: Following the same children over time to study within-person change. / Confounding variable: Identifying a third factor that may account for an observed association between exposure and outcome.
C. Random assignment: Using a chance procedure to allocate enrolled participants to treatment conditions. / Confounding variable: Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work.
D. Random assignment: Identifying a third factor that may account for an observed association between exposure and outcome. / Confounding variable: Using a chance procedure to allocate enrolled participants to treatment conditions.

0516. A case conference asks for a distinction between Informed research consent and Preregistration. Which answer is sound?

A. Informed research consent: Voluntary authorization to participate based on adequate disclosure, provided by an authorized adult when required. / Preregistration: Allocation of participants to study conditions by chance to support baseline comparability.
B. Informed research consent: Publicly documenting hypotheses, methods, and analysis plans before examining outcome data. / Preregistration: Voluntary authorization to participate based on adequate disclosure, provided by an authorized adult when required.
C. Informed research consent: Voluntary authorization to participate based on adequate disclosure, provided by an authorized adult when required. / Preregistration: Publicly documenting hypotheses, methods, and analysis plans before examining outcome data.
D. Informed research consent: A factor associated with both a presumed cause and outcome that can offer an alternative explanation. / Preregistration: Publicly documenting hypotheses, methods, and analysis plans before examining outcome data.

0517. Which named construct is captured by this account? Voluntary authorization to participate based on adequate disclosure, provided by an authorized adult when required.

A. Cross-sectional design
B. Preregistration
C. Informed research consent
D. Child assent in research

0518. Which statement most accurately defines Operational definition?

A. Publicly documenting hypotheses, methods, and analysis plans before examining outcome data.
B. A precise specification of how a construct or variable is observed, measured, or manipulated.
C. Voluntary authorization to participate based on adequate disclosure, provided by an authorized adult when required.
D. The extent to which findings may apply across populations, settings, measures, and conditions beyond the study.

0519. At a case-planning meeting, the play therapist proposes comparing age groups during one data-collection period while recognizing age and cohort are confounded. for a teenage client seen in the caregiver consultation. Which concept does this illustrate?

A. Random assignment
B. External validity
C. Cross-sectional design
D. Operational definition

0520. A consulting counselor is asked to justify a plan for a older adolescent client in the school-based service. It calls for considering whether a sample and setting resemble the populations to which results are generalized. Which concept provides the rationale?

A. Operational definition
B. External validity
C. Random assignment
D. Informed research consent

0521. A behavior specialist reviews a plan for a child aged 6 in the community mental-health service. The plan emphasizes using a chance procedure to allocate enrolled participants to treatment conditions. Which course idea does this reflect?

A. Longitudinal design
B. Random assignment
C. Operational definition
D. Child assent in research

0522. Which pair of actions illustrates Cross-sectional design and Preregistration, respectively?

A. Cross-sectional design: Comparing age groups during one data-collection period while recognizing age and cohort are confounded. / Preregistration: Evaluating whether rival explanations for a treatment effect have been addressed.
B. Cross-sectional design: Comparing age groups during one data-collection period while recognizing age and cohort are confounded. / Preregistration: Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work.
C. Cross-sectional design: Using a chance procedure to allocate enrolled participants to treatment conditions. / Preregistration: Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work.
D. Cross-sectional design: Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work. / Preregistration: Comparing age groups during one data-collection period while recognizing age and cohort are confounded.

0523. An interdisciplinary team reviews a child aged 7's case at the classroom support meeting. The clinical supervisor recommends defining observable criteria for a study variable before collecting data. Which course concept best fits?

A. Longitudinal design
B. Operational definition
C. Internal validity
D. Preregistration

0524. Which comparison correctly distinguishes Longitudinal design from Cross-sectional design?

A. Longitudinal design: The strength of evidence that a study's manipulation or exposure, rather than alternatives, explains the observed effect. / Cross-sectional design: A design that compares different individuals or groups at one time point.
B. Longitudinal design: A design that measures the same individuals or units across multiple time points. / Cross-sectional design: A design that compares different individuals or groups at one time point.
C. Longitudinal design: A design that measures the same individuals or units across multiple time points. / Cross-sectional design: Voluntary authorization to participate based on adequate disclosure, provided by an authorized adult when required.
D. Longitudinal design: A design that compares different individuals or groups at one time point. / Cross-sectional design: A design that measures the same individuals or units across multiple time points.

0525. Which comparison correctly distinguishes Random assignment from Longitudinal design?

A. Random assignment: Publicly documenting hypotheses, methods, and analysis plans before examining outcome data. / Longitudinal design: A design that measures the same individuals or units across multiple time points.
B. Random assignment: Allocation of participants to study conditions by chance to support baseline comparability. / Longitudinal design: A precise specification of how a construct or variable is observed, measured, or manipulated.
C. Random assignment: A design that measures the same individuals or units across multiple time points. / Longitudinal design: Allocation of participants to study conditions by chance to support baseline comparability.
D. Random assignment: Allocation of participants to study conditions by chance to support baseline comparability. / Longitudinal design: A design that measures the same individuals or units across multiple time points.

0526. At the community service agency, a school support specialist meets with a preadolescent child. The practice priority is: explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult. Which concept best captures that priority?

A. Confounding variable
B. Cross-sectional design
C. Informed research consent
D. Random assignment

0527. How are Cross-sectional design and Preregistration most accurately differentiated in this curriculum?

A. Cross-sectional design: A design that compares different individuals or groups at one time point. / Preregistration: Publicly documenting hypotheses, methods, and analysis plans before examining outcome data.
B. Cross-sectional design: Publicly documenting hypotheses, methods, and analysis plans before examining outcome data. / Preregistration: A design that compares different individuals or groups at one time point.
C. Cross-sectional design: Allocation of participants to study conditions by chance to support baseline comparability. / Preregistration: Publicly documenting hypotheses, methods, and analysis plans before examining outcome data.
D. Cross-sectional design: A design that compares different individuals or groups at one time point. / Preregistration: The strength of evidence that a study's manipulation or exposure, rather than alternatives, explains the observed effect.

0528. A case conference reviews a research trainee's work with a young person aged 10 in the family resource center: recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work. Which principle is central?

A. External validity
B. Child assent in research
C. Preregistration
D. Cross-sectional design

0529. For a child of elementary-school age seen in the student-support meeting, the program coordinator recommends a plan built around recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work. Which concept is reflected?

A. External validity
B. Confounding variable
C. Preregistration
D. Internal validity

0530. A play therapist is asked to evaluate a proposed service for a middle-school student in the learning-support meeting. The defining feature is evaluating whether rival explanations for a treatment effect have been addressed. Which concept fits?

A. Confounding variable
B. Preregistration
C. Internal validity
D. Longitudinal design

0531. A consultant is supporting a child aged 8 in the clinical planning session. The key practice is explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult. Which course concept is most relevant?

A. Longitudinal design
B. Internal validity
C. Informed research consent
D. Child assent in research

0532. Which option correctly matches each concept to its practice focus: Internal validity and External validity?

A. Internal validity: Considering whether a sample and setting resemble the populations to which results are generalized. / External validity: Evaluating whether rival explanations for a treatment effect have been addressed.
B. Internal validity: Evaluating whether rival explanations for a treatment effect have been addressed. / External validity: Considering whether a sample and setting resemble the populations to which results are generalized.
C. Internal validity: Evaluating whether rival explanations for a treatment effect have been addressed. / External validity: Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work.
D. Internal validity: Explaining a study to a child in accessible language and respecting dissent under applicable safeguards. / External validity: Considering whether a sample and setting resemble the populations to which results are generalized.

0533. Choose the practice comparison that best separates Cross-sectional design from External validity.

A. Cross-sectional design: Identifying a third factor that may account for an observed association between exposure and outcome. / External validity: Considering whether a sample and setting resemble the populations to which results are generalized.
B. Cross-sectional design: Comparing age groups during one data-collection period while recognizing age and cohort are confounded. / External validity: Explaining a study to a child in accessible language and respecting dissent under applicable safeguards.
C. Cross-sectional design: Considering whether a sample and setting resemble the populations to which results are generalized. / External validity: Comparing age groups during one data-collection period while recognizing age and cohort are confounded.
D. Cross-sectional design: Comparing age groups during one data-collection period while recognizing age and cohort are confounded. / External validity: Considering whether a sample and setting resemble the populations to which results are generalized.

0534. A case conference asks for a distinction between Operational definition and External validity. Which answer is sound?

A. Operational definition: The extent to which findings may apply across populations, settings, measures, and conditions beyond the study. / External validity: A precise specification of how a construct or variable is observed, measured, or manipulated.
B. Operational definition: A factor associated with both a presumed cause and outcome that can offer an alternative explanation. / External validity: The extent to which findings may apply across populations, settings, measures, and conditions beyond the study.
C. Operational definition: A precise specification of how a construct or variable is observed, measured, or manipulated. / External validity: Publicly documenting hypotheses, methods, and analysis plans before examining outcome data.
D. Operational definition: A precise specification of how a construct or variable is observed, measured, or manipulated. / External validity: The extent to which findings may apply across populations, settings, measures, and conditions beyond the study.

0535. A play therapist reviews a plan for a middle-school student in the learning-support meeting. The plan emphasizes evaluating whether rival explanations for a treatment effect have been addressed. Which course idea does this reflect?

A. Operational definition
B. Informed research consent
C. Internal validity
D. Confounding variable

0536. Which paired example correctly applies Child assent in research first and Preregistration second?

A. Child assent in research: Explaining a study to a child in accessible language and respecting dissent under applicable safeguards. / Preregistration: Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work.
B. Child assent in research: Explaining a study to a child in accessible language and respecting dissent under applicable safeguards. / Preregistration: Identifying a third factor that may account for an observed association between exposure and outcome.
C. Child assent in research: Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work. / Preregistration: Explaining a study to a child in accessible language and respecting dissent under applicable safeguards.
D. Child assent in research: Defining observable criteria for a study variable before collecting data. / Preregistration: Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work.

0537. Which applied comparison correctly identifies what belongs to Confounding variable versus External validity?

A. Confounding variable: Identifying a third factor that may account for an observed association between exposure and outcome. / External validity: Considering whether a sample and setting resemble the populations to which results are generalized.
B. Confounding variable: Considering whether a sample and setting resemble the populations to which results are generalized. / External validity: Identifying a third factor that may account for an observed association between exposure and outcome.
C. Confounding variable: Following the same children over time to study within-person change. / External validity: Considering whether a sample and setting resemble the populations to which results are generalized.
D. Confounding variable: Identifying a third factor that may account for an observed association between exposure and outcome. / External validity: Comparing age groups during one data-collection period while recognizing age and cohort are confounded.

0538. Choose the term that matches this definition: A precise specification of how a construct or variable is observed, measured, or manipulated.

A. Informed research consent
B. Operational definition
C. Child assent in research
D. Internal validity

0539. Which statement accurately contrasts the course concepts Confounding variable and Informed research consent?

A. Confounding variable: A design that compares different individuals or groups at one time point. / Informed research consent: Voluntary authorization to participate based on adequate disclosure, provided by an authorized adult when required.
B. Confounding variable: Voluntary authorization to participate based on adequate disclosure, provided by an authorized adult when required. / Informed research consent: A factor associated with both a presumed cause and outcome that can offer an alternative explanation.
C. Confounding variable: A factor associated with both a presumed cause and outcome that can offer an alternative explanation. / Informed research consent: Voluntary authorization to participate based on adequate disclosure, provided by an authorized adult when required.
D. Confounding variable: A factor associated with both a presumed cause and outcome that can offer an alternative explanation. / Informed research consent: A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission.

0540. Which applied comparison correctly identifies what belongs to Longitudinal design versus Informed research consent?

A. Longitudinal design: Following the same children over time to study within-person change. / Informed research consent: Considering whether a sample and setting resemble the populations to which results are generalized.
B. Longitudinal design: Explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult. / Informed research consent: Following the same children over time to study within-person change.
C. Longitudinal design: Comparing age groups during one data-collection period while recognizing age and cohort are confounded. / Informed research consent: Explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult.
D. Longitudinal design: Following the same children over time to study within-person change. / Informed research consent: Explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult.

0541. In the after-school program, a team asks how a youth worker can support a high-school student. One proposed action is explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult. Which idea does it represent?

A. Internal validity
B. Cross-sectional design
C. Informed research consent
D. Confounding variable

0542. Which choice aligns each practice with the correct idea, Operational definition or Cross-sectional design?

A. Operational definition: Defining observable criteria for a study variable before collecting data. / Cross-sectional design: Comparing age groups during one data-collection period while recognizing age and cohort are confounded.
B. Operational definition: Explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult. / Cross-sectional design: Comparing age groups during one data-collection period while recognizing age and cohort are confounded.
C. Operational definition: Comparing age groups during one data-collection period while recognizing age and cohort are confounded. / Cross-sectional design: Defining observable criteria for a study variable before collecting data.
D. Operational definition: Defining observable criteria for a study variable before collecting data. / Cross-sectional design: Explaining a study to a child in accessible language and respecting dissent under applicable safeguards.

0543. Which option pairs the definitions of Confounding variable and Informed research consent correctly, in that order?

A. Confounding variable: A design that compares different individuals or groups at one time point. / Informed research consent: Voluntary authorization to participate based on adequate disclosure, provided by an authorized adult when required.
B. Confounding variable: Voluntary authorization to participate based on adequate disclosure, provided by an authorized adult when required. / Informed research consent: A factor associated with both a presumed cause and outcome that can offer an alternative explanation.
C. Confounding variable: A factor associated with both a presumed cause and outcome that can offer an alternative explanation. / Informed research consent: Voluntary authorization to participate based on adequate disclosure, provided by an authorized adult when required.
D. Confounding variable: A factor associated with both a presumed cause and outcome that can offer an alternative explanation. / Informed research consent: A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission.

0544. Which option correctly matches each concept to its practice focus: Random assignment and Confounding variable?

A. Random assignment: Identifying a third factor that may account for an observed association between exposure and outcome. / Confounding variable: Using a chance procedure to allocate enrolled participants to treatment conditions.
B. Random assignment: Following the same children over time to study within-person change. / Confounding variable: Identifying a third factor that may account for an observed association between exposure and outcome.
C. Random assignment: Using a chance procedure to allocate enrolled participants to treatment conditions. / Confounding variable: Identifying a third factor that may account for an observed association between exposure and outcome.
D. Random assignment: Using a chance procedure to allocate enrolled participants to treatment conditions. / Confounding variable: Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work.

0545. Which option preserves the correct meaning of both Confounding variable and Preregistration?

A. Confounding variable: A factor associated with both a presumed cause and outcome that can offer an alternative explanation. / Preregistration: Voluntary authorization to participate based on adequate disclosure, provided by an authorized adult when required.
B. Confounding variable: Publicly documenting hypotheses, methods, and analysis plans before examining outcome data. / Preregistration: A factor associated with both a presumed cause and outcome that can offer an alternative explanation.
C. Confounding variable: A factor associated with both a presumed cause and outcome that can offer an alternative explanation. / Preregistration: Publicly documenting hypotheses, methods, and analysis plans before examining outcome data.
D. Confounding variable: A design that compares different individuals or groups at one time point. / Preregistration: Publicly documenting hypotheses, methods, and analysis plans before examining outcome data.

0546. Choose the practice comparison that best separates Internal validity from Preregistration.

A. Internal validity: Identifying a third factor that may account for an observed association between exposure and outcome. / Preregistration: Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work.
B. Internal validity: Evaluating whether rival explanations for a treatment effect have been addressed. / Preregistration: Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work.
C. Internal validity: Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work. / Preregistration: Evaluating whether rival explanations for a treatment effect have been addressed.
D. Internal validity: Evaluating whether rival explanations for a treatment effect have been addressed. / Preregistration: Using a chance procedure to allocate enrolled participants to treatment conditions.

0547. While consulting in the outpatient clinic, a supervised trainee supports a young person aged 13 by using this approach: explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult. Which concept is being applied?

A. External validity
B. Informed research consent
C. Preregistration
D. Longitudinal design

0548. How should a practitioner distinguish the applications of Operational definition and Cross-sectional design?

A. Operational definition: Explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult. / Cross-sectional design: Comparing age groups during one data-collection period while recognizing age and cohort are confounded.
B. Operational definition: Defining observable criteria for a study variable before collecting data. / Cross-sectional design: Explaining a study to a child in accessible language and respecting dissent under applicable safeguards.
C. Operational definition: Defining observable criteria for a study variable before collecting data. / Cross-sectional design: Comparing age groups during one data-collection period while recognizing age and cohort are confounded.
D. Operational definition: Comparing age groups during one data-collection period while recognizing age and cohort are confounded. / Cross-sectional design: Defining observable criteria for a study variable before collecting data.

0549. Which comparison correctly distinguishes Cross-sectional design from Preregistration?

A. Cross-sectional design: A design that compares different individuals or groups at one time point. / Preregistration: The strength of evidence that a study's manipulation or exposure, rather than alternatives, explains the observed effect.
B. Cross-sectional design: Allocation of participants to study conditions by chance to support baseline comparability. / Preregistration: Publicly documenting hypotheses, methods, and analysis plans before examining outcome data.
C. Cross-sectional design: Publicly documenting hypotheses, methods, and analysis plans before examining outcome data. / Preregistration: A design that compares different individuals or groups at one time point.
D. Cross-sectional design: A design that compares different individuals or groups at one time point. / Preregistration: Publicly documenting hypotheses, methods, and analysis plans before examining outcome data.

0550. Consider a young person aged 18 receiving help in the community mental-health service. The consulting counselor focuses on explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult. Which term best describes the guiding idea?

A. Random assignment
B. Informed research consent
C. Confounding variable
D. Cross-sectional design

0551. Choose the definition pair that correctly explains Informed research consent first and Child assent in research second.

A. Informed research consent: A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission. / Child assent in research: Voluntary authorization to participate based on adequate disclosure, provided by an authorized adult when required.
B. Informed research consent: Voluntary authorization to participate based on adequate disclosure, provided by an authorized adult when required. / Child assent in research: Allocation of participants to study conditions by chance to support baseline comparability.
C. Informed research consent: Voluntary authorization to participate based on adequate disclosure, provided by an authorized adult when required. / Child assent in research: A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission.
D. Informed research consent: A design that measures the same individuals or units across multiple time points. / Child assent in research: A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission.

0552. A student confuses External validity with Informed research consent. Which explanation most accurately separates them?

A. External validity: Voluntary authorization to participate based on adequate disclosure, provided by an authorized adult when required. / Informed research consent: The extent to which findings may apply across populations, settings, measures, and conditions beyond the study.
B. External validity: The extent to which findings may apply across populations, settings, measures, and conditions beyond the study. / Informed research consent: A design that compares different individuals or groups at one time point.
C. External validity: A precise specification of how a construct or variable is observed, measured, or manipulated. / Informed research consent: Voluntary authorization to participate based on adequate disclosure, provided by an authorized adult when required.
D. External validity: The extent to which findings may apply across populations, settings, measures, and conditions beyond the study. / Informed research consent: Voluntary authorization to participate based on adequate disclosure, provided by an authorized adult when required.

0553. A support meeting for a school-age child includes a school support specialist in the learning-support meeting. The practice under consideration is defining observable criteria for a study variable before collecting data. Which concept guides it?

A. External validity
B. Preregistration
C. Child assent in research
D. Operational definition

0554. In the student-support meeting, a parent educator is considering this approach for a young person aged 13: considering whether a sample and setting resemble the populations to which results are generalized. Which framework does it represent?

A. External validity
B. Confounding variable
C. Random assignment
D. Child assent in research

0555. An interdisciplinary team reviews a child of elementary-school age's case at the after-school program. The school support specialist recommends using a chance procedure to allocate enrolled participants to treatment conditions. Which course concept best fits?

A. Random assignment
B. Confounding variable
C. Internal validity
D. Longitudinal design

0556. In a supervision quiz, how should External validity be distinguished from Informed research consent?

A. External validity: Voluntary authorization to participate based on adequate disclosure, provided by an authorized adult when required. / Informed research consent: The extent to which findings may apply across populations, settings, measures, and conditions beyond the study.
B. External validity: The extent to which findings may apply across populations, settings, measures, and conditions beyond the study. / Informed research consent: A design that compares different individuals or groups at one time point.
C. External validity: The extent to which findings may apply across populations, settings, measures, and conditions beyond the study. / Informed research consent: Voluntary authorization to participate based on adequate disclosure, provided by an authorized adult when required.
D. External validity: A precise specification of how a construct or variable is observed, measured, or manipulated. / Informed research consent: Voluntary authorization to participate based on adequate disclosure, provided by an authorized adult when required.

0557. Which option correctly matches each concept to its practice focus: Longitudinal design and Preregistration?

A. Longitudinal design: Following the same children over time to study within-person change. / Preregistration: Explaining a study to a child in accessible language and respecting dissent under applicable safeguards.
B. Longitudinal design: Following the same children over time to study within-person change. / Preregistration: Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work.
C. Longitudinal design: Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work. / Preregistration: Following the same children over time to study within-person change.
D. Longitudinal design: Identifying a third factor that may account for an observed association between exposure and outcome. / Preregistration: Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work.

0558. A high-school student's service team meets in the school counseling office. The family therapist recommends a change involving identifying a third factor that may account for an observed association between exposure and outcome. Which idea best explains it?

A. Operational definition
B. Confounding variable
C. External validity
D. Child assent in research

0559. Which named construct is captured by this account? A factor associated with both a presumed cause and outcome that can offer an alternative explanation.

A. Cross-sectional design
B. Confounding variable
C. External validity
D. Random assignment

0560. A trainee must explain Internal validity. Which answer is accurate?

A. The strength of evidence that a study's manipulation or exposure, rather than alternatives, explains the observed effect.
B. A design that measures the same individuals or units across multiple time points.
C. A factor associated with both a presumed cause and outcome that can offer an alternative explanation.
D. Voluntary authorization to participate based on adequate disclosure, provided by an authorized adult when required.

0561. A team must select a support approach for a child aged 14 at the school-based service. The caregiver working with a counselor recommends identifying a third factor that may account for an observed association between exposure and outcome. Which idea is most relevant?

A. Longitudinal design
B. Confounding variable
C. Cross-sectional design
D. Informed research consent

0562. A student confuses Longitudinal design with Informed research consent. Which explanation most accurately separates them?

A. Longitudinal design: A design that measures the same individuals or units across multiple time points. / Informed research consent: The extent to which findings may apply across populations, settings, measures, and conditions beyond the study.
B. Longitudinal design: A design that compares different individuals or groups at one time point. / Informed research consent: Voluntary authorization to participate based on adequate disclosure, provided by an authorized adult when required.
C. Longitudinal design: A design that measures the same individuals or units across multiple time points. / Informed research consent: Voluntary authorization to participate based on adequate disclosure, provided by an authorized adult when required.
D. Longitudinal design: Voluntary authorization to participate based on adequate disclosure, provided by an authorized adult when required. / Informed research consent: A design that measures the same individuals or units across multiple time points.

0563. A young person aged 18 and a supervised trainee are reviewing goals in the family resource center. The agreed action is evaluating whether rival explanations for a treatment effect have been addressed. Which principle best accounts for it?

A. Cross-sectional design
B. Confounding variable
C. Internal validity
D. External validity

0564. A team must select a support approach for a student aged 17 at the outpatient clinic. The school-based clinician recommends explaining a study to a child in accessible language and respecting dissent under applicable safeguards. Which idea is most relevant?

A. Longitudinal design
B. Confounding variable
C. Child assent in research
D. Informed research consent

0565. Which pair of actions illustrates Cross-sectional design and Informed research consent, respectively?

A. Cross-sectional design: Comparing age groups during one data-collection period while recognizing age and cohort are confounded. / Informed research consent: Using a chance procedure to allocate enrolled participants to treatment conditions.
B. Cross-sectional design: Comparing age groups during one data-collection period while recognizing age and cohort are confounded. / Informed research consent: Explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult.
C. Cross-sectional design: Explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult. / Informed research consent: Comparing age groups during one data-collection period while recognizing age and cohort are confounded.
D. Cross-sectional design: Defining observable criteria for a study variable before collecting data. / Informed research consent: Explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult.

0566. A case discussion concerns a child of elementary-school age and a parent educator in the caregiver consultation. The practitioner is considering following the same children over time to study within-person change. Which principle is involved?

A. Longitudinal design
B. Child assent in research
C. Informed research consent
D. Cross-sectional design

0567. A consulting counselor is asked to justify a plan for a student aged 12 in the school counseling office. It calls for using a chance procedure to allocate enrolled participants to treatment conditions. Which concept provides the rationale?

A. Random assignment
B. Cross-sectional design
C. Internal validity
D. Child assent in research

0568. Choose the definition pair that correctly explains Confounding variable first and Informed research consent second.

A. Confounding variable: A factor associated with both a presumed cause and outcome that can offer an alternative explanation. / Informed research consent: A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission.
B. Confounding variable: A factor associated with both a presumed cause and outcome that can offer an alternative explanation. / Informed research consent: Voluntary authorization to participate based on adequate disclosure, provided by an authorized adult when required.
C. Confounding variable: Voluntary authorization to participate based on adequate disclosure, provided by an authorized adult when required. / Informed research consent: A factor associated with both a presumed cause and outcome that can offer an alternative explanation.
D. Confounding variable: A design that compares different individuals or groups at one time point. / Informed research consent: Voluntary authorization to participate based on adequate disclosure, provided by an authorized adult when required.

0569. In a case note about a child aged 14, a consultant working in the child guidance clinic records this priority: evaluating whether rival explanations for a treatment effect have been addressed. What principle is reflected?

A. Internal validity
B. Child assent in research
C. Confounding variable
D. Informed research consent

0570. An interdisciplinary team reviews a young person aged 10’s case at the family session. The school support specialist recommends considering whether a sample and setting resemble the populations to which results are generalized. Which course concept best fits?

A. External validity
B. Random assignment
C. Cross-sectional design
D. Operational definition

0571. Which comparison correctly distinguishes Cross-sectional design from Child assent in research?

A. Cross-sectional design: A precise specification of how a construct or variable is observed, measured, or manipulated. / Child assent in research: A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission.
B. Cross-sectional design: A design that compares different individuals or groups at one time point. / Child assent in research: Publicly documenting hypotheses, methods, and analysis plans before examining outcome data.
C. Cross-sectional design: A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission. / Child assent in research: A design that compares different individuals or groups at one time point.
D. Cross-sectional design: A design that compares different individuals or groups at one time point. / Child assent in research: A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission.

0572. At a case-planning meeting, the counselor proposes evaluating whether rival explanations for a treatment effect have been addressed. for a child aged 7 seen in the school-based service. Which concept does this illustrate?

A. Longitudinal design
B. External validity
C. Confounding variable
D. Internal validity

0573. Which applied comparison correctly identifies what belongs to Operational definition versus Random assignment?

A. Operational definition: Using a chance procedure to allocate enrolled participants to treatment conditions. / Random assignment: Defining observable criteria for a study variable before collecting data.
B. Operational definition: Defining observable criteria for a study variable before collecting data. / Random assignment: Explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult.
C. Operational definition: Defining observable criteria for a study variable before collecting data. / Random assignment: Using a chance procedure to allocate enrolled participants to treatment conditions.
D. Operational definition: Explaining a study to a child in accessible language and respecting dissent under applicable safeguards. / Random assignment: Using a chance procedure to allocate enrolled participants to treatment conditions.

0574. A planning meeting about a child of elementary-school age includes a school support specialist. The proposed practice in the after-school program is using a chance procedure to allocate enrolled participants to treatment conditions. Which idea underlies it?

A. Confounding variable
B. Internal validity
C. External validity
D. Random assignment

0575. A supervisor asks for an applied contrast between Random assignment and Preregistration. Which option fits?

A. Random assignment: Using a chance procedure to allocate enrolled participants to treatment conditions. / Preregistration: Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work.
B. Random assignment: Explaining a study to a child in accessible language and respecting dissent under applicable safeguards. / Preregistration: Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work.
C. Random assignment: Using a chance procedure to allocate enrolled participants to treatment conditions. / Preregistration: Identifying a third factor that may account for an observed association between exposure and outcome.
D. Random assignment: Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work. / Preregistration: Using a chance procedure to allocate enrolled participants to treatment conditions.

0576. Which pair of actions illustrates Longitudinal design and External validity, respectively?

A. Longitudinal design: Considering whether a sample and setting resemble the populations to which results are generalized. / External validity: Following the same children over time to study within-person change.
B. Longitudinal design: Defining observable criteria for a study variable before collecting data. / External validity: Considering whether a sample and setting resemble the populations to which results are generalized.
C. Longitudinal design: Following the same children over time to study within-person change. / External validity: Evaluating whether rival explanations for a treatment effect have been addressed.
D. Longitudinal design: Following the same children over time to study within-person change. / External validity: Considering whether a sample and setting resemble the populations to which results are generalized.

0577. In a supervision quiz, how should Confounding variable be distinguished from Informed research consent?

A. Confounding variable: A factor associated with both a presumed cause and outcome that can offer an alternative explanation. / Informed research consent: A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission.
B. Confounding variable: A factor associated with both a presumed cause and outcome that can offer an alternative explanation. / Informed research consent: Voluntary authorization to participate based on adequate disclosure, provided by an authorized adult when required.
C. Confounding variable: Voluntary authorization to participate based on adequate disclosure, provided by an authorized adult when required. / Informed research consent: A factor associated with both a presumed cause and outcome that can offer an alternative explanation.
D. Confounding variable: A design that compares different individuals or groups at one time point. / Informed research consent: Voluntary authorization to participate based on adequate disclosure, provided by an authorized adult when required.

0578. In the student wellness team, a team asks how a consulting counselor can support a young person aged 13. One proposed action is recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work. Which idea does it represent?

A. Confounding variable
B. Internal validity
C. Preregistration
D. Longitudinal design

0579. A group facilitator is asked to justify a plan for a student aged 15 in the multidisciplinary case conference. It calls for evaluating whether rival explanations for a treatment effect have been addressed. Which concept provides the rationale?

A. Longitudinal design
B. External validity
C. Internal validity
D. Operational definition

0580. Which choice aligns each practice with the correct idea, Operational definition or Longitudinal design?

A. Operational definition: Defining observable criteria for a study variable before collecting data. / Longitudinal design: Following the same children over time to study within-person change.
B. Operational definition: Following the same children over time to study within-person change. / Longitudinal design: Defining observable criteria for a study variable before collecting data.
C. Operational definition: Identifying a third factor that may account for an observed association between exposure and outcome. / Longitudinal design: Following the same children over time to study within-person change.
D. Operational definition: Defining observable criteria for a study variable before collecting data. / Longitudinal design: Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work.

0581. Choose the definition pair that correctly explains Operational definition first and Internal validity second.

A. Operational definition: A precise specification of how a construct or variable is observed, measured, or manipulated. / Internal validity: The strength of evidence that a study's manipulation or exposure, rather than alternatives, explains the observed effect.
B. Operational definition: Voluntary authorization to participate based on adequate disclosure, provided by an authorized adult when required. / Internal validity: The strength of evidence that a study's manipulation or exposure, rather than alternatives, explains the observed effect.
C. Operational definition: The strength of evidence that a study's manipulation or exposure, rather than alternatives, explains the observed effect. / Internal validity: A precise specification of how a construct or variable is observed, measured, or manipulated.
D. Operational definition: A precise specification of how a construct or variable is observed, measured, or manipulated. / Internal validity: A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission.

0582. A trainee must explain Confounding variable. Which answer is accurate?

A. Publicly documenting hypotheses, methods, and analysis plans before examining outcome data.
B. A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission.
C. A factor associated with both a presumed cause and outcome that can offer an alternative explanation.
D. The extent to which findings may apply across populations, settings, measures, and conditions beyond the study.

0583. While consulting in the community mental-health service, a consultant supports a client in late adolescence by using this approach: recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work. Which concept is being applied?

A. Confounding variable
B. Preregistration
C. Longitudinal design
D. Internal validity

0584. A supervisor asks for an applied contrast between Longitudinal design and Confounding variable. Which option fits?

A. Longitudinal design: Following the same children over time to study within-person change. / Confounding variable: Identifying a third factor that may account for an observed association between exposure and outcome.
B. Longitudinal design: Defining observable criteria for a study variable before collecting data. / Confounding variable: Identifying a third factor that may account for an observed association between exposure and outcome.
C. Longitudinal design: Identifying a third factor that may account for an observed association between exposure and outcome. / Confounding variable: Following the same children over time to study within-person change.
D. Longitudinal design: Following the same children over time to study within-person change. / Confounding variable: Explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult.

0585. Which description belongs with the term Operational definition?

A. A design that measures the same individuals or units across multiple time points.
B. Allocation of participants to study conditions by chance to support baseline comparability.
C. The strength of evidence that a study's manipulation or exposure, rather than alternatives, explains the observed effect.
D. A precise specification of how a construct or variable is observed, measured, or manipulated.

0586. While supporting a student aged 12 in the clinical planning session, a family therapist adopts this practice: explaining a study to a child in accessible language and respecting dissent under applicable safeguards. Which concept best explains the choice?

A. Cross-sectional design
B. Random assignment
C. Child assent in research
D. Longitudinal design

0587. A service navigator describes an intervention for a student aged 17 in the supervision meeting, centered on evaluating whether rival explanations for a treatment effect have been addressed. Which named idea is most relevant?

A. Longitudinal design
B. Internal validity
C. External validity
D. Confounding variable

0588. A student confuses Longitudinal design with Confounding variable. Which explanation most accurately separates them?

A. Longitudinal design: A precise specification of how a construct or variable is observed, measured, or manipulated. / Confounding variable: A factor associated with both a presumed cause and outcome that can offer an alternative explanation.
B. Longitudinal design: A factor associated with both a presumed cause and outcome that can offer an alternative explanation. / Confounding variable: A design that measures the same individuals or units across multiple time points.
C. Longitudinal design: A design that measures the same individuals or units across multiple time points. / Confounding variable: Voluntary authorization to participate based on adequate disclosure, provided by an authorized adult when required.
D. Longitudinal design: A design that measures the same individuals or units across multiple time points. / Confounding variable: A factor associated with both a presumed cause and outcome that can offer an alternative explanation.

0589. A student aged 9's service team meets in the school-based service. The family therapist recommends a change involving recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work. Which idea best explains it?

A. Cross-sectional design
B. Internal validity
C. Confounding variable
D. Preregistration

0590. A service team discusses a client in late adolescence in the youth advocacy program. Their proposed next step is evaluating whether rival explanations for a treatment effect have been addressed. Which course concept supports it?

A. Internal validity
B. Preregistration
C. Confounding variable
D. Operational definition

0591. Which option pairs the definitions of Longitudinal design and Informed research consent correctly, in that order?

A. Longitudinal design: A design that measures the same individuals or units across multiple time points. / Informed research consent: The extent to which findings may apply across populations, settings, measures, and conditions beyond the study.
B. Longitudinal design: Voluntary authorization to participate based on adequate disclosure, provided by an authorized adult when required. / Informed research consent: A design that measures the same individuals or units across multiple time points.
C. Longitudinal design: A design that compares different individuals or groups at one time point. / Informed research consent: Voluntary authorization to participate based on adequate disclosure, provided by an authorized adult when required.
D. Longitudinal design: A design that measures the same individuals or units across multiple time points. / Informed research consent: Voluntary authorization to participate based on adequate disclosure, provided by an authorized adult when required.

0592. Choose the definition pair that correctly explains Informed research consent first and Preregistration second.

A. Informed research consent: Publicly documenting hypotheses, methods, and analysis plans before examining outcome data. / Preregistration: Voluntary authorization to participate based on adequate disclosure, provided by an authorized adult when required.
B. Informed research consent: Voluntary authorization to participate based on adequate disclosure, provided by an authorized adult when required. / Preregistration: Allocation of participants to study conditions by chance to support baseline comparability.
C. Informed research consent: Voluntary authorization to participate based on adequate disclosure, provided by an authorized adult when required. / Preregistration: Publicly documenting hypotheses, methods, and analysis plans before examining outcome data.
D. Informed research consent: A factor associated with both a presumed cause and outcome that can offer an alternative explanation. / Preregistration: Publicly documenting hypotheses, methods, and analysis plans before examining outcome data.

0593. Which paired example correctly applies Internal validity first and Child assent in research second?

A. Internal validity: Evaluating whether rival explanations for a treatment effect have been addressed. / Child assent in research: Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work.
B. Internal validity: Explaining a study to a child in accessible language and respecting dissent under applicable safeguards. / Child assent in research: Evaluating whether rival explanations for a treatment effect have been addressed.
C. Internal validity: Evaluating whether rival explanations for a treatment effect have been addressed. / Child assent in research: Explaining a study to a child in accessible language and respecting dissent under applicable safeguards.
D. Internal validity: Considering whether a sample and setting resemble the populations to which results are generalized. / Child assent in research: Explaining a study to a child in accessible language and respecting dissent under applicable safeguards.

0594. A supervisor asks for an applied contrast between Longitudinal design and Cross-sectional design. Which option fits?

A. Longitudinal design: Comparing age groups during one data-collection period while recognizing age and cohort are confounded. / Cross-sectional design: Following the same children over time to study within-person change.
B. Longitudinal design: Following the same children over time to study within-person change. / Cross-sectional design: Comparing age groups during one data-collection period while recognizing age and cohort are confounded.
C. Longitudinal design: Following the same children over time to study within-person change. / Cross-sectional design: Explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult.
D. Longitudinal design: Evaluating whether rival explanations for a treatment effect have been addressed. / Cross-sectional design: Comparing age groups during one data-collection period while recognizing age and cohort are confounded.

0595. Which paired example correctly applies Random assignment first and Preregistration second?

A. Random assignment: Explaining a study to a child in accessible language and respecting dissent under applicable safeguards. / Preregistration: Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work.
B. Random assignment: Using a chance procedure to allocate enrolled participants to treatment conditions. / Preregistration: Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work.
C. Random assignment: Using a chance procedure to allocate enrolled participants to treatment conditions. / Preregistration: Identifying a third factor that may account for an observed association between exposure and outcome.
D. Random assignment: Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work. / Preregistration: Using a chance procedure to allocate enrolled participants to treatment conditions.

0596. Which statement shows a sound practice-level distinction between Longitudinal design and Confounding variable?

A. Longitudinal design: Defining observable criteria for a study variable before collecting data. / Confounding variable: Identifying a third factor that may account for an observed association between exposure and outcome.
B. Longitudinal design: Following the same children over time to study within-person change. / Confounding variable: Explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult.
C. Longitudinal design: Identifying a third factor that may account for an observed association between exposure and outcome. / Confounding variable: Following the same children over time to study within-person change.
D. Longitudinal design: Following the same children over time to study within-person change. / Confounding variable: Identifying a third factor that may account for an observed association between exposure and outcome.

0597. Which statement shows a sound practice-level distinction between Longitudinal design and Internal validity?

A. Longitudinal design: Following the same children over time to study within-person change. / Internal validity: Defining observable criteria for a study variable before collecting data.
B. Longitudinal design: Comparing age groups during one data-collection period while recognizing age and cohort are confounded. / Internal validity: Evaluating whether rival explanations for a treatment effect have been addressed.
C. Longitudinal design: Following the same children over time to study within-person change. / Internal validity: Evaluating whether rival explanations for a treatment effect have been addressed.
D. Longitudinal design: Evaluating whether rival explanations for a treatment effect have been addressed. / Internal validity: Following the same children over time to study within-person change.

0598. A case conference asks for a distinction between Cross-sectional design and Confounding variable. Which answer is sound?

A. Cross-sectional design: A design that compares different individuals or groups at one time point. / Confounding variable: A factor associated with both a presumed cause and outcome that can offer an alternative explanation.
B. Cross-sectional design: A factor associated with both a presumed cause and outcome that can offer an alternative explanation. / Confounding variable: A design that compares different individuals or groups at one time point.
C. Cross-sectional design: Allocation of participants to study conditions by chance to support baseline comparability. / Confounding variable: A factor associated with both a presumed cause and outcome that can offer an alternative explanation.
D. Cross-sectional design: A design that compares different individuals or groups at one time point. / Confounding variable: The strength of evidence that a study's manipulation or exposure, rather than alternatives, explains the observed effect.

0599. A young person aged 10's service team meets in the student wellness team. The school-based clinician recommends a change involving following the same children over time to study within-person change. Which idea best explains it?

A. Longitudinal design
B. Preregistration
C. Operational definition
D. Confounding variable

0600. Choose the practice comparison that best separates Operational definition from Informed research consent.

A. Operational definition: Explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult. / Informed research consent: Defining observable criteria for a study variable before collecting data.
B. Operational definition: Defining observable criteria for a study variable before collecting data. / Informed research consent: Evaluating whether rival explanations for a treatment effect have been addressed.
C. Operational definition: Defining observable criteria for a study variable before collecting data. / Informed research consent: Explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult.
D. Operational definition: Identifying a third factor that may account for an observed association between exposure and outcome. / Informed research consent: Explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult.

0601. In the family resource center, the agreed focus for a program coordinator working with a student aged 15 is identifying a third factor that may account for an observed association between exposure and outcome. Which concept names this focus?

A. Operational definition
B. Confounding variable
C. Child assent in research
D. Random assignment

0602. A supervisor asks for an applied contrast between Operational definition and Preregistration. Which option fits?

A. Operational definition: Using a chance procedure to allocate enrolled participants to treatment conditions. / Preregistration: Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work.
B. Operational definition: Defining observable criteria for a study variable before collecting data. / Preregistration: Considering whether a sample and setting resemble the populations to which results are generalized.
C. Operational definition: Defining observable criteria for a study variable before collecting data. / Preregistration: Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work.
D. Operational definition: Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work. / Preregistration: Defining observable criteria for a study variable before collecting data.

0603. At a case-planning meeting, the behavior specialist proposes identifying a third factor that may account for an observed association between exposure and outcome. for a child aged 11 seen in the multidisciplinary case conference. Which concept does this illustrate?

A. External validity
B. Confounding variable
C. Child assent in research
D. Informed research consent

0604. Which choice aligns each practice with the correct idea, External validity or Informed research consent?

A. External validity: Defining observable criteria for a study variable before collecting data. / Informed research consent: Explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult.
B. External validity: Considering whether a sample and setting resemble the populations to which results are generalized. / Informed research consent: Explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult.
C. External validity: Considering whether a sample and setting resemble the populations to which results are generalized. / Informed research consent: Comparing age groups during one data-collection period while recognizing age and cohort are confounded.
D. External validity: Explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult. / Informed research consent: Considering whether a sample and setting resemble the populations to which results are generalized.

0605. A student confuses Confounding variable with Internal validity. Which explanation most accurately separates them?

A. Confounding variable: A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission. / Internal validity: The strength of evidence that a study's manipulation or exposure, rather than alternatives, explains the observed effect.
B. Confounding variable: A factor associated with both a presumed cause and outcome that can offer an alternative explanation. / Internal validity: The strength of evidence that a study's manipulation or exposure, rather than alternatives, explains the observed effect.
C. Confounding variable: The strength of evidence that a study's manipulation or exposure, rather than alternatives, explains the observed effect. / Internal validity: A factor associated with both a presumed cause and outcome that can offer an alternative explanation.
D. Confounding variable: A factor associated with both a presumed cause and outcome that can offer an alternative explanation. / Internal validity: A design that compares different individuals or groups at one time point.

0606. A supervisor asks how Internal validity would appear in practice. Which choice should be selected?

A. Defining observable criteria for a study variable before collecting data.
B. Comparing age groups during one data-collection period while recognizing age and cohort are confounded.
C. Evaluating whether rival explanations for a treatment effect have been addressed.
D. Following the same children over time to study within-person change.

0607. A trainee must distinguish how Operational definition and External validity guide practice. Which comparison is accurate?

A. Operational definition: Defining observable criteria for a study variable before collecting data. / External validity: Considering whether a sample and setting resemble the populations to which results are generalized.
B. Operational definition: Considering whether a sample and setting resemble the populations to which results are generalized. / External validity: Defining observable criteria for a study variable before collecting data.
C. Operational definition: Identifying a third factor that may account for an observed association between exposure and outcome. / External validity: Considering whether a sample and setting resemble the populations to which results are generalized.
D. Operational definition: Defining observable criteria for a study variable before collecting data. / External validity: Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work.

0608. A trainee must choose a practice that exemplifies Longitudinal design. Which action is the best fit?

A. Explaining a study to a child in accessible language and respecting dissent under applicable safeguards.
B. Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work.
C. Following the same children over time to study within-person change.
D. Comparing age groups during one data-collection period while recognizing age and cohort are confounded.

0609. In the classroom support meeting, the agreed focus for a service navigator working with a client in early adolescence is following the same children over time to study within-person change. Which concept names this focus?

A. Random assignment
B. External validity
C. Operational definition
D. Longitudinal design

0610. In a supervision quiz, how should Operational definition be distinguished from Longitudinal design?

A. Operational definition: A factor associated with both a presumed cause and outcome that can offer an alternative explanation. / Longitudinal design: A design that measures the same individuals or units across multiple time points.
B. Operational definition: A precise specification of how a construct or variable is observed, measured, or manipulated. / Longitudinal design: A design that measures the same individuals or units across multiple time points.
C. Operational definition: A design that measures the same individuals or units across multiple time points. / Longitudinal design: A precise specification of how a construct or variable is observed, measured, or manipulated.
D. Operational definition: A precise specification of how a construct or variable is observed, measured, or manipulated. / Longitudinal design: Publicly documenting hypotheses, methods, and analysis plans before examining outcome data.

0611. Which applied comparison correctly identifies what belongs to Cross-sectional design versus Confounding variable?

A. Cross-sectional design: Comparing age groups during one data-collection period while recognizing age and cohort are confounded. / Confounding variable: Identifying a third factor that may account for an observed association between exposure and outcome.
B. Cross-sectional design: Using a chance procedure to allocate enrolled participants to treatment conditions. / Confounding variable: Identifying a third factor that may account for an observed association between exposure and outcome.
C. Cross-sectional design: Comparing age groups during one data-collection period while recognizing age and cohort are confounded. / Confounding variable: Evaluating whether rival explanations for a treatment effect have been addressed.
D. Cross-sectional design: Identifying a third factor that may account for an observed association between exposure and outcome. / Confounding variable: Comparing age groups during one data-collection period while recognizing age and cohort are confounded.

0612. Which course concept is defined as follows: Allocation of participants to study conditions by chance to support baseline comparability.

A. Operational definition
B. Child assent in research
C. Longitudinal design
D. Random assignment

0613. In the supervision meeting, a school counselor explains why a young person aged 13 would benefit from identifying a third factor that may account for an observed association between exposure and outcome. Which course concept underpins the explanation?

A. Internal validity
B. Preregistration
C. Informed research consent
D. Confounding variable

0614. A trainee must distinguish how Random assignment and Internal validity guide practice. Which comparison is accurate?

A. Random assignment: Using a chance procedure to allocate enrolled participants to treatment conditions. / Internal validity: Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work.
B. Random assignment: Identifying a third factor that may account for an observed association between exposure and outcome. / Internal validity: Evaluating whether rival explanations for a treatment effect have been addressed.
C. Random assignment: Using a chance procedure to allocate enrolled participants to treatment conditions. / Internal validity: Evaluating whether rival explanations for a treatment effect have been addressed.
D. Random assignment: Evaluating whether rival explanations for a treatment effect have been addressed. / Internal validity: Using a chance procedure to allocate enrolled participants to treatment conditions.

0615. Which named construct is captured by this account? A precise specification of how a construct or variable is observed, measured, or manipulated.

A. Random assignment
B. Operational definition
C. Internal validity
D. Child assent in research

0616. A research trainee describes an intervention for a school-age child in the community mental-health service, centered on comparing age groups during one data-collection period while recognizing age and cohort are confounded. Which named idea is most relevant?

A. Cross-sectional design
B. Informed research consent
C. Confounding variable
D. Child assent in research

0617. Which option is the clearest practical expression of Preregistration?

A. Considering whether a sample and setting resemble the populations to which results are generalized.
B. Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work.
C. Explaining a study to a child in accessible language and respecting dissent under applicable safeguards.
D. Comparing age groups during one data-collection period while recognizing age and cohort are confounded.

0618. A case conference asks for a distinction between Internal validity and Informed research consent. Which answer is sound?

A. Internal validity: Voluntary authorization to participate based on adequate disclosure, provided by an authorized adult when required. / Informed research consent: The strength of evidence that a study's manipulation or exposure, rather than alternatives, explains the observed effect.
B. Internal validity: The strength of evidence that a study's manipulation or exposure, rather than alternatives, explains the observed effect. / Informed research consent: A precise specification of how a construct or variable is observed, measured, or manipulated.
C. Internal validity: The strength of evidence that a study's manipulation or exposure, rather than alternatives, explains the observed effect. / Informed research consent: Voluntary authorization to participate based on adequate disclosure, provided by an authorized adult when required.
D. Internal validity: A factor associated with both a presumed cause and outcome that can offer an alternative explanation. / Informed research consent: Voluntary authorization to participate based on adequate disclosure, provided by an authorized adult when required.

0619. Which statement shows a sound practice-level distinction between Operational definition and Informed research consent?

A. Operational definition: Explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult. / Informed research consent: Defining observable criteria for a study variable before collecting data.
B. Operational definition: Identifying a third factor that may account for an observed association between exposure and outcome. / Informed research consent: Explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult.
C. Operational definition: Defining observable criteria for a study variable before collecting data. / Informed research consent: Explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult.
D. Operational definition: Defining observable criteria for a study variable before collecting data. / Informed research consent: Evaluating whether rival explanations for a treatment effect have been addressed.

0620. How are Operational definition and External validity most accurately differentiated in this curriculum?

A. Operational definition: A factor associated with both a presumed cause and outcome that can offer an alternative explanation. / External validity: The extent to which findings may apply across populations, settings, measures, and conditions beyond the study.
B. Operational definition: The extent to which findings may apply across populations, settings, measures, and conditions beyond the study. / External validity: A precise specification of how a construct or variable is observed, measured, or manipulated.
C. Operational definition: A precise specification of how a construct or variable is observed, measured, or manipulated. / External validity: Publicly documenting hypotheses, methods, and analysis plans before examining outcome data.
D. Operational definition: A precise specification of how a construct or variable is observed, measured, or manipulated. / External validity: The extent to which findings may apply across populations, settings, measures, and conditions beyond the study.

0621. Which paired example correctly applies Operational definition first and Internal validity second?

A. Operational definition: Evaluating whether rival explanations for a treatment effect have been addressed. / Internal validity: Defining observable criteria for a study variable before collecting data.
B. Operational definition: Explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult. / Internal validity: Evaluating whether rival explanations for a treatment effect have been addressed.
C. Operational definition: Defining observable criteria for a study variable before collecting data. / Internal validity: Evaluating whether rival explanations for a treatment effect have been addressed.
D. Operational definition: Defining observable criteria for a study variable before collecting data. / Internal validity: Explaining a study to a child in accessible language and respecting dissent under applicable safeguards.

0622. How are Cross-sectional design and Internal validity most accurately differentiated in this curriculum?

A. Cross-sectional design: The strength of evidence that a study's manipulation or exposure, rather than alternatives, explains the observed effect. / Internal validity: A design that compares different individuals or groups at one time point.
B. Cross-sectional design: A design that compares different individuals or groups at one time point. / Internal validity: The strength of evidence that a study's manipulation or exposure, rather than alternatives, explains the observed effect.
C. Cross-sectional design: Publicly documenting hypotheses, methods, and analysis plans before examining outcome data. / Internal validity: The strength of evidence that a study's manipulation or exposure, rather than alternatives, explains the observed effect.
D. Cross-sectional design: A design that compares different individuals or groups at one time point. / Internal validity: A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission.

0623. A supervisor asks how Operational definition would appear in practice. Which choice should be selected?

A. Comparing age groups during one data-collection period while recognizing age and cohort are confounded.
B. Considering whether a sample and setting resemble the populations to which results are generalized.
C. Defining observable criteria for a study variable before collecting data.
D. Explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult.

0624. Which pair of actions illustrates Longitudinal design and Informed research consent, respectively?

A. Longitudinal design: Explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult. / Informed research consent: Following the same children over time to study within-person change.
B. Longitudinal design: Following the same children over time to study within-person change. / Informed research consent: Explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult.
C. Longitudinal design: Comparing age groups during one data-collection period while recognizing age and cohort are confounded. / Informed research consent: Explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult.
D. Longitudinal design: Following the same children over time to study within-person change. / Informed research consent: Considering whether a sample and setting resemble the populations to which results are generalized.

0625. How should a practitioner distinguish the applications of Random assignment and Internal validity?

A. Random assignment: Identifying a third factor that may account for an observed association between exposure and outcome. / Internal validity: Evaluating whether rival explanations for a treatment effect have been addressed.
B. Random assignment: Using a chance procedure to allocate enrolled participants to treatment conditions. / Internal validity: Evaluating whether rival explanations for a treatment effect have been addressed.
C. Random assignment: Using a chance procedure to allocate enrolled participants to treatment conditions. / Internal validity: Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work.
D. Random assignment: Evaluating whether rival explanations for a treatment effect have been addressed. / Internal validity: Using a chance procedure to allocate enrolled participants to treatment conditions.

0626. Identify the most precise label for this idea: A factor associated with both a presumed cause and outcome that can offer an alternative explanation.

A. Confounding variable
B. Random assignment
C. Child assent in research
D. Preregistration

0627. A therapist is asked what should shape a student aged 17's support in the caregiver consultation. The proposed focus is defining observable criteria for a study variable before collecting data. Which principle does it represent?

A. Random assignment
B. Longitudinal design
C. Operational definition
D. Cross-sectional design

0628. Identify the most precise label for this idea: Voluntary authorization to participate based on adequate disclosure, provided by an authorized adult when required.

A. Confounding variable
B. Longitudinal design
C. Preregistration
D. Informed research consent

0629. During service review in the student wellness team, a program coordinator describes defining observable criteria for a study variable before collecting data. for a client in late adolescence. Which course idea is most applicable?

A. Operational definition
B. Longitudinal design
C. Internal validity
D. Cross-sectional design

0630. A case conference asks for a distinction between Cross-sectional design and Internal validity. Which answer is sound?

A. Cross-sectional design: A design that compares different individuals or groups at one time point. / Internal validity: The strength of evidence that a study's manipulation or exposure, rather than alternatives, explains the observed effect.
B. Cross-sectional design: Publicly documenting hypotheses, methods, and analysis plans before examining outcome data. / Internal validity: The strength of evidence that a study's manipulation or exposure, rather than alternatives, explains the observed effect.
C. Cross-sectional design: A design that compares different individuals or groups at one time point. / Internal validity: A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission.
D. Cross-sectional design: The strength of evidence that a study's manipulation or exposure, rather than alternatives, explains the observed effect. / Internal validity: A design that compares different individuals or groups at one time point.

0631. Which option preserves the correct meaning of both Random assignment and Child assent in research?

A. Random assignment: A design that compares different individuals or groups at one time point. / Child assent in research: A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission.
B. Random assignment: Allocation of participants to study conditions by chance to support baseline comparability. / Child assent in research: The strength of evidence that a study's manipulation or exposure, rather than alternatives, explains the observed effect.
C. Random assignment: Allocation of participants to study conditions by chance to support baseline comparability. / Child assent in research: A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission.
D. Random assignment: A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission. / Child assent in research: Allocation of participants to study conditions by chance to support baseline comparability.

0632. A trainee must choose a practice that exemplifies Operational definition. Which action is the best fit?

A. Considering whether a sample and setting resemble the populations to which results are generalized.
B. Identifying a third factor that may account for an observed association between exposure and outcome.
C. Evaluating whether rival explanations for a treatment effect have been addressed.
D. Defining observable criteria for a study variable before collecting data.

0633. A trainee must explain Longitudinal design. Which answer is accurate?

A. A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission.
B. Publicly documenting hypotheses, methods, and analysis plans before examining outcome data.
C. A design that measures the same individuals or units across multiple time points.
D. A factor associated with both a presumed cause and outcome that can offer an alternative explanation.

0634. While supporting a client in late adolescence in the youth group, a family therapist adopts this practice: comparing age groups during one data-collection period while recognizing age and cohort are confounded. Which concept best explains the choice?

A. Cross-sectional design
B. External validity
C. Preregistration
D. Internal validity

0635. A service team discusses a student aged 17 in the caregiver consultation. Their proposed next step is defining observable criteria for a study variable before collecting data. Which course concept supports it?

A. External validity
B. Operational definition
C. Longitudinal design
D. Cross-sectional design

0636. During work in the learning-support meeting, a youth worker identifies this need: considering whether a sample and setting resemble the populations to which results are generalized. Which idea should guide the response?

A. Longitudinal design
B. Operational definition
C. External validity
D. Random assignment

0637. Which option pairs the definitions of Operational definition and Preregistration correctly, in that order?

A. Operational definition: A precise specification of how a construct or variable is observed, measured, or manipulated. / Preregistration: Publicly documenting hypotheses, methods, and analysis plans before examining outcome data.
B. Operational definition: Allocation of participants to study conditions by chance to support baseline comparability. / Preregistration: Publicly documenting hypotheses, methods, and analysis plans before examining outcome data.
C. Operational definition: A precise specification of how a construct or variable is observed, measured, or manipulated. / Preregistration: The extent to which findings may apply across populations, settings, measures, and conditions beyond the study.
D. Operational definition: Publicly documenting hypotheses, methods, and analysis plans before examining outcome data. / Preregistration: A precise specification of how a construct or variable is observed, measured, or manipulated.

0638. A supervisor asks for an applied contrast between External validity and Child assent in research. Which option fits?

A. External validity: Explaining a study to a child in accessible language and respecting dissent under applicable safeguards. / Child assent in research: Considering whether a sample and setting resemble the populations to which results are generalized.
B. External validity: Considering whether a sample and setting resemble the populations to which results are generalized. / Child assent in research: Defining observable criteria for a study variable before collecting data.
C. External validity: Considering whether a sample and setting resemble the populations to which results are generalized. / Child assent in research: Explaining a study to a child in accessible language and respecting dissent under applicable safeguards.
D. External validity: Explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult. / Child assent in research: Explaining a study to a child in accessible language and respecting dissent under applicable safeguards.

0639. Which statement shows a sound practice-level distinction between Cross-sectional design and Child assent in research?

A. Cross-sectional design: Comparing age groups during one data-collection period while recognizing age and cohort are confounded. / Child assent in research: Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work.
B. Cross-sectional design: Explaining a study to a child in accessible language and respecting dissent under applicable safeguards. / Child assent in research: Comparing age groups during one data-collection period while recognizing age and cohort are confounded.
C. Cross-sectional design: Comparing age groups during one data-collection period while recognizing age and cohort are confounded. / Child assent in research: Explaining a study to a child in accessible language and respecting dissent under applicable safeguards.
D. Cross-sectional design: Defining observable criteria for a study variable before collecting data. / Child assent in research: Explaining a study to a child in accessible language and respecting dissent under applicable safeguards.

0640. A family therapist presents a support plan for a child aged 8 at the community service agency. Its central feature is using a chance procedure to allocate enrolled participants to treatment conditions. Which concept should be named?

A. Child assent in research
B. Random assignment
C. Confounding variable
D. Internal validity

0641. A mental-health professional is preparing a follow-up plan for a child of elementary-school age in the classroom support meeting. The plan calls for explaining a study to a child in accessible language and respecting dissent under applicable safeguards. Which concept names this approach?

A. Internal validity
B. External validity
C. Child assent in research
D. Operational definition

0642. Which applied comparison correctly identifies what belongs to Longitudinal design versus External validity?

A. Longitudinal design: Defining observable criteria for a study variable before collecting data. / External validity: Considering whether a sample and setting resemble the populations to which results are generalized.
B. Longitudinal design: Following the same children over time to study within-person change. / External validity: Evaluating whether rival explanations for a treatment effect have been addressed.
C. Longitudinal design: Considering whether a sample and setting resemble the populations to which results are generalized. / External validity: Following the same children over time to study within-person change.
D. Longitudinal design: Following the same children over time to study within-person change. / External validity: Considering whether a sample and setting resemble the populations to which results are generalized.

0643. In the outpatient clinic, a teacher and counselor explains why a young person aged 10 would benefit from defining observable criteria for a study variable before collecting data. Which course concept underpins the explanation?

A. Operational definition
B. Confounding variable
C. Preregistration
D. Child assent in research

0644. When reviewing a middle-school student’s plan in the child guidance clinic, the caregiver working with a counselor notes that the next step is using a chance procedure to allocate enrolled participants to treatment conditions. Which concept guides this step?

A. Operational definition
B. Informed research consent
C. Random assignment
D. Preregistration

0645. A case coordinator presents a support plan for a child of elementary-school age at the supervision meeting. Its central feature is explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult. Which concept should be named?

A. Informed research consent
B. Confounding variable
C. Internal validity
D. Operational definition

0646. A assessment clinician is preparing a follow-up plan for a teenage client in the community youth program. The plan calls for evaluating whether rival explanations for a treatment effect have been addressed. Which concept names this approach?

A. Preregistration
B. External validity
C. Informed research consent
D. Internal validity

0647. A support meeting for a adolescent student includes a clinical supervisor in the youth group. The practice under consideration is identifying a third factor that may account for an observed association between exposure and outcome. Which concept guides it?

A. Preregistration
B. External validity
C. Confounding variable
D. Internal validity

0648. Which option correctly matches each concept to its practice focus: Confounding variable and External validity?

A. Confounding variable: Identifying a third factor that may account for an observed association between exposure and outcome. / External validity: Comparing age groups during one data-collection period while recognizing age and cohort are confounded.
B. Confounding variable: Considering whether a sample and setting resemble the populations to which results are generalized. / External validity: Identifying a third factor that may account for an observed association between exposure and outcome.
C. Confounding variable: Following the same children over time to study within-person change. / External validity: Considering whether a sample and setting resemble the populations to which results are generalized.
D. Confounding variable: Identifying a third factor that may account for an observed association between exposure and outcome. / External validity: Considering whether a sample and setting resemble the populations to which results are generalized.

0649. How should a practitioner distinguish the applications of Longitudinal design and External validity?

A. Longitudinal design: Considering whether a sample and setting resemble the populations to which results are generalized. / External validity: Following the same children over time to study within-person change.
B. Longitudinal design: Following the same children over time to study within-person change. / External validity: Considering whether a sample and setting resemble the populations to which results are generalized.
C. Longitudinal design: Defining observable criteria for a study variable before collecting data. / External validity: Considering whether a sample and setting resemble the populations to which results are generalized.
D. Longitudinal design: Following the same children over time to study within-person change. / External validity: Evaluating whether rival explanations for a treatment effect have been addressed.

0650. A student confuses Operational definition with Random assignment. Which explanation most accurately separates them?

A. Operational definition: A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission. / Random assignment: Allocation of participants to study conditions by chance to support baseline comparability.
B. Operational definition: A precise specification of how a construct or variable is observed, measured, or manipulated. / Random assignment: Voluntary authorization to participate based on adequate disclosure, provided by an authorized adult when required.
C. Operational definition: Allocation of participants to study conditions by chance to support baseline comparability. / Random assignment: A precise specification of how a construct or variable is observed, measured, or manipulated.
D. Operational definition: A precise specification of how a construct or variable is observed, measured, or manipulated. / Random assignment: Allocation of participants to study conditions by chance to support baseline comparability.

0651. Which statement most accurately defines Informed research consent?

A. Voluntary authorization to participate based on adequate disclosure, provided by an authorized adult when required.
B. A design that compares different individuals or groups at one time point.
C. A factor associated with both a presumed cause and outcome that can offer an alternative explanation.
D. The extent to which findings may apply across populations, settings, measures, and conditions beyond the study.

0652. During work in the outpatient clinic, a teacher and counselor identifies this need: defining observable criteria for a study variable before collecting data. Which idea should guide the response?

A. Child assent in research
B. Informed research consent
C. Preregistration
D. Operational definition

0653. At a case-planning meeting, the school support specialist proposes explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult. for a preadolescent child seen in the community service agency. Which concept does this illustrate?

A. Preregistration
B. Random assignment
C. Informed research consent
D. Confounding variable

0654. How are Operational definition and Child assent in research most accurately differentiated in this curriculum?

A. Operational definition: A design that compares different individuals or groups at one time point. / Child assent in research: A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission.
B. Operational definition: A precise specification of how a construct or variable is observed, measured, or manipulated. / Child assent in research: A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission.
C. Operational definition: A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission. / Child assent in research: A precise specification of how a construct or variable is observed, measured, or manipulated.
D. Operational definition: A precise specification of how a construct or variable is observed, measured, or manipulated. / Child assent in research: The extent to which findings may apply across populations, settings, measures, and conditions beyond the study.

0655. Which applied comparison correctly identifies what belongs to External validity versus Preregistration?

A. External validity: Considering whether a sample and setting resemble the populations to which results are generalized. / Preregistration: Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work.
B. External validity: Defining observable criteria for a study variable before collecting data. / Preregistration: Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work.
C. External validity: Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work. / Preregistration: Considering whether a sample and setting resemble the populations to which results are generalized.
D. External validity: Considering whether a sample and setting resemble the populations to which results are generalized. / Preregistration: Identifying a third factor that may account for an observed association between exposure and outcome.

0656. In the telehealth session, a group facilitator describes the most appropriate support for a student aged 12 as considering whether a sample and setting resemble the populations to which results are generalized. Which framework is being applied?

A. Child assent in research
B. Longitudinal design
C. External validity
D. Internal validity

0657. Which option pairs the definitions of Longitudinal design and Internal validity correctly, in that order?

A. Longitudinal design: A design that compares different individuals or groups at one time point. / Internal validity: The strength of evidence that a study's manipulation or exposure, rather than alternatives, explains the observed effect.
B. Longitudinal design: The strength of evidence that a study's manipulation or exposure, rather than alternatives, explains the observed effect. / Internal validity: A design that measures the same individuals or units across multiple time points.
C. Longitudinal design: A design that measures the same individuals or units across multiple time points. / Internal validity: A precise specification of how a construct or variable is observed, measured, or manipulated.
D. Longitudinal design: A design that measures the same individuals or units across multiple time points. / Internal validity: The strength of evidence that a study's manipulation or exposure, rather than alternatives, explains the observed effect.

0658. Which comparison would correct a trainee's misunderstanding of Operational definition versus Informed research consent?

A. Operational definition: A precise specification of how a construct or variable is observed, measured, or manipulated. / Informed research consent: Voluntary authorization to participate based on adequate disclosure, provided by an authorized adult when required.
B. Operational definition: A precise specification of how a construct or variable is observed, measured, or manipulated. / Informed research consent: The strength of evidence that a study's manipulation or exposure, rather than alternatives, explains the observed effect.
C. Operational definition: A factor associated with both a presumed cause and outcome that can offer an alternative explanation. / Informed research consent: Voluntary authorization to participate based on adequate disclosure, provided by an authorized adult when required.
D. Operational definition: Voluntary authorization to participate based on adequate disclosure, provided by an authorized adult when required. / Informed research consent: A precise specification of how a construct or variable is observed, measured, or manipulated.

0659. For a student aged 15 in the community mental-health service, a counselor makes this practice the immediate priority: considering whether a sample and setting resemble the populations to which results are generalized. Which concept fits best?

A. Preregistration
B. External validity
C. Operational definition
D. Internal validity

0660. Choose the response that best puts Internal validity into practice.

A. Comparing age groups during one data-collection period while recognizing age and cohort are confounded.
B. Evaluating whether rival explanations for a treatment effect have been addressed.
C. Identifying a third factor that may account for an observed association between exposure and outcome.
D. Explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult.

0661. Which option is the clearest practical expression of Informed research consent?

A. Explaining a study to a child in accessible language and respecting dissent under applicable safeguards.
B. Explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult.
C. Evaluating whether rival explanations for a treatment effect have been addressed.
D. Following the same children over time to study within-person change.

0662. A supervisor asks for an applied contrast between External validity and Informed research consent. Which option fits?

A. External validity: Defining observable criteria for a study variable before collecting data. / Informed research consent: Explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult.
B. External validity: Explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult. / Informed research consent: Considering whether a sample and setting resemble the populations to which results are generalized.
C. External validity: Considering whether a sample and setting resemble the populations to which results are generalized. / Informed research consent: Comparing age groups during one data-collection period while recognizing age and cohort are confounded.
D. External validity: Considering whether a sample and setting resemble the populations to which results are generalized. / Informed research consent: Explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult.

0663. At a case-planning meeting, the counselor proposes defining observable criteria for a study variable before collecting data. for a child aged 8 seen in the school counseling office. Which concept does this illustrate?

A. Confounding variable
B. Operational definition
C. External validity
D. Informed research consent

0664. Which statement shows a sound practice-level distinction between Longitudinal design and Cross-sectional design?

A. Longitudinal design: Following the same children over time to study within-person change. / Cross-sectional design: Comparing age groups during one data-collection period while recognizing age and cohort are confounded.
B. Longitudinal design: Evaluating whether rival explanations for a treatment effect have been addressed. / Cross-sectional design: Comparing age groups during one data-collection period while recognizing age and cohort are confounded.
C. Longitudinal design: Comparing age groups during one data-collection period while recognizing age and cohort are confounded. / Cross-sectional design: Following the same children over time to study within-person change.
D. Longitudinal design: Following the same children over time to study within-person change. / Cross-sectional design: Explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult.

0665. In a supervision quiz, how should Informed research consent be distinguished from Child assent in research?

A. Informed research consent: Voluntary authorization to participate based on adequate disclosure, provided by an authorized adult when required. / Child assent in research: Allocation of participants to study conditions by chance to support baseline comparability.
B. Informed research consent: Voluntary authorization to participate based on adequate disclosure, provided by an authorized adult when required. / Child assent in research: A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission.
C. Informed research consent: A design that measures the same individuals or units across multiple time points. / Child assent in research: A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission.
D. Informed research consent: A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission. / Child assent in research: Voluntary authorization to participate based on adequate disclosure, provided by an authorized adult when required.

0666. During service review in the student-support meeting, a therapist describes identifying a third factor that may account for an observed association between exposure and outcome. for a young person. Which course idea is most applicable?

A. Random assignment
B. Cross-sectional design
C. Confounding variable
D. External validity

0667. How are Random assignment and Longitudinal design most accurately differentiated in this curriculum?

A. Random assignment: Publicly documenting hypotheses, methods, and analysis plans before examining outcome data. / Longitudinal design: A design that measures the same individuals or units across multiple time points.
B. Random assignment: Allocation of participants to study conditions by chance to support baseline comparability. / Longitudinal design: A design that measures the same individuals or units across multiple time points.
C. Random assignment: A design that measures the same individuals or units across multiple time points. / Longitudinal design: Allocation of participants to study conditions by chance to support baseline comparability.
D. Random assignment: Allocation of participants to study conditions by chance to support baseline comparability. / Longitudinal design: A precise specification of how a construct or variable is observed, measured, or manipulated.

0668. Which option correctly matches each concept to its practice focus: Operational definition and External validity?

A. Operational definition: Defining observable criteria for a study variable before collecting data. / External validity: Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work.
B. Operational definition: Considering whether a sample and setting resemble the populations to which results are generalized. / External validity: Defining observable criteria for a study variable before collecting data.
C. Operational definition: Defining observable criteria for a study variable before collecting data. / External validity: Considering whether a sample and setting resemble the populations to which results are generalized.
D. Operational definition: Identifying a third factor that may account for an observed association between exposure and outcome. / External validity: Considering whether a sample and setting resemble the populations to which results are generalized.

0669. Which professional action most closely applies Operational definition?

A. Explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult.
B. Defining observable criteria for a study variable before collecting data.
C. Comparing age groups during one data-collection period while recognizing age and cohort are confounded.
D. Using a chance procedure to allocate enrolled participants to treatment conditions.

0670. Choose the definition pair that correctly explains Confounding variable first and Child assent in research second.

A. Confounding variable: A factor associated with both a presumed cause and outcome that can offer an alternative explanation. / Child assent in research: The extent to which findings may apply across populations, settings, measures, and conditions beyond the study.
B. Confounding variable: Voluntary authorization to participate based on adequate disclosure, provided by an authorized adult when required. / Child assent in research: A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission.
C. Confounding variable: A factor associated with both a presumed cause and outcome that can offer an alternative explanation. / Child assent in research: A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission.
D. Confounding variable: A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission. / Child assent in research: A factor associated with both a presumed cause and outcome that can offer an alternative explanation.

0671. A trainee must explain Cross-sectional design. Which answer is accurate?

A. Publicly documenting hypotheses, methods, and analysis plans before examining outcome data.
B. Voluntary authorization to participate based on adequate disclosure, provided by an authorized adult when required.
C. A factor associated with both a presumed cause and outcome that can offer an alternative explanation.
D. A design that compares different individuals or groups at one time point.

0672. Identify the most precise label for this idea: A design that compares different individuals or groups at one time point.

A. Informed research consent
B. Confounding variable
C. Cross-sectional design
D. Preregistration

0673. Which option preserves the correct meaning of both Operational definition and External validity?

A. Operational definition: The extent to which findings may apply across populations, settings, measures, and conditions beyond the study. / External validity: A precise specification of how a construct or variable is observed, measured, or manipulated.
B. Operational definition: A factor associated with both a presumed cause and outcome that can offer an alternative explanation. / External validity: The extent to which findings may apply across populations, settings, measures, and conditions beyond the study.
C. Operational definition: A precise specification of how a construct or variable is observed, measured, or manipulated. / External validity: Publicly documenting hypotheses, methods, and analysis plans before examining outcome data.
D. Operational definition: A precise specification of how a construct or variable is observed, measured, or manipulated. / External validity: The extent to which findings may apply across populations, settings, measures, and conditions beyond the study.

0674. A caregiver working with a counselor presents a support plan for a child aged 11 at the community mental-health service. Its central feature is evaluating whether rival explanations for a treatment effect have been addressed. Which concept should be named?

A. Confounding variable
B. Child assent in research
C. Preregistration
D. Internal validity

0675. A supervisor asks for an applied contrast between Operational definition and Child assent in research. Which option fits?

A. Operational definition: Comparing age groups during one data-collection period while recognizing age and cohort are confounded. / Child assent in research: Explaining a study to a child in accessible language and respecting dissent under applicable safeguards.
B. Operational definition: Defining observable criteria for a study variable before collecting data. / Child assent in research: Explaining a study to a child in accessible language and respecting dissent under applicable safeguards.
C. Operational definition: Explaining a study to a child in accessible language and respecting dissent under applicable safeguards. / Child assent in research: Defining observable criteria for a study variable before collecting data.
D. Operational definition: Defining observable criteria for a study variable before collecting data. / Child assent in research: Considering whether a sample and setting resemble the populations to which results are generalized.

0676. In a supervision quiz, how should Confounding variable be distinguished from Child assent in research?

A. Confounding variable: A factor associated with both a presumed cause and outcome that can offer an alternative explanation. / Child assent in research: The extent to which findings may apply across populations, settings, measures, and conditions beyond the study.
B. Confounding variable: Voluntary authorization to participate based on adequate disclosure, provided by an authorized adult when required. / Child assent in research: A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission.
C. Confounding variable: A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission. / Child assent in research: A factor associated with both a presumed cause and outcome that can offer an alternative explanation.
D. Confounding variable: A factor associated with both a presumed cause and outcome that can offer an alternative explanation. / Child assent in research: A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission.

0677. A young person and a member of a clinical team are reviewing goals in the classroom support meeting. The agreed action is comparing age groups during one data-collection period while recognizing age and cohort are confounded. Which principle best accounts for it?

A. Internal validity
B. Cross-sectional design
C. Longitudinal design
D. Operational definition

0678. A program coordinator describes an intervention for a young adolescent client in the telehealth session, centered on following the same children over time to study within-person change. Which named idea is most relevant?

A. Cross-sectional design
B. External validity
C. Confounding variable
D. Longitudinal design

0679. A trainee must explain External validity. Which answer is accurate?

A. Publicly documenting hypotheses, methods, and analysis plans before examining outcome data.
B. The extent to which findings may apply across populations, settings, measures, and conditions beyond the study.
C. A factor associated with both a presumed cause and outcome that can offer an alternative explanation.
D. The strength of evidence that a study's manipulation or exposure, rather than alternatives, explains the observed effect.

0680. Which statement accurately contrasts the course concepts Random assignment and External validity?

A. Random assignment: The extent to which findings may apply across populations, settings, measures, and conditions beyond the study. / External validity: Allocation of participants to study conditions by chance to support baseline comparability.
B. Random assignment: Allocation of participants to study conditions by chance to support baseline comparability. / External validity: The extent to which findings may apply across populations, settings, measures, and conditions beyond the study.
C. Random assignment: Allocation of participants to study conditions by chance to support baseline comparability. / External validity: A factor associated with both a presumed cause and outcome that can offer an alternative explanation.
D. Random assignment: A design that compares different individuals or groups at one time point. / External validity: The extent to which findings may apply across populations, settings, measures, and conditions beyond the study.

0681. A trainee must distinguish how Operational definition and Cross-sectional design guide practice. Which comparison is accurate?

A. Operational definition: Defining observable criteria for a study variable before collecting data. / Cross-sectional design: Explaining a study to a child in accessible language and respecting dissent under applicable safeguards.
B. Operational definition: Explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult. / Cross-sectional design: Comparing age groups during one data-collection period while recognizing age and cohort are confounded.
C. Operational definition: Defining observable criteria for a study variable before collecting data. / Cross-sectional design: Comparing age groups during one data-collection period while recognizing age and cohort are confounded.
D. Operational definition: Comparing age groups during one data-collection period while recognizing age and cohort are confounded. / Cross-sectional design: Defining observable criteria for a study variable before collecting data.

0682. Which pair of actions illustrates Cross-sectional design and Child assent in research, respectively?

A. Cross-sectional design: Explaining a study to a child in accessible language and respecting dissent under applicable safeguards. / Child assent in research: Comparing age groups during one data-collection period while recognizing age and cohort are confounded.
B. Cross-sectional design: Defining observable criteria for a study variable before collecting data. / Child assent in research: Explaining a study to a child in accessible language and respecting dissent under applicable safeguards.
C. Cross-sectional design: Comparing age groups during one data-collection period while recognizing age and cohort are confounded. / Child assent in research: Explaining a study to a child in accessible language and respecting dissent under applicable safeguards.
D. Cross-sectional design: Comparing age groups during one data-collection period while recognizing age and cohort are confounded. / Child assent in research: Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work.

0683. A clinical supervisor reviews a plan for a young person aged 18 in the school consultation. The plan emphasizes explaining a study to a child in accessible language and respecting dissent under applicable safeguards. Which course idea does this reflect?

A. Informed research consent
B. Cross-sectional design
C. Preregistration
D. Child assent in research

0684. How should a practitioner distinguish the applications of Operational definition and Longitudinal design?

A. Operational definition: Identifying a third factor that may account for an observed association between exposure and outcome. / Longitudinal design: Following the same children over time to study within-person change.
B. Operational definition: Defining observable criteria for a study variable before collecting data. / Longitudinal design: Following the same children over time to study within-person change.
C. Operational definition: Defining observable criteria for a study variable before collecting data. / Longitudinal design: Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work.
D. Operational definition: Following the same children over time to study within-person change. / Longitudinal design: Defining observable criteria for a study variable before collecting data.

0685. Which statement shows a sound practice-level distinction between Internal validity and Preregistration?

A. Internal validity: Identifying a third factor that may account for an observed association between exposure and outcome. / Preregistration: Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work.
B. Internal validity: Evaluating whether rival explanations for a treatment effect have been addressed. / Preregistration: Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work.
C. Internal validity: Evaluating whether rival explanations for a treatment effect have been addressed. / Preregistration: Using a chance procedure to allocate enrolled participants to treatment conditions.
D. Internal validity: Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work. / Preregistration: Evaluating whether rival explanations for a treatment effect have been addressed.

0686. Which paired example correctly applies Longitudinal design first and Cross-sectional design second?

A. Longitudinal design: Comparing age groups during one data-collection period while recognizing age and cohort are confounded. / Cross-sectional design: Following the same children over time to study within-person change.
B. Longitudinal design: Following the same children over time to study within-person change. / Cross-sectional design: Explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult.
C. Longitudinal design: Evaluating whether rival explanations for a treatment effect have been addressed. / Cross-sectional design: Comparing age groups during one data-collection period while recognizing age and cohort are confounded.
D. Longitudinal design: Following the same children over time to study within-person change. / Cross-sectional design: Comparing age groups during one data-collection period while recognizing age and cohort are confounded.

0687. Which statement accurately contrasts the course concepts External validity and Preregistration?

A. External validity: The extent to which findings may apply across populations, settings, measures, and conditions beyond the study. / Preregistration: Publicly documenting hypotheses, methods, and analysis plans before examining outcome data.
B. External validity: Publicly documenting hypotheses, methods, and analysis plans before examining outcome data. / Preregistration: The extent to which findings may apply across populations, settings, measures, and conditions beyond the study.
C. External validity: The extent to which findings may apply across populations, settings, measures, and conditions beyond the study. / Preregistration: A factor associated with both a presumed cause and outcome that can offer an alternative explanation.
D. External validity: A precise specification of how a construct or variable is observed, measured, or manipulated. / Preregistration: Publicly documenting hypotheses, methods, and analysis plans before examining outcome data.

0688. A supervised trainee is preparing a follow-up plan for a older adolescent client in the parent meeting. The plan calls for identifying a third factor that may account for an observed association between exposure and outcome. Which concept names this approach?

A. Random assignment
B. External validity
C. Operational definition
D. Confounding variable

0689. A mental-health professional is preparing a follow-up plan for a student aged 15 in the learning-support meeting. The plan calls for comparing age groups during one data-collection period while recognizing age and cohort are confounded. Which concept names this approach?

A. Cross-sectional design
B. Child assent in research
C. External validity
D. Operational definition

0690. Which professional action most closely applies Confounding variable?

A. Comparing age groups during one data-collection period while recognizing age and cohort are confounded.
B. Identifying a third factor that may account for an observed association between exposure and outcome.
C. Defining observable criteria for a study variable before collecting data.
D. Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work.

0691. A student confuses Internal validity with Preregistration. Which explanation most accurately separates them?

A. Internal validity: Publicly documenting hypotheses, methods, and analysis plans before examining outcome data. / Preregistration: The strength of evidence that a study's manipulation or exposure, rather than alternatives, explains the observed effect.
B. Internal validity: The strength of evidence that a study's manipulation or exposure, rather than alternatives, explains the observed effect. / Preregistration: Publicly documenting hypotheses, methods, and analysis plans before examining outcome data.
C. Internal validity: A factor associated with both a presumed cause and outcome that can offer an alternative explanation. / Preregistration: Publicly documenting hypotheses, methods, and analysis plans before examining outcome data.
D. Internal validity: The strength of evidence that a study's manipulation or exposure, rather than alternatives, explains the observed effect. / Preregistration: Allocation of participants to study conditions by chance to support baseline comparability.

0692. Which option pairs the definitions of External validity and Informed research consent correctly, in that order?

A. External validity: The extent to which findings may apply across populations, settings, measures, and conditions beyond the study. / Informed research consent: A design that compares different individuals or groups at one time point.
B. External validity: The extent to which findings may apply across populations, settings, measures, and conditions beyond the study. / Informed research consent: Voluntary authorization to participate based on adequate disclosure, provided by an authorized adult when required.
C. External validity: Voluntary authorization to participate based on adequate disclosure, provided by an authorized adult when required. / Informed research consent: The extent to which findings may apply across populations, settings, measures, and conditions beyond the study.
D. External validity: A precise specification of how a construct or variable is observed, measured, or manipulated. / Informed research consent: Voluntary authorization to participate based on adequate disclosure, provided by an authorized adult when required.

0693. In a professional consultation about a adolescent student, the mental-health professional describes this response in the youth advocacy program: considering whether a sample and setting resemble the populations to which results are generalized. Which term is most apt?

A. Internal validity
B. Random assignment
C. Cross-sectional design
D. External validity

0694. A support meeting for a young person aged 16 includes a clinical supervisor in the clinical planning session. The practice under consideration is recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work. Which concept guides it?

A. Informed research consent
B. Confounding variable
C. Longitudinal design
D. Preregistration

0695. During service review in the caregiver consultation, a program coordinator describes evaluating whether rival explanations for a treatment effect have been addressed. for a student aged 12. Which course idea is most applicable?

A. Preregistration
B. Child assent in research
C. Internal validity
D. Informed research consent

0696. A case discussion concerns a young adolescent client and a family therapist in the behavior-support review. The practitioner is considering evaluating whether rival explanations for a treatment effect have been addressed. Which principle is involved?

A. Confounding variable
B. Informed research consent
C. Internal validity
D. Cross-sectional design

0697. A child of elementary-school age is receiving support in the clinical planning session. The consulting counselor is guided by this practice: evaluating whether rival explanations for a treatment effect have been addressed. Which principle best fits?

A. External validity
B. Internal validity
C. Cross-sectional design
D. Child assent in research

0698. Which comparison correctly distinguishes Operational definition from Informed research consent?

A. Operational definition: Voluntary authorization to participate based on adequate disclosure, provided by an authorized adult when required. / Informed research consent: A precise specification of how a construct or variable is observed, measured, or manipulated.
B. Operational definition: A precise specification of how a construct or variable is observed, measured, or manipulated. / Informed research consent: Voluntary authorization to participate based on adequate disclosure, provided by an authorized adult when required.
C. Operational definition: A factor associated with both a presumed cause and outcome that can offer an alternative explanation. / Informed research consent: Voluntary authorization to participate based on adequate disclosure, provided by an authorized adult when required.
D. Operational definition: A precise specification of how a construct or variable is observed, measured, or manipulated. / Informed research consent: The strength of evidence that a study's manipulation or exposure, rather than alternatives, explains the observed effect.

0699. Which course concept is defined as follows: The extent to which findings may apply across populations, settings, measures, and conditions beyond the study.

A. Preregistration
B. Internal validity
C. Child assent in research
D. External validity

0700. How should a practitioner distinguish the applications of Longitudinal design and Informed research consent?

A. Longitudinal design: Following the same children over time to study within-person change. / Informed research consent: Considering whether a sample and setting resemble the populations to which results are generalized.
B. Longitudinal design: Explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult. / Informed research consent: Following the same children over time to study within-person change.
C. Longitudinal design: Comparing age groups during one data-collection period while recognizing age and cohort are confounded. / Informed research consent: Explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult.
D. Longitudinal design: Following the same children over time to study within-person change. / Informed research consent: Explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult.

0701. A case conference reviews a therapist's work with a child aged 11 in the learning-support meeting: following the same children over time to study within-person change. Which principle is central?

A. Longitudinal design
B. External validity
C. Operational definition
D. Confounding variable

0702. Choose the practice comparison that best separates Longitudinal design from Cross-sectional design.

A. Longitudinal design: Following the same children over time to study within-person change. / Cross-sectional design: Comparing age groups during one data-collection period while recognizing age and cohort are confounded.
B. Longitudinal design: Evaluating whether rival explanations for a treatment effect have been addressed. / Cross-sectional design: Comparing age groups during one data-collection period while recognizing age and cohort are confounded.
C. Longitudinal design: Comparing age groups during one data-collection period while recognizing age and cohort are confounded. / Cross-sectional design: Following the same children over time to study within-person change.
D. Longitudinal design: Following the same children over time to study within-person change. / Cross-sectional design: Explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult.

0703. In the parent meeting, a group facilitator explains why a student aged 9 would benefit from explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult. Which course concept underpins the explanation?

A. Informed research consent
B. Confounding variable
C. Longitudinal design
D. Random assignment

0704. In a supervision review, a caregiver working with a counselor describes work with a middle-school student in the child guidance clinic: using a chance procedure to allocate enrolled participants to treatment conditions. What concept is illustrated?

A. Random assignment
B. Informed research consent
C. Preregistration
D. Cross-sectional design

0705. Which paired example correctly applies Random assignment first and Child assent in research second?

A. Random assignment: Explaining a study to a child in accessible language and respecting dissent under applicable safeguards. / Child assent in research: Using a chance procedure to allocate enrolled participants to treatment conditions.
B. Random assignment: Comparing age groups during one data-collection period while recognizing age and cohort are confounded. / Child assent in research: Explaining a study to a child in accessible language and respecting dissent under applicable safeguards.
C. Random assignment: Using a chance procedure to allocate enrolled participants to treatment conditions. / Child assent in research: Explaining a study to a child in accessible language and respecting dissent under applicable safeguards.
D. Random assignment: Using a chance procedure to allocate enrolled participants to treatment conditions. / Child assent in research: Evaluating whether rival explanations for a treatment effect have been addressed.

0706. Which paired example correctly applies Operational definition first and Informed research consent second?

A. Operational definition: Identifying a third factor that may account for an observed association between exposure and outcome. / Informed research consent: Explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult.
B. Operational definition: Defining observable criteria for a study variable before collecting data. / Informed research consent: Evaluating whether rival explanations for a treatment effect have been addressed.
C. Operational definition: Explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult. / Informed research consent: Defining observable criteria for a study variable before collecting data.
D. Operational definition: Defining observable criteria for a study variable before collecting data. / Informed research consent: Explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult.

0707. Select the best explanation of Longitudinal design.

A. A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission.
B. Publicly documenting hypotheses, methods, and analysis plans before examining outcome data.
C. A design that measures the same individuals or units across multiple time points.
D. The extent to which findings may apply across populations, settings, measures, and conditions beyond the study.

0708. Which paired example correctly applies Cross-sectional design first and Confounding variable second?

A. Cross-sectional design: Using a chance procedure to allocate enrolled participants to treatment conditions. / Confounding variable: Identifying a third factor that may account for an observed association between exposure and outcome.
B. Cross-sectional design: Comparing age groups during one data-collection period while recognizing age and cohort are confounded. / Confounding variable: Identifying a third factor that may account for an observed association between exposure and outcome.
C. Cross-sectional design: Identifying a third factor that may account for an observed association between exposure and outcome. / Confounding variable: Comparing age groups during one data-collection period while recognizing age and cohort are confounded.
D. Cross-sectional design: Comparing age groups during one data-collection period while recognizing age and cohort are confounded. / Confounding variable: Evaluating whether rival explanations for a treatment effect have been addressed.

0709. Which statement accurately contrasts the course concepts Longitudinal design and Informed research consent?

A. Longitudinal design: A design that measures the same individuals or units across multiple time points. / Informed research consent: The extent to which findings may apply across populations, settings, measures, and conditions beyond the study.
B. Longitudinal design: A design that compares different individuals or groups at one time point. / Informed research consent: Voluntary authorization to participate based on adequate disclosure, provided by an authorized adult when required.
C. Longitudinal design: Voluntary authorization to participate based on adequate disclosure, provided by an authorized adult when required. / Informed research consent: A design that measures the same individuals or units across multiple time points.
D. Longitudinal design: A design that measures the same individuals or units across multiple time points. / Informed research consent: Voluntary authorization to participate based on adequate disclosure, provided by an authorized adult when required.

0710. A planning meeting about a young adolescent client includes a counselor. The proposed practice in the clinical planning session is identifying a third factor that may account for an observed association between exposure and outcome. Which idea underlies it?

A. Child assent in research
B. Confounding variable
C. Cross-sectional design
D. Operational definition

0711. A member of a clinical team prepares for a session in the counseling practicum with a child aged 8. The intended approach is following the same children over time to study within-person change. Which concept is most relevant?

A. Cross-sectional design
B. Preregistration
C. Longitudinal design
D. Operational definition

0712. Which paired example correctly applies Random assignment first and External validity second?

A. Random assignment: Using a chance procedure to allocate enrolled participants to treatment conditions. / External validity: Identifying a third factor that may account for an observed association between exposure and outcome.
B. Random assignment: Considering whether a sample and setting resemble the populations to which results are generalized. / External validity: Using a chance procedure to allocate enrolled participants to treatment conditions.
C. Random assignment: Using a chance procedure to allocate enrolled participants to treatment conditions. / External validity: Considering whether a sample and setting resemble the populations to which results are generalized.
D. Random assignment: Comparing age groups during one data-collection period while recognizing age and cohort are confounded. / External validity: Considering whether a sample and setting resemble the populations to which results are generalized.

0713. A trainee must distinguish how Cross-sectional design and External validity guide practice. Which comparison is accurate?

A. Cross-sectional design: Comparing age groups during one data-collection period while recognizing age and cohort are confounded. / External validity: Considering whether a sample and setting resemble the populations to which results are generalized.
B. Cross-sectional design: Identifying a third factor that may account for an observed association between exposure and outcome. / External validity: Considering whether a sample and setting resemble the populations to which results are generalized.
C. Cross-sectional design: Considering whether a sample and setting resemble the populations to which results are generalized. / External validity: Comparing age groups during one data-collection period while recognizing age and cohort are confounded.
D. Cross-sectional design: Comparing age groups during one data-collection period while recognizing age and cohort are confounded. / External validity: Explaining a study to a child in accessible language and respecting dissent under applicable safeguards.

0714. Which option preserves the correct meaning of both Cross-sectional design and Child assent in research?

A. Cross-sectional design: A precise specification of how a construct or variable is observed, measured, or manipulated. / Child assent in research: A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission.
B. Cross-sectional design: A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission. / Child assent in research: A design that compares different individuals or groups at one time point.
C. Cross-sectional design: A design that compares different individuals or groups at one time point. / Child assent in research: Publicly documenting hypotheses, methods, and analysis plans before examining outcome data.
D. Cross-sectional design: A design that compares different individuals or groups at one time point. / Child assent in research: A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission.

0715. In the after-school program, the agreed focus for a therapist working with a child aged 8 is comparing age groups during one data-collection period while recognizing age and cohort are confounded. Which concept names this focus?

A. Internal validity
B. Operational definition
C. Cross-sectional design
D. External validity

0716. Choose the definition pair that correctly explains Cross-sectional design first and Internal validity second.

A. Cross-sectional design: The strength of evidence that a study's manipulation or exposure, rather than alternatives, explains the observed effect. / Internal validity: A design that compares different individuals or groups at one time point.
B. Cross-sectional design: A design that compares different individuals or groups at one time point. / Internal validity: The strength of evidence that a study's manipulation or exposure, rather than alternatives, explains the observed effect.
C. Cross-sectional design: Publicly documenting hypotheses, methods, and analysis plans before examining outcome data. / Internal validity: The strength of evidence that a study's manipulation or exposure, rather than alternatives, explains the observed effect.
D. Cross-sectional design: A design that compares different individuals or groups at one time point. / Internal validity: A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission.

0717. Which course concept is defined as follows: A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission.

A. Operational definition
B. Child assent in research
C. Random assignment
D. Internal validity

0718. Choose the practice comparison that best separates Cross-sectional design from Internal validity.

A. Cross-sectional design: Comparing age groups during one data-collection period while recognizing age and cohort are confounded. / Internal validity: Evaluating whether rival explanations for a treatment effect have been addressed.
B. Cross-sectional design: Comparing age groups during one data-collection period while recognizing age and cohort are confounded. / Internal validity: Explaining a study to a child in accessible language and respecting dissent under applicable safeguards.
C. Cross-sectional design: Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work. / Internal validity: Evaluating whether rival explanations for a treatment effect have been addressed.
D. Cross-sectional design: Evaluating whether rival explanations for a treatment effect have been addressed. / Internal validity: Comparing age groups during one data-collection period while recognizing age and cohort are confounded.

0719. Which comparison would correct a trainee's misunderstanding of Informed research consent versus Preregistration?

A. Informed research consent: Voluntary authorization to participate based on adequate disclosure, provided by an authorized adult when required. / Preregistration: Allocation of participants to study conditions by chance to support baseline comparability.
B. Informed research consent: Publicly documenting hypotheses, methods, and analysis plans before examining outcome data. / Preregistration: Voluntary authorization to participate based on adequate disclosure, provided by an authorized adult when required.
C. Informed research consent: A factor associated with both a presumed cause and outcome that can offer an alternative explanation. / Preregistration: Publicly documenting hypotheses, methods, and analysis plans before examining outcome data.
D. Informed research consent: Voluntary authorization to participate based on adequate disclosure, provided by an authorized adult when required. / Preregistration: Publicly documenting hypotheses, methods, and analysis plans before examining outcome data.

0720. Which professional action most closely applies Preregistration?

A. Identifying a third factor that may account for an observed association between exposure and outcome.
B. Considering whether a sample and setting resemble the populations to which results are generalized.
C. Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work.
D. Evaluating whether rival explanations for a treatment effect have been addressed.

0721. A support meeting for a child aged 6 includes a play therapist in the after-school program. The practice under consideration is considering whether a sample and setting resemble the populations to which results are generalized. Which concept guides it?

A. Informed research consent
B. External validity
C. Confounding variable
D. Internal validity

0722. For a child aged 8 seen in the after-school program, the therapist recommends a plan built around comparing age groups during one data-collection period while recognizing age and cohort are confounded. Which concept is reflected?

A. Cross-sectional design
B. Preregistration
C. Random assignment
D. Internal validity

0723. In a supervision quiz, how should Longitudinal design be distinguished from External validity?

A. Longitudinal design: A design that measures the same individuals or units across multiple time points. / External validity: The extent to which findings may apply across populations, settings, measures, and conditions beyond the study.
B. Longitudinal design: A precise specification of how a construct or variable is observed, measured, or manipulated. / External validity: The extent to which findings may apply across populations, settings, measures, and conditions beyond the study.
C. Longitudinal design: A design that measures the same individuals or units across multiple time points. / External validity: The strength of evidence that a study's manipulation or exposure, rather than alternatives, explains the observed effect.
D. Longitudinal design: The extent to which findings may apply across populations, settings, measures, and conditions beyond the study. / External validity: A design that measures the same individuals or units across multiple time points.

0724. How are Random assignment and Child assent in research most accurately differentiated in this curriculum?

A. Random assignment: Allocation of participants to study conditions by chance to support baseline comparability. / Child assent in research: The strength of evidence that a study's manipulation or exposure, rather than alternatives, explains the observed effect.
B. Random assignment: A design that compares different individuals or groups at one time point. / Child assent in research: A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission.
C. Random assignment: A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission. / Child assent in research: Allocation of participants to study conditions by chance to support baseline comparability.
D. Random assignment: Allocation of participants to study conditions by chance to support baseline comparability. / Child assent in research: A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission.

0725. How are Internal validity and External validity most accurately differentiated in this curriculum?

A. Internal validity: The strength of evidence that a study's manipulation or exposure, rather than alternatives, explains the observed effect. / External validity: The extent to which findings may apply across populations, settings, measures, and conditions beyond the study.
B. Internal validity: A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission. / External validity: The extent to which findings may apply across populations, settings, measures, and conditions beyond the study.
C. Internal validity: The extent to which findings may apply across populations, settings, measures, and conditions beyond the study. / External validity: The strength of evidence that a study's manipulation or exposure, rather than alternatives, explains the observed effect.
D. Internal validity: The strength of evidence that a study's manipulation or exposure, rather than alternatives, explains the observed effect. / External validity: Publicly documenting hypotheses, methods, and analysis plans before examining outcome data.

0726. A group facilitator is explaining a choice to a child aged 7 and caregiver in the student wellness team. The choice centers on identifying a third factor that may account for an observed association between exposure and outcome. Which idea is illustrated?

A. External validity
B. Longitudinal design
C. Preregistration
D. Confounding variable

0727. Which pair of actions illustrates Longitudinal design and Confounding variable, respectively?

A. Longitudinal design: Following the same children over time to study within-person change. / Confounding variable: Identifying a third factor that may account for an observed association between exposure and outcome.
B. Longitudinal design: Identifying a third factor that may account for an observed association between exposure and outcome. / Confounding variable: Following the same children over time to study within-person change.
C. Longitudinal design: Following the same children over time to study within-person change. / Confounding variable: Explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult.
D. Longitudinal design: Defining observable criteria for a study variable before collecting data. / Confounding variable: Identifying a third factor that may account for an observed association between exposure and outcome.

0728. How are Cross-sectional design and Child assent in research most accurately differentiated in this curriculum?

A. Cross-sectional design: A design that compares different individuals or groups at one time point. / Child assent in research: Publicly documenting hypotheses, methods, and analysis plans before examining outcome data.
B. Cross-sectional design: A precise specification of how a construct or variable is observed, measured, or manipulated. / Child assent in research: A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission.
C. Cross-sectional design: A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission. / Child assent in research: A design that compares different individuals or groups at one time point.
D. Cross-sectional design: A design that compares different individuals or groups at one time point. / Child assent in research: A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission.

0729. A case conference asks for a distinction between Operational definition and Informed research consent. Which answer is sound?

A. Operational definition: A factor associated with both a presumed cause and outcome that can offer an alternative explanation. / Informed research consent: Voluntary authorization to participate based on adequate disclosure, provided by an authorized adult when required.
B. Operational definition: A precise specification of how a construct or variable is observed, measured, or manipulated. / Informed research consent: Voluntary authorization to participate based on adequate disclosure, provided by an authorized adult when required.
C. Operational definition: A precise specification of how a construct or variable is observed, measured, or manipulated. / Informed research consent: The strength of evidence that a study's manipulation or exposure, rather than alternatives, explains the observed effect.
D. Operational definition: Voluntary authorization to participate based on adequate disclosure, provided by an authorized adult when required. / Informed research consent: A precise specification of how a construct or variable is observed, measured, or manipulated.

0730. A service team discusses a high-school student in the multidisciplinary case conference. Their proposed next step is using a chance procedure to allocate enrolled participants to treatment conditions. Which course concept supports it?

A. Preregistration
B. Cross-sectional design
C. Random assignment
D. External validity

0731. When reviewing a student aged 12's plan in the counseling practicum, the case coordinator notes that the next step is comparing age groups during one data-collection period while recognizing age and cohort are confounded. Which concept guides this step?

A. Confounding variable
B. Preregistration
C. Cross-sectional design
D. Random assignment

0732. Choose the definition pair that correctly explains Longitudinal design first and Child assent in research second.

A. Longitudinal design: A design that measures the same individuals or units across multiple time points. / Child assent in research: Publicly documenting hypotheses, methods, and analysis plans before examining outcome data.
B. Longitudinal design: A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission. / Child assent in research: A design that measures the same individuals or units across multiple time points.
C. Longitudinal design: A factor associated with both a presumed cause and outcome that can offer an alternative explanation. / Child assent in research: A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission.
D. Longitudinal design: A design that measures the same individuals or units across multiple time points. / Child assent in research: A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission.

0733. In a professional consultation about a young person aged 13, the supervised trainee describes this response in the outpatient clinic: explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult. Which term is most apt?

A. Child assent in research
B. Cross-sectional design
C. Informed research consent
D. Random assignment

0734. A service team discusses a middle-school student in the community mental-health service. Their proposed next step is explaining a study to a child in accessible language and respecting dissent under applicable safeguards. Which course concept supports it?

A. Operational definition
B. Child assent in research
C. Random assignment
D. External validity

0735. How should a practitioner distinguish the applications of Confounding variable and Informed research consent?

A. Confounding variable: Explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult. / Informed research consent: Identifying a third factor that may account for an observed association between exposure and outcome.
B. Confounding variable: Identifying a third factor that may account for an observed association between exposure and outcome. / Informed research consent: Explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult.
C. Confounding variable: Comparing age groups during one data-collection period while recognizing age and cohort are confounded. / Informed research consent: Explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult.
D. Confounding variable: Identifying a third factor that may account for an observed association between exposure and outcome. / Informed research consent: Explaining a study to a child in accessible language and respecting dissent under applicable safeguards.

0736. A case conference asks for a distinction between Random assignment and Informed research consent. Which answer is sound?

A. Random assignment: Voluntary authorization to participate based on adequate disclosure, provided by an authorized adult when required. / Informed research consent: Allocation of participants to study conditions by chance to support baseline comparability.
B. Random assignment: A design that compares different individuals or groups at one time point. / Informed research consent: Voluntary authorization to participate based on adequate disclosure, provided by an authorized adult when required.
C. Random assignment: Allocation of participants to study conditions by chance to support baseline comparability. / Informed research consent: Voluntary authorization to participate based on adequate disclosure, provided by an authorized adult when required.
D. Random assignment: Allocation of participants to study conditions by chance to support baseline comparability. / Informed research consent: Publicly documenting hypotheses, methods, and analysis plans before examining outcome data.

0737. In the behavior-support review, a consulting counselor describes the most appropriate support for a student aged 9 as following the same children over time to study within-person change. Which framework is being applied?

A. Longitudinal design
B. Informed research consent
C. Random assignment
D. Child assent in research

0738. A supervisor asks how Informed research consent would appear in practice. Which choice should be selected?

A. Explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult.
B. Identifying a third factor that may account for an observed association between exposure and outcome.
C. Defining observable criteria for a study variable before collecting data.
D. Following the same children over time to study within-person change.

0739. What is the central meaning of External validity?

A. A design that compares different individuals or groups at one time point.
B. The strength of evidence that a study's manipulation or exposure, rather than alternatives, explains the observed effect.
C. A factor associated with both a presumed cause and outcome that can offer an alternative explanation.
D. The extent to which findings may apply across populations, settings, measures, and conditions beyond the study.

0740. Which option preserves the correct meaning of both Internal validity and External validity?

A. Internal validity: A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission. / External validity: The extent to which findings may apply across populations, settings, measures, and conditions beyond the study.
B. Internal validity: The strength of evidence that a study's manipulation or exposure, rather than alternatives, explains the observed effect. / External validity: Publicly documenting hypotheses, methods, and analysis plans before examining outcome data.
C. Internal validity: The extent to which findings may apply across populations, settings, measures, and conditions beyond the study. / External validity: The strength of evidence that a study's manipulation or exposure, rather than alternatives, explains the observed effect.
D. Internal validity: The strength of evidence that a study's manipulation or exposure, rather than alternatives, explains the observed effect. / External validity: The extent to which findings may apply across populations, settings, measures, and conditions beyond the study.

0741. Which statement most accurately defines Cross-sectional design?

A. A design that compares different individuals or groups at one time point.
B. The extent to which findings may apply across populations, settings, measures, and conditions beyond the study.
C. A design that measures the same individuals or units across multiple time points.
D. Publicly documenting hypotheses, methods, and analysis plans before examining outcome data.

0742. A planning meeting about a school-age child includes a clinical supervisor. The proposed practice in the school counseling office is evaluating whether rival explanations for a treatment effect have been addressed. Which idea underlies it?

A. Internal validity
B. Cross-sectional design
C. Child assent in research
D. Informed research consent

0743. Which applied comparison correctly identifies what belongs to Random assignment versus Informed research consent?

A. Random assignment: Explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult. / Informed research consent: Using a chance procedure to allocate enrolled participants to treatment conditions.
B. Random assignment: Using a chance procedure to allocate enrolled participants to treatment conditions. / Informed research consent: Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work.
C. Random assignment: Comparing age groups during one data-collection period while recognizing age and cohort are confounded. / Informed research consent: Explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult.
D. Random assignment: Using a chance procedure to allocate enrolled participants to treatment conditions. / Informed research consent: Explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult.

0744. Which comparison correctly distinguishes Longitudinal design from External validity?

A. Longitudinal design: The extent to which findings may apply across populations, settings, measures, and conditions beyond the study. / External validity: A design that measures the same individuals or units across multiple time points.
B. Longitudinal design: A design that measures the same individuals or units across multiple time points. / External validity: The extent to which findings may apply across populations, settings, measures, and conditions beyond the study.
C. Longitudinal design: A precise specification of how a construct or variable is observed, measured, or manipulated. / External validity: The extent to which findings may apply across populations, settings, measures, and conditions beyond the study.
D. Longitudinal design: A design that measures the same individuals or units across multiple time points. / External validity: The strength of evidence that a study's manipulation or exposure, rather than alternatives, explains the observed effect.

0745. A service team discusses a adolescent student in the school-based service. Their proposed next step is following the same children over time to study within-person change. Which course concept supports it?

A. Random assignment
B. Internal validity
C. Child assent in research
D. Longitudinal design

0746. Which paired example correctly applies Confounding variable first and Child assent in research second?

A. Confounding variable: Identifying a third factor that may account for an observed association between exposure and outcome. / Child assent in research: Explaining a study to a child in accessible language and respecting dissent under applicable safeguards.
B. Confounding variable: Identifying a third factor that may account for an observed association between exposure and outcome. / Child assent in research: Considering whether a sample and setting resemble the populations to which results are generalized.
C. Confounding variable: Explaining a study to a child in accessible language and respecting dissent under applicable safeguards. / Child assent in research: Identifying a third factor that may account for an observed association between exposure and outcome.
D. Confounding variable: Explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult. / Child assent in research: Explaining a study to a child in accessible language and respecting dissent under applicable safeguards.

0747. For a student aged 12 seen in the school consultation, the research trainee recommends a plan built around defining observable criteria for a study variable before collecting data. Which concept is reflected?

A. Operational definition
B. External validity
C. Longitudinal design
D. Cross-sectional design

0748. How are Internal validity and Informed research consent most accurately differentiated in this curriculum?

A. Internal validity: The strength of evidence that a study's manipulation or exposure, rather than alternatives, explains the observed effect. / Informed research consent: Voluntary authorization to participate based on adequate disclosure, provided by an authorized adult when required.
B. Internal validity: The strength of evidence that a study's manipulation or exposure, rather than alternatives, explains the observed effect. / Informed research consent: A precise specification of how a construct or variable is observed, measured, or manipulated.
C. Internal validity: A factor associated with both a presumed cause and outcome that can offer an alternative explanation. / Informed research consent: Voluntary authorization to participate based on adequate disclosure, provided by an authorized adult when required.
D. Internal validity: Voluntary authorization to participate based on adequate disclosure, provided by an authorized adult when required. / Informed research consent: The strength of evidence that a study's manipulation or exposure, rather than alternatives, explains the observed effect.

0749. Choose the practice comparison that best separates Cross-sectional design from Confounding variable.

A. Cross-sectional design: Comparing age groups during one data-collection period while recognizing age and cohort are confounded. / Confounding variable: Identifying a third factor that may account for an observed association between exposure and outcome.
B. Cross-sectional design: Using a chance procedure to allocate enrolled participants to treatment conditions. / Confounding variable: Identifying a third factor that may account for an observed association between exposure and outcome.
C. Cross-sectional design: Comparing age groups during one data-collection period while recognizing age and cohort are confounded. / Confounding variable: Evaluating whether rival explanations for a treatment effect have been addressed.
D. Cross-sectional design: Identifying a third factor that may account for an observed association between exposure and outcome. / Confounding variable: Comparing age groups during one data-collection period while recognizing age and cohort are confounded.

0750. Which option is the clearest practical expression of Operational definition?

A. Defining observable criteria for a study variable before collecting data.
B. Following the same children over time to study within-person change.
C. Explaining a study to a child in accessible language and respecting dissent under applicable safeguards.
D. Explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult.

0751. During service review in the school counseling office, a community practitioner describes following the same children over time to study within-person change. for a young person aged 16. Which course idea is most applicable?

A. Child assent in research
B. Internal validity
C. Longitudinal design
D. Informed research consent

0752. A trainee must choose a practice that exemplifies Child assent in research. Which action is the best fit?

A. Explaining a study to a child in accessible language and respecting dissent under applicable safeguards.
B. Explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult.
C. Following the same children over time to study within-person change.
D. Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work.

0753. A community practitioner is asked what should shape a young person aged 13's support in the behavior-support review. The proposed focus is comparing age groups during one data-collection period while recognizing age and cohort are confounded. Which principle does it represent?

A. Preregistration
B. Confounding variable
C. Internal validity
D. Cross-sectional design

0754. Which named construct is captured by this account? A design that compares different individuals or groups at one time point.

A. Cross-sectional design
B. Child assent in research
C. Informed research consent
D. Internal validity

0755. Which option pairs the definitions of Internal validity and Preregistration correctly, in that order?

A. Internal validity: The strength of evidence that a study's manipulation or exposure, rather than alternatives, explains the observed effect. / Preregistration: Allocation of participants to study conditions by chance to support baseline comparability.
B. Internal validity: Publicly documenting hypotheses, methods, and analysis plans before examining outcome data. / Preregistration: The strength of evidence that a study's manipulation or exposure, rather than alternatives, explains the observed effect.
C. Internal validity: A factor associated with both a presumed cause and outcome that can offer an alternative explanation. / Preregistration: Publicly documenting hypotheses, methods, and analysis plans before examining outcome data.
D. Internal validity: The strength of evidence that a study's manipulation or exposure, rather than alternatives, explains the observed effect. / Preregistration: Publicly documenting hypotheses, methods, and analysis plans before examining outcome data.

0756. Which option pairs the definitions of Confounding variable and External validity correctly, in that order?

A. Confounding variable: The extent to which findings may apply across populations, settings, measures, and conditions beyond the study. / External validity: A factor associated with both a presumed cause and outcome that can offer an alternative explanation.
B. Confounding variable: A factor associated with both a presumed cause and outcome that can offer an alternative explanation. / External validity: The extent to which findings may apply across populations, settings, measures, and conditions beyond the study.
C. Confounding variable: A design that measures the same individuals or units across multiple time points. / External validity: The extent to which findings may apply across populations, settings, measures, and conditions beyond the study.
D. Confounding variable: A factor associated with both a presumed cause and outcome that can offer an alternative explanation. / External validity: A design that compares different individuals or groups at one time point.

0757. A teenage client is receiving support in the after-school program. The teacher and counselor is guided by this practice: following the same children over time to study within-person change. Which principle best fits?

A. Informed research consent
B. Preregistration
C. Longitudinal design
D. Operational definition

0758. In a case note about a preadolescent child, a assessment clinician working in the community mental-health service records this priority: identifying a third factor that may account for an observed association between exposure and outcome. What principle is reflected?

A. Confounding variable
B. Longitudinal design
C. Preregistration
D. External validity

0759. An interdisciplinary team reviews a school-age child's case at the school counseling office. The clinical supervisor recommends evaluating whether rival explanations for a treatment effect have been addressed. Which course concept best fits?

A. Confounding variable
B. Random assignment
C. Operational definition
D. Internal validity

0760. A play therapist is asked to evaluate a proposed service for a young person aged 13 in the telehealth session. The defining feature is defining observable criteria for a study variable before collecting data. Which concept fits?

A. Random assignment
B. Internal validity
C. Preregistration
D. Operational definition

0761. A service navigator is asked what should shape a child aged 6's support in the community service agency. The proposed focus is identifying a third factor that may account for an observed association between exposure and outcome. Which principle does it represent?

A. Operational definition
B. Informed research consent
C. Child assent in research
D. Confounding variable

0762. Which option correctly matches each concept to its practice focus: Random assignment and External validity?

A. Random assignment: Considering whether a sample and setting resemble the populations to which results are generalized. / External validity: Using a chance procedure to allocate enrolled participants to treatment conditions.
B. Random assignment: Using a chance procedure to allocate enrolled participants to treatment conditions. / External validity: Identifying a third factor that may account for an observed association between exposure and outcome.
C. Random assignment: Comparing age groups during one data-collection period while recognizing age and cohort are confounded. / External validity: Considering whether a sample and setting resemble the populations to which results are generalized.
D. Random assignment: Using a chance procedure to allocate enrolled participants to treatment conditions. / External validity: Considering whether a sample and setting resemble the populations to which results are generalized.

0763. A play therapist reviews a plan for a young person aged 13 in the telehealth session. The plan emphasizes defining observable criteria for a study variable before collecting data. Which course idea does this reflect?

A. Child assent in research
B. Operational definition
C. Informed research consent
D. Longitudinal design

0764. When reviewing a teenage client's plan in the classroom support meeting, the parent educator notes that the next step is recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work. Which concept guides this step?

A. Preregistration
B. Informed research consent
C. Internal validity
D. Cross-sectional design

0765. Consider a client in early adolescence receiving help in the child guidance clinic. The school counselor focuses on explaining a study to a child in accessible language and respecting dissent under applicable safeguards. Which term best describes the guiding idea?

A. Internal validity
B. Child assent in research
C. Informed research consent
D. Longitudinal design

0766. Which description belongs with the term External validity?

A. Voluntary authorization to participate based on adequate disclosure, provided by an authorized adult when required.
B. Publicly documenting hypotheses, methods, and analysis plans before examining outcome data.
C. Allocation of participants to study conditions by chance to support baseline comparability.
D. The extent to which findings may apply across populations, settings, measures, and conditions beyond the study.

0767. Which option correctly matches each concept to its practice focus: Operational definition and Longitudinal design?

A. Operational definition: Identifying a third factor that may account for an observed association between exposure and outcome. / Longitudinal design: Following the same children over time to study within-person change.
B. Operational definition: Defining observable criteria for a study variable before collecting data. / Longitudinal design: Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work.
C. Operational definition: Following the same children over time to study within-person change. / Longitudinal design: Defining observable criteria for a study variable before collecting data.
D. Operational definition: Defining observable criteria for a study variable before collecting data. / Longitudinal design: Following the same children over time to study within-person change.

0768. A trainee must distinguish how Random assignment and Preregistration guide practice. Which comparison is accurate?

A. Random assignment: Using a chance procedure to allocate enrolled participants to treatment conditions. / Preregistration: Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work.
B. Random assignment: Explaining a study to a child in accessible language and respecting dissent under applicable safeguards. / Preregistration: Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work.
C. Random assignment: Using a chance procedure to allocate enrolled participants to treatment conditions. / Preregistration: Identifying a third factor that may account for an observed association between exposure and outcome.
D. Random assignment: Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work. / Preregistration: Using a chance procedure to allocate enrolled participants to treatment conditions.

0769. Which option correctly matches each concept to its practice focus: External validity and Preregistration?

A. External validity: Considering whether a sample and setting resemble the populations to which results are generalized. / Preregistration: Identifying a third factor that may account for an observed association between exposure and outcome.
B. External validity: Defining observable criteria for a study variable before collecting data. / Preregistration: Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work.
C. External validity: Considering whether a sample and setting resemble the populations to which results are generalized. / Preregistration: Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work.
D. External validity: Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work. / Preregistration: Considering whether a sample and setting resemble the populations to which results are generalized.

0770. In the multidisciplinary case conference, a caregiver working with a counselor is considering this approach for a client in late adolescence: explaining a study to a child in accessible language and respecting dissent under applicable safeguards. Which framework does it represent?

A. Cross-sectional design
B. Confounding variable
C. Child assent in research
D. External validity

0771. In the family resource center, a team asks how a group facilitator can support a adolescent student. One proposed action is explaining a study to a child in accessible language and respecting dissent under applicable safeguards. Which idea does it represent?

A. Confounding variable
B. Child assent in research
C. Random assignment
D. Internal validity

0772. Which choice aligns each practice with the correct idea, Confounding variable or External validity?

A. Confounding variable: Identifying a third factor that may account for an observed association between exposure and outcome. / External validity: Comparing age groups during one data-collection period while recognizing age and cohort are confounded.
B. Confounding variable: Identifying a third factor that may account for an observed association between exposure and outcome. / External validity: Considering whether a sample and setting resemble the populations to which results are generalized.
C. Confounding variable: Considering whether a sample and setting resemble the populations to which results are generalized. / External validity: Identifying a third factor that may account for an observed association between exposure and outcome.
D. Confounding variable: Following the same children over time to study within-person change. / External validity: Considering whether a sample and setting resemble the populations to which results are generalized.

0773. A school support specialist reviews a plan for a client in early adolescence in the youth group. The plan emphasizes recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work. Which course idea does this reflect?

A. Preregistration
B. Operational definition
C. Cross-sectional design
D. Informed research consent

0774. A supervisor asks for an applied contrast between Operational definition and Random assignment. Which option fits?

A. Operational definition: Explaining a study to a child in accessible language and respecting dissent under applicable safeguards. / Random assignment: Using a chance procedure to allocate enrolled participants to treatment conditions.
B. Operational definition: Defining observable criteria for a study variable before collecting data. / Random assignment: Explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult.
C. Operational definition: Defining observable criteria for a study variable before collecting data. / Random assignment: Using a chance procedure to allocate enrolled participants to treatment conditions.
D. Operational definition: Using a chance procedure to allocate enrolled participants to treatment conditions. / Random assignment: Defining observable criteria for a study variable before collecting data.

0775. A student confuses Cross-sectional design with Preregistration. Which explanation most accurately separates them?

A. Cross-sectional design: Publicly documenting hypotheses, methods, and analysis plans before examining outcome data. / Preregistration: A design that compares different individuals or groups at one time point.
B. Cross-sectional design: A design that compares different individuals or groups at one time point. / Preregistration: The strength of evidence that a study's manipulation or exposure, rather than alternatives, explains the observed effect.
C. Cross-sectional design: A design that compares different individuals or groups at one time point. / Preregistration: Publicly documenting hypotheses, methods, and analysis plans before examining outcome data.
D. Cross-sectional design: Allocation of participants to study conditions by chance to support baseline comparability. / Preregistration: Publicly documenting hypotheses, methods, and analysis plans before examining outcome data.

0776. During work in the counseling practicum, a teacher and counselor identifies this need: evaluating whether rival explanations for a treatment effect have been addressed. Which idea should guide the response?

A. Preregistration
B. Cross-sectional design
C. Internal validity
D. Random assignment

0777. In the counseling practicum, a teacher and counselor explains why a child aged 6 would benefit from evaluating whether rival explanations for a treatment effect have been addressed. Which course concept underpins the explanation?

A. Informed research consent
B. Random assignment
C. Preregistration
D. Internal validity

0778. A doctoral student reads the following description. Which concept does it define? Publicly documenting hypotheses, methods, and analysis plans before examining outcome data.

A. Confounding variable
B. Longitudinal design
C. Preregistration
D. Operational definition

0779. A counselor reviews a plan for a client in late adolescence in the child guidance clinic. The plan emphasizes following the same children over time to study within-person change. Which course idea does this reflect?

A. Preregistration
B. Confounding variable
C. Longitudinal design
D. Cross-sectional design

0780. Which comparison would correct a trainee's misunderstanding of Random assignment versus Informed research consent?

A. Random assignment: Voluntary authorization to participate based on adequate disclosure, provided by an authorized adult when required. / Informed research consent: Allocation of participants to study conditions by chance to support baseline comparability.
B. Random assignment: Allocation of participants to study conditions by chance to support baseline comparability. / Informed research consent: Publicly documenting hypotheses, methods, and analysis plans before examining outcome data.
C. Random assignment: Allocation of participants to study conditions by chance to support baseline comparability. / Informed research consent: Voluntary authorization to participate based on adequate disclosure, provided by an authorized adult when required.
D. Random assignment: A design that compares different individuals or groups at one time point. / Informed research consent: Voluntary authorization to participate based on adequate disclosure, provided by an authorized adult when required.

0781. Consider a child aged 8 receiving help in the supervision meeting. The teacher and counselor focuses on recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work. Which term best describes the guiding idea?

A. Preregistration
B. Confounding variable
C. Operational definition
D. Internal validity

0782. In a case note about a student aged 17, a assessment clinician working in the parent meeting records this priority: recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work. What principle is reflected?

A. Confounding variable
B. Preregistration
C. Operational definition
D. Child assent in research

0783. Which comparison would correct a trainee's misunderstanding of Informed research consent versus Child assent in research?

A. Informed research consent: Voluntary authorization to participate based on adequate disclosure, provided by an authorized adult when required. / Child assent in research: Allocation of participants to study conditions by chance to support baseline comparability.
B. Informed research consent: Voluntary authorization to participate based on adequate disclosure, provided by an authorized adult when required. / Child assent in research: A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission.
C. Informed research consent: A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission. / Child assent in research: Voluntary authorization to participate based on adequate disclosure, provided by an authorized adult when required.
D. Informed research consent: A design that measures the same individuals or units across multiple time points. / Child assent in research: A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission.

0784. In a supervision quiz, how should Random assignment be distinguished from Cross-sectional design?

A. Random assignment: The extent to which findings may apply across populations, settings, measures, and conditions beyond the study. / Cross-sectional design: A design that compares different individuals or groups at one time point.
B. Random assignment: Allocation of participants to study conditions by chance to support baseline comparability. / Cross-sectional design: A precise specification of how a construct or variable is observed, measured, or manipulated.
C. Random assignment: Allocation of participants to study conditions by chance to support baseline comparability. / Cross-sectional design: A design that compares different individuals or groups at one time point.
D. Random assignment: A design that compares different individuals or groups at one time point. / Cross-sectional design: Allocation of participants to study conditions by chance to support baseline comparability.

0785. During work in the community mental-health service, a group facilitator identifies this need: following the same children over time to study within-person change. Which idea should guide the response?

A. Longitudinal design
B. Confounding variable
C. Cross-sectional design
D. Operational definition

0786. A trainee must distinguish how Confounding variable and Child assent in research guide practice. Which comparison is accurate?

A. Confounding variable: Identifying a third factor that may account for an observed association between exposure and outcome. / Child assent in research: Explaining a study to a child in accessible language and respecting dissent under applicable safeguards.
B. Confounding variable: Explaining a study to a child in accessible language and respecting dissent under applicable safeguards. / Child assent in research: Identifying a third factor that may account for an observed association between exposure and outcome.
C. Confounding variable: Identifying a third factor that may account for an observed association between exposure and outcome. / Child assent in research: Considering whether a sample and setting resemble the populations to which results are generalized.
D. Confounding variable: Explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult. / Child assent in research: Explaining a study to a child in accessible language and respecting dissent under applicable safeguards.

0787. Which comparison would correct a trainee's misunderstanding of Random assignment versus Internal validity?

A. Random assignment: Allocation of participants to study conditions by chance to support baseline comparability. / Internal validity: The strength of evidence that a study's manipulation or exposure, rather than alternatives, explains the observed effect.
B. Random assignment: Allocation of participants to study conditions by chance to support baseline comparability. / Internal validity: Publicly documenting hypotheses, methods, and analysis plans before examining outcome data.
C. Random assignment: A factor associated with both a presumed cause and outcome that can offer an alternative explanation. / Internal validity: The strength of evidence that a study's manipulation or exposure, rather than alternatives, explains the observed effect.
D. Random assignment: The strength of evidence that a study's manipulation or exposure, rather than alternatives, explains the observed effect. / Internal validity: Allocation of participants to study conditions by chance to support baseline comparability.

0788. At the community youth program, a research trainee reviews whether a plan for a child of elementary-school age is appropriate. The relevant practice is identifying a third factor that may account for an observed association between exposure and outcome. Which concept is tested?

A. Informed research consent
B. Confounding variable
C. Cross-sectional design
D. Preregistration

0789. A consultant is supporting a middle-school student in the youth group. The key practice is following the same children over time to study within-person change. Which course concept is most relevant?

A. Operational definition
B. Cross-sectional design
C. Longitudinal design
D. External validity

0790. A mental-health professional prepares for a session in the learning-support meeting with a student aged 15. The intended approach is comparing age groups during one data-collection period while recognizing age and cohort are confounded. Which concept is most relevant?

A. Random assignment
B. Cross-sectional design
C. Informed research consent
D. Internal validity

0791. Which pair of actions illustrates External validity and Informed research consent, respectively?

A. External validity: Considering whether a sample and setting resemble the populations to which results are generalized. / Informed research consent: Explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult.
B. External validity: Considering whether a sample and setting resemble the populations to which results are generalized. / Informed research consent: Comparing age groups during one data-collection period while recognizing age and cohort are confounded.
C. External validity: Explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult. / Informed research consent: Considering whether a sample and setting resemble the populations to which results are generalized.
D. External validity: Defining observable criteria for a study variable before collecting data. / Informed research consent: Explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult.

0792. A team must select a support approach for a school-age child at the community service agency. The case coordinator recommends considering whether a sample and setting resemble the populations to which results are generalized. Which idea is most relevant?

A. Preregistration
B. Confounding variable
C. Child assent in research
D. External validity

0793. Identify the most precise label for this idea: The strength of evidence that a study's manipulation or exposure, rather than alternatives, explains the observed effect.

A. Preregistration
B. Longitudinal design
C. Cross-sectional design
D. Internal validity

0794. How are Longitudinal design and Confounding variable most accurately differentiated in this curriculum?

A. Longitudinal design: A design that measures the same individuals or units across multiple time points. / Confounding variable: A factor associated with both a presumed cause and outcome that can offer an alternative explanation.
B. Longitudinal design: A precise specification of how a construct or variable is observed, measured, or manipulated. / Confounding variable: A factor associated with both a presumed cause and outcome that can offer an alternative explanation.
C. Longitudinal design: A design that measures the same individuals or units across multiple time points. / Confounding variable: Voluntary authorization to participate based on adequate disclosure, provided by an authorized adult when required.
D. Longitudinal design: A factor associated with both a presumed cause and outcome that can offer an alternative explanation. / Confounding variable: A design that measures the same individuals or units across multiple time points.

0795. A school support specialist is asked to evaluate a proposed service for a client in early adolescence in the youth group. The defining feature is recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work. Which concept fits?

A. Informed research consent
B. Cross-sectional design
C. Preregistration
D. Internal validity

0796. Which choice aligns each practice with the correct idea, Longitudinal design or Preregistration?

A. Longitudinal design: Following the same children over time to study within-person change. / Preregistration: Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work.
B. Longitudinal design: Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work. / Preregistration: Following the same children over time to study within-person change.
C. Longitudinal design: Following the same children over time to study within-person change. / Preregistration: Explaining a study to a child in accessible language and respecting dissent under applicable safeguards.
D. Longitudinal design: Identifying a third factor that may account for an observed association between exposure and outcome. / Preregistration: Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work.

0797. Identify the most precise label for this idea: Publicly documenting hypotheses, methods, and analysis plans before examining outcome data.

A. External validity
B. Confounding variable
C. Random assignment
D. Preregistration

0798. What is the central meaning of Internal validity?

A. The extent to which findings may apply across populations, settings, measures, and conditions beyond the study.
B. The strength of evidence that a study's manipulation or exposure, rather than alternatives, explains the observed effect.
C. Allocation of participants to study conditions by chance to support baseline comparability.
D. A factor associated with both a presumed cause and outcome that can offer an alternative explanation.

0799. A case conference reviews a program coordinator's work with a school-age child in the after-school program: explaining a study to a child in accessible language and respecting dissent under applicable safeguards. Which principle is central?

A. Child assent in research
B. Informed research consent
C. External validity
D. Internal validity

0800. A supervised trainee and a young person aged 16 are discussing support in the caregiver consultation. The selected practice is considering whether a sample and setting resemble the populations to which results are generalized. Which concept does this demonstrate?

A. Cross-sectional design
B. External validity
C. Informed research consent
D. Confounding variable

0801. What is the central meaning of Confounding variable?

A. A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission.
B. A design that compares different individuals or groups at one time point.
C. Allocation of participants to study conditions by chance to support baseline comparability.
D. A factor associated with both a presumed cause and outcome that can offer an alternative explanation.

0802. A community practitioner describes an intervention for a child aged 6 in the community youth program, centered on recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work. Which named idea is most relevant?

A. Informed research consent
B. Longitudinal design
C. Preregistration
D. Cross-sectional design

0803. Which pair of actions illustrates Confounding variable and External validity, respectively?

A. Confounding variable: Considering whether a sample and setting resemble the populations to which results are generalized. / External validity: Identifying a third factor that may account for an observed association between exposure and outcome.
B. Confounding variable: Following the same children over time to study within-person change. / External validity: Considering whether a sample and setting resemble the populations to which results are generalized.
C. Confounding variable: Identifying a third factor that may account for an observed association between exposure and outcome. / External validity: Comparing age groups during one data-collection period while recognizing age and cohort are confounded.
D. Confounding variable: Identifying a third factor that may account for an observed association between exposure and outcome. / External validity: Considering whether a sample and setting resemble the populations to which results are generalized.

0804. Which comparison would correct a trainee’s misunderstanding of Confounding variable versus Informed research consent?

A. Confounding variable: A factor associated with both a presumed cause and outcome that can offer an alternative explanation. / Informed research consent: A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission.
B. Confounding variable: Voluntary authorization to participate based on adequate disclosure, provided by an authorized adult when required. / Informed research consent: A factor associated with both a presumed cause and outcome that can offer an alternative explanation.
C. Confounding variable: A factor associated with both a presumed cause and outcome that can offer an alternative explanation. / Informed research consent: Voluntary authorization to participate based on adequate disclosure, provided by an authorized adult when required.
D. Confounding variable: A design that compares different individuals or groups at one time point. / Informed research consent: Voluntary authorization to participate based on adequate disclosure, provided by an authorized adult when required.

0805. A child aged 6’s service team meets in the caregiver consultation. The school-based clinician recommends a change involving explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult. Which idea best explains it?

A. Child assent in research
B. Random assignment
C. Informed research consent
D. Operational definition

0806. What is the central meaning of Preregistration?

A. A design that measures the same individuals or units across multiple time points.
B. A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission.
C. Voluntary authorization to participate based on adequate disclosure, provided by an authorized adult when required.
D. Publicly documenting hypotheses, methods, and analysis plans before examining outcome data.

0807. Which statement most accurately defines External validity?

A. Voluntary authorization to participate based on adequate disclosure, provided by an authorized adult when required.
B. The extent to which findings may apply across populations, settings, measures, and conditions beyond the study.
C. A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission.
D. Publicly documenting hypotheses, methods, and analysis plans before examining outcome data.

0808. In a professional consultation about a young adolescent client, the mental-health professional describes this response in the caregiver consultation: using a chance procedure to allocate enrolled participants to treatment conditions. Which term is most apt?

A. Internal validity
B. Confounding variable
C. Preregistration
D. Random assignment

0809. A case conference reviews a service navigator’s work with a teenage client in the counseling practicum: using a chance procedure to allocate enrolled participants to treatment conditions. Which principle is central?

A. Random assignment
B. External validity
C. Internal validity
D. Confounding variable

0810. A supervisor asks how Cross-sectional design would appear in practice. Which choice should be selected?

A. Explaining a study to a child in accessible language and respecting dissent under applicable safeguards.
B. Using a chance procedure to allocate enrolled participants to treatment conditions.
C. Explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult.
D. Comparing age groups during one data-collection period while recognizing age and cohort are confounded.

0811. A case conference asks for a distinction between Random assignment and Child assent in research. Which answer is sound?

A. Random assignment: Allocation of participants to study conditions by chance to support baseline comparability. / Child assent in research: The strength of evidence that a study’s manipulation or exposure, rather than alternatives, explains the observed effect.
B. Random assignment: A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission. / Child assent in research: Allocation of participants to study conditions by chance to support baseline comparability.
C. Random assignment: A design that compares different individuals or groups at one time point. / Child assent in research: A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission.
D. Random assignment: Allocation of participants to study conditions by chance to support baseline comparability. / Child assent in research: A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission.

0812. In the learning-support meeting, a team asks how a teacher and counselor can support a preadolescent child. One proposed action is using a chance procedure to allocate enrolled participants to treatment conditions. Which idea does it represent?

A. Preregistration
B. Random assignment
C. Confounding variable
D. Operational definition

0813. Which comparison correctly distinguishes External validity from Child assent in research?

A. External validity: The extent to which findings may apply across populations, settings, measures, and conditions beyond the study. / Child assent in research: A precise specification of how a construct or variable is observed, measured, or manipulated.
B. External validity: The extent to which findings may apply across populations, settings, measures, and conditions beyond the study. / Child assent in research: A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission.
C. External validity: A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission. / Child assent in research: The extent to which findings may apply across populations, settings, measures, and conditions beyond the study.
D. External validity: Voluntary authorization to participate based on adequate disclosure, provided by an authorized adult when required. / Child assent in research: A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission.

0814. In the youth advocacy program, a teacher and counselor describes the most appropriate support for a middle-school student as identifying a third factor that may account for an observed association between exposure and outcome. Which framework is being applied?

A. Informed research consent
B. Internal validity
C. Preregistration
D. Confounding variable

0815. In the family session, a case coordinator is considering this approach for a adolescent student: evaluating whether rival explanations for a treatment effect have been addressed. Which framework does it represent?

A. Random assignment
B. Confounding variable
C. Internal validity
D. Child assent in research

0816. In the youth group, the agreed focus for a community practitioner working with a young person aged 18 is using a chance procedure to allocate enrolled participants to treatment conditions. Which concept names this focus?

A. Internal validity
B. Longitudinal design
C. Operational definition
D. Random assignment

0817. Which statement shows a sound practice-level distinction between External validity and Informed research consent?

A. External validity: Explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult. / Informed research consent: Considering whether a sample and setting resemble the populations to which results are generalized.
B. External validity: Considering whether a sample and setting resemble the populations to which results are generalized. / Informed research consent: Comparing age groups during one data-collection period while recognizing age and cohort are confounded.
C. External validity: Considering whether a sample and setting resemble the populations to which results are generalized. / Informed research consent: Explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult.
D. External validity: Defining observable criteria for a study variable before collecting data. / Informed research consent: Explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult.

0818. Which course concept is defined as follows: A design that measures the same individuals or units across multiple time points.

A. Operational definition
B. External validity
C. Longitudinal design
D. Cross-sectional design

0819. In a supervision review, a parent educator describes work with a young person aged 18 in the learning-support meeting: identifying a third factor that may account for an observed association between exposure and outcome. What concept is illustrated?

A. Operational definition
B. Confounding variable
C. Internal validity
D. Cross-sectional design

0820. A doctoral student reads the following description. Which concept does it define? The strength of evidence that a study's manipulation or exposure, rather than alternatives, explains the observed effect.

A. Informed research consent
B. Internal validity
C. Cross-sectional design
D. Child assent in research

0821. In a supervision quiz, how should Informed research consent be distinguished from Preregistration?

A. Informed research consent: Voluntary authorization to participate based on adequate disclosure, provided by an authorized adult when required. / Preregistration: Publicly documenting hypotheses, methods, and analysis plans before examining outcome data.
B. Informed research consent: Publicly documenting hypotheses, methods, and analysis plans before examining outcome data. / Preregistration: Voluntary authorization to participate based on adequate disclosure, provided by an authorized adult when required.
C. Informed research consent: A factor associated with both a presumed cause and outcome that can offer an alternative explanation. / Preregistration: Publicly documenting hypotheses, methods, and analysis plans before examining outcome data.
D. Informed research consent: Voluntary authorization to participate based on adequate disclosure, provided by an authorized adult when required. / Preregistration: Allocation of participants to study conditions by chance to support baseline comparability.

0822. Which choice aligns each practice with the correct idea, Informed research consent or Child assent in research?

A. Informed research consent: Explaining a study to a child in accessible language and respecting dissent under applicable safeguards. / Child assent in research: Explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult.
B. Informed research consent: Explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult. / Child assent in research: Using a chance procedure to allocate enrolled participants to treatment conditions.
C. Informed research consent: Following the same children over time to study within-person change. / Child assent in research: Explaining a study to a child in accessible language and respecting dissent under applicable safeguards.
D. Informed research consent: Explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult. / Child assent in research: Explaining a study to a child in accessible language and respecting dissent under applicable safeguards.

0823. Which choice aligns each practice with the correct idea, Cross-sectional design or Preregistration?

A. Cross-sectional design: Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work. / Preregistration: Comparing age groups during one data-collection period while recognizing age and cohort are confounded.
B. Cross-sectional design: Using a chance procedure to allocate enrolled participants to treatment conditions. / Preregistration: Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work.
C. Cross-sectional design: Comparing age groups during one data-collection period while recognizing age and cohort are confounded. / Preregistration: Evaluating whether rival explanations for a treatment effect have been addressed.
D. Cross-sectional design: Comparing age groups during one data-collection period while recognizing age and cohort are confounded. / Preregistration: Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work.

0824. A trainee must choose a practice that exemplifies Random assignment. Which action is the best fit?

A. Following the same children over time to study within-person change.
B. Using a chance procedure to allocate enrolled participants to treatment conditions.
C. Considering whether a sample and setting resemble the populations to which results are generalized.
D. Explaining a study to a child in accessible language and respecting dissent under applicable safeguards.

0825. A consultant prepares for a session in the school consultation with a child aged 11. The intended approach is considering whether a sample and setting resemble the populations to which results are generalized. Which concept is most relevant?

A. Informed research consent
B. External validity
C. Internal validity
D. Confounding variable

0826. A supervisor asks for an applied contrast between Longitudinal design and External validity. Which option fits?

A. Longitudinal design: Following the same children over time to study within-person change. / External validity: Evaluating whether rival explanations for a treatment effect have been addressed.
B. Longitudinal design: Following the same children over time to study within-person change. / External validity: Considering whether a sample and setting resemble the populations to which results are generalized.
C. Longitudinal design: Considering whether a sample and setting resemble the populations to which results are generalized. / External validity: Following the same children over time to study within-person change.
D. Longitudinal design: Defining observable criteria for a study variable before collecting data. / External validity: Considering whether a sample and setting resemble the populations to which results are generalized.

0827. A supervisor asks how Random assignment would appear in practice. Which choice should be selected?

A. Using a chance procedure to allocate enrolled participants to treatment conditions.
B. Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work.
C. Comparing age groups during one data-collection period while recognizing age and cohort are confounded.
D. Evaluating whether rival explanations for a treatment effect have been addressed.

0828. Which option pairs the definitions of Random assignment and Cross-sectional design correctly, in that order?

A. Random assignment: The extent to which findings may apply across populations, settings, measures, and conditions beyond the study. / Cross-sectional design: A design that compares different individuals or groups at one time point.
B. Random assignment: Allocation of participants to study conditions by chance to support baseline comparability. / Cross-sectional design: A design that compares different individuals or groups at one time point.
C. Random assignment: A design that compares different individuals or groups at one time point. / Cross-sectional design: Allocation of participants to study conditions by chance to support baseline comparability.
D. Random assignment: Allocation of participants to study conditions by chance to support baseline comparability. / Cross-sectional design: A precise specification of how a construct or variable is observed, measured, or manipulated.

0829. A supervisor asks for an applied contrast between Internal validity and Child assent in research. Which option fits?

A. Internal validity: Evaluating whether rival explanations for a treatment effect have been addressed. / Child assent in research: Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work.
B. Internal validity: Considering whether a sample and setting resemble the populations to which results are generalized. / Child assent in research: Explaining a study to a child in accessible language and respecting dissent under applicable safeguards.
C. Internal validity: Evaluating whether rival explanations for a treatment effect have been addressed. / Child assent in research: Explaining a study to a child in accessible language and respecting dissent under applicable safeguards.
D. Internal validity: Explaining a study to a child in accessible language and respecting dissent under applicable safeguards. / Child assent in research: Evaluating whether rival explanations for a treatment effect have been addressed.

0830. Which applied comparison correctly identifies what belongs to Random assignment versus Internal validity?

A. Random assignment: Using a chance procedure to allocate enrolled participants to treatment conditions. / Internal validity: Evaluating whether rival explanations for a treatment effect have been addressed.
B. Random assignment: Evaluating whether rival explanations for a treatment effect have been addressed. / Internal validity: Using a chance procedure to allocate enrolled participants to treatment conditions.
C. Random assignment: Using a chance procedure to allocate enrolled participants to treatment conditions. / Internal validity: Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work.
D. Random assignment: Identifying a third factor that may account for an observed association between exposure and outcome. / Internal validity: Evaluating whether rival explanations for a treatment effect have been addressed.

0831. At the behavior-support review, a clinical supervisor meets with a child of elementary-school age. The practice priority is: considering whether a sample and setting resemble the populations to which results are generalized. Which concept best captures that priority?

A. External validity
B. Longitudinal design
C. Internal validity
D. Random assignment

0832. Which statement shows a sound practice-level distinction between Random assignment and Longitudinal design?

A. Random assignment: Using a chance procedure to allocate enrolled participants to treatment conditions. / Longitudinal design: Following the same children over time to study within-person change.
B. Random assignment: Using a chance procedure to allocate enrolled participants to treatment conditions. / Longitudinal design: Defining observable criteria for a study variable before collecting data.
C. Random assignment: Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work. / Longitudinal design: Following the same children over time to study within-person change.
D. Random assignment: Following the same children over time to study within-person change. / Longitudinal design: Using a chance procedure to allocate enrolled participants to treatment conditions.

0833. Which applied comparison correctly identifies what belongs to Longitudinal design versus Preregistration?

A. Longitudinal design: Identifying a third factor that may account for an observed association between exposure and outcome. / Preregistration: Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work.
B. Longitudinal design: Following the same children over time to study within-person change. / Preregistration: Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work.
C. Longitudinal design: Following the same children over time to study within-person change. / Preregistration: Explaining a study to a child in accessible language and respecting dissent under applicable safeguards.
D. Longitudinal design: Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work. / Preregistration: Following the same children over time to study within-person change.

0834. During work in the community youth program, a consulting counselor identifies this need: explaining a study to a child in accessible language and respecting dissent under applicable safeguards. Which idea should guide the response?

A. Child assent in research
B. Random assignment
C. Preregistration
D. Longitudinal design

0835. While consulting in the caregiver consultation, a mental-health professional supports a young adolescent client by using this approach: using a chance procedure to allocate enrolled participants to treatment conditions. Which concept is being applied?

A. Internal validity
B. Informed research consent
C. Operational definition
D. Random assignment

0836. Which applied comparison correctly identifies what belongs to Random assignment versus External validity?

A. Random assignment: Comparing age groups during one data-collection period while recognizing age and cohort are confounded. / External validity: Considering whether a sample and setting resemble the populations to which results are generalized.
B. Random assignment: Using a chance procedure to allocate enrolled participants to treatment conditions. / External validity: Considering whether a sample and setting resemble the populations to which results are generalized.
C. Random assignment: Using a chance procedure to allocate enrolled participants to treatment conditions. / External validity: Identifying a third factor that may account for an observed association between exposure and outcome.
D. Random assignment: Considering whether a sample and setting resemble the populations to which results are generalized. / External validity: Using a chance procedure to allocate enrolled participants to treatment conditions.

0837. Consider a child aged 6 receiving help in the multidisciplinary case conference. The youth worker focuses on defining observable criteria for a study variable before collecting data. Which term best describes the guiding idea?

A. Operational definition
B. Preregistration
C. Informed research consent
D. Internal validity

0838. Which pair of actions illustrates Confounding variable and Internal validity, respectively?

A. Confounding variable: Identifying a third factor that may account for an observed association between exposure and outcome. / Internal validity: Evaluating whether rival explanations for a treatment effect have been addressed.
B. Confounding variable: Explaining a study to a child in accessible language and respecting dissent under applicable safeguards. / Internal validity: Evaluating whether rival explanations for a treatment effect have been addressed.
C. Confounding variable: Evaluating whether rival explanations for a treatment effect have been addressed. / Internal validity: Identifying a third factor that may account for an observed association between exposure and outcome.
D. Confounding variable: Identifying a third factor that may account for an observed association between exposure and outcome. / Internal validity: Comparing age groups during one data-collection period while recognizing age and cohort are confounded.

0839. Which option pairs the definitions of External validity and Child assent in research correctly, in that order?

A. External validity: A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission. / Child assent in research: The extent to which findings may apply across populations, settings, measures, and conditions beyond the study.
B. External validity: Voluntary authorization to participate based on adequate disclosure, provided by an authorized adult when required. / Child assent in research: A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission.
C. External validity: The extent to which findings may apply across populations, settings, measures, and conditions beyond the study. / Child assent in research: A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission.
D. External validity: The extent to which findings may apply across populations, settings, measures, and conditions beyond the study. / Child assent in research: A precise specification of how a construct or variable is observed, measured, or manipulated.

0840. A student confuses Longitudinal design with External validity. Which explanation most accurately separates them?

A. Longitudinal design: The extent to which findings may apply across populations, settings, measures, and conditions beyond the study. / External validity: A design that measures the same individuals or units across multiple time points.
B. Longitudinal design: A precise specification of how a construct or variable is observed, measured, or manipulated. / External validity: The extent to which findings may apply across populations, settings, measures, and conditions beyond the study.
C. Longitudinal design: A design that measures the same individuals or units across multiple time points. / External validity: The strength of evidence that a study's manipulation or exposure, rather than alternatives, explains the observed effect.
D. Longitudinal design: A design that measures the same individuals or units across multiple time points. / External validity: The extent to which findings may apply across populations, settings, measures, and conditions beyond the study.

0841. A member of a clinical team is preparing a follow-up plan for a child aged 8 in the counseling practicum. The plan calls for following the same children over time to study within-person change. Which concept names this approach?

A. Operational definition
B. Longitudinal design
C. Random assignment
D. Cross-sectional design

0842. How should a practitioner distinguish the applications of Internal validity and Preregistration?

A. Internal validity: Evaluating whether rival explanations for a treatment effect have been addressed. / Preregistration: Using a chance procedure to allocate enrolled participants to treatment conditions.
B. Internal validity: Identifying a third factor that may account for an observed association between exposure and outcome. / Preregistration: Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work.
C. Internal validity: Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work. / Preregistration: Evaluating whether rival explanations for a treatment effect have been addressed.
D. Internal validity: Evaluating whether rival explanations for a treatment effect have been addressed. / Preregistration: Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work.

0843. Which option preserves the correct meaning of both Operational definition and Informed research consent?

A. Operational definition: A factor associated with both a presumed cause and outcome that can offer an alternative explanation. / Informed research consent: Voluntary authorization to participate based on adequate disclosure, provided by an authorized adult when required.
B. Operational definition: A precise specification of how a construct or variable is observed, measured, or manipulated. / Informed research consent: Voluntary authorization to participate based on adequate disclosure, provided by an authorized adult when required.
C. Operational definition: Voluntary authorization to participate based on adequate disclosure, provided by an authorized adult when required. / Informed research consent: A precise specification of how a construct or variable is observed, measured, or manipulated.
D. Operational definition: A precise specification of how a construct or variable is observed, measured, or manipulated. / Informed research consent: The strength of evidence that a study's manipulation or exposure, rather than alternatives, explains the observed effect.

0844. A clinical supervisor reviews a plan for a student aged 9 in the supervision meeting. The plan emphasizes comparing age groups during one data-collection period while recognizing age and cohort are confounded. Which course idea does this reflect?

A. External validity
B. Confounding variable
C. Cross-sectional design
D. Preregistration

0845. Which paired example correctly applies Operational definition first and Confounding variable second?

A. Operational definition: Defining observable criteria for a study variable before collecting data. / Confounding variable: Identifying a third factor that may account for an observed association between exposure and outcome.
B. Operational definition: Identifying a third factor that may account for an observed association between exposure and outcome. / Confounding variable: Defining observable criteria for a study variable before collecting data.
C. Operational definition: Defining observable criteria for a study variable before collecting data. / Confounding variable: Using a chance procedure to allocate enrolled participants to treatment conditions.
D. Operational definition: Explaining a study to a child in accessible language and respecting dissent under applicable safeguards. / Confounding variable: Identifying a third factor that may account for an observed association between exposure and outcome.

0846. A counselor is asked to evaluate a proposed service for a student aged 12 in the community youth program. The defining feature is explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult. Which concept fits?

A. External validity
B. Informed research consent
C. Cross-sectional design
D. Random assignment

0847. Which option pairs the definitions of Longitudinal design and Confounding variable correctly, in that order?

A. Longitudinal design: A factor associated with both a presumed cause and outcome that can offer an alternative explanation. / Confounding variable: A design that measures the same individuals or units across multiple time points.
B. Longitudinal design: A precise specification of how a construct or variable is observed, measured, or manipulated. / Confounding variable: A factor associated with both a presumed cause and outcome that can offer an alternative explanation.
C. Longitudinal design: A design that measures the same individuals or units across multiple time points. / Confounding variable: Voluntary authorization to participate based on adequate disclosure, provided by an authorized adult when required.
D. Longitudinal design: A design that measures the same individuals or units across multiple time points. / Confounding variable: A factor associated with both a presumed cause and outcome that can offer an alternative explanation.

0848. Choose the practice comparison that best separates Longitudinal design from Confounding variable.

A. Longitudinal design: Following the same children over time to study within-person change. / Confounding variable: Explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult.
B. Longitudinal design: Following the same children over time to study within-person change. / Confounding variable: Identifying a third factor that may account for an observed association between exposure and outcome.
C. Longitudinal design: Defining observable criteria for a study variable before collecting data. / Confounding variable: Identifying a third factor that may account for an observed association between exposure and outcome.
D. Longitudinal design: Identifying a third factor that may account for an observed association between exposure and outcome. / Confounding variable: Following the same children over time to study within-person change.

0849. A team must select a support approach for a preadolescent child at the multidisciplinary case conference. The school-based clinician recommends comparing age groups during one data-collection period while recognizing age and cohort are confounded. Which idea is most relevant?

A. Random assignment
B. Cross-sectional design
C. Internal validity
D. Confounding variable

0850. Choose the response that best puts Preregistration into practice.

A. Identifying a third factor that may account for an observed association between exposure and outcome.
B. Explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult.
C. Using a chance procedure to allocate enrolled participants to treatment conditions.
D. Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work.

0851. A mental-health professional and a student aged 9 are discussing support in the student-support meeting. The selected practice is evaluating whether rival explanations for a treatment effect have been addressed. Which concept does this demonstrate?

A. Child assent in research
B. Informed research consent
C. Random assignment
D. Internal validity

0852. Which applied comparison correctly identifies what belongs to External validity versus Child assent in research?

A. External validity: Explaining a study to a child in accessible language and respecting dissent under applicable safeguards. / Child assent in research: Considering whether a sample and setting resemble the populations to which results are generalized.
B. External validity: Considering whether a sample and setting resemble the populations to which results are generalized. / Child assent in research: Explaining a study to a child in accessible language and respecting dissent under applicable safeguards.
C. External validity: Explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult. / Child assent in research: Explaining a study to a child in accessible language and respecting dissent under applicable safeguards.
D. External validity: Considering whether a sample and setting resemble the populations to which results are generalized. / Child assent in research: Defining observable criteria for a study variable before collecting data.

0853. Which choice aligns each practice with the correct idea, Longitudinal design or External validity?

A. Longitudinal design: Considering whether a sample and setting resemble the populations to which results are generalized. / External validity: Following the same children over time to study within-person change.
B. Longitudinal design: Following the same children over time to study within-person change. / External validity: Considering whether a sample and setting resemble the populations to which results are generalized.
C. Longitudinal design: Following the same children over time to study within-person change. / External validity: Evaluating whether rival explanations for a treatment effect have been addressed.
D. Longitudinal design: Defining observable criteria for a study variable before collecting data. / External validity: Considering whether a sample and setting resemble the populations to which results are generalized.

0854. Which applied comparison correctly identifies what belongs to Operational definition versus Internal validity?

A. Operational definition: Evaluating whether rival explanations for a treatment effect have been addressed. / Internal validity: Defining observable criteria for a study variable before collecting data.
B. Operational definition: Defining observable criteria for a study variable before collecting data. / Internal validity: Evaluating whether rival explanations for a treatment effect have been addressed.
C. Operational definition: Explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult. / Internal validity: Evaluating whether rival explanations for a treatment effect have been addressed.
D. Operational definition: Defining observable criteria for a study variable before collecting data. / Internal validity: Explaining a study to a child in accessible language and respecting dissent under applicable safeguards.

0855. In a supervision review, a case coordinator describes work with a older adolescent client in the youth group: explaining a study to a child in accessible language and respecting dissent under applicable safeguards. What concept is illustrated?

A. Internal validity
B. Operational definition
C. Child assent in research
D. External validity

0856. Which applied comparison correctly identifies what belongs to Informed research consent versus Preregistration?

A. Informed research consent: Explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult. / Preregistration: Using a chance procedure to allocate enrolled participants to treatment conditions.
B. Informed research consent: Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work. / Preregistration: Explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult.
C. Informed research consent: Explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult. / Preregistration: Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work.
D. Informed research consent: Identifying a third factor that may account for an observed association between exposure and outcome. / Preregistration: Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work.

0857. An interdisciplinary team reviews a high-school student's case at the caregiver consultation. The behavior specialist recommends explaining a study to a child in accessible language and respecting dissent under applicable safeguards. Which course concept best fits?

A. Internal validity
B. Informed research consent
C. Longitudinal design
D. Child assent in research

0858. In the community youth program, a consulting counselor explains why a young person aged 16 would benefit from explaining a study to a child in accessible language and respecting dissent under applicable safeguards. Which course concept underpins the explanation?

A. Internal validity
B. External validity
C. Random assignment
D. Child assent in research

0859. A student confuses Longitudinal design with Cross-sectional design. Which explanation most accurately separates them?

A. Longitudinal design: A design that measures the same individuals or units across multiple time points. / Cross-sectional design: A design that compares different individuals or groups at one time point.
B. Longitudinal design: A design that measures the same individuals or units across multiple time points. / Cross-sectional design: Voluntary authorization to participate based on adequate disclosure, provided by an authorized adult when required.
C. Longitudinal design: A design that compares different individuals or groups at one time point. / Cross-sectional design: A design that measures the same individuals or units across multiple time points.
D. Longitudinal design: The strength of evidence that a study's manipulation or exposure, rather than alternatives, explains the observed effect. / Cross-sectional design: A design that compares different individuals or groups at one time point.

0860. A supervisor asks for an applied contrast between Random assignment and Longitudinal design. Which option fits?

A. Random assignment: Using a chance procedure to allocate enrolled participants to treatment conditions. / Longitudinal design: Defining observable criteria for a study variable before collecting data.
B. Random assignment: Using a chance procedure to allocate enrolled participants to treatment conditions. / Longitudinal design: Following the same children over time to study within-person change.
C. Random assignment: Following the same children over time to study within-person change. / Longitudinal design: Using a chance procedure to allocate enrolled participants to treatment conditions.
D. Random assignment: Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work. / Longitudinal design: Following the same children over time to study within-person change.

0861. In the school consultation, the agreed focus for a research trainee working with a student aged 12 is defining observable criteria for a study variable before collecting data. Which concept names this focus?

A. Confounding variable
B. Cross-sectional design
C. Operational definition
D. External validity

0862. A trainee must distinguish how Operational definition and Internal validity guide practice. Which comparison is accurate?

A. Operational definition: Defining observable criteria for a study variable before collecting data. / Internal validity: Evaluating whether rival explanations for a treatment effect have been addressed.
B. Operational definition: Explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult. / Internal validity: Evaluating whether rival explanations for a treatment effect have been addressed.
C. Operational definition: Defining observable criteria for a study variable before collecting data. / Internal validity: Explaining a study to a child in accessible language and respecting dissent under applicable safeguards.
D. Operational definition: Evaluating whether rival explanations for a treatment effect have been addressed. / Internal validity: Defining observable criteria for a study variable before collecting data.

0863. A child aged 7 is receiving support in the student wellness team. The group facilitator is guided by this practice: identifying a third factor that may account for an observed association between exposure and outcome. Which principle best fits?

A. Confounding variable
B. Informed research consent
C. External validity
D. Cross-sectional design

0864. A caregiver working with a counselor presents a support plan for a client in early adolescence at the behavior-support review. Its central feature is defining observable criteria for a study variable before collecting data. Which concept should be named?

A. Operational definition
B. Confounding variable
C. Child assent in research
D. Longitudinal design

0865. At a case-planning meeting, the clinical supervisor proposes using a chance procedure to allocate enrolled participants to treatment conditions. for a student aged 15 seen in the family session. Which concept does this illustrate?

A. Random assignment
B. Confounding variable
C. Operational definition
D. Preregistration

0866. A group facilitator is explaining a choice to a school-age child and caregiver in the caregiver consultation. The choice centers on recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work. Which idea is illustrated?

A. Child assent in research
B. Confounding variable
C. Random assignment
D. Preregistration

0867. Which comparison would correct a trainee's misunderstanding of Operational definition versus External validity?

A. Operational definition: A factor associated with both a presumed cause and outcome that can offer an alternative explanation. / External validity: The extent to which findings may apply across populations, settings, measures, and conditions beyond the study.
B. Operational definition: A precise specification of how a construct or variable is observed, measured, or manipulated. / External validity: Publicly documenting hypotheses, methods, and analysis plans before examining outcome data.
C. Operational definition: A precise specification of how a construct or variable is observed, measured, or manipulated. / External validity: The extent to which findings may apply across populations, settings, measures, and conditions beyond the study.
D. Operational definition: The extent to which findings may apply across populations, settings, measures, and conditions beyond the study. / External validity: A precise specification of how a construct or variable is observed, measured, or manipulated.

0868. At the after-school program, a program coordinator reviews whether a plan for a school-age child is appropriate. The relevant practice is explaining a study to a child in accessible language and respecting dissent under applicable safeguards. Which concept is tested?

A. Child assent in research
B. External validity
C. Longitudinal design
D. Informed research consent

0869. Which paired example correctly applies Cross-sectional design first and Internal validity second?

A. Cross-sectional design: Evaluating whether rival explanations for a treatment effect have been addressed. / Internal validity: Comparing age groups during one data-collection period while recognizing age and cohort are confounded.
B. Cross-sectional design: Comparing age groups during one data-collection period while recognizing age and cohort are confounded. / Internal validity: Evaluating whether rival explanations for a treatment effect have been addressed.
C. Cross-sectional design: Comparing age groups during one data-collection period while recognizing age and cohort are confounded. / Internal validity: Explaining a study to a child in accessible language and respecting dissent under applicable safeguards.
D. Cross-sectional design: Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work. / Internal validity: Evaluating whether rival explanations for a treatment effect have been addressed.

0870. Which option correctly matches each concept to its practice focus: Confounding variable and Child assent in research?

A. Confounding variable: Identifying a third factor that may account for an observed association between exposure and outcome. / Child assent in research: Explaining a study to a child in accessible language and respecting dissent under applicable safeguards.
B. Confounding variable: Explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult. / Child assent in research: Explaining a study to a child in accessible language and respecting dissent under applicable safeguards.
C. Confounding variable: Identifying a third factor that may account for an observed association between exposure and outcome. / Child assent in research: Considering whether a sample and setting resemble the populations to which results are generalized.
D. Confounding variable: Explaining a study to a child in accessible language and respecting dissent under applicable safeguards. / Child assent in research: Identifying a third factor that may account for an observed association between exposure and outcome.

0871. An interdisciplinary team reviews a adolescent student's case at the multidisciplinary case conference. The counselor recommends recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work. Which course concept best fits?

A. Preregistration
B. External validity
C. Child assent in research
D. Operational definition

0872. Which comparison would correct a trainee’s misunderstanding of Longitudinal design versus Preregistration?

A. Longitudinal design: A factor associated with both a presumed cause and outcome that can offer an alternative explanation. / Preregistration: Publicly documenting hypotheses, methods, and analysis plans before examining outcome data.
B. Longitudinal design: A design that measures the same individuals or units across multiple time points. / Preregistration: A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission.
C. Longitudinal design: Publicly documenting hypotheses, methods, and analysis plans before examining outcome data. / Preregistration: A design that measures the same individuals or units across multiple time points.
D. Longitudinal design: A design that measures the same individuals or units across multiple time points. / Preregistration: Publicly documenting hypotheses, methods, and analysis plans before examining outcome data.

0873. Which statement accurately contrasts the course concepts Longitudinal design and Child assent in research?

A. Longitudinal design: A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission. / Child assent in research: A design that measures the same individuals or units across multiple time points.
B. Longitudinal design: A design that measures the same individuals or units across multiple time points. / Child assent in research: Publicly documenting hypotheses, methods, and analysis plans before examining outcome data.
C. Longitudinal design: A factor associated with both a presumed cause and outcome that can offer an alternative explanation. / Child assent in research: A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission.
D. Longitudinal design: A design that measures the same individuals or units across multiple time points. / Child assent in research: A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission.

0874. Which option preserves the correct meaning of both Child assent in research and Preregistration?

A. Child assent in research: A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission. / Preregistration: Publicly documenting hypotheses, methods, and analysis plans before examining outcome data.
B. Child assent in research: A precise specification of how a construct or variable is observed, measured, or manipulated. / Preregistration: Publicly documenting hypotheses, methods, and analysis plans before examining outcome data.
C. Child assent in research: A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission. / Preregistration: A factor associated with both a presumed cause and outcome that can offer an alternative explanation.
D. Child assent in research: Publicly documenting hypotheses, methods, and analysis plans before examining outcome data. / Preregistration: A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission.

0875. Which statement most accurately defines Confounding variable?

A. The extent to which findings may apply across populations, settings, measures, and conditions beyond the study.
B. The strength of evidence that a study’s manipulation or exposure, rather than alternatives, explains the observed effect.
C. Voluntary authorization to participate based on adequate disclosure, provided by an authorized adult when required.
D. A factor associated with both a presumed cause and outcome that can offer an alternative explanation.

0876. A support meeting for a young person aged 13 includes a school support specialist in the classroom support meeting. The practice under consideration is evaluating whether rival explanations for a treatment effect have been addressed. Which concept guides it?

A. Longitudinal design
B. Internal validity
C. Preregistration
D. Informed research consent

0877. In a supervision review, a family therapist describes work with a student aged 15 in the school consultation: explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult. What concept is illustrated?

A. Longitudinal design
B. Random assignment
C. Internal validity
D. Informed research consent

0878. In a supervision review, a caregiver working with a counselor describes work with a child aged 8 in the community youth program: considering whether a sample and setting resemble the populations to which results are generalized. What concept is illustrated?

A. Random assignment
B. Child assent in research
C. External validity
D. Internal validity

0879. In a supervision quiz, how should Random assignment be distinguished from Internal validity?

A. Random assignment: Allocation of participants to study conditions by chance to support baseline comparability. / Internal validity: The strength of evidence that a study’s manipulation or exposure, rather than alternatives, explains the observed effect.
B. Random assignment: Allocation of participants to study conditions by chance to support baseline comparability. / Internal validity: Publicly documenting hypotheses, methods, and analysis plans before examining outcome data.
C. Random assignment: A factor associated with both a presumed cause and outcome that can offer an alternative explanation. / Internal validity: The strength of evidence that a study’s manipulation or exposure, rather than alternatives, explains the observed effect.
D. Random assignment: The strength of evidence that a study’s manipulation or exposure, rather than alternatives, explains the observed effect. / Internal validity: Allocation of participants to study conditions by chance to support baseline comparability.

0880. How should a practitioner distinguish the applications of Longitudinal design and Internal validity?

A. Longitudinal design: Evaluating whether rival explanations for a treatment effect have been addressed. / Internal validity: Following the same children over time to study within-person change.
B. Longitudinal design: Following the same children over time to study within-person change. / Internal validity: Defining observable criteria for a study variable before collecting data.
C. Longitudinal design: Following the same children over time to study within-person change. / Internal validity: Evaluating whether rival explanations for a treatment effect have been addressed.
D. Longitudinal design: Comparing age groups during one data-collection period while recognizing age and cohort are confounded. / Internal validity: Evaluating whether rival explanations for a treatment effect have been addressed.

0881. A trainee must choose a practice that exemplifies Cross-sectional design. Which action is the best fit?

A. Considering whether a sample and setting resemble the populations to which results are generalized.
B. Comparing age groups during one data-collection period while recognizing age and cohort are confounded.
C. Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work.
D. Explaining a study to a child in accessible language and respecting dissent under applicable safeguards.

0882. Which statement shows a sound practice-level distinction between Random assignment and Child assent in research?

A. Random assignment: Comparing age groups during one data-collection period while recognizing age and cohort are confounded. / Child assent in research: Explaining a study to a child in accessible language and respecting dissent under applicable safeguards.
B. Random assignment: Explaining a study to a child in accessible language and respecting dissent under applicable safeguards. / Child assent in research: Using a chance procedure to allocate enrolled participants to treatment conditions.
C. Random assignment: Using a chance procedure to allocate enrolled participants to treatment conditions. / Child assent in research: Evaluating whether rival explanations for a treatment effect have been addressed.
D. Random assignment: Using a chance procedure to allocate enrolled participants to treatment conditions. / Child assent in research: Explaining a study to a child in accessible language and respecting dissent under applicable safeguards.

0883. Which statement accurately contrasts the course concepts Operational definition and Random assignment?

A. Operational definition: A precise specification of how a construct or variable is observed, measured, or manipulated. / Random assignment: Allocation of participants to study conditions by chance to support baseline comparability.
B. Operational definition: A precise specification of how a construct or variable is observed, measured, or manipulated. / Random assignment: Voluntary authorization to participate based on adequate disclosure, provided by an authorized adult when required.
C. Operational definition: A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission. / Random assignment: Allocation of participants to study conditions by chance to support baseline comparability.
D. Operational definition: Allocation of participants to study conditions by chance to support baseline comparability. / Random assignment: A precise specification of how a construct or variable is observed, measured, or manipulated.

0884. Which statement accurately contrasts the course concepts Child assent in research and Preregistration?

A. Child assent in research: A precise specification of how a construct or variable is observed, measured, or manipulated. / Preregistration: Publicly documenting hypotheses, methods, and analysis plans before examining outcome data.
B. Child assent in research: A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission. / Preregistration: Publicly documenting hypotheses, methods, and analysis plans before examining outcome data.
C. Child assent in research: A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission. / Preregistration: A factor associated with both a presumed cause and outcome that can offer an alternative explanation.
D. Child assent in research: Publicly documenting hypotheses, methods, and analysis plans before examining outcome data. / Preregistration: A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission.

0885. Which choice aligns each practice with the correct idea, Confounding variable or Child assent in research?

A. Confounding variable: Identifying a third factor that may account for an observed association between exposure and outcome. / Child assent in research: Considering whether a sample and setting resemble the populations to which results are generalized.
B. Confounding variable: Explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult. / Child assent in research: Explaining a study to a child in accessible language and respecting dissent under applicable safeguards.
C. Confounding variable: Explaining a study to a child in accessible language and respecting dissent under applicable safeguards. / Child assent in research: Identifying a third factor that may account for an observed association between exposure and outcome.
D. Confounding variable: Identifying a third factor that may account for an observed association between exposure and outcome. / Child assent in research: Explaining a study to a child in accessible language and respecting dissent under applicable safeguards.

0886. A school support specialist is asked to evaluate a proposed service for a young person aged 16 in the counseling practicum. The defining feature is identifying a third factor that may account for an observed association between exposure and outcome. Which concept fits?

A. Longitudinal design
B. Confounding variable
C. Preregistration
D. Cross-sectional design

0887. In a supervision quiz, how should Cross-sectional design be distinguished from Preregistration?

A. Cross-sectional design: A design that compares different individuals or groups at one time point. / Preregistration: Publicly documenting hypotheses, methods, and analysis plans before examining outcome data.
B. Cross-sectional design: A design that compares different individuals or groups at one time point. / Preregistration: The strength of evidence that a study's manipulation or exposure, rather than alternatives, explains the observed effect.
C. Cross-sectional design: Allocation of participants to study conditions by chance to support baseline comparability. / Preregistration: Publicly documenting hypotheses, methods, and analysis plans before examining outcome data.
D. Cross-sectional design: Publicly documenting hypotheses, methods, and analysis plans before examining outcome data. / Preregistration: A design that compares different individuals or groups at one time point.

0888. Choose the definition pair that correctly explains Random assignment first and Child assent in research second.

A. Random assignment: Allocation of participants to study conditions by chance to support baseline comparability. / Child assent in research: The strength of evidence that a study's manipulation or exposure, rather than alternatives, explains the observed effect.
B. Random assignment: A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission. / Child assent in research: Allocation of participants to study conditions by chance to support baseline comparability.
C. Random assignment: A design that compares different individuals or groups at one time point. / Child assent in research: A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission.
D. Random assignment: Allocation of participants to study conditions by chance to support baseline comparability. / Child assent in research: A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission.

0889. A school counselor is explaining a choice to a preadolescent child and caregiver in the school counseling office. The choice centers on considering whether a sample and setting resemble the populations to which results are generalized. Which idea is illustrated?

A. Internal validity
B. External validity
C. Random assignment
D. Operational definition

0890. Which named construct is captured by this account? Publicly documenting hypotheses, methods, and analysis plans before examining outcome data.

A. External validity
B. Preregistration
C. Operational definition
D. Child assent in research

0891. Which paired example correctly applies Operational definition first and Child assent in research second?

A. Operational definition: Explaining a study to a child in accessible language and respecting dissent under applicable safeguards. / Child assent in research: Defining observable criteria for a study variable before collecting data.
B. Operational definition: Defining observable criteria for a study variable before collecting data. / Child assent in research: Explaining a study to a child in accessible language and respecting dissent under applicable safeguards.
C. Operational definition: Defining observable criteria for a study variable before collecting data. / Child assent in research: Considering whether a sample and setting resemble the populations to which results are generalized.
D. Operational definition: Comparing age groups during one data-collection period while recognizing age and cohort are confounded. / Child assent in research: Explaining a study to a child in accessible language and respecting dissent under applicable safeguards.

0892. Which applied comparison correctly identifies what belongs to Longitudinal design versus Child assent in research?

A. Longitudinal design: Explaining a study to a child in accessible language and respecting dissent under applicable safeguards. / Child assent in research: Following the same children over time to study within-person change.
B. Longitudinal design: Following the same children over time to study within-person change. / Child assent in research: Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work.
C. Longitudinal design: Identifying a third factor that may account for an observed association between exposure and outcome. / Child assent in research: Explaining a study to a child in accessible language and respecting dissent under applicable safeguards.
D. Longitudinal design: Following the same children over time to study within-person change. / Child assent in research: Explaining a study to a child in accessible language and respecting dissent under applicable safeguards.

0893. In a supervision quiz, how should Longitudinal design be distinguished from Internal validity?

A. Longitudinal design: A design that measures the same individuals or units across multiple time points. / Internal validity: The strength of evidence that a study's manipulation or exposure, rather than alternatives, explains the observed effect.
B. Longitudinal design: A design that compares different individuals or groups at one time point. / Internal validity: The strength of evidence that a study's manipulation or exposure, rather than alternatives, explains the observed effect.
C. Longitudinal design: The strength of evidence that a study's manipulation or exposure, rather than alternatives, explains the observed effect. / Internal validity: A design that measures the same individuals or units across multiple time points.
D. Longitudinal design: A design that measures the same individuals or units across multiple time points. / Internal validity: A precise specification of how a construct or variable is observed, measured, or manipulated.

0894. Which professional action most closely applies Random assignment?

A. Explaining a study to a child in accessible language and respecting dissent under applicable safeguards.
B. Using a chance procedure to allocate enrolled participants to treatment conditions.
C. Defining observable criteria for a study variable before collecting data.
D. Comparing age groups during one data-collection period while recognizing age and cohort are confounded.

0895. A therapist is asked what should shape a client in late adolescence's support in the youth advocacy program. The proposed focus is evaluating whether rival explanations for a treatment effect have been addressed. Which principle does it represent?

A. Confounding variable
B. Informed research consent
C. Cross-sectional design
D. Internal validity

0896. Which statement most accurately defines Preregistration?

A. Publicly documenting hypotheses, methods, and analysis plans before examining outcome data.
B. A precise specification of how a construct or variable is observed, measured, or manipulated.
C. The extent to which findings may apply across populations, settings, measures, and conditions beyond the study.
D. A design that compares different individuals or groups at one time point.

0897. Choose the definition pair that correctly explains Operational definition first and Cross-sectional design second.

A. Operational definition: A precise specification of how a construct or variable is observed, measured, or manipulated. / Cross-sectional design: A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission.
B. Operational definition: Voluntary authorization to participate based on adequate disclosure, provided by an authorized adult when required. / Cross-sectional design: A design that compares different individuals or groups at one time point.
C. Operational definition: A precise specification of how a construct or variable is observed, measured, or manipulated. / Cross-sectional design: A design that compares different individuals or groups at one time point.
D. Operational definition: A design that compares different individuals or groups at one time point. / Cross-sectional design: A precise specification of how a construct or variable is observed, measured, or manipulated.

0898. Choose the practice comparison that best separates Random assignment from Preregistration.

A. Random assignment: Using a chance procedure to allocate enrolled participants to treatment conditions. / Preregistration: Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work.
B. Random assignment: Explaining a study to a child in accessible language and respecting dissent under applicable safeguards. / Preregistration: Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work.
C. Random assignment: Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work. / Preregistration: Using a chance procedure to allocate enrolled participants to treatment conditions.
D. Random assignment: Using a chance procedure to allocate enrolled participants to treatment conditions. / Preregistration: Identifying a third factor that may account for an observed association between exposure and outcome.

0899. At the parent meeting, a program coordinator reviews whether a plan for a child aged 7 is appropriate. The relevant practice is comparing age groups during one data-collection period while recognizing age and cohort are confounded. Which concept is tested?

A. Random assignment
B. Cross-sectional design
C. Child assent in research
D. Longitudinal design

0900. A youth worker is explaining a choice to a child aged 11 and caregiver in the family resource center. The choice centers on comparing age groups during one data-collection period while recognizing age and cohort are confounded. Which idea is illustrated?

A. Confounding variable
B. Informed research consent
C. Cross-sectional design
D. Preregistration

0901. For a child aged 11 in the counseling practicum, a play therapist makes this practice the immediate priority: recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work. Which concept fits best?

A. Cross-sectional design
B. Confounding variable
C. Child assent in research
D. Preregistration

0902. At the outpatient clinic, a behavior specialist meets with a young adolescent client. The practice priority is: recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work. Which concept best captures that priority?

A. Informed research consent
B. Confounding variable
C. Child assent in research
D. Preregistration

0903. In a supervision quiz, how should External validity be distinguished from Preregistration?

A. External validity: The extent to which findings may apply across populations, settings, measures, and conditions beyond the study. / Preregistration: A factor associated with both a presumed cause and outcome that can offer an alternative explanation.
B. External validity: A precise specification of how a construct or variable is observed, measured, or manipulated. / Preregistration: Publicly documenting hypotheses, methods, and analysis plans before examining outcome data.
C. External validity: Publicly documenting hypotheses, methods, and analysis plans before examining outcome data. / Preregistration: The extent to which findings may apply across populations, settings, measures, and conditions beyond the study.
D. External validity: The extent to which findings may apply across populations, settings, measures, and conditions beyond the study. / Preregistration: Publicly documenting hypotheses, methods, and analysis plans before examining outcome data.

0904. An interdisciplinary team reviews a young adolescent client's case at the clinical planning session. The counselor recommends identifying a third factor that may account for an observed association between exposure and outcome. Which course concept best fits?

A. Internal validity
B. Confounding variable
C. Longitudinal design
D. Preregistration

0905. A case conference asks for a distinction between Internal validity and External validity. Which answer is sound?

A. Internal validity: The strength of evidence that a study's manipulation or exposure, rather than alternatives, explains the observed effect. / External validity: Publicly documenting hypotheses, methods, and analysis plans before examining outcome data.
B. Internal validity: A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission. / External validity: The extent to which findings may apply across populations, settings, measures, and conditions beyond the study.
C. Internal validity: The extent to which findings may apply across populations, settings, measures, and conditions beyond the study. / External validity: The strength of evidence that a study's manipulation or exposure, rather than alternatives, explains the observed effect.
D. Internal validity: The strength of evidence that a study's manipulation or exposure, rather than alternatives, explains the observed effect. / External validity: The extent to which findings may apply across populations, settings, measures, and conditions beyond the study.

0906. In a supervision review, a family therapist describes work with a young person in the supervision meeting: following the same children over time to study within-person change. What concept is illustrated?

A. Internal validity
B. Preregistration
C. Random assignment
D. Longitudinal design

0907. A mental-health professional prepares for a session in the classroom support meeting with a child of elementary-school age. The intended approach is explaining a study to a child in accessible language and respecting dissent under applicable safeguards. Which concept is most relevant?

A. Child assent in research
B. Longitudinal design
C. External validity
D. Cross-sectional design

0908. In a supervision quiz, how should Longitudinal design be distinguished from Child assent in research?

A. Longitudinal design: A design that measures the same individuals or units across multiple time points. / Child assent in research: Publicly documenting hypotheses, methods, and analysis plans before examining outcome data.
B. Longitudinal design: A design that measures the same individuals or units across multiple time points. / Child assent in research: A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission.
C. Longitudinal design: A factor associated with both a presumed cause and outcome that can offer an alternative explanation. / Child assent in research: A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission.
D. Longitudinal design: A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission. / Child assent in research: A design that measures the same individuals or units across multiple time points.

0909. In the school consultation, a school counselor explains why a middle-school student would benefit from recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work. Which course concept underpins the explanation?

A. Child assent in research
B. Preregistration
C. Confounding variable
D. Cross-sectional design

0910. In the community mental-health service, a group facilitator explains why a high-school student would benefit from following the same children over time to study within-person change. Which course concept underpins the explanation?

A. Operational definition
B. Informed research consent
C. Longitudinal design
D. Confounding variable

0911. Which paired example correctly applies Confounding variable first and Preregistration second?

A. Confounding variable: Comparing age groups during one data-collection period while recognizing age and cohort are confounded. / Preregistration: Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work.
B. Confounding variable: Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work. / Preregistration: Identifying a third factor that may account for an observed association between exposure and outcome.
C. Confounding variable: Identifying a third factor that may account for an observed association between exposure and outcome. / Preregistration: Explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult.
D. Confounding variable: Identifying a third factor that may account for an observed association between exposure and outcome. / Preregistration: Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work.

0912. Consider a young person receiving help in the outpatient clinic. The youth worker focuses on evaluating whether rival explanations for a treatment effect have been addressed. Which term best describes the guiding idea?

A. Operational definition
B. Child assent in research
C. Internal validity
D. Longitudinal design

0913. Which description belongs with the term Child assent in research?

A. Allocation of participants to study conditions by chance to support baseline comparability.
B. The extent to which findings may apply across populations, settings, measures, and conditions beyond the study.
C. The strength of evidence that a study's manipulation or exposure, rather than alternatives, explains the observed effect.
D. A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission.

0914. A case discussion concerns a child aged 11 and a family therapist in the family session. The practitioner is considering defining observable criteria for a study variable before collecting data. Which principle is involved?

A. Internal validity
B. Preregistration
C. Longitudinal design
D. Operational definition

0915. Choose the response that best puts Confounding variable into practice.

A. Evaluating whether rival explanations for a treatment effect have been addressed.
B. Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work.
C. Identifying a third factor that may account for an observed association between exposure and outcome.
D. Considering whether a sample and setting resemble the populations to which results are generalized.

0916. Choose the practice comparison that best separates Cross-sectional design from Informed research consent.

A. Cross-sectional design: Comparing age groups during one data-collection period while recognizing age and cohort are confounded. / Informed research consent: Explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult.
B. Cross-sectional design: Comparing age groups during one data-collection period while recognizing age and cohort are confounded. / Informed research consent: Using a chance procedure to allocate enrolled participants to treatment conditions.
C. Cross-sectional design: Defining observable criteria for a study variable before collecting data. / Informed research consent: Explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult.
D. Cross-sectional design: Explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult. / Informed research consent: Comparing age groups during one data-collection period while recognizing age and cohort are confounded.

0917. A case discussion concerns a high-school student and a caregiver working with a counselor in the telehealth session. The practitioner is considering recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work. Which principle is involved?

A. Longitudinal design
B. Cross-sectional design
C. Internal validity
D. Preregistration

0918. Which comparison correctly distinguishes Cross-sectional design from Informed research consent?

A. Cross-sectional design: A precise specification of how a construct or variable is observed, measured, or manipulated. / Informed research consent: Voluntary authorization to participate based on adequate disclosure, provided by an authorized adult when required.
B. Cross-sectional design: Voluntary authorization to participate based on adequate disclosure, provided by an authorized adult when required. / Informed research consent: A design that compares different individuals or groups at one time point.
C. Cross-sectional design: A design that compares different individuals or groups at one time point. / Informed research consent: Allocation of participants to study conditions by chance to support baseline comparability.
D. Cross-sectional design: A design that compares different individuals or groups at one time point. / Informed research consent: Voluntary authorization to participate based on adequate disclosure, provided by an authorized adult when required.

0919. Which choice aligns each practice with the correct idea, Operational definition or Confounding variable?

A. Operational definition: Explaining a study to a child in accessible language and respecting dissent under applicable safeguards. / Confounding variable: Identifying a third factor that may account for an observed association between exposure and outcome.
B. Operational definition: Identifying a third factor that may account for an observed association between exposure and outcome. / Confounding variable: Defining observable criteria for a study variable before collecting data.
C. Operational definition: Defining observable criteria for a study variable before collecting data. / Confounding variable: Using a chance procedure to allocate enrolled participants to treatment conditions.
D. Operational definition: Defining observable criteria for a study variable before collecting data. / Confounding variable: Identifying a third factor that may account for an observed association between exposure and outcome.

0920. Which statement accurately contrasts the course concepts Operational definition and Internal validity?

A. Operational definition: The strength of evidence that a study's manipulation or exposure, rather than alternatives, explains the observed effect. / Internal validity: A precise specification of how a construct or variable is observed, measured, or manipulated.
B. Operational definition: A precise specification of how a construct or variable is observed, measured, or manipulated. / Internal validity: A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission.
C. Operational definition: A precise specification of how a construct or variable is observed, measured, or manipulated. / Internal validity: The strength of evidence that a study's manipulation or exposure, rather than alternatives, explains the observed effect.
D. Operational definition: Voluntary authorization to participate based on adequate disclosure, provided by an authorized adult when required. / Internal validity: The strength of evidence that a study's manipulation or exposure, rather than alternatives, explains the observed effect.

0921. A student confuses Longitudinal design with Internal validity. Which explanation most accurately separates them?

A. Longitudinal design: A design that measures the same individuals or units across multiple time points. / Internal validity: The strength of evidence that a study's manipulation or exposure, rather than alternatives, explains the observed effect.
B. Longitudinal design: A design that measures the same individuals or units across multiple time points. / Internal validity: A precise specification of how a construct or variable is observed, measured, or manipulated.
C. Longitudinal design: The strength of evidence that a study's manipulation or exposure, rather than alternatives, explains the observed effect. / Internal validity: A design that measures the same individuals or units across multiple time points.
D. Longitudinal design: A design that compares different individuals or groups at one time point. / Internal validity: The strength of evidence that a study's manipulation or exposure, rather than alternatives, explains the observed effect.

0922. In a supervision quiz, how should Operational definition be distinguished from Cross-sectional design?

A. Operational definition: Voluntary authorization to participate based on adequate disclosure, provided by an authorized adult when required. / Cross-sectional design: A design that compares different individuals or groups at one time point.
B. Operational definition: A design that compares different individuals or groups at one time point. / Cross-sectional design: A precise specification of how a construct or variable is observed, measured, or manipulated.
C. Operational definition: A precise specification of how a construct or variable is observed, measured, or manipulated. / Cross-sectional design: A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission.
D. Operational definition: A precise specification of how a construct or variable is observed, measured, or manipulated. / Cross-sectional design: A design that compares different individuals or groups at one time point.

0923. A service navigator describes an intervention for a preadolescent child in the youth advocacy program, centered on defining observable criteria for a study variable before collecting data. Which named idea is most relevant?

A. Random assignment
B. Operational definition
C. Cross-sectional design
D. Child assent in research

0924. A supervised trainee prepares for a session in the after-school program with a preadolescent child. The intended approach is recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work. Which concept is most relevant?

A. Internal validity
B. Preregistration
C. Cross-sectional design
D. Informed research consent

0925. A doctoral student reads the following description. Which concept does it define? The extent to which findings may apply across populations, settings, measures, and conditions beyond the study.

A. Child assent in research
B. Preregistration
C. Confounding variable
D. External validity

0926. In a case note about a child aged 11, a member of a clinical team working in the youth advocacy program records this priority: using a chance procedure to allocate enrolled participants to treatment conditions. What principle is reflected?

A. Operational definition
B. Random assignment
C. Cross-sectional design
D. External validity

0927. A supervisor asks for an applied contrast between Longitudinal design and Internal validity. Which option fits?

A. Longitudinal design: Following the same children over time to study within-person change. / Internal validity: Defining observable criteria for a study variable before collecting data.
B. Longitudinal design: Evaluating whether rival explanations for a treatment effect have been addressed. / Internal validity: Following the same children over time to study within-person change.
C. Longitudinal design: Comparing age groups during one data-collection period while recognizing age and cohort are confounded. / Internal validity: Evaluating whether rival explanations for a treatment effect have been addressed.
D. Longitudinal design: Following the same children over time to study within-person change. / Internal validity: Evaluating whether rival explanations for a treatment effect have been addressed.

0928. A team must select a support approach for a child aged 7 at the student-support meeting. The case coordinator recommends using a chance procedure to allocate enrolled participants to treatment conditions. Which idea is most relevant?

A. Informed research consent
B. Random assignment
C. Preregistration
D. External validity

0929. In the family session, the agreed focus for a therapist working with a child aged 7 is explaining a study to a child in accessible language and respecting dissent under applicable safeguards. Which concept names this focus?

A. Longitudinal design
B. Child assent in research
C. Internal validity
D. Operational definition

0930. Which comparison would correct a trainee's misunderstanding of Cross-sectional design versus Internal validity?

A. Cross-sectional design: A design that compares different individuals or groups at one time point. / Internal validity: The strength of evidence that a study's manipulation or exposure, rather than alternatives, explains the observed effect.
B. Cross-sectional design: The strength of evidence that a study's manipulation or exposure, rather than alternatives, explains the observed effect. / Internal validity: A design that compares different individuals or groups at one time point.
C. Cross-sectional design: A design that compares different individuals or groups at one time point. / Internal validity: A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission.
D. Cross-sectional design: Publicly documenting hypotheses, methods, and analysis plans before examining outcome data. / Internal validity: The strength of evidence that a study's manipulation or exposure, rather than alternatives, explains the observed effect.

0931. Which option preserves the correct meaning of both Operational definition and Internal validity?

A. Operational definition: A precise specification of how a construct or variable is observed, measured, or manipulated. / Internal validity: The strength of evidence that a study's manipulation or exposure, rather than alternatives, explains the observed effect.
B. Operational definition: Voluntary authorization to participate based on adequate disclosure, provided by an authorized adult when required. / Internal validity: The strength of evidence that a study's manipulation or exposure, rather than alternatives, explains the observed effect.
C. Operational definition: A precise specification of how a construct or variable is observed, measured, or manipulated. / Internal validity: A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission.
D. Operational definition: The strength of evidence that a study's manipulation or exposure, rather than alternatives, explains the observed effect. / Internal validity: A precise specification of how a construct or variable is observed, measured, or manipulated.

0932. Which statement shows a sound practice-level distinction between Operational definition and External validity?

A. Operational definition: Considering whether a sample and setting resemble the populations to which results are generalized. / External validity: Defining observable criteria for a study variable before collecting data.
B. Operational definition: Defining observable criteria for a study variable before collecting data. / External validity: Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work.
C. Operational definition: Identifying a third factor that may account for an observed association between exposure and outcome. / External validity: Considering whether a sample and setting resemble the populations to which results are generalized.
D. Operational definition: Defining observable criteria for a study variable before collecting data. / External validity: Considering whether a sample and setting resemble the populations to which results are generalized.

0933. A trainee must explain Informed research consent. Which answer is accurate?

A. Publicly documenting hypotheses, methods, and analysis plans before examining outcome data.
B. A precise specification of how a construct or variable is observed, measured, or manipulated.
C. A design that measures the same individuals or units across multiple time points.
D. Voluntary authorization to participate based on adequate disclosure, provided by an authorized adult when required.

0934. A trainee must distinguish how Informed research consent and Preregistration guide practice. Which comparison is accurate?

A. Informed research consent: Explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult. / Preregistration: Using a chance procedure to allocate enrolled participants to treatment conditions.
B. Informed research consent: Identifying a third factor that may account for an observed association between exposure and outcome. / Preregistration: Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work.
C. Informed research consent: Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work. / Preregistration: Explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult.
D. Informed research consent: Explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult. / Preregistration: Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work.

0935. A program coordinator describes an intervention for a adolescent student in the learning-support meeting, centered on explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult. Which named idea is most relevant?

A. Preregistration
B. Informed research consent
C. Random assignment
D. Confounding variable

0936. Choose the definition pair that correctly explains Internal validity first and External validity second.

A. Internal validity: The strength of evidence that a study's manipulation or exposure, rather than alternatives, explains the observed effect. / External validity: Publicly documenting hypotheses, methods, and analysis plans before examining outcome data.
B. Internal validity: A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission. / External validity: The extent to which findings may apply across populations, settings, measures, and conditions beyond the study.
C. Internal validity: The extent to which findings may apply across populations, settings, measures, and conditions beyond the study. / External validity: The strength of evidence that a study's manipulation or exposure, rather than alternatives, explains the observed effect.
D. Internal validity: The strength of evidence that a study's manipulation or exposure, rather than alternatives, explains the observed effect. / External validity: The extent to which findings may apply across populations, settings, measures, and conditions beyond the study.

0937. Choose the definition pair that correctly explains Operational definition first and External validity second.

A. Operational definition: A precise specification of how a construct or variable is observed, measured, or manipulated. / External validity: Publicly documenting hypotheses, methods, and analysis plans before examining outcome data.
B. Operational definition: A precise specification of how a construct or variable is observed, measured, or manipulated. / External validity: The extent to which findings may apply across populations, settings, measures, and conditions beyond the study.
C. Operational definition: A factor associated with both a presumed cause and outcome that can offer an alternative explanation. / External validity: The extent to which findings may apply across populations, settings, measures, and conditions beyond the study.
D. Operational definition: The extent to which findings may apply across populations, settings, measures, and conditions beyond the study. / External validity: A precise specification of how a construct or variable is observed, measured, or manipulated.

0938. A member of a clinical team prepares for a session in the youth group with a child aged 7. The intended approach is explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult. Which concept is most relevant?

A. External validity
B. Informed research consent
C. Operational definition
D. Child assent in research

0939. In a supervision review, a case coordinator describes work with a student aged 12 in the counseling practicum: comparing age groups during one data-collection period while recognizing age and cohort are confounded. What concept is illustrated?

A. Confounding variable
B. External validity
C. Random assignment
D. Cross-sectional design

0940. A counselor is asked to evaluate a proposed service for a client in late adolescence in the child guidance clinic. The defining feature is following the same children over time to study within-person change. Which concept fits?

A. Longitudinal design
B. Preregistration
C. Random assignment
D. Internal validity

0941. In the student-support meeting, the agreed focus for a program coordinator working with a child of elementary-school age is recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work. Which concept names this focus?

A. Preregistration
B. Child assent in research
C. Operational definition
D. Random assignment

0942. Select the best explanation of Cross-sectional design.

A. Allocation of participants to study conditions by chance to support baseline comparability.
B. A design that compares different individuals or groups at one time point.
C. Publicly documenting hypotheses, methods, and analysis plans before examining outcome data.
D. A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission.

0943. Which option correctly matches each concept to its practice focus: Longitudinal design and Child assent in research?

A. Longitudinal design: Explaining a study to a child in accessible language and respecting dissent under applicable safeguards. / Child assent in research: Following the same children over time to study within-person change.
B. Longitudinal design: Identifying a third factor that may account for an observed association between exposure and outcome. / Child assent in research: Explaining a study to a child in accessible language and respecting dissent under applicable safeguards.
C. Longitudinal design: Following the same children over time to study within-person change. / Child assent in research: Explaining a study to a child in accessible language and respecting dissent under applicable safeguards.
D. Longitudinal design: Following the same children over time to study within-person change. / Child assent in research: Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work.

0944. A doctoral student reads the following description. Which concept does it define? A precise specification of how a construct or variable is observed, measured, or manipulated.

A. Preregistration
B. Confounding variable
C. Longitudinal design
D. Operational definition

0945. Which option correctly matches each concept to its practice focus: Operational definition and Confounding variable?

A. Operational definition: Explaining a study to a child in accessible language and respecting dissent under applicable safeguards. / Confounding variable: Identifying a third factor that may account for an observed association between exposure and outcome.
B. Operational definition: Defining observable criteria for a study variable before collecting data. / Confounding variable: Identifying a third factor that may account for an observed association between exposure and outcome.
C. Operational definition: Defining observable criteria for a study variable before collecting data. / Confounding variable: Using a chance procedure to allocate enrolled participants to treatment conditions.
D. Operational definition: Identifying a third factor that may account for an observed association between exposure and outcome. / Confounding variable: Defining observable criteria for a study variable before collecting data.

0946. Which comparison correctly distinguishes Internal validity from Child assent in research?

A. Internal validity: The strength of evidence that a study's manipulation or exposure, rather than alternatives, explains the observed effect. / Child assent in research: Publicly documenting hypotheses, methods, and analysis plans before examining outcome data.
B. Internal validity: The strength of evidence that a study's manipulation or exposure, rather than alternatives, explains the observed effect. / Child assent in research: A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission.
C. Internal validity: The extent to which findings may apply across populations, settings, measures, and conditions beyond the study. / Child assent in research: A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission.
D. Internal validity: A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission. / Child assent in research: The strength of evidence that a study's manipulation or exposure, rather than alternatives, explains the observed effect.

0947. Which statement shows a sound practice-level distinction between Random assignment and Preregistration?

A. Random assignment: Using a chance procedure to allocate enrolled participants to treatment conditions. / Preregistration: Identifying a third factor that may account for an observed association between exposure and outcome.
B. Random assignment: Explaining a study to a child in accessible language and respecting dissent under applicable safeguards. / Preregistration: Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work.
C. Random assignment: Using a chance procedure to allocate enrolled participants to treatment conditions. / Preregistration: Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work.
D. Random assignment: Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work. / Preregistration: Using a chance procedure to allocate enrolled participants to treatment conditions.

0948. In a case note about a child of elementary-school age, a supervised trainee working in the telehealth session records this priority: comparing age groups during one data-collection period while recognizing age and cohort are confounded. What principle is reflected?

A. Confounding variable
B. Cross-sectional design
C. Preregistration
D. Random assignment

0949. A therapist describes an intervention for a child aged 14 in the outpatient clinic, centered on using a chance procedure to allocate enrolled participants to treatment conditions. Which named idea is most relevant?

A. Longitudinal design
B. Random assignment
C. Cross-sectional design
D. Informed research consent

0950. A trainee must distinguish how Random assignment and External validity guide practice. Which comparison is accurate?

A. Random assignment: Considering whether a sample and setting resemble the populations to which results are generalized. / External validity: Using a chance procedure to allocate enrolled participants to treatment conditions.
B. Random assignment: Using a chance procedure to allocate enrolled participants to treatment conditions. / External validity: Considering whether a sample and setting resemble the populations to which results are generalized.
C. Random assignment: Comparing age groups during one data-collection period while recognizing age and cohort are confounded. / External validity: Considering whether a sample and setting resemble the populations to which results are generalized.
D. Random assignment: Using a chance procedure to allocate enrolled participants to treatment conditions. / External validity: Identifying a third factor that may account for an observed association between exposure and outcome.

0951. Which choice aligns each practice with the correct idea, Longitudinal design or Informed research consent?

A. Longitudinal design: Following the same children over time to study within-person change. / Informed research consent: Considering whether a sample and setting resemble the populations to which results are generalized.
B. Longitudinal design: Explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult. / Informed research consent: Following the same children over time to study within-person change.
C. Longitudinal design: Following the same children over time to study within-person change. / Informed research consent: Explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult.
D. Longitudinal design: Comparing age groups during one data-collection period while recognizing age and cohort are confounded. / Informed research consent: Explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult.

0952. In the clinical planning session, a caregiver working with a counselor is considering this approach for a student aged 17: comparing age groups during one data-collection period while recognizing age and cohort are confounded. Which framework does it represent?

A. Informed research consent
B. External validity
C. Cross-sectional design
D. Confounding variable

0953. Select the best explanation of Child assent in research.

A. Allocation of participants to study conditions by chance to support baseline comparability.
B. A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission.
C. The strength of evidence that a study's manipulation or exposure, rather than alternatives, explains the observed effect.
D. A factor associated with both a presumed cause and outcome that can offer an alternative explanation.

0954. In the child guidance clinic, a consulting counselor explains why a adolescent student would benefit from comparing age groups during one data-collection period while recognizing age and cohort are confounded. Which course concept underpins the explanation?

A. Informed research consent
B. Preregistration
C. Internal validity
D. Cross-sectional design

0955. During work in the telehealth session, a youth worker identifies this need: using a chance procedure to allocate enrolled participants to treatment conditions. Which idea should guide the response?

A. Confounding variable
B. Operational definition
C. Internal validity
D. Random assignment

0956. Which option preserves the correct meaning of both Operational definition and Preregistration?

A. Operational definition: Allocation of participants to study conditions by chance to support baseline comparability. / Preregistration: Publicly documenting hypotheses, methods, and analysis plans before examining outcome data.
B. Operational definition: A precise specification of how a construct or variable is observed, measured, or manipulated. / Preregistration: The extent to which findings may apply across populations, settings, measures, and conditions beyond the study.
C. Operational definition: Publicly documenting hypotheses, methods, and analysis plans before examining outcome data. / Preregistration: A precise specification of how a construct or variable is observed, measured, or manipulated.
D. Operational definition: A precise specification of how a construct or variable is observed, measured, or manipulated. / Preregistration: Publicly documenting hypotheses, methods, and analysis plans before examining outcome data.

0957. How should a practitioner distinguish the applications of Random assignment and Longitudinal design?

A. Random assignment: Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work. / Longitudinal design: Following the same children over time to study within-person change.
B. Random assignment: Using a chance procedure to allocate enrolled participants to treatment conditions. / Longitudinal design: Following the same children over time to study within-person change.
C. Random assignment: Using a chance procedure to allocate enrolled participants to treatment conditions. / Longitudinal design: Defining observable criteria for a study variable before collecting data.
D. Random assignment: Following the same children over time to study within-person change. / Longitudinal design: Using a chance procedure to allocate enrolled participants to treatment conditions.

0958. A case coordinator presents a support plan for a student aged 15 at the youth advocacy program. Its central feature is following the same children over time to study within-person change. Which concept should be named?

A. Confounding variable
B. Preregistration
C. Longitudinal design
D. Cross-sectional design

0959. A student confuses External validity with Preregistration. Which explanation most accurately separates them?

A. External validity: Publicly documenting hypotheses, methods, and analysis plans before examining outcome data. / Preregistration: The extent to which findings may apply across populations, settings, measures, and conditions beyond the study.
B. External validity: The extent to which findings may apply across populations, settings, measures, and conditions beyond the study. / Preregistration: Publicly documenting hypotheses, methods, and analysis plans before examining outcome data.
C. External validity: The extent to which findings may apply across populations, settings, measures, and conditions beyond the study. / Preregistration: A factor associated with both a presumed cause and outcome that can offer an alternative explanation.
D. External validity: A precise specification of how a construct or variable is observed, measured, or manipulated. / Preregistration: Publicly documenting hypotheses, methods, and analysis plans before examining outcome data.

0960. What is the central meaning of Random assignment?

A. Voluntary authorization to participate based on adequate disclosure, provided by an authorized adult when required.
B. A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission.
C. The strength of evidence that a study's manipulation or exposure, rather than alternatives, explains the observed effect.
D. Allocation of participants to study conditions by chance to support baseline comparability.

0961. When reviewing a child aged 8’s plan in the community youth program, the caregiver working with a counselor notes that the next step is considering whether a sample and setting resemble the populations to which results are generalized. Which concept guides this step?

A. Preregistration
B. Confounding variable
C. External validity
D. Informed research consent

0962. For a young person aged 18 seen in the youth group, the community practitioner recommends a plan built around using a chance procedure to allocate enrolled participants to treatment conditions. Which concept is reflected?

A. Child assent in research
B. Random assignment
C. Confounding variable
D. Informed research consent

0963. At the multidisciplinary case conference, a behavior specialist meets with a child aged 11. The practice priority is: identifying a third factor that may account for an observed association between exposure and outcome. Which concept best captures that priority?

A. Cross-sectional design
B. Informed research consent
C. Confounding variable
D. Random assignment

0964. Choose the practice comparison that best separates Internal validity from Child assent in research.

A. Internal validity: Explaining a study to a child in accessible language and respecting dissent under applicable safeguards. / Child assent in research: Evaluating whether rival explanations for a treatment effect have been addressed.
B. Internal validity: Evaluating whether rival explanations for a treatment effect have been addressed. / Child assent in research: Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work.
C. Internal validity: Evaluating whether rival explanations for a treatment effect have been addressed. / Child assent in research: Explaining a study to a child in accessible language and respecting dissent under applicable safeguards.
D. Internal validity: Considering whether a sample and setting resemble the populations to which results are generalized. / Child assent in research: Explaining a study to a child in accessible language and respecting dissent under applicable safeguards.

0965. While consulting in the telehealth session, a assessment clinician supports a child aged 6 by using this approach: explaining a study to a child in accessible language and respecting dissent under applicable safeguards. Which concept is being applied?

A. Longitudinal design
B. Confounding variable
C. Informed research consent
D. Child assent in research

0966. A clinical supervisor is asked to evaluate a proposed service for a student aged 9 in the supervision meeting. The defining feature is comparing age groups during one data-collection period while recognizing age and cohort are confounded. Which concept fits?

A. Internal validity
B. Longitudinal design
C. Informed research consent
D. Cross-sectional design

0967. Which option correctly matches each concept to its practice focus: Informed research consent and Preregistration?

A. Informed research consent: Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work. / Preregistration: Explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult.
B. Informed research consent: Identifying a third factor that may account for an observed association between exposure and outcome. / Preregistration: Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work.
C. Informed research consent: Explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult. / Preregistration: Using a chance procedure to allocate enrolled participants to treatment conditions.
D. Informed research consent: Explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult. / Preregistration: Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work.

0968. A mental-health professional is supporting a student aged 12 in the after-school program. The key practice is identifying a third factor that may account for an observed association between exposure and outcome. Which course concept is most relevant?

A. Longitudinal design
B. External validity
C. Informed research consent
D. Confounding variable

0969. A supervisor asks how Longitudinal design would appear in practice. Which choice should be selected?

A. Following the same children over time to study within-person change.
B. Explaining a study to a child in accessible language and respecting dissent under applicable safeguards.
C. Comparing age groups during one data-collection period while recognizing age and cohort are confounded.
D. Evaluating whether rival explanations for a treatment effect have been addressed.

0970. Which course concept is defined as follows: Publicly documenting hypotheses, methods, and analysis plans before examining outcome data.

A. Informed research consent
B. Random assignment
C. External validity
D. Preregistration

0971. Choose the response that best puts Operational definition into practice.

A. Explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult.
B. Comparing age groups during one data-collection period while recognizing age and cohort are confounded.
C. Defining observable criteria for a study variable before collecting data.
D. Identifying a third factor that may account for an observed association between exposure and outcome.

0972. In a professional consultation about a client in late adolescence, the consultant describes this response in the community mental-health service: recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work. Which term is most apt?

A. Child assent in research
B. Informed research consent
C. Preregistration
D. Longitudinal design

0973. In a supervision review, a parent educator describes work with a teenage client in the classroom support meeting: recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work. What concept is illustrated?

A. Preregistration
B. Child assent in research
C. Cross-sectional design
D. Internal validity

0974. A case conference reviews a research trainee's work with a child of elementary-school age in the community youth program: identifying a third factor that may account for an observed association between exposure and outcome. Which principle is central?

A. External validity
B. Confounding variable
C. Internal validity
D. Child assent in research

0975. A trainee must choose a practice that exemplifies Internal validity. Which action is the best fit?

A. Comparing age groups during one data-collection period while recognizing age and cohort are confounded.
B. Considering whether a sample and setting resemble the populations to which results are generalized.
C. Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work.
D. Evaluating whether rival explanations for a treatment effect have been addressed.

0976. Choose the practice comparison that best separates Cross-sectional design from Child assent in research.

A. Cross-sectional design: Explaining a study to a child in accessible language and respecting dissent under applicable safeguards. / Child assent in research: Comparing age groups during one data-collection period while recognizing age and cohort are confounded.
B. Cross-sectional design: Defining observable criteria for a study variable before collecting data. / Child assent in research: Explaining a study to a child in accessible language and respecting dissent under applicable safeguards.
C. Cross-sectional design: Comparing age groups during one data-collection period while recognizing age and cohort are confounded. / Child assent in research: Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work.
D. Cross-sectional design: Comparing age groups during one data-collection period while recognizing age and cohort are confounded. / Child assent in research: Explaining a study to a child in accessible language and respecting dissent under applicable safeguards.

0977. For a child aged 7 seen in the family session, the therapist recommends a plan built around explaining a study to a child in accessible language and respecting dissent under applicable safeguards. Which concept is reflected?

A. Informed research consent
B. Longitudinal design
C. Child assent in research
D. Random assignment

0978. A family therapist presents a support plan for a child aged 7 at the child guidance clinic. Its central feature is considering whether a sample and setting resemble the populations to which results are generalized. Which concept should be named?

A. External validity
B. Random assignment
C. Longitudinal design
D. Cross-sectional design

0979. A supervisor asks for an applied contrast between Internal validity and Informed research consent. Which option fits?

A. Internal validity: Evaluating whether rival explanations for a treatment effect have been addressed. / Informed research consent: Explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult.
B. Internal validity: Evaluating whether rival explanations for a treatment effect have been addressed. / Informed research consent: Defining observable criteria for a study variable before collecting data.
C. Internal validity: Explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult. / Informed research consent: Evaluating whether rival explanations for a treatment effect have been addressed.
D. Internal validity: Identifying a third factor that may account for an observed association between exposure and outcome. / Informed research consent: Explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult.

0980. A youth worker is explaining a choice to a young adolescent client and caregiver in the student-support meeting. The choice centers on explaining a study to a child in accessible language and respecting dissent under applicable safeguards. Which idea is illustrated?

A. Preregistration
B. Informed research consent
C. Child assent in research
D. External validity

0981. Which option correctly matches each concept to its practice focus: Random assignment and Informed research consent?

A. Random assignment: Using a chance procedure to allocate enrolled participants to treatment conditions. / Informed research consent: Explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult.
B. Random assignment: Explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult. / Informed research consent: Using a chance procedure to allocate enrolled participants to treatment conditions.
C. Random assignment: Using a chance procedure to allocate enrolled participants to treatment conditions. / Informed research consent: Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work.
D. Random assignment: Comparing age groups during one data-collection period while recognizing age and cohort are confounded. / Informed research consent: Explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult.

0982. Which paired example correctly applies Informed research consent first and Preregistration second?

A. Informed research consent: Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work. / Preregistration: Explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult.
B. Informed research consent: Explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult. / Preregistration: Using a chance procedure to allocate enrolled participants to treatment conditions.
C. Informed research consent: Identifying a third factor that may account for an observed association between exposure and outcome. / Preregistration: Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work.
D. Informed research consent: Explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult. / Preregistration: Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work.

0983. A service navigator is asked what should shape a young person’s support in the child guidance clinic. The proposed focus is recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work. Which principle does it represent?

A. Informed research consent
B. Internal validity
C. Cross-sectional design
D. Preregistration

0984. Which option pairs the definitions of Random assignment and Internal validity correctly, in that order?

A. Random assignment: Allocation of participants to study conditions by chance to support baseline comparability. / Internal validity: The strength of evidence that a study’s manipulation or exposure, rather than alternatives, explains the observed effect.
B. Random assignment: The strength of evidence that a study’s manipulation or exposure, rather than alternatives, explains the observed effect. / Internal validity: Allocation of participants to study conditions by chance to support baseline comparability.
C. Random assignment: A factor associated with both a presumed cause and outcome that can offer an alternative explanation. / Internal validity: The strength of evidence that a study’s manipulation or exposure, rather than alternatives, explains the observed effect.
D. Random assignment: Allocation of participants to study conditions by chance to support baseline comparability. / Internal validity: Publicly documenting hypotheses, methods, and analysis plans before examining outcome data.

0985. How should a practitioner distinguish the applications of Random assignment and Confounding variable?

A. Random assignment: Using a chance procedure to allocate enrolled participants to treatment conditions. / Confounding variable: Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work.
B. Random assignment: Using a chance procedure to allocate enrolled participants to treatment conditions. / Confounding variable: Identifying a third factor that may account for an observed association between exposure and outcome.
C. Random assignment: Following the same children over time to study within-person change. / Confounding variable: Identifying a third factor that may account for an observed association between exposure and outcome.
D. Random assignment: Identifying a third factor that may account for an observed association between exposure and outcome. / Confounding variable: Using a chance procedure to allocate enrolled participants to treatment conditions.

0986. While supporting a young person aged 18 in the school counseling office, a case coordinator adopts this practice: recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work. Which concept best explains the choice?

A. Informed research consent
B. Child assent in research
C. Preregistration
D. Confounding variable

0987. When reviewing a young person aged 16’s plan in the community mental-health service, the school-based clinician notes that the next step is defining observable criteria for a study variable before collecting data. Which concept guides this step?

A. Random assignment
B. Operational definition
C. Longitudinal design
D. External validity

0988. Choose the term that matches this definition: The extent to which findings may apply across populations, settings, measures, and conditions beyond the study.

A. Operational definition
B. Preregistration
C. Confounding variable
D. External validity

0989. Which option preserves the correct meaning of both Cross-sectional design and External validity?

A. Cross-sectional design: A design that compares different individuals or groups at one time point. / External validity: The extent to which findings may apply across populations, settings, measures, and conditions beyond the study.
B. Cross-sectional design: A factor associated with both a presumed cause and outcome that can offer an alternative explanation. / External validity: The extent to which findings may apply across populations, settings, measures, and conditions beyond the study.
C. Cross-sectional design: The extent to which findings may apply across populations, settings, measures, and conditions beyond the study. / External validity: A design that compares different individuals or groups at one time point.
D. Cross-sectional design: A design that compares different individuals or groups at one time point. / External validity: A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission.

0990. During service review in the behavior-support review, a service navigator describes explaining a study to a child in accessible language and respecting dissent under applicable safeguards. for a child aged 8. Which course idea is most applicable?

A. Internal validity
B. Cross-sectional design
C. Child assent in research
D. Operational definition

0991. How should a practitioner distinguish the applications of Informed research consent and Child assent in research?

A. Informed research consent: Explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult. / Child assent in research: Using a chance procedure to allocate enrolled participants to treatment conditions.
B. Informed research consent: Following the same children over time to study within-person change. / Child assent in research: Explaining a study to a child in accessible language and respecting dissent under applicable safeguards.
C. Informed research consent: Explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult. / Child assent in research: Explaining a study to a child in accessible language and respecting dissent under applicable safeguards.
D. Informed research consent: Explaining a study to a child in accessible language and respecting dissent under applicable safeguards. / Child assent in research: Explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult.

0992. A assessment clinician and a young person aged 13 are discussing support in the clinical planning session. The selected practice is following the same children over time to study within-person change. Which concept does this demonstrate?

A. Internal validity
B. Longitudinal design
C. Preregistration
D. Random assignment

0993. Which statement accurately contrasts the course concepts Informed research consent and Child assent in research?

A. Informed research consent: A design that measures the same individuals or units across multiple time points. / Child assent in research: A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission.
B. Informed research consent: A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission. / Child assent in research: Voluntary authorization to participate based on adequate disclosure, provided by an authorized adult when required.
C. Informed research consent: Voluntary authorization to participate based on adequate disclosure, provided by an authorized adult when required. / Child assent in research: Allocation of participants to study conditions by chance to support baseline comparability.
D. Informed research consent: Voluntary authorization to participate based on adequate disclosure, provided by an authorized adult when required. / Child assent in research: A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission.

0994. A case conference asks for a distinction between Operational definition and Confounding variable. Which answer is sound?

A. Operational definition: A precise specification of how a construct or variable is observed, measured, or manipulated. / Confounding variable: A factor associated with both a presumed cause and outcome that can offer an alternative explanation.
B. Operational definition: A factor associated with both a presumed cause and outcome that can offer an alternative explanation. / Confounding variable: A precise specification of how a construct or variable is observed, measured, or manipulated.
C. Operational definition: A precise specification of how a construct or variable is observed, measured, or manipulated. / Confounding variable: Allocation of participants to study conditions by chance to support baseline comparability.
D. Operational definition: A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission. / Confounding variable: A factor associated with both a presumed cause and outcome that can offer an alternative explanation.

0995. Which statement accurately contrasts the course concepts Random assignment and Cross-sectional design?

A. Random assignment: The extent to which findings may apply across populations, settings, measures, and conditions beyond the study. / Cross-sectional design: A design that compares different individuals or groups at one time point.
B. Random assignment: Allocation of participants to study conditions by chance to support baseline comparability. / Cross-sectional design: A design that compares different individuals or groups at one time point.
C. Random assignment: A design that compares different individuals or groups at one time point. / Cross-sectional design: Allocation of participants to study conditions by chance to support baseline comparability.
D. Random assignment: Allocation of participants to study conditions by chance to support baseline comparability. / Cross-sectional design: A precise specification of how a construct or variable is observed, measured, or manipulated.

0996. A team must select a support approach for a child of elementary-school age at the caregiver consultation. The parent educator recommends following the same children over time to study within-person change. Which idea is most relevant?

A. Informed research consent
B. Longitudinal design
C. Internal validity
D. Child assent in research

0997. Which comparison would correct a trainee’s misunderstanding of Operational definition versus Cross-sectional design?

A. Operational definition: A design that compares different individuals or groups at one time point. / Cross-sectional design: A precise specification of how a construct or variable is observed, measured, or manipulated.
B. Operational definition: Voluntary authorization to participate based on adequate disclosure, provided by an authorized adult when required. / Cross-sectional design: A design that compares different individuals or groups at one time point.
C. Operational definition: A precise specification of how a construct or variable is observed, measured, or manipulated. / Cross-sectional design: A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission.
D. Operational definition: A precise specification of how a construct or variable is observed, measured, or manipulated. / Cross-sectional design: A design that compares different individuals or groups at one time point.

0998. Choose the definition pair that correctly explains Longitudinal design first and Preregistration second.

A. Longitudinal design: A factor associated with both a presumed cause and outcome that can offer an alternative explanation. / Preregistration: Publicly documenting hypotheses, methods, and analysis plans before examining outcome data.
B. Longitudinal design: A design that measures the same individuals or units across multiple time points. / Preregistration: Publicly documenting hypotheses, methods, and analysis plans before examining outcome data.
C. Longitudinal design: Publicly documenting hypotheses, methods, and analysis plans before examining outcome data. / Preregistration: A design that measures the same individuals or units across multiple time points.
D. Longitudinal design: A design that measures the same individuals or units across multiple time points. / Preregistration: A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission.

0999. Which option correctly matches each concept to its practice focus: Operational definition and Cross-sectional design?

A. Operational definition: Comparing age groups during one data-collection period while recognizing age and cohort are confounded. / Cross-sectional design: Defining observable criteria for a study variable before collecting data.
B. Operational definition: Defining observable criteria for a study variable before collecting data. / Cross-sectional design: Comparing age groups during one data-collection period while recognizing age and cohort are confounded.
C. Operational definition: Explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult. / Cross-sectional design: Comparing age groups during one data-collection period while recognizing age and cohort are confounded.
D. Operational definition: Defining observable criteria for a study variable before collecting data. / Cross-sectional design: Explaining a study to a child in accessible language and respecting dissent under applicable safeguards.

1000. In the learning-support meeting, a youth worker explains why a client in late adolescence would benefit from considering whether a sample and setting resemble the populations to which results are generalized. Which course concept underpins the explanation?

A. External validity
B. Child assent in research
C. Internal validity
D. Cross-sectional design

CAC.913 | Neurodevelopmental Disorders

QUESTION BANK | 1,000 ITEMS | ANSWERS AT THE END

0001. In the classroom support meeting, the agreed focus for a service navigator working with a client in early adolescence is describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation. Which concept names this focus?

A. Neurodiversity-affirming practice
B. Autism spectrum condition
C. Adaptive functioning
D. Comorbidity

0002. A planning meeting about a child aged 14 includes a behavior specialist. The proposed practice in the student wellness team is examining skill history, instruction, and targeted assessment when academic difficulty persists. Which idea underlies it?

A. ADHD executive-function profile
B. Reasonable accommodation
C. Sensory processing differences
D. Specific learning disorder

0003. A play therapist reviews a plan for a young person aged 13 in the telehealth session. The plan emphasizes considering developmental history and functional impact rather than inferring a condition from one isolated behavior. Which course idea does this reflect?

A. Autism spectrum condition
B. ADHD executive-function profile
C. Neurodevelopmental condition
D. Sensory processing differences

0004. Choose the definition pair that correctly explains ADHD executive-function profile first and Neurodiversity-affirming practice second.

A. ADHD executive-function profile: A pattern of developmentally inappropriate inattention and/or hyperactivity-impulsivity with impairment across relevant contexts. / Neurodiversity-affirming practice: A condition characterized by limitations in intellectual functioning and adaptive functioning with developmental onset.
B. ADHD executive-function profile: A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs. / Neurodiversity-affirming practice: An approach that respects neurological variation, avoids unnecessary normalization, and focuses on access and meaningful support.
C. ADHD executive-function profile: An approach that respects neurological variation, avoids unnecessary normalization, and focuses on access and meaningful support. / Neurodiversity-affirming practice: A pattern of developmentally inappropriate inattention and/or hyperactivity-impulsivity with impairment across relevant contexts.
D. ADHD executive-function profile: A pattern of developmentally inappropriate inattention and/or hyperactivity-impulsivity with impairment across relevant contexts. / Neurodiversity-affirming practice: An approach that respects neurological variation, avoids unnecessary normalization, and focuses on access and meaningful support.

0005. Which option correctly matches each concept to its practice focus: Autism spectrum condition and Reasonable accommodation?

A. Autism spectrum condition: Describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation. / Reasonable accommodation: Identifying practical adjustments that permit meaningful participation and checking governing requirements.
B. Autism spectrum condition: Identifying practical adjustments that permit meaningful participation and checking governing requirements. / Reasonable accommodation: Describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation.
C. Autism spectrum condition: Examining skill history, instruction, and targeted assessment when academic difficulty persists. / Reasonable accommodation: Identifying practical adjustments that permit meaningful participation and checking governing requirements.
D. Autism spectrum condition: Describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation. / Reasonable accommodation: Asking which sensory environments support or hinder participation and adjusting the setting where feasible.

0006. Which statement shows a sound practice-level distinction between Autism spectrum condition and Adaptive functioning?

A. Autism spectrum condition: Evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone. / Adaptive functioning: Describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation.
B. Autism spectrum condition: Describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation. / Adaptive functioning: Evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone.
C. Autism spectrum condition: Describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation. / Adaptive functioning: Gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions.
D. Autism spectrum condition: Examining skill history, instruction, and targeted assessment when academic difficulty persists. / Adaptive functioning: Evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone.

0007. A therapist is asked what should shape a student aged 17's support in the caregiver consultation. The proposed focus is considering developmental history and functional impact rather than inferring a condition from one isolated behavior. Which principle does it represent?

A. ADHD executive-function profile
B. Specific learning disorder
C. Neurodiversity-affirming practice
D. Neurodevelopmental condition

0008. A planning meeting about a preadolescent child includes a play therapist. The proposed practice in the family resource center is describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation. Which idea underlies it?

A. Autism spectrum condition
B. Sensory processing differences
C. Specific learning disorder
D. ADHD executive-function profile

0009. A doctoral student reads the following description. Which concept does it define? Co-occurrence of two or more conditions or clinically significant problems in one person.

A. ADHD executive-function profile
B. Autism spectrum condition
C. Neurodiversity-affirming practice
D. Comorbidity

0010. At the outpatient clinic, a behavior specialist meets with a young adolescent client. The practice priority is: identifying practical adjustments that permit meaningful participation and checking governing requirements. Which concept best captures that priority?

A. Neurodiversity-affirming practice
B. ADHD executive-function profile
C. Reasonable accommodation
D. Autism spectrum condition

0011. Choose the response that best puts Neurodevelopmental condition into practice.

A. Considering developmental history and functional impact rather than inferring a condition from one isolated behavior.
B. Building accommodations around the person's needs and goals rather than treating difference itself as a defect.
C. Identifying practical adjustments that permit meaningful participation and checking governing requirements.
D. Evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone.

0012. A supervisor asks for an applied contrast between Specific learning disorder and Sensory processing differences. Which option fits?

A. Specific learning disorder: Asking which sensory environments support or hinder participation and adjusting the setting where feasible. / Sensory processing differences: Examining skill history, instruction, and targeted assessment when academic difficulty persists.
B. Specific learning disorder: Examining skill history, instruction, and targeted assessment when academic difficulty persists. / Sensory processing differences: Asking which sensory environments support or hinder participation and adjusting the setting where feasible.
C. Specific learning disorder: Assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty. / Sensory processing differences: Asking which sensory environments support or hinder participation and adjusting the setting where feasible.
D. Specific learning disorder: Examining skill history, instruction, and targeted assessment when academic difficulty persists. / Sensory processing differences: Building accommodations around the person's needs and goals rather than treating difference itself as a defect.

0013. Which statement shows a sound practice-level distinction between ADHD executive-function profile and Autism spectrum condition?

A. ADHD executive-function profile: Gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions. / Autism spectrum condition: Describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation.
B. ADHD executive-function profile: Describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation. / Autism spectrum condition: Gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions.
C. ADHD executive-function profile: Gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions. / Autism spectrum condition: Considering developmental history and functional impact rather than inferring a condition from one isolated behavior.
D. ADHD executive-function profile: Evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone. / Autism spectrum condition: Describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation.

0014. In a professional consultation about a young person aged 13, the supervised trainee describes this response in the outpatient clinic: building accommodations around the person's needs and goals rather than treating difference itself as a defect. Which term is most apt?

A. Specific learning disorder
B. Neurodiversity-affirming practice
C. Reasonable accommodation
D. Intellectual disability

0015. Which statement accurately contrasts the course concepts Intellectual disability and Adaptive functioning?

A. Intellectual disability: A condition characterized by limitations in intellectual functioning and adaptive functioning with developmental onset. / Adaptive functioning: An approach that respects neurological variation, avoids unnecessary normalization, and focuses on access and meaningful support.
B. Intellectual disability: Co-occurrence of two or more conditions or clinically significant problems in one person. / Adaptive functioning: Conceptual, social, and practical skills used to meet everyday demands across settings.
C. Intellectual disability: A condition characterized by limitations in intellectual functioning and adaptive functioning with developmental onset. / Adaptive functioning: Conceptual, social, and practical skills used to meet everyday demands across settings.
D. Intellectual disability: Conceptual, social, and practical skills used to meet everyday demands across settings. / Adaptive functioning: A condition characterized by limitations in intellectual functioning and adaptive functioning with developmental onset.

0016. A trainee must distinguish how ADHD executive-function profile and Sensory processing differences guide practice. Which comparison is accurate?

A. ADHD executive-function profile: Asking which sensory environments support or hinder participation and adjusting the setting where feasible. / Sensory processing differences: Gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions.
B. ADHD executive-function profile: Gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions. / Sensory processing differences: Asking which sensory environments support or hinder participation and adjusting the setting where feasible.
C. ADHD executive-function profile: Describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation. / Sensory processing differences: Asking which sensory environments support or hinder participation and adjusting the setting where feasible.
D. ADHD executive-function profile: Gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions. / Sensory processing differences: Examining skill history, instruction, and targeted assessment when academic difficulty persists.

0017. When reviewing a young person aged 16's plan in the community mental-health service, the school-based clinician notes that the next step is considering developmental history and functional impact rather than inferring a condition from one isolated behavior. Which concept guides this step?

A. Neurodiversity-affirming practice
B. Neurodevelopmental condition
C. Adaptive functioning
D. Intellectual disability

0018. Which paired example correctly applies ADHD executive-function profile first and Neurodiversity-affirming practice second?

A. ADHD executive-function profile: Building accommodations around the person's needs and goals rather than treating difference itself as a defect. / Neurodiversity-affirming practice: Gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions.
B. ADHD executive-function profile: Gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions. / Neurodiversity-affirming practice: Building accommodations around the person's needs and goals rather than treating difference itself as a defect.
C. ADHD executive-function profile: Gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions. / Neurodiversity-affirming practice: Assessing adaptive skills and developmental history alongside intellectual functioning.
D. ADHD executive-function profile: Describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation. / Neurodiversity-affirming practice: Building accommodations around the person's needs and goals rather than treating difference itself as a defect.

0019. Which option correctly matches each concept to its practice focus: Intellectual disability and Neurodiversity-affirming practice?

A. Intellectual disability: Assessing adaptive skills and developmental history alongside intellectual functioning. / Neurodiversity-affirming practice: Building accommodations around the person's needs and goals rather than treating difference itself as a defect.
B. Intellectual disability: Assessing adaptive skills and developmental history alongside intellectual functioning. / Neurodiversity-affirming practice: Gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions.
C. Intellectual disability: Building accommodations around the person's needs and goals rather than treating difference itself as a defect. / Neurodiversity-affirming practice: Assessing adaptive skills and developmental history alongside intellectual functioning.
D. Intellectual disability: Evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone. / Neurodiversity-affirming practice: Building accommodations around the person's needs and goals rather than treating difference itself as a defect.

0020. At the learning-support meeting, a therapist reviews whether a plan for a child aged 11 is appropriate. The relevant practice is describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation. Which concept is tested?

A. Intellectual disability
B. Reasonable accommodation
C. Autism spectrum condition
D. Specific learning disorder

0021. A member of a clinical team is supporting a student aged 15 in the school counseling office. The key practice is assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty. Which course concept is most relevant?

A. Autism spectrum condition
B. Comorbidity
C. Neurodiversity-affirming practice
D. Intellectual disability

0022. In a professional consultation about a young person aged 10, the assessment clinician describes this response in the school-based service: examining skill history, instruction, and targeted assessment when academic difficulty persists. Which term is most apt?

A. Specific learning disorder
B. Intellectual disability
C. Sensory processing differences
D. Autism spectrum condition

0023. Which option correctly matches each concept to its practice focus: ADHD executive-function profile and Intellectual disability?

A. ADHD executive-function profile: Evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone. / Intellectual disability: Assessing adaptive skills and developmental history alongside intellectual functioning.
B. ADHD executive-function profile: Gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions. / Intellectual disability: Assessing adaptive skills and developmental history alongside intellectual functioning.
C. ADHD executive-function profile: Gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions. / Intellectual disability: Assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty.
D. ADHD executive-function profile: Assessing adaptive skills and developmental history alongside intellectual functioning. / Intellectual disability: Gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions.

0024. When reviewing a young person's plan in the supervision meeting, the family therapist notes that the next step is describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation. Which concept guides this step?

A. Specific learning disorder
B. Autism spectrum condition
C. Reasonable accommodation
D. Intellectual disability

0025. Choose the practice comparison that best separates Specific learning disorder from Neurodiversity-affirming practice.

A. Specific learning disorder: Describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation. / Neurodiversity-affirming practice: Building accommodations around the person's needs and goals rather than treating difference itself as a defect.
B. Specific learning disorder: Examining skill history, instruction, and targeted assessment when academic difficulty persists. / Neurodiversity-affirming practice: Evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone.
C. Specific learning disorder: Building accommodations around the person's needs and goals rather than treating difference itself as a defect. / Neurodiversity-affirming practice: Examining skill history, instruction, and targeted assessment when academic difficulty persists.
D. Specific learning disorder: Examining skill history, instruction, and targeted assessment when academic difficulty persists. / Neurodiversity-affirming practice: Building accommodations around the person's needs and goals rather than treating difference itself as a defect.

0026. A planning meeting about a young adolescent client includes a counselor. The proposed practice in the clinical planning session is assessing adaptive skills and developmental history alongside intellectual functioning. Which idea underlies it?

A. Intellectual disability
B. Neurodiversity-affirming practice
C. Autism spectrum condition
D. Specific learning disorder

0027. Which option pairs the definitions of Adaptive functioning and Reasonable accommodation correctly, in that order?

A. Adaptive functioning: Conceptual, social, and practical skills used to meet everyday demands across settings. / Reasonable accommodation: A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs.
B. Adaptive functioning: Conceptual, social, and practical skills used to meet everyday demands across settings. / Reasonable accommodation: A modification to environment, instruction, or procedure that supports equitable access under applicable rules.
C. Adaptive functioning: A modification to environment, instruction, or procedure that supports equitable access under applicable rules. / Reasonable accommodation: Conceptual, social, and practical skills used to meet everyday demands across settings.
D. Adaptive functioning: Co-occurrence of two or more conditions or clinically significant problems in one person. / Reasonable accommodation: A modification to environment, instruction, or procedure that supports equitable access under applicable rules.

0028. At a case-planning meeting, the clinical supervisor proposes asking which sensory environments support or hinder participation and adjusting the setting where feasible. for a child of elementary-school age seen in the behavior-support review. Which concept does this illustrate?

A. ADHD executive-function profile
B. Reasonable accommodation
C. Autism spectrum condition
D. Sensory processing differences

0029. At a case-planning meeting, the clinical supervisor proposes gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions. for a student aged 15 seen in the family session. Which concept does this illustrate?

A. ADHD executive-function profile
B. Neurodevelopmental condition
C. Comorbidity
D. Sensory processing differences

0030. Which option pairs the definitions of ADHD executive-function profile and Autism spectrum condition correctly, in that order?

A. ADHD executive-function profile: Conceptual, social, and practical skills used to meet everyday demands across settings. / Autism spectrum condition: A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs.
B. ADHD executive-function profile: A pattern of developmentally inappropriate inattention and/or hyperactivity-impulsivity with impairment across relevant contexts. / Autism spectrum condition: A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs.
C. ADHD executive-function profile: A pattern of developmentally inappropriate inattention and/or hyperactivity-impulsivity with impairment across relevant contexts. / Autism spectrum condition: A group of conditions with developmental onset that affect functioning in areas such as learning, communication, or behavior.
D. ADHD executive-function profile: A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs. / Autism spectrum condition: A pattern of developmentally inappropriate inattention and/or hyperactivity-impulsivity with impairment across relevant contexts.

0031. A doctoral student reads the following description. Which concept does it define? An approach that respects neurological variation, avoids unnecessary normalization, and focuses on access and meaningful support.

A. Sensory processing differences
B. ADHD executive-function profile
C. Autism spectrum condition
D. Neurodiversity-affirming practice

0032. Choose the response that best puts Adaptive functioning into practice.

A. Examining skill history, instruction, and targeted assessment when academic difficulty persists.
B. Evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone.
C. Building accommodations around the person's needs and goals rather than treating difference itself as a defect.
D. Assessing adaptive skills and developmental history alongside intellectual functioning.

0033. In the community service agency, a school counselor describes the most appropriate support for a young person aged 16 as examining skill history, instruction, and targeted assessment when academic difficulty persists. Which framework is being applied?

A. ADHD executive-function profile
B. Specific learning disorder
C. Intellectual disability
D. Adaptive functioning

0034. In a supervision review, a family therapist describes work with a student aged 15 in the school consultation: building accommodations around the person's needs and goals rather than treating difference itself as a defect. What concept is illustrated?

A. Neurodiversity-affirming practice
B. Comorbidity
C. ADHD executive-function profile
D. Reasonable accommodation

0035. Choose the practice comparison that best separates Specific learning disorder from Comorbidity.

A. Specific learning disorder: Examining skill history, instruction, and targeted assessment when academic difficulty persists. / Comorbidity: Assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty.
B. Specific learning disorder: Examining skill history, instruction, and targeted assessment when academic difficulty persists. / Comorbidity: Gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions.
C. Specific learning disorder: Assessing adaptive skills and developmental history alongside intellectual functioning. / Comorbidity: Assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty.
D. Specific learning disorder: Assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty. / Comorbidity: Examining skill history, instruction, and targeted assessment when academic difficulty persists.

0036. A supervisor asks how Autism spectrum condition would appear in practice. Which choice should be selected?

A. Describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation.
B. Gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions.
C. Assessing adaptive skills and developmental history alongside intellectual functioning.
D. Building accommodations around the person's needs and goals rather than treating difference itself as a defect.

0037. In the school consultation, a team asks how a consulting counselor can support a school-age child. One proposed action is assessing adaptive skills and developmental history alongside intellectual functioning. Which idea does it represent?

A. Intellectual disability
B. Sensory processing differences
C. Specific learning disorder
D. Autism spectrum condition

0038. A trainee must explain Adaptive functioning. Which answer is accurate?

A. Conceptual, social, and practical skills used to meet everyday demands across settings.
B. A modification to environment, instruction, or procedure that supports equitable access under applicable rules.
C. A pattern of developmentally inappropriate inattention and/or hyperactivity-impulsivity with impairment across relevant contexts.
D. An approach that respects neurological variation, avoids unnecessary normalization, and focuses on access and meaningful support.

0039. Which option correctly matches each concept to its practice focus: Intellectual disability and Reasonable accommodation?

A. Intellectual disability: Describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation. / Reasonable accommodation: Identifying practical adjustments that permit meaningful participation and checking governing requirements.
B. Intellectual disability: Assessing adaptive skills and developmental history alongside intellectual functioning. / Reasonable accommodation: Considering developmental history and functional impact rather than inferring a condition from one isolated behavior.
C. Intellectual disability: Identifying practical adjustments that permit meaningful participation and checking governing requirements. / Reasonable accommodation: Assessing adaptive skills and developmental history alongside intellectual functioning.
D. Intellectual disability: Assessing adaptive skills and developmental history alongside intellectual functioning. / Reasonable accommodation: Identifying practical adjustments that permit meaningful participation and checking governing requirements.

0040. A child aged 8 and a consultant are reviewing goals in the clinical planning session. The agreed action is building accommodations around the person's needs and goals rather than treating difference itself as a defect. Which principle best accounts for it?

A. Neurodiversity-affirming practice
B. Intellectual disability
C. Sensory processing differences
D. ADHD executive-function profile

0041. Which option correctly matches each concept to its practice focus: Neurodevelopmental condition and Autism spectrum condition?

A. Neurodevelopmental condition: Considering developmental history and functional impact rather than inferring a condition from one isolated behavior. / Autism spectrum condition: Examining skill history, instruction, and targeted assessment when academic difficulty persists.
B. Neurodevelopmental condition: Considering developmental history and functional impact rather than inferring a condition from one isolated behavior. / Autism spectrum condition: Describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation.
C. Neurodevelopmental condition: Asking which sensory environments support or hinder participation and adjusting the setting where feasible. / Autism spectrum condition: Describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation.
D. Neurodevelopmental condition: Describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation. / Autism spectrum condition: Considering developmental history and functional impact rather than inferring a condition from one isolated behavior.

0042. What is the central meaning of Adaptive functioning?

A. Conceptual, social, and practical skills used to meet everyday demands across settings.
B. An approach that respects neurological variation, avoids unnecessary normalization, and focuses on access and meaningful support.
C. A condition characterized by limitations in intellectual functioning and adaptive functioning with developmental onset.
D. Differences in responding to sensory input that may affect comfort, attention, or participation.

0043. A doctoral student reads the following description. Which concept does it define? A modification to environment, instruction, or procedure that supports equitable access under applicable rules.

A. Sensory processing differences
B. Reasonable accommodation
C. Neurodevelopmental condition
D. ADHD executive-function profile

0044. Which professional action most closely applies Comorbidity?

A. Assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty.
B. Evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone.
C. Gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions.
D. Asking which sensory environments support or hinder participation and adjusting the setting where feasible.

0045. For a student aged 15 seen in the family resource center, the program coordinator recommends a plan built around assessing adaptive skills and developmental history alongside intellectual functioning. Which concept is reflected?

A. Sensory processing differences
B. Intellectual disability
C. Specific learning disorder
D. Autism spectrum condition

0046. Which option preserves the correct meaning of both Autism spectrum condition and Specific learning disorder?

A. Autism spectrum condition: A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs. / Specific learning disorder: Differences in responding to sensory input that may affect comfort, attention, or participation.
B. Autism spectrum condition: A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs. / Specific learning disorder: Persistent difficulty learning or using academic skills despite appropriate support, evaluated in relation to developmental and educational context.
C. Autism spectrum condition: Persistent difficulty learning or using academic skills despite appropriate support, evaluated in relation to developmental and educational context. / Specific learning disorder: A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs.
D. Autism spectrum condition: A group of conditions with developmental onset that affect functioning in areas such as learning, communication, or behavior. / Specific learning disorder: Persistent difficulty learning or using academic skills despite appropriate support, evaluated in relation to developmental and educational context.

0047. A family therapist presents a support plan for a child aged 8 at the community service agency. Its central feature is gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions. Which concept should be named?

A. Neurodiversity-affirming practice
B. Neurodevelopmental condition
C. Autism spectrum condition
D. ADHD executive-function profile

0048. Which choice aligns each practice with the correct idea, ADHD executive-function profile or Autism spectrum condition?

A. ADHD executive-function profile: Describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation. / Autism spectrum condition: Gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions.
B. ADHD executive-function profile: Evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone. / Autism spectrum condition: Describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation.
C. ADHD executive-function profile: Gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions. / Autism spectrum condition: Considering developmental history and functional impact rather than inferring a condition from one isolated behavior.
D. ADHD executive-function profile: Gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions. / Autism spectrum condition: Describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation.

0049. Identify the most precise label for this idea: A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs.

A. ADHD executive-function profile
B. Autism spectrum condition
C. Neurodevelopmental condition
D. Reasonable accommodation

0050. When reviewing a student aged 15's plan in the school consultation, the family therapist notes that the next step is building accommodations around the person's needs and goals rather than treating difference itself as a defect. Which concept guides this step?

A. Autism spectrum condition
B. Neurodiversity-affirming practice
C. Specific learning disorder
D. Adaptive functioning

0051. At a case-planning meeting, the school support specialist proposes building accommodations around the person's needs and goals rather than treating difference itself as a defect. for a preadolescent child seen in the community service agency. Which concept does this illustrate?

A. Sensory processing differences
B. Adaptive functioning
C. Reasonable accommodation
D. Neurodiversity-affirming practice

0052. Select the best explanation of Reasonable accommodation.

A. A modification to environment, instruction, or procedure that supports equitable access under applicable rules.
B. Persistent difficulty learning or using academic skills despite appropriate support, evaluated in relation to developmental and educational context.
C. A group of conditions with developmental onset that affect functioning in areas such as learning, communication, or behavior.
D. An approach that respects neurological variation, avoids unnecessary normalization, and focuses on access and meaningful support.

0053. How should a practitioner distinguish the applications of Neurodevelopmental condition and ADHD executive-function profile?

A. Neurodevelopmental condition: Considering developmental history and functional impact rather than inferring a condition from one isolated behavior. / ADHD executive-function profile: Describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation.
B. Neurodevelopmental condition: Considering developmental history and functional impact rather than inferring a condition from one isolated behavior. / ADHD executive-function profile: Gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions.
C. Neurodevelopmental condition: Gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions. / ADHD executive-function profile: Considering developmental history and functional impact rather than inferring a condition from one isolated behavior.
D. Neurodevelopmental condition: Assessing adaptive skills and developmental history alongside intellectual functioning. / ADHD executive-function profile: Gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions.

0054. A consultant is supporting a child aged 8 in the clinical planning session. The key practice is building accommodations around the person's needs and goals rather than treating difference itself as a defect. Which course concept is most relevant?

A. Reasonable accommodation
B. Comorbidity
C. Neurodiversity-affirming practice
D. Adaptive functioning

0055. In the supervision meeting, a school counselor explains why a young person aged 13 would benefit from assessing adaptive skills and developmental history alongside intellectual functioning. Which course concept underpins the explanation?

A. Intellectual disability
B. Autism spectrum condition
C. Sensory processing differences
D. Comorbidity

0056. Which statement accurately contrasts the course concepts ADHD executive-function profile and Neurodiversity-affirming practice?

A. ADHD executive-function profile: A pattern of developmentally inappropriate inattention and/or hyperactivity-impulsivity with impairment across relevant contexts. / Neurodiversity-affirming practice: An approach that respects neurological variation, avoids unnecessary normalization, and focuses on access and meaningful support.
B. ADHD executive-function profile: A pattern of developmentally inappropriate inattention and/or hyperactivity-impulsivity with impairment across relevant contexts. / Neurodiversity-affirming practice: A condition characterized by limitations in intellectual functioning and adaptive functioning with developmental onset.
C. ADHD executive-function profile: An approach that respects neurological variation, avoids unnecessary normalization, and focuses on access and meaningful support. / Neurodiversity-affirming practice: A pattern of developmentally inappropriate inattention and/or hyperactivity-impulsivity with impairment across relevant contexts.
D. ADHD executive-function profile: A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs. / Neurodiversity-affirming practice: An approach that respects neurological variation, avoids unnecessary normalization, and focuses on access and meaningful support.

0057. In a supervision quiz, how should ADHD executive-function profile be distinguished from Intellectual disability?

A. ADHD executive-function profile: Conceptual, social, and practical skills used to meet everyday demands across settings. / Intellectual disability: A condition characterized by limitations in intellectual functioning and adaptive functioning with developmental onset.
B. ADHD executive-function profile: A condition characterized by limitations in intellectual functioning and adaptive functioning with developmental onset. / Intellectual disability: A pattern of developmentally inappropriate inattention and/or hyperactivity-impulsivity with impairment across relevant contexts.
C. ADHD executive-function profile: A pattern of developmentally inappropriate inattention and/or hyperactivity-impulsivity with impairment across relevant contexts. / Intellectual disability: Co-occurrence of two or more conditions or clinically significant problems in one person.
D. ADHD executive-function profile: A pattern of developmentally inappropriate inattention and/or hyperactivity-impulsivity with impairment across relevant contexts. / Intellectual disability: A condition characterized by limitations in intellectual functioning and adaptive functioning with developmental onset.

0058. Which applied comparison correctly identifies what belongs to Intellectual disability versus Neurodiversity-affirming practice?

A. Intellectual disability: Assessing adaptive skills and developmental history alongside intellectual functioning. / Neurodiversity-affirming practice: Gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions.
B. Intellectual disability: Assessing adaptive skills and developmental history alongside intellectual functioning. / Neurodiversity-affirming practice: Building accommodations around the person's needs and goals rather than treating difference itself as a defect.
C. Intellectual disability: Evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone. / Neurodiversity-affirming practice: Building accommodations around the person's needs and goals rather than treating difference itself as a defect.
D. Intellectual disability: Building accommodations around the person's needs and goals rather than treating difference itself as a defect. / Neurodiversity-affirming practice: Assessing adaptive skills and developmental history alongside intellectual functioning.

0059. In a case note about a young person aged 10, a supervised trainee working in the learning-support meeting records this priority: assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty. What principle is reflected?

A. Reasonable accommodation
B. Comorbidity
C. Intellectual disability
D. ADHD executive-function profile

0060. A support meeting for a young person aged 16 includes a clinical supervisor in the clinical planning session. The practice under consideration is identifying practical adjustments that permit meaningful participation and checking governing requirements. Which concept guides it?

A. Reasonable accommodation
B. Intellectual disability
C. Comorbidity
D. Adaptive functioning

0061. Which statement accurately contrasts the course concepts Intellectual disability and Comorbidity?

A. Intellectual disability: Co-occurrence of two or more conditions or clinically significant problems in one person. / Comorbidity: A condition characterized by limitations in intellectual functioning and adaptive functioning with developmental onset.
B. Intellectual disability: A condition characterized by limitations in intellectual functioning and adaptive functioning with developmental onset. / Comorbidity: Co-occurrence of two or more conditions or clinically significant problems in one person.
C. Intellectual disability: A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs. / Comorbidity: Co-occurrence of two or more conditions or clinically significant problems in one person.
D. Intellectual disability: A condition characterized by limitations in intellectual functioning and adaptive functioning with developmental onset. / Comorbidity: Conceptual, social, and practical skills used to meet everyday demands across settings.

0062. When reviewing a young person aged 18's plan in the learning-support meeting, the parent educator notes that the next step is assessing adaptive skills and developmental history alongside intellectual functioning. Which concept guides this step?

A. Autism spectrum condition
B. Neurodevelopmental condition
C. ADHD executive-function profile
D. Intellectual disability

0063. A behavior specialist reviews a plan for a child aged 6 in the community mental-health service. The plan emphasizes gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions. Which course idea does this reflect?

A. Reasonable accommodation
B. Neurodevelopmental condition
C. Autism spectrum condition
D. ADHD executive-function profile

0064. A student aged 17's service team meets in the clinical planning session. The caregiver working with a counselor recommends a change involving examining skill history, instruction, and targeted assessment when academic difficulty persists. Which idea best explains it?

A. Neurodiversity-affirming practice
B. Specific learning disorder
C. Intellectual disability
D. ADHD executive-function profile

0065. Choose the practice comparison that best separates Specific learning disorder from Intellectual disability.

A. Specific learning disorder: Assessing adaptive skills and developmental history alongside intellectual functioning. / Intellectual disability: Examining skill history, instruction, and targeted assessment when academic difficulty persists.
B. Specific learning disorder: Evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone. / Intellectual disability: Assessing adaptive skills and developmental history alongside intellectual functioning.
C. Specific learning disorder: Examining skill history, instruction, and targeted assessment when academic difficulty persists. / Intellectual disability: Assessing adaptive skills and developmental history alongside intellectual functioning.
D. Specific learning disorder: Examining skill history, instruction, and targeted assessment when academic difficulty persists. / Intellectual disability: Building accommodations around the person's needs and goals rather than treating difference itself as a defect.

0066. Choose the definition pair that correctly explains Neurodiversity-affirming practice first and Reasonable accommodation second.

A. Neurodiversity-affirming practice: An approach that respects neurological variation, avoids unnecessary normalization, and focuses on access and meaningful support. / Reasonable accommodation: Conceptual, social, and practical skills used to meet everyday demands across settings.
B. Neurodiversity-affirming practice: Differences in responding to sensory input that may affect comfort, attention, or participation. / Reasonable accommodation: A modification to environment, instruction, or procedure that supports equitable access under applicable rules.
C. Neurodiversity-affirming practice: A modification to environment, instruction, or procedure that supports equitable access under applicable rules. / Reasonable accommodation: An approach that respects neurological variation, avoids unnecessary normalization, and focuses on access and meaningful support.
D. Neurodiversity-affirming practice: An approach that respects neurological variation, avoids unnecessary normalization, and focuses on access and meaningful support. / Reasonable accommodation: A modification to environment, instruction, or procedure that supports equitable access under applicable rules.

0067. A service navigator is asked what should shape a young person’s support in the child guidance clinic. The proposed focus is identifying practical adjustments that permit meaningful participation and checking governing requirements. Which principle does it represent?

A. Specific learning disorder
B. Comorbidity
C. Reasonable accommodation
D. Intellectual disability

0068. At the family resource center, a research trainee reviews whether a plan for a young person aged 10 is appropriate. The relevant practice is identifying practical adjustments that permit meaningful participation and checking governing requirements. Which concept is tested?

A. Reasonable accommodation
B. Adaptive functioning
C. Specific learning disorder
D. Intellectual disability

0069. In the behavior-support review, a consulting counselor describes the most appropriate support for a student aged 9 as describing an individual’s strengths, communication profile, sensory needs, and support needs rather than assuming one presentation. Which framework is being applied?

A. Autism spectrum condition
B. Neurodevelopmental condition
C. Comorbidity
D. Intellectual disability

0070. Which comparison correctly distinguishes Specific learning disorder from Reasonable accommodation?

A. Specific learning disorder: A modification to environment, instruction, or procedure that supports equitable access under applicable rules. / Reasonable accommodation: Persistent difficulty learning or using academic skills despite appropriate support, evaluated in relation to developmental and educational context.
B. Specific learning disorder: Persistent difficulty learning or using academic skills despite appropriate support, evaluated in relation to developmental and educational context. / Reasonable accommodation: A pattern of developmentally inappropriate inattention and/or hyperactivity-impulsivity with impairment across relevant contexts.
C. Specific learning disorder: Persistent difficulty learning or using academic skills despite appropriate support, evaluated in relation to developmental and educational context. / Reasonable accommodation: A modification to environment, instruction, or procedure that supports equitable access under applicable rules.
D. Specific learning disorder: Differences in responding to sensory input that may affect comfort, attention, or participation. / Reasonable accommodation: A modification to environment, instruction, or procedure that supports equitable access under applicable rules.

0071. Choose the term that matches this definition: Persistent difficulty learning or using academic skills despite appropriate support, evaluated in relation to developmental and educational context.

A. Specific learning disorder
B. Autism spectrum condition
C. Sensory processing differences
D. Neurodiversity-affirming practice

0072. Choose the practice comparison that best separates Neurodevelopmental condition from Comorbidity.

A. Neurodevelopmental condition: Considering developmental history and functional impact rather than inferring a condition from one isolated behavior. / Comorbidity: Assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty.
B. Neurodevelopmental condition: Considering developmental history and functional impact rather than inferring a condition from one isolated behavior. / Comorbidity: Examining skill history, instruction, and targeted assessment when academic difficulty persists.
C. Neurodevelopmental condition: Identifying practical adjustments that permit meaningful participation and checking governing requirements. / Comorbidity: Assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty.
D. Neurodevelopmental condition: Assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty. / Comorbidity: Considering developmental history and functional impact rather than inferring a condition from one isolated behavior.

0073. A student aged 9’s service team meets in the school-based service. The family therapist recommends a change involving identifying practical adjustments that permit meaningful participation and checking governing requirements. Which idea best explains it?

A. Comorbidity
B. Specific learning disorder
C. Reasonable accommodation
D. Intellectual disability

0074. Which named construct is captured by this account? Conceptual, social, and practical skills used to meet everyday demands across settings.

A. Reasonable accommodation
B. Adaptive functioning
C. Autism spectrum condition
D. Intellectual disability

0075. While supporting a young person in the student wellness team, a caregiver working with a counselor adopts this practice: building accommodations around the person’s needs and goals rather than treating difference itself as a defect. Which concept best explains the choice?

A. Reasonable accommodation
B. Neurodiversity-affirming practice
C. Autism spectrum condition
D. ADHD executive-function profile

0076. A trainee must explain Reasonable accommodation. Which answer is accurate?

A. Conceptual, social, and practical skills used to meet everyday demands across settings.
B. A condition characterized by limitations in intellectual functioning and adaptive functioning with developmental onset.
C. A modification to environment, instruction, or procedure that supports equitable access under applicable rules.
D. A pattern of developmentally inappropriate inattention and/or hyperactivity-impulsivity with impairment across relevant contexts.

0077. Which comparison correctly distinguishes Sensory processing differences from Neurodiversity-affirming practice?

A. Sensory processing differences: Differences in responding to sensory input that may affect comfort, attention, or participation. / Neurodiversity-affirming practice: An approach that respects neurological variation, avoids unnecessary normalization, and focuses on access and meaningful support.
B. Sensory processing differences: Persistent difficulty learning or using academic skills despite appropriate support, evaluated in relation to developmental and educational context. / Neurodiversity-affirming practice: An approach that respects neurological variation, avoids unnecessary normalization, and focuses on access and meaningful support.
C. Sensory processing differences: Differences in responding to sensory input that may affect comfort, attention, or participation. / Neurodiversity-affirming practice: A pattern of developmentally inappropriate inattention and/or hyperactivity-impulsivity with impairment across relevant contexts.
D. Sensory processing differences: An approach that respects neurological variation, avoids unnecessary normalization, and focuses on access and meaningful support. / Neurodiversity-affirming practice: Differences in responding to sensory input that may affect comfort, attention, or participation.

0078. Consider a middle-school student receiving help in the youth advocacy program. The teacher and counselor focuses on assessing adaptive skills and developmental history alongside intellectual functioning. Which term best describes the guiding idea?

A. ADHD executive-function profile
B. Reasonable accommodation
C. Sensory processing differences
D. Intellectual disability

0079. What is the central meaning of Intellectual disability?

A. A condition characterized by limitations in intellectual functioning and adaptive functioning with developmental onset.
B. A modification to environment, instruction, or procedure that supports equitable access under applicable rules.
C. An approach that respects neurological variation, avoids unnecessary normalization, and focuses on access and meaningful support.
D. A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs.

0080. Which statement accurately contrasts the course concepts Specific learning disorder and Intellectual disability?

A. Specific learning disorder: Persistent difficulty learning or using academic skills despite appropriate support, evaluated in relation to developmental and educational context. / Intellectual disability: A condition characterized by limitations in intellectual functioning and adaptive functioning with developmental onset.
B. Specific learning disorder: A condition characterized by limitations in intellectual functioning and adaptive functioning with developmental onset. / Intellectual disability: Persistent difficulty learning or using academic skills despite appropriate support, evaluated in relation to developmental and educational context.
C. Specific learning disorder: Persistent difficulty learning or using academic skills despite appropriate support, evaluated in relation to developmental and educational context. / Intellectual disability: An approach that respects neurological variation, avoids unnecessary normalization, and focuses on access and meaningful support.
D. Specific learning disorder: Conceptual, social, and practical skills used to meet everyday demands across settings. / Intellectual disability: A condition characterized by limitations in intellectual functioning and adaptive functioning with developmental onset.

0081. Which comparison would correct a trainee's misunderstanding of ADHD executive-function profile versus Adaptive functioning?

A. ADHD executive-function profile: A group of conditions with developmental onset that affect functioning in areas such as learning, communication, or behavior. / Adaptive functioning: Conceptual, social, and practical skills used to meet everyday demands across settings.
B. ADHD executive-function profile: A pattern of developmentally inappropriate inattention and/or hyperactivity-impulsivity with impairment across relevant contexts. / Adaptive functioning: Conceptual, social, and practical skills used to meet everyday demands across settings.
C. ADHD executive-function profile: Conceptual, social, and practical skills used to meet everyday demands across settings. / Adaptive functioning: A pattern of developmentally inappropriate inattention and/or hyperactivity-impulsivity with impairment across relevant contexts.
D. ADHD executive-function profile: A pattern of developmentally inappropriate inattention and/or hyperactivity-impulsivity with impairment across relevant contexts. / Adaptive functioning: Persistent difficulty learning or using academic skills despite appropriate support, evaluated in relation to developmental and educational context.

0082. Which option pairs the definitions of Autism spectrum condition and Intellectual disability correctly, in that order?

A. Autism spectrum condition: A group of conditions with developmental onset that affect functioning in areas such as learning, communication, or behavior. / Intellectual disability: A condition characterized by limitations in intellectual functioning and adaptive functioning with developmental onset.
B. Autism spectrum condition: A condition characterized by limitations in intellectual functioning and adaptive functioning with developmental onset. / Intellectual disability: A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs.
C. Autism spectrum condition: A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs. / Intellectual disability: A condition characterized by limitations in intellectual functioning and adaptive functioning with developmental onset.
D. Autism spectrum condition: A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs. / Intellectual disability: Conceptual, social, and practical skills used to meet everyday demands across settings.

0083. Choose the definition pair that correctly explains Sensory processing differences first and Reasonable accommodation second.

A. Sensory processing differences: Differences in responding to sensory input that may affect comfort, attention, or participation. / Reasonable accommodation: A pattern of developmentally inappropriate inattention and/or hyperactivity-impulsivity with impairment across relevant contexts.
B. Sensory processing differences: A modification to environment, instruction, or procedure that supports equitable access under applicable rules. / Reasonable accommodation: Differences in responding to sensory input that may affect comfort, attention, or participation.
C. Sensory processing differences: Differences in responding to sensory input that may affect comfort, attention, or participation. / Reasonable accommodation: A modification to environment, instruction, or procedure that supports equitable access under applicable rules.
D. Sensory processing differences: Conceptual, social, and practical skills used to meet everyday demands across settings. / Reasonable accommodation: A modification to environment, instruction, or procedure that supports equitable access under applicable rules.

0084. A trainee must choose a practice that exemplifies Specific learning disorder. Which action is the best fit?

A. Considering developmental history and functional impact rather than inferring a condition from one isolated behavior.
B. Describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation.
C. Examining skill history, instruction, and targeted assessment when academic difficulty persists.
D. Identifying practical adjustments that permit meaningful participation and checking governing requirements.

0085. A support meeting for a young person aged 13 includes a school support specialist in the classroom support meeting. The practice under consideration is evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone. Which concept guides it?

A. Specific learning disorder
B. Neurodevelopmental condition
C. Neurodiversity-affirming practice
D. Adaptive functioning

0086. Select the best explanation of Intellectual disability.

A. A pattern of developmentally inappropriate inattention and/or hyperactivity-impulsivity with impairment across relevant contexts.
B. A modification to environment, instruction, or procedure that supports equitable access under applicable rules.
C. A condition characterized by limitations in intellectual functioning and adaptive functioning with developmental onset.
D. Co-occurrence of two or more conditions or clinically significant problems in one person.

0087. A supervisor asks for an applied contrast between Sensory processing differences and Neurodiversity-affirming practice. Which option fits?

A. Sensory processing differences: Asking which sensory environments support or hinder participation and adjusting the setting where feasible. / Neurodiversity-affirming practice: Gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions.
B. Sensory processing differences: Asking which sensory environments support or hinder participation and adjusting the setting where feasible. / Neurodiversity-affirming practice: Building accommodations around the person's needs and goals rather than treating difference itself as a defect.
C. Sensory processing differences: Building accommodations around the person's needs and goals rather than treating difference itself as a defect. / Neurodiversity-affirming practice: Asking which sensory environments support or hinder participation and adjusting the setting where feasible.
D. Sensory processing differences: Examining skill history, instruction, and targeted assessment when academic difficulty persists. / Neurodiversity-affirming practice: Building accommodations around the person's needs and goals rather than treating difference itself as a defect.

0088. Which option is the clearest practical expression of Sensory processing differences?

A. Assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty.
B. Assessing adaptive skills and developmental history alongside intellectual functioning.
C. Asking which sensory environments support or hinder participation and adjusting the setting where feasible.
D. Gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions.

0089. Consider a young person aged 18 receiving help in the community mental-health service. The consulting counselor focuses on building accommodations around the person's needs and goals rather than treating difference itself as a defect. Which term best describes the guiding idea?

A. Neurodevelopmental condition
B. ADHD executive-function profile
C. Neurodiversity-affirming practice
D. Comorbidity

0090. Which pair of actions illustrates Specific learning disorder and Neurodiversity-affirming practice, respectively?

A. Specific learning disorder: Describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation. / Neurodiversity-affirming practice: Building accommodations around the person's needs and goals rather than treating difference itself as a defect.
B. Specific learning disorder: Building accommodations around the person's needs and goals rather than treating difference itself as a defect. / Neurodiversity-affirming practice: Examining skill history, instruction, and targeted assessment when academic difficulty persists.
C. Specific learning disorder: Examining skill history, instruction, and targeted assessment when academic difficulty persists. / Neurodiversity-affirming practice: Building accommodations around the person's needs and goals rather than treating difference itself as a defect.
D. Specific learning disorder: Examining skill history, instruction, and targeted assessment when academic difficulty persists. / Neurodiversity-affirming practice: Evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone.

0091. During service review in the student wellness team, a program coordinator describes considering developmental history and functional impact rather than inferring a condition from one isolated behavior. for a client in late adolescence. Which course idea is most applicable?

A. Autism spectrum condition
B. Specific learning disorder
C. Intellectual disability
D. Neurodevelopmental condition

0092. Choose the definition pair that correctly explains Specific learning disorder first and Intellectual disability second.

A. Specific learning disorder: Conceptual, social, and practical skills used to meet everyday demands across settings. / Intellectual disability: A condition characterized by limitations in intellectual functioning and adaptive functioning with developmental onset.
B. Specific learning disorder: A condition characterized by limitations in intellectual functioning and adaptive functioning with developmental onset. / Intellectual disability: Persistent difficulty learning or using academic skills despite appropriate support, evaluated in relation to developmental and educational context.
C. Specific learning disorder: Persistent difficulty learning or using academic skills despite appropriate support, evaluated in relation to developmental and educational context. / Intellectual disability: A condition characterized by limitations in intellectual functioning and adaptive functioning with developmental onset.
D. Specific learning disorder: Persistent difficulty learning or using academic skills despite appropriate support, evaluated in relation to developmental and educational context. / Intellectual disability: An approach that respects neurological variation, avoids unnecessary normalization, and focuses on access and meaningful support.

0093. Which statement most accurately defines Sensory processing differences?

A. A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs.
B. A condition characterized by limitations in intellectual functioning and adaptive functioning with developmental onset.
C. Co-occurrence of two or more conditions or clinically significant problems in one person.
D. Differences in responding to sensory input that may affect comfort, attention, or participation.

0094. A case conference reviews a program coordinator's work with a school-age child in the after-school program: assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty. Which principle is central?

A. Comorbidity
B. Neurodiversity-affirming practice
C. ADHD executive-function profile
D. Specific learning disorder

0095. A service team discusses a high-school student in the multidisciplinary case conference. Their proposed next step is gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions. Which course concept supports it?

A. ADHD executive-function profile
B. Neurodiversity-affirming practice
C. Autism spectrum condition
D. Specific learning disorder

0096. A trainee must choose a practice that exemplifies ADHD executive-function profile. Which action is the best fit?

A. Gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions.
B. Asking which sensory environments support or hinder participation and adjusting the setting where feasible.
C. Describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation.
D. Assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty.

0097. In the family resource center, a team asks how a group facilitator can support a adolescent student. One proposed action is assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty. Which idea does it represent?

A. Comorbidity
B. Autism spectrum condition
C. Neurodevelopmental condition
D. Sensory processing differences

0098. Which professional action most closely applies Adaptive functioning?

A. Identifying practical adjustments that permit meaningful participation and checking governing requirements.
B. Considering developmental history and functional impact rather than inferring a condition from one isolated behavior.
C. Assessing adaptive skills and developmental history alongside intellectual functioning.
D. Evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone.

0099. Which pair of actions illustrates Autism spectrum condition and Specific learning disorder, respectively?

A. Autism spectrum condition: Considering developmental history and functional impact rather than inferring a condition from one isolated behavior. / Specific learning disorder: Examining skill history, instruction, and targeted assessment when academic difficulty persists.
B. Autism spectrum condition: Describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation. / Specific learning disorder: Examining skill history, instruction, and targeted assessment when academic difficulty persists.
C. Autism spectrum condition: Examining skill history, instruction, and targeted assessment when academic difficulty persists. / Specific learning disorder: Describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation.
D. Autism spectrum condition: Describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation. / Specific learning disorder: Asking which sensory environments support or hinder participation and adjusting the setting where feasible.

0100. A trainee must choose a practice that exemplifies Intellectual disability. Which action is the best fit?

A. Assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty.
B. Considering developmental history and functional impact rather than inferring a condition from one isolated behavior.
C. Assessing adaptive skills and developmental history alongside intellectual functioning.
D. Describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation.

0101. Which paired example correctly applies Intellectual disability first and Comorbidity second?

A. Intellectual disability: Assessing adaptive skills and developmental history alongside intellectual functioning. / Comorbidity: Evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone.
B. Intellectual disability: Assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty. / Comorbidity: Assessing adaptive skills and developmental history alongside intellectual functioning.
C. Intellectual disability: Describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation. / Comorbidity: Assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty.
D. Intellectual disability: Assessing adaptive skills and developmental history alongside intellectual functioning. / Comorbidity: Assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty.

0102. Which option preserves the correct meaning of both Adaptive functioning and Neurodiversity-affirming practice?

A. Adaptive functioning: Conceptual, social, and practical skills used to meet everyday demands across settings. / Neurodiversity-affirming practice: Differences in responding to sensory input that may affect comfort, attention, or participation.
B. Adaptive functioning: An approach that respects neurological variation, avoids unnecessary normalization, and focuses on access and meaningful support. / Neurodiversity-affirming practice: Conceptual, social, and practical skills used to meet everyday demands across settings.
C. Adaptive functioning: Conceptual, social, and practical skills used to meet everyday demands across settings. / Neurodiversity-affirming practice: An approach that respects neurological variation, avoids unnecessary normalization, and focuses on access and meaningful support.
D. Adaptive functioning: A modification to environment, instruction, or procedure that supports equitable access under applicable rules. / Neurodiversity-affirming practice: An approach that respects neurological variation, avoids unnecessary normalization, and focuses on access and meaningful support.

0103. Which statement accurately contrasts the course concepts Neurodiversity-affirming practice and Reasonable accommodation?

A. Neurodiversity-affirming practice: An approach that respects neurological variation, avoids unnecessary normalization, and focuses on access and meaningful support. / Reasonable accommodation: Conceptual, social, and practical skills used to meet everyday demands across settings.
B. Neurodiversity-affirming practice: A modification to environment, instruction, or procedure that supports equitable access under applicable rules. / Reasonable accommodation: An approach that respects neurological variation, avoids unnecessary normalization, and focuses on access and meaningful support.
C. Neurodiversity-affirming practice: Differences in responding to sensory input that may affect comfort, attention, or participation. / Reasonable accommodation: A modification to environment, instruction, or procedure that supports equitable access under applicable rules.
D. Neurodiversity-affirming practice: An approach that respects neurological variation, avoids unnecessary normalization, and focuses on access and meaningful support. / Reasonable accommodation: A modification to environment, instruction, or procedure that supports equitable access under applicable rules.

0104. Identify the most precise label for this idea: A group of conditions with developmental onset that affect functioning in areas such as learning, communication, or behavior.

A. Comorbidity
B. Neurodevelopmental condition
C. Neurodiversity-affirming practice
D. Autism spectrum condition

0105. A older adolescent client and a mental-health professional are reviewing goals in the family session. The agreed action is identifying practical adjustments that permit meaningful participation and checking governing requirements. Which principle best accounts for it?

A. Autism spectrum condition
B. ADHD executive-function profile
C. Neurodevelopmental condition
D. Reasonable accommodation

0106. Choose the definition pair that correctly explains Intellectual disability first and Comorbidity second.

A. Intellectual disability: Co-occurrence of two or more conditions or clinically significant problems in one person. / Comorbidity: A condition characterized by limitations in intellectual functioning and adaptive functioning with developmental onset.
B. Intellectual disability: A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs. / Comorbidity: Co-occurrence of two or more conditions or clinically significant problems in one person.
C. Intellectual disability: A condition characterized by limitations in intellectual functioning and adaptive functioning with developmental onset. / Comorbidity: Co-occurrence of two or more conditions or clinically significant problems in one person.
D. Intellectual disability: A condition characterized by limitations in intellectual functioning and adaptive functioning with developmental onset. / Comorbidity: Conceptual, social, and practical skills used to meet everyday demands across settings.

0107. A mental-health professional and a student aged 9 are discussing support in the student-support meeting. The selected practice is evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone. Which concept does this demonstrate?

A. Neurodevelopmental condition
B. Adaptive functioning
C. Sensory processing differences
D. Comorbidity

0108. A planning meeting about a child aged 7 includes a clinical supervisor. The proposed practice in the classroom support meeting is considering developmental history and functional impact rather than inferring a condition from one isolated behavior. Which idea underlies it?

A. Sensory processing differences
B. Reasonable accommodation
C. ADHD executive-function profile
D. Neurodevelopmental condition

0109. A research trainee is asked what should shape a adolescent student's support in the school-based service. The proposed focus is describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation. Which principle does it represent?

A. Adaptive functioning
B. Sensory processing differences
C. Neurodevelopmental condition
D. Autism spectrum condition

0110. A service navigator describes an intervention for a student aged 17 in the supervision meeting, centered on evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone. Which named idea is most relevant?

A. Specific learning disorder
B. Intellectual disability
C. Comorbidity
D. Adaptive functioning

0111. A child aged 14 is receiving support in the family session. The teacher and counselor is guided by this practice: building accommodations around the person's needs and goals rather than treating difference itself as a defect. Which principle best fits?

A. ADHD executive-function profile
B. Intellectual disability
C. Neurodiversity-affirming practice
D. Adaptive functioning

0112. A doctoral student reads the following description. Which concept does it define? Conceptual, social, and practical skills used to meet everyday demands across settings.

A. Adaptive functioning
B. Reasonable accommodation
C. Autism spectrum condition
D. Neurodiversity-affirming practice

0113. Which professional action most closely applies Specific learning disorder?

A. Gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions.
B. Evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone.
C. Considering developmental history and functional impact rather than inferring a condition from one isolated behavior.
D. Examining skill history, instruction, and targeted assessment when academic difficulty persists.

0114. A member of a clinical team prepares for a session in the counseling practicum with a child aged 8. The intended approach is describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation. Which concept is most relevant?

A. Autism spectrum condition
B. Adaptive functioning
C. Reasonable accommodation
D. Specific learning disorder

0115. A supervised trainee is preparing a follow-up plan for a preadolescent child in the after-school program. The plan calls for identifying practical adjustments that permit meaningful participation and checking governing requirements. Which concept names this approach?

A. Reasonable accommodation
B. Neurodiversity-affirming practice
C. ADHD executive-function profile
D. Specific learning disorder

0116. Consider a young person receiving help in the outpatient clinic. The youth worker focuses on evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone. Which term best describes the guiding idea?

A. Intellectual disability
B. Sensory processing differences
C. Adaptive functioning
D. Reasonable accommodation

0117. Choose the practice comparison that best separates ADHD executive-function profile from Neurodiversity-affirming practice.

A. ADHD executive-function profile: Gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions. / Neurodiversity-affirming practice: Building accommodations around the person's needs and goals rather than treating difference itself as a defect.
B. ADHD executive-function profile: Building accommodations around the person's needs and goals rather than treating difference itself as a defect. / Neurodiversity-affirming practice: Gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions.
C. ADHD executive-function profile: Describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation. / Neurodiversity-affirming practice: Building accommodations around the person's needs and goals rather than treating difference itself as a defect.
D. ADHD executive-function profile: Gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions. / Neurodiversity-affirming practice: Assessing adaptive skills and developmental history alongside intellectual functioning.

0118. For a student aged 12 seen in the school consultation, the research trainee recommends a plan built around considering developmental history and functional impact rather than inferring a condition from one isolated behavior. Which concept is reflected?

A. Neurodevelopmental condition
B. Autism spectrum condition
C. Neurodiversity-affirming practice
D. Sensory processing differences

0119. At the multidisciplinary case conference, a behavior specialist meets with a child aged 11. The practice priority is: assessing adaptive skills and developmental history alongside intellectual functioning. Which concept best captures that priority?

A. Comorbidity
B. Autism spectrum condition
C. Intellectual disability
D. Adaptive functioning

0120. Which option pairs the definitions of Specific learning disorder and Comorbidity correctly, in that order?

A. Specific learning disorder: Persistent difficulty learning or using academic skills despite appropriate support, evaluated in relation to developmental and educational context. / Comorbidity: A pattern of developmentally inappropriate inattention and/or hyperactivity-impulsivity with impairment across relevant contexts.
B. Specific learning disorder: A condition characterized by limitations in intellectual functioning and adaptive functioning with developmental onset. / Comorbidity: Co-occurrence of two or more conditions or clinically significant problems in one person.
C. Specific learning disorder: Co-occurrence of two or more conditions or clinically significant problems in one person. / Comorbidity: Persistent difficulty learning or using academic skills despite appropriate support, evaluated in relation to developmental and educational context.
D. Specific learning disorder: Persistent difficulty learning or using academic skills despite appropriate support, evaluated in relation to developmental and educational context. / Comorbidity: Co-occurrence of two or more conditions or clinically significant problems in one person.

0121. For a child aged 8 seen in the after-school program, the therapist recommends a plan built around examining skill history, instruction, and targeted assessment when academic difficulty persists. Which concept is reflected?

A. Specific learning disorder
B. Intellectual disability
C. Comorbidity
D. Sensory processing differences

0122. Which paired example correctly applies Neurodiversity-affirming practice first and Reasonable accommodation second?

A. Neurodiversity-affirming practice: Identifying practical adjustments that permit meaningful participation and checking governing requirements. / Reasonable accommodation: Building accommodations around the person's needs and goals rather than treating difference itself as a defect.
B. Neurodiversity-affirming practice: Building accommodations around the person's needs and goals rather than treating difference itself as a defect. / Reasonable accommodation: Identifying practical adjustments that permit meaningful participation and checking governing requirements.
C. Neurodiversity-affirming practice: Building accommodations around the person's needs and goals rather than treating difference itself as a defect. / Reasonable accommodation: Evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone.
D. Neurodiversity-affirming practice: Asking which sensory environments support or hinder participation and adjusting the setting where feasible. / Reasonable accommodation: Identifying practical adjustments that permit meaningful participation and checking governing requirements.

0123. For a teenage client in the supervision meeting, a school support specialist makes this practice the immediate priority: assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty. Which concept fits best?

A. Reasonable accommodation
B. Comorbidity
C. Neurodiversity-affirming practice
D. Autism spectrum condition

0124. A trainee must explain Intellectual disability. Which answer is accurate?

A. A pattern of developmentally inappropriate inattention and/or hyperactivity-impulsivity with impairment across relevant contexts.
B. Differences in responding to sensory input that may affect comfort, attention, or participation.
C. A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs.
D. A condition characterized by limitations in intellectual functioning and adaptive functioning with developmental onset.

0125. A student confuses Neurodevelopmental condition with Autism spectrum condition. Which explanation most accurately separates them?

A. Neurodevelopmental condition: A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs. / Autism spectrum condition: A group of conditions with developmental onset that affect functioning in areas such as learning, communication, or behavior.
B. Neurodevelopmental condition: Differences in responding to sensory input that may affect comfort, attention, or participation. / Autism spectrum condition: A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs.
C. Neurodevelopmental condition: A group of conditions with developmental onset that affect functioning in areas such as learning, communication, or behavior. / Autism spectrum condition: A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs.
D. Neurodevelopmental condition: A group of conditions with developmental onset that affect functioning in areas such as learning, communication, or behavior. / Autism spectrum condition: Persistent difficulty learning or using academic skills despite appropriate support, evaluated in relation to developmental and educational context.

0126. Which statement accurately contrasts the course concepts ADHD executive-function profile and Adaptive functioning?

A. ADHD executive-function profile: Conceptual, social, and practical skills used to meet everyday demands across settings. / Adaptive functioning: A pattern of developmentally inappropriate inattention and/or hyperactivity-impulsivity with impairment across relevant contexts.
B. ADHD executive-function profile: A pattern of developmentally inappropriate inattention and/or hyperactivity-impulsivity with impairment across relevant contexts. / Adaptive functioning: Conceptual, social, and practical skills used to meet everyday demands across settings.
C. ADHD executive-function profile: A pattern of developmentally inappropriate inattention and/or hyperactivity-impulsivity with impairment across relevant contexts. / Adaptive functioning: Persistent difficulty learning or using academic skills despite appropriate support, evaluated in relation to developmental and educational context.
D. ADHD executive-function profile: A group of conditions with developmental onset that affect functioning in areas such as learning, communication, or behavior. / Adaptive functioning: Conceptual, social, and practical skills used to meet everyday demands across settings.

0127. In the learning-support meeting, a youth worker explains why a client in late adolescence would benefit from asking which sensory environments support or hinder participation and adjusting the setting where feasible. Which course concept underpins the explanation?

A. Reasonable accommodation
B. Neurodiversity-affirming practice
C. Neurodevelopmental condition
D. Sensory processing differences

0128. Which choice aligns each practice with the correct idea, Autism spectrum condition or Reasonable accommodation?

A. Autism spectrum condition: Examining skill history, instruction, and targeted assessment when academic difficulty persists. / Reasonable accommodation: Identifying practical adjustments that permit meaningful participation and checking governing requirements.
B. Autism spectrum condition: Identifying practical adjustments that permit meaningful participation and checking governing requirements. / Reasonable accommodation: Describing an individual’s strengths, communication profile, sensory needs, and support needs rather than assuming one presentation.
C. Autism spectrum condition: Describing an individual’s strengths, communication profile, sensory needs, and support needs rather than assuming one presentation. / Reasonable accommodation: Identifying practical adjustments that permit meaningful participation and checking governing requirements.
D. Autism spectrum condition: Describing an individual’s strengths, communication profile, sensory needs, and support needs rather than assuming one presentation. / Reasonable accommodation: Asking which sensory environments support or hinder participation and adjusting the setting where feasible.

0129. A case conference asks for a distinction between Specific learning disorder and Intellectual disability. Which answer is sound?

A. Specific learning disorder: Persistent difficulty learning or using academic skills despite appropriate support, evaluated in relation to developmental and educational context. / Intellectual disability: An approach that respects neurological variation, avoids unnecessary normalization, and focuses on access and meaningful support.
B. Specific learning disorder: A condition characterized by limitations in intellectual functioning and adaptive functioning with developmental onset. / Intellectual disability: Persistent difficulty learning or using academic skills despite appropriate support, evaluated in relation to developmental and educational context.
C. Specific learning disorder: Persistent difficulty learning or using academic skills despite appropriate support, evaluated in relation to developmental and educational context. / Intellectual disability: A condition characterized by limitations in intellectual functioning and adaptive functioning with developmental onset.
D. Specific learning disorder: Conceptual, social, and practical skills used to meet everyday demands across settings. / Intellectual disability: A condition characterized by limitations in intellectual functioning and adaptive functioning with developmental onset.

0130. A trainee must distinguish how Neurodiversity-affirming practice and Comorbidity guide practice. Which comparison is accurate?

A. Neurodiversity-affirming practice: Building accommodations around the person’s needs and goals rather than treating difference itself as a defect. / Comorbidity: Describing an individual’s strengths, communication profile, sensory needs, and support needs rather than assuming one presentation.
B. Neurodiversity-affirming practice: Assessing adaptive skills and developmental history alongside intellectual functioning. / Comorbidity: Assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty.
C. Neurodiversity-affirming practice: Assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty. / Comorbidity: Building accommodations around the person’s needs and goals rather than treating difference itself as a defect.
D. Neurodiversity-affirming practice: Building accommodations around the person’s needs and goals rather than treating difference itself as a defect. / Comorbidity: Assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty.

0131. A child of elementary-school age is receiving support in the clinical planning session. The consulting counselor is guided by this practice: evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone. Which principle best fits?

A. Sensory processing differences
B. Adaptive functioning
C. Neurodiversity-affirming practice
D. Comorbidity

0132. In the counseling practicum, a teacher and counselor explains why a child aged 6 would benefit from evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone. Which course concept underpins the explanation?

A. Autism spectrum condition
B. ADHD executive-function profile
C. Neurodevelopmental condition
D. Adaptive functioning

0133. A young person and a member of a clinical team are reviewing goals in the classroom support meeting. The agreed action is examining skill history, instruction, and targeted assessment when academic difficulty persists. Which principle best accounts for it?

A. Sensory processing differences
B. Comorbidity
C. ADHD executive-function profile
D. Specific learning disorder

0134. In the student-support meeting, a parent educator is considering this approach for a young person aged 13: asking which sensory environments support or hinder participation and adjusting the setting where feasible. Which framework does it represent?

A. Neurodiversity-affirming practice
B. Sensory processing differences
C. Intellectual disability
D. Comorbidity

0135. How should a practitioner distinguish the applications of ADHD executive-function profile and Intellectual disability?

A. ADHD executive-function profile: Gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions. / Intellectual disability: Assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty.
B. ADHD executive-function profile: Evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone. / Intellectual disability: Assessing adaptive skills and developmental history alongside intellectual functioning.
C. ADHD executive-function profile: Assessing adaptive skills and developmental history alongside intellectual functioning. / Intellectual disability: Gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions.
D. ADHD executive-function profile: Gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions. / Intellectual disability: Assessing adaptive skills and developmental history alongside intellectual functioning.

0136. For a middle-school student in the school-based service, a behavior specialist makes this practice the immediate priority: considering developmental history and functional impact rather than inferring a condition from one isolated behavior. Which concept fits best?

A. Specific learning disorder
B. Comorbidity
C. Neurodevelopmental condition
D. Autism spectrum condition

0137. Which statement shows a sound practice-level distinction between Adaptive functioning and Reasonable accommodation?

A. Adaptive functioning: Identifying practical adjustments that permit meaningful participation and checking governing requirements. / Reasonable accommodation: Evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone.
B. Adaptive functioning: Evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone. / Reasonable accommodation: Describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation.
C. Adaptive functioning: Evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone. / Reasonable accommodation: Identifying practical adjustments that permit meaningful participation and checking governing requirements.
D. Adaptive functioning: Assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty. / Reasonable accommodation: Identifying practical adjustments that permit meaningful participation and checking governing requirements.

0138. Which option is the clearest practical expression of Autism spectrum condition?

A. Assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty.
B. Identifying practical adjustments that permit meaningful participation and checking governing requirements.
C. Describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation.
D. Examining skill history, instruction, and targeted assessment when academic difficulty persists.

0139. A behavior specialist is asked to evaluate a proposed service for a child aged 6 in the community mental-health service. The defining feature is gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions. Which concept fits?

A. Comorbidity
B. ADHD executive-function profile
C. Autism spectrum condition
D. Adaptive functioning

0140. Which applied comparison correctly identifies what belongs to ADHD executive-function profile versus Neurodiversity-affirming practice?

A. ADHD executive-function profile: Gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions. / Neurodiversity-affirming practice: Building accommodations around the person's needs and goals rather than treating difference itself as a defect.
B. ADHD executive-function profile: Describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation. / Neurodiversity-affirming practice: Building accommodations around the person's needs and goals rather than treating difference itself as a defect.
C. ADHD executive-function profile: Building accommodations around the person's needs and goals rather than treating difference itself as a defect. / Neurodiversity-affirming practice: Gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions.
D. ADHD executive-function profile: Gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions. / Neurodiversity-affirming practice: Assessing adaptive skills and developmental history alongside intellectual functioning.

0141. At the student-support meeting, a school support specialist meets with a older adolescent client. The practice priority is: describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation. Which concept best captures that priority?

A. ADHD executive-function profile
B. Autism spectrum condition
C. Intellectual disability
D. Comorbidity

0142. Choose the practice comparison that best separates Autism spectrum condition from Intellectual disability.

A. Autism spectrum condition: Describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation. / Intellectual disability: Evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone.
B. Autism spectrum condition: Assessing adaptive skills and developmental history alongside intellectual functioning. / Intellectual disability: Describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation.
C. Autism spectrum condition: Considering developmental history and functional impact rather than inferring a condition from one isolated behavior. / Intellectual disability: Assessing adaptive skills and developmental history alongside intellectual functioning.
D. Autism spectrum condition: Describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation. / Intellectual disability: Assessing adaptive skills and developmental history alongside intellectual functioning.

0143. A counselor is asked to evaluate a proposed service for a client in late adolescence in the child guidance clinic. The defining feature is describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation. Which concept fits?

A. ADHD executive-function profile
B. Intellectual disability
C. Sensory processing differences
D. Autism spectrum condition

0144. Which comparison would correct a trainee's misunderstanding of ADHD executive-function profile versus Reasonable accommodation?

A. ADHD executive-function profile: A pattern of developmentally inappropriate inattention and/or hyperactivity-impulsivity with impairment across relevant contexts. / Reasonable accommodation: A modification to environment, instruction, or procedure that supports equitable access under applicable rules.
B. ADHD executive-function profile: A pattern of developmentally inappropriate inattention and/or hyperactivity-impulsivity with impairment across relevant contexts. / Reasonable accommodation: Differences in responding to sensory input that may affect comfort, attention, or participation.
C. ADHD executive-function profile: An approach that respects neurological variation, avoids unnecessary normalization, and focuses on access and meaningful support. / Reasonable accommodation: A modification to environment, instruction, or procedure that supports equitable access under applicable rules.
D. ADHD executive-function profile: A modification to environment, instruction, or procedure that supports equitable access under applicable rules. / Reasonable accommodation: A pattern of developmentally inappropriate inattention and/or hyperactivity-impulsivity with impairment across relevant contexts.

0145. Choose the definition pair that correctly explains Neurodevelopmental condition first and Intellectual disability second.

A. Neurodevelopmental condition: Differences in responding to sensory input that may affect comfort, attention, or participation. / Intellectual disability: A condition characterized by limitations in intellectual functioning and adaptive functioning with developmental onset.
B. Neurodevelopmental condition: A condition characterized by limitations in intellectual functioning and adaptive functioning with developmental onset. / Intellectual disability: A group of conditions with developmental onset that affect functioning in areas such as learning, communication, or behavior.
C. Neurodevelopmental condition: A group of conditions with developmental onset that affect functioning in areas such as learning, communication, or behavior. / Intellectual disability: Co-occurrence of two or more conditions or clinically significant problems in one person.
D. Neurodevelopmental condition: A group of conditions with developmental onset that affect functioning in areas such as learning, communication, or behavior. / Intellectual disability: A condition characterized by limitations in intellectual functioning and adaptive functioning with developmental onset.

0146. A team must select a support approach for a high-school student at the telehealth session. The caregiver working with a counselor recommends identifying practical adjustments that permit meaningful participation and checking governing requirements. Which idea is most relevant?

A. Reasonable accommodation
B. ADHD executive-function profile
C. Neurodevelopmental condition
D. Neurodiversity-affirming practice

0147. A case conference asks for a distinction between Neurodevelopmental condition and Sensory processing differences. Which answer is sound?

A. Neurodevelopmental condition: A group of conditions with developmental onset that affect functioning in areas such as learning, communication, or behavior. / Sensory processing differences: Conceptual, social, and practical skills used to meet everyday demands across settings.
B. Neurodevelopmental condition: A group of conditions with developmental onset that affect functioning in areas such as learning, communication, or behavior. / Sensory processing differences: Differences in responding to sensory input that may affect comfort, attention, or participation.
C. Neurodevelopmental condition: Differences in responding to sensory input that may affect comfort, attention, or participation. / Sensory processing differences: A group of conditions with developmental onset that affect functioning in areas such as learning, communication, or behavior.
D. Neurodevelopmental condition: Co-occurrence of two or more conditions or clinically significant problems in one person. / Sensory processing differences: Differences in responding to sensory input that may affect comfort, attention, or participation.

0148. Choose the response that best puts Intellectual disability into practice.

A. Identifying practical adjustments that permit meaningful participation and checking governing requirements.
B. Building accommodations around the person's needs and goals rather than treating difference itself as a defect.
C. Considering developmental history and functional impact rather than inferring a condition from one isolated behavior.
D. Assessing adaptive skills and developmental history alongside intellectual functioning.

0149. Which course concept is defined as follows: A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs.

A. Comorbidity
B. Sensory processing differences
C. ADHD executive-function profile
D. Autism spectrum condition

0150. During service review in the student-support meeting, a therapist describes assessing adaptive skills and developmental history alongside intellectual functioning. for a young person. Which course idea is most applicable?

A. Neurodevelopmental condition
B. Comorbidity
C. Autism spectrum condition
D. Intellectual disability

0151. Which option pairs the definitions of Neurodevelopmental condition and ADHD executive-function profile correctly, in that order?

A. Neurodevelopmental condition: A group of conditions with developmental onset that affect functioning in areas such as learning, communication, or behavior. / ADHD executive-function profile: A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs.
B. Neurodevelopmental condition: A condition characterized by limitations in intellectual functioning and adaptive functioning with developmental onset. / ADHD executive-function profile: A pattern of developmentally inappropriate inattention and/or hyperactivity-impulsivity with impairment across relevant contexts.
C. Neurodevelopmental condition: A group of conditions with developmental onset that affect functioning in areas such as learning, communication, or behavior. / ADHD executive-function profile: A pattern of developmentally inappropriate inattention and/or hyperactivity-impulsivity with impairment across relevant contexts.
D. Neurodevelopmental condition: A pattern of developmentally inappropriate inattention and/or hyperactivity-impulsivity with impairment across relevant contexts. / ADHD executive-function profile: A group of conditions with developmental onset that affect functioning in areas such as learning, communication, or behavior.

0152. Which comparison correctly distinguishes Sensory processing differences from Comorbidity?

A. Sensory processing differences: Co-occurrence of two or more conditions or clinically significant problems in one person. / Comorbidity: Differences in responding to sensory input that may affect comfort, attention, or participation.
B. Sensory processing differences: Differences in responding to sensory input that may affect comfort, attention, or participation. / Comorbidity: A modification to environment, instruction, or procedure that supports equitable access under applicable rules.
C. Sensory processing differences: Differences in responding to sensory input that may affect comfort, attention, or participation. / Comorbidity: Co-occurrence of two or more conditions or clinically significant problems in one person.
D. Sensory processing differences: A condition characterized by limitations in intellectual functioning and adaptive functioning with developmental onset. / Comorbidity: Co-occurrence of two or more conditions or clinically significant problems in one person.

0153. Which paired example correctly applies Adaptive functioning first and Comorbidity second?

A. Adaptive functioning: Assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty. / Comorbidity: Evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone.
B. Adaptive functioning: Considering developmental history and functional impact rather than inferring a condition from one isolated behavior. / Comorbidity: Assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty.
C. Adaptive functioning: Evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone. / Comorbidity: Assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty.
D. Adaptive functioning: Evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone. / Comorbidity: Assessing adaptive skills and developmental history alongside intellectual functioning.

0154. Which option pairs the definitions of ADHD executive-function profile and Adaptive functioning correctly, in that order?

A. ADHD executive-function profile: Conceptual, social, and practical skills used to meet everyday demands across settings. / Adaptive functioning: A pattern of developmentally inappropriate inattention and/or hyperactivity-impulsivity with impairment across relevant contexts.
B. ADHD executive-function profile: A pattern of developmentally inappropriate inattention and/or hyperactivity-impulsivity with impairment across relevant contexts. / Adaptive functioning: Conceptual, social, and practical skills used to meet everyday demands across settings.
C. ADHD executive-function profile: A pattern of developmentally inappropriate inattention and/or hyperactivity-impulsivity with impairment across relevant contexts. / Adaptive functioning: Persistent difficulty learning or using academic skills despite appropriate support, evaluated in relation to developmental and educational context.
D. ADHD executive-function profile: A group of conditions with developmental onset that affect functioning in areas such as learning, communication, or behavior. / Adaptive functioning: Conceptual, social, and practical skills used to meet everyday demands across settings.

0155. Choose the response that best puts Specific learning disorder into practice.

A. Examining skill history, instruction, and targeted assessment when academic difficulty persists.
B. Assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty.
C. Building accommodations around the person's needs and goals rather than treating difference itself as a defect.
D. Describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation.

0156. In a supervision quiz, how should Sensory processing differences be distinguished from Neurodiversity-affirming practice?

A. Sensory processing differences: Differences in responding to sensory input that may affect comfort, attention, or participation. / Neurodiversity-affirming practice: An approach that respects neurological variation, avoids unnecessary normalization, and focuses on access and meaningful support.
B. Sensory processing differences: An approach that respects neurological variation, avoids unnecessary normalization, and focuses on access and meaningful support. / Neurodiversity-affirming practice: Differences in responding to sensory input that may affect comfort, attention, or participation.
C. Sensory processing differences: Differences in responding to sensory input that may affect comfort, attention, or participation. / Neurodiversity-affirming practice: A pattern of developmentally inappropriate inattention and/or hyperactivity-impulsivity with impairment across relevant contexts.
D. Sensory processing differences: Persistent difficulty learning or using academic skills despite appropriate support, evaluated in relation to developmental and educational context. / Neurodiversity-affirming practice: An approach that respects neurological variation, avoids unnecessary normalization, and focuses on access and meaningful support.

0157. In a supervision quiz, how should Intellectual disability be distinguished from Adaptive functioning?

A. Intellectual disability: A condition characterized by limitations in intellectual functioning and adaptive functioning with developmental onset. / Adaptive functioning: An approach that respects neurological variation, avoids unnecessary normalization, and focuses on access and meaningful support.
B. Intellectual disability: Conceptual, social, and practical skills used to meet everyday demands across settings. / Adaptive functioning: A condition characterized by limitations in intellectual functioning and adaptive functioning with developmental onset.
C. Intellectual disability: Co-occurrence of two or more conditions or clinically significant problems in one person. / Adaptive functioning: Conceptual, social, and practical skills used to meet everyday demands across settings.
D. Intellectual disability: A condition characterized by limitations in intellectual functioning and adaptive functioning with developmental onset. / Adaptive functioning: Conceptual, social, and practical skills used to meet everyday demands across settings.

0158. Which professional action most closely applies Intellectual disability?

A. Assessing adaptive skills and developmental history alongside intellectual functioning.
B. Examining skill history, instruction, and targeted assessment when academic difficulty persists.
C. Describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation.
D. Assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty.

0159. What is the central meaning of Specific learning disorder?

A. A modification to environment, instruction, or procedure that supports equitable access under applicable rules.
B. Persistent difficulty learning or using academic skills despite appropriate support, evaluated in relation to developmental and educational context.
C. A pattern of developmentally inappropriate inattention and/or hyperactivity-impulsivity with impairment across relevant contexts.
D. A group of conditions with developmental onset that affect functioning in areas such as learning, communication, or behavior.

0160. Which description belongs with the term Intellectual disability?

A. A modification to environment, instruction, or procedure that supports equitable access under applicable rules.
B. Co-occurrence of two or more conditions or clinically significant problems in one person.
C. Persistent difficulty learning or using academic skills despite appropriate support, evaluated in relation to developmental and educational context.
D. A condition characterized by limitations in intellectual functioning and adaptive functioning with developmental onset.

0161. While consulting in the multidisciplinary case conference, a supervised trainee supports a school-age child by using this approach: describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation. Which concept is being applied?

A. Intellectual disability
B. ADHD executive-function profile
C. Adaptive functioning
D. Autism spectrum condition

0162. Which statement most accurately defines ADHD executive-function profile?

A. Co-occurrence of two or more conditions or clinically significant problems in one person.
B. Persistent difficulty learning or using academic skills despite appropriate support, evaluated in relation to developmental and educational context.
C. Differences in responding to sensory input that may affect comfort, attention, or participation.
D. A pattern of developmentally inappropriate inattention and/or hyperactivity-impulsivity with impairment across relevant contexts.

0163. A support meeting for a child aged 6 includes a play therapist in the after-school program. The practice under consideration is asking which sensory environments support or hinder participation and adjusting the setting where feasible. Which concept guides it?

A. Specific learning disorder
B. Reasonable accommodation
C. Neurodiversity-affirming practice
D. Sensory processing differences

0164. In the supervision meeting, a teacher and counselor describes the most appropriate support for a child aged 8 as identifying practical adjustments that permit meaningful participation and checking governing requirements. Which framework is being applied?

A. Neurodiversity-affirming practice
B. Reasonable accommodation
C. Sensory processing differences
D. Intellectual disability

0165. A play therapist is asked to evaluate a proposed service for a young person aged 13 in the telehealth session. The defining feature is considering developmental history and functional impact rather than inferring a condition from one isolated behavior. Which concept fits?

A. Comorbidity
B. Intellectual disability
C. Reasonable accommodation
D. Neurodevelopmental condition

0166. A supervisor asks how Reasonable accommodation would appear in practice. Which choice should be selected?

A. Asking which sensory environments support or hinder participation and adjusting the setting where feasible.
B. Assessing adaptive skills and developmental history alongside intellectual functioning.
C. Identifying practical adjustments that permit meaningful participation and checking governing requirements.
D. Considering developmental history and functional impact rather than inferring a condition from one isolated behavior.

0167. A therapist describes an intervention for a child aged 14 in the outpatient clinic, centered on gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions. Which named idea is most relevant?

A. Neurodevelopmental condition
B. Sensory processing differences
C. Autism spectrum condition
D. ADHD executive-function profile

0168. Which statement shows a sound practice-level distinction between Specific learning disorder and Sensory processing differences?

A. Specific learning disorder: Assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty. / Sensory processing differences: Asking which sensory environments support or hinder participation and adjusting the setting where feasible.
B. Specific learning disorder: Examining skill history, instruction, and targeted assessment when academic difficulty persists. / Sensory processing differences: Asking which sensory environments support or hinder participation and adjusting the setting where feasible.
C. Specific learning disorder: Examining skill history, instruction, and targeted assessment when academic difficulty persists. / Sensory processing differences: Building accommodations around the person's needs and goals rather than treating difference itself as a defect.
D. Specific learning disorder: Asking which sensory environments support or hinder participation and adjusting the setting where feasible. / Sensory processing differences: Examining skill history, instruction, and targeted assessment when academic difficulty persists.

0169. Which comparison correctly distinguishes Autism spectrum condition from Adaptive functioning?

A. Autism spectrum condition: A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs. / Adaptive functioning: A pattern of developmentally inappropriate inattention and/or hyperactivity-impulsivity with impairment across relevant contexts.
B. Autism spectrum condition: A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs. / Adaptive functioning: Conceptual, social, and practical skills used to meet everyday demands across settings.
C. Autism spectrum condition: Conceptual, social, and practical skills used to meet everyday demands across settings. / Adaptive functioning: A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs.
D. Autism spectrum condition: Persistent difficulty learning or using academic skills despite appropriate support, evaluated in relation to developmental and educational context. / Adaptive functioning: Conceptual, social, and practical skills used to meet everyday demands across settings.

0170. At a case-planning meeting, the behavior specialist proposes identifying practical adjustments that permit meaningful participation and checking governing requirements. for a young adolescent client seen in the outpatient clinic. Which concept does this illustrate?

A. Sensory processing differences
B. Autism spectrum condition
C. Reasonable accommodation
D. Neurodiversity-affirming practice

0171. Choose the term that matches this definition: A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs.

A. Autism spectrum condition
B. Sensory processing differences
C. Reasonable accommodation
D. Neurodiversity-affirming practice

0172. How should a practitioner distinguish the applications of Neurodevelopmental condition and Autism spectrum condition?

A. Neurodevelopmental condition: Considering developmental history and functional impact rather than inferring a condition from one isolated behavior. / Autism spectrum condition: Describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation.
B. Neurodevelopmental condition: Considering developmental history and functional impact rather than inferring a condition from one isolated behavior. / Autism spectrum condition: Examining skill history, instruction, and targeted assessment when academic difficulty persists.
C. Neurodevelopmental condition: Describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation. / Autism spectrum condition: Considering developmental history and functional impact rather than inferring a condition from one isolated behavior.
D. Neurodevelopmental condition: Asking which sensory environments support or hinder participation and adjusting the setting where feasible. / Autism spectrum condition: Describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation.

0173. A case conference asks for a distinction between Autism spectrum condition and Specific learning disorder. Which answer is sound?

A. Autism spectrum condition: A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs. / Specific learning disorder: Differences in responding to sensory input that may affect comfort, attention, or participation.
B. Autism spectrum condition: A group of conditions with developmental onset that affect functioning in areas such as learning, communication, or behavior. / Specific learning disorder: Persistent difficulty learning or using academic skills despite appropriate support, evaluated in relation to developmental and educational context.
C. Autism spectrum condition: Persistent difficulty learning or using academic skills despite appropriate support, evaluated in relation to developmental and educational context. / Specific learning disorder: A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs.
D. Autism spectrum condition: A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs. / Specific learning disorder: Persistent difficulty learning or using academic skills despite appropriate support, evaluated in relation to developmental and educational context.

0174. For a child aged 8 in the telehealth session, a behavior specialist makes this practice the immediate priority: evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone. Which concept fits best?

A. Adaptive functioning
B. Intellectual disability
C. Specific learning disorder
D. Reasonable accommodation

0175. In the classroom support meeting, a team asks how a teacher and counselor can support a student aged 17. One proposed action is asking which sensory environments support or hinder participation and adjusting the setting where feasible. Which idea does it represent?

A. Adaptive functioning
B. Specific learning disorder
C. Autism spectrum condition
D. Sensory processing differences

0176. Which paired example correctly applies Specific learning disorder first and Neurodiversity-affirming practice second?

A. Specific learning disorder: Examining skill history, instruction, and targeted assessment when academic difficulty persists. / Neurodiversity-affirming practice: Evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone.
B. Specific learning disorder: Building accommodations around the person's needs and goals rather than treating difference itself as a defect. / Neurodiversity-affirming practice: Examining skill history, instruction, and targeted assessment when academic difficulty persists.
C. Specific learning disorder: Describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation. / Neurodiversity-affirming practice: Building accommodations around the person's needs and goals rather than treating difference itself as a defect.
D. Specific learning disorder: Examining skill history, instruction, and targeted assessment when academic difficulty persists. / Neurodiversity-affirming practice: Building accommodations around the person's needs and goals rather than treating difference itself as a defect.

0177. How should a practitioner distinguish the applications of Autism spectrum condition and Sensory processing differences?

A. Autism spectrum condition: Asking which sensory environments support or hinder participation and adjusting the setting where feasible. / Sensory processing differences: Describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation.
B. Autism spectrum condition: Describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation. / Sensory processing differences: Asking which sensory environments support or hinder participation and adjusting the setting where feasible.
C. Autism spectrum condition: Describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation. / Sensory processing differences: Considering developmental history and functional impact rather than inferring a condition from one isolated behavior.
D. Autism spectrum condition: Identifying practical adjustments that permit meaningful participation and checking governing requirements. / Sensory processing differences: Asking which sensory environments support or hinder participation and adjusting the setting where feasible.

0178. In the multidisciplinary case conference, a caregiver working with a counselor is considering this approach for a client in late adolescence: assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty. Which framework does it represent?

A. Sensory processing differences
B. ADHD executive-function profile
C. Comorbidity
D. Autism spectrum condition

0179. A community practitioner describes an intervention for a young person aged 10 in the child guidance clinic, centered on assessing adaptive skills and developmental history alongside intellectual functioning. Which named idea is most relevant?

A. ADHD executive-function profile
B. Intellectual disability
C. Specific learning disorder
D. Autism spectrum condition

0180. Choose the term that matches this definition: Co-occurrence of two or more conditions or clinically significant problems in one person.

A. ADHD executive-function profile
B. Specific learning disorder
C. Comorbidity
D. Adaptive functioning

0181. Identify the most precise label for this idea: Conceptual, social, and practical skills used to meet everyday demands across settings.

A. Comorbidity
B. Adaptive functioning
C. Intellectual disability
D. Neurodevelopmental condition

0182. Which applied comparison correctly identifies what belongs to Intellectual disability versus Reasonable accommodation?

A. Intellectual disability: Assessing adaptive skills and developmental history alongside intellectual functioning. / Reasonable accommodation: Identifying practical adjustments that permit meaningful participation and checking governing requirements.
B. Intellectual disability: Describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation. / Reasonable accommodation: Identifying practical adjustments that permit meaningful participation and checking governing requirements.
C. Intellectual disability: Assessing adaptive skills and developmental history alongside intellectual functioning. / Reasonable accommodation: Considering developmental history and functional impact rather than inferring a condition from one isolated behavior.
D. Intellectual disability: Identifying practical adjustments that permit meaningful participation and checking governing requirements. / Reasonable accommodation: Assessing adaptive skills and developmental history alongside intellectual functioning.

0183. A youth worker is explaining a choice to a young adolescent client and caregiver in the student-support meeting. The choice centers on assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty. Which idea is illustrated?

A. ADHD executive-function profile
B. Neurodevelopmental condition
C. Reasonable accommodation
D. Comorbidity

0184. Which applied comparison correctly identifies what belongs to Neurodevelopmental condition versus Specific learning disorder?

A. Neurodevelopmental condition: Examining skill history, instruction, and targeted assessment when academic difficulty persists. / Specific learning disorder: Considering developmental history and functional impact rather than inferring a condition from one isolated behavior.
B. Neurodevelopmental condition: Considering developmental history and functional impact rather than inferring a condition from one isolated behavior. / Specific learning disorder: Examining skill history, instruction, and targeted assessment when academic difficulty persists.
C. Neurodevelopmental condition: Considering developmental history and functional impact rather than inferring a condition from one isolated behavior. / Specific learning disorder: Asking which sensory environments support or hinder participation and adjusting the setting where feasible.
D. Neurodevelopmental condition: Describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation. / Specific learning disorder: Examining skill history, instruction, and targeted assessment when academic difficulty persists.

0185. At the behavior-support review, a clinical supervisor meets with a child of elementary-school age. The practice priority is: asking which sensory environments support or hinder participation and adjusting the setting where feasible. Which concept best captures that priority?

A. Reasonable accommodation
B. Neurodiversity-affirming practice
C. Sensory processing differences
D. Adaptive functioning

0186. A case conference asks for a distinction between Neurodevelopmental condition and Comorbidity. Which answer is sound?

A. Neurodevelopmental condition: A modification to environment, instruction, or procedure that supports equitable access under applicable rules. / Comorbidity: Co-occurrence of two or more conditions or clinically significant problems in one person.
B. Neurodevelopmental condition: A group of conditions with developmental onset that affect functioning in areas such as learning, communication, or behavior. / Comorbidity: Persistent difficulty learning or using academic skills despite appropriate support, evaluated in relation to developmental and educational context.
C. Neurodevelopmental condition: A group of conditions with developmental onset that affect functioning in areas such as learning, communication, or behavior. / Comorbidity: Co-occurrence of two or more conditions or clinically significant problems in one person.
D. Neurodevelopmental condition: Co-occurrence of two or more conditions or clinically significant problems in one person. / Comorbidity: A group of conditions with developmental onset that affect functioning in areas such as learning, communication, or behavior.

0187. Which pair of actions illustrates ADHD executive-function profile and Specific learning disorder, respectively?

A. ADHD executive-function profile: Describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation. / Specific learning disorder: Examining skill history, instruction, and targeted assessment when academic difficulty persists.
B. ADHD executive-function profile: Examining skill history, instruction, and targeted assessment when academic difficulty persists. / Specific learning disorder: Gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions.
C. ADHD executive-function profile: Gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions. / Specific learning disorder: Considering developmental history and functional impact rather than inferring a condition from one isolated behavior.
D. ADHD executive-function profile: Gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions. / Specific learning disorder: Examining skill history, instruction, and targeted assessment when academic difficulty persists.

0188. Which statement accurately contrasts the course concepts Autism spectrum condition and Comorbidity?

A. Autism spectrum condition: A condition characterized by limitations in intellectual functioning and adaptive functioning with developmental onset. / Comorbidity: Co-occurrence of two or more conditions or clinically significant problems in one person.
B. Autism spectrum condition: Co-occurrence of two or more conditions or clinically significant problems in one person. / Comorbidity: A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs.
C. Autism spectrum condition: A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs. / Comorbidity: A group of conditions with developmental onset that affect functioning in areas such as learning, communication, or behavior.
D. Autism spectrum condition: A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs. / Comorbidity: Co-occurrence of two or more conditions or clinically significant problems in one person.

0189. For a older adolescent client in the child guidance clinic, a clinical supervisor makes this practice the immediate priority: building accommodations around the person's needs and goals rather than treating difference itself as a defect. Which concept fits best?

A. Neurodiversity-affirming practice
B. Adaptive functioning
C. Comorbidity
D. Reasonable accommodation

0190. For a teenage client seen in the clinical planning session, the community practitioner recommends a plan built around asking which sensory environments support or hinder participation and adjusting the setting where feasible. Which concept is reflected?

A. Adaptive functioning
B. Sensory processing differences
C. Autism spectrum condition
D. Neurodiversity-affirming practice

0191. Consider a child aged 8 receiving help in the supervision meeting. The teacher and counselor focuses on identifying practical adjustments that permit meaningful participation and checking governing requirements. Which term best describes the guiding idea?

A. Autism spectrum condition
B. Reasonable accommodation
C. Neurodiversity-affirming practice
D. ADHD executive-function profile

0192. A young person aged 10’s service team meets in the student wellness team. The school-based clinician recommends a change involving describing an individual’s strengths, communication profile, sensory needs, and support needs rather than assuming one presentation. Which idea best explains it?

A. Specific learning disorder
B. Autism spectrum condition
C. Adaptive functioning
D. Neurodiversity-affirming practice

0193. A adolescent student’s service team meets in the family session. The case coordinator recommends a change involving evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone. Which idea best explains it?

A. Adaptive functioning
B. Neurodiversity-affirming practice
C. Neurodevelopmental condition
D. Intellectual disability

0194. In the school counseling office, the agreed focus for a service navigator working with a child aged 11 is building accommodations around the person’s needs and goals rather than treating difference itself as a defect. Which concept names this focus?

A. Autism spectrum condition
B. Sensory processing differences
C. Neurodiversity-affirming practice
D. ADHD executive-function profile

0195. Which pair of actions illustrates Adaptive functioning and Reasonable accommodation, respectively?

A. Adaptive functioning: Evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone. / Reasonable accommodation: Describing an individual’s strengths, communication profile, sensory needs, and support needs rather than assuming one presentation.
B. Adaptive functioning: Assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty. / Reasonable accommodation: Identifying practical adjustments that permit meaningful participation and checking governing requirements.
C. Adaptive functioning: Evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone. / Reasonable accommodation: Identifying practical adjustments that permit meaningful participation and checking governing requirements.
D. Adaptive functioning: Identifying practical adjustments that permit meaningful participation and checking governing requirements. / Reasonable accommodation: Evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone.

0196. In the family session, the agreed focus for a therapist working with a child aged 7 is assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty. Which concept names this focus?

A. Adaptive functioning
B. Sensory processing differences
C. Comorbidity
D. Neurodevelopmental condition

0197. In a supervision quiz, how should Autism spectrum condition be distinguished from Comorbidity?

A. Autism spectrum condition: A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs. / Comorbidity: Co-occurrence of two or more conditions or clinically significant problems in one person.
B. Autism spectrum condition: Co-occurrence of two or more conditions or clinically significant problems in one person. / Comorbidity: A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs.
C. Autism spectrum condition: A condition characterized by limitations in intellectual functioning and adaptive functioning with developmental onset. / Comorbidity: Co-occurrence of two or more conditions or clinically significant problems in one person.
D. Autism spectrum condition: A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs. / Comorbidity: A group of conditions with developmental onset that affect functioning in areas such as learning, communication, or behavior.

0198. A preadolescent child is receiving support in the school counseling office. The school counselor is guided by this practice: asking which sensory environments support or hinder participation and adjusting the setting where feasible. Which principle best fits?

A. Neurodevelopmental condition
B. ADHD executive-function profile
C. Sensory processing differences
D. Intellectual disability

0199. In the youth group, the agreed focus for a community practitioner working with a young person aged 18 is gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions. Which concept names this focus?

A. Neurodevelopmental condition
B. Comorbidity
C. Neurodiversity-affirming practice
D. ADHD executive-function profile

0200. Which option preserves the correct meaning of both Neurodevelopmental condition and Comorbidity?

A. Neurodevelopmental condition: A group of conditions with developmental onset that affect functioning in areas such as learning, communication, or behavior. / Comorbidity: Co-occurrence of two or more conditions or clinically significant problems in one person.
B. Neurodevelopmental condition: A modification to environment, instruction, or procedure that supports equitable access under applicable rules. / Comorbidity: Co-occurrence of two or more conditions or clinically significant problems in one person.
C. Neurodevelopmental condition: A group of conditions with developmental onset that affect functioning in areas such as learning, communication, or behavior. / Comorbidity: Persistent difficulty learning or using academic skills despite appropriate support, evaluated in relation to developmental and educational context.
D. Neurodevelopmental condition: Co-occurrence of two or more conditions or clinically significant problems in one person. / Comorbidity: A group of conditions with developmental onset that affect functioning in areas such as learning, communication, or behavior.

0201. At the counseling practicum, a service navigator reviews whether a plan for a teenage client is appropriate. The relevant practice is gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions. Which concept is tested?

A. Adaptive functioning
B. Sensory processing differences
C. ADHD executive-function profile
D. Comorbidity

0202. A team must select a support approach for a child aged 7 at the student-support meeting. The case coordinator recommends gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions. Which idea is most relevant?

A. ADHD executive-function profile
B. Adaptive functioning
C. Neurodiversity-affirming practice
D. Intellectual disability

0203. Which statement shows a sound practice-level distinction between ADHD executive-function profile and Reasonable accommodation?

A. ADHD executive-function profile: Gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions. / Reasonable accommodation: Asking which sensory environments support or hinder participation and adjusting the setting where feasible.
B. ADHD executive-function profile: Building accommodations around the person's needs and goals rather than treating difference itself as a defect. / Reasonable accommodation: Identifying practical adjustments that permit meaningful participation and checking governing requirements.
C. ADHD executive-function profile: Gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions. / Reasonable accommodation: Identifying practical adjustments that permit meaningful participation and checking governing requirements.
D. ADHD executive-function profile: Identifying practical adjustments that permit meaningful participation and checking governing requirements. / Reasonable accommodation: Gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions.

0204. For a child aged 7 seen in the family session, the therapist recommends a plan built around assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty. Which concept is reflected?

A. Neurodevelopmental condition
B. Adaptive functioning
C. Reasonable accommodation
D. Comorbidity

0205. While consulting in the youth advocacy program, a mental-health professional supports a adolescent student by using this approach: asking which sensory environments support or hinder participation and adjusting the setting where feasible. Which concept is being applied?

A. Reasonable accommodation
B. Intellectual disability
C. ADHD executive-function profile
D. Sensory processing differences

0206. For a child aged 11 in the counseling practicum, a play therapist makes this practice the immediate priority: identifying practical adjustments that permit meaningful participation and checking governing requirements. Which concept fits best?

A. Autism spectrum condition
B. Neurodiversity-affirming practice
C. Sensory processing differences
D. Reasonable accommodation

0207. A student confuses Intellectual disability with Adaptive functioning. Which explanation most accurately separates them?

A. Intellectual disability: Co-occurrence of two or more conditions or clinically significant problems in one person. / Adaptive functioning: Conceptual, social, and practical skills used to meet everyday demands across settings.
B. Intellectual disability: A condition characterized by limitations in intellectual functioning and adaptive functioning with developmental onset. / Adaptive functioning: An approach that respects neurological variation, avoids unnecessary normalization, and focuses on access and meaningful support.
C. Intellectual disability: A condition characterized by limitations in intellectual functioning and adaptive functioning with developmental onset. / Adaptive functioning: Conceptual, social, and practical skills used to meet everyday demands across settings.
D. Intellectual disability: Conceptual, social, and practical skills used to meet everyday demands across settings. / Adaptive functioning: A condition characterized by limitations in intellectual functioning and adaptive functioning with developmental onset.

0208. A supervisor asks how ADHD executive-function profile would appear in practice. Which choice should be selected?

A. Gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions.
B. Evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone.
C. Identifying practical adjustments that permit meaningful participation and checking governing requirements.
D. Examining skill history, instruction, and targeted assessment when academic difficulty persists.

0209. Which statement accurately contrasts the course concepts Neurodevelopmental condition and Autism spectrum condition?

A. Neurodevelopmental condition: Differences in responding to sensory input that may affect comfort, attention, or participation. / Autism spectrum condition: A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs.
B. Neurodevelopmental condition: A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs. / Autism spectrum condition: A group of conditions with developmental onset that affect functioning in areas such as learning, communication, or behavior.
C. Neurodevelopmental condition: A group of conditions with developmental onset that affect functioning in areas such as learning, communication, or behavior. / Autism spectrum condition: Persistent difficulty learning or using academic skills despite appropriate support, evaluated in relation to developmental and educational context.
D. Neurodevelopmental condition: A group of conditions with developmental onset that affect functioning in areas such as learning, communication, or behavior. / Autism spectrum condition: A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs.

0210. A mental-health professional is supporting a student aged 12 in the after-school program. The key practice is assessing adaptive skills and developmental history alongside intellectual functioning. Which course concept is most relevant?

A. Neurodevelopmental condition
B. Comorbidity
C. Adaptive functioning
D. Intellectual disability

0211. A doctoral student reads the following description. Which concept does it define? A pattern of developmentally inappropriate inattention and/or hyperactivity-impulsivity with impairment across relevant contexts.

A. Specific learning disorder
B. Reasonable accommodation
C. ADHD executive-function profile
D. Intellectual disability

0212. Which description belongs with the term Comorbidity?

A. A pattern of developmentally inappropriate inattention and/or hyperactivity-impulsivity with impairment across relevant contexts.
B. Persistent difficulty learning or using academic skills despite appropriate support, evaluated in relation to developmental and educational context.
C. Co-occurrence of two or more conditions or clinically significant problems in one person.
D. An approach that respects neurological variation, avoids unnecessary normalization, and focuses on access and meaningful support.

0213. Choose the practice comparison that best separates Adaptive functioning from Comorbidity.

A. Adaptive functioning: Evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone. / Comorbidity: Assessing adaptive skills and developmental history alongside intellectual functioning.
B. Adaptive functioning: Assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty. / Comorbidity: Evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone.
C. Adaptive functioning: Considering developmental history and functional impact rather than inferring a condition from one isolated behavior. / Comorbidity: Assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty.
D. Adaptive functioning: Evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone. / Comorbidity: Assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty.

0214. For a child aged 11 seen in the school counseling office, the service navigator recommends a plan built around building accommodations around the person's needs and goals rather than treating difference itself as a defect. Which concept is reflected?

A. Neurodevelopmental condition
B. Specific learning disorder
C. Neurodiversity-affirming practice
D. Sensory processing differences

0215. A doctoral student reads the following description. Which concept does it define? Persistent difficulty learning or using academic skills despite appropriate support, evaluated in relation to developmental and educational context.

A. Specific learning disorder
B. Adaptive functioning
C. ADHD executive-function profile
D. Sensory processing differences

0216. A case conference asks for a distinction between Comorbidity and Reasonable accommodation. Which answer is sound?

A. Comorbidity: Co-occurrence of two or more conditions or clinically significant problems in one person. / Reasonable accommodation: Persistent difficulty learning or using academic skills despite appropriate support, evaluated in relation to developmental and educational context.
B. Comorbidity: An approach that respects neurological variation, avoids unnecessary normalization, and focuses on access and meaningful support. / Reasonable accommodation: A modification to environment, instruction, or procedure that supports equitable access under applicable rules.
C. Comorbidity: A modification to environment, instruction, or procedure that supports equitable access under applicable rules. / Reasonable accommodation: Co-occurrence of two or more conditions or clinically significant problems in one person.
D. Comorbidity: Co-occurrence of two or more conditions or clinically significant problems in one person. / Reasonable accommodation: A modification to environment, instruction, or procedure that supports equitable access under applicable rules.

0217. Choose the term that matches this definition: A condition characterized by limitations in intellectual functioning and adaptive functioning with developmental onset.

A. Intellectual disability
B. Autism spectrum condition
C. Sensory processing differences
D. ADHD executive-function profile

0218. In a supervision quiz, how should Neurodevelopmental condition be distinguished from Intellectual disability?

A. Neurodevelopmental condition: A condition characterized by limitations in intellectual functioning and adaptive functioning with developmental onset. / Intellectual disability: A group of conditions with developmental onset that affect functioning in areas such as learning, communication, or behavior.
B. Neurodevelopmental condition: A group of conditions with developmental onset that affect functioning in areas such as learning, communication, or behavior. / Intellectual disability: A condition characterized by limitations in intellectual functioning and adaptive functioning with developmental onset.
C. Neurodevelopmental condition: Differences in responding to sensory input that may affect comfort, attention, or participation. / Intellectual disability: A condition characterized by limitations in intellectual functioning and adaptive functioning with developmental onset.
D. Neurodevelopmental condition: A group of conditions with developmental onset that affect functioning in areas such as learning, communication, or behavior. / Intellectual disability: Co-occurrence of two or more conditions or clinically significant problems in one person.

0219. A program coordinator describes an intervention for a adolescent student in the learning-support meeting, centered on building accommodations around the person's needs and goals rather than treating difference itself as a defect. Which named idea is most relevant?

A. Sensory processing differences
B. Comorbidity
C. Neurodiversity-affirming practice
D. Intellectual disability

0220. A counselor reviews a plan for a student aged 12 in the community youth program. The plan emphasizes building accommodations around the person's needs and goals rather than treating difference itself as a defect. Which course idea does this reflect?

A. ADHD executive-function profile
B. Neurodevelopmental condition
C. Sensory processing differences
D. Neurodiversity-affirming practice

0221. An interdisciplinary team reviews a preadolescent child's case at the family resource center. The play therapist recommends describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation. Which course concept best fits?

A. Sensory processing differences
B. Intellectual disability
C. Autism spectrum condition
D. Neurodevelopmental condition

0222. A young adolescent client is receiving support in the student-support meeting. The youth worker is guided by this practice: assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty. Which principle best fits?

A. Reasonable accommodation
B. Autism spectrum condition
C. Comorbidity
D. Neurodiversity-affirming practice

0223. A supervisor asks for an applied contrast between Autism spectrum condition and Intellectual disability. Which option fits?

A. Autism spectrum condition: Assessing adaptive skills and developmental history alongside intellectual functioning. / Intellectual disability: Describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation.
B. Autism spectrum condition: Describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation. / Intellectual disability: Assessing adaptive skills and developmental history alongside intellectual functioning.
C. Autism spectrum condition: Considering developmental history and functional impact rather than inferring a condition from one isolated behavior. / Intellectual disability: Assessing adaptive skills and developmental history alongside intellectual functioning.
D. Autism spectrum condition: Describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation. / Intellectual disability: Evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone.

0224. Which choice aligns each practice with the correct idea, Autism spectrum condition or Neurodiversity-affirming practice?

A. Autism spectrum condition: Gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions. / Neurodiversity-affirming practice: Building accommodations around the person's needs and goals rather than treating difference itself as a defect.
B. Autism spectrum condition: Describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation. / Neurodiversity-affirming practice: Identifying practical adjustments that permit meaningful participation and checking governing requirements.
C. Autism spectrum condition: Building accommodations around the person's needs and goals rather than treating difference itself as a defect. / Neurodiversity-affirming practice: Describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation.
D. Autism spectrum condition: Describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation. / Neurodiversity-affirming practice: Building accommodations around the person's needs and goals rather than treating difference itself as a defect.

0225. What is the central meaning of Autism spectrum condition?

A. A condition characterized by limitations in intellectual functioning and adaptive functioning with developmental onset.
B. A group of conditions with developmental onset that affect functioning in areas such as learning, communication, or behavior.
C. A modification to environment, instruction, or procedure that supports equitable access under applicable rules.
D. A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs.

0226. In the school counseling office, a family therapist is considering this approach for a high-school student: assessing adaptive skills and developmental history alongside intellectual functioning. Which framework does it represent?

A. Adaptive functioning
B. Specific learning disorder
C. Intellectual disability
D. Reasonable accommodation

0227. Which applied comparison correctly identifies what belongs to ADHD executive-function profile versus Adaptive functioning?

A. ADHD executive-function profile: Considering developmental history and functional impact rather than inferring a condition from one isolated behavior. / Adaptive functioning: Evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone.
B. ADHD executive-function profile: Gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions. / Adaptive functioning: Examining skill history, instruction, and targeted assessment when academic difficulty persists.
C. ADHD executive-function profile: Evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone. / Adaptive functioning: Gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions.
D. ADHD executive-function profile: Gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions. / Adaptive functioning: Evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone.

0228. In a professional consultation about a school-age child, the supervised trainee describes this response in the multidisciplinary case conference: describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation. Which term is most apt?

A. Autism spectrum condition
B. ADHD executive-function profile
C. Neurodiversity-affirming practice
D. Reasonable accommodation

0229. Choose the practice comparison that best separates Neurodevelopmental condition from Reasonable accommodation.

A. Neurodevelopmental condition: Considering developmental history and functional impact rather than inferring a condition from one isolated behavior. / Reasonable accommodation: Identifying practical adjustments that permit meaningful participation and checking governing requirements.
B. Neurodevelopmental condition: Identifying practical adjustments that permit meaningful participation and checking governing requirements. / Reasonable accommodation: Considering developmental history and functional impact rather than inferring a condition from one isolated behavior.
C. Neurodevelopmental condition: Considering developmental history and functional impact rather than inferring a condition from one isolated behavior. / Reasonable accommodation: Asking which sensory environments support or hinder participation and adjusting the setting where feasible.
D. Neurodevelopmental condition: Describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation. / Reasonable accommodation: Identifying practical adjustments that permit meaningful participation and checking governing requirements.

0230. Which option is the clearest practical expression of Neurodiversity-affirming practice?

A. Identifying practical adjustments that permit meaningful participation and checking governing requirements.
B. Assessing adaptive skills and developmental history alongside intellectual functioning.
C. Asking which sensory environments support or hinder participation and adjusting the setting where feasible.
D. Building accommodations around the person's needs and goals rather than treating difference itself as a defect.

0231. Which pair of actions illustrates Intellectual disability and Sensory processing differences, respectively?

A. Intellectual disability: Examining skill history, instruction, and targeted assessment when academic difficulty persists. / Sensory processing differences: Asking which sensory environments support or hinder participation and adjusting the setting where feasible.
B. Intellectual disability: Assessing adaptive skills and developmental history alongside intellectual functioning. / Sensory processing differences: Asking which sensory environments support or hinder participation and adjusting the setting where feasible.
C. Intellectual disability: Asking which sensory environments support or hinder participation and adjusting the setting where feasible. / Sensory processing differences: Assessing adaptive skills and developmental history alongside intellectual functioning.
D. Intellectual disability: Assessing adaptive skills and developmental history alongside intellectual functioning. / Sensory processing differences: Describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation.

0232. How should a practitioner distinguish the applications of Intellectual disability and Neurodiversity-affirming practice?

A. Intellectual disability: Assessing adaptive skills and developmental history alongside intellectual functioning. / Neurodiversity-affirming practice: Building accommodations around the person's needs and goals rather than treating difference itself as a defect.
B. Intellectual disability: Assessing adaptive skills and developmental history alongside intellectual functioning. / Neurodiversity-affirming practice: Gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions.
C. Intellectual disability: Evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone. / Neurodiversity-affirming practice: Building accommodations around the person's needs and goals rather than treating difference itself as a defect.
D. Intellectual disability: Building accommodations around the person's needs and goals rather than treating difference itself as a defect. / Neurodiversity-affirming practice: Assessing adaptive skills and developmental history alongside intellectual functioning.

0233. Select the best explanation of Specific learning disorder.

A. A condition characterized by limitations in intellectual functioning and adaptive functioning with developmental onset.
B. Conceptual, social, and practical skills used to meet everyday demands across settings.
C. Co-occurrence of two or more conditions or clinically significant problems in one person.
D. Persistent difficulty learning or using academic skills despite appropriate support, evaluated in relation to developmental and educational context.

0234. How are Sensory processing differences and Neurodiversity-affirming practice most accurately differentiated in this curriculum?

A. Sensory processing differences: Persistent difficulty learning or using academic skills despite appropriate support, evaluated in relation to developmental and educational context. / Neurodiversity-affirming practice: An approach that respects neurological variation, avoids unnecessary normalization, and focuses on access and meaningful support.
B. Sensory processing differences: Differences in responding to sensory input that may affect comfort, attention, or participation. / Neurodiversity-affirming practice: A pattern of developmentally inappropriate inattention and/or hyperactivity-impulsivity with impairment across relevant contexts.
C. Sensory processing differences: An approach that respects neurological variation, avoids unnecessary normalization, and focuses on access and meaningful support. / Neurodiversity-affirming practice: Differences in responding to sensory input that may affect comfort, attention, or participation.
D. Sensory processing differences: Differences in responding to sensory input that may affect comfort, attention, or participation. / Neurodiversity-affirming practice: An approach that respects neurological variation, avoids unnecessary normalization, and focuses on access and meaningful support.

0235. How should a practitioner distinguish the applications of Intellectual disability and Sensory processing differences?

A. Intellectual disability: Asking which sensory environments support or hinder participation and adjusting the setting where feasible. / Sensory processing differences: Assessing adaptive skills and developmental history alongside intellectual functioning.
B. Intellectual disability: Examining skill history, instruction, and targeted assessment when academic difficulty persists. / Sensory processing differences: Asking which sensory environments support or hinder participation and adjusting the setting where feasible.
C. Intellectual disability: Assessing adaptive skills and developmental history alongside intellectual functioning. / Sensory processing differences: Describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation.
D. Intellectual disability: Assessing adaptive skills and developmental history alongside intellectual functioning. / Sensory processing differences: Asking which sensory environments support or hinder participation and adjusting the setting where feasible.

0236. In the child guidance clinic, a consulting counselor explains why a adolescent student would benefit from examining skill history, instruction, and targeted assessment when academic difficulty persists. Which course concept underpins the explanation?

A. Neurodevelopmental condition
B. ADHD executive-function profile
C. Specific learning disorder
D. Reasonable accommodation

0237. A community practitioner is asked what should shape a middle-school student's support in the community mental-health service. The proposed focus is assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty. Which principle does it represent?

A. Neurodevelopmental condition
B. Comorbidity
C. Intellectual disability
D. Neurodiversity-affirming practice

0238. Which paired example correctly applies Autism spectrum condition first and Specific learning disorder second?

A. Autism spectrum condition: Considering developmental history and functional impact rather than inferring a condition from one isolated behavior. / Specific learning disorder: Examining skill history, instruction, and targeted assessment when academic difficulty persists.
B. Autism spectrum condition: Examining skill history, instruction, and targeted assessment when academic difficulty persists. / Specific learning disorder: Describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation.
C. Autism spectrum condition: Describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation. / Specific learning disorder: Examining skill history, instruction, and targeted assessment when academic difficulty persists.
D. Autism spectrum condition: Describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation. / Specific learning disorder: Asking which sensory environments support or hinder participation and adjusting the setting where feasible.

0239. Which option correctly matches each concept to its practice focus: Neurodevelopmental condition and Intellectual disability?

A. Neurodevelopmental condition: Assessing adaptive skills and developmental history alongside intellectual functioning. / Intellectual disability: Considering developmental history and functional impact rather than inferring a condition from one isolated behavior.
B. Neurodevelopmental condition: Considering developmental history and functional impact rather than inferring a condition from one isolated behavior. / Intellectual disability: Assessing adaptive skills and developmental history alongside intellectual functioning.
C. Neurodevelopmental condition: Considering developmental history and functional impact rather than inferring a condition from one isolated behavior. / Intellectual disability: Assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty.
D. Neurodevelopmental condition: Asking which sensory environments support or hinder participation and adjusting the setting where feasible. / Intellectual disability: Assessing adaptive skills and developmental history alongside intellectual functioning.

0240. A student aged 12 and a mental-health professional are reviewing goals in the after-school program. The agreed action is assessing adaptive skills and developmental history alongside intellectual functioning. Which principle best accounts for it?

A. Intellectual disability
B. Autism spectrum condition
C. Comorbidity
D. Neurodevelopmental condition

0241. Which statement most accurately defines Autism spectrum condition?

A. Persistent difficulty learning or using academic skills despite appropriate support, evaluated in relation to developmental and educational context.
B. Co-occurrence of two or more conditions or clinically significant problems in one person.
C. A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs.
D. A condition characterized by limitations in intellectual functioning and adaptive functioning with developmental onset.

0242. In a supervision quiz, how should Autism spectrum condition be distinguished from Sensory processing differences?

A. Autism spectrum condition: Differences in responding to sensory input that may affect comfort, attention, or participation. / Sensory processing differences: A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs.
B. Autism spectrum condition: A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs. / Sensory processing differences: Differences in responding to sensory input that may affect comfort, attention, or participation.
C. Autism spectrum condition: A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs. / Sensory processing differences: A group of conditions with developmental onset that affect functioning in areas such as learning, communication, or behavior.
D. Autism spectrum condition: A modification to environment, instruction, or procedure that supports equitable access under applicable rules. / Sensory processing differences: Differences in responding to sensory input that may affect comfort, attention, or participation.

0243. During work in the outpatient clinic, a teacher and counselor identifies this need: considering developmental history and functional impact rather than inferring a condition from one isolated behavior. Which idea should guide the response?

A. ADHD executive-function profile
B. Sensory processing differences
C. Autism spectrum condition
D. Neurodevelopmental condition

0244. Which option pairs the definitions of ADHD executive-function profile and Intellectual disability correctly, in that order?

A. ADHD executive-function profile: A pattern of developmentally inappropriate inattention and/or hyperactivity-impulsivity with impairment across relevant contexts. / Intellectual disability: Co-occurrence of two or more conditions or clinically significant problems in one person.
B. ADHD executive-function profile: A pattern of developmentally inappropriate inattention and/or hyperactivity-impulsivity with impairment across relevant contexts. / Intellectual disability: A condition characterized by limitations in intellectual functioning and adaptive functioning with developmental onset.
C. ADHD executive-function profile: Conceptual, social, and practical skills used to meet everyday demands across settings. / Intellectual disability: A condition characterized by limitations in intellectual functioning and adaptive functioning with developmental onset.
D. ADHD executive-function profile: A condition characterized by limitations in intellectual functioning and adaptive functioning with developmental onset. / Intellectual disability: A pattern of developmentally inappropriate inattention and/or hyperactivity-impulsivity with impairment across relevant contexts.

0245. A case coordinator presents a support plan for a child of elementary-school age at the supervision meeting. Its central feature is building accommodations around the person's needs and goals rather than treating difference itself as a defect. Which concept should be named?

A. Sensory processing differences
B. Intellectual disability
C. Neurodiversity-affirming practice
D. Reasonable accommodation

0246. Which named construct is captured by this account? A pattern of developmentally inappropriate inattention and/or hyperactivity-impulsivity with impairment across relevant contexts.

A. Autism spectrum condition
B. Specific learning disorder
C. ADHD executive-function profile
D. Adaptive functioning

0247. For a older adolescent client seen in the student wellness team, the research trainee recommends a plan built around evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone. Which concept is reflected?

A. Neurodevelopmental condition
B. Adaptive functioning
C. Intellectual disability
D. Autism spectrum condition

0248. Which applied comparison correctly identifies what belongs to Neurodevelopmental condition versus ADHD executive-function profile?

A. Neurodevelopmental condition: Assessing adaptive skills and developmental history alongside intellectual functioning. / ADHD executive-function profile: Gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions.
B. Neurodevelopmental condition: Considering developmental history and functional impact rather than inferring a condition from one isolated behavior. / ADHD executive-function profile: Gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions.
C. Neurodevelopmental condition: Considering developmental history and functional impact rather than inferring a condition from one isolated behavior. / ADHD executive-function profile: Describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation.
D. Neurodevelopmental condition: Gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions. / ADHD executive-function profile: Considering developmental history and functional impact rather than inferring a condition from one isolated behavior.

0249. Consider a young person aged 16 receiving help in the community service agency. The school counselor focuses on examining skill history, instruction, and targeted assessment when academic difficulty persists. Which term best describes the guiding idea?

A. Comorbidity
B. Specific learning disorder
C. Neurodevelopmental condition
D. Adaptive functioning

0250. A trainee must choose a practice that exemplifies Autism spectrum condition. Which action is the best fit?

A. Describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation.
B. Considering developmental history and functional impact rather than inferring a condition from one isolated behavior.
C. Evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone.
D. Identifying practical adjustments that permit meaningful participation and checking governing requirements.

0251. During service review in the school-based service, a community practitioner describes building accommodations around the person's needs and goals rather than treating difference itself as a defect. for a client in early adolescence. Which course idea is most applicable?

A. Neurodiversity-affirming practice
B. Intellectual disability
C. Reasonable accommodation
D. Sensory processing differences

0252. A student confuses Sensory processing differences with Reasonable accommodation. Which explanation most accurately separates them?

A. Sensory processing differences: Differences in responding to sensory input that may affect comfort, attention, or participation. / Reasonable accommodation: A pattern of developmentally inappropriate inattention and/or hyperactivity-impulsivity with impairment across relevant contexts.
B. Sensory processing differences: A modification to environment, instruction, or procedure that supports equitable access under applicable rules. / Reasonable accommodation: Differences in responding to sensory input that may affect comfort, attention, or participation.
C. Sensory processing differences: Conceptual, social, and practical skills used to meet everyday demands across settings. / Reasonable accommodation: A modification to environment, instruction, or procedure that supports equitable access under applicable rules.
D. Sensory processing differences: Differences in responding to sensory input that may affect comfort, attention, or participation. / Reasonable accommodation: A modification to environment, instruction, or procedure that supports equitable access under applicable rules.

0253. Which applied comparison correctly identifies what belongs to Sensory processing differences versus Reasonable accommodation?

A. Sensory processing differences: Asking which sensory environments support or hinder participation and adjusting the setting where feasible. / Reasonable accommodation: Gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions.
B. Sensory processing differences: Identifying practical adjustments that permit meaningful participation and checking governing requirements. / Reasonable accommodation: Asking which sensory environments support or hinder participation and adjusting the setting where feasible.
C. Sensory processing differences: Asking which sensory environments support or hinder participation and adjusting the setting where feasible. / Reasonable accommodation: Identifying practical adjustments that permit meaningful participation and checking governing requirements.
D. Sensory processing differences: Evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone. / Reasonable accommodation: Identifying practical adjustments that permit meaningful participation and checking governing requirements.

0254. Which applied comparison correctly identifies what belongs to Neurodiversity-affirming practice versus Reasonable accommodation?

A. Neurodiversity-affirming practice: Building accommodations around the person's needs and goals rather than treating difference itself as a defect. / Reasonable accommodation: Identifying practical adjustments that permit meaningful participation and checking governing requirements.
B. Neurodiversity-affirming practice: Identifying practical adjustments that permit meaningful participation and checking governing requirements. / Reasonable accommodation: Building accommodations around the person's needs and goals rather than treating difference itself as a defect.
C. Neurodiversity-affirming practice: Asking which sensory environments support or hinder participation and adjusting the setting where feasible. / Reasonable accommodation: Identifying practical adjustments that permit meaningful participation and checking governing requirements.
D. Neurodiversity-affirming practice: Building accommodations around the person's needs and goals rather than treating difference itself as a defect. / Reasonable accommodation: Evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone.

0255. A supervisor asks how Sensory processing differences would appear in practice. Which choice should be selected?

A. Assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty.
B. Identifying practical adjustments that permit meaningful participation and checking governing requirements.
C. Building accommodations around the person's needs and goals rather than treating difference itself as a defect.
D. Asking which sensory environments support or hinder participation and adjusting the setting where feasible.

0256. At the parent meeting, a program coordinator reviews whether a plan for a child aged 7 is appropriate. The relevant practice is examining skill history, instruction, and targeted assessment when academic difficulty persists. Which concept is tested?

A. Comorbidity
B. Specific learning disorder
C. Autism spectrum condition
D. ADHD executive-function profile

0257. A member of a clinical team is preparing a follow-up plan for a child aged 8 in the counseling practicum. The plan calls for describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation. Which concept names this approach?

A. Sensory processing differences
B. Intellectual disability
C. Reasonable accommodation
D. Autism spectrum condition

0258. A consultant and a young person are discussing support in the school-based service. The selected practice is assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty. Which concept does this demonstrate?

A. Specific learning disorder
B. Autism spectrum condition
C. Neurodiversity-affirming practice
D. Comorbidity

0259. A service team discusses a adolescent student in the school-based service. Their proposed next step is describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation. Which course concept supports it?

A. Specific learning disorder
B. ADHD executive-function profile
C. Neurodevelopmental condition
D. Autism spectrum condition

0260. How are Neurodevelopmental condition and Neurodiversity-affirming practice most accurately differentiated in this curriculum?

A. Neurodevelopmental condition: A pattern of developmentally inappropriate inattention and/or hyperactivity-impulsivity with impairment across relevant contexts. / Neurodiversity-affirming practice: An approach that respects neurological variation, avoids unnecessary normalization, and focuses on access and meaningful support.
B. Neurodevelopmental condition: A group of conditions with developmental onset that affect functioning in areas such as learning, communication, or behavior. / Neurodiversity-affirming practice: A modification to environment, instruction, or procedure that supports equitable access under applicable rules.
C. Neurodevelopmental condition: An approach that respects neurological variation, avoids unnecessary normalization, and focuses on access and meaningful support. / Neurodiversity-affirming practice: A group of conditions with developmental onset that affect functioning in areas such as learning, communication, or behavior.
D. Neurodevelopmental condition: A group of conditions with developmental onset that affect functioning in areas such as learning, communication, or behavior. / Neurodiversity-affirming practice: An approach that respects neurological variation, avoids unnecessary normalization, and focuses on access and meaningful support.

0261. Which pair of actions illustrates ADHD executive-function profile and Autism spectrum condition, respectively?

A. ADHD executive-function profile: Evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone. / Autism spectrum condition: Describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation.
B. ADHD executive-function profile: Gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions. / Autism spectrum condition: Describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation.
C. ADHD executive-function profile: Describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation. / Autism spectrum condition: Gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions.
D. ADHD executive-function profile: Gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions. / Autism spectrum condition: Considering developmental history and functional impact rather than inferring a condition from one isolated behavior.

0262. A case discussion concerns a high-school student and a caregiver working with a counselor in the telehealth session. The practitioner is considering identifying practical adjustments that permit meaningful participation and checking governing requirements. Which principle is involved?

A. Reasonable accommodation
B. Specific learning disorder
C. Comorbidity
D. Adaptive functioning

0263. A team must select a support approach for a child of elementary-school age at the caregiver consultation. The parent educator recommends describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation. Which idea is most relevant?

A. Neurodevelopmental condition
B. Adaptive functioning
C. Autism spectrum condition
D. Reasonable accommodation

0264. Which statement shows a sound practice-level distinction between Adaptive functioning and Sensory processing differences?

A. Adaptive functioning: Evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone. / Sensory processing differences: Asking which sensory environments support or hinder participation and adjusting the setting where feasible.
B. Adaptive functioning: Asking which sensory environments support or hinder participation and adjusting the setting where feasible. / Sensory processing differences: Evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone.
C. Adaptive functioning: Building accommodations around the person's needs and goals rather than treating difference itself as a defect. / Sensory processing differences: Asking which sensory environments support or hinder participation and adjusting the setting where feasible.
D. Adaptive functioning: Evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone. / Sensory processing differences: Identifying practical adjustments that permit meaningful participation and checking governing requirements.

0265. A supervisor asks for an applied contrast between ADHD executive-function profile and Specific learning disorder. Which option fits?

A. ADHD executive-function profile: Examining skill history, instruction, and targeted assessment when academic difficulty persists. / Specific learning disorder: Gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions.
B. ADHD executive-function profile: Gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions. / Specific learning disorder: Considering developmental history and functional impact rather than inferring a condition from one isolated behavior.
C. ADHD executive-function profile: Gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions. / Specific learning disorder: Examining skill history, instruction, and targeted assessment when academic difficulty persists.
D. ADHD executive-function profile: Describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation. / Specific learning disorder: Examining skill history, instruction, and targeted assessment when academic difficulty persists.

0266. During service review in the clinical planning session, a research trainee describes gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions. for a student aged 9. Which course idea is most applicable?

A. ADHD executive-function profile
B. Reasonable accommodation
C. Adaptive functioning
D. Comorbidity

0267. A school-based clinician presents a support plan for a teenage client at the telehealth session. Its central feature is assessing adaptive skills and developmental history alongside intellectual functioning. Which concept should be named?

A. Autism spectrum condition
B. Intellectual disability
C. Neurodevelopmental condition
D. ADHD executive-function profile

0268. Which choice aligns each practice with the correct idea, Neurodevelopmental condition or Specific learning disorder?

A. Neurodevelopmental condition: Describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation. / Specific learning disorder: Examining skill history, instruction, and targeted assessment when academic difficulty persists.
B. Neurodevelopmental condition: Considering developmental history and functional impact rather than inferring a condition from one isolated behavior. / Specific learning disorder: Asking which sensory environments support or hinder participation and adjusting the setting where feasible.
C. Neurodevelopmental condition: Considering developmental history and functional impact rather than inferring a condition from one isolated behavior. / Specific learning disorder: Examining skill history, instruction, and targeted assessment when academic difficulty persists.
D. Neurodevelopmental condition: Examining skill history, instruction, and targeted assessment when academic difficulty persists. / Specific learning disorder: Considering developmental history and functional impact rather than inferring a condition from one isolated behavior.

0269. While consulting in the behavior-support review, a consultant supports a student aged 17 by using this approach: assessing adaptive skills and developmental history alongside intellectual functioning. Which concept is being applied?

A. ADHD executive-function profile
B. Reasonable accommodation
C. Intellectual disability
D. Neurodiversity-affirming practice

0270. In the learning-support meeting, a team asks how a teacher and counselor can support a preadolescent child. One proposed action is gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions. Which idea does it represent?

A. Neurodiversity-affirming practice
B. Specific learning disorder
C. ADHD executive-function profile
D. Neurodevelopmental condition

0271. Which paired example correctly applies Specific learning disorder first and Adaptive functioning second?

A. Specific learning disorder: Examining skill history, instruction, and targeted assessment when academic difficulty persists. / Adaptive functioning: Gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions.
B. Specific learning disorder: Evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone. / Adaptive functioning: Examining skill history, instruction, and targeted assessment when academic difficulty persists.
C. Specific learning disorder: Examining skill history, instruction, and targeted assessment when academic difficulty persists. / Adaptive functioning: Evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone.
D. Specific learning disorder: Asking which sensory environments support or hinder participation and adjusting the setting where feasible. / Adaptive functioning: Evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone.

0272. In a supervision review, a school-based clinician describes work with a young person aged 16 in the community mental-health service: considering developmental history and functional impact rather than inferring a condition from one isolated behavior. What concept is illustrated?

A. Neurodevelopmental condition
B. Neurodiversity-affirming practice
C. Comorbidity
D. ADHD executive-function profile

0273. A trainee must choose a practice that exemplifies Adaptive functioning. Which action is the best fit?

A. Building accommodations around the person's needs and goals rather than treating difference itself as a defect.
B. Evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone.
C. Considering developmental history and functional impact rather than inferring a condition from one isolated behavior.
D. Examining skill history, instruction, and targeted assessment when academic difficulty persists.

0274. Which statement accurately contrasts the course concepts ADHD executive-function profile and Intellectual disability?

A. ADHD executive-function profile: A pattern of developmentally inappropriate inattention and/or hyperactivity-impulsivity with impairment across relevant contexts. / Intellectual disability: Co-occurrence of two or more conditions or clinically significant problems in one person.
B. ADHD executive-function profile: Conceptual, social, and practical skills used to meet everyday demands across settings. / Intellectual disability: A condition characterized by limitations in intellectual functioning and adaptive functioning with developmental onset.
C. ADHD executive-function profile: A pattern of developmentally inappropriate inattention and/or hyperactivity-impulsivity with impairment across relevant contexts. / Intellectual disability: A condition characterized by limitations in intellectual functioning and adaptive functioning with developmental onset.
D. ADHD executive-function profile: A condition characterized by limitations in intellectual functioning and adaptive functioning with developmental onset. / Intellectual disability: A pattern of developmentally inappropriate inattention and/or hyperactivity-impulsivity with impairment across relevant contexts.

0275. Which statement accurately contrasts the course concepts Intellectual disability and Reasonable accommodation?

A. Intellectual disability: A condition characterized by limitations in intellectual functioning and adaptive functioning with developmental onset. / Reasonable accommodation: A modification to environment, instruction, or procedure that supports equitable access under applicable rules.
B. Intellectual disability: A modification to environment, instruction, or procedure that supports equitable access under applicable rules. / Reasonable accommodation: A condition characterized by limitations in intellectual functioning and adaptive functioning with developmental onset.
C. Intellectual disability: A condition characterized by limitations in intellectual functioning and adaptive functioning with developmental onset. / Reasonable accommodation: A group of conditions with developmental onset that affect functioning in areas such as learning, communication, or behavior.
D. Intellectual disability: A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs. / Reasonable accommodation: A modification to environment, instruction, or procedure that supports equitable access under applicable rules.

0276. Choose the practice comparison that best separates ADHD executive-function profile from Reasonable accommodation.

A. ADHD executive-function profile: Gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions. / Reasonable accommodation: Asking which sensory environments support or hinder participation and adjusting the setting where feasible.
B. ADHD executive-function profile: Building accommodations around the person's needs and goals rather than treating difference itself as a defect. / Reasonable accommodation: Identifying practical adjustments that permit meaningful participation and checking governing requirements.
C. ADHD executive-function profile: Identifying practical adjustments that permit meaningful participation and checking governing requirements. / Reasonable accommodation: Gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions.
D. ADHD executive-function profile: Gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions. / Reasonable accommodation: Identifying practical adjustments that permit meaningful participation and checking governing requirements.

0277. Which option is the clearest practical expression of Comorbidity?

A. Assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty.
B. Examining skill history, instruction, and targeted assessment when academic difficulty persists.
C. Gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions.
D. Assessing adaptive skills and developmental history alongside intellectual functioning.

0278. How are Specific learning disorder and Adaptive functioning most accurately differentiated in this curriculum?

A. Specific learning disorder: Persistent difficulty learning or using academic skills despite appropriate support, evaluated in relation to developmental and educational context. / Adaptive functioning: Conceptual, social, and practical skills used to meet everyday demands across settings.
B. Specific learning disorder: Conceptual, social, and practical skills used to meet everyday demands across settings. / Adaptive functioning: Persistent difficulty learning or using academic skills despite appropriate support, evaluated in relation to developmental and educational context.
C. Specific learning disorder: Differences in responding to sensory input that may affect comfort, attention, or participation. / Adaptive functioning: Conceptual, social, and practical skills used to meet everyday demands across settings.
D. Specific learning disorder: Persistent difficulty learning or using academic skills despite appropriate support, evaluated in relation to developmental and educational context. / Adaptive functioning: A pattern of developmentally inappropriate inattention and/or hyperactivity-impulsivity with impairment across relevant contexts.

0279. Which paired example correctly applies ADHD executive-function profile first and Sensory processing differences second?

A. ADHD executive-function profile: Describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation. / Sensory processing differences: Asking which sensory environments support or hinder participation and adjusting the setting where feasible.
B. ADHD executive-function profile: Gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions. / Sensory processing differences: Examining skill history, instruction, and targeted assessment when academic difficulty persists.
C. ADHD executive-function profile: Asking which sensory environments support or hinder participation and adjusting the setting where feasible. / Sensory processing differences: Gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions.
D. ADHD executive-function profile: Gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions. / Sensory processing differences: Asking which sensory environments support or hinder participation and adjusting the setting where feasible.

0280. In the student wellness team, a school-based clinician is considering this approach for a young person aged 10: describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation. Which framework does it represent?

A. Adaptive functioning
B. Specific learning disorder
C. Autism spectrum condition
D. ADHD executive-function profile

0281. A family therapist presents a support plan for a child aged 7 at the child guidance clinic. Its central feature is asking which sensory environments support or hinder participation and adjusting the setting where feasible. Which concept should be named?

A. Sensory processing differences
B. Autism spectrum condition
C. ADHD executive-function profile
D. Neurodevelopmental condition

0282. A research trainee is asked what should shape a young person aged 16's support in the telehealth session. The proposed focus is building accommodations around the person's needs and goals rather than treating difference itself as a defect. Which principle does it represent?

A. Neurodiversity-affirming practice
B. Specific learning disorder
C. Comorbidity
D. ADHD executive-function profile

0283. A group facilitator is explaining a choice to a school-age child and caregiver in the caregiver consultation. The choice centers on identifying practical adjustments that permit meaningful participation and checking governing requirements. Which idea is illustrated?

A. Comorbidity
B. Reasonable accommodation
C. Sensory processing differences
D. Neurodiversity-affirming practice

0284. Which comparison correctly distinguishes Neurodevelopmental condition from Comorbidity?

A. Neurodevelopmental condition: A group of conditions with developmental onset that affect functioning in areas such as learning, communication, or behavior. / Comorbidity: Co-occurrence of two or more conditions or clinically significant problems in one person.
B. Neurodevelopmental condition: A group of conditions with developmental onset that affect functioning in areas such as learning, communication, or behavior. / Comorbidity: Persistent difficulty learning or using academic skills despite appropriate support, evaluated in relation to developmental and educational context.
C. Neurodevelopmental condition: Co-occurrence of two or more conditions or clinically significant problems in one person. / Comorbidity: A group of conditions with developmental onset that affect functioning in areas such as learning, communication, or behavior.
D. Neurodevelopmental condition: A modification to environment, instruction, or procedure that supports equitable access under applicable rules. / Comorbidity: Co-occurrence of two or more conditions or clinically significant problems in one person.

0285. Which applied comparison correctly identifies what belongs to Neurodevelopmental condition versus Autism spectrum condition?

A. Neurodevelopmental condition: Considering developmental history and functional impact rather than inferring a condition from one isolated behavior. / Autism spectrum condition: Describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation.
B. Neurodevelopmental condition: Considering developmental history and functional impact rather than inferring a condition from one isolated behavior. / Autism spectrum condition: Examining skill history, instruction, and targeted assessment when academic difficulty persists.
C. Neurodevelopmental condition: Asking which sensory environments support or hinder participation and adjusting the setting where feasible. / Autism spectrum condition: Describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation.
D. Neurodevelopmental condition: Describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation. / Autism spectrum condition: Considering developmental history and functional impact rather than inferring a condition from one isolated behavior.

0286. A trainee must distinguish how Adaptive functioning and Neurodiversity-affirming practice guide practice. Which comparison is accurate?

A. Adaptive functioning: Evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone. / Neurodiversity-affirming practice: Asking which sensory environments support or hinder participation and adjusting the setting where feasible.
B. Adaptive functioning: Identifying practical adjustments that permit meaningful participation and checking governing requirements. / Neurodiversity-affirming practice: Building accommodations around the person's needs and goals rather than treating difference itself as a defect.
C. Adaptive functioning: Building accommodations around the person's needs and goals rather than treating difference itself as a defect. / Neurodiversity-affirming practice: Evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone.
D. Adaptive functioning: Evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone. / Neurodiversity-affirming practice: Building accommodations around the person's needs and goals rather than treating difference itself as a defect.

0287. A school counselor is explaining a choice to a preadolescent child and caregiver in the school counseling office. The choice centers on asking which sensory environments support or hinder participation and adjusting the setting where feasible. Which idea is illustrated?

A. Adaptive functioning
B. Comorbidity
C. Sensory processing differences
D. Intellectual disability

0288. Which applied comparison correctly identifies what belongs to Neurodiversity-affirming practice versus Comorbidity?

A. Neurodiversity-affirming practice: Assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty. / Comorbidity: Building accommodations around the person's needs and goals rather than treating difference itself as a defect.
B. Neurodiversity-affirming practice: Building accommodations around the person's needs and goals rather than treating difference itself as a defect. / Comorbidity: Describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation.
C. Neurodiversity-affirming practice: Assessing adaptive skills and developmental history alongside intellectual functioning. / Comorbidity: Assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty.
D. Neurodiversity-affirming practice: Building accommodations around the person's needs and goals rather than treating difference itself as a defect. / Comorbidity: Assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty.

0289. A planning meeting about a high-school student includes a behavior specialist. The proposed practice in the caregiver consultation is assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty. Which idea underlies it?

A. Comorbidity
B. Intellectual disability
C. Sensory processing differences
D. Neurodiversity-affirming practice

0290. Which option preserves the correct meaning of both ADHD executive-function profile and Neurodiversity-affirming practice?

A. ADHD executive-function profile: A pattern of developmentally inappropriate inattention and/or hyperactivity-impulsivity with impairment across relevant contexts. / Neurodiversity-affirming practice: A condition characterized by limitations in intellectual functioning and adaptive functioning with developmental onset.
B. ADHD executive-function profile: An approach that respects neurological variation, avoids unnecessary normalization, and focuses on access and meaningful support. / Neurodiversity-affirming practice: A pattern of developmentally inappropriate inattention and/or hyperactivity-impulsivity with impairment across relevant contexts.
C. ADHD executive-function profile: A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs. / Neurodiversity-affirming practice: An approach that respects neurological variation, avoids unnecessary normalization, and focuses on access and meaningful support.
D. ADHD executive-function profile: A pattern of developmentally inappropriate inattention and/or hyperactivity-impulsivity with impairment across relevant contexts. / Neurodiversity-affirming practice: An approach that respects neurological variation, avoids unnecessary normalization, and focuses on access and meaningful support.

0291. A school support specialist is asked to evaluate a proposed service for a young person aged 16 in the counseling practicum. The defining feature is assessing adaptive skills and developmental history alongside intellectual functioning. Which concept fits?

A. Autism spectrum condition
B. ADHD executive-function profile
C. Intellectual disability
D. Comorbidity

0292. Which course concept is defined as follows: Persistent difficulty learning or using academic skills despite appropriate support, evaluated in relation to developmental and educational context.

A. Specific learning disorder
B. Adaptive functioning
C. Neurodiversity-affirming practice
D. Neurodevelopmental condition

0293. A doctoral student reads the following description. Which concept does it define? A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs.

A. Autism spectrum condition
B. Neurodiversity-affirming practice
C. Reasonable accommodation
D. Comorbidity

0294. Which option pairs the definitions of Neurodiversity-affirming practice and Comorbidity correctly, in that order?

A. Neurodiversity-affirming practice: A condition characterized by limitations in intellectual functioning and adaptive functioning with developmental onset. / Comorbidity: Co-occurrence of two or more conditions or clinically significant problems in one person.
B. Neurodiversity-affirming practice: An approach that respects neurological variation, avoids unnecessary normalization, and focuses on access and meaningful support. / Comorbidity: Co-occurrence of two or more conditions or clinically significant problems in one person.
C. Neurodiversity-affirming practice: An approach that respects neurological variation, avoids unnecessary normalization, and focuses on access and meaningful support. / Comorbidity: A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs.
D. Neurodiversity-affirming practice: Co-occurrence of two or more conditions or clinically significant problems in one person. / Comorbidity: An approach that respects neurological variation, avoids unnecessary normalization, and focuses on access and meaningful support.

0295. A case discussion concerns a child of elementary-school age and a parent educator in the caregiver consultation. The practitioner is considering describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation. Which principle is involved?

A. Comorbidity
B. Autism spectrum condition
C. Sensory processing differences
D. ADHD executive-function profile

0296. A service team discusses a young person aged 13 in the behavior-support review. Their proposed next step is examining skill history, instruction, and targeted assessment when academic difficulty persists. Which course concept supports it?

A. Adaptive functioning
B. Specific learning disorder
C. ADHD executive-function profile
D. Comorbidity

0297. Choose the definition pair that correctly explains ADHD executive-function profile first and Adaptive functioning second.

A. ADHD executive-function profile: A group of conditions with developmental onset that affect functioning in areas such as learning, communication, or behavior. / Adaptive functioning: Conceptual, social, and practical skills used to meet everyday demands across settings.
B. ADHD executive-function profile: A pattern of developmentally inappropriate inattention and/or hyperactivity-impulsivity with impairment across relevant contexts. / Adaptive functioning: Persistent difficulty learning or using academic skills despite appropriate support, evaluated in relation to developmental and educational context.
C. ADHD executive-function profile: A pattern of developmentally inappropriate inattention and/or hyperactivity-impulsivity with impairment across relevant contexts. / Adaptive functioning: Conceptual, social, and practical skills used to meet everyday demands across settings.
D. ADHD executive-function profile: Conceptual, social, and practical skills used to meet everyday demands across settings. / Adaptive functioning: A pattern of developmentally inappropriate inattention and/or hyperactivity-impulsivity with impairment across relevant contexts.

0298. Which option correctly matches each concept to its practice focus: Neurodiversity-affirming practice and Reasonable accommodation?

A. Neurodiversity-affirming practice: Building accommodations around the person's needs and goals rather than treating difference itself as a defect. / Reasonable accommodation: Identifying practical adjustments that permit meaningful participation and checking governing requirements.
B. Neurodiversity-affirming practice: Identifying practical adjustments that permit meaningful participation and checking governing requirements. / Reasonable accommodation: Building accommodations around the person's needs and goals rather than treating difference itself as a defect.
C. Neurodiversity-affirming practice: Asking which sensory environments support or hinder participation and adjusting the setting where feasible. / Reasonable accommodation: Identifying practical adjustments that permit meaningful participation and checking governing requirements.
D. Neurodiversity-affirming practice: Building accommodations around the person's needs and goals rather than treating difference itself as a defect. / Reasonable accommodation: Evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone.

0299. During service review in the caregiver consultation, a program coordinator describes evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone. for a student aged 12. Which course idea is most applicable?

A. Adaptive functioning
B. Autism spectrum condition
C. Specific learning disorder
D. Neurodiversity-affirming practice

0300. Identify the most precise label for this idea: Co-occurrence of two or more conditions or clinically significant problems in one person.

A. Adaptive functioning
B. Comorbidity
C. Sensory processing differences
D. Reasonable accommodation

0301. A trainee must explain Specific learning disorder. Which answer is accurate?

A. Co-occurrence of two or more conditions or clinically significant problems in one person.
B. Differences in responding to sensory input that may affect comfort, attention, or participation.
C. Persistent difficulty learning or using academic skills despite appropriate support, evaluated in relation to developmental and educational context.
D. An approach that respects neurological variation, avoids unnecessary normalization, and focuses on access and meaningful support.

0302. A trainee must distinguish how Autism spectrum condition and Reasonable accommodation guide practice. Which comparison is accurate?

A. Autism spectrum condition: Describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation. / Reasonable accommodation: Asking which sensory environments support or hinder participation and adjusting the setting where feasible.
B. Autism spectrum condition: Examining skill history, instruction, and targeted assessment when academic difficulty persists. / Reasonable accommodation: Identifying practical adjustments that permit meaningful participation and checking governing requirements.
C. Autism spectrum condition: Describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation. / Reasonable accommodation: Identifying practical adjustments that permit meaningful participation and checking governing requirements.
D. Autism spectrum condition: Identifying practical adjustments that permit meaningful participation and checking governing requirements. / Reasonable accommodation: Describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation.

0303. A supervisor asks for an applied contrast between Neurodevelopmental condition and ADHD executive-function profile. Which option fits?

A. Neurodevelopmental condition: Considering developmental history and functional impact rather than inferring a condition from one isolated behavior. / ADHD executive-function profile: Gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions.
B. Neurodevelopmental condition: Gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions. / ADHD executive-function profile: Considering developmental history and functional impact rather than inferring a condition from one isolated behavior.
C. Neurodevelopmental condition: Assessing adaptive skills and developmental history alongside intellectual functioning. / ADHD executive-function profile: Gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions.
D. Neurodevelopmental condition: Considering developmental history and functional impact rather than inferring a condition from one isolated behavior. / ADHD executive-function profile: Describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation.

0304. While consulting in the telehealth session, a assessment clinician supports a child aged 6 by using this approach: assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty. Which concept is being applied?

A. ADHD executive-function profile
B. Adaptive functioning
C. Comorbidity
D. Sensory processing differences

0305. In a case note about a school-age child, a mental-health professional working in the counseling practicum records this priority: building accommodations around the person's needs and goals rather than treating difference itself as a defect. What principle is reflected?

A. Autism spectrum condition
B. Neurodiversity-affirming practice
C. Specific learning disorder
D. ADHD executive-function profile

0306. Which option correctly matches each concept to its practice focus: Autism spectrum condition and Comorbidity?

A. Autism spectrum condition: Describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation. / Comorbidity: Considering developmental history and functional impact rather than inferring a condition from one isolated behavior.
B. Autism spectrum condition: Describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation. / Comorbidity: Assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty.
C. Autism spectrum condition: Assessing adaptive skills and developmental history alongside intellectual functioning. / Comorbidity: Assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty.
D. Autism spectrum condition: Assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty. / Comorbidity: Describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation.

0307. How should a practitioner distinguish the applications of Adaptive functioning and Reasonable accommodation?

A. Adaptive functioning: Identifying practical adjustments that permit meaningful participation and checking governing requirements. / Reasonable accommodation: Evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone.
B. Adaptive functioning: Evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone. / Reasonable accommodation: Describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation.
C. Adaptive functioning: Assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty. / Reasonable accommodation: Identifying practical adjustments that permit meaningful participation and checking governing requirements.
D. Adaptive functioning: Evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone. / Reasonable accommodation: Identifying practical adjustments that permit meaningful participation and checking governing requirements.

0308. A service team discusses a young person in the child guidance clinic. Their proposed next step is identifying practical adjustments that permit meaningful participation and checking governing requirements. Which course concept supports it?

A. Neurodevelopmental condition
B. Adaptive functioning
C. Reasonable accommodation
D. Sensory processing differences

0309. Which statement shows a sound practice-level distinction between Specific learning disorder and Neurodiversity-affirming practice?

A. Specific learning disorder: Examining skill history, instruction, and targeted assessment when academic difficulty persists. / Neurodiversity-affirming practice: Evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone.
B. Specific learning disorder: Examining skill history, instruction, and targeted assessment when academic difficulty persists. / Neurodiversity-affirming practice: Building accommodations around the person's needs and goals rather than treating difference itself as a defect.
C. Specific learning disorder: Building accommodations around the person's needs and goals rather than treating difference itself as a defect. / Neurodiversity-affirming practice: Examining skill history, instruction, and targeted assessment when academic difficulty persists.
D. Specific learning disorder: Describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation. / Neurodiversity-affirming practice: Building accommodations around the person's needs and goals rather than treating difference itself as a defect.

0310. A member of a clinical team and a student aged 12 are discussing support in the behavior-support review. The selected practice is identifying practical adjustments that permit meaningful participation and checking governing requirements. Which concept does this demonstrate?

A. Comorbidity
B. Adaptive functioning
C. Reasonable accommodation
D. Sensory processing differences

0311. A school counselor is asked to justify a plan for a teenage client in the behavior-support review. It calls for building accommodations around the person's needs and goals rather than treating difference itself as a defect. Which concept provides the rationale?

A. Neurodevelopmental condition
B. Reasonable accommodation
C. Neurodiversity-affirming practice
D. Sensory processing differences

0312. Which description belongs with the term Neurodiversity-affirming practice?

A. A modification to environment, instruction, or procedure that supports equitable access under applicable rules.
B. A group of conditions with developmental onset that affect functioning in areas such as learning, communication, or behavior.
C. Persistent difficulty learning or using academic skills despite appropriate support, evaluated in relation to developmental and educational context.
D. An approach that respects neurological variation, avoids unnecessary normalization, and focuses on access and meaningful support.

0313. A mental-health professional is preparing a follow-up plan for a student aged 15 in the learning-support meeting. The plan calls for examining skill history, instruction, and targeted assessment when academic difficulty persists. Which concept names this approach?

A. Reasonable accommodation
B. Intellectual disability
C. ADHD executive-function profile
D. Specific learning disorder

0314. Which named construct is captured by this account? Co-occurrence of two or more conditions or clinically significant problems in one person.

A. Reasonable accommodation
B. Specific learning disorder
C. Intellectual disability
D. Comorbidity

0315. A teacher and counselor is explaining a choice to a teenage client and caregiver in the after-school program. The choice centers on describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation. Which idea is illustrated?

A. ADHD executive-function profile
B. Specific learning disorder
C. Autism spectrum condition
D. Neurodevelopmental condition

0316. A program coordinator is asked what should shape a student aged 9's support in the outpatient clinic. The proposed focus is asking which sensory environments support or hinder participation and adjusting the setting where feasible. Which principle does it represent?

A. Intellectual disability
B. Neurodevelopmental condition
C. Sensory processing differences
D. Adaptive functioning

0317. Which statement shows a sound practice-level distinction between Specific learning disorder and Comorbidity?

A. Specific learning disorder: Assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty. / Comorbidity: Examining skill history, instruction, and targeted assessment when academic difficulty persists.
B. Specific learning disorder: Examining skill history, instruction, and targeted assessment when academic difficulty persists. / Comorbidity: Assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty.
C. Specific learning disorder: Examining skill history, instruction, and targeted assessment when academic difficulty persists. / Comorbidity: Gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions.
D. Specific learning disorder: Assessing adaptive skills and developmental history alongside intellectual functioning. / Comorbidity: Assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty.

0318. A case conference reviews a research trainee's work with a young person aged 10 in the family resource center: identifying practical adjustments that permit meaningful participation and checking governing requirements. Which principle is central?

A. Reasonable accommodation
B. Adaptive functioning
C. Autism spectrum condition
D. Sensory processing differences

0319. Consider a child aged 6 receiving help in the multidisciplinary case conference. The youth worker focuses on considering developmental history and functional impact rather than inferring a condition from one isolated behavior. Which term best describes the guiding idea?

A. Reasonable accommodation
B. Neurodevelopmental condition
C. Comorbidity
D. ADHD executive-function profile

0320. In a supervision quiz, how should Neurodiversity-affirming practice be distinguished from Comorbidity?

A. Neurodiversity-affirming practice: An approach that respects neurological variation, avoids unnecessary normalization, and focuses on access and meaningful support. / Comorbidity: A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs.
B. Neurodiversity-affirming practice: A condition characterized by limitations in intellectual functioning and adaptive functioning with developmental onset. / Comorbidity: Co-occurrence of two or more conditions or clinically significant problems in one person.
C. Neurodiversity-affirming practice: Co-occurrence of two or more conditions or clinically significant problems in one person. / Comorbidity: An approach that respects neurological variation, avoids unnecessary normalization, and focuses on access and meaningful support.
D. Neurodiversity-affirming practice: An approach that respects neurological variation, avoids unnecessary normalization, and focuses on access and meaningful support. / Comorbidity: Co-occurrence of two or more conditions or clinically significant problems in one person.

0321. A trainee must distinguish how Adaptive functioning and Sensory processing differences guide practice. Which comparison is accurate?

A. Adaptive functioning: Asking which sensory environments support or hinder participation and adjusting the setting where feasible. / Sensory processing differences: Evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone.
B. Adaptive functioning: Evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone. / Sensory processing differences: Identifying practical adjustments that permit meaningful participation and checking governing requirements.
C. Adaptive functioning: Evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone. / Sensory processing differences: Asking which sensory environments support or hinder participation and adjusting the setting where feasible.
D. Adaptive functioning: Building accommodations around the person's needs and goals rather than treating difference itself as a defect. / Sensory processing differences: Asking which sensory environments support or hinder participation and adjusting the setting where feasible.

0322. Which comparison would correct a trainee's misunderstanding of Specific learning disorder versus Adaptive functioning?

A. Specific learning disorder: Persistent difficulty learning or using academic skills despite appropriate support, evaluated in relation to developmental and educational context. / Adaptive functioning: Conceptual, social, and practical skills used to meet everyday demands across settings.
B. Specific learning disorder: Conceptual, social, and practical skills used to meet everyday demands across settings. / Adaptive functioning: Persistent difficulty learning or using academic skills despite appropriate support, evaluated in relation to developmental and educational context.
C. Specific learning disorder: Persistent difficulty learning or using academic skills despite appropriate support, evaluated in relation to developmental and educational context. / Adaptive functioning: A pattern of developmentally inappropriate inattention and/or hyperactivity-impulsivity with impairment across relevant contexts.
D. Specific learning disorder: Differences in responding to sensory input that may affect comfort, attention, or participation. / Adaptive functioning: Conceptual, social, and practical skills used to meet everyday demands across settings.

0323. A supervisor asks for an applied contrast between Neurodevelopmental condition and Comorbidity. Which option fits?

A. Neurodevelopmental condition: Considering developmental history and functional impact rather than inferring a condition from one isolated behavior. / Comorbidity: Assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty.
B. Neurodevelopmental condition: Considering developmental history and functional impact rather than inferring a condition from one isolated behavior. / Comorbidity: Examining skill history, instruction, and targeted assessment when academic difficulty persists.
C. Neurodevelopmental condition: Assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty. / Comorbidity: Considering developmental history and functional impact rather than inferring a condition from one isolated behavior.
D. Neurodevelopmental condition: Identifying practical adjustments that permit meaningful participation and checking governing requirements. / Comorbidity: Assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty.

0324. An interdisciplinary team reviews a school-age child's case at the school counseling office. The clinical supervisor recommends evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone. Which course concept best fits?

A. Adaptive functioning
B. Comorbidity
C. Specific learning disorder
D. Autism spectrum condition

0325. A support meeting for a school-age child includes a school support specialist in the learning-support meeting. The practice under consideration is considering developmental history and functional impact rather than inferring a condition from one isolated behavior. Which concept guides it?

A. ADHD executive-function profile
B. Sensory processing differences
C. Intellectual disability
D. Neurodevelopmental condition

0326. Which statement shows a sound practice-level distinction between ADHD executive-function profile and Comorbidity?

A. ADHD executive-function profile: Assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty. / Comorbidity: Gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions.
B. ADHD executive-function profile: Gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions. / Comorbidity: Examining skill history, instruction, and targeted assessment when academic difficulty persists.
C. ADHD executive-function profile: Evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone. / Comorbidity: Assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty.
D. ADHD executive-function profile: Gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions. / Comorbidity: Assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty.

0327. In the after-school program, a case coordinator is considering this approach for a young adolescent client: considering developmental history and functional impact rather than inferring a condition from one isolated behavior. Which framework does it represent?

A. Adaptive functioning
B. Neurodevelopmental condition
C. ADHD executive-function profile
D. Specific learning disorder

0328. Choose the practice comparison that best separates Adaptive functioning from Reasonable accommodation.

A. Adaptive functioning: Evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone. / Reasonable accommodation: Identifying practical adjustments that permit meaningful participation and checking governing requirements.
B. Adaptive functioning: Assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty. / Reasonable accommodation: Identifying practical adjustments that permit meaningful participation and checking governing requirements.
C. Adaptive functioning: Evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone. / Reasonable accommodation: Describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation.
D. Adaptive functioning: Identifying practical adjustments that permit meaningful participation and checking governing requirements. / Reasonable accommodation: Evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone.

0329. At the community youth program, a research trainee reviews whether a plan for a child of elementary-school age is appropriate. The relevant practice is assessing adaptive skills and developmental history alongside intellectual functioning. Which concept is tested?

A. Autism spectrum condition
B. ADHD executive-function profile
C. Reasonable accommodation
D. Intellectual disability

0330. A student confuses Neurodevelopmental condition with Reasonable accommodation. Which explanation most accurately separates them?

A. Neurodevelopmental condition: A group of conditions with developmental onset that affect functioning in areas such as learning, communication, or behavior. / Reasonable accommodation: Differences in responding to sensory input that may affect comfort, attention, or participation.
B. Neurodevelopmental condition: A modification to environment, instruction, or procedure that supports equitable access under applicable rules. / Reasonable accommodation: A group of conditions with developmental onset that affect functioning in areas such as learning, communication, or behavior.
C. Neurodevelopmental condition: A group of conditions with developmental onset that affect functioning in areas such as learning, communication, or behavior. / Reasonable accommodation: A modification to environment, instruction, or procedure that supports equitable access under applicable rules.
D. Neurodevelopmental condition: A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs. / Reasonable accommodation: A modification to environment, instruction, or procedure that supports equitable access under applicable rules.

0331. An interdisciplinary team reviews a young person aged 10's case at the family session. The school support specialist recommends asking which sensory environments support or hinder participation and adjusting the setting where feasible. Which course concept best fits?

A. Specific learning disorder
B. Sensory processing differences
C. Reasonable accommodation
D. Autism spectrum condition

0332. A supervisor asks how Comorbidity would appear in practice. Which choice should be selected?

A. Building accommodations around the person's needs and goals rather than treating difference itself as a defect.
B. Gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions.
C. Assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty.
D. Assessing adaptive skills and developmental history alongside intellectual functioning.

0333. A research trainee describes an intervention for a young person aged 13 in the parent meeting, centered on assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty. Which named idea is most relevant?

A. Adaptive functioning
B. Comorbidity
C. Neurodiversity-affirming practice
D. Specific learning disorder

0334. Which option preserves the correct meaning of both Neurodevelopmental condition and Reasonable accommodation?

A. Neurodevelopmental condition: A group of conditions with developmental onset that affect functioning in areas such as learning, communication, or behavior. / Reasonable accommodation: Differences in responding to sensory input that may affect comfort, attention, or participation.
B. Neurodevelopmental condition: A group of conditions with developmental onset that affect functioning in areas such as learning, communication, or behavior. / Reasonable accommodation: A modification to environment, instruction, or procedure that supports equitable access under applicable rules.
C. Neurodevelopmental condition: A modification to environment, instruction, or procedure that supports equitable access under applicable rules. / Reasonable accommodation: A group of conditions with developmental onset that affect functioning in areas such as learning, communication, or behavior.
D. Neurodevelopmental condition: A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs. / Reasonable accommodation: A modification to environment, instruction, or procedure that supports equitable access under applicable rules.

0335. Which option correctly matches each concept to its practice focus: Neurodevelopmental condition and Specific learning disorder?

A. Neurodevelopmental condition: Considering developmental history and functional impact rather than inferring a condition from one isolated behavior. / Specific learning disorder: Examining skill history, instruction, and targeted assessment when academic difficulty persists.
B. Neurodevelopmental condition: Describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation. / Specific learning disorder: Examining skill history, instruction, and targeted assessment when academic difficulty persists.
C. Neurodevelopmental condition: Considering developmental history and functional impact rather than inferring a condition from one isolated behavior. / Specific learning disorder: Asking which sensory environments support or hinder participation and adjusting the setting where feasible.
D. Neurodevelopmental condition: Examining skill history, instruction, and targeted assessment when academic difficulty persists. / Specific learning disorder: Considering developmental history and functional impact rather than inferring a condition from one isolated behavior.

0336. A parent educator presents a support plan for a older adolescent client at the outpatient clinic. Its central feature is examining skill history, instruction, and targeted assessment when academic difficulty persists. Which concept should be named?

A. Neurodevelopmental condition
B. Specific learning disorder
C. Autism spectrum condition
D. Adaptive functioning

0337. Which comparison correctly distinguishes Specific learning disorder from Sensory processing differences?

A. Specific learning disorder: Persistent difficulty learning or using academic skills despite appropriate support, evaluated in relation to developmental and educational context. / Sensory processing differences: An approach that respects neurological variation, avoids unnecessary normalization, and focuses on access and meaningful support.
B. Specific learning disorder: Persistent difficulty learning or using academic skills despite appropriate support, evaluated in relation to developmental and educational context. / Sensory processing differences: Differences in responding to sensory input that may affect comfort, attention, or participation.
C. Specific learning disorder: Co-occurrence of two or more conditions or clinically significant problems in one person. / Sensory processing differences: Differences in responding to sensory input that may affect comfort, attention, or participation.
D. Specific learning disorder: Differences in responding to sensory input that may affect comfort, attention, or participation. / Sensory processing differences: Persistent difficulty learning or using academic skills despite appropriate support, evaluated in relation to developmental and educational context.

0338. Which course concept is defined as follows: An approach that respects neurological variation, avoids unnecessary normalization, and focuses on access and meaningful support.

A. Intellectual disability
B. Adaptive functioning
C. Neurodiversity-affirming practice
D. Specific learning disorder

0339. Which comparison correctly distinguishes Autism spectrum condition from Sensory processing differences?

A. Autism spectrum condition: A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs. / Sensory processing differences: A group of conditions with developmental onset that affect functioning in areas such as learning, communication, or behavior.
B. Autism spectrum condition: A modification to environment, instruction, or procedure that supports equitable access under applicable rules. / Sensory processing differences: Differences in responding to sensory input that may affect comfort, attention, or participation.
C. Autism spectrum condition: Differences in responding to sensory input that may affect comfort, attention, or participation. / Sensory processing differences: A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs.
D. Autism spectrum condition: A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs. / Sensory processing differences: Differences in responding to sensory input that may affect comfort, attention, or participation.

0340. Which choice aligns each practice with the correct idea, Sensory processing differences or Comorbidity?

A. Sensory processing differences: Assessing adaptive skills and developmental history alongside intellectual functioning. / Comorbidity: Assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty.
B. Sensory processing differences: Assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty. / Comorbidity: Asking which sensory environments support or hinder participation and adjusting the setting where feasible.
C. Sensory processing differences: Asking which sensory environments support or hinder participation and adjusting the setting where feasible. / Comorbidity: Assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty.
D. Sensory processing differences: Asking which sensory environments support or hinder participation and adjusting the setting where feasible. / Comorbidity: Identifying practical adjustments that permit meaningful participation and checking governing requirements.

0341. Choose the definition pair that correctly explains Autism spectrum condition first and Neurodiversity-affirming practice second.

A. Autism spectrum condition: A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs. / Neurodiversity-affirming practice: A modification to environment, instruction, or procedure that supports equitable access under applicable rules.
B. Autism spectrum condition: An approach that respects neurological variation, avoids unnecessary normalization, and focuses on access and meaningful support. / Neurodiversity-affirming practice: A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs.
C. Autism spectrum condition: A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs. / Neurodiversity-affirming practice: An approach that respects neurological variation, avoids unnecessary normalization, and focuses on access and meaningful support.
D. Autism spectrum condition: A pattern of developmentally inappropriate inattention and/or hyperactivity-impulsivity with impairment across relevant contexts. / Neurodiversity-affirming practice: An approach that respects neurological variation, avoids unnecessary normalization, and focuses on access and meaningful support.

0342. A group facilitator is asked to justify a plan for a student aged 15 in the multidisciplinary case conference. It calls for evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone. Which concept provides the rationale?

A. Adaptive functioning
B. Neurodiversity-affirming practice
C. Intellectual disability
D. Comorbidity

0343. Which description belongs with the term Autism spectrum condition?

A. Differences in responding to sensory input that may affect comfort, attention, or participation.
B. A modification to environment, instruction, or procedure that supports equitable access under applicable rules.
C. A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs.
D. An approach that respects neurological variation, avoids unnecessary normalization, and focuses on access and meaningful support.

0344. Which pair of actions illustrates Specific learning disorder and Comorbidity, respectively?

A. Specific learning disorder: Examining skill history, instruction, and targeted assessment when academic difficulty persists. / Comorbidity: Assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty.
B. Specific learning disorder: Assessing adaptive skills and developmental history alongside intellectual functioning. / Comorbidity: Assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty.
C. Specific learning disorder: Examining skill history, instruction, and targeted assessment when academic difficulty persists. / Comorbidity: Gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions.
D. Specific learning disorder: Assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty. / Comorbidity: Examining skill history, instruction, and targeted assessment when academic difficulty persists.

0345. A supervised trainee is supporting a student aged 9 in the community youth program. The key practice is considering developmental history and functional impact rather than inferring a condition from one isolated behavior. Which course concept is most relevant?

A. Neurodevelopmental condition
B. Neurodiversity-affirming practice
C. Sensory processing differences
D. Adaptive functioning

0346. While supporting a young person aged 13 in the community youth program, a school-based clinician adopts this practice: gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions. Which concept best explains the choice?

A. Specific learning disorder
B. ADHD executive-function profile
C. Adaptive functioning
D. Neurodevelopmental condition

0347. A trainee must explain Neurodiversity-affirming practice. Which answer is accurate?

A. An approach that respects neurological variation, avoids unnecessary normalization, and focuses on access and meaningful support.
B. Conceptual, social, and practical skills used to meet everyday demands across settings.
C. A group of conditions with developmental onset that affect functioning in areas such as learning, communication, or behavior.
D. A pattern of developmentally inappropriate inattention and/or hyperactivity-impulsivity with impairment across relevant contexts.

0348. Which statement shows a sound practice-level distinction between Adaptive functioning and Comorbidity?

A. Adaptive functioning: Considering developmental history and functional impact rather than inferring a condition from one isolated behavior. / Comorbidity: Assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty.
B. Adaptive functioning: Evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone. / Comorbidity: Assessing adaptive skills and developmental history alongside intellectual functioning.
C. Adaptive functioning: Evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone. / Comorbidity: Assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty.
D. Adaptive functioning: Assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty. / Comorbidity: Evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone.

0349. Which pair of actions illustrates Autism spectrum condition and Adaptive functioning, respectively?

A. Autism spectrum condition: Evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone. / Adaptive functioning: Describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation.
B. Autism spectrum condition: Describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation. / Adaptive functioning: Gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions.
C. Autism spectrum condition: Describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation. / Adaptive functioning: Evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone.
D. Autism spectrum condition: Examining skill history, instruction, and targeted assessment when academic difficulty persists. / Adaptive functioning: Evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone.

0350. During work in the community youth program, a consulting counselor identifies this need: assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty. Which idea should guide the response?

A. Intellectual disability
B. Autism spectrum condition
C. Reasonable accommodation
D. Comorbidity

0351. A case coordinator presents a support plan for a student aged 15 at the youth advocacy program. Its central feature is describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation. Which concept should be named?

A. Neurodevelopmental condition
B. Autism spectrum condition
C. Neurodiversity-affirming practice
D. Specific learning disorder

0352. A student confuses Autism spectrum condition with Specific learning disorder. Which explanation most accurately separates them?

A. Autism spectrum condition: Persistent difficulty learning or using academic skills despite appropriate support, evaluated in relation to developmental and educational context. / Specific learning disorder: A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs.
B. Autism spectrum condition: A group of conditions with developmental onset that affect functioning in areas such as learning, communication, or behavior. / Specific learning disorder: Persistent difficulty learning or using academic skills despite appropriate support, evaluated in relation to developmental and educational context.
C. Autism spectrum condition: A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs. / Specific learning disorder: Differences in responding to sensory input that may affect comfort, attention, or participation.
D. Autism spectrum condition: A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs. / Specific learning disorder: Persistent difficulty learning or using academic skills despite appropriate support, evaluated in relation to developmental and educational context.

0353. Which choice aligns each practice with the correct idea, Sensory processing differences or Reasonable accommodation?

A. Sensory processing differences: Asking which sensory environments support or hinder participation and adjusting the setting where feasible. / Reasonable accommodation: Gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions.
B. Sensory processing differences: Evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone. / Reasonable accommodation: Identifying practical adjustments that permit meaningful participation and checking governing requirements.
C. Sensory processing differences: Asking which sensory environments support or hinder participation and adjusting the setting where feasible. / Reasonable accommodation: Identifying practical adjustments that permit meaningful participation and checking governing requirements.
D. Sensory processing differences: Identifying practical adjustments that permit meaningful participation and checking governing requirements. / Reasonable accommodation: Asking which sensory environments support or hinder participation and adjusting the setting where feasible.

0354. A support meeting for a adolescent student includes a clinical supervisor in the youth group. The practice under consideration is assessing adaptive skills and developmental history alongside intellectual functioning. Which concept guides it?

A. Sensory processing differences
B. Intellectual disability
C. Adaptive functioning
D. Neurodiversity-affirming practice

0355. Which choice aligns each practice with the correct idea, ADHD executive-function profile or Specific learning disorder?

A. ADHD executive-function profile: Gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions. / Specific learning disorder: Considering developmental history and functional impact rather than inferring a condition from one isolated behavior.
B. ADHD executive-function profile: Gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions. / Specific learning disorder: Examining skill history, instruction, and targeted assessment when academic difficulty persists.
C. ADHD executive-function profile: Examining skill history, instruction, and targeted assessment when academic difficulty persists. / Specific learning disorder: Gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions.
D. ADHD executive-function profile: Describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation. / Specific learning disorder: Examining skill history, instruction, and targeted assessment when academic difficulty persists.

0356. Choose the practice comparison that best separates Adaptive functioning from Sensory processing differences.

A. Adaptive functioning: Evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone. / Sensory processing differences: Identifying practical adjustments that permit meaningful participation and checking governing requirements.
B. Adaptive functioning: Evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone. / Sensory processing differences: Asking which sensory environments support or hinder participation and adjusting the setting where feasible.
C. Adaptive functioning: Asking which sensory environments support or hinder participation and adjusting the setting where feasible. / Sensory processing differences: Evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone.
D. Adaptive functioning: Building accommodations around the person's needs and goals rather than treating difference itself as a defect. / Sensory processing differences: Asking which sensory environments support or hinder participation and adjusting the setting where feasible.

0357. An interdisciplinary team reviews a student aged 17's case at the student-support meeting. The play therapist recommends building accommodations around the person's needs and goals rather than treating difference itself as a defect. Which course concept best fits?

A. Adaptive functioning
B. Intellectual disability
C. Specific learning disorder
D. Neurodiversity-affirming practice

0358. During work in the supervision meeting, a school counselor identifies this need: assessing adaptive skills and developmental history alongside intellectual functioning. Which idea should guide the response?

A. Autism spectrum condition
B. Reasonable accommodation
C. Intellectual disability
D. Neurodiversity-affirming practice

0359. A school-age child's service team meets in the family resource center. The parent educator recommends a change involving gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions. Which idea best explains it?

A. Sensory processing differences
B. Neurodevelopmental condition
C. Intellectual disability
D. ADHD executive-function profile

0360. Identify the most precise label for this idea: Persistent difficulty learning or using academic skills despite appropriate support, evaluated in relation to developmental and educational context.

A. Intellectual disability
B. Specific learning disorder
C. Adaptive functioning
D. Neurodevelopmental condition

0361. A case discussion concerns a preadolescent child and a school-based clinician in the multidisciplinary case conference. The practitioner is considering examining skill history, instruction, and targeted assessment when academic difficulty persists. Which principle is involved?

A. Specific learning disorder
B. Sensory processing differences
C. Comorbidity
D. Intellectual disability

0362. In the school consultation, a school counselor explains why a middle-school student would benefit from identifying practical adjustments that permit meaningful participation and checking governing requirements. Which course concept underpins the explanation?

A. Adaptive functioning
B. Comorbidity
C. Reasonable accommodation
D. Neurodiversity-affirming practice

0363. Which choice aligns each practice with the correct idea, Neurodiversity-affirming practice or Reasonable accommodation?

A. Neurodiversity-affirming practice: Identifying practical adjustments that permit meaningful participation and checking governing requirements. / Reasonable accommodation: Building accommodations around the person's needs and goals rather than treating difference itself as a defect.
B. Neurodiversity-affirming practice: Building accommodations around the person's needs and goals rather than treating difference itself as a defect. / Reasonable accommodation: Identifying practical adjustments that permit meaningful participation and checking governing requirements.
C. Neurodiversity-affirming practice: Building accommodations around the person's needs and goals rather than treating difference itself as a defect. / Reasonable accommodation: Evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone.
D. Neurodiversity-affirming practice: Asking which sensory environments support or hinder participation and adjusting the setting where feasible. / Reasonable accommodation: Identifying practical adjustments that permit meaningful participation and checking governing requirements.

0364. A case conference asks for a distinction between ADHD executive-function profile and Neurodiversity-affirming practice. Which answer is sound?

A. ADHD executive-function profile: An approach that respects neurological variation, avoids unnecessary normalization, and focuses on access and meaningful support. / Neurodiversity-affirming practice: A pattern of developmentally inappropriate inattention and/or hyperactivity-impulsivity with impairment across relevant contexts.
B. ADHD executive-function profile: A pattern of developmentally inappropriate inattention and/or hyperactivity-impulsivity with impairment across relevant contexts. / Neurodiversity-affirming practice: A condition characterized by limitations in intellectual functioning and adaptive functioning with developmental onset.
C. ADHD executive-function profile: A pattern of developmentally inappropriate inattention and/or hyperactivity-impulsivity with impairment across relevant contexts. / Neurodiversity-affirming practice: An approach that respects neurological variation, avoids unnecessary normalization, and focuses on access and meaningful support.
D. ADHD executive-function profile: A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs. / Neurodiversity-affirming practice: An approach that respects neurological variation, avoids unnecessary normalization, and focuses on access and meaningful support.

0365. A trainee must distinguish how Autism spectrum condition and Comorbidity guide practice. Which comparison is accurate?

A. Autism spectrum condition: Assessing adaptive skills and developmental history alongside intellectual functioning. / Comorbidity: Assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty.
B. Autism spectrum condition: Describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation. / Comorbidity: Assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty.
C. Autism spectrum condition: Assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty. / Comorbidity: Describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation.
D. Autism spectrum condition: Describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation. / Comorbidity: Considering developmental history and functional impact rather than inferring a condition from one isolated behavior.

0366. An interdisciplinary team reviews a child aged 14's case at the student wellness team. The behavior specialist recommends examining skill history, instruction, and targeted assessment when academic difficulty persists. Which course concept best fits?

A. Specific learning disorder
B. Adaptive functioning
C. Autism spectrum condition
D. Neurodevelopmental condition

0367. A young person aged 18 and a supervised trainee are reviewing goals in the family resource center. The agreed action is evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone. Which principle best accounts for it?

A. Intellectual disability
B. Adaptive functioning
C. Sensory processing differences
D. Neurodevelopmental condition

0368. Which statement shows a sound practice-level distinction between Sensory processing differences and Neurodiversity-affirming practice?

A. Sensory processing differences: Examining skill history, instruction, and targeted assessment when academic difficulty persists. / Neurodiversity-affirming practice: Building accommodations around the person's needs and goals rather than treating difference itself as a defect.
B. Sensory processing differences: Asking which sensory environments support or hinder participation and adjusting the setting where feasible. / Neurodiversity-affirming practice: Building accommodations around the person's needs and goals rather than treating difference itself as a defect.
C. Sensory processing differences: Asking which sensory environments support or hinder participation and adjusting the setting where feasible. / Neurodiversity-affirming practice: Gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions.
D. Sensory processing differences: Building accommodations around the person's needs and goals rather than treating difference itself as a defect. / Neurodiversity-affirming practice: Asking which sensory environments support or hinder participation and adjusting the setting where feasible.

0369. Choose the definition pair that correctly explains Neurodevelopmental condition first and Adaptive functioning second.

A. Neurodevelopmental condition: A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs. / Adaptive functioning: Conceptual, social, and practical skills used to meet everyday demands across settings.
B. Neurodevelopmental condition: Conceptual, social, and practical skills used to meet everyday demands across settings. / Adaptive functioning: A group of conditions with developmental onset that affect functioning in areas such as learning, communication, or behavior.
C. Neurodevelopmental condition: A group of conditions with developmental onset that affect functioning in areas such as learning, communication, or behavior. / Adaptive functioning: Conceptual, social, and practical skills used to meet everyday demands across settings.
D. Neurodevelopmental condition: A group of conditions with developmental onset that affect functioning in areas such as learning, communication, or behavior. / Adaptive functioning: Co-occurrence of two or more conditions or clinically significant problems in one person.

0370. A student confuses Autism spectrum condition with Adaptive functioning. Which explanation most accurately separates them?

A. Autism spectrum condition: A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs. / Adaptive functioning: Conceptual, social, and practical skills used to meet everyday demands across settings.
B. Autism spectrum condition: Conceptual, social, and practical skills used to meet everyday demands across settings. / Adaptive functioning: A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs.
C. Autism spectrum condition: Persistent difficulty learning or using academic skills despite appropriate support, evaluated in relation to developmental and educational context. / Adaptive functioning: Conceptual, social, and practical skills used to meet everyday demands across settings.
D. Autism spectrum condition: A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs. / Adaptive functioning: A pattern of developmentally inappropriate inattention and/or hyperactivity-impulsivity with impairment across relevant contexts.

0371. A teacher and counselor is asked to justify a plan for a client in early adolescence in the student-support meeting. It calls for examining skill history, instruction, and targeted assessment when academic difficulty persists. Which concept provides the rationale?

A. ADHD executive-function profile
B. Reasonable accommodation
C. Comorbidity
D. Specific learning disorder

0372. Which option preserves the correct meaning of both Specific learning disorder and Adaptive functioning?

A. Specific learning disorder: Conceptual, social, and practical skills used to meet everyday demands across settings. / Adaptive functioning: Persistent difficulty learning or using academic skills despite appropriate support, evaluated in relation to developmental and educational context.
B. Specific learning disorder: Differences in responding to sensory input that may affect comfort, attention, or participation. / Adaptive functioning: Conceptual, social, and practical skills used to meet everyday demands across settings.
C. Specific learning disorder: Persistent difficulty learning or using academic skills despite appropriate support, evaluated in relation to developmental and educational context. / Adaptive functioning: A pattern of developmentally inappropriate inattention and/or hyperactivity-impulsivity with impairment across relevant contexts.
D. Specific learning disorder: Persistent difficulty learning or using academic skills despite appropriate support, evaluated in relation to developmental and educational context. / Adaptive functioning: Conceptual, social, and practical skills used to meet everyday demands across settings.

0373. In a professional consultation about a client in late adolescence, the consultant describes this response in the community mental-health service: identifying practical adjustments that permit meaningful participation and checking governing requirements. Which term is most apt?

A. Intellectual disability
B. ADHD executive-function profile
C. Specific learning disorder
D. Reasonable accommodation

0374. A supervisor asks for an applied contrast between Sensory processing differences and Comorbidity. Which option fits?

A. Sensory processing differences: Asking which sensory environments support or hinder participation and adjusting the setting where feasible. / Comorbidity: Identifying practical adjustments that permit meaningful participation and checking governing requirements.
B. Sensory processing differences: Assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty. / Comorbidity: Asking which sensory environments support or hinder participation and adjusting the setting where feasible.
C. Sensory processing differences: Asking which sensory environments support or hinder participation and adjusting the setting where feasible. / Comorbidity: Assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty.
D. Sensory processing differences: Assessing adaptive skills and developmental history alongside intellectual functioning. / Comorbidity: Assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty.

0375. How are Neurodevelopmental condition and Comorbidity most accurately differentiated in this curriculum?

A. Neurodevelopmental condition: Co-occurrence of two or more conditions or clinically significant problems in one person. / Comorbidity: A group of conditions with developmental onset that affect functioning in areas such as learning, communication, or behavior.
B. Neurodevelopmental condition: A group of conditions with developmental onset that affect functioning in areas such as learning, communication, or behavior. / Comorbidity: Co-occurrence of two or more conditions or clinically significant problems in one person.
C. Neurodevelopmental condition: A modification to environment, instruction, or procedure that supports equitable access under applicable rules. / Comorbidity: Co-occurrence of two or more conditions or clinically significant problems in one person.
D. Neurodevelopmental condition: A group of conditions with developmental onset that affect functioning in areas such as learning, communication, or behavior. / Comorbidity: Persistent difficulty learning or using academic skills despite appropriate support, evaluated in relation to developmental and educational context.

0376. In a supervision quiz, how should Intellectual disability be distinguished from Sensory processing differences?

A. Intellectual disability: Persistent difficulty learning or using academic skills despite appropriate support, evaluated in relation to developmental and educational context. / Sensory processing differences: Differences in responding to sensory input that may affect comfort, attention, or participation.
B. Intellectual disability: Differences in responding to sensory input that may affect comfort, attention, or participation. / Sensory processing differences: A condition characterized by limitations in intellectual functioning and adaptive functioning with developmental onset.
C. Intellectual disability: A condition characterized by limitations in intellectual functioning and adaptive functioning with developmental onset. / Sensory processing differences: A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs.
D. Intellectual disability: A condition characterized by limitations in intellectual functioning and adaptive functioning with developmental onset. / Sensory processing differences: Differences in responding to sensory input that may affect comfort, attention, or participation.

0377. Which named construct is captured by this account? A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs.

A. Neurodevelopmental condition
B. Autism spectrum condition
C. Comorbidity
D. Intellectual disability

0378. In a supervision quiz, how should Autism spectrum condition be distinguished from Adaptive functioning?

A. Autism spectrum condition: A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs. / Adaptive functioning: A pattern of developmentally inappropriate inattention and/or hyperactivity-impulsivity with impairment across relevant contexts.
B. Autism spectrum condition: Conceptual, social, and practical skills used to meet everyday demands across settings. / Adaptive functioning: A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs.
C. Autism spectrum condition: Persistent difficulty learning or using academic skills despite appropriate support, evaluated in relation to developmental and educational context. / Adaptive functioning: Conceptual, social, and practical skills used to meet everyday demands across settings.
D. Autism spectrum condition: A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs. / Adaptive functioning: Conceptual, social, and practical skills used to meet everyday demands across settings.

0379. Which applied comparison correctly identifies what belongs to ADHD executive-function profile versus Sensory processing differences?

A. ADHD executive-function profile: Gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions. / Sensory processing differences: Asking which sensory environments support or hinder participation and adjusting the setting where feasible.
B. ADHD executive-function profile: Gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions. / Sensory processing differences: Examining skill history, instruction, and targeted assessment when academic difficulty persists.
C. ADHD executive-function profile: Asking which sensory environments support or hinder participation and adjusting the setting where feasible. / Sensory processing differences: Gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions.
D. ADHD executive-function profile: Describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation. / Sensory processing differences: Asking which sensory environments support or hinder participation and adjusting the setting where feasible.

0380. A young person aged 13's service team meets in the student-support meeting. The parent educator recommends a change involving asking which sensory environments support or hinder participation and adjusting the setting where feasible. Which idea best explains it?

A. Sensory processing differences
B. Intellectual disability
C. Autism spectrum condition
D. Specific learning disorder

0381. A teacher and counselor is asked to justify a plan for a child aged 11 in the community service agency. It calls for assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty. Which concept provides the rationale?

A. ADHD executive-function profile
B. Comorbidity
C. Sensory processing differences
D. Reasonable accommodation

0382. Choose the practice comparison that best separates Adaptive functioning from Neurodiversity-affirming practice.

A. Adaptive functioning: Building accommodations around the person's needs and goals rather than treating difference itself as a defect. / Neurodiversity-affirming practice: Evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone.
B. Adaptive functioning: Evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone. / Neurodiversity-affirming practice: Building accommodations around the person's needs and goals rather than treating difference itself as a defect.
C. Adaptive functioning: Evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone. / Neurodiversity-affirming practice: Asking which sensory environments support or hinder participation and adjusting the setting where feasible.
D. Adaptive functioning: Identifying practical adjustments that permit meaningful participation and checking governing requirements. / Neurodiversity-affirming practice: Building accommodations around the person's needs and goals rather than treating difference itself as a defect.

0383. Choose the response that best puts Comorbidity into practice.

A. Assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty.
B. Considering developmental history and functional impact rather than inferring a condition from one isolated behavior.
C. Assessing adaptive skills and developmental history alongside intellectual functioning.
D. Gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions.

0384. Which option pairs the definitions of Specific learning disorder and Reasonable accommodation correctly, in that order?

A. Specific learning disorder: A modification to environment, instruction, or procedure that supports equitable access under applicable rules. / Reasonable accommodation: Persistent difficulty learning or using academic skills despite appropriate support, evaluated in relation to developmental and educational context.
B. Specific learning disorder: Differences in responding to sensory input that may affect comfort, attention, or participation. / Reasonable accommodation: A modification to environment, instruction, or procedure that supports equitable access under applicable rules.
C. Specific learning disorder: Persistent difficulty learning or using academic skills despite appropriate support, evaluated in relation to developmental and educational context. / Reasonable accommodation: A modification to environment, instruction, or procedure that supports equitable access under applicable rules.
D. Specific learning disorder: Persistent difficulty learning or using academic skills despite appropriate support, evaluated in relation to developmental and educational context. / Reasonable accommodation: A pattern of developmentally inappropriate inattention and/or hyperactivity-impulsivity with impairment across relevant contexts.

0385. A doctoral student reads the following description. Which concept does it define? A group of conditions with developmental onset that affect functioning in areas such as learning, communication, or behavior.

A. Intellectual disability
B. Sensory processing differences
C. Specific learning disorder
D. Neurodevelopmental condition

0386. Which option pairs the definitions of ADHD executive-function profile and Specific learning disorder correctly, in that order?

A. ADHD executive-function profile: Persistent difficulty learning or using academic skills despite appropriate support, evaluated in relation to developmental and educational context. / Specific learning disorder: A pattern of developmentally inappropriate inattention and/or hyperactivity-impulsivity with impairment across relevant contexts.
B. ADHD executive-function profile: A pattern of developmentally inappropriate inattention and/or hyperactivity-impulsivity with impairment across relevant contexts. / Specific learning disorder: Persistent difficulty learning or using academic skills despite appropriate support, evaluated in relation to developmental and educational context.
C. ADHD executive-function profile: A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs. / Specific learning disorder: Persistent difficulty learning or using academic skills despite appropriate support, evaluated in relation to developmental and educational context.
D. ADHD executive-function profile: A pattern of developmentally inappropriate inattention and/or hyperactivity-impulsivity with impairment across relevant contexts. / Specific learning disorder: A group of conditions with developmental onset that affect functioning in areas such as learning, communication, or behavior.

0387. A behavior specialist reviews a plan for a young person in the parent meeting. The plan emphasizes asking which sensory environments support or hinder participation and adjusting the setting where feasible. Which course idea does this reflect?

A. ADHD executive-function profile
B. Sensory processing differences
C. Comorbidity
D. Intellectual disability

0388. Which option pairs the definitions of Autism spectrum condition and Adaptive functioning correctly, in that order?

A. Autism spectrum condition: A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs. / Adaptive functioning: Conceptual, social, and practical skills used to meet everyday demands across settings.
B. Autism spectrum condition: Persistent difficulty learning or using academic skills despite appropriate support, evaluated in relation to developmental and educational context. / Adaptive functioning: Conceptual, social, and practical skills used to meet everyday demands across settings.
C. Autism spectrum condition: Conceptual, social, and practical skills used to meet everyday demands across settings. / Adaptive functioning: A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs.
D. Autism spectrum condition: A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs. / Adaptive functioning: A pattern of developmentally inappropriate inattention and/or hyperactivity-impulsivity with impairment across relevant contexts.

0389. Choose the response that best puts Sensory processing differences into practice.

A. Identifying practical adjustments that permit meaningful participation and checking governing requirements.
B. Gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions.
C. Assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty.
D. Asking which sensory environments support or hinder participation and adjusting the setting where feasible.

0390. A doctoral student reads the following description. Which concept does it define? Differences in responding to sensory input that may affect comfort, attention, or participation.

A. Sensory processing differences
B. Neurodiversity-affirming practice
C. Autism spectrum condition
D. ADHD executive-function profile

0391. Which statement accurately contrasts the course concepts Autism spectrum condition and Neurodiversity-affirming practice?

A. Autism spectrum condition: A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs. / Neurodiversity-affirming practice: An approach that respects neurological variation, avoids unnecessary normalization, and focuses on access and meaningful support.
B. Autism spectrum condition: A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs. / Neurodiversity-affirming practice: A modification to environment, instruction, or procedure that supports equitable access under applicable rules.
C. Autism spectrum condition: An approach that respects neurological variation, avoids unnecessary normalization, and focuses on access and meaningful support. / Neurodiversity-affirming practice: A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs.
D. Autism spectrum condition: A pattern of developmentally inappropriate inattention and/or hyperactivity-impulsivity with impairment across relevant contexts. / Neurodiversity-affirming practice: An approach that respects neurological variation, avoids unnecessary normalization, and focuses on access and meaningful support.

0392. Which pair of actions illustrates ADHD executive-function profile and Intellectual disability, respectively?

A. ADHD executive-function profile: Gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions. / Intellectual disability: Assessing adaptive skills and developmental history alongside intellectual functioning.
B. ADHD executive-function profile: Assessing adaptive skills and developmental history alongside intellectual functioning. / Intellectual disability: Gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions.
C. ADHD executive-function profile: Evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone. / Intellectual disability: Assessing adaptive skills and developmental history alongside intellectual functioning.
D. ADHD executive-function profile: Gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions. / Intellectual disability: Assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty.

0393. A student confuses Sensory processing differences with Comorbidity. Which explanation most accurately separates them?

A. Sensory processing differences: Differences in responding to sensory input that may affect comfort, attention, or participation. / Comorbidity: Co-occurrence of two or more conditions or clinically significant problems in one person.
B. Sensory processing differences: A condition characterized by limitations in intellectual functioning and adaptive functioning with developmental onset. / Comorbidity: Co-occurrence of two or more conditions or clinically significant problems in one person.
C. Sensory processing differences: Co-occurrence of two or more conditions or clinically significant problems in one person. / Comorbidity: Differences in responding to sensory input that may affect comfort, attention, or participation.
D. Sensory processing differences: Differences in responding to sensory input that may affect comfort, attention, or participation. / Comorbidity: A modification to environment, instruction, or procedure that supports equitable access under applicable rules.

0394. A case conference asks for a distinction between Neurodevelopmental condition and Intellectual disability. Which answer is sound?

A. Neurodevelopmental condition: A group of conditions with developmental onset that affect functioning in areas such as learning, communication, or behavior. / Intellectual disability: Co-occurrence of two or more conditions or clinically significant problems in one person.
B. Neurodevelopmental condition: Differences in responding to sensory input that may affect comfort, attention, or participation. / Intellectual disability: A condition characterized by limitations in intellectual functioning and adaptive functioning with developmental onset.
C. Neurodevelopmental condition: A condition characterized by limitations in intellectual functioning and adaptive functioning with developmental onset. / Intellectual disability: A group of conditions with developmental onset that affect functioning in areas such as learning, communication, or behavior.
D. Neurodevelopmental condition: A group of conditions with developmental onset that affect functioning in areas such as learning, communication, or behavior. / Intellectual disability: A condition characterized by limitations in intellectual functioning and adaptive functioning with developmental onset.

0395. Which professional action most closely applies Sensory processing differences?

A. Examining skill history, instruction, and targeted assessment when academic difficulty persists.
B. Evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone.
C. Asking which sensory environments support or hinder participation and adjusting the setting where feasible.
D. Assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty.

0396. During service review in the multidisciplinary case conference, a research trainee describes asking which sensory environments support or hinder participation and adjusting the setting where feasible. for a young person aged 18. Which course idea is most applicable?

A. Adaptive functioning
B. Sensory processing differences
C. Reasonable accommodation
D. Neurodevelopmental condition

0397. Which statement accurately contrasts the course concepts Intellectual disability and Sensory processing differences?

A. Intellectual disability: A condition characterized by limitations in intellectual functioning and adaptive functioning with developmental onset. / Sensory processing differences: A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs.
B. Intellectual disability: Differences in responding to sensory input that may affect comfort, attention, or participation. / Sensory processing differences: A condition characterized by limitations in intellectual functioning and adaptive functioning with developmental onset.
C. Intellectual disability: Persistent difficulty learning or using academic skills despite appropriate support, evaluated in relation to developmental and educational context. / Sensory processing differences: Differences in responding to sensory input that may affect comfort, attention, or participation.
D. Intellectual disability: A condition characterized by limitations in intellectual functioning and adaptive functioning with developmental onset. / Sensory processing differences: Differences in responding to sensory input that may affect comfort, attention, or participation.

0398. At the after-school program, a program coordinator reviews whether a plan for a school-age child is appropriate. The relevant practice is assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty. Which concept is tested?

A. Intellectual disability
B. ADHD executive-function profile
C. Comorbidity
D. Sensory processing differences

0399. How should a practitioner distinguish the applications of Intellectual disability and Adaptive functioning?

A. Intellectual disability: Assessing adaptive skills and developmental history alongside intellectual functioning. / Adaptive functioning: Building accommodations around the person’s needs and goals rather than treating difference itself as a defect.
B. Intellectual disability: Evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone. / Adaptive functioning: Assessing adaptive skills and developmental history alongside intellectual functioning.
C. Intellectual disability: Assessing adaptive skills and developmental history alongside intellectual functioning. / Adaptive functioning: Evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone.
D. Intellectual disability: Assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty. / Adaptive functioning: Evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone.

0400. Which paired example correctly applies Specific learning disorder first and Sensory processing differences second?

A. Specific learning disorder: Asking which sensory environments support or hinder participation and adjusting the setting where feasible. / Sensory processing differences: Examining skill history, instruction, and targeted assessment when academic difficulty persists.
B. Specific learning disorder: Assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty. / Sensory processing differences: Asking which sensory environments support or hinder participation and adjusting the setting where feasible.
C. Specific learning disorder: Examining skill history, instruction, and targeted assessment when academic difficulty persists. / Sensory processing differences: Building accommodations around the person’s needs and goals rather than treating difference itself as a defect.
D. Specific learning disorder: Examining skill history, instruction, and targeted assessment when academic difficulty persists. / Sensory processing differences: Asking which sensory environments support or hinder participation and adjusting the setting where feasible.

0401. Select the best explanation of Autism spectrum condition.

A. A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs.
B. Co-occurrence of two or more conditions or clinically significant problems in one person.
C. A group of conditions with developmental onset that affect functioning in areas such as learning, communication, or behavior.
D. A condition characterized by limitations in intellectual functioning and adaptive functioning with developmental onset.

0402. Choose the response that best puts Neurodiversity-affirming practice into practice.

A. Building accommodations around the person’s needs and goals rather than treating difference itself as a defect.
B. Assessing adaptive skills and developmental history alongside intellectual functioning.
C. Considering developmental history and functional impact rather than inferring a condition from one isolated behavior.
D. Identifying practical adjustments that permit meaningful participation and checking governing requirements.

0403. A supervisor asks for an applied contrast between Autism spectrum condition and Specific learning disorder. Which option fits?

A. Autism spectrum condition: Examining skill history, instruction, and targeted assessment when academic difficulty persists. / Specific learning disorder: Describing an individual’s strengths, communication profile, sensory needs, and support needs rather than assuming one presentation.
B. Autism spectrum condition: Describing an individual’s strengths, communication profile, sensory needs, and support needs rather than assuming one presentation. / Specific learning disorder: Examining skill history, instruction, and targeted assessment when academic difficulty persists.
C. Autism spectrum condition: Considering developmental history and functional impact rather than inferring a condition from one isolated behavior. / Specific learning disorder: Examining skill history, instruction, and targeted assessment when academic difficulty persists.
D. Autism spectrum condition: Describing an individual’s strengths, communication profile, sensory needs, and support needs rather than assuming one presentation. / Specific learning disorder: Asking which sensory environments support or hinder participation and adjusting the setting where feasible.

0404. A supervisor asks for an applied contrast between Autism spectrum condition and Adaptive functioning. Which option fits?

A. Autism spectrum condition: Describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation. / Adaptive functioning: Evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone.
B. Autism spectrum condition: Examining skill history, instruction, and targeted assessment when academic difficulty persists. / Adaptive functioning: Evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone.
C. Autism spectrum condition: Describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation. / Adaptive functioning: Gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions.
D. Autism spectrum condition: Evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone. / Adaptive functioning: Describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation.

0405. In the telehealth session, a group facilitator describes the most appropriate support for a student aged 12 as asking which sensory environments support or hinder participation and adjusting the setting where feasible. Which framework is being applied?

A. ADHD executive-function profile
B. Intellectual disability
C. Neurodiversity-affirming practice
D. Sensory processing differences

0406. A trainee must distinguish how Comorbidity and Reasonable accommodation guide practice. Which comparison is accurate?

A. Comorbidity: Assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty. / Reasonable accommodation: Examining skill history, instruction, and targeted assessment when academic difficulty persists.
B. Comorbidity: Building accommodations around the person's needs and goals rather than treating difference itself as a defect. / Reasonable accommodation: Identifying practical adjustments that permit meaningful participation and checking governing requirements.
C. Comorbidity: Assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty. / Reasonable accommodation: Identifying practical adjustments that permit meaningful participation and checking governing requirements.
D. Comorbidity: Identifying practical adjustments that permit meaningful participation and checking governing requirements. / Reasonable accommodation: Assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty.

0407. How are Adaptive functioning and Neurodiversity-affirming practice most accurately differentiated in this curriculum?

A. Adaptive functioning: Conceptual, social, and practical skills used to meet everyday demands across settings. / Neurodiversity-affirming practice: Differences in responding to sensory input that may affect comfort, attention, or participation.
B. Adaptive functioning: An approach that respects neurological variation, avoids unnecessary normalization, and focuses on access and meaningful support. / Neurodiversity-affirming practice: Conceptual, social, and practical skills used to meet everyday demands across settings.
C. Adaptive functioning: Conceptual, social, and practical skills used to meet everyday demands across settings. / Neurodiversity-affirming practice: An approach that respects neurological variation, avoids unnecessary normalization, and focuses on access and meaningful support.
D. Adaptive functioning: A modification to environment, instruction, or procedure that supports equitable access under applicable rules. / Neurodiversity-affirming practice: An approach that respects neurological variation, avoids unnecessary normalization, and focuses on access and meaningful support.

0408. Which option preserves the correct meaning of both Specific learning disorder and Comorbidity?

A. Specific learning disorder: Persistent difficulty learning or using academic skills despite appropriate support, evaluated in relation to developmental and educational context. / Comorbidity: A pattern of developmentally inappropriate inattention and/or hyperactivity-impulsivity with impairment across relevant contexts.
B. Specific learning disorder: A condition characterized by limitations in intellectual functioning and adaptive functioning with developmental onset. / Comorbidity: Co-occurrence of two or more conditions or clinically significant problems in one person.
C. Specific learning disorder: Persistent difficulty learning or using academic skills despite appropriate support, evaluated in relation to developmental and educational context. / Comorbidity: Co-occurrence of two or more conditions or clinically significant problems in one person.
D. Specific learning disorder: Co-occurrence of two or more conditions or clinically significant problems in one person. / Comorbidity: Persistent difficulty learning or using academic skills despite appropriate support, evaluated in relation to developmental and educational context.

0409. A counselor reviews a plan for a client in late adolescence in the child guidance clinic. The plan emphasizes describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation. Which course idea does this reflect?

A. Neurodevelopmental condition
B. Reasonable accommodation
C. Autism spectrum condition
D. Specific learning disorder

0410. A team must select a support approach for a student aged 17 at the outpatient clinic. The school-based clinician recommends assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty. Which idea is most relevant?

A. Neurodiversity-affirming practice
B. Reasonable accommodation
C. Specific learning disorder
D. Comorbidity

0411. In the caregiver consultation, a school-based clinician is considering this approach for a child aged 6: building accommodations around the person's needs and goals rather than treating difference itself as a defect. Which framework does it represent?

A. Intellectual disability
B. ADHD executive-function profile
C. Neurodiversity-affirming practice
D. Specific learning disorder

0412. A trainee must choose a practice that exemplifies Reasonable accommodation. Which action is the best fit?

A. Examining skill history, instruction, and targeted assessment when academic difficulty persists.
B. Identifying practical adjustments that permit meaningful participation and checking governing requirements.
C. Evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone.
D. Assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty.

0413. Choose the term that matches this definition: An approach that respects neurological variation, avoids unnecessary normalization, and focuses on access and meaningful support.

A. Specific learning disorder
B. Reasonable accommodation
C. Neurodiversity-affirming practice
D. Adaptive functioning

0414. For a young person in the behavior-support review, a counselor makes this practice the immediate priority: gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions. Which concept fits best?

A. Reasonable accommodation
B. ADHD executive-function profile
C. Adaptive functioning
D. Sensory processing differences

0415. Which comparison correctly distinguishes ADHD executive-function profile from Specific learning disorder?

A. ADHD executive-function profile: A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs. / Specific learning disorder: Persistent difficulty learning or using academic skills despite appropriate support, evaluated in relation to developmental and educational context.
B. ADHD executive-function profile: A pattern of developmentally inappropriate inattention and/or hyperactivity-impulsivity with impairment across relevant contexts. / Specific learning disorder: Persistent difficulty learning or using academic skills despite appropriate support, evaluated in relation to developmental and educational context.
C. ADHD executive-function profile: A pattern of developmentally inappropriate inattention and/or hyperactivity-impulsivity with impairment across relevant contexts. / Specific learning disorder: A group of conditions with developmental onset that affect functioning in areas such as learning, communication, or behavior.
D. ADHD executive-function profile: Persistent difficulty learning or using academic skills despite appropriate support, evaluated in relation to developmental and educational context. / Specific learning disorder: A pattern of developmentally inappropriate inattention and/or hyperactivity-impulsivity with impairment across relevant contexts.

0416. In the community mental-health service, a consulting counselor describes the most appropriate support for a young person aged 18 as building accommodations around the person's needs and goals rather than treating difference itself as a defect. Which framework is being applied?

A. Intellectual disability
B. Comorbidity
C. Sensory processing differences
D. Neurodiversity-affirming practice

0417. A trainee must distinguish how ADHD executive-function profile and Adaptive functioning guide practice. Which comparison is accurate?

A. ADHD executive-function profile: Gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions. / Adaptive functioning: Evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone.
B. ADHD executive-function profile: Gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions. / Adaptive functioning: Examining skill history, instruction, and targeted assessment when academic difficulty persists.
C. ADHD executive-function profile: Evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone. / Adaptive functioning: Gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions.
D. ADHD executive-function profile: Considering developmental history and functional impact rather than inferring a condition from one isolated behavior. / Adaptive functioning: Evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone.

0418. A assessment clinician is preparing a follow-up plan for a young person aged 18 in the child guidance clinic. The plan calls for considering developmental history and functional impact rather than inferring a condition from one isolated behavior. Which concept names this approach?

A. Sensory processing differences
B. Adaptive functioning
C. Neurodevelopmental condition
D. Specific learning disorder

0419. A case conference asks for a distinction between ADHD executive-function profile and Comorbidity. Which answer is sound?

A. ADHD executive-function profile: A pattern of developmentally inappropriate inattention and/or hyperactivity-impulsivity with impairment across relevant contexts. / Comorbidity: Co-occurrence of two or more conditions or clinically significant problems in one person.
B. ADHD executive-function profile: A pattern of developmentally inappropriate inattention and/or hyperactivity-impulsivity with impairment across relevant contexts. / Comorbidity: Persistent difficulty learning or using academic skills despite appropriate support, evaluated in relation to developmental and educational context.
C. ADHD executive-function profile: Conceptual, social, and practical skills used to meet everyday demands across settings. / Comorbidity: Co-occurrence of two or more conditions or clinically significant problems in one person.
D. ADHD executive-function profile: Co-occurrence of two or more conditions or clinically significant problems in one person. / Comorbidity: A pattern of developmentally inappropriate inattention and/or hyperactivity-impulsivity with impairment across relevant contexts.

0420. In a supervision quiz, how should ADHD executive-function profile be distinguished from Adaptive functioning?

A. ADHD executive-function profile: A pattern of developmentally inappropriate inattention and/or hyperactivity-impulsivity with impairment across relevant contexts. / Adaptive functioning: Persistent difficulty learning or using academic skills despite appropriate support, evaluated in relation to developmental and educational context.
B. ADHD executive-function profile: Conceptual, social, and practical skills used to meet everyday demands across settings. / Adaptive functioning: A pattern of developmentally inappropriate inattention and/or hyperactivity-impulsivity with impairment across relevant contexts.
C. ADHD executive-function profile: A pattern of developmentally inappropriate inattention and/or hyperactivity-impulsivity with impairment across relevant contexts. / Adaptive functioning: Conceptual, social, and practical skills used to meet everyday demands across settings.
D. ADHD executive-function profile: A group of conditions with developmental onset that affect functioning in areas such as learning, communication, or behavior. / Adaptive functioning: Conceptual, social, and practical skills used to meet everyday demands across settings.

0421. Which course concept is defined as follows: A pattern of developmentally inappropriate inattention and/or hyperactivity-impulsivity with impairment across relevant contexts.

A. Sensory processing differences
B. Specific learning disorder
C. Adaptive functioning
D. ADHD executive-function profile

0422. In a supervision quiz, how should Intellectual disability be distinguished from Neurodiversity-affirming practice?

A. Intellectual disability: Conceptual, social, and practical skills used to meet everyday demands across settings. / Neurodiversity-affirming practice: An approach that respects neurological variation, avoids unnecessary normalization, and focuses on access and meaningful support.
B. Intellectual disability: A condition characterized by limitations in intellectual functioning and adaptive functioning with developmental onset. / Neurodiversity-affirming practice: A pattern of developmentally inappropriate inattention and/or hyperactivity-impulsivity with impairment across relevant contexts.
C. Intellectual disability: An approach that respects neurological variation, avoids unnecessary normalization, and focuses on access and meaningful support. / Neurodiversity-affirming practice: A condition characterized by limitations in intellectual functioning and adaptive functioning with developmental onset.
D. Intellectual disability: A condition characterized by limitations in intellectual functioning and adaptive functioning with developmental onset. / Neurodiversity-affirming practice: An approach that respects neurological variation, avoids unnecessary normalization, and focuses on access and meaningful support.

0423. A trainee must choose a practice that exemplifies Comorbidity. Which action is the best fit?

A. Assessing adaptive skills and developmental history alongside intellectual functioning.
B. Assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty.
C. Gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions.
D. Building accommodations around the person's needs and goals rather than treating difference itself as a defect.

0424. While supporting a child aged 6 in the school consultation, a caregiver working with a counselor adopts this practice: describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation. Which concept best explains the choice?

A. Adaptive functioning
B. ADHD executive-function profile
C. Autism spectrum condition
D. Intellectual disability

0425. How are ADHD executive-function profile and Comorbidity most accurately differentiated in this curriculum?

A. ADHD executive-function profile: A pattern of developmentally inappropriate inattention and/or hyperactivity-impulsivity with impairment across relevant contexts. / Comorbidity: Persistent difficulty learning or using academic skills despite appropriate support, evaluated in relation to developmental and educational context.
B. ADHD executive-function profile: A pattern of developmentally inappropriate inattention and/or hyperactivity-impulsivity with impairment across relevant contexts. / Comorbidity: Co-occurrence of two or more conditions or clinically significant problems in one person.
C. ADHD executive-function profile: Co-occurrence of two or more conditions or clinically significant problems in one person. / Comorbidity: A pattern of developmentally inappropriate inattention and/or hyperactivity-impulsivity with impairment across relevant contexts.
D. ADHD executive-function profile: Conceptual, social, and practical skills used to meet everyday demands across settings. / Comorbidity: Co-occurrence of two or more conditions or clinically significant problems in one person.

0426. Consider a client in early adolescence receiving help in the child guidance clinic. The school counselor focuses on assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty. Which term best describes the guiding idea?

A. Sensory processing differences
B. Autism spectrum condition
C. Specific learning disorder
D. Comorbidity

0427. In the school consultation, the agreed focus for a research trainee working with a student aged 12 is considering developmental history and functional impact rather than inferring a condition from one isolated behavior. Which concept names this focus?

A. Comorbidity
B. Neurodiversity-affirming practice
C. Adaptive functioning
D. Neurodevelopmental condition

0428. In a supervision quiz, how should Sensory processing differences be distinguished from Reasonable accommodation?

A. Sensory processing differences: Differences in responding to sensory input that may affect comfort, attention, or participation. / Reasonable accommodation: A pattern of developmentally inappropriate inattention and/or hyperactivity-impulsivity with impairment across relevant contexts.
B. Sensory processing differences: Differences in responding to sensory input that may affect comfort, attention, or participation. / Reasonable accommodation: A modification to environment, instruction, or procedure that supports equitable access under applicable rules.
C. Sensory processing differences: A modification to environment, instruction, or procedure that supports equitable access under applicable rules. / Reasonable accommodation: Differences in responding to sensory input that may affect comfort, attention, or participation.
D. Sensory processing differences: Conceptual, social, and practical skills used to meet everyday demands across settings. / Reasonable accommodation: A modification to environment, instruction, or procedure that supports equitable access under applicable rules.

0429. A trainee must explain Neurodevelopmental condition. Which answer is accurate?

A. A pattern of developmentally inappropriate inattention and/or hyperactivity-impulsivity with impairment across relevant contexts.
B. An approach that respects neurological variation, avoids unnecessary normalization, and focuses on access and meaningful support.
C. A group of conditions with developmental onset that affect functioning in areas such as learning, communication, or behavior.
D. Differences in responding to sensory input that may affect comfort, attention, or participation.

0430. A clinical supervisor reviews a plan for a young person aged 18 in the school consultation. The plan emphasizes assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty. Which course idea does this reflect?

A. Reasonable accommodation
B. Comorbidity
C. Intellectual disability
D. Adaptive functioning

0431. A support meeting for a client in late adolescence includes a behavior specialist in the family resource center. The practice under consideration is building accommodations around the person's needs and goals rather than treating difference itself as a defect. Which concept guides it?

A. Neurodevelopmental condition
B. ADHD executive-function profile
C. Neurodiversity-affirming practice
D. Sensory processing differences

0432. A supervisor asks for an applied contrast between Autism spectrum condition and Sensory processing differences. Which option fits?

A. Autism spectrum condition: Describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation. / Sensory processing differences: Asking which sensory environments support or hinder participation and adjusting the setting where feasible.
B. Autism spectrum condition: Asking which sensory environments support or hinder participation and adjusting the setting where feasible. / Sensory processing differences: Describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation.
C. Autism spectrum condition: Identifying practical adjustments that permit meaningful participation and checking governing requirements. / Sensory processing differences: Asking which sensory environments support or hinder participation and adjusting the setting where feasible.
D. Autism spectrum condition: Describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation. / Sensory processing differences: Considering developmental history and functional impact rather than inferring a condition from one isolated behavior.

0433. Which statement shows a sound practice-level distinction between Specific learning disorder and Reasonable accommodation?

A. Specific learning disorder: Examining skill history, instruction, and targeted assessment when academic difficulty persists. / Reasonable accommodation: Identifying practical adjustments that permit meaningful participation and checking governing requirements.
B. Specific learning disorder: Identifying practical adjustments that permit meaningful participation and checking governing requirements. / Reasonable accommodation: Examining skill history, instruction, and targeted assessment when academic difficulty persists.
C. Specific learning disorder: Asking which sensory environments support or hinder participation and adjusting the setting where feasible. / Reasonable accommodation: Identifying practical adjustments that permit meaningful participation and checking governing requirements.
D. Specific learning disorder: Examining skill history, instruction, and targeted assessment when academic difficulty persists. / Reasonable accommodation: Gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions.

0434. Which choice aligns each practice with the correct idea, Intellectual disability or Sensory processing differences?

A. Intellectual disability: Assessing adaptive skills and developmental history alongside intellectual functioning. / Sensory processing differences: Asking which sensory environments support or hinder participation and adjusting the setting where feasible.
B. Intellectual disability: Asking which sensory environments support or hinder participation and adjusting the setting where feasible. / Sensory processing differences: Assessing adaptive skills and developmental history alongside intellectual functioning.
C. Intellectual disability: Assessing adaptive skills and developmental history alongside intellectual functioning. / Sensory processing differences: Describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation.
D. Intellectual disability: Examining skill history, instruction, and targeted assessment when academic difficulty persists. / Sensory processing differences: Asking which sensory environments support or hinder participation and adjusting the setting where feasible.

0435. Choose the definition pair that correctly explains ADHD executive-function profile first and Sensory processing differences second.

A. ADHD executive-function profile: A pattern of developmentally inappropriate inattention and/or hyperactivity-impulsivity with impairment across relevant contexts. / Sensory processing differences: Persistent difficulty learning or using academic skills despite appropriate support, evaluated in relation to developmental and educational context.
B. ADHD executive-function profile: Differences in responding to sensory input that may affect comfort, attention, or participation. / Sensory processing differences: A pattern of developmentally inappropriate inattention and/or hyperactivity-impulsivity with impairment across relevant contexts.
C. ADHD executive-function profile: A pattern of developmentally inappropriate inattention and/or hyperactivity-impulsivity with impairment across relevant contexts. / Sensory processing differences: Differences in responding to sensory input that may affect comfort, attention, or participation.
D. ADHD executive-function profile: A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs. / Sensory processing differences: Differences in responding to sensory input that may affect comfort, attention, or participation.

0436. A child aged 6's service team meets in the caregiver consultation. The school-based clinician recommends a change involving building accommodations around the person's needs and goals rather than treating difference itself as a defect. Which idea best explains it?

A. Intellectual disability
B. Comorbidity
C. Reasonable accommodation
D. Neurodiversity-affirming practice

0437. Which comparison would correct a trainee's misunderstanding of Neurodiversity-affirming practice versus Comorbidity?

A. Neurodiversity-affirming practice: An approach that respects neurological variation, avoids unnecessary normalization, and focuses on access and meaningful support. / Comorbidity: A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs.
B. Neurodiversity-affirming practice: Co-occurrence of two or more conditions or clinically significant problems in one person. / Comorbidity: An approach that respects neurological variation, avoids unnecessary normalization, and focuses on access and meaningful support.
C. Neurodiversity-affirming practice: An approach that respects neurological variation, avoids unnecessary normalization, and focuses on access and meaningful support. / Comorbidity: Co-occurrence of two or more conditions or clinically significant problems in one person.
D. Neurodiversity-affirming practice: A condition characterized by limitations in intellectual functioning and adaptive functioning with developmental onset. / Comorbidity: Co-occurrence of two or more conditions or clinically significant problems in one person.

0438. How are ADHD executive-function profile and Reasonable accommodation most accurately differentiated in this curriculum?

A. ADHD executive-function profile: An approach that respects neurological variation, avoids unnecessary normalization, and focuses on access and meaningful support. / Reasonable accommodation: A modification to environment, instruction, or procedure that supports equitable access under applicable rules.
B. ADHD executive-function profile: A pattern of developmentally inappropriate inattention and/or hyperactivity-impulsivity with impairment across relevant contexts. / Reasonable accommodation: Differences in responding to sensory input that may affect comfort, attention, or participation.
C. ADHD executive-function profile: A modification to environment, instruction, or procedure that supports equitable access under applicable rules. / Reasonable accommodation: A pattern of developmentally inappropriate inattention and/or hyperactivity-impulsivity with impairment across relevant contexts.
D. ADHD executive-function profile: A pattern of developmentally inappropriate inattention and/or hyperactivity-impulsivity with impairment across relevant contexts. / Reasonable accommodation: A modification to environment, instruction, or procedure that supports equitable access under applicable rules.

0439. A trainee must choose a practice that exemplifies Neurodevelopmental condition. Which action is the best fit?

A. Assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty.
B. Examining skill history, instruction, and targeted assessment when academic difficulty persists.
C. Considering developmental history and functional impact rather than inferring a condition from one isolated behavior.
D. Describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation.

0440. Which applied comparison correctly identifies what belongs to Intellectual disability versus Sensory processing differences?

A. Intellectual disability: Examining skill history, instruction, and targeted assessment when academic difficulty persists. / Sensory processing differences: Asking which sensory environments support or hinder participation and adjusting the setting where feasible.
B. Intellectual disability: Assessing adaptive skills and developmental history alongside intellectual functioning. / Sensory processing differences: Describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation.
C. Intellectual disability: Asking which sensory environments support or hinder participation and adjusting the setting where feasible. / Sensory processing differences: Assessing adaptive skills and developmental history alongside intellectual functioning.
D. Intellectual disability: Assessing adaptive skills and developmental history alongside intellectual functioning. / Sensory processing differences: Asking which sensory environments support or hinder participation and adjusting the setting where feasible.

0441. Which paired example correctly applies Intellectual disability first and Reasonable accommodation second?

A. Intellectual disability: Assessing adaptive skills and developmental history alongside intellectual functioning. / Reasonable accommodation: Identifying practical adjustments that permit meaningful participation and checking governing requirements.
B. Intellectual disability: Identifying practical adjustments that permit meaningful participation and checking governing requirements. / Reasonable accommodation: Assessing adaptive skills and developmental history alongside intellectual functioning.
C. Intellectual disability: Assessing adaptive skills and developmental history alongside intellectual functioning. / Reasonable accommodation: Considering developmental history and functional impact rather than inferring a condition from one isolated behavior.
D. Intellectual disability: Describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation. / Reasonable accommodation: Identifying practical adjustments that permit meaningful participation and checking governing requirements.

0442. At a case-planning meeting, the play therapist proposes assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty. for a child aged 14 seen in the youth advocacy program. Which concept does this illustrate?

A. Comorbidity
B. Autism spectrum condition
C. Reasonable accommodation
D. Neurodevelopmental condition

0443. Choose the term that matches this definition: A group of conditions with developmental onset that affect functioning in areas such as learning, communication, or behavior.

A. Autism spectrum condition
B. Intellectual disability
C. Neurodevelopmental condition
D. ADHD executive-function profile

0444. In the telehealth session, a youth worker explains why a student aged 17 would benefit from gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions. Which course concept underpins the explanation?

A. ADHD executive-function profile
B. Adaptive functioning
C. Specific learning disorder
D. Neurodevelopmental condition

0445. In the after-school program, the agreed focus for a therapist working with a child aged 8 is examining skill history, instruction, and targeted assessment when academic difficulty persists. Which concept names this focus?

A. Specific learning disorder
B. Autism spectrum condition
C. Neurodevelopmental condition
D. Neurodiversity-affirming practice

0446. A trainee must choose a practice that exemplifies Neurodiversity-affirming practice. Which action is the best fit?

A. Building accommodations around the person's needs and goals rather than treating difference itself as a defect.
B. Describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation.
C. Asking which sensory environments support or hinder participation and adjusting the setting where feasible.
D. Examining skill history, instruction, and targeted assessment when academic difficulty persists.

0447. Which comparison would correct a trainee's misunderstanding of ADHD executive-function profile versus Comorbidity?

A. ADHD executive-function profile: Co-occurrence of two or more conditions or clinically significant problems in one person. / Comorbidity: A pattern of developmentally inappropriate inattention and/or hyperactivity-impulsivity with impairment across relevant contexts.
B. ADHD executive-function profile: A pattern of developmentally inappropriate inattention and/or hyperactivity-impulsivity with impairment across relevant contexts. / Comorbidity: Persistent difficulty learning or using academic skills despite appropriate support, evaluated in relation to developmental and educational context.
C. ADHD executive-function profile: Conceptual, social, and practical skills used to meet everyday demands across settings. / Comorbidity: Co-occurrence of two or more conditions or clinically significant problems in one person.
D. ADHD executive-function profile: A pattern of developmentally inappropriate inattention and/or hyperactivity-impulsivity with impairment across relevant contexts. / Comorbidity: Co-occurrence of two or more conditions or clinically significant problems in one person.

0448. Which comparison would correct a trainee's misunderstanding of ADHD executive-function profile versus Sensory processing differences?

A. ADHD executive-function profile: A pattern of developmentally inappropriate inattention and/or hyperactivity-impulsivity with impairment across relevant contexts. / Sensory processing differences: Persistent difficulty learning or using academic skills despite appropriate support, evaluated in relation to developmental and educational context.
B. ADHD executive-function profile: A pattern of developmentally inappropriate inattention and/or hyperactivity-impulsivity with impairment across relevant contexts. / Sensory processing differences: Differences in responding to sensory input that may affect comfort, attention, or participation.
C. ADHD executive-function profile: Differences in responding to sensory input that may affect comfort, attention, or participation. / Sensory processing differences: A pattern of developmentally inappropriate inattention and/or hyperactivity-impulsivity with impairment across relevant contexts.
D. ADHD executive-function profile: A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs. / Sensory processing differences: Differences in responding to sensory input that may affect comfort, attention, or participation.

0449. Which option preserves the correct meaning of both Autism spectrum condition and Intellectual disability?

A. Autism spectrum condition: A condition characterized by limitations in intellectual functioning and adaptive functioning with developmental onset. / Intellectual disability: A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs.
B. Autism spectrum condition: A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs. / Intellectual disability: Conceptual, social, and practical skills used to meet everyday demands across settings.
C. Autism spectrum condition: A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs. / Intellectual disability: A condition characterized by limitations in intellectual functioning and adaptive functioning with developmental onset.
D. Autism spectrum condition: A group of conditions with developmental onset that affect functioning in areas such as learning, communication, or behavior. / Intellectual disability: A condition characterized by limitations in intellectual functioning and adaptive functioning with developmental onset.

0450. Choose the practice comparison that best separates Neurodevelopmental condition from Neurodiversity-affirming practice.

A. Neurodevelopmental condition: Considering developmental history and functional impact rather than inferring a condition from one isolated behavior. / Neurodiversity-affirming practice: Identifying practical adjustments that permit meaningful participation and checking governing requirements.
B. Neurodevelopmental condition: Considering developmental history and functional impact rather than inferring a condition from one isolated behavior. / Neurodiversity-affirming practice: Building accommodations around the person's needs and goals rather than treating difference itself as a defect.
C. Neurodevelopmental condition: Building accommodations around the person's needs and goals rather than treating difference itself as a defect. / Neurodiversity-affirming practice: Considering developmental history and functional impact rather than inferring a condition from one isolated behavior.
D. Neurodevelopmental condition: Gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions. / Neurodiversity-affirming practice: Building accommodations around the person's needs and goals rather than treating difference itself as a defect.

0451. A service navigator is asked what should shape a child aged 6's support in the community service agency. The proposed focus is assessing adaptive skills and developmental history alongside intellectual functioning. Which principle does it represent?

A. Intellectual disability
B. Comorbidity
C. Adaptive functioning
D. Neurodevelopmental condition

0452. Which comparison would correct a trainee's misunderstanding of Autism spectrum condition versus Comorbidity?

A. Autism spectrum condition: A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs. / Comorbidity: Co-occurrence of two or more conditions or clinically significant problems in one person.
B. Autism spectrum condition: Co-occurrence of two or more conditions or clinically significant problems in one person. / Comorbidity: A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs.
C. Autism spectrum condition: A condition characterized by limitations in intellectual functioning and adaptive functioning with developmental onset. / Comorbidity: Co-occurrence of two or more conditions or clinically significant problems in one person.
D. Autism spectrum condition: A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs. / Comorbidity: A group of conditions with developmental onset that affect functioning in areas such as learning, communication, or behavior.

0453. A case conference asks for a distinction between Adaptive functioning and Sensory processing differences. Which answer is sound?

A. Adaptive functioning: Conceptual, social, and practical skills used to meet everyday demands across settings. / Sensory processing differences: A modification to environment, instruction, or procedure that supports equitable access under applicable rules.
B. Adaptive functioning: Differences in responding to sensory input that may affect comfort, attention, or participation. / Sensory processing differences: Conceptual, social, and practical skills used to meet everyday demands across settings.
C. Adaptive functioning: An approach that respects neurological variation, avoids unnecessary normalization, and focuses on access and meaningful support. / Sensory processing differences: Differences in responding to sensory input that may affect comfort, attention, or participation.
D. Adaptive functioning: Conceptual, social, and practical skills used to meet everyday demands across settings. / Sensory processing differences: Differences in responding to sensory input that may affect comfort, attention, or participation.

0454. In a supervision quiz, how should Sensory processing differences be distinguished from Comorbidity?

A. Sensory processing differences: Differences in responding to sensory input that may affect comfort, attention, or participation. / Comorbidity: A modification to environment, instruction, or procedure that supports equitable access under applicable rules.
B. Sensory processing differences: Co-occurrence of two or more conditions or clinically significant problems in one person. / Comorbidity: Differences in responding to sensory input that may affect comfort, attention, or participation.
C. Sensory processing differences: A condition characterized by limitations in intellectual functioning and adaptive functioning with developmental onset. / Comorbidity: Co-occurrence of two or more conditions or clinically significant problems in one person.
D. Sensory processing differences: Differences in responding to sensory input that may affect comfort, attention, or participation. / Comorbidity: Co-occurrence of two or more conditions or clinically significant problems in one person.

0455. A play therapist reviews a plan for a middle-school student in the learning-support meeting. The plan emphasizes evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone. Which course idea does this reflect?

A. Sensory processing differences
B. Autism spectrum condition
C. Adaptive functioning
D. Intellectual disability

0456. In the school-based service, a group facilitator describes the most appropriate support for a client in late adolescence as gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions. Which framework is being applied?

A. Intellectual disability
B. ADHD executive-function profile
C. Specific learning disorder
D. Autism spectrum condition

0457. How should a practitioner distinguish the applications of Sensory processing differences and Reasonable accommodation?

A. Sensory processing differences: Asking which sensory environments support or hinder participation and adjusting the setting where feasible. / Reasonable accommodation: Gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions.
B. Sensory processing differences: Identifying practical adjustments that permit meaningful participation and checking governing requirements. / Reasonable accommodation: Asking which sensory environments support or hinder participation and adjusting the setting where feasible.
C. Sensory processing differences: Evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone. / Reasonable accommodation: Identifying practical adjustments that permit meaningful participation and checking governing requirements.
D. Sensory processing differences: Asking which sensory environments support or hinder participation and adjusting the setting where feasible. / Reasonable accommodation: Identifying practical adjustments that permit meaningful participation and checking governing requirements.

0458. For a student aged 15 in the community mental-health service, a counselor makes this practice the immediate priority: asking which sensory environments support or hinder participation and adjusting the setting where feasible. Which concept fits best?

A. Intellectual disability
B. Specific learning disorder
C. Comorbidity
D. Sensory processing differences

0459. While consulting in the outpatient clinic, a supervised trainee supports a young person aged 13 by using this approach: building accommodations around the person's needs and goals rather than treating difference itself as a defect. Which concept is being applied?

A. Adaptive functioning
B. Intellectual disability
C. ADHD executive-function profile
D. Neurodiversity-affirming practice

0460. Choose the definition pair that correctly explains Intellectual disability first and Reasonable accommodation second.

A. Intellectual disability: A condition characterized by limitations in intellectual functioning and adaptive functioning with developmental onset. / Reasonable accommodation: A modification to environment, instruction, or procedure that supports equitable access under applicable rules.
B. Intellectual disability: A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs. / Reasonable accommodation: A modification to environment, instruction, or procedure that supports equitable access under applicable rules.
C. Intellectual disability: A condition characterized by limitations in intellectual functioning and adaptive functioning with developmental onset. / Reasonable accommodation: A group of conditions with developmental onset that affect functioning in areas such as learning, communication, or behavior.
D. Intellectual disability: A modification to environment, instruction, or procedure that supports equitable access under applicable rules. / Reasonable accommodation: A condition characterized by limitations in intellectual functioning and adaptive functioning with developmental onset.

0461. How should a practitioner distinguish the applications of Sensory processing differences and Neurodiversity-affirming practice?

A. Sensory processing differences: Asking which sensory environments support or hinder participation and adjusting the setting where feasible. / Neurodiversity-affirming practice: Building accommodations around the person's needs and goals rather than treating difference itself as a defect.
B. Sensory processing differences: Asking which sensory environments support or hinder participation and adjusting the setting where feasible. / Neurodiversity-affirming practice: Gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions.
C. Sensory processing differences: Examining skill history, instruction, and targeted assessment when academic difficulty persists. / Neurodiversity-affirming practice: Building accommodations around the person's needs and goals rather than treating difference itself as a defect.
D. Sensory processing differences: Building accommodations around the person's needs and goals rather than treating difference itself as a defect. / Neurodiversity-affirming practice: Asking which sensory environments support or hinder participation and adjusting the setting where feasible.

0462. A supervised trainee and a adolescent student are discussing support in the student wellness team. The selected practice is gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions. Which concept does this demonstrate?

A. ADHD executive-function profile
B. Neurodiversity-affirming practice
C. Comorbidity
D. Intellectual disability

0463. Which comparison would correct a trainee's misunderstanding of Specific learning disorder versus Intellectual disability?

A. Specific learning disorder: Persistent difficulty learning or using academic skills despite appropriate support, evaluated in relation to developmental and educational context. / Intellectual disability: An approach that respects neurological variation, avoids unnecessary normalization, and focuses on access and meaningful support.
B. Specific learning disorder: Conceptual, social, and practical skills used to meet everyday demands across settings. / Intellectual disability: A condition characterized by limitations in intellectual functioning and adaptive functioning with developmental onset.
C. Specific learning disorder: Persistent difficulty learning or using academic skills despite appropriate support, evaluated in relation to developmental and educational context. / Intellectual disability: A condition characterized by limitations in intellectual functioning and adaptive functioning with developmental onset.
D. Specific learning disorder: A condition characterized by limitations in intellectual functioning and adaptive functioning with developmental onset. / Intellectual disability: Persistent difficulty learning or using academic skills despite appropriate support, evaluated in relation to developmental and educational context.

0464. How are Neurodevelopmental condition and Sensory processing differences most accurately differentiated in this curriculum?

A. Neurodevelopmental condition: A group of conditions with developmental onset that affect functioning in areas such as learning, communication, or behavior. / Sensory processing differences: Conceptual, social, and practical skills used to meet everyday demands across settings.
B. Neurodevelopmental condition: Co-occurrence of two or more conditions or clinically significant problems in one person. / Sensory processing differences: Differences in responding to sensory input that may affect comfort, attention, or participation.
C. Neurodevelopmental condition: Differences in responding to sensory input that may affect comfort, attention, or participation. / Sensory processing differences: A group of conditions with developmental onset that affect functioning in areas such as learning, communication, or behavior.
D. Neurodevelopmental condition: A group of conditions with developmental onset that affect functioning in areas such as learning, communication, or behavior. / Sensory processing differences: Differences in responding to sensory input that may affect comfort, attention, or participation.

0465. Which description belongs with the term Reasonable accommodation?

A. Persistent difficulty learning or using academic skills despite appropriate support, evaluated in relation to developmental and educational context.
B. A modification to environment, instruction, or procedure that supports equitable access under applicable rules.
C. A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs.
D. Co-occurrence of two or more conditions or clinically significant problems in one person.

0466. A service navigator describes an intervention for a preadolescent child in the youth advocacy program, centered on considering developmental history and functional impact rather than inferring a condition from one isolated behavior. Which named idea is most relevant?

A. Specific learning disorder
B. Intellectual disability
C. Neurodevelopmental condition
D. Comorbidity

0467. How should a practitioner distinguish the applications of Autism spectrum condition and Neurodiversity-affirming practice?

A. Autism spectrum condition: Building accommodations around the person's needs and goals rather than treating difference itself as a defect. / Neurodiversity-affirming practice: Describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation.
B. Autism spectrum condition: Describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation. / Neurodiversity-affirming practice: Identifying practical adjustments that permit meaningful participation and checking governing requirements.
C. Autism spectrum condition: Describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation. / Neurodiversity-affirming practice: Building accommodations around the person's needs and goals rather than treating difference itself as a defect.
D. Autism spectrum condition: Gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions. / Neurodiversity-affirming practice: Building accommodations around the person's needs and goals rather than treating difference itself as a defect.

0468. Consider a client in late adolescence receiving help in the school-based service. The group facilitator focuses on gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions. Which term best describes the guiding idea?

A. ADHD executive-function profile
B. Comorbidity
C. Reasonable accommodation
D. Neurodiversity-affirming practice

0469. In the family session, a case coordinator is considering this approach for a adolescent student: evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone. Which framework does it represent?

A. Reasonable accommodation
B. Adaptive functioning
C. Intellectual disability
D. Comorbidity

0470. While consulting in the student-support meeting, a member of a clinical team supports a child aged 14 by using this approach: considering developmental history and functional impact rather than inferring a condition from one isolated behavior. Which concept is being applied?

A. Neurodevelopmental condition
B. ADHD executive-function profile
C. Adaptive functioning
D. Reasonable accommodation

0471. Which statement most accurately defines Neurodiversity-affirming practice?

A. Co-occurrence of two or more conditions or clinically significant problems in one person.
B. A condition characterized by limitations in intellectual functioning and adaptive functioning with developmental onset.
C. A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs.
D. An approach that respects neurological variation, avoids unnecessary normalization, and focuses on access and meaningful support.

0472. In a supervision quiz, how should Neurodevelopmental condition be distinguished from Specific learning disorder?

A. Neurodevelopmental condition: A group of conditions with developmental onset that affect functioning in areas such as learning, communication, or behavior. / Specific learning disorder: Differences in responding to sensory input that may affect comfort, attention, or participation.
B. Neurodevelopmental condition: A group of conditions with developmental onset that affect functioning in areas such as learning, communication, or behavior. / Specific learning disorder: Persistent difficulty learning or using academic skills despite appropriate support, evaluated in relation to developmental and educational context.
C. Neurodevelopmental condition: Persistent difficulty learning or using academic skills despite appropriate support, evaluated in relation to developmental and educational context. / Specific learning disorder: A group of conditions with developmental onset that affect functioning in areas such as learning, communication, or behavior.
D. Neurodevelopmental condition: A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs. / Specific learning disorder: Persistent difficulty learning or using academic skills despite appropriate support, evaluated in relation to developmental and educational context.

0473. In the student-support meeting, the agreed focus for a program coordinator working with a child of elementary-school age is identifying practical adjustments that permit meaningful participation and checking governing requirements. Which concept names this focus?

A. ADHD executive-function profile
B. Adaptive functioning
C. Specific learning disorder
D. Reasonable accommodation

0474. In a professional consultation about a adolescent student, the mental-health professional describes this response in the youth advocacy program: asking which sensory environments support or hinder participation and adjusting the setting where feasible. Which term is most apt?

A. Sensory processing differences
B. Specific learning disorder
C. Neurodevelopmental condition
D. Comorbidity

0475. Which pair of actions illustrates Neurodevelopmental condition and Autism spectrum condition, respectively?

A. Neurodevelopmental condition: Asking which sensory environments support or hinder participation and adjusting the setting where feasible. / Autism spectrum condition: Describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation.
B. Neurodevelopmental condition: Considering developmental history and functional impact rather than inferring a condition from one isolated behavior. / Autism spectrum condition: Examining skill history, instruction, and targeted assessment when academic difficulty persists.
C. Neurodevelopmental condition: Describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation. / Autism spectrum condition: Considering developmental history and functional impact rather than inferring a condition from one isolated behavior.
D. Neurodevelopmental condition: Considering developmental history and functional impact rather than inferring a condition from one isolated behavior. / Autism spectrum condition: Describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation.

0476. In the parent meeting, a group facilitator explains why a student aged 9 would benefit from building accommodations around the person's needs and goals rather than treating difference itself as a defect. Which course concept underpins the explanation?

A. Autism spectrum condition
B. Intellectual disability
C. Neurodiversity-affirming practice
D. Sensory processing differences

0477. How should a practitioner distinguish the applications of Autism spectrum condition and Adaptive functioning?

A. Autism spectrum condition: Evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone. / Adaptive functioning: Describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation.
B. Autism spectrum condition: Describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation. / Adaptive functioning: Gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions.
C. Autism spectrum condition: Describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation. / Adaptive functioning: Evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone.
D. Autism spectrum condition: Examining skill history, instruction, and targeted assessment when academic difficulty persists. / Adaptive functioning: Evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone.

0478. A case conference asks for a distinction between Intellectual disability and Comorbidity. Which answer is sound?

A. Intellectual disability: A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs. / Comorbidity: Co-occurrence of two or more conditions or clinically significant problems in one person.
B. Intellectual disability: A condition characterized by limitations in intellectual functioning and adaptive functioning with developmental onset. / Comorbidity: Co-occurrence of two or more conditions or clinically significant problems in one person.
C. Intellectual disability: Co-occurrence of two or more conditions or clinically significant problems in one person. / Comorbidity: A condition characterized by limitations in intellectual functioning and adaptive functioning with developmental onset.
D. Intellectual disability: A condition characterized by limitations in intellectual functioning and adaptive functioning with developmental onset. / Comorbidity: Conceptual, social, and practical skills used to meet everyday demands across settings.

0479. A student confuses Neurodevelopmental condition with ADHD executive-function profile. Which explanation most accurately separates them?

A. Neurodevelopmental condition: A pattern of developmentally inappropriate inattention and/or hyperactivity-impulsivity with impairment across relevant contexts. / ADHD executive-function profile: A group of conditions with developmental onset that affect functioning in areas such as learning, communication, or behavior.
B. Neurodevelopmental condition: A group of conditions with developmental onset that affect functioning in areas such as learning, communication, or behavior. / ADHD executive-function profile: A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs.
C. Neurodevelopmental condition: A condition characterized by limitations in intellectual functioning and adaptive functioning with developmental onset. / ADHD executive-function profile: A pattern of developmentally inappropriate inattention and/or hyperactivity-impulsivity with impairment across relevant contexts.
D. Neurodevelopmental condition: A group of conditions with developmental onset that affect functioning in areas such as learning, communication, or behavior. / ADHD executive-function profile: A pattern of developmentally inappropriate inattention and/or hyperactivity-impulsivity with impairment across relevant contexts.

0480. Choose the definition pair that correctly explains Autism spectrum condition first and Comorbidity second.

A. Autism spectrum condition: A condition characterized by limitations in intellectual functioning and adaptive functioning with developmental onset. / Comorbidity: Co-occurrence of two or more conditions or clinically significant problems in one person.
B. Autism spectrum condition: Co-occurrence of two or more conditions or clinically significant problems in one person. / Comorbidity: A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs.
C. Autism spectrum condition: A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs. / Comorbidity: Co-occurrence of two or more conditions or clinically significant problems in one person.
D. Autism spectrum condition: A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs. / Comorbidity: A group of conditions with developmental onset that affect functioning in areas such as learning, communication, or behavior.

0481. For a student aged 12 in the community service agency, a clinical supervisor makes this practice the immediate priority: describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation. Which concept fits best?

A. Autism spectrum condition
B. Sensory processing differences
C. Adaptive functioning
D. Neurodevelopmental condition

0482. Which paired example correctly applies Adaptive functioning first and Neurodiversity-affirming practice second?

A. Adaptive functioning: Identifying practical adjustments that permit meaningful participation and checking governing requirements. / Neurodiversity-affirming practice: Building accommodations around the person's needs and goals rather than treating difference itself as a defect.
B. Adaptive functioning: Evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone. / Neurodiversity-affirming practice: Building accommodations around the person's needs and goals rather than treating difference itself as a defect.
C. Adaptive functioning: Evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone. / Neurodiversity-affirming practice: Asking which sensory environments support or hinder participation and adjusting the setting where feasible.
D. Adaptive functioning: Building accommodations around the person's needs and goals rather than treating difference itself as a defect. / Neurodiversity-affirming practice: Evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone.

0483. A trainee must explain Sensory processing differences. Which answer is accurate?

A. A modification to environment, instruction, or procedure that supports equitable access under applicable rules.
B. A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs.
C. A group of conditions with developmental onset that affect functioning in areas such as learning, communication, or behavior.
D. Differences in responding to sensory input that may affect comfort, attention, or participation.

0484. Choose the term that matches this definition: A modification to environment, instruction, or procedure that supports equitable access under applicable rules.

A. Sensory processing differences
B. Comorbidity
C. Reasonable accommodation
D. Neurodiversity-affirming practice

0485. Choose the term that matches this definition: Differences in responding to sensory input that may affect comfort, attention, or participation.

A. Adaptive functioning
B. Sensory processing differences
C. Autism spectrum condition
D. Intellectual disability

0486. Which paired example correctly applies Autism spectrum condition first and Reasonable accommodation second?

A. Autism spectrum condition: Identifying practical adjustments that permit meaningful participation and checking governing requirements. / Reasonable accommodation: Describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation.
B. Autism spectrum condition: Describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation. / Reasonable accommodation: Identifying practical adjustments that permit meaningful participation and checking governing requirements.
C. Autism spectrum condition: Examining skill history, instruction, and targeted assessment when academic difficulty persists. / Reasonable accommodation: Identifying practical adjustments that permit meaningful participation and checking governing requirements.
D. Autism spectrum condition: Describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation. / Reasonable accommodation: Asking which sensory environments support or hinder participation and adjusting the setting where feasible.

0487. A student aged 15 is receiving support in the youth group. The consulting counselor is guided by this practice: considering developmental history and functional impact rather than inferring a condition from one isolated behavior. Which principle best fits?

A. Reasonable accommodation
B. ADHD executive-function profile
C. Neurodevelopmental condition
D. Autism spectrum condition

0488. A school support specialist reviews a plan for a young person aged 16 in the counseling practicum. The plan emphasizes assessing adaptive skills and developmental history alongside intellectual functioning. Which course idea does this reflect?

A. Sensory processing differences
B. ADHD executive-function profile
C. Comorbidity
D. Intellectual disability

0489. Select the best explanation of Comorbidity.

A. Co-occurrence of two or more conditions or clinically significant problems in one person.
B. Persistent difficulty learning or using academic skills despite appropriate support, evaluated in relation to developmental and educational context.
C. A group of conditions with developmental onset that affect functioning in areas such as learning, communication, or behavior.
D. A modification to environment, instruction, or procedure that supports equitable access under applicable rules.

0490. A young person aged 16 and a assessment clinician are reviewing goals in the school consultation. The agreed action is gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions. Which principle best accounts for it?

A. Sensory processing differences
B. Neurodiversity-affirming practice
C. ADHD executive-function profile
D. Intellectual disability

0491. In the community youth program, a team asks how a group facilitator can support a young adolescent client. One proposed action is examining skill history, instruction, and targeted assessment when academic difficulty persists. Which idea does it represent?

A. Specific learning disorder
B. Comorbidity
C. Reasonable accommodation
D. Neurodevelopmental condition

0492. A supervisor asks for an applied contrast between ADHD executive-function profile and Reasonable accommodation. Which option fits?

A. ADHD executive-function profile: Gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions. / Reasonable accommodation: Asking which sensory environments support or hinder participation and adjusting the setting where feasible.
B. ADHD executive-function profile: Identifying practical adjustments that permit meaningful participation and checking governing requirements. / Reasonable accommodation: Gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions.
C. ADHD executive-function profile: Gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions. / Reasonable accommodation: Identifying practical adjustments that permit meaningful participation and checking governing requirements.
D. ADHD executive-function profile: Building accommodations around the person's needs and goals rather than treating difference itself as a defect. / Reasonable accommodation: Identifying practical adjustments that permit meaningful participation and checking governing requirements.

0493. How should a practitioner distinguish the applications of Neurodevelopmental condition and Reasonable accommodation?

A. Neurodevelopmental condition: Considering developmental history and functional impact rather than inferring a condition from one isolated behavior. / Reasonable accommodation: Identifying practical adjustments that permit meaningful participation and checking governing requirements.
B. Neurodevelopmental condition: Considering developmental history and functional impact rather than inferring a condition from one isolated behavior. / Reasonable accommodation: Asking which sensory environments support or hinder participation and adjusting the setting where feasible.
C. Neurodevelopmental condition: Describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation. / Reasonable accommodation: Identifying practical adjustments that permit meaningful participation and checking governing requirements.
D. Neurodevelopmental condition: Identifying practical adjustments that permit meaningful participation and checking governing requirements. / Reasonable accommodation: Considering developmental history and functional impact rather than inferring a condition from one isolated behavior.

0494. Which comparison would correct a trainee's misunderstanding of Comorbidity versus Reasonable accommodation?

A. Comorbidity: An approach that respects neurological variation, avoids unnecessary normalization, and focuses on access and meaningful support. / Reasonable accommodation: A modification to environment, instruction, or procedure that supports equitable access under applicable rules.
B. Comorbidity: Co-occurrence of two or more conditions or clinically significant problems in one person. / Reasonable accommodation: Persistent difficulty learning or using academic skills despite appropriate support, evaluated in relation to developmental and educational context.
C. Comorbidity: A modification to environment, instruction, or procedure that supports equitable access under applicable rules. / Reasonable accommodation: Co-occurrence of two or more conditions or clinically significant problems in one person.
D. Comorbidity: Co-occurrence of two or more conditions or clinically significant problems in one person. / Reasonable accommodation: A modification to environment, instruction, or procedure that supports equitable access under applicable rules.

0495. A trainee must explain ADHD executive-function profile. Which answer is accurate?

A. Co-occurrence of two or more conditions or clinically significant problems in one person.
B. A condition characterized by limitations in intellectual functioning and adaptive functioning with developmental onset.
C. A pattern of developmentally inappropriate inattention and/or hyperactivity-impulsivity with impairment across relevant contexts.
D. A modification to environment, instruction, or procedure that supports equitable access under applicable rules.

0496. How should a practitioner distinguish the applications of Neurodiversity-affirming practice and Comorbidity?

A. Neurodiversity-affirming practice: Assessing adaptive skills and developmental history alongside intellectual functioning. / Comorbidity: Assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty.
B. Neurodiversity-affirming practice: Building accommodations around the person's needs and goals rather than treating difference itself as a defect. / Comorbidity: Describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation.
C. Neurodiversity-affirming practice: Assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty. / Comorbidity: Building accommodations around the person's needs and goals rather than treating difference itself as a defect.
D. Neurodiversity-affirming practice: Building accommodations around the person's needs and goals rather than treating difference itself as a defect. / Comorbidity: Assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty.

0497. A supervisor asks for an applied contrast between Specific learning disorder and Comorbidity. Which option fits?

A. Specific learning disorder: Assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty. / Comorbidity: Examining skill history, instruction, and targeted assessment when academic difficulty persists.
B. Specific learning disorder: Examining skill history, instruction, and targeted assessment when academic difficulty persists. / Comorbidity: Gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions.
C. Specific learning disorder: Examining skill history, instruction, and targeted assessment when academic difficulty persists. / Comorbidity: Assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty.
D. Specific learning disorder: Assessing adaptive skills and developmental history alongside intellectual functioning. / Comorbidity: Assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty.

0498. A assessment clinician prepares for a session in the community youth program with a teenage client. The intended approach is evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone. Which concept is most relevant?

A. Autism spectrum condition
B. Neurodevelopmental condition
C. Adaptive functioning
D. Neurodiversity-affirming practice

0499. Choose the definition pair that correctly explains ADHD executive-function profile first and Intellectual disability second.

A. ADHD executive-function profile: A pattern of developmentally inappropriate inattention and/or hyperactivity-impulsivity with impairment across relevant contexts. / Intellectual disability: A condition characterized by limitations in intellectual functioning and adaptive functioning with developmental onset.
B. ADHD executive-function profile: A pattern of developmentally inappropriate inattention and/or hyperactivity-impulsivity with impairment across relevant contexts. / Intellectual disability: Co-occurrence of two or more conditions or clinically significant problems in one person.
C. ADHD executive-function profile: Conceptual, social, and practical skills used to meet everyday demands across settings. / Intellectual disability: A condition characterized by limitations in intellectual functioning and adaptive functioning with developmental onset.
D. ADHD executive-function profile: A condition characterized by limitations in intellectual functioning and adaptive functioning with developmental onset. / Intellectual disability: A pattern of developmentally inappropriate inattention and/or hyperactivity-impulsivity with impairment across relevant contexts.

0500. An interdisciplinary team reviews a child aged 7's case at the classroom support meeting. The clinical supervisor recommends considering developmental history and functional impact rather than inferring a condition from one isolated behavior. Which course concept best fits?

A. ADHD executive-function profile
B. Reasonable accommodation
C. Neurodevelopmental condition
D. Adaptive functioning

0501. For a young person aged 18 seen in the youth group, the community practitioner recommends a plan built around gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions. Which concept is reflected?

A. Neurodiversity-affirming practice
B. Sensory processing differences
C. Autism spectrum condition
D. ADHD executive-function profile

0502. Which paired example correctly applies Neurodevelopmental condition first and Comorbidity second?

A. Neurodevelopmental condition: Identifying practical adjustments that permit meaningful participation and checking governing requirements. / Comorbidity: Assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty.
B. Neurodevelopmental condition: Considering developmental history and functional impact rather than inferring a condition from one isolated behavior. / Comorbidity: Assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty.
C. Neurodevelopmental condition: Assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty. / Comorbidity: Considering developmental history and functional impact rather than inferring a condition from one isolated behavior.
D. Neurodevelopmental condition: Considering developmental history and functional impact rather than inferring a condition from one isolated behavior. / Comorbidity: Examining skill history, instruction, and targeted assessment when academic difficulty persists.

0503. How are Autism spectrum condition and Intellectual disability most accurately differentiated in this curriculum?

A. Autism spectrum condition: A condition characterized by limitations in intellectual functioning and adaptive functioning with developmental onset. / Intellectual disability: A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs.
B. Autism spectrum condition: A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs. / Intellectual disability: Conceptual, social, and practical skills used to meet everyday demands across settings.
C. Autism spectrum condition: A group of conditions with developmental onset that affect functioning in areas such as learning, communication, or behavior. / Intellectual disability: A condition characterized by limitations in intellectual functioning and adaptive functioning with developmental onset.
D. Autism spectrum condition: A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs. / Intellectual disability: A condition characterized by limitations in intellectual functioning and adaptive functioning with developmental onset.

0504. A school-based clinician presents a support plan for a child aged 14 at the learning-support meeting. Its central feature is identifying practical adjustments that permit meaningful participation and checking governing requirements. Which concept should be named?

A. Reasonable accommodation
B. Comorbidity
C. Sensory processing differences
D. Autism spectrum condition

0505. In the community mental-health service, a group facilitator explains why a high-school student would benefit from describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation. Which course concept underpins the explanation?

A. Reasonable accommodation
B. Neurodiversity-affirming practice
C. Autism spectrum condition
D. Adaptive functioning

0506. Which option correctly matches each concept to its practice focus: Neurodiversity-affirming practice and Comorbidity?

A. Neurodiversity-affirming practice: Assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty. / Comorbidity: Building accommodations around the person's needs and goals rather than treating difference itself as a defect.
B. Neurodiversity-affirming practice: Building accommodations around the person's needs and goals rather than treating difference itself as a defect. / Comorbidity: Assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty.
C. Neurodiversity-affirming practice: Assessing adaptive skills and developmental history alongside intellectual functioning. / Comorbidity: Assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty.
D. Neurodiversity-affirming practice: Building accommodations around the person's needs and goals rather than treating difference itself as a defect. / Comorbidity: Describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation.

0507. Which comparison would correct a trainee's misunderstanding of Intellectual disability versus Comorbidity?

A. Intellectual disability: A condition characterized by limitations in intellectual functioning and adaptive functioning with developmental onset. / Comorbidity: Conceptual, social, and practical skills used to meet everyday demands across settings.
B. Intellectual disability: Co-occurrence of two or more conditions or clinically significant problems in one person. / Comorbidity: A condition characterized by limitations in intellectual functioning and adaptive functioning with developmental onset.
C. Intellectual disability: A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs. / Comorbidity: Co-occurrence of two or more conditions or clinically significant problems in one person.
D. Intellectual disability: A condition characterized by limitations in intellectual functioning and adaptive functioning with developmental onset. / Comorbidity: Co-occurrence of two or more conditions or clinically significant problems in one person.

0508. A trainee must explain Autism spectrum condition. Which answer is accurate?

A. Conceptual, social, and practical skills used to meet everyday demands across settings.
B. A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs.
C. A pattern of developmentally inappropriate inattention and/or hyperactivity-impulsivity with impairment across relevant contexts.
D. Persistent difficulty learning or using academic skills despite appropriate support, evaluated in relation to developmental and educational context.

0509. At a case-planning meeting, the counselor proposes considering developmental history and functional impact rather than inferring a condition from one isolated behavior. for a child aged 8 seen in the school counseling office. Which concept does this illustrate?

A. Reasonable accommodation
B. Neurodevelopmental condition
C. Comorbidity
D. Specific learning disorder

0510. A mental-health professional is preparing a follow-up plan for a child of elementary-school age in the classroom support meeting. The plan calls for assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty. Which concept names this approach?

A. Comorbidity
B. Adaptive functioning
C. Specific learning disorder
D. Reasonable accommodation

0511. Which statement accurately contrasts the course concepts Comorbidity and Reasonable accommodation?

A. Comorbidity: A modification to environment, instruction, or procedure that supports equitable access under applicable rules. / Reasonable accommodation: Co-occurrence of two or more conditions or clinically significant problems in one person.
B. Comorbidity: Co-occurrence of two or more conditions or clinically significant problems in one person. / Reasonable accommodation: A modification to environment, instruction, or procedure that supports equitable access under applicable rules.
C. Comorbidity: An approach that respects neurological variation, avoids unnecessary normalization, and focuses on access and meaningful support. / Reasonable accommodation: A modification to environment, instruction, or procedure that supports equitable access under applicable rules.
D. Comorbidity: Co-occurrence of two or more conditions or clinically significant problems in one person. / Reasonable accommodation: Persistent difficulty learning or using academic skills despite appropriate support, evaluated in relation to developmental and educational context.

0512. A supervisor asks for an applied contrast between Adaptive functioning and Reasonable accommodation. Which option fits?

A. Adaptive functioning: Evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone. / Reasonable accommodation: Describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation.
B. Adaptive functioning: Evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone. / Reasonable accommodation: Identifying practical adjustments that permit meaningful participation and checking governing requirements.
C. Adaptive functioning: Identifying practical adjustments that permit meaningful participation and checking governing requirements. / Reasonable accommodation: Evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone.
D. Adaptive functioning: Assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty. / Reasonable accommodation: Identifying practical adjustments that permit meaningful participation and checking governing requirements.

0513. While consulting in the school-based service, a assessment clinician supports a young person aged 10 by using this approach: examining skill history, instruction, and targeted assessment when academic difficulty persists. Which concept is being applied?

A. Neurodiversity-affirming practice
B. Adaptive functioning
C. Specific learning disorder
D. Autism spectrum condition

0514. In a supervision quiz, how should Intellectual disability be distinguished from Comorbidity?

A. Intellectual disability: A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs. / Comorbidity: Co-occurrence of two or more conditions or clinically significant problems in one person.
B. Intellectual disability: A condition characterized by limitations in intellectual functioning and adaptive functioning with developmental onset. / Comorbidity: Conceptual, social, and practical skills used to meet everyday demands across settings.
C. Intellectual disability: A condition characterized by limitations in intellectual functioning and adaptive functioning with developmental onset. / Comorbidity: Co-occurrence of two or more conditions or clinically significant problems in one person.
D. Intellectual disability: Co-occurrence of two or more conditions or clinically significant problems in one person. / Comorbidity: A condition characterized by limitations in intellectual functioning and adaptive functioning with developmental onset.

0515. In a professional consultation about a high-school student, the member of a clinical team describes this response in the community service agency: evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone. Which term is most apt?

A. Adaptive functioning
B. Reasonable accommodation
C. Neurodiversity-affirming practice
D. Neurodevelopmental condition

0516. A clinical supervisor is asked to evaluate a proposed service for a student aged 9 in the supervision meeting. The defining feature is examining skill history, instruction, and targeted assessment when academic difficulty persists. Which concept fits?

A. Comorbidity
B. Intellectual disability
C. Specific learning disorder
D. Autism spectrum condition

0517. At the youth group, a service navigator reviews whether a plan for a child aged 14 is appropriate. The relevant practice is asking which sensory environments support or hinder participation and adjusting the setting where feasible. Which concept is tested?

A. Autism spectrum condition
B. Specific learning disorder
C. ADHD executive-function profile
D. Sensory processing differences

0518. A clinical supervisor reviews a plan for a student aged 9 in the supervision meeting. The plan emphasizes examining skill history, instruction, and targeted assessment when academic difficulty persists. Which course idea does this reflect?

A. Sensory processing differences
B. Neurodiversity-affirming practice
C. Specific learning disorder
D. Neurodevelopmental condition

0519. A case discussion concerns a school-age child and a case coordinator in the community service agency. The practitioner is considering asking which sensory environments support or hinder participation and adjusting the setting where feasible. Which principle is involved?

A. Comorbidity
B. Sensory processing differences
C. Autism spectrum condition
D. Neurodevelopmental condition

0520. How are Autism spectrum condition and Adaptive functioning most accurately differentiated in this curriculum?

A. Autism spectrum condition: Persistent difficulty learning or using academic skills despite appropriate support, evaluated in relation to developmental and educational context. / Adaptive functioning: Conceptual, social, and practical skills used to meet everyday demands across settings.
B. Autism spectrum condition: A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs. / Adaptive functioning: A pattern of developmentally inappropriate inattention and/or hyperactivity-impulsivity with impairment across relevant contexts.
C. Autism spectrum condition: A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs. / Adaptive functioning: Conceptual, social, and practical skills used to meet everyday demands across settings.
D. Autism spectrum condition: Conceptual, social, and practical skills used to meet everyday demands across settings. / Adaptive functioning: A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs.

0521. Choose the practice comparison that best separates Specific learning disorder from Adaptive functioning.

A. Specific learning disorder: Evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone. / Adaptive functioning: Examining skill history, instruction, and targeted assessment when academic difficulty persists.
B. Specific learning disorder: Asking which sensory environments support or hinder participation and adjusting the setting where feasible. / Adaptive functioning: Evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone.
C. Specific learning disorder: Examining skill history, instruction, and targeted assessment when academic difficulty persists. / Adaptive functioning: Evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone.
D. Specific learning disorder: Examining skill history, instruction, and targeted assessment when academic difficulty persists. / Adaptive functioning: Gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions.

0522. Which statement shows a sound practice-level distinction between Adaptive functioning and Neurodiversity-affirming practice?

A. Adaptive functioning: Identifying practical adjustments that permit meaningful participation and checking governing requirements. / Neurodiversity-affirming practice: Building accommodations around the person’s needs and goals rather than treating difference itself as a defect.
B. Adaptive functioning: Building accommodations around the person’s needs and goals rather than treating difference itself as a defect. / Neurodiversity-affirming practice: Evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone.
C. Adaptive functioning: Evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone. / Neurodiversity-affirming practice: Building accommodations around the person’s needs and goals rather than treating difference itself as a defect.
D. Adaptive functioning: Evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone. / Neurodiversity-affirming practice: Asking which sensory environments support or hinder participation and adjusting the setting where feasible.

0523. Which statement accurately contrasts the course concepts Neurodevelopmental condition and ADHD executive-function profile?

A. Neurodevelopmental condition: A pattern of developmentally inappropriate inattention and/or hyperactivity-impulsivity with impairment across relevant contexts. / ADHD executive-function profile: A group of conditions with developmental onset that affect functioning in areas such as learning, communication, or behavior.
B. Neurodevelopmental condition: A group of conditions with developmental onset that affect functioning in areas such as learning, communication, or behavior. / ADHD executive-function profile: A pattern of developmentally inappropriate inattention and/or hyperactivity-impulsivity with impairment across relevant contexts.
C. Neurodevelopmental condition: A condition characterized by limitations in intellectual functioning and adaptive functioning with developmental onset. / ADHD executive-function profile: A pattern of developmentally inappropriate inattention and/or hyperactivity-impulsivity with impairment across relevant contexts.
D. Neurodevelopmental condition: A group of conditions with developmental onset that affect functioning in areas such as learning, communication, or behavior. / ADHD executive-function profile: A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs.

0524. In a supervision quiz, how should Specific learning disorder be distinguished from Reasonable accommodation?

A. Specific learning disorder: Persistent difficulty learning or using academic skills despite appropriate support, evaluated in relation to developmental and educational context. / Reasonable accommodation: A pattern of developmentally inappropriate inattention and/or hyperactivity-impulsivity with impairment across relevant contexts.
B. Specific learning disorder: Persistent difficulty learning or using academic skills despite appropriate support, evaluated in relation to developmental and educational context. / Reasonable accommodation: A modification to environment, instruction, or procedure that supports equitable access under applicable rules.
C. Specific learning disorder: A modification to environment, instruction, or procedure that supports equitable access under applicable rules. / Reasonable accommodation: Persistent difficulty learning or using academic skills despite appropriate support, evaluated in relation to developmental and educational context.
D. Specific learning disorder: Differences in responding to sensory input that may affect comfort, attention, or participation. / Reasonable accommodation: A modification to environment, instruction, or procedure that supports equitable access under applicable rules.

0525. While supporting a adolescent student in the parent meeting, a parent educator adopts this practice: considering developmental history and functional impact rather than inferring a condition from one isolated behavior. Which concept best explains the choice?

A. Neurodevelopmental condition
B. Adaptive functioning
C. Specific learning disorder
D. Intellectual disability

0526. Which statement shows a sound practice-level distinction between Neurodevelopmental condition and Sensory processing differences?

A. Neurodevelopmental condition: Asking which sensory environments support or hinder participation and adjusting the setting where feasible. / Sensory processing differences: Considering developmental history and functional impact rather than inferring a condition from one isolated behavior.
B. Neurodevelopmental condition: Considering developmental history and functional impact rather than inferring a condition from one isolated behavior. / Sensory processing differences: Evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone.
C. Neurodevelopmental condition: Assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty. / Sensory processing differences: Asking which sensory environments support or hinder participation and adjusting the setting where feasible.
D. Neurodevelopmental condition: Considering developmental history and functional impact rather than inferring a condition from one isolated behavior. / Sensory processing differences: Asking which sensory environments support or hinder participation and adjusting the setting where feasible.

0527. Which description belongs with the term Specific learning disorder?

A. Persistent difficulty learning or using academic skills despite appropriate support, evaluated in relation to developmental and educational context.
B. Differences in responding to sensory input that may affect comfort, attention, or participation.
C. A pattern of developmentally inappropriate inattention and/or hyperactivity-impulsivity with impairment across relevant contexts.
D. A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs.

0528. What is the central meaning of Neurodiversity-affirming practice?

A. Co-occurrence of two or more conditions or clinically significant problems in one person.
B. A modification to environment, instruction, or procedure that supports equitable access under applicable rules.
C. An approach that respects neurological variation, avoids unnecessary normalization, and focuses on access and meaningful support.
D. Conceptual, social, and practical skills used to meet everyday demands across settings.

0529. A supervisor asks for an applied contrast between ADHD executive-function profile and Autism spectrum condition. Which option fits?

A. ADHD executive-function profile: Gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions. / Autism spectrum condition: Describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation.
B. ADHD executive-function profile: Describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation. / Autism spectrum condition: Gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions.
C. ADHD executive-function profile: Evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone. / Autism spectrum condition: Describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation.
D. ADHD executive-function profile: Gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions. / Autism spectrum condition: Considering developmental history and functional impact rather than inferring a condition from one isolated behavior.

0530. Which paired example correctly applies ADHD executive-function profile first and Comorbidity second?

A. ADHD executive-function profile: Assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty. / Comorbidity: Gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions.
B. ADHD executive-function profile: Evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone. / Comorbidity: Assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty.
C. ADHD executive-function profile: Gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions. / Comorbidity: Assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty.
D. ADHD executive-function profile: Gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions. / Comorbidity: Examining skill history, instruction, and targeted assessment when academic difficulty persists.

0531. A supervisor asks for an applied contrast between Specific learning disorder and Reasonable accommodation. Which option fits?

A. Specific learning disorder: Asking which sensory environments support or hinder participation and adjusting the setting where feasible. / Reasonable accommodation: Identifying practical adjustments that permit meaningful participation and checking governing requirements.
B. Specific learning disorder: Examining skill history, instruction, and targeted assessment when academic difficulty persists. / Reasonable accommodation: Gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions.
C. Specific learning disorder: Identifying practical adjustments that permit meaningful participation and checking governing requirements. / Reasonable accommodation: Examining skill history, instruction, and targeted assessment when academic difficulty persists.
D. Specific learning disorder: Examining skill history, instruction, and targeted assessment when academic difficulty persists. / Reasonable accommodation: Identifying practical adjustments that permit meaningful participation and checking governing requirements.

0532. Which option preserves the correct meaning of both Neurodevelopmental condition and Neurodiversity-affirming practice?

A. Neurodevelopmental condition: A group of conditions with developmental onset that affect functioning in areas such as learning, communication, or behavior. / Neurodiversity-affirming practice: An approach that respects neurological variation, avoids unnecessary normalization, and focuses on access and meaningful support.
B. Neurodevelopmental condition: An approach that respects neurological variation, avoids unnecessary normalization, and focuses on access and meaningful support. / Neurodiversity-affirming practice: A group of conditions with developmental onset that affect functioning in areas such as learning, communication, or behavior.
C. Neurodevelopmental condition: A pattern of developmentally inappropriate inattention and/or hyperactivity-impulsivity with impairment across relevant contexts. / Neurodiversity-affirming practice: An approach that respects neurological variation, avoids unnecessary normalization, and focuses on access and meaningful support.
D. Neurodevelopmental condition: A group of conditions with developmental onset that affect functioning in areas such as learning, communication, or behavior. / Neurodiversity-affirming practice: A modification to environment, instruction, or procedure that supports equitable access under applicable rules.

0533. A supervisor asks for an applied contrast between Intellectual disability and Adaptive functioning. Which option fits?

A. Intellectual disability: Assessing adaptive skills and developmental history alongside intellectual functioning. / Adaptive functioning: Building accommodations around the person's needs and goals rather than treating difference itself as a defect.
B. Intellectual disability: Assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty. / Adaptive functioning: Evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone.
C. Intellectual disability: Assessing adaptive skills and developmental history alongside intellectual functioning. / Adaptive functioning: Evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone.
D. Intellectual disability: Evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone. / Adaptive functioning: Assessing adaptive skills and developmental history alongside intellectual functioning.

0534. When reviewing a student aged 12's plan in the counseling practicum, the case coordinator notes that the next step is examining skill history, instruction, and targeted assessment when academic difficulty persists. Which concept guides this step?

A. Reasonable accommodation
B. Specific learning disorder
C. Intellectual disability
D. Sensory processing differences

0535. A assessment clinician is supporting a young person aged 16 in the school consultation. The key practice is gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions. Which course concept is most relevant?

A. ADHD executive-function profile
B. Specific learning disorder
C. Adaptive functioning
D. Neurodiversity-affirming practice

0536. Choose the definition pair that correctly explains Neurodevelopmental condition first and Sensory processing differences second.

A. Neurodevelopmental condition: A group of conditions with developmental onset that affect functioning in areas such as learning, communication, or behavior. / Sensory processing differences: Conceptual, social, and practical skills used to meet everyday demands across settings.
B. Neurodevelopmental condition: Differences in responding to sensory input that may affect comfort, attention, or participation. / Sensory processing differences: A group of conditions with developmental onset that affect functioning in areas such as learning, communication, or behavior.
C. Neurodevelopmental condition: A group of conditions with developmental onset that affect functioning in areas such as learning, communication, or behavior. / Sensory processing differences: Differences in responding to sensory input that may affect comfort, attention, or participation.
D. Neurodevelopmental condition: Co-occurrence of two or more conditions or clinically significant problems in one person. / Sensory processing differences: Differences in responding to sensory input that may affect comfort, attention, or participation.

0537. A behavior specialist is asked to evaluate a proposed service for a young person in the parent meeting. The defining feature is asking which sensory environments support or hinder participation and adjusting the setting where feasible. Which concept fits?

A. Sensory processing differences
B. Comorbidity
C. Adaptive functioning
D. Neurodevelopmental condition

0538. When reviewing a client in early adolescence's plan in the parent meeting, the school-based clinician notes that the next step is evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone. Which concept guides this step?

A. Neurodevelopmental condition
B. Adaptive functioning
C. Specific learning disorder
D. Sensory processing differences

0539. Which statement most accurately defines Comorbidity?

A. A pattern of developmentally inappropriate inattention and/or hyperactivity-impulsivity with impairment across relevant contexts.
B. Differences in responding to sensory input that may affect comfort, attention, or participation.
C. A condition characterized by limitations in intellectual functioning and adaptive functioning with developmental onset.
D. Co-occurrence of two or more conditions or clinically significant problems in one person.

0540. A consultant is preparing a follow-up plan for a client in early adolescence in the supervision meeting. The plan calls for gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions. Which concept names this approach?

A. ADHD executive-function profile
B. Specific learning disorder
C. Neurodiversity-affirming practice
D. Adaptive functioning

0541. A trainee must distinguish how Intellectual disability and Reasonable accommodation guide practice. Which comparison is accurate?

A. Intellectual disability: Assessing adaptive skills and developmental history alongside intellectual functioning. / Reasonable accommodation: Considering developmental history and functional impact rather than inferring a condition from one isolated behavior.
B. Intellectual disability: Describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation. / Reasonable accommodation: Identifying practical adjustments that permit meaningful participation and checking governing requirements.
C. Intellectual disability: Assessing adaptive skills and developmental history alongside intellectual functioning. / Reasonable accommodation: Identifying practical adjustments that permit meaningful participation and checking governing requirements.
D. Intellectual disability: Identifying practical adjustments that permit meaningful participation and checking governing requirements. / Reasonable accommodation: Assessing adaptive skills and developmental history alongside intellectual functioning.

0542. How should a practitioner distinguish the applications of Autism spectrum condition and Comorbidity?

A. Autism spectrum condition: Assessing adaptive skills and developmental history alongside intellectual functioning. / Comorbidity: Assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty.
B. Autism spectrum condition: Assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty. / Comorbidity: Describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation.
C. Autism spectrum condition: Describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation. / Comorbidity: Considering developmental history and functional impact rather than inferring a condition from one isolated behavior.
D. Autism spectrum condition: Describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation. / Comorbidity: Assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty.

0543. An interdisciplinary team reviews a child of elementary-school age's case at the after-school program. The school support specialist recommends gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions. Which course concept best fits?

A. Adaptive functioning
B. Neurodiversity-affirming practice
C. ADHD executive-function profile
D. Sensory processing differences

0544. A teacher and counselor is explaining a choice to a child aged 14 and caregiver in the family session. The choice centers on building accommodations around the person's needs and goals rather than treating difference itself as a defect. Which idea is illustrated?

A. Neurodiversity-affirming practice
B. Adaptive functioning
C. Autism spectrum condition
D. Neurodevelopmental condition

0545. Which statement shows a sound practice-level distinction between Autism spectrum condition and Specific learning disorder?

A. Autism spectrum condition: Examining skill history, instruction, and targeted assessment when academic difficulty persists. / Specific learning disorder: Describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation.
B. Autism spectrum condition: Describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation. / Specific learning disorder: Asking which sensory environments support or hinder participation and adjusting the setting where feasible.
C. Autism spectrum condition: Describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation. / Specific learning disorder: Examining skill history, instruction, and targeted assessment when academic difficulty persists.
D. Autism spectrum condition: Considering developmental history and functional impact rather than inferring a condition from one isolated behavior. / Specific learning disorder: Examining skill history, instruction, and targeted assessment when academic difficulty persists.

0546. A consulting counselor is asked to justify a plan for a student aged 12 in the school counseling office. It calls for gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions. Which concept provides the rationale?

A. Sensory processing differences
B. Intellectual disability
C. ADHD executive-function profile
D. Autism spectrum condition

0547. While supporting a middle-school student in the family resource center, a school-based clinician adopts this practice: asking which sensory environments support or hinder participation and adjusting the setting where feasible. Which concept best explains the choice?

A. Reasonable accommodation
B. Sensory processing differences
C. Neurodevelopmental condition
D. Specific learning disorder

0548. Which applied comparison correctly identifies what belongs to Sensory processing differences versus Comorbidity?

A. Sensory processing differences: Asking which sensory environments support or hinder participation and adjusting the setting where feasible. / Comorbidity: Identifying practical adjustments that permit meaningful participation and checking governing requirements.
B. Sensory processing differences: Asking which sensory environments support or hinder participation and adjusting the setting where feasible. / Comorbidity: Assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty.
C. Sensory processing differences: Assessing adaptive skills and developmental history alongside intellectual functioning. / Comorbidity: Assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty.
D. Sensory processing differences: Assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty. / Comorbidity: Asking which sensory environments support or hinder participation and adjusting the setting where feasible.

0549. Which option pairs the definitions of Autism spectrum condition and Neurodiversity-affirming practice correctly, in that order?

A. Autism spectrum condition: A pattern of developmentally inappropriate inattention and/or hyperactivity-impulsivity with impairment across relevant contexts. / Neurodiversity-affirming practice: An approach that respects neurological variation, avoids unnecessary normalization, and focuses on access and meaningful support.
B. Autism spectrum condition: A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs. / Neurodiversity-affirming practice: A modification to environment, instruction, or procedure that supports equitable access under applicable rules.
C. Autism spectrum condition: An approach that respects neurological variation, avoids unnecessary normalization, and focuses on access and meaningful support. / Neurodiversity-affirming practice: A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs.
D. Autism spectrum condition: A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs. / Neurodiversity-affirming practice: An approach that respects neurological variation, avoids unnecessary normalization, and focuses on access and meaningful support.

0550. A trainee must distinguish how Intellectual disability and Neurodiversity-affirming practice guide practice. Which comparison is accurate?

A. Intellectual disability: Evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone. / Neurodiversity-affirming practice: Building accommodations around the person's needs and goals rather than treating difference itself as a defect.
B. Intellectual disability: Building accommodations around the person's needs and goals rather than treating difference itself as a defect. / Neurodiversity-affirming practice: Assessing adaptive skills and developmental history alongside intellectual functioning.
C. Intellectual disability: Assessing adaptive skills and developmental history alongside intellectual functioning. / Neurodiversity-affirming practice: Gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions.
D. Intellectual disability: Assessing adaptive skills and developmental history alongside intellectual functioning. / Neurodiversity-affirming practice: Building accommodations around the person's needs and goals rather than treating difference itself as a defect.

0551. A trainee must choose a practice that exemplifies Sensory processing differences. Which action is the best fit?

A. Evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone.
B. Examining skill history, instruction, and targeted assessment when academic difficulty persists.
C. Asking which sensory environments support or hinder participation and adjusting the setting where feasible.
D. Describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation.

0552. A community practitioner is asked what should shape a young person aged 13's support in the behavior-support review. The proposed focus is examining skill history, instruction, and targeted assessment when academic difficulty persists. Which principle does it represent?

A. Neurodevelopmental condition
B. Specific learning disorder
C. Autism spectrum condition
D. Sensory processing differences

0553. At the supervision meeting, a community practitioner reviews whether a plan for a older adolescent client is appropriate. The relevant practice is considering developmental history and functional impact rather than inferring a condition from one isolated behavior. Which concept is tested?

A. Adaptive functioning
B. Specific learning disorder
C. Neurodevelopmental condition
D. Intellectual disability

0554. Which comparison correctly distinguishes Autism spectrum condition from Specific learning disorder?

A. Autism spectrum condition: A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs. / Specific learning disorder: Persistent difficulty learning or using academic skills despite appropriate support, evaluated in relation to developmental and educational context.
B. Autism spectrum condition: A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs. / Specific learning disorder: Differences in responding to sensory input that may affect comfort, attention, or participation.
C. Autism spectrum condition: Persistent difficulty learning or using academic skills despite appropriate support, evaluated in relation to developmental and educational context. / Specific learning disorder: A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs.
D. Autism spectrum condition: A group of conditions with developmental onset that affect functioning in areas such as learning, communication, or behavior. / Specific learning disorder: Persistent difficulty learning or using academic skills despite appropriate support, evaluated in relation to developmental and educational context.

0555. While consulting in the community service agency, a member of a clinical team supports a high-school student by using this approach: evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone. Which concept is being applied?

A. Adaptive functioning
B. Specific learning disorder
C. ADHD executive-function profile
D. Comorbidity

0556. Choose the response that best puts Autism spectrum condition into practice.

A. Asking which sensory environments support or hinder participation and adjusting the setting where feasible.
B. Identifying practical adjustments that permit meaningful participation and checking governing requirements.
C. Considering developmental history and functional impact rather than inferring a condition from one isolated behavior.
D. Describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation.

0557. In a supervision review, a caregiver working with a counselor describes work with a child aged 8 in the community youth program: asking which sensory environments support or hinder participation and adjusting the setting where feasible. What concept is illustrated?

A. Reasonable accommodation
B. Sensory processing differences
C. Comorbidity
D. ADHD executive-function profile

0558. Which statement accurately contrasts the course concepts Neurodevelopmental condition and Intellectual disability?

A. Neurodevelopmental condition: A group of conditions with developmental onset that affect functioning in areas such as learning, communication, or behavior. / Intellectual disability: A condition characterized by limitations in intellectual functioning and adaptive functioning with developmental onset.
B. Neurodevelopmental condition: Differences in responding to sensory input that may affect comfort, attention, or participation. / Intellectual disability: A condition characterized by limitations in intellectual functioning and adaptive functioning with developmental onset.
C. Neurodevelopmental condition: A group of conditions with developmental onset that affect functioning in areas such as learning, communication, or behavior. / Intellectual disability: Co-occurrence of two or more conditions or clinically significant problems in one person.
D. Neurodevelopmental condition: A condition characterized by limitations in intellectual functioning and adaptive functioning with developmental onset. / Intellectual disability: A group of conditions with developmental onset that affect functioning in areas such as learning, communication, or behavior.

0559. A school counselor is asked to justify a plan for a young person aged 18 in the family session. It calls for describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation. Which concept provides the rationale?

A. Autism spectrum condition
B. ADHD executive-function profile
C. Adaptive functioning
D. Specific learning disorder

0560. At the school counseling office, a counselor meets with a child aged 8. The practice priority is: considering developmental history and functional impact rather than inferring a condition from one isolated behavior. Which concept best captures that priority?

A. Intellectual disability
B. ADHD executive-function profile
C. Neurodevelopmental condition
D. Adaptive functioning

0561. Which comparison correctly distinguishes Neurodevelopmental condition from Neurodiversity-affirming practice?

A. Neurodevelopmental condition: A group of conditions with developmental onset that affect functioning in areas such as learning, communication, or behavior. / Neurodiversity-affirming practice: An approach that respects neurological variation, avoids unnecessary normalization, and focuses on access and meaningful support.
B. Neurodevelopmental condition: An approach that respects neurological variation, avoids unnecessary normalization, and focuses on access and meaningful support. / Neurodiversity-affirming practice: A group of conditions with developmental onset that affect functioning in areas such as learning, communication, or behavior.
C. Neurodevelopmental condition: A group of conditions with developmental onset that affect functioning in areas such as learning, communication, or behavior. / Neurodiversity-affirming practice: A modification to environment, instruction, or procedure that supports equitable access under applicable rules.
D. Neurodevelopmental condition: A pattern of developmentally inappropriate inattention and/or hyperactivity-impulsivity with impairment across relevant contexts. / Neurodiversity-affirming practice: An approach that respects neurological variation, avoids unnecessary normalization, and focuses on access and meaningful support.

0562. Choose the practice comparison that best separates Intellectual disability from Reasonable accommodation.

A. Intellectual disability: Identifying practical adjustments that permit meaningful participation and checking governing requirements. / Reasonable accommodation: Assessing adaptive skills and developmental history alongside intellectual functioning.
B. Intellectual disability: Describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation. / Reasonable accommodation: Identifying practical adjustments that permit meaningful participation and checking governing requirements.
C. Intellectual disability: Assessing adaptive skills and developmental history alongside intellectual functioning. / Reasonable accommodation: Identifying practical adjustments that permit meaningful participation and checking governing requirements.
D. Intellectual disability: Assessing adaptive skills and developmental history alongside intellectual functioning. / Reasonable accommodation: Considering developmental history and functional impact rather than inferring a condition from one isolated behavior.

0563. A mental-health professional prepares for a session in the classroom support meeting with a child of elementary-school age. The intended approach is assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty. Which concept is most relevant?

A. Comorbidity
B. Reasonable accommodation
C. Neurodiversity-affirming practice
D. Specific learning disorder

0564. A supervisor asks for an applied contrast between Neurodevelopmental condition and Reasonable accommodation. Which option fits?

A. Neurodevelopmental condition: Considering developmental history and functional impact rather than inferring a condition from one isolated behavior. / Reasonable accommodation: Asking which sensory environments support or hinder participation and adjusting the setting where feasible.
B. Neurodevelopmental condition: Considering developmental history and functional impact rather than inferring a condition from one isolated behavior. / Reasonable accommodation: Identifying practical adjustments that permit meaningful participation and checking governing requirements.
C. Neurodevelopmental condition: Describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation. / Reasonable accommodation: Identifying practical adjustments that permit meaningful participation and checking governing requirements.
D. Neurodevelopmental condition: Identifying practical adjustments that permit meaningful participation and checking governing requirements. / Reasonable accommodation: Considering developmental history and functional impact rather than inferring a condition from one isolated behavior.

0565. In a supervision review, a case coordinator describes work with a older adolescent client in the youth group: assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty. What concept is illustrated?

A. ADHD executive-function profile
B. Comorbidity
C. Autism spectrum condition
D. Specific learning disorder

0566. Choose the definition pair that correctly explains Neurodevelopmental condition first and Autism spectrum condition second.

A. Neurodevelopmental condition: A group of conditions with developmental onset that affect functioning in areas such as learning, communication, or behavior. / Autism spectrum condition: A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs.
B. Neurodevelopmental condition: A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs. / Autism spectrum condition: A group of conditions with developmental onset that affect functioning in areas such as learning, communication, or behavior.
C. Neurodevelopmental condition: A group of conditions with developmental onset that affect functioning in areas such as learning, communication, or behavior. / Autism spectrum condition: Persistent difficulty learning or using academic skills despite appropriate support, evaluated in relation to developmental and educational context.
D. Neurodevelopmental condition: Differences in responding to sensory input that may affect comfort, attention, or participation. / Autism spectrum condition: A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs.

0567. Which option pairs the definitions of Neurodevelopmental condition and Autism spectrum condition correctly, in that order?

A. Neurodevelopmental condition: A group of conditions with developmental onset that affect functioning in areas such as learning, communication, or behavior. / Autism spectrum condition: Persistent difficulty learning or using academic skills despite appropriate support, evaluated in relation to developmental and educational context.
B. Neurodevelopmental condition: A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs. / Autism spectrum condition: A group of conditions with developmental onset that affect functioning in areas such as learning, communication, or behavior.
C. Neurodevelopmental condition: Differences in responding to sensory input that may affect comfort, attention, or participation. / Autism spectrum condition: A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs.
D. Neurodevelopmental condition: A group of conditions with developmental onset that affect functioning in areas such as learning, communication, or behavior. / Autism spectrum condition: A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs.

0568. In a professional consultation about a young adolescent client, the mental-health professional describes this response in the caregiver consultation: gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions. Which term is most apt?

A. Comorbidity
B. ADHD executive-function profile
C. Neurodevelopmental condition
D. Reasonable accommodation

0569. A program coordinator is asked what should shape a high-school student's support in the multidisciplinary case conference. The proposed focus is gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions. Which principle does it represent?

A. ADHD executive-function profile
B. Autism spectrum condition
C. Intellectual disability
D. Sensory processing differences

0570. Identify the most precise label for this idea: A modification to environment, instruction, or procedure that supports equitable access under applicable rules.

A. Sensory processing differences
B. ADHD executive-function profile
C. Reasonable accommodation
D. Autism spectrum condition

0571. A trainee must distinguish how Neurodevelopmental condition and Intellectual disability guide practice. Which comparison is accurate?

A. Neurodevelopmental condition: Asking which sensory environments support or hinder participation and adjusting the setting where feasible. / Intellectual disability: Assessing adaptive skills and developmental history alongside intellectual functioning.
B. Neurodevelopmental condition: Considering developmental history and functional impact rather than inferring a condition from one isolated behavior. / Intellectual disability: Assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty.
C. Neurodevelopmental condition: Considering developmental history and functional impact rather than inferring a condition from one isolated behavior. / Intellectual disability: Assessing adaptive skills and developmental history alongside intellectual functioning.
D. Neurodevelopmental condition: Assessing adaptive skills and developmental history alongside intellectual functioning. / Intellectual disability: Considering developmental history and functional impact rather than inferring a condition from one isolated behavior.

0572. Which option preserves the correct meaning of both ADHD executive-function profile and Reasonable accommodation?

A. ADHD executive-function profile: A pattern of developmentally inappropriate inattention and/or hyperactivity-impulsivity with impairment across relevant contexts. / Reasonable accommodation: Differences in responding to sensory input that may affect comfort, attention, or participation.
B. ADHD executive-function profile: A modification to environment, instruction, or procedure that supports equitable access under applicable rules. / Reasonable accommodation: A pattern of developmentally inappropriate inattention and/or hyperactivity-impulsivity with impairment across relevant contexts.
C. ADHD executive-function profile: An approach that respects neurological variation, avoids unnecessary normalization, and focuses on access and meaningful support. / Reasonable accommodation: A modification to environment, instruction, or procedure that supports equitable access under applicable rules.
D. ADHD executive-function profile: A pattern of developmentally inappropriate inattention and/or hyperactivity-impulsivity with impairment across relevant contexts. / Reasonable accommodation: A modification to environment, instruction, or procedure that supports equitable access under applicable rules.

0573. When reviewing a teenage client's plan in the classroom support meeting, the parent educator notes that the next step is identifying practical adjustments that permit meaningful participation and checking governing requirements. Which concept guides this step?

A. Sensory processing differences
B. Comorbidity
C. Autism spectrum condition
D. Reasonable accommodation

0574. A trainee must distinguish how Specific learning disorder and Adaptive functioning guide practice. Which comparison is accurate?

A. Specific learning disorder: Asking which sensory environments support or hinder participation and adjusting the setting where feasible. / Adaptive functioning: Evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone.
B. Specific learning disorder: Examining skill history, instruction, and targeted assessment when academic difficulty persists. / Adaptive functioning: Evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone.
C. Specific learning disorder: Examining skill history, instruction, and targeted assessment when academic difficulty persists. / Adaptive functioning: Gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions.
D. Specific learning disorder: Evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone. / Adaptive functioning: Examining skill history, instruction, and targeted assessment when academic difficulty persists.

0575. What is the central meaning of Neurodevelopmental condition?

A. An approach that respects neurological variation, avoids unnecessary normalization, and focuses on access and meaningful support.
B. Conceptual, social, and practical skills used to meet everyday demands across settings.
C. A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs.
D. A group of conditions with developmental onset that affect functioning in areas such as learning, communication, or behavior.

0576. A high-school student's service team meets in the school counseling office. The family therapist recommends a change involving assessing adaptive skills and developmental history alongside intellectual functioning. Which idea best explains it?

A. Intellectual disability
B. Adaptive functioning
C. Sensory processing differences
D. Reasonable accommodation

0577. Which pair of actions illustrates Autism spectrum condition and Neurodiversity-affirming practice, respectively?

A. Autism spectrum condition: Describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation. / Neurodiversity-affirming practice: Identifying practical adjustments that permit meaningful participation and checking governing requirements.
B. Autism spectrum condition: Describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation. / Neurodiversity-affirming practice: Building accommodations around the person's needs and goals rather than treating difference itself as a defect.
C. Autism spectrum condition: Building accommodations around the person's needs and goals rather than treating difference itself as a defect. / Neurodiversity-affirming practice: Describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation.
D. Autism spectrum condition: Gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions. / Neurodiversity-affirming practice: Building accommodations around the person's needs and goals rather than treating difference itself as a defect.

0578. During service review in the school counseling office, a community practitioner describes describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation. for a young person aged 16. Which course idea is most applicable?

A. ADHD executive-function profile
B. Adaptive functioning
C. Sensory processing differences
D. Autism spectrum condition

0579. While consulting in the caregiver consultation, a mental-health professional supports a young adolescent client by using this approach: gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions. Which concept is being applied?

A. Autism spectrum condition
B. ADHD executive-function profile
C. Intellectual disability
D. Neurodiversity-affirming practice

0580. Which option pairs the definitions of Neurodevelopmental condition and Reasonable accommodation correctly, in that order?

A. Neurodevelopmental condition: A modification to environment, instruction, or procedure that supports equitable access under applicable rules. / Reasonable accommodation: A group of conditions with developmental onset that affect functioning in areas such as learning, communication, or behavior.
B. Neurodevelopmental condition: A group of conditions with developmental onset that affect functioning in areas such as learning, communication, or behavior. / Reasonable accommodation: A modification to environment, instruction, or procedure that supports equitable access under applicable rules.
C. Neurodevelopmental condition: A group of conditions with developmental onset that affect functioning in areas such as learning, communication, or behavior. / Reasonable accommodation: Differences in responding to sensory input that may affect comfort, attention, or participation.
D. Neurodevelopmental condition: A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs. / Reasonable accommodation: A modification to environment, instruction, or procedure that supports equitable access under applicable rules.

0581. Which statement shows a sound practice-level distinction between Neurodevelopmental condition and Reasonable accommodation?

A. Neurodevelopmental condition: Describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation. / Reasonable accommodation: Identifying practical adjustments that permit meaningful participation and checking governing requirements.
B. Neurodevelopmental condition: Identifying practical adjustments that permit meaningful participation and checking governing requirements. / Reasonable accommodation: Considering developmental history and functional impact rather than inferring a condition from one isolated behavior.
C. Neurodevelopmental condition: Considering developmental history and functional impact rather than inferring a condition from one isolated behavior. / Reasonable accommodation: Asking which sensory environments support or hinder participation and adjusting the setting where feasible.
D. Neurodevelopmental condition: Considering developmental history and functional impact rather than inferring a condition from one isolated behavior. / Reasonable accommodation: Identifying practical adjustments that permit meaningful participation and checking governing requirements.

0582. In a supervision quiz, how should Neurodevelopmental condition be distinguished from ADHD executive-function profile?

A. Neurodevelopmental condition: A group of conditions with developmental onset that affect functioning in areas such as learning, communication, or behavior. / ADHD executive-function profile: A pattern of developmentally inappropriate inattention and/or hyperactivity-impulsivity with impairment across relevant contexts.
B. Neurodevelopmental condition: A condition characterized by limitations in intellectual functioning and adaptive functioning with developmental onset. / ADHD executive-function profile: A pattern of developmentally inappropriate inattention and/or hyperactivity-impulsivity with impairment across relevant contexts.
C. Neurodevelopmental condition: A group of conditions with developmental onset that affect functioning in areas such as learning, communication, or behavior. / ADHD executive-function profile: A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs.
D. Neurodevelopmental condition: A pattern of developmentally inappropriate inattention and/or hyperactivity-impulsivity with impairment across relevant contexts. / ADHD executive-function profile: A group of conditions with developmental onset that affect functioning in areas such as learning, communication, or behavior.

0583. A case conference asks for a distinction between Neurodevelopmental condition and Neurodiversity-affirming practice. Which answer is sound?

A. Neurodevelopmental condition: A pattern of developmentally inappropriate inattention and/or hyperactivity-impulsivity with impairment across relevant contexts. / Neurodiversity-affirming practice: An approach that respects neurological variation, avoids unnecessary normalization, and focuses on access and meaningful support.
B. Neurodevelopmental condition: An approach that respects neurological variation, avoids unnecessary normalization, and focuses on access and meaningful support. / Neurodiversity-affirming practice: A group of conditions with developmental onset that affect functioning in areas such as learning, communication, or behavior.
C. Neurodevelopmental condition: A group of conditions with developmental onset that affect functioning in areas such as learning, communication, or behavior. / Neurodiversity-affirming practice: A modification to environment, instruction, or procedure that supports equitable access under applicable rules.
D. Neurodevelopmental condition: A group of conditions with developmental onset that affect functioning in areas such as learning, communication, or behavior. / Neurodiversity-affirming practice: An approach that respects neurological variation, avoids unnecessary normalization, and focuses on access and meaningful support.

0584. Choose the practice comparison that best separates ADHD executive-function profile from Comorbidity.

A. ADHD executive-function profile: Gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions. / Comorbidity: Assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty.
B. ADHD executive-function profile: Gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions. / Comorbidity: Examining skill history, instruction, and targeted assessment when academic difficulty persists.
C. ADHD executive-function profile: Evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone. / Comorbidity: Assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty.
D. ADHD executive-function profile: Assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty. / Comorbidity: Gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions.

0585. Which paired example correctly applies Neurodevelopmental condition first and Neurodiversity-affirming practice second?

A. Neurodevelopmental condition: Considering developmental history and functional impact rather than inferring a condition from one isolated behavior. / Neurodiversity-affirming practice: Building accommodations around the person's needs and goals rather than treating difference itself as a defect.
B. Neurodevelopmental condition: Considering developmental history and functional impact rather than inferring a condition from one isolated behavior. / Neurodiversity-affirming practice: Identifying practical adjustments that permit meaningful participation and checking governing requirements.
C. Neurodevelopmental condition: Gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions. / Neurodiversity-affirming practice: Building accommodations around the person's needs and goals rather than treating difference itself as a defect.
D. Neurodevelopmental condition: Building accommodations around the person's needs and goals rather than treating difference itself as a defect. / Neurodiversity-affirming practice: Considering developmental history and functional impact rather than inferring a condition from one isolated behavior.

0586. A student confuses Adaptive functioning with Comorbidity. Which explanation most accurately separates them?

A. Adaptive functioning: Co-occurrence of two or more conditions or clinically significant problems in one person. / Comorbidity: Conceptual, social, and practical skills used to meet everyday demands across settings.
B. Adaptive functioning: Conceptual, social, and practical skills used to meet everyday demands across settings. / Comorbidity: A condition characterized by limitations in intellectual functioning and adaptive functioning with developmental onset.
C. Adaptive functioning: Conceptual, social, and practical skills used to meet everyday demands across settings. / Comorbidity: Co-occurrence of two or more conditions or clinically significant problems in one person.
D. Adaptive functioning: A group of conditions with developmental onset that affect functioning in areas such as learning, communication, or behavior. / Comorbidity: Co-occurrence of two or more conditions or clinically significant problems in one person.

0587. In a supervision review, a family therapist describes work with a young person in the supervision meeting: describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation. What concept is illustrated?

A. Sensory processing differences
B. Autism spectrum condition
C. Adaptive functioning
D. Reasonable accommodation

0588. A trainee must explain Comorbidity. Which answer is accurate?

A. Co-occurrence of two or more conditions or clinically significant problems in one person.
B. Conceptual, social, and practical skills used to meet everyday demands across settings.
C. A condition characterized by limitations in intellectual functioning and adaptive functioning with developmental onset.
D. A group of conditions with developmental onset that affect functioning in areas such as learning, communication, or behavior.

0589. Which choice aligns each practice with the correct idea, Autism spectrum condition or Sensory processing differences?

A. Autism spectrum condition: Identifying practical adjustments that permit meaningful participation and checking governing requirements. / Sensory processing differences: Asking which sensory environments support or hinder participation and adjusting the setting where feasible.
B. Autism spectrum condition: Describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation. / Sensory processing differences: Considering developmental history and functional impact rather than inferring a condition from one isolated behavior.
C. Autism spectrum condition: Asking which sensory environments support or hinder participation and adjusting the setting where feasible. / Sensory processing differences: Describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation.
D. Autism spectrum condition: Describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation. / Sensory processing differences: Asking which sensory environments support or hinder participation and adjusting the setting where feasible.

0590. In the child guidance clinic, a school counselor describes the most appropriate support for a client in early adolescence as assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty. Which framework is being applied?

A. Specific learning disorder
B. Comorbidity
C. Reasonable accommodation
D. ADHD executive-function profile

0591. Which named construct is captured by this account? A group of conditions with developmental onset that affect functioning in areas such as learning, communication, or behavior.

A. Adaptive functioning
B. Reasonable accommodation
C. Neurodevelopmental condition
D. Comorbidity

0592. In a supervision review, a parent educator describes work with a young person aged 18 in the learning-support meeting: assessing adaptive skills and developmental history alongside intellectual functioning. What concept is illustrated?

A. Sensory processing differences
B. Intellectual disability
C. Reasonable accommodation
D. Neurodevelopmental condition

0593. A team must select a support approach for a child aged 11 at the family session. The family therapist recommends considering developmental history and functional impact rather than inferring a condition from one isolated behavior. Which idea is most relevant?

A. ADHD executive-function profile
B. Neurodevelopmental condition
C. Autism spectrum condition
D. Neurodiversity-affirming practice

0594. A child aged 11 is receiving support in the family resource center. The youth worker is guided by this practice: examining skill history, instruction, and targeted assessment when academic difficulty persists. Which principle best fits?

A. Neurodiversity-affirming practice
B. Specific learning disorder
C. Reasonable accommodation
D. Neurodevelopmental condition

0595. Select the best explanation of Sensory processing differences.

A. A group of conditions with developmental onset that affect functioning in areas such as learning, communication, or behavior.
B. An approach that respects neurological variation, avoids unnecessary normalization, and focuses on access and meaningful support.
C. Differences in responding to sensory input that may affect comfort, attention, or participation.
D. Persistent difficulty learning or using academic skills despite appropriate support, evaluated in relation to developmental and educational context.

0596. Which applied comparison correctly identifies what belongs to Comorbidity versus Reasonable accommodation?

A. Comorbidity: Identifying practical adjustments that permit meaningful participation and checking governing requirements. / Reasonable accommodation: Assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty.
B. Comorbidity: Assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty. / Reasonable accommodation: Identifying practical adjustments that permit meaningful participation and checking governing requirements.
C. Comorbidity: Assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty. / Reasonable accommodation: Examining skill history, instruction, and targeted assessment when academic difficulty persists.
D. Comorbidity: Building accommodations around the person's needs and goals rather than treating difference itself as a defect. / Reasonable accommodation: Identifying practical adjustments that permit meaningful participation and checking governing requirements.

0597. In the school-based service, a family therapist is considering this approach for a student aged 9: identifying practical adjustments that permit meaningful participation and checking governing requirements. Which framework does it represent?

A. Neurodiversity-affirming practice
B. Neurodevelopmental condition
C. ADHD executive-function profile
D. Reasonable accommodation

0598. In the community youth program, a consulting counselor explains why a young person aged 16 would benefit from assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty. Which course concept underpins the explanation?

A. Neurodiversity-affirming practice
B. Reasonable accommodation
C. Sensory processing differences
D. Comorbidity

0599. Which choice aligns each practice with the correct idea, ADHD executive-function profile or Sensory processing differences?

A. ADHD executive-function profile: Describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation. / Sensory processing differences: Asking which sensory environments support or hinder participation and adjusting the setting where feasible.
B. ADHD executive-function profile: Gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions. / Sensory processing differences: Examining skill history, instruction, and targeted assessment when academic difficulty persists.
C. ADHD executive-function profile: Gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions. / Sensory processing differences: Asking which sensory environments support or hinder participation and adjusting the setting where feasible.
D. ADHD executive-function profile: Asking which sensory environments support or hinder participation and adjusting the setting where feasible. / Sensory processing differences: Gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions.

0600. At the caregiver consultation, a play therapist meets with a teenage client. The practice priority is: examining skill history, instruction, and targeted assessment when academic difficulty persists. Which concept best captures that priority?

A. Autism spectrum condition
B. Neurodiversity-affirming practice
C. Specific learning disorder
D. Reasonable accommodation

0601. Which comparison correctly distinguishes Neurodevelopmental condition from ADHD executive-function profile?

A. Neurodevelopmental condition: A pattern of developmentally inappropriate inattention and/or hyperactivity-impulsivity with impairment across relevant contexts. / ADHD executive-function profile: A group of conditions with developmental onset that affect functioning in areas such as learning, communication, or behavior.
B. Neurodevelopmental condition: A group of conditions with developmental onset that affect functioning in areas such as learning, communication, or behavior. / ADHD executive-function profile: A pattern of developmentally inappropriate inattention and/or hyperactivity-impulsivity with impairment across relevant contexts.
C. Neurodevelopmental condition: A group of conditions with developmental onset that affect functioning in areas such as learning, communication, or behavior. / ADHD executive-function profile: A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs.
D. Neurodevelopmental condition: A condition characterized by limitations in intellectual functioning and adaptive functioning with developmental onset. / ADHD executive-function profile: A pattern of developmentally inappropriate inattention and/or hyperactivity-impulsivity with impairment across relevant contexts.

0602. Which comparison would correct a trainee's misunderstanding of Neurodevelopmental condition versus Intellectual disability?

A. Neurodevelopmental condition: A group of conditions with developmental onset that affect functioning in areas such as learning, communication, or behavior. / Intellectual disability: Co-occurrence of two or more conditions or clinically significant problems in one person.
B. Neurodevelopmental condition: A group of conditions with developmental onset that affect functioning in areas such as learning, communication, or behavior. / Intellectual disability: A condition characterized by limitations in intellectual functioning and adaptive functioning with developmental onset.
C. Neurodevelopmental condition: A condition characterized by limitations in intellectual functioning and adaptive functioning with developmental onset. / Intellectual disability: A group of conditions with developmental onset that affect functioning in areas such as learning, communication, or behavior.
D. Neurodevelopmental condition: Differences in responding to sensory input that may affect comfort, attention, or participation. / Intellectual disability: A condition characterized by limitations in intellectual functioning and adaptive functioning with developmental onset.

0603. How are Neurodevelopmental condition and Reasonable accommodation most accurately differentiated in this curriculum?

A. Neurodevelopmental condition: A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs. / Reasonable accommodation: A modification to environment, instruction, or procedure that supports equitable access under applicable rules.
B. Neurodevelopmental condition: A group of conditions with developmental onset that affect functioning in areas such as learning, communication, or behavior. / Reasonable accommodation: A modification to environment, instruction, or procedure that supports equitable access under applicable rules.
C. Neurodevelopmental condition: A group of conditions with developmental onset that affect functioning in areas such as learning, communication, or behavior. / Reasonable accommodation: Differences in responding to sensory input that may affect comfort, attention, or participation.
D. Neurodevelopmental condition: A modification to environment, instruction, or procedure that supports equitable access under applicable rules. / Reasonable accommodation: A group of conditions with developmental onset that affect functioning in areas such as learning, communication, or behavior.

0604. An interdisciplinary team reviews a young adolescent client's case at the clinical planning session. The counselor recommends assessing adaptive skills and developmental history alongside intellectual functioning. Which course concept best fits?

A. Neurodiversity-affirming practice
B. Intellectual disability
C. Adaptive functioning
D. Neurodevelopmental condition

0605. In a supervision quiz, how should ADHD executive-function profile be distinguished from Sensory processing differences?

A. ADHD executive-function profile: A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs. / Sensory processing differences: Differences in responding to sensory input that may affect comfort, attention, or participation.
B. ADHD executive-function profile: Differences in responding to sensory input that may affect comfort, attention, or participation. / Sensory processing differences: A pattern of developmentally inappropriate inattention and/or hyperactivity-impulsivity with impairment across relevant contexts.
C. ADHD executive-function profile: A pattern of developmentally inappropriate inattention and/or hyperactivity-impulsivity with impairment across relevant contexts. / Sensory processing differences: Differences in responding to sensory input that may affect comfort, attention, or participation.
D. ADHD executive-function profile: A pattern of developmentally inappropriate inattention and/or hyperactivity-impulsivity with impairment across relevant contexts. / Sensory processing differences: Persistent difficulty learning or using academic skills despite appropriate support, evaluated in relation to developmental and educational context.

0606. A case discussion concerns a child aged 7 and a case coordinator in the student-support meeting. The practitioner is considering gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions. Which principle is involved?

A. ADHD executive-function profile
B. Comorbidity
C. Reasonable accommodation
D. Adaptive functioning

0607. Which option pairs the definitions of Autism spectrum condition and Comorbidity correctly, in that order?

A. Autism spectrum condition: Co-occurrence of two or more conditions or clinically significant problems in one person. / Comorbidity: A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs.
B. Autism spectrum condition: A condition characterized by limitations in intellectual functioning and adaptive functioning with developmental onset. / Comorbidity: Co-occurrence of two or more conditions or clinically significant problems in one person.
C. Autism spectrum condition: A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs. / Comorbidity: Co-occurrence of two or more conditions or clinically significant problems in one person.
D. Autism spectrum condition: A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs. / Comorbidity: A group of conditions with developmental onset that affect functioning in areas such as learning, communication, or behavior.

0608. Which option pairs the definitions of Sensory processing differences and Comorbidity correctly, in that order?

A. Sensory processing differences: Differences in responding to sensory input that may affect comfort, attention, or participation. / Comorbidity: Co-occurrence of two or more conditions or clinically significant problems in one person.
B. Sensory processing differences: Differences in responding to sensory input that may affect comfort, attention, or participation. / Comorbidity: A modification to environment, instruction, or procedure that supports equitable access under applicable rules.
C. Sensory processing differences: A condition characterized by limitations in intellectual functioning and adaptive functioning with developmental onset. / Comorbidity: Co-occurrence of two or more conditions or clinically significant problems in one person.
D. Sensory processing differences: Co-occurrence of two or more conditions or clinically significant problems in one person. / Comorbidity: Differences in responding to sensory input that may affect comfort, attention, or participation.

0609. Which option preserves the correct meaning of both ADHD executive-function profile and Comorbidity?

A. ADHD executive-function profile: A pattern of developmentally inappropriate inattention and/or hyperactivity-impulsivity with impairment across relevant contexts. / Comorbidity: Co-occurrence of two or more conditions or clinically significant problems in one person.
B. ADHD executive-function profile: A pattern of developmentally inappropriate inattention and/or hyperactivity-impulsivity with impairment across relevant contexts. / Comorbidity: Persistent difficulty learning or using academic skills despite appropriate support, evaluated in relation to developmental and educational context.
C. ADHD executive-function profile: Conceptual, social, and practical skills used to meet everyday demands across settings. / Comorbidity: Co-occurrence of two or more conditions or clinically significant problems in one person.
D. ADHD executive-function profile: Co-occurrence of two or more conditions or clinically significant problems in one person. / Comorbidity: A pattern of developmentally inappropriate inattention and/or hyperactivity-impulsivity with impairment across relevant contexts.

0610. Which pair of actions illustrates Neurodevelopmental condition and ADHD executive-function profile, respectively?

A. Neurodevelopmental condition: Assessing adaptive skills and developmental history alongside intellectual functioning. / ADHD executive-function profile: Gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions.
B. Neurodevelopmental condition: Considering developmental history and functional impact rather than inferring a condition from one isolated behavior. / ADHD executive-function profile: Gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions.
C. Neurodevelopmental condition: Considering developmental history and functional impact rather than inferring a condition from one isolated behavior. / ADHD executive-function profile: Describing an individual’s strengths, communication profile, sensory needs, and support needs rather than assuming one presentation.
D. Neurodevelopmental condition: Gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions. / ADHD executive-function profile: Considering developmental history and functional impact rather than inferring a condition from one isolated behavior.

0611. A case conference asks for a distinction between Autism spectrum condition and Reasonable accommodation. Which answer is sound?

A. Autism spectrum condition: A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs. / Reasonable accommodation: A modification to environment, instruction, or procedure that supports equitable access under applicable rules.
B. Autism spectrum condition: A modification to environment, instruction, or procedure that supports equitable access under applicable rules. / Reasonable accommodation: A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs.
C. Autism spectrum condition: A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs. / Reasonable accommodation: Differences in responding to sensory input that may affect comfort, attention, or participation.
D. Autism spectrum condition: Persistent difficulty learning or using academic skills despite appropriate support, evaluated in relation to developmental and educational context. / Reasonable accommodation: A modification to environment, instruction, or procedure that supports equitable access under applicable rules.

0612. A youth worker is asked to justify a plan for a child aged 8 in the caregiver consultation. It calls for assessing adaptive skills and developmental history alongside intellectual functioning. Which concept provides the rationale?

A. Comorbidity
B. Specific learning disorder
C. Reasonable accommodation
D. Intellectual disability

0613. During work in the counseling practicum, a teacher and counselor identifies this need: evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone. Which idea should guide the response?

A. Intellectual disability
B. Neurodevelopmental condition
C. Adaptive functioning
D. Neurodiversity-affirming practice

0614. A mental-health professional is supporting a older adolescent client in the family session. The key practice is identifying practical adjustments that permit meaningful participation and checking governing requirements. Which course concept is most relevant?

A. Reasonable accommodation
B. Specific learning disorder
C. Neurodiversity-affirming practice
D. ADHD executive-function profile

0615. Choose the definition pair that correctly explains Adaptive functioning first and Sensory processing differences second.

A. Adaptive functioning: Conceptual, social, and practical skills used to meet everyday demands across settings. / Sensory processing differences: Differences in responding to sensory input that may affect comfort, attention, or participation.
B. Adaptive functioning: Differences in responding to sensory input that may affect comfort, attention, or participation. / Sensory processing differences: Conceptual, social, and practical skills used to meet everyday demands across settings.
C. Adaptive functioning: An approach that respects neurological variation, avoids unnecessary normalization, and focuses on access and meaningful support. / Sensory processing differences: Differences in responding to sensory input that may affect comfort, attention, or participation.
D. Adaptive functioning: Conceptual, social, and practical skills used to meet everyday demands across settings. / Sensory processing differences: A modification to environment, instruction, or procedure that supports equitable access under applicable rules.

0616. Which named construct is captured by this account? Persistent difficulty learning or using academic skills despite appropriate support, evaluated in relation to developmental and educational context.

A. Neurodevelopmental condition
B. ADHD executive-function profile
C. Specific learning disorder
D. Comorbidity

0617. At a case-planning meeting, the school support specialist proposes describing an individual’s strengths, communication profile, sensory needs, and support needs rather than assuming one presentation. for a older adolescent client seen in the student-support meeting. Which concept does this illustrate?

A. Intellectual disability
B. Adaptive functioning
C. Neurodiversity-affirming practice
D. Autism spectrum condition

0618. A planning meeting about a school-age child includes a clinical supervisor. The proposed practice in the school counseling office is evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone. Which idea underlies it?

A. Adaptive functioning
B. Neurodiversity-affirming practice
C. Autism spectrum condition
D. Intellectual disability

0619. Which professional action most closely applies Neurodiversity-affirming practice?

A. Considering developmental history and functional impact rather than inferring a condition from one isolated behavior.
B. Describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation.
C. Building accommodations around the person's needs and goals rather than treating difference itself as a defect.
D. Examining skill history, instruction, and targeted assessment when academic difficulty persists.

0620. A therapist describes an intervention for a high-school student in the counseling practicum, centered on asking which sensory environments support or hinder participation and adjusting the setting where feasible. Which named idea is most relevant?

A. ADHD executive-function profile
B. Intellectual disability
C. Comorbidity
D. Sensory processing differences

0621. How should a practitioner distinguish the applications of Sensory processing differences and Comorbidity?

A. Sensory processing differences: Asking which sensory environments support or hinder participation and adjusting the setting where feasible. / Comorbidity: Assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty.
B. Sensory processing differences: Assessing adaptive skills and developmental history alongside intellectual functioning. / Comorbidity: Assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty.
C. Sensory processing differences: Asking which sensory environments support or hinder participation and adjusting the setting where feasible. / Comorbidity: Identifying practical adjustments that permit meaningful participation and checking governing requirements.
D. Sensory processing differences: Assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty. / Comorbidity: Asking which sensory environments support or hinder participation and adjusting the setting where feasible.

0622. Which option correctly matches each concept to its practice focus: Neurodevelopmental condition and Sensory processing differences?

A. Neurodevelopmental condition: Asking which sensory environments support or hinder participation and adjusting the setting where feasible. / Sensory processing differences: Considering developmental history and functional impact rather than inferring a condition from one isolated behavior.
B. Neurodevelopmental condition: Considering developmental history and functional impact rather than inferring a condition from one isolated behavior. / Sensory processing differences: Evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone.
C. Neurodevelopmental condition: Assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty. / Sensory processing differences: Asking which sensory environments support or hinder participation and adjusting the setting where feasible.
D. Neurodevelopmental condition: Considering developmental history and functional impact rather than inferring a condition from one isolated behavior. / Sensory processing differences: Asking which sensory environments support or hinder participation and adjusting the setting where feasible.

0623. A team must select a support approach for a school-age child at the community service agency. The case coordinator recommends asking which sensory environments support or hinder participation and adjusting the setting where feasible. Which idea is most relevant?

A. Comorbidity
B. Sensory processing differences
C. Specific learning disorder
D. Reasonable accommodation

0624. How should a practitioner distinguish the applications of Specific learning disorder and Comorbidity?

A. Specific learning disorder: Assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty. / Comorbidity: Examining skill history, instruction, and targeted assessment when academic difficulty persists.
B. Specific learning disorder: Assessing adaptive skills and developmental history alongside intellectual functioning. / Comorbidity: Assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty.
C. Specific learning disorder: Examining skill history, instruction, and targeted assessment when academic difficulty persists. / Comorbidity: Gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions.
D. Specific learning disorder: Examining skill history, instruction, and targeted assessment when academic difficulty persists. / Comorbidity: Assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty.

0625. A caregiver working with a counselor presents a support plan for a child aged 11 at the community mental-health service. Its central feature is evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone. Which concept should be named?

A. Adaptive functioning
B. Sensory processing differences
C. Neurodevelopmental condition
D. Autism spectrum condition

0626. Which paired example correctly applies Neurodevelopmental condition first and Intellectual disability second?

A. Neurodevelopmental condition: Asking which sensory environments support or hinder participation and adjusting the setting where feasible. / Intellectual disability: Assessing adaptive skills and developmental history alongside intellectual functioning.
B. Neurodevelopmental condition: Considering developmental history and functional impact rather than inferring a condition from one isolated behavior. / Intellectual disability: Assessing adaptive skills and developmental history alongside intellectual functioning.
C. Neurodevelopmental condition: Considering developmental history and functional impact rather than inferring a condition from one isolated behavior. / Intellectual disability: Assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty.
D. Neurodevelopmental condition: Assessing adaptive skills and developmental history alongside intellectual functioning. / Intellectual disability: Considering developmental history and functional impact rather than inferring a condition from one isolated behavior.

0627. A planning meeting about a young person aged 10 includes a school support specialist. The proposed practice in the family session is asking which sensory environments support or hinder participation and adjusting the setting where feasible. Which idea underlies it?

A. Specific learning disorder
B. Intellectual disability
C. Autism spectrum condition
D. Sensory processing differences

0628. When reviewing a middle-school student's plan in the child guidance clinic, the caregiver working with a counselor notes that the next step is gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions. Which concept guides this step?

A. Neurodevelopmental condition
B. Adaptive functioning
C. ADHD executive-function profile
D. Intellectual disability

0629. Which comparison correctly distinguishes Specific learning disorder from Neurodiversity-affirming practice?

A. Specific learning disorder: An approach that respects neurological variation, avoids unnecessary normalization, and focuses on access and meaningful support. / Neurodiversity-affirming practice: Persistent difficulty learning or using academic skills despite appropriate support, evaluated in relation to developmental and educational context.
B. Specific learning disorder: A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs. / Neurodiversity-affirming practice: An approach that respects neurological variation, avoids unnecessary normalization, and focuses on access and meaningful support.
C. Specific learning disorder: Persistent difficulty learning or using academic skills despite appropriate support, evaluated in relation to developmental and educational context. / Neurodiversity-affirming practice: Conceptual, social, and practical skills used to meet everyday demands across settings.
D. Specific learning disorder: Persistent difficulty learning or using academic skills despite appropriate support, evaluated in relation to developmental and educational context. / Neurodiversity-affirming practice: An approach that respects neurological variation, avoids unnecessary normalization, and focuses on access and meaningful support.

0630. A trainee must distinguish how Specific learning disorder and Intellectual disability guide practice. Which comparison is accurate?

A. Specific learning disorder: Examining skill history, instruction, and targeted assessment when academic difficulty persists. / Intellectual disability: Assessing adaptive skills and developmental history alongside intellectual functioning.
B. Specific learning disorder: Evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone. / Intellectual disability: Assessing adaptive skills and developmental history alongside intellectual functioning.
C. Specific learning disorder: Assessing adaptive skills and developmental history alongside intellectual functioning. / Intellectual disability: Examining skill history, instruction, and targeted assessment when academic difficulty persists.
D. Specific learning disorder: Examining skill history, instruction, and targeted assessment when academic difficulty persists. / Intellectual disability: Building accommodations around the person's needs and goals rather than treating difference itself as a defect.

0631. A supervisor asks for an applied contrast between Neurodevelopmental condition and Neurodiversity-affirming practice. Which option fits?

A. Neurodevelopmental condition: Considering developmental history and functional impact rather than inferring a condition from one isolated behavior. / Neurodiversity-affirming practice: Identifying practical adjustments that permit meaningful participation and checking governing requirements.
B. Neurodevelopmental condition: Building accommodations around the person's needs and goals rather than treating difference itself as a defect. / Neurodiversity-affirming practice: Considering developmental history and functional impact rather than inferring a condition from one isolated behavior.
C. Neurodevelopmental condition: Gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions. / Neurodiversity-affirming practice: Building accommodations around the person's needs and goals rather than treating difference itself as a defect.
D. Neurodevelopmental condition: Considering developmental history and functional impact rather than inferring a condition from one isolated behavior. / Neurodiversity-affirming practice: Building accommodations around the person's needs and goals rather than treating difference itself as a defect.

0632. Which comparison would correct a trainee's misunderstanding of Adaptive functioning versus Sensory processing differences?

A. Adaptive functioning: Conceptual, social, and practical skills used to meet everyday demands across settings. / Sensory processing differences: A modification to environment, instruction, or procedure that supports equitable access under applicable rules.
B. Adaptive functioning: Differences in responding to sensory input that may affect comfort, attention, or participation. / Sensory processing differences: Conceptual, social, and practical skills used to meet everyday demands across settings.
C. Adaptive functioning: Conceptual, social, and practical skills used to meet everyday demands across settings. / Sensory processing differences: Differences in responding to sensory input that may affect comfort, attention, or participation.
D. Adaptive functioning: An approach that respects neurological variation, avoids unnecessary normalization, and focuses on access and meaningful support. / Sensory processing differences: Differences in responding to sensory input that may affect comfort, attention, or participation.

0633. Which comparison would correct a trainee's misunderstanding of Adaptive functioning versus Neurodiversity-affirming practice?

A. Adaptive functioning: An approach that respects neurological variation, avoids unnecessary normalization, and focuses on access and meaningful support. / Neurodiversity-affirming practice: Conceptual, social, and practical skills used to meet everyday demands across settings.
B. Adaptive functioning: Conceptual, social, and practical skills used to meet everyday demands across settings. / Neurodiversity-affirming practice: An approach that respects neurological variation, avoids unnecessary normalization, and focuses on access and meaningful support.
C. Adaptive functioning: Conceptual, social, and practical skills used to meet everyday demands across settings. / Neurodiversity-affirming practice: Differences in responding to sensory input that may affect comfort, attention, or participation.
D. Adaptive functioning: A modification to environment, instruction, or procedure that supports equitable access under applicable rules. / Neurodiversity-affirming practice: An approach that respects neurological variation, avoids unnecessary normalization, and focuses on access and meaningful support.

0634. While supporting a young person aged 16 in the after-school program, a parent educator adopts this practice: evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone. Which concept best explains the choice?

A. Neurodevelopmental condition
B. Comorbidity
C. Adaptive functioning
D. Neurodiversity-affirming practice

0635. Which paired example correctly applies ADHD executive-function profile first and Reasonable accommodation second?

A. ADHD executive-function profile: Gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions. / Reasonable accommodation: Asking which sensory environments support or hinder participation and adjusting the setting where feasible.
B. ADHD executive-function profile: Building accommodations around the person's needs and goals rather than treating difference itself as a defect. / Reasonable accommodation: Identifying practical adjustments that permit meaningful participation and checking governing requirements.
C. ADHD executive-function profile: Gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions. / Reasonable accommodation: Identifying practical adjustments that permit meaningful participation and checking governing requirements.
D. ADHD executive-function profile: Identifying practical adjustments that permit meaningful participation and checking governing requirements. / Reasonable accommodation: Gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions.

0636. A trainee must distinguish how Intellectual disability and Comorbidity guide practice. Which comparison is accurate?

A. Intellectual disability: Assessing adaptive skills and developmental history alongside intellectual functioning. / Comorbidity: Assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty.
B. Intellectual disability: Assessing adaptive skills and developmental history alongside intellectual functioning. / Comorbidity: Evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone.
C. Intellectual disability: Describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation. / Comorbidity: Assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty.
D. Intellectual disability: Assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty. / Comorbidity: Assessing adaptive skills and developmental history alongside intellectual functioning.

0637. A consulting counselor is explaining a choice to a child of elementary-school age and caregiver in the clinical planning session. The choice centers on evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone. Which idea is illustrated?

A. Sensory processing differences
B. Adaptive functioning
C. Neurodiversity-affirming practice
D. Neurodevelopmental condition

0638. What is the central meaning of ADHD executive-function profile?

A. A pattern of developmentally inappropriate inattention and/or hyperactivity-impulsivity with impairment across relevant contexts.
B. Differences in responding to sensory input that may affect comfort, attention, or participation.
C. Persistent difficulty learning or using academic skills despite appropriate support, evaluated in relation to developmental and educational context.
D. Co-occurrence of two or more conditions or clinically significant problems in one person.

0639. Select the best explanation of Adaptive functioning.

A. A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs.
B. A pattern of developmentally inappropriate inattention and/or hyperactivity-impulsivity with impairment across relevant contexts.
C. Conceptual, social, and practical skills used to meet everyday demands across settings.
D. A group of conditions with developmental onset that affect functioning in areas such as learning, communication, or behavior.

0640. Which statement most accurately defines Specific learning disorder?

A. Conceptual, social, and practical skills used to meet everyday demands across settings.
B. Persistent difficulty learning or using academic skills despite appropriate support, evaluated in relation to developmental and educational context.
C. A group of conditions with developmental onset that affect functioning in areas such as learning, communication, or behavior.
D. A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs.

0641. Which statement accurately contrasts the course concepts Neurodiversity-affirming practice and Comorbidity?

A. Neurodiversity-affirming practice: An approach that respects neurological variation, avoids unnecessary normalization, and focuses on access and meaningful support. / Comorbidity: Co-occurrence of two or more conditions or clinically significant problems in one person.
B. Neurodiversity-affirming practice: An approach that respects neurological variation, avoids unnecessary normalization, and focuses on access and meaningful support. / Comorbidity: A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs.
C. Neurodiversity-affirming practice: A condition characterized by limitations in intellectual functioning and adaptive functioning with developmental onset. / Comorbidity: Co-occurrence of two or more conditions or clinically significant problems in one person.
D. Neurodiversity-affirming practice: Co-occurrence of two or more conditions or clinically significant problems in one person. / Comorbidity: An approach that respects neurological variation, avoids unnecessary normalization, and focuses on access and meaningful support.

0642. Which pair of actions illustrates Neurodevelopmental condition and Comorbidity, respectively?

A. Neurodevelopmental condition: Assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty. / Comorbidity: Considering developmental history and functional impact rather than inferring a condition from one isolated behavior.
B. Neurodevelopmental condition: Identifying practical adjustments that permit meaningful participation and checking governing requirements. / Comorbidity: Assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty.
C. Neurodevelopmental condition: Considering developmental history and functional impact rather than inferring a condition from one isolated behavior. / Comorbidity: Assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty.
D. Neurodevelopmental condition: Considering developmental history and functional impact rather than inferring a condition from one isolated behavior. / Comorbidity: Examining skill history, instruction, and targeted assessment when academic difficulty persists.

0643. Which statement shows a sound practice-level distinction between Neurodevelopmental condition and Comorbidity?

A. Neurodevelopmental condition: Considering developmental history and functional impact rather than inferring a condition from one isolated behavior. / Comorbidity: Examining skill history, instruction, and targeted assessment when academic difficulty persists.
B. Neurodevelopmental condition: Identifying practical adjustments that permit meaningful participation and checking governing requirements. / Comorbidity: Assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty.
C. Neurodevelopmental condition: Assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty. / Comorbidity: Considering developmental history and functional impact rather than inferring a condition from one isolated behavior.
D. Neurodevelopmental condition: Considering developmental history and functional impact rather than inferring a condition from one isolated behavior. / Comorbidity: Assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty.

0644. A research trainee describes an intervention for a school-age child in the community mental-health service, centered on examining skill history, instruction, and targeted assessment when academic difficulty persists. Which named idea is most relevant?

A. Comorbidity
B. Intellectual disability
C. Specific learning disorder
D. Reasonable accommodation

0645. A trainee must distinguish how Neurodevelopmental condition and Neurodiversity-affirming practice guide practice. Which comparison is accurate?

A. Neurodevelopmental condition: Considering developmental history and functional impact rather than inferring a condition from one isolated behavior. / Neurodiversity-affirming practice: Building accommodations around the person's needs and goals rather than treating difference itself as a defect.
B. Neurodevelopmental condition: Gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions. / Neurodiversity-affirming practice: Building accommodations around the person's needs and goals rather than treating difference itself as a defect.
C. Neurodevelopmental condition: Considering developmental history and functional impact rather than inferring a condition from one isolated behavior. / Neurodiversity-affirming practice: Identifying practical adjustments that permit meaningful participation and checking governing requirements.
D. Neurodevelopmental condition: Building accommodations around the person's needs and goals rather than treating difference itself as a defect. / Neurodiversity-affirming practice: Considering developmental history and functional impact rather than inferring a condition from one isolated behavior.

0646. A case conference asks for a distinction between Specific learning disorder and Adaptive functioning. Which answer is sound?

A. Specific learning disorder: Differences in responding to sensory input that may affect comfort, attention, or participation. / Adaptive functioning: Conceptual, social, and practical skills used to meet everyday demands across settings.
B. Specific learning disorder: Persistent difficulty learning or using academic skills despite appropriate support, evaluated in relation to developmental and educational context. / Adaptive functioning: Conceptual, social, and practical skills used to meet everyday demands across settings.
C. Specific learning disorder: Persistent difficulty learning or using academic skills despite appropriate support, evaluated in relation to developmental and educational context. / Adaptive functioning: A pattern of developmentally inappropriate inattention and/or hyperactivity-impulsivity with impairment across relevant contexts.
D. Specific learning disorder: Conceptual, social, and practical skills used to meet everyday demands across settings. / Adaptive functioning: Persistent difficulty learning or using academic skills despite appropriate support, evaluated in relation to developmental and educational context.

0647. Which course concept is defined as follows: A condition characterized by limitations in intellectual functioning and adaptive functioning with developmental onset.

A. Sensory processing differences
B. Neurodiversity-affirming practice
C. Intellectual disability
D. ADHD executive-function profile

0648. A case conference asks for a distinction between Specific learning disorder and Neurodiversity-affirming practice. Which answer is sound?

A. Specific learning disorder: A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs. / Neurodiversity-affirming practice: An approach that respects neurological variation, avoids unnecessary normalization, and focuses on access and meaningful support.
B. Specific learning disorder: Persistent difficulty learning or using academic skills despite appropriate support, evaluated in relation to developmental and educational context. / Neurodiversity-affirming practice: Conceptual, social, and practical skills used to meet everyday demands across settings.
C. Specific learning disorder: Persistent difficulty learning or using academic skills despite appropriate support, evaluated in relation to developmental and educational context. / Neurodiversity-affirming practice: An approach that respects neurological variation, avoids unnecessary normalization, and focuses on access and meaningful support.
D. Specific learning disorder: An approach that respects neurological variation, avoids unnecessary normalization, and focuses on access and meaningful support. / Neurodiversity-affirming practice: Persistent difficulty learning or using academic skills despite appropriate support, evaluated in relation to developmental and educational context.

0649. How should a practitioner distinguish the applications of ADHD executive-function profile and Specific learning disorder?

A. ADHD executive-function profile: Examining skill history, instruction, and targeted assessment when academic difficulty persists. / Specific learning disorder: Gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions.
B. ADHD executive-function profile: Gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions. / Specific learning disorder: Examining skill history, instruction, and targeted assessment when academic difficulty persists.
C. ADHD executive-function profile: Describing an individual’s strengths, communication profile, sensory needs, and support needs rather than assuming one presentation. / Specific learning disorder: Examining skill history, instruction, and targeted assessment when academic difficulty persists.
D. ADHD executive-function profile: Gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions. / Specific learning disorder: Considering developmental history and functional impact rather than inferring a condition from one isolated behavior.

0650. Which description belongs with the term Neurodevelopmental condition?

A. Persistent difficulty learning or using academic skills despite appropriate support, evaluated in relation to developmental and educational context.
B. A pattern of developmentally inappropriate inattention and/or hyperactivity-impulsivity with impairment across relevant contexts.
C. A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs.
D. A group of conditions with developmental onset that affect functioning in areas such as learning, communication, or behavior.

0651. A supervisor asks how Adaptive functioning would appear in practice. Which choice should be selected?

A. Evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone.
B. Describing an individual’s strengths, communication profile, sensory needs, and support needs rather than assuming one presentation.
C. Assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty.
D. Identifying practical adjustments that permit meaningful participation and checking governing requirements.

0652. Which statement accurately contrasts the course concepts Sensory processing differences and Reasonable accommodation?

A. Sensory processing differences: A modification to environment, instruction, or procedure that supports equitable access under applicable rules. / Reasonable accommodation: Differences in responding to sensory input that may affect comfort, attention, or participation.
B. Sensory processing differences: Differences in responding to sensory input that may affect comfort, attention, or participation. / Reasonable accommodation: A pattern of developmentally inappropriate inattention and/or hyperactivity-impulsivity with impairment across relevant contexts.
C. Sensory processing differences: Conceptual, social, and practical skills used to meet everyday demands across settings. / Reasonable accommodation: A modification to environment, instruction, or procedure that supports equitable access under applicable rules.
D. Sensory processing differences: Differences in responding to sensory input that may affect comfort, attention, or participation. / Reasonable accommodation: A modification to environment, instruction, or procedure that supports equitable access under applicable rules.

0653. At a case-planning meeting, the counselor proposes evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone. for a child aged 7 seen in the school-based service. Which concept does this illustrate?

A. Neurodevelopmental condition
B. Neurodiversity-affirming practice
C. Adaptive functioning
D. Specific learning disorder

0654. Which choice aligns each practice with the correct idea, Neurodevelopmental condition or ADHD executive-function profile?

A. Neurodevelopmental condition: Considering developmental history and functional impact rather than inferring a condition from one isolated behavior. / ADHD executive-function profile: Gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions.
B. Neurodevelopmental condition: Considering developmental history and functional impact rather than inferring a condition from one isolated behavior. / ADHD executive-function profile: Describing an individual’s strengths, communication profile, sensory needs, and support needs rather than assuming one presentation.
C. Neurodevelopmental condition: Gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions. / ADHD executive-function profile: Considering developmental history and functional impact rather than inferring a condition from one isolated behavior.
D. Neurodevelopmental condition: Assessing adaptive skills and developmental history alongside intellectual functioning. / ADHD executive-function profile: Gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions.

0655. Which pair of actions illustrates Neurodevelopmental condition and Reasonable accommodation, respectively?

A. Neurodevelopmental condition: Identifying practical adjustments that permit meaningful participation and checking governing requirements. / Reasonable accommodation: Considering developmental history and functional impact rather than inferring a condition from one isolated behavior.
B. Neurodevelopmental condition: Describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation. / Reasonable accommodation: Identifying practical adjustments that permit meaningful participation and checking governing requirements.
C. Neurodevelopmental condition: Considering developmental history and functional impact rather than inferring a condition from one isolated behavior. / Reasonable accommodation: Asking which sensory environments support or hinder participation and adjusting the setting where feasible.
D. Neurodevelopmental condition: Considering developmental history and functional impact rather than inferring a condition from one isolated behavior. / Reasonable accommodation: Identifying practical adjustments that permit meaningful participation and checking governing requirements.

0656. Which choice aligns each practice with the correct idea, ADHD executive-function profile or Intellectual disability?

A. ADHD executive-function profile: Gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions. / Intellectual disability: Assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty.
B. ADHD executive-function profile: Evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone. / Intellectual disability: Assessing adaptive skills and developmental history alongside intellectual functioning.
C. ADHD executive-function profile: Gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions. / Intellectual disability: Assessing adaptive skills and developmental history alongside intellectual functioning.
D. ADHD executive-function profile: Assessing adaptive skills and developmental history alongside intellectual functioning. / Intellectual disability: Gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions.

0657. A play therapist is asked to evaluate a proposed service for a middle-school student in the learning-support meeting. The defining feature is evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone. Which concept fits?

A. Adaptive functioning
B. Neurodevelopmental condition
C. Comorbidity
D. Autism spectrum condition

0658. Which option correctly matches each concept to its practice focus: Neurodevelopmental condition and Adaptive functioning?

A. Neurodevelopmental condition: Considering developmental history and functional impact rather than inferring a condition from one isolated behavior. / Adaptive functioning: Assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty.
B. Neurodevelopmental condition: Describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation. / Adaptive functioning: Evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone.
C. Neurodevelopmental condition: Considering developmental history and functional impact rather than inferring a condition from one isolated behavior. / Adaptive functioning: Evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone.
D. Neurodevelopmental condition: Evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone. / Adaptive functioning: Considering developmental history and functional impact rather than inferring a condition from one isolated behavior.

0659. Which option pairs the definitions of Intellectual disability and Neurodiversity-affirming practice correctly, in that order?

A. Intellectual disability: An approach that respects neurological variation, avoids unnecessary normalization, and focuses on access and meaningful support. / Neurodiversity-affirming practice: A condition characterized by limitations in intellectual functioning and adaptive functioning with developmental onset.
B. Intellectual disability: A condition characterized by limitations in intellectual functioning and adaptive functioning with developmental onset. / Neurodiversity-affirming practice: An approach that respects neurological variation, avoids unnecessary normalization, and focuses on access and meaningful support.
C. Intellectual disability: Conceptual, social, and practical skills used to meet everyday demands across settings. / Neurodiversity-affirming practice: An approach that respects neurological variation, avoids unnecessary normalization, and focuses on access and meaningful support.
D. Intellectual disability: A condition characterized by limitations in intellectual functioning and adaptive functioning with developmental onset. / Neurodiversity-affirming practice: A pattern of developmentally inappropriate inattention and/or hyperactivity-impulsivity with impairment across relevant contexts.

0660. A case conference asks for a distinction between Adaptive functioning and Comorbidity. Which answer is sound?

A. Adaptive functioning: Conceptual, social, and practical skills used to meet everyday demands across settings. / Comorbidity: A condition characterized by limitations in intellectual functioning and adaptive functioning with developmental onset.
B. Adaptive functioning: Conceptual, social, and practical skills used to meet everyday demands across settings. / Comorbidity: Co-occurrence of two or more conditions or clinically significant problems in one person.
C. Adaptive functioning: A group of conditions with developmental onset that affect functioning in areas such as learning, communication, or behavior. / Comorbidity: Co-occurrence of two or more conditions or clinically significant problems in one person.
D. Adaptive functioning: Co-occurrence of two or more conditions or clinically significant problems in one person. / Comorbidity: Conceptual, social, and practical skills used to meet everyday demands across settings.

0661. Which option preserves the correct meaning of both Specific learning disorder and Intellectual disability?

A. Specific learning disorder: Conceptual, social, and practical skills used to meet everyday demands across settings. / Intellectual disability: A condition characterized by limitations in intellectual functioning and adaptive functioning with developmental onset.
B. Specific learning disorder: A condition characterized by limitations in intellectual functioning and adaptive functioning with developmental onset. / Intellectual disability: Persistent difficulty learning or using academic skills despite appropriate support, evaluated in relation to developmental and educational context.
C. Specific learning disorder: Persistent difficulty learning or using academic skills despite appropriate support, evaluated in relation to developmental and educational context. / Intellectual disability: An approach that respects neurological variation, avoids unnecessary normalization, and focuses on access and meaningful support.
D. Specific learning disorder: Persistent difficulty learning or using academic skills despite appropriate support, evaluated in relation to developmental and educational context. / Intellectual disability: A condition characterized by limitations in intellectual functioning and adaptive functioning with developmental onset.

0662. A support meeting for a high-school student includes a counselor in the school consultation. The practice under consideration is examining skill history, instruction, and targeted assessment when academic difficulty persists. Which concept guides it?

A. Specific learning disorder
B. Neurodevelopmental condition
C. Autism spectrum condition
D. Neurodiversity-affirming practice

0663. Which professional action most closely applies Neurodevelopmental condition?

A. Assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty.
B. Identifying practical adjustments that permit meaningful participation and checking governing requirements.
C. Considering developmental history and functional impact rather than inferring a condition from one isolated behavior.
D. Building accommodations around the person's needs and goals rather than treating difference itself as a defect.

0664. Which comparison correctly distinguishes Adaptive functioning from Neurodiversity-affirming practice?

A. Adaptive functioning: An approach that respects neurological variation, avoids unnecessary normalization, and focuses on access and meaningful support. / Neurodiversity-affirming practice: Conceptual, social, and practical skills used to meet everyday demands across settings.
B. Adaptive functioning: Conceptual, social, and practical skills used to meet everyday demands across settings. / Neurodiversity-affirming practice: Differences in responding to sensory input that may affect comfort, attention, or participation.
C. Adaptive functioning: A modification to environment, instruction, or procedure that supports equitable access under applicable rules. / Neurodiversity-affirming practice: An approach that respects neurological variation, avoids unnecessary normalization, and focuses on access and meaningful support.
D. Adaptive functioning: Conceptual, social, and practical skills used to meet everyday demands across settings. / Neurodiversity-affirming practice: An approach that respects neurological variation, avoids unnecessary normalization, and focuses on access and meaningful support.

0665. A student confuses ADHD executive-function profile with Intellectual disability. Which explanation most accurately separates them?

A. ADHD executive-function profile: A pattern of developmentally inappropriate inattention and/or hyperactivity-impulsivity with impairment across relevant contexts. / Intellectual disability: Co-occurrence of two or more conditions or clinically significant problems in one person.
B. ADHD executive-function profile: A pattern of developmentally inappropriate inattention and/or hyperactivity-impulsivity with impairment across relevant contexts. / Intellectual disability: A condition characterized by limitations in intellectual functioning and adaptive functioning with developmental onset.
C. ADHD executive-function profile: Conceptual, social, and practical skills used to meet everyday demands across settings. / Intellectual disability: A condition characterized by limitations in intellectual functioning and adaptive functioning with developmental onset.
D. ADHD executive-function profile: A condition characterized by limitations in intellectual functioning and adaptive functioning with developmental onset. / Intellectual disability: A pattern of developmentally inappropriate inattention and/or hyperactivity-impulsivity with impairment across relevant contexts.

0666. A youth worker is explaining a choice to a child aged 11 and caregiver in the family resource center. The choice centers on examining skill history, instruction, and targeted assessment when academic difficulty persists. Which idea is illustrated?

A. Autism spectrum condition
B. ADHD executive-function profile
C. Specific learning disorder
D. Intellectual disability

0667. Which comparison would correct a trainee's misunderstanding of Autism spectrum condition versus Reasonable accommodation?

A. Autism spectrum condition: A modification to environment, instruction, or procedure that supports equitable access under applicable rules. / Reasonable accommodation: A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs.
B. Autism spectrum condition: A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs. / Reasonable accommodation: A modification to environment, instruction, or procedure that supports equitable access under applicable rules.
C. Autism spectrum condition: Persistent difficulty learning or using academic skills despite appropriate support, evaluated in relation to developmental and educational context. / Reasonable accommodation: A modification to environment, instruction, or procedure that supports equitable access under applicable rules.
D. Autism spectrum condition: A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs. / Reasonable accommodation: Differences in responding to sensory input that may affect comfort, attention, or participation.

0668. In a case note about a child aged 11, a member of a clinical team working in the youth advocacy program records this priority: gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions. What principle is reflected?

A. ADHD executive-function profile
B. Intellectual disability
C. Sensory processing differences
D. Neurodiversity-affirming practice

0669. A case conference asks for a distinction between Neurodiversity-affirming practice and Reasonable accommodation. Which answer is sound?

A. Neurodiversity-affirming practice: A modification to environment, instruction, or procedure that supports equitable access under applicable rules. / Reasonable accommodation: An approach that respects neurological variation, avoids unnecessary normalization, and focuses on access and meaningful support.
B. Neurodiversity-affirming practice: An approach that respects neurological variation, avoids unnecessary normalization, and focuses on access and meaningful support. / Reasonable accommodation: Conceptual, social, and practical skills used to meet everyday demands across settings.
C. Neurodiversity-affirming practice: Differences in responding to sensory input that may affect comfort, attention, or participation. / Reasonable accommodation: A modification to environment, instruction, or procedure that supports equitable access under applicable rules.
D. Neurodiversity-affirming practice: An approach that respects neurological variation, avoids unnecessary normalization, and focuses on access and meaningful support. / Reasonable accommodation: A modification to environment, instruction, or procedure that supports equitable access under applicable rules.

0670. Which choice aligns each practice with the correct idea, Neurodevelopmental condition or Intellectual disability?

A. Neurodevelopmental condition: Asking which sensory environments support or hinder participation and adjusting the setting where feasible. / Intellectual disability: Assessing adaptive skills and developmental history alongside intellectual functioning.
B. Neurodevelopmental condition: Assessing adaptive skills and developmental history alongside intellectual functioning. / Intellectual disability: Considering developmental history and functional impact rather than inferring a condition from one isolated behavior.
C. Neurodevelopmental condition: Considering developmental history and functional impact rather than inferring a condition from one isolated behavior. / Intellectual disability: Assessing adaptive skills and developmental history alongside intellectual functioning.
D. Neurodevelopmental condition: Considering developmental history and functional impact rather than inferring a condition from one isolated behavior. / Intellectual disability: Assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty.

0671. A case conference reviews a program coordinator's work with a child aged 7 in the parent meeting: examining skill history, instruction, and targeted assessment when academic difficulty persists. Which principle is central?

A. Specific learning disorder
B. Adaptive functioning
C. Neurodevelopmental condition
D. Reasonable accommodation

0672. A supervised trainee is preparing a follow-up plan for a older adolescent client in the parent meeting. The plan calls for assessing adaptive skills and developmental history alongside intellectual functioning. Which concept names this approach?

A. Sensory processing differences
B. Intellectual disability
C. Neurodevelopmental condition
D. Adaptive functioning

0673. A therapist is asked what should shape a client in late adolescence's support in the youth advocacy program. The proposed focus is evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone. Which principle does it represent?

A. Specific learning disorder
B. Adaptive functioning
C. Sensory processing differences
D. Neurodiversity-affirming practice

0674. Choose the definition pair that correctly explains Neurodiversity-affirming practice first and Comorbidity second.

A. Neurodiversity-affirming practice: An approach that respects neurological variation, avoids unnecessary normalization, and focuses on access and meaningful support. / Comorbidity: A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs.
B. Neurodiversity-affirming practice: An approach that respects neurological variation, avoids unnecessary normalization, and focuses on access and meaningful support. / Comorbidity: Co-occurrence of two or more conditions or clinically significant problems in one person.
C. Neurodiversity-affirming practice: Co-occurrence of two or more conditions or clinically significant problems in one person. / Comorbidity: An approach that respects neurological variation, avoids unnecessary normalization, and focuses on access and meaningful support.
D. Neurodiversity-affirming practice: A condition characterized by limitations in intellectual functioning and adaptive functioning with developmental onset. / Comorbidity: Co-occurrence of two or more conditions or clinically significant problems in one person.

0675. Which statement accurately contrasts the course concepts Intellectual disability and Neurodiversity-affirming practice?

A. Intellectual disability: Conceptual, social, and practical skills used to meet everyday demands across settings. / Neurodiversity-affirming practice: An approach that respects neurological variation, avoids unnecessary normalization, and focuses on access and meaningful support.
B. Intellectual disability: A condition characterized by limitations in intellectual functioning and adaptive functioning with developmental onset. / Neurodiversity-affirming practice: An approach that respects neurological variation, avoids unnecessary normalization, and focuses on access and meaningful support.
C. Intellectual disability: A condition characterized by limitations in intellectual functioning and adaptive functioning with developmental onset. / Neurodiversity-affirming practice: A pattern of developmentally inappropriate inattention and/or hyperactivity-impulsivity with impairment across relevant contexts.
D. Intellectual disability: An approach that respects neurological variation, avoids unnecessary normalization, and focuses on access and meaningful support. / Neurodiversity-affirming practice: A condition characterized by limitations in intellectual functioning and adaptive functioning with developmental onset.

0676. A supervisor asks for an applied contrast between Adaptive functioning and Neurodiversity-affirming practice. Which option fits?

A. Adaptive functioning: Identifying practical adjustments that permit meaningful participation and checking governing requirements. / Neurodiversity-affirming practice: Building accommodations around the person's needs and goals rather than treating difference itself as a defect.
B. Adaptive functioning: Evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone. / Neurodiversity-affirming practice: Asking which sensory environments support or hinder participation and adjusting the setting where feasible.
C. Adaptive functioning: Evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone. / Neurodiversity-affirming practice: Building accommodations around the person's needs and goals rather than treating difference itself as a defect.
D. Adaptive functioning: Building accommodations around the person's needs and goals rather than treating difference itself as a defect. / Neurodiversity-affirming practice: Evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone.

0677. In a supervision quiz, how should Neurodevelopmental condition be distinguished from Autism spectrum condition?

A. Neurodevelopmental condition: A group of conditions with developmental onset that affect functioning in areas such as learning, communication, or behavior. / Autism spectrum condition: Persistent difficulty learning or using academic skills despite appropriate support, evaluated in relation to developmental and educational context.
B. Neurodevelopmental condition: A group of conditions with developmental onset that affect functioning in areas such as learning, communication, or behavior. / Autism spectrum condition: A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs.
C. Neurodevelopmental condition: Differences in responding to sensory input that may affect comfort, attention, or participation. / Autism spectrum condition: A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs.
D. Neurodevelopmental condition: A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs. / Autism spectrum condition: A group of conditions with developmental onset that affect functioning in areas such as learning, communication, or behavior.

0678. A mental-health professional prepares for a session in the learning-support meeting with a student aged 15. The intended approach is examining skill history, instruction, and targeted assessment when academic difficulty persists. Which concept is most relevant?

A. Sensory processing differences
B. Specific learning disorder
C. Adaptive functioning
D. Autism spectrum condition

0679. A case conference asks for a distinction between Specific learning disorder and Sensory processing differences. Which answer is sound?

A. Specific learning disorder: Co-occurrence of two or more conditions or clinically significant problems in one person. / Sensory processing differences: Differences in responding to sensory input that may affect comfort, attention, or participation.
B. Specific learning disorder: Persistent difficulty learning or using academic skills despite appropriate support, evaluated in relation to developmental and educational context. / Sensory processing differences: An approach that respects neurological variation, avoids unnecessary normalization, and focuses on access and meaningful support.
C. Specific learning disorder: Differences in responding to sensory input that may affect comfort, attention, or participation. / Sensory processing differences: Persistent difficulty learning or using academic skills despite appropriate support, evaluated in relation to developmental and educational context.
D. Specific learning disorder: Persistent difficulty learning or using academic skills despite appropriate support, evaluated in relation to developmental and educational context. / Sensory processing differences: Differences in responding to sensory input that may affect comfort, attention, or participation.

0680. A community practitioner describes an intervention for a child aged 6 in the community youth program, centered on identifying practical adjustments that permit meaningful participation and checking governing requirements. Which named idea is most relevant?

A. Neurodevelopmental condition
B. Reasonable accommodation
C. Autism spectrum condition
D. Sensory processing differences

0681. A planning meeting about a adolescent student includes a counselor. The proposed practice in the multidisciplinary case conference is identifying practical adjustments that permit meaningful participation and checking governing requirements. Which idea underlies it?

A. Specific learning disorder
B. Reasonable accommodation
C. Neurodiversity-affirming practice
D. ADHD executive-function profile

0682. A support meeting for a young person aged 10 includes a play therapist in the parent meeting. The practice under consideration is gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions. Which concept guides it?

A. Intellectual disability
B. ADHD executive-function profile
C. Comorbidity
D. Autism spectrum condition

0683. A clinical supervisor is asked to evaluate a proposed service for a young person aged 18 in the school consultation. The defining feature is assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty. Which concept fits?

A. Autism spectrum condition
B. Comorbidity
C. ADHD executive-function profile
D. Sensory processing differences

0684. Which pair of actions illustrates Autism spectrum condition and Sensory processing differences, respectively?

A. Autism spectrum condition: Identifying practical adjustments that permit meaningful participation and checking governing requirements. / Sensory processing differences: Asking which sensory environments support or hinder participation and adjusting the setting where feasible.
B. Autism spectrum condition: Describing an individual’s strengths, communication profile, sensory needs, and support needs rather than assuming one presentation. / Sensory processing differences: Asking which sensory environments support or hinder participation and adjusting the setting where feasible.
C. Autism spectrum condition: Asking which sensory environments support or hinder participation and adjusting the setting where feasible. / Sensory processing differences: Describing an individual’s strengths, communication profile, sensory needs, and support needs rather than assuming one presentation.
D. Autism spectrum condition: Describing an individual’s strengths, communication profile, sensory needs, and support needs rather than assuming one presentation. / Sensory processing differences: Considering developmental history and functional impact rather than inferring a condition from one isolated behavior.

0685. Which comparison would correct a trainee’s misunderstanding of Neurodevelopmental condition versus Adaptive functioning?

A. Neurodevelopmental condition: A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs. / Adaptive functioning: Conceptual, social, and practical skills used to meet everyday demands across settings.
B. Neurodevelopmental condition: Conceptual, social, and practical skills used to meet everyday demands across settings. / Adaptive functioning: A group of conditions with developmental onset that affect functioning in areas such as learning, communication, or behavior.
C. Neurodevelopmental condition: A group of conditions with developmental onset that affect functioning in areas such as learning, communication, or behavior. / Adaptive functioning: Co-occurrence of two or more conditions or clinically significant problems in one person.
D. Neurodevelopmental condition: A group of conditions with developmental onset that affect functioning in areas such as learning, communication, or behavior. / Adaptive functioning: Conceptual, social, and practical skills used to meet everyday demands across settings.

0686. Which option correctly matches each concept to its practice focus: Intellectual disability and Sensory processing differences?

A. Intellectual disability: Examining skill history, instruction, and targeted assessment when academic difficulty persists. / Sensory processing differences: Asking which sensory environments support or hinder participation and adjusting the setting where feasible.
B. Intellectual disability: Asking which sensory environments support or hinder participation and adjusting the setting where feasible. / Sensory processing differences: Assessing adaptive skills and developmental history alongside intellectual functioning.
C. Intellectual disability: Assessing adaptive skills and developmental history alongside intellectual functioning. / Sensory processing differences: Describing an individual’s strengths, communication profile, sensory needs, and support needs rather than assuming one presentation.
D. Intellectual disability: Assessing adaptive skills and developmental history alongside intellectual functioning. / Sensory processing differences: Asking which sensory environments support or hinder participation and adjusting the setting where feasible.

0687. Which choice aligns each practice with the correct idea, Autism spectrum condition or Comorbidity?

A. Autism spectrum condition: Describing an individual’s strengths, communication profile, sensory needs, and support needs rather than assuming one presentation. / Comorbidity: Assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty.
B. Autism spectrum condition: Assessing adaptive skills and developmental history alongside intellectual functioning. / Comorbidity: Assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty.
C. Autism spectrum condition: Describing an individual’s strengths, communication profile, sensory needs, and support needs rather than assuming one presentation. / Comorbidity: Considering developmental history and functional impact rather than inferring a condition from one isolated behavior.
D. Autism spectrum condition: Assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty. / Comorbidity: Describing an individual’s strengths, communication profile, sensory needs, and support needs rather than assuming one presentation.

0688. At a case-planning meeting, the play therapist proposes examining skill history, instruction, and targeted assessment when academic difficulty persists. for a teenage client seen in the caregiver consultation. Which concept does this illustrate?

A. Sensory processing differences
B. ADHD executive-function profile
C. Adaptive functioning
D. Specific learning disorder

0689. A caregiver working with a counselor presents a support plan for a client in early adolescence at the behavior-support review. Its central feature is considering developmental history and functional impact rather than inferring a condition from one isolated behavior. Which concept should be named?

A. Neurodevelopmental condition
B. Intellectual disability
C. Autism spectrum condition
D. Specific learning disorder

0690. Which paired example correctly applies Specific learning disorder first and Intellectual disability second?

A. Specific learning disorder: Examining skill history, instruction, and targeted assessment when academic difficulty persists. / Intellectual disability: Building accommodations around the person's needs and goals rather than treating difference itself as a defect.
B. Specific learning disorder: Evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone. / Intellectual disability: Assessing adaptive skills and developmental history alongside intellectual functioning.
C. Specific learning disorder: Assessing adaptive skills and developmental history alongside intellectual functioning. / Intellectual disability: Examining skill history, instruction, and targeted assessment when academic difficulty persists.
D. Specific learning disorder: Examining skill history, instruction, and targeted assessment when academic difficulty persists. / Intellectual disability: Assessing adaptive skills and developmental history alongside intellectual functioning.

0691. Which comparison correctly distinguishes Intellectual disability from Adaptive functioning?

A. Intellectual disability: Conceptual, social, and practical skills used to meet everyday demands across settings. / Adaptive functioning: A condition characterized by limitations in intellectual functioning and adaptive functioning with developmental onset.
B. Intellectual disability: Co-occurrence of two or more conditions or clinically significant problems in one person. / Adaptive functioning: Conceptual, social, and practical skills used to meet everyday demands across settings.
C. Intellectual disability: A condition characterized by limitations in intellectual functioning and adaptive functioning with developmental onset. / Adaptive functioning: Conceptual, social, and practical skills used to meet everyday demands across settings.
D. Intellectual disability: A condition characterized by limitations in intellectual functioning and adaptive functioning with developmental onset. / Adaptive functioning: An approach that respects neurological variation, avoids unnecessary normalization, and focuses on access and meaningful support.

0692. During work in the telehealth session, a youth worker identifies this need: gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions. Which idea should guide the response?

A. Reasonable accommodation
B. ADHD executive-function profile
C. Comorbidity
D. Adaptive functioning

0693. Which option is the clearest practical expression of Reasonable accommodation?

A. Examining skill history, instruction, and targeted assessment when academic difficulty persists.
B. Identifying practical adjustments that permit meaningful participation and checking governing requirements.
C. Gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions.
D. Considering developmental history and functional impact rather than inferring a condition from one isolated behavior.

0694. A member of a clinical team is preparing a follow-up plan for a child aged 7 in the youth group. The plan calls for building accommodations around the person's needs and goals rather than treating difference itself as a defect. Which concept names this approach?

A. Specific learning disorder
B. Sensory processing differences
C. Neurodiversity-affirming practice
D. Intellectual disability

0695. A young adolescent client's service team meets in the after-school program. The case coordinator recommends a change involving considering developmental history and functional impact rather than inferring a condition from one isolated behavior. Which idea best explains it?

A. Neurodevelopmental condition
B. Sensory processing differences
C. Reasonable accommodation
D. Neurodiversity-affirming practice

0696. In a case note about a child of elementary-school age, a supervised trainee working in the telehealth session records this priority: examining skill history, instruction, and targeted assessment when academic difficulty persists. What principle is reflected?

A. Intellectual disability
B. Reasonable accommodation
C. ADHD executive-function profile
D. Specific learning disorder

0697. A assessment clinician and a young person aged 13 are discussing support in the clinical planning session. The selected practice is describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation. Which concept does this demonstrate?

A. Sensory processing differences
B. Intellectual disability
C. Autism spectrum condition
D. Adaptive functioning

0698. Which statement accurately contrasts the course concepts Sensory processing differences and Comorbidity?

A. Sensory processing differences: Differences in responding to sensory input that may affect comfort, attention, or participation. / Comorbidity: Co-occurrence of two or more conditions or clinically significant problems in one person.
B. Sensory processing differences: Co-occurrence of two or more conditions or clinically significant problems in one person. / Comorbidity: Differences in responding to sensory input that may affect comfort, attention, or participation.
C. Sensory processing differences: Differences in responding to sensory input that may affect comfort, attention, or participation. / Comorbidity: A modification to environment, instruction, or procedure that supports equitable access under applicable rules.
D. Sensory processing differences: A condition characterized by limitations in intellectual functioning and adaptive functioning with developmental onset. / Comorbidity: Co-occurrence of two or more conditions or clinically significant problems in one person.

0699. Which option correctly matches each concept to its practice focus: Specific learning disorder and Adaptive functioning?

A. Specific learning disorder: Evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone. / Adaptive functioning: Examining skill history, instruction, and targeted assessment when academic difficulty persists.
B. Specific learning disorder: Examining skill history, instruction, and targeted assessment when academic difficulty persists. / Adaptive functioning: Gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions.
C. Specific learning disorder: Asking which sensory environments support or hinder participation and adjusting the setting where feasible. / Adaptive functioning: Evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone.
D. Specific learning disorder: Examining skill history, instruction, and targeted assessment when academic difficulty persists. / Adaptive functioning: Evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone.

0700. In the family resource center, the agreed focus for a program coordinator working with a student aged 15 is assessing adaptive skills and developmental history alongside intellectual functioning. Which concept names this focus?

A. Autism spectrum condition
B. ADHD executive-function profile
C. Intellectual disability
D. Reasonable accommodation

0701. Which option pairs the definitions of Intellectual disability and Adaptive functioning correctly, in that order?

A. Intellectual disability: A condition characterized by limitations in intellectual functioning and adaptive functioning with developmental onset. / Adaptive functioning: An approach that respects neurological variation, avoids unnecessary normalization, and focuses on access and meaningful support.
B. Intellectual disability: Co-occurrence of two or more conditions or clinically significant problems in one person. / Adaptive functioning: Conceptual, social, and practical skills used to meet everyday demands across settings.
C. Intellectual disability: A condition characterized by limitations in intellectual functioning and adaptive functioning with developmental onset. / Adaptive functioning: Conceptual, social, and practical skills used to meet everyday demands across settings.
D. Intellectual disability: Conceptual, social, and practical skills used to meet everyday demands across settings. / Adaptive functioning: A condition characterized by limitations in intellectual functioning and adaptive functioning with developmental onset.

0702. During work in the parent meeting, a group facilitator identifies this need: building accommodations around the person's needs and goals rather than treating difference itself as a defect. Which idea should guide the response?

A. Sensory processing differences
B. Intellectual disability
C. Neurodiversity-affirming practice
D. Neurodevelopmental condition

0703. A mental-health professional and a high-school student are discussing support in the family resource center. The selected practice is considering developmental history and functional impact rather than inferring a condition from one isolated behavior. Which concept does this demonstrate?

A. Specific learning disorder
B. Neurodevelopmental condition
C. Reasonable accommodation
D. Autism spectrum condition

0704. At the school consultation, a community practitioner reviews whether a plan for a preadolescent child is appropriate. The relevant practice is evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone. Which concept is tested?

A. Adaptive functioning
B. Sensory processing differences
C. Neurodevelopmental condition
D. Neurodiversity-affirming practice

0705. Which comparison correctly distinguishes Specific learning disorder from Comorbidity?

A. Specific learning disorder: Co-occurrence of two or more conditions or clinically significant problems in one person. / Comorbidity: Persistent difficulty learning or using academic skills despite appropriate support, evaluated in relation to developmental and educational context.
B. Specific learning disorder: A condition characterized by limitations in intellectual functioning and adaptive functioning with developmental onset. / Comorbidity: Co-occurrence of two or more conditions or clinically significant problems in one person.
C. Specific learning disorder: Persistent difficulty learning or using academic skills despite appropriate support, evaluated in relation to developmental and educational context. / Comorbidity: Co-occurrence of two or more conditions or clinically significant problems in one person.
D. Specific learning disorder: Persistent difficulty learning or using academic skills despite appropriate support, evaluated in relation to developmental and educational context. / Comorbidity: A pattern of developmentally inappropriate inattention and/or hyperactivity-impulsivity with impairment across relevant contexts.

0706. A trainee must distinguish how ADHD executive-function profile and Neurodiversity-affirming practice guide practice. Which comparison is accurate?

A. ADHD executive-function profile: Building accommodations around the person's needs and goals rather than treating difference itself as a defect. / Neurodiversity-affirming practice: Gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions.
B. ADHD executive-function profile: Gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions. / Neurodiversity-affirming practice: Assessing adaptive skills and developmental history alongside intellectual functioning.
C. ADHD executive-function profile: Describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation. / Neurodiversity-affirming practice: Building accommodations around the person's needs and goals rather than treating difference itself as a defect.
D. ADHD executive-function profile: Gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions. / Neurodiversity-affirming practice: Building accommodations around the person's needs and goals rather than treating difference itself as a defect.

0707. When reviewing a older adolescent client's plan in the youth group, the case coordinator notes that the next step is assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty. Which concept guides this step?

A. Neurodevelopmental condition
B. Specific learning disorder
C. Autism spectrum condition
D. Comorbidity

0708. How should a practitioner distinguish the applications of ADHD executive-function profile and Autism spectrum condition?

A. ADHD executive-function profile: Gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions. / Autism spectrum condition: Describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation.
B. ADHD executive-function profile: Gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions. / Autism spectrum condition: Considering developmental history and functional impact rather than inferring a condition from one isolated behavior.
C. ADHD executive-function profile: Evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone. / Autism spectrum condition: Describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation.
D. ADHD executive-function profile: Describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation. / Autism spectrum condition: Gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions.

0709. Which statement accurately contrasts the course concepts ADHD executive-function profile and Specific learning disorder?

A. ADHD executive-function profile: A pattern of developmentally inappropriate inattention and/or hyperactivity-impulsivity with impairment across relevant contexts. / Specific learning disorder: A group of conditions with developmental onset that affect functioning in areas such as learning, communication, or behavior.
B. ADHD executive-function profile: A pattern of developmentally inappropriate inattention and/or hyperactivity-impulsivity with impairment across relevant contexts. / Specific learning disorder: Persistent difficulty learning or using academic skills despite appropriate support, evaluated in relation to developmental and educational context.
C. ADHD executive-function profile: A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs. / Specific learning disorder: Persistent difficulty learning or using academic skills despite appropriate support, evaluated in relation to developmental and educational context.
D. ADHD executive-function profile: Persistent difficulty learning or using academic skills despite appropriate support, evaluated in relation to developmental and educational context. / Specific learning disorder: A pattern of developmentally inappropriate inattention and/or hyperactivity-impulsivity with impairment across relevant contexts.

0710. Which applied comparison correctly identifies what belongs to Autism spectrum condition versus Comorbidity?

A. Autism spectrum condition: Assessing adaptive skills and developmental history alongside intellectual functioning. / Comorbidity: Assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty.
B. Autism spectrum condition: Describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation. / Comorbidity: Considering developmental history and functional impact rather than inferring a condition from one isolated behavior.
C. Autism spectrum condition: Assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty. / Comorbidity: Describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation.
D. Autism spectrum condition: Describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation. / Comorbidity: Assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty.

0711. A trainee must distinguish how Neurodevelopmental condition and Sensory processing differences guide practice. Which comparison is accurate?

A. Neurodevelopmental condition: Considering developmental history and functional impact rather than inferring a condition from one isolated behavior. / Sensory processing differences: Asking which sensory environments support or hinder participation and adjusting the setting where feasible.
B. Neurodevelopmental condition: Assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty. / Sensory processing differences: Asking which sensory environments support or hinder participation and adjusting the setting where feasible.
C. Neurodevelopmental condition: Considering developmental history and functional impact rather than inferring a condition from one isolated behavior. / Sensory processing differences: Evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone.
D. Neurodevelopmental condition: Asking which sensory environments support or hinder participation and adjusting the setting where feasible. / Sensory processing differences: Considering developmental history and functional impact rather than inferring a condition from one isolated behavior.

0712. Which statement accurately contrasts the course concepts Autism spectrum condition and Reasonable accommodation?

A. Autism spectrum condition: A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs. / Reasonable accommodation: A modification to environment, instruction, or procedure that supports equitable access under applicable rules.
B. Autism spectrum condition: Persistent difficulty learning or using academic skills despite appropriate support, evaluated in relation to developmental and educational context. / Reasonable accommodation: A modification to environment, instruction, or procedure that supports equitable access under applicable rules.
C. Autism spectrum condition: A modification to environment, instruction, or procedure that supports equitable access under applicable rules. / Reasonable accommodation: A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs.
D. Autism spectrum condition: A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs. / Reasonable accommodation: Differences in responding to sensory input that may affect comfort, attention, or participation.

0713. A supervisor asks how Neurodiversity-affirming practice would appear in practice. Which choice should be selected?

A. Examining skill history, instruction, and targeted assessment when academic difficulty persists.
B. Assessing adaptive skills and developmental history alongside intellectual functioning.
C. Building accommodations around the person's needs and goals rather than treating difference itself as a defect.
D. Considering developmental history and functional impact rather than inferring a condition from one isolated behavior.

0714. Which option preserves the correct meaning of both Intellectual disability and Reasonable accommodation?

A. Intellectual disability: A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs. / Reasonable accommodation: A modification to environment, instruction, or procedure that supports equitable access under applicable rules.
B. Intellectual disability: A modification to environment, instruction, or procedure that supports equitable access under applicable rules. / Reasonable accommodation: A condition characterized by limitations in intellectual functioning and adaptive functioning with developmental onset.
C. Intellectual disability: A condition characterized by limitations in intellectual functioning and adaptive functioning with developmental onset. / Reasonable accommodation: A group of conditions with developmental onset that affect functioning in areas such as learning, communication, or behavior.
D. Intellectual disability: A condition characterized by limitations in intellectual functioning and adaptive functioning with developmental onset. / Reasonable accommodation: A modification to environment, instruction, or procedure that supports equitable access under applicable rules.

0715. For a child of elementary-school age seen in the student-support meeting, the program coordinator recommends a plan built around identifying practical adjustments that permit meaningful participation and checking governing requirements. Which concept is reflected?

A. Sensory processing differences
B. ADHD executive-function profile
C. Intellectual disability
D. Reasonable accommodation

0716. A counselor is asked to evaluate a proposed service for a student aged 12 in the community youth program. The defining feature is building accommodations around the person's needs and goals rather than treating difference itself as a defect. Which concept fits?

A. Specific learning disorder
B. Neurodiversity-affirming practice
C. ADHD executive-function profile
D. Sensory processing differences

0717. A student confuses ADHD executive-function profile with Autism spectrum condition. Which explanation most accurately separates them?

A. ADHD executive-function profile: A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs. / Autism spectrum condition: A pattern of developmentally inappropriate inattention and/or hyperactivity-impulsivity with impairment across relevant contexts.
B. ADHD executive-function profile: Conceptual, social, and practical skills used to meet everyday demands across settings. / Autism spectrum condition: A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs.
C. ADHD executive-function profile: A pattern of developmentally inappropriate inattention and/or hyperactivity-impulsivity with impairment across relevant contexts. / Autism spectrum condition: A group of conditions with developmental onset that affect functioning in areas such as learning, communication, or behavior.
D. ADHD executive-function profile: A pattern of developmentally inappropriate inattention and/or hyperactivity-impulsivity with impairment across relevant contexts. / Autism spectrum condition: A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs.

0718. Which applied comparison correctly identifies what belongs to Autism spectrum condition versus Reasonable accommodation?

A. Autism spectrum condition: Examining skill history, instruction, and targeted assessment when academic difficulty persists. / Reasonable accommodation: Identifying practical adjustments that permit meaningful participation and checking governing requirements.
B. Autism spectrum condition: Describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation. / Reasonable accommodation: Asking which sensory environments support or hinder participation and adjusting the setting where feasible.
C. Autism spectrum condition: Identifying practical adjustments that permit meaningful participation and checking governing requirements. / Reasonable accommodation: Describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation.
D. Autism spectrum condition: Describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation. / Reasonable accommodation: Identifying practical adjustments that permit meaningful participation and checking governing requirements.

0719. A group facilitator is asked to justify a plan for a young person in the clinical planning session. It calls for considering developmental history and functional impact rather than inferring a condition from one isolated behavior. Which concept provides the rationale?

A. ADHD executive-function profile
B. Specific learning disorder
C. Intellectual disability
D. Neurodevelopmental condition

0720. What is the central meaning of Reasonable accommodation?

A. A modification to environment, instruction, or procedure that supports equitable access under applicable rules.
B. A condition characterized by limitations in intellectual functioning and adaptive functioning with developmental onset.
C. Conceptual, social, and practical skills used to meet everyday demands across settings.
D. Co-occurrence of two or more conditions or clinically significant problems in one person.

0721. Which applied comparison correctly identifies what belongs to Autism spectrum condition versus Neurodiversity-affirming practice?

A. Autism spectrum condition: Describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation. / Neurodiversity-affirming practice: Identifying practical adjustments that permit meaningful participation and checking governing requirements.
B. Autism spectrum condition: Gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions. / Neurodiversity-affirming practice: Building accommodations around the person's needs and goals rather than treating difference itself as a defect.
C. Autism spectrum condition: Describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation. / Neurodiversity-affirming practice: Building accommodations around the person's needs and goals rather than treating difference itself as a defect.
D. Autism spectrum condition: Building accommodations around the person's needs and goals rather than treating difference itself as a defect. / Neurodiversity-affirming practice: Describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation.

0722. A case discussion concerns a young person aged 10 and a parent educator in the youth advocacy program. The practitioner is considering building accommodations around the person's needs and goals rather than treating difference itself as a defect. Which principle is involved?

A. Sensory processing differences
B. Autism spectrum condition
C. Neurodiversity-affirming practice
D. ADHD executive-function profile

0723. How are Specific learning disorder and Comorbidity most accurately differentiated in this curriculum?

A. Specific learning disorder: Co-occurrence of two or more conditions or clinically significant problems in one person. / Comorbidity: Persistent difficulty learning or using academic skills despite appropriate support, evaluated in relation to developmental and educational context.
B. Specific learning disorder: Persistent difficulty learning or using academic skills despite appropriate support, evaluated in relation to developmental and educational context. / Comorbidity: Co-occurrence of two or more conditions or clinically significant problems in one person.
C. Specific learning disorder: A condition characterized by limitations in intellectual functioning and adaptive functioning with developmental onset. / Comorbidity: Co-occurrence of two or more conditions or clinically significant problems in one person.
D. Specific learning disorder: Persistent difficulty learning or using academic skills despite appropriate support, evaluated in relation to developmental and educational context. / Comorbidity: A pattern of developmentally inappropriate inattention and/or hyperactivity-impulsivity with impairment across relevant contexts.

0724. A student aged 9 and a supervised trainee are reviewing goals in the community youth program. The agreed action is considering developmental history and functional impact rather than inferring a condition from one isolated behavior. Which principle best accounts for it?

A. Adaptive functioning
B. Neurodevelopmental condition
C. ADHD executive-function profile
D. Autism spectrum condition

0725. Which comparison correctly distinguishes ADHD executive-function profile from Reasonable accommodation?

A. ADHD executive-function profile: A modification to environment, instruction, or procedure that supports equitable access under applicable rules. / Reasonable accommodation: A pattern of developmentally inappropriate inattention and/or hyperactivity-impulsivity with impairment across relevant contexts.
B. ADHD executive-function profile: A pattern of developmentally inappropriate inattention and/or hyperactivity-impulsivity with impairment across relevant contexts. / Reasonable accommodation: Differences in responding to sensory input that may affect comfort, attention, or participation.
C. ADHD executive-function profile: A pattern of developmentally inappropriate inattention and/or hyperactivity-impulsivity with impairment across relevant contexts. / Reasonable accommodation: A modification to environment, instruction, or procedure that supports equitable access under applicable rules.
D. ADHD executive-function profile: An approach that respects neurological variation, avoids unnecessary normalization, and focuses on access and meaningful support. / Reasonable accommodation: A modification to environment, instruction, or procedure that supports equitable access under applicable rules.

0726. Which option preserves the correct meaning of both Adaptive functioning and Comorbidity?

A. Adaptive functioning: Conceptual, social, and practical skills used to meet everyday demands across settings. / Comorbidity: A condition characterized by limitations in intellectual functioning and adaptive functioning with developmental onset.
B. Adaptive functioning: Co-occurrence of two or more conditions or clinically significant problems in one person. / Comorbidity: Conceptual, social, and practical skills used to meet everyday demands across settings.
C. Adaptive functioning: Conceptual, social, and practical skills used to meet everyday demands across settings. / Comorbidity: Co-occurrence of two or more conditions or clinically significant problems in one person.
D. Adaptive functioning: A group of conditions with developmental onset that affect functioning in areas such as learning, communication, or behavior. / Comorbidity: Co-occurrence of two or more conditions or clinically significant problems in one person.

0727. Which description belongs with the term Adaptive functioning?

A. Conceptual, social, and practical skills used to meet everyday demands across settings.
B. Persistent difficulty learning or using academic skills despite appropriate support, evaluated in relation to developmental and educational context.
C. Co-occurrence of two or more conditions or clinically significant problems in one person.
D. A pattern of developmentally inappropriate inattention and/or hyperactivity-impulsivity with impairment across relevant contexts.

0728. A service team discusses a young person aged 16 in the telehealth session. Their proposed next step is building accommodations around the person's needs and goals rather than treating difference itself as a defect. Which course concept supports it?

A. Neurodiversity-affirming practice
B. ADHD executive-function profile
C. Intellectual disability
D. Sensory processing differences

0729. During service review in the behavior-support review, a service navigator describes assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty. for a child aged 8. Which course idea is most applicable?

A. Comorbidity
B. Reasonable accommodation
C. Sensory processing differences
D. ADHD executive-function profile

0730. A student confuses Adaptive functioning with Reasonable accommodation. Which explanation most accurately separates them?

A. Adaptive functioning: A modification to environment, instruction, or procedure that supports equitable access under applicable rules. / Reasonable accommodation: Conceptual, social, and practical skills used to meet everyday demands across settings.
B. Adaptive functioning: Co-occurrence of two or more conditions or clinically significant problems in one person. / Reasonable accommodation: A modification to environment, instruction, or procedure that supports equitable access under applicable rules.
C. Adaptive functioning: Conceptual, social, and practical skills used to meet everyday demands across settings. / Reasonable accommodation: A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs.
D. Adaptive functioning: Conceptual, social, and practical skills used to meet everyday demands across settings. / Reasonable accommodation: A modification to environment, instruction, or procedure that supports equitable access under applicable rules.

0731. Which choice aligns each practice with the correct idea, Neurodiversity-affirming practice or Comorbidity?

A. Neurodiversity-affirming practice: Building accommodations around the person's needs and goals rather than treating difference itself as a defect. / Comorbidity: Describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation.
B. Neurodiversity-affirming practice: Assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty. / Comorbidity: Building accommodations around the person's needs and goals rather than treating difference itself as a defect.
C. Neurodiversity-affirming practice: Assessing adaptive skills and developmental history alongside intellectual functioning. / Comorbidity: Assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty.
D. Neurodiversity-affirming practice: Building accommodations around the person's needs and goals rather than treating difference itself as a defect. / Comorbidity: Assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty.

0732. In a case note about a child aged 7, a mental-health professional working in the outpatient clinic records this priority: describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation. What principle is reflected?

A. Specific learning disorder
B. Reasonable accommodation
C. Autism spectrum condition
D. Neurodiversity-affirming practice

0733. For a young person aged 18 in the youth advocacy program, a school support specialist makes this practice the immediate priority: examining skill history, instruction, and targeted assessment when academic difficulty persists. Which concept fits best?

A. Sensory processing differences
B. Specific learning disorder
C. Comorbidity
D. Reasonable accommodation

0734. At the family session, a clinical supervisor meets with a student aged 15. The practice priority is: gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions. Which concept best captures that priority?

A. Neurodevelopmental condition
B. Neurodiversity-affirming practice
C. Comorbidity
D. ADHD executive-function profile

0735. Which comparison would correct a trainee’s misunderstanding of Intellectual disability versus Neurodiversity-affirming practice?

A. Intellectual disability: Conceptual, social, and practical skills used to meet everyday demands across settings. / Neurodiversity-affirming practice: An approach that respects neurological variation, avoids unnecessary normalization, and focuses on access and meaningful support.
B. Intellectual disability: A condition characterized by limitations in intellectual functioning and adaptive functioning with developmental onset. / Neurodiversity-affirming practice: A pattern of developmentally inappropriate inattention and/or hyperactivity-impulsivity with impairment across relevant contexts.
C. Intellectual disability: An approach that respects neurological variation, avoids unnecessary normalization, and focuses on access and meaningful support. / Neurodiversity-affirming practice: A condition characterized by limitations in intellectual functioning and adaptive functioning with developmental onset.
D. Intellectual disability: A condition characterized by limitations in intellectual functioning and adaptive functioning with developmental onset. / Neurodiversity-affirming practice: An approach that respects neurological variation, avoids unnecessary normalization, and focuses on access and meaningful support.

0736. Identify the most precise label for this idea: Differences in responding to sensory input that may affect comfort, attention, or participation.

A. ADHD executive-function profile
B. Comorbidity
C. Specific learning disorder
D. Sensory processing differences

0737. Identify the most precise label for this idea: A pattern of developmentally inappropriate inattention and/or hyperactivity-impulsivity with impairment across relevant contexts.

A. Autism spectrum condition
B. Intellectual disability
C. ADHD executive-function profile
D. Reasonable accommodation

0738. How are Specific learning disorder and Neurodiversity-affirming practice most accurately differentiated in this curriculum?

A. Specific learning disorder: Persistent difficulty learning or using academic skills despite appropriate support, evaluated in relation to developmental and educational context. / Neurodiversity-affirming practice: An approach that respects neurological variation, avoids unnecessary normalization, and focuses on access and meaningful support.
B. Specific learning disorder: An approach that respects neurological variation, avoids unnecessary normalization, and focuses on access and meaningful support. / Neurodiversity-affirming practice: Persistent difficulty learning or using academic skills despite appropriate support, evaluated in relation to developmental and educational context.
C. Specific learning disorder: A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs. / Neurodiversity-affirming practice: An approach that respects neurological variation, avoids unnecessary normalization, and focuses on access and meaningful support.
D. Specific learning disorder: Persistent difficulty learning or using academic skills despite appropriate support, evaluated in relation to developmental and educational context. / Neurodiversity-affirming practice: Conceptual, social, and practical skills used to meet everyday demands across settings.

0739. In a case note about a student aged 17, a assessment clinician working in the parent meeting records this priority: identifying practical adjustments that permit meaningful participation and checking governing requirements. What principle is reflected?

A. Reasonable accommodation
B. Intellectual disability
C. Comorbidity
D. Neurodiversity-affirming practice

0740. Choose the practice comparison that best separates Neurodevelopmental condition from Adaptive functioning.

A. Neurodevelopmental condition: Describing an individual’s strengths, communication profile, sensory needs, and support needs rather than assuming one presentation. / Adaptive functioning: Evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone.
B. Neurodevelopmental condition: Considering developmental history and functional impact rather than inferring a condition from one isolated behavior. / Adaptive functioning: Assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty.
C. Neurodevelopmental condition: Evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone. / Adaptive functioning: Considering developmental history and functional impact rather than inferring a condition from one isolated behavior.
D. Neurodevelopmental condition: Considering developmental history and functional impact rather than inferring a condition from one isolated behavior. / Adaptive functioning: Evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone.

0741. Which comparison correctly distinguishes Adaptive functioning from Reasonable accommodation?

A. Adaptive functioning: Co-occurrence of two or more conditions or clinically significant problems in one person. / Reasonable accommodation: A modification to environment, instruction, or procedure that supports equitable access under applicable rules.
B. Adaptive functioning: Conceptual, social, and practical skills used to meet everyday demands across settings. / Reasonable accommodation: A modification to environment, instruction, or procedure that supports equitable access under applicable rules.
C. Adaptive functioning: A modification to environment, instruction, or procedure that supports equitable access under applicable rules. / Reasonable accommodation: Conceptual, social, and practical skills used to meet everyday demands across settings.
D. Adaptive functioning: Conceptual, social, and practical skills used to meet everyday demands across settings. / Reasonable accommodation: A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs.

0742. Which option correctly matches each concept to its practice focus: Specific learning disorder and Intellectual disability?

A. Specific learning disorder: Evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone. / Intellectual disability: Assessing adaptive skills and developmental history alongside intellectual functioning.
B. Specific learning disorder: Assessing adaptive skills and developmental history alongside intellectual functioning. / Intellectual disability: Examining skill history, instruction, and targeted assessment when academic difficulty persists.
C. Specific learning disorder: Examining skill history, instruction, and targeted assessment when academic difficulty persists. / Intellectual disability: Building accommodations around the person’s needs and goals rather than treating difference itself as a defect.
D. Specific learning disorder: Examining skill history, instruction, and targeted assessment when academic difficulty persists. / Intellectual disability: Assessing adaptive skills and developmental history alongside intellectual functioning.

0743. A case discussion concerns a student aged 17 and a school-based clinician in the outpatient clinic. The practitioner is considering assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty. Which principle is involved?

A. ADHD executive-function profile
B. Sensory processing differences
C. Neurodevelopmental condition
D. Comorbidity

0744. Which statement accurately contrasts the course concepts Neurodevelopmental condition and Adaptive functioning?

A. Neurodevelopmental condition: Conceptual, social, and practical skills used to meet everyday demands across settings. / Adaptive functioning: A group of conditions with developmental onset that affect functioning in areas such as learning, communication, or behavior.
B. Neurodevelopmental condition: A group of conditions with developmental onset that affect functioning in areas such as learning, communication, or behavior. / Adaptive functioning: Conceptual, social, and practical skills used to meet everyday demands across settings.
C. Neurodevelopmental condition: A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs. / Adaptive functioning: Conceptual, social, and practical skills used to meet everyday demands across settings.
D. Neurodevelopmental condition: A group of conditions with developmental onset that affect functioning in areas such as learning, communication, or behavior. / Adaptive functioning: Co-occurrence of two or more conditions or clinically significant problems in one person.

0745. In a professional consultation about a child aged 6, the assessment clinician describes this response in the telehealth session: assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty. Which term is most apt?

A. Sensory processing differences
B. Intellectual disability
C. Comorbidity
D. Neurodiversity-affirming practice

0746. During work in the learning-support meeting, a youth worker identifies this need: asking which sensory environments support or hinder participation and adjusting the setting where feasible. Which idea should guide the response?

A. Neurodiversity-affirming practice
B. Autism spectrum condition
C. Sensory processing differences
D. Neurodevelopmental condition

0747. At the community service agency, a school support specialist meets with a preadolescent child. The practice priority is: building accommodations around the person’s needs and goals rather than treating difference itself as a defect. Which concept best captures that priority?

A. Comorbidity
B. Neurodiversity-affirming practice
C. Intellectual disability
D. Reasonable accommodation

0748. While supporting a client in late adolescence in the youth group, a family therapist adopts this practice: examining skill history, instruction, and targeted assessment when academic difficulty persists. Which concept best explains the choice?

A. Adaptive functioning
B. Intellectual disability
C. Specific learning disorder
D. ADHD executive-function profile

0749. Which option correctly matches each concept to its practice focus: ADHD executive-function profile and Comorbidity?

A. ADHD executive-function profile: Gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions. / Comorbidity: Assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty.
B. ADHD executive-function profile: Assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty. / Comorbidity: Gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions.
C. ADHD executive-function profile: Gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions. / Comorbidity: Examining skill history, instruction, and targeted assessment when academic difficulty persists.
D. ADHD executive-function profile: Evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone. / Comorbidity: Assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty.

0750. In a supervision review, a caregiver working with a counselor describes work with a middle-school student in the child guidance clinic: gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions. What concept is illustrated?

A. Specific learning disorder
B. ADHD executive-function profile
C. Neurodevelopmental condition
D. Sensory processing differences

0751. Which option correctly matches each concept to its practice focus: Sensory processing differences and Reasonable accommodation?

A. Sensory processing differences: Asking which sensory environments support or hinder participation and adjusting the setting where feasible. / Reasonable accommodation: Identifying practical adjustments that permit meaningful participation and checking governing requirements.
B. Sensory processing differences: Identifying practical adjustments that permit meaningful participation and checking governing requirements. / Reasonable accommodation: Asking which sensory environments support or hinder participation and adjusting the setting where feasible.
C. Sensory processing differences: Evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone. / Reasonable accommodation: Identifying practical adjustments that permit meaningful participation and checking governing requirements.
D. Sensory processing differences: Asking which sensory environments support or hinder participation and adjusting the setting where feasible. / Reasonable accommodation: Gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions.

0752. Which professional action most closely applies Autism spectrum condition?

A. Asking which sensory environments support or hinder participation and adjusting the setting where feasible.
B. Gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions.
C. Describing an individual’s strengths, communication profile, sensory needs, and support needs rather than assuming one presentation.
D. Examining skill history, instruction, and targeted assessment when academic difficulty persists.

0753. Which option preserves the correct meaning of both Adaptive functioning and Reasonable accommodation?

A. Adaptive functioning: A modification to environment, instruction, or procedure that supports equitable access under applicable rules. / Reasonable accommodation: Conceptual, social, and practical skills used to meet everyday demands across settings.
B. Adaptive functioning: Conceptual, social, and practical skills used to meet everyday demands across settings. / Reasonable accommodation: A modification to environment, instruction, or procedure that supports equitable access under applicable rules.
C. Adaptive functioning: Conceptual, social, and practical skills used to meet everyday demands across settings. / Reasonable accommodation: A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs.
D. Adaptive functioning: Co-occurrence of two or more conditions or clinically significant problems in one person. / Reasonable accommodation: A modification to environment, instruction, or procedure that supports equitable access under applicable rules.

0754. Consider a student aged 12 receiving help in the telehealth session. The group facilitator focuses on asking which sensory environments support or hinder participation and adjusting the setting where feasible. Which term best describes the guiding idea?

A. Sensory processing differences
B. Autism spectrum condition
C. Neurodiversity-affirming practice
D. Reasonable accommodation

0755. In a professional consultation about a student aged 17, the consultant describes this response in the behavior-support review: assessing adaptive skills and developmental history alongside intellectual functioning. Which term is most apt?

A. Autism spectrum condition
B. Sensory processing differences
C. Intellectual disability
D. Reasonable accommodation

0756. Which course concept is defined as follows: Co-occurrence of two or more conditions or clinically significant problems in one person.

A. Sensory processing differences
B. Neurodevelopmental condition
C. Comorbidity
D. Adaptive functioning

0757. Which course concept is defined as follows: A modification to environment, instruction, or procedure that supports equitable access under applicable rules.

A. Reasonable accommodation
B. Comorbidity
C. Adaptive functioning
D. Sensory processing differences

0758. A student confuses Intellectual disability with Sensory processing differences. Which explanation most accurately separates them?

A. Intellectual disability: A condition characterized by limitations in intellectual functioning and adaptive functioning with developmental onset. / Sensory processing differences: A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs.
B. Intellectual disability: Persistent difficulty learning or using academic skills despite appropriate support, evaluated in relation to developmental and educational context. / Sensory processing differences: Differences in responding to sensory input that may affect comfort, attention, or participation.
C. Intellectual disability: A condition characterized by limitations in intellectual functioning and adaptive functioning with developmental onset. / Sensory processing differences: Differences in responding to sensory input that may affect comfort, attention, or participation.
D. Intellectual disability: Differences in responding to sensory input that may affect comfort, attention, or participation. / Sensory processing differences: A condition characterized by limitations in intellectual functioning and adaptive functioning with developmental onset.

0759. In a supervision review, a school-based clinician describes work with a client in early adolescence in the parent meeting: evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone. What concept is illustrated?

A. ADHD executive-function profile
B. Autism spectrum condition
C. Neurodevelopmental condition
D. Adaptive functioning

0760. In a supervision quiz, how should ADHD executive-function profile be distinguished from Autism spectrum condition?

A. ADHD executive-function profile: A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs. / Autism spectrum condition: A pattern of developmentally inappropriate inattention and/or hyperactivity-impulsivity with impairment across relevant contexts.
B. ADHD executive-function profile: Conceptual, social, and practical skills used to meet everyday demands across settings. / Autism spectrum condition: A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs.
C. ADHD executive-function profile: A pattern of developmentally inappropriate inattention and/or hyperactivity-impulsivity with impairment across relevant contexts. / Autism spectrum condition: A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs.
D. ADHD executive-function profile: A pattern of developmentally inappropriate inattention and/or hyperactivity-impulsivity with impairment across relevant contexts. / Autism spectrum condition: A group of conditions with developmental onset that affect functioning in areas such as learning, communication, or behavior.

0761. Which comparison would correct a trainee’s misunderstanding of Specific learning disorder versus Sensory processing differences?

A. Specific learning disorder: Differences in responding to sensory input that may affect comfort, attention, or participation. / Sensory processing differences: Persistent difficulty learning or using academic skills despite appropriate support, evaluated in relation to developmental and educational context.
B. Specific learning disorder: Persistent difficulty learning or using academic skills despite appropriate support, evaluated in relation to developmental and educational context. / Sensory processing differences: Differences in responding to sensory input that may affect comfort, attention, or participation.
C. Specific learning disorder: Persistent difficulty learning or using academic skills despite appropriate support, evaluated in relation to developmental and educational context. / Sensory processing differences: An approach that respects neurological variation, avoids unnecessary normalization, and focuses on access and meaningful support.
D. Specific learning disorder: Co-occurrence of two or more conditions or clinically significant problems in one person. / Sensory processing differences: Differences in responding to sensory input that may affect comfort, attention, or participation.

0762. Which pair of actions illustrates Sensory processing differences and Reasonable accommodation, respectively?

A. Sensory processing differences: Asking which sensory environments support or hinder participation and adjusting the setting where feasible. / Reasonable accommodation: Gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions.
B. Sensory processing differences: Asking which sensory environments support or hinder participation and adjusting the setting where feasible. / Reasonable accommodation: Identifying practical adjustments that permit meaningful participation and checking governing requirements.
C. Sensory processing differences: Identifying practical adjustments that permit meaningful participation and checking governing requirements. / Reasonable accommodation: Asking which sensory environments support or hinder participation and adjusting the setting where feasible.
D. Sensory processing differences: Evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone. / Reasonable accommodation: Identifying practical adjustments that permit meaningful participation and checking governing requirements.

0763. In the after-school program, a team asks how a youth worker can support a high-school student. One proposed action is building accommodations around the person’s needs and goals rather than treating difference itself as a defect. Which idea does it represent?

A. Sensory processing differences
B. Neurodiversity-affirming practice
C. Adaptive functioning
D. Comorbidity

0764. How should a practitioner distinguish the applications of Specific learning disorder and Reasonable accommodation?

A. Specific learning disorder: Examining skill history, instruction, and targeted assessment when academic difficulty persists. / Reasonable accommodation: Gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions.
B. Specific learning disorder: Asking which sensory environments support or hinder participation and adjusting the setting where feasible. / Reasonable accommodation: Identifying practical adjustments that permit meaningful participation and checking governing requirements.
C. Specific learning disorder: Identifying practical adjustments that permit meaningful participation and checking governing requirements. / Reasonable accommodation: Examining skill history, instruction, and targeted assessment when academic difficulty persists.
D. Specific learning disorder: Examining skill history, instruction, and targeted assessment when academic difficulty persists. / Reasonable accommodation: Identifying practical adjustments that permit meaningful participation and checking governing requirements.

0765. In the clinical planning session, the agreed focus for a community practitioner working with a teenage client is asking which sensory environments support or hinder participation and adjusting the setting where feasible. Which concept names this focus?

A. Sensory processing differences
B. Adaptive functioning
C. ADHD executive-function profile
D. Autism spectrum condition

0766. Which choice aligns each practice with the correct idea, Intellectual disability or Comorbidity?

A. Intellectual disability: Assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty. / Comorbidity: Assessing adaptive skills and developmental history alongside intellectual functioning.
B. Intellectual disability: Assessing adaptive skills and developmental history alongside intellectual functioning. / Comorbidity: Evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone.
C. Intellectual disability: Describing an individual’s strengths, communication profile, sensory needs, and support needs rather than assuming one presentation. / Comorbidity: Assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty.
D. Intellectual disability: Assessing adaptive skills and developmental history alongside intellectual functioning. / Comorbidity: Assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty.

0767. An interdisciplinary team reviews a high-school student’s case at the caregiver consultation. The behavior specialist recommends assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty. Which course concept best fits?

A. Intellectual disability
B. Adaptive functioning
C. Sensory processing differences
D. Comorbidity

0768. Which applied comparison correctly identifies what belongs to Intellectual disability versus Adaptive functioning?

A. Intellectual disability: Assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty. / Adaptive functioning: Evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone.
B. Intellectual disability: Assessing adaptive skills and developmental history alongside intellectual functioning. / Adaptive functioning: Building accommodations around the person’s needs and goals rather than treating difference itself as a defect.
C. Intellectual disability: Assessing adaptive skills and developmental history alongside intellectual functioning. / Adaptive functioning: Evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone.
D. Intellectual disability: Evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone. / Adaptive functioning: Assessing adaptive skills and developmental history alongside intellectual functioning.

0769. Identify the most precise label for this idea: A condition characterized by limitations in intellectual functioning and adaptive functioning with developmental onset.

A. Specific learning disorder
B. Neurodiversity-affirming practice
C. Autism spectrum condition
D. Intellectual disability

0770. For a client in early adolescence in the outpatient clinic, a play therapist makes this practice the immediate priority: assessing adaptive skills and developmental history alongside intellectual functioning. Which concept fits best?

A. ADHD executive-function profile
B. Neurodiversity-affirming practice
C. Neurodevelopmental condition
D. Intellectual disability

0771. Select the best explanation of ADHD executive-function profile.

A. Conceptual, social, and practical skills used to meet everyday demands across settings.
B. A pattern of developmentally inappropriate inattention and/or hyperactivity-impulsivity with impairment across relevant contexts.
C. A group of conditions with developmental onset that affect functioning in areas such as learning, communication, or behavior.
D. An approach that respects neurological variation, avoids unnecessary normalization, and focuses on access and meaningful support.

0772. How should a practitioner distinguish the applications of Neurodevelopmental condition and Specific learning disorder?

A. Neurodevelopmental condition: Examining skill history, instruction, and targeted assessment when academic difficulty persists. / Specific learning disorder: Considering developmental history and functional impact rather than inferring a condition from one isolated behavior.
B. Neurodevelopmental condition: Describing an individual’s strengths, communication profile, sensory needs, and support needs rather than assuming one presentation. / Specific learning disorder: Examining skill history, instruction, and targeted assessment when academic difficulty persists.
C. Neurodevelopmental condition: Considering developmental history and functional impact rather than inferring a condition from one isolated behavior. / Specific learning disorder: Examining skill history, instruction, and targeted assessment when academic difficulty persists.
D. Neurodevelopmental condition: Considering developmental history and functional impact rather than inferring a condition from one isolated behavior. / Specific learning disorder: Asking which sensory environments support or hinder participation and adjusting the setting where feasible.

0773. In a supervision review, a parent educator describes work with a teenage client in the classroom support meeting: identifying practical adjustments that permit meaningful participation and checking governing requirements. What concept is illustrated?

A. Specific learning disorder
B. Reasonable accommodation
C. Neurodiversity-affirming practice
D. Sensory processing differences

0774. In a case note about a child aged 14, a consultant working in the child guidance clinic records this priority: evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone. What principle is reflected?

A. Reasonable accommodation
B. Specific learning disorder
C. Neurodevelopmental condition
D. Adaptive functioning

0775. What is the central meaning of Comorbidity?

A. A modification to environment, instruction, or procedure that supports equitable access under applicable rules.
B. A pattern of developmentally inappropriate inattention and/or hyperactivity-impulsivity with impairment across relevant contexts.
C. Co-occurrence of two or more conditions or clinically significant problems in one person.
D. A group of conditions with developmental onset that affect functioning in areas such as learning, communication, or behavior.

0776. A case discussion concerns a child aged 11 and a family therapist in the family session. The practitioner is considering considering developmental history and functional impact rather than inferring a condition from one isolated behavior. Which principle is involved?

A. Comorbidity
B. Sensory processing differences
C. Neurodevelopmental condition
D. Neurodiversity-affirming practice

0777. Which description belongs with the term Sensory processing differences?

A. Persistent difficulty learning or using academic skills despite appropriate support, evaluated in relation to developmental and educational context.
B. Differences in responding to sensory input that may affect comfort, attention, or participation.
C. Co-occurrence of two or more conditions or clinically significant problems in one person.
D. A condition characterized by limitations in intellectual functioning and adaptive functioning with developmental onset.

0778. Choose the definition pair that correctly explains Specific learning disorder first and Adaptive functioning second.

A. Specific learning disorder: Differences in responding to sensory input that may affect comfort, attention, or participation. / Adaptive functioning: Conceptual, social, and practical skills used to meet everyday demands across settings.
B. Specific learning disorder: Persistent difficulty learning or using academic skills despite appropriate support, evaluated in relation to developmental and educational context. / Adaptive functioning: A pattern of developmentally inappropriate inattention and/or hyperactivity-impulsivity with impairment across relevant contexts.
C. Specific learning disorder: Persistent difficulty learning or using academic skills despite appropriate support, evaluated in relation to developmental and educational context. / Adaptive functioning: Conceptual, social, and practical skills used to meet everyday demands across settings.
D. Specific learning disorder: Conceptual, social, and practical skills used to meet everyday demands across settings. / Adaptive functioning: Persistent difficulty learning or using academic skills despite appropriate support, evaluated in relation to developmental and educational context.

0779. At a case-planning meeting, the behavior specialist proposes assessing adaptive skills and developmental history alongside intellectual functioning. for a child aged 11 seen in the multidisciplinary case conference. Which concept does this illustrate?

A. Intellectual disability
B. Neurodiversity-affirming practice
C. Comorbidity
D. Sensory processing differences

0780. Which option pairs the definitions of Intellectual disability and Sensory processing differences correctly, in that order?

A. Intellectual disability: Differences in responding to sensory input that may affect comfort, attention, or participation. / Sensory processing differences: A condition characterized by limitations in intellectual functioning and adaptive functioning with developmental onset.
B. Intellectual disability: A condition characterized by limitations in intellectual functioning and adaptive functioning with developmental onset. / Sensory processing differences: A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs.
C. Intellectual disability: Persistent difficulty learning or using academic skills despite appropriate support, evaluated in relation to developmental and educational context. / Sensory processing differences: Differences in responding to sensory input that may affect comfort, attention, or participation.
D. Intellectual disability: A condition characterized by limitations in intellectual functioning and adaptive functioning with developmental onset. / Sensory processing differences: Differences in responding to sensory input that may affect comfort, attention, or participation.

0781. Which comparison would correct a trainee's misunderstanding of Intellectual disability versus Reasonable accommodation?

A. Intellectual disability: A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs. / Reasonable accommodation: A modification to environment, instruction, or procedure that supports equitable access under applicable rules.
B. Intellectual disability: A modification to environment, instruction, or procedure that supports equitable access under applicable rules. / Reasonable accommodation: A condition characterized by limitations in intellectual functioning and adaptive functioning with developmental onset.
C. Intellectual disability: A condition characterized by limitations in intellectual functioning and adaptive functioning with developmental onset. / Reasonable accommodation: A modification to environment, instruction, or procedure that supports equitable access under applicable rules.
D. Intellectual disability: A condition characterized by limitations in intellectual functioning and adaptive functioning with developmental onset. / Reasonable accommodation: A group of conditions with developmental onset that affect functioning in areas such as learning, communication, or behavior.

0782. A case conference reviews a service navigator's work with a teenage client in the counseling practicum: gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions. Which principle is central?

A. Intellectual disability
B. Reasonable accommodation
C. Neurodevelopmental condition
D. ADHD executive-function profile

0783. Choose the definition pair that correctly explains Comorbidity first and Reasonable accommodation second.

A. Comorbidity: Co-occurrence of two or more conditions or clinically significant problems in one person. / Reasonable accommodation: Persistent difficulty learning or using academic skills despite appropriate support, evaluated in relation to developmental and educational context.
B. Comorbidity: An approach that respects neurological variation, avoids unnecessary normalization, and focuses on access and meaningful support. / Reasonable accommodation: A modification to environment, instruction, or procedure that supports equitable access under applicable rules.
C. Comorbidity: A modification to environment, instruction, or procedure that supports equitable access under applicable rules. / Reasonable accommodation: Co-occurrence of two or more conditions or clinically significant problems in one person.
D. Comorbidity: Co-occurrence of two or more conditions or clinically significant problems in one person. / Reasonable accommodation: A modification to environment, instruction, or procedure that supports equitable access under applicable rules.

0784. How are Adaptive functioning and Comorbidity most accurately differentiated in this curriculum?

A. Adaptive functioning: Conceptual, social, and practical skills used to meet everyday demands across settings. / Comorbidity: A condition characterized by limitations in intellectual functioning and adaptive functioning with developmental onset.
B. Adaptive functioning: Conceptual, social, and practical skills used to meet everyday demands across settings. / Comorbidity: Co-occurrence of two or more conditions or clinically significant problems in one person.
C. Adaptive functioning: Co-occurrence of two or more conditions or clinically significant problems in one person. / Comorbidity: Conceptual, social, and practical skills used to meet everyday demands across settings.
D. Adaptive functioning: A group of conditions with developmental onset that affect functioning in areas such as learning, communication, or behavior. / Comorbidity: Co-occurrence of two or more conditions or clinically significant problems in one person.

0785. A assessment clinician prepares for a session in the child guidance clinic with a young person aged 18. The intended approach is considering developmental history and functional impact rather than inferring a condition from one isolated behavior. Which concept is most relevant?

A. Sensory processing differences
B. Autism spectrum condition
C. Adaptive functioning
D. Neurodevelopmental condition

0786. In a case note about a teenage client, a consultant working in the community service agency records this priority: considering developmental history and functional impact rather than inferring a condition from one isolated behavior. What principle is reflected?

A. Neurodevelopmental condition
B. Specific learning disorder
C. Reasonable accommodation
D. Comorbidity

0787. While supporting a student aged 12 in the clinical planning session, a family therapist adopts this practice: assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty. Which concept best explains the choice?

A. Intellectual disability
B. Comorbidity
C. Sensory processing differences
D. Autism spectrum condition

0788. Choose the response that best puts Reasonable accommodation into practice.

A. Identifying practical adjustments that permit meaningful participation and checking governing requirements.
B. Building accommodations around the person's needs and goals rather than treating difference itself as a defect.
C. Describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation.
D. Gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions.

0789. A consultant and a child aged 6 are discussing support in the school counseling office. The selected practice is examining skill history, instruction, and targeted assessment when academic difficulty persists. Which concept does this demonstrate?

A. Neurodiversity-affirming practice
B. Specific learning disorder
C. Reasonable accommodation
D. Adaptive functioning

0790. A case conference reviews a community practitioner's work with a preadolescent child in the school consultation: evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone. Which principle is central?

A. ADHD executive-function profile
B. Autism spectrum condition
C. Adaptive functioning
D. Comorbidity

0791. A consulting counselor is explaining a choice to a student aged 15 and caregiver in the youth group. The choice centers on considering developmental history and functional impact rather than inferring a condition from one isolated behavior. Which idea is illustrated?

A. Intellectual disability
B. Adaptive functioning
C. Neurodiversity-affirming practice
D. Neurodevelopmental condition

0792. Which statement accurately contrasts the course concepts Autism spectrum condition and Sensory processing differences?

A. Autism spectrum condition: Differences in responding to sensory input that may affect comfort, attention, or participation. / Sensory processing differences: A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs.
B. Autism spectrum condition: A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs. / Sensory processing differences: A group of conditions with developmental onset that affect functioning in areas such as learning, communication, or behavior.
C. Autism spectrum condition: A modification to environment, instruction, or procedure that supports equitable access under applicable rules. / Sensory processing differences: Differences in responding to sensory input that may affect comfort, attention, or participation.
D. Autism spectrum condition: A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs. / Sensory processing differences: Differences in responding to sensory input that may affect comfort, attention, or participation.

0793. In the outpatient clinic, a teacher and counselor explains why a young person aged 10 would benefit from considering developmental history and functional impact rather than inferring a condition from one isolated behavior. Which course concept underpins the explanation?

A. Neurodiversity-affirming practice
B. Specific learning disorder
C. Adaptive functioning
D. Neurodevelopmental condition

0794. Which comparison correctly distinguishes Adaptive functioning from Comorbidity?

A. Adaptive functioning: Co-occurrence of two or more conditions or clinically significant problems in one person. / Comorbidity: Conceptual, social, and practical skills used to meet everyday demands across settings.
B. Adaptive functioning: Conceptual, social, and practical skills used to meet everyday demands across settings. / Comorbidity: A condition characterized by limitations in intellectual functioning and adaptive functioning with developmental onset.
C. Adaptive functioning: Conceptual, social, and practical skills used to meet everyday demands across settings. / Comorbidity: Co-occurrence of two or more conditions or clinically significant problems in one person.
D. Adaptive functioning: A group of conditions with developmental onset that affect functioning in areas such as learning, communication, or behavior. / Comorbidity: Co-occurrence of two or more conditions or clinically significant problems in one person.

0795. A parent educator presents a support plan for a preadolescent child at the counseling practicum. Its central feature is assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty. Which concept should be named?

A. Neurodiversity-affirming practice
B. Reasonable accommodation
C. Adaptive functioning
D. Comorbidity

0796. Which pair of actions illustrates Sensory processing differences and Comorbidity, respectively?

A. Sensory processing differences: Asking which sensory environments support or hinder participation and adjusting the setting where feasible. / Comorbidity: Identifying practical adjustments that permit meaningful participation and checking governing requirements.
B. Sensory processing differences: Assessing adaptive skills and developmental history alongside intellectual functioning. / Comorbidity: Assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty.
C. Sensory processing differences: Assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty. / Comorbidity: Asking which sensory environments support or hinder participation and adjusting the setting where feasible.
D. Sensory processing differences: Asking which sensory environments support or hinder participation and adjusting the setting where feasible. / Comorbidity: Assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty.

0797. A group facilitator is explaining a choice to a child aged 7 and caregiver in the student wellness team. The choice centers on assessing adaptive skills and developmental history alongside intellectual functioning. Which idea is illustrated?

A. Reasonable accommodation
B. Sensory processing differences
C. Intellectual disability
D. Neurodevelopmental condition

0798. A supervised trainee prepares for a session in the parent meeting with a older adolescent client. The intended approach is assessing adaptive skills and developmental history alongside intellectual functioning. Which concept is most relevant?

A. Neurodiversity-affirming practice
B. Specific learning disorder
C. Autism spectrum condition
D. Intellectual disability

0799. A student confuses Autism spectrum condition with Intellectual disability. Which explanation most accurately separates them?

A. Autism spectrum condition: A group of conditions with developmental onset that affect functioning in areas such as learning, communication, or behavior. / Intellectual disability: A condition characterized by limitations in intellectual functioning and adaptive functioning with developmental onset.
B. Autism spectrum condition: A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs. / Intellectual disability: A condition characterized by limitations in intellectual functioning and adaptive functioning with developmental onset.
C. Autism spectrum condition: A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs. / Intellectual disability: Conceptual, social, and practical skills used to meet everyday demands across settings.
D. Autism spectrum condition: A condition characterized by limitations in intellectual functioning and adaptive functioning with developmental onset. / Intellectual disability: A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs.

0800. Which named construct is captured by this account? Differences in responding to sensory input that may affect comfort, attention, or participation.

A. Intellectual disability
B. Specific learning disorder
C. Adaptive functioning
D. Sensory processing differences

0801. Choose the term that matches this definition: A pattern of developmentally inappropriate inattention and/or hyperactivity-impulsivity with impairment across relevant contexts.

A. Adaptive functioning
B. ADHD executive-function profile
C. Comorbidity
D. Neurodevelopmental condition

0802. In the multidisciplinary case conference, a youth worker describes the most appropriate support for a child aged 6 as considering developmental history and functional impact rather than inferring a condition from one isolated behavior. Which framework is being applied?

A. Specific learning disorder
B. Sensory processing differences
C. Reasonable accommodation
D. Neurodevelopmental condition

0803. A middle-school student and a consultant are reviewing goals in the youth group. The agreed action is describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation. Which principle best accounts for it?

A. Comorbidity
B. Autism spectrum condition
C. Neurodevelopmental condition
D. Intellectual disability

0804. A team must select a support approach for a young adolescent client at the behavior-support review. The family therapist recommends evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone. Which idea is most relevant?

A. Reasonable accommodation
B. Neurodevelopmental condition
C. Sensory processing differences
D. Adaptive functioning

0805. A planning meeting about a child of elementary-school age includes a school support specialist. The proposed practice in the after-school program is gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions. Which idea underlies it?

A. Neurodevelopmental condition
B. Autism spectrum condition
C. ADHD executive-function profile
D. Specific learning disorder

0806. A supervisor asks for an applied contrast between Adaptive functioning and Comorbidity. Which option fits?

A. Adaptive functioning: Assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty. / Comorbidity: Evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone.
B. Adaptive functioning: Evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone. / Comorbidity: Assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty.
C. Adaptive functioning: Considering developmental history and functional impact rather than inferring a condition from one isolated behavior. / Comorbidity: Assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty.
D. Adaptive functioning: Evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone. / Comorbidity: Assessing adaptive skills and developmental history alongside intellectual functioning.

0807. A child aged 7 is receiving support in the student wellness team. The group facilitator is guided by this practice: assessing adaptive skills and developmental history alongside intellectual functioning. Which principle best fits?

A. Reasonable accommodation
B. Intellectual disability
C. Neurodevelopmental condition
D. ADHD executive-function profile

0808. In a professional consultation about a child aged 14, the member of a clinical team describes this response in the student-support meeting: considering developmental history and functional impact rather than inferring a condition from one isolated behavior. Which term is most apt?

A. Neurodiversity-affirming practice
B. Adaptive functioning
C. Specific learning disorder
D. Neurodevelopmental condition

0809. A trainee must distinguish how Neurodiversity-affirming practice and Reasonable accommodation guide practice. Which comparison is accurate?

A. Neurodiversity-affirming practice: Building accommodations around the person's needs and goals rather than treating difference itself as a defect. / Reasonable accommodation: Identifying practical adjustments that permit meaningful participation and checking governing requirements.
B. Neurodiversity-affirming practice: Building accommodations around the person's needs and goals rather than treating difference itself as a defect. / Reasonable accommodation: Evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone.
C. Neurodiversity-affirming practice: Identifying practical adjustments that permit meaningful participation and checking governing requirements. / Reasonable accommodation: Building accommodations around the person's needs and goals rather than treating difference itself as a defect.
D. Neurodiversity-affirming practice: Asking which sensory environments support or hinder participation and adjusting the setting where feasible. / Reasonable accommodation: Identifying practical adjustments that permit meaningful participation and checking governing requirements.

0810. Which comparison would correct a trainee's misunderstanding of Neurodevelopmental condition versus Sensory processing differences?

A. Neurodevelopmental condition: Differences in responding to sensory input that may affect comfort, attention, or participation. / Sensory processing differences: A group of conditions with developmental onset that affect functioning in areas such as learning, communication, or behavior.
B. Neurodevelopmental condition: A group of conditions with developmental onset that affect functioning in areas such as learning, communication, or behavior. / Sensory processing differences: Differences in responding to sensory input that may affect comfort, attention, or participation.
C. Neurodevelopmental condition: A group of conditions with developmental onset that affect functioning in areas such as learning, communication, or behavior. / Sensory processing differences: Conceptual, social, and practical skills used to meet everyday demands across settings.
D. Neurodevelopmental condition: Co-occurrence of two or more conditions or clinically significant problems in one person. / Sensory processing differences: Differences in responding to sensory input that may affect comfort, attention, or participation.

0811. Choose the definition pair that correctly explains Autism spectrum condition first and Reasonable accommodation second.

A. Autism spectrum condition: Persistent difficulty learning or using academic skills despite appropriate support, evaluated in relation to developmental and educational context. / Reasonable accommodation: A modification to environment, instruction, or procedure that supports equitable access under applicable rules.
B. Autism spectrum condition: A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs. / Reasonable accommodation: A modification to environment, instruction, or procedure that supports equitable access under applicable rules.
C. Autism spectrum condition: A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs. / Reasonable accommodation: Differences in responding to sensory input that may affect comfort, attention, or participation.
D. Autism spectrum condition: A modification to environment, instruction, or procedure that supports equitable access under applicable rules. / Reasonable accommodation: A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs.

0812. Which course concept is defined as follows: Conceptual, social, and practical skills used to meet everyday demands across settings.

A. Neurodevelopmental condition
B. Adaptive functioning
C. Neurodiversity-affirming practice
D. Autism spectrum condition

0813. In a supervision quiz, how should Autism spectrum condition be distinguished from Neurodiversity-affirming practice?

A. Autism spectrum condition: A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs. / Neurodiversity-affirming practice: An approach that respects neurological variation, avoids unnecessary normalization, and focuses on access and meaningful support.
B. Autism spectrum condition: A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs. / Neurodiversity-affirming practice: A modification to environment, instruction, or procedure that supports equitable access under applicable rules.
C. Autism spectrum condition: An approach that respects neurological variation, avoids unnecessary normalization, and focuses on access and meaningful support. / Neurodiversity-affirming practice: A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs.
D. Autism spectrum condition: A pattern of developmentally inappropriate inattention and/or hyperactivity-impulsivity with impairment across relevant contexts. / Neurodiversity-affirming practice: An approach that respects neurological variation, avoids unnecessary normalization, and focuses on access and meaningful support.

0814. A older adolescent client is receiving support in the classroom support meeting. The school counselor is guided by this practice: gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions. Which principle best fits?

A. ADHD executive-function profile
B. Comorbidity
C. Adaptive functioning
D. Autism spectrum condition

0815. Which statement most accurately defines Adaptive functioning?

A. A group of conditions with developmental onset that affect functioning in areas such as learning, communication, or behavior.
B. Persistent difficulty learning or using academic skills despite appropriate support, evaluated in relation to developmental and educational context.
C. Conceptual, social, and practical skills used to meet everyday demands across settings.
D. Differences in responding to sensory input that may affect comfort, attention, or participation.

0816. A assessment clinician and a middle-school student are discussing support in the multidisciplinary case conference. The selected practice is building accommodations around the person’s needs and goals rather than treating difference itself as a defect. Which concept does this demonstrate?

A. Adaptive functioning
B. Neurodiversity-affirming practice
C. Comorbidity
D. Sensory processing differences

0817. Which applied comparison correctly identifies what belongs to ADHD executive-function profile versus Intellectual disability?

A. ADHD executive-function profile: Gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions. / Intellectual disability: Assessing adaptive skills and developmental history alongside intellectual functioning.
B. ADHD executive-function profile: Assessing adaptive skills and developmental history alongside intellectual functioning. / Intellectual disability: Gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions.
C. ADHD executive-function profile: Evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone. / Intellectual disability: Assessing adaptive skills and developmental history alongside intellectual functioning.
D. ADHD executive-function profile: Gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions. / Intellectual disability: Assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty.

0818. In the youth advocacy program, a teacher and counselor describes the most appropriate support for a middle-school student as assessing adaptive skills and developmental history alongside intellectual functioning. Which framework is being applied?

A. Neurodevelopmental condition
B. Comorbidity
C. Intellectual disability
D. Neurodiversity-affirming practice

0819. A student confuses Neurodevelopmental condition with Comorbidity. Which explanation most accurately separates them?

A. Neurodevelopmental condition: Co-occurrence of two or more conditions or clinically significant problems in one person. / Comorbidity: A group of conditions with developmental onset that affect functioning in areas such as learning, communication, or behavior.
B. Neurodevelopmental condition: A group of conditions with developmental onset that affect functioning in areas such as learning, communication, or behavior. / Comorbidity: Persistent difficulty learning or using academic skills despite appropriate support, evaluated in relation to developmental and educational context.
C. Neurodevelopmental condition: A group of conditions with developmental onset that affect functioning in areas such as learning, communication, or behavior. / Comorbidity: Co-occurrence of two or more conditions or clinically significant problems in one person.
D. Neurodevelopmental condition: A modification to environment, instruction, or procedure that supports equitable access under applicable rules. / Comorbidity: Co-occurrence of two or more conditions or clinically significant problems in one person.

0820. Which option preserves the correct meaning of both Specific learning disorder and Neurodiversity-affirming practice?

A. Specific learning disorder: Persistent difficulty learning or using academic skills despite appropriate support, evaluated in relation to developmental and educational context. / Neurodiversity-affirming practice: An approach that respects neurological variation, avoids unnecessary normalization, and focuses on access and meaningful support.
B. Specific learning disorder: A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs. / Neurodiversity-affirming practice: An approach that respects neurological variation, avoids unnecessary normalization, and focuses on access and meaningful support.
C. Specific learning disorder: An approach that respects neurological variation, avoids unnecessary normalization, and focuses on access and meaningful support. / Neurodiversity-affirming practice: Persistent difficulty learning or using academic skills despite appropriate support, evaluated in relation to developmental and educational context.
D. Specific learning disorder: Persistent difficulty learning or using academic skills despite appropriate support, evaluated in relation to developmental and educational context. / Neurodiversity-affirming practice: Conceptual, social, and practical skills used to meet everyday demands across settings.

0821. Which named construct is captured by this account? A modification to environment, instruction, or procedure that supports equitable access under applicable rules.

A. ADHD executive-function profile
B. Autism spectrum condition
C. Reasonable accommodation
D. Neurodevelopmental condition

0822. A trainee must distinguish how ADHD executive-function profile and Reasonable accommodation guide practice. Which comparison is accurate?

A. ADHD executive-function profile: Gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions. / Reasonable accommodation: Identifying practical adjustments that permit meaningful participation and checking governing requirements.
B. ADHD executive-function profile: Identifying practical adjustments that permit meaningful participation and checking governing requirements. / Reasonable accommodation: Gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions.
C. ADHD executive-function profile: Gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions. / Reasonable accommodation: Asking which sensory environments support or hinder participation and adjusting the setting where feasible.
D. ADHD executive-function profile: Building accommodations around the person's needs and goals rather than treating difference itself as a defect. / Reasonable accommodation: Identifying practical adjustments that permit meaningful participation and checking governing requirements.

0823. Which applied comparison correctly identifies what belongs to Specific learning disorder versus Intellectual disability?

A. Specific learning disorder: Assessing adaptive skills and developmental history alongside intellectual functioning. / Intellectual disability: Examining skill history, instruction, and targeted assessment when academic difficulty persists.
B. Specific learning disorder: Evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone. / Intellectual disability: Assessing adaptive skills and developmental history alongside intellectual functioning.
C. Specific learning disorder: Examining skill history, instruction, and targeted assessment when academic difficulty persists. / Intellectual disability: Building accommodations around the person's needs and goals rather than treating difference itself as a defect.
D. Specific learning disorder: Examining skill history, instruction, and targeted assessment when academic difficulty persists. / Intellectual disability: Assessing adaptive skills and developmental history alongside intellectual functioning.

0824. A case conference reviews a community practitioner's work with a older adolescent client in the supervision meeting: considering developmental history and functional impact rather than inferring a condition from one isolated behavior. Which principle is central?

A. Intellectual disability
B. Neurodiversity-affirming practice
C. Neurodevelopmental condition
D. Specific learning disorder

0825. Which description belongs with the term ADHD executive-function profile?

A. A modification to environment, instruction, or procedure that supports equitable access under applicable rules.
B. Differences in responding to sensory input that may affect comfort, attention, or participation.
C. A pattern of developmentally inappropriate inattention and/or hyperactivity-impulsivity with impairment across relevant contexts.
D. A condition characterized by limitations in intellectual functioning and adaptive functioning with developmental onset.

0826. When reviewing a child aged 8's plan in the community youth program, the caregiver working with a counselor notes that the next step is asking which sensory environments support or hinder participation and adjusting the setting where feasible. Which concept guides this step?

A. Comorbidity
B. Sensory processing differences
C. Intellectual disability
D. Autism spectrum condition

0827. In the outpatient clinic, a youth worker describes the most appropriate support for a young person as evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone. Which framework is being applied?

A. Reasonable accommodation
B. Intellectual disability
C. Adaptive functioning
D. Specific learning disorder

0828. At the youth advocacy program, a play therapist meets with a child aged 14. The practice priority is: assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty. Which concept best captures that priority?

A. Autism spectrum condition
B. Reasonable accommodation
C. Comorbidity
D. Adaptive functioning

0829. Which pair of actions illustrates Intellectual disability and Adaptive functioning, respectively?

A. Intellectual disability: Assessing adaptive skills and developmental history alongside intellectual functioning. / Adaptive functioning: Building accommodations around the person's needs and goals rather than treating difference itself as a defect.
B. Intellectual disability: Assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty. / Adaptive functioning: Evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone.
C. Intellectual disability: Evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone. / Adaptive functioning: Assessing adaptive skills and developmental history alongside intellectual functioning.
D. Intellectual disability: Assessing adaptive skills and developmental history alongside intellectual functioning. / Adaptive functioning: Evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone.

0830. At the school-based service, a counselor meets with a child aged 7. The practice priority is: evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone. Which concept best captures that priority?

A. ADHD executive-function profile
B. Reasonable accommodation
C. Adaptive functioning
D. Sensory processing differences

0831. Which option preserves the correct meaning of both Specific learning disorder and Sensory processing differences?

A. Specific learning disorder: Co-occurrence of two or more conditions or clinically significant problems in one person. / Sensory processing differences: Differences in responding to sensory input that may affect comfort, attention, or participation.
B. Specific learning disorder: Persistent difficulty learning or using academic skills despite appropriate support, evaluated in relation to developmental and educational context. / Sensory processing differences: Differences in responding to sensory input that may affect comfort, attention, or participation.
C. Specific learning disorder: Persistent difficulty learning or using academic skills despite appropriate support, evaluated in relation to developmental and educational context. / Sensory processing differences: An approach that respects neurological variation, avoids unnecessary normalization, and focuses on access and meaningful support.
D. Specific learning disorder: Differences in responding to sensory input that may affect comfort, attention, or participation. / Sensory processing differences: Persistent difficulty learning or using academic skills despite appropriate support, evaluated in relation to developmental and educational context.

0832. Which statement shows a sound practice-level distinction between Autism spectrum condition and Intellectual disability?

A. Autism spectrum condition: Considering developmental history and functional impact rather than inferring a condition from one isolated behavior. / Intellectual disability: Assessing adaptive skills and developmental history alongside intellectual functioning.
B. Autism spectrum condition: Describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation. / Intellectual disability: Assessing adaptive skills and developmental history alongside intellectual functioning.
C. Autism spectrum condition: Describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation. / Intellectual disability: Evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone.
D. Autism spectrum condition: Assessing adaptive skills and developmental history alongside intellectual functioning. / Intellectual disability: Describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation.

0833. A student confuses Specific learning disorder with Neurodiversity-affirming practice. Which explanation most accurately separates them?

A. Specific learning disorder: An approach that respects neurological variation, avoids unnecessary normalization, and focuses on access and meaningful support. / Neurodiversity-affirming practice: Persistent difficulty learning or using academic skills despite appropriate support, evaluated in relation to developmental and educational context.
B. Specific learning disorder: A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs. / Neurodiversity-affirming practice: An approach that respects neurological variation, avoids unnecessary normalization, and focuses on access and meaningful support.
C. Specific learning disorder: Persistent difficulty learning or using academic skills despite appropriate support, evaluated in relation to developmental and educational context. / Neurodiversity-affirming practice: An approach that respects neurological variation, avoids unnecessary normalization, and focuses on access and meaningful support.
D. Specific learning disorder: Persistent difficulty learning or using academic skills despite appropriate support, evaluated in relation to developmental and educational context. / Neurodiversity-affirming practice: Conceptual, social, and practical skills used to meet everyday demands across settings.

0834. A student confuses Specific learning disorder with Comorbidity. Which explanation most accurately separates them?

A. Specific learning disorder: Persistent difficulty learning or using academic skills despite appropriate support, evaluated in relation to developmental and educational context. / Comorbidity: Co-occurrence of two or more conditions or clinically significant problems in one person.
B. Specific learning disorder: Co-occurrence of two or more conditions or clinically significant problems in one person. / Comorbidity: Persistent difficulty learning or using academic skills despite appropriate support, evaluated in relation to developmental and educational context.
C. Specific learning disorder: A condition characterized by limitations in intellectual functioning and adaptive functioning with developmental onset. / Comorbidity: Co-occurrence of two or more conditions or clinically significant problems in one person.
D. Specific learning disorder: Persistent difficulty learning or using academic skills despite appropriate support, evaluated in relation to developmental and educational context. / Comorbidity: A pattern of developmentally inappropriate inattention and/or hyperactivity-impulsivity with impairment across relevant contexts.

0835. At the classroom support meeting, a therapist reviews whether a plan for a young adolescent client is appropriate. The relevant practice is building accommodations around the person's needs and goals rather than treating difference itself as a defect. Which concept is tested?

A. Neurodiversity-affirming practice
B. Adaptive functioning
C. Reasonable accommodation
D. Comorbidity

0836. A consultant prepares for a session in the school consultation with a child aged 11. The intended approach is asking which sensory environments support or hinder participation and adjusting the setting where feasible. Which concept is most relevant?

A. Specific learning disorder
B. Sensory processing differences
C. Autism spectrum condition
D. Reasonable accommodation

0837. Which option correctly matches each concept to its practice focus: ADHD executive-function profile and Adaptive functioning?

A. ADHD executive-function profile: Gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions. / Adaptive functioning: Evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone.
B. ADHD executive-function profile: Evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone. / Adaptive functioning: Gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions.
C. ADHD executive-function profile: Considering developmental history and functional impact rather than inferring a condition from one isolated behavior. / Adaptive functioning: Evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone.
D. ADHD executive-function profile: Gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions. / Adaptive functioning: Examining skill history, instruction, and targeted assessment when academic difficulty persists.

0838. In the student wellness team, the agreed focus for a research trainee working with a older adolescent client is evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone. Which concept names this focus?

A. Adaptive functioning
B. Reasonable accommodation
C. Intellectual disability
D. Specific learning disorder

0839. Which statement most accurately defines Reasonable accommodation?

A. Conceptual, social, and practical skills used to meet everyday demands across settings.
B. A modification to environment, instruction, or procedure that supports equitable access under applicable rules.
C. Co-occurrence of two or more conditions or clinically significant problems in one person.
D. Differences in responding to sensory input that may affect comfort, attention, or participation.

0840. Which option correctly matches each concept to its practice focus: Comorbidity and Reasonable accommodation?

A. Comorbidity: Assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty. / Reasonable accommodation: Examining skill history, instruction, and targeted assessment when academic difficulty persists.
B. Comorbidity: Building accommodations around the person's needs and goals rather than treating difference itself as a defect. / Reasonable accommodation: Identifying practical adjustments that permit meaningful participation and checking governing requirements.
C. Comorbidity: Identifying practical adjustments that permit meaningful participation and checking governing requirements. / Reasonable accommodation: Assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty.
D. Comorbidity: Assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty. / Reasonable accommodation: Identifying practical adjustments that permit meaningful participation and checking governing requirements.

0841. Choose the definition pair that correctly explains Intellectual disability first and Neurodiversity-affirming practice second.

A. Intellectual disability: A condition characterized by limitations in intellectual functioning and adaptive functioning with developmental onset. / Neurodiversity-affirming practice: An approach that respects neurological variation, avoids unnecessary normalization, and focuses on access and meaningful support.
B. Intellectual disability: An approach that respects neurological variation, avoids unnecessary normalization, and focuses on access and meaningful support. / Neurodiversity-affirming practice: A condition characterized by limitations in intellectual functioning and adaptive functioning with developmental onset.
C. Intellectual disability: Conceptual, social, and practical skills used to meet everyday demands across settings. / Neurodiversity-affirming practice: An approach that respects neurological variation, avoids unnecessary normalization, and focuses on access and meaningful support.
D. Intellectual disability: A condition characterized by limitations in intellectual functioning and adaptive functioning with developmental onset. / Neurodiversity-affirming practice: A pattern of developmentally inappropriate inattention and/or hyperactivity-impulsivity with impairment across relevant contexts.

0842. Choose the response that best puts ADHD executive-function profile into practice.

A. Gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions.
B. Examining skill history, instruction, and targeted assessment when academic difficulty persists.
C. Building accommodations around the person's needs and goals rather than treating difference itself as a defect.
D. Considering developmental history and functional impact rather than inferring a condition from one isolated behavior.

0843. A school counselor is explaining a choice to a older adolescent client and caregiver in the classroom support meeting. The choice centers on gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions. Which idea is illustrated?

A. Sensory processing differences
B. ADHD executive-function profile
C. Adaptive functioning
D. Intellectual disability

0844. Which choice aligns each practice with the correct idea, Autism spectrum condition or Adaptive functioning?

A. Autism spectrum condition: Examining skill history, instruction, and targeted assessment when academic difficulty persists. / Adaptive functioning: Evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone.
B. Autism spectrum condition: Describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation. / Adaptive functioning: Evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone.
C. Autism spectrum condition: Evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone. / Adaptive functioning: Describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation.
D. Autism spectrum condition: Describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation. / Adaptive functioning: Gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions.

0845. Which comparison correctly distinguishes Autism spectrum condition from Intellectual disability?

A. Autism spectrum condition: A group of conditions with developmental onset that affect functioning in areas such as learning, communication, or behavior. / Intellectual disability: A condition characterized by limitations in intellectual functioning and adaptive functioning with developmental onset.
B. Autism spectrum condition: A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs. / Intellectual disability: Conceptual, social, and practical skills used to meet everyday demands across settings.
C. Autism spectrum condition: A condition characterized by limitations in intellectual functioning and adaptive functioning with developmental onset. / Intellectual disability: A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs.
D. Autism spectrum condition: A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs. / Intellectual disability: A condition characterized by limitations in intellectual functioning and adaptive functioning with developmental onset.

0846. A case discussion concerns a child aged 14 and a caregiver working with a counselor in the school-based service. The practitioner is considering assessing adaptive skills and developmental history alongside intellectual functioning. Which principle is involved?

A. Intellectual disability
B. Adaptive functioning
C. Sensory processing differences
D. ADHD executive-function profile

0847. A assessment clinician is supporting a client in early adolescence in the student wellness team. The key practice is asking which sensory environments support or hinder participation and adjusting the setting where feasible. Which course concept is most relevant?

A. Adaptive functioning
B. Sensory processing differences
C. Comorbidity
D. Specific learning disorder

0848. A student confuses Autism spectrum condition with Neurodiversity-affirming practice. Which explanation most accurately separates them?

A. Autism spectrum condition: A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs. / Neurodiversity-affirming practice: A modification to environment, instruction, or procedure that supports equitable access under applicable rules.
B. Autism spectrum condition: A pattern of developmentally inappropriate inattention and/or hyperactivity-impulsivity with impairment across relevant contexts. / Neurodiversity-affirming practice: An approach that respects neurological variation, avoids unnecessary normalization, and focuses on access and meaningful support.
C. Autism spectrum condition: An approach that respects neurological variation, avoids unnecessary normalization, and focuses on access and meaningful support. / Neurodiversity-affirming practice: A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs.
D. Autism spectrum condition: A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs. / Neurodiversity-affirming practice: An approach that respects neurological variation, avoids unnecessary normalization, and focuses on access and meaningful support.

0849. How are Specific learning disorder and Sensory processing differences most accurately differentiated in this curriculum?

A. Specific learning disorder: Persistent difficulty learning or using academic skills despite appropriate support, evaluated in relation to developmental and educational context. / Sensory processing differences: An approach that respects neurological variation, avoids unnecessary normalization, and focuses on access and meaningful support.
B. Specific learning disorder: Differences in responding to sensory input that may affect comfort, attention, or participation. / Sensory processing differences: Persistent difficulty learning or using academic skills despite appropriate support, evaluated in relation to developmental and educational context.
C. Specific learning disorder: Co-occurrence of two or more conditions or clinically significant problems in one person. / Sensory processing differences: Differences in responding to sensory input that may affect comfort, attention, or participation.
D. Specific learning disorder: Persistent difficulty learning or using academic skills despite appropriate support, evaluated in relation to developmental and educational context. / Sensory processing differences: Differences in responding to sensory input that may affect comfort, attention, or participation.

0850. Which option pairs the definitions of Sensory processing differences and Reasonable accommodation correctly, in that order?

A. Sensory processing differences: A modification to environment, instruction, or procedure that supports equitable access under applicable rules. / Reasonable accommodation: Differences in responding to sensory input that may affect comfort, attention, or participation.
B. Sensory processing differences: Differences in responding to sensory input that may affect comfort, attention, or participation. / Reasonable accommodation: A modification to environment, instruction, or procedure that supports equitable access under applicable rules.
C. Sensory processing differences: Differences in responding to sensory input that may affect comfort, attention, or participation. / Reasonable accommodation: A pattern of developmentally inappropriate inattention and/or hyperactivity-impulsivity with impairment across relevant contexts.
D. Sensory processing differences: Conceptual, social, and practical skills used to meet everyday demands across settings. / Reasonable accommodation: A modification to environment, instruction, or procedure that supports equitable access under applicable rules.

0851. In a supervision review, a case coordinator describes work with a student aged 12 in the counseling practicum: examining skill history, instruction, and targeted assessment when academic difficulty persists. What concept is illustrated?

A. Specific learning disorder
B. ADHD executive-function profile
C. Autism spectrum condition
D. Sensory processing differences

0852. How should a practitioner distinguish the applications of ADHD executive-function profile and Adaptive functioning?

A. ADHD executive-function profile: Considering developmental history and functional impact rather than inferring a condition from one isolated behavior. / Adaptive functioning: Evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone.
B. ADHD executive-function profile: Evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone. / Adaptive functioning: Gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions.
C. ADHD executive-function profile: Gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions. / Adaptive functioning: Evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone.
D. ADHD executive-function profile: Gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions. / Adaptive functioning: Examining skill history, instruction, and targeted assessment when academic difficulty persists.

0853. Which comparison would correct a trainee's misunderstanding of Neurodiversity-affirming practice versus Reasonable accommodation?

A. Neurodiversity-affirming practice: An approach that respects neurological variation, avoids unnecessary normalization, and focuses on access and meaningful support. / Reasonable accommodation: A modification to environment, instruction, or procedure that supports equitable access under applicable rules.
B. Neurodiversity-affirming practice: An approach that respects neurological variation, avoids unnecessary normalization, and focuses on access and meaningful support. / Reasonable accommodation: Conceptual, social, and practical skills used to meet everyday demands across settings.
C. Neurodiversity-affirming practice: A modification to environment, instruction, or procedure that supports equitable access under applicable rules. / Reasonable accommodation: An approach that respects neurological variation, avoids unnecessary normalization, and focuses on access and meaningful support.
D. Neurodiversity-affirming practice: Differences in responding to sensory input that may affect comfort, attention, or participation. / Reasonable accommodation: A modification to environment, instruction, or procedure that supports equitable access under applicable rules.

0854. Choose the term that matches this definition: Conceptual, social, and practical skills used to meet everyday demands across settings.

A. Reasonable accommodation
B. Autism spectrum condition
C. Comorbidity
D. Adaptive functioning

0855. A student confuses ADHD executive-function profile with Specific learning disorder. Which explanation most accurately separates them?

A. ADHD executive-function profile: A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs. / Specific learning disorder: Persistent difficulty learning or using academic skills despite appropriate support, evaluated in relation to developmental and educational context.
B. ADHD executive-function profile: A pattern of developmentally inappropriate inattention and/or hyperactivity-impulsivity with impairment across relevant contexts. / Specific learning disorder: A group of conditions with developmental onset that affect functioning in areas such as learning, communication, or behavior.
C. ADHD executive-function profile: A pattern of developmentally inappropriate inattention and/or hyperactivity-impulsivity with impairment across relevant contexts. / Specific learning disorder: Persistent difficulty learning or using academic skills despite appropriate support, evaluated in relation to developmental and educational context.
D. ADHD executive-function profile: Persistent difficulty learning or using academic skills despite appropriate support, evaluated in relation to developmental and educational context. / Specific learning disorder: A pattern of developmentally inappropriate inattention and/or hyperactivity-impulsivity with impairment across relevant contexts.

0856. A case conference asks for a distinction between Adaptive functioning and Neurodiversity-affirming practice. Which answer is sound?

A. Adaptive functioning: Conceptual, social, and practical skills used to meet everyday demands across settings. / Neurodiversity-affirming practice: Differences in responding to sensory input that may affect comfort, attention, or participation.
B. Adaptive functioning: Conceptual, social, and practical skills used to meet everyday demands across settings. / Neurodiversity-affirming practice: An approach that respects neurological variation, avoids unnecessary normalization, and focuses on access and meaningful support.
C. Adaptive functioning: A modification to environment, instruction, or procedure that supports equitable access under applicable rules. / Neurodiversity-affirming practice: An approach that respects neurological variation, avoids unnecessary normalization, and focuses on access and meaningful support.
D. Adaptive functioning: An approach that respects neurological variation, avoids unnecessary normalization, and focuses on access and meaningful support. / Neurodiversity-affirming practice: Conceptual, social, and practical skills used to meet everyday demands across settings.

0857. In a supervision quiz, how should ADHD executive-function profile be distinguished from Specific learning disorder?

A. ADHD executive-function profile: A pattern of developmentally inappropriate inattention and/or hyperactivity-impulsivity with impairment across relevant contexts. / Specific learning disorder: A group of conditions with developmental onset that affect functioning in areas such as learning, communication, or behavior.
B. ADHD executive-function profile: A pattern of developmentally inappropriate inattention and/or hyperactivity-impulsivity with impairment across relevant contexts. / Specific learning disorder: Persistent difficulty learning or using academic skills despite appropriate support, evaluated in relation to developmental and educational context.
C. ADHD executive-function profile: Persistent difficulty learning or using academic skills despite appropriate support, evaluated in relation to developmental and educational context. / Specific learning disorder: A pattern of developmentally inappropriate inattention and/or hyperactivity-impulsivity with impairment across relevant contexts.
D. ADHD executive-function profile: A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs. / Specific learning disorder: Persistent difficulty learning or using academic skills despite appropriate support, evaluated in relation to developmental and educational context.

0858. In a case note about a preadolescent child, a assessment clinician working in the community mental-health service records this priority: assessing adaptive skills and developmental history alongside intellectual functioning. What principle is reflected?

A. Comorbidity
B. Specific learning disorder
C. Reasonable accommodation
D. Intellectual disability

0859. A service team discusses a student aged 9 in the outpatient clinic. Their proposed next step is asking which sensory environments support or hinder participation and adjusting the setting where feasible. Which course concept supports it?

A. Sensory processing differences
B. Neurodevelopmental condition
C. Comorbidity
D. Adaptive functioning

0860. In the family resource center, a parent educator is considering this approach for a school-age child: gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions. Which framework does it represent?

A. Neurodevelopmental condition
B. Autism spectrum condition
C. ADHD executive-function profile
D. Specific learning disorder

0861. How are Adaptive functioning and Reasonable accommodation most accurately differentiated in this curriculum?

A. Adaptive functioning: Conceptual, social, and practical skills used to meet everyday demands across settings. / Reasonable accommodation: A modification to environment, instruction, or procedure that supports equitable access under applicable rules.
B. Adaptive functioning: A modification to environment, instruction, or procedure that supports equitable access under applicable rules. / Reasonable accommodation: Conceptual, social, and practical skills used to meet everyday demands across settings.
C. Adaptive functioning: Conceptual, social, and practical skills used to meet everyday demands across settings. / Reasonable accommodation: A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs.
D. Adaptive functioning: Co-occurrence of two or more conditions or clinically significant problems in one person. / Reasonable accommodation: A modification to environment, instruction, or procedure that supports equitable access under applicable rules.

0862. A case discussion concerns a young adolescent client and a family therapist in the behavior-support review. The practitioner is considering evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone. Which principle is involved?

A. Adaptive functioning
B. ADHD executive-function profile
C. Sensory processing differences
D. Specific learning disorder

0863. During service review in the family session, a service navigator describes examining skill history, instruction, and targeted assessment when academic difficulty persists. for a middle-school student. Which course idea is most applicable?

A. Specific learning disorder
B. Neurodiversity-affirming practice
C. Adaptive functioning
D. Sensory processing differences

0864. A student aged 15 and a member of a clinical team are reviewing goals in the school counseling office. The agreed action is assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty. Which principle best accounts for it?

A. Intellectual disability
B. Specific learning disorder
C. Reasonable accommodation
D. Comorbidity

0865. Which option pairs the definitions of Sensory processing differences and Neurodiversity-affirming practice correctly, in that order?

A. Sensory processing differences: Differences in responding to sensory input that may affect comfort, attention, or participation. / Neurodiversity-affirming practice: An approach that respects neurological variation, avoids unnecessary normalization, and focuses on access and meaningful support.
B. Sensory processing differences: Differences in responding to sensory input that may affect comfort, attention, or participation. / Neurodiversity-affirming practice: A pattern of developmentally inappropriate inattention and/or hyperactivity-impulsivity with impairment across relevant contexts.
C. Sensory processing differences: An approach that respects neurological variation, avoids unnecessary normalization, and focuses on access and meaningful support. / Neurodiversity-affirming practice: Differences in responding to sensory input that may affect comfort, attention, or participation.
D. Sensory processing differences: Persistent difficulty learning or using academic skills despite appropriate support, evaluated in relation to developmental and educational context. / Neurodiversity-affirming practice: An approach that respects neurological variation, avoids unnecessary normalization, and focuses on access and meaningful support.

0866. Which professional action most closely applies Reasonable accommodation?

A. Identifying practical adjustments that permit meaningful participation and checking governing requirements.
B. Considering developmental history and functional impact rather than inferring a condition from one isolated behavior.
C. Assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty.
D. Gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions.

0867. A trainee must distinguish how Neurodevelopmental condition and Adaptive functioning guide practice. Which comparison is accurate?

A. Neurodevelopmental condition: Considering developmental history and functional impact rather than inferring a condition from one isolated behavior. / Adaptive functioning: Evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone.
B. Neurodevelopmental condition: Considering developmental history and functional impact rather than inferring a condition from one isolated behavior. / Adaptive functioning: Assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty.
C. Neurodevelopmental condition: Evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone. / Adaptive functioning: Considering developmental history and functional impact rather than inferring a condition from one isolated behavior.
D. Neurodevelopmental condition: Describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation. / Adaptive functioning: Evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone.

0868. Which choice aligns each practice with the correct idea, Sensory processing differences or Neurodiversity-affirming practice?

A. Sensory processing differences: Asking which sensory environments support or hinder participation and adjusting the setting where feasible. / Neurodiversity-affirming practice: Gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions.
B. Sensory processing differences: Examining skill history, instruction, and targeted assessment when academic difficulty persists. / Neurodiversity-affirming practice: Building accommodations around the person's needs and goals rather than treating difference itself as a defect.
C. Sensory processing differences: Asking which sensory environments support or hinder participation and adjusting the setting where feasible. / Neurodiversity-affirming practice: Building accommodations around the person's needs and goals rather than treating difference itself as a defect.
D. Sensory processing differences: Building accommodations around the person's needs and goals rather than treating difference itself as a defect. / Neurodiversity-affirming practice: Asking which sensory environments support or hinder participation and adjusting the setting where feasible.

0869. Which applied comparison correctly identifies what belongs to Neurodevelopmental condition versus Adaptive functioning?

A. Neurodevelopmental condition: Considering developmental history and functional impact rather than inferring a condition from one isolated behavior. / Adaptive functioning: Assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty.
B. Neurodevelopmental condition: Considering developmental history and functional impact rather than inferring a condition from one isolated behavior. / Adaptive functioning: Evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone.
C. Neurodevelopmental condition: Describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation. / Adaptive functioning: Evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone.
D. Neurodevelopmental condition: Evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone. / Adaptive functioning: Considering developmental history and functional impact rather than inferring a condition from one isolated behavior.

0870. A consultant prepares for a session in the supervision meeting with a client in early adolescence. The intended approach is gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions. Which concept is most relevant?

A. Autism spectrum condition
B. Reasonable accommodation
C. ADHD executive-function profile
D. Sensory processing differences

0871. What is the central meaning of Sensory processing differences?

A. Differences in responding to sensory input that may affect comfort, attention, or participation.
B. A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs.
C. A condition characterized by limitations in intellectual functioning and adaptive functioning with developmental onset.
D. Co-occurrence of two or more conditions or clinically significant problems in one person.

0872. How are Adaptive functioning and Sensory processing differences most accurately differentiated in this curriculum?

A. Adaptive functioning: An approach that respects neurological variation, avoids unnecessary normalization, and focuses on access and meaningful support. / Sensory processing differences: Differences in responding to sensory input that may affect comfort, attention, or participation.
B. Adaptive functioning: Conceptual, social, and practical skills used to meet everyday demands across settings. / Sensory processing differences: Differences in responding to sensory input that may affect comfort, attention, or participation.
C. Adaptive functioning: Conceptual, social, and practical skills used to meet everyday demands across settings. / Sensory processing differences: A modification to environment, instruction, or procedure that supports equitable access under applicable rules.
D. Adaptive functioning: Differences in responding to sensory input that may affect comfort, attention, or participation. / Sensory processing differences: Conceptual, social, and practical skills used to meet everyday demands across settings.

0873. Which paired example correctly applies Comorbidity first and Reasonable accommodation second?

A. Comorbidity: Assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty. / Reasonable accommodation: Identifying practical adjustments that permit meaningful participation and checking governing requirements.
B. Comorbidity: Assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty. / Reasonable accommodation: Examining skill history, instruction, and targeted assessment when academic difficulty persists.
C. Comorbidity: Building accommodations around the person's needs and goals rather than treating difference itself as a defect. / Reasonable accommodation: Identifying practical adjustments that permit meaningful participation and checking governing requirements.
D. Comorbidity: Identifying practical adjustments that permit meaningful participation and checking governing requirements. / Reasonable accommodation: Assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty.

0874. Select the best explanation of Neurodiversity-affirming practice.

A. A pattern of developmentally inappropriate inattention and/or hyperactivity-impulsivity with impairment across relevant contexts.
B. An approach that respects neurological variation, avoids unnecessary normalization, and focuses on access and meaningful support.
C. Conceptual, social, and practical skills used to meet everyday demands across settings.
D. Co-occurrence of two or more conditions or clinically significant problems in one person.

0875. A youth worker is asked to justify a plan for a child aged 7 in the youth advocacy program. It calls for identifying practical adjustments that permit meaningful participation and checking governing requirements. Which concept provides the rationale?

A. Neurodiversity-affirming practice
B. Reasonable accommodation
C. ADHD executive-function profile
D. Autism spectrum condition

0876. Which option is the clearest practical expression of Neurodevelopmental condition?

A. Examining skill history, instruction, and targeted assessment when academic difficulty persists.
B. Building accommodations around the person's needs and goals rather than treating difference itself as a defect.
C. Considering developmental history and functional impact rather than inferring a condition from one isolated behavior.
D. Assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty.

0877. Which choice aligns each practice with the correct idea, Intellectual disability or Neurodiversity-affirming practice?

A. Intellectual disability: Building accommodations around the person's needs and goals rather than treating difference itself as a defect. / Neurodiversity-affirming practice: Assessing adaptive skills and developmental history alongside intellectual functioning.
B. Intellectual disability: Assessing adaptive skills and developmental history alongside intellectual functioning. / Neurodiversity-affirming practice: Gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions.
C. Intellectual disability: Assessing adaptive skills and developmental history alongside intellectual functioning. / Neurodiversity-affirming practice: Building accommodations around the person's needs and goals rather than treating difference itself as a defect.
D. Intellectual disability: Evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone. / Neurodiversity-affirming practice: Building accommodations around the person's needs and goals rather than treating difference itself as a defect.

0878. Choose the definition pair that correctly explains ADHD executive-function profile first and Comorbidity second.

A. ADHD executive-function profile: Conceptual, social, and practical skills used to meet everyday demands across settings. / Comorbidity: Co-occurrence of two or more conditions or clinically significant problems in one person.
B. ADHD executive-function profile: Co-occurrence of two or more conditions or clinically significant problems in one person. / Comorbidity: A pattern of developmentally inappropriate inattention and/or hyperactivity-impulsivity with impairment across relevant contexts.
C. ADHD executive-function profile: A pattern of developmentally inappropriate inattention and/or hyperactivity-impulsivity with impairment across relevant contexts. / Comorbidity: Persistent difficulty learning or using academic skills despite appropriate support, evaluated in relation to developmental and educational context.
D. ADHD executive-function profile: A pattern of developmentally inappropriate inattention and/or hyperactivity-impulsivity with impairment across relevant contexts. / Comorbidity: Co-occurrence of two or more conditions or clinically significant problems in one person.

0879. Which paired example correctly applies Neurodevelopmental condition first and Adaptive functioning second?

A. Neurodevelopmental condition: Describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation. / Adaptive functioning: Evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone.
B. Neurodevelopmental condition: Considering developmental history and functional impact rather than inferring a condition from one isolated behavior. / Adaptive functioning: Evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone.
C. Neurodevelopmental condition: Evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone. / Adaptive functioning: Considering developmental history and functional impact rather than inferring a condition from one isolated behavior.
D. Neurodevelopmental condition: Considering developmental history and functional impact rather than inferring a condition from one isolated behavior. / Adaptive functioning: Assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty.

0880. Choose the practice comparison that best separates Neurodevelopmental condition from Sensory processing differences.

A. Neurodevelopmental condition: Considering developmental history and functional impact rather than inferring a condition from one isolated behavior. / Sensory processing differences: Evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone.
B. Neurodevelopmental condition: Assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty. / Sensory processing differences: Asking which sensory environments support or hinder participation and adjusting the setting where feasible.
C. Neurodevelopmental condition: Asking which sensory environments support or hinder participation and adjusting the setting where feasible. / Sensory processing differences: Considering developmental history and functional impact rather than inferring a condition from one isolated behavior.
D. Neurodevelopmental condition: Considering developmental history and functional impact rather than inferring a condition from one isolated behavior. / Sensory processing differences: Asking which sensory environments support or hinder participation and adjusting the setting where feasible.

0881. A client in late adolescence's service team meets in the multidisciplinary case conference. The caregiver working with a counselor recommends a change involving assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty. Which idea best explains it?

A. Sensory processing differences
B. ADHD executive-function profile
C. Comorbidity
D. Neurodiversity-affirming practice

0882. Which comparison would correct a trainee's misunderstanding of ADHD executive-function profile versus Neurodiversity-affirming practice?

A. ADHD executive-function profile: A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs. / Neurodiversity-affirming practice: An approach that respects neurological variation, avoids unnecessary normalization, and focuses on access and meaningful support.
B. ADHD executive-function profile: A pattern of developmentally inappropriate inattention and/or hyperactivity-impulsivity with impairment across relevant contexts. / Neurodiversity-affirming practice: An approach that respects neurological variation, avoids unnecessary normalization, and focuses on access and meaningful support.
C. ADHD executive-function profile: An approach that respects neurological variation, avoids unnecessary normalization, and focuses on access and meaningful support. / Neurodiversity-affirming practice: A pattern of developmentally inappropriate inattention and/or hyperactivity-impulsivity with impairment across relevant contexts.
D. ADHD executive-function profile: A pattern of developmentally inappropriate inattention and/or hyperactivity-impulsivity with impairment across relevant contexts. / Neurodiversity-affirming practice: A condition characterized by limitations in intellectual functioning and adaptive functioning with developmental onset.

0883. Which comparison would correct a trainee's misunderstanding of Neurodevelopmental condition versus Neurodiversity-affirming practice?

A. Neurodevelopmental condition: A group of conditions with developmental onset that affect functioning in areas such as learning, communication, or behavior. / Neurodiversity-affirming practice: An approach that respects neurological variation, avoids unnecessary normalization, and focuses on access and meaningful support.
B. Neurodevelopmental condition: A pattern of developmentally inappropriate inattention and/or hyperactivity-impulsivity with impairment across relevant contexts. / Neurodiversity-affirming practice: An approach that respects neurological variation, avoids unnecessary normalization, and focuses on access and meaningful support.
C. Neurodevelopmental condition: An approach that respects neurological variation, avoids unnecessary normalization, and focuses on access and meaningful support. / Neurodiversity-affirming practice: A group of conditions with developmental onset that affect functioning in areas such as learning, communication, or behavior.
D. Neurodevelopmental condition: A group of conditions with developmental onset that affect functioning in areas such as learning, communication, or behavior. / Neurodiversity-affirming practice: A modification to environment, instruction, or procedure that supports equitable access under applicable rules.

0884. Which paired example correctly applies Neurodevelopmental condition first and Sensory processing differences second?

A. Neurodevelopmental condition: Considering developmental history and functional impact rather than inferring a condition from one isolated behavior. / Sensory processing differences: Evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone.
B. Neurodevelopmental condition: Asking which sensory environments support or hinder participation and adjusting the setting where feasible. / Sensory processing differences: Considering developmental history and functional impact rather than inferring a condition from one isolated behavior.
C. Neurodevelopmental condition: Assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty. / Sensory processing differences: Asking which sensory environments support or hinder participation and adjusting the setting where feasible.
D. Neurodevelopmental condition: Considering developmental history and functional impact rather than inferring a condition from one isolated behavior. / Sensory processing differences: Asking which sensory environments support or hinder participation and adjusting the setting where feasible.

0885. How are Specific learning disorder and Reasonable accommodation most accurately differentiated in this curriculum?

A. Specific learning disorder: A modification to environment, instruction, or procedure that supports equitable access under applicable rules. / Reasonable accommodation: Persistent difficulty learning or using academic skills despite appropriate support, evaluated in relation to developmental and educational context.
B. Specific learning disorder: Differences in responding to sensory input that may affect comfort, attention, or participation. / Reasonable accommodation: A modification to environment, instruction, or procedure that supports equitable access under applicable rules.
C. Specific learning disorder: Persistent difficulty learning or using academic skills despite appropriate support, evaluated in relation to developmental and educational context. / Reasonable accommodation: A modification to environment, instruction, or procedure that supports equitable access under applicable rules.
D. Specific learning disorder: Persistent difficulty learning or using academic skills despite appropriate support, evaluated in relation to developmental and educational context. / Reasonable accommodation: A pattern of developmentally inappropriate inattention and/or hyperactivity-impulsivity with impairment across relevant contexts.

0886. A consultant is preparing a follow-up plan for a child aged 11 in the school consultation. The plan calls for asking which sensory environments support or hinder participation and adjusting the setting where feasible. Which concept names this approach?

A. Neurodiversity-affirming practice
B. ADHD executive-function profile
C. Intellectual disability
D. Sensory processing differences

0887. Which option is the clearest practical expression of Adaptive functioning?

A. Identifying practical adjustments that permit meaningful participation and checking governing requirements.
B. Considering developmental history and functional impact rather than inferring a condition from one isolated behavior.
C. Assessing adaptive skills and developmental history alongside intellectual functioning.
D. Evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone.

0888. Identify the most precise label for this idea: An approach that respects neurological variation, avoids unnecessary normalization, and focuses on access and meaningful support.

A. Comorbidity
B. ADHD executive-function profile
C. Reasonable accommodation
D. Neurodiversity-affirming practice

0889. A student confuses Autism spectrum condition with Sensory processing differences. Which explanation most accurately separates them?

A. Autism spectrum condition: Differences in responding to sensory input that may affect comfort, attention, or participation. / Sensory processing differences: A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs.
B. Autism spectrum condition: A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs. / Sensory processing differences: A group of conditions with developmental onset that affect functioning in areas such as learning, communication, or behavior.
C. Autism spectrum condition: A modification to environment, instruction, or procedure that supports equitable access under applicable rules. / Sensory processing differences: Differences in responding to sensory input that may affect comfort, attention, or participation.
D. Autism spectrum condition: A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs. / Sensory processing differences: Differences in responding to sensory input that may affect comfort, attention, or participation.

0890. Which option preserves the correct meaning of both Comorbidity and Reasonable accommodation?

A. Comorbidity: A modification to environment, instruction, or procedure that supports equitable access under applicable rules. / Reasonable accommodation: Co-occurrence of two or more conditions or clinically significant problems in one person.
B. Comorbidity: Co-occurrence of two or more conditions or clinically significant problems in one person. / Reasonable accommodation: Persistent difficulty learning or using academic skills despite appropriate support, evaluated in relation to developmental and educational context.
C. Comorbidity: An approach that respects neurological variation, avoids unnecessary normalization, and focuses on access and meaningful support. / Reasonable accommodation: A modification to environment, instruction, or procedure that supports equitable access under applicable rules.
D. Comorbidity: Co-occurrence of two or more conditions or clinically significant problems in one person. / Reasonable accommodation: A modification to environment, instruction, or procedure that supports equitable access under applicable rules.

0891. A school support specialist reviews a plan for a client in early adolescence in the youth group. The plan emphasizes identifying practical adjustments that permit meaningful participation and checking governing requirements. Which course idea does this reflect?

A. Reasonable accommodation
B. ADHD executive-function profile
C. Intellectual disability
D. Autism spectrum condition

0892. Select the best explanation of Neurodevelopmental condition.

A. Conceptual, social, and practical skills used to meet everyday demands across settings.
B. A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs.
C. An approach that respects neurological variation, avoids unnecessary normalization, and focuses on access and meaningful support.
D. A group of conditions with developmental onset that affect functioning in areas such as learning, communication, or behavior.

0893. Which option pairs the definitions of Autism spectrum condition and Sensory processing differences correctly, in that order?

A. Autism spectrum condition: A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs. / Sensory processing differences: A group of conditions with developmental onset that affect functioning in areas such as learning, communication, or behavior.
B. Autism spectrum condition: A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs. / Sensory processing differences: Differences in responding to sensory input that may affect comfort, attention, or participation.
C. Autism spectrum condition: A modification to environment, instruction, or procedure that supports equitable access under applicable rules. / Sensory processing differences: Differences in responding to sensory input that may affect comfort, attention, or participation.
D. Autism spectrum condition: Differences in responding to sensory input that may affect comfort, attention, or participation. / Sensory processing differences: A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs.

0894. A student confuses Sensory processing differences with Neurodiversity-affirming practice. Which explanation most accurately separates them?

A. Sensory processing differences: Differences in responding to sensory input that may affect comfort, attention, or participation. / Neurodiversity-affirming practice: A pattern of developmentally inappropriate inattention and/or hyperactivity-impulsivity with impairment across relevant contexts.
B. Sensory processing differences: An approach that respects neurological variation, avoids unnecessary normalization, and focuses on access and meaningful support. / Neurodiversity-affirming practice: Differences in responding to sensory input that may affect comfort, attention, or participation.
C. Sensory processing differences: Differences in responding to sensory input that may affect comfort, attention, or participation. / Neurodiversity-affirming practice: An approach that respects neurological variation, avoids unnecessary normalization, and focuses on access and meaningful support.
D. Sensory processing differences: Persistent difficulty learning or using academic skills despite appropriate support, evaluated in relation to developmental and educational context. / Neurodiversity-affirming practice: An approach that respects neurological variation, avoids unnecessary normalization, and focuses on access and meaningful support.

0895. Which option correctly matches each concept to its practice focus: ADHD executive-function profile and Neurodiversity-affirming practice?

A. ADHD executive-function profile: Gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions. / Neurodiversity-affirming practice: Building accommodations around the person's needs and goals rather than treating difference itself as a defect.
B. ADHD executive-function profile: Building accommodations around the person's needs and goals rather than treating difference itself as a defect. / Neurodiversity-affirming practice: Gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions.
C. ADHD executive-function profile: Describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation. / Neurodiversity-affirming practice: Building accommodations around the person's needs and goals rather than treating difference itself as a defect.
D. ADHD executive-function profile: Gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions. / Neurodiversity-affirming practice: Assessing adaptive skills and developmental history alongside intellectual functioning.

0896. A supervisor asks for an applied contrast between Specific learning disorder and Neurodiversity-affirming practice. Which option fits?

A. Specific learning disorder: Building accommodations around the person's needs and goals rather than treating difference itself as a defect. / Neurodiversity-affirming practice: Examining skill history, instruction, and targeted assessment when academic difficulty persists.
B. Specific learning disorder: Examining skill history, instruction, and targeted assessment when academic difficulty persists. / Neurodiversity-affirming practice: Building accommodations around the person's needs and goals rather than treating difference itself as a defect.
C. Specific learning disorder: Describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation. / Neurodiversity-affirming practice: Building accommodations around the person's needs and goals rather than treating difference itself as a defect.
D. Specific learning disorder: Examining skill history, instruction, and targeted assessment when academic difficulty persists. / Neurodiversity-affirming practice: Evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone.

0897. In the parent meeting, a team asks how a youth worker can support a child aged 14. One proposed action is describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation. Which idea does it represent?

A. Neurodiversity-affirming practice
B. Specific learning disorder
C. Autism spectrum condition
D. Sensory processing differences

0898. A case conference reviews a service navigator's work with a child aged 14 in the youth group: asking which sensory environments support or hinder participation and adjusting the setting where feasible. Which principle is central?

A. Comorbidity
B. Neurodevelopmental condition
C. Autism spectrum condition
D. Sensory processing differences

0899. How should a practitioner distinguish the applications of Autism spectrum condition and Intellectual disability?

A. Autism spectrum condition: Describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation. / Intellectual disability: Evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone.
B. Autism spectrum condition: Assessing adaptive skills and developmental history alongside intellectual functioning. / Intellectual disability: Describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation.
C. Autism spectrum condition: Considering developmental history and functional impact rather than inferring a condition from one isolated behavior. / Intellectual disability: Assessing adaptive skills and developmental history alongside intellectual functioning.
D. Autism spectrum condition: Describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation. / Intellectual disability: Assessing adaptive skills and developmental history alongside intellectual functioning.

0900. Which statement most accurately defines Neurodevelopmental condition?

A. A group of conditions with developmental onset that affect functioning in areas such as learning, communication, or behavior.
B. A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs.
C. A condition characterized by limitations in intellectual functioning and adaptive functioning with developmental onset.
D. Differences in responding to sensory input that may affect comfort, attention, or participation.

0901. During service review in the community service agency, a therapist describes identifying practical adjustments that permit meaningful participation and checking governing requirements. for a student aged 15. Which course idea is most applicable?

A. Intellectual disability
B. Reasonable accommodation
C. Sensory processing differences
D. Comorbidity

0902. Which statement accurately contrasts the course concepts ADHD executive-function profile and Sensory processing differences?

A. ADHD executive-function profile: A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs. / Sensory processing differences: Differences in responding to sensory input that may affect comfort, attention, or participation.
B. ADHD executive-function profile: A pattern of developmentally inappropriate inattention and/or hyperactivity-impulsivity with impairment across relevant contexts. / Sensory processing differences: Differences in responding to sensory input that may affect comfort, attention, or participation.
C. ADHD executive-function profile: Differences in responding to sensory input that may affect comfort, attention, or participation. / Sensory processing differences: A pattern of developmentally inappropriate inattention and/or hyperactivity-impulsivity with impairment across relevant contexts.
D. ADHD executive-function profile: A pattern of developmentally inappropriate inattention and/or hyperactivity-impulsivity with impairment across relevant contexts. / Sensory processing differences: Persistent difficulty learning or using academic skills despite appropriate support, evaluated in relation to developmental and educational context.

0903. Which pair of actions illustrates Autism spectrum condition and Intellectual disability, respectively?

A. Autism spectrum condition: Considering developmental history and functional impact rather than inferring a condition from one isolated behavior. / Intellectual disability: Assessing adaptive skills and developmental history alongside intellectual functioning.
B. Autism spectrum condition: Assessing adaptive skills and developmental history alongside intellectual functioning. / Intellectual disability: Describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation.
C. Autism spectrum condition: Describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation. / Intellectual disability: Assessing adaptive skills and developmental history alongside intellectual functioning.
D. Autism spectrum condition: Describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation. / Intellectual disability: Evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone.

0904. Which pair of actions illustrates Sensory processing differences and Neurodiversity-affirming practice, respectively?

A. Sensory processing differences: Asking which sensory environments support or hinder participation and adjusting the setting where feasible. / Neurodiversity-affirming practice: Building accommodations around the person's needs and goals rather than treating difference itself as a defect.
B. Sensory processing differences: Asking which sensory environments support or hinder participation and adjusting the setting where feasible. / Neurodiversity-affirming practice: Gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions.
C. Sensory processing differences: Building accommodations around the person's needs and goals rather than treating difference itself as a defect. / Neurodiversity-affirming practice: Asking which sensory environments support or hinder participation and adjusting the setting where feasible.
D. Sensory processing differences: Examining skill history, instruction, and targeted assessment when academic difficulty persists. / Neurodiversity-affirming practice: Building accommodations around the person's needs and goals rather than treating difference itself as a defect.

0905. A service team discusses a client in late adolescence in the youth advocacy program. Their proposed next step is evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone. Which course concept supports it?

A. Sensory processing differences
B. Comorbidity
C. Autism spectrum condition
D. Adaptive functioning

0906. A school support specialist is asked to evaluate a proposed service for a client in early adolescence in the youth group. The defining feature is identifying practical adjustments that permit meaningful participation and checking governing requirements. Which concept fits?

A. Adaptive functioning
B. Sensory processing differences
C. Reasonable accommodation
D. Neurodevelopmental condition

0907. A service team discusses a child aged 6 in the community service agency. Their proposed next step is assessing adaptive skills and developmental history alongside intellectual functioning. Which course concept supports it?

A. Autism spectrum condition
B. Specific learning disorder
C. Intellectual disability
D. Neurodevelopmental condition

0908. A client in early adolescence and a assessment clinician are reviewing goals in the student wellness team. The agreed action is asking which sensory environments support or hinder participation and adjusting the setting where feasible. Which principle best accounts for it?

A. Intellectual disability
B. Neurodevelopmental condition
C. Sensory processing differences
D. Specific learning disorder

0909. An interdisciplinary team reviews a adolescent student's case at the multidisciplinary case conference. The counselor recommends identifying practical adjustments that permit meaningful participation and checking governing requirements. Which course concept best fits?

A. Reasonable accommodation
B. Neurodiversity-affirming practice
C. ADHD executive-function profile
D. Specific learning disorder

0910. A team must select a support approach for a young person aged 10 at the youth advocacy program. The parent educator recommends building accommodations around the person's needs and goals rather than treating difference itself as a defect. Which idea is most relevant?

A. Neurodiversity-affirming practice
B. Intellectual disability
C. Adaptive functioning
D. Autism spectrum condition

0911. Choose the definition pair that correctly explains Neurodevelopmental condition first and Specific learning disorder second.

A. Neurodevelopmental condition: Persistent difficulty learning or using academic skills despite appropriate support, evaluated in relation to developmental and educational context. / Specific learning disorder: A group of conditions with developmental onset that affect functioning in areas such as learning, communication, or behavior.
B. Neurodevelopmental condition: A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs. / Specific learning disorder: Persistent difficulty learning or using academic skills despite appropriate support, evaluated in relation to developmental and educational context.
C. Neurodevelopmental condition: A group of conditions with developmental onset that affect functioning in areas such as learning, communication, or behavior. / Specific learning disorder: Persistent difficulty learning or using academic skills despite appropriate support, evaluated in relation to developmental and educational context.
D. Neurodevelopmental condition: A group of conditions with developmental onset that affect functioning in areas such as learning, communication, or behavior. / Specific learning disorder: Differences in responding to sensory input that may affect comfort, attention, or participation.

0912. A case conference asks for a distinction between ADHD executive-function profile and Sensory processing differences. Which answer is sound?

A. ADHD executive-function profile: A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs. / Sensory processing differences: Differences in responding to sensory input that may affect comfort, attention, or participation.
B. ADHD executive-function profile: A pattern of developmentally inappropriate inattention and/or hyperactivity-impulsivity with impairment across relevant contexts. / Sensory processing differences: Differences in responding to sensory input that may affect comfort, attention, or participation.
C. ADHD executive-function profile: Differences in responding to sensory input that may affect comfort, attention, or participation. / Sensory processing differences: A pattern of developmentally inappropriate inattention and/or hyperactivity-impulsivity with impairment across relevant contexts.
D. ADHD executive-function profile: A pattern of developmentally inappropriate inattention and/or hyperactivity-impulsivity with impairment across relevant contexts. / Sensory processing differences: Persistent difficulty learning or using academic skills despite appropriate support, evaluated in relation to developmental and educational context.

0913. Which option pairs the definitions of Neurodevelopmental condition and Specific learning disorder correctly, in that order?

A. Neurodevelopmental condition: A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs. / Specific learning disorder: Persistent difficulty learning or using academic skills despite appropriate support, evaluated in relation to developmental and educational context.
B. Neurodevelopmental condition: Persistent difficulty learning or using academic skills despite appropriate support, evaluated in relation to developmental and educational context. / Specific learning disorder: A group of conditions with developmental onset that affect functioning in areas such as learning, communication, or behavior.
C. Neurodevelopmental condition: A group of conditions with developmental onset that affect functioning in areas such as learning, communication, or behavior. / Specific learning disorder: Persistent difficulty learning or using academic skills despite appropriate support, evaluated in relation to developmental and educational context.
D. Neurodevelopmental condition: A group of conditions with developmental onset that affect functioning in areas such as learning, communication, or behavior. / Specific learning disorder: Differences in responding to sensory input that may affect comfort, attention, or participation.

0914. Which option correctly matches each concept to its practice focus: Adaptive functioning and Sensory processing differences?

A. Adaptive functioning: Evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone. / Sensory processing differences: Identifying practical adjustments that permit meaningful participation and checking governing requirements.
B. Adaptive functioning: Asking which sensory environments support or hinder participation and adjusting the setting where feasible. / Sensory processing differences: Evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone.
C. Adaptive functioning: Evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone. / Sensory processing differences: Asking which sensory environments support or hinder participation and adjusting the setting where feasible.
D. Adaptive functioning: Building accommodations around the person's needs and goals rather than treating difference itself as a defect. / Sensory processing differences: Asking which sensory environments support or hinder participation and adjusting the setting where feasible.

0915. Choose the practice comparison that best separates Specific learning disorder from Sensory processing differences.

A. Specific learning disorder: Asking which sensory environments support or hinder participation and adjusting the setting where feasible. / Sensory processing differences: Examining skill history, instruction, and targeted assessment when academic difficulty persists.
B. Specific learning disorder: Assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty. / Sensory processing differences: Asking which sensory environments support or hinder participation and adjusting the setting where feasible.
C. Specific learning disorder: Examining skill history, instruction, and targeted assessment when academic difficulty persists. / Sensory processing differences: Asking which sensory environments support or hinder participation and adjusting the setting where feasible.
D. Specific learning disorder: Examining skill history, instruction, and targeted assessment when academic difficulty persists. / Sensory processing differences: Building accommodations around the person's needs and goals rather than treating difference itself as a defect.

0916. Which option correctly matches each concept to its practice focus: Intellectual disability and Comorbidity?

A. Intellectual disability: Assessing adaptive skills and developmental history alongside intellectual functioning. / Comorbidity: Assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty.
B. Intellectual disability: Describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation. / Comorbidity: Assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty.
C. Intellectual disability: Assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty. / Comorbidity: Assessing adaptive skills and developmental history alongside intellectual functioning.
D. Intellectual disability: Assessing adaptive skills and developmental history alongside intellectual functioning. / Comorbidity: Evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone.

0917. Choose the practice comparison that best separates Autism spectrum condition from Specific learning disorder.

A. Autism spectrum condition: Considering developmental history and functional impact rather than inferring a condition from one isolated behavior. / Specific learning disorder: Examining skill history, instruction, and targeted assessment when academic difficulty persists.
B. Autism spectrum condition: Examining skill history, instruction, and targeted assessment when academic difficulty persists. / Specific learning disorder: Describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation.
C. Autism spectrum condition: Describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation. / Specific learning disorder: Asking which sensory environments support or hinder participation and adjusting the setting where feasible.
D. Autism spectrum condition: Describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation. / Specific learning disorder: Examining skill history, instruction, and targeted assessment when academic difficulty persists.

0918. Choose the practice comparison that best separates Comorbidity from Reasonable accommodation.

A. Comorbidity: Assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty. / Reasonable accommodation: Identifying practical adjustments that permit meaningful participation and checking governing requirements.
B. Comorbidity: Building accommodations around the person's needs and goals rather than treating difference itself as a defect. / Reasonable accommodation: Identifying practical adjustments that permit meaningful participation and checking governing requirements.
C. Comorbidity: Identifying practical adjustments that permit meaningful participation and checking governing requirements. / Reasonable accommodation: Assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty.
D. Comorbidity: Assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty. / Reasonable accommodation: Examining skill history, instruction, and targeted assessment when academic difficulty persists.

0919. Which pair of actions illustrates Specific learning disorder and Reasonable accommodation, respectively?

A. Specific learning disorder: Identifying practical adjustments that permit meaningful participation and checking governing requirements. / Reasonable accommodation: Examining skill history, instruction, and targeted assessment when academic difficulty persists.
B. Specific learning disorder: Examining skill history, instruction, and targeted assessment when academic difficulty persists. / Reasonable accommodation: Gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions.
C. Specific learning disorder: Examining skill history, instruction, and targeted assessment when academic difficulty persists. / Reasonable accommodation: Identifying practical adjustments that permit meaningful participation and checking governing requirements.
D. Specific learning disorder: Asking which sensory environments support or hinder participation and adjusting the setting where feasible. / Reasonable accommodation: Identifying practical adjustments that permit meaningful participation and checking governing requirements.

0920. Consider a student aged 9 receiving help in the behavior-support review. The consulting counselor focuses on describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation. Which term best describes the guiding idea?

A. ADHD executive-function profile
B. Autism spectrum condition
C. Comorbidity
D. Neurodiversity-affirming practice

0921. Which choice aligns each practice with the correct idea, Specific learning disorder or Reasonable accommodation?

A. Specific learning disorder: Identifying practical adjustments that permit meaningful participation and checking governing requirements. / Reasonable accommodation: Examining skill history, instruction, and targeted assessment when academic difficulty persists.
B. Specific learning disorder: Examining skill history, instruction, and targeted assessment when academic difficulty persists. / Reasonable accommodation: Gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions.
C. Specific learning disorder: Examining skill history, instruction, and targeted assessment when academic difficulty persists. / Reasonable accommodation: Identifying practical adjustments that permit meaningful participation and checking governing requirements.
D. Specific learning disorder: Asking which sensory environments support or hinder participation and adjusting the setting where feasible. / Reasonable accommodation: Identifying practical adjustments that permit meaningful participation and checking governing requirements.

0922. Which choice aligns each practice with the correct idea, ADHD executive-function profile or Adaptive functioning?

A. ADHD executive-function profile: Gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions. / Adaptive functioning: Examining skill history, instruction, and targeted assessment when academic difficulty persists.
B. ADHD executive-function profile: Evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone. / Adaptive functioning: Gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions.
C. ADHD executive-function profile: Considering developmental history and functional impact rather than inferring a condition from one isolated behavior. / Adaptive functioning: Evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone.
D. ADHD executive-function profile: Gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions. / Adaptive functioning: Evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone.

0923. A trainee must distinguish how Neurodevelopmental condition and Specific learning disorder guide practice. Which comparison is accurate?

A. Neurodevelopmental condition: Examining skill history, instruction, and targeted assessment when academic difficulty persists. / Specific learning disorder: Considering developmental history and functional impact rather than inferring a condition from one isolated behavior.
B. Neurodevelopmental condition: Considering developmental history and functional impact rather than inferring a condition from one isolated behavior. / Specific learning disorder: Asking which sensory environments support or hinder participation and adjusting the setting where feasible.
C. Neurodevelopmental condition: Describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation. / Specific learning disorder: Examining skill history, instruction, and targeted assessment when academic difficulty persists.
D. Neurodevelopmental condition: Considering developmental history and functional impact rather than inferring a condition from one isolated behavior. / Specific learning disorder: Examining skill history, instruction, and targeted assessment when academic difficulty persists.

0924. Which pair of actions illustrates Adaptive functioning and Comorbidity, respectively?

A. Adaptive functioning: Evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone. / Comorbidity: Assessing adaptive skills and developmental history alongside intellectual functioning.
B. Adaptive functioning: Considering developmental history and functional impact rather than inferring a condition from one isolated behavior. / Comorbidity: Assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty.
C. Adaptive functioning: Assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty. / Comorbidity: Evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone.
D. Adaptive functioning: Evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone. / Comorbidity: Assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty.

0925. Which comparison correctly distinguishes ADHD executive-function profile from Autism spectrum condition?

A. ADHD executive-function profile: A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs. / Autism spectrum condition: A pattern of developmentally inappropriate inattention and/or hyperactivity-impulsivity with impairment across relevant contexts.
B. ADHD executive-function profile: A pattern of developmentally inappropriate inattention and/or hyperactivity-impulsivity with impairment across relevant contexts. / Autism spectrum condition: A group of conditions with developmental onset that affect functioning in areas such as learning, communication, or behavior.
C. ADHD executive-function profile: A pattern of developmentally inappropriate inattention and/or hyperactivity-impulsivity with impairment across relevant contexts. / Autism spectrum condition: A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs.
D. ADHD executive-function profile: Conceptual, social, and practical skills used to meet everyday demands across settings. / Autism spectrum condition: A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs.

0926. Which course concept is defined as follows: Differences in responding to sensory input that may affect comfort, attention, or participation.

A. Sensory processing differences
B. Intellectual disability
C. Specific learning disorder
D. Neurodiversity-affirming practice

0927. A doctoral student reads the following description. Which concept does it define? A condition characterized by limitations in intellectual functioning and adaptive functioning with developmental onset.

A. Intellectual disability
B. Reasonable accommodation
C. Autism spectrum condition
D. Adaptive functioning

0928. A consulting counselor is asked to justify a plan for a older adolescent client in the school-based service. It calls for asking which sensory environments support or hinder participation and adjusting the setting where feasible. Which concept provides the rationale?

A. Sensory processing differences
B. Comorbidity
C. Reasonable accommodation
D. Adaptive functioning

0929. A planning meeting about a student aged 17 includes a play therapist. The proposed practice in the student-support meeting is building accommodations around the person's needs and goals rather than treating difference itself as a defect. Which idea underlies it?

A. Neurodevelopmental condition
B. Neurodiversity-affirming practice
C. Intellectual disability
D. Specific learning disorder

0930. Which option is the clearest practical expression of ADHD executive-function profile?

A. Evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone.
B. Assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty.
C. Describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation.
D. Gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions.

0931. Which course concept is defined as follows: A group of conditions with developmental onset that affect functioning in areas such as learning, communication, or behavior.

A. Neurodevelopmental condition
B. Autism spectrum condition
C. Reasonable accommodation
D. ADHD executive-function profile

0932. Which option correctly matches each concept to its practice focus: ADHD executive-function profile and Sensory processing differences?

A. ADHD executive-function profile: Asking which sensory environments support or hinder participation and adjusting the setting where feasible. / Sensory processing differences: Gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions.
B. ADHD executive-function profile: Gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions. / Sensory processing differences: Examining skill history, instruction, and targeted assessment when academic difficulty persists.
C. ADHD executive-function profile: Describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation. / Sensory processing differences: Asking which sensory environments support or hinder participation and adjusting the setting where feasible.
D. ADHD executive-function profile: Gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions. / Sensory processing differences: Asking which sensory environments support or hinder participation and adjusting the setting where feasible.

0933. Which paired example correctly applies Adaptive functioning first and Sensory processing differences second?

A. Adaptive functioning: Evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone. / Sensory processing differences: Identifying practical adjustments that permit meaningful participation and checking governing requirements.
B. Adaptive functioning: Evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone. / Sensory processing differences: Asking which sensory environments support or hinder participation and adjusting the setting where feasible.
C. Adaptive functioning: Building accommodations around the person's needs and goals rather than treating difference itself as a defect. / Sensory processing differences: Asking which sensory environments support or hinder participation and adjusting the setting where feasible.
D. Adaptive functioning: Asking which sensory environments support or hinder participation and adjusting the setting where feasible. / Sensory processing differences: Evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone.

0934. A team must select a support approach for a preadolescent child at the multidisciplinary case conference. The school-based clinician recommends examining skill history, instruction, and targeted assessment when academic difficulty persists. Which idea is most relevant?

A. Reasonable accommodation
B. Comorbidity
C. Specific learning disorder
D. Neurodevelopmental condition

0935. Which applied comparison correctly identifies what belongs to ADHD executive-function profile versus Specific learning disorder?

A. ADHD executive-function profile: Describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation. / Specific learning disorder: Examining skill history, instruction, and targeted assessment when academic difficulty persists.
B. ADHD executive-function profile: Gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions. / Specific learning disorder: Examining skill history, instruction, and targeted assessment when academic difficulty persists.
C. ADHD executive-function profile: Gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions. / Specific learning disorder: Considering developmental history and functional impact rather than inferring a condition from one isolated behavior.
D. ADHD executive-function profile: Examining skill history, instruction, and targeted assessment when academic difficulty persists. / Specific learning disorder: Gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions.

0936. A member of a clinical team and a client in late adolescence are discussing support in the family session. The selected practice is assessing adaptive skills and developmental history alongside intellectual functioning. Which concept does this demonstrate?

A. Neurodevelopmental condition
B. Specific learning disorder
C. Intellectual disability
D. Adaptive functioning

0937. Which statement accurately contrasts the course concepts Neurodevelopmental condition and Specific learning disorder?

A. Neurodevelopmental condition: A group of conditions with developmental onset that affect functioning in areas such as learning, communication, or behavior. / Specific learning disorder: Differences in responding to sensory input that may affect comfort, attention, or participation.
B. Neurodevelopmental condition: A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs. / Specific learning disorder: Persistent difficulty learning or using academic skills despite appropriate support, evaluated in relation to developmental and educational context.
C. Neurodevelopmental condition: Persistent difficulty learning or using academic skills despite appropriate support, evaluated in relation to developmental and educational context. / Specific learning disorder: A group of conditions with developmental onset that affect functioning in areas such as learning, communication, or behavior.
D. Neurodevelopmental condition: A group of conditions with developmental onset that affect functioning in areas such as learning, communication, or behavior. / Specific learning disorder: Persistent difficulty learning or using academic skills despite appropriate support, evaluated in relation to developmental and educational context.

0938. A service team discusses a student aged 17 in the caregiver consultation. Their proposed next step is considering developmental history and functional impact rather than inferring a condition from one isolated behavior. Which course concept supports it?

A. Specific learning disorder
B. Comorbidity
C. ADHD executive-function profile
D. Neurodevelopmental condition

0939. A program coordinator describes an intervention for a young adolescent client in the telehealth session, centered on describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation. Which named idea is most relevant?

A. Neurodiversity-affirming practice
B. Autism spectrum condition
C. Intellectual disability
D. Adaptive functioning

0940. A member of a clinical team prepares for a session in the youth group with a child aged 7. The intended approach is building accommodations around the person's needs and goals rather than treating difference itself as a defect. Which concept is most relevant?

A. Comorbidity
B. Neurodiversity-affirming practice
C. Intellectual disability
D. Sensory processing differences

0941. Which option preserves the correct meaning of both Neurodevelopmental condition and Adaptive functioning?

A. Neurodevelopmental condition: A group of conditions with developmental onset that affect functioning in areas such as learning, communication, or behavior. / Adaptive functioning: Co-occurrence of two or more conditions or clinically significant problems in one person.
B. Neurodevelopmental condition: A group of conditions with developmental onset that affect functioning in areas such as learning, communication, or behavior. / Adaptive functioning: Conceptual, social, and practical skills used to meet everyday demands across settings.
C. Neurodevelopmental condition: A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs. / Adaptive functioning: Conceptual, social, and practical skills used to meet everyday demands across settings.
D. Neurodevelopmental condition: Conceptual, social, and practical skills used to meet everyday demands across settings. / Adaptive functioning: A group of conditions with developmental onset that affect functioning in areas such as learning, communication, or behavior.

0942. A support meeting for a student aged 9 includes a counselor in the student wellness team. The practice under consideration is assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty. Which concept guides it?

A. Neurodevelopmental condition
B. ADHD executive-function profile
C. Comorbidity
D. Neurodiversity-affirming practice

0943. Which named construct is captured by this account? An approach that respects neurological variation, avoids unnecessary normalization, and focuses on access and meaningful support.

A. Sensory processing differences
B. Specific learning disorder
C. Neurodiversity-affirming practice
D. Intellectual disability

0944. In the student wellness team, a team asks how a consulting counselor can support a young person aged 13. One proposed action is identifying practical adjustments that permit meaningful participation and checking governing requirements. Which idea does it represent?

A. Autism spectrum condition
B. Specific learning disorder
C. Intellectual disability
D. Reasonable accommodation

0945. A case conference reviews a therapist's work with a child aged 11 in the learning-support meeting: describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation. Which principle is central?

A. Autism spectrum condition
B. Adaptive functioning
C. Reasonable accommodation
D. Specific learning disorder

0946. For a client in early adolescence seen in the classroom support meeting, the service navigator recommends a plan built around describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation. Which concept is reflected?

A. Comorbidity
B. Sensory processing differences
C. Intellectual disability
D. Autism spectrum condition

0947. During work in the child guidance clinic, a consulting counselor identifies this need: examining skill history, instruction, and targeted assessment when academic difficulty persists. Which idea should guide the response?

A. Specific learning disorder
B. Comorbidity
C. Sensory processing differences
D. Autism spectrum condition

0948. During work in the community mental-health service, a group facilitator identifies this need: describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation. Which idea should guide the response?

A. Specific learning disorder
B. Autism spectrum condition
C. Neurodevelopmental condition
D. Neurodiversity-affirming practice

0949. A consultant is supporting a middle-school student in the youth group. The key practice is describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation. Which course concept is most relevant?

A. Neurodevelopmental condition
B. Autism spectrum condition
C. Sensory processing differences
D. ADHD executive-function profile

0950. A assessment clinician is preparing a follow-up plan for a teenage client in the community youth program. The plan calls for evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone. Which concept names this approach?

A. Reasonable accommodation
B. Comorbidity
C. Adaptive functioning
D. ADHD executive-function profile

0951. In a case note about a young adolescent client, a member of a clinical team working in the supervision meeting records this priority: asking which sensory environments support or hinder participation and adjusting the setting where feasible. What principle is reflected?

A. Neurodiversity-affirming practice
B. Neurodevelopmental condition
C. Sensory processing differences
D. Autism spectrum condition

0952. Which statement most accurately defines Intellectual disability?

A. A modification to environment, instruction, or procedure that supports equitable access under applicable rules.
B. A condition characterized by limitations in intellectual functioning and adaptive functioning with developmental onset.
C. A group of conditions with developmental onset that affect functioning in areas such as learning, communication, or behavior.
D. Conceptual, social, and practical skills used to meet everyday demands across settings.

0953. A trainee must distinguish how Specific learning disorder and Sensory processing differences guide practice. Which comparison is accurate?

A. Specific learning disorder: Examining skill history, instruction, and targeted assessment when academic difficulty persists. / Sensory processing differences: Asking which sensory environments support or hinder participation and adjusting the setting where feasible.
B. Specific learning disorder: Examining skill history, instruction, and targeted assessment when academic difficulty persists. / Sensory processing differences: Building accommodations around the person's needs and goals rather than treating difference itself as a defect.
C. Specific learning disorder: Assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty. / Sensory processing differences: Asking which sensory environments support or hinder participation and adjusting the setting where feasible.
D. Specific learning disorder: Asking which sensory environments support or hinder participation and adjusting the setting where feasible. / Sensory processing differences: Examining skill history, instruction, and targeted assessment when academic difficulty persists.

0954. Which option preserves the correct meaning of both Adaptive functioning and Sensory processing differences?

A. Adaptive functioning: An approach that respects neurological variation, avoids unnecessary normalization, and focuses on access and meaningful support. / Sensory processing differences: Differences in responding to sensory input that may affect comfort, attention, or participation.
B. Adaptive functioning: Conceptual, social, and practical skills used to meet everyday demands across settings. / Sensory processing differences: A modification to environment, instruction, or procedure that supports equitable access under applicable rules.
C. Adaptive functioning: Conceptual, social, and practical skills used to meet everyday demands across settings. / Sensory processing differences: Differences in responding to sensory input that may affect comfort, attention, or participation.
D. Adaptive functioning: Differences in responding to sensory input that may affect comfort, attention, or participation. / Sensory processing differences: Conceptual, social, and practical skills used to meet everyday demands across settings.

0955. In the clinical planning session, a caregiver working with a counselor is considering this approach for a student aged 17: examining skill history, instruction, and targeted assessment when academic difficulty persists. Which framework does it represent?

A. Neurodiversity-affirming practice
B. Reasonable accommodation
C. Intellectual disability
D. Specific learning disorder

0956. A case conference asks for a distinction between Neurodevelopmental condition and Adaptive functioning. Which answer is sound?

A. Neurodevelopmental condition: Conceptual, social, and practical skills used to meet everyday demands across settings. / Adaptive functioning: A group of conditions with developmental onset that affect functioning in areas such as learning, communication, or behavior.
B. Neurodevelopmental condition: A group of conditions with developmental onset that affect functioning in areas such as learning, communication, or behavior. / Adaptive functioning: Conceptual, social, and practical skills used to meet everyday demands across settings.
C. Neurodevelopmental condition: A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs. / Adaptive functioning: Conceptual, social, and practical skills used to meet everyday demands across settings.
D. Neurodevelopmental condition: A group of conditions with developmental onset that affect functioning in areas such as learning, communication, or behavior. / Adaptive functioning: Co-occurrence of two or more conditions or clinically significant problems in one person.

0957. During work in the school consultation, a school counselor identifies this need: identifying practical adjustments that permit meaningful participation and checking governing requirements. Which idea should guide the response?

A. Intellectual disability
B. Reasonable accommodation
C. Neurodiversity-affirming practice
D. Neurodevelopmental condition

0958. A supervised trainee and a young person aged 16 are discussing support in the caregiver consultation. The selected practice is asking which sensory environments support or hinder participation and adjusting the setting where feasible. Which concept does this demonstrate?

A. ADHD executive-function profile
B. Sensory processing differences
C. Autism spectrum condition
D. Neurodiversity-affirming practice

0959. Which option is the clearest practical expression of Specific learning disorder?

A. Identifying practical adjustments that permit meaningful participation and checking governing requirements.
B. Examining skill history, instruction, and targeted assessment when academic difficulty persists.
C. Building accommodations around the person's needs and goals rather than treating difference itself as a defect.
D. Gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions.

0960. In a supervision quiz, how should Neurodiversity-affirming practice be distinguished from Reasonable accommodation?

A. Neurodiversity-affirming practice: Differences in responding to sensory input that may affect comfort, attention, or participation. / Reasonable accommodation: A modification to environment, instruction, or procedure that supports equitable access under applicable rules.
B. Neurodiversity-affirming practice: An approach that respects neurological variation, avoids unnecessary normalization, and focuses on access and meaningful support. / Reasonable accommodation: A modification to environment, instruction, or procedure that supports equitable access under applicable rules.
C. Neurodiversity-affirming practice: A modification to environment, instruction, or procedure that supports equitable access under applicable rules. / Reasonable accommodation: An approach that respects neurological variation, avoids unnecessary normalization, and focuses on access and meaningful support.
D. Neurodiversity-affirming practice: An approach that respects neurological variation, avoids unnecessary normalization, and focuses on access and meaningful support. / Reasonable accommodation: Conceptual, social, and practical skills used to meet everyday demands across settings.

0961. A team must select a support approach for a child aged 14 at the school-based service. The caregiver working with a counselor recommends assessing adaptive skills and developmental history alongside intellectual functioning. Which idea is most relevant?

A. Reasonable accommodation
B. Intellectual disability
C. Autism spectrum condition
D. Comorbidity

0962. Which choice aligns each practice with the correct idea, Neurodevelopmental condition or Autism spectrum condition?

A. Neurodevelopmental condition: Considering developmental history and functional impact rather than inferring a condition from one isolated behavior. / Autism spectrum condition: Describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation.
B. Neurodevelopmental condition: Asking which sensory environments support or hinder participation and adjusting the setting where feasible. / Autism spectrum condition: Describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation.
C. Neurodevelopmental condition: Describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation. / Autism spectrum condition: Considering developmental history and functional impact rather than inferring a condition from one isolated behavior.
D. Neurodevelopmental condition: Considering developmental history and functional impact rather than inferring a condition from one isolated behavior. / Autism spectrum condition: Examining skill history, instruction, and targeted assessment when academic difficulty persists.

0963. While supporting a young person aged 18 in the school counseling office, a case coordinator adopts this practice: identifying practical adjustments that permit meaningful participation and checking governing requirements. Which concept best explains the choice?

A. Specific learning disorder
B. ADHD executive-function profile
C. Neurodevelopmental condition
D. Reasonable accommodation

0964. Which applied comparison correctly identifies what belongs to Neurodevelopmental condition versus Intellectual disability?

A. Neurodevelopmental condition: Considering developmental history and functional impact rather than inferring a condition from one isolated behavior. / Intellectual disability: Assessing adaptive skills and developmental history alongside intellectual functioning.
B. Neurodevelopmental condition: Considering developmental history and functional impact rather than inferring a condition from one isolated behavior. / Intellectual disability: Assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty.
C. Neurodevelopmental condition: Assessing adaptive skills and developmental history alongside intellectual functioning. / Intellectual disability: Considering developmental history and functional impact rather than inferring a condition from one isolated behavior.
D. Neurodevelopmental condition: Asking which sensory environments support or hinder participation and adjusting the setting where feasible. / Intellectual disability: Assessing adaptive skills and developmental history alongside intellectual functioning.

0965. In the youth group, a team asks how a school counselor can support a young person aged 10. One proposed action is evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone. Which idea does it represent?

A. Adaptive functioning
B. Autism spectrum condition
C. Comorbidity
D. Reasonable accommodation

0966. While consulting in the community mental-health service, a consultant supports a client in late adolescence by using this approach: identifying practical adjustments that permit meaningful participation and checking governing requirements. Which concept is being applied?

A. Intellectual disability
B. Reasonable accommodation
C. Neurodevelopmental condition
D. Autism spectrum condition

0967. Which choice aligns each practice with the correct idea, Intellectual disability or Adaptive functioning?

A. Intellectual disability: Evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone. / Adaptive functioning: Assessing adaptive skills and developmental history alongside intellectual functioning.
B. Intellectual disability: Assessing adaptive skills and developmental history alongside intellectual functioning. / Adaptive functioning: Evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone.
C. Intellectual disability: Assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty. / Adaptive functioning: Evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone.
D. Intellectual disability: Assessing adaptive skills and developmental history alongside intellectual functioning. / Adaptive functioning: Building accommodations around the person's needs and goals rather than treating difference itself as a defect.

0968. Choose the definition pair that correctly explains Intellectual disability first and Sensory processing differences second.

A. Intellectual disability: Persistent difficulty learning or using academic skills despite appropriate support, evaluated in relation to developmental and educational context. / Sensory processing differences: Differences in responding to sensory input that may affect comfort, attention, or participation.
B. Intellectual disability: A condition characterized by limitations in intellectual functioning and adaptive functioning with developmental onset. / Sensory processing differences: Differences in responding to sensory input that may affect comfort, attention, or participation.
C. Intellectual disability: Differences in responding to sensory input that may affect comfort, attention, or participation. / Sensory processing differences: A condition characterized by limitations in intellectual functioning and adaptive functioning with developmental onset.
D. Intellectual disability: A condition characterized by limitations in intellectual functioning and adaptive functioning with developmental onset. / Sensory processing differences: A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs.

0969. Which applied comparison correctly identifies what belongs to Intellectual disability versus Comorbidity?

A. Intellectual disability: Assessing adaptive skills and developmental history alongside intellectual functioning. / Comorbidity: Evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone.
B. Intellectual disability: Describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation. / Comorbidity: Assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty.
C. Intellectual disability: Assessing adaptive skills and developmental history alongside intellectual functioning. / Comorbidity: Assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty.
D. Intellectual disability: Assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty. / Comorbidity: Assessing adaptive skills and developmental history alongside intellectual functioning.

0970. A case conference reviews a therapist's work with a young adolescent client in the classroom support meeting: building accommodations around the person's needs and goals rather than treating difference itself as a defect. Which principle is central?

A. Comorbidity
B. Specific learning disorder
C. Autism spectrum condition
D. Neurodiversity-affirming practice

0971. In a supervision quiz, how should Autism spectrum condition be distinguished from Reasonable accommodation?

A. Autism spectrum condition: A modification to environment, instruction, or procedure that supports equitable access under applicable rules. / Reasonable accommodation: A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs.
B. Autism spectrum condition: A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs. / Reasonable accommodation: A modification to environment, instruction, or procedure that supports equitable access under applicable rules.
C. Autism spectrum condition: Persistent difficulty learning or using academic skills despite appropriate support, evaluated in relation to developmental and educational context. / Reasonable accommodation: A modification to environment, instruction, or procedure that supports equitable access under applicable rules.
D. Autism spectrum condition: A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs. / Reasonable accommodation: Differences in responding to sensory input that may affect comfort, attention, or participation.

0972. A supervisor asks how Intellectual disability would appear in practice. Which choice should be selected?

A. Asking which sensory environments support or hinder participation and adjusting the setting where feasible.
B. Building accommodations around the person's needs and goals rather than treating difference itself as a defect.
C. Evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone.
D. Assessing adaptive skills and developmental history alongside intellectual functioning.

0973. Which statement shows a sound practice-level distinction between Neurodevelopmental condition and Neurodiversity-affirming practice?

A. Neurodevelopmental condition: Building accommodations around the person's needs and goals rather than treating difference itself as a defect. / Neurodiversity-affirming practice: Considering developmental history and functional impact rather than inferring a condition from one isolated behavior.
B. Neurodevelopmental condition: Considering developmental history and functional impact rather than inferring a condition from one isolated behavior. / Neurodiversity-affirming practice: Identifying practical adjustments that permit meaningful participation and checking governing requirements.
C. Neurodevelopmental condition: Considering developmental history and functional impact rather than inferring a condition from one isolated behavior. / Neurodiversity-affirming practice: Building accommodations around the person's needs and goals rather than treating difference itself as a defect.
D. Neurodevelopmental condition: Gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions. / Neurodiversity-affirming practice: Building accommodations around the person's needs and goals rather than treating difference itself as a defect.

0974. A student confuses Specific learning disorder with Reasonable accommodation. Which explanation most accurately separates them?

A. Specific learning disorder: Differences in responding to sensory input that may affect comfort, attention, or participation. / Reasonable accommodation: A modification to environment, instruction, or procedure that supports equitable access under applicable rules.
B. Specific learning disorder: Persistent difficulty learning or using academic skills despite appropriate support, evaluated in relation to developmental and educational context. / Reasonable accommodation: A modification to environment, instruction, or procedure that supports equitable access under applicable rules.
C. Specific learning disorder: Persistent difficulty learning or using academic skills despite appropriate support, evaluated in relation to developmental and educational context. / Reasonable accommodation: A pattern of developmentally inappropriate inattention and/or hyperactivity-impulsivity with impairment across relevant contexts.
D. Specific learning disorder: A modification to environment, instruction, or procedure that supports equitable access under applicable rules. / Reasonable accommodation: Persistent difficulty learning or using academic skills despite appropriate support, evaluated in relation to developmental and educational context.

0975. A supervisor asks how Neurodevelopmental condition would appear in practice. Which choice should be selected?

A. Considering developmental history and functional impact rather than inferring a condition from one isolated behavior.
B. Assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty.
C. Examining skill history, instruction, and targeted assessment when academic difficulty persists.
D. Evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone.

0976. How are ADHD executive-function profile and Autism spectrum condition most accurately differentiated in this curriculum?

A. ADHD executive-function profile: A pattern of developmentally inappropriate inattention and/or hyperactivity-impulsivity with impairment across relevant contexts. / Autism spectrum condition: A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs.
B. ADHD executive-function profile: A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs. / Autism spectrum condition: A pattern of developmentally inappropriate inattention and/or hyperactivity-impulsivity with impairment across relevant contexts.
C. ADHD executive-function profile: Conceptual, social, and practical skills used to meet everyday demands across settings. / Autism spectrum condition: A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs.
D. ADHD executive-function profile: A pattern of developmentally inappropriate inattention and/or hyperactivity-impulsivity with impairment across relevant contexts. / Autism spectrum condition: A group of conditions with developmental onset that affect functioning in areas such as learning, communication, or behavior.

0977. A support meeting for a student aged 17 includes a behavior specialist in the community youth program. The practice under consideration is describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation. Which concept guides it?

A. Neurodiversity-affirming practice
B. Comorbidity
C. Adaptive functioning
D. Autism spectrum condition

0978. A member of a clinical team is supporting a young person in the classroom support meeting. The key practice is examining skill history, instruction, and targeted assessment when academic difficulty persists. Which course concept is most relevant?

A. Sensory processing differences
B. Adaptive functioning
C. Neurodevelopmental condition
D. Specific learning disorder

0979. A supervisor asks how Specific learning disorder would appear in practice. Which choice should be selected?

A. Building accommodations around the person's needs and goals rather than treating difference itself as a defect.
B. Identifying practical adjustments that permit meaningful participation and checking governing requirements.
C. Asking which sensory environments support or hinder participation and adjusting the setting where feasible.
D. Examining skill history, instruction, and targeted assessment when academic difficulty persists.

0980. A case conference asks for a distinction between Intellectual disability and Reasonable accommodation. Which answer is sound?

A. Intellectual disability: A modification to environment, instruction, or procedure that supports equitable access under applicable rules. / Reasonable accommodation: A condition characterized by limitations in intellectual functioning and adaptive functioning with developmental onset.
B. Intellectual disability: A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs. / Reasonable accommodation: A modification to environment, instruction, or procedure that supports equitable access under applicable rules.
C. Intellectual disability: A condition characterized by limitations in intellectual functioning and adaptive functioning with developmental onset. / Reasonable accommodation: A modification to environment, instruction, or procedure that supports equitable access under applicable rules.
D. Intellectual disability: A condition characterized by limitations in intellectual functioning and adaptive functioning with developmental onset. / Reasonable accommodation: A group of conditions with developmental onset that affect functioning in areas such as learning, communication, or behavior.

0981. A teenage client is receiving support in the after-school program. The teacher and counselor is guided by this practice: describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation. Which principle best fits?

A. Sensory processing differences
B. Adaptive functioning
C. Autism spectrum condition
D. Intellectual disability

0982. A school-age child is receiving support in the caregiver consultation. The group facilitator is guided by this practice: identifying practical adjustments that permit meaningful participation and checking governing requirements. Which principle best fits?

A. Sensory processing differences
B. Neurodevelopmental condition
C. Reasonable accommodation
D. ADHD executive-function profile

0983. A service team discusses a middle-school student in the community mental-health service. Their proposed next step is assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty. Which course concept supports it?

A. Neurodevelopmental condition
B. Neurodiversity-affirming practice
C. Adaptive functioning
D. Comorbidity

0984. Which option correctly matches each concept to its practice focus: Autism spectrum condition and Neurodiversity-affirming practice?

A. Autism spectrum condition: Gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions. / Neurodiversity-affirming practice: Building accommodations around the person's needs and goals rather than treating difference itself as a defect.
B. Autism spectrum condition: Describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation. / Neurodiversity-affirming practice: Identifying practical adjustments that permit meaningful participation and checking governing requirements.
C. Autism spectrum condition: Building accommodations around the person's needs and goals rather than treating difference itself as a defect. / Neurodiversity-affirming practice: Describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation.
D. Autism spectrum condition: Describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation. / Neurodiversity-affirming practice: Building accommodations around the person's needs and goals rather than treating difference itself as a defect.

0985. A trainee must distinguish how ADHD executive-function profile and Comorbidity guide practice. Which comparison is accurate?

A. ADHD executive-function profile: Assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty. / Comorbidity: Gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions.
B. ADHD executive-function profile: Gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions. / Comorbidity: Examining skill history, instruction, and targeted assessment when academic difficulty persists.
C. ADHD executive-function profile: Gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions. / Comorbidity: Assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty.
D. ADHD executive-function profile: Evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone. / Comorbidity: Assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty.

0986. A case conference reviews a research trainee's work with a child of elementary-school age in the community youth program: assessing adaptive skills and developmental history alongside intellectual functioning. Which principle is central?

A. Reasonable accommodation
B. Sensory processing differences
C. Neurodevelopmental condition
D. Intellectual disability

0987. A supervised trainee is supporting a young person aged 18 in the family resource center. The key practice is evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone. Which course concept is most relevant?

A. Comorbidity
B. Reasonable accommodation
C. Adaptive functioning
D. Sensory processing differences

0988. Which applied comparison correctly identifies what belongs to Autism spectrum condition versus Sensory processing differences?

A. Autism spectrum condition: Describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation. / Sensory processing differences: Asking which sensory environments support or hinder participation and adjusting the setting where feasible.
B. Autism spectrum condition: Identifying practical adjustments that permit meaningful participation and checking governing requirements. / Sensory processing differences: Asking which sensory environments support or hinder participation and adjusting the setting where feasible.
C. Autism spectrum condition: Describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation. / Sensory processing differences: Considering developmental history and functional impact rather than inferring a condition from one isolated behavior.
D. Autism spectrum condition: Asking which sensory environments support or hinder participation and adjusting the setting where feasible. / Sensory processing differences: Describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation.

0989. A case conference asks for a distinction between ADHD executive-function profile and Reasonable accommodation. Which answer is sound?

A. ADHD executive-function profile: An approach that respects neurological variation, avoids unnecessary normalization, and focuses on access and meaningful support. / Reasonable accommodation: A modification to environment, instruction, or procedure that supports equitable access under applicable rules.
B. ADHD executive-function profile: A pattern of developmentally inappropriate inattention and/or hyperactivity-impulsivity with impairment across relevant contexts. / Reasonable accommodation: A modification to environment, instruction, or procedure that supports equitable access under applicable rules.
C. ADHD executive-function profile: A pattern of developmentally inappropriate inattention and/or hyperactivity-impulsivity with impairment across relevant contexts. / Reasonable accommodation: Differences in responding to sensory input that may affect comfort, attention, or participation.
D. ADHD executive-function profile: A modification to environment, instruction, or procedure that supports equitable access under applicable rules. / Reasonable accommodation: A pattern of developmentally inappropriate inattention and/or hyperactivity-impulsivity with impairment across relevant contexts.

0990. While supporting a student aged 9 in the classroom support meeting, a case coordinator adopts this practice: assessing adaptive skills and developmental history alongside intellectual functioning. Which concept best explains the choice?

A. Comorbidity
B. ADHD executive-function profile
C. Autism spectrum condition
D. Intellectual disability

0991. A supervised trainee prepares for a session in the after-school program with a preadolescent child. The intended approach is identifying practical adjustments that permit meaningful participation and checking governing requirements. Which concept is most relevant?

A. Reasonable accommodation
B. Autism spectrum condition
C. Sensory processing differences
D. Comorbidity

0992. Which option is the clearest practical expression of Intellectual disability?

A. Building accommodations around the person's needs and goals rather than treating difference itself as a defect.
B. Identifying practical adjustments that permit meaningful participation and checking governing requirements.
C. Assessing adaptive skills and developmental history alongside intellectual functioning.
D. Considering developmental history and functional impact rather than inferring a condition from one isolated behavior.

0993. Which comparison would correct a trainee’s misunderstanding of Neurodevelopmental condition versus Specific learning disorder?

A. Neurodevelopmental condition: A group of conditions with developmental onset that affect functioning in areas such as learning, communication, or behavior. / Specific learning disorder: Differences in responding to sensory input that may affect comfort, attention, or participation.
B. Neurodevelopmental condition: A group of conditions with developmental onset that affect functioning in areas such as learning, communication, or behavior. / Specific learning disorder: Persistent difficulty learning or using academic skills despite appropriate support, evaluated in relation to developmental and educational context.
C. Neurodevelopmental condition: A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs. / Specific learning disorder: Persistent difficulty learning or using academic skills despite appropriate support, evaluated in relation to developmental and educational context.
D. Neurodevelopmental condition: Persistent difficulty learning or using academic skills despite appropriate support, evaluated in relation to developmental and educational context. / Specific learning disorder: A group of conditions with developmental onset that affect functioning in areas such as learning, communication, or behavior.

0994. How are Autism spectrum condition and Specific learning disorder most accurately differentiated in this curriculum?

A. Autism spectrum condition: Persistent difficulty learning or using academic skills despite appropriate support, evaluated in relation to developmental and educational context. / Specific learning disorder: A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs.
B. Autism spectrum condition: A group of conditions with developmental onset that affect functioning in areas such as learning, communication, or behavior. / Specific learning disorder: Persistent difficulty learning or using academic skills despite appropriate support, evaluated in relation to developmental and educational context.
C. Autism spectrum condition: A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs. / Specific learning disorder: Persistent difficulty learning or using academic skills despite appropriate support, evaluated in relation to developmental and educational context.
D. Autism spectrum condition: A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs. / Specific learning disorder: Differences in responding to sensory input that may affect comfort, attention, or participation.

0995. Which option preserves the correct meaning of both Neurodevelopmental condition and Sensory processing differences?

A. Neurodevelopmental condition: A group of conditions with developmental onset that affect functioning in areas such as learning, communication, or behavior. / Sensory processing differences: Conceptual, social, and practical skills used to meet everyday demands across settings.
B. Neurodevelopmental condition: Co-occurrence of two or more conditions or clinically significant problems in one person. / Sensory processing differences: Differences in responding to sensory input that may affect comfort, attention, or participation.
C. Neurodevelopmental condition: Differences in responding to sensory input that may affect comfort, attention, or participation. / Sensory processing differences: A group of conditions with developmental onset that affect functioning in areas such as learning, communication, or behavior.
D. Neurodevelopmental condition: A group of conditions with developmental onset that affect functioning in areas such as learning, communication, or behavior. / Sensory processing differences: Differences in responding to sensory input that may affect comfort, attention, or participation.

0996. Which comparison correctly distinguishes Neurodevelopmental condition from Reasonable accommodation?

A. Neurodevelopmental condition: A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs. / Reasonable accommodation: A modification to environment, instruction, or procedure that supports equitable access under applicable rules.
B. Neurodevelopmental condition: A group of conditions with developmental onset that affect functioning in areas such as learning, communication, or behavior. / Reasonable accommodation: Differences in responding to sensory input that may affect comfort, attention, or participation.
C. Neurodevelopmental condition: A modification to environment, instruction, or procedure that supports equitable access under applicable rules. / Reasonable accommodation: A group of conditions with developmental onset that affect functioning in areas such as learning, communication, or behavior.
D. Neurodevelopmental condition: A group of conditions with developmental onset that affect functioning in areas such as learning, communication, or behavior. / Reasonable accommodation: A modification to environment, instruction, or procedure that supports equitable access under applicable rules.

0997. In the counseling practicum, a team asks how a school counselor can support a child of elementary-school age. One proposed action is considering developmental history and functional impact rather than inferring a condition from one isolated behavior. Which idea does it represent?

A. Autism spectrum condition
B. Intellectual disability
C. Neurodevelopmental condition
D. Sensory processing differences

0998. Which named construct is captured by this account? A condition characterized by limitations in intellectual functioning and adaptive functioning with developmental onset.

A. Reasonable accommodation
B. Specific learning disorder
C. Intellectual disability
D. Adaptive functioning

0999. Which statement shows a sound practice-level distinction between Specific learning disorder and Adaptive functioning?

A. Specific learning disorder: Examining skill history, instruction, and targeted assessment when academic difficulty persists. / Adaptive functioning: Gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions.
B. Specific learning disorder: Evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone. / Adaptive functioning: Examining skill history, instruction, and targeted assessment when academic difficulty persists.
C. Specific learning disorder: Asking which sensory environments support or hinder participation and adjusting the setting where feasible. / Adaptive functioning: Evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone.
D. Specific learning disorder: Examining skill history, instruction, and targeted assessment when academic difficulty persists. / Adaptive functioning: Evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone.

1000. Which professional action most closely applies ADHD executive-function profile?

A. Assessing adaptive skills and developmental history alongside intellectual functioning.
B. Gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions.
C. Identifying practical adjustments that permit meaningful participation and checking governing requirements.
D. Examining skill history, instruction, and targeted assessment when academic difficulty persists.

CAC.914 | Substance Abuse Counseling for Adolescents

QUESTION BANK | 1,000 ITEMS | ANSWERS AT THE END

0001. During work in the community mental-health service, a group facilitator identifies this need: discussing realistic safety steps while continuing to support the adolescent's goals and options. Which idea should guide the response?

A. SBIRT
B. Adolescent substance-use screening
C. Relapse prevention
D. Harm reduction

0002. In adolescent substance-use counseling, which choice aligns each practice with the correct idea, Protective factor assessment or Relapse prevention?

A. Protective factor assessment: Asking about supportive adults, activities, strengths, and settings that can reinforce safer choices. / Relapse prevention: Mapping supportive relationships, practical resources, and meaningful roles that can aid recovery.
B. Protective factor assessment: Identifying triggers and rehearsal of a response plan without framing a lapse as total failure. / Relapse prevention: Asking about supportive adults, activities, strengths, and settings that can reinforce safer choices.
C. Protective factor assessment: Assessing anxiety, mood, trauma, and substance use together while coordinating appropriate care. / Relapse prevention: Identifying triggers and rehearsal of a response plan without framing a lapse as total failure.
D. Protective factor assessment: Asking about supportive adults, activities, strengths, and settings that can reinforce safer choices. / Relapse prevention: Identifying triggers and rehearsal of a response plan without framing a lapse as total failure.

0003. Choose the practice comparison that best separates Motivational enhancement from Recovery capital.

A. Motivational enhancement: Eliciting the adolescent's reasons for and against change and reinforcing autonomy. / Recovery capital: Mapping supportive relationships, practical resources, and meaningful roles that can aid recovery.
B. Motivational enhancement: Eliciting the adolescent's reasons for and against change and reinforcing autonomy. / Recovery capital: Using a validated youth-appropriate screen as an entry point rather than treating it as a diagnosis.
C. Motivational enhancement: Asking about supportive adults, activities, strengths, and settings that can reinforce safer choices. / Recovery capital: Mapping supportive relationships, practical resources, and meaningful roles that can aid recovery.
D. Motivational enhancement: Mapping supportive relationships, practical resources, and meaningful roles that can aid recovery. / Recovery capital: Eliciting the adolescent's reasons for and against change and reinforcing autonomy.

0004. A support meeting for a school-age child includes a school support specialist in the learning-support meeting. The practice under consideration is using a validated youth-appropriate screen as an entry point rather than treating it as a diagnosis. Which concept guides it?

A. Confidentiality and substance care
B. Motivational enhancement
C. Adolescent substance-use screening
D. Harm reduction

0005. Which statement shows a sound practice-level distinction between Co-occurring conditions and Recovery capital?

A. Co-occurring conditions: Asking about supportive adults, activities, strengths, and settings that can reinforce safer choices. / Recovery capital: Mapping supportive relationships, practical resources, and meaningful roles that can aid recovery.
B. Co-occurring conditions: Mapping supportive relationships, practical resources, and meaningful roles that can aid recovery. / Recovery capital: Assessing anxiety, mood, trauma, and substance use together while coordinating appropriate care.
C. Co-occurring conditions: Assessing anxiety, mood, trauma, and substance use together while coordinating appropriate care. / Recovery capital: Mapping supportive relationships, practical resources, and meaningful roles that can aid recovery.
D. Co-occurring conditions: Assessing anxiety, mood, trauma, and substance use together while coordinating appropriate care. / Recovery capital: Exploring peer influence and emerging independence without assuming all adolescent use has the same meaning.

0006. Which applied comparison correctly identifies what belongs to Protective factor assessment versus Developmental framing?

A. Protective factor assessment: Exploring peer influence and emerging independence without assuming all adolescent use has the same meaning. / Developmental framing: Asking about supportive adults, activities, strengths, and settings that can reinforce safer choices.
B. Protective factor assessment: Asking about supportive adults, activities, strengths, and settings that can reinforce safer choices. / Developmental framing: Exploring peer influence and emerging independence without assuming all adolescent use has the same meaning.
C. Protective factor assessment: Mapping supportive relationships, practical resources, and meaningful roles that can aid recovery. / Developmental framing: Exploring peer influence and emerging independence without assuming all adolescent use has the same meaning.
D. Protective factor assessment: Asking about supportive adults, activities, strengths, and settings that can reinforce safer choices. / Developmental framing: Using a validated youth-appropriate screen as an entry point rather than treating it as a diagnosis.

0007. Which course concept is defined as follows: Understanding substance use in relation to adolescent development, peer context, access, and changing autonomy.

A. Harm reduction
B. Relapse prevention
C. Motivational enhancement
D. Developmental framing

0008. An interdisciplinary team reviews a preadolescent child's case at the family resource center. The play therapist recommends discussing realistic safety steps while continuing to support the adolescent's goals and options. Which course concept best fits?

A. Recovery capital
B. Harm reduction
C. Protective factor assessment
D. Motivational enhancement

0009. Which applied comparison correctly identifies what belongs to Adolescent substance-use screening versus SBIRT?

A. Adolescent substance-use screening: Linking screening results to a brief conversation and appropriate referral when indicated. / SBIRT: Using a validated youth-appropriate screen as an entry point rather than treating it as a diagnosis.
B. Adolescent substance-use screening: Eliciting the adolescent's reasons for and against change and reinforcing autonomy. / SBIRT: Linking screening results to a brief conversation and appropriate referral when indicated.
C. Adolescent substance-use screening: Using a validated youth-appropriate screen as an entry point rather than treating it as a diagnosis. / SBIRT: Linking screening results to a brief conversation and appropriate referral when indicated.
D. Adolescent substance-use screening: Using a validated youth-appropriate screen as an entry point rather than treating it as a diagnosis. / SBIRT: Explaining privacy and its exceptions accurately using current local law and policy before asking sensitive questions.

0010. A trainee must distinguish how Co-occurring conditions and Recovery capital guide practice. Which comparison is accurate?

A. Co-occurring conditions: Assessing anxiety, mood, trauma, and substance use together while coordinating appropriate care. / Recovery capital: Mapping supportive relationships, practical resources, and meaningful roles that can aid recovery.
B. Co-occurring conditions: Asking about supportive adults, activities, strengths, and settings that can reinforce safer choices. / Recovery capital: Mapping supportive relationships, practical resources, and meaningful roles that can aid recovery.
C. Co-occurring conditions: Assessing anxiety, mood, trauma, and substance use together while coordinating appropriate care. / Recovery capital: Exploring peer influence and emerging independence without assuming all adolescent use has the same meaning.
D. Co-occurring conditions: Mapping supportive relationships, practical resources, and meaningful roles that can aid recovery. / Recovery capital: Assessing anxiety, mood, trauma, and substance use together while coordinating appropriate care.

0011. At the caregiver consultation, a play therapist meets with a teenage client. The practice priority is: linking screening results to a brief conversation and appropriate referral when indicated. Which concept best captures that priority?

A. Relapse prevention
B. SBIRT
C. Motivational enhancement
D. Harm reduction

0012. Which statement accurately contrasts the course concepts Harm reduction and Recovery capital?

A. Harm reduction: Substance-related concerns that occur alongside mental-health or other health conditions. / Recovery capital: Personal, social, and community resources that can support recovery and sustained change.
B. Harm reduction: Practical strategies intended to reduce substance-related risks without requiring immediate abstinence as a precondition for care. / Recovery capital: A collaborative strategy that strengthens a person's own motivation and commitment to change.
C. Harm reduction: Practical strategies intended to reduce substance-related risks without requiring immediate abstinence as a precondition for care. / Recovery capital: Personal, social, and community resources that can support recovery and sustained change.
D. Harm reduction: Personal, social, and community resources that can support recovery and sustained change. / Recovery capital: Practical strategies intended to reduce substance-related risks without requiring immediate abstinence as a precondition for care.

0013. Which comparison would correct a trainee's misunderstanding of Recovery capital versus Developmental framing?

A. Recovery capital: Personal, social, and community resources that can support recovery and sustained change. / Developmental framing: Understanding substance use in relation to adolescent development, peer context, access, and changing autonomy.
B. Recovery capital: Understanding substance use in relation to adolescent development, peer context, access, and changing autonomy. / Developmental framing: Personal, social, and community resources that can support recovery and sustained change.
C. Recovery capital: Personal, social, and community resources that can support recovery and sustained change. / Developmental framing: A collaborative strategy that strengthens a person's own motivation and commitment to change.
D. Recovery capital: A brief, age-appropriate process to identify possible substance-related risk and need for fuller assessment. / Developmental framing: Understanding substance use in relation to adolescent development, peer context, access, and changing autonomy.

0014. A play therapist reviews a plan for a middle-school student in the learning-support meeting. The plan emphasizes assessing anxiety, mood, trauma, and substance use together while coordinating appropriate care. Which course idea does this reflect?

A. Adolescent substance-use screening
B. Motivational enhancement
C. Co-occurring conditions
D. Confidentiality and substance care

0015. What is the central meaning of Co-occurring conditions?

A. A brief, age-appropriate process to identify possible substance-related risk and need for fuller assessment.
B. Privacy rules for adolescent substance services that depend on jurisdiction, consent, and service context.
C. Substance-related concerns that occur alongside mental-health or other health conditions.
D. Screening, brief intervention, and referral to treatment, a structured pathway for responding to substance-use risk.

0016. Which option is the clearest practical expression of Harm reduction?

A. Discussing realistic safety steps while continuing to support the adolescent's goals and options.
B. Identifying triggers and rehearsal of a response plan without framing a lapse as total failure.
C. Mapping supportive relationships, practical resources, and meaningful roles that can aid recovery.
D. Asking about supportive adults, activities, strengths, and settings that can reinforce safer choices.

0017. A youth worker is asked to justify a plan for a child aged 7 in the youth advocacy program. It calls for exploring peer influence and emerging independence without assuming all adolescent use has the same meaning. Which concept provides the rationale?

A. Developmental framing
B. Recovery capital
C. Motivational enhancement
D. SBIRT

0018. Which comparison correctly distinguishes Adolescent substance-use screening from Motivational enhancement?

A. Adolescent substance-use screening: Identification of resources and conditions that support reduced use, safety, and healthy development. / Motivational enhancement: A collaborative strategy that strengthens a person's own motivation and commitment to change.
B. Adolescent substance-use screening: A brief, age-appropriate process to identify possible substance-related risk and need for fuller assessment. / Motivational enhancement: Understanding substance use in relation to adolescent development, peer context, access, and changing autonomy.
C. Adolescent substance-use screening: A collaborative strategy that strengthens a person's own motivation and commitment to change. / Motivational enhancement: A brief, age-appropriate process to identify possible substance-related risk and need for fuller assessment.
D. Adolescent substance-use screening: A brief, age-appropriate process to identify possible substance-related risk and need for fuller assessment. / Motivational enhancement: A collaborative strategy that strengthens a person's own motivation and commitment to change.

0019. A case conference asks for a distinction between Adolescent substance-use screening and Co-occurring conditions. Which answer is sound?

A. Adolescent substance-use screening: A brief, age-appropriate process to identify possible substance-related risk and need for fuller assessment. / Co-occurring conditions: Substance-related concerns that occur alongside mental-health or other health conditions.
B. Adolescent substance-use screening: Screening, brief intervention, and referral to treatment, a structured pathway for responding to substance-use risk. / Co-occurring conditions: Substance-related concerns that occur alongside mental-health or other health conditions.
C. Adolescent substance-use screening: A brief, age-appropriate process to identify possible substance-related risk and need for fuller assessment. / Co-occurring conditions: Planning for high-risk situations, cravings, coping responses, and support following a return to use or lapse.
D. Adolescent substance-use screening: Substance-related concerns that occur alongside mental-health or other health conditions. / Co-occurring conditions: A brief, age-appropriate process to identify possible substance-related risk and need for fuller assessment.

0020. Which option correctly matches each concept to its practice focus: Motivational enhancement and Recovery capital?

A. Motivational enhancement: Mapping supportive relationships, practical resources, and meaningful roles that can aid recovery. / Recovery capital: Eliciting the adolescent's reasons for and against change and reinforcing autonomy.
B. Motivational enhancement: Eliciting the adolescent's reasons for and against change and reinforcing autonomy. / Recovery capital: Using a validated youth-appropriate screen as an entry point rather than treating it as a diagnosis.
C. Motivational enhancement: Asking about supportive adults, activities, strengths, and settings that can reinforce safer choices. / Recovery capital: Mapping supportive relationships, practical resources, and meaningful roles that can aid recovery.
D. Motivational enhancement: Eliciting the adolescent's reasons for and against change and reinforcing autonomy. / Recovery capital: Mapping supportive relationships, practical resources, and meaningful roles that can aid recovery.

0021. Which statement accurately contrasts the course concepts Adolescent substance-use screening and Co-occurring conditions?

A. Adolescent substance-use screening: A brief, age-appropriate process to identify possible substance-related risk and need for fuller assessment. / Co-occurring conditions: Substance-related concerns that occur alongside mental-health or other health conditions.
B. Adolescent substance-use screening: A brief, age-appropriate process to identify possible substance-related risk and need for fuller assessment. / Co-occurring conditions: Planning for high-risk situations, cravings, coping responses, and support following a return to use or lapse.
C. Adolescent substance-use screening: Substance-related concerns that occur alongside mental-health or other health conditions. / Co-occurring conditions: A brief, age-appropriate process to identify possible substance-related risk and need for fuller assessment.
D. Adolescent substance-use screening: Screening, brief intervention, and referral to treatment, a structured pathway for responding to substance-use risk. / Co-occurring conditions: Substance-related concerns that occur alongside mental-health or other health conditions.

0022. Consider a student aged 12 receiving help in the telehealth session. The group facilitator focuses on explaining privacy and its exceptions accurately using current local law and policy before asking sensitive questions. Which term best describes the guiding idea?

A. Motivational enhancement
B. Harm reduction
C. Relapse prevention
D. Confidentiality and substance care

0023. How should a practitioner distinguish the applications of Protective factor assessment and Recovery capital?

A. Protective factor assessment: Asking about supportive adults, activities, strengths, and settings that can reinforce safer choices. / Recovery capital: Mapping supportive relationships, practical resources, and meaningful roles that can aid recovery.
B. Protective factor assessment: Mapping supportive relationships, practical resources, and meaningful roles that can aid recovery. / Recovery capital: Asking about supportive adults, activities, strengths, and settings that can reinforce safer choices.
C. Protective factor assessment: Asking about supportive adults, activities, strengths, and settings that can reinforce safer choices. / Recovery capital: Assessing anxiety, mood, trauma, and substance use together while coordinating appropriate care.
D. Protective factor assessment: Eliciting the adolescent's reasons for and against change and reinforcing autonomy. / Recovery capital: Mapping supportive relationships, practical resources, and meaningful roles that can aid recovery.

0024. While supporting a middle-school student in the family resource center, a school-based clinician adopts this practice: explaining privacy and its exceptions accurately using current local law and policy before asking sensitive questions. Which concept best explains the choice?

A. Co-occurring conditions
B. Protective factor assessment
C. Adolescent substance-use screening
D. Confidentiality and substance care

0025. Choose the definition pair that correctly explains Confidentiality and substance care first and Developmental framing second.

A. Confidentiality and substance care: Privacy rules for adolescent substance services that depend on jurisdiction, consent, and service context. / Developmental framing: Understanding substance use in relation to adolescent development, peer context, access, and changing autonomy.
B. Confidentiality and substance care: Personal, social, and community resources that can support recovery and sustained change. / Developmental framing: Understanding substance use in relation to adolescent development, peer context, access, and changing autonomy.
C. Confidentiality and substance care: Understanding substance use in relation to adolescent development, peer context, access, and changing autonomy. / Developmental framing: Privacy rules for adolescent substance services that depend on jurisdiction, consent, and service context.
D. Confidentiality and substance care: Privacy rules for adolescent substance services that depend on jurisdiction, consent, and service context. / Developmental framing: Screening, brief intervention, and referral to treatment, a structured pathway for responding to substance-use risk.

0026. Which statement most accurately defines Protective factor assessment?

A. Practical strategies intended to reduce substance-related risks without requiring immediate abstinence as a precondition for care.
B. Substance-related concerns that occur alongside mental-health or other health conditions.
C. Planning for high-risk situations, cravings, coping responses, and support following a return to use or lapse.
D. Identification of resources and conditions that support reduced use, safety, and healthy development.

0027. At the supervision meeting, a community practitioner reviews whether a plan for a older adolescent client is appropriate. The relevant practice is using a validated youth-appropriate screen as an entry point rather than treating it as a diagnosis. Which concept is tested?

A. Harm reduction
B. Adolescent substance-use screening
C. SBIRT
D. Developmental framing

0028. Which option preserves the correct meaning of both Protective factor assessment and Developmental framing?

A. Protective factor assessment: Understanding substance use in relation to adolescent development, peer context, access, and changing autonomy. / Developmental framing: Identification of resources and conditions that support reduced use, safety, and healthy development.
B. Protective factor assessment: Identification of resources and conditions that support reduced use, safety, and healthy development. / Developmental framing: A brief, age-appropriate process to identify possible substance-related risk and need for fuller assessment.
C. Protective factor assessment: Personal, social, and community resources that can support recovery and sustained change. / Developmental framing: Understanding substance use in relation to adolescent development, peer context, access, and changing autonomy.
D. Protective factor assessment: Identification of resources and conditions that support reduced use, safety, and healthy development. / Developmental framing: Understanding substance use in relation to adolescent development, peer context, access, and changing autonomy.

0029. A supervisor asks for an applied contrast between Motivational enhancement and Harm reduction. Which option fits?

A. Motivational enhancement: Eliciting the adolescent's reasons for and against change and reinforcing autonomy. / Harm reduction: Discussing realistic safety steps while continuing to support the adolescent's goals and options.
B. Motivational enhancement: Linking screening results to a brief conversation and appropriate referral when indicated. / Harm reduction: Discussing realistic safety steps while continuing to support the adolescent's goals and options.
C. Motivational enhancement: Discussing realistic safety steps while continuing to support the adolescent's goals and options. / Harm reduction: Eliciting the adolescent's reasons for and against change and reinforcing autonomy.
D. Motivational enhancement: Eliciting the adolescent's reasons for and against change and reinforcing autonomy. / Harm reduction: Explaining privacy and its exceptions accurately using current local law and policy before asking sensitive questions.

0030. Which statement accurately contrasts the course concepts Protective factor assessment and Co-occurring conditions?

A. Protective factor assessment: Identification of resources and conditions that support reduced use, safety, and healthy development. / Co-occurring conditions: A brief, age-appropriate process to identify possible substance-related risk and need for fuller assessment.
B. Protective factor assessment: Substance-related concerns that occur alongside mental-health or other health conditions. / Co-occurring conditions: Identification of resources and conditions that support reduced use, safety, and healthy development.
C. Protective factor assessment: Personal, social, and community resources that can support recovery and sustained change. / Co-occurring conditions: Substance-related concerns that occur alongside mental-health or other health conditions.
D. Protective factor assessment: Identification of resources and conditions that support reduced use, safety, and healthy development. / Co-occurring conditions: Substance-related concerns that occur alongside mental-health or other health conditions.

0031. Which pair of actions illustrates Adolescent substance-use screening and Developmental framing, respectively?

A. Adolescent substance-use screening: Linking screening results to a brief conversation and appropriate referral when indicated. / Developmental framing: Exploring peer influence and emerging independence without assuming all adolescent use has the same meaning.
B. Adolescent substance-use screening: Exploring peer influence and emerging independence without assuming all adolescent use has the same meaning. / Developmental framing: Using a validated youth-appropriate screen as an entry point rather than treating it as a diagnosis.
C. Adolescent substance-use screening: Using a validated youth-appropriate screen as an entry point rather than treating it as a diagnosis. / Developmental framing: Identifying triggers and rehearsal of a response plan without framing a lapse as total failure.
D. Adolescent substance-use screening: Using a validated youth-appropriate screen as an entry point rather than treating it as a diagnosis. / Developmental framing: Exploring peer influence and emerging independence without assuming all adolescent use has the same meaning.

0032. Choose the definition pair that correctly explains SBIRT first and Co-occurring conditions second.

A. SBIRT: Substance-related concerns that occur alongside mental-health or other health conditions. / Co-occurring conditions: Screening, brief intervention, and referral to treatment, a structured pathway for responding to substance-use risk.
B. SBIRT: Privacy rules for adolescent substance services that depend on jurisdiction, consent, and service context. / Co-occurring conditions: Substance-related concerns that occur alongside mental-health or other health conditions.
C. SBIRT: Screening, brief intervention, and referral to treatment, a structured pathway for responding to substance-use risk. / Co-occurring conditions: Substance-related concerns that occur alongside mental-health or other health conditions.
D. SBIRT: Screening, brief intervention, and referral to treatment, a structured pathway for responding to substance-use risk. / Co-occurring conditions: Practical strategies intended to reduce substance-related risks without requiring immediate abstinence as a precondition for care.

0033. A high-school student's service team meets in the school counseling office. The family therapist recommends a change involving asking about supportive adults, activities, strengths, and settings that can reinforce safer choices. Which idea best explains it?

A. Motivational enhancement
B. SBIRT
C. Protective factor assessment
D. Confidentiality and substance care

0034. What is the central meaning of Motivational enhancement?

A. Practical strategies intended to reduce substance-related risks without requiring immediate abstinence as a precondition for care.
B. Understanding substance use in relation to adolescent development, peer context, access, and changing autonomy.
C. A collaborative strategy that strengthens a person's own motivation and commitment to change.
D. Identification of resources and conditions that support reduced use, safety, and healthy development.

0035. Which option is the clearest practical expression of SBIRT?

A. Assessing anxiety, mood, trauma, and substance use together while coordinating appropriate care.
B. Explaining privacy and its exceptions accurately using current local law and policy before asking sensitive questions.
C. Linking screening results to a brief conversation and appropriate referral when indicated.
D. Discussing realistic safety steps while continuing to support the adolescent's goals and options.

0036. In adolescent substance-use counseling, choose the definition pair that correctly explains Relapse prevention first and Developmental framing second.

A. Relapse prevention: Planning for high-risk situations, cravings, coping responses, and support following a return to use or lapse. / Developmental framing: Identification of resources and conditions that support reduced use, safety, and healthy development.
B. Relapse prevention: Understanding substance use in relation to adolescent development, peer context, access, and changing autonomy. / Developmental framing: Planning for high-risk situations, cravings, coping responses, and support following a return to use or lapse.
C. Relapse prevention: Practical strategies intended to reduce substance-related risks without requiring immediate abstinence as a precondition for care. / Developmental framing: Understanding substance use in relation to adolescent development, peer context, access, and changing autonomy.
D. Relapse prevention: Planning for high-risk situations, cravings, coping responses, and support following a return to use or lapse. / Developmental framing: Understanding substance use in relation to adolescent development, peer context, access, and changing autonomy.

0037. When reviewing a young person’s plan in the supervision meeting, the family therapist notes that the next step is discussing realistic safety steps while continuing to support the adolescent’s goals and options. Which concept guides this step?

A. Co-occurring conditions
B. Confidentiality and substance care
C. Motivational enhancement
D. Harm reduction

0038. A child of elementary-school age is receiving support in the clinical planning session. The consulting counselor is guided by this practice: assessing anxiety, mood, trauma, and substance use together while coordinating appropriate care. Which principle best fits?

A. Protective factor assessment
B. Adolescent substance-use screening
C. SBIRT
D. Co-occurring conditions

0039. A case conference asks for a distinction between Adolescent substance-use screening and Protective factor assessment. Which answer is sound?

A. Adolescent substance-use screening: A brief, age-appropriate process to identify possible substance-related risk and need for fuller assessment. / Protective factor assessment: Planning for high-risk situations, cravings, coping responses, and support following a return to use or lapse.
B. Adolescent substance-use screening: A brief, age-appropriate process to identify possible substance-related risk and need for fuller assessment. / Protective factor assessment: Identification of resources and conditions that support reduced use, safety, and healthy development.
C. Adolescent substance-use screening: A collaborative strategy that strengthens a person’s own motivation and commitment to change. / Protective factor assessment: Identification of resources and conditions that support reduced use, safety, and healthy development.
D. Adolescent substance-use screening: Identification of resources and conditions that support reduced use, safety, and healthy development. / Protective factor assessment: A brief, age-appropriate process to identify possible substance-related risk and need for fuller assessment.

0040. What is the central meaning of Adolescent substance-use screening?

A. Planning for high-risk situations, cravings, coping responses, and support following a return to use or lapse.
B. Understanding substance use in relation to adolescent development, peer context, access, and changing autonomy.
C. A brief, age-appropriate process to identify possible substance-related risk and need for fuller assessment.
D. Substance-related concerns that occur alongside mental-health or other health conditions.

0041. A young adolescent client’s service team meets in the after-school program. The case coordinator recommends a change involving using a validated youth-appropriate screen as an entry point rather than treating it as a diagnosis. Which idea best explains it?

A. Adolescent substance-use screening
B. Motivational enhancement
C. Developmental framing
D. SBIRT

0042. Choose the definition pair that correctly explains Harm reduction first and Recovery capital second.

A. Harm reduction: Practical strategies intended to reduce substance-related risks without requiring immediate abstinence as a precondition for care. / Recovery capital: Personal, social, and community resources that can support recovery and sustained change.
B. Harm reduction: Substance-related concerns that occur alongside mental-health or other health conditions. / Recovery capital: Personal, social, and community resources that can support recovery and sustained change.
C. Harm reduction: Practical strategies intended to reduce substance-related risks without requiring immediate abstinence as a precondition for care. / Recovery capital: A collaborative strategy that strengthens a person’s own motivation and commitment to change.
D. Harm reduction: Personal, social, and community resources that can support recovery and sustained change. / Recovery capital: Practical strategies intended to reduce substance-related risks without requiring immediate abstinence as a precondition for care.

0043. In adolescent substance-use counseling, a trainee must distinguish how Relapse prevention and Developmental framing guide practice. Which comparison is accurate?

A. Relapse prevention: Identifying triggers and rehearsal of a response plan without framing a lapse as total failure. / Developmental framing: Asking about supportive adults, activities, strengths, and settings that can reinforce safer choices.
B. Relapse prevention: Exploring peer influence and emerging independence without assuming all adolescent use has the same meaning. / Developmental framing: Identifying triggers and rehearsal of a response plan without framing a lapse as total failure.
C. Relapse prevention: Identifying triggers and rehearsal of a response plan without framing a lapse as total failure. / Developmental framing: Exploring peer influence and emerging independence without assuming all adolescent use has the same meaning.
D. Relapse prevention: Discussing realistic safety steps while continuing to support the adolescent’s goals and options. / Developmental framing: Exploring peer influence and emerging independence without assuming all adolescent use has the same meaning.

0044. Choose the definition pair that correctly explains Protective factor assessment first and Confidentiality and substance care second.

A. Protective factor assessment: Personal, social, and community resources that can support recovery and sustained change. / Confidentiality and substance care: Privacy rules for adolescent substance services that depend on jurisdiction, consent, and service context.
B. Protective factor assessment: Privacy rules for adolescent substance services that depend on jurisdiction, consent, and service context. / Confidentiality and substance care: Identification of resources and conditions that support reduced use, safety, and healthy development.
C. Protective factor assessment: Identification of resources and conditions that support reduced use, safety, and healthy development. / Confidentiality and substance care: Understanding substance use in relation to adolescent development, peer context, access, and changing autonomy.
D. Protective factor assessment: Identification of resources and conditions that support reduced use, safety, and healthy development. / Confidentiality and substance care: Privacy rules for adolescent substance services that depend on jurisdiction, consent, and service context.

0045. In adolescent substance-use counseling, a student confuses Co-occurring conditions with Relapse prevention. Which explanation most accurately separates them?

A. Co-occurring conditions: Substance-related concerns that occur alongside mental-health or other health conditions. / Relapse prevention: Planning for high-risk situations, cravings, coping responses, and support following a return to use or lapse.
B. Co-occurring conditions: Substance-related concerns that occur alongside mental-health or other health conditions. / Relapse prevention: Practical strategies intended to reduce substance-related risks without requiring immediate abstinence as a precondition for care.
C. Co-occurring conditions: Privacy rules for adolescent substance services that depend on jurisdiction, consent, and service context. / Relapse prevention: Planning for high-risk situations, cravings, coping responses, and support following a return to use or lapse.
D. Co-occurring conditions: Planning for high-risk situations, cravings, coping responses, and support following a return to use or lapse. / Relapse prevention: Substance-related concerns that occur alongside mental-health or other health conditions.

0046. During work in the telehealth session, a youth worker identifies this need: eliciting the adolescent's reasons for and against change and reinforcing autonomy. Which idea should guide the response?

A. Harm reduction
B. Relapse prevention
C. Motivational enhancement
D. Developmental framing

0047. A student confuses Confidentiality and substance care with Developmental framing. Which explanation most accurately separates them?

A. Confidentiality and substance care: Understanding substance use in relation to adolescent development, peer context, access, and changing autonomy. / Developmental framing: Privacy rules for adolescent substance services that depend on jurisdiction, consent, and service context.
B. Confidentiality and substance care: Privacy rules for adolescent substance services that depend on jurisdiction, consent, and service context. / Developmental framing: Screening, brief intervention, and referral to treatment, a structured pathway for responding to substance-use risk.
C. Confidentiality and substance care: Personal, social, and community resources that can support recovery and sustained change. / Developmental framing: Understanding substance use in relation to adolescent development, peer context, access, and changing autonomy.
D. Confidentiality and substance care: Privacy rules for adolescent substance services that depend on jurisdiction, consent, and service context. / Developmental framing: Understanding substance use in relation to adolescent development, peer context, access, and changing autonomy.

0048. In adolescent substance-use counseling, at the youth advocacy program, a play therapist meets with a child aged 14. The practice priority is: identifying triggers and rehearsal of a response plan without framing a lapse as total failure. Which concept best captures that priority?

A. Confidentiality and substance care
B. Relapse prevention
C. Protective factor assessment
D. Developmental framing

0049. For a student aged 12 in the community service agency, a clinical supervisor makes this practice the immediate priority: discussing realistic safety steps while continuing to support the adolescent's goals and options. Which concept fits best?

A. Confidentiality and substance care
B. Recovery capital
C. Motivational enhancement
D. Harm reduction

0050. In adolescent substance-use counseling, select the best explanation of Relapse prevention.

A. A collaborative strategy that strengthens a person's own motivation and commitment to change.
B. Practical strategies intended to reduce substance-related risks without requiring immediate abstinence as a precondition for care.
C. Privacy rules for adolescent substance services that depend on jurisdiction, consent, and service context.
D. Planning for high-risk situations, cravings, coping responses, and support following a return to use or lapse.

0051. A case conference asks for a distinction between Adolescent substance-use screening and Recovery capital. Which answer is sound?

A. Adolescent substance-use screening: Planning for high-risk situations, cravings, coping responses, and support following a return to use or lapse. / Recovery capital: Personal, social, and community resources that can support recovery and sustained change.
B. Adolescent substance-use screening: Personal, social, and community resources that can support recovery and sustained change. / Recovery capital: A brief, age-appropriate process to identify possible substance-related risk and need for fuller assessment.
C. Adolescent substance-use screening: A brief, age-appropriate process to identify possible substance-related risk and need for fuller assessment. / Recovery capital: Personal, social, and community resources that can support recovery and sustained change.
D. Adolescent substance-use screening: A brief, age-appropriate process to identify possible substance-related risk and need for fuller assessment. / Recovery capital: Screening, brief intervention, and referral to treatment, a structured pathway for responding to substance-use risk.

0052. A team must select a support approach for a high-school student at the telehealth session. The caregiver working with a counselor recommends exploring peer influence and emerging independence without assuming all adolescent use has the same meaning. Which idea is most relevant?

A. Adolescent substance-use screening
B. SBIRT
C. Recovery capital
D. Developmental framing

0053. Select the best explanation of Co-occurring conditions.

A. Personal, social, and community resources that can support recovery and sustained change.
B. Screening, brief intervention, and referral to treatment, a structured pathway for responding to substance-use risk.
C. Understanding substance use in relation to adolescent development, peer context, access, and changing autonomy.
D. Substance-related concerns that occur alongside mental-health or other health conditions.

0054. Which statement shows a sound practice-level distinction between Harm reduction and SBIRT?

A. Harm reduction: Discussing realistic safety steps while continuing to support the adolescent's goals and options. / SBIRT: Linking screening results to a brief conversation and appropriate referral when indicated.
B. Harm reduction: Discussing realistic safety steps while continuing to support the adolescent's goals and options. / SBIRT: Using a validated youth-appropriate screen as an entry point rather than treating it as a diagnosis.
C. Harm reduction: Explaining privacy and its exceptions accurately using current local law and policy before asking sensitive questions. / SBIRT: Linking screening results to a brief conversation and appropriate referral when indicated.
D. Harm reduction: Linking screening results to a brief conversation and appropriate referral when indicated. / SBIRT: Discussing realistic safety steps while continuing to support the adolescent's goals and options.

0055. Select the best explanation of Harm reduction.

A. A collaborative strategy that strengthens a person's own motivation and commitment to change.
B. Identification of resources and conditions that support reduced use, safety, and healthy development.
C. Practical strategies intended to reduce substance-related risks without requiring immediate abstinence as a precondition for care.
D. Planning for high-risk situations, cravings, coping responses, and support following a return to use or lapse.

0056. For a child aged 11 in the counseling practicum, a play therapist makes this practice the immediate priority: exploring peer influence and emerging independence without assuming all adolescent use has the same meaning. Which concept fits best?

A. Co-occurring conditions
B. Developmental framing
C. Relapse prevention
D. Confidentiality and substance care

0057. In adolescent substance-use counseling, a case conference asks for a distinction between Relapse prevention and Developmental framing. Which answer is sound?

A. Relapse prevention: Planning for high-risk situations, cravings, coping responses, and support following a return to use or lapse. / Developmental framing: Identification of resources and conditions that support reduced use, safety, and healthy development.
B. Relapse prevention: Planning for high-risk situations, cravings, coping responses, and support following a return to use or lapse. / Developmental framing: Understanding substance use in relation to adolescent development, peer context, access, and changing autonomy.
C. Relapse prevention: Understanding substance use in relation to adolescent development, peer context, access, and changing autonomy. / Developmental framing: Planning for high-risk situations, cravings, coping responses, and support following a return to use or lapse.
D. Relapse prevention: Practical strategies intended to reduce substance-related risks without requiring immediate abstinence as a precondition for care. / Developmental framing: Understanding substance use in relation to adolescent development, peer context, access, and changing autonomy.

0058. A case discussion concerns a child aged 11 and a family therapist in the family session. The practitioner is considering using a validated youth-appropriate screen as an entry point rather than treating it as a diagnosis. Which principle is involved?

A. Relapse prevention
B. Protective factor assessment
C. SBIRT
D. Adolescent substance-use screening

0059. Which choice aligns each practice with the correct idea, Motivational enhancement or Harm reduction?

A. Motivational enhancement: Linking screening results to a brief conversation and appropriate referral when indicated. / Harm reduction: Discussing realistic safety steps while continuing to support the adolescent's goals and options.
B. Motivational enhancement: Discussing realistic safety steps while continuing to support the adolescent's goals and options. / Harm reduction: Eliciting the adolescent's reasons for and against change and reinforcing autonomy.
C. Motivational enhancement: Eliciting the adolescent's reasons for and against change and reinforcing autonomy. / Harm reduction: Explaining privacy and its exceptions accurately using current local law and policy before asking sensitive questions.
D. Motivational enhancement: Eliciting the adolescent's reasons for and against change and reinforcing autonomy. / Harm reduction: Discussing realistic safety steps while continuing to support the adolescent's goals and options.

0060. Identify the most precise label for this idea: A collaborative strategy that strengthens a person's own motivation and commitment to change.

A. Relapse prevention
B. Motivational enhancement
C. Protective factor assessment
D. Recovery capital

0061. Which choice aligns each practice with the correct idea, Confidentiality and substance care or Developmental framing?

A. Confidentiality and substance care: Explaining privacy and its exceptions accurately using current local law and policy before asking sensitive questions. / Developmental framing: Linking screening results to a brief conversation and appropriate referral when indicated.
B. Confidentiality and substance care: Mapping supportive relationships, practical resources, and meaningful roles that can aid recovery. / Developmental framing: Exploring peer influence and emerging independence without assuming all adolescent use has the same meaning.
C. Confidentiality and substance care: Exploring peer influence and emerging independence without assuming all adolescent use has the same meaning. / Developmental framing: Explaining privacy and its exceptions accurately using current local law and policy before asking sensitive questions.
D. Confidentiality and substance care: Explaining privacy and its exceptions accurately using current local law and policy before asking sensitive questions. / Developmental framing: Exploring peer influence and emerging independence without assuming all adolescent use has the same meaning.

0062. A caregiver working with a counselor presents a support plan for a client in early adolescence at the behavior-support review. Its central feature is using a validated youth-appropriate screen as an entry point rather than treating it as a diagnosis. Which concept should be named?

A. Adolescent substance-use screening
B. SBIRT
C. Protective factor assessment
D. Co-occurring conditions

0063. A trainee must explain Motivational enhancement. Which answer is accurate?

A. Identification of resources and conditions that support reduced use, safety, and healthy development.
B. Planning for high-risk situations, cravings, coping responses, and support following a return to use or lapse.
C. A collaborative strategy that strengthens a person's own motivation and commitment to change.
D. Privacy rules for adolescent substance services that depend on jurisdiction, consent, and service context.

0064. In adolescent substance-use counseling, choose the practice comparison that best separates SBIRT from Relapse prevention.

A. SBIRT: Identifying triggers and rehearsal of a response plan without framing a lapse as total failure. / Relapse prevention: Linking screening results to a brief conversation and appropriate referral when indicated.
B. SBIRT: Linking screening results to a brief conversation and appropriate referral when indicated. / Relapse prevention: Exploring peer influence and emerging independence without assuming all adolescent use has the same meaning.
C. SBIRT: Linking screening results to a brief conversation and appropriate referral when indicated. / Relapse prevention: Identifying triggers and rehearsal of a response plan without framing a lapse as total failure.
D. SBIRT: Assessing anxiety, mood, trauma, and substance use together while coordinating appropriate care. / Relapse prevention: Identifying triggers and rehearsal of a response plan without framing a lapse as total failure.

0065. During work in the outpatient clinic, a teacher and counselor identifies this need: using a validated youth-appropriate screen as an entry point rather than treating it as a diagnosis. Which idea should guide the response?

A. Adolescent substance-use screening
B. Protective factor assessment
C. Harm reduction
D. Developmental framing

0066. Which course concept is defined as follows: A brief, age-appropriate process to identify possible substance-related risk and need for fuller assessment.

A. Adolescent substance-use screening
B. Protective factor assessment
C. Recovery capital
D. Motivational enhancement

0067. During work in the supervision meeting, a school counselor identifies this need: asking about supportive adults, activities, strengths, and settings that can reinforce safer choices. Which idea should guide the response?

A. Confidentiality and substance care
B. Harm reduction
C. Protective factor assessment
D. Recovery capital

0068. For a student aged 15 in the community mental-health service, a counselor makes this practice the immediate priority: explaining privacy and its exceptions accurately using current local law and policy before asking sensitive questions. Which concept fits best?

A. Developmental framing
B. Protective factor assessment
C. Confidentiality and substance care
D. Recovery capital

0069. A trainee must distinguish how Protective factor assessment and Developmental framing guide practice. Which comparison is accurate?

A. Protective factor assessment: Asking about supportive adults, activities, strengths, and settings that can reinforce safer choices. / Developmental framing: Exploring peer influence and emerging independence without assuming all adolescent use has the same meaning.
B. Protective factor assessment: Mapping supportive relationships, practical resources, and meaningful roles that can aid recovery. / Developmental framing: Exploring peer influence and emerging independence without assuming all adolescent use has the same meaning.
C. Protective factor assessment: Exploring peer influence and emerging independence without assuming all adolescent use has the same meaning. / Developmental framing: Asking about supportive adults, activities, strengths, and settings that can reinforce safer choices.
D. Protective factor assessment: Asking about supportive adults, activities, strengths, and settings that can reinforce safer choices. / Developmental framing: Using a validated youth-appropriate screen as an entry point rather than treating it as a diagnosis.

0070. A parent educator presents a support plan for a older adolescent client at the outpatient clinic. Its central feature is linking screening results to a brief conversation and appropriate referral when indicated. Which concept should be named?

A. Protective factor assessment
B. Adolescent substance-use screening
C. SBIRT
D. Relapse prevention

0071. Which course concept is defined as follows: A collaborative strategy that strengthens a person's own motivation and commitment to change.

A. SBIRT
B. Relapse prevention
C. Harm reduction
D. Motivational enhancement

0072. A trainee must distinguish how SBIRT and Co-occurring conditions guide practice. Which comparison is accurate?

A. SBIRT: Assessing anxiety, mood, trauma, and substance use together while coordinating appropriate care. / Co-occurring conditions: Linking screening results to a brief conversation and appropriate referral when indicated.
B. SBIRT: Linking screening results to a brief conversation and appropriate referral when indicated. / Co-occurring conditions: Assessing anxiety, mood, trauma, and substance use together while coordinating appropriate care.
C. SBIRT: Linking screening results to a brief conversation and appropriate referral when indicated. / Co-occurring conditions: Discussing realistic safety steps while continuing to support the adolescent's goals and options.
D. SBIRT: Explaining privacy and its exceptions accurately using current local law and policy before asking sensitive questions. / Co-occurring conditions: Assessing anxiety, mood, trauma, and substance use together while coordinating appropriate care.

0073. At the outpatient clinic, a behavior specialist meets with a young adolescent client. The practice priority is: exploring peer influence and emerging independence without assuming all adolescent use has the same meaning. Which concept best captures that priority?

A. Relapse prevention
B. Developmental framing
C. Recovery capital
D. SBIRT

0074. A doctoral student reads the following description. Which concept does it define? Substance-related concerns that occur alongside mental-health or other health conditions.

A. Harm reduction
B. Motivational enhancement
C. Protective factor assessment
D. Co-occurring conditions

0075. A group facilitator is asked to justify a plan for a young person in the clinical planning session. It calls for using a validated youth-appropriate screen as an entry point rather than treating it as a diagnosis. Which concept provides the rationale?

A. Relapse prevention
B. Adolescent substance-use screening
C. Developmental framing
D. SBIRT

0076. Which description belongs with the term Harm reduction?

A. Personal, social, and community resources that can support recovery and sustained change.
B. Identification of resources and conditions that support reduced use, safety, and healthy development.
C. Practical strategies intended to reduce substance-related risks without requiring immediate abstinence as a precondition for care.
D. Understanding substance use in relation to adolescent development, peer context, access, and changing autonomy.

0077. Which option preserves the correct meaning of both Motivational enhancement and Developmental framing?

A. Motivational enhancement: A collaborative strategy that strengthens a person's own motivation and commitment to change. / Developmental framing: Planning for high-risk situations, cravings, coping responses, and support following a return to use or lapse.
B. Motivational enhancement: Understanding substance use in relation to adolescent development, peer context, access, and changing autonomy. / Developmental framing: A collaborative strategy that strengthens a person's own motivation and commitment to change.
C. Motivational enhancement: Substance-related concerns that occur alongside mental-health or other health conditions. / Developmental framing: Understanding substance use in relation to adolescent development, peer context, access, and changing autonomy.
D. Motivational enhancement: A collaborative strategy that strengthens a person's own motivation and commitment to change. / Developmental framing: Understanding substance use in relation to adolescent development, peer context, access, and changing autonomy.

0078. Which statement most accurately defines SBIRT?

A. Personal, social, and community resources that can support recovery and sustained change.
B. Screening, brief intervention, and referral to treatment, a structured pathway for responding to substance-use risk.
C. Privacy rules for adolescent substance services that depend on jurisdiction, consent, and service context.
D. Planning for high-risk situations, cravings, coping responses, and support following a return to use or lapse.

0079. In the student-support meeting, the agreed focus for a program coordinator working with a child of elementary-school age is exploring peer influence and emerging independence without assuming all adolescent use has the same meaning. Which concept names this focus?

A. Developmental framing
B. Protective factor assessment
C. Relapse prevention
D. Co-occurring conditions

0080. In the after-school program, a team asks how a youth worker can support a high-school student. One proposed action is mapping supportive relationships, practical resources, and meaningful roles that can aid recovery. Which idea does it represent?

A. Motivational enhancement
B. Recovery capital
C. Protective factor assessment
D. Adolescent substance-use screening

0081. Which statement accurately contrasts the course concepts Motivational enhancement and Protective factor assessment?

A. Motivational enhancement: A collaborative strategy that strengthens a person's own motivation and commitment to change. / Protective factor assessment: A brief, age-appropriate process to identify possible substance-related risk and need for fuller assessment.
B. Motivational enhancement: Identification of resources and conditions that support reduced use, safety, and healthy development. / Protective factor assessment: A collaborative strategy that strengthens a person's own motivation and commitment to change.
C. Motivational enhancement: A collaborative strategy that strengthens a person's own motivation and commitment to change. / Protective factor assessment: Identification of resources and conditions that support reduced use, safety, and healthy development.
D. Motivational enhancement: Screening, brief intervention, and referral to treatment, a structured pathway for responding to substance-use risk. / Protective factor assessment: Identification of resources and conditions that support reduced use, safety, and healthy development.

0082. How are SBIRT and Developmental framing most accurately differentiated in this curriculum?

A. SBIRT: Screening, brief intervention, and referral to treatment, a structured pathway for responding to substance-use risk. / Developmental framing: Planning for high-risk situations, cravings, coping responses, and support following a return to use or lapse.
B. SBIRT: Understanding substance use in relation to adolescent development, peer context, access, and changing autonomy. / Developmental framing: Screening, brief intervention, and referral to treatment, a structured pathway for responding to substance-use risk.
C. SBIRT: Screening, brief intervention, and referral to treatment, a structured pathway for responding to substance-use risk. / Developmental framing: Understanding substance use in relation to adolescent development, peer context, access, and changing autonomy.
D. SBIRT: Personal, social, and community resources that can support recovery and sustained change. / Developmental framing: Understanding substance use in relation to adolescent development, peer context, access, and changing autonomy.

0083. In adolescent substance-use counseling, a research trainee describes an intervention for a young person aged 13 in the parent meeting, centered on identifying triggers and rehearsal of a response plan without framing a lapse as total failure. Which named idea is most relevant?

A. Developmental framing
B. Relapse prevention
C. Recovery capital
D. Co-occurring conditions

0084. Which option pairs the definitions of Motivational enhancement and Protective factor assessment correctly, in that order?

A. Motivational enhancement: Identification of resources and conditions that support reduced use, safety, and healthy development. / Protective factor assessment: A collaborative strategy that strengthens a person's own motivation and commitment to change.
B. Motivational enhancement: Screening, brief intervention, and referral to treatment, a structured pathway for responding to substance-use risk. / Protective factor assessment: Identification of resources and conditions that support reduced use, safety, and healthy development.
C. Motivational enhancement: A collaborative strategy that strengthens a person's own motivation and commitment to change. / Protective factor assessment: A brief, age-appropriate process to identify possible substance-related risk and need for fuller assessment.
D. Motivational enhancement: A collaborative strategy that strengthens a person's own motivation and commitment to change. / Protective factor assessment: Identification of resources and conditions that support reduced use, safety, and healthy development.

0085. At a case-planning meeting, the clinical supervisor proposes eliciting the adolescent's reasons for and against change and reinforcing autonomy. for a student aged 15 seen in the family session. Which concept does this illustrate?

A. Harm reduction
B. Co-occurring conditions
C. Motivational enhancement
D. SBIRT

0086. Which choice aligns each practice with the correct idea, Confidentiality and substance care or Recovery capital?

A. Confidentiality and substance care: Explaining privacy and its exceptions accurately using current local law and policy before asking sensitive questions. / Recovery capital: Mapping supportive relationships, practical resources, and meaningful roles that can aid recovery.
B. Confidentiality and substance care: Mapping supportive relationships, practical resources, and meaningful roles that can aid recovery. / Recovery capital: Explaining privacy and its exceptions accurately using current local law and policy before asking sensitive questions.
C. Confidentiality and substance care: Discussing realistic safety steps while continuing to support the adolescent's goals and options. / Recovery capital: Mapping supportive relationships, practical resources, and meaningful roles that can aid recovery.
D. Confidentiality and substance care: Explaining privacy and its exceptions accurately using current local law and policy before asking sensitive questions. / Recovery capital: Asking about supportive adults, activities, strengths, and settings that can reinforce safer choices.

0087. In adolescent substance-use counseling, a planning meeting about a high-school student includes a behavior specialist. The proposed practice in the caregiver consultation is identifying triggers and rehearsal of a response plan without framing a lapse as total failure. Which idea underlies it?

A. Relapse prevention
B. Co-occurring conditions
C. Motivational enhancement
D. Developmental framing

0088. Choose the term that matches this definition: Substance-related concerns that occur alongside mental-health or other health conditions.

A. Motivational enhancement
B. Co-occurring conditions
C. Recovery capital
D. Confidentiality and substance care

0089. A support meeting for a young person aged 10 includes a play therapist in the parent meeting. The practice under consideration is eliciting the adolescent's reasons for and against change and reinforcing autonomy. Which concept guides it?

A. Co-occurring conditions
B. Recovery capital
C. Motivational enhancement
D. Harm reduction

0090. In a supervision quiz, how should Harm reduction be distinguished from Co-occurring conditions?

A. Harm reduction: Substance-related concerns that occur alongside mental-health or other health conditions. / Co-occurring conditions: Practical strategies intended to reduce substance-related risks without requiring immediate abstinence as a precondition for care.
B. Harm reduction: Practical strategies intended to reduce substance-related risks without requiring immediate abstinence as a precondition for care. / Co-occurring conditions: Substance-related concerns that occur alongside mental-health or other health conditions.
C. Harm reduction: Screening, brief intervention, and referral to treatment, a structured pathway for responding to substance-use risk. / Co-occurring conditions: Substance-related concerns that occur alongside mental-health or other health conditions.
D. Harm reduction: Practical strategies intended to reduce substance-related risks without requiring immediate abstinence as a precondition for care. / Co-occurring conditions: A brief, age-appropriate process to identify possible substance-related risk and need for fuller assessment.

0091. Which pair of actions illustrates SBIRT and Recovery capital, respectively?

A. SBIRT: Linking screening results to a brief conversation and appropriate referral when indicated. / Recovery capital: Explaining privacy and its exceptions accurately using current local law and policy before asking sensitive questions.
B. SBIRT: Exploring peer influence and emerging independence without assuming all adolescent use has the same meaning. / Recovery capital: Mapping supportive relationships, practical resources, and meaningful roles that can aid recovery.
C. SBIRT: Mapping supportive relationships, practical resources, and meaningful roles that can aid recovery. / Recovery capital: Linking screening results to a brief conversation and appropriate referral when indicated.
D. SBIRT: Linking screening results to a brief conversation and appropriate referral when indicated. / Recovery capital: Mapping supportive relationships, practical resources, and meaningful roles that can aid recovery.

0092. When reviewing a teenage client's plan in the classroom support meeting, the parent educator notes that the next step is exploring peer influence and emerging independence without assuming all adolescent use has the same meaning. Which concept guides this step?

A. Confidentiality and substance care
B. Co-occurring conditions
C. Developmental framing
D. Motivational enhancement

0093. A behavior specialist reviews a plan for a young person in the parent meeting. The plan emphasizes explaining privacy and its exceptions accurately using current local law and policy before asking sensitive questions. Which course idea does this reflect?

A. Relapse prevention
B. Co-occurring conditions
C. Confidentiality and substance care
D. Recovery capital

0094. In the behavior-support review, a consulting counselor describes the most appropriate support for a student aged 9 as discussing realistic safety steps while continuing to support the adolescent's goals and options. Which framework is being applied?

A. Relapse prevention
B. Developmental framing
C. Harm reduction
D. Co-occurring conditions

0095. A planning meeting about a preadolescent child includes a play therapist. The proposed practice in the family resource center is discussing realistic safety steps while continuing to support the adolescent's goals and options. Which idea underlies it?

A. Harm reduction
B. Developmental framing
C. SBIRT
D. Protective factor assessment

0096. Which comparison correctly distinguishes Motivational enhancement from Harm reduction?

A. Motivational enhancement: Practical strategies intended to reduce substance-related risks without requiring immediate abstinence as a precondition for care. / Harm reduction: A collaborative strategy that strengthens a person's own motivation and commitment to change.
B. Motivational enhancement: A collaborative strategy that strengthens a person's own motivation and commitment to change. / Harm reduction: Privacy rules for adolescent substance services that depend on jurisdiction, consent, and service context.
C. Motivational enhancement: Screening, brief intervention, and referral to treatment, a structured pathway for responding to substance-use risk. / Harm reduction: Practical strategies intended to reduce substance-related risks without requiring immediate abstinence as a precondition for care.
D. Motivational enhancement: A collaborative strategy that strengthens a person's own motivation and commitment to change. / Harm reduction: Practical strategies intended to reduce substance-related risks without requiring immediate abstinence as a precondition for care.

0097. A case conference asks for a distinction between Harm reduction and Developmental framing. Which answer is sound?

A. Harm reduction: Planning for high-risk situations, cravings, coping responses, and support following a return to use or lapse. / Developmental framing: Understanding substance use in relation to adolescent development, peer context, access, and changing autonomy.
B. Harm reduction: Understanding substance use in relation to adolescent development, peer context, access, and changing autonomy. / Developmental framing: Practical strategies intended to reduce substance-related risks without requiring immediate abstinence as a precondition for care.
C. Harm reduction: Practical strategies intended to reduce substance-related risks without requiring immediate abstinence as a precondition for care. / Developmental framing: Privacy rules for adolescent substance services that depend on jurisdiction, consent, and service context.
D. Harm reduction: Practical strategies intended to reduce substance-related risks without requiring immediate abstinence as a precondition for care. / Developmental framing: Understanding substance use in relation to adolescent development, peer context, access, and changing autonomy.

0098. Identify the most precise label for this idea: Screening, brief intervention, and referral to treatment, a structured pathway for responding to substance-use risk.

A. SBIRT
B. Relapse prevention
C. Motivational enhancement
D. Confidentiality and substance care

0099. A supervisor asks for an applied contrast between SBIRT and Confidentiality and substance care. Which option fits?

A. SBIRT: Linking screening results to a brief conversation and appropriate referral when indicated. / Confidentiality and substance care: Using a validated youth-appropriate screen as an entry point rather than treating it as a diagnosis.
B. SBIRT: Assessing anxiety, mood, trauma, and substance use together while coordinating appropriate care. / Confidentiality and substance care: Explaining privacy and its exceptions accurately using current local law and policy before asking sensitive questions.
C. SBIRT: Linking screening results to a brief conversation and appropriate referral when indicated. / Confidentiality and substance care: Explaining privacy and its exceptions accurately using current local law and policy before asking sensitive questions.
D. SBIRT: Explaining privacy and its exceptions accurately using current local law and policy before asking sensitive questions. / Confidentiality and substance care: Linking screening results to a brief conversation and appropriate referral when indicated.

0100. In adolescent substance-use counseling, which option pairs the definitions of SBIRT and Relapse prevention correctly, in that order?

A. SBIRT: Substance-related concerns that occur alongside mental-health or other health conditions. / Relapse prevention: Planning for high-risk situations, cravings, coping responses, and support following a return to use or lapse.
B. SBIRT: Screening, brief intervention, and referral to treatment, a structured pathway for responding to substance-use risk. / Relapse prevention: Understanding substance use in relation to adolescent development, peer context, access, and changing autonomy.
C. SBIRT: Planning for high-risk situations, cravings, coping responses, and support following a return to use or lapse. / Relapse prevention: Screening, brief intervention, and referral to treatment, a structured pathway for responding to substance-use risk.
D. SBIRT: Screening, brief intervention, and referral to treatment, a structured pathway for responding to substance-use risk. / Relapse prevention: Planning for high-risk situations, cravings, coping responses, and support following a return to use or lapse.

0101. How should a practitioner distinguish the applications of Motivational enhancement and SBIRT?

A. Motivational enhancement: Linking screening results to a brief conversation and appropriate referral when indicated. / SBIRT: Eliciting the adolescent's reasons for and against change and reinforcing autonomy.
B. Motivational enhancement: Eliciting the adolescent's reasons for and against change and reinforcing autonomy. / SBIRT: Explaining privacy and its exceptions accurately using current local law and policy before asking sensitive questions.
C. Motivational enhancement: Eliciting the adolescent's reasons for and against change and reinforcing autonomy. / SBIRT: Linking screening results to a brief conversation and appropriate referral when indicated.
D. Motivational enhancement: Discussing realistic safety steps while continuing to support the adolescent's goals and options. / SBIRT: Linking screening results to a brief conversation and appropriate referral when indicated.

0102. A trainee must distinguish how Adolescent substance-use screening and Co-occurring conditions guide practice. Which comparison is accurate?

A. Adolescent substance-use screening: Using a validated youth-appropriate screen as an entry point rather than treating it as a diagnosis. / Co-occurring conditions: Assessing anxiety, mood, trauma, and substance use together while coordinating appropriate care.
B. Adolescent substance-use screening: Assessing anxiety, mood, trauma, and substance use together while coordinating appropriate care. / Co-occurring conditions: Using a validated youth-appropriate screen as an entry point rather than treating it as a diagnosis.
C. Adolescent substance-use screening: Linking screening results to a brief conversation and appropriate referral when indicated. / Co-occurring conditions: Assessing anxiety, mood, trauma, and substance use together while coordinating appropriate care.
D. Adolescent substance-use screening: Using a validated youth-appropriate screen as an entry point rather than treating it as a diagnosis. / Co-occurring conditions: Identifying triggers and rehearsal of a response plan without framing a lapse as total failure.

0103. In adolescent substance-use counseling, choose the practice comparison that best separates Relapse prevention from Developmental framing.

A. Relapse prevention: Discussing realistic safety steps while continuing to support the adolescent's goals and options. / Developmental framing: Exploring peer influence and emerging independence without assuming all adolescent use has the same meaning.
B. Relapse prevention: Identifying triggers and rehearsal of a response plan without framing a lapse as total failure. / Developmental framing: Asking about supportive adults, activities, strengths, and settings that can reinforce safer choices.
C. Relapse prevention: Identifying triggers and rehearsal of a response plan without framing a lapse as total failure. / Developmental framing: Exploring peer influence and emerging independence without assuming all adolescent use has the same meaning.
D. Relapse prevention: Exploring peer influence and emerging independence without assuming all adolescent use has the same meaning. / Developmental framing: Identifying triggers and rehearsal of a response plan without framing a lapse as total failure.

0104. A school-age child's service team meets in the family resource center. The parent educator recommends a change involving eliciting the adolescent's reasons for and against change and reinforcing autonomy. Which idea best explains it?

A. Protective factor assessment
B. Adolescent substance-use screening
C. Co-occurring conditions
D. Motivational enhancement

0105. Which named construct is captured by this account? Screening, brief intervention, and referral to treatment, a structured pathway for responding to substance-use risk.

A. Relapse prevention
B. SBIRT
C. Confidentiality and substance care
D. Recovery capital

0106. A trainee must distinguish how SBIRT and Confidentiality and substance care guide practice. Which comparison is accurate?

A. SBIRT: Explaining privacy and its exceptions accurately using current local law and policy before asking sensitive questions. / Confidentiality and substance care: Linking screening results to a brief conversation and appropriate referral when indicated.
B. SBIRT: Linking screening results to a brief conversation and appropriate referral when indicated. / Confidentiality and substance care: Explaining privacy and its exceptions accurately using current local law and policy before asking sensitive questions.
C. SBIRT: Assessing anxiety, mood, trauma, and substance use together while coordinating appropriate care. / Confidentiality and substance care: Explaining privacy and its exceptions accurately using current local law and policy before asking sensitive questions.
D. SBIRT: Linking screening results to a brief conversation and appropriate referral when indicated. / Confidentiality and substance care: Using a validated youth-appropriate screen as an entry point rather than treating it as a diagnosis.

0107. A research trainee is asked what should shape a young person aged 16’s support in the telehealth session. The proposed focus is mapping supportive relationships, practical resources, and meaningful roles that can aid recovery. Which principle does it represent?

A. Recovery capital
B. SBIRT
C. Protective factor assessment
D. Motivational enhancement

0108. In a supervision review, a caregiver working with a counselor describes work with a child aged 8 in the community youth program: explaining privacy and its exceptions accurately using current local law and policy before asking sensitive questions. What concept is illustrated?

A. Confidentiality and substance care
B. Harm reduction
C. SBIRT
D. Relapse prevention

0109. Choose the term that matches this definition: Identification of resources and conditions that support reduced use, safety, and healthy development.

A. Confidentiality and substance care
B. Adolescent substance-use screening
C. Protective factor assessment
D. Relapse prevention

0110. A case conference reviews a program coordinator’s work with a child aged 7 in the parent meeting: linking screening results to a brief conversation and appropriate referral when indicated. Which principle is central?

A. Co-occurring conditions
B. SBIRT
C. Confidentiality and substance care
D. Adolescent substance-use screening

0111. In the community mental-health service, a group facilitator explains why a high-school student would benefit from discussing realistic safety steps while continuing to support the adolescent’s goals and options. Which course concept underpins the explanation?

A. Co-occurring conditions
B. Confidentiality and substance care
C. Developmental framing
D. Harm reduction

0112. A trainee must distinguish how Harm reduction and Developmental framing guide practice. Which comparison is accurate?

A. Harm reduction: Exploring peer influence and emerging independence without assuming all adolescent use has the same meaning. / Developmental framing: Discussing realistic safety steps while continuing to support the adolescent’s goals and options.
B. Harm reduction: Discussing realistic safety steps while continuing to support the adolescent’s goals and options. / Developmental framing: Explaining privacy and its exceptions accurately using current local law and policy before asking sensitive questions.
C. Harm reduction: Identifying triggers and rehearsal of a response plan without framing a lapse as total failure. / Developmental framing: Exploring peer influence and emerging independence without assuming all adolescent use has the same meaning.
D. Harm reduction: Discussing realistic safety steps while continuing to support the adolescent’s goals and options. / Developmental framing: Exploring peer influence and emerging independence without assuming all adolescent use has the same meaning.

0113. Choose the practice comparison that best separates SBIRT from Co-occurring conditions.

A. SBIRT: Explaining privacy and its exceptions accurately using current local law and policy before asking sensitive questions. / Co-occurring conditions: Assessing anxiety, mood, trauma, and substance use together while coordinating appropriate care.
B. SBIRT: Assessing anxiety, mood, trauma, and substance use together while coordinating appropriate care. / Co-occurring conditions: Linking screening results to a brief conversation and appropriate referral when indicated.
C. SBIRT: Linking screening results to a brief conversation and appropriate referral when indicated. / Co-occurring conditions: Assessing anxiety, mood, trauma, and substance use together while coordinating appropriate care.
D. SBIRT: Linking screening results to a brief conversation and appropriate referral when indicated. / Co-occurring conditions: Discussing realistic safety steps while continuing to support the adolescent’s goals and options.

0114. Which comparison would correct a trainee’s misunderstanding of Protective factor assessment versus Recovery capital?

A. Protective factor assessment: Identification of resources and conditions that support reduced use, safety, and healthy development. / Recovery capital: Personal, social, and community resources that can support recovery and sustained change.
B. Protective factor assessment: Identification of resources and conditions that support reduced use, safety, and healthy development. / Recovery capital: Substance-related concerns that occur alongside mental-health or other health conditions.
C. Protective factor assessment: A collaborative strategy that strengthens a person’s own motivation and commitment to change. / Recovery capital: Personal, social, and community resources that can support recovery and sustained change.
D. Protective factor assessment: Personal, social, and community resources that can support recovery and sustained change. / Recovery capital: Identification of resources and conditions that support reduced use, safety, and healthy development.

0115. Which pair of actions illustrates Adolescent substance-use screening and Harm reduction, respectively?

A. Adolescent substance-use screening: Discussing realistic safety steps while continuing to support the adolescent’s goals and options. / Harm reduction: Using a validated youth-appropriate screen as an entry point rather than treating it as a diagnosis.
B. Adolescent substance-use screening: Using a validated youth-appropriate screen as an entry point rather than treating it as a diagnosis. / Harm reduction: Explaining privacy and its exceptions accurately using current local law and policy before asking sensitive questions.
C. Adolescent substance-use screening: Eliciting the adolescent’s reasons for and against change and reinforcing autonomy. / Harm reduction: Discussing realistic safety steps while continuing to support the adolescent’s goals and options.
D. Adolescent substance-use screening: Using a validated youth-appropriate screen as an entry point rather than treating it as a diagnosis. / Harm reduction: Discussing realistic safety steps while continuing to support the adolescent’s goals and options.

0116. In a case note about a child aged 14, a consultant working in the child guidance clinic records this priority: assessing anxiety, mood, trauma, and substance use together while coordinating appropriate care. What principle is reflected?

A. Adolescent substance-use screening
B. Protective factor assessment
C. Harm reduction
D. Co-occurring conditions

0117. A doctoral student reads the following description. Which concept does it define? Understanding substance use in relation to adolescent development, peer context, access, and changing autonomy.

A. Confidentiality and substance care
B. Developmental framing
C. Protective factor assessment
D. SBIRT

0118. A school-based clinician presents a support plan for a child aged 14 at the learning-support meeting. Its central feature is exploring peer influence and emerging independence without assuming all adolescent use has the same meaning. Which concept should be named?

A. Recovery capital
B. Adolescent substance-use screening
C. Developmental framing
D. Confidentiality and substance care

0119. In adolescent substance-use counseling, a supervisor asks for an applied contrast between Adolescent substance-use screening and Relapse prevention. Which option fits?

A. Adolescent substance-use screening: Identifying triggers and rehearsal of a response plan without framing a lapse as total failure. / Relapse prevention: Using a validated youth-appropriate screen as an entry point rather than treating it as a diagnosis.
B. Adolescent substance-use screening: Using a validated youth-appropriate screen as an entry point rather than treating it as a diagnosis. / Relapse prevention: Identifying triggers and rehearsal of a response plan without framing a lapse as total failure.
C. Adolescent substance-use screening: Using a validated youth-appropriate screen as an entry point rather than treating it as a diagnosis. / Relapse prevention: Mapping supportive relationships, practical resources, and meaningful roles that can aid recovery.
D. Adolescent substance-use screening: Eliciting the adolescent's reasons for and against change and reinforcing autonomy. / Relapse prevention: Identifying triggers and rehearsal of a response plan without framing a lapse as total failure.

0120. A student confuses Motivational enhancement with Protective factor assessment. Which explanation most accurately separates them?

A. Motivational enhancement: A collaborative strategy that strengthens a person's own motivation and commitment to change. / Protective factor assessment: Identification of resources and conditions that support reduced use, safety, and healthy development.
B. Motivational enhancement: Identification of resources and conditions that support reduced use, safety, and healthy development. / Protective factor assessment: A collaborative strategy that strengthens a person's own motivation and commitment to change.
C. Motivational enhancement: Screening, brief intervention, and referral to treatment, a structured pathway for responding to substance-use risk. / Protective factor assessment: Identification of resources and conditions that support reduced use, safety, and healthy development.
D. Motivational enhancement: A collaborative strategy that strengthens a person's own motivation and commitment to change. / Protective factor assessment: A brief, age-appropriate process to identify possible substance-related risk and need for fuller assessment.

0121. Choose the practice comparison that best separates SBIRT from Protective factor assessment.

A. SBIRT: Linking screening results to a brief conversation and appropriate referral when indicated. / Protective factor assessment: Asking about supportive adults, activities, strengths, and settings that can reinforce safer choices.
B. SBIRT: Asking about supportive adults, activities, strengths, and settings that can reinforce safer choices. / Protective factor assessment: Linking screening results to a brief conversation and appropriate referral when indicated.
C. SBIRT: Discussing realistic safety steps while continuing to support the adolescent's goals and options. / Protective factor assessment: Asking about supportive adults, activities, strengths, and settings that can reinforce safer choices.
D. SBIRT: Linking screening results to a brief conversation and appropriate referral when indicated. / Protective factor assessment: Explaining privacy and its exceptions accurately using current local law and policy before asking sensitive questions.

0122. While consulting in the youth advocacy program, a mental-health professional supports a adolescent student by using this approach: explaining privacy and its exceptions accurately using current local law and policy before asking sensitive questions. Which concept is being applied?

A. Adolescent substance-use screening
B. Confidentiality and substance care
C. Developmental framing
D. Co-occurring conditions

0123. In adolescent substance-use counseling, in a case note about a young person aged 10, a supervised trainee working in the learning-support meeting records this priority: identifying triggers and rehearsal of a response plan without framing a lapse as total failure. What principle is reflected?

A. Recovery capital
B. Developmental framing
C. Motivational enhancement
D. Relapse prevention

0124. In adolescent substance-use counseling, while consulting in the telehealth session, a assessment clinician supports a child aged 6 by using this approach: identifying triggers and rehearsal of a response plan without framing a lapse as total failure. Which concept is being applied?

A. Harm reduction
B. Motivational enhancement
C. Relapse prevention
D. Adolescent substance-use screening

0125. Which comparison would correct a trainee's misunderstanding of Protective factor assessment versus Developmental framing?

A. Protective factor assessment: Understanding substance use in relation to adolescent development, peer context, access, and changing autonomy. / Developmental framing: Identification of resources and conditions that support reduced use, safety, and healthy development.
B. Protective factor assessment: Identification of resources and conditions that support reduced use, safety, and healthy development. / Developmental framing: A brief, age-appropriate process to identify possible substance-related risk and need for fuller assessment.
C. Protective factor assessment: Identification of resources and conditions that support reduced use, safety, and healthy development. / Developmental framing: Understanding substance use in relation to adolescent development, peer context, access, and changing autonomy.
D. Protective factor assessment: Personal, social, and community resources that can support recovery and sustained change. / Developmental framing: Understanding substance use in relation to adolescent development, peer context, access, and changing autonomy.

0126. A doctoral student reads the following description. Which concept does it define? Practical strategies intended to reduce substance-related risks without requiring immediate abstinence as a precondition for care.

A. Protective factor assessment
B. Recovery capital
C. Relapse prevention
D. Harm reduction

0127. In adolescent substance-use counseling, which comparison would correct a trainee’s misunderstanding of Recovery capital versus Relapse prevention?

A. Recovery capital: Personal, social, and community resources that can support recovery and sustained change. / Relapse prevention: Identification of resources and conditions that support reduced use, safety, and healthy development.
B. Recovery capital: A collaborative strategy that strengthens a person’s own motivation and commitment to change. / Relapse prevention: Planning for high-risk situations, cravings, coping responses, and support following a return to use or lapse.
C. Recovery capital: Planning for high-risk situations, cravings, coping responses, and support following a return to use or lapse. / Relapse prevention: Personal, social, and community resources that can support recovery and sustained change.
D. Recovery capital: Personal, social, and community resources that can support recovery and sustained change. / Relapse prevention: Planning for high-risk situations, cravings, coping responses, and support following a return to use or lapse.

0128. A behavior specialist is asked to evaluate a proposed service for a child aged 6 in the community mental-health service. The defining feature is eliciting the adolescent’s reasons for and against change and reinforcing autonomy. Which concept fits?

A. Protective factor assessment
B. Confidentiality and substance care
C. Motivational enhancement
D. Co-occurring conditions

0129. Which comparison would correct a trainee’s misunderstanding of Adolescent substance-use screening versus SBIRT?

A. Adolescent substance-use screening: Screening, brief intervention, and referral to treatment, a structured pathway for responding to substance-use risk. / SBIRT: A brief, age-appropriate process to identify possible substance-related risk and need for fuller assessment.
B. Adolescent substance-use screening: A brief, age-appropriate process to identify possible substance-related risk and need for fuller assessment. / SBIRT: Privacy rules for adolescent substance services that depend on jurisdiction, consent, and service context.
C. Adolescent substance-use screening: A collaborative strategy that strengthens a person’s own motivation and commitment to change. / SBIRT: Screening, brief intervention, and referral to treatment, a structured pathway for responding to substance-use risk.
D. Adolescent substance-use screening: A brief, age-appropriate process to identify possible substance-related risk and need for fuller assessment. / SBIRT: Screening, brief intervention, and referral to treatment, a structured pathway for responding to substance-use risk.

0130. Which professional action most closely applies Co-occurring conditions?

A. Asking about supportive adults, activities, strengths, and settings that can reinforce safer choices.
B. Assessing anxiety, mood, trauma, and substance use together while coordinating appropriate care.
C. Linking screening results to a brief conversation and appropriate referral when indicated.
D. Discussing realistic safety steps while continuing to support the adolescent’s goals and options.

0131. Which option preserves the correct meaning of both SBIRT and Recovery capital?

A. SBIRT: Understanding substance use in relation to adolescent development, peer context, access, and changing autonomy. / Recovery capital: Personal, social, and community resources that can support recovery and sustained change.
B. SBIRT: Personal, social, and community resources that can support recovery and sustained change. / Recovery capital: Screening, brief intervention, and referral to treatment, a structured pathway for responding to substance-use risk.
C. SBIRT: Screening, brief intervention, and referral to treatment, a structured pathway for responding to substance-use risk. / Recovery capital: Privacy rules for adolescent substance services that depend on jurisdiction, consent, and service context.
D. SBIRT: Screening, brief intervention, and referral to treatment, a structured pathway for responding to substance-use risk. / Recovery capital: Personal, social, and community resources that can support recovery and sustained change.

0132. Which paired example correctly applies Recovery capital first and Developmental framing second?

A. Recovery capital: Mapping supportive relationships, practical resources, and meaningful roles that can aid recovery. / Developmental framing: Eliciting the adolescent’s reasons for and against change and reinforcing autonomy.
B. Recovery capital: Mapping supportive relationships, practical resources, and meaningful roles that can aid recovery. / Developmental framing: Exploring peer influence and emerging independence without assuming all adolescent use has the same meaning.
C. Recovery capital: Using a validated youth-appropriate screen as an entry point rather than treating it as a diagnosis. / Developmental framing: Exploring peer influence and emerging independence without assuming all adolescent use has the same meaning.
D. Recovery capital: Exploring peer influence and emerging independence without assuming all adolescent use has the same meaning. / Developmental framing: Mapping supportive relationships, practical resources, and meaningful roles that can aid recovery.

0133. Consider a young person aged 16 receiving help in the community service agency. The school counselor focuses on linking screening results to a brief conversation and appropriate referral when indicated. Which term best describes the guiding idea?

A. Adolescent substance-use screening
B. Co-occurring conditions
C. SBIRT
D. Motivational enhancement

0134. In adolescent substance-use counseling, which paired example correctly applies Co-occurring conditions first and Relapse prevention second?

A. Co-occurring conditions: Identifying triggers and rehearsal of a response plan without framing a lapse as total failure. / Relapse prevention: Assessing anxiety, mood, trauma, and substance use together while coordinating appropriate care.
B. Co-occurring conditions: Assessing anxiety, mood, trauma, and substance use together while coordinating appropriate care. / Relapse prevention: Discussing realistic safety steps while continuing to support the adolescent’s goals and options.
C. Co-occurring conditions: Explaining privacy and its exceptions accurately using current local law and policy before asking sensitive questions. / Relapse prevention: Identifying triggers and rehearsal of a response plan without framing a lapse as total failure.
D. Co-occurring conditions: Assessing anxiety, mood, trauma, and substance use together while coordinating appropriate care. / Relapse prevention: Identifying triggers and rehearsal of a response plan without framing a lapse as total failure.

0135. In adolescent substance-use counseling, in a supervision quiz, how should Protective factor assessment be distinguished from Relapse prevention?

A. Protective factor assessment: Identification of resources and conditions that support reduced use, safety, and healthy development. / Relapse prevention: Personal, social, and community resources that can support recovery and sustained change.
B. Protective factor assessment: Substance-related concerns that occur alongside mental-health or other health conditions. / Relapse prevention: Planning for high-risk situations, cravings, coping responses, and support following a return to use or lapse.
C. Protective factor assessment: Identification of resources and conditions that support reduced use, safety, and healthy development. / Relapse prevention: Planning for high-risk situations, cravings, coping responses, and support following a return to use or lapse.
D. Protective factor assessment: Planning for high-risk situations, cravings, coping responses, and support following a return to use or lapse. / Relapse prevention: Identification of resources and conditions that support reduced use, safety, and healthy development.

0136. In a professional consultation about a adolescent student, the mental-health professional describes this response in the youth advocacy program: explaining privacy and its exceptions accurately using current local law and policy before asking sensitive questions. Which term is most apt?

A. SBIRT
B. Confidentiality and substance care
C. Protective factor assessment
D. Relapse prevention

0137. When reviewing a young person aged 16's plan in the community mental-health service, the school-based clinician notes that the next step is using a validated youth-appropriate screen as an entry point rather than treating it as a diagnosis. Which concept guides this step?

A. Adolescent substance-use screening
B. Confidentiality and substance care
C. Developmental framing
D. Co-occurring conditions

0138. In adolescent substance-use counseling, which statement shows a sound practice-level distinction between Adolescent substance-use screening and Relapse prevention?

A. Adolescent substance-use screening: Using a validated youth-appropriate screen as an entry point rather than treating it as a diagnosis. / Relapse prevention: Identifying triggers and rehearsal of a response plan without framing a lapse as total failure.
B. Adolescent substance-use screening: Identifying triggers and rehearsal of a response plan without framing a lapse as total failure. / Relapse prevention: Using a validated youth-appropriate screen as an entry point rather than treating it as a diagnosis.
C. Adolescent substance-use screening: Eliciting the adolescent's reasons for and against change and reinforcing autonomy. / Relapse prevention: Identifying triggers and rehearsal of a response plan without framing a lapse as total failure.
D. Adolescent substance-use screening: Using a validated youth-appropriate screen as an entry point rather than treating it as a diagnosis. / Relapse prevention: Mapping supportive relationships, practical resources, and meaningful roles that can aid recovery.

0139. Which pair of actions illustrates Harm reduction and Co-occurring conditions, respectively?

A. Harm reduction: Discussing realistic safety steps while continuing to support the adolescent's goals and options. / Co-occurring conditions: Using a validated youth-appropriate screen as an entry point rather than treating it as a diagnosis.
B. Harm reduction: Discussing realistic safety steps while continuing to support the adolescent's goals and options. / Co-occurring conditions: Assessing anxiety, mood, trauma, and substance use together while coordinating appropriate care.
C. Harm reduction: Linking screening results to a brief conversation and appropriate referral when indicated. / Co-occurring conditions: Assessing anxiety, mood, trauma, and substance use together while coordinating appropriate care.
D. Harm reduction: Assessing anxiety, mood, trauma, and substance use together while coordinating appropriate care. / Co-occurring conditions: Discussing realistic safety steps while continuing to support the adolescent's goals and options.

0140. Which choice aligns each practice with the correct idea, Adolescent substance-use screening or Motivational enhancement?

A. Adolescent substance-use screening: Using a validated youth-appropriate screen as an entry point rather than treating it as a diagnosis. / Motivational enhancement: Exploring peer influence and emerging independence without assuming all adolescent use has the same meaning.
B. Adolescent substance-use screening: Using a validated youth-appropriate screen as an entry point rather than treating it as a diagnosis. / Motivational enhancement: Eliciting the adolescent's reasons for and against change and reinforcing autonomy.
C. Adolescent substance-use screening: Asking about supportive adults, activities, strengths, and settings that can reinforce safer choices. / Motivational enhancement: Eliciting the adolescent's reasons for and against change and reinforcing autonomy.
D. Adolescent substance-use screening: Eliciting the adolescent's reasons for and against change and reinforcing autonomy. / Motivational enhancement: Using a validated youth-appropriate screen as an entry point rather than treating it as a diagnosis.

0141. How are Confidentiality and substance care and Recovery capital most accurately differentiated in this curriculum?

A. Confidentiality and substance care: Privacy rules for adolescent substance services that depend on jurisdiction, consent, and service context. / Recovery capital: Personal, social, and community resources that can support recovery and sustained change.
B. Confidentiality and substance care: Practical strategies intended to reduce substance-related risks without requiring immediate abstinence as a precondition for care. / Recovery capital: Personal, social, and community resources that can support recovery and sustained change.
C. Confidentiality and substance care: Personal, social, and community resources that can support recovery and sustained change. / Recovery capital: Privacy rules for adolescent substance services that depend on jurisdiction, consent, and service context.
D. Confidentiality and substance care: Privacy rules for adolescent substance services that depend on jurisdiction, consent, and service context. / Recovery capital: Identification of resources and conditions that support reduced use, safety, and healthy development.

0142. In adolescent substance-use counseling, in a supervision review, a case coordinator describes work with a older adolescent client in the youth group: identifying triggers and rehearsal of a response plan without framing a lapse as total failure. What concept is illustrated?

A. Co-occurring conditions
B. Adolescent substance-use screening
C. SBIRT
D. Relapse prevention

0143. In a supervision quiz, how should Motivational enhancement be distinguished from Co-occurring conditions?

A. Motivational enhancement: A collaborative strategy that strengthens a person's own motivation and commitment to change. / Co-occurring conditions: Substance-related concerns that occur alongside mental-health or other health conditions.
B. Motivational enhancement: Substance-related concerns that occur alongside mental-health or other health conditions. / Co-occurring conditions: A collaborative strategy that strengthens a person's own motivation and commitment to change.
C. Motivational enhancement: Understanding substance use in relation to adolescent development, peer context, access, and changing autonomy. / Co-occurring conditions: Substance-related concerns that occur alongside mental-health or other health conditions.
D. Motivational enhancement: A collaborative strategy that strengthens a person's own motivation and commitment to change. / Co-occurring conditions: Identification of resources and conditions that support reduced use, safety, and healthy development.

0144. Which course concept is defined as follows: Identification of resources and conditions that support reduced use, safety, and healthy development.

A. Harm reduction
B. Co-occurring conditions
C. Protective factor assessment
D. Confidentiality and substance care

0145. A program coordinator is asked what should shape a high-school student's support in the multidisciplinary case conference. The proposed focus is eliciting the adolescent's reasons for and against change and reinforcing autonomy. Which principle does it represent?

A. Protective factor assessment
B. Motivational enhancement
C. Harm reduction
D. Adolescent substance-use screening

0146. Choose the practice comparison that best separates Adolescent substance-use screening from Developmental framing.

A. Adolescent substance-use screening: Linking screening results to a brief conversation and appropriate referral when indicated. / Developmental framing: Exploring peer influence and emerging independence without assuming all adolescent use has the same meaning.
B. Adolescent substance-use screening: Using a validated youth-appropriate screen as an entry point rather than treating it as a diagnosis. / Developmental framing: Exploring peer influence and emerging independence without assuming all adolescent use has the same meaning.
C. Adolescent substance-use screening: Using a validated youth-appropriate screen as an entry point rather than treating it as a diagnosis. / Developmental framing: Identifying triggers and rehearsal of a response plan without framing a lapse as total failure.
D. Adolescent substance-use screening: Exploring peer influence and emerging independence without assuming all adolescent use has the same meaning. / Developmental framing: Using a validated youth-appropriate screen as an entry point rather than treating it as a diagnosis.

0147. A supervised trainee prepares for a session in the after-school program with a preadolescent child. The intended approach is exploring peer influence and emerging independence without assuming all adolescent use has the same meaning. Which concept is most relevant?

A. Motivational enhancement
B. Recovery capital
C. Adolescent substance-use screening
D. Developmental framing

0148. Which statement shows a sound practice-level distinction between SBIRT and Recovery capital?

A. SBIRT: Mapping supportive relationships, practical resources, and meaningful roles that can aid recovery. / Recovery capital: Linking screening results to a brief conversation and appropriate referral when indicated.
B. SBIRT: Linking screening results to a brief conversation and appropriate referral when indicated. / Recovery capital: Mapping supportive relationships, practical resources, and meaningful roles that can aid recovery.
C. SBIRT: Linking screening results to a brief conversation and appropriate referral when indicated. / Recovery capital: Explaining privacy and its exceptions accurately using current local law and policy before asking sensitive questions.
D. SBIRT: Exploring peer influence and emerging independence without assuming all adolescent use has the same meaning. / Recovery capital: Mapping supportive relationships, practical resources, and meaningful roles that can aid recovery.

0149. Which professional action most closely applies Harm reduction?

A. Discussing realistic safety steps while continuing to support the adolescent's goals and options.
B. Eliciting the adolescent's reasons for and against change and reinforcing autonomy.
C. Linking screening results to a brief conversation and appropriate referral when indicated.
D. Assessing anxiety, mood, trauma, and substance use together while coordinating appropriate care.

0150. At the classroom support meeting, a therapist reviews whether a plan for a young adolescent client is appropriate. The relevant practice is mapping supportive relationships, practical resources, and meaningful roles that can aid recovery. Which concept is tested?

A. Motivational enhancement
B. Developmental framing
C. Recovery capital
D. Harm reduction

0151. Which comparison correctly distinguishes Adolescent substance-use screening from Developmental framing?

A. Adolescent substance-use screening: A brief, age-appropriate process to identify possible substance-related risk and need for fuller assessment. / Developmental framing: Planning for high-risk situations, cravings, coping responses, and support following a return to use or lapse.
B. Adolescent substance-use screening: Understanding substance use in relation to adolescent development, peer context, access, and changing autonomy. / Developmental framing: A brief, age-appropriate process to identify possible substance-related risk and need for fuller assessment.
C. Adolescent substance-use screening: Screening, brief intervention, and referral to treatment, a structured pathway for responding to substance-use risk. / Developmental framing: Understanding substance use in relation to adolescent development, peer context, access, and changing autonomy.
D. Adolescent substance-use screening: A brief, age-appropriate process to identify possible substance-related risk and need for fuller assessment. / Developmental framing: Understanding substance use in relation to adolescent development, peer context, access, and changing autonomy.

0152. What is the central meaning of Confidentiality and substance care?

A. Privacy rules for adolescent substance services that depend on jurisdiction, consent, and service context.
B. Practical strategies intended to reduce substance-related risks without requiring immediate abstinence as a precondition for care.
C. Screening, brief intervention, and referral to treatment, a structured pathway for responding to substance-use risk.
D. A brief, age-appropriate process to identify possible substance-related risk and need for fuller assessment.

0153. Which option pairs the definitions of Adolescent substance-use screening and Developmental framing correctly, in that order?

A. Adolescent substance-use screening: A brief, age-appropriate process to identify possible substance-related risk and need for fuller assessment. / Developmental framing: Planning for high-risk situations, cravings, coping responses, and support following a return to use or lapse.
B. Adolescent substance-use screening: Screening, brief intervention, and referral to treatment, a structured pathway for responding to substance-use risk. / Developmental framing: Understanding substance use in relation to adolescent development, peer context, access, and changing autonomy.
C. Adolescent substance-use screening: Understanding substance use in relation to adolescent development, peer context, access, and changing autonomy. / Developmental framing: A brief, age-appropriate process to identify possible substance-related risk and need for fuller assessment.
D. Adolescent substance-use screening: A brief, age-appropriate process to identify possible substance-related risk and need for fuller assessment. / Developmental framing: Understanding substance use in relation to adolescent development, peer context, access, and changing autonomy.

0154. Which option correctly matches each concept to its practice focus: Adolescent substance-use screening and Protective factor assessment?

A. Adolescent substance-use screening: Using a validated youth-appropriate screen as an entry point rather than treating it as a diagnosis. / Protective factor assessment: Asking about supportive adults, activities, strengths, and settings that can reinforce safer choices.
B. Adolescent substance-use screening: Eliciting the adolescent's reasons for and against change and reinforcing autonomy. / Protective factor assessment: Asking about supportive adults, activities, strengths, and settings that can reinforce safer choices.
C. Adolescent substance-use screening: Asking about supportive adults, activities, strengths, and settings that can reinforce safer choices. / Protective factor assessment: Using a validated youth-appropriate screen as an entry point rather than treating it as a diagnosis.
D. Adolescent substance-use screening: Using a validated youth-appropriate screen as an entry point rather than treating it as a diagnosis. / Protective factor assessment: Identifying triggers and rehearsal of a response plan without framing a lapse as total failure.

0155. Which comparison correctly distinguishes Adolescent substance-use screening from Recovery capital?

A. Adolescent substance-use screening: A brief, age-appropriate process to identify possible substance-related risk and need for fuller assessment. / Recovery capital: Personal, social, and community resources that can support recovery and sustained change.
B. Adolescent substance-use screening: Planning for high-risk situations, cravings, coping responses, and support following a return to use or lapse. / Recovery capital: Personal, social, and community resources that can support recovery and sustained change.
C. Adolescent substance-use screening: A brief, age-appropriate process to identify possible substance-related risk and need for fuller assessment. / Recovery capital: Screening, brief intervention, and referral to treatment, a structured pathway for responding to substance-use risk.
D. Adolescent substance-use screening: Personal, social, and community resources that can support recovery and sustained change. / Recovery capital: A brief, age-appropriate process to identify possible substance-related risk and need for fuller assessment.

0156. A school support specialist is asked to evaluate a proposed service for a young person aged 16 in the counseling practicum. The defining feature is asking about supportive adults, activities, strengths, and settings that can reinforce safer choices. Which concept fits?

A. Recovery capital
B. Protective factor assessment
C. Harm reduction
D. Relapse prevention

0157. In adolescent substance-use counseling, which option preserves the correct meaning of both Motivational enhancement and Relapse prevention?

A. Motivational enhancement: Understanding substance use in relation to adolescent development, peer context, access, and changing autonomy. / Relapse prevention: Planning for high-risk situations, cravings, coping responses, and support following a return to use or lapse.
B. Motivational enhancement: Planning for high-risk situations, cravings, coping responses, and support following a return to use or lapse. / Relapse prevention: A collaborative strategy that strengthens a person's own motivation and commitment to change.
C. Motivational enhancement: A collaborative strategy that strengthens a person's own motivation and commitment to change. / Relapse prevention: Planning for high-risk situations, cravings, coping responses, and support following a return to use or lapse.
D. Motivational enhancement: A collaborative strategy that strengthens a person's own motivation and commitment to change. / Relapse prevention: Screening, brief intervention, and referral to treatment, a structured pathway for responding to substance-use risk.

0158. An interdisciplinary team reviews a child of elementary-school age's case at the after-school program. The school support specialist recommends eliciting the adolescent's reasons for and against change and reinforcing autonomy. Which course concept best fits?

A. Adolescent substance-use screening
B. Motivational enhancement
C. SBIRT
D. Developmental framing

0159. For a older adolescent client seen in the student wellness team, the research trainee recommends a plan built around assessing anxiety, mood, trauma, and substance use together while coordinating appropriate care. Which concept is reflected?

A. Relapse prevention
B. Confidentiality and substance care
C. Adolescent substance-use screening
D. Co-occurring conditions

0160. In the student wellness team, a team asks how a consulting counselor can support a young person aged 13. One proposed action is exploring peer influence and emerging independence without assuming all adolescent use has the same meaning. Which idea does it represent?

A. Protective factor assessment
B. Developmental framing
C. Adolescent substance-use screening
D. Motivational enhancement

0161. Which pair of actions illustrates Protective factor assessment and Confidentiality and substance care, respectively?

A. Protective factor assessment: Mapping supportive relationships, practical resources, and meaningful roles that can aid recovery. / Confidentiality and substance care: Explaining privacy and its exceptions accurately using current local law and policy before asking sensitive questions.
B. Protective factor assessment: Asking about supportive adults, activities, strengths, and settings that can reinforce safer choices. / Confidentiality and substance care: Exploring peer influence and emerging independence without assuming all adolescent use has the same meaning.
C. Protective factor assessment: Asking about supportive adults, activities, strengths, and settings that can reinforce safer choices. / Confidentiality and substance care: Explaining privacy and its exceptions accurately using current local law and policy before asking sensitive questions.
D. Protective factor assessment: Explaining privacy and its exceptions accurately using current local law and policy before asking sensitive questions. / Confidentiality and substance care: Asking about supportive adults, activities, strengths, and settings that can reinforce safer choices.

0162. A planning meeting about a school-age child includes a clinical supervisor. The proposed practice in the school counseling office is assessing anxiety, mood, trauma, and substance use together while coordinating appropriate care. Which idea underlies it?

A. Protective factor assessment
B. Motivational enhancement
C. Co-occurring conditions
D. Harm reduction

0163. In adolescent substance-use counseling, a teacher and counselor is asked to justify a plan for a child aged 11 in the community service agency. It calls for identifying triggers and rehearsal of a response plan without framing a lapse as total failure. Which concept provides the rationale?

A. Adolescent substance-use screening
B. Protective factor assessment
C. Motivational enhancement
D. Relapse prevention

0164. Which comparison would correct a trainee's misunderstanding of Motivational enhancement versus Recovery capital?

A. Motivational enhancement: Identification of resources and conditions that support reduced use, safety, and healthy development. / Recovery capital: Personal, social, and community resources that can support recovery and sustained change.
B. Motivational enhancement: A collaborative strategy that strengthens a person's own motivation and commitment to change. / Recovery capital: A brief, age-appropriate process to identify possible substance-related risk and need for fuller assessment.
C. Motivational enhancement: A collaborative strategy that strengthens a person's own motivation and commitment to change. / Recovery capital: Personal, social, and community resources that can support recovery and sustained change.
D. Motivational enhancement: Personal, social, and community resources that can support recovery and sustained change. / Recovery capital: A collaborative strategy that strengthens a person's own motivation and commitment to change.

0165. An interdisciplinary team reviews a adolescent student's case at the multidisciplinary case conference. The counselor recommends exploring peer influence and emerging independence without assuming all adolescent use has the same meaning. Which course concept best fits?

A. Confidentiality and substance care
B. Developmental framing
C. Harm reduction
D. Recovery capital

0166. Which choice aligns each practice with the correct idea, Protective factor assessment or Confidentiality and substance care?

A. Protective factor assessment: Explaining privacy and its exceptions accurately using current local law and policy before asking sensitive questions. / Confidentiality and substance care: Asking about supportive adults, activities, strengths, and settings that can reinforce safer choices.
B. Protective factor assessment: Asking about supportive adults, activities, strengths, and settings that can reinforce safer choices. / Confidentiality and substance care: Explaining privacy and its exceptions accurately using current local law and policy before asking sensitive questions.
C. Protective factor assessment: Mapping supportive relationships, practical resources, and meaningful roles that can aid recovery. / Confidentiality and substance care: Explaining privacy and its exceptions accurately using current local law and policy before asking sensitive questions.
D. Protective factor assessment: Asking about supportive adults, activities, strengths, and settings that can reinforce safer choices. / Confidentiality and substance care: Exploring peer influence and emerging independence without assuming all adolescent use has the same meaning.

0167. Which option correctly matches each concept to its practice focus: Adolescent substance-use screening and Confidentiality and substance care?

A. Adolescent substance-use screening: Using a validated youth-appropriate screen as an entry point rather than treating it as a diagnosis. / Confidentiality and substance care: Explaining privacy and its exceptions accurately using current local law and policy before asking sensitive questions.
B. Adolescent substance-use screening: Explaining privacy and its exceptions accurately using current local law and policy before asking sensitive questions. / Confidentiality and substance care: Using a validated youth-appropriate screen as an entry point rather than treating it as a diagnosis.
C. Adolescent substance-use screening: Exploring peer influence and emerging independence without assuming all adolescent use has the same meaning. / Confidentiality and substance care: Explaining privacy and its exceptions accurately using current local law and policy before asking sensitive questions.
D. Adolescent substance-use screening: Using a validated youth-appropriate screen as an entry point rather than treating it as a diagnosis. / Confidentiality and substance care: Identifying triggers and rehearsal of a response plan without framing a lapse as total failure.

0168. Which description belongs with the term Recovery capital?

A. Personal, social, and community resources that can support recovery and sustained change.
B. Understanding substance use in relation to adolescent development, peer context, access, and changing autonomy.
C. Practical strategies intended to reduce substance-related risks without requiring immediate abstinence as a precondition for care.
D. A collaborative strategy that strengthens a person's own motivation and commitment to change.

0169. In the counseling practicum, a teacher and counselor explains why a child aged 6 would benefit from assessing anxiety, mood, trauma, and substance use together while coordinating appropriate care. Which course concept underpins the explanation?

A. Co-occurring conditions
B. SBIRT
C. Motivational enhancement
D. Developmental framing

0170. An interdisciplinary team reviews a student aged 17's case at the student-support meeting. The play therapist recommends mapping supportive relationships, practical resources, and meaningful roles that can aid recovery. Which course concept best fits?

A. Co-occurring conditions
B. Recovery capital
C. Protective factor assessment
D. Harm reduction

0171. In the classroom support meeting, a team asks how a teacher and counselor can support a student aged 17. One proposed action is explaining privacy and its exceptions accurately using current local law and policy before asking sensitive questions. Which idea does it represent?

A. Protective factor assessment
B. Co-occurring conditions
C. Developmental framing
D. Confidentiality and substance care

0172. Select the best explanation of Motivational enhancement.

A. Personal, social, and community resources that can support recovery and sustained change.
B. Identification of resources and conditions that support reduced use, safety, and healthy development.
C. A collaborative strategy that strengthens a person's own motivation and commitment to change.
D. Practical strategies intended to reduce substance-related risks without requiring immediate abstinence as a precondition for care.

0173. Which option pairs the definitions of SBIRT and Developmental framing correctly, in that order?

A. SBIRT: Screening, brief intervention, and referral to treatment, a structured pathway for responding to substance-use risk. / Developmental framing: Planning for high-risk situations, cravings, coping responses, and support following a return to use or lapse.
B. SBIRT: Understanding substance use in relation to adolescent development, peer context, access, and changing autonomy. / Developmental framing: Screening, brief intervention, and referral to treatment, a structured pathway for responding to substance-use risk.
C. SBIRT: Screening, brief intervention, and referral to treatment, a structured pathway for responding to substance-use risk. / Developmental framing: Understanding substance use in relation to adolescent development, peer context, access, and changing autonomy.
D. SBIRT: Personal, social, and community resources that can support recovery and sustained change. / Developmental framing: Understanding substance use in relation to adolescent development, peer context, access, and changing autonomy.

0174. In adolescent substance-use counseling, which pair of actions illustrates Co-occurring conditions and Relapse prevention, respectively?

A. Co-occurring conditions: Assessing anxiety, mood, trauma, and substance use together while coordinating appropriate care. / Relapse prevention: Discussing realistic safety steps while continuing to support the adolescent's goals and options.
B. Co-occurring conditions: Identifying triggers and rehearsal of a response plan without framing a lapse as total failure. / Relapse prevention: Assessing anxiety, mood, trauma, and substance use together while coordinating appropriate care.
C. Co-occurring conditions: Assessing anxiety, mood, trauma, and substance use together while coordinating appropriate care. / Relapse prevention: Identifying triggers and rehearsal of a response plan without framing a lapse as total failure.
D. Co-occurring conditions: Explaining privacy and its exceptions accurately using current local law and policy before asking sensitive questions. / Relapse prevention: Identifying triggers and rehearsal of a response plan without framing a lapse as total failure.

0175. Which applied comparison correctly identifies what belongs to Protective factor assessment versus Confidentiality and substance care?

A. Protective factor assessment: Mapping supportive relationships, practical resources, and meaningful roles that can aid recovery. / Confidentiality and substance care: Explaining privacy and its exceptions accurately using current local law and policy before asking sensitive questions.
B. Protective factor assessment: Explaining privacy and its exceptions accurately using current local law and policy before asking sensitive questions. / Confidentiality and substance care: Asking about supportive adults, activities, strengths, and settings that can reinforce safer choices.
C. Protective factor assessment: Asking about supportive adults, activities, strengths, and settings that can reinforce safer choices. / Confidentiality and substance care: Explaining privacy and its exceptions accurately using current local law and policy before asking sensitive questions.
D. Protective factor assessment: Asking about supportive adults, activities, strengths, and settings that can reinforce safer choices. / Confidentiality and substance care: Exploring peer influence and emerging independence without assuming all adolescent use has the same meaning.

0176. How are Harm reduction and Co-occurring conditions most accurately differentiated in this curriculum?

A. Harm reduction: Screening, brief intervention, and referral to treatment, a structured pathway for responding to substance-use risk. / Co-occurring conditions: Substance-related concerns that occur alongside mental-health or other health conditions.
B. Harm reduction: Practical strategies intended to reduce substance-related risks without requiring immediate abstinence as a precondition for care. / Co-occurring conditions: Substance-related concerns that occur alongside mental-health or other health conditions.
C. Harm reduction: Practical strategies intended to reduce substance-related risks without requiring immediate abstinence as a precondition for care. / Co-occurring conditions: A brief, age-appropriate process to identify possible substance-related risk and need for fuller assessment.
D. Harm reduction: Substance-related concerns that occur alongside mental-health or other health conditions. / Co-occurring conditions: Practical strategies intended to reduce substance-related risks without requiring immediate abstinence as a precondition for care.

0177. In a supervision quiz, how should Harm reduction be distinguished from Recovery capital?

A. Harm reduction: Practical strategies intended to reduce substance-related risks without requiring immediate abstinence as a precondition for care. / Recovery capital: Personal, social, and community resources that can support recovery and sustained change.
B. Harm reduction: Substance-related concerns that occur alongside mental-health or other health conditions. / Recovery capital: Personal, social, and community resources that can support recovery and sustained change.
C. Harm reduction: Personal, social, and community resources that can support recovery and sustained change. / Recovery capital: Practical strategies intended to reduce substance-related risks without requiring immediate abstinence as a precondition for care.
D. Harm reduction: Practical strategies intended to reduce substance-related risks without requiring immediate abstinence as a precondition for care. / Recovery capital: A collaborative strategy that strengthens a person's own motivation and commitment to change.

0178. Which comparison correctly distinguishes SBIRT from Developmental framing?

A. SBIRT: Screening, brief intervention, and referral to treatment, a structured pathway for responding to substance-use risk. / Developmental framing: Understanding substance use in relation to adolescent development, peer context, access, and changing autonomy.
B. SBIRT: Personal, social, and community resources that can support recovery and sustained change. / Developmental framing: Understanding substance use in relation to adolescent development, peer context, access, and changing autonomy.
C. SBIRT: Understanding substance use in relation to adolescent development, peer context, access, and changing autonomy. / Developmental framing: Screening, brief intervention, and referral to treatment, a structured pathway for responding to substance-use risk.
D. SBIRT: Screening, brief intervention, and referral to treatment, a structured pathway for responding to substance-use risk. / Developmental framing: Planning for high-risk situations, cravings, coping responses, and support following a return to use or lapse.

0179. During service review in the school-based service, a community practitioner describes mapping supportive relationships, practical resources, and meaningful roles that can aid recovery. for a client in early adolescence. Which course idea is most applicable?

A. Relapse prevention
B. Recovery capital
C. Motivational enhancement
D. Developmental framing

0180. During service review in the family session, a service navigator describes linking screening results to a brief conversation and appropriate referral when indicated. for a middle-school student. Which course idea is most applicable?

A. Relapse prevention
B. Confidentiality and substance care
C. SBIRT
D. Co-occurring conditions

0181. During work in the learning-support meeting, a youth worker identifies this need: explaining privacy and its exceptions accurately using current local law and policy before asking sensitive questions. Which idea should guide the response?

A. Motivational enhancement
B. Developmental framing
C. Co-occurring conditions
D. Confidentiality and substance care

0182. A student confuses Motivational enhancement with SBIRT. Which explanation most accurately separates them?

A. Motivational enhancement: A collaborative strategy that strengthens a person's own motivation and commitment to change. / SBIRT: Screening, brief intervention, and referral to treatment, a structured pathway for responding to substance-use risk.
B. Motivational enhancement: Practical strategies intended to reduce substance-related risks without requiring immediate abstinence as a precondition for care. / SBIRT: Screening, brief intervention, and referral to treatment, a structured pathway for responding to substance-use risk.
C. Motivational enhancement: A collaborative strategy that strengthens a person's own motivation and commitment to change. / SBIRT: Privacy rules for adolescent substance services that depend on jurisdiction, consent, and service context.
D. Motivational enhancement: Screening, brief intervention, and referral to treatment, a structured pathway for responding to substance-use risk. / SBIRT: A collaborative strategy that strengthens a person's own motivation and commitment to change.

0183. A supervised trainee and a adolescent student are discussing support in the student wellness team. The selected practice is eliciting the adolescent's reasons for and against change and reinforcing autonomy. Which concept does this demonstrate?

A. Protective factor assessment
B. Adolescent substance-use screening
C. Co-occurring conditions
D. Motivational enhancement

0184. A student confuses Harm reduction with Co-occurring conditions. Which explanation most accurately separates them?

A. Harm reduction: Practical strategies intended to reduce substance-related risks without requiring immediate abstinence as a precondition for care. / Co-occurring conditions: Substance-related concerns that occur alongside mental-health or other health conditions.
B. Harm reduction: Screening, brief intervention, and referral to treatment, a structured pathway for responding to substance-use risk. / Co-occurring conditions: Substance-related concerns that occur alongside mental-health or other health conditions.
C. Harm reduction: Practical strategies intended to reduce substance-related risks without requiring immediate abstinence as a precondition for care. / Co-occurring conditions: A brief, age-appropriate process to identify possible substance-related risk and need for fuller assessment.
D. Harm reduction: Substance-related concerns that occur alongside mental-health or other health conditions. / Co-occurring conditions: Practical strategies intended to reduce substance-related risks without requiring immediate abstinence as a precondition for care.

0185. Which choice aligns each practice with the correct idea, Adolescent substance-use screening or SBIRT?

A. Adolescent substance-use screening: Eliciting the adolescent's reasons for and against change and reinforcing autonomy. / SBIRT: Linking screening results to a brief conversation and appropriate referral when indicated.
B. Adolescent substance-use screening: Linking screening results to a brief conversation and appropriate referral when indicated. / SBIRT: Using a validated youth-appropriate screen as an entry point rather than treating it as a diagnosis.
C. Adolescent substance-use screening: Using a validated youth-appropriate screen as an entry point rather than treating it as a diagnosis. / SBIRT: Explaining privacy and its exceptions accurately using current local law and policy before asking sensitive questions.
D. Adolescent substance-use screening: Using a validated youth-appropriate screen as an entry point rather than treating it as a diagnosis. / SBIRT: Linking screening results to a brief conversation and appropriate referral when indicated.

0186. In a case note about a school-age child, a mental-health professional working in the counseling practicum records this priority: mapping supportive relationships, practical resources, and meaningful roles that can aid recovery. What principle is reflected?

A. Adolescent substance-use screening
B. Harm reduction
C. Co-occurring conditions
D. Recovery capital

0187. A trainee must distinguish how Motivational enhancement and Confidentiality and substance care guide practice. Which comparison is accurate?

A. Motivational enhancement: Eliciting the adolescent's reasons for and against change and reinforcing autonomy. / Confidentiality and substance care: Assessing anxiety, mood, trauma, and substance use together while coordinating appropriate care.
B. Motivational enhancement: Eliciting the adolescent's reasons for and against change and reinforcing autonomy. / Confidentiality and substance care: Explaining privacy and its exceptions accurately using current local law and policy before asking sensitive questions.
C. Motivational enhancement: Linking screening results to a brief conversation and appropriate referral when indicated. / Confidentiality and substance care: Explaining privacy and its exceptions accurately using current local law and policy before asking sensitive questions.
D. Motivational enhancement: Explaining privacy and its exceptions accurately using current local law and policy before asking sensitive questions. / Confidentiality and substance care: Eliciting the adolescent's reasons for and against change and reinforcing autonomy.

0188. Which option pairs the definitions of Harm reduction and Recovery capital correctly, in that order?

A. Harm reduction: Practical strategies intended to reduce substance-related risks without requiring immediate abstinence as a precondition for care. / Recovery capital: A collaborative strategy that strengthens a person's own motivation and commitment to change.
B. Harm reduction: Personal, social, and community resources that can support recovery and sustained change. / Recovery capital: Practical strategies intended to reduce substance-related risks without requiring immediate abstinence as a precondition for care.
C. Harm reduction: Substance-related concerns that occur alongside mental-health or other health conditions. / Recovery capital: Personal, social, and community resources that can support recovery and sustained change.
D. Harm reduction: Practical strategies intended to reduce substance-related risks without requiring immediate abstinence as a precondition for care. / Recovery capital: Personal, social, and community resources that can support recovery and sustained change.

0189. Which applied comparison correctly identifies what belongs to Adolescent substance-use screening versus Motivational enhancement?

A. Adolescent substance-use screening: Eliciting the adolescent's reasons for and against change and reinforcing autonomy. / Motivational enhancement: Using a validated youth-appropriate screen as an entry point rather than treating it as a diagnosis.
B. Adolescent substance-use screening: Using a validated youth-appropriate screen as an entry point rather than treating it as a diagnosis. / Motivational enhancement: Exploring peer influence and emerging independence without assuming all adolescent use has the same meaning.
C. Adolescent substance-use screening: Using a validated youth-appropriate screen as an entry point rather than treating it as a diagnosis. / Motivational enhancement: Eliciting the adolescent's reasons for and against change and reinforcing autonomy.
D. Adolescent substance-use screening: Asking about supportive adults, activities, strengths, and settings that can reinforce safer choices. / Motivational enhancement: Eliciting the adolescent's reasons for and against change and reinforcing autonomy.

0190. A trainee must distinguish how Adolescent substance-use screening and Protective factor assessment guide practice. Which comparison is accurate?

A. Adolescent substance-use screening: Eliciting the adolescent's reasons for and against change and reinforcing autonomy. / Protective factor assessment: Asking about supportive adults, activities, strengths, and settings that can reinforce safer choices.
B. Adolescent substance-use screening: Using a validated youth-appropriate screen as an entry point rather than treating it as a diagnosis. / Protective factor assessment: Asking about supportive adults, activities, strengths, and settings that can reinforce safer choices.
C. Adolescent substance-use screening: Using a validated youth-appropriate screen as an entry point rather than treating it as a diagnosis. / Protective factor assessment: Identifying triggers and rehearsal of a response plan without framing a lapse as total failure.
D. Adolescent substance-use screening: Asking about supportive adults, activities, strengths, and settings that can reinforce safer choices. / Protective factor assessment: Using a validated youth-appropriate screen as an entry point rather than treating it as a diagnosis.

0191. A supervisor asks for an applied contrast between Motivational enhancement and Developmental framing. Which option fits?

A. Motivational enhancement: Eliciting the adolescent's reasons for and against change and reinforcing autonomy. / Developmental framing: Exploring peer influence and emerging independence without assuming all adolescent use has the same meaning.
B. Motivational enhancement: Exploring peer influence and emerging independence without assuming all adolescent use has the same meaning. / Developmental framing: Eliciting the adolescent's reasons for and against change and reinforcing autonomy.
C. Motivational enhancement: Assessing anxiety, mood, trauma, and substance use together while coordinating appropriate care. / Developmental framing: Exploring peer influence and emerging independence without assuming all adolescent use has the same meaning.
D. Motivational enhancement: Eliciting the adolescent's reasons for and against change and reinforcing autonomy. / Developmental framing: Identifying triggers and rehearsal of a response plan without framing a lapse as total failure.

0192. In adolescent substance-use counseling, which statement most accurately defines Relapse prevention?

A. Planning for high-risk situations, cravings, coping responses, and support following a return to use or lapse.
B. Substance-related concerns that occur alongside mental-health or other health conditions.
C. Screening, brief intervention, and referral to treatment, a structured pathway for responding to substance-use risk.
D. Practical strategies intended to reduce substance-related risks without requiring immediate abstinence as a precondition for care.

0193. Which professional action most closely applies SBIRT?

A. Discussing realistic safety steps while continuing to support the adolescent's goals and options.
B. Exploring peer influence and emerging independence without assuming all adolescent use has the same meaning.
C. Assessing anxiety, mood, trauma, and substance use together while coordinating appropriate care.
D. Linking screening results to a brief conversation and appropriate referral when indicated.

0194. How should a practitioner distinguish the applications of Harm reduction and Recovery capital?

A. Harm reduction: Assessing anxiety, mood, trauma, and substance use together while coordinating appropriate care. / Recovery capital: Mapping supportive relationships, practical resources, and meaningful roles that can aid recovery.
B. Harm reduction: Mapping supportive relationships, practical resources, and meaningful roles that can aid recovery. / Recovery capital: Discussing realistic safety steps while continuing to support the adolescent's goals and options.
C. Harm reduction: Discussing realistic safety steps while continuing to support the adolescent's goals and options. / Recovery capital: Mapping supportive relationships, practical resources, and meaningful roles that can aid recovery.
D. Harm reduction: Discussing realistic safety steps while continuing to support the adolescent's goals and options. / Recovery capital: Eliciting the adolescent's reasons for and against change and reinforcing autonomy.

0195. A supervisor asks for an applied contrast between Adolescent substance-use screening and Recovery capital. Which option fits?

A. Adolescent substance-use screening: Using a validated youth-appropriate screen as an entry point rather than treating it as a diagnosis. / Recovery capital: Linking screening results to a brief conversation and appropriate referral when indicated.
B. Adolescent substance-use screening: Using a validated youth-appropriate screen as an entry point rather than treating it as a diagnosis. / Recovery capital: Mapping supportive relationships, practical resources, and meaningful roles that can aid recovery.
C. Adolescent substance-use screening: Mapping supportive relationships, practical resources, and meaningful roles that can aid recovery. / Recovery capital: Using a validated youth-appropriate screen as an entry point rather than treating it as a diagnosis.
D. Adolescent substance-use screening: Identifying triggers and rehearsal of a response plan without framing a lapse as total failure. / Recovery capital: Mapping supportive relationships, practical resources, and meaningful roles that can aid recovery.

0196. In adolescent substance-use counseling, during work in the community youth program, a consulting counselor identifies this need: identifying triggers and rehearsal of a response plan without framing a lapse as total failure. Which idea should guide the response?

A. SBIRT
B. Relapse prevention
C. Developmental framing
D. Adolescent substance-use screening

0197. At the counseling practicum, a service navigator reviews whether a plan for a teenage client is appropriate. The relevant practice is eliciting the adolescent's reasons for and against change and reinforcing autonomy. Which concept is tested?

A. Co-occurring conditions
B. Relapse prevention
C. Motivational enhancement
D. Developmental framing

0198. How should a practitioner distinguish the applications of Protective factor assessment and Co-occurring conditions?

A. Protective factor assessment: Assessing anxiety, mood, trauma, and substance use together while coordinating appropriate care. / Co-occurring conditions: Asking about supportive adults, activities, strengths, and settings that can reinforce safer choices.
B. Protective factor assessment: Asking about supportive adults, activities, strengths, and settings that can reinforce safer choices. / Co-occurring conditions: Using a validated youth-appropriate screen as an entry point rather than treating it as a diagnosis.
C. Protective factor assessment: Mapping supportive relationships, practical resources, and meaningful roles that can aid recovery. / Co-occurring conditions: Assessing anxiety, mood, trauma, and substance use together while coordinating appropriate care.
D. Protective factor assessment: Asking about supportive adults, activities, strengths, and settings that can reinforce safer choices. / Co-occurring conditions: Assessing anxiety, mood, trauma, and substance use together while coordinating appropriate care.

0199. A student aged 15 is receiving support in the youth group. The consulting counselor is guided by this practice: using a validated youth-appropriate screen as an entry point rather than treating it as a diagnosis. Which principle best fits?

A. Protective factor assessment
B. Relapse prevention
C. Adolescent substance-use screening
D. Recovery capital

0200. A family therapist presents a support plan for a child aged 7 at the child guidance clinic. Its central feature is explaining privacy and its exceptions accurately using current local law and policy before asking sensitive questions. Which concept should be named?

A. Motivational enhancement
B. Protective factor assessment
C. Confidentiality and substance care
D. Co-occurring conditions

0201. A trainee must distinguish how Motivational enhancement and Co-occurring conditions guide practice. Which comparison is accurate?

A. Motivational enhancement: Eliciting the adolescent's reasons for and against change and reinforcing autonomy. / Co-occurring conditions: Assessing anxiety, mood, trauma, and substance use together while coordinating appropriate care.
B. Motivational enhancement: Assessing anxiety, mood, trauma, and substance use together while coordinating appropriate care. / Co-occurring conditions: Eliciting the adolescent's reasons for and against change and reinforcing autonomy.
C. Motivational enhancement: Exploring peer influence and emerging independence without assuming all adolescent use has the same meaning. / Co-occurring conditions: Assessing anxiety, mood, trauma, and substance use together while coordinating appropriate care.
D. Motivational enhancement: Eliciting the adolescent's reasons for and against change and reinforcing autonomy. / Co-occurring conditions: Asking about supportive adults, activities, strengths, and settings that can reinforce safer choices.

0202. Which comparison would correct a trainee's misunderstanding of Adolescent substance-use screening versus Co-occurring conditions?

A. Adolescent substance-use screening: A brief, age-appropriate process to identify possible substance-related risk and need for fuller assessment. / Co-occurring conditions: Planning for high-risk situations, cravings, coping responses, and support following a return to use or lapse.
B. Adolescent substance-use screening: A brief, age-appropriate process to identify possible substance-related risk and need for fuller assessment. / Co-occurring conditions: Substance-related concerns that occur alongside mental-health or other health conditions.
C. Adolescent substance-use screening: Screening, brief intervention, and referral to treatment, a structured pathway for responding to substance-use risk. / Co-occurring conditions: Substance-related concerns that occur alongside mental-health or other health conditions.
D. Adolescent substance-use screening: Substance-related concerns that occur alongside mental-health or other health conditions. / Co-occurring conditions: A brief, age-appropriate process to identify possible substance-related risk and need for fuller assessment.

0203. Which description belongs with the term Confidentiality and substance care?

A. Practical strategies intended to reduce substance-related risks without requiring immediate abstinence as a precondition for care.
B. Substance-related concerns that occur alongside mental-health or other health conditions.
C. Screening, brief intervention, and referral to treatment, a structured pathway for responding to substance-use risk.
D. Privacy rules for adolescent substance services that depend on jurisdiction, consent, and service context.

0204. In a professional consultation about a young adolescent client, the mental-health professional describes this response in the caregiver consultation: eliciting the adolescent's reasons for and against change and reinforcing autonomy. Which term is most apt?

A. Developmental framing
B. SBIRT
C. Motivational enhancement
D. Harm reduction

0205. In adolescent substance-use counseling, which comparison correctly distinguishes SBIRT from Relapse prevention?

A. SBIRT: Screening, brief intervention, and referral to treatment, a structured pathway for responding to substance-use risk. / Relapse prevention: Understanding substance use in relation to adolescent development, peer context, access, and changing autonomy.
B. SBIRT: Screening, brief intervention, and referral to treatment, a structured pathway for responding to substance-use risk. / Relapse prevention: Planning for high-risk situations, cravings, coping responses, and support following a return to use or lapse.
C. SBIRT: Planning for high-risk situations, cravings, coping responses, and support following a return to use or lapse. / Relapse prevention: Screening, brief intervention, and referral to treatment, a structured pathway for responding to substance-use risk.
D. SBIRT: Substance-related concerns that occur alongside mental-health or other health conditions. / Relapse prevention: Planning for high-risk situations, cravings, coping responses, and support following a return to use or lapse.

0206. In adolescent substance-use counseling, identify the most precise label for this idea: Planning for high-risk situations, cravings, coping responses, and support following a return to use or lapse.

A. Relapse prevention
B. SBIRT
C. Recovery capital
D. Confidentiality and substance care

0207. A trainee must choose a practice that exemplifies Protective factor assessment. Which action is the best fit?

A. Exploring peer influence and emerging independence without assuming all adolescent use has the same meaning.
B. Using a validated youth-appropriate screen as an entry point rather than treating it as a diagnosis.
C. Asking about supportive adults, activities, strengths, and settings that can reinforce safer choices.
D. Linking screening results to a brief conversation and appropriate referral when indicated.

0208. Which named construct is captured by this account? Personal, social, and community resources that can support recovery and sustained change.

A. Recovery capital
B. Co-occurring conditions
C. Adolescent substance-use screening
D. Harm reduction

0209. In adolescent substance-use counseling, a mental-health professional is preparing a follow-up plan for a child of elementary-school age in the classroom support meeting. The plan calls for identifying triggers and rehearsal of a response plan without framing a lapse as total failure. Which concept names this approach?

A. Confidentiality and substance care
B. Co-occurring conditions
C. Relapse prevention
D. Protective factor assessment

0210. In a supervision quiz, how should Motivational enhancement be distinguished from Harm reduction?

A. Motivational enhancement: A collaborative strategy that strengthens a person's own motivation and commitment to change. / Harm reduction: Practical strategies intended to reduce substance-related risks without requiring immediate abstinence as a precondition for care.
B. Motivational enhancement: Screening, brief intervention, and referral to treatment, a structured pathway for responding to substance-use risk. / Harm reduction: Practical strategies intended to reduce substance-related risks without requiring immediate abstinence as a precondition for care.
C. Motivational enhancement: A collaborative strategy that strengthens a person's own motivation and commitment to change. / Harm reduction: Privacy rules for adolescent substance services that depend on jurisdiction, consent, and service context.
D. Motivational enhancement: Practical strategies intended to reduce substance-related risks without requiring immediate abstinence as a precondition for care. / Harm reduction: A collaborative strategy that strengthens a person's own motivation and commitment to change.

0211. A case coordinator presents a support plan for a child of elementary-school age at the supervision meeting. Its central feature is mapping supportive relationships, practical resources, and meaningful roles that can aid recovery. Which concept should be named?

A. Adolescent substance-use screening
B. Protective factor assessment
C. Recovery capital
D. Harm reduction

0212. A consultant prepares for a session in the school consultation with a child aged 11. The intended approach is explaining privacy and its exceptions accurately using current local law and policy before asking sensitive questions. Which concept is most relevant?

A. Relapse prevention
B. Confidentiality and substance care
C. Motivational enhancement
D. Harm reduction

0213. In adolescent substance-use counseling, a service team discusses a middle-school student in the community mental-health service. Their proposed next step is identifying triggers and rehearsal of a response plan without framing a lapse as total failure. Which course concept supports it?

A. Protective factor assessment
B. Motivational enhancement
C. Relapse prevention
D. Adolescent substance-use screening

0214. When reviewing a student aged 12’s plan in the counseling practicum, the case coordinator notes that the next step is linking screening results to a brief conversation and appropriate referral when indicated. Which concept guides this step?

A. Relapse prevention
B. SBIRT
C. Recovery capital
D. Adolescent substance-use screening

0215. Which statement shows a sound practice-level distinction between Co-occurring conditions and Developmental framing?

A. Co-occurring conditions: Discussing realistic safety steps while continuing to support the adolescent’s goals and options. / Developmental framing: Exploring peer influence and emerging independence without assuming all adolescent use has the same meaning.
B. Co-occurring conditions: Assessing anxiety, mood, trauma, and substance use together while coordinating appropriate care. / Developmental framing: Mapping supportive relationships, practical resources, and meaningful roles that can aid recovery.
C. Co-occurring conditions: Exploring peer influence and emerging independence without assuming all adolescent use has the same meaning. / Developmental framing: Assessing anxiety, mood, trauma, and substance use together while coordinating appropriate care.
D. Co-occurring conditions: Assessing anxiety, mood, trauma, and substance use together while coordinating appropriate care. / Developmental framing: Exploring peer influence and emerging independence without assuming all adolescent use has the same meaning.

0216. In the school-based service, a family therapist is considering this approach for a student aged 9: exploring peer influence and emerging independence without assuming all adolescent use has the same meaning. Which framework does it represent?

A. Harm reduction
B. Adolescent substance-use screening
C. Protective factor assessment
D. Developmental framing

0217. In adolescent substance-use counseling, how are Co-occurring conditions and Relapse prevention most accurately differentiated in this curriculum?

A. Co-occurring conditions: Substance-related concerns that occur alongside mental-health or other health conditions. / Relapse prevention: Practical strategies intended to reduce substance-related risks without requiring immediate abstinence as a precondition for care.
B. Co-occurring conditions: Privacy rules for adolescent substance services that depend on jurisdiction, consent, and service context. / Relapse prevention: Planning for high-risk situations, cravings, coping responses, and support following a return to use or lapse.
C. Co-occurring conditions: Substance-related concerns that occur alongside mental-health or other health conditions. / Relapse prevention: Planning for high-risk situations, cravings, coping responses, and support following a return to use or lapse.
D. Co-occurring conditions: Planning for high-risk situations, cravings, coping responses, and support following a return to use or lapse. / Relapse prevention: Substance-related concerns that occur alongside mental-health or other health conditions.

0218. A trainee must distinguish how Protective factor assessment and Recovery capital guide practice. Which comparison is accurate?

A. Protective factor assessment: Asking about supportive adults, activities, strengths, and settings that can reinforce safer choices. / Recovery capital: Assessing anxiety, mood, trauma, and substance use together while coordinating appropriate care.
B. Protective factor assessment: Asking about supportive adults, activities, strengths, and settings that can reinforce safer choices. / Recovery capital: Mapping supportive relationships, practical resources, and meaningful roles that can aid recovery.
C. Protective factor assessment: Eliciting the adolescent’s reasons for and against change and reinforcing autonomy. / Recovery capital: Mapping supportive relationships, practical resources, and meaningful roles that can aid recovery.
D. Protective factor assessment: Mapping supportive relationships, practical resources, and meaningful roles that can aid recovery. / Recovery capital: Asking about supportive adults, activities, strengths, and settings that can reinforce safer choices.

0219. A trainee must choose a practice that exemplifies Confidentiality and substance care. Which action is the best fit?

A. Assessing anxiety, mood, trauma, and substance use together while coordinating appropriate care.
B. Linking screening results to a brief conversation and appropriate referral when indicated.
C. Explaining privacy and its exceptions accurately using current local law and policy before asking sensitive questions.
D. Using a validated youth-appropriate screen as an entry point rather than treating it as a diagnosis.

0220. Which option correctly matches each concept to its practice focus: Harm reduction and Developmental framing?

A. Harm reduction: Discussing realistic safety steps while continuing to support the adolescent’s goals and options. / Developmental framing: Exploring peer influence and emerging independence without assuming all adolescent use has the same meaning.
B. Harm reduction: Exploring peer influence and emerging independence without assuming all adolescent use has the same meaning. / Developmental framing: Discussing realistic safety steps while continuing to support the adolescent’s goals and options.
C. Harm reduction: Identifying triggers and rehearsal of a response plan without framing a lapse as total failure. / Developmental framing: Exploring peer influence and emerging independence without assuming all adolescent use has the same meaning.
D. Harm reduction: Discussing realistic safety steps while continuing to support the adolescent’s goals and options. / Developmental framing: Explaining privacy and its exceptions accurately using current local law and policy before asking sensitive questions.

0221. In adolescent substance-use counseling, which applied comparison correctly identifies what belongs to Relapse prevention versus Developmental framing?

A. Relapse prevention: Discussing realistic safety steps while continuing to support the adolescent’s goals and options. / Developmental framing: Exploring peer influence and emerging independence without assuming all adolescent use has the same meaning.
B. Relapse prevention: Exploring peer influence and emerging independence without assuming all adolescent use has the same meaning. / Developmental framing: Identifying triggers and rehearsal of a response plan without framing a lapse as total failure.
C. Relapse prevention: Identifying triggers and rehearsal of a response plan without framing a lapse as total failure. / Developmental framing: Exploring peer influence and emerging independence without assuming all adolescent use has the same meaning.
D. Relapse prevention: Identifying triggers and rehearsal of a response plan without framing a lapse as total failure. / Developmental framing: Asking about supportive adults, activities, strengths, and settings that can reinforce safer choices.

0222. Which choice aligns each practice with the correct idea, Protective factor assessment or Recovery capital?

A. Protective factor assessment: Asking about supportive adults, activities, strengths, and settings that can reinforce safer choices. / Recovery capital: Assessing anxiety, mood, trauma, and substance use together while coordinating appropriate care.
B. Protective factor assessment: Mapping supportive relationships, practical resources, and meaningful roles that can aid recovery. / Recovery capital: Asking about supportive adults, activities, strengths, and settings that can reinforce safer choices.
C. Protective factor assessment: Eliciting the adolescent’s reasons for and against change and reinforcing autonomy. / Recovery capital: Mapping supportive relationships, practical resources, and meaningful roles that can aid recovery.
D. Protective factor assessment: Asking about supportive adults, activities, strengths, and settings that can reinforce safer choices. / Recovery capital: Mapping supportive relationships, practical resources, and meaningful roles that can aid recovery.

0223. A supervisor asks for an applied contrast between Protective factor assessment and Co-occurring conditions. Which option fits?

A. Protective factor assessment: Assessing anxiety, mood, trauma, and substance use together while coordinating appropriate care. / Co-occurring conditions: Asking about supportive adults, activities, strengths, and settings that can reinforce safer choices.
B. Protective factor assessment: Asking about supportive adults, activities, strengths, and settings that can reinforce safer choices. / Co-occurring conditions: Using a validated youth-appropriate screen as an entry point rather than treating it as a diagnosis.
C. Protective factor assessment: Mapping supportive relationships, practical resources, and meaningful roles that can aid recovery. / Co-occurring conditions: Assessing anxiety, mood, trauma, and substance use together while coordinating appropriate care.
D. Protective factor assessment: Asking about supportive adults, activities, strengths, and settings that can reinforce safer choices. / Co-occurring conditions: Assessing anxiety, mood, trauma, and substance use together while coordinating appropriate care.

0224. Consider a child aged 8 receiving help in the supervision meeting. The teacher and counselor focuses on exploring peer influence and emerging independence without assuming all adolescent use has the same meaning. Which term best describes the guiding idea?

A. Developmental framing
B. Motivational enhancement
C. Confidentiality and substance care
D. Adolescent substance-use screening

0225. In a case note about a child aged 11, a member of a clinical team working in the youth advocacy program records this priority: eliciting the adolescent's reasons for and against change and reinforcing autonomy. What principle is reflected?

A. Harm reduction
B. Co-occurring conditions
C. Motivational enhancement
D. SBIRT

0226. In the community youth program, a team asks how a group facilitator can support a young adolescent client. One proposed action is linking screening results to a brief conversation and appropriate referral when indicated. Which idea does it represent?

A. Recovery capital
B. SBIRT
C. Relapse prevention
D. Co-occurring conditions

0227. In adolescent substance-use counseling, a youth worker is explaining a choice to a young adolescent client and caregiver in the student-support meeting. The choice centers on identifying triggers and rehearsal of a response plan without framing a lapse as total failure. Which idea is illustrated?

A. Relapse prevention
B. Confidentiality and substance care
C. Motivational enhancement
D. Co-occurring conditions

0228. Which option is the clearest practical expression of Developmental framing?

A. Exploring peer influence and emerging independence without assuming all adolescent use has the same meaning.
B. Using a validated youth-appropriate screen as an entry point rather than treating it as a diagnosis.
C. Identifying triggers and rehearsal of a response plan without framing a lapse as total failure.
D. Assessing anxiety, mood, trauma, and substance use together while coordinating appropriate care.

0229. Which named construct is captured by this account? Privacy rules for adolescent substance services that depend on jurisdiction, consent, and service context.

A. Confidentiality and substance care
B. Adolescent substance-use screening
C. Protective factor assessment
D. Recovery capital

0230. Choose the term that matches this definition: Personal, social, and community resources that can support recovery and sustained change.

A. Recovery capital
B. Developmental framing
C. SBIRT
D. Protective factor assessment

0231. Which option correctly matches each concept to its practice focus: Adolescent substance-use screening and Harm reduction?

A. Adolescent substance-use screening: Discussing realistic safety steps while continuing to support the adolescent's goals and options. / Harm reduction: Using a validated youth-appropriate screen as an entry point rather than treating it as a diagnosis.
B. Adolescent substance-use screening: Eliciting the adolescent's reasons for and against change and reinforcing autonomy. / Harm reduction: Discussing realistic safety steps while continuing to support the adolescent's goals and options.
C. Adolescent substance-use screening: Using a validated youth-appropriate screen as an entry point rather than treating it as a diagnosis. / Harm reduction: Explaining privacy and its exceptions accurately using current local law and policy before asking sensitive questions.
D. Adolescent substance-use screening: Using a validated youth-appropriate screen as an entry point rather than treating it as a diagnosis. / Harm reduction: Discussing realistic safety steps while continuing to support the adolescent's goals and options.

0232. A mental-health professional and a high-school student are discussing support in the family resource center. The selected practice is using a validated youth-appropriate screen as an entry point rather than treating it as a diagnosis. Which concept does this demonstrate?

A. SBIRT
B. Protective factor assessment
C. Co-occurring conditions
D. Adolescent substance-use screening

0233. A mental-health professional is supporting a student aged 12 in the after-school program. The key practice is asking about supportive adults, activities, strengths, and settings that can reinforce safer choices. Which course concept is most relevant?

A. Protective factor assessment
B. SBIRT
C. Recovery capital
D. Relapse prevention

0234. Identify the most precise label for this idea: Understanding substance use in relation to adolescent development, peer context, access, and changing autonomy.

A. Harm reduction
B. Adolescent substance-use screening
C. Co-occurring conditions
D. Developmental framing

0235. In adolescent substance-use counseling, choose the definition pair that correctly explains Recovery capital first and Relapse prevention second.

A. Recovery capital: A collaborative strategy that strengthens a person's own motivation and commitment to change. / Relapse prevention: Planning for high-risk situations, cravings, coping responses, and support following a return to use or lapse.
B. Recovery capital: Personal, social, and community resources that can support recovery and sustained change. / Relapse prevention: Planning for high-risk situations, cravings, coping responses, and support following a return to use or lapse.
C. Recovery capital: Planning for high-risk situations, cravings, coping responses, and support following a return to use or lapse. / Relapse prevention: Personal, social, and community resources that can support recovery and sustained change.
D. Recovery capital: Personal, social, and community resources that can support recovery and sustained change. / Relapse prevention: Identification of resources and conditions that support reduced use, safety, and healthy development.

0236. In the youth group, a team asks how a school counselor can support a young person aged 10. One proposed action is assessing anxiety, mood, trauma, and substance use together while coordinating appropriate care. Which idea does it represent?

A. Developmental framing
B. Recovery capital
C. Co-occurring conditions
D. SBIRT

0237. How are Adolescent substance-use screening and Confidentiality and substance care most accurately differentiated in this curriculum?

A. Adolescent substance-use screening: Privacy rules for adolescent substance services that depend on jurisdiction, consent, and service context. / Confidentiality and substance care: A brief, age-appropriate process to identify possible substance-related risk and need for fuller assessment.
B. Adolescent substance-use screening: A brief, age-appropriate process to identify possible substance-related risk and need for fuller assessment. / Confidentiality and substance care: Planning for high-risk situations, cravings, coping responses, and support following a return to use or lapse.
C. Adolescent substance-use screening: Understanding substance use in relation to adolescent development, peer context, access, and changing autonomy. / Confidentiality and substance care: Privacy rules for adolescent substance services that depend on jurisdiction, consent, and service context.
D. Adolescent substance-use screening: A brief, age-appropriate process to identify possible substance-related risk and need for fuller assessment. / Confidentiality and substance care: Privacy rules for adolescent substance services that depend on jurisdiction, consent, and service context.

0238. A counselor is asked to evaluate a proposed service for a student aged 12 in the community youth program. The defining feature is mapping supportive relationships, practical resources, and meaningful roles that can aid recovery. Which concept fits?

A. Harm reduction
B. Recovery capital
C. Developmental framing
D. Relapse prevention

0239. Choose the definition pair that correctly explains Protective factor assessment first and Recovery capital second.

A. Protective factor assessment: A collaborative strategy that strengthens a person's own motivation and commitment to change. / Recovery capital: Personal, social, and community resources that can support recovery and sustained change.
B. Protective factor assessment: Identification of resources and conditions that support reduced use, safety, and healthy development. / Recovery capital: Substance-related concerns that occur alongside mental-health or other health conditions.
C. Protective factor assessment: Personal, social, and community resources that can support recovery and sustained change. / Recovery capital: Identification of resources and conditions that support reduced use, safety, and healthy development.
D. Protective factor assessment: Identification of resources and conditions that support reduced use, safety, and healthy development. / Recovery capital: Personal, social, and community resources that can support recovery and sustained change.

0240. Which option preserves the correct meaning of both SBIRT and Protective factor assessment?

A. SBIRT: Identification of resources and conditions that support reduced use, safety, and healthy development. / Protective factor assessment: Screening, brief intervention, and referral to treatment, a structured pathway for responding to substance-use risk.
B. SBIRT: Screening, brief intervention, and referral to treatment, a structured pathway for responding to substance-use risk. / Protective factor assessment: Privacy rules for adolescent substance services that depend on jurisdiction, consent, and service context.
C. SBIRT: Practical strategies intended to reduce substance-related risks without requiring immediate abstinence as a precondition for care. / Protective factor assessment: Identification of resources and conditions that support reduced use, safety, and healthy development.
D. SBIRT: Screening, brief intervention, and referral to treatment, a structured pathway for responding to substance-use risk. / Protective factor assessment: Identification of resources and conditions that support reduced use, safety, and healthy development.

0241. In adolescent substance-use counseling, a trainee must choose a practice that exemplifies Relapse prevention. Which action is the best fit?

A. Identifying triggers and rehearsal of a response plan without framing a lapse as total failure.
B. Explaining privacy and its exceptions accurately using current local law and policy before asking sensitive questions.
C. Mapping supportive relationships, practical resources, and meaningful roles that can aid recovery.
D. Eliciting the adolescent's reasons for and against change and reinforcing autonomy.

0242. In adolescent substance-use counseling, which choice aligns each practice with the correct idea, Harm reduction or Relapse prevention?

A. Harm reduction: Eliciting the adolescent's reasons for and against change and reinforcing autonomy. / Relapse prevention: Identifying triggers and rehearsal of a response plan without framing a lapse as total failure.
B. Harm reduction: Discussing realistic safety steps while continuing to support the adolescent's goals and options. / Relapse prevention: Exploring peer influence and emerging independence without assuming all adolescent use has the same meaning.
C. Harm reduction: Identifying triggers and rehearsal of a response plan without framing a lapse as total failure. / Relapse prevention: Discussing realistic safety steps while continuing to support the adolescent's goals and options.
D. Harm reduction: Discussing realistic safety steps while continuing to support the adolescent's goals and options. / Relapse prevention: Identifying triggers and rehearsal of a response plan without framing a lapse as total failure.

0243. Which statement shows a sound practice-level distinction between Confidentiality and substance care and Recovery capital?

A. Confidentiality and substance care: Mapping supportive relationships, practical resources, and meaningful roles that can aid recovery. / Recovery capital: Explaining privacy and its exceptions accurately using current local law and policy before asking sensitive questions.
B. Confidentiality and substance care: Explaining privacy and its exceptions accurately using current local law and policy before asking sensitive questions. / Recovery capital: Mapping supportive relationships, practical resources, and meaningful roles that can aid recovery.
C. Confidentiality and substance care: Discussing realistic safety steps while continuing to support the adolescent's goals and options. / Recovery capital: Mapping supportive relationships, practical resources, and meaningful roles that can aid recovery.
D. Confidentiality and substance care: Explaining privacy and its exceptions accurately using current local law and policy before asking sensitive questions. / Recovery capital: Asking about supportive adults, activities, strengths, and settings that can reinforce safer choices.

0244. Which pair of actions illustrates Harm reduction and Confidentiality and substance care, respectively?

A. Harm reduction: Discussing realistic safety steps while continuing to support the adolescent's goals and options. / Confidentiality and substance care: Mapping supportive relationships, practical resources, and meaningful roles that can aid recovery.
B. Harm reduction: Linking screening results to a brief conversation and appropriate referral when indicated. / Confidentiality and substance care: Explaining privacy and its exceptions accurately using current local law and policy before asking sensitive questions.
C. Harm reduction: Explaining privacy and its exceptions accurately using current local law and policy before asking sensitive questions. / Confidentiality and substance care: Discussing realistic safety steps while continuing to support the adolescent's goals and options.
D. Harm reduction: Discussing realistic safety steps while continuing to support the adolescent's goals and options. / Confidentiality and substance care: Explaining privacy and its exceptions accurately using current local law and policy before asking sensitive questions.

0245. A teenage client is receiving support in the after-school program. The teacher and counselor is guided by this practice: discussing realistic safety steps while continuing to support the adolescent's goals and options. Which principle best fits?

A. Harm reduction
B. Co-occurring conditions
C. Relapse prevention
D. Developmental framing

0246. For a middle-school student in the school-based service, a behavior specialist makes this practice the immediate priority: using a validated youth-appropriate screen as an entry point rather than treating it as a diagnosis. Which concept fits best?

A. Motivational enhancement
B. Confidentiality and substance care
C. Adolescent substance-use screening
D. Developmental framing

0247. Which option is the clearest practical expression of Recovery capital?

A. Explaining privacy and its exceptions accurately using current local law and policy before asking sensitive questions.
B. Identifying triggers and rehearsal of a response plan without framing a lapse as total failure.
C. Mapping supportive relationships, practical resources, and meaningful roles that can aid recovery.
D. Exploring peer influence and emerging independence without assuming all adolescent use has the same meaning.

0248. Which description belongs with the term Developmental framing?

A. Planning for high-risk situations, cravings, coping responses, and support following a return to use or lapse.
B. Identification of resources and conditions that support reduced use, safety, and healthy development.
C. A brief, age-appropriate process to identify possible substance-related risk and need for fuller assessment.
D. Understanding substance use in relation to adolescent development, peer context, access, and changing autonomy.

0249. A play therapist reviews a plan for a young person aged 13 in the telehealth session. The plan emphasizes using a validated youth-appropriate screen as an entry point rather than treating it as a diagnosis. Which course idea does this reflect?

A. Motivational enhancement
B. Co-occurring conditions
C. Relapse prevention
D. Adolescent substance-use screening

0250. A case discussion concerns a high-school student and a caregiver working with a counselor in the telehealth session. The practitioner is considering exploring peer influence and emerging independence without assuming all adolescent use has the same meaning. Which principle is involved?

A. Motivational enhancement
B. Harm reduction
C. Confidentiality and substance care
D. Developmental framing

0251. A planning meeting about a young person aged 10 includes a school support specialist. The proposed practice in the family session is explaining privacy and its exceptions accurately using current local law and policy before asking sensitive questions. Which idea underlies it?

A. Confidentiality and substance care
B. Protective factor assessment
C. Developmental framing
D. Recovery capital

0252. Which comparison correctly distinguishes SBIRT from Confidentiality and substance care?

A. SBIRT: Screening, brief intervention, and referral to treatment, a structured pathway for responding to substance-use risk. / Confidentiality and substance care: Privacy rules for adolescent substance services that depend on jurisdiction, consent, and service context.
B. SBIRT: Privacy rules for adolescent substance services that depend on jurisdiction, consent, and service context. / Confidentiality and substance care: Screening, brief intervention, and referral to treatment, a structured pathway for responding to substance-use risk.
C. SBIRT: Screening, brief intervention, and referral to treatment, a structured pathway for responding to substance-use risk. / Confidentiality and substance care: A brief, age-appropriate process to identify possible substance-related risk and need for fuller assessment.
D. SBIRT: Substance-related concerns that occur alongside mental-health or other health conditions. / Confidentiality and substance care: Privacy rules for adolescent substance services that depend on jurisdiction, consent, and service context.

0253. What is the central meaning of SBIRT?

A. Substance-related concerns that occur alongside mental-health or other health conditions.
B. Screening, brief intervention, and referral to treatment, a structured pathway for responding to substance-use risk.
C. Personal, social, and community resources that can support recovery and sustained change.
D. Practical strategies intended to reduce substance-related risks without requiring immediate abstinence as a precondition for care.

0254. A trainee must distinguish how Co-occurring conditions and Confidentiality and substance care guide practice. Which comparison is accurate?

A. Co-occurring conditions: Explaining privacy and its exceptions accurately using current local law and policy before asking sensitive questions. / Confidentiality and substance care: Assessing anxiety, mood, trauma, and substance use together while coordinating appropriate care.
B. Co-occurring conditions: Identifying triggers and rehearsal of a response plan without framing a lapse as total failure. / Confidentiality and substance care: Explaining privacy and its exceptions accurately using current local law and policy before asking sensitive questions.
C. Co-occurring conditions: Assessing anxiety, mood, trauma, and substance use together while coordinating appropriate care. / Confidentiality and substance care: Explaining privacy and its exceptions accurately using current local law and policy before asking sensitive questions.
D. Co-occurring conditions: Assessing anxiety, mood, trauma, and substance use together while coordinating appropriate care. / Confidentiality and substance care: Using a validated youth-appropriate screen as an entry point rather than treating it as a diagnosis.

0255. Which comparison would correct a trainee's misunderstanding of Adolescent substance-use screening versus Confidentiality and substance care?

A. Adolescent substance-use screening: A brief, age-appropriate process to identify possible substance-related risk and need for fuller assessment. / Confidentiality and substance care: Planning for high-risk situations, cravings, coping responses, and support following a return to use or lapse.
B. Adolescent substance-use screening: A brief, age-appropriate process to identify possible substance-related risk and need for fuller assessment. / Confidentiality and substance care: Privacy rules for adolescent substance services that depend on jurisdiction, consent, and service context.
C. Adolescent substance-use screening: Privacy rules for adolescent substance services that depend on jurisdiction, consent, and service context. / Confidentiality and substance care: A brief, age-appropriate process to identify possible substance-related risk and need for fuller assessment.
D. Adolescent substance-use screening: Understanding substance use in relation to adolescent development, peer context, access, and changing autonomy. / Confidentiality and substance care: Privacy rules for adolescent substance services that depend on jurisdiction, consent, and service context.

0256. A consultant is preparing a follow-up plan for a child aged 11 in the school consultation. The plan calls for explaining privacy and its exceptions accurately using current local law and policy before asking sensitive questions. Which concept names this approach?

A. Protective factor assessment
B. Co-occurring conditions
C. SBIRT
D. Confidentiality and substance care

0257. Which statement accurately contrasts the course concepts Protective factor assessment and Developmental framing?

A. Protective factor assessment: Understanding substance use in relation to adolescent development, peer context, access, and changing autonomy. / Developmental framing: Identification of resources and conditions that support reduced use, safety, and healthy development.
B. Protective factor assessment: Identification of resources and conditions that support reduced use, safety, and healthy development. / Developmental framing: Understanding substance use in relation to adolescent development, peer context, access, and changing autonomy.
C. Protective factor assessment: Personal, social, and community resources that can support recovery and sustained change. / Developmental framing: Understanding substance use in relation to adolescent development, peer context, access, and changing autonomy.
D. Protective factor assessment: Identification of resources and conditions that support reduced use, safety, and healthy development. / Developmental framing: A brief, age-appropriate process to identify possible substance-related risk and need for fuller assessment.

0258. When reviewing a client in early adolescence's plan in the parent meeting, the school-based clinician notes that the next step is assessing anxiety, mood, trauma, and substance use together while coordinating appropriate care. Which concept guides this step?

A. Co-occurring conditions
B. Motivational enhancement
C. Protective factor assessment
D. Adolescent substance-use screening

0259. How are SBIRT and Confidentiality and substance care most accurately differentiated in this curriculum?

A. SBIRT: Substance-related concerns that occur alongside mental-health or other health conditions. / Confidentiality and substance care: Privacy rules for adolescent substance services that depend on jurisdiction, consent, and service context.
B. SBIRT: Screening, brief intervention, and referral to treatment, a structured pathway for responding to substance-use risk. / Confidentiality and substance care: Privacy rules for adolescent substance services that depend on jurisdiction, consent, and service context.
C. SBIRT: Privacy rules for adolescent substance services that depend on jurisdiction, consent, and service context. / Confidentiality and substance care: Screening, brief intervention, and referral to treatment, a structured pathway for responding to substance-use risk.
D. SBIRT: Screening, brief intervention, and referral to treatment, a structured pathway for responding to substance-use risk. / Confidentiality and substance care: A brief, age-appropriate process to identify possible substance-related risk and need for fuller assessment.

0260. In a supervision review, a family therapist describes work with a student aged 15 in the school consultation: mapping supportive relationships, practical resources, and meaningful roles that can aid recovery. What concept is illustrated?

A. Motivational enhancement
B. Confidentiality and substance care
C. Co-occurring conditions
D. Recovery capital

0261. Which choice aligns each practice with the correct idea, Harm reduction or Developmental framing?

A. Harm reduction: Exploring peer influence and emerging independence without assuming all adolescent use has the same meaning. / Developmental framing: Discussing realistic safety steps while continuing to support the adolescent's goals and options.
B. Harm reduction: Discussing realistic safety steps while continuing to support the adolescent's goals and options. / Developmental framing: Explaining privacy and its exceptions accurately using current local law and policy before asking sensitive questions.
C. Harm reduction: Discussing realistic safety steps while continuing to support the adolescent's goals and options. / Developmental framing: Exploring peer influence and emerging independence without assuming all adolescent use has the same meaning.
D. Harm reduction: Identifying triggers and rehearsal of a response plan without framing a lapse as total failure. / Developmental framing: Exploring peer influence and emerging independence without assuming all adolescent use has the same meaning.

0262. A supervised trainee is supporting a young person aged 18 in the family resource center. The key practice is assessing anxiety, mood, trauma, and substance use together while coordinating appropriate care. Which course concept is most relevant?

A. Co-occurring conditions
B. Adolescent substance-use screening
C. SBIRT
D. Protective factor assessment

0263. In a professional consultation about a school-age child, the supervised trainee describes this response in the multidisciplinary case conference: discussing realistic safety steps while continuing to support the adolescent's goals and options. Which term is most apt?

A. Motivational enhancement
B. Harm reduction
C. Adolescent substance-use screening
D. Protective factor assessment

0264. A group facilitator is explaining a choice to a school-age child and caregiver in the caregiver consultation. The choice centers on exploring peer influence and emerging independence without assuming all adolescent use has the same meaning. Which idea is illustrated?

A. Motivational enhancement
B. Developmental framing
C. Recovery capital
D. Adolescent substance-use screening

0265. A consulting counselor is explaining a choice to a child of elementary-school age and caregiver in the clinical planning session. The choice centers on assessing anxiety, mood, trauma, and substance use together while coordinating appropriate care. Which idea is illustrated?

A. Recovery capital
B. Confidentiality and substance care
C. SBIRT
D. Co-occurring conditions

0266. A young person aged 10's service team meets in the student wellness team. The school-based clinician recommends a change involving discussing realistic safety steps while continuing to support the adolescent's goals and options. Which idea best explains it?

A. Confidentiality and substance care
B. Adolescent substance-use screening
C. Harm reduction
D. Co-occurring conditions

0267. Which comparison would correct a trainee's misunderstanding of Co-occurring conditions versus Confidentiality and substance care?

A. Co-occurring conditions: Planning for high-risk situations, cravings, coping responses, and support following a return to use or lapse. / Confidentiality and substance care: Privacy rules for adolescent substance services that depend on jurisdiction, consent, and service context.
B. Co-occurring conditions: Privacy rules for adolescent substance services that depend on jurisdiction, consent, and service context. / Confidentiality and substance care: Substance-related concerns that occur alongside mental-health or other health conditions.
C. Co-occurring conditions: Substance-related concerns that occur alongside mental-health or other health conditions. / Confidentiality and substance care: Privacy rules for adolescent substance services that depend on jurisdiction, consent, and service context.
D. Co-occurring conditions: Substance-related concerns that occur alongside mental-health or other health conditions. / Confidentiality and substance care: A brief, age-appropriate process to identify possible substance-related risk and need for fuller assessment.

0268. A supervisor asks how Motivational enhancement would appear in practice. Which choice should be selected?

A. Eliciting the adolescent's reasons for and against change and reinforcing autonomy.
B. Exploring peer influence and emerging independence without assuming all adolescent use has the same meaning.
C. Linking screening results to a brief conversation and appropriate referral when indicated.
D. Asking about supportive adults, activities, strengths, and settings that can reinforce safer choices.

0269. In adolescent substance-use counseling, a case conference asks for a distinction between Co-occurring conditions and Relapse prevention. Which answer is sound?

A. Co-occurring conditions: Privacy rules for adolescent substance services that depend on jurisdiction, consent, and service context. / Relapse prevention: Planning for high-risk situations, cravings, coping responses, and support following a return to use or lapse.
B. Co-occurring conditions: Planning for high-risk situations, cravings, coping responses, and support following a return to use or lapse. / Relapse prevention: Substance-related concerns that occur alongside mental-health or other health conditions.
C. Co-occurring conditions: Substance-related concerns that occur alongside mental-health or other health conditions. / Relapse prevention: Planning for high-risk situations, cravings, coping responses, and support following a return to use or lapse.
D. Co-occurring conditions: Substance-related concerns that occur alongside mental-health or other health conditions. / Relapse prevention: Practical strategies intended to reduce substance-related risks without requiring immediate abstinence as a precondition for care.

0270. For a child aged 11 seen in the school counseling office, the service navigator recommends a plan built around mapping supportive relationships, practical resources, and meaningful roles that can aid recovery. Which concept is reflected?

A. SBIRT
B. Motivational enhancement
C. Recovery capital
D. Protective factor assessment

0271. In adolescent substance-use counseling, which option preserves the correct meaning of both Relapse prevention and Developmental framing?

A. Relapse prevention: Practical strategies intended to reduce substance-related risks without requiring immediate abstinence as a precondition for care. / Developmental framing: Understanding substance use in relation to adolescent development, peer context, access, and changing autonomy.
B. Relapse prevention: Planning for high-risk situations, cravings, coping responses, and support following a return to use or lapse. / Developmental framing: Identification of resources and conditions that support reduced use, safety, and healthy development.
C. Relapse prevention: Understanding substance use in relation to adolescent development, peer context, access, and changing autonomy. / Developmental framing: Planning for high-risk situations, cravings, coping responses, and support following a return to use or lapse.
D. Relapse prevention: Planning for high-risk situations, cravings, coping responses, and support following a return to use or lapse. / Developmental framing: Understanding substance use in relation to adolescent development, peer context, access, and changing autonomy.

0272. How should a practitioner distinguish the applications of Adolescent substance-use screening and Developmental framing?

A. Adolescent substance-use screening: Using a validated youth-appropriate screen as an entry point rather than treating it as a diagnosis. / Developmental framing: Exploring peer influence and emerging independence without assuming all adolescent use has the same meaning.
B. Adolescent substance-use screening: Using a validated youth-appropriate screen as an entry point rather than treating it as a diagnosis. / Developmental framing: Identifying triggers and rehearsal of a response plan without framing a lapse as total failure.
C. Adolescent substance-use screening: Linking screening results to a brief conversation and appropriate referral when indicated. / Developmental framing: Exploring peer influence and emerging independence without assuming all adolescent use has the same meaning.
D. Adolescent substance-use screening: Exploring peer influence and emerging independence without assuming all adolescent use has the same meaning. / Developmental framing: Using a validated youth-appropriate screen as an entry point rather than treating it as a diagnosis.

0273. In adolescent substance-use counseling, which choice aligns each practice with the correct idea, Recovery capital or Relapse prevention?

A. Recovery capital: Mapping supportive relationships, practical resources, and meaningful roles that can aid recovery. / Relapse prevention: Identifying triggers and rehearsal of a response plan without framing a lapse as total failure.
B. Recovery capital: Identifying triggers and rehearsal of a response plan without framing a lapse as total failure. / Relapse prevention: Mapping supportive relationships, practical resources, and meaningful roles that can aid recovery.
C. Recovery capital: Eliciting the adolescent's reasons for and against change and reinforcing autonomy. / Relapse prevention: Identifying triggers and rehearsal of a response plan without framing a lapse as total failure.
D. Recovery capital: Mapping supportive relationships, practical resources, and meaningful roles that can aid recovery. / Relapse prevention: Asking about supportive adults, activities, strengths, and settings that can reinforce safer choices.

0274. A case conference asks for a distinction between Protective factor assessment and Developmental framing. Which answer is sound?

A. Protective factor assessment: Personal, social, and community resources that can support recovery and sustained change. / Developmental framing: Understanding substance use in relation to adolescent development, peer context, access, and changing autonomy.
B. Protective factor assessment: Understanding substance use in relation to adolescent development, peer context, access, and changing autonomy. / Developmental framing: Identification of resources and conditions that support reduced use, safety, and healthy development.
C. Protective factor assessment: Identification of resources and conditions that support reduced use, safety, and healthy development. / Developmental framing: A brief, age-appropriate process to identify possible substance-related risk and need for fuller assessment.
D. Protective factor assessment: Identification of resources and conditions that support reduced use, safety, and healthy development. / Developmental framing: Understanding substance use in relation to adolescent development, peer context, access, and changing autonomy.

0275. A client in early adolescence and a assessment clinician are reviewing goals in the student wellness team. The agreed action is explaining privacy and its exceptions accurately using current local law and policy before asking sensitive questions. Which principle best accounts for it?

A. Harm reduction
B. Motivational enhancement
C. Confidentiality and substance care
D. Developmental framing

0276. An interdisciplinary team reviews a school-age child's case at the school counseling office. The clinical supervisor recommends assessing anxiety, mood, trauma, and substance use together while coordinating appropriate care. Which course concept best fits?

A. Harm reduction
B. Recovery capital
C. Co-occurring conditions
D. SBIRT

0277. Which option pairs the definitions of Adolescent substance-use screening and SBIRT correctly, in that order?

A. Adolescent substance-use screening: A collaborative strategy that strengthens a person's own motivation and commitment to change. / SBIRT: Screening, brief intervention, and referral to treatment, a structured pathway for responding to substance-use risk.
B. Adolescent substance-use screening: A brief, age-appropriate process to identify possible substance-related risk and need for fuller assessment. / SBIRT: Screening, brief intervention, and referral to treatment, a structured pathway for responding to substance-use risk.
C. Adolescent substance-use screening: A brief, age-appropriate process to identify possible substance-related risk and need for fuller assessment. / SBIRT: Privacy rules for adolescent substance services that depend on jurisdiction, consent, and service context.
D. Adolescent substance-use screening: Screening, brief intervention, and referral to treatment, a structured pathway for responding to substance-use risk. / SBIRT: A brief, age-appropriate process to identify possible substance-related risk and need for fuller assessment.

0278. In adolescent substance-use counseling, which option pairs the definitions of Confidentiality and substance care and Relapse prevention correctly, in that order?

A. Confidentiality and substance care: Privacy rules for adolescent substance services that depend on jurisdiction, consent, and service context. / Relapse prevention: Planning for high-risk situations, cravings, coping responses, and support following a return to use or lapse.
B. Confidentiality and substance care: Practical strategies intended to reduce substance-related risks without requiring immediate abstinence as a precondition for care. / Relapse prevention: Planning for high-risk situations, cravings, coping responses, and support following a return to use or lapse.
C. Confidentiality and substance care: Privacy rules for adolescent substance services that depend on jurisdiction, consent, and service context. / Relapse prevention: Screening, brief intervention, and referral to treatment, a structured pathway for responding to substance-use risk.
D. Confidentiality and substance care: Planning for high-risk situations, cravings, coping responses, and support following a return to use or lapse. / Relapse prevention: Privacy rules for adolescent substance services that depend on jurisdiction, consent, and service context.

0279. A team must select a support approach for a young adolescent client at the behavior-support review. The family therapist recommends assessing anxiety, mood, trauma, and substance use together while coordinating appropriate care. Which idea is most relevant?

A. Motivational enhancement
B. Co-occurring conditions
C. Protective factor assessment
D. Developmental framing

0280. While supporting a young person aged 16 in the after-school program, a parent educator adopts this practice: assessing anxiety, mood, trauma, and substance use together while coordinating appropriate care. Which concept best explains the choice?

A. Co-occurring conditions
B. Relapse prevention
C. Developmental framing
D. Adolescent substance-use screening

0281. In the community service agency, a school counselor describes the most appropriate support for a young person aged 16 as linking screening results to a brief conversation and appropriate referral when indicated. Which framework is being applied?

A. Relapse prevention
B. Harm reduction
C. Recovery capital
D. SBIRT

0282. A assessment clinician is supporting a client in early adolescence in the student wellness team. The key practice is explaining privacy and its exceptions accurately using current local law and policy before asking sensitive questions. Which course concept is most relevant?

A. Confidentiality and substance care
B. Protective factor assessment
C. Harm reduction
D. Co-occurring conditions

0283. In a supervision quiz, how should Recovery capital be distinguished from Developmental framing?

A. Recovery capital: A brief, age-appropriate process to identify possible substance-related risk and need for fuller assessment. / Developmental framing: Understanding substance use in relation to adolescent development, peer context, access, and changing autonomy.
B. Recovery capital: Understanding substance use in relation to adolescent development, peer context, access, and changing autonomy. / Developmental framing: Personal, social, and community resources that can support recovery and sustained change.
C. Recovery capital: Personal, social, and community resources that can support recovery and sustained change. / Developmental framing: Understanding substance use in relation to adolescent development, peer context, access, and changing autonomy.
D. Recovery capital: Personal, social, and community resources that can support recovery and sustained change. / Developmental framing: A collaborative strategy that strengthens a person's own motivation and commitment to change.

0284. A supervisor asks how Harm reduction would appear in practice. Which choice should be selected?

A. Using a validated youth-appropriate screen as an entry point rather than treating it as a diagnosis.
B. Discussing realistic safety steps while continuing to support the adolescent's goals and options.
C. Explaining privacy and its exceptions accurately using current local law and policy before asking sensitive questions.
D. Exploring peer influence and emerging independence without assuming all adolescent use has the same meaning.

0285. During service review in the clinical planning session, a research trainee describes eliciting the adolescent's reasons for and against change and reinforcing autonomy. for a student aged 9. Which course idea is most applicable?

A. Motivational enhancement
B. Confidentiality and substance care
C. Developmental framing
D. Co-occurring conditions

0286. Which named construct is captured by this account? Identification of resources and conditions that support reduced use, safety, and healthy development.

A. Developmental framing
B. Recovery capital
C. SBIRT
D. Protective factor assessment

0287. Which description belongs with the term Adolescent substance-use screening?

A. Personal, social, and community resources that can support recovery and sustained change.
B. Practical strategies intended to reduce substance-related risks without requiring immediate abstinence as a precondition for care.
C. Identification of resources and conditions that support reduced use, safety, and healthy development.
D. A brief, age-appropriate process to identify possible substance-related risk and need for fuller assessment.

0288. In adolescent substance-use counseling, a consultant and a young person are discussing support in the school-based service. The selected practice is identifying triggers and rehearsal of a response plan without framing a lapse as total failure. Which concept does this demonstrate?

A. Relapse prevention
B. Confidentiality and substance care
C. Motivational enhancement
D. Protective factor assessment

0289. A mental-health professional is preparing a follow-up plan for a student aged 15 in the learning-support meeting. The plan calls for linking screening results to a brief conversation and appropriate referral when indicated. Which concept names this approach?

A. Motivational enhancement
B. Adolescent substance-use screening
C. SBIRT
D. Recovery capital

0290. A consultant is supporting a middle-school student in the youth group. The key practice is discussing realistic safety steps while continuing to support the adolescent's goals and options. Which course concept is most relevant?

A. SBIRT
B. Relapse prevention
C. Adolescent substance-use screening
D. Harm reduction

0291. At the community service agency, a school support specialist meets with a preadolescent child. The practice priority is: mapping supportive relationships, practical resources, and meaningful roles that can aid recovery. Which concept best captures that priority?

A. Recovery capital
B. Adolescent substance-use screening
C. Motivational enhancement
D. Relapse prevention

0292. In adolescent substance-use counseling, in a supervision quiz, how should Harm reduction be distinguished from Relapse prevention?

A. Harm reduction: Practical strategies intended to reduce substance-related risks without requiring immediate abstinence as a precondition for care. / Relapse prevention: Planning for high-risk situations, cravings, coping responses, and support following a return to use or lapse.
B. Harm reduction: A collaborative strategy that strengthens a person's own motivation and commitment to change. / Relapse prevention: Planning for high-risk situations, cravings, coping responses, and support following a return to use or lapse.
C. Harm reduction: Practical strategies intended to reduce substance-related risks without requiring immediate abstinence as a precondition for care. / Relapse prevention: Understanding substance use in relation to adolescent development, peer context, access, and changing autonomy.
D. Harm reduction: Planning for high-risk situations, cravings, coping responses, and support following a return to use or lapse. / Relapse prevention: Practical strategies intended to reduce substance-related risks without requiring immediate abstinence as a precondition for care.

0293. Which option preserves the correct meaning of both Co-occurring conditions and Recovery capital?

A. Co-occurring conditions: Identification of resources and conditions that support reduced use, safety, and healthy development. / Recovery capital: Personal, social, and community resources that can support recovery and sustained change.
B. Co-occurring conditions: Substance-related concerns that occur alongside mental-health or other health conditions. / Recovery capital: Understanding substance use in relation to adolescent development, peer context, access, and changing autonomy.
C. Co-occurring conditions: Substance-related concerns that occur alongside mental-health or other health conditions. / Recovery capital: Personal, social, and community resources that can support recovery and sustained change.
D. Co-occurring conditions: Personal, social, and community resources that can support recovery and sustained change. / Recovery capital: Substance-related concerns that occur alongside mental-health or other health conditions.

0294. In a supervision review, a school-based clinician describes work with a client in early adolescence in the parent meeting: assessing anxiety, mood, trauma, and substance use together while coordinating appropriate care. What concept is illustrated?

A. Co-occurring conditions
B. Relapse prevention
C. Confidentiality and substance care
D. Harm reduction

0295. While supporting a student aged 9 in the classroom support meeting, a case coordinator adopts this practice: asking about supportive adults, activities, strengths, and settings that can reinforce safer choices. Which concept best explains the choice?

A. Protective factor assessment
B. Recovery capital
C. Harm reduction
D. Developmental framing

0296. Select the best explanation of Protective factor assessment.

A. A brief, age-appropriate process to identify possible substance-related risk and need for fuller assessment.
B. Identification of resources and conditions that support reduced use, safety, and healthy development.
C. Planning for high-risk situations, cravings, coping responses, and support following a return to use or lapse.
D. Privacy rules for adolescent substance services that depend on jurisdiction, consent, and service context.

0297. A supervisor asks for an applied contrast between SBIRT and Recovery capital. Which option fits?

A. SBIRT: Linking screening results to a brief conversation and appropriate referral when indicated. / Recovery capital: Explaining privacy and its exceptions accurately using current local law and policy before asking sensitive questions.
B. SBIRT: Exploring peer influence and emerging independence without assuming all adolescent use has the same meaning. / Recovery capital: Mapping supportive relationships, practical resources, and meaningful roles that can aid recovery.
C. SBIRT: Linking screening results to a brief conversation and appropriate referral when indicated. / Recovery capital: Mapping supportive relationships, practical resources, and meaningful roles that can aid recovery.
D. SBIRT: Mapping supportive relationships, practical resources, and meaningful roles that can aid recovery. / Recovery capital: Linking screening results to a brief conversation and appropriate referral when indicated.

0298. A supervisor asks how Confidentiality and substance care would appear in practice. Which choice should be selected?

A. Using a validated youth-appropriate screen as an entry point rather than treating it as a diagnosis.
B. Mapping supportive relationships, practical resources, and meaningful roles that can aid recovery.
C. Explaining privacy and its exceptions accurately using current local law and policy before asking sensitive questions.
D. Discussing realistic safety steps while continuing to support the adolescent's goals and options.

0299. A school-based clinician presents a support plan for a teenage client at the telehealth session. Its central feature is asking about supportive adults, activities, strengths, and settings that can reinforce safer choices. Which concept should be named?

A. Protective factor assessment
B. SBIRT
C. Relapse prevention
D. Recovery capital

0300. In a supervision review, a parent educator describes work with a young person aged 18 in the learning-support meeting: asking about supportive adults, activities, strengths, and settings that can reinforce safer choices. What concept is illustrated?

A. Co-occurring conditions
B. Developmental framing
C. Protective factor assessment
D. Relapse prevention

0301. When reviewing a young person aged 18's plan in the learning-support meeting, the parent educator notes that the next step is asking about supportive adults, activities, strengths, and settings that can reinforce safer choices. Which concept guides this step?

A. SBIRT
B. Protective factor assessment
C. Recovery capital
D. Harm reduction

0302. A mental-health professional is supporting a older adolescent client in the family session. The key practice is exploring peer influence and emerging independence without assuming all adolescent use has the same meaning. Which course concept is most relevant?

A. Developmental framing
B. Motivational enhancement
C. Confidentiality and substance care
D. Relapse prevention

0303. Which course concept is defined as follows: Personal, social, and community resources that can support recovery and sustained change.

A. Confidentiality and substance care
B. Recovery capital
C. Protective factor assessment
D. Harm reduction

0304. An interdisciplinary team reviews a young person aged 10's case at the family session. The school support specialist recommends explaining privacy and its exceptions accurately using current local law and policy before asking sensitive questions. Which course concept best fits?

A. Confidentiality and substance care
B. Adolescent substance-use screening
C. Relapse prevention
D. SBIRT

0305. In the family resource center, the agreed focus for a program coordinator working with a student aged 15 is asking about supportive adults, activities, strengths, and settings that can reinforce safer choices. Which concept names this focus?

A. Co-occurring conditions
B. SBIRT
C. Motivational enhancement
D. Protective factor assessment

0306. Choose the term that matches this definition: Understanding substance use in relation to adolescent development, peer context, access, and changing autonomy.

A. Motivational enhancement
B. Co-occurring conditions
C. Adolescent substance-use screening
D. Developmental framing

0307. Which applied comparison correctly identifies what belongs to Motivational enhancement versus Recovery capital?

A. Motivational enhancement: Eliciting the adolescent's reasons for and against change and reinforcing autonomy. / Recovery capital: Mapping supportive relationships, practical resources, and meaningful roles that can aid recovery.
B. Motivational enhancement: Eliciting the adolescent's reasons for and against change and reinforcing autonomy. / Recovery capital: Using a validated youth-appropriate screen as an entry point rather than treating it as a diagnosis.
C. Motivational enhancement: Asking about supportive adults, activities, strengths, and settings that can reinforce safer choices. / Recovery capital: Mapping supportive relationships, practical resources, and meaningful roles that can aid recovery.
D. Motivational enhancement: Mapping supportive relationships, practical resources, and meaningful roles that can aid recovery. / Recovery capital: Eliciting the adolescent's reasons for and against change and reinforcing autonomy.

0308. A school support specialist reviews a plan for a client in early adolescence in the youth group. The plan emphasizes exploring peer influence and emerging independence without assuming all adolescent use has the same meaning. Which course idea does this reflect?

A. Confidentiality and substance care
B. Developmental framing
C. SBIRT
D. Adolescent substance-use screening

0309. Which comparison would correct a trainee's misunderstanding of Harm reduction versus Developmental framing?

A. Harm reduction: Practical strategies intended to reduce substance-related risks without requiring immediate abstinence as a precondition for care. / Developmental framing: Understanding substance use in relation to adolescent development, peer context, access, and changing autonomy.
B. Harm reduction: Planning for high-risk situations, cravings, coping responses, and support following a return to use or lapse. / Developmental framing: Understanding substance use in relation to adolescent development, peer context, access, and changing autonomy.
C. Harm reduction: Understanding substance use in relation to adolescent development, peer context, access, and changing autonomy. / Developmental framing: Practical strategies intended to reduce substance-related risks without requiring immediate abstinence as a precondition for care.
D. Harm reduction: Practical strategies intended to reduce substance-related risks without requiring immediate abstinence as a precondition for care. / Developmental framing: Privacy rules for adolescent substance services that depend on jurisdiction, consent, and service context.

0310. In adolescent substance-use counseling, a trainee must distinguish how Harm reduction and Relapse prevention guide practice. Which comparison is accurate?

A. Harm reduction: Eliciting the adolescent's reasons for and against change and reinforcing autonomy. / Relapse prevention: Identifying triggers and rehearsal of a response plan without framing a lapse as total failure.
B. Harm reduction: Discussing realistic safety steps while continuing to support the adolescent's goals and options. / Relapse prevention: Exploring peer influence and emerging independence without assuming all adolescent use has the same meaning.
C. Harm reduction: Discussing realistic safety steps while continuing to support the adolescent's goals and options. / Relapse prevention: Identifying triggers and rehearsal of a response plan without framing a lapse as total failure.
D. Harm reduction: Identifying triggers and rehearsal of a response plan without framing a lapse as total failure. / Relapse prevention: Discussing realistic safety steps while continuing to support the adolescent's goals and options.

0311. At a case-planning meeting, the clinical supervisor proposes explaining privacy and its exceptions accurately using current local law and policy before asking sensitive questions. for a child of elementary-school age seen in the behavior-support review. Which concept does this illustrate?

A. Confidentiality and substance care
B. Protective factor assessment
C. Motivational enhancement
D. Recovery capital

0312. Which option pairs the definitions of Harm reduction and Confidentiality and substance care correctly, in that order?

A. Harm reduction: Practical strategies intended to reduce substance-related risks without requiring immediate abstinence as a precondition for care. / Confidentiality and substance care: Personal, social, and community resources that can support recovery and sustained change.
B. Harm reduction: Practical strategies intended to reduce substance-related risks without requiring immediate abstinence as a precondition for care. / Confidentiality and substance care: Privacy rules for adolescent substance services that depend on jurisdiction, consent, and service context.
C. Harm reduction: Privacy rules for adolescent substance services that depend on jurisdiction, consent, and service context. / Confidentiality and substance care: Practical strategies intended to reduce substance-related risks without requiring immediate abstinence as a precondition for care.
D. Harm reduction: Screening, brief intervention, and referral to treatment, a structured pathway for responding to substance-use risk. / Confidentiality and substance care: Privacy rules for adolescent substance services that depend on jurisdiction, consent, and service context.

0313. A supervised trainee and a young person aged 16 are discussing support in the caregiver consultation. The selected practice is explaining privacy and its exceptions accurately using current local law and policy before asking sensitive questions. Which concept does this demonstrate?

A. Confidentiality and substance care
B. Developmental framing
C. Protective factor assessment
D. Co-occurring conditions

0314. A community practitioner describes an intervention for a child aged 6 in the community youth program, centered on exploring peer influence and emerging independence without assuming all adolescent use has the same meaning. Which named idea is most relevant?

A. Confidentiality and substance care
B. Adolescent substance-use screening
C. Protective factor assessment
D. Developmental framing

0315. In adolescent substance-use counseling, which comparison correctly distinguishes Adolescent substance-use screening from Relapse prevention?

A. Adolescent substance-use screening: A collaborative strategy that strengthens a person's own motivation and commitment to change. / Relapse prevention: Planning for high-risk situations, cravings, coping responses, and support following a return to use or lapse.
B. Adolescent substance-use screening: A brief, age-appropriate process to identify possible substance-related risk and need for fuller assessment. / Relapse prevention: Planning for high-risk situations, cravings, coping responses, and support following a return to use or lapse.
C. Adolescent substance-use screening: A brief, age-appropriate process to identify possible substance-related risk and need for fuller assessment. / Relapse prevention: Personal, social, and community resources that can support recovery and sustained change.
D. Adolescent substance-use screening: Planning for high-risk situations, cravings, coping responses, and support following a return to use or lapse. / Relapse prevention: A brief, age-appropriate process to identify possible substance-related risk and need for fuller assessment.

0316. In adolescent substance-use counseling, choose the definition pair that correctly explains Protective factor assessment first and Relapse prevention second.

A. Protective factor assessment: Identification of resources and conditions that support reduced use, safety, and healthy development. / Relapse prevention: Personal, social, and community resources that can support recovery and sustained change.
B. Protective factor assessment: Planning for high-risk situations, cravings, coping responses, and support following a return to use or lapse. / Relapse prevention: Identification of resources and conditions that support reduced use, safety, and healthy development.
C. Protective factor assessment: Identification of resources and conditions that support reduced use, safety, and healthy development. / Relapse prevention: Planning for high-risk situations, cravings, coping responses, and support following a return to use or lapse.
D. Protective factor assessment: Substance-related concerns that occur alongside mental-health or other health conditions. / Relapse prevention: Planning for high-risk situations, cravings, coping responses, and support following a return to use or lapse.

0317. Choose the definition pair that correctly explains Adolescent substance-use screening first and Harm reduction second.

A. Adolescent substance-use screening: Practical strategies intended to reduce substance-related risks without requiring immediate abstinence as a precondition for care. / Harm reduction: A brief, age-appropriate process to identify possible substance-related risk and need for fuller assessment.
B. Adolescent substance-use screening: A brief, age-appropriate process to identify possible substance-related risk and need for fuller assessment. / Harm reduction: Practical strategies intended to reduce substance-related risks without requiring immediate abstinence as a precondition for care.
C. Adolescent substance-use screening: A brief, age-appropriate process to identify possible substance-related risk and need for fuller assessment. / Harm reduction: Privacy rules for adolescent substance services that depend on jurisdiction, consent, and service context.
D. Adolescent substance-use screening: A collaborative strategy that strengthens a person's own motivation and commitment to change. / Harm reduction: Practical strategies intended to reduce substance-related risks without requiring immediate abstinence as a precondition for care.

0318. In adolescent substance-use counseling, which statement shows a sound practice-level distinction between Co-occurring conditions and Relapse prevention?

A. Co-occurring conditions: Assessing anxiety, mood, trauma, and substance use together while coordinating appropriate care. / Relapse prevention: Discussing realistic safety steps while continuing to support the adolescent's goals and options.
B. Co-occurring conditions: Explaining privacy and its exceptions accurately using current local law and policy before asking sensitive questions. / Relapse prevention: Identifying triggers and rehearsal of a response plan without framing a lapse as total failure.
C. Co-occurring conditions: Assessing anxiety, mood, trauma, and substance use together while coordinating appropriate care. / Relapse prevention: Identifying triggers and rehearsal of a response plan without framing a lapse as total failure.
D. Co-occurring conditions: Identifying triggers and rehearsal of a response plan without framing a lapse as total failure. / Relapse prevention: Assessing anxiety, mood, trauma, and substance use together while coordinating appropriate care.

0319. A student confuses Motivational enhancement with Harm reduction. Which explanation most accurately separates them?

A. Motivational enhancement: Screening, brief intervention, and referral to treatment, a structured pathway for responding to substance-use risk. / Harm reduction: Practical strategies intended to reduce substance-related risks without requiring immediate abstinence as a precondition for care.
B. Motivational enhancement: A collaborative strategy that strengthens a person's own motivation and commitment to change. / Harm reduction: Practical strategies intended to reduce substance-related risks without requiring immediate abstinence as a precondition for care.
C. Motivational enhancement: A collaborative strategy that strengthens a person's own motivation and commitment to change. / Harm reduction: Privacy rules for adolescent substance services that depend on jurisdiction, consent, and service context.
D. Motivational enhancement: Practical strategies intended to reduce substance-related risks without requiring immediate abstinence as a precondition for care. / Harm reduction: A collaborative strategy that strengthens a person's own motivation and commitment to change.

0320. While consulting in the behavior-support review, a consultant supports a student aged 17 by using this approach: asking about supportive adults, activities, strengths, and settings that can reinforce safer choices. Which concept is being applied?

A. Protective factor assessment
B. Developmental framing
C. Motivational enhancement
D. Adolescent substance-use screening

0321. A student confuses Adolescent substance-use screening with Harm reduction. Which explanation most accurately separates them?

A. Adolescent substance-use screening: A collaborative strategy that strengthens a person's own motivation and commitment to change. / Harm reduction: Practical strategies intended to reduce substance-related risks without requiring immediate abstinence as a precondition for care.
B. Adolescent substance-use screening: Practical strategies intended to reduce substance-related risks without requiring immediate abstinence as a precondition for care. / Harm reduction: A brief, age-appropriate process to identify possible substance-related risk and need for fuller assessment.
C. Adolescent substance-use screening: A brief, age-appropriate process to identify possible substance-related risk and need for fuller assessment. / Harm reduction: Privacy rules for adolescent substance services that depend on jurisdiction, consent, and service context.
D. Adolescent substance-use screening: A brief, age-appropriate process to identify possible substance-related risk and need for fuller assessment. / Harm reduction: Practical strategies intended to reduce substance-related risks without requiring immediate abstinence as a precondition for care.

0322. At a case-planning meeting, the behavior specialist proposes asking about supportive adults, activities, strengths, and settings that can reinforce safer choices. for a child aged 11 seen in the multidisciplinary case conference. Which concept does this illustrate?

A. Developmental framing
B. Co-occurring conditions
C. Protective factor assessment
D. Adolescent substance-use screening

0323. While supporting a child aged 6 in the school consultation, a caregiver working with a counselor adopts this practice: discussing realistic safety steps while continuing to support the adolescent's goals and options. Which concept best explains the choice?

A. SBIRT
B. Relapse prevention
C. Co-occurring conditions
D. Harm reduction

0324. Which statement shows a sound practice-level distinction between Harm reduction and Protective factor assessment?

A. Harm reduction: Discussing realistic safety steps while continuing to support the adolescent's goals and options. / Protective factor assessment: Mapping supportive relationships, practical resources, and meaningful roles that can aid recovery.
B. Harm reduction: Asking about supportive adults, activities, strengths, and settings that can reinforce safer choices. / Protective factor assessment: Discussing realistic safety steps while continuing to support the adolescent's goals and options.
C. Harm reduction: Discussing realistic safety steps while continuing to support the adolescent's goals and options. / Protective factor assessment: Asking about supportive adults, activities, strengths, and settings that can reinforce safer choices.
D. Harm reduction: Linking screening results to a brief conversation and appropriate referral when indicated. / Protective factor assessment: Asking about supportive adults, activities, strengths, and settings that can reinforce safer choices.

0325. In adolescent substance-use counseling, in a supervision quiz, how should Recovery capital be distinguished from Relapse prevention?

A. Recovery capital: Personal, social, and community resources that can support recovery and sustained change. / Relapse prevention: Identification of resources and conditions that support reduced use, safety, and healthy development.
B. Recovery capital: A collaborative strategy that strengthens a person's own motivation and commitment to change. / Relapse prevention: Planning for high-risk situations, cravings, coping responses, and support following a return to use or lapse.
C. Recovery capital: Planning for high-risk situations, cravings, coping responses, and support following a return to use or lapse. / Relapse prevention: Personal, social, and community resources that can support recovery and sustained change.
D. Recovery capital: Personal, social, and community resources that can support recovery and sustained change. / Relapse prevention: Planning for high-risk situations, cravings, coping responses, and support following a return to use or lapse.

0326. In the counseling practicum, a team asks how a school counselor can support a child of elementary-school age. One proposed action is using a validated youth-appropriate screen as an entry point rather than treating it as a diagnosis. Which idea does it represent?

A. Relapse prevention
B. Protective factor assessment
C. Adolescent substance-use screening
D. Co-occurring conditions

0327. In adolescent substance-use counseling, which pair of actions illustrates Confidentiality and substance care and Relapse prevention, respectively?

A. Confidentiality and substance care: Explaining privacy and its exceptions accurately using current local law and policy before asking sensitive questions. / Relapse prevention: Linking screening results to a brief conversation and appropriate referral when indicated.
B. Confidentiality and substance care: Discussing realistic safety steps while continuing to support the adolescent's goals and options. / Relapse prevention: Identifying triggers and rehearsal of a response plan without framing a lapse as total failure.
C. Confidentiality and substance care: Explaining privacy and its exceptions accurately using current local law and policy before asking sensitive questions. / Relapse prevention: Identifying triggers and rehearsal of a response plan without framing a lapse as total failure.
D. Confidentiality and substance care: Identifying triggers and rehearsal of a response plan without framing a lapse as total failure. / Relapse prevention: Explaining privacy and its exceptions accurately using current local law and policy before asking sensitive questions.

0328. In adolescent substance-use counseling, in a supervision quiz, how should Confidentiality and substance care be distinguished from Relapse prevention?

A. Confidentiality and substance care: Privacy rules for adolescent substance services that depend on jurisdiction, consent, and service context. / Relapse prevention: Planning for high-risk situations, cravings, coping responses, and support following a return to use or lapse.
B. Confidentiality and substance care: Privacy rules for adolescent substance services that depend on jurisdiction, consent, and service context. / Relapse prevention: Screening, brief intervention, and referral to treatment, a structured pathway for responding to substance-use risk.
C. Confidentiality and substance care: Practical strategies intended to reduce substance-related risks without requiring immediate abstinence as a precondition for care. / Relapse prevention: Planning for high-risk situations, cravings, coping responses, and support following a return to use or lapse.
D. Confidentiality and substance care: Planning for high-risk situations, cravings, coping responses, and support following a return to use or lapse. / Relapse prevention: Privacy rules for adolescent substance services that depend on jurisdiction, consent, and service context.

0329. A student aged 17's service team meets in the clinical planning session. The caregiver working with a counselor recommends a change involving linking screening results to a brief conversation and appropriate referral when indicated. Which idea best explains it?

A. Adolescent substance-use screening
B. SBIRT
C. Motivational enhancement
D. Relapse prevention

0330. A support meeting for a adolescent student includes a clinical supervisor in the youth group. The practice under consideration is asking about supportive adults, activities, strengths, and settings that can reinforce safer choices. Which concept guides it?

A. Relapse prevention
B. Harm reduction
C. Recovery capital
D. Protective factor assessment

0331. A doctoral student reads the following description. Which concept does it define? Screening, brief intervention, and referral to treatment, a structured pathway for responding to substance-use risk.

A. Recovery capital
B. SBIRT
C. Co-occurring conditions
D. Relapse prevention

0332. While consulting in the community mental-health service, a consultant supports a client in late adolescence by using this approach: exploring peer influence and emerging independence without assuming all adolescent use has the same meaning. Which concept is being applied?

A. Developmental framing
B. SBIRT
C. Confidentiality and substance care
D. Protective factor assessment

0333. A planning meeting about a child aged 14 includes a behavior specialist. The proposed practice in the student wellness team is linking screening results to a brief conversation and appropriate referral when indicated. Which idea underlies it?

A. Co-occurring conditions
B. Protective factor assessment
C. SBIRT
D. Developmental framing

0334. Which option pairs the definitions of Motivational enhancement and SBIRT correctly, in that order?

A. Motivational enhancement: A collaborative strategy that strengthens a person's own motivation and commitment to change. / SBIRT: Privacy rules for adolescent substance services that depend on jurisdiction, consent, and service context.
B. Motivational enhancement: Practical strategies intended to reduce substance-related risks without requiring immediate abstinence as a precondition for care. / SBIRT: Screening, brief intervention, and referral to treatment, a structured pathway for responding to substance-use risk.
C. Motivational enhancement: Screening, brief intervention, and referral to treatment, a structured pathway for responding to substance-use risk. / SBIRT: A collaborative strategy that strengthens a person's own motivation and commitment to change.
D. Motivational enhancement: A collaborative strategy that strengthens a person's own motivation and commitment to change. / SBIRT: Screening, brief intervention, and referral to treatment, a structured pathway for responding to substance-use risk.

0335. How are Co-occurring conditions and Recovery capital most accurately differentiated in this curriculum?

A. Co-occurring conditions: Substance-related concerns that occur alongside mental-health or other health conditions. / Recovery capital: Personal, social, and community resources that can support recovery and sustained change.
B. Co-occurring conditions: Substance-related concerns that occur alongside mental-health or other health conditions. / Recovery capital: Understanding substance use in relation to adolescent development, peer context, access, and changing autonomy.
C. Co-occurring conditions: Personal, social, and community resources that can support recovery and sustained change. / Recovery capital: Substance-related concerns that occur alongside mental-health or other health conditions.
D. Co-occurring conditions: Identification of resources and conditions that support reduced use, safety, and healthy development. / Recovery capital: Personal, social, and community resources that can support recovery and sustained change.

0336. A case discussion concerns a preadolescent child and a school-based clinician in the multidisciplinary case conference. The practitioner is considering linking screening results to a brief conversation and appropriate referral when indicated. Which principle is involved?

A. SBIRT
B. Recovery capital
C. Confidentiality and substance care
D. Relapse prevention

0337. A trainee must choose a practice that exemplifies Harm reduction. Which action is the best fit?

A. Eliciting the adolescent's reasons for and against change and reinforcing autonomy.
B. Discussing realistic safety steps while continuing to support the adolescent's goals and options.
C. Exploring peer influence and emerging independence without assuming all adolescent use has the same meaning.
D. Mapping supportive relationships, practical resources, and meaningful roles that can aid recovery.

0338. A trainee must explain Co-occurring conditions. Which answer is accurate?

A. Substance-related concerns that occur alongside mental-health or other health conditions.
B. Planning for high-risk situations, cravings, coping responses, and support following a return to use or lapse.
C. Practical strategies intended to reduce substance-related risks without requiring immediate abstinence as a precondition for care.
D. Understanding substance use in relation to adolescent development, peer context, access, and changing autonomy.

0339. Which applied comparison correctly identifies what belongs to Motivational enhancement versus SBIRT?

A. Motivational enhancement: Linking screening results to a brief conversation and appropriate referral when indicated. / SBIRT: Eliciting the adolescent's reasons for and against change and reinforcing autonomy.
B. Motivational enhancement: Eliciting the adolescent's reasons for and against change and reinforcing autonomy. / SBIRT: Linking screening results to a brief conversation and appropriate referral when indicated.
C. Motivational enhancement: Eliciting the adolescent's reasons for and against change and reinforcing autonomy. / SBIRT: Explaining privacy and its exceptions accurately using current local law and policy before asking sensitive questions.
D. Motivational enhancement: Discussing realistic safety steps while continuing to support the adolescent's goals and options. / SBIRT: Linking screening results to a brief conversation and appropriate referral when indicated.

0340. In adolescent substance-use counseling, a parent educator presents a support plan for a preadolescent child at the counseling practicum. Its central feature is identifying triggers and rehearsal of a response plan without framing a lapse as total failure. Which concept should be named?

A. SBIRT
B. Relapse prevention
C. Co-occurring conditions
D. Harm reduction

0341. Which comparison correctly distinguishes Motivational enhancement from SBIRT?

A. Motivational enhancement: Practical strategies intended to reduce substance-related risks without requiring immediate abstinence as a precondition for care. / SBIRT: Screening, brief intervention, and referral to treatment, a structured pathway for responding to substance-use risk.
B. Motivational enhancement: A collaborative strategy that strengthens a person's own motivation and commitment to change. / SBIRT: Screening, brief intervention, and referral to treatment, a structured pathway for responding to substance-use risk.
C. Motivational enhancement: A collaborative strategy that strengthens a person's own motivation and commitment to change. / SBIRT: Privacy rules for adolescent substance services that depend on jurisdiction, consent, and service context.
D. Motivational enhancement: Screening, brief intervention, and referral to treatment, a structured pathway for responding to substance-use risk. / SBIRT: A collaborative strategy that strengthens a person's own motivation and commitment to change.

0342. How are Adolescent substance-use screening and Developmental framing most accurately differentiated in this curriculum?

A. Adolescent substance-use screening: Screening, brief intervention, and referral to treatment, a structured pathway for responding to substance-use risk. / Developmental framing: Understanding substance use in relation to adolescent development, peer context, access, and changing autonomy.
B. Adolescent substance-use screening: A brief, age-appropriate process to identify possible substance-related risk and need for fuller assessment. / Developmental framing: Understanding substance use in relation to adolescent development, peer context, access, and changing autonomy.
C. Adolescent substance-use screening: A brief, age-appropriate process to identify possible substance-related risk and need for fuller assessment. / Developmental framing: Planning for high-risk situations, cravings, coping responses, and support following a return to use or lapse.
D. Adolescent substance-use screening: Understanding substance use in relation to adolescent development, peer context, access, and changing autonomy. / Developmental framing: A brief, age-appropriate process to identify possible substance-related risk and need for fuller assessment.

0343. Choose the definition pair that correctly explains Adolescent substance-use screening first and Protective factor assessment second.

A. Adolescent substance-use screening: A brief, age-appropriate process to identify possible substance-related risk and need for fuller assessment. / Protective factor assessment: Identification of resources and conditions that support reduced use, safety, and healthy development.
B. Adolescent substance-use screening: Identification of resources and conditions that support reduced use, safety, and healthy development. / Protective factor assessment: A brief, age-appropriate process to identify possible substance-related risk and need for fuller assessment.
C. Adolescent substance-use screening: A collaborative strategy that strengthens a person's own motivation and commitment to change. / Protective factor assessment: Identification of resources and conditions that support reduced use, safety, and healthy development.
D. Adolescent substance-use screening: A brief, age-appropriate process to identify possible substance-related risk and need for fuller assessment. / Protective factor assessment: Planning for high-risk situations, cravings, coping responses, and support following a return to use or lapse.

0344. Consider a young person receiving help in the outpatient clinic. The youth worker focuses on assessing anxiety, mood, trauma, and substance use together while coordinating appropriate care. Which term best describes the guiding idea?

A. Confidentiality and substance care
B. Co-occurring conditions
C. Harm reduction
D. Relapse prevention

0345. In adolescent substance-use counseling, a young adolescent client is receiving support in the student-support meeting. The youth worker is guided by this practice: identifying triggers and rehearsal of a response plan without framing a lapse as total failure. Which principle best fits?

A. Adolescent substance-use screening
B. Developmental framing
C. Relapse prevention
D. SBIRT

0346. In adolescent substance-use counseling, how should a practitioner distinguish the applications of Harm reduction and Relapse prevention?

A. Harm reduction: Eliciting the adolescent's reasons for and against change and reinforcing autonomy. / Relapse prevention: Identifying triggers and rehearsal of a response plan without framing a lapse as total failure.
B. Harm reduction: Discussing realistic safety steps while continuing to support the adolescent's goals and options. / Relapse prevention: Exploring peer influence and emerging independence without assuming all adolescent use has the same meaning.
C. Harm reduction: Discussing realistic safety steps while continuing to support the adolescent's goals and options. / Relapse prevention: Identifying triggers and rehearsal of a response plan without framing a lapse as total failure.
D. Harm reduction: Identifying triggers and rehearsal of a response plan without framing a lapse as total failure. / Relapse prevention: Discussing realistic safety steps while continuing to support the adolescent's goals and options.

0347. Which statement shows a sound practice-level distinction between Motivational enhancement and Harm reduction?

A. Motivational enhancement: Eliciting the adolescent's reasons for and against change and reinforcing autonomy. / Harm reduction: Discussing realistic safety steps while continuing to support the adolescent's goals and options.
B. Motivational enhancement: Discussing realistic safety steps while continuing to support the adolescent's goals and options. / Harm reduction: Eliciting the adolescent's reasons for and against change and reinforcing autonomy.
C. Motivational enhancement: Linking screening results to a brief conversation and appropriate referral when indicated. / Harm reduction: Discussing realistic safety steps while continuing to support the adolescent's goals and options.
D. Motivational enhancement: Eliciting the adolescent's reasons for and against change and reinforcing autonomy. / Harm reduction: Explaining privacy and its exceptions accurately using current local law and policy before asking sensitive questions.

0348. Which comparison would correct a trainee's misunderstanding of Motivational enhancement versus Co-occurring conditions?

A. Motivational enhancement: Substance-related concerns that occur alongside mental-health or other health conditions. / Co-occurring conditions: A collaborative strategy that strengthens a person's own motivation and commitment to change.
B. Motivational enhancement: A collaborative strategy that strengthens a person's own motivation and commitment to change. / Co-occurring conditions: Identification of resources and conditions that support reduced use, safety, and healthy development.
C. Motivational enhancement: A collaborative strategy that strengthens a person's own motivation and commitment to change. / Co-occurring conditions: Substance-related concerns that occur alongside mental-health or other health conditions.
D. Motivational enhancement: Understanding substance use in relation to adolescent development, peer context, access, and changing autonomy. / Co-occurring conditions: Substance-related concerns that occur alongside mental-health or other health conditions.

0349. Which applied comparison correctly identifies what belongs to Harm reduction versus Confidentiality and substance care?

A. Harm reduction: Discussing realistic safety steps while continuing to support the adolescent's goals and options. / Confidentiality and substance care: Mapping supportive relationships, practical resources, and meaningful roles that can aid recovery.
B. Harm reduction: Linking screening results to a brief conversation and appropriate referral when indicated. / Confidentiality and substance care: Explaining privacy and its exceptions accurately using current local law and policy before asking sensitive questions.
C. Harm reduction: Discussing realistic safety steps while continuing to support the adolescent's goals and options. / Confidentiality and substance care: Explaining privacy and its exceptions accurately using current local law and policy before asking sensitive questions.
D. Harm reduction: Explaining privacy and its exceptions accurately using current local law and policy before asking sensitive questions. / Confidentiality and substance care: Discussing realistic safety steps while continuing to support the adolescent's goals and options.

0350. A planning meeting about a student aged 17 includes a play therapist. The proposed practice in the student-support meeting is mapping supportive relationships, practical resources, and meaningful roles that can aid recovery. Which idea underlies it?

A. Recovery capital
B. Relapse prevention
C. Harm reduction
D. Adolescent substance-use screening

0351. In adolescent substance-use counseling, which paired example correctly applies Relapse prevention first and Developmental framing second?

A. Relapse prevention: Identifying triggers and rehearsal of a response plan without framing a lapse as total failure. / Developmental framing: Exploring peer influence and emerging independence without assuming all adolescent use has the same meaning.
B. Relapse prevention: Exploring peer influence and emerging independence without assuming all adolescent use has the same meaning. / Developmental framing: Identifying triggers and rehearsal of a response plan without framing a lapse as total failure.
C. Relapse prevention: Discussing realistic safety steps while continuing to support the adolescent's goals and options. / Developmental framing: Exploring peer influence and emerging independence without assuming all adolescent use has the same meaning.
D. Relapse prevention: Identifying triggers and rehearsal of a response plan without framing a lapse as total failure. / Developmental framing: Asking about supportive adults, activities, strengths, and settings that can reinforce safer choices.

0352. In adolescent substance-use counseling, which pair of actions illustrates SBIRT and Relapse prevention, respectively?

A. SBIRT: Linking screening results to a brief conversation and appropriate referral when indicated. / Relapse prevention: Exploring peer influence and emerging independence without assuming all adolescent use has the same meaning.
B. SBIRT: Identifying triggers and rehearsal of a response plan without framing a lapse as total failure. / Relapse prevention: Linking screening results to a brief conversation and appropriate referral when indicated.
C. SBIRT: Assessing anxiety, mood, trauma, and substance use together while coordinating appropriate care. / Relapse prevention: Identifying triggers and rehearsal of a response plan without framing a lapse as total failure.
D. SBIRT: Linking screening results to a brief conversation and appropriate referral when indicated. / Relapse prevention: Identifying triggers and rehearsal of a response plan without framing a lapse as total failure.

0353. Which professional action most closely applies Protective factor assessment?

A. Exploring peer influence and emerging independence without assuming all adolescent use has the same meaning.
B. Asking about supportive adults, activities, strengths, and settings that can reinforce safer choices.
C. Explaining privacy and its exceptions accurately using current local law and policy before asking sensitive questions.
D. Eliciting the adolescent's reasons for and against change and reinforcing autonomy.

0354. Which paired example correctly applies Co-occurring conditions first and Confidentiality and substance care second?

A. Co-occurring conditions: Assessing anxiety, mood, trauma, and substance use together while coordinating appropriate care. / Confidentiality and substance care: Explaining privacy and its exceptions accurately using current local law and policy before asking sensitive questions.
B. Co-occurring conditions: Explaining privacy and its exceptions accurately using current local law and policy before asking sensitive questions. / Confidentiality and substance care: Assessing anxiety, mood, trauma, and substance use together while coordinating appropriate care.
C. Co-occurring conditions: Assessing anxiety, mood, trauma, and substance use together while coordinating appropriate care. / Confidentiality and substance care: Using a validated youth-appropriate screen as an entry point rather than treating it as a diagnosis.
D. Co-occurring conditions: Identifying triggers and rehearsal of a response plan without framing a lapse as total failure. / Confidentiality and substance care: Explaining privacy and its exceptions accurately using current local law and policy before asking sensitive questions.

0355. Which option preserves the correct meaning of both SBIRT and Confidentiality and substance care?

A. SBIRT: Privacy rules for adolescent substance services that depend on jurisdiction, consent, and service context. / Confidentiality and substance care: Screening, brief intervention, and referral to treatment, a structured pathway for responding to substance-use risk.
B. SBIRT: Screening, brief intervention, and referral to treatment, a structured pathway for responding to substance-use risk. / Confidentiality and substance care: Privacy rules for adolescent substance services that depend on jurisdiction, consent, and service context.
C. SBIRT: Screening, brief intervention, and referral to treatment, a structured pathway for responding to substance-use risk. / Confidentiality and substance care: A brief, age-appropriate process to identify possible substance-related risk and need for fuller assessment.
D. SBIRT: Substance-related concerns that occur alongside mental-health or other health conditions. / Confidentiality and substance care: Privacy rules for adolescent substance services that depend on jurisdiction, consent, and service context.

0356. At the learning-support meeting, a therapist reviews whether a plan for a child aged 11 is appropriate. The relevant practice is discussing realistic safety steps while continuing to support the adolescent's goals and options. Which concept is tested?

A. Harm reduction
B. Adolescent substance-use screening
C. Relapse prevention
D. Confidentiality and substance care

0357. In adolescent substance-use counseling, a case conference asks for a distinction between Motivational enhancement and Relapse prevention. Which answer is sound?

A. Motivational enhancement: Planning for high-risk situations, cravings, coping responses, and support following a return to use or lapse. / Relapse prevention: A collaborative strategy that strengthens a person's own motivation and commitment to change.
B. Motivational enhancement: Understanding substance use in relation to adolescent development, peer context, access, and changing autonomy. / Relapse prevention: Planning for high-risk situations, cravings, coping responses, and support following a return to use or lapse.
C. Motivational enhancement: A collaborative strategy that strengthens a person's own motivation and commitment to change. / Relapse prevention: Screening, brief intervention, and referral to treatment, a structured pathway for responding to substance-use risk.
D. Motivational enhancement: A collaborative strategy that strengthens a person's own motivation and commitment to change. / Relapse prevention: Planning for high-risk situations, cravings, coping responses, and support following a return to use or lapse.

0358. A case discussion concerns a school-age child and a case coordinator in the community service agency. The practitioner is considering explaining privacy and its exceptions accurately using current local law and policy before asking sensitive questions. Which principle is involved?

A. Confidentiality and substance care
B. Protective factor assessment
C. Relapse prevention
D. Recovery capital

0359. Which option correctly matches each concept to its practice focus: Harm reduction and Recovery capital?

A. Harm reduction: Mapping supportive relationships, practical resources, and meaningful roles that can aid recovery. / Recovery capital: Discussing realistic safety steps while continuing to support the adolescent's goals and options.
B. Harm reduction: Discussing realistic safety steps while continuing to support the adolescent's goals and options. / Recovery capital: Mapping supportive relationships, practical resources, and meaningful roles that can aid recovery.
C. Harm reduction: Discussing realistic safety steps while continuing to support the adolescent's goals and options. / Recovery capital: Eliciting the adolescent's reasons for and against change and reinforcing autonomy.
D. Harm reduction: Assessing anxiety, mood, trauma, and substance use together while coordinating appropriate care. / Recovery capital: Mapping supportive relationships, practical resources, and meaningful roles that can aid recovery.

0360. A team must select a support approach for a child aged 7 at the student-support meeting. The case coordinator recommends eliciting the adolescent's reasons for and against change and reinforcing autonomy. Which idea is most relevant?

A. Harm reduction
B. Recovery capital
C. Motivational enhancement
D. Adolescent substance-use screening

0361. Which statement accurately contrasts the course concepts Protective factor assessment and Confidentiality and substance care?

A. Protective factor assessment: Privacy rules for adolescent substance services that depend on jurisdiction, consent, and service context. / Confidentiality and substance care: Identification of resources and conditions that support reduced use, safety, and healthy development.
B. Protective factor assessment: Identification of resources and conditions that support reduced use, safety, and healthy development. / Confidentiality and substance care: Privacy rules for adolescent substance services that depend on jurisdiction, consent, and service context.
C. Protective factor assessment: Personal, social, and community resources that can support recovery and sustained change. / Confidentiality and substance care: Privacy rules for adolescent substance services that depend on jurisdiction, consent, and service context.
D. Protective factor assessment: Identification of resources and conditions that support reduced use, safety, and healthy development. / Confidentiality and substance care: Understanding substance use in relation to adolescent development, peer context, access, and changing autonomy.

0362. Which applied comparison correctly identifies what belongs to Motivational enhancement versus Protective factor assessment?

A. Motivational enhancement: Asking about supportive adults, activities, strengths, and settings that can reinforce safer choices. / Protective factor assessment: Eliciting the adolescent's reasons for and against change and reinforcing autonomy.
B. Motivational enhancement: Linking screening results to a brief conversation and appropriate referral when indicated. / Protective factor assessment: Asking about supportive adults, activities, strengths, and settings that can reinforce safer choices.
C. Motivational enhancement: Eliciting the adolescent's reasons for and against change and reinforcing autonomy. / Protective factor assessment: Asking about supportive adults, activities, strengths, and settings that can reinforce safer choices.
D. Motivational enhancement: Eliciting the adolescent's reasons for and against change and reinforcing autonomy. / Protective factor assessment: Using a validated youth-appropriate screen as an entry point rather than treating it as a diagnosis.

0363. Choose the practice comparison that best separates Protective factor assessment from Developmental framing.

A. Protective factor assessment: Mapping supportive relationships, practical resources, and meaningful roles that can aid recovery. / Developmental framing: Exploring peer influence and emerging independence without assuming all adolescent use has the same meaning.
B. Protective factor assessment: Exploring peer influence and emerging independence without assuming all adolescent use has the same meaning. / Developmental framing: Asking about supportive adults, activities, strengths, and settings that can reinforce safer choices.
C. Protective factor assessment: Asking about supportive adults, activities, strengths, and settings that can reinforce safer choices. / Developmental framing: Using a validated youth-appropriate screen as an entry point rather than treating it as a diagnosis.
D. Protective factor assessment: Asking about supportive adults, activities, strengths, and settings that can reinforce safer choices. / Developmental framing: Exploring peer influence and emerging independence without assuming all adolescent use has the same meaning.

0364. In adolescent substance-use counseling, which paired example correctly applies Protective factor assessment first and Relapse prevention second?

A. Protective factor assessment: Asking about supportive adults, activities, strengths, and settings that can reinforce safer choices. / Relapse prevention: Mapping supportive relationships, practical resources, and meaningful roles that can aid recovery.
B. Protective factor assessment: Identifying triggers and rehearsal of a response plan without framing a lapse as total failure. / Relapse prevention: Asking about supportive adults, activities, strengths, and settings that can reinforce safer choices.
C. Protective factor assessment: Assessing anxiety, mood, trauma, and substance use together while coordinating appropriate care. / Relapse prevention: Identifying triggers and rehearsal of a response plan without framing a lapse as total failure.
D. Protective factor assessment: Asking about supportive adults, activities, strengths, and settings that can reinforce safer choices. / Relapse prevention: Identifying triggers and rehearsal of a response plan without framing a lapse as total failure.

0365. A trainee must explain Harm reduction. Which answer is accurate?

A. A brief, age-appropriate process to identify possible substance-related risk and need for fuller assessment.
B. Identification of resources and conditions that support reduced use, safety, and healthy development.
C. Practical strategies intended to reduce substance-related risks without requiring immediate abstinence as a precondition for care.
D. Substance-related concerns that occur alongside mental-health or other health conditions.

0366. Which named construct is captured by this account? A brief, age-appropriate process to identify possible substance-related risk and need for fuller assessment.

A. Protective factor assessment
B. SBIRT
C. Motivational enhancement
D. Adolescent substance-use screening

0367. Which comparison would correct a trainee's misunderstanding of SBIRT versus Protective factor assessment?

A. SBIRT: Screening, brief intervention, and referral to treatment, a structured pathway for responding to substance-use risk. / Protective factor assessment: Identification of resources and conditions that support reduced use, safety, and healthy development.
B. SBIRT: Screening, brief intervention, and referral to treatment, a structured pathway for responding to substance-use risk. / Protective factor assessment: Privacy rules for adolescent substance services that depend on jurisdiction, consent, and service context.
C. SBIRT: Practical strategies intended to reduce substance-related risks without requiring immediate abstinence as a precondition for care. / Protective factor assessment: Identification of resources and conditions that support reduced use, safety, and healthy development.
D. SBIRT: Identification of resources and conditions that support reduced use, safety, and healthy development. / Protective factor assessment: Screening, brief intervention, and referral to treatment, a structured pathway for responding to substance-use risk.

0368. Which comparison would correct a trainee's misunderstanding of Adolescent substance-use screening versus Protective factor assessment?

A. Adolescent substance-use screening: A brief, age-appropriate process to identify possible substance-related risk and need for fuller assessment. / Protective factor assessment: Identification of resources and conditions that support reduced use, safety, and healthy development.
B. Adolescent substance-use screening: A collaborative strategy that strengthens a person's own motivation and commitment to change. / Protective factor assessment: Identification of resources and conditions that support reduced use, safety, and healthy development.
C. Adolescent substance-use screening: A brief, age-appropriate process to identify possible substance-related risk and need for fuller assessment. / Protective factor assessment: Planning for high-risk situations, cravings, coping responses, and support following a return to use or lapse.
D. Adolescent substance-use screening: Identification of resources and conditions that support reduced use, safety, and healthy development. / Protective factor assessment: A brief, age-appropriate process to identify possible substance-related risk and need for fuller assessment.

0369. Which applied comparison correctly identifies what belongs to Adolescent substance-use screening versus Protective factor assessment?

A. Adolescent substance-use screening: Using a validated youth-appropriate screen as an entry point rather than treating it as a diagnosis. / Protective factor assessment: Identifying triggers and rehearsal of a response plan without framing a lapse as total failure.
B. Adolescent substance-use screening: Eliciting the adolescent's reasons for and against change and reinforcing autonomy. / Protective factor assessment: Asking about supportive adults, activities, strengths, and settings that can reinforce safer choices.
C. Adolescent substance-use screening: Using a validated youth-appropriate screen as an entry point rather than treating it as a diagnosis. / Protective factor assessment: Asking about supportive adults, activities, strengths, and settings that can reinforce safer choices.
D. Adolescent substance-use screening: Asking about supportive adults, activities, strengths, and settings that can reinforce safer choices. / Protective factor assessment: Using a validated youth-appropriate screen as an entry point rather than treating it as a diagnosis.

0370. Which option correctly matches each concept to its practice focus: Motivational enhancement and Protective factor assessment?

A. Motivational enhancement: Eliciting the adolescent's reasons for and against change and reinforcing autonomy. / Protective factor assessment: Asking about supportive adults, activities, strengths, and settings that can reinforce safer choices.
B. Motivational enhancement: Linking screening results to a brief conversation and appropriate referral when indicated. / Protective factor assessment: Asking about supportive adults, activities, strengths, and settings that can reinforce safer choices.
C. Motivational enhancement: Eliciting the adolescent's reasons for and against change and reinforcing autonomy. / Protective factor assessment: Using a validated youth-appropriate screen as an entry point rather than treating it as a diagnosis.
D. Motivational enhancement: Asking about supportive adults, activities, strengths, and settings that can reinforce safer choices. / Protective factor assessment: Eliciting the adolescent's reasons for and against change and reinforcing autonomy.

0371. In the school counseling office, the agreed focus for a service navigator working with a child aged 11 is mapping supportive relationships, practical resources, and meaningful roles that can aid recovery. Which concept names this focus?

A. SBIRT
B. Developmental framing
C. Relapse prevention
D. Recovery capital

0372. In a supervision review, a caregiver working with a counselor describes work with a middle-school student in the child guidance clinic: eliciting the adolescent's reasons for and against change and reinforcing autonomy. What concept is illustrated?

A. Protective factor assessment
B. Motivational enhancement
C. Co-occurring conditions
D. Recovery capital

0373. Choose the term that matches this definition: A collaborative strategy that strengthens a person's own motivation and commitment to change.

A. Relapse prevention
B. Motivational enhancement
C. Co-occurring conditions
D. Protective factor assessment

0374. In adolescent substance-use counseling, during service review in the behavior-support review, a service navigator describes identifying triggers and rehearsal of a response plan without framing a lapse as total failure. for a child aged 8. Which course idea is most applicable?

A. Adolescent substance-use screening
B. Developmental framing
C. Relapse prevention
D. Co-occurring conditions

0375. At the behavior-support review, a clinical supervisor meets with a child of elementary-school age. The practice priority is: explaining privacy and its exceptions accurately using current local law and policy before asking sensitive questions. Which concept best captures that priority?

A. SBIRT
B. Co-occurring conditions
C. Confidentiality and substance care
D. Adolescent substance-use screening

0376. Which choice aligns each practice with the correct idea, Harm reduction or Co-occurring conditions?

A. Harm reduction: Discussing realistic safety steps while continuing to support the adolescent's goals and options. / Co-occurring conditions: Assessing anxiety, mood, trauma, and substance use together while coordinating appropriate care.
B. Harm reduction: Assessing anxiety, mood, trauma, and substance use together while coordinating appropriate care. / Co-occurring conditions: Discussing realistic safety steps while continuing to support the adolescent's goals and options.
C. Harm reduction: Linking screening results to a brief conversation and appropriate referral when indicated. / Co-occurring conditions: Assessing anxiety, mood, trauma, and substance use together while coordinating appropriate care.
D. Harm reduction: Discussing realistic safety steps while continuing to support the adolescent's goals and options. / Co-occurring conditions: Using a validated youth-appropriate screen as an entry point rather than treating it as a diagnosis.

0377. A case conference reviews a service navigator's work with a child aged 14 in the youth group: explaining privacy and its exceptions accurately using current local law and policy before asking sensitive questions. Which principle is central?

A. Confidentiality and substance care
B. Relapse prevention
C. SBIRT
D. Developmental framing

0378. In adolescent substance-use counseling, which comparison would correct a trainee's misunderstanding of Motivational enhancement versus Relapse prevention?

A. Motivational enhancement: A collaborative strategy that strengthens a person's own motivation and commitment to change. / Relapse prevention: Planning for high-risk situations, cravings, coping responses, and support following a return to use or lapse.
B. Motivational enhancement: Understanding substance use in relation to adolescent development, peer context, access, and changing autonomy. / Relapse prevention: Planning for high-risk situations, cravings, coping responses, and support following a return to use or lapse.
C. Motivational enhancement: A collaborative strategy that strengthens a person's own motivation and commitment to change. / Relapse prevention: Screening, brief intervention, and referral to treatment, a structured pathway for responding to substance-use risk.
D. Motivational enhancement: Planning for high-risk situations, cravings, coping responses, and support following a return to use or lapse. / Relapse prevention: A collaborative strategy that strengthens a person's own motivation and commitment to change.

0379. In adolescent substance-use counseling, which applied comparison correctly identifies what belongs to Confidentiality and substance care versus Relapse prevention?

A. Confidentiality and substance care: Explaining privacy and its exceptions accurately using current local law and policy before asking sensitive questions. / Relapse prevention: Identifying triggers and rehearsal of a response plan without framing a lapse as total failure.
B. Confidentiality and substance care: Discussing realistic safety steps while continuing to support the adolescent's goals and options. / Relapse prevention: Identifying triggers and rehearsal of a response plan without framing a lapse as total failure.
C. Confidentiality and substance care: Explaining privacy and its exceptions accurately using current local law and policy before asking sensitive questions. / Relapse prevention: Linking screening results to a brief conversation and appropriate referral when indicated.
D. Confidentiality and substance care: Identifying triggers and rehearsal of a response plan without framing a lapse as total failure. / Relapse prevention: Explaining privacy and its exceptions accurately using current local law and policy before asking sensitive questions.

0380. Which paired example correctly applies Motivational enhancement first and Developmental framing second?

A. Motivational enhancement: Eliciting the adolescent's reasons for and against change and reinforcing autonomy. / Developmental framing: Identifying triggers and rehearsal of a response plan without framing a lapse as total failure.
B. Motivational enhancement: Assessing anxiety, mood, trauma, and substance use together while coordinating appropriate care. / Developmental framing: Exploring peer influence and emerging independence without assuming all adolescent use has the same meaning.
C. Motivational enhancement: Eliciting the adolescent's reasons for and against change and reinforcing autonomy. / Developmental framing: Exploring peer influence and emerging independence without assuming all adolescent use has the same meaning.
D. Motivational enhancement: Exploring peer influence and emerging independence without assuming all adolescent use has the same meaning. / Developmental framing: Eliciting the adolescent's reasons for and against change and reinforcing autonomy.

0381. Which option preserves the correct meaning of both Adolescent substance-use screening and Recovery capital?

A. Adolescent substance-use screening: Personal, social, and community resources that can support recovery and sustained change. / Recovery capital: A brief, age-appropriate process to identify possible substance-related risk and need for fuller assessment.
B. Adolescent substance-use screening: A brief, age-appropriate process to identify possible substance-related risk and need for fuller assessment. / Recovery capital: Personal, social, and community resources that can support recovery and sustained change.
C. Adolescent substance-use screening: A brief, age-appropriate process to identify possible substance-related risk and need for fuller assessment. / Recovery capital: Screening, brief intervention, and referral to treatment, a structured pathway for responding to substance-use risk.
D. Adolescent substance-use screening: Planning for high-risk situations, cravings, coping responses, and support following a return to use or lapse. / Recovery capital: Personal, social, and community resources that can support recovery and sustained change.

0382. During work in the school consultation, a school counselor identifies this need: exploring peer influence and emerging independence without assuming all adolescent use has the same meaning. Which idea should guide the response?

A. Adolescent substance-use screening
B. Motivational enhancement
C. Developmental framing
D. Co-occurring conditions

0383. Select the best explanation of Confidentiality and substance care.

A. Personal, social, and community resources that can support recovery and sustained change.
B. A brief, age-appropriate process to identify possible substance-related risk and need for fuller assessment.
C. Privacy rules for adolescent substance services that depend on jurisdiction, consent, and service context.
D. Practical strategies intended to reduce substance-related risks without requiring immediate abstinence as a precondition for care.

0384. Which statement most accurately defines Adolescent substance-use screening?

A. Practical strategies intended to reduce substance-related risks without requiring immediate abstinence as a precondition for care.
B. Substance-related concerns that occur alongside mental-health or other health conditions.
C. Understanding substance use in relation to adolescent development, peer context, access, and changing autonomy.
D. A brief, age-appropriate process to identify possible substance-related risk and need for fuller assessment.

0385. Which option correctly matches each concept to its practice focus: Motivational enhancement and Co-occurring conditions?

A. Motivational enhancement: Assessing anxiety, mood, trauma, and substance use together while coordinating appropriate care. / Co-occurring conditions: Eliciting the adolescent's reasons for and against change and reinforcing autonomy.
B. Motivational enhancement: Eliciting the adolescent's reasons for and against change and reinforcing autonomy. / Co-occurring conditions: Assessing anxiety, mood, trauma, and substance use together while coordinating appropriate care.
C. Motivational enhancement: Exploring peer influence and emerging independence without assuming all adolescent use has the same meaning. / Co-occurring conditions: Assessing anxiety, mood, trauma, and substance use together while coordinating appropriate care.
D. Motivational enhancement: Eliciting the adolescent's reasons for and against change and reinforcing autonomy. / Co-occurring conditions: Asking about supportive adults, activities, strengths, and settings that can reinforce safer choices.

0386. A service team discusses a child aged 6 in the community service agency. Their proposed next step is asking about supportive adults, activities, strengths, and settings that can reinforce safer choices. Which course concept supports it?

A. Adolescent substance-use screening
B. Protective factor assessment
C. Relapse prevention
D. SBIRT

0387. In the outpatient clinic, a youth worker describes the most appropriate support for a young person as assessing anxiety, mood, trauma, and substance use together while coordinating appropriate care. Which framework is being applied?

A. Adolescent substance-use screening
B. SBIRT
C. Relapse prevention
D. Co-occurring conditions

0388. A young person aged 18 and a supervised trainee are reviewing goals in the family resource center. The agreed action is assessing anxiety, mood, trauma, and substance use together while coordinating appropriate care. Which principle best accounts for it?

A. Co-occurring conditions
B. SBIRT
C. Adolescent substance-use screening
D. Recovery capital

0389. A service team discusses a student aged 17 in the caregiver consultation. Their proposed next step is using a validated youth-appropriate screen as an entry point rather than treating it as a diagnosis. Which course concept supports it?

A. Harm reduction
B. Recovery capital
C. Developmental framing
D. Adolescent substance-use screening

0390. A therapist is asked what should shape a client in late adolescence's support in the youth advocacy program. The proposed focus is assessing anxiety, mood, trauma, and substance use together while coordinating appropriate care. Which principle does it represent?

A. Relapse prevention
B. Co-occurring conditions
C. Confidentiality and substance care
D. Recovery capital

0391. Which professional action most closely applies Developmental framing?

A. Using a validated youth-appropriate screen as an entry point rather than treating it as a diagnosis.
B. Linking screening results to a brief conversation and appropriate referral when indicated.
C. Exploring peer influence and emerging independence without assuming all adolescent use has the same meaning.
D. Discussing realistic safety steps while continuing to support the adolescent's goals and options.

0392. A case coordinator presents a support plan for a student aged 15 at the youth advocacy program. Its central feature is discussing realistic safety steps while continuing to support the adolescent's goals and options. Which concept should be named?

A. Co-occurring conditions
B. Harm reduction
C. Motivational enhancement
D. Developmental framing

0393. A case conference reviews a community practitioner's work with a preadolescent child in the school consultation: assessing anxiety, mood, trauma, and substance use together while coordinating appropriate care. Which principle is central?

A. Harm reduction
B. Relapse prevention
C. Co-occurring conditions
D. Adolescent substance-use screening

0394. In a supervision quiz, how should Harm reduction be distinguished from Developmental framing?

A. Harm reduction: Planning for high-risk situations, cravings, coping responses, and support following a return to use or lapse. / Developmental framing: Understanding substance use in relation to adolescent development, peer context, access, and changing autonomy.
B. Harm reduction: Practical strategies intended to reduce substance-related risks without requiring immediate abstinence as a precondition for care. / Developmental framing: Privacy rules for adolescent substance services that depend on jurisdiction, consent, and service context.
C. Harm reduction: Understanding substance use in relation to adolescent development, peer context, access, and changing autonomy. / Developmental framing: Practical strategies intended to reduce substance-related risks without requiring immediate abstinence as a precondition for care.
D. Harm reduction: Practical strategies intended to reduce substance-related risks without requiring immediate abstinence as a precondition for care. / Developmental framing: Understanding substance use in relation to adolescent development, peer context, access, and changing autonomy.

0395. Which pair of actions illustrates Motivational enhancement and Protective factor assessment, respectively?

A. Motivational enhancement: Asking about supportive adults, activities, strengths, and settings that can reinforce safer choices. / Protective factor assessment: Eliciting the adolescent's reasons for and against change and reinforcing autonomy.
B. Motivational enhancement: Eliciting the adolescent's reasons for and against change and reinforcing autonomy. / Protective factor assessment: Using a validated youth-appropriate screen as an entry point rather than treating it as a diagnosis.
C. Motivational enhancement: Eliciting the adolescent's reasons for and against change and reinforcing autonomy. / Protective factor assessment: Asking about supportive adults, activities, strengths, and settings that can reinforce safer choices.
D. Motivational enhancement: Linking screening results to a brief conversation and appropriate referral when indicated. / Protective factor assessment: Asking about supportive adults, activities, strengths, and settings that can reinforce safer choices.

0396. A case conference reviews a research trainee's work with a child of elementary-school age in the community youth program: asking about supportive adults, activities, strengths, and settings that can reinforce safer choices. Which principle is central?

A. Adolescent substance-use screening
B. Harm reduction
C. Relapse prevention
D. Protective factor assessment

0397. A case conference asks for a distinction between SBIRT and Protective factor assessment. Which answer is sound?

A. SBIRT: Identification of resources and conditions that support reduced use, safety, and healthy development. / Protective factor assessment: Screening, brief intervention, and referral to treatment, a structured pathway for responding to substance-use risk.
B. SBIRT: Screening, brief intervention, and referral to treatment, a structured pathway for responding to substance-use risk. / Protective factor assessment: Identification of resources and conditions that support reduced use, safety, and healthy development.
C. SBIRT: Practical strategies intended to reduce substance-related risks without requiring immediate abstinence as a precondition for care. / Protective factor assessment: Identification of resources and conditions that support reduced use, safety, and healthy development.
D. SBIRT: Screening, brief intervention, and referral to treatment, a structured pathway for responding to substance-use risk. / Protective factor assessment: Privacy rules for adolescent substance services that depend on jurisdiction, consent, and service context.

0398. A child aged 8 and a consultant are reviewing goals in the clinical planning session. The agreed action is mapping supportive relationships, practical resources, and meaningful roles that can aid recovery. Which principle best accounts for it?

A. Relapse prevention
B. Recovery capital
C. Protective factor assessment
D. Developmental framing

0399. Which option preserves the correct meaning of both Motivational enhancement and Recovery capital?

A. Motivational enhancement: Personal, social, and community resources that can support recovery and sustained change. / Recovery capital: A collaborative strategy that strengthens a person's own motivation and commitment to change.
B. Motivational enhancement: Identification of resources and conditions that support reduced use, safety, and healthy development. / Recovery capital: Personal, social, and community resources that can support recovery and sustained change.
C. Motivational enhancement: A collaborative strategy that strengthens a person's own motivation and commitment to change. / Recovery capital: A brief, age-appropriate process to identify possible substance-related risk and need for fuller assessment.
D. Motivational enhancement: A collaborative strategy that strengthens a person's own motivation and commitment to change. / Recovery capital: Personal, social, and community resources that can support recovery and sustained change.

0400. A member of a clinical team is supporting a young person in the classroom support meeting. The key practice is linking screening results to a brief conversation and appropriate referral when indicated. Which course concept is most relevant?

A. Harm reduction
B. SBIRT
C. Recovery capital
D. Protective factor assessment

0401. In adolescent substance-use counseling, a supervisor asks for an applied contrast between Co-occurring conditions and Relapse prevention. Which option fits?

A. Co-occurring conditions: Explaining privacy and its exceptions accurately using current local law and policy before asking sensitive questions. / Relapse prevention: Identifying triggers and rehearsal of a response plan without framing a lapse as total failure.
B. Co-occurring conditions: Assessing anxiety, mood, trauma, and substance use together while coordinating appropriate care. / Relapse prevention: Discussing realistic safety steps while continuing to support the adolescent's goals and options.
C. Co-occurring conditions: Identifying triggers and rehearsal of a response plan without framing a lapse as total failure. / Relapse prevention: Assessing anxiety, mood, trauma, and substance use together while coordinating appropriate care.
D. Co-occurring conditions: Assessing anxiety, mood, trauma, and substance use together while coordinating appropriate care. / Relapse prevention: Identifying triggers and rehearsal of a response plan without framing a lapse as total failure.

0402. Which statement accurately contrasts the course concepts Adolescent substance-use screening and Motivational enhancement?

A. Adolescent substance-use screening: Identification of resources and conditions that support reduced use, safety, and healthy development. / Motivational enhancement: A collaborative strategy that strengthens a person's own motivation and commitment to change.
B. Adolescent substance-use screening: A brief, age-appropriate process to identify possible substance-related risk and need for fuller assessment. / Motivational enhancement: Understanding substance use in relation to adolescent development, peer context, access, and changing autonomy.
C. Adolescent substance-use screening: A brief, age-appropriate process to identify possible substance-related risk and need for fuller assessment. / Motivational enhancement: A collaborative strategy that strengthens a person's own motivation and commitment to change.
D. Adolescent substance-use screening: A collaborative strategy that strengthens a person's own motivation and commitment to change. / Motivational enhancement: A brief, age-appropriate process to identify possible substance-related risk and need for fuller assessment.

0403. A supervised trainee is preparing a follow-up plan for a preadolescent child in the after-school program. The plan calls for exploring peer influence and emerging independence without assuming all adolescent use has the same meaning. Which concept names this approach?

A. Motivational enhancement
B. Adolescent substance-use screening
C. Developmental framing
D. Harm reduction

0404. Which course concept is defined as follows: Substance-related concerns that occur alongside mental-health or other health conditions.

A. SBIRT
B. Co-occurring conditions
C. Adolescent substance-use screening
D. Motivational enhancement

0405. In adolescent substance-use counseling, which option correctly matches each concept to its practice focus: Motivational enhancement and Relapse prevention?

A. Motivational enhancement: Identifying triggers and rehearsal of a response plan without framing a lapse as total failure. / Relapse prevention: Eliciting the adolescent's reasons for and against change and reinforcing autonomy.
B. Motivational enhancement: Eliciting the adolescent's reasons for and against change and reinforcing autonomy. / Relapse prevention: Linking screening results to a brief conversation and appropriate referral when indicated.
C. Motivational enhancement: Exploring peer influence and emerging independence without assuming all adolescent use has the same meaning. / Relapse prevention: Identifying triggers and rehearsal of a response plan without framing a lapse as total failure.
D. Motivational enhancement: Eliciting the adolescent's reasons for and against change and reinforcing autonomy. / Relapse prevention: Identifying triggers and rehearsal of a response plan without framing a lapse as total failure.

0406. In the school consultation, the agreed focus for a research trainee working with a student aged 12 is using a validated youth-appropriate screen as an entry point rather than treating it as a diagnosis. Which concept names this focus?

A. Recovery capital
B. Adolescent substance-use screening
C. Harm reduction
D. Relapse prevention

0407. Choose the definition pair that correctly explains SBIRT first and Protective factor assessment second.

A. SBIRT: Screening, brief intervention, and referral to treatment, a structured pathway for responding to substance-use risk. / Protective factor assessment: Privacy rules for adolescent substance services that depend on jurisdiction, consent, and service context.
B. SBIRT: Screening, brief intervention, and referral to treatment, a structured pathway for responding to substance-use risk. / Protective factor assessment: Identification of resources and conditions that support reduced use, safety, and healthy development.
C. SBIRT: Practical strategies intended to reduce substance-related risks without requiring immediate abstinence as a precondition for care. / Protective factor assessment: Identification of resources and conditions that support reduced use, safety, and healthy development.
D. SBIRT: Identification of resources and conditions that support reduced use, safety, and healthy development. / Protective factor assessment: Screening, brief intervention, and referral to treatment, a structured pathway for responding to substance-use risk.

0408. In adolescent substance-use counseling, choose the practice comparison that best separates Motivational enhancement from Relapse prevention.

A. Motivational enhancement: Identifying triggers and rehearsal of a response plan without framing a lapse as total failure. / Relapse prevention: Eliciting the adolescent's reasons for and against change and reinforcing autonomy.
B. Motivational enhancement: Eliciting the adolescent's reasons for and against change and reinforcing autonomy. / Relapse prevention: Identifying triggers and rehearsal of a response plan without framing a lapse as total failure.
C. Motivational enhancement: Exploring peer influence and emerging independence without assuming all adolescent use has the same meaning. / Relapse prevention: Identifying triggers and rehearsal of a response plan without framing a lapse as total failure.
D. Motivational enhancement: Eliciting the adolescent's reasons for and against change and reinforcing autonomy. / Relapse prevention: Linking screening results to a brief conversation and appropriate referral when indicated.

0409. In adolescent substance-use counseling, a trainee must distinguish how Protective factor assessment and Relapse prevention guide practice. Which comparison is accurate?

A. Protective factor assessment: Asking about supportive adults, activities, strengths, and settings that can reinforce safer choices. / Relapse prevention: Mapping supportive relationships, practical resources, and meaningful roles that can aid recovery.
B. Protective factor assessment: Asking about supportive adults, activities, strengths, and settings that can reinforce safer choices. / Relapse prevention: Identifying triggers and rehearsal of a response plan without framing a lapse as total failure.
C. Protective factor assessment: Identifying triggers and rehearsal of a response plan without framing a lapse as total failure. / Relapse prevention: Asking about supportive adults, activities, strengths, and settings that can reinforce safer choices.
D. Protective factor assessment: Assessing anxiety, mood, trauma, and substance use together while coordinating appropriate care. / Relapse prevention: Identifying triggers and rehearsal of a response plan without framing a lapse as total failure.

0410. When reviewing a middle-school student's plan in the child guidance clinic, the caregiver working with a counselor notes that the next step is eliciting the adolescent's reasons for and against change and reinforcing autonomy. Which concept guides this step?

A. Motivational enhancement
B. Recovery capital
C. SBIRT
D. Developmental framing

0411. Which course concept is defined as follows: Privacy rules for adolescent substance services that depend on jurisdiction, consent, and service context.

A. Protective factor assessment
B. SBIRT
C. Confidentiality and substance care
D. Developmental framing

0412. In adolescent substance-use counseling, in the community youth program, a consulting counselor explains why a young person aged 16 would benefit from identifying triggers and rehearsal of a response plan without framing a lapse as total failure. Which course concept underpins the explanation?

A. Relapse prevention
B. Developmental framing
C. Recovery capital
D. SBIRT

0413. In adolescent substance-use counseling, which option correctly matches each concept to its practice focus: Harm reduction and Relapse prevention?

A. Harm reduction: Discussing realistic safety steps while continuing to support the adolescent's goals and options. / Relapse prevention: Identifying triggers and rehearsal of a response plan without framing a lapse as total failure.
B. Harm reduction: Eliciting the adolescent's reasons for and against change and reinforcing autonomy. / Relapse prevention: Identifying triggers and rehearsal of a response plan without framing a lapse as total failure.
C. Harm reduction: Discussing realistic safety steps while continuing to support the adolescent's goals and options. / Relapse prevention: Exploring peer influence and emerging independence without assuming all adolescent use has the same meaning.
D. Harm reduction: Identifying triggers and rehearsal of a response plan without framing a lapse as total failure. / Relapse prevention: Discussing realistic safety steps while continuing to support the adolescent's goals and options.

0414. A adolescent student's service team meets in the family session. The case coordinator recommends a change involving assessing anxiety, mood, trauma, and substance use together while coordinating appropriate care. Which idea best explains it?

A. Co-occurring conditions
B. Recovery capital
C. Developmental framing
D. Harm reduction

0415. Which pair of actions illustrates Harm reduction and Protective factor assessment, respectively?

A. Harm reduction: Discussing realistic safety steps while continuing to support the adolescent's goals and options. / Protective factor assessment: Mapping supportive relationships, practical resources, and meaningful roles that can aid recovery.
B. Harm reduction: Linking screening results to a brief conversation and appropriate referral when indicated. / Protective factor assessment: Asking about supportive adults, activities, strengths, and settings that can reinforce safer choices.
C. Harm reduction: Asking about supportive adults, activities, strengths, and settings that can reinforce safer choices. / Protective factor assessment: Discussing realistic safety steps while continuing to support the adolescent's goals and options.
D. Harm reduction: Discussing realistic safety steps while continuing to support the adolescent's goals and options. / Protective factor assessment: Asking about supportive adults, activities, strengths, and settings that can reinforce safer choices.

0416. A supervisor asks how Adolescent substance-use screening would appear in practice. Which choice should be selected?

A. Identifying triggers and rehearsal of a response plan without framing a lapse as total failure.
B. Using a validated youth-appropriate screen as an entry point rather than treating it as a diagnosis.
C. Exploring peer influence and emerging independence without assuming all adolescent use has the same meaning.
D. Linking screening results to a brief conversation and appropriate referral when indicated.

0417. In adolescent substance-use counseling, which statement shows a sound practice-level distinction between SBIRT and Relapse prevention?

A. SBIRT: Assessing anxiety, mood, trauma, and substance use together while coordinating appropriate care. / Relapse prevention: Identifying triggers and rehearsal of a response plan without framing a lapse as total failure.
B. SBIRT: Linking screening results to a brief conversation and appropriate referral when indicated. / Relapse prevention: Exploring peer influence and emerging independence without assuming all adolescent use has the same meaning.
C. SBIRT: Identifying triggers and rehearsal of a response plan without framing a lapse as total failure. / Relapse prevention: Linking screening results to a brief conversation and appropriate referral when indicated.
D. SBIRT: Linking screening results to a brief conversation and appropriate referral when indicated. / Relapse prevention: Identifying triggers and rehearsal of a response plan without framing a lapse as total failure.

0418. In adolescent substance-use counseling, a mental-health professional prepares for a session in the classroom support meeting with a child of elementary-school age. The intended approach is identifying triggers and rehearsal of a response plan without framing a lapse as total failure. Which concept is most relevant?

A. Co-occurring conditions
B. Confidentiality and substance care
C. Recovery capital
D. Relapse prevention

0419. In adolescent substance-use counseling, which paired example correctly applies Adolescent substance-use screening first and Relapse prevention second?

A. Adolescent substance-use screening: Using a validated youth-appropriate screen as an entry point rather than treating it as a diagnosis. / Relapse prevention: Identifying triggers and rehearsal of a response plan without framing a lapse as total failure.
B. Adolescent substance-use screening: Using a validated youth-appropriate screen as an entry point rather than treating it as a diagnosis. / Relapse prevention: Mapping supportive relationships, practical resources, and meaningful roles that can aid recovery.
C. Adolescent substance-use screening: Identifying triggers and rehearsal of a response plan without framing a lapse as total failure. / Relapse prevention: Using a validated youth-appropriate screen as an entry point rather than treating it as a diagnosis.
D. Adolescent substance-use screening: Eliciting the adolescent's reasons for and against change and reinforcing autonomy. / Relapse prevention: Identifying triggers and rehearsal of a response plan without framing a lapse as total failure.

0420. A program coordinator describes an intervention for a young adolescent client in the telehealth session, centered on discussing realistic safety steps while continuing to support the adolescent's goals and options. Which named idea is most relevant?

A. Harm reduction
B. SBIRT
C. Recovery capital
D. Protective factor assessment

0421. When reviewing a child aged 8's plan in the community youth program, the caregiver working with a counselor notes that the next step is explaining privacy and its exceptions accurately using current local law and policy before asking sensitive questions. Which concept guides this step?

A. Motivational enhancement
B. Developmental framing
C. Confidentiality and substance care
D. SBIRT

0422. During work in the counseling practicum, a teacher and counselor identifies this need: assessing anxiety, mood, trauma, and substance use together while coordinating appropriate care. Which idea should guide the response?

A. Co-occurring conditions
B. Harm reduction
C. Motivational enhancement
D. Relapse prevention

0423. In the school consultation, a school counselor explains why a middle-school student would benefit from exploring peer influence and emerging independence without assuming all adolescent use has the same meaning. Which course concept underpins the explanation?

A. Harm reduction
B. Developmental framing
C. Relapse prevention
D. Motivational enhancement

0424. In adolescent substance-use counseling, choose the response that best puts Relapse prevention into practice.

A. Identifying triggers and rehearsal of a response plan without framing a lapse as total failure.
B. Exploring peer influence and emerging independence without assuming all adolescent use has the same meaning.
C. Eliciting the adolescent's reasons for and against change and reinforcing autonomy.
D. Mapping supportive relationships, practical resources, and meaningful roles that can aid recovery.

0425. A supervisor asks for an applied contrast between Confidentiality and substance care and Recovery capital. Which option fits?

A. Confidentiality and substance care: Explaining privacy and its exceptions accurately using current local law and policy before asking sensitive questions. / Recovery capital: Mapping supportive relationships, practical resources, and meaningful roles that can aid recovery.
B. Confidentiality and substance care: Explaining privacy and its exceptions accurately using current local law and policy before asking sensitive questions. / Recovery capital: Asking about supportive adults, activities, strengths, and settings that can reinforce safer choices.
C. Confidentiality and substance care: Discussing realistic safety steps while continuing to support the adolescent's goals and options. / Recovery capital: Mapping supportive relationships, practical resources, and meaningful roles that can aid recovery.
D. Confidentiality and substance care: Mapping supportive relationships, practical resources, and meaningful roles that can aid recovery. / Recovery capital: Explaining privacy and its exceptions accurately using current local law and policy before asking sensitive questions.

0426. Which comparison correctly distinguishes Co-occurring conditions from Recovery capital?

A. Co-occurring conditions: Substance-related concerns that occur alongside mental-health or other health conditions. / Recovery capital: Personal, social, and community resources that can support recovery and sustained change.
B. Co-occurring conditions: Identification of resources and conditions that support reduced use, safety, and healthy development. / Recovery capital: Personal, social, and community resources that can support recovery and sustained change.
C. Co-occurring conditions: Substance-related concerns that occur alongside mental-health or other health conditions. / Recovery capital: Understanding substance use in relation to adolescent development, peer context, access, and changing autonomy.
D. Co-occurring conditions: Personal, social, and community resources that can support recovery and sustained change. / Recovery capital: Substance-related concerns that occur alongside mental-health or other health conditions.

0427. In adolescent substance-use counseling, a clinical supervisor is asked to evaluate a proposed service for a young person aged 18 in the school consultation. The defining feature is identifying triggers and rehearsal of a response plan without framing a lapse as total failure. Which concept fits?

A. Developmental framing
B. Confidentiality and substance care
C. Relapse prevention
D. Protective factor assessment

0428. At the community youth program, a research trainee reviews whether a plan for a child of elementary-school age is appropriate. The relevant practice is asking about supportive adults, activities, strengths, and settings that can reinforce safer choices. Which concept is tested?

A. Motivational enhancement
B. Relapse prevention
C. Protective factor assessment
D. Adolescent substance-use screening

0429. Which option correctly matches each concept to its practice focus: Recovery capital and Developmental framing?

A. Recovery capital: Using a validated youth-appropriate screen as an entry point rather than treating it as a diagnosis. / Developmental framing: Exploring peer influence and emerging independence without assuming all adolescent use has the same meaning.
B. Recovery capital: Mapping supportive relationships, practical resources, and meaningful roles that can aid recovery. / Developmental framing: Eliciting the adolescent's reasons for and against change and reinforcing autonomy.
C. Recovery capital: Mapping supportive relationships, practical resources, and meaningful roles that can aid recovery. / Developmental framing: Exploring peer influence and emerging independence without assuming all adolescent use has the same meaning.
D. Recovery capital: Exploring peer influence and emerging independence without assuming all adolescent use has the same meaning. / Developmental framing: Mapping supportive relationships, practical resources, and meaningful roles that can aid recovery.

0430. During work in the child guidance clinic, a consulting counselor identifies this need: linking screening results to a brief conversation and appropriate referral when indicated. Which idea should guide the response?

A. Harm reduction
B. Adolescent substance-use screening
C. Protective factor assessment
D. SBIRT

0431. A service team discusses a student aged 9 in the outpatient clinic. Their proposed next step is explaining privacy and its exceptions accurately using current local law and policy before asking sensitive questions. Which course concept supports it?

A. Adolescent substance-use screening
B. Confidentiality and substance care
C. SBIRT
D. Developmental framing

0432. Which statement most accurately defines Harm reduction?

A. Personal, social, and community resources that can support recovery and sustained change.
B. Substance-related concerns that occur alongside mental-health or other health conditions.
C. Practical strategies intended to reduce substance-related risks without requiring immediate abstinence as a precondition for care.
D. A collaborative strategy that strengthens a person's own motivation and commitment to change.

0433. A service team discusses a client in late adolescence in the youth advocacy program. Their proposed next step is assessing anxiety, mood, trauma, and substance use together while coordinating appropriate care. Which course concept supports it?

A. Developmental framing
B. SBIRT
C. Protective factor assessment
D. Co-occurring conditions

0434. A doctoral student reads the following description. Which concept does it define? Personal, social, and community resources that can support recovery and sustained change.

A. Recovery capital
B. Harm reduction
C. Adolescent substance-use screening
D. Motivational enhancement

0435. In adolescent substance-use counseling, which statement accurately contrasts the course concepts Relapse prevention and Developmental framing?

A. Relapse prevention: Planning for high-risk situations, cravings, coping responses, and support following a return to use or lapse. / Developmental framing: Identification of resources and conditions that support reduced use, safety, and healthy development.
B. Relapse prevention: Understanding substance use in relation to adolescent development, peer context, access, and changing autonomy. / Developmental framing: Planning for high-risk situations, cravings, coping responses, and support following a return to use or lapse.
C. Relapse prevention: Planning for high-risk situations, cravings, coping responses, and support following a return to use or lapse. / Developmental framing: Understanding substance use in relation to adolescent development, peer context, access, and changing autonomy.
D. Relapse prevention: Practical strategies intended to reduce substance-related risks without requiring immediate abstinence as a precondition for care. / Developmental framing: Understanding substance use in relation to adolescent development, peer context, access, and changing autonomy.

0436. In adolescent substance-use counseling, which paired example correctly applies Motivational enhancement first and Relapse prevention second?

A. Motivational enhancement: Exploring peer influence and emerging independence without assuming all adolescent use has the same meaning. / Relapse prevention: Identifying triggers and rehearsal of a response plan without framing a lapse as total failure.
B. Motivational enhancement: Eliciting the adolescent's reasons for and against change and reinforcing autonomy. / Relapse prevention: Identifying triggers and rehearsal of a response plan without framing a lapse as total failure.
C. Motivational enhancement: Eliciting the adolescent's reasons for and against change and reinforcing autonomy. / Relapse prevention: Linking screening results to a brief conversation and appropriate referral when indicated.
D. Motivational enhancement: Identifying triggers and rehearsal of a response plan without framing a lapse as total failure. / Relapse prevention: Eliciting the adolescent's reasons for and against change and reinforcing autonomy.

0437. Which option correctly matches each concept to its practice focus: Adolescent substance-use screening and Co-occurring conditions?

A. Adolescent substance-use screening: Using a validated youth-appropriate screen as an entry point rather than treating it as a diagnosis. / Co-occurring conditions: Identifying triggers and rehearsal of a response plan without framing a lapse as total failure.
B. Adolescent substance-use screening: Linking screening results to a brief conversation and appropriate referral when indicated. / Co-occurring conditions: Assessing anxiety, mood, trauma, and substance use together while coordinating appropriate care.
C. Adolescent substance-use screening: Assessing anxiety, mood, trauma, and substance use together while coordinating appropriate care. / Co-occurring conditions: Using a validated youth-appropriate screen as an entry point rather than treating it as a diagnosis.
D. Adolescent substance-use screening: Using a validated youth-appropriate screen as an entry point rather than treating it as a diagnosis. / Co-occurring conditions: Assessing anxiety, mood, trauma, and substance use together while coordinating appropriate care.

0438. Which statement shows a sound practice-level distinction between Adolescent substance-use screening and Confidentiality and substance care?

A. Adolescent substance-use screening: Explaining privacy and its exceptions accurately using current local law and policy before asking sensitive questions. / Confidentiality and substance care: Using a validated youth-appropriate screen as an entry point rather than treating it as a diagnosis.
B. Adolescent substance-use screening: Using a validated youth-appropriate screen as an entry point rather than treating it as a diagnosis. / Confidentiality and substance care: Identifying triggers and rehearsal of a response plan without framing a lapse as total failure.
C. Adolescent substance-use screening: Using a validated youth-appropriate screen as an entry point rather than treating it as a diagnosis. / Confidentiality and substance care: Explaining privacy and its exceptions accurately using current local law and policy before asking sensitive questions.
D. Adolescent substance-use screening: Exploring peer influence and emerging independence without assuming all adolescent use has the same meaning. / Confidentiality and substance care: Explaining privacy and its exceptions accurately using current local law and policy before asking sensitive questions.

0439. For a young person aged 18 in the youth advocacy program, a school support specialist makes this practice the immediate priority: linking screening results to a brief conversation and appropriate referral when indicated. Which concept fits best?

A. Developmental framing
B. Co-occurring conditions
C. SBIRT
D. Relapse prevention

0440. Which comparison correctly distinguishes Confidentiality and substance care from Recovery capital?

A. Confidentiality and substance care: Privacy rules for adolescent substance services that depend on jurisdiction, consent, and service context. / Recovery capital: Personal, social, and community resources that can support recovery and sustained change.
B. Confidentiality and substance care: Personal, social, and community resources that can support recovery and sustained change. / Recovery capital: Privacy rules for adolescent substance services that depend on jurisdiction, consent, and service context.
C. Confidentiality and substance care: Practical strategies intended to reduce substance-related risks without requiring immediate abstinence as a precondition for care. / Recovery capital: Personal, social, and community resources that can support recovery and sustained change.
D. Confidentiality and substance care: Privacy rules for adolescent substance services that depend on jurisdiction, consent, and service context. / Recovery capital: Identification of resources and conditions that support reduced use, safety, and healthy development.

0441. A student confuses Harm reduction with SBIRT. Which explanation most accurately separates them?

A. Harm reduction: Practical strategies intended to reduce substance-related risks without requiring immediate abstinence as a precondition for care. / SBIRT: Screening, brief intervention, and referral to treatment, a structured pathway for responding to substance-use risk.
B. Harm reduction: Privacy rules for adolescent substance services that depend on jurisdiction, consent, and service context. / SBIRT: Screening, brief intervention, and referral to treatment, a structured pathway for responding to substance-use risk.
C. Harm reduction: Screening, brief intervention, and referral to treatment, a structured pathway for responding to substance-use risk. / SBIRT: Practical strategies intended to reduce substance-related risks without requiring immediate abstinence as a precondition for care.
D. Harm reduction: Practical strategies intended to reduce substance-related risks without requiring immediate abstinence as a precondition for care. / SBIRT: A brief, age-appropriate process to identify possible substance-related risk and need for fuller assessment.

0442. An interdisciplinary team reviews a child aged 14’s case at the student wellness team. The behavior specialist recommends linking screening results to a brief conversation and appropriate referral when indicated. Which course concept best fits?

A. Co-occurring conditions
B. Confidentiality and substance care
C. Harm reduction
D. SBIRT

0443. In adolescent substance-use counseling, a student confuses SBIRT with Relapse prevention. Which explanation most accurately separates them?

A. SBIRT: Screening, brief intervention, and referral to treatment, a structured pathway for responding to substance-use risk. / Relapse prevention: Understanding substance use in relation to adolescent development, peer context, access, and changing autonomy.
B. SBIRT: Planning for high-risk situations, cravings, coping responses, and support following a return to use or lapse. / Relapse prevention: Screening, brief intervention, and referral to treatment, a structured pathway for responding to substance-use risk.
C. SBIRT: Screening, brief intervention, and referral to treatment, a structured pathway for responding to substance-use risk. / Relapse prevention: Planning for high-risk situations, cravings, coping responses, and support following a return to use or lapse.
D. SBIRT: Substance-related concerns that occur alongside mental-health or other health conditions. / Relapse prevention: Planning for high-risk situations, cravings, coping responses, and support following a return to use or lapse.

0444. In adolescent substance-use counseling, which statement accurately contrasts the course concepts Recovery capital and Relapse prevention?

A. Recovery capital: Planning for high-risk situations, cravings, coping responses, and support following a return to use or lapse. / Relapse prevention: Personal, social, and community resources that can support recovery and sustained change.
B. Recovery capital: Personal, social, and community resources that can support recovery and sustained change. / Relapse prevention: Planning for high-risk situations, cravings, coping responses, and support following a return to use or lapse.
C. Recovery capital: Personal, social, and community resources that can support recovery and sustained change. / Relapse prevention: Identification of resources and conditions that support reduced use, safety, and healthy development.
D. Recovery capital: A collaborative strategy that strengthens a person’s own motivation and commitment to change. / Relapse prevention: Planning for high-risk situations, cravings, coping responses, and support following a return to use or lapse.

0445. A case conference asks for a distinction between Harm reduction and SBIRT. Which answer is sound?

A. Harm reduction: Practical strategies intended to reduce substance-related risks without requiring immediate abstinence as a precondition for care. / SBIRT: A brief, age-appropriate process to identify possible substance-related risk and need for fuller assessment.
B. Harm reduction: Privacy rules for adolescent substance services that depend on jurisdiction, consent, and service context. / SBIRT: Screening, brief intervention, and referral to treatment, a structured pathway for responding to substance-use risk.
C. Harm reduction: Screening, brief intervention, and referral to treatment, a structured pathway for responding to substance-use risk. / SBIRT: Practical strategies intended to reduce substance-related risks without requiring immediate abstinence as a precondition for care.
D. Harm reduction: Practical strategies intended to reduce substance-related risks without requiring immediate abstinence as a precondition for care. / SBIRT: Screening, brief intervention, and referral to treatment, a structured pathway for responding to substance-use risk.

0446. A support meeting for a young person aged 16 includes a clinical supervisor in the clinical planning session. The practice under consideration is exploring peer influence and emerging independence without assuming all adolescent use has the same meaning. Which concept guides it?

A. Recovery capital
B. Harm reduction
C. Developmental framing
D. SBIRT

0447. In the telehealth session, a youth worker explains why a student aged 17 would benefit from eliciting the adolescent's reasons for and against change and reinforcing autonomy. Which course concept underpins the explanation?

A. Motivational enhancement
B. SBIRT
C. Confidentiality and substance care
D. Recovery capital

0448. How are Harm reduction and SBIRT most accurately differentiated in this curriculum?

A. Harm reduction: Practical strategies intended to reduce substance-related risks without requiring immediate abstinence as a precondition for care. / SBIRT: A brief, age-appropriate process to identify possible substance-related risk and need for fuller assessment.
B. Harm reduction: Privacy rules for adolescent substance services that depend on jurisdiction, consent, and service context. / SBIRT: Screening, brief intervention, and referral to treatment, a structured pathway for responding to substance-use risk.
C. Harm reduction: Screening, brief intervention, and referral to treatment, a structured pathway for responding to substance-use risk. / SBIRT: Practical strategies intended to reduce substance-related risks without requiring immediate abstinence as a precondition for care.
D. Harm reduction: Practical strategies intended to reduce substance-related risks without requiring immediate abstinence as a precondition for care. / SBIRT: Screening, brief intervention, and referral to treatment, a structured pathway for responding to substance-use risk.

0449. Which comparison correctly distinguishes Harm reduction from Protective factor assessment?

A. Harm reduction: Screening, brief intervention, and referral to treatment, a structured pathway for responding to substance-use risk. / Protective factor assessment: Identification of resources and conditions that support reduced use, safety, and healthy development.
B. Harm reduction: Practical strategies intended to reduce substance-related risks without requiring immediate abstinence as a precondition for care. / Protective factor assessment: Identification of resources and conditions that support reduced use, safety, and healthy development.
C. Harm reduction: Identification of resources and conditions that support reduced use, safety, and healthy development. / Protective factor assessment: Practical strategies intended to reduce substance-related risks without requiring immediate abstinence as a precondition for care.
D. Harm reduction: Practical strategies intended to reduce substance-related risks without requiring immediate abstinence as a precondition for care. / Protective factor assessment: Personal, social, and community resources that can support recovery and sustained change.

0450. In adolescent substance-use counseling, in a professional consultation about a child aged 6, the assessment clinician describes this response in the telehealth session: identifying triggers and rehearsal of a response plan without framing a lapse as total failure. Which term is most apt?

A. Relapse prevention
B. Co-occurring conditions
C. Developmental framing
D. Adolescent substance-use screening

0451. Which paired example correctly applies SBIRT first and Recovery capital second?

A. SBIRT: Exploring peer influence and emerging independence without assuming all adolescent use has the same meaning. / Recovery capital: Mapping supportive relationships, practical resources, and meaningful roles that can aid recovery.
B. SBIRT: Linking screening results to a brief conversation and appropriate referral when indicated. / Recovery capital: Mapping supportive relationships, practical resources, and meaningful roles that can aid recovery.
C. SBIRT: Mapping supportive relationships, practical resources, and meaningful roles that can aid recovery. / Recovery capital: Linking screening results to a brief conversation and appropriate referral when indicated.
D. SBIRT: Linking screening results to a brief conversation and appropriate referral when indicated. / Recovery capital: Explaining privacy and its exceptions accurately using current local law and policy before asking sensitive questions.

0452. Which comparison correctly distinguishes Motivational enhancement from Developmental framing?

A. Motivational enhancement: Substance-related concerns that occur alongside mental-health or other health conditions. / Developmental framing: Understanding substance use in relation to adolescent development, peer context, access, and changing autonomy.
B. Motivational enhancement: Understanding substance use in relation to adolescent development, peer context, access, and changing autonomy. / Developmental framing: A collaborative strategy that strengthens a person's own motivation and commitment to change.
C. Motivational enhancement: A collaborative strategy that strengthens a person's own motivation and commitment to change. / Developmental framing: Understanding substance use in relation to adolescent development, peer context, access, and changing autonomy.
D. Motivational enhancement: A collaborative strategy that strengthens a person's own motivation and commitment to change. / Developmental framing: Planning for high-risk situations, cravings, coping responses, and support following a return to use or lapse.

0453. Which applied comparison correctly identifies what belongs to Protective factor assessment versus Co-occurring conditions?

A. Protective factor assessment: Asking about supportive adults, activities, strengths, and settings that can reinforce safer choices. / Co-occurring conditions: Using a validated youth-appropriate screen as an entry point rather than treating it as a diagnosis.
B. Protective factor assessment: Asking about supportive adults, activities, strengths, and settings that can reinforce safer choices. / Co-occurring conditions: Assessing anxiety, mood, trauma, and substance use together while coordinating appropriate care.
C. Protective factor assessment: Assessing anxiety, mood, trauma, and substance use together while coordinating appropriate care. / Co-occurring conditions: Asking about supportive adults, activities, strengths, and settings that can reinforce safer choices.
D. Protective factor assessment: Mapping supportive relationships, practical resources, and meaningful roles that can aid recovery. / Co-occurring conditions: Assessing anxiety, mood, trauma, and substance use together while coordinating appropriate care.

0454. A team must select a support approach for a child of elementary-school age at the caregiver consultation. The parent educator recommends discussing realistic safety steps while continuing to support the adolescent's goals and options. Which idea is most relevant?

A. Confidentiality and substance care
B. Relapse prevention
C. Harm reduction
D. Co-occurring conditions

0455. A member of a clinical team and a student aged 12 are discussing support in the behavior-support review. The selected practice is exploring peer influence and emerging independence without assuming all adolescent use has the same meaning. Which concept does this demonstrate?

A. Developmental framing
B. Protective factor assessment
C. Co-occurring conditions
D. SBIRT

0456. Consider a student aged 9 receiving help in the behavior-support review. The consulting counselor focuses on discussing realistic safety steps while continuing to support the adolescent's goals and options. Which term best describes the guiding idea?

A. Developmental framing
B. Confidentiality and substance care
C. Harm reduction
D. Protective factor assessment

0457. In adolescent substance-use counseling, a support meeting for a student aged 9 includes a counselor in the student wellness team. The practice under consideration is identifying triggers and rehearsal of a response plan without framing a lapse as total failure. Which concept guides it?

A. Protective factor assessment
B. SBIRT
C. Confidentiality and substance care
D. Relapse prevention

0458. A case discussion concerns a child aged 14 and a caregiver working with a counselor in the school-based service. The practitioner is considering asking about supportive adults, activities, strengths, and settings that can reinforce safer choices. Which principle is involved?

A. Protective factor assessment
B. Relapse prevention
C. Motivational enhancement
D. Adolescent substance-use screening

0459. A service team discusses a high-school student in the multidisciplinary case conference. Their proposed next step is eliciting the adolescent's reasons for and against change and reinforcing autonomy. Which course concept supports it?

A. Relapse prevention
B. Confidentiality and substance care
C. Motivational enhancement
D. Protective factor assessment

0460. A assessment clinician prepares for a session in the community youth program with a teenage client. The intended approach is assessing anxiety, mood, trauma, and substance use together while coordinating appropriate care. Which concept is most relevant?

A. Co-occurring conditions
B. Harm reduction
C. Adolescent substance-use screening
D. Relapse prevention

0461. Which comparison correctly distinguishes Harm reduction from SBIRT?

A. Harm reduction: Practical strategies intended to reduce substance-related risks without requiring immediate abstinence as a precondition for care. / SBIRT: Screening, brief intervention, and referral to treatment, a structured pathway for responding to substance-use risk.
B. Harm reduction: Screening, brief intervention, and referral to treatment, a structured pathway for responding to substance-use risk. / SBIRT: Practical strategies intended to reduce substance-related risks without requiring immediate abstinence as a precondition for care.
C. Harm reduction: Privacy rules for adolescent substance services that depend on jurisdiction, consent, and service context. / SBIRT: Screening, brief intervention, and referral to treatment, a structured pathway for responding to substance-use risk.
D. Harm reduction: Practical strategies intended to reduce substance-related risks without requiring immediate abstinence as a precondition for care. / SBIRT: A brief, age-appropriate process to identify possible substance-related risk and need for fuller assessment.

0462. Choose the practice comparison that best separates SBIRT from Recovery capital.

A. SBIRT: Linking screening results to a brief conversation and appropriate referral when indicated. / Recovery capital: Mapping supportive relationships, practical resources, and meaningful roles that can aid recovery.
B. SBIRT: Linking screening results to a brief conversation and appropriate referral when indicated. / Recovery capital: Explaining privacy and its exceptions accurately using current local law and policy before asking sensitive questions.
C. SBIRT: Exploring peer influence and emerging independence without assuming all adolescent use has the same meaning. / Recovery capital: Mapping supportive relationships, practical resources, and meaningful roles that can aid recovery.
D. SBIRT: Mapping supportive relationships, practical resources, and meaningful roles that can aid recovery. / Recovery capital: Linking screening results to a brief conversation and appropriate referral when indicated.

0463. In adolescent substance-use counseling, which option pairs the definitions of Harm reduction and Relapse prevention correctly, in that order?

A. Harm reduction: Practical strategies intended to reduce substance-related risks without requiring immediate abstinence as a precondition for care. / Relapse prevention: Understanding substance use in relation to adolescent development, peer context, access, and changing autonomy.
B. Harm reduction: Practical strategies intended to reduce substance-related risks without requiring immediate abstinence as a precondition for care. / Relapse prevention: Planning for high-risk situations, cravings, coping responses, and support following a return to use or lapse.
C. Harm reduction: A collaborative strategy that strengthens a person's own motivation and commitment to change. / Relapse prevention: Planning for high-risk situations, cravings, coping responses, and support following a return to use or lapse.
D. Harm reduction: Planning for high-risk situations, cravings, coping responses, and support following a return to use or lapse. / Relapse prevention: Practical strategies intended to reduce substance-related risks without requiring immediate abstinence as a precondition for care.

0464. During service review in the student-support meeting, a therapist describes asking about supportive adults, activities, strengths, and settings that can reinforce safer choices. for a young person. Which course idea is most applicable?

A. Relapse prevention
B. Protective factor assessment
C. Recovery capital
D. Motivational enhancement

0465. Which paired example correctly applies Adolescent substance-use screening first and Recovery capital second?

A. Adolescent substance-use screening: Identifying triggers and rehearsal of a response plan without framing a lapse as total failure. / Recovery capital: Mapping supportive relationships, practical resources, and meaningful roles that can aid recovery.
B. Adolescent substance-use screening: Using a validated youth-appropriate screen as an entry point rather than treating it as a diagnosis. / Recovery capital: Mapping supportive relationships, practical resources, and meaningful roles that can aid recovery.
C. Adolescent substance-use screening: Mapping supportive relationships, practical resources, and meaningful roles that can aid recovery. / Recovery capital: Using a validated youth-appropriate screen as an entry point rather than treating it as a diagnosis.
D. Adolescent substance-use screening: Using a validated youth-appropriate screen as an entry point rather than treating it as a diagnosis. / Recovery capital: Linking screening results to a brief conversation and appropriate referral when indicated.

0466. Which comparison would correct a trainee's misunderstanding of SBIRT versus Co-occurring conditions?

A. SBIRT: Substance-related concerns that occur alongside mental-health or other health conditions. / Co-occurring conditions: Screening, brief intervention, and referral to treatment, a structured pathway for responding to substance-use risk.
B. SBIRT: Privacy rules for adolescent substance services that depend on jurisdiction, consent, and service context. / Co-occurring conditions: Substance-related concerns that occur alongside mental-health or other health conditions.
C. SBIRT: Screening, brief intervention, and referral to treatment, a structured pathway for responding to substance-use risk. / Co-occurring conditions: Practical strategies intended to reduce substance-related risks without requiring immediate abstinence as a precondition for care.
D. SBIRT: Screening, brief intervention, and referral to treatment, a structured pathway for responding to substance-use risk. / Co-occurring conditions: Substance-related concerns that occur alongside mental-health or other health conditions.

0467. A older adolescent client and a mental-health professional are reviewing goals in the family session. The agreed action is exploring peer influence and emerging independence without assuming all adolescent use has the same meaning. Which principle best accounts for it?

A. Confidentiality and substance care
B. Relapse prevention
C. Co-occurring conditions
D. Developmental framing

0468. Which named construct is captured by this account? Understanding substance use in relation to adolescent development, peer context, access, and changing autonomy.

A. Confidentiality and substance care
B. Developmental framing
C. Recovery capital
D. SBIRT

0469. Choose the practice comparison that best separates Motivational enhancement from Developmental framing.

A. Motivational enhancement: Exploring peer influence and emerging independence without assuming all adolescent use has the same meaning. / Developmental framing: Eliciting the adolescent's reasons for and against change and reinforcing autonomy.
B. Motivational enhancement: Eliciting the adolescent's reasons for and against change and reinforcing autonomy. / Developmental framing: Exploring peer influence and emerging independence without assuming all adolescent use has the same meaning.
C. Motivational enhancement: Eliciting the adolescent's reasons for and against change and reinforcing autonomy. / Developmental framing: Identifying triggers and rehearsal of a response plan without framing a lapse as total failure.
D. Motivational enhancement: Assessing anxiety, mood, trauma, and substance use together while coordinating appropriate care. / Developmental framing: Exploring peer influence and emerging independence without assuming all adolescent use has the same meaning.

0470. Choose the definition pair that correctly explains Adolescent substance-use screening first and Confidentiality and substance care second.

A. Adolescent substance-use screening: Understanding substance use in relation to adolescent development, peer context, access, and changing autonomy. / Confidentiality and substance care: Privacy rules for adolescent substance services that depend on jurisdiction, consent, and service context.
B. Adolescent substance-use screening: Privacy rules for adolescent substance services that depend on jurisdiction, consent, and service context. / Confidentiality and substance care: A brief, age-appropriate process to identify possible substance-related risk and need for fuller assessment.
C. Adolescent substance-use screening: A brief, age-appropriate process to identify possible substance-related risk and need for fuller assessment. / Confidentiality and substance care: Privacy rules for adolescent substance services that depend on jurisdiction, consent, and service context.
D. Adolescent substance-use screening: A brief, age-appropriate process to identify possible substance-related risk and need for fuller assessment. / Confidentiality and substance care: Planning for high-risk situations, cravings, coping responses, and support following a return to use or lapse.

0471. In adolescent substance-use counseling, a member of a clinical team is supporting a student aged 15 in the school counseling office. The key practice is identifying triggers and rehearsal of a response plan without framing a lapse as total failure. Which course concept is most relevant?

A. SBIRT
B. Adolescent substance-use screening
C. Relapse prevention
D. Developmental framing

0472. Which pair of actions illustrates Adolescent substance-use screening and Motivational enhancement, respectively?

A. Adolescent substance-use screening: Using a validated youth-appropriate screen as an entry point rather than treating it as a diagnosis. / Motivational enhancement: Eliciting the adolescent's reasons for and against change and reinforcing autonomy.
B. Adolescent substance-use screening: Asking about supportive adults, activities, strengths, and settings that can reinforce safer choices. / Motivational enhancement: Eliciting the adolescent's reasons for and against change and reinforcing autonomy.
C. Adolescent substance-use screening: Eliciting the adolescent's reasons for and against change and reinforcing autonomy. / Motivational enhancement: Using a validated youth-appropriate screen as an entry point rather than treating it as a diagnosis.
D. Adolescent substance-use screening: Using a validated youth-appropriate screen as an entry point rather than treating it as a diagnosis. / Motivational enhancement: Exploring peer influence and emerging independence without assuming all adolescent use has the same meaning.

0473. A trainee must distinguish how Adolescent substance-use screening and SBIRT guide practice. Which comparison is accurate?

A. Adolescent substance-use screening: Using a validated youth-appropriate screen as an entry point rather than treating it as a diagnosis. / SBIRT: Linking screening results to a brief conversation and appropriate referral when indicated.
B. Adolescent substance-use screening: Using a validated youth-appropriate screen as an entry point rather than treating it as a diagnosis. / SBIRT: Explaining privacy and its exceptions accurately using current local law and policy before asking sensitive questions.
C. Adolescent substance-use screening: Linking screening results to a brief conversation and appropriate referral when indicated. / SBIRT: Using a validated youth-appropriate screen as an entry point rather than treating it as a diagnosis.
D. Adolescent substance-use screening: Eliciting the adolescent's reasons for and against change and reinforcing autonomy. / SBIRT: Linking screening results to a brief conversation and appropriate referral when indicated.

0474. Which named construct is captured by this account? Practical strategies intended to reduce substance-related risks without requiring immediate abstinence as a precondition for care.

A. Relapse prevention
B. SBIRT
C. Harm reduction
D. Adolescent substance-use screening

0475. During service review in the student wellness team, a program coordinator describes using a validated youth-appropriate screen as an entry point rather than treating it as a diagnosis. for a client in late adolescence. Which course idea is most applicable?

A. Adolescent substance-use screening
B. Harm reduction
C. Co-occurring conditions
D. Protective factor assessment

0476. How should a practitioner distinguish the applications of Motivational enhancement and Harm reduction?

A. Motivational enhancement: Eliciting the adolescent's reasons for and against change and reinforcing autonomy. / Harm reduction: Explaining privacy and its exceptions accurately using current local law and policy before asking sensitive questions.
B. Motivational enhancement: Eliciting the adolescent's reasons for and against change and reinforcing autonomy. / Harm reduction: Discussing realistic safety steps while continuing to support the adolescent's goals and options.
C. Motivational enhancement: Discussing realistic safety steps while continuing to support the adolescent's goals and options. / Harm reduction: Eliciting the adolescent's reasons for and against change and reinforcing autonomy.
D. Motivational enhancement: Linking screening results to a brief conversation and appropriate referral when indicated. / Harm reduction: Discussing realistic safety steps while continuing to support the adolescent's goals and options.

0477. In the student wellness team, a school-based clinician is considering this approach for a young person aged 10: discussing realistic safety steps while continuing to support the adolescent's goals and options. Which framework does it represent?

A. Relapse prevention
B. Developmental framing
C. Adolescent substance-use screening
D. Harm reduction

0478. In adolescent substance-use counseling, which option preserves the correct meaning of both Co-occurring conditions and Relapse prevention?

A. Co-occurring conditions: Planning for high-risk situations, cravings, coping responses, and support following a return to use or lapse. / Relapse prevention: Substance-related concerns that occur alongside mental-health or other health conditions.
B. Co-occurring conditions: Substance-related concerns that occur alongside mental-health or other health conditions. / Relapse prevention: Practical strategies intended to reduce substance-related risks without requiring immediate abstinence as a precondition for care.
C. Co-occurring conditions: Privacy rules for adolescent substance services that depend on jurisdiction, consent, and service context. / Relapse prevention: Planning for high-risk situations, cravings, coping responses, and support following a return to use or lapse.
D. Co-occurring conditions: Substance-related concerns that occur alongside mental-health or other health conditions. / Relapse prevention: Planning for high-risk situations, cravings, coping responses, and support following a return to use or lapse.

0479. In adolescent substance-use counseling, which comparison correctly distinguishes Co-occurring conditions from Relapse prevention?

A. Co-occurring conditions: Substance-related concerns that occur alongside mental-health or other health conditions. / Relapse prevention: Planning for high-risk situations, cravings, coping responses, and support following a return to use or lapse.
B. Co-occurring conditions: Substance-related concerns that occur alongside mental-health or other health conditions. / Relapse prevention: Practical strategies intended to reduce substance-related risks without requiring immediate abstinence as a precondition for care.
C. Co-occurring conditions: Planning for high-risk situations, cravings, coping responses, and support following a return to use or lapse. / Relapse prevention: Substance-related concerns that occur alongside mental-health or other health conditions.
D. Co-occurring conditions: Privacy rules for adolescent substance services that depend on jurisdiction, consent, and service context. / Relapse prevention: Planning for high-risk situations, cravings, coping responses, and support following a return to use or lapse.

0480. Which statement most accurately defines Confidentiality and substance care?

A. Personal, social, and community resources that can support recovery and sustained change.
B. Screening, brief intervention, and referral to treatment, a structured pathway for responding to substance-use risk.
C. Identification of resources and conditions that support reduced use, safety, and healthy development.
D. Privacy rules for adolescent substance services that depend on jurisdiction, consent, and service context.

0481. A team must select a support approach for a child aged 14 at the school-based service. The caregiver working with a counselor recommends asking about supportive adults, activities, strengths, and settings that can reinforce safer choices. Which idea is most relevant?

A. Developmental framing
B. Protective factor assessment
C. Relapse prevention
D. SBIRT

0482. A case conference asks for a distinction between Co-occurring conditions and Recovery capital. Which answer is sound?

A. Co-occurring conditions: Substance-related concerns that occur alongside mental-health or other health conditions. / Recovery capital: Understanding substance use in relation to adolescent development, peer context, access, and changing autonomy.
B. Co-occurring conditions: Identification of resources and conditions that support reduced use, safety, and healthy development. / Recovery capital: Personal, social, and community resources that can support recovery and sustained change.
C. Co-occurring conditions: Personal, social, and community resources that can support recovery and sustained change. / Recovery capital: Substance-related concerns that occur alongside mental-health or other health conditions.
D. Co-occurring conditions: Substance-related concerns that occur alongside mental-health or other health conditions. / Recovery capital: Personal, social, and community resources that can support recovery and sustained change.

0483. In a supervision quiz, how should Adolescent substance-use screening be distinguished from Protective factor assessment?

A. Adolescent substance-use screening: A brief, age-appropriate process to identify possible substance-related risk and need for fuller assessment. / Protective factor assessment: Planning for high-risk situations, cravings, coping responses, and support following a return to use or lapse.
B. Adolescent substance-use screening: A brief, age-appropriate process to identify possible substance-related risk and need for fuller assessment. / Protective factor assessment: Identification of resources and conditions that support reduced use, safety, and healthy development.
C. Adolescent substance-use screening: A collaborative strategy that strengthens a person's own motivation and commitment to change. / Protective factor assessment: Identification of resources and conditions that support reduced use, safety, and healthy development.
D. Adolescent substance-use screening: Identification of resources and conditions that support reduced use, safety, and healthy development. / Protective factor assessment: A brief, age-appropriate process to identify possible substance-related risk and need for fuller assessment.

0484. In adolescent substance-use counseling, which course concept is defined as follows: Planning for high-risk situations, cravings, coping responses, and support following a return to use or lapse.

A. SBIRT
B. Relapse prevention
C. Confidentiality and substance care
D. Developmental framing

0485. Identify the most precise label for this idea: Substance-related concerns that occur alongside mental-health or other health conditions.

A. Adolescent substance-use screening
B. Harm reduction
C. Co-occurring conditions
D. Protective factor assessment

0486. A service team discusses a young person in the child guidance clinic. Their proposed next step is exploring peer influence and emerging independence without assuming all adolescent use has the same meaning. Which course concept supports it?

A. Relapse prevention
B. Protective factor assessment
C. Developmental framing
D. Recovery capital

0487. A assessment clinician and a young person aged 13 are discussing support in the clinical planning session. The selected practice is discussing realistic safety steps while continuing to support the adolescent's goals and options. Which concept does this demonstrate?

A. Harm reduction
B. Protective factor assessment
C. Motivational enhancement
D. Co-occurring conditions

0488. A trainee must explain Developmental framing. Which answer is accurate?

A. Screening, brief intervention, and referral to treatment, a structured pathway for responding to substance-use risk.
B. Understanding substance use in relation to adolescent development, peer context, access, and changing autonomy.
C. A collaborative strategy that strengthens a person's own motivation and commitment to change.
D. A brief, age-appropriate process to identify possible substance-related risk and need for fuller assessment.

0489. In adolescent substance-use counseling, while supporting a student aged 12 in the clinical planning session, a family therapist adopts this practice: identifying triggers and rehearsal of a response plan without framing a lapse as total failure. Which concept best explains the choice?

A. Adolescent substance-use screening
B. Relapse prevention
C. Confidentiality and substance care
D. Motivational enhancement

0490. At the family session, a clinical supervisor meets with a student aged 15. The practice priority is: eliciting the adolescent's reasons for and against change and reinforcing autonomy. Which concept best captures that priority?

A. Motivational enhancement
B. Protective factor assessment
C. Developmental framing
D. Adolescent substance-use screening

0491. In a supervision quiz, how should Adolescent substance-use screening be distinguished from Harm reduction?

A. Adolescent substance-use screening: A brief, age-appropriate process to identify possible substance-related risk and need for fuller assessment. / Harm reduction: Privacy rules for adolescent substance services that depend on jurisdiction, consent, and service context.
B. Adolescent substance-use screening: A collaborative strategy that strengthens a person's own motivation and commitment to change. / Harm reduction: Practical strategies intended to reduce substance-related risks without requiring immediate abstinence as a precondition for care.
C. Adolescent substance-use screening: A brief, age-appropriate process to identify possible substance-related risk and need for fuller assessment. / Harm reduction: Practical strategies intended to reduce substance-related risks without requiring immediate abstinence as a precondition for care.
D. Adolescent substance-use screening: Practical strategies intended to reduce substance-related risks without requiring immediate abstinence as a precondition for care. / Harm reduction: A brief, age-appropriate process to identify possible substance-related risk and need for fuller assessment.

0492. In adolescent substance-use counseling, which statement shows a sound practice-level distinction between Motivational enhancement and Relapse prevention?

A. Motivational enhancement: Identifying triggers and rehearsal of a response plan without framing a lapse as total failure. / Relapse prevention: Eliciting the adolescent's reasons for and against change and reinforcing autonomy.
B. Motivational enhancement: Eliciting the adolescent's reasons for and against change and reinforcing autonomy. / Relapse prevention: Identifying triggers and rehearsal of a response plan without framing a lapse as total failure.
C. Motivational enhancement: Exploring peer influence and emerging independence without assuming all adolescent use has the same meaning. / Relapse prevention: Identifying triggers and rehearsal of a response plan without framing a lapse as total failure.
D. Motivational enhancement: Eliciting the adolescent's reasons for and against change and reinforcing autonomy. / Relapse prevention: Linking screening results to a brief conversation and appropriate referral when indicated.

0493. How are Adolescent substance-use screening and Recovery capital most accurately differentiated in this curriculum?

A. Adolescent substance-use screening: A brief, age-appropriate process to identify possible substance-related risk and need for fuller assessment. / Recovery capital: Personal, social, and community resources that can support recovery and sustained change.
B. Adolescent substance-use screening: A brief, age-appropriate process to identify possible substance-related risk and need for fuller assessment. / Recovery capital: Screening, brief intervention, and referral to treatment, a structured pathway for responding to substance-use risk.
C. Adolescent substance-use screening: Planning for high-risk situations, cravings, coping responses, and support following a return to use or lapse. / Recovery capital: Personal, social, and community resources that can support recovery and sustained change.
D. Adolescent substance-use screening: Personal, social, and community resources that can support recovery and sustained change. / Recovery capital: A brief, age-appropriate process to identify possible substance-related risk and need for fuller assessment.

0494. In adolescent substance-use counseling, choose the definition pair that correctly explains Motivational enhancement first and Relapse prevention second.

A. Motivational enhancement: A collaborative strategy that strengthens a person's own motivation and commitment to change. / Relapse prevention: Screening, brief intervention, and referral to treatment, a structured pathway for responding to substance-use risk.
B. Motivational enhancement: Planning for high-risk situations, cravings, coping responses, and support following a return to use or lapse. / Relapse prevention: A collaborative strategy that strengthens a person's own motivation and commitment to change.
C. Motivational enhancement: Understanding substance use in relation to adolescent development, peer context, access, and changing autonomy. / Relapse prevention: Planning for high-risk situations, cravings, coping responses, and support following a return to use or lapse.
D. Motivational enhancement: A collaborative strategy that strengthens a person's own motivation and commitment to change. / Relapse prevention: Planning for high-risk situations, cravings, coping responses, and support following a return to use or lapse.

0495. A school support specialist reviews a plan for a young person aged 16 in the counseling practicum. The plan emphasizes asking about supportive adults, activities, strengths, and settings that can reinforce safer choices. Which course idea does this reflect?

A. Recovery capital
B. Protective factor assessment
C. Relapse prevention
D. Adolescent substance-use screening

0496. In adolescent substance-use counseling, how are Motivational enhancement and Relapse prevention most accurately differentiated in this curriculum?

A. Motivational enhancement: A collaborative strategy that strengthens a person's own motivation and commitment to change. / Relapse prevention: Screening, brief intervention, and referral to treatment, a structured pathway for responding to substance-use risk.
B. Motivational enhancement: Understanding substance use in relation to adolescent development, peer context, access, and changing autonomy. / Relapse prevention: Planning for high-risk situations, cravings, coping responses, and support following a return to use or lapse.
C. Motivational enhancement: Planning for high-risk situations, cravings, coping responses, and support following a return to use or lapse. / Relapse prevention: A collaborative strategy that strengthens a person's own motivation and commitment to change.
D. Motivational enhancement: A collaborative strategy that strengthens a person's own motivation and commitment to change. / Relapse prevention: Planning for high-risk situations, cravings, coping responses, and support following a return to use or lapse.

0497. In adolescent substance-use counseling, which pair of actions illustrates Adolescent substance-use screening and Relapse prevention, respectively?

A. Adolescent substance-use screening: Identifying triggers and rehearsal of a response plan without framing a lapse as total failure. / Relapse prevention: Using a validated youth-appropriate screen as an entry point rather than treating it as a diagnosis.
B. Adolescent substance-use screening: Using a validated youth-appropriate screen as an entry point rather than treating it as a diagnosis. / Relapse prevention: Identifying triggers and rehearsal of a response plan without framing a lapse as total failure.
C. Adolescent substance-use screening: Eliciting the adolescent's reasons for and against change and reinforcing autonomy. / Relapse prevention: Identifying triggers and rehearsal of a response plan without framing a lapse as total failure.
D. Adolescent substance-use screening: Using a validated youth-appropriate screen as an entry point rather than treating it as a diagnosis. / Relapse prevention: Mapping supportive relationships, practical resources, and meaningful roles that can aid recovery.

0498. In adolescent substance-use counseling, which applied comparison correctly identifies what belongs to Recovery capital versus Relapse prevention?

A. Recovery capital: Identifying triggers and rehearsal of a response plan without framing a lapse as total failure. / Relapse prevention: Mapping supportive relationships, practical resources, and meaningful roles that can aid recovery.
B. Recovery capital: Mapping supportive relationships, practical resources, and meaningful roles that can aid recovery. / Relapse prevention: Asking about supportive adults, activities, strengths, and settings that can reinforce safer choices.
C. Recovery capital: Eliciting the adolescent's reasons for and against change and reinforcing autonomy. / Relapse prevention: Identifying triggers and rehearsal of a response plan without framing a lapse as total failure.
D. Recovery capital: Mapping supportive relationships, practical resources, and meaningful roles that can aid recovery. / Relapse prevention: Identifying triggers and rehearsal of a response plan without framing a lapse as total failure.

0499. Choose the response that best puts Developmental framing into practice.

A. Asking about supportive adults, activities, strengths, and settings that can reinforce safer choices.
B. Identifying triggers and rehearsal of a response plan without framing a lapse as total failure.
C. Explaining privacy and its exceptions accurately using current local law and policy before asking sensitive questions.
D. Exploring peer influence and emerging independence without assuming all adolescent use has the same meaning.

0500. In adolescent substance-use counseling, which option is the clearest practical expression of Relapse prevention?

A. Explaining privacy and its exceptions accurately using current local law and policy before asking sensitive questions.
B. Exploring peer influence and emerging independence without assuming all adolescent use has the same meaning.
C. Mapping supportive relationships, practical resources, and meaningful roles that can aid recovery.
D. Identifying triggers and rehearsal of a response plan without framing a lapse as total failure.

0501. In adolescent substance-use counseling, a case conference reviews a program coordinator's work with a school-age child in the after-school program: identifying triggers and rehearsal of a response plan without framing a lapse as total failure. Which principle is central?

A. Recovery capital
B. Relapse prevention
C. SBIRT
D. Developmental framing

0502. At a case-planning meeting, the play therapist proposes linking screening results to a brief conversation and appropriate referral when indicated. for a teenage client seen in the caregiver consultation. Which concept does this illustrate?

A. Co-occurring conditions
B. SBIRT
C. Confidentiality and substance care
D. Protective factor assessment

0503. In adolescent substance-use counseling, which statement accurately contrasts the course concepts Confidentiality and substance care and Relapse prevention?

A. Confidentiality and substance care: Privacy rules for adolescent substance services that depend on jurisdiction, consent, and service context. / Relapse prevention: Planning for high-risk situations, cravings, coping responses, and support following a return to use or lapse.
B. Confidentiality and substance care: Planning for high-risk situations, cravings, coping responses, and support following a return to use or lapse. / Relapse prevention: Privacy rules for adolescent substance services that depend on jurisdiction, consent, and service context.
C. Confidentiality and substance care: Practical strategies intended to reduce substance-related risks without requiring immediate abstinence as a precondition for care. / Relapse prevention: Planning for high-risk situations, cravings, coping responses, and support following a return to use or lapse.
D. Confidentiality and substance care: Privacy rules for adolescent substance services that depend on jurisdiction, consent, and service context. / Relapse prevention: Screening, brief intervention, and referral to treatment, a structured pathway for responding to substance-use risk.

0504. A consulting counselor is asked to justify a plan for a student aged 12 in the school counseling office. It calls for eliciting the adolescent's reasons for and against change and reinforcing autonomy. Which concept provides the rationale?

A. SBIRT
B. Recovery capital
C. Motivational enhancement
D. Co-occurring conditions

0505. Which option is the clearest practical expression of Protective factor assessment?

A. Exploring peer influence and emerging independence without assuming all adolescent use has the same meaning.
B. Mapping supportive relationships, practical resources, and meaningful roles that can aid recovery.
C. Eliciting the adolescent's reasons for and against change and reinforcing autonomy.
D. Asking about supportive adults, activities, strengths, and settings that can reinforce safer choices.

0506. How are Motivational enhancement and Harm reduction most accurately differentiated in this curriculum?

A. Motivational enhancement: Screening, brief intervention, and referral to treatment, a structured pathway for responding to substance-use risk. / Harm reduction: Practical strategies intended to reduce substance-related risks without requiring immediate abstinence as a precondition for care.
B. Motivational enhancement: Practical strategies intended to reduce substance-related risks without requiring immediate abstinence as a precondition for care. / Harm reduction: A collaborative strategy that strengthens a person's own motivation and commitment to change.
C. Motivational enhancement: A collaborative strategy that strengthens a person's own motivation and commitment to change. / Harm reduction: Privacy rules for adolescent substance services that depend on jurisdiction, consent, and service context.
D. Motivational enhancement: A collaborative strategy that strengthens a person's own motivation and commitment to change. / Harm reduction: Practical strategies intended to reduce substance-related risks without requiring immediate abstinence as a precondition for care.

0507. A trainee must explain SBIRT. Which answer is accurate?

A. Understanding substance use in relation to adolescent development, peer context, access, and changing autonomy.
B. Planning for high-risk situations, cravings, coping responses, and support following a return to use or lapse.
C. Personal, social, and community resources that can support recovery and sustained change.
D. Screening, brief intervention, and referral to treatment, a structured pathway for responding to substance-use risk.

0508. While supporting a young person aged 18 in the school counseling office, a case coordinator adopts this practice: exploring peer influence and emerging independence without assuming all adolescent use has the same meaning. Which concept best explains the choice?

A. Relapse prevention
B. Confidentiality and substance care
C. Motivational enhancement
D. Developmental framing

0509. A support meeting for a high-school student includes a counselor in the school consultation. The practice under consideration is linking screening results to a brief conversation and appropriate referral when indicated. Which concept guides it?

A. Adolescent substance-use screening
B. SBIRT
C. Protective factor assessment
D. Harm reduction

0510. A case conference reviews a therapist's work with a child aged 11 in the learning-support meeting: discussing realistic safety steps while continuing to support the adolescent's goals and options. Which principle is central?

A. Protective factor assessment
B. Recovery capital
C. Adolescent substance-use screening
D. Harm reduction

0511. A school support specialist is asked to evaluate a proposed service for a client in early adolescence in the youth group. The defining feature is exploring peer influence and emerging independence without assuming all adolescent use has the same meaning. Which concept fits?

A. Confidentiality and substance care
B. Harm reduction
C. Developmental framing
D. Protective factor assessment

0512. A trainee must choose a practice that exemplifies Developmental framing. Which action is the best fit?

A. Eliciting the adolescent's reasons for and against change and reinforcing autonomy.
B. Identifying triggers and rehearsal of a response plan without framing a lapse as total failure.
C. Mapping supportive relationships, practical resources, and meaningful roles that can aid recovery.
D. Exploring peer influence and emerging independence without assuming all adolescent use has the same meaning.

0513. In adolescent substance-use counseling, a supervisor asks how Relapse prevention would appear in practice. Which choice should be selected?

A. Identifying triggers and rehearsal of a response plan without framing a lapse as total failure.
B. Exploring peer influence and emerging independence without assuming all adolescent use has the same meaning.
C. Discussing realistic safety steps while continuing to support the adolescent's goals and options.
D. Asking about supportive adults, activities, strengths, and settings that can reinforce safer choices.

0514. While consulting in the school-based service, a assessment clinician supports a young person aged 10 by using this approach: linking screening results to a brief conversation and appropriate referral when indicated. Which concept is being applied?

A. SBIRT
B. Co-occurring conditions
C. Recovery capital
D. Protective factor assessment

0515. For a teenage client seen in the clinical planning session, the community practitioner recommends a plan built around explaining privacy and its exceptions accurately using current local law and policy before asking sensitive questions. Which concept is reflected?

A. SBIRT
B. Confidentiality and substance care
C. Co-occurring conditions
D. Harm reduction

0516. A student confuses Adolescent substance-use screening with Developmental framing. Which explanation most accurately separates them?

A. Adolescent substance-use screening: Screening, brief intervention, and referral to treatment, a structured pathway for responding to substance-use risk. / Developmental framing: Understanding substance use in relation to adolescent development, peer context, access, and changing autonomy.
B. Adolescent substance-use screening: A brief, age-appropriate process to identify possible substance-related risk and need for fuller assessment. / Developmental framing: Planning for high-risk situations, cravings, coping responses, and support following a return to use or lapse.
C. Adolescent substance-use screening: A brief, age-appropriate process to identify possible substance-related risk and need for fuller assessment. / Developmental framing: Understanding substance use in relation to adolescent development, peer context, access, and changing autonomy.
D. Adolescent substance-use screening: Understanding substance use in relation to adolescent development, peer context, access, and changing autonomy. / Developmental framing: A brief, age-appropriate process to identify possible substance-related risk and need for fuller assessment.

0517. Which applied comparison correctly identifies what belongs to Motivational enhancement versus Confidentiality and substance care?

A. Motivational enhancement: Explaining privacy and its exceptions accurately using current local law and policy before asking sensitive questions. / Confidentiality and substance care: Eliciting the adolescent's reasons for and against change and reinforcing autonomy.
B. Motivational enhancement: Eliciting the adolescent's reasons for and against change and reinforcing autonomy. / Confidentiality and substance care: Assessing anxiety, mood, trauma, and substance use together while coordinating appropriate care.
C. Motivational enhancement: Eliciting the adolescent's reasons for and against change and reinforcing autonomy. / Confidentiality and substance care: Explaining privacy and its exceptions accurately using current local law and policy before asking sensitive questions.
D. Motivational enhancement: Linking screening results to a brief conversation and appropriate referral when indicated. / Confidentiality and substance care: Explaining privacy and its exceptions accurately using current local law and policy before asking sensitive questions.

0518. Which paired example correctly applies Co-occurring conditions first and Recovery capital second?

A. Co-occurring conditions: Asking about supportive adults, activities, strengths, and settings that can reinforce safer choices. / Recovery capital: Mapping supportive relationships, practical resources, and meaningful roles that can aid recovery.
B. Co-occurring conditions: Assessing anxiety, mood, trauma, and substance use together while coordinating appropriate care. / Recovery capital: Mapping supportive relationships, practical resources, and meaningful roles that can aid recovery.
C. Co-occurring conditions: Mapping supportive relationships, practical resources, and meaningful roles that can aid recovery. / Recovery capital: Assessing anxiety, mood, trauma, and substance use together while coordinating appropriate care.
D. Co-occurring conditions: Assessing anxiety, mood, trauma, and substance use together while coordinating appropriate care. / Recovery capital: Exploring peer influence and emerging independence without assuming all adolescent use has the same meaning.

0519. A supervisor asks how SBIRT would appear in practice. Which choice should be selected?

A. Linking screening results to a brief conversation and appropriate referral when indicated.
B. Explaining privacy and its exceptions accurately using current local law and policy before asking sensitive questions.
C. Exploring peer influence and emerging independence without assuming all adolescent use has the same meaning.
D. Mapping supportive relationships, practical resources, and meaningful roles that can aid recovery.

0520. In adolescent substance-use counseling, which comparison would correct a trainee's misunderstanding of Harm reduction versus Relapse prevention?

A. Harm reduction: Practical strategies intended to reduce substance-related risks without requiring immediate abstinence as a precondition for care. / Relapse prevention: Planning for high-risk situations, cravings, coping responses, and support following a return to use or lapse.
B. Harm reduction: Practical strategies intended to reduce substance-related risks without requiring immediate abstinence as a precondition for care. / Relapse prevention: Understanding substance use in relation to adolescent development, peer context, access, and changing autonomy.
C. Harm reduction: A collaborative strategy that strengthens a person's own motivation and commitment to change. / Relapse prevention: Planning for high-risk situations, cravings, coping responses, and support following a return to use or lapse.
D. Harm reduction: Planning for high-risk situations, cravings, coping responses, and support following a return to use or lapse. / Relapse prevention: Practical strategies intended to reduce substance-related risks without requiring immediate abstinence as a precondition for care.

0521. In the family session, a case coordinator is considering this approach for a adolescent student: assessing anxiety, mood, trauma, and substance use together while coordinating appropriate care. Which framework does it represent?

A. Confidentiality and substance care
B. Adolescent substance-use screening
C. Co-occurring conditions
D. SBIRT

0522. In adolescent substance-use counseling, choose the definition pair that correctly explains Harm reduction first and Relapse prevention second.

A. Harm reduction: Practical strategies intended to reduce substance-related risks without requiring immediate abstinence as a precondition for care. / Relapse prevention: Understanding substance use in relation to adolescent development, peer context, access, and changing autonomy.
B. Harm reduction: Practical strategies intended to reduce substance-related risks without requiring immediate abstinence as a precondition for care. / Relapse prevention: Planning for high-risk situations, cravings, coping responses, and support following a return to use or lapse.
C. Harm reduction: Planning for high-risk situations, cravings, coping responses, and support following a return to use or lapse. / Relapse prevention: Practical strategies intended to reduce substance-related risks without requiring immediate abstinence as a precondition for care.
D. Harm reduction: A collaborative strategy that strengthens a person's own motivation and commitment to change. / Relapse prevention: Planning for high-risk situations, cravings, coping responses, and support following a return to use or lapse.

0523. In adolescent substance-use counseling, at a case-planning meeting, the play therapist proposes identifying triggers and rehearsal of a response plan without framing a lapse as total failure. for a child aged 14 seen in the youth advocacy program. Which concept does this illustrate?

A. Recovery capital
B. Developmental framing
C. Relapse prevention
D. Harm reduction

0524. In a supervision quiz, how should Motivational enhancement be distinguished from Confidentiality and substance care?

A. Motivational enhancement: Privacy rules for adolescent substance services that depend on jurisdiction, consent, and service context. / Confidentiality and substance care: A collaborative strategy that strengthens a person's own motivation and commitment to change.
B. Motivational enhancement: A collaborative strategy that strengthens a person's own motivation and commitment to change. / Confidentiality and substance care: Substance-related concerns that occur alongside mental-health or other health conditions.
C. Motivational enhancement: A collaborative strategy that strengthens a person's own motivation and commitment to change. / Confidentiality and substance care: Privacy rules for adolescent substance services that depend on jurisdiction, consent, and service context.
D. Motivational enhancement: Screening, brief intervention, and referral to treatment, a structured pathway for responding to substance-use risk. / Confidentiality and substance care: Privacy rules for adolescent substance services that depend on jurisdiction, consent, and service context.

0525. A supervisor asks how Co-occurring conditions would appear in practice. Which choice should be selected?

A. Eliciting the adolescent's reasons for and against change and reinforcing autonomy.
B. Linking screening results to a brief conversation and appropriate referral when indicated.
C. Assessing anxiety, mood, trauma, and substance use together while coordinating appropriate care.
D. Mapping supportive relationships, practical resources, and meaningful roles that can aid recovery.

0526. A student confuses Harm reduction with Protective factor assessment. Which explanation most accurately separates them?

A. Harm reduction: Identification of resources and conditions that support reduced use, safety, and healthy development. / Protective factor assessment: Practical strategies intended to reduce substance-related risks without requiring immediate abstinence as a precondition for care.
B. Harm reduction: Practical strategies intended to reduce substance-related risks without requiring immediate abstinence as a precondition for care. / Protective factor assessment: Personal, social, and community resources that can support recovery and sustained change.
C. Harm reduction: Practical strategies intended to reduce substance-related risks without requiring immediate abstinence as a precondition for care. / Protective factor assessment: Identification of resources and conditions that support reduced use, safety, and healthy development.
D. Harm reduction: Screening, brief intervention, and referral to treatment, a structured pathway for responding to substance-use risk. / Protective factor assessment: Identification of resources and conditions that support reduced use, safety, and healthy development.

0527. Which statement accurately contrasts the course concepts SBIRT and Protective factor assessment?

A. SBIRT: Screening, brief intervention, and referral to treatment, a structured pathway for responding to substance-use risk. / Protective factor assessment: Privacy rules for adolescent substance services that depend on jurisdiction, consent, and service context.
B. SBIRT: Screening, brief intervention, and referral to treatment, a structured pathway for responding to substance-use risk. / Protective factor assessment: Identification of resources and conditions that support reduced use, safety, and healthy development.
C. SBIRT: Practical strategies intended to reduce substance-related risks without requiring immediate abstinence as a precondition for care. / Protective factor assessment: Identification of resources and conditions that support reduced use, safety, and healthy development.
D. SBIRT: Identification of resources and conditions that support reduced use, safety, and healthy development. / Protective factor assessment: Screening, brief intervention, and referral to treatment, a structured pathway for responding to substance-use risk.

0528. Which paired example correctly applies Motivational enhancement first and Recovery capital second?

A. Motivational enhancement: Eliciting the adolescent's reasons for and against change and reinforcing autonomy. / Recovery capital: Mapping supportive relationships, practical resources, and meaningful roles that can aid recovery.
B. Motivational enhancement: Asking about supportive adults, activities, strengths, and settings that can reinforce safer choices. / Recovery capital: Mapping supportive relationships, practical resources, and meaningful roles that can aid recovery.
C. Motivational enhancement: Mapping supportive relationships, practical resources, and meaningful roles that can aid recovery. / Recovery capital: Eliciting the adolescent's reasons for and against change and reinforcing autonomy.
D. Motivational enhancement: Eliciting the adolescent's reasons for and against change and reinforcing autonomy. / Recovery capital: Using a validated youth-appropriate screen as an entry point rather than treating it as a diagnosis.

0529. In a supervision quiz, how should Protective factor assessment be distinguished from Confidentiality and substance care?

A. Protective factor assessment: Personal, social, and community resources that can support recovery and sustained change. / Confidentiality and substance care: Privacy rules for adolescent substance services that depend on jurisdiction, consent, and service context.
B. Protective factor assessment: Privacy rules for adolescent substance services that depend on jurisdiction, consent, and service context. / Confidentiality and substance care: Identification of resources and conditions that support reduced use, safety, and healthy development.
C. Protective factor assessment: Identification of resources and conditions that support reduced use, safety, and healthy development. / Confidentiality and substance care: Privacy rules for adolescent substance services that depend on jurisdiction, consent, and service context.
D. Protective factor assessment: Identification of resources and conditions that support reduced use, safety, and healthy development. / Confidentiality and substance care: Understanding substance use in relation to adolescent development, peer context, access, and changing autonomy.

0530. For a client in early adolescence in the outpatient clinic, a play therapist makes this practice the immediate priority: asking about supportive adults, activities, strengths, and settings that can reinforce safer choices. Which concept fits best?

A. SBIRT
B. Co-occurring conditions
C. Protective factor assessment
D. Developmental framing

0531. While supporting a young person in the student wellness team, a caregiver working with a counselor adopts this practice: mapping supportive relationships, practical resources, and meaningful roles that can aid recovery. Which concept best explains the choice?

A. Recovery capital
B. Confidentiality and substance care
C. SBIRT
D. Adolescent substance-use screening

0532. What is the central meaning of Protective factor assessment?

A. Privacy rules for adolescent substance services that depend on jurisdiction, consent, and service context.
B. A brief, age-appropriate process to identify possible substance-related risk and need for fuller assessment.
C. Identification of resources and conditions that support reduced use, safety, and healthy development.
D. Practical strategies intended to reduce substance-related risks without requiring immediate abstinence as a precondition for care.

0533. A therapist is asked what should shape a student aged 17's support in the caregiver consultation. The proposed focus is using a validated youth-appropriate screen as an entry point rather than treating it as a diagnosis. Which principle does it represent?

A. Relapse prevention
B. Adolescent substance-use screening
C. Confidentiality and substance care
D. Recovery capital

0534. Which paired example correctly applies Harm reduction first and SBIRT second?

A. Harm reduction: Explaining privacy and its exceptions accurately using current local law and policy before asking sensitive questions. / SBIRT: Linking screening results to a brief conversation and appropriate referral when indicated.
B. Harm reduction: Linking screening results to a brief conversation and appropriate referral when indicated. / SBIRT: Discussing realistic safety steps while continuing to support the adolescent's goals and options.
C. Harm reduction: Discussing realistic safety steps while continuing to support the adolescent's goals and options. / SBIRT: Using a validated youth-appropriate screen as an entry point rather than treating it as a diagnosis.
D. Harm reduction: Discussing realistic safety steps while continuing to support the adolescent's goals and options. / SBIRT: Linking screening results to a brief conversation and appropriate referral when indicated.

0535. A assessment clinician prepares for a session in the child guidance clinic with a young person aged 18. The intended approach is using a validated youth-appropriate screen as an entry point rather than treating it as a diagnosis. Which concept is most relevant?

A. Protective factor assessment
B. Relapse prevention
C. Harm reduction
D. Adolescent substance-use screening

0536. Which statement accurately contrasts the course concepts Motivational enhancement and SBIRT?

A. Motivational enhancement: A collaborative strategy that strengthens a person's own motivation and commitment to change. / SBIRT: Screening, brief intervention, and referral to treatment, a structured pathway for responding to substance-use risk.
B. Motivational enhancement: Screening, brief intervention, and referral to treatment, a structured pathway for responding to substance-use risk. / SBIRT: A collaborative strategy that strengthens a person's own motivation and commitment to change.
C. Motivational enhancement: A collaborative strategy that strengthens a person's own motivation and commitment to change. / SBIRT: Privacy rules for adolescent substance services that depend on jurisdiction, consent, and service context.
D. Motivational enhancement: Practical strategies intended to reduce substance-related risks without requiring immediate abstinence as a precondition for care. / SBIRT: Screening, brief intervention, and referral to treatment, a structured pathway for responding to substance-use risk.

0537. A supervisor asks for an applied contrast between SBIRT and Developmental framing. Which option fits?

A. SBIRT: Linking screening results to a brief conversation and appropriate referral when indicated. / Developmental framing: Identifying triggers and rehearsal of a response plan without framing a lapse as total failure.
B. SBIRT: Mapping supportive relationships, practical resources, and meaningful roles that can aid recovery. / Developmental framing: Exploring peer influence and emerging independence without assuming all adolescent use has the same meaning.
C. SBIRT: Exploring peer influence and emerging independence without assuming all adolescent use has the same meaning. / Developmental framing: Linking screening results to a brief conversation and appropriate referral when indicated.
D. SBIRT: Linking screening results to a brief conversation and appropriate referral when indicated. / Developmental framing: Exploring peer influence and emerging independence without assuming all adolescent use has the same meaning.

0538. Select the best explanation of Recovery capital.

A. Personal, social, and community resources that can support recovery and sustained change.
B. A brief, age-appropriate process to identify possible substance-related risk and need for fuller assessment.
C. Practical strategies intended to reduce substance-related risks without requiring immediate abstinence as a precondition for care.
D. A collaborative strategy that strengthens a person's own motivation and commitment to change.

0539. Which professional action most closely applies Confidentiality and substance care?

A. Assessing anxiety, mood, trauma, and substance use together while coordinating appropriate care.
B. Eliciting the adolescent's reasons for and against change and reinforcing autonomy.
C. Explaining privacy and its exceptions accurately using current local law and policy before asking sensitive questions.
D. Identifying triggers and rehearsal of a response plan without framing a lapse as total failure.

0540. Which statement accurately contrasts the course concepts Recovery capital and Developmental framing?

A. Recovery capital: Personal, social, and community resources that can support recovery and sustained change. / Developmental framing: A collaborative strategy that strengthens a person's own motivation and commitment to change.
B. Recovery capital: Understanding substance use in relation to adolescent development, peer context, access, and changing autonomy. / Developmental framing: Personal, social, and community resources that can support recovery and sustained change.
C. Recovery capital: Personal, social, and community resources that can support recovery and sustained change. / Developmental framing: Understanding substance use in relation to adolescent development, peer context, access, and changing autonomy.
D. Recovery capital: A brief, age-appropriate process to identify possible substance-related risk and need for fuller assessment. / Developmental framing: Understanding substance use in relation to adolescent development, peer context, access, and changing autonomy.

0541. A group facilitator is explaining a choice to a child aged 7 and caregiver in the student wellness team. The choice centers on asking about supportive adults, activities, strengths, and settings that can reinforce safer choices. Which idea is illustrated?

A. Adolescent substance-use screening
B. Protective factor assessment
C. Co-occurring conditions
D. Confidentiality and substance care

0542. A case discussion concerns a young person aged 10 and a parent educator in the youth advocacy program. The practitioner is considering mapping supportive relationships, practical resources, and meaningful roles that can aid recovery. Which principle is involved?

A. Confidentiality and substance care
B. Recovery capital
C. Relapse prevention
D. Adolescent substance-use screening

0543. How should a practitioner distinguish the applications of Confidentiality and substance care and Developmental framing?

A. Confidentiality and substance care: Explaining privacy and its exceptions accurately using current local law and policy before asking sensitive questions. / Developmental framing: Linking screening results to a brief conversation and appropriate referral when indicated.
B. Confidentiality and substance care: Explaining privacy and its exceptions accurately using current local law and policy before asking sensitive questions. / Developmental framing: Exploring peer influence and emerging independence without assuming all adolescent use has the same meaning.
C. Confidentiality and substance care: Mapping supportive relationships, practical resources, and meaningful roles that can aid recovery. / Developmental framing: Exploring peer influence and emerging independence without assuming all adolescent use has the same meaning.
D. Confidentiality and substance care: Exploring peer influence and emerging independence without assuming all adolescent use has the same meaning. / Developmental framing: Explaining privacy and its exceptions accurately using current local law and policy before asking sensitive questions.

0544. Which paired example correctly applies Motivational enhancement first and Confidentiality and substance care second?

A. Motivational enhancement: Explaining privacy and its exceptions accurately using current local law and policy before asking sensitive questions. / Confidentiality and substance care: Eliciting the adolescent's reasons for and against change and reinforcing autonomy.
B. Motivational enhancement: Eliciting the adolescent's reasons for and against change and reinforcing autonomy. / Confidentiality and substance care: Explaining privacy and its exceptions accurately using current local law and policy before asking sensitive questions.
C. Motivational enhancement: Linking screening results to a brief conversation and appropriate referral when indicated. / Confidentiality and substance care: Explaining privacy and its exceptions accurately using current local law and policy before asking sensitive questions.
D. Motivational enhancement: Eliciting the adolescent's reasons for and against change and reinforcing autonomy. / Confidentiality and substance care: Assessing anxiety, mood, trauma, and substance use together while coordinating appropriate care.

0545. Choose the practice comparison that best separates Adolescent substance-use screening from Recovery capital.

A. Adolescent substance-use screening: Using a validated youth-appropriate screen as an entry point rather than treating it as a diagnosis. / Recovery capital: Mapping supportive relationships, practical resources, and meaningful roles that can aid recovery.
B. Adolescent substance-use screening: Identifying triggers and rehearsal of a response plan without framing a lapse as total failure. / Recovery capital: Mapping supportive relationships, practical resources, and meaningful roles that can aid recovery.
C. Adolescent substance-use screening: Using a validated youth-appropriate screen as an entry point rather than treating it as a diagnosis. / Recovery capital: Linking screening results to a brief conversation and appropriate referral when indicated.
D. Adolescent substance-use screening: Mapping supportive relationships, practical resources, and meaningful roles that can aid recovery. / Recovery capital: Using a validated youth-appropriate screen as an entry point rather than treating it as a diagnosis.

0546. A member of a clinical team is preparing a follow-up plan for a child aged 8 in the counseling practicum. The plan calls for discussing realistic safety steps while continuing to support the adolescent's goals and options. Which concept names this approach?

A. Relapse prevention
B. Co-occurring conditions
C. Confidentiality and substance care
D. Harm reduction

0547. At the multidisciplinary case conference, a behavior specialist meets with a child aged 11. The practice priority is: asking about supportive adults, activities, strengths, and settings that can reinforce safer choices. Which concept best captures that priority?

A. Adolescent substance-use screening
B. Developmental framing
C. Co-occurring conditions
D. Protective factor assessment

0548. In adolescent substance-use counseling, a trainee must distinguish how Recovery capital and Relapse prevention guide practice. Which comparison is accurate?

A. Recovery capital: Identifying triggers and rehearsal of a response plan without framing a lapse as total failure. / Relapse prevention: Mapping supportive relationships, practical resources, and meaningful roles that can aid recovery.
B. Recovery capital: Mapping supportive relationships, practical resources, and meaningful roles that can aid recovery. / Relapse prevention: Asking about supportive adults, activities, strengths, and settings that can reinforce safer choices.
C. Recovery capital: Mapping supportive relationships, practical resources, and meaningful roles that can aid recovery. / Relapse prevention: Identifying triggers and rehearsal of a response plan without framing a lapse as total failure.
D. Recovery capital: Eliciting the adolescent's reasons for and against change and reinforcing autonomy. / Relapse prevention: Identifying triggers and rehearsal of a response plan without framing a lapse as total failure.

0549. A older adolescent client is receiving support in the classroom support meeting. The school counselor is guided by this practice: eliciting the adolescent's reasons for and against change and reinforcing autonomy. Which principle best fits?

A. Co-occurring conditions
B. Motivational enhancement
C. Relapse prevention
D. Protective factor assessment

0550. In a case note about a teenage client, a consultant working in the community service agency records this priority: using a validated youth-appropriate screen as an entry point rather than treating it as a diagnosis. What principle is reflected?

A. Adolescent substance-use screening
B. Developmental framing
C. Protective factor assessment
D. Recovery capital

0551. Which applied comparison correctly identifies what belongs to Motivational enhancement versus Co-occurring conditions?

A. Motivational enhancement: Eliciting the adolescent's reasons for and against change and reinforcing autonomy. / Co-occurring conditions: Asking about supportive adults, activities, strengths, and settings that can reinforce safer choices.
B. Motivational enhancement: Eliciting the adolescent's reasons for and against change and reinforcing autonomy. / Co-occurring conditions: Assessing anxiety, mood, trauma, and substance use together while coordinating appropriate care.
C. Motivational enhancement: Assessing anxiety, mood, trauma, and substance use together while coordinating appropriate care. / Co-occurring conditions: Eliciting the adolescent's reasons for and against change and reinforcing autonomy.
D. Motivational enhancement: Exploring peer influence and emerging independence without assuming all adolescent use has the same meaning. / Co-occurring conditions: Assessing anxiety, mood, trauma, and substance use together while coordinating appropriate care.

0552. A support meeting for a student aged 17 includes a behavior specialist in the community youth program. The practice under consideration is discussing realistic safety steps while continuing to support the adolescent's goals and options. Which concept guides it?

A. Adolescent substance-use screening
B. Developmental framing
C. Relapse prevention
D. Harm reduction

0553. In adolescent substance-use counseling, a client in late adolescence's service team meets in the multidisciplinary case conference. The caregiver working with a counselor recommends a change involving identifying triggers and rehearsal of a response plan without framing a lapse as total failure. Which idea best explains it?

A. Recovery capital
B. Adolescent substance-use screening
C. Relapse prevention
D. Co-occurring conditions

0554. Choose the response that best puts SBIRT into practice.

A. Explaining privacy and its exceptions accurately using current local law and policy before asking sensitive questions.
B. Exploring peer influence and emerging independence without assuming all adolescent use has the same meaning.
C. Using a validated youth-appropriate screen as an entry point rather than treating it as a diagnosis.
D. Linking screening results to a brief conversation and appropriate referral when indicated.

0555. A team must select a support approach for a young person aged 10 at the youth advocacy program. The parent educator recommends mapping supportive relationships, practical resources, and meaningful roles that can aid recovery. Which idea is most relevant?

A. Developmental framing
B. Confidentiality and substance care
C. Protective factor assessment
D. Recovery capital

0556. Which statement shows a sound practice-level distinction between SBIRT and Co-occurring conditions?

A. SBIRT: Linking screening results to a brief conversation and appropriate referral when indicated. / Co-occurring conditions: Assessing anxiety, mood, trauma, and substance use together while coordinating appropriate care.
B. SBIRT: Assessing anxiety, mood, trauma, and substance use together while coordinating appropriate care. / Co-occurring conditions: Linking screening results to a brief conversation and appropriate referral when indicated.
C. SBIRT: Linking screening results to a brief conversation and appropriate referral when indicated. / Co-occurring conditions: Discussing realistic safety steps while continuing to support the adolescent's goals and options.
D. SBIRT: Explaining privacy and its exceptions accurately using current local law and policy before asking sensitive questions. / Co-occurring conditions: Assessing anxiety, mood, trauma, and substance use together while coordinating appropriate care.

0557. In adolescent substance-use counseling, a supervisor asks for an applied contrast between SBIRT and Relapse prevention. Which option fits?

A. SBIRT: Assessing anxiety, mood, trauma, and substance use together while coordinating appropriate care. / Relapse prevention: Identifying triggers and rehearsal of a response plan without framing a lapse as total failure.
B. SBIRT: Identifying triggers and rehearsal of a response plan without framing a lapse as total failure. / Relapse prevention: Linking screening results to a brief conversation and appropriate referral when indicated.
C. SBIRT: Linking screening results to a brief conversation and appropriate referral when indicated. / Relapse prevention: Exploring peer influence and emerging independence without assuming all adolescent use has the same meaning.
D. SBIRT: Linking screening results to a brief conversation and appropriate referral when indicated. / Relapse prevention: Identifying triggers and rehearsal of a response plan without framing a lapse as total failure.

0558. A supervised trainee is preparing a follow-up plan for a older adolescent client in the parent meeting. The plan calls for asking about supportive adults, activities, strengths, and settings that can reinforce safer choices. Which concept names this approach?

A. Harm reduction
B. Co-occurring conditions
C. Adolescent substance-use screening
D. Protective factor assessment

0559. Select the best explanation of SBIRT.

A. Privacy rules for adolescent substance services that depend on jurisdiction, consent, and service context.
B. Screening, brief intervention, and referral to treatment, a structured pathway for responding to substance-use risk.
C. Planning for high-risk situations, cravings, coping responses, and support following a return to use or lapse.
D. A collaborative strategy that strengthens a person's own motivation and commitment to change.

0560. Which statement shows a sound practice-level distinction between Adolescent substance-use screening and Recovery capital?

A. Adolescent substance-use screening: Using a validated youth-appropriate screen as an entry point rather than treating it as a diagnosis. / Recovery capital: Mapping supportive relationships, practical resources, and meaningful roles that can aid recovery.
B. Adolescent substance-use screening: Identifying triggers and rehearsal of a response plan without framing a lapse as total failure. / Recovery capital: Mapping supportive relationships, practical resources, and meaningful roles that can aid recovery.
C. Adolescent substance-use screening: Mapping supportive relationships, practical resources, and meaningful roles that can aid recovery. / Recovery capital: Using a validated youth-appropriate screen as an entry point rather than treating it as a diagnosis.
D. Adolescent substance-use screening: Using a validated youth-appropriate screen as an entry point rather than treating it as a diagnosis. / Recovery capital: Linking screening results to a brief conversation and appropriate referral when indicated.

0561. A case conference asks for a distinction between SBIRT and Recovery capital. Which answer is sound?

A. SBIRT: Understanding substance use in relation to adolescent development, peer context, access, and changing autonomy. / Recovery capital: Personal, social, and community resources that can support recovery and sustained change.
B. SBIRT: Screening, brief intervention, and referral to treatment, a structured pathway for responding to substance-use risk. / Recovery capital: Personal, social, and community resources that can support recovery and sustained change.
C. SBIRT: Personal, social, and community resources that can support recovery and sustained change. / Recovery capital: Screening, brief intervention, and referral to treatment, a structured pathway for responding to substance-use risk.
D. SBIRT: Screening, brief intervention, and referral to treatment, a structured pathway for responding to substance-use risk. / Recovery capital: Privacy rules for adolescent substance services that depend on jurisdiction, consent, and service context.

0562. Which course concept is defined as follows: Practical strategies intended to reduce substance-related risks without requiring immediate abstinence as a precondition for care.

A. Developmental framing
B. Harm reduction
C. SBIRT
D. Relapse prevention

0563. Select the best explanation of Adolescent substance-use screening.

A. Planning for high-risk situations, cravings, coping responses, and support following a return to use or lapse.
B. Privacy rules for adolescent substance services that depend on jurisdiction, consent, and service context.
C. A brief, age-appropriate process to identify possible substance-related risk and need for fuller assessment.
D. Screening, brief intervention, and referral to treatment, a structured pathway for responding to substance-use risk.

0564. In adolescent substance-use counseling, which comparison would correct a trainee's misunderstanding of Relapse prevention versus Developmental framing?

A. Relapse prevention: Practical strategies intended to reduce substance-related risks without requiring immediate abstinence as a precondition for care. / Developmental framing: Understanding substance use in relation to adolescent development, peer context, access, and changing autonomy.
B. Relapse prevention: Understanding substance use in relation to adolescent development, peer context, access, and changing autonomy. / Developmental framing: Planning for high-risk situations, cravings, coping responses, and support following a return to use or lapse.
C. Relapse prevention: Planning for high-risk situations, cravings, coping responses, and support following a return to use or lapse. / Developmental framing: Understanding substance use in relation to adolescent development, peer context, access, and changing autonomy.
D. Relapse prevention: Planning for high-risk situations, cravings, coping responses, and support following a return to use or lapse. / Developmental framing: Identification of resources and conditions that support reduced use, safety, and healthy development.

0565. Which paired example correctly applies SBIRT first and Protective factor assessment second?

A. SBIRT: Linking screening results to a brief conversation and appropriate referral when indicated. / Protective factor assessment: Asking about supportive adults, activities, strengths, and settings that can reinforce safer choices.
B. SBIRT: Discussing realistic safety steps while continuing to support the adolescent's goals and options. / Protective factor assessment: Asking about supportive adults, activities, strengths, and settings that can reinforce safer choices.
C. SBIRT: Asking about supportive adults, activities, strengths, and settings that can reinforce safer choices. / Protective factor assessment: Linking screening results to a brief conversation and appropriate referral when indicated.
D. SBIRT: Linking screening results to a brief conversation and appropriate referral when indicated. / Protective factor assessment: Explaining privacy and its exceptions accurately using current local law and policy before asking sensitive questions.

0566. In the student wellness team, the agreed focus for a research trainee working with a older adolescent client is assessing anxiety, mood, trauma, and substance use together while coordinating appropriate care. Which concept names this focus?

A. Co-occurring conditions
B. Recovery capital
C. Protective factor assessment
D. Confidentiality and substance care

0567. Which applied comparison correctly identifies what belongs to Adolescent substance-use screening versus Harm reduction?

A. Adolescent substance-use screening: Using a validated youth-appropriate screen as an entry point rather than treating it as a diagnosis. / Harm reduction: Discussing realistic safety steps while continuing to support the adolescent's goals and options.
B. Adolescent substance-use screening: Using a validated youth-appropriate screen as an entry point rather than treating it as a diagnosis. / Harm reduction: Explaining privacy and its exceptions accurately using current local law and policy before asking sensitive questions.
C. Adolescent substance-use screening: Discussing realistic safety steps while continuing to support the adolescent's goals and options. / Harm reduction: Using a validated youth-appropriate screen as an entry point rather than treating it as a diagnosis.
D. Adolescent substance-use screening: Eliciting the adolescent's reasons for and against change and reinforcing autonomy. / Harm reduction: Discussing realistic safety steps while continuing to support the adolescent's goals and options.

0568. In the learning-support meeting, a team asks how a teacher and counselor can support a preadolescent child. One proposed action is eliciting the adolescent's reasons for and against change and reinforcing autonomy. Which idea does it represent?

A. SBIRT
B. Protective factor assessment
C. Developmental framing
D. Motivational enhancement

0569. A student confuses Confidentiality and substance care with Recovery capital. Which explanation most accurately separates them?

A. Confidentiality and substance care: Personal, social, and community resources that can support recovery and sustained change. / Recovery capital: Privacy rules for adolescent substance services that depend on jurisdiction, consent, and service context.
B. Confidentiality and substance care: Privacy rules for adolescent substance services that depend on jurisdiction, consent, and service context. / Recovery capital: Identification of resources and conditions that support reduced use, safety, and healthy development.
C. Confidentiality and substance care: Privacy rules for adolescent substance services that depend on jurisdiction, consent, and service context. / Recovery capital: Personal, social, and community resources that can support recovery and sustained change.
D. Confidentiality and substance care: Practical strategies intended to reduce substance-related risks without requiring immediate abstinence as a precondition for care. / Recovery capital: Personal, social, and community resources that can support recovery and sustained change.

0570. Which statement shows a sound practice-level distinction between Adolescent substance-use screening and Developmental framing?

A. Adolescent substance-use screening: Using a validated youth-appropriate screen as an entry point rather than treating it as a diagnosis. / Developmental framing: Identifying triggers and rehearsal of a response plan without framing a lapse as total failure.
B. Adolescent substance-use screening: Exploring peer influence and emerging independence without assuming all adolescent use has the same meaning. / Developmental framing: Using a validated youth-appropriate screen as an entry point rather than treating it as a diagnosis.
C. Adolescent substance-use screening: Using a validated youth-appropriate screen as an entry point rather than treating it as a diagnosis. / Developmental framing: Exploring peer influence and emerging independence without assuming all adolescent use has the same meaning.
D. Adolescent substance-use screening: Linking screening results to a brief conversation and appropriate referral when indicated. / Developmental framing: Exploring peer influence and emerging independence without assuming all adolescent use has the same meaning.

0571. How are Co-occurring conditions and Developmental framing most accurately differentiated in this curriculum?

A. Co-occurring conditions: Substance-related concerns that occur alongside mental-health or other health conditions. / Developmental framing: Understanding substance use in relation to adolescent development, peer context, access, and changing autonomy.
B. Co-occurring conditions: Practical strategies intended to reduce substance-related risks without requiring immediate abstinence as a precondition for care. / Developmental framing: Understanding substance use in relation to adolescent development, peer context, access, and changing autonomy.
C. Co-occurring conditions: Understanding substance use in relation to adolescent development, peer context, access, and changing autonomy. / Developmental framing: Substance-related concerns that occur alongside mental-health or other health conditions.
D. Co-occurring conditions: Substance-related concerns that occur alongside mental-health or other health conditions. / Developmental framing: Personal, social, and community resources that can support recovery and sustained change.

0572. In adolescent substance-use counseling, a clinical supervisor reviews a plan for a young person aged 18 in the school consultation. The plan emphasizes identifying triggers and rehearsal of a response plan without framing a lapse as total failure. Which course idea does this reflect?

A. Co-occurring conditions
B. SBIRT
C. Relapse prevention
D. Harm reduction

0573. A member of a clinical team is preparing a follow-up plan for a child aged 7 in the youth group. The plan calls for mapping supportive relationships, practical resources, and meaningful roles that can aid recovery. Which concept names this approach?

A. Protective factor assessment
B. Co-occurring conditions
C. SBIRT
D. Recovery capital

0574. In adolescent substance-use counseling, how should a practitioner distinguish the applications of SBIRT and Relapse prevention?

A. SBIRT: Linking screening results to a brief conversation and appropriate referral when indicated. / Relapse prevention: Identifying triggers and rehearsal of a response plan without framing a lapse as total failure.
B. SBIRT: Assessing anxiety, mood, trauma, and substance use together while coordinating appropriate care. / Relapse prevention: Identifying triggers and rehearsal of a response plan without framing a lapse as total failure.
C. SBIRT: Linking screening results to a brief conversation and appropriate referral when indicated. / Relapse prevention: Exploring peer influence and emerging independence without assuming all adolescent use has the same meaning.
D. SBIRT: Identifying triggers and rehearsal of a response plan without framing a lapse as total failure. / Relapse prevention: Linking screening results to a brief conversation and appropriate referral when indicated.

0575. A counselor is asked to evaluate a proposed service for a client in late adolescence in the child guidance clinic. The defining feature is discussing realistic safety steps while continuing to support the adolescent's goals and options. Which concept fits?

A. Confidentiality and substance care
B. Developmental framing
C. Co-occurring conditions
D. Harm reduction

0576. At a case-planning meeting, the school support specialist proposes discussing realistic safety steps while continuing to support the adolescent's goals and options. for a older adolescent client seen in the student-support meeting. Which concept does this illustrate?

A. Adolescent substance-use screening
B. Co-occurring conditions
C. Motivational enhancement
D. Harm reduction

0577. At a case-planning meeting, the counselor proposes assessing anxiety, mood, trauma, and substance use together while coordinating appropriate care. for a child aged 7 seen in the school-based service. Which concept does this illustrate?

A. Co-occurring conditions
B. Developmental framing
C. Protective factor assessment
D. Recovery capital

0578. A therapist describes an intervention for a child aged 14 in the outpatient clinic, centered on eliciting the adolescent's reasons for and against change and reinforcing autonomy. Which named idea is most relevant?

A. Motivational enhancement
B. Relapse prevention
C. Developmental framing
D. Adolescent substance-use screening

0579. A case conference asks for a distinction between Motivational enhancement and Recovery capital. Which answer is sound?

A. Motivational enhancement: A collaborative strategy that strengthens a person's own motivation and commitment to change. / Recovery capital: Personal, social, and community resources that can support recovery and sustained change.
B. Motivational enhancement: Identification of resources and conditions that support reduced use, safety, and healthy development. / Recovery capital: Personal, social, and community resources that can support recovery and sustained change.
C. Motivational enhancement: Personal, social, and community resources that can support recovery and sustained change. / Recovery capital: A collaborative strategy that strengthens a person's own motivation and commitment to change.
D. Motivational enhancement: A collaborative strategy that strengthens a person's own motivation and commitment to change. / Recovery capital: A brief, age-appropriate process to identify possible substance-related risk and need for fuller assessment.

0580. While consulting in the multidisciplinary case conference, a supervised trainee supports a school-age child by using this approach: discussing realistic safety steps while continuing to support the adolescent's goals and options. Which concept is being applied?

A. Co-occurring conditions
B. Relapse prevention
C. Harm reduction
D. SBIRT

0581. Which option pairs the definitions of Co-occurring conditions and Developmental framing correctly, in that order?

A. Co-occurring conditions: Practical strategies intended to reduce substance-related risks without requiring immediate abstinence as a precondition for care. / Developmental framing: Understanding substance use in relation to adolescent development, peer context, access, and changing autonomy.
B. Co-occurring conditions: Substance-related concerns that occur alongside mental-health or other health conditions. / Developmental framing: Understanding substance use in relation to adolescent development, peer context, access, and changing autonomy.
C. Co-occurring conditions: Understanding substance use in relation to adolescent development, peer context, access, and changing autonomy. / Developmental framing: Substance-related concerns that occur alongside mental-health or other health conditions.
D. Co-occurring conditions: Substance-related concerns that occur alongside mental-health or other health conditions. / Developmental framing: Personal, social, and community resources that can support recovery and sustained change.

0582. In adolescent substance-use counseling, which option pairs the definitions of Recovery capital and Relapse prevention correctly, in that order?

A. Recovery capital: Personal, social, and community resources that can support recovery and sustained change. / Relapse prevention: Identification of resources and conditions that support reduced use, safety, and healthy development.
B. Recovery capital: Personal, social, and community resources that can support recovery and sustained change. / Relapse prevention: Planning for high-risk situations, cravings, coping responses, and support following a return to use or lapse.
C. Recovery capital: A collaborative strategy that strengthens a person's own motivation and commitment to change. / Relapse prevention: Planning for high-risk situations, cravings, coping responses, and support following a return to use or lapse.
D. Recovery capital: Planning for high-risk situations, cravings, coping responses, and support following a return to use or lapse. / Relapse prevention: Personal, social, and community resources that can support recovery and sustained change.

0583. In adolescent substance-use counseling, which applied comparison correctly identifies what belongs to Protective factor assessment versus Relapse prevention?

A. Protective factor assessment: Identifying triggers and rehearsal of a response plan without framing a lapse as total failure. / Relapse prevention: Asking about supportive adults, activities, strengths, and settings that can reinforce safer choices.
B. Protective factor assessment: Assessing anxiety, mood, trauma, and substance use together while coordinating appropriate care. / Relapse prevention: Identifying triggers and rehearsal of a response plan without framing a lapse as total failure.
C. Protective factor assessment: Asking about supportive adults, activities, strengths, and settings that can reinforce safer choices. / Relapse prevention: Identifying triggers and rehearsal of a response plan without framing a lapse as total failure.
D. Protective factor assessment: Asking about supportive adults, activities, strengths, and settings that can reinforce safer choices. / Relapse prevention: Mapping supportive relationships, practical resources, and meaningful roles that can aid recovery.

0584. While supporting a young person aged 13 in the community youth program, a school-based clinician adopts this practice: eliciting the adolescent's reasons for and against change and reinforcing autonomy. Which concept best explains the choice?

A. Confidentiality and substance care
B. Adolescent substance-use screening
C. Relapse prevention
D. Motivational enhancement

0585. In adolescent substance-use counseling, choose the practice comparison that best separates Co-occurring conditions from Relapse prevention.

A. Co-occurring conditions: Assessing anxiety, mood, trauma, and substance use together while coordinating appropriate care. / Relapse prevention: Identifying triggers and rehearsal of a response plan without framing a lapse as total failure.
B. Co-occurring conditions: Assessing anxiety, mood, trauma, and substance use together while coordinating appropriate care. / Relapse prevention: Discussing realistic safety steps while continuing to support the adolescent's goals and options.
C. Co-occurring conditions: Identifying triggers and rehearsal of a response plan without framing a lapse as total failure. / Relapse prevention: Assessing anxiety, mood, trauma, and substance use together while coordinating appropriate care.
D. Co-occurring conditions: Explaining privacy and its exceptions accurately using current local law and policy before asking sensitive questions. / Relapse prevention: Identifying triggers and rehearsal of a response plan without framing a lapse as total failure.

0586. Which description belongs with the term Co-occurring conditions?

A. Substance-related concerns that occur alongside mental-health or other health conditions.
B. Privacy rules for adolescent substance services that depend on jurisdiction, consent, and service context.
C. Planning for high-risk situations, cravings, coping responses, and support following a return to use or lapse.
D. Understanding substance use in relation to adolescent development, peer context, access, and changing autonomy.

0587. How should a practitioner distinguish the applications of SBIRT and Developmental framing?

A. SBIRT: Linking screening results to a brief conversation and appropriate referral when indicated. / Developmental framing: Exploring peer influence and emerging independence without assuming all adolescent use has the same meaning.
B. SBIRT: Linking screening results to a brief conversation and appropriate referral when indicated. / Developmental framing: Identifying triggers and rehearsal of a response plan without framing a lapse as total failure.
C. SBIRT: Mapping supportive relationships, practical resources, and meaningful roles that can aid recovery. / Developmental framing: Exploring peer influence and emerging independence without assuming all adolescent use has the same meaning.
D. SBIRT: Exploring peer influence and emerging independence without assuming all adolescent use has the same meaning. / Developmental framing: Linking screening results to a brief conversation and appropriate referral when indicated.

0588. A student confuses Co-occurring conditions with Developmental framing. Which explanation most accurately separates them?

A. Co-occurring conditions: Understanding substance use in relation to adolescent development, peer context, access, and changing autonomy. / Developmental framing: Substance-related concerns that occur alongside mental-health or other health conditions.
B. Co-occurring conditions: Substance-related concerns that occur alongside mental-health or other health conditions. / Developmental framing: Personal, social, and community resources that can support recovery and sustained change.
C. Co-occurring conditions: Practical strategies intended to reduce substance-related risks without requiring immediate abstinence as a precondition for care. / Developmental framing: Understanding substance use in relation to adolescent development, peer context, access, and changing autonomy.
D. Co-occurring conditions: Substance-related concerns that occur alongside mental-health or other health conditions. / Developmental framing: Understanding substance use in relation to adolescent development, peer context, access, and changing autonomy.

0589. A service team discusses a young person aged 13 in the behavior-support review. Their proposed next step is linking screening results to a brief conversation and appropriate referral when indicated. Which course concept supports it?

A. SBIRT
B. Motivational enhancement
C. Co-occurring conditions
D. Adolescent substance-use screening

0590. How should a practitioner distinguish the applications of Harm reduction and Confidentiality and substance care?

A. Harm reduction: Linking screening results to a brief conversation and appropriate referral when indicated. / Confidentiality and substance care: Explaining privacy and its exceptions accurately using current local law and policy before asking sensitive questions.
B. Harm reduction: Discussing realistic safety steps while continuing to support the adolescent's goals and options. / Confidentiality and substance care: Explaining privacy and its exceptions accurately using current local law and policy before asking sensitive questions.
C. Harm reduction: Discussing realistic safety steps while continuing to support the adolescent's goals and options. / Confidentiality and substance care: Mapping supportive relationships, practical resources, and meaningful roles that can aid recovery.
D. Harm reduction: Explaining privacy and its exceptions accurately using current local law and policy before asking sensitive questions. / Confidentiality and substance care: Discussing realistic safety steps while continuing to support the adolescent's goals and options.

0591. In the youth advocacy program, a teacher and counselor describes the most appropriate support for a middle-school student as asking about supportive adults, activities, strengths, and settings that can reinforce safer choices. Which framework is being applied?

A. Co-occurring conditions
B. Protective factor assessment
C. Developmental framing
D. Harm reduction

0592. A trainee must explain Adolescent substance-use screening. Which answer is accurate?

A. A brief, age-appropriate process to identify possible substance-related risk and need for fuller assessment.
B. Understanding substance use in relation to adolescent development, peer context, access, and changing autonomy.
C. Personal, social, and community resources that can support recovery and sustained change.
D. Substance-related concerns that occur alongside mental-health or other health conditions.

0593. Choose the definition pair that correctly explains Recovery capital first and Developmental framing second.

A. Recovery capital: Understanding substance use in relation to adolescent development, peer context, access, and changing autonomy. / Developmental framing: Personal, social, and community resources that can support recovery and sustained change.
B. Recovery capital: Personal, social, and community resources that can support recovery and sustained change. / Developmental framing: A collaborative strategy that strengthens a person's own motivation and commitment to change.
C. Recovery capital: Personal, social, and community resources that can support recovery and sustained change. / Developmental framing: Understanding substance use in relation to adolescent development, peer context, access, and changing autonomy.
D. Recovery capital: A brief, age-appropriate process to identify possible substance-related risk and need for fuller assessment. / Developmental framing: Understanding substance use in relation to adolescent development, peer context, access, and changing autonomy.

0594. A consultant prepares for a session in the supervision meeting with a client in early adolescence. The intended approach is eliciting the adolescent's reasons for and against change and reinforcing autonomy. Which concept is most relevant?

A. Protective factor assessment
B. Adolescent substance-use screening
C. Co-occurring conditions
D. Motivational enhancement

0595. A assessment clinician is preparing a follow-up plan for a teenage client in the community youth program. The plan calls for assessing anxiety, mood, trauma, and substance use together while coordinating appropriate care. Which concept names this approach?

A. Developmental framing
B. Adolescent substance-use screening
C. Motivational enhancement
D. Co-occurring conditions

0596. For a client in early adolescence seen in the classroom support meeting, the service navigator recommends a plan built around discussing realistic safety steps while continuing to support the adolescent's goals and options. Which concept is reflected?

A. Recovery capital
B. Co-occurring conditions
C. Adolescent substance-use screening
D. Harm reduction

0597. Choose the definition pair that correctly explains Motivational enhancement first and Protective factor assessment second.

A. Motivational enhancement: A collaborative strategy that strengthens a person's own motivation and commitment to change. / Protective factor assessment: Identification of resources and conditions that support reduced use, safety, and healthy development.
B. Motivational enhancement: Identification of resources and conditions that support reduced use, safety, and healthy development. / Protective factor assessment: A collaborative strategy that strengthens a person's own motivation and commitment to change.
C. Motivational enhancement: Screening, brief intervention, and referral to treatment, a structured pathway for responding to substance-use risk. / Protective factor assessment: Identification of resources and conditions that support reduced use, safety, and healthy development.
D. Motivational enhancement: A collaborative strategy that strengthens a person's own motivation and commitment to change. / Protective factor assessment: A brief, age-appropriate process to identify possible substance-related risk and need for fuller assessment.

0598. Choose the practice comparison that best separates Harm reduction from SBIRT.

A. Harm reduction: Discussing realistic safety steps while continuing to support the adolescent's goals and options. / SBIRT: Linking screening results to a brief conversation and appropriate referral when indicated.
B. Harm reduction: Discussing realistic safety steps while continuing to support the adolescent's goals and options. / SBIRT: Using a validated youth-appropriate screen as an entry point rather than treating it as a diagnosis.
C. Harm reduction: Linking screening results to a brief conversation and appropriate referral when indicated. / SBIRT: Discussing realistic safety steps while continuing to support the adolescent's goals and options.
D. Harm reduction: Explaining privacy and its exceptions accurately using current local law and policy before asking sensitive questions. / SBIRT: Linking screening results to a brief conversation and appropriate referral when indicated.

0599. How should a practitioner distinguish the applications of Confidentiality and substance care and Recovery capital?

A. Confidentiality and substance care: Explaining privacy and its exceptions accurately using current local law and policy before asking sensitive questions. / Recovery capital: Asking about supportive adults, activities, strengths, and settings that can reinforce safer choices.
B. Confidentiality and substance care: Explaining privacy and its exceptions accurately using current local law and policy before asking sensitive questions. / Recovery capital: Mapping supportive relationships, practical resources, and meaningful roles that can aid recovery.
C. Confidentiality and substance care: Discussing realistic safety steps while continuing to support the adolescent's goals and options. / Recovery capital: Mapping supportive relationships, practical resources, and meaningful roles that can aid recovery.
D. Confidentiality and substance care: Mapping supportive relationships, practical resources, and meaningful roles that can aid recovery. / Recovery capital: Explaining privacy and its exceptions accurately using current local law and policy before asking sensitive questions.

0600. In a supervision quiz, how should SBIRT be distinguished from Developmental framing?

A. SBIRT: Personal, social, and community resources that can support recovery and sustained change. / Developmental framing: Understanding substance use in relation to adolescent development, peer context, access, and changing autonomy.
B. SBIRT: Screening, brief intervention, and referral to treatment, a structured pathway for responding to substance-use risk. / Developmental framing: Understanding substance use in relation to adolescent development, peer context, access, and changing autonomy.
C. SBIRT: Understanding substance use in relation to adolescent development, peer context, access, and changing autonomy. / Developmental framing: Screening, brief intervention, and referral to treatment, a structured pathway for responding to substance-use risk.
D. SBIRT: Screening, brief intervention, and referral to treatment, a structured pathway for responding to substance-use risk. / Developmental framing: Planning for high-risk situations, cravings, coping responses, and support following a return to use or lapse.

0601. A member of a clinical team prepares for a session in the youth group with a child aged 7. The intended approach is mapping supportive relationships, practical resources, and meaningful roles that can aid recovery. Which concept is most relevant?

A. Confidentiality and substance care
B. SBIRT
C. Recovery capital
D. Relapse prevention

0602. A mental-health professional and a student aged 9 are discussing support in the student-support meeting. The selected practice is assessing anxiety, mood, trauma, and substance use together while coordinating appropriate care. Which concept does this demonstrate?

A. Motivational enhancement
B. Developmental framing
C. Co-occurring conditions
D. Recovery capital

0603. A middle-school student and a consultant are reviewing goals in the youth group. The agreed action is discussing realistic safety steps while continuing to support the adolescent's goals and options. Which principle best accounts for it?

A. Recovery capital
B. Adolescent substance-use screening
C. Motivational enhancement
D. Harm reduction

0604. A trainee must explain Confidentiality and substance care. Which answer is accurate?

A. Screening, brief intervention, and referral to treatment, a structured pathway for responding to substance-use risk.
B. Privacy rules for adolescent substance services that depend on jurisdiction, consent, and service context.
C. A collaborative strategy that strengthens a person's own motivation and commitment to change.
D. Substance-related concerns that occur alongside mental-health or other health conditions.

0605. At a case-planning meeting, the counselor proposes using a validated youth-appropriate screen as an entry point rather than treating it as a diagnosis. for a child aged 8 seen in the school counseling office. Which concept does this illustrate?

A. Adolescent substance-use screening
B. Recovery capital
C. Relapse prevention
D. SBIRT

0606. In adolescent substance-use counseling, which description belongs with the term Relapse prevention?

A. Practical strategies intended to reduce substance-related risks without requiring immediate abstinence as a precondition for care.
B. A brief, age-appropriate process to identify possible substance-related risk and need for fuller assessment.
C. Understanding substance use in relation to adolescent development, peer context, access, and changing autonomy.
D. Planning for high-risk situations, cravings, coping responses, and support following a return to use or lapse.

0607. Which comparison correctly distinguishes Harm reduction from Confidentiality and substance care?

A. Harm reduction: Privacy rules for adolescent substance services that depend on jurisdiction, consent, and service context. / Confidentiality and substance care: Practical strategies intended to reduce substance-related risks without requiring immediate abstinence as a precondition for care.
B. Harm reduction: Practical strategies intended to reduce substance-related risks without requiring immediate abstinence as a precondition for care. / Confidentiality and substance care: Privacy rules for adolescent substance services that depend on jurisdiction, consent, and service context.
C. Harm reduction: Screening, brief intervention, and referral to treatment, a structured pathway for responding to substance-use risk. / Confidentiality and substance care: Privacy rules for adolescent substance services that depend on jurisdiction, consent, and service context.
D. Harm reduction: Practical strategies intended to reduce substance-related risks without requiring immediate abstinence as a precondition for care. / Confidentiality and substance care: Personal, social, and community resources that can support recovery and sustained change.

0608. In a supervision quiz, how should Adolescent substance-use screening be distinguished from SBIRT?

A. Adolescent substance-use screening: A collaborative strategy that strengthens a person's own motivation and commitment to change. / SBIRT: Screening, brief intervention, and referral to treatment, a structured pathway for responding to substance-use risk.
B. Adolescent substance-use screening: A brief, age-appropriate process to identify possible substance-related risk and need for fuller assessment. / SBIRT: Screening, brief intervention, and referral to treatment, a structured pathway for responding to substance-use risk.
C. Adolescent substance-use screening: Screening, brief intervention, and referral to treatment, a structured pathway for responding to substance-use risk. / SBIRT: A brief, age-appropriate process to identify possible substance-related risk and need for fuller assessment.
D. Adolescent substance-use screening: A brief, age-appropriate process to identify possible substance-related risk and need for fuller assessment. / SBIRT: Privacy rules for adolescent substance services that depend on jurisdiction, consent, and service context.

0609. Which option correctly matches each concept to its practice focus: Motivational enhancement and Confidentiality and substance care?

A. Motivational enhancement: Eliciting the adolescent's reasons for and against change and reinforcing autonomy. / Confidentiality and substance care: Assessing anxiety, mood, trauma, and substance use together while coordinating appropriate care.
B. Motivational enhancement: Explaining privacy and its exceptions accurately using current local law and policy before asking sensitive questions. / Confidentiality and substance care: Eliciting the adolescent's reasons for and against change and reinforcing autonomy.
C. Motivational enhancement: Linking screening results to a brief conversation and appropriate referral when indicated. / Confidentiality and substance care: Explaining privacy and its exceptions accurately using current local law and policy before asking sensitive questions.
D. Motivational enhancement: Eliciting the adolescent's reasons for and against change and reinforcing autonomy. / Confidentiality and substance care: Explaining privacy and its exceptions accurately using current local law and policy before asking sensitive questions.

0610. Consider a middle-school student receiving help in the youth advocacy program. The teacher and counselor focuses on asking about supportive adults, activities, strengths, and settings that can reinforce safer choices. Which term best describes the guiding idea?

A. Motivational enhancement
B. Co-occurring conditions
C. Protective factor assessment
D. SBIRT

0611. A supervisor asks how Developmental framing would appear in practice. Which choice should be selected?

A. Using a validated youth-appropriate screen as an entry point rather than treating it as a diagnosis.
B. Exploring peer influence and emerging independence without assuming all adolescent use has the same meaning.
C. Discussing realistic safety steps while continuing to support the adolescent's goals and options.
D. Eliciting the adolescent's reasons for and against change and reinforcing autonomy.

0612. A trainee must explain Protective factor assessment. Which answer is accurate?

A. Identification of resources and conditions that support reduced use, safety, and healthy development.
B. Substance-related concerns that occur alongside mental-health or other health conditions.
C. Privacy rules for adolescent substance services that depend on jurisdiction, consent, and service context.
D. A brief, age-appropriate process to identify possible substance-related risk and need for fuller assessment.

0613. In a supervision quiz, how should Motivational enhancement be distinguished from SBIRT?

A. Motivational enhancement: A collaborative strategy that strengthens a person's own motivation and commitment to change. / SBIRT: Privacy rules for adolescent substance services that depend on jurisdiction, consent, and service context.
B. Motivational enhancement: Practical strategies intended to reduce substance-related risks without requiring immediate abstinence as a precondition for care. / SBIRT: Screening, brief intervention, and referral to treatment, a structured pathway for responding to substance-use risk.
C. Motivational enhancement: Screening, brief intervention, and referral to treatment, a structured pathway for responding to substance-use risk. / SBIRT: A collaborative strategy that strengthens a person's own motivation and commitment to change.
D. Motivational enhancement: A collaborative strategy that strengthens a person's own motivation and commitment to change. / SBIRT: Screening, brief intervention, and referral to treatment, a structured pathway for responding to substance-use risk.

0614. A consulting counselor is asked to justify a plan for a older adolescent client in the school-based service. It calls for explaining privacy and its exceptions accurately using current local law and policy before asking sensitive questions. Which concept provides the rationale?

A. Harm reduction
B. Confidentiality and substance care
C. Motivational enhancement
D. SBIRT

0615. Which statement shows a sound practice-level distinction between Harm reduction and Co-occurring conditions?

A. Harm reduction: Discussing realistic safety steps while continuing to support the adolescent's goals and options. / Co-occurring conditions: Using a validated youth-appropriate screen as an entry point rather than treating it as a diagnosis.
B. Harm reduction: Linking screening results to a brief conversation and appropriate referral when indicated. / Co-occurring conditions: Assessing anxiety, mood, trauma, and substance use together while coordinating appropriate care.
C. Harm reduction: Assessing anxiety, mood, trauma, and substance use together while coordinating appropriate care. / Co-occurring conditions: Discussing realistic safety steps while continuing to support the adolescent's goals and options.
D. Harm reduction: Discussing realistic safety steps while continuing to support the adolescent's goals and options. / Co-occurring conditions: Assessing anxiety, mood, trauma, and substance use together while coordinating appropriate care.

0616. In adolescent substance-use counseling, a case discussion concerns a student aged 17 and a school-based clinician in the outpatient clinic. The practitioner is considering identifying triggers and rehearsal of a response plan without framing a lapse as total failure. Which principle is involved?

A. Recovery capital
B. Relapse prevention
C. Motivational enhancement
D. SBIRT

0617. How should a practitioner distinguish the applications of Motivational enhancement and Co-occurring conditions?

A. Motivational enhancement: Exploring peer influence and emerging independence without assuming all adolescent use has the same meaning. / Co-occurring conditions: Assessing anxiety, mood, trauma, and substance use together while coordinating appropriate care.
B. Motivational enhancement: Assessing anxiety, mood, trauma, and substance use together while coordinating appropriate care. / Co-occurring conditions: Eliciting the adolescent's reasons for and against change and reinforcing autonomy.
C. Motivational enhancement: Eliciting the adolescent's reasons for and against change and reinforcing autonomy. / Co-occurring conditions: Asking about supportive adults, activities, strengths, and settings that can reinforce safer choices.
D. Motivational enhancement: Eliciting the adolescent's reasons for and against change and reinforcing autonomy. / Co-occurring conditions: Assessing anxiety, mood, trauma, and substance use together while coordinating appropriate care.

0618. In adolescent substance-use counseling, which comparison correctly distinguishes Confidentiality and substance care from Relapse prevention?

A. Confidentiality and substance care: Privacy rules for adolescent substance services that depend on jurisdiction, consent, and service context. / Relapse prevention: Planning for high-risk situations, cravings, coping responses, and support following a return to use or lapse.
B. Confidentiality and substance care: Practical strategies intended to reduce substance-related risks without requiring immediate abstinence as a precondition for care. / Relapse prevention: Planning for high-risk situations, cravings, coping responses, and support following a return to use or lapse.
C. Confidentiality and substance care: Planning for high-risk situations, cravings, coping responses, and support following a return to use or lapse. / Relapse prevention: Privacy rules for adolescent substance services that depend on jurisdiction, consent, and service context.
D. Confidentiality and substance care: Privacy rules for adolescent substance services that depend on jurisdiction, consent, and service context. / Relapse prevention: Screening, brief intervention, and referral to treatment, a structured pathway for responding to substance-use risk.

0619. Which statement accurately contrasts the course concepts Adolescent substance-use screening and Protective factor assessment?

A. Adolescent substance-use screening: A brief, age-appropriate process to identify possible substance-related risk and need for fuller assessment. / Protective factor assessment: Planning for high-risk situations, cravings, coping responses, and support following a return to use or lapse.
B. Adolescent substance-use screening: Identification of resources and conditions that support reduced use, safety, and healthy development. / Protective factor assessment: A brief, age-appropriate process to identify possible substance-related risk and need for fuller assessment.
C. Adolescent substance-use screening: A brief, age-appropriate process to identify possible substance-related risk and need for fuller assessment. / Protective factor assessment: Identification of resources and conditions that support reduced use, safety, and healthy development.
D. Adolescent substance-use screening: A collaborative strategy that strengthens a person's own motivation and commitment to change. / Protective factor assessment: Identification of resources and conditions that support reduced use, safety, and healthy development.

0620. Which statement most accurately defines Developmental framing?

A. Practical strategies intended to reduce substance-related risks without requiring immediate abstinence as a precondition for care.
B. A collaborative strategy that strengthens a person's own motivation and commitment to change.
C. A brief, age-appropriate process to identify possible substance-related risk and need for fuller assessment.
D. Understanding substance use in relation to adolescent development, peer context, access, and changing autonomy.

0621. Which choice aligns each practice with the correct idea, Motivational enhancement or Co-occurring conditions?

A. Motivational enhancement: Exploring peer influence and emerging independence without assuming all adolescent use has the same meaning. / Co-occurring conditions: Assessing anxiety, mood, trauma, and substance use together while coordinating appropriate care.
B. Motivational enhancement: Eliciting the adolescent's reasons for and against change and reinforcing autonomy. / Co-occurring conditions: Assessing anxiety, mood, trauma, and substance use together while coordinating appropriate care.
C. Motivational enhancement: Eliciting the adolescent's reasons for and against change and reinforcing autonomy. / Co-occurring conditions: Asking about supportive adults, activities, strengths, and settings that can reinforce safer choices.
D. Motivational enhancement: Assessing anxiety, mood, trauma, and substance use together while coordinating appropriate care. / Co-occurring conditions: Eliciting the adolescent's reasons for and against change and reinforcing autonomy.

0622. A planning meeting about a child of elementary-school age includes a school support specialist. The proposed practice in the after-school program is eliciting the adolescent's reasons for and against change and reinforcing autonomy. Which idea underlies it?

A. Recovery capital
B. Motivational enhancement
C. SBIRT
D. Relapse prevention

0623. A student confuses SBIRT with Recovery capital. Which explanation most accurately separates them?

A. SBIRT: Screening, brief intervention, and referral to treatment, a structured pathway for responding to substance-use risk. / Recovery capital: Personal, social, and community resources that can support recovery and sustained change.
B. SBIRT: Personal, social, and community resources that can support recovery and sustained change. / Recovery capital: Screening, brief intervention, and referral to treatment, a structured pathway for responding to substance-use risk.
C. SBIRT: Screening, brief intervention, and referral to treatment, a structured pathway for responding to substance-use risk. / Recovery capital: Privacy rules for adolescent substance services that depend on jurisdiction, consent, and service context.
D. SBIRT: Understanding substance use in relation to adolescent development, peer context, access, and changing autonomy. / Recovery capital: Personal, social, and community resources that can support recovery and sustained change.

0624. In a supervision review, a family therapist describes work with a young person in the supervision meeting: discussing realistic safety steps while continuing to support the adolescent's goals and options. What concept is illustrated?

A. Adolescent substance-use screening
B. Protective factor assessment
C. SBIRT
D. Harm reduction

0625. In a supervision review, a case coordinator describes work with a student aged 12 in the counseling practicum: linking screening results to a brief conversation and appropriate referral when indicated. What concept is illustrated?

A. Recovery capital
B. Motivational enhancement
C. Developmental framing
D. SBIRT

0626. In a case note about a child of elementary-school age, a supervised trainee working in the telehealth session records this priority: linking screening results to a brief conversation and appropriate referral when indicated. What principle is reflected?

A. Harm reduction
B. Developmental framing
C. SBIRT
D. Relapse prevention

0627. Choose the response that best puts Confidentiality and substance care into practice.

A. Eliciting the adolescent's reasons for and against change and reinforcing autonomy.
B. Explaining privacy and its exceptions accurately using current local law and policy before asking sensitive questions.
C. Mapping supportive relationships, practical resources, and meaningful roles that can aid recovery.
D. Exploring peer influence and emerging independence without assuming all adolescent use has the same meaning.

0628. Which option preserves the correct meaning of both SBIRT and Co-occurring conditions?

A. SBIRT: Screening, brief intervention, and referral to treatment, a structured pathway for responding to substance-use risk. / Co-occurring conditions: Substance-related concerns that occur alongside mental-health or other health conditions.
B. SBIRT: Substance-related concerns that occur alongside mental-health or other health conditions. / Co-occurring conditions: Screening, brief intervention, and referral to treatment, a structured pathway for responding to substance-use risk.
C. SBIRT: Privacy rules for adolescent substance services that depend on jurisdiction, consent, and service context. / Co-occurring conditions: Substance-related concerns that occur alongside mental-health or other health conditions.
D. SBIRT: Screening, brief intervention, and referral to treatment, a structured pathway for responding to substance-use risk. / Co-occurring conditions: Practical strategies intended to reduce substance-related risks without requiring immediate abstinence as a precondition for care.

0629. A planning meeting about a adolescent student includes a counselor. The proposed practice in the multidisciplinary case conference is exploring peer influence and emerging independence without assuming all adolescent use has the same meaning. Which idea underlies it?

A. Developmental framing
B. Adolescent substance-use screening
C. Harm reduction
D. Recovery capital

0630. Choose the response that best puts Recovery capital into practice.

A. Exploring peer influence and emerging independence without assuming all adolescent use has the same meaning.
B. Assessing anxiety, mood, trauma, and substance use together while coordinating appropriate care.
C. Mapping supportive relationships, practical resources, and meaningful roles that can aid recovery.
D. Identifying triggers and rehearsal of a response plan without framing a lapse as total failure.

0631. A counselor reviews a plan for a student aged 12 in the community youth program. The plan emphasizes mapping supportive relationships, practical resources, and meaningful roles that can aid recovery. Which course idea does this reflect?

A. Recovery capital
B. Motivational enhancement
C. Developmental framing
D. Co-occurring conditions

0632. A doctoral student reads the following description. Which concept does it define? Privacy rules for adolescent substance services that depend on jurisdiction, consent, and service context.

A. Confidentiality and substance care
B. Recovery capital
C. SBIRT
D. Relapse prevention

0633. Which option is the clearest practical expression of Adolescent substance-use screening?

A. Identifying triggers and rehearsal of a response plan without framing a lapse as total failure.
B. Using a validated youth-appropriate screen as an entry point rather than treating it as a diagnosis.
C. Assessing anxiety, mood, trauma, and substance use together while coordinating appropriate care.
D. Eliciting the adolescent's reasons for and against change and reinforcing autonomy.

0634. For a older adolescent client in the child guidance clinic, a clinical supervisor makes this practice the immediate priority: mapping supportive relationships, practical resources, and meaningful roles that can aid recovery. Which concept fits best?

A. Relapse prevention
B. Confidentiality and substance care
C. Harm reduction
D. Recovery capital

0635. In adolescent substance-use counseling, a student confuses Confidentiality and substance care with Relapse prevention. Which explanation most accurately separates them?

A. Confidentiality and substance care: Planning for high-risk situations, cravings, coping responses, and support following a return to use or lapse. / Relapse prevention: Privacy rules for adolescent substance services that depend on jurisdiction, consent, and service context.
B. Confidentiality and substance care: Practical strategies intended to reduce substance-related risks without requiring immediate abstinence as a precondition for care. / Relapse prevention: Planning for high-risk situations, cravings, coping responses, and support following a return to use or lapse.
C. Confidentiality and substance care: Privacy rules for adolescent substance services that depend on jurisdiction, consent, and service context. / Relapse prevention: Planning for high-risk situations, cravings, coping responses, and support following a return to use or lapse.
D. Confidentiality and substance care: Privacy rules for adolescent substance services that depend on jurisdiction, consent, and service context. / Relapse prevention: Screening, brief intervention, and referral to treatment, a structured pathway for responding to substance-use risk.

0636. A student confuses Adolescent substance-use screening with Motivational enhancement. Which explanation most accurately separates them?

A. Adolescent substance-use screening: A collaborative strategy that strengthens a person's own motivation and commitment to change. / Motivational enhancement: A brief, age-appropriate process to identify possible substance-related risk and need for fuller assessment.
B. Adolescent substance-use screening: Identification of resources and conditions that support reduced use, safety, and healthy development. / Motivational enhancement: A collaborative strategy that strengthens a person's own motivation and commitment to change.
C. Adolescent substance-use screening: A brief, age-appropriate process to identify possible substance-related risk and need for fuller assessment. / Motivational enhancement: A collaborative strategy that strengthens a person's own motivation and commitment to change.
D. Adolescent substance-use screening: A brief, age-appropriate process to identify possible substance-related risk and need for fuller assessment. / Motivational enhancement: Understanding substance use in relation to adolescent development, peer context, access, and changing autonomy.

0637. Which option pairs the definitions of Protective factor assessment and Confidentiality and substance care correctly, in that order?

A. Protective factor assessment: Identification of resources and conditions that support reduced use, safety, and healthy development. / Confidentiality and substance care: Privacy rules for adolescent substance services that depend on jurisdiction, consent, and service context.
B. Protective factor assessment: Identification of resources and conditions that support reduced use, safety, and healthy development. / Confidentiality and substance care: Understanding substance use in relation to adolescent development, peer context, access, and changing autonomy.
C. Protective factor assessment: Personal, social, and community resources that can support recovery and sustained change. / Confidentiality and substance care: Privacy rules for adolescent substance services that depend on jurisdiction, consent, and service context.
D. Protective factor assessment: Privacy rules for adolescent substance services that depend on jurisdiction, consent, and service context. / Confidentiality and substance care: Identification of resources and conditions that support reduced use, safety, and healthy development.

0638. Which option pairs the definitions of Confidentiality and substance care and Developmental framing correctly, in that order?

A. Confidentiality and substance care: Understanding substance use in relation to adolescent development, peer context, access, and changing autonomy. / Developmental framing: Privacy rules for adolescent substance services that depend on jurisdiction, consent, and service context.
B. Confidentiality and substance care: Privacy rules for adolescent substance services that depend on jurisdiction, consent, and service context. / Developmental framing: Understanding substance use in relation to adolescent development, peer context, access, and changing autonomy.
C. Confidentiality and substance care: Personal, social, and community resources that can support recovery and sustained change. / Developmental framing: Understanding substance use in relation to adolescent development, peer context, access, and changing autonomy.
D. Confidentiality and substance care: Privacy rules for adolescent substance services that depend on jurisdiction, consent, and service context. / Developmental framing: Screening, brief intervention, and referral to treatment, a structured pathway for responding to substance-use risk.

0639. Which pair of actions illustrates Harm reduction and SBIRT, respectively?

A. Harm reduction: Explaining privacy and its exceptions accurately using current local law and policy before asking sensitive questions. / SBIRT: Linking screening results to a brief conversation and appropriate referral when indicated.
B. Harm reduction: Discussing realistic safety steps while continuing to support the adolescent's goals and options. / SBIRT: Using a validated youth-appropriate screen as an entry point rather than treating it as a diagnosis.
C. Harm reduction: Discussing realistic safety steps while continuing to support the adolescent's goals and options. / SBIRT: Linking screening results to a brief conversation and appropriate referral when indicated.
D. Harm reduction: Linking screening results to a brief conversation and appropriate referral when indicated. / SBIRT: Discussing realistic safety steps while continuing to support the adolescent's goals and options.

0640. Which option pairs the definitions of Adolescent substance-use screening and Motivational enhancement correctly, in that order?

A. Adolescent substance-use screening: A collaborative strategy that strengthens a person's own motivation and commitment to change. / Motivational enhancement: A brief, age-appropriate process to identify possible substance-related risk and need for fuller assessment.
B. Adolescent substance-use screening: A brief, age-appropriate process to identify possible substance-related risk and need for fuller assessment. / Motivational enhancement: Understanding substance use in relation to adolescent development, peer context, access, and changing autonomy.
C. Adolescent substance-use screening: Identification of resources and conditions that support reduced use, safety, and healthy development. / Motivational enhancement: A collaborative strategy that strengthens a person's own motivation and commitment to change.
D. Adolescent substance-use screening: A brief, age-appropriate process to identify possible substance-related risk and need for fuller assessment. / Motivational enhancement: A collaborative strategy that strengthens a person's own motivation and commitment to change.

0641. A supervisor asks for an applied contrast between Co-occurring conditions and Developmental framing. Which option fits?

A. Co-occurring conditions: Exploring peer influence and emerging independence without assuming all adolescent use has the same meaning. / Developmental framing: Assessing anxiety, mood, trauma, and substance use together while coordinating appropriate care.
B. Co-occurring conditions: Discussing realistic safety steps while continuing to support the adolescent's goals and options. / Developmental framing: Exploring peer influence and emerging independence without assuming all adolescent use has the same meaning.
C. Co-occurring conditions: Assessing anxiety, mood, trauma, and substance use together while coordinating appropriate care. / Developmental framing: Exploring peer influence and emerging independence without assuming all adolescent use has the same meaning.
D. Co-occurring conditions: Assessing anxiety, mood, trauma, and substance use together while coordinating appropriate care. / Developmental framing: Mapping supportive relationships, practical resources, and meaningful roles that can aid recovery.

0642. In adolescent substance-use counseling, how should a practitioner distinguish the applications of Confidentiality and substance care and Relapse prevention?

A. Confidentiality and substance care: Explaining privacy and its exceptions accurately using current local law and policy before asking sensitive questions. / Relapse prevention: Linking screening results to a brief conversation and appropriate referral when indicated.
B. Confidentiality and substance care: Identifying triggers and rehearsal of a response plan without framing a lapse as total failure. / Relapse prevention: Explaining privacy and its exceptions accurately using current local law and policy before asking sensitive questions.
C. Confidentiality and substance care: Discussing realistic safety steps while continuing to support the adolescent's goals and options. / Relapse prevention: Identifying triggers and rehearsal of a response plan without framing a lapse as total failure.
D. Confidentiality and substance care: Explaining privacy and its exceptions accurately using current local law and policy before asking sensitive questions. / Relapse prevention: Identifying triggers and rehearsal of a response plan without framing a lapse as total failure.

0643. A mental-health professional prepares for a session in the learning-support meeting with a student aged 15. The intended approach is linking screening results to a brief conversation and appropriate referral when indicated. Which concept is most relevant?

A. Developmental framing
B. SBIRT
C. Protective factor assessment
D. Relapse prevention

0644. A youth worker is asked to justify a plan for a child aged 8 in the caregiver consultation. It calls for asking about supportive adults, activities, strengths, and settings that can reinforce safer choices. Which concept provides the rationale?

A. Recovery capital
B. Adolescent substance-use screening
C. Protective factor assessment
D. Developmental framing

0645. Which option preserves the correct meaning of both Harm reduction and SBIRT?

A. Harm reduction: Privacy rules for adolescent substance services that depend on jurisdiction, consent, and service context. / SBIRT: Screening, brief intervention, and referral to treatment, a structured pathway for responding to substance-use risk.
B. Harm reduction: Practical strategies intended to reduce substance-related risks without requiring immediate abstinence as a precondition for care. / SBIRT: Screening, brief intervention, and referral to treatment, a structured pathway for responding to substance-use risk.
C. Harm reduction: Screening, brief intervention, and referral to treatment, a structured pathway for responding to substance-use risk. / SBIRT: Practical strategies intended to reduce substance-related risks without requiring immediate abstinence as a precondition for care.
D. Harm reduction: Practical strategies intended to reduce substance-related risks without requiring immediate abstinence as a precondition for care. / SBIRT: A brief, age-appropriate process to identify possible substance-related risk and need for fuller assessment.

0646. A research trainee is asked what should shape a adolescent student's support in the school-based service. The proposed focus is discussing realistic safety steps while continuing to support the adolescent's goals and options. Which principle does it represent?

A. Protective factor assessment
B. Harm reduction
C. SBIRT
D. Confidentiality and substance care

0647. Which statement accurately contrasts the course concepts Motivational enhancement and Co-occurring conditions?

A. Motivational enhancement: A collaborative strategy that strengthens a person's own motivation and commitment to change. / Co-occurring conditions: Identification of resources and conditions that support reduced use, safety, and healthy development.
B. Motivational enhancement: A collaborative strategy that strengthens a person's own motivation and commitment to change. / Co-occurring conditions: Substance-related concerns that occur alongside mental-health or other health conditions.
C. Motivational enhancement: Understanding substance use in relation to adolescent development, peer context, access, and changing autonomy. / Co-occurring conditions: Substance-related concerns that occur alongside mental-health or other health conditions.
D. Motivational enhancement: Substance-related concerns that occur alongside mental-health or other health conditions. / Co-occurring conditions: A collaborative strategy that strengthens a person's own motivation and commitment to change.

0648. Which professional action most closely applies Adolescent substance-use screening?

A. Identifying triggers and rehearsal of a response plan without framing a lapse as total failure.
B. Linking screening results to a brief conversation and appropriate referral when indicated.
C. Using a validated youth-appropriate screen as an entry point rather than treating it as a diagnosis.
D. Eliciting the adolescent's reasons for and against change and reinforcing autonomy.

0649. In a professional consultation about a student aged 17, the consultant describes this response in the behavior-support review: asking about supportive adults, activities, strengths, and settings that can reinforce safer choices. Which term is most apt?

A. Motivational enhancement
B. SBIRT
C. Protective factor assessment
D. Relapse prevention

0650. A assessment clinician and a middle-school student are discussing support in the multidisciplinary case conference. The selected practice is mapping supportive relationships, practical resources, and meaningful roles that can aid recovery. Which concept does this demonstrate?

A. Motivational enhancement
B. Developmental framing
C. Adolescent substance-use screening
D. Recovery capital

0651. Which option preserves the correct meaning of both Adolescent substance-use screening and Developmental framing?

A. Adolescent substance-use screening: A brief, age-appropriate process to identify possible substance-related risk and need for fuller assessment. / Developmental framing: Planning for high-risk situations, cravings, coping responses, and support following a return to use or lapse.
B. Adolescent substance-use screening: A brief, age-appropriate process to identify possible substance-related risk and need for fuller assessment. / Developmental framing: Understanding substance use in relation to adolescent development, peer context, access, and changing autonomy.
C. Adolescent substance-use screening: Screening, brief intervention, and referral to treatment, a structured pathway for responding to substance-use risk. / Developmental framing: Understanding substance use in relation to adolescent development, peer context, access, and changing autonomy.
D. Adolescent substance-use screening: Understanding substance use in relation to adolescent development, peer context, access, and changing autonomy. / Developmental framing: A brief, age-appropriate process to identify possible substance-related risk and need for fuller assessment.

0652. Choose the term that matches this definition: Privacy rules for adolescent substance services that depend on jurisdiction, consent, and service context.

A. Confidentiality and substance care
B. Recovery capital
C. Motivational enhancement
D. Protective factor assessment

0653. A trainee must distinguish how Motivational enhancement and Recovery capital guide practice. Which comparison is accurate?

A. Motivational enhancement: Eliciting the adolescent's reasons for and against change and reinforcing autonomy. / Recovery capital: Mapping supportive relationships, practical resources, and meaningful roles that can aid recovery.
B. Motivational enhancement: Asking about supportive adults, activities, strengths, and settings that can reinforce safer choices. / Recovery capital: Mapping supportive relationships, practical resources, and meaningful roles that can aid recovery.
C. Motivational enhancement: Mapping supportive relationships, practical resources, and meaningful roles that can aid recovery. / Recovery capital: Eliciting the adolescent's reasons for and against change and reinforcing autonomy.
D. Motivational enhancement: Eliciting the adolescent's reasons for and against change and reinforcing autonomy. / Recovery capital: Using a validated youth-appropriate screen as an entry point rather than treating it as a diagnosis.

0654. Which option preserves the correct meaning of both Co-occurring conditions and Developmental framing?

A. Co-occurring conditions: Substance-related concerns that occur alongside mental-health or other health conditions. / Developmental framing: Understanding substance use in relation to adolescent development, peer context, access, and changing autonomy.
B. Co-occurring conditions: Understanding substance use in relation to adolescent development, peer context, access, and changing autonomy. / Developmental framing: Substance-related concerns that occur alongside mental-health or other health conditions.
C. Co-occurring conditions: Substance-related concerns that occur alongside mental-health or other health conditions. / Developmental framing: Personal, social, and community resources that can support recovery and sustained change.
D. Co-occurring conditions: Practical strategies intended to reduce substance-related risks without requiring immediate abstinence as a precondition for care. / Developmental framing: Understanding substance use in relation to adolescent development, peer context, access, and changing autonomy.

0655. A student aged 9's service team meets in the school-based service. The family therapist recommends a change involving exploring peer influence and emerging independence without assuming all adolescent use has the same meaning. Which idea best explains it?

A. Recovery capital
B. Developmental framing
C. Harm reduction
D. Adolescent substance-use screening

0656. In adolescent substance-use counseling, which statement accurately contrasts the course concepts Harm reduction and Relapse prevention?

A. Harm reduction: A collaborative strategy that strengthens a person's own motivation and commitment to change. / Relapse prevention: Planning for high-risk situations, cravings, coping responses, and support following a return to use or lapse.
B. Harm reduction: Practical strategies intended to reduce substance-related risks without requiring immediate abstinence as a precondition for care. / Relapse prevention: Understanding substance use in relation to adolescent development, peer context, access, and changing autonomy.
C. Harm reduction: Planning for high-risk situations, cravings, coping responses, and support following a return to use or lapse. / Relapse prevention: Practical strategies intended to reduce substance-related risks without requiring immediate abstinence as a precondition for care.
D. Harm reduction: Practical strategies intended to reduce substance-related risks without requiring immediate abstinence as a precondition for care. / Relapse prevention: Planning for high-risk situations, cravings, coping responses, and support following a return to use or lapse.

0657. Which option pairs the definitions of Confidentiality and substance care and Recovery capital correctly, in that order?

A. Confidentiality and substance care: Privacy rules for adolescent substance services that depend on jurisdiction, consent, and service context. / Recovery capital: Identification of resources and conditions that support reduced use, safety, and healthy development.
B. Confidentiality and substance care: Practical strategies intended to reduce substance-related risks without requiring immediate abstinence as a precondition for care. / Recovery capital: Personal, social, and community resources that can support recovery and sustained change.
C. Confidentiality and substance care: Privacy rules for adolescent substance services that depend on jurisdiction, consent, and service context. / Recovery capital: Personal, social, and community resources that can support recovery and sustained change.
D. Confidentiality and substance care: Personal, social, and community resources that can support recovery and sustained change. / Recovery capital: Privacy rules for adolescent substance services that depend on jurisdiction, consent, and service context.

0658. In the supervision meeting, a teacher and counselor describes the most appropriate support for a child aged 8 as exploring peer influence and emerging independence without assuming all adolescent use has the same meaning. Which framework is being applied?

A. Developmental framing
B. Co-occurring conditions
C. Protective factor assessment
D. Relapse prevention

0659. A service team discusses a young person aged 16 in the telehealth session. Their proposed next step is mapping supportive relationships, practical resources, and meaningful roles that can aid recovery. Which course concept supports it?

A. Co-occurring conditions
B. Motivational enhancement
C. Protective factor assessment
D. Recovery capital

0660. Which option pairs the definitions of Protective factor assessment and Recovery capital correctly, in that order?

A. Protective factor assessment: Identification of resources and conditions that support reduced use, safety, and healthy development. / Recovery capital: Substance-related concerns that occur alongside mental-health or other health conditions.
B. Protective factor assessment: Personal, social, and community resources that can support recovery and sustained change. / Recovery capital: Identification of resources and conditions that support reduced use, safety, and healthy development.
C. Protective factor assessment: A collaborative strategy that strengthens a person's own motivation and commitment to change. / Recovery capital: Personal, social, and community resources that can support recovery and sustained change.
D. Protective factor assessment: Identification of resources and conditions that support reduced use, safety, and healthy development. / Recovery capital: Personal, social, and community resources that can support recovery and sustained change.

0661. Which pair of actions illustrates SBIRT and Developmental framing, respectively?

A. SBIRT: Linking screening results to a brief conversation and appropriate referral when indicated. / Developmental framing: Exploring peer influence and emerging independence without assuming all adolescent use has the same meaning.
B. SBIRT: Exploring peer influence and emerging independence without assuming all adolescent use has the same meaning. / Developmental framing: Linking screening results to a brief conversation and appropriate referral when indicated.
C. SBIRT: Mapping supportive relationships, practical resources, and meaningful roles that can aid recovery. / Developmental framing: Exploring peer influence and emerging independence without assuming all adolescent use has the same meaning.
D. SBIRT: Linking screening results to a brief conversation and appropriate referral when indicated. / Developmental framing: Identifying triggers and rehearsal of a response plan without framing a lapse as total failure.

0662. A trainee must distinguish how Recovery capital and Developmental framing guide practice. Which comparison is accurate?

A. Recovery capital: Using a validated youth-appropriate screen as an entry point rather than treating it as a diagnosis. / Developmental framing: Exploring peer influence and emerging independence without assuming all adolescent use has the same meaning.
B. Recovery capital: Mapping supportive relationships, practical resources, and meaningful roles that can aid recovery. / Developmental framing: Exploring peer influence and emerging independence without assuming all adolescent use has the same meaning.
C. Recovery capital: Exploring peer influence and emerging independence without assuming all adolescent use has the same meaning. / Developmental framing: Mapping supportive relationships, practical resources, and meaningful roles that can aid recovery.
D. Recovery capital: Mapping supportive relationships, practical resources, and meaningful roles that can aid recovery. / Developmental framing: Eliciting the adolescent's reasons for and against change and reinforcing autonomy.

0663. A supervisor asks for an applied contrast between Harm reduction and SBIRT. Which option fits?

A. Harm reduction: Discussing realistic safety steps while continuing to support the adolescent's goals and options. / SBIRT: Linking screening results to a brief conversation and appropriate referral when indicated.
B. Harm reduction: Explaining privacy and its exceptions accurately using current local law and policy before asking sensitive questions. / SBIRT: Linking screening results to a brief conversation and appropriate referral when indicated.
C. Harm reduction: Discussing realistic safety steps while continuing to support the adolescent's goals and options. / SBIRT: Using a validated youth-appropriate screen as an entry point rather than treating it as a diagnosis.
D. Harm reduction: Linking screening results to a brief conversation and appropriate referral when indicated. / SBIRT: Discussing realistic safety steps while continuing to support the adolescent's goals and options.

0664. Which statement accurately contrasts the course concepts Harm reduction and Developmental framing?

A. Harm reduction: Planning for high-risk situations, cravings, coping responses, and support following a return to use or lapse. / Developmental framing: Understanding substance use in relation to adolescent development, peer context, access, and changing autonomy.
B. Harm reduction: Practical strategies intended to reduce substance-related risks without requiring immediate abstinence as a precondition for care. / Developmental framing: Understanding substance use in relation to adolescent development, peer context, access, and changing autonomy.
C. Harm reduction: Practical strategies intended to reduce substance-related risks without requiring immediate abstinence as a precondition for care. / Developmental framing: Privacy rules for adolescent substance services that depend on jurisdiction, consent, and service context.
D. Harm reduction: Understanding substance use in relation to adolescent development, peer context, access, and changing autonomy. / Developmental framing: Practical strategies intended to reduce substance-related risks without requiring immediate abstinence as a precondition for care.

0665. Choose the definition pair that correctly explains Co-occurring conditions first and Confidentiality and substance care second.

A. Co-occurring conditions: Substance-related concerns that occur alongside mental-health or other health conditions. / Confidentiality and substance care: A brief, age-appropriate process to identify possible substance-related risk and need for fuller assessment.
B. Co-occurring conditions: Substance-related concerns that occur alongside mental-health or other health conditions. / Confidentiality and substance care: Privacy rules for adolescent substance services that depend on jurisdiction, consent, and service context.
C. Co-occurring conditions: Planning for high-risk situations, cravings, coping responses, and support following a return to use or lapse. / Confidentiality and substance care: Privacy rules for adolescent substance services that depend on jurisdiction, consent, and service context.
D. Co-occurring conditions: Privacy rules for adolescent substance services that depend on jurisdiction, consent, and service context. / Confidentiality and substance care: Substance-related concerns that occur alongside mental-health or other health conditions.

0666. In adolescent substance-use counseling, a case conference asks for a distinction between Protective factor assessment and Relapse prevention. Which answer is sound?

A. Protective factor assessment: Substance-related concerns that occur alongside mental-health or other health conditions. / Relapse prevention: Planning for high-risk situations, cravings, coping responses, and support following a return to use or lapse.
B. Protective factor assessment: Planning for high-risk situations, cravings, coping responses, and support following a return to use or lapse. / Relapse prevention: Identification of resources and conditions that support reduced use, safety, and healthy development.
C. Protective factor assessment: Identification of resources and conditions that support reduced use, safety, and healthy development. / Relapse prevention: Personal, social, and community resources that can support recovery and sustained change.
D. Protective factor assessment: Identification of resources and conditions that support reduced use, safety, and healthy development. / Relapse prevention: Planning for high-risk situations, cravings, coping responses, and support following a return to use or lapse.

0667. Identify the most precise label for this idea: Personal, social, and community resources that can support recovery and sustained change.

A. SBIRT
B. Protective factor assessment
C. Confidentiality and substance care
D. Recovery capital

0668. A community practitioner is asked what should shape a young person aged 13's support in the behavior-support review. The proposed focus is linking screening results to a brief conversation and appropriate referral when indicated. Which principle does it represent?

A. Motivational enhancement
B. Harm reduction
C. SBIRT
D. Recovery capital

0669. Which choice aligns each practice with the correct idea, SBIRT or Developmental framing?

A. SBIRT: Linking screening results to a brief conversation and appropriate referral when indicated. / Developmental framing: Identifying triggers and rehearsal of a response plan without framing a lapse as total failure.
B. SBIRT: Exploring peer influence and emerging independence without assuming all adolescent use has the same meaning. / Developmental framing: Linking screening results to a brief conversation and appropriate referral when indicated.
C. SBIRT: Mapping supportive relationships, practical resources, and meaningful roles that can aid recovery. / Developmental framing: Exploring peer influence and emerging independence without assuming all adolescent use has the same meaning.
D. SBIRT: Linking screening results to a brief conversation and appropriate referral when indicated. / Developmental framing: Exploring peer influence and emerging independence without assuming all adolescent use has the same meaning.

0670. A consultant is supporting a child aged 8 in the clinical planning session. The key practice is mapping supportive relationships, practical resources, and meaningful roles that can aid recovery. Which course concept is most relevant?

A. Recovery capital
B. Confidentiality and substance care
C. Protective factor assessment
D. Adolescent substance-use screening

0671. Which option preserves the correct meaning of both Adolescent substance-use screening and Co-occurring conditions?

A. Adolescent substance-use screening: A brief, age-appropriate process to identify possible substance-related risk and need for fuller assessment. / Co-occurring conditions: Substance-related concerns that occur alongside mental-health or other health conditions.
B. Adolescent substance-use screening: Screening, brief intervention, and referral to treatment, a structured pathway for responding to substance-use risk. / Co-occurring conditions: Substance-related concerns that occur alongside mental-health or other health conditions.
C. Adolescent substance-use screening: A brief, age-appropriate process to identify possible substance-related risk and need for fuller assessment. / Co-occurring conditions: Planning for high-risk situations, cravings, coping responses, and support following a return to use or lapse.
D. Adolescent substance-use screening: Substance-related concerns that occur alongside mental-health or other health conditions. / Co-occurring conditions: A brief, age-appropriate process to identify possible substance-related risk and need for fuller assessment.

0672. A trainee must distinguish how Adolescent substance-use screening and Recovery capital guide practice. Which comparison is accurate?

A. Adolescent substance-use screening: Using a validated youth-appropriate screen as an entry point rather than treating it as a diagnosis. / Recovery capital: Linking screening results to a brief conversation and appropriate referral when indicated.
B. Adolescent substance-use screening: Identifying triggers and rehearsal of a response plan without framing a lapse as total failure. / Recovery capital: Mapping supportive relationships, practical resources, and meaningful roles that can aid recovery.
C. Adolescent substance-use screening: Mapping supportive relationships, practical resources, and meaningful roles that can aid recovery. / Recovery capital: Using a validated youth-appropriate screen as an entry point rather than treating it as a diagnosis.
D. Adolescent substance-use screening: Using a validated youth-appropriate screen as an entry point rather than treating it as a diagnosis. / Recovery capital: Mapping supportive relationships, practical resources, and meaningful roles that can aid recovery.

0673. In the caregiver consultation, a school-based clinician is considering this approach for a child aged 6: mapping supportive relationships, practical resources, and meaningful roles that can aid recovery. Which framework does it represent?

A. Confidentiality and substance care
B. Recovery capital
C. Co-occurring conditions
D. Developmental framing

0674. In the after-school program, the agreed focus for a therapist working with a child aged 8 is linking screening results to a brief conversation and appropriate referral when indicated. Which concept names this focus?

A. Harm reduction
B. Co-occurring conditions
C. Recovery capital
D. SBIRT

0675. Which statement accurately contrasts the course concepts Adolescent substance-use screening and SBIRT?

A. Adolescent substance-use screening: A brief, age-appropriate process to identify possible substance-related risk and need for fuller assessment. / SBIRT: Screening, brief intervention, and referral to treatment, a structured pathway for responding to substance-use risk.
B. Adolescent substance-use screening: A collaborative strategy that strengthens a person's own motivation and commitment to change. / SBIRT: Screening, brief intervention, and referral to treatment, a structured pathway for responding to substance-use risk.
C. Adolescent substance-use screening: Screening, brief intervention, and referral to treatment, a structured pathway for responding to substance-use risk. / SBIRT: A brief, age-appropriate process to identify possible substance-related risk and need for fuller assessment.
D. Adolescent substance-use screening: A brief, age-appropriate process to identify possible substance-related risk and need for fuller assessment. / SBIRT: Privacy rules for adolescent substance services that depend on jurisdiction, consent, and service context.

0676. Which statement shows a sound practice-level distinction between SBIRT and Developmental framing?

A. SBIRT: Linking screening results to a brief conversation and appropriate referral when indicated. / Developmental framing: Exploring peer influence and emerging independence without assuming all adolescent use has the same meaning.
B. SBIRT: Linking screening results to a brief conversation and appropriate referral when indicated. / Developmental framing: Identifying triggers and rehearsal of a response plan without framing a lapse as total failure.
C. SBIRT: Mapping supportive relationships, practical resources, and meaningful roles that can aid recovery. / Developmental framing: Exploring peer influence and emerging independence without assuming all adolescent use has the same meaning.
D. SBIRT: Exploring peer influence and emerging independence without assuming all adolescent use has the same meaning. / Developmental framing: Linking screening results to a brief conversation and appropriate referral when indicated.

0677. A service navigator is asked what should shape a young person's support in the child guidance clinic. The proposed focus is exploring peer influence and emerging independence without assuming all adolescent use has the same meaning. Which principle does it represent?

A. SBIRT
B. Developmental framing
C. Adolescent substance-use screening
D. Protective factor assessment

0678. A student confuses Protective factor assessment with Confidentiality and substance care. Which explanation most accurately separates them?

A. Protective factor assessment: Personal, social, and community resources that can support recovery and sustained change. / Confidentiality and substance care: Privacy rules for adolescent substance services that depend on jurisdiction, consent, and service context.
B. Protective factor assessment: Privacy rules for adolescent substance services that depend on jurisdiction, consent, and service context. / Confidentiality and substance care: Identification of resources and conditions that support reduced use, safety, and healthy development.
C. Protective factor assessment: Identification of resources and conditions that support reduced use, safety, and healthy development. / Confidentiality and substance care: Privacy rules for adolescent substance services that depend on jurisdiction, consent, and service context.
D. Protective factor assessment: Identification of resources and conditions that support reduced use, safety, and healthy development. / Confidentiality and substance care: Understanding substance use in relation to adolescent development, peer context, access, and changing autonomy.

0679. Which statement accurately contrasts the course concepts Protective factor assessment and Recovery capital?

A. Protective factor assessment: Identification of resources and conditions that support reduced use, safety, and healthy development. / Recovery capital: Substance-related concerns that occur alongside mental-health or other health conditions.
B. Protective factor assessment: Identification of resources and conditions that support reduced use, safety, and healthy development. / Recovery capital: Personal, social, and community resources that can support recovery and sustained change.
C. Protective factor assessment: Personal, social, and community resources that can support recovery and sustained change. / Recovery capital: Identification of resources and conditions that support reduced use, safety, and healthy development.
D. Protective factor assessment: A collaborative strategy that strengthens a person's own motivation and commitment to change. / Recovery capital: Personal, social, and community resources that can support recovery and sustained change.

0680. In adolescent substance-use counseling, which professional action most closely applies Relapse prevention?

A. Asking about supportive adults, activities, strengths, and settings that can reinforce safer choices.
B. Eliciting the adolescent's reasons for and against change and reinforcing autonomy.
C. Identifying triggers and rehearsal of a response plan without framing a lapse as total failure.
D. Assessing anxiety, mood, trauma, and substance use together while coordinating appropriate care.

0681. A case discussion concerns a young adolescent client and a family therapist in the behavior-support review. The practitioner is considering assessing anxiety, mood, trauma, and substance use together while coordinating appropriate care. Which principle is involved?

A. Co-occurring conditions
B. Harm reduction
C. Protective factor assessment
D. SBIRT

0682. Choose the practice comparison that best separates Harm reduction from Protective factor assessment.

A. Harm reduction: Linking screening results to a brief conversation and appropriate referral when indicated. / Protective factor assessment: Asking about supportive adults, activities, strengths, and settings that can reinforce safer choices.
B. Harm reduction: Discussing realistic safety steps while continuing to support the adolescent's goals and options. / Protective factor assessment: Mapping supportive relationships, practical resources, and meaningful roles that can aid recovery.
C. Harm reduction: Asking about supportive adults, activities, strengths, and settings that can reinforce safer choices. / Protective factor assessment: Discussing realistic safety steps while continuing to support the adolescent's goals and options.
D. Harm reduction: Discussing realistic safety steps while continuing to support the adolescent's goals and options. / Protective factor assessment: Asking about supportive adults, activities, strengths, and settings that can reinforce safer choices.

0683. Which comparison correctly distinguishes Harm reduction from Co-occurring conditions?

A. Harm reduction: Substance-related concerns that occur alongside mental-health or other health conditions. / Co-occurring conditions: Practical strategies intended to reduce substance-related risks without requiring immediate abstinence as a precondition for care.
B. Harm reduction: Practical strategies intended to reduce substance-related risks without requiring immediate abstinence as a precondition for care. / Co-occurring conditions: A brief, age-appropriate process to identify possible substance-related risk and need for fuller assessment.
C. Harm reduction: Screening, brief intervention, and referral to treatment, a structured pathway for responding to substance-use risk. / Co-occurring conditions: Substance-related concerns that occur alongside mental-health or other health conditions.
D. Harm reduction: Practical strategies intended to reduce substance-related risks without requiring immediate abstinence as a precondition for care. / Co-occurring conditions: Substance-related concerns that occur alongside mental-health or other health conditions.

0684. In the after-school program, a case coordinator is considering this approach for a young adolescent client: using a validated youth-appropriate screen as an entry point rather than treating it as a diagnosis. Which framework does it represent?

A. SBIRT
B. Adolescent substance-use screening
C. Developmental framing
D. Protective factor assessment

0685. A case conference asks for a distinction between SBIRT and Confidentiality and substance care. Which answer is sound?

A. SBIRT: Privacy rules for adolescent substance services that depend on jurisdiction, consent, and service context. / Confidentiality and substance care: Screening, brief intervention, and referral to treatment, a structured pathway for responding to substance-use risk.
B. SBIRT: Screening, brief intervention, and referral to treatment, a structured pathway for responding to substance-use risk. / Confidentiality and substance care: Privacy rules for adolescent substance services that depend on jurisdiction, consent, and service context.
C. SBIRT: Substance-related concerns that occur alongside mental-health or other health conditions. / Confidentiality and substance care: Privacy rules for adolescent substance services that depend on jurisdiction, consent, and service context.
D. SBIRT: Screening, brief intervention, and referral to treatment, a structured pathway for responding to substance-use risk. / Confidentiality and substance care: A brief, age-appropriate process to identify possible substance-related risk and need for fuller assessment.

0686. Choose the practice comparison that best separates Co-occurring conditions from Confidentiality and substance care.

A. Co-occurring conditions: Identifying triggers and rehearsal of a response plan without framing a lapse as total failure. / Confidentiality and substance care: Explaining privacy and its exceptions accurately using current local law and policy before asking sensitive questions.
B. Co-occurring conditions: Assessing anxiety, mood, trauma, and substance use together while coordinating appropriate care. / Confidentiality and substance care: Using a validated youth-appropriate screen as an entry point rather than treating it as a diagnosis.
C. Co-occurring conditions: Assessing anxiety, mood, trauma, and substance use together while coordinating appropriate care. / Confidentiality and substance care: Explaining privacy and its exceptions accurately using current local law and policy before asking sensitive questions.
D. Co-occurring conditions: Explaining privacy and its exceptions accurately using current local law and policy before asking sensitive questions. / Confidentiality and substance care: Assessing anxiety, mood, trauma, and substance use together while coordinating appropriate care.

0687. A team must select a support approach for a preadolescent child at the multidisciplinary case conference. The school-based clinician recommends linking screening results to a brief conversation and appropriate referral when indicated. Which idea is most relevant?

A. Recovery capital
B. SBIRT
C. Co-occurring conditions
D. Developmental framing

0688. Choose the practice comparison that best separates SBIRT from Confidentiality and substance care.

A. SBIRT: Explaining privacy and its exceptions accurately using current local law and policy before asking sensitive questions. / Confidentiality and substance care: Linking screening results to a brief conversation and appropriate referral when indicated.
B. SBIRT: Assessing anxiety, mood, trauma, and substance use together while coordinating appropriate care. / Confidentiality and substance care: Explaining privacy and its exceptions accurately using current local law and policy before asking sensitive questions.
C. SBIRT: Linking screening results to a brief conversation and appropriate referral when indicated. / Confidentiality and substance care: Using a validated youth-appropriate screen as an entry point rather than treating it as a diagnosis.
D. SBIRT: Linking screening results to a brief conversation and appropriate referral when indicated. / Confidentiality and substance care: Explaining privacy and its exceptions accurately using current local law and policy before asking sensitive questions.

0689. Which comparison correctly distinguishes Co-occurring conditions from Developmental framing?

A. Co-occurring conditions: Understanding substance use in relation to adolescent development, peer context, access, and changing autonomy. / Developmental framing: Substance-related concerns that occur alongside mental-health or other health conditions.
B. Co-occurring conditions: Substance-related concerns that occur alongside mental-health or other health conditions. / Developmental framing: Understanding substance use in relation to adolescent development, peer context, access, and changing autonomy.
C. Co-occurring conditions: Practical strategies intended to reduce substance-related risks without requiring immediate abstinence as a precondition for care. / Developmental framing: Understanding substance use in relation to adolescent development, peer context, access, and changing autonomy.
D. Co-occurring conditions: Substance-related concerns that occur alongside mental-health or other health conditions. / Developmental framing: Personal, social, and community resources that can support recovery and sustained change.

0690. In adolescent substance-use counseling, which statement accurately contrasts the course concepts Protective factor assessment and Relapse prevention?

A. Protective factor assessment: Planning for high-risk situations, cravings, coping responses, and support following a return to use or lapse. / Relapse prevention: Identification of resources and conditions that support reduced use, safety, and healthy development.
B. Protective factor assessment: Identification of resources and conditions that support reduced use, safety, and healthy development. / Relapse prevention: Personal, social, and community resources that can support recovery and sustained change.
C. Protective factor assessment: Identification of resources and conditions that support reduced use, safety, and healthy development. / Relapse prevention: Planning for high-risk situations, cravings, coping responses, and support following a return to use or lapse.
D. Protective factor assessment: Substance-related concerns that occur alongside mental-health or other health conditions. / Relapse prevention: Planning for high-risk situations, cravings, coping responses, and support following a return to use or lapse.

0691. During service review in the community service agency, a therapist describes exploring peer influence and emerging independence without assuming all adolescent use has the same meaning. for a student aged 15. Which course idea is most applicable?

A. Harm reduction
B. Confidentiality and substance care
C. Developmental framing
D. Co-occurring conditions

0692. Choose the response that best puts Adolescent substance-use screening into practice.

A. Using a validated youth-appropriate screen as an entry point rather than treating it as a diagnosis.
B. Linking screening results to a brief conversation and appropriate referral when indicated.
C. Mapping supportive relationships, practical resources, and meaningful roles that can aid recovery.
D. Discussing realistic safety steps while continuing to support the adolescent’s goals and options.

0693. Choose the response that best puts Co-occurring conditions into practice.

A. Explaining privacy and its exceptions accurately using current local law and policy before asking sensitive questions.
B. Eliciting the adolescent’s reasons for and against change and reinforcing autonomy.
C. Assessing anxiety, mood, trauma, and substance use together while coordinating appropriate care.
D. Mapping supportive relationships, practical resources, and meaningful roles that can aid recovery.

0694. Which option pairs the definitions of Motivational enhancement and Harm reduction correctly, in that order?

A. Motivational enhancement: Screening, brief intervention, and referral to treatment, a structured pathway for responding to substance-use risk. / Harm reduction: Practical strategies intended to reduce substance-related risks without requiring immediate abstinence as a precondition for care.
B. Motivational enhancement: Practical strategies intended to reduce substance-related risks without requiring immediate abstinence as a precondition for care. / Harm reduction: A collaborative strategy that strengthens a person’s own motivation and commitment to change.
C. Motivational enhancement: A collaborative strategy that strengthens a person’s own motivation and commitment to change. / Harm reduction: Privacy rules for adolescent substance services that depend on jurisdiction, consent, and service context.
D. Motivational enhancement: A collaborative strategy that strengthens a person’s own motivation and commitment to change. / Harm reduction: Practical strategies intended to reduce substance-related risks without requiring immediate abstinence as a precondition for care.

0695. A clinical supervisor reviews a plan for a student aged 9 in the supervision meeting. The plan emphasizes linking screening results to a brief conversation and appropriate referral when indicated. Which course idea does this reflect?

A. SBIRT
B. Motivational enhancement
C. Confidentiality and substance care
D. Relapse prevention

0696. Which applied comparison correctly identifies what belongs to Confidentiality and substance care versus Developmental framing?

A. Confidentiality and substance care: Mapping supportive relationships, practical resources, and meaningful roles that can aid recovery. / Developmental framing: Exploring peer influence and emerging independence without assuming all adolescent use has the same meaning.
B. Confidentiality and substance care: Exploring peer influence and emerging independence without assuming all adolescent use has the same meaning. / Developmental framing: Explaining privacy and its exceptions accurately using current local law and policy before asking sensitive questions.
C. Confidentiality and substance care: Explaining privacy and its exceptions accurately using current local law and policy before asking sensitive questions. / Developmental framing: Exploring peer influence and emerging independence without assuming all adolescent use has the same meaning.
D. Confidentiality and substance care: Explaining privacy and its exceptions accurately using current local law and policy before asking sensitive questions. / Developmental framing: Linking screening results to a brief conversation and appropriate referral when indicated.

0697. A school counselor is explaining a choice to a older adolescent client and caregiver in the classroom support meeting. The choice centers on eliciting the adolescent’s reasons for and against change and reinforcing autonomy. Which idea is illustrated?

A. SBIRT
B. Co-occurring conditions
C. Motivational enhancement
D. Protective factor assessment

0698. A trainee must distinguish how Adolescent substance-use screening and Confidentiality and substance care guide practice. Which comparison is accurate?

A. Adolescent substance-use screening: Explaining privacy and its exceptions accurately using current local law and policy before asking sensitive questions. / Confidentiality and substance care: Using a validated youth-appropriate screen as an entry point rather than treating it as a diagnosis.
B. Adolescent substance-use screening: Exploring peer influence and emerging independence without assuming all adolescent use has the same meaning. / Confidentiality and substance care: Explaining privacy and its exceptions accurately using current local law and policy before asking sensitive questions.
C. Adolescent substance-use screening: Using a validated youth-appropriate screen as an entry point rather than treating it as a diagnosis. / Confidentiality and substance care: Explaining privacy and its exceptions accurately using current local law and policy before asking sensitive questions.
D. Adolescent substance-use screening: Using a validated youth-appropriate screen as an entry point rather than treating it as a diagnosis. / Confidentiality and substance care: Identifying triggers and rehearsal of a response plan without framing a lapse as total failure.

0699. In a professional consultation about a young person aged 13, the supervised trainee describes this response in the outpatient clinic: mapping supportive relationships, practical resources, and meaningful roles that can aid recovery. Which term is most apt?

A. Recovery capital
B. SBIRT
C. Adolescent substance-use screening
D. Developmental framing

0700. Identify the most precise label for this idea: Identification of resources and conditions that support reduced use, safety, and healthy development.

A. Developmental framing
B. Motivational enhancement
C. Adolescent substance-use screening
D. Protective factor assessment

0701. Which statement shows a sound practice-level distinction between SBIRT and Confidentiality and substance care?

A. SBIRT: Linking screening results to a brief conversation and appropriate referral when indicated. / Confidentiality and substance care: Using a validated youth-appropriate screen as an entry point rather than treating it as a diagnosis.
B. SBIRT: Explaining privacy and its exceptions accurately using current local law and policy before asking sensitive questions. / Confidentiality and substance care: Linking screening results to a brief conversation and appropriate referral when indicated.
C. SBIRT: Linking screening results to a brief conversation and appropriate referral when indicated. / Confidentiality and substance care: Explaining privacy and its exceptions accurately using current local law and policy before asking sensitive questions.
D. SBIRT: Assessing anxiety, mood, trauma, and substance use together while coordinating appropriate care. / Confidentiality and substance care: Explaining privacy and its exceptions accurately using current local law and policy before asking sensitive questions.

0702. Which paired example correctly applies SBIRT first and Co-occurring conditions second?

A. SBIRT: Linking screening results to a brief conversation and appropriate referral when indicated. / Co-occurring conditions: Discussing realistic safety steps while continuing to support the adolescent's goals and options.
B. SBIRT: Explaining privacy and its exceptions accurately using current local law and policy before asking sensitive questions. / Co-occurring conditions: Assessing anxiety, mood, trauma, and substance use together while coordinating appropriate care.
C. SBIRT: Linking screening results to a brief conversation and appropriate referral when indicated. / Co-occurring conditions: Assessing anxiety, mood, trauma, and substance use together while coordinating appropriate care.
D. SBIRT: Assessing anxiety, mood, trauma, and substance use together while coordinating appropriate care. / Co-occurring conditions: Linking screening results to a brief conversation and appropriate referral when indicated.

0703. Which paired example correctly applies Harm reduction first and Developmental framing second?

A. Harm reduction: Discussing realistic safety steps while continuing to support the adolescent's goals and options. / Developmental framing: Explaining privacy and its exceptions accurately using current local law and policy before asking sensitive questions.
B. Harm reduction: Discussing realistic safety steps while continuing to support the adolescent's goals and options. / Developmental framing: Exploring peer influence and emerging independence without assuming all adolescent use has the same meaning.
C. Harm reduction: Identifying triggers and rehearsal of a response plan without framing a lapse as total failure. / Developmental framing: Exploring peer influence and emerging independence without assuming all adolescent use has the same meaning.
D. Harm reduction: Exploring peer influence and emerging independence without assuming all adolescent use has the same meaning. / Developmental framing: Discussing realistic safety steps while continuing to support the adolescent's goals and options.

0704. What is the central meaning of Harm reduction?

A. Understanding substance use in relation to adolescent development, peer context, access, and changing autonomy.
B. Identification of resources and conditions that support reduced use, safety, and healthy development.
C. Practical strategies intended to reduce substance-related risks without requiring immediate abstinence as a precondition for care.
D. Substance-related concerns that occur alongside mental-health or other health conditions.

0705. A trainee must distinguish how Motivational enhancement and Developmental framing guide practice. Which comparison is accurate?

A. Motivational enhancement: Eliciting the adolescent's reasons for and against change and reinforcing autonomy. / Developmental framing: Identifying triggers and rehearsal of a response plan without framing a lapse as total failure.
B. Motivational enhancement: Assessing anxiety, mood, trauma, and substance use together while coordinating appropriate care. / Developmental framing: Exploring peer influence and emerging independence without assuming all adolescent use has the same meaning.
C. Motivational enhancement: Exploring peer influence and emerging independence without assuming all adolescent use has the same meaning. / Developmental framing: Eliciting the adolescent's reasons for and against change and reinforcing autonomy.
D. Motivational enhancement: Eliciting the adolescent's reasons for and against change and reinforcing autonomy. / Developmental framing: Exploring peer influence and emerging independence without assuming all adolescent use has the same meaning.

0706. Which choice aligns each practice with the correct idea, Motivational enhancement or SBIRT?

A. Motivational enhancement: Linking screening results to a brief conversation and appropriate referral when indicated. / SBIRT: Eliciting the adolescent's reasons for and against change and reinforcing autonomy.
B. Motivational enhancement: Eliciting the adolescent's reasons for and against change and reinforcing autonomy. / SBIRT: Linking screening results to a brief conversation and appropriate referral when indicated.
C. Motivational enhancement: Discussing realistic safety steps while continuing to support the adolescent's goals and options. / SBIRT: Linking screening results to a brief conversation and appropriate referral when indicated.
D. Motivational enhancement: Eliciting the adolescent's reasons for and against change and reinforcing autonomy. / SBIRT: Explaining privacy and its exceptions accurately using current local law and policy before asking sensitive questions.

0707. In a professional consultation about a client in late adolescence, the consultant describes this response in the community mental-health service: exploring peer influence and emerging independence without assuming all adolescent use has the same meaning. Which term is most apt?

A. SBIRT
B. Recovery capital
C. Developmental framing
D. Confidentiality and substance care

0708. In adolescent substance-use counseling, in the multidisciplinary case conference, a caregiver working with a counselor is considering this approach for a client in late adolescence: identifying triggers and rehearsal of a response plan without framing a lapse as total failure. Which framework does it represent?

A. Confidentiality and substance care
B. Relapse prevention
C. Developmental framing
D. Protective factor assessment

0709. A planning meeting about a child aged 7 includes a clinical supervisor. The proposed practice in the classroom support meeting is using a validated youth-appropriate screen as an entry point rather than treating it as a diagnosis. Which idea underlies it?

A. Developmental framing
B. Co-occurring conditions
C. Confidentiality and substance care
D. Adolescent substance-use screening

0710. Which comparison correctly distinguishes SBIRT from Recovery capital?

A. SBIRT: Personal, social, and community resources that can support recovery and sustained change. / Recovery capital: Screening, brief intervention, and referral to treatment, a structured pathway for responding to substance-use risk.
B. SBIRT: Understanding substance use in relation to adolescent development, peer context, access, and changing autonomy. / Recovery capital: Personal, social, and community resources that can support recovery and sustained change.
C. SBIRT: Screening, brief intervention, and referral to treatment, a structured pathway for responding to substance-use risk. / Recovery capital: Privacy rules for adolescent substance services that depend on jurisdiction, consent, and service context.
D. SBIRT: Screening, brief intervention, and referral to treatment, a structured pathway for responding to substance-use risk. / Recovery capital: Personal, social, and community resources that can support recovery and sustained change.

0711. Choose the response that best puts Protective factor assessment into practice.

A. Explaining privacy and its exceptions accurately using current local law and policy before asking sensitive questions.
B. Mapping supportive relationships, practical resources, and meaningful roles that can aid recovery.
C. Using a validated youth-appropriate screen as an entry point rather than treating it as a diagnosis.
D. Asking about supportive adults, activities, strengths, and settings that can reinforce safer choices.

0712. A preadolescent child is receiving support in the school counseling office. The school counselor is guided by this practice: explaining privacy and its exceptions accurately using current local law and policy before asking sensitive questions. Which principle best fits?

A. Protective factor assessment
B. Motivational enhancement
C. Confidentiality and substance care
D. Developmental framing

0713. A planning meeting about a young adolescent client includes a counselor. The proposed practice in the clinical planning session is asking about supportive adults, activities, strengths, and settings that can reinforce safer choices. Which idea underlies it?

A. Developmental framing
B. Adolescent substance-use screening
C. Protective factor assessment
D. Co-occurring conditions

0714. In adolescent substance-use counseling, a supervisor asks for an applied contrast between Confidentiality and substance care and Relapse prevention. Which option fits?

A. Confidentiality and substance care: Identifying triggers and rehearsal of a response plan without framing a lapse as total failure. / Relapse prevention: Explaining privacy and its exceptions accurately using current local law and policy before asking sensitive questions.
B. Confidentiality and substance care: Explaining privacy and its exceptions accurately using current local law and policy before asking sensitive questions. / Relapse prevention: Identifying triggers and rehearsal of a response plan without framing a lapse as total failure.
C. Confidentiality and substance care: Discussing realistic safety steps while continuing to support the adolescent's goals and options. / Relapse prevention: Identifying triggers and rehearsal of a response plan without framing a lapse as total failure.
D. Confidentiality and substance care: Explaining privacy and its exceptions accurately using current local law and policy before asking sensitive questions. / Relapse prevention: Linking screening results to a brief conversation and appropriate referral when indicated.

0715. Which statement accurately contrasts the course concepts Motivational enhancement and Confidentiality and substance care?

A. Motivational enhancement: Privacy rules for adolescent substance services that depend on jurisdiction, consent, and service context. / Confidentiality and substance care: A collaborative strategy that strengthens a person's own motivation and commitment to change.
B. Motivational enhancement: Screening, brief intervention, and referral to treatment, a structured pathway for responding to substance-use risk. / Confidentiality and substance care: Privacy rules for adolescent substance services that depend on jurisdiction, consent, and service context.
C. Motivational enhancement: A collaborative strategy that strengthens a person's own motivation and commitment to change. / Confidentiality and substance care: Privacy rules for adolescent substance services that depend on jurisdiction, consent, and service context.
D. Motivational enhancement: A collaborative strategy that strengthens a person's own motivation and commitment to change. / Confidentiality and substance care: Substance-related concerns that occur alongside mental-health or other health conditions.

0716. A trainee must choose a practice that exemplifies SBIRT. Which action is the best fit?

A. Exploring peer influence and emerging independence without assuming all adolescent use has the same meaning.
B. Assessing anxiety, mood, trauma, and substance use together while coordinating appropriate care.
C. Explaining privacy and its exceptions accurately using current local law and policy before asking sensitive questions.
D. Linking screening results to a brief conversation and appropriate referral when indicated.

0717. A supervisor asks how Recovery capital would appear in practice. Which choice should be selected?

A. Exploring peer influence and emerging independence without assuming all adolescent use has the same meaning.
B. Assessing anxiety, mood, trauma, and substance use together while coordinating appropriate care.
C. Discussing realistic safety steps while continuing to support the adolescent's goals and options.
D. Mapping supportive relationships, practical resources, and meaningful roles that can aid recovery.

0718. A case conference reviews a community practitioner's work with a older adolescent client in the supervision meeting: using a validated youth-appropriate screen as an entry point rather than treating it as a diagnosis. Which principle is central?

A. Co-occurring conditions
B. Recovery capital
C. Confidentiality and substance care
D. Adolescent substance-use screening

0719. Which paired example correctly applies Adolescent substance-use screening first and Protective factor assessment second?

A. Adolescent substance-use screening: Asking about supportive adults, activities, strengths, and settings that can reinforce safer choices. / Protective factor assessment: Using a validated youth-appropriate screen as an entry point rather than treating it as a diagnosis.
B. Adolescent substance-use screening: Using a validated youth-appropriate screen as an entry point rather than treating it as a diagnosis. / Protective factor assessment: Asking about supportive adults, activities, strengths, and settings that can reinforce safer choices.
C. Adolescent substance-use screening: Eliciting the adolescent's reasons for and against change and reinforcing autonomy. / Protective factor assessment: Asking about supportive adults, activities, strengths, and settings that can reinforce safer choices.
D. Adolescent substance-use screening: Using a validated youth-appropriate screen as an entry point rather than treating it as a diagnosis. / Protective factor assessment: Identifying triggers and rehearsal of a response plan without framing a lapse as total failure.

0720. In adolescent substance-use counseling, choose the term that matches this definition: Planning for high-risk situations, cravings, coping responses, and support following a return to use or lapse.

A. Relapse prevention
B. Confidentiality and substance care
C. Co-occurring conditions
D. Protective factor assessment

0721. In adolescent substance-use counseling, which comparison would correct a trainee's misunderstanding of Protective factor assessment versus Relapse prevention?

A. Protective factor assessment: Substance-related concerns that occur alongside mental-health or other health conditions. / Relapse prevention: Planning for high-risk situations, cravings, coping responses, and support following a return to use or lapse.
B. Protective factor assessment: Planning for high-risk situations, cravings, coping responses, and support following a return to use or lapse. / Relapse prevention: Identification of resources and conditions that support reduced use, safety, and healthy development.
C. Protective factor assessment: Identification of resources and conditions that support reduced use, safety, and healthy development. / Relapse prevention: Planning for high-risk situations, cravings, coping responses, and support following a return to use or lapse.
D. Protective factor assessment: Identification of resources and conditions that support reduced use, safety, and healthy development. / Relapse prevention: Personal, social, and community resources that can support recovery and sustained change.

0722. In adolescent substance-use counseling, a doctoral student reads the following description. Which concept does it define? Planning for high-risk situations, cravings, coping responses, and support following a return to use or lapse.

A. Recovery capital
B. SBIRT
C. Relapse prevention
D. Protective factor assessment

0723. Which applied comparison correctly identifies what belongs to Adolescent substance-use screening versus Co-occurring conditions?

A. Adolescent substance-use screening: Assessing anxiety, mood, trauma, and substance use together while coordinating appropriate care. / Co-occurring conditions: Using a validated youth-appropriate screen as an entry point rather than treating it as a diagnosis.
B. Adolescent substance-use screening: Linking screening results to a brief conversation and appropriate referral when indicated. / Co-occurring conditions: Assessing anxiety, mood, trauma, and substance use together while coordinating appropriate care.
C. Adolescent substance-use screening: Using a validated youth-appropriate screen as an entry point rather than treating it as a diagnosis. / Co-occurring conditions: Assessing anxiety, mood, trauma, and substance use together while coordinating appropriate care.
D. Adolescent substance-use screening: Using a validated youth-appropriate screen as an entry point rather than treating it as a diagnosis. / Co-occurring conditions: Identifying triggers and rehearsal of a response plan without framing a lapse as total failure.

0724. How are Harm reduction and Protective factor assessment most accurately differentiated in this curriculum?

A. Harm reduction: Practical strategies intended to reduce substance-related risks without requiring immediate abstinence as a precondition for care. / Protective factor assessment: Personal, social, and community resources that can support recovery and sustained change.
B. Harm reduction: Identification of resources and conditions that support reduced use, safety, and healthy development. / Protective factor assessment: Practical strategies intended to reduce substance-related risks without requiring immediate abstinence as a precondition for care.
C. Harm reduction: Practical strategies intended to reduce substance-related risks without requiring immediate abstinence as a precondition for care. / Protective factor assessment: Identification of resources and conditions that support reduced use, safety, and healthy development.
D. Harm reduction: Screening, brief intervention, and referral to treatment, a structured pathway for responding to substance-use risk. / Protective factor assessment: Identification of resources and conditions that support reduced use, safety, and healthy development.

0725. A service navigator is asked what should shape a child aged 6's support in the community service agency. The proposed focus is asking about supportive adults, activities, strengths, and settings that can reinforce safer choices. Which principle does it represent?

A. Recovery capital
B. Motivational enhancement
C. Protective factor assessment
D. Developmental framing

0726. In adolescent substance-use counseling, which applied comparison correctly identifies what belongs to Harm reduction versus Relapse prevention?

A. Harm reduction: Identifying triggers and rehearsal of a response plan without framing a lapse as total failure. / Relapse prevention: Discussing realistic safety steps while continuing to support the adolescent's goals and options.
B. Harm reduction: Eliciting the adolescent's reasons for and against change and reinforcing autonomy. / Relapse prevention: Identifying triggers and rehearsal of a response plan without framing a lapse as total failure.
C. Harm reduction: Discussing realistic safety steps while continuing to support the adolescent's goals and options. / Relapse prevention: Exploring peer influence and emerging independence without assuming all adolescent use has the same meaning.
D. Harm reduction: Discussing realistic safety steps while continuing to support the adolescent's goals and options. / Relapse prevention: Identifying triggers and rehearsal of a response plan without framing a lapse as total failure.

0727. Which professional action most closely applies Recovery capital?

A. Mapping supportive relationships, practical resources, and meaningful roles that can aid recovery.
B. Asking about supportive adults, activities, strengths, and settings that can reinforce safer choices.
C. Exploring peer influence and emerging independence without assuming all adolescent use has the same meaning.
D. Identifying triggers and rehearsal of a response plan without framing a lapse as total failure.

0728. Which option correctly matches each concept to its practice focus: Adolescent substance-use screening and SBIRT?

A. Adolescent substance-use screening: Linking screening results to a brief conversation and appropriate referral when indicated. / SBIRT: Using a validated youth-appropriate screen as an entry point rather than treating it as a diagnosis.
B. Adolescent substance-use screening: Using a validated youth-appropriate screen as an entry point rather than treating it as a diagnosis. / SBIRT: Linking screening results to a brief conversation and appropriate referral when indicated.
C. Adolescent substance-use screening: Using a validated youth-appropriate screen as an entry point rather than treating it as a diagnosis. / SBIRT: Explaining privacy and its exceptions accurately using current local law and policy before asking sensitive questions.
D. Adolescent substance-use screening: Eliciting the adolescent's reasons for and against change and reinforcing autonomy. / SBIRT: Linking screening results to a brief conversation and appropriate referral when indicated.

0729. In adolescent substance-use counseling, at the after-school program, a program coordinator reviews whether a plan for a school-age child is appropriate. The relevant practice is identifying triggers and rehearsal of a response plan without framing a lapse as total failure. Which concept is tested?

A. Confidentiality and substance care
B. Protective factor assessment
C. Motivational enhancement
D. Relapse prevention

0730. How should a practitioner distinguish the applications of Harm reduction and Protective factor assessment?

A. Harm reduction: Asking about supportive adults, activities, strengths, and settings that can reinforce safer choices. / Protective factor assessment: Discussing realistic safety steps while continuing to support the adolescent's goals and options.
B. Harm reduction: Discussing realistic safety steps while continuing to support the adolescent's goals and options. / Protective factor assessment: Asking about supportive adults, activities, strengths, and settings that can reinforce safer choices.
C. Harm reduction: Linking screening results to a brief conversation and appropriate referral when indicated. / Protective factor assessment: Asking about supportive adults, activities, strengths, and settings that can reinforce safer choices.
D. Harm reduction: Discussing realistic safety steps while continuing to support the adolescent's goals and options. / Protective factor assessment: Mapping supportive relationships, practical resources, and meaningful roles that can aid recovery.

0731. A teacher and counselor is explaining a choice to a child aged 14 and caregiver in the family session. The choice centers on mapping supportive relationships, practical resources, and meaningful roles that can aid recovery. Which idea is illustrated?

A. Recovery capital
B. Developmental framing
C. Motivational enhancement
D. Harm reduction

0732. In the outpatient clinic, a teacher and counselor explains why a young person aged 10 would benefit from using a validated youth-appropriate screen as an entry point rather than treating it as a diagnosis. Which course concept underpins the explanation?

A. Adolescent substance-use screening
B. Motivational enhancement
C. Harm reduction
D. Relapse prevention

0733. In adolescent substance-use counseling, a case conference asks for a distinction between Adolescent substance-use screening and Relapse prevention. Which answer is sound?

A. Adolescent substance-use screening: A collaborative strategy that strengthens a person's own motivation and commitment to change. / Relapse prevention: Planning for high-risk situations, cravings, coping responses, and support following a return to use or lapse.
B. Adolescent substance-use screening: A brief, age-appropriate process to identify possible substance-related risk and need for fuller assessment. / Relapse prevention: Planning for high-risk situations, cravings, coping responses, and support following a return to use or lapse.
C. Adolescent substance-use screening: Planning for high-risk situations, cravings, coping responses, and support following a return to use or lapse. / Relapse prevention: A brief, age-appropriate process to identify possible substance-related risk and need for fuller assessment.
D. Adolescent substance-use screening: A brief, age-appropriate process to identify possible substance-related risk and need for fuller assessment. / Relapse prevention: Personal, social, and community resources that can support recovery and sustained change.

0734. A child aged 14 is receiving support in the family session. The teacher and counselor is guided by this practice: mapping supportive relationships, practical resources, and meaningful roles that can aid recovery. Which principle best fits?

A. Recovery capital
B. Motivational enhancement
C. Co-occurring conditions
D. SBIRT

0735. A trainee must choose a practice that exemplifies Motivational enhancement. Which action is the best fit?

A. Eliciting the adolescent's reasons for and against change and reinforcing autonomy.
B. Discussing realistic safety steps while continuing to support the adolescent's goals and options.
C. Mapping supportive relationships, practical resources, and meaningful roles that can aid recovery.
D. Using a validated youth-appropriate screen as an entry point rather than treating it as a diagnosis.

0736. A child aged 7 is receiving support in the student wellness team. The group facilitator is guided by this practice: asking about supportive adults, activities, strengths, and settings that can reinforce safer choices. Which principle best fits?

A. Recovery capital
B. Adolescent substance-use screening
C. Protective factor assessment
D. Developmental framing

0737. Consider a young person aged 18 receiving help in the community mental-health service. The consulting counselor focuses on mapping supportive relationships, practical resources, and meaningful roles that can aid recovery. Which term best describes the guiding idea?

A. Developmental framing
B. Motivational enhancement
C. Recovery capital
D. Protective factor assessment

0738. In adolescent substance-use counseling, how should a practitioner distinguish the applications of Recovery capital and Relapse prevention?

A. Recovery capital: Identifying triggers and rehearsal of a response plan without framing a lapse as total failure. / Relapse prevention: Mapping supportive relationships, practical resources, and meaningful roles that can aid recovery.
B. Recovery capital: Eliciting the adolescent's reasons for and against change and reinforcing autonomy. / Relapse prevention: Identifying triggers and rehearsal of a response plan without framing a lapse as total failure.
C. Recovery capital: Mapping supportive relationships, practical resources, and meaningful roles that can aid recovery. / Relapse prevention: Identifying triggers and rehearsal of a response plan without framing a lapse as total failure.
D. Recovery capital: Mapping supportive relationships, practical resources, and meaningful roles that can aid recovery. / Relapse prevention: Asking about supportive adults, activities, strengths, and settings that can reinforce safer choices.

0739. Which pair of actions illustrates Harm reduction and Recovery capital, respectively?

A. Harm reduction: Assessing anxiety, mood, trauma, and substance use together while coordinating appropriate care. / Recovery capital: Mapping supportive relationships, practical resources, and meaningful roles that can aid recovery.
B. Harm reduction: Discussing realistic safety steps while continuing to support the adolescent's goals and options. / Recovery capital: Mapping supportive relationships, practical resources, and meaningful roles that can aid recovery.
C. Harm reduction: Discussing realistic safety steps while continuing to support the adolescent's goals and options. / Recovery capital: Eliciting the adolescent's reasons for and against change and reinforcing autonomy.
D. Harm reduction: Mapping supportive relationships, practical resources, and meaningful roles that can aid recovery. / Recovery capital: Discussing realistic safety steps while continuing to support the adolescent's goals and options.

0740. Which option pairs the definitions of Adolescent substance-use screening and Harm reduction correctly, in that order?

A. Adolescent substance-use screening: Practical strategies intended to reduce substance-related risks without requiring immediate abstinence as a precondition for care. / Harm reduction: A brief, age-appropriate process to identify possible substance-related risk and need for fuller assessment.
B. Adolescent substance-use screening: A brief, age-appropriate process to identify possible substance-related risk and need for fuller assessment. / Harm reduction: Practical strategies intended to reduce substance-related risks without requiring immediate abstinence as a precondition for care.
C. Adolescent substance-use screening: A collaborative strategy that strengthens a person's own motivation and commitment to change. / Harm reduction: Practical strategies intended to reduce substance-related risks without requiring immediate abstinence as a precondition for care.
D. Adolescent substance-use screening: A brief, age-appropriate process to identify possible substance-related risk and need for fuller assessment. / Harm reduction: Privacy rules for adolescent substance services that depend on jurisdiction, consent, and service context.

0741. A supervisor asks for an applied contrast between Harm reduction and Confidentiality and substance care. Which option fits?

A. Harm reduction: Explaining privacy and its exceptions accurately using current local law and policy before asking sensitive questions. / Confidentiality and substance care: Discussing realistic safety steps while continuing to support the adolescent's goals and options.
B. Harm reduction: Discussing realistic safety steps while continuing to support the adolescent's goals and options. / Confidentiality and substance care: Explaining privacy and its exceptions accurately using current local law and policy before asking sensitive questions.
C. Harm reduction: Linking screening results to a brief conversation and appropriate referral when indicated. / Confidentiality and substance care: Explaining privacy and its exceptions accurately using current local law and policy before asking sensitive questions.
D. Harm reduction: Discussing realistic safety steps while continuing to support the adolescent's goals and options. / Confidentiality and substance care: Mapping supportive relationships, practical resources, and meaningful roles that can aid recovery.

0742. How are SBIRT and Recovery capital most accurately differentiated in this curriculum?

A. SBIRT: Personal, social, and community resources that can support recovery and sustained change. / Recovery capital: Screening, brief intervention, and referral to treatment, a structured pathway for responding to substance-use risk.
B. SBIRT: Screening, brief intervention, and referral to treatment, a structured pathway for responding to substance-use risk. / Recovery capital: Personal, social, and community resources that can support recovery and sustained change.
C. SBIRT: Screening, brief intervention, and referral to treatment, a structured pathway for responding to substance-use risk. / Recovery capital: Privacy rules for adolescent substance services that depend on jurisdiction, consent, and service context.
D. SBIRT: Understanding substance use in relation to adolescent development, peer context, access, and changing autonomy. / Recovery capital: Personal, social, and community resources that can support recovery and sustained change.

0743. A trainee must explain Recovery capital. Which answer is accurate?

A. Identification of resources and conditions that support reduced use, safety, and healthy development.
B. Understanding substance use in relation to adolescent development, peer context, access, and changing autonomy.
C. Personal, social, and community resources that can support recovery and sustained change.
D. Substance-related concerns that occur alongside mental-health or other health conditions.

0744. A case conference reviews a service navigator's work with a teenage client in the counseling practicum: eliciting the adolescent's reasons for and against change and reinforcing autonomy. Which principle is central?

A. Developmental framing
B. Motivational enhancement
C. Confidentiality and substance care
D. Harm reduction

0745. Which paired example correctly applies SBIRT first and Confidentiality and substance care second?

A. SBIRT: Assessing anxiety, mood, trauma, and substance use together while coordinating appropriate care. / Confidentiality and substance care: Explaining privacy and its exceptions accurately using current local law and policy before asking sensitive questions.
B. SBIRT: Linking screening results to a brief conversation and appropriate referral when indicated. / Confidentiality and substance care: Using a validated youth-appropriate screen as an entry point rather than treating it as a diagnosis.
C. SBIRT: Linking screening results to a brief conversation and appropriate referral when indicated. / Confidentiality and substance care: Explaining privacy and its exceptions accurately using current local law and policy before asking sensitive questions.
D. SBIRT: Explaining privacy and its exceptions accurately using current local law and policy before asking sensitive questions. / Confidentiality and substance care: Linking screening results to a brief conversation and appropriate referral when indicated.

0746. A young person and a member of a clinical team are reviewing goals in the classroom support meeting. The agreed action is linking screening results to a brief conversation and appropriate referral when indicated. Which principle best accounts for it?

A. Confidentiality and substance care
B. Relapse prevention
C. SBIRT
D. Developmental framing

0747. A case conference asks for a distinction between Co-occurring conditions and Confidentiality and substance care. Which answer is sound?

A. Co-occurring conditions: Substance-related concerns that occur alongside mental-health or other health conditions. / Confidentiality and substance care: Privacy rules for adolescent substance services that depend on jurisdiction, consent, and service context.
B. Co-occurring conditions: Substance-related concerns that occur alongside mental-health or other health conditions. / Confidentiality and substance care: A brief, age-appropriate process to identify possible substance-related risk and need for fuller assessment.
C. Co-occurring conditions: Planning for high-risk situations, cravings, coping responses, and support following a return to use or lapse. / Confidentiality and substance care: Privacy rules for adolescent substance services that depend on jurisdiction, consent, and service context.
D. Co-occurring conditions: Privacy rules for adolescent substance services that depend on jurisdiction, consent, and service context. / Confidentiality and substance care: Substance-related concerns that occur alongside mental-health or other health conditions.

0748. In adolescent substance-use counseling, which option correctly matches each concept to its practice focus: Protective factor assessment and Relapse prevention?

A. Protective factor assessment: Identifying triggers and rehearsal of a response plan without framing a lapse as total failure. / Relapse prevention: Asking about supportive adults, activities, strengths, and settings that can reinforce safer choices.
B. Protective factor assessment: Assessing anxiety, mood, trauma, and substance use together while coordinating appropriate care. / Relapse prevention: Identifying triggers and rehearsal of a response plan without framing a lapse as total failure.
C. Protective factor assessment: Asking about supportive adults, activities, strengths, and settings that can reinforce safer choices. / Relapse prevention: Identifying triggers and rehearsal of a response plan without framing a lapse as total failure.
D. Protective factor assessment: Asking about supportive adults, activities, strengths, and settings that can reinforce safer choices. / Relapse prevention: Mapping supportive relationships, practical resources, and meaningful roles that can aid recovery.

0749. A play therapist is asked to evaluate a proposed service for a young person aged 13 in the telehealth session. The defining feature is using a validated youth-appropriate screen as an entry point rather than treating it as a diagnosis. Which concept fits?

A. Relapse prevention
B. Protective factor assessment
C. Adolescent substance-use screening
D. Co-occurring conditions

0750. In the supervision meeting, a school counselor explains why a young person aged 13 would benefit from asking about supportive adults, activities, strengths, and settings that can reinforce safer choices. Which course concept underpins the explanation?

A. Recovery capital
B. Adolescent substance-use screening
C. Relapse prevention
D. Protective factor assessment

0751. In adolescent substance-use counseling, choose the practice comparison that best separates Adolescent substance-use screening from Relapse prevention.

A. Adolescent substance-use screening: Using a validated youth-appropriate screen as an entry point rather than treating it as a diagnosis. / Relapse prevention: Mapping supportive relationships, practical resources, and meaningful roles that can aid recovery.
B. Adolescent substance-use screening: Identifying triggers and rehearsal of a response plan without framing a lapse as total failure. / Relapse prevention: Using a validated youth-appropriate screen as an entry point rather than treating it as a diagnosis.
C. Adolescent substance-use screening: Eliciting the adolescent's reasons for and against change and reinforcing autonomy. / Relapse prevention: Identifying triggers and rehearsal of a response plan without framing a lapse as total failure.
D. Adolescent substance-use screening: Using a validated youth-appropriate screen as an entry point rather than treating it as a diagnosis. / Relapse prevention: Identifying triggers and rehearsal of a response plan without framing a lapse as total failure.

0752. In adolescent substance-use counseling, an interdisciplinary team reviews a high-school student's case at the caregiver consultation. The behavior specialist recommends identifying triggers and rehearsal of a response plan without framing a lapse as total failure. Which course concept best fits?

A. Motivational enhancement
B. Developmental framing
C. Relapse prevention
D. SBIRT

0753. A supervisor asks for an applied contrast between Adolescent substance-use screening and Developmental framing. Which option fits?

A. Adolescent substance-use screening: Linking screening results to a brief conversation and appropriate referral when indicated. / Developmental framing: Exploring peer influence and emerging independence without assuming all adolescent use has the same meaning.
B. Adolescent substance-use screening: Using a validated youth-appropriate screen as an entry point rather than treating it as a diagnosis. / Developmental framing: Identifying triggers and rehearsal of a response plan without framing a lapse as total failure.
C. Adolescent substance-use screening: Using a validated youth-appropriate screen as an entry point rather than treating it as a diagnosis. / Developmental framing: Exploring peer influence and emerging independence without assuming all adolescent use has the same meaning.
D. Adolescent substance-use screening: Exploring peer influence and emerging independence without assuming all adolescent use has the same meaning. / Developmental framing: Using a validated youth-appropriate screen as an entry point rather than treating it as a diagnosis.

0754. Which statement accurately contrasts the course concepts Adolescent substance-use screening and Harm reduction?

A. Adolescent substance-use screening: A collaborative strategy that strengthens a person's own motivation and commitment to change. / Harm reduction: Practical strategies intended to reduce substance-related risks without requiring immediate abstinence as a precondition for care.
B. Adolescent substance-use screening: A brief, age-appropriate process to identify possible substance-related risk and need for fuller assessment. / Harm reduction: Practical strategies intended to reduce substance-related risks without requiring immediate abstinence as a precondition for care.
C. Adolescent substance-use screening: Practical strategies intended to reduce substance-related risks without requiring immediate abstinence as a precondition for care. / Harm reduction: A brief, age-appropriate process to identify possible substance-related risk and need for fuller assessment.
D. Adolescent substance-use screening: A brief, age-appropriate process to identify possible substance-related risk and need for fuller assessment. / Harm reduction: Privacy rules for adolescent substance services that depend on jurisdiction, consent, and service context.

0755. While supporting a client in late adolescence in the youth group, a family therapist adopts this practice: linking screening results to a brief conversation and appropriate referral when indicated. Which concept best explains the choice?

A. Co-occurring conditions
B. SBIRT
C. Harm reduction
D. Recovery capital

0756. Which applied comparison correctly identifies what belongs to Harm reduction versus Developmental framing?

A. Harm reduction: Discussing realistic safety steps while continuing to support the adolescent's goals and options. / Developmental framing: Explaining privacy and its exceptions accurately using current local law and policy before asking sensitive questions.
B. Harm reduction: Discussing realistic safety steps while continuing to support the adolescent's goals and options. / Developmental framing: Exploring peer influence and emerging independence without assuming all adolescent use has the same meaning.
C. Harm reduction: Exploring peer influence and emerging independence without assuming all adolescent use has the same meaning. / Developmental framing: Discussing realistic safety steps while continuing to support the adolescent's goals and options.
D. Harm reduction: Identifying triggers and rehearsal of a response plan without framing a lapse as total failure. / Developmental framing: Exploring peer influence and emerging independence without assuming all adolescent use has the same meaning.

0757. Which option is the clearest practical expression of Confidentiality and substance care?

A. Explaining privacy and its exceptions accurately using current local law and policy before asking sensitive questions.
B. Identifying triggers and rehearsal of a response plan without framing a lapse as total failure.
C. Eliciting the adolescent's reasons for and against change and reinforcing autonomy.
D. Asking about supportive adults, activities, strengths, and settings that can reinforce safer choices.

0758. In the multidisciplinary case conference, a youth worker describes the most appropriate support for a child aged 6 as using a validated youth-appropriate screen as an entry point rather than treating it as a diagnosis. Which framework is being applied?

A. Protective factor assessment
B. Motivational enhancement
C. Adolescent substance-use screening
D. Confidentiality and substance care

0759. A support meeting for a child aged 6 includes a play therapist in the after-school program. The practice under consideration is explaining privacy and its exceptions accurately using current local law and policy before asking sensitive questions. Which concept guides it?

A. Relapse prevention
B. Recovery capital
C. Confidentiality and substance care
D. SBIRT

0760. In adolescent substance-use counseling, consider a client in early adolescence receiving help in the child guidance clinic. The school counselor focuses on identifying triggers and rehearsal of a response plan without framing a lapse as total failure. Which term best describes the guiding idea?

A. Relapse prevention
B. Co-occurring conditions
C. Protective factor assessment
D. Developmental framing

0761. In adolescent substance-use counseling, what is the central meaning of Relapse prevention?

A. Planning for high-risk situations, cravings, coping responses, and support following a return to use or lapse.
B. Practical strategies intended to reduce substance-related risks without requiring immediate abstinence as a precondition for care.
C. Privacy rules for adolescent substance services that depend on jurisdiction, consent, and service context.
D. A collaborative strategy that strengthens a person's own motivation and commitment to change.

0762. In the clinical planning session, the agreed focus for a community practitioner working with a teenage client is explaining privacy and its exceptions accurately using current local law and policy before asking sensitive questions. Which concept names this focus?

A. Confidentiality and substance care
B. Harm reduction
C. Recovery capital
D. Adolescent substance-use screening

0763. How should a practitioner distinguish the applications of Protective factor assessment and Confidentiality and substance care?

A. Protective factor assessment: Mapping supportive relationships, practical resources, and meaningful roles that can aid recovery. / Confidentiality and substance care: Explaining privacy and its exceptions accurately using current local law and policy before asking sensitive questions.
B. Protective factor assessment: Asking about supportive adults, activities, strengths, and settings that can reinforce safer choices. / Confidentiality and substance care: Explaining privacy and its exceptions accurately using current local law and policy before asking sensitive questions.
C. Protective factor assessment: Explaining privacy and its exceptions accurately using current local law and policy before asking sensitive questions. / Confidentiality and substance care: Asking about supportive adults, activities, strengths, and settings that can reinforce safer choices.
D. Protective factor assessment: Asking about supportive adults, activities, strengths, and settings that can reinforce safer choices. / Confidentiality and substance care: Exploring peer influence and emerging independence without assuming all adolescent use has the same meaning.

0764. A doctoral student reads the following description. Which concept does it define? A collaborative strategy that strengthens a person's own motivation and commitment to change.

A. Confidentiality and substance care
B. Motivational enhancement
C. Adolescent substance-use screening
D. Harm reduction

0765. In the parent meeting, a team asks how a youth worker can support a child aged 14. One proposed action is discussing realistic safety steps while continuing to support the adolescent's goals and options. Which idea does it represent?

A. Protective factor assessment
B. Harm reduction
C. Confidentiality and substance care
D. Co-occurring conditions

0766. A support meeting for a young person aged 13 includes a school support specialist in the classroom support meeting. The practice under consideration is assessing anxiety, mood, trauma, and substance use together while coordinating appropriate care. Which concept guides it?

A. Adolescent substance-use screening
B. Relapse prevention
C. Co-occurring conditions
D. Developmental framing

0767. Which comparison correctly distinguishes Protective factor assessment from Co-occurring conditions?

A. Protective factor assessment: Identification of resources and conditions that support reduced use, safety, and healthy development. / Co-occurring conditions: A brief, age-appropriate process to identify possible substance-related risk and need for fuller assessment.
B. Protective factor assessment: Substance-related concerns that occur alongside mental-health or other health conditions. / Co-occurring conditions: Identification of resources and conditions that support reduced use, safety, and healthy development.
C. Protective factor assessment: Personal, social, and community resources that can support recovery and sustained change. / Co-occurring conditions: Substance-related concerns that occur alongside mental-health or other health conditions.
D. Protective factor assessment: Identification of resources and conditions that support reduced use, safety, and healthy development. / Co-occurring conditions: Substance-related concerns that occur alongside mental-health or other health conditions.

0768. Which option preserves the correct meaning of both Co-occurring conditions and Confidentiality and substance care?

A. Co-occurring conditions: Planning for high-risk situations, cravings, coping responses, and support following a return to use or lapse. / Confidentiality and substance care: Privacy rules for adolescent substance services that depend on jurisdiction, consent, and service context.
B. Co-occurring conditions: Substance-related concerns that occur alongside mental-health or other health conditions. / Confidentiality and substance care: Privacy rules for adolescent substance services that depend on jurisdiction, consent, and service context.
C. Co-occurring conditions: Substance-related concerns that occur alongside mental-health or other health conditions. / Confidentiality and substance care: A brief, age-appropriate process to identify possible substance-related risk and need for fuller assessment.
D. Co-occurring conditions: Privacy rules for adolescent substance services that depend on jurisdiction, consent, and service context. / Confidentiality and substance care: Substance-related concerns that occur alongside mental-health or other health conditions.

0769. Which option correctly matches each concept to its practice focus: Co-occurring conditions and Confidentiality and substance care?

A. Co-occurring conditions: Explaining privacy and its exceptions accurately using current local law and policy before asking sensitive questions. / Confidentiality and substance care: Assessing anxiety, mood, trauma, and substance use together while coordinating appropriate care.
B. Co-occurring conditions: Assessing anxiety, mood, trauma, and substance use together while coordinating appropriate care. / Confidentiality and substance care: Explaining privacy and its exceptions accurately using current local law and policy before asking sensitive questions.
C. Co-occurring conditions: Identifying triggers and rehearsal of a response plan without framing a lapse as total failure. / Confidentiality and substance care: Explaining privacy and its exceptions accurately using current local law and policy before asking sensitive questions.
D. Co-occurring conditions: Assessing anxiety, mood, trauma, and substance use together while coordinating appropriate care. / Confidentiality and substance care: Using a validated youth-appropriate screen as an entry point rather than treating it as a diagnosis.

0770. Which choice aligns each practice with the correct idea, Harm reduction or Recovery capital?

A. Harm reduction: Assessing anxiety, mood, trauma, and substance use together while coordinating appropriate care. / Recovery capital: Mapping supportive relationships, practical resources, and meaningful roles that can aid recovery.
B. Harm reduction: Mapping supportive relationships, practical resources, and meaningful roles that can aid recovery. / Recovery capital: Discussing realistic safety steps while continuing to support the adolescent's goals and options.
C. Harm reduction: Discussing realistic safety steps while continuing to support the adolescent's goals and options. / Recovery capital: Eliciting the adolescent's reasons for and against change and reinforcing autonomy.
D. Harm reduction: Discussing realistic safety steps while continuing to support the adolescent's goals and options. / Recovery capital: Mapping supportive relationships, practical resources, and meaningful roles that can aid recovery.

0771. Identify the most precise label for this idea: Privacy rules for adolescent substance services that depend on jurisdiction, consent, and service context.

A. Recovery capital
B. Developmental framing
C. Adolescent substance-use screening
D. Confidentiality and substance care

0772. Choose the practice comparison that best separates Adolescent substance-use screening from Co-occurring conditions.

A. Adolescent substance-use screening: Using a validated youth-appropriate screen as an entry point rather than treating it as a diagnosis. / Co-occurring conditions: Identifying triggers and rehearsal of a response plan without framing a lapse as total failure.
B. Adolescent substance-use screening: Using a validated youth-appropriate screen as an entry point rather than treating it as a diagnosis. / Co-occurring conditions: Assessing anxiety, mood, trauma, and substance use together while coordinating appropriate care.
C. Adolescent substance-use screening: Linking screening results to a brief conversation and appropriate referral when indicated. / Co-occurring conditions: Assessing anxiety, mood, trauma, and substance use together while coordinating appropriate care.
D. Adolescent substance-use screening: Assessing anxiety, mood, trauma, and substance use together while coordinating appropriate care. / Co-occurring conditions: Using a validated youth-appropriate screen as an entry point rather than treating it as a diagnosis.

0773. A case conference asks for a distinction between Motivational enhancement and Confidentiality and substance care. Which answer is sound?

A. Motivational enhancement: A collaborative strategy that strengthens a person's own motivation and commitment to change. / Confidentiality and substance care: Substance-related concerns that occur alongside mental-health or other health conditions.
B. Motivational enhancement: A collaborative strategy that strengthens a person's own motivation and commitment to change. / Confidentiality and substance care: Privacy rules for adolescent substance services that depend on jurisdiction, consent, and service context.
C. Motivational enhancement: Privacy rules for adolescent substance services that depend on jurisdiction, consent, and service context. / Confidentiality and substance care: A collaborative strategy that strengthens a person's own motivation and commitment to change.
D. Motivational enhancement: Screening, brief intervention, and referral to treatment, a structured pathway for responding to substance-use risk. / Confidentiality and substance care: Privacy rules for adolescent substance services that depend on jurisdiction, consent, and service context.

0774. In adolescent substance-use counseling, a trainee must explain Relapse prevention. Which answer is accurate?

A. Practical strategies intended to reduce substance-related risks without requiring immediate abstinence as a precondition for care.
B. Privacy rules for adolescent substance services that depend on jurisdiction, consent, and service context.
C. Planning for high-risk situations, cravings, coping responses, and support following a return to use or lapse.
D. Personal, social, and community resources that can support recovery and sustained change.

0775. In the clinical planning session, a caregiver working with a counselor is considering this approach for a student aged 17: linking screening results to a brief conversation and appropriate referral when indicated. Which framework does it represent?

A. Developmental framing
B. Confidentiality and substance care
C. SBIRT
D. Harm reduction

0776. A consultant is preparing a follow-up plan for a client in early adolescence in the supervision meeting. The plan calls for eliciting the adolescent's reasons for and against change and reinforcing autonomy. Which concept names this approach?

A. Harm reduction
B. Co-occurring conditions
C. Motivational enhancement
D. Developmental framing

0777. A team must select a support approach for a school-age child at the community service agency. The case coordinator recommends explaining privacy and its exceptions accurately using current local law and policy before asking sensitive questions. Which idea is most relevant?

A. Co-occurring conditions
B. SBIRT
C. Harm reduction
D. Confidentiality and substance care

0778. For a young person aged 18 seen in the youth group, the community practitioner recommends a plan built around eliciting the adolescent's reasons for and against change and reinforcing autonomy. Which concept is reflected?

A. Relapse prevention
B. Recovery capital
C. Motivational enhancement
D. Co-occurring conditions

0779. A doctoral student reads the following description. Which concept does it define? A brief, age-appropriate process to identify possible substance-related risk and need for fuller assessment.

A. Protective factor assessment
B. Adolescent substance-use screening
C. Harm reduction
D. SBIRT

0780. In a professional consultation about a high-school student, the member of a clinical team describes this response in the community service agency: assessing anxiety, mood, trauma, and substance use together while coordinating appropriate care. Which term is most apt?

A. Harm reduction
B. Protective factor assessment
C. Co-occurring conditions
D. Relapse prevention

0781. A team must select a support approach for a child aged 11 at the family session. The family therapist recommends using a validated youth-appropriate screen as an entry point rather than treating it as a diagnosis. Which idea is most relevant?

A. Relapse prevention
B. Adolescent substance-use screening
C. Confidentiality and substance care
D. Developmental framing

0782. A case conference asks for a distinction between Motivational enhancement and Developmental framing. Which answer is sound?

A. Motivational enhancement: Substance-related concerns that occur alongside mental-health or other health conditions. / Developmental framing: Understanding substance use in relation to adolescent development, peer context, access, and changing autonomy.
B. Motivational enhancement: A collaborative strategy that strengthens a person's own motivation and commitment to change. / Developmental framing: Understanding substance use in relation to adolescent development, peer context, access, and changing autonomy.
C. Motivational enhancement: Understanding substance use in relation to adolescent development, peer context, access, and changing autonomy. / Developmental framing: A collaborative strategy that strengthens a person's own motivation and commitment to change.
D. Motivational enhancement: A collaborative strategy that strengthens a person's own motivation and commitment to change. / Developmental framing: Planning for high-risk situations, cravings, coping responses, and support following a return to use or lapse.

0783. In adolescent substance-use counseling, in the child guidance clinic, a school counselor describes the most appropriate support for a client in early adolescence as identifying triggers and rehearsal of a response plan without framing a lapse as total failure. Which framework is being applied?

A. Motivational enhancement
B. Relapse prevention
C. Recovery capital
D. Adolescent substance-use screening

0784. A consultant and a child aged 6 are discussing support in the school counseling office. The selected practice is linking screening results to a brief conversation and appropriate referral when indicated. Which concept does this demonstrate?

A. Developmental framing
B. SBIRT
C. Recovery capital
D. Co-occurring conditions

0785. At a case-planning meeting, the behavior specialist proposes exploring peer influence and emerging independence without assuming all adolescent use has the same meaning. for a young adolescent client seen in the outpatient clinic. Which concept does this illustrate?

A. SBIRT
B. Confidentiality and substance care
C. Harm reduction
D. Developmental framing

0786. In adolescent substance-use counseling, a team must select a support approach for a student aged 17 at the outpatient clinic. The school-based clinician recommends identifying triggers and rehearsal of a response plan without framing a lapse as total failure. Which idea is most relevant?

A. Confidentiality and substance care
B. Recovery capital
C. Co-occurring conditions
D. Relapse prevention

0787. A research trainee describes an intervention for a school-age child in the community mental-health service, centered on linking screening results to a brief conversation and appropriate referral when indicated. Which named idea is most relevant?

A. Developmental framing
B. Recovery capital
C. SBIRT
D. Confidentiality and substance care

0788. A trainee must choose a practice that exemplifies Co-occurring conditions. Which action is the best fit?

A. Exploring peer influence and emerging independence without assuming all adolescent use has the same meaning.
B. Mapping supportive relationships, practical resources, and meaningful roles that can aid recovery.
C. Assessing anxiety, mood, trauma, and substance use together while coordinating appropriate care.
D. Eliciting the adolescent's reasons for and against change and reinforcing autonomy.

0789. In adolescent substance-use counseling, how are SBIRT and Relapse prevention most accurately differentiated in this curriculum?

A. SBIRT: Screening, brief intervention, and referral to treatment, a structured pathway for responding to substance-use risk. / Relapse prevention: Understanding substance use in relation to adolescent development, peer context, access, and changing autonomy.
B. SBIRT: Screening, brief intervention, and referral to treatment, a structured pathway for responding to substance-use risk. / Relapse prevention: Planning for high-risk situations, cravings, coping responses, and support following a return to use or lapse.
C. SBIRT: Planning for high-risk situations, cravings, coping responses, and support following a return to use or lapse. / Relapse prevention: Screening, brief intervention, and referral to treatment, a structured pathway for responding to substance-use risk.
D. SBIRT: Substance-related concerns that occur alongside mental-health or other health conditions. / Relapse prevention: Planning for high-risk situations, cravings, coping responses, and support following a return to use or lapse.

0790. Consider a child aged 6 receiving help in the multidisciplinary case conference. The youth worker focuses on using a validated youth-appropriate screen as an entry point rather than treating it as a diagnosis. Which term best describes the guiding idea?

A. Adolescent substance-use screening
B. Recovery capital
C. SBIRT
D. Motivational enhancement

0791. A supervisor asks for an applied contrast between Co-occurring conditions and Recovery capital. Which option fits?

A. Co-occurring conditions: Mapping supportive relationships, practical resources, and meaningful roles that can aid recovery. / Recovery capital: Assessing anxiety, mood, trauma, and substance use together while coordinating appropriate care.
B. Co-occurring conditions: Asking about supportive adults, activities, strengths, and settings that can reinforce safer choices. / Recovery capital: Mapping supportive relationships, practical resources, and meaningful roles that can aid recovery.
C. Co-occurring conditions: Assessing anxiety, mood, trauma, and substance use together while coordinating appropriate care. / Recovery capital: Exploring peer influence and emerging independence without assuming all adolescent use has the same meaning.
D. Co-occurring conditions: Assessing anxiety, mood, trauma, and substance use together while coordinating appropriate care. / Recovery capital: Mapping supportive relationships, practical resources, and meaningful roles that can aid recovery.

0792. Which choice aligns each practice with the correct idea, Motivational enhancement or Protective factor assessment?

A. Motivational enhancement: Linking screening results to a brief conversation and appropriate referral when indicated. / Protective factor assessment: Asking about supportive adults, activities, strengths, and settings that can reinforce safer choices.
B. Motivational enhancement: Eliciting the adolescent's reasons for and against change and reinforcing autonomy. / Protective factor assessment: Using a validated youth-appropriate screen as an entry point rather than treating it as a diagnosis.
C. Motivational enhancement: Asking about supportive adults, activities, strengths, and settings that can reinforce safer choices. / Protective factor assessment: Eliciting the adolescent's reasons for and against change and reinforcing autonomy.
D. Motivational enhancement: Eliciting the adolescent's reasons for and against change and reinforcing autonomy. / Protective factor assessment: Asking about supportive adults, activities, strengths, and settings that can reinforce safer choices.

0793. Which pair of actions illustrates Confidentiality and substance care and Developmental framing, respectively?

A. Confidentiality and substance care: Mapping supportive relationships, practical resources, and meaningful roles that can aid recovery. / Developmental framing: Exploring peer influence and emerging independence without assuming all adolescent use has the same meaning.
B. Confidentiality and substance care: Exploring peer influence and emerging independence without assuming all adolescent use has the same meaning. / Developmental framing: Explaining privacy and its exceptions accurately using current local law and policy before asking sensitive questions.
C. Confidentiality and substance care: Explaining privacy and its exceptions accurately using current local law and policy before asking sensitive questions. / Developmental framing: Linking screening results to a brief conversation and appropriate referral when indicated.
D. Confidentiality and substance care: Explaining privacy and its exceptions accurately using current local law and policy before asking sensitive questions. / Developmental framing: Exploring peer influence and emerging independence without assuming all adolescent use has the same meaning.

0794. Which option pairs the definitions of Harm reduction and Protective factor assessment correctly, in that order?

A. Harm reduction: Practical strategies intended to reduce substance-related risks without requiring immediate abstinence as a precondition for care. / Protective factor assessment: Personal, social, and community resources that can support recovery and sustained change.
B. Harm reduction: Practical strategies intended to reduce substance-related risks without requiring immediate abstinence as a precondition for care. / Protective factor assessment: Identification of resources and conditions that support reduced use, safety, and healthy development.
C. Harm reduction: Identification of resources and conditions that support reduced use, safety, and healthy development. / Protective factor assessment: Practical strategies intended to reduce substance-related risks without requiring immediate abstinence as a precondition for care.
D. Harm reduction: Screening, brief intervention, and referral to treatment, a structured pathway for responding to substance-use risk. / Protective factor assessment: Identification of resources and conditions that support reduced use, safety, and healthy development.

0795. In the telehealth session, a group facilitator describes the most appropriate support for a student aged 12 as explaining privacy and its exceptions accurately using current local law and policy before asking sensitive questions. Which framework is being applied?

A. Confidentiality and substance care
B. Developmental framing
C. Protective factor assessment
D. SBIRT

0796. For a child aged 8 in the telehealth session, a behavior specialist makes this practice the immediate priority: assessing anxiety, mood, trauma, and substance use together while coordinating appropriate care. Which concept fits best?

A. Motivational enhancement
B. Co-occurring conditions
C. Harm reduction
D. Confidentiality and substance care

0797. A behavior specialist reviews a plan for a child aged 6 in the community mental-health service. The plan emphasizes eliciting the adolescent's reasons for and against change and reinforcing autonomy. Which course idea does this reflect?

A. Motivational enhancement
B. Recovery capital
C. Protective factor assessment
D. SBIRT

0798. A service navigator describes an intervention for a student aged 17 in the supervision meeting, centered on assessing anxiety, mood, trauma, and substance use together while coordinating appropriate care. Which named idea is most relevant?

A. Developmental framing
B. Co-occurring conditions
C. Relapse prevention
D. SBIRT

0799. In a professional consultation about a child aged 14, the member of a clinical team describes this response in the student-support meeting: using a validated youth-appropriate screen as an entry point rather than treating it as a diagnosis. Which term is most apt?

A. Developmental framing
B. Confidentiality and substance care
C. Harm reduction
D. Adolescent substance-use screening

0800. A supervisor asks for an applied contrast between Adolescent substance-use screening and Motivational enhancement. Which option fits?

A. Adolescent substance-use screening: Eliciting the adolescent's reasons for and against change and reinforcing autonomy. / Motivational enhancement: Using a validated youth-appropriate screen as an entry point rather than treating it as a diagnosis.
B. Adolescent substance-use screening: Using a validated youth-appropriate screen as an entry point rather than treating it as a diagnosis. / Motivational enhancement: Exploring peer influence and emerging independence without assuming all adolescent use has the same meaning.
C. Adolescent substance-use screening: Asking about supportive adults, activities, strengths, and settings that can reinforce safer choices. / Motivational enhancement: Eliciting the adolescent's reasons for and against change and reinforcing autonomy.
D. Adolescent substance-use screening: Using a validated youth-appropriate screen as an entry point rather than treating it as a diagnosis. / Motivational enhancement: Eliciting the adolescent's reasons for and against change and reinforcing autonomy.

0801. Which named construct is captured by this account? Substance-related concerns that occur alongside mental-health or other health conditions.

A. Harm reduction
B. Relapse prevention
C. Co-occurring conditions
D. Recovery capital

0802. A youth worker is explaining a choice to a child aged 11 and caregiver in the family resource center. The choice centers on linking screening results to a brief conversation and appropriate referral when indicated. Which idea is illustrated?

A. SBIRT
B. Developmental framing
C. Relapse prevention
D. Motivational enhancement

0803. Which option preserves the correct meaning of both Harm reduction and Protective factor assessment?

A. Harm reduction: Practical strategies intended to reduce substance-related risks without requiring immediate abstinence as a precondition for care. / Protective factor assessment: Personal, social, and community resources that can support recovery and sustained change.
B. Harm reduction: Identification of resources and conditions that support reduced use, safety, and healthy development. / Protective factor assessment: Practical strategies intended to reduce substance-related risks without requiring immediate abstinence as a precondition for care.
C. Harm reduction: Practical strategies intended to reduce substance-related risks without requiring immediate abstinence as a precondition for care. / Protective factor assessment: Identification of resources and conditions that support reduced use, safety, and healthy development.
D. Harm reduction: Screening, brief intervention, and referral to treatment, a structured pathway for responding to substance-use risk. / Protective factor assessment: Identification of resources and conditions that support reduced use, safety, and healthy development.

0804. In adolescent substance-use counseling, in the family session, the agreed focus for a therapist working with a child aged 7 is identifying triggers and rehearsal of a response plan without framing a lapse as total failure. Which concept names this focus?

A. Co-occurring conditions
B. Harm reduction
C. Developmental framing
D. Relapse prevention

0805. In a supervision quiz, how should Motivational enhancement be distinguished from Protective factor assessment?

A. Motivational enhancement: A collaborative strategy that strengthens a person's own motivation and commitment to change. / Protective factor assessment: Identification of resources and conditions that support reduced use, safety, and healthy development.
B. Motivational enhancement: A collaborative strategy that strengthens a person's own motivation and commitment to change. / Protective factor assessment: A brief, age-appropriate process to identify possible substance-related risk and need for fuller assessment.
C. Motivational enhancement: Identification of resources and conditions that support reduced use, safety, and healthy development. / Protective factor assessment: A collaborative strategy that strengthens a person's own motivation and commitment to change.
D. Motivational enhancement: Screening, brief intervention, and referral to treatment, a structured pathway for responding to substance-use risk. / Protective factor assessment: Identification of resources and conditions that support reduced use, safety, and healthy development.

0806. In adolescent substance-use counseling, in the family resource center, a team asks how a group facilitator can support a adolescent student. One proposed action is identifying triggers and rehearsal of a response plan without framing a lapse as total failure. Which idea does it represent?

A. Recovery capital
B. Relapse prevention
C. Protective factor assessment
D. SBIRT

0807. In the youth group, the agreed focus for a community practitioner working with a young person aged 18 is eliciting the adolescent's reasons for and against change and reinforcing autonomy. Which concept names this focus?

A. Developmental framing
B. Relapse prevention
C. Recovery capital
D. Motivational enhancement

0808. In adolescent substance-use counseling, which option correctly matches each concept to its practice focus: Relapse prevention and Developmental framing?

A. Relapse prevention: Identifying triggers and rehearsal of a response plan without framing a lapse as total failure. / Developmental framing: Asking about supportive adults, activities, strengths, and settings that can reinforce safer choices.
B. Relapse prevention: Identifying triggers and rehearsal of a response plan without framing a lapse as total failure. / Developmental framing: Exploring peer influence and emerging independence without assuming all adolescent use has the same meaning.
C. Relapse prevention: Discussing realistic safety steps while continuing to support the adolescent's goals and options. / Developmental framing: Exploring peer influence and emerging independence without assuming all adolescent use has the same meaning.
D. Relapse prevention: Exploring peer influence and emerging independence without assuming all adolescent use has the same meaning. / Developmental framing: Identifying triggers and rehearsal of a response plan without framing a lapse as total failure.

0809. A school counselor is explaining a choice to a preadolescent child and caregiver in the school counseling office. The choice centers on explaining privacy and its exceptions accurately using current local law and policy before asking sensitive questions. Which idea is illustrated?

A. Recovery capital
B. Adolescent substance-use screening
C. Co-occurring conditions
D. Confidentiality and substance care

0810. A community practitioner describes an intervention for a young person aged 10 in the child guidance clinic, centered on asking about supportive adults, activities, strengths, and settings that can reinforce safer choices. Which named idea is most relevant?

A. Co-occurring conditions
B. Relapse prevention
C. Protective factor assessment
D. Adolescent substance-use screening

0811. In a supervision quiz, how should Harm reduction be distinguished from Confidentiality and substance care?

A. Harm reduction: Screening, brief intervention, and referral to treatment, a structured pathway for responding to substance-use risk. / Confidentiality and substance care: Privacy rules for adolescent substance services that depend on jurisdiction, consent, and service context.
B. Harm reduction: Practical strategies intended to reduce substance-related risks without requiring immediate abstinence as a precondition for care. / Confidentiality and substance care: Personal, social, and community resources that can support recovery and sustained change.
C. Harm reduction: Privacy rules for adolescent substance services that depend on jurisdiction, consent, and service context. / Confidentiality and substance care: Practical strategies intended to reduce substance-related risks without requiring immediate abstinence as a precondition for care.
D. Harm reduction: Practical strategies intended to reduce substance-related risks without requiring immediate abstinence as a precondition for care. / Confidentiality and substance care: Privacy rules for adolescent substance services that depend on jurisdiction, consent, and service context.

0812. Which statement accurately contrasts the course concepts Confidentiality and substance care and Developmental framing?

A. Confidentiality and substance care: Privacy rules for adolescent substance services that depend on jurisdiction, consent, and service context. / Developmental framing: Screening, brief intervention, and referral to treatment, a structured pathway for responding to substance-use risk.
B. Confidentiality and substance care: Privacy rules for adolescent substance services that depend on jurisdiction, consent, and service context. / Developmental framing: Understanding substance use in relation to adolescent development, peer context, access, and changing autonomy.
C. Confidentiality and substance care: Personal, social, and community resources that can support recovery and sustained change. / Developmental framing: Understanding substance use in relation to adolescent development, peer context, access, and changing autonomy.
D. Confidentiality and substance care: Understanding substance use in relation to adolescent development, peer context, access, and changing autonomy. / Developmental framing: Privacy rules for adolescent substance services that depend on jurisdiction, consent, and service context.
