0430. A youth worker is asked to justify a plan for a child aged 7 in the youth advocacy program. It calls for teaching students to interpret feedback and plan a concrete revision. Which concept provides the rationale?

A. Culturally responsive pedagogy
B. Experiential learning
C. Feedback literacy
D. Metacognition

0431. A school counselor is asked to justify a plan for a young person aged 18 in the family session. It calls for modeling a skill and gradually reducing prompts as learners gain mastery. Which concept provides the rationale?

A. Experiential learning
B. Scaffolding in instruction
C. Formative assessment
D. Constructive alignment

0432. Which choice aligns each practice with the correct idea, Metacognition or Experiential learning?

A. Metacognition: Having students explain which strategy helped and what they will change next time. / Experiential learning: Evaluating mastery after a course unit concludes.
B. Metacognition: Pairing an activity with structured reflection and transfer to a new situation. / Experiential learning: Having students explain which strategy helped and what they will change next time.
C. Metacognition: Having students explain which strategy helped and what they will change next time. / Experiential learning: Pairing an activity with structured reflection and transfer to a new situation.
D. Metacognition: Modeling a skill and gradually reducing prompts as learners gain mastery. / Experiential learning: Pairing an activity with structured reflection and transfer to a new situation.

0433. An interdisciplinary team reviews a child of elementary-school age's case at the after-school program. The school support specialist recommends offering accessible ways to encounter material and demonstrate learning. Which course concept best fits?

A. Universal Design for Learning
B. Formative assessment
C. Summative assessment
D. Metacognition

0434. A child aged 8 and a consultant are reviewing goals in the clinical planning session. The agreed action is connecting examples to students' contexts and checking whose perspectives are represented. Which principle best accounts for it?

A. Retrieval practice
B. Experiential learning
C. Culturally responsive pedagogy
D. Scaffolding in instruction

0435. Which professional action most closely applies Constructive alignment?

A. Evaluating mastery after a course unit concludes.
B. Modeling a skill and gradually reducing prompts as learners gain mastery.
C. Checking that an assessment measures the skill stated in the course outcome.
D. Having students explain which strategy helped and what they will change next time.

0436. Select the best explanation of Constructive alignment.

A. Evaluation of learning at the end of an instructional period or unit.
B. Alignment among learning outcomes, teaching and learning activities, and assessment.
C. Learners' capacity to understand, evaluate, and use feedback to improve work.
D. Awareness and regulation of one's own learning, including planning, monitoring, and evaluation.

0437. A supervisor asks for an applied contrast between Scaffolding in instruction and Metacognition. Which option fits?

A. Scaffolding in instruction: Modeling a skill and gradually reducing prompts as learners gain mastery. / Metacognition: Having students explain which strategy helped and what they will change next time.
B. Scaffolding in instruction: Modeling a skill and gradually reducing prompts as learners gain mastery. / Metacognition: Evaluating mastery after a course unit concludes.
C. Scaffolding in instruction: Having students explain which strategy helped and what they will change next time. / Metacognition: Modeling a skill and gradually reducing prompts as learners gain mastery.
D. Scaffolding in instruction: Connecting examples to students' contexts and checking whose perspectives are represented. / Metacognition: Having students explain which strategy helped and what they will change next time.

0438. For a client in early adolescence in the outpatient clinic, a play therapist makes this practice the immediate priority: evaluating mastery after a course unit concludes. Which concept fits best?

A. Constructive alignment
B. Scaffolding in instruction
C. Metacognition
D. Summative assessment

0439. At the parent meeting, a program coordinator reviews whether a plan for a child aged 7 is appropriate. The relevant practice is using an exit question to decide what to reteach in the next class. Which concept is tested?

A. Formative assessment
B. Universal Design for Learning
C. Constructive alignment
D. Culturally responsive pedagogy

0440. An interdisciplinary team reviews a adolescent student's case at the multidisciplinary case conference. The counselor recommends teaching students to interpret feedback and plan a concrete revision. Which course concept best fits?

A. Retrieval practice
B. Feedback literacy
C. Universal Design for Learning
D. Culturally responsive pedagogy

0441. At the classroom support meeting, a therapist reviews whether a plan for a young adolescent client is appropriate. The relevant practice is connecting examples to students' contexts and checking whose perspectives are represented. Which concept is tested?

A. Scaffolding in instruction
B. Retrieval practice
C. Culturally responsive pedagogy
D. Feedback literacy

0442. Which paired example correctly applies Formative assessment first and Culturally responsive pedagogy second?

A. Formative assessment: Using an exit question to decide what to reteach in the next class. / Culturally responsive pedagogy: Offering accessible ways to encounter material and demonstrate learning.
B. Formative assessment: Pairing an activity with structured reflection and transfer to a new situation. / Culturally responsive pedagogy: Connecting examples to students' contexts and checking whose perspectives are represented.
C. Formative assessment: Using an exit question to decide what to reteach in the next class. / Culturally responsive pedagogy: Connecting examples to students' contexts and checking whose perspectives are represented.
D. Formative assessment: Connecting examples to students' contexts and checking whose perspectives are represented. / Culturally responsive pedagogy: Using an exit question to decide what to reteach in the next class.

0443. What is the central meaning of Feedback literacy?

A. Learners' capacity to understand, evaluate, and use feedback to improve work.
B. Teaching that draws on learners' cultural knowledge and experiences while maintaining high expectations and belonging.
C. Evaluation of learning at the end of an instructional period or unit.
D. Alignment among learning outcomes, teaching and learning activities, and assessment.

0444. A supervisor asks for an applied contrast between Constructive alignment and Culturally responsive pedagogy. Which option fits?

A. Constructive alignment: Connecting examples to students' contexts and checking whose perspectives are represented. / Culturally responsive pedagogy: Checking that an assessment measures the skill stated in the course outcome.
B. Constructive alignment: Checking that an assessment measures the skill stated in the course outcome. / Culturally responsive pedagogy: Teaching students to interpret feedback and plan a concrete revision.
C. Constructive alignment: Evaluating mastery after a course unit concludes. / Culturally responsive pedagogy: Connecting examples to students' contexts and checking whose perspectives are represented.
D. Constructive alignment: Checking that an assessment measures the skill stated in the course outcome. / Culturally responsive pedagogy: Connecting examples to students' contexts and checking whose perspectives are represented.

0445. Which pair of actions illustrates Universal Design for Learning and Scaffolding in instruction, respectively?

A. Universal Design for Learning: Checking that an assessment measures the skill stated in the course outcome. / Scaffolding in instruction: Modeling a skill and gradually reducing prompts as learners gain mastery.
B. Universal Design for Learning: Offering accessible ways to encounter material and demonstrate learning. / Scaffolding in instruction: Modeling a skill and gradually reducing prompts as learners gain mastery.
C. Universal Design for Learning: Offering accessible ways to encounter material and demonstrate learning. / Scaffolding in instruction: Teaching students to interpret feedback and plan a concrete revision.
D. Universal Design for Learning: Modeling a skill and gradually reducing prompts as learners gain mastery. / Scaffolding in instruction: Offering accessible ways to encounter material and demonstrate learning.

0446. Which comparison would correct a trainee's misunderstanding of Universal Design for Learning versus Culturally responsive pedagogy?

A. Universal Design for Learning: A framework for designing flexible learning environments with multiple means of engagement, representation, and action or expression. / Culturally responsive pedagogy: Teaching that draws on learners' cultural knowledge and experiences while maintaining high expectations and belonging.
B. Universal Design for Learning: Teaching that draws on learners' cultural knowledge and experiences while maintaining high expectations and belonging. / Culturally responsive pedagogy: A framework for designing flexible learning environments with multiple means of engagement, representation, and action or expression.
C. Universal Design for Learning: A framework for designing flexible learning environments with multiple means of engagement, representation, and action or expression. / Culturally responsive pedagogy: Alignment among learning outcomes, teaching and learning activities, and assessment.
D. Universal Design for Learning: Evaluation of learning at the end of an instructional period or unit. / Culturally responsive pedagogy: Teaching that draws on learners' cultural knowledge and experiences while maintaining high expectations and belonging.

0447. Identify the most precise label for this idea: Temporary instructional support that enables increasingly independent performance.

A. Metacognition
B. Universal Design for Learning
C. Scaffolding in instruction
D. Constructive alignment

0448. A supervisor asks for an applied contrast between Scaffolding in instruction and Retrieval practice. Which option fits?

A. Scaffolding in instruction: Asking learners to retrieve key ideas from memory before reviewing notes. / Retrieval practice: Modeling a skill and gradually reducing prompts as learners gain mastery.
B. Scaffolding in instruction: Offering accessible ways to encounter material and demonstrate learning. / Retrieval practice: Asking learners to retrieve key ideas from memory before reviewing notes.
C. Scaffolding in instruction: Modeling a skill and gradually reducing prompts as learners gain mastery. / Retrieval practice: Asking learners to retrieve key ideas from memory before reviewing notes.
D. Scaffolding in instruction: Modeling a skill and gradually reducing prompts as learners gain mastery. / Retrieval practice: Pairing an activity with structured reflection and transfer to a new situation.

0449. In a professional consultation about a child aged 6, the assessment clinician describes this response in the telehealth session: pairing an activity with structured reflection and transfer to a new situation. Which term is most apt?

A. Experiential learning
B. Formative assessment
C. Constructive alignment
D. Culturally responsive pedagogy

0450. In a professional consultation about a child aged 14, the member of a clinical team describes this response in the student-support meeting: checking that an assessment measures the skill stated in the course outcome. Which term is most apt?

A. Culturally responsive pedagogy
B. Summative assessment
C. Metacognition
D. Constructive alignment

0451. A assessment clinician is preparing a follow-up plan for a teenage client in the community youth program. The plan calls for asking learners to retrieve key ideas from memory before reviewing notes. Which concept names this approach?

A. Summative assessment
B. Scaffolding in instruction
C. Metacognition
D. Retrieval practice

0452. Choose the definition pair that correctly explains Universal Design for Learning first and Metacognition second.

A. Universal Design for Learning: A framework for designing flexible learning environments with multiple means of engagement, representation, and action or expression. / Metacognition: Awareness and regulation of one's own learning, including planning, monitoring, and evaluation.
B. Universal Design for Learning: A framework for designing flexible learning environments with multiple means of engagement, representation, and action or expression. / Metacognition: Evaluation of learning at the end of an instructional period or unit.
C. Universal Design for Learning: Low-stakes evidence gathered during learning to guide feedback and next instructional steps. / Metacognition: Awareness and regulation of one's own learning, including planning, monitoring, and evaluation.
D. Universal Design for Learning: Awareness and regulation of one's own learning, including planning, monitoring, and evaluation. / Metacognition: A framework for designing flexible learning environments with multiple means of engagement, representation, and action or expression.

0453. A case conference asks for a distinction between Constructive alignment and Summative assessment. Which answer is sound?

A. Constructive alignment: Learners' capacity to understand, evaluate, and use feedback to improve work. / Summative assessment: Evaluation of learning at the end of an instructional period or unit.
B. Constructive alignment: Alignment among learning outcomes, teaching and learning activities, and assessment. / Summative assessment: Effortful recall of learned material that strengthens retention and reveals learning needs.
C. Constructive alignment: Alignment among learning outcomes, teaching and learning activities, and assessment. / Summative assessment: Evaluation of learning at the end of an instructional period or unit.
D. Constructive alignment: Evaluation of learning at the end of an instructional period or unit. / Summative assessment: Alignment among learning outcomes, teaching and learning activities, and assessment.

0454. Which option pairs the definitions of Scaffolding in instruction and Summative assessment correctly, in that order?

A. Scaffolding in instruction: Evaluation of learning at the end of an instructional period or unit. / Summative assessment: Temporary instructional support that enables increasingly independent performance.
B. Scaffolding in instruction: Low-stakes evidence gathered during learning to guide feedback and next instructional steps. / Summative assessment: Evaluation of learning at the end of an instructional period or unit.
C. Scaffolding in instruction: Temporary instructional support that enables increasingly independent performance. / Summative assessment: Effortful recall of learned material that strengthens retention and reveals learning needs.
D. Scaffolding in instruction: Temporary instructional support that enables increasingly independent performance. / Summative assessment: Evaluation of learning at the end of an instructional period or unit.

0455. A service navigator is asked what should shape a child aged 6's support in the community service agency. The proposed focus is evaluating mastery after a course unit concludes. Which principle does it represent?

A. Metacognition
B. Summative assessment
C. Universal Design for Learning
D. Feedback literacy

0456. Which statement most accurately defines Feedback literacy?

A. Effortful recall of learned material that strengthens retention and reveals learning needs.
B. Learners' capacity to understand, evaluate, and use feedback to improve work.
C. Awareness and regulation of one's own learning, including planning, monitoring, and evaluation.
D. Low-stakes evidence gathered during learning to guide feedback and next instructional steps.

0457. A student confuses Constructive alignment with Experiential learning. Which explanation most accurately separates them?

A. Constructive alignment: Learning through purposeful experience, reflection, conceptualization, and application. / Experiential learning: Alignment among learning outcomes, teaching and learning activities, and assessment.
B. Constructive alignment: Alignment among learning outcomes, teaching and learning activities, and assessment. / Experiential learning: Learning through purposeful experience, reflection, conceptualization, and application.
C. Constructive alignment: Alignment among learning outcomes, teaching and learning activities, and assessment. / Experiential learning: Teaching that draws on learners' cultural knowledge and experiences while maintaining high expectations and belonging.
D. Constructive alignment: Learners' capacity to understand, evaluate, and use feedback to improve work. / Experiential learning: Learning through purposeful experience, reflection, conceptualization, and application.

0458. Which comparison correctly distinguishes Universal Design for Learning from Scaffolding in instruction?

A. Universal Design for Learning: A framework for designing flexible learning environments with multiple means of engagement, representation, and action or expression. / Scaffolding in instruction: Learners' capacity to understand, evaluate, and use feedback to improve work.
B. Universal Design for Learning: Alignment among learning outcomes, teaching and learning activities, and assessment. / Scaffolding in instruction: Temporary instructional support that enables increasingly independent performance.
C. Universal Design for Learning: A framework for designing flexible learning environments with multiple means of engagement, representation, and action or expression. / Scaffolding in instruction: Temporary instructional support that enables increasingly independent performance.
D. Universal Design for Learning: Temporary instructional support that enables increasingly independent performance. / Scaffolding in instruction: A framework for designing flexible learning environments with multiple means of engagement, representation, and action or expression.

0459. A research trainee describes an intervention for a young person aged 13 in the parent meeting, centered on pairing an activity with structured reflection and transfer to a new situation. Which named idea is most relevant?

A. Retrieval practice
B. Universal Design for Learning
C. Experiential learning
D. Formative assessment

0460. Which option correctly matches each concept to its practice focus: Summative assessment and Experiential learning?

A. Summative assessment: Asking learners to retrieve key ideas from memory before reviewing notes. / Experiential learning: Pairing an activity with structured reflection and transfer to a new situation.
B. Summative assessment: Evaluating mastery after a course unit concludes. / Experiential learning: Pairing an activity with structured reflection and transfer to a new situation.
C. Summative assessment: Pairing an activity with structured reflection and transfer to a new situation. / Experiential learning: Evaluating mastery after a course unit concludes.
D. Summative assessment: Evaluating mastery after a course unit concludes. / Experiential learning: Using an exit question to decide what to reteach in the next class.

0461. In the youth group, a team asks how a school counselor can support a young person aged 10. One proposed action is asking learners to retrieve key ideas from memory before reviewing notes. Which idea does it represent?

A. Culturally responsive pedagogy
B. Constructive alignment
C. Feedback literacy
D. Retrieval practice

0462. Which option is the clearest practical expression of Formative assessment?

A. Modeling a skill and gradually reducing prompts as learners gain mastery.
B. Using an exit question to decide what to reteach in the next class.
C. Teaching students to interpret feedback and plan a concrete revision.
D. Asking learners to retrieve key ideas from memory before reviewing notes.

0463. Which option preserves the correct meaning of both Retrieval practice and Culturally responsive pedagogy?

A. Retrieval practice: Effortful recall of learned material that strengthens retention and reveals learning needs. / Culturally responsive pedagogy: A framework for designing flexible learning environments with multiple means of engagement, representation, and action or expression.
B. Retrieval practice: Teaching that draws on learners' cultural knowledge and experiences while maintaining high expectations and belonging. / Culturally responsive pedagogy: Effortful recall of learned material that strengthens retention and reveals learning needs.
C. Retrieval practice: Temporary instructional support that enables increasingly independent performance. / Culturally responsive pedagogy: Teaching that draws on learners' cultural knowledge and experiences while maintaining high expectations and belonging.
D. Retrieval practice: Effortful recall of learned material that strengthens retention and reveals learning needs. / Culturally responsive pedagogy: Teaching that draws on learners' cultural knowledge and experiences while maintaining high expectations and belonging.

0464. At the school-based service, a counselor meets with a child aged 7. The practice priority is: asking learners to retrieve key ideas from memory before reviewing notes. Which concept best captures that priority?

A. Experiential learning
B. Formative assessment
C. Retrieval practice
D. Culturally responsive pedagogy

0465. Which comparison would correct a trainee's misunderstanding of Formative assessment versus Metacognition?

A. Formative assessment: Learners' capacity to understand, evaluate, and use feedback to improve work. / Metacognition: Awareness and regulation of one's own learning, including planning, monitoring, and evaluation.
B. Formative assessment: Low-stakes evidence gathered during learning to guide feedback and next instructional steps. / Metacognition: A framework for designing flexible learning environments with multiple means of engagement, representation, and action or expression.
C. Formative assessment: Awareness and regulation of one's own learning, including planning, monitoring, and evaluation. / Metacognition: Low-stakes evidence gathered during learning to guide feedback and next instructional steps.
D. Formative assessment: Low-stakes evidence gathered during learning to guide feedback and next instructional steps. / Metacognition: Awareness and regulation of one's own learning, including planning, monitoring, and evaluation.

0466. How should a practitioner distinguish the applications of Formative assessment and Experiential learning?

A. Formative assessment: Using an exit question to decide what to reteach in the next class. / Experiential learning: Pairing an activity with structured reflection and transfer to a new situation.
B. Formative assessment: Teaching students to interpret feedback and plan a concrete revision. / Experiential learning: Pairing an activity with structured reflection and transfer to a new situation.
C. Formative assessment: Using an exit question to decide what to reteach in the next class. / Experiential learning: Connecting examples to students' contexts and checking whose perspectives are represented.
D. Formative assessment: Pairing an activity with structured reflection and transfer to a new situation. / Experiential learning: Using an exit question to decide what to reteach in the next class.

0467. A teenage client is receiving support in the after-school program. The teacher and counselor is guided by this practice: modeling a skill and gradually reducing prompts as learners gain mastery. Which principle best fits?

A. Formative assessment
B. Scaffolding in instruction
C. Retrieval practice
D. Constructive alignment

0468. At the after-school program, a program coordinator reviews whether a plan for a school-age child is appropriate. The relevant practice is pairing an activity with structured reflection and transfer to a new situation. Which concept is tested?

A. Retrieval practice
B. Feedback literacy
C. Experiential learning
D. Culturally responsive pedagogy

0469. In the learning-support meeting, a youth worker explains why a client in late adolescence would benefit from having students explain which strategy helped and what they will change next time. Which course concept underpins the explanation?

A. Culturally responsive pedagogy
B. Feedback literacy
C. Scaffolding in instruction
D. Metacognition

0470. Choose the practice comparison that best separates Formative assessment from Retrieval practice.

A. Formative assessment: Using an exit question to decide what to reteach in the next class. / Retrieval practice: Asking learners to retrieve key ideas from memory before reviewing notes.
B. Formative assessment: Asking learners to retrieve key ideas from memory before reviewing notes. / Retrieval practice: Using an exit question to decide what to reteach in the next class.
C. Formative assessment: Using an exit question to decide what to reteach in the next class. / Retrieval practice: Checking that an assessment measures the skill stated in the course outcome.
D. Formative assessment: Evaluating mastery after a course unit concludes. / Retrieval practice: Asking learners to retrieve key ideas from memory before reviewing notes.

0471. Choose the term that matches this definition: Awareness and regulation of one's own learning, including planning, monitoring, and evaluation.

A. Metacognition
B. Retrieval practice
C. Formative assessment
D. Summative assessment

0472. A doctoral student reads the following description. Which concept does it define? Low-stakes evidence gathered during learning to guide feedback and next instructional steps.

A. Experiential learning
B. Scaffolding in instruction
C. Formative assessment
D. Constructive alignment

0473. Which pair of actions illustrates Universal Design for Learning and Summative assessment, respectively?

A. Universal Design for Learning: Evaluating mastery after a course unit concludes. / Summative assessment: Offering accessible ways to encounter material and demonstrate learning.
B. Universal Design for Learning: Connecting examples to students' contexts and checking whose perspectives are represented. / Summative assessment: Evaluating mastery after a course unit concludes.
C. Universal Design for Learning: Offering accessible ways to encounter material and demonstrate learning. / Summative assessment: Pairing an activity with structured reflection and transfer to a new situation.
D. Universal Design for Learning: Offering accessible ways to encounter material and demonstrate learning. / Summative assessment: Evaluating mastery after a course unit concludes.

0474. A student confuses Scaffolding in instruction with Formative assessment. Which explanation most accurately separates them?

A. Scaffolding in instruction: Temporary instructional support that enables increasingly independent performance. / Formative assessment: Low-stakes evidence gathered during learning to guide feedback and next instructional steps.
B. Scaffolding in instruction: Effortful recall of learned material that strengthens retention and reveals learning needs. / Formative assessment: Low-stakes evidence gathered during learning to guide feedback and next instructional steps.
C. Scaffolding in instruction: Temporary instructional support that enables increasingly independent performance. / Formative assessment: Learners' capacity to understand, evaluate, and use feedback to improve work.
D. Scaffolding in instruction: Low-stakes evidence gathered during learning to guide feedback and next instructional steps. / Formative assessment: Temporary instructional support that enables increasingly independent performance.

0475. A student aged 15 and a member of a clinical team are reviewing goals in the school counseling office. The agreed action is pairing an activity with structured reflection and transfer to a new situation. Which principle best accounts for it?

A. Constructive alignment
B. Retrieval practice
C. Culturally responsive pedagogy
D. Experiential learning

0476. Choose the definition pair that correctly explains Constructive alignment first and Scaffolding in instruction second.

A. Constructive alignment: Temporary instructional support that enables increasingly independent performance. / Scaffolding in instruction: Alignment among learning outcomes, teaching and learning activities, and assessment.
B. Constructive alignment: Evaluation of learning at the end of an instructional period or unit. / Scaffolding in instruction: Temporary instructional support that enables increasingly independent performance.
C. Constructive alignment: Alignment among learning outcomes, teaching and learning activities, and assessment. / Scaffolding in instruction: Temporary instructional support that enables increasingly independent performance.
D. Constructive alignment: Alignment among learning outcomes, teaching and learning activities, and assessment. / Scaffolding in instruction: Low-stakes evidence gathered during learning to guide feedback and next instructional steps.

0477. While consulting in the caregiver consultation, a mental-health professional supports a young adolescent client by using this approach: offering accessible ways to encounter material and demonstrate learning. Which concept is being applied?

A. Experiential learning
B. Retrieval practice
C. Scaffolding in instruction
D. Universal Design for Learning

0478. Choose the term that matches this definition: Learners' capacity to understand, evaluate, and use feedback to improve work.

A. Experiential learning
B. Scaffolding in instruction
C. Feedback literacy
D. Retrieval practice

0479. Which statement accurately contrasts the course concepts Constructive alignment and Summative assessment?

A. Constructive alignment: Evaluation of learning at the end of an instructional period or unit. / Summative assessment: Alignment among learning outcomes, teaching and learning activities, and assessment.
B. Constructive alignment: Alignment among learning outcomes, teaching and learning activities, and assessment. / Summative assessment: Effortful recall of learned material that strengthens retention and reveals learning needs.
C. Constructive alignment: Alignment among learning outcomes, teaching and learning activities, and assessment. / Summative assessment: Evaluation of learning at the end of an instructional period or unit.
D. Constructive alignment: Learners' capacity to understand, evaluate, and use feedback to improve work. / Summative assessment: Evaluation of learning at the end of an instructional period or unit.

0480. Which option is the clearest practical expression of Culturally responsive pedagogy?

A. Having students explain which strategy helped and what they will change next time.
B. Using an exit question to decide what to reteach in the next class.
C. Offering accessible ways to encounter material and demonstrate learning.
D. Connecting examples to students' contexts and checking whose perspectives are represented.

0481. A clinical supervisor is asked to evaluate a proposed service for a student aged 9 in the supervision meeting. The defining feature is using an exit question to decide what to reteach in the next class. Which concept fits?

A. Formative assessment
B. Universal Design for Learning
C. Culturally responsive pedagogy
D. Summative assessment

0482. Consider a middle-school student receiving help in the youth advocacy program. The teacher and counselor focuses on evaluating mastery after a course unit concludes. Which term best describes the guiding idea?

A. Metacognition
B. Formative assessment
C. Constructive alignment
D. Summative assessment

0483. A supervisor asks for an applied contrast between Retrieval practice and Experiential learning. Which option fits?

A. Retrieval practice: Pairing an activity with structured reflection and transfer to a new situation. / Experiential learning: Asking learners to retrieve key ideas from memory before reviewing notes.
B. Retrieval practice: Asking learners to retrieve key ideas from memory before reviewing notes. / Experiential learning: Pairing an activity with structured reflection and transfer to a new situation.
C. Retrieval practice: Asking learners to retrieve key ideas from memory before reviewing notes. / Experiential learning: Teaching students to interpret feedback and plan a concrete revision.
D. Retrieval practice: Checking that an assessment measures the skill stated in the course outcome. / Experiential learning: Pairing an activity with structured reflection and transfer to a new situation.

0484. Which option pairs the definitions of Constructive alignment and Formative assessment correctly, in that order?

A. Constructive alignment: Learners' capacity to understand, evaluate, and use feedback to improve work. / Formative assessment: Low-stakes evidence gathered during learning to guide feedback and next instructional steps.
B. Constructive alignment: Alignment among learning outcomes, teaching and learning activities, and assessment. / Formative assessment: Low-stakes evidence gathered during learning to guide feedback and next instructional steps.
C. Constructive alignment: Alignment among learning outcomes, teaching and learning activities, and assessment. / Formative assessment: A framework for designing flexible learning environments with multiple means of engagement, representation, and action or expression.
D. Constructive alignment: Low-stakes evidence gathered during learning to guide feedback and next instructional steps. / Formative assessment: Alignment among learning outcomes, teaching and learning activities, and assessment.

0485. Which choice aligns each practice with the correct idea, Scaffolding in instruction or Feedback literacy?

A. Scaffolding in instruction: Modeling a skill and gradually reducing prompts as learners gain mastery. / Feedback literacy: Teaching students to interpret feedback and plan a concrete revision.
B. Scaffolding in instruction: Teaching students to interpret feedback and plan a concrete revision. / Feedback literacy: Modeling a skill and gradually reducing prompts as learners gain mastery.
C. Scaffolding in instruction: Modeling a skill and gradually reducing prompts as learners gain mastery. / Feedback literacy: Pairing an activity with structured reflection and transfer to a new situation.
D. Scaffolding in instruction: Evaluating mastery after a course unit concludes. / Feedback literacy: Teaching students to interpret feedback and plan a concrete revision.

0486. A trainee must choose a practice that exemplifies Retrieval practice. Which action is the best fit?

A. Connecting examples to students' contexts and checking whose perspectives are represented.
B. Pairing an activity with structured reflection and transfer to a new situation.
C. Asking learners to retrieve key ideas from memory before reviewing notes.
D. Offering accessible ways to encounter material and demonstrate learning.

0487. Choose the response that best puts Feedback literacy into practice.

A. Having students explain which strategy helped and what they will change next time.
B. Connecting examples to students' contexts and checking whose perspectives are represented.
C. Checking that an assessment measures the skill stated in the course outcome.
D. Teaching students to interpret feedback and plan a concrete revision.

0488. Which option pairs the definitions of Metacognition and Culturally responsive pedagogy correctly, in that order?

A. Metacognition: Awareness and regulation of one's own learning, including planning, monitoring, and evaluation. / Culturally responsive pedagogy: Effortful recall of learned material that strengthens retention and reveals learning needs.
B. Metacognition: Awareness and regulation of one's own learning, including planning, monitoring, and evaluation. / Culturally responsive pedagogy: Teaching that draws on learners' cultural knowledge and experiences while maintaining high expectations and belonging.
C. Metacognition: Alignment among learning outcomes, teaching and learning activities, and assessment. / Culturally responsive pedagogy: Teaching that draws on learners' cultural knowledge and experiences while maintaining high expectations and belonging.
D. Metacognition: Teaching that draws on learners' cultural knowledge and experiences while maintaining high expectations and belonging. / Culturally responsive pedagogy: Awareness and regulation of one's own learning, including planning, monitoring, and evaluation.

0489. Identify the most precise label for this idea: Evaluation of learning at the end of an instructional period or unit.

A. Summative assessment
B. Metacognition
C. Retrieval practice
D. Scaffolding in instruction

0490. Which option preserves the correct meaning of both Experiential learning and Feedback literacy?

A. Experiential learning: Alignment among learning outcomes, teaching and learning activities, and assessment. / Feedback literacy: Learners' capacity to understand, evaluate, and use feedback to improve work.
B. Experiential learning: Learning through purposeful experience, reflection, conceptualization, and application. / Feedback literacy: Low-stakes evidence gathered during learning to guide feedback and next instructional steps.
C. Experiential learning: Learning through purposeful experience, reflection, conceptualization, and application. / Feedback literacy: Learners' capacity to understand, evaluate, and use feedback to improve work.
D. Experiential learning: Learners' capacity to understand, evaluate, and use feedback to improve work. / Feedback literacy: Learning through purposeful experience, reflection, conceptualization, and application.

0491. Which option correctly matches each concept to its practice focus: Constructive alignment and Summative assessment?

A. Constructive alignment: Teaching students to interpret feedback and plan a concrete revision. / Summative assessment: Evaluating mastery after a course unit concludes.
B. Constructive alignment: Checking that an assessment measures the skill stated in the course outcome. / Summative assessment: Evaluating mastery after a course unit concludes.
C. Constructive alignment: Checking that an assessment measures the skill stated in the course outcome. / Summative assessment: Asking learners to retrieve key ideas from memory before reviewing notes.
D. Constructive alignment: Evaluating mastery after a course unit concludes. / Summative assessment: Checking that an assessment measures the skill stated in the course outcome.

0492. Which option pairs the definitions of Universal Design for Learning and Formative assessment correctly, in that order?

A. Universal Design for Learning: A framework for designing flexible learning environments with multiple means of engagement, representation, and action or expression. / Formative assessment: Temporary instructional support that enables increasingly independent performance.
B. Universal Design for Learning: Alignment among learning outcomes, teaching and learning activities, and assessment. / Formative assessment: Low-stakes evidence gathered during learning to guide feedback and next instructional steps.
C. Universal Design for Learning: A framework for designing flexible learning environments with multiple means of engagement, representation, and action or expression. / Formative assessment: Low-stakes evidence gathered during learning to guide feedback and next instructional steps.
D. Universal Design for Learning: Low-stakes evidence gathered during learning to guide feedback and next instructional steps. / Formative assessment: A framework for designing flexible learning environments with multiple means of engagement, representation, and action or expression.

0493. At a case-planning meeting, the school support specialist proposes connecting examples to students' contexts and checking whose perspectives are represented. for a preadolescent child seen in the community service agency. Which concept does this illustrate?

A. Retrieval practice
B. Culturally responsive pedagogy
C. Summative assessment
D. Experiential learning

0494. A supervised trainee is preparing a follow-up plan for a older adolescent client in the parent meeting. The plan calls for evaluating mastery after a course unit concludes. Which concept names this approach?

A. Constructive alignment
B. Summative assessment
C. Feedback literacy
D. Metacognition

0495. In the school counseling office, a family therapist is considering this approach for a high-school student: evaluating mastery after a course unit concludes. Which framework does it represent?

A. Experiential learning
B. Scaffolding in instruction
C. Summative assessment
D. Retrieval practice

0496. Choose the practice comparison that best separates Retrieval practice from Feedback literacy.

A. Retrieval practice: Evaluating mastery after a course unit concludes. / Feedback literacy: Teaching students to interpret feedback and plan a concrete revision.
B. Retrieval practice: Asking learners to retrieve key ideas from memory before reviewing notes. / Feedback literacy: Teaching students to interpret feedback and plan a concrete revision.
C. Retrieval practice: Teaching students to interpret feedback and plan a concrete revision. / Feedback literacy: Asking learners to retrieve key ideas from memory before reviewing notes.
D. Retrieval practice: Asking learners to retrieve key ideas from memory before reviewing notes. / Feedback literacy: Modeling a skill and gradually reducing prompts as learners gain mastery.

0497. In a supervision review, a parent educator describes work with a young person aged 18 in the learning-support meeting: evaluating mastery after a course unit concludes. What concept is illustrated?

A. Metacognition
B. Scaffolding in instruction
C. Summative assessment
D. Retrieval practice

0498. In the student-support meeting, a parent educator is considering this approach for a young person aged 13: having students explain which strategy helped and what they will change next time. Which framework does it represent?

A. Universal Design for Learning
B. Culturally responsive pedagogy
C. Formative assessment
D. Metacognition

0499. A planning meeting about a student aged 17 includes a play therapist. The proposed practice in the student-support meeting is connecting examples to students' contexts and checking whose perspectives are represented. Which idea underlies it?

A. Culturally responsive pedagogy
B. Universal Design for Learning
C. Constructive alignment
D. Formative assessment

0500. Which option preserves the correct meaning of both Formative assessment and Summative assessment?

A. Formative assessment: Low-stakes evidence gathered during learning to guide feedback and next instructional steps. / Summative assessment: Evaluation of learning at the end of an instructional period or unit.
B. Formative assessment: Evaluation of learning at the end of an instructional period or unit. / Summative assessment: Low-stakes evidence gathered during learning to guide feedback and next instructional steps.
C. Formative assessment: Effortful recall of learned material that strengthens retention and reveals learning needs. / Summative assessment: Evaluation of learning at the end of an instructional period or unit.
D. Formative assessment: Low-stakes evidence gathered during learning to guide feedback and next instructional steps. / Summative assessment: Alignment among learning outcomes, teaching and learning activities, and assessment.

0501. Which pair of actions illustrates Scaffolding in instruction and Metacognition, respectively?

A. Scaffolding in instruction: Modeling a skill and gradually reducing prompts as learners gain mastery. / Metacognition: Evaluating mastery after a course unit concludes.
B. Scaffolding in instruction: Connecting examples to students' contexts and checking whose perspectives are represented. / Metacognition: Having students explain which strategy helped and what they will change next time.
C. Scaffolding in instruction: Having students explain which strategy helped and what they will change next time. / Metacognition: Modeling a skill and gradually reducing prompts as learners gain mastery.
D. Scaffolding in instruction: Modeling a skill and gradually reducing prompts as learners gain mastery. / Metacognition: Having students explain which strategy helped and what they will change next time.

0502. A counselor reviews a plan for a student aged 12 in the community youth program. The plan emphasizes connecting examples to students' contexts and checking whose perspectives are represented. Which course idea does this reflect?

A. Metacognition
B. Universal Design for Learning
C. Culturally responsive pedagogy
D. Retrieval practice

0503. A consultant is supporting a child aged 8 in the clinical planning session. The key practice is connecting examples to students' contexts and checking whose perspectives are represented. Which course concept is most relevant?

A. Metacognition
B. Culturally responsive pedagogy
C. Formative assessment
D. Feedback literacy

0504. For a child aged 8 seen in the after-school program, the therapist recommends a plan built around using an exit question to decide what to reteach in the next class. Which concept is reflected?

A. Scaffolding in instruction
B. Formative assessment
C. Retrieval practice
D. Culturally responsive pedagogy

0505. Which statement shows a sound practice-level distinction between Constructive alignment and Culturally responsive pedagogy?

A. Constructive alignment: Evaluating mastery after a course unit concludes. / Culturally responsive pedagogy: Connecting examples to students' contexts and checking whose perspectives are represented.
B. Constructive alignment: Checking that an assessment measures the skill stated in the course outcome. / Culturally responsive pedagogy: Teaching students to interpret feedback and plan a concrete revision.
C. Constructive alignment: Connecting examples to students' contexts and checking whose perspectives are represented. / Culturally responsive pedagogy: Checking that an assessment measures the skill stated in the course outcome.
D. Constructive alignment: Checking that an assessment measures the skill stated in the course outcome. / Culturally responsive pedagogy: Connecting examples to students' contexts and checking whose perspectives are represented.

0506. A student confuses Constructive alignment with Universal Design for Learning. Which explanation most accurately separates them?

A. Constructive alignment: Alignment among learning outcomes, teaching and learning activities, and assessment. / Universal Design for Learning: Teaching that draws on learners' cultural knowledge and experiences while maintaining high expectations and belonging.
B. Constructive alignment: Alignment among learning outcomes, teaching and learning activities, and assessment. / Universal Design for Learning: A framework for designing flexible learning environments with multiple means of engagement, representation, and action or expression.
C. Constructive alignment: Learning through purposeful experience, reflection, conceptualization, and application. / Universal Design for Learning: A framework for designing flexible learning environments with multiple means of engagement, representation, and action or expression.
D. Constructive alignment: A framework for designing flexible learning environments with multiple means of engagement, representation, and action or expression. / Universal Design for Learning: Alignment among learning outcomes, teaching and learning activities, and assessment.

0507. A trainee must choose a practice that exemplifies Feedback literacy. Which action is the best fit?

A. Asking learners to retrieve key ideas from memory before reviewing notes.
B. Evaluating mastery after a course unit concludes.
C. Pairing an activity with structured reflection and transfer to a new situation.
D. Teaching students to interpret feedback and plan a concrete revision.

0508. A case discussion concerns a student aged 17 and a school-based clinician in the outpatient clinic. The practitioner is considering pairing an activity with structured reflection and transfer to a new situation. Which principle is involved?

A. Experiential learning
B. Retrieval practice
C. Constructive alignment
D. Formative assessment

0509. Which comparison would correct a trainee's misunderstanding of Constructive alignment versus Summative assessment?

A. Constructive alignment: Alignment among learning outcomes, teaching and learning activities, and assessment. / Summative assessment: Effortful recall of learned material that strengthens retention and reveals learning needs.
B. Constructive alignment: Alignment among learning outcomes, teaching and learning activities, and assessment. / Summative assessment: Evaluation of learning at the end of an instructional period or unit.
C. Constructive alignment: Evaluation of learning at the end of an instructional period or unit. / Summative assessment: Alignment among learning outcomes, teaching and learning activities, and assessment.
D. Constructive alignment: Learners' capacity to understand, evaluate, and use feedback to improve work. / Summative assessment: Evaluation of learning at the end of an instructional period or unit.

0510. Which applied comparison correctly identifies what belongs to Scaffolding in instruction versus Metacognition?

A. Scaffolding in instruction: Modeling a skill and gradually reducing prompts as learners gain mastery. / Metacognition: Evaluating mastery after a course unit concludes.
B. Scaffolding in instruction: Modeling a skill and gradually reducing prompts as learners gain mastery. / Metacognition: Having students explain which strategy helped and what they will change next time.
C. Scaffolding in instruction: Having students explain which strategy helped and what they will change next time. / Metacognition: Modeling a skill and gradually reducing prompts as learners gain mastery.
D. Scaffolding in instruction: Connecting examples to students' contexts and checking whose perspectives are represented. / Metacognition: Having students explain which strategy helped and what they will change next time.

0511. For a child of elementary-school age seen in the student-support meeting, the program coordinator recommends a plan built around teaching students to interpret feedback and plan a concrete revision. Which concept is reflected?

A. Metacognition
B. Universal Design for Learning
C. Formative assessment
D. Feedback literacy

0512. A supervisor asks for an applied contrast between Formative assessment and Experiential learning. Which option fits?

A. Formative assessment: Using an exit question to decide what to reteach in the next class. / Experiential learning: Connecting examples to students' contexts and checking whose perspectives are represented.
B. Formative assessment: Pairing an activity with structured reflection and transfer to a new situation. / Experiential learning: Using an exit question to decide what to reteach in the next class.
C. Formative assessment: Teaching students to interpret feedback and plan a concrete revision. / Experiential learning: Pairing an activity with structured reflection and transfer to a new situation.
D. Formative assessment: Using an exit question to decide what to reteach in the next class. / Experiential learning: Pairing an activity with structured reflection and transfer to a new situation.

0513. A young person aged 10's service team meets in the student wellness team. The school-based clinician recommends a change involving modeling a skill and gradually reducing prompts as learners gain mastery. Which idea best explains it?

A. Retrieval practice
B. Scaffolding in instruction
C. Feedback literacy
D. Culturally responsive pedagogy

0514. A mental-health professional is supporting a student aged 12 in the after-school program. The key practice is evaluating mastery after a course unit concludes. Which course concept is most relevant?

A. Scaffolding in instruction
B. Metacognition
C. Summative assessment
D. Feedback literacy

0515. For a young person in the behavior-support review, a counselor makes this practice the immediate priority: offering accessible ways to encounter material and demonstrate learning. Which concept fits best?

A. Universal Design for Learning
B. Formative assessment
C. Scaffolding in instruction
D. Metacognition

0516. Which statement shows a sound practice-level distinction between Universal Design for Learning and Scaffolding in instruction?

A. Universal Design for Learning: Offering accessible ways to encounter material and demonstrate learning. / Scaffolding in instruction: Teaching students to interpret feedback and plan a concrete revision.
B. Universal Design for Learning: Modeling a skill and gradually reducing prompts as learners gain mastery. / Scaffolding in instruction: Offering accessible ways to encounter material and demonstrate learning.
C. Universal Design for Learning: Checking that an assessment measures the skill stated in the course outcome. / Scaffolding in instruction: Modeling a skill and gradually reducing prompts as learners gain mastery.
D. Universal Design for Learning: Offering accessible ways to encounter material and demonstrate learning. / Scaffolding in instruction: Modeling a skill and gradually reducing prompts as learners gain mastery.

0517. Which paired example correctly applies Scaffolding in instruction first and Feedback literacy second?

A. Scaffolding in instruction: Modeling a skill and gradually reducing prompts as learners gain mastery. / Feedback literacy: Pairing an activity with structured reflection and transfer to a new situation.
B. Scaffolding in instruction: Teaching students to interpret feedback and plan a concrete revision. / Feedback literacy: Modeling a skill and gradually reducing prompts as learners gain mastery.
C. Scaffolding in instruction: Modeling a skill and gradually reducing prompts as learners gain mastery. / Feedback literacy: Teaching students to interpret feedback and plan a concrete revision.
D. Scaffolding in instruction: Evaluating mastery after a course unit concludes. / Feedback literacy: Teaching students to interpret feedback and plan a concrete revision.

0518. Choose the practice comparison that best separates Universal Design for Learning from Feedback literacy.

A. Universal Design for Learning: Checking that an assessment measures the skill stated in the course outcome. / Feedback literacy: Teaching students to interpret feedback and plan a concrete revision.
B. Universal Design for Learning: Offering accessible ways to encounter material and demonstrate learning. / Feedback literacy: Teaching students to interpret feedback and plan a concrete revision.
C. Universal Design for Learning: Teaching students to interpret feedback and plan a concrete revision. / Feedback literacy: Offering accessible ways to encounter material and demonstrate learning.
D. Universal Design for Learning: Offering accessible ways to encounter material and demonstrate learning. / Feedback literacy: Connecting examples to students' contexts and checking whose perspectives are represented.

0519. Which pair of actions illustrates Metacognition and Feedback literacy, respectively?

A. Metacognition: Teaching students to interpret feedback and plan a concrete revision. / Feedback literacy: Having students explain which strategy helped and what they will change next time.
B. Metacognition: Having students explain which strategy helped and what they will change next time. / Feedback literacy: Teaching students to interpret feedback and plan a concrete revision.
C. Metacognition: Having students explain which strategy helped and what they will change next time. / Feedback literacy: Using an exit question to decide what to reteach in the next class.
D. Metacognition: Checking that an assessment measures the skill stated in the course outcome. / Feedback literacy: Teaching students to interpret feedback and plan a concrete revision.

0520. Which statement accurately contrasts the course concepts Constructive alignment and Universal Design for Learning?

A. Constructive alignment: Alignment among learning outcomes, teaching and learning activities, and assessment. / Universal Design for Learning: Teaching that draws on learners' cultural knowledge and experiences while maintaining high expectations and belonging.
B. Constructive alignment: Learning through purposeful experience, reflection, conceptualization, and application. / Universal Design for Learning: A framework for designing flexible learning environments with multiple means of engagement, representation, and action or expression.
C. Constructive alignment: A framework for designing flexible learning environments with multiple means of engagement, representation, and action or expression. / Universal Design for Learning: Alignment among learning outcomes, teaching and learning activities, and assessment.
D. Constructive alignment: Alignment among learning outcomes, teaching and learning activities, and assessment. / Universal Design for Learning: A framework for designing flexible learning environments with multiple means of engagement, representation, and action or expression.

0521. Which named construct is captured by this account? Learners' capacity to understand, evaluate, and use feedback to improve work.

A. Retrieval practice
B. Culturally responsive pedagogy
C. Summative assessment
D. Feedback literacy

0522. In the school consultation, the agreed focus for a research trainee working with a student aged 12 is checking that an assessment measures the skill stated in the course outcome. Which concept names this focus?

A. Culturally responsive pedagogy
B. Universal Design for Learning
C. Constructive alignment
D. Retrieval practice

0523. A community practitioner is asked what should shape a middle-school student's support in the community mental-health service. The proposed focus is pairing an activity with structured reflection and transfer to a new situation. Which principle does it represent?

A. Summative assessment
B. Experiential learning
C. Constructive alignment
D. Metacognition

0524. Which choice aligns each practice with the correct idea, Culturally responsive pedagogy or Feedback literacy?

A. Culturally responsive pedagogy: Teaching students to interpret feedback and plan a concrete revision. / Feedback literacy: Connecting examples to students' contexts and checking whose perspectives are represented.
B. Culturally responsive pedagogy: Connecting examples to students' contexts and checking whose perspectives are represented. / Feedback literacy: Teaching students to interpret feedback and plan a concrete revision.
C. Culturally responsive pedagogy: Connecting examples to students' contexts and checking whose perspectives are represented. / Feedback literacy: Using an exit question to decide what to reteach in the next class.
D. Culturally responsive pedagogy: Having students explain which strategy helped and what they will change next time. / Feedback literacy: Teaching students to interpret feedback and plan a concrete revision.

0525. A trainee must explain Scaffolding in instruction. Which answer is accurate?

A. Teaching that draws on learners' cultural knowledge and experiences while maintaining high expectations and belonging.
B. Learners' capacity to understand, evaluate, and use feedback to improve work.
C. Effortful recall of learned material that strengthens retention and reveals learning needs.
D. Temporary instructional support that enables increasingly independent performance.

0526. Which statement shows a sound practice-level distinction between Scaffolding in instruction and Summative assessment?

A. Scaffolding in instruction: Modeling a skill and gradually reducing prompts as learners gain mastery. / Summative assessment: Asking learners to retrieve key ideas from memory before reviewing notes.
B. Scaffolding in instruction: Using an exit question to decide what to reteach in the next class. / Summative assessment: Evaluating mastery after a course unit concludes.
C. Scaffolding in instruction: Evaluating mastery after a course unit concludes. / Summative assessment: Modeling a skill and gradually reducing prompts as learners gain mastery.
D. Scaffolding in instruction: Modeling a skill and gradually reducing prompts as learners gain mastery. / Summative assessment: Evaluating mastery after a course unit concludes.

0527. A program coordinator is asked what should shape a high-school student's support in the multidisciplinary case conference. The proposed focus is offering accessible ways to encounter material and demonstrate learning. Which principle does it represent?

A. Summative assessment
B. Metacognition
C. Universal Design for Learning
D. Culturally responsive pedagogy

0528. A planning meeting about a young adolescent client includes a counselor. The proposed practice in the clinical planning session is evaluating mastery after a course unit concludes. Which idea underlies it?

A. Scaffolding in instruction
B. Summative assessment
C. Culturally responsive pedagogy
D. Metacognition

0529. In a case note about a child aged 11, a member of a clinical team working in the youth advocacy program records this priority: offering accessible ways to encounter material and demonstrate learning. What principle is reflected?

A. Metacognition
B. Culturally responsive pedagogy
C. Feedback literacy
D. Universal Design for Learning

0530. Which option correctly matches each concept to its practice focus: Constructive alignment and Metacognition?

A. Constructive alignment: Checking that an assessment measures the skill stated in the course outcome. / Metacognition: Having students explain which strategy helped and what they will change next time.
B. Constructive alignment: Asking learners to retrieve key ideas from memory before reviewing notes. / Metacognition: Having students explain which strategy helped and what they will change next time.
C. Constructive alignment: Having students explain which strategy helped and what they will change next time. / Metacognition: Checking that an assessment measures the skill stated in the course outcome.
D. Constructive alignment: Checking that an assessment measures the skill stated in the course outcome. / Metacognition: Connecting examples to students' contexts and checking whose perspectives are represented.

0531. For a child aged 11 seen in the school counseling office, the service navigator recommends a plan built around connecting examples to students' contexts and checking whose perspectives are represented. Which concept is reflected?

A. Universal Design for Learning
B. Experiential learning
C. Retrieval practice
D. Culturally responsive pedagogy

0532. During service review in the family session, a service navigator describes using an exit question to decide what to reteach in the next class. for a middle-school student. Which course idea is most applicable?

A. Formative assessment
B. Culturally responsive pedagogy
C. Metacognition
D. Universal Design for Learning

0533. While consulting in the youth advocacy program, a mental-health professional supports a adolescent student by using this approach: having students explain which strategy helped and what they will change next time. Which concept is being applied?

A. Metacognition
B. Retrieval practice
C. Experiential learning
D. Scaffolding in instruction

0534. Which pair of actions illustrates Metacognition and Experiential learning, respectively?

A. Metacognition: Having students explain which strategy helped and what they will change next time. / Experiential learning: Pairing an activity with structured reflection and transfer to a new situation.
B. Metacognition: Pairing an activity with structured reflection and transfer to a new situation. / Experiential learning: Having students explain which strategy helped and what they will change next time.
C. Metacognition: Modeling a skill and gradually reducing prompts as learners gain mastery. / Experiential learning: Pairing an activity with structured reflection and transfer to a new situation.
D. Metacognition: Having students explain which strategy helped and what they will change next time. / Experiential learning: Evaluating mastery after a course unit concludes.

0535. A member of a clinical team is supporting a young person in the classroom support meeting. The key practice is using an exit question to decide what to reteach in the next class. Which course concept is most relevant?

A. Culturally responsive pedagogy
B. Formative assessment
C. Metacognition
D. Summative assessment

0536. A play therapist is asked to evaluate a proposed service for a young person aged 13 in the telehealth session. The defining feature is checking that an assessment measures the skill stated in the course outcome. Which concept fits?

A. Universal Design for Learning
B. Feedback literacy
C. Constructive alignment
D. Scaffolding in instruction

0537. Choose the practice comparison that best separates Constructive alignment from Experiential learning.

A. Constructive alignment: Checking that an assessment measures the skill stated in the course outcome. / Experiential learning: Connecting examples to students' contexts and checking whose perspectives are represented.
B. Constructive alignment: Checking that an assessment measures the skill stated in the course outcome. / Experiential learning: Pairing an activity with structured reflection and transfer to a new situation.
C. Constructive alignment: Teaching students to interpret feedback and plan a concrete revision. / Experiential learning: Pairing an activity with structured reflection and transfer to a new situation.
D. Constructive alignment: Pairing an activity with structured reflection and transfer to a new situation. / Experiential learning: Checking that an assessment measures the skill stated in the course outcome.

0538. A trainee must distinguish how Constructive alignment and Summative assessment guide practice. Which comparison is accurate?

A. Constructive alignment: Checking that an assessment measures the skill stated in the course outcome. / Summative assessment: Asking learners to retrieve key ideas from memory before reviewing notes.
B. Constructive alignment: Teaching students to interpret feedback and plan a concrete revision. / Summative assessment: Evaluating mastery after a course unit concludes.
C. Constructive alignment: Checking that an assessment measures the skill stated in the course outcome. / Summative assessment: Evaluating mastery after a course unit concludes.
D. Constructive alignment: Evaluating mastery after a course unit concludes. / Summative assessment: Checking that an assessment measures the skill stated in the course outcome.

0539. Choose the practice comparison that best separates Constructive alignment from Retrieval practice.

A. Constructive alignment: Checking that an assessment measures the skill stated in the course outcome. / Retrieval practice: Asking learners to retrieve key ideas from memory before reviewing notes.
B. Constructive alignment: Asking learners to retrieve key ideas from memory before reviewing notes. / Retrieval practice: Checking that an assessment measures the skill stated in the course outcome.
C. Constructive alignment: Modeling a skill and gradually reducing prompts as learners gain mastery. / Retrieval practice: Asking learners to retrieve key ideas from memory before reviewing notes.
D. Constructive alignment: Checking that an assessment measures the skill stated in the course outcome. / Retrieval practice: Teaching students to interpret feedback and plan a concrete revision.

0540. A planning meeting about a child aged 7 includes a clinical supervisor. The proposed practice in the classroom support meeting is checking that an assessment measures the skill stated in the course outcome. Which idea underlies it?

A. Constructive alignment
B. Summative assessment
C. Metacognition
D. Feedback literacy

0541. For a middle-school student in the school-based service, a behavior specialist makes this practice the immediate priority: checking that an assessment measures the skill stated in the course outcome. Which concept fits best?

A. Retrieval practice
B. Metacognition
C. Constructive alignment
D. Scaffolding in instruction

0542. A planning meeting about a high-school student includes a behavior specialist. The proposed practice in the caregiver consultation is pairing an activity with structured reflection and transfer to a new situation. Which idea underlies it?

A. Experiential learning
B. Metacognition
C. Scaffolding in instruction
D. Constructive alignment

0543. When reviewing a young person's plan in the supervision meeting, the family therapist notes that the next step is modeling a skill and gradually reducing prompts as learners gain mastery. Which concept guides this step?

A. Summative assessment
B. Metacognition
C. Retrieval practice
D. Scaffolding in instruction

0544. Which applied comparison correctly identifies what belongs to Summative assessment versus Culturally responsive pedagogy?

A. Summative assessment: Evaluating mastery after a course unit concludes. / Culturally responsive pedagogy: Connecting examples to students' contexts and checking whose perspectives are represented.
B. Summative assessment: Connecting examples to students' contexts and checking whose perspectives are represented. / Culturally responsive pedagogy: Evaluating mastery after a course unit concludes.
C. Summative assessment: Evaluating mastery after a course unit concludes. / Culturally responsive pedagogy: Having students explain which strategy helped and what they will change next time.
D. Summative assessment: Checking that an assessment measures the skill stated in the course outcome. / Culturally responsive pedagogy: Connecting examples to students' contexts and checking whose perspectives are represented.

0545. While supporting a young person aged 16 in the after-school program, a parent educator adopts this practice: asking learners to retrieve key ideas from memory before reviewing notes. Which concept best explains the choice?

A. Scaffolding in instruction
B. Retrieval practice
C. Feedback literacy
D. Culturally responsive pedagogy

0546. A mental-health professional prepares for a session in the classroom support meeting with a child of elementary-school age. The intended approach is pairing an activity with structured reflection and transfer to a new situation. Which concept is most relevant?

A. Experiential learning
B. Feedback literacy
C. Metacognition
D. Culturally responsive pedagogy

0547. A case discussion concerns a child aged 11 and a family therapist in the family session. The practitioner is considering checking that an assessment measures the skill stated in the course outcome. Which principle is involved?

A. Universal Design for Learning
B. Constructive alignment
C. Culturally responsive pedagogy
D. Retrieval practice

0548. Which paired example correctly applies Scaffolding in instruction first and Formative assessment second?

A. Scaffolding in instruction: Modeling a skill and gradually reducing prompts as learners gain mastery. / Formative assessment: Using an exit question to decide what to reteach in the next class.
B. Scaffolding in instruction: Modeling a skill and gradually reducing prompts as learners gain mastery. / Formative assessment: Teaching students to interpret feedback and plan a concrete revision.
C. Scaffolding in instruction: Using an exit question to decide what to reteach in the next class. / Formative assessment: Modeling a skill and gradually reducing prompts as learners gain mastery.
D. Scaffolding in instruction: Asking learners to retrieve key ideas from memory before reviewing notes. / Formative assessment: Using an exit question to decide what to reteach in the next class.

0549. When reviewing a older adolescent client's plan in the youth group, the case coordinator notes that the next step is pairing an activity with structured reflection and transfer to a new situation. Which concept guides this step?

A. Metacognition
B. Summative assessment
C. Experiential learning
D. Scaffolding in instruction

0550. A research trainee is asked what should shape a adolescent student's support in the school-based service. The proposed focus is modeling a skill and gradually reducing prompts as learners gain mastery. Which principle does it represent?

A. Feedback literacy
B. Experiential learning
C. Scaffolding in instruction
D. Formative assessment

0551. A mental-health professional is preparing a follow-up plan for a student aged 15 in the learning-support meeting. The plan calls for using an exit question to decide what to reteach in the next class. Which concept names this approach?

A. Metacognition
B. Scaffolding in instruction
C. Culturally responsive pedagogy
D. Formative assessment

0552. Which choice aligns each practice with the correct idea, Summative assessment or Retrieval practice?

A. Summative assessment: Evaluating mastery after a course unit concludes. / Retrieval practice: Asking learners to retrieve key ideas from memory before reviewing notes.
B. Summative assessment: Asking learners to retrieve key ideas from memory before reviewing notes. / Retrieval practice: Evaluating mastery after a course unit concludes.
C. Summative assessment: Evaluating mastery after a course unit concludes. / Retrieval practice: Teaching students to interpret feedback and plan a concrete revision.
D. Summative assessment: Checking that an assessment measures the skill stated in the course outcome. / Retrieval practice: Asking learners to retrieve key ideas from memory before reviewing notes.

0553. Which option pairs the definitions of Universal Design for Learning and Retrieval practice correctly, in that order?

A. Universal Design for Learning: A framework for designing flexible learning environments with multiple means of engagement, representation, and action or expression. / Retrieval practice: Effortful recall of learned material that strengthens retention and reveals learning needs.
B. Universal Design for Learning: A framework for designing flexible learning environments with multiple means of engagement, representation, and action or expression. / Retrieval practice: Awareness and regulation of one's own learning, including planning, monitoring, and evaluation.
C. Universal Design for Learning: Learning through purposeful experience, reflection, conceptualization, and application. / Retrieval practice: Effortful recall of learned material that strengthens retention and reveals learning needs.
D. Universal Design for Learning: Effortful recall of learned material that strengthens retention and reveals learning needs. / Retrieval practice: A framework for designing flexible learning environments with multiple means of engagement, representation, and action or expression.

0554. Which named construct is captured by this account? Low-stakes evidence gathered during learning to guide feedback and next instructional steps.

A. Scaffolding in instruction
B. Experiential learning
C. Formative assessment
D. Culturally responsive pedagogy

0555. Which applied comparison correctly identifies what belongs to Universal Design for Learning versus Retrieval practice?

A. Universal Design for Learning: Asking learners to retrieve key ideas from memory before reviewing notes. / Retrieval practice: Offering accessible ways to encounter material and demonstrate learning.
B. Universal Design for Learning: Pairing an activity with structured reflection and transfer to a new situation. / Retrieval practice: Asking learners to retrieve key ideas from memory before reviewing notes.
C. Universal Design for Learning: Offering accessible ways to encounter material and demonstrate learning. / Retrieval practice: Asking learners to retrieve key ideas from memory before reviewing notes.
D. Universal Design for Learning: Offering accessible ways to encounter material and demonstrate learning. / Retrieval practice: Having students explain which strategy helped and what they will change next time.

0556. Which statement accurately contrasts the course concepts Metacognition and Experiential learning?

A. Metacognition: Learning through purposeful experience, reflection, conceptualization, and application. / Experiential learning: Awareness and regulation of one's own learning, including planning, monitoring, and evaluation.
B. Metacognition: Awareness and regulation of one's own learning, including planning, monitoring, and evaluation. / Experiential learning: Evaluation of learning at the end of an instructional period or unit.
C. Metacognition: Temporary instructional support that enables increasingly independent performance. / Experiential learning: Learning through purposeful experience, reflection, conceptualization, and application.
D. Metacognition: Awareness and regulation of one's own learning, including planning, monitoring, and evaluation. / Experiential learning: Learning through purposeful experience, reflection, conceptualization, and application.

0557. Which option correctly matches each concept to its practice focus: Summative assessment and Metacognition?

A. Summative assessment: Using an exit question to decide what to reteach in the next class. / Metacognition: Having students explain which strategy helped and what they will change next time.
B. Summative assessment: Having students explain which strategy helped and what they will change next time. / Metacognition: Evaluating mastery after a course unit concludes.
C. Summative assessment: Evaluating mastery after a course unit concludes. / Metacognition: Having students explain which strategy helped and what they will change next time.
D. Summative assessment: Evaluating mastery after a course unit concludes. / Metacognition: Offering accessible ways to encounter material and demonstrate learning.

0558. Which course concept is defined as follows: Alignment among learning outcomes, teaching and learning activities, and assessment.

A. Metacognition
B. Formative assessment
C. Constructive alignment
D. Experiential learning

0559. A mental-health professional is supporting a older adolescent client in the family session. The key practice is teaching students to interpret feedback and plan a concrete revision. Which course concept is most relevant?

A. Universal Design for Learning
B. Feedback literacy
C. Culturally responsive pedagogy
D. Formative assessment

0560. In the community youth program, a team asks how a group facilitator can support a young adolescent client. One proposed action is using an exit question to decide what to reteach in the next class. Which idea does it represent?

A. Constructive alignment
B. Retrieval practice
C. Summative assessment
D. Formative assessment

0561. Which option preserves the correct meaning of both Scaffolding in instruction and Summative assessment?

A. Scaffolding in instruction: Temporary instructional support that enables increasingly independent performance. / Summative assessment: Evaluation of learning at the end of an instructional period or unit.
B. Scaffolding in instruction: Temporary instructional support that enables increasingly independent performance. / Summative assessment: Effortful recall of learned material that strengthens retention and reveals learning needs.
C. Scaffolding in instruction: Evaluation of learning at the end of an instructional period or unit. / Summative assessment: Temporary instructional support that enables increasingly independent performance.
D. Scaffolding in instruction: Low-stakes evidence gathered during learning to guide feedback and next instructional steps. / Summative assessment: Evaluation of learning at the end of an instructional period or unit.

0562. Which choice aligns each practice with the correct idea, Constructive alignment or Formative assessment?

A. Constructive alignment: Using an exit question to decide what to reteach in the next class. / Formative assessment: Checking that an assessment measures the skill stated in the course outcome.
B. Constructive alignment: Teaching students to interpret feedback and plan a concrete revision. / Formative assessment: Using an exit question to decide what to reteach in the next class.
C. Constructive alignment: Checking that an assessment measures the skill stated in the course outcome. / Formative assessment: Using an exit question to decide what to reteach in the next class.
D. Constructive alignment: Checking that an assessment measures the skill stated in the course outcome. / Formative assessment: Offering accessible ways to encounter material and demonstrate learning.

0563. Which option preserves the correct meaning of both Universal Design for Learning and Experiential learning?

A. Universal Design for Learning: Evaluation of learning at the end of an instructional period or unit. / Experiential learning: Learning through purposeful experience, reflection, conceptualization, and application.
B. Universal Design for Learning: Learning through purposeful experience, reflection, conceptualization, and application. / Experiential learning: A framework for designing flexible learning environments with multiple means of engagement, representation, and action or expression.
C. Universal Design for Learning: A framework for designing flexible learning environments with multiple means of engagement, representation, and action or expression. / Experiential learning: Temporary instructional support that enables increasingly independent performance.
D. Universal Design for Learning: A framework for designing flexible learning environments with multiple means of engagement, representation, and action or expression. / Experiential learning: Learning through purposeful experience, reflection, conceptualization, and application.

0564. In a supervision quiz, how should Formative assessment be distinguished from Feedback literacy?

A. Formative assessment: Low-stakes evidence gathered during learning to guide feedback and next instructional steps. / Feedback literacy: Teaching that draws on learners' cultural knowledge and experiences while maintaining high expectations and belonging.
B. Formative assessment: Awareness and regulation of one's own learning, including planning, monitoring, and evaluation. / Feedback literacy: Learners' capacity to understand, evaluate, and use feedback to improve work.
C. Formative assessment: Learners' capacity to understand, evaluate, and use feedback to improve work. / Feedback literacy: Low-stakes evidence gathered during learning to guide feedback and next instructional steps.
D. Formative assessment: Low-stakes evidence gathered during learning to guide feedback and next instructional steps. / Feedback literacy: Learners' capacity to understand, evaluate, and use feedback to improve work.

0565. A student aged 12 and a mental-health professional are reviewing goals in the after-school program. The agreed action is evaluating mastery after a course unit concludes. Which principle best accounts for it?

A. Summative assessment
B. Feedback literacy
C. Metacognition
D. Retrieval practice

0566. Choose the definition pair that correctly explains Retrieval practice first and Metacognition second.

A. Retrieval practice: Awareness and regulation of one's own learning, including planning, monitoring, and evaluation. / Metacognition: Effortful recall of learned material that strengthens retention and reveals learning needs.
B. Retrieval practice: Temporary instructional support that enables increasingly independent performance. / Metacognition: Awareness and regulation of one's own learning, including planning, monitoring, and evaluation.
C. Retrieval practice: Effortful recall of learned material that strengthens retention and reveals learning needs. / Metacognition: Learners' capacity to understand, evaluate, and use feedback to improve work.
D. Retrieval practice: Effortful recall of learned material that strengthens retention and reveals learning needs. / Metacognition: Awareness and regulation of one's own learning, including planning, monitoring, and evaluation.

0567. A service team discusses a young person in the child guidance clinic. Their proposed next step is teaching students to interpret feedback and plan a concrete revision. Which course concept supports it?

A. Feedback literacy
B. Scaffolding in instruction
C. Retrieval practice
D. Experiential learning

0568. While supporting a student aged 12 in the clinical planning session, a family therapist adopts this practice: pairing an activity with structured reflection and transfer to a new situation. Which concept best explains the choice?

A. Formative assessment
B. Summative assessment
C. Experiential learning
D. Scaffolding in instruction

0569. A member of a clinical team is preparing a follow-up plan for a child aged 7 in the youth group. The plan calls for connecting examples to students' contexts and checking whose perspectives are represented. Which concept names this approach?

A. Retrieval practice
B. Culturally responsive pedagogy
C. Feedback literacy
D. Experiential learning

0570. A program coordinator describes an intervention for a young adolescent client in the telehealth session, centered on modeling a skill and gradually reducing prompts as learners gain mastery. Which named idea is most relevant?

A. Scaffolding in instruction
B. Constructive alignment
C. Summative assessment
D. Metacognition

0571. Which option preserves the correct meaning of both Retrieval practice and Feedback literacy?

A. Retrieval practice: Effortful recall of learned material that strengthens retention and reveals learning needs. / Feedback literacy: Learners' capacity to understand, evaluate, and use feedback to improve work.
B. Retrieval practice: Evaluation of learning at the end of an instructional period or unit. / Feedback literacy: Learners' capacity to understand, evaluate, and use feedback to improve work.
C. Retrieval practice: Learners' capacity to understand, evaluate, and use feedback to improve work. / Feedback literacy: Effortful recall of learned material that strengthens retention and reveals learning needs.
D. Retrieval practice: Effortful recall of learned material that strengthens retention and reveals learning needs. / Feedback literacy: Temporary instructional support that enables increasingly independent performance.

0572. During service review in the community service agency, a therapist describes teaching students to interpret feedback and plan a concrete revision. for a student aged 15. Which course idea is most applicable?

A. Feedback literacy
B. Retrieval practice
C. Scaffolding in instruction
D. Culturally responsive pedagogy

0573. Which choice aligns each practice with the correct idea, Scaffolding in instruction or Retrieval practice?

A. Scaffolding in instruction: Modeling a skill and gradually reducing prompts as learners gain mastery. / Retrieval practice: Pairing an activity with structured reflection and transfer to a new situation.
B. Scaffolding in instruction: Asking learners to retrieve key ideas from memory before reviewing notes. / Retrieval practice: Modeling a skill and gradually reducing prompts as learners gain mastery.
C. Scaffolding in instruction: Offering accessible ways to encounter material and demonstrate learning. / Retrieval practice: Asking learners to retrieve key ideas from memory before reviewing notes.
D. Scaffolding in instruction: Modeling a skill and gradually reducing prompts as learners gain mastery. / Retrieval practice: Asking learners to retrieve key ideas from memory before reviewing notes.

0574. For a child aged 11 in the counseling practicum, a play therapist makes this practice the immediate priority: teaching students to interpret feedback and plan a concrete revision. Which concept fits best?

A. Formative assessment
B. Retrieval practice
C. Feedback literacy
D. Experiential learning

0575. Choose the definition pair that correctly explains Summative assessment first and Metacognition second.

A. Summative assessment: Low-stakes evidence gathered during learning to guide feedback and next instructional steps. / Metacognition: Awareness and regulation of one's own learning, including planning, monitoring, and evaluation.
B. Summative assessment: Awareness and regulation of one's own learning, including planning, monitoring, and evaluation. / Metacognition: Evaluation of learning at the end of an instructional period or unit.
C. Summative assessment: Evaluation of learning at the end of an instructional period or unit. / Metacognition: Awareness and regulation of one's own learning, including planning, monitoring, and evaluation.
D. Summative assessment: Evaluation of learning at the end of an instructional period or unit. / Metacognition: A framework for designing flexible learning environments with multiple means of engagement, representation, and action or expression.

0576. A service team discusses a adolescent student in the school-based service. Their proposed next step is modeling a skill and gradually reducing prompts as learners gain mastery. Which course concept supports it?

A. Summative assessment
B. Constructive alignment
C. Retrieval practice
D. Scaffolding in instruction

0577. At a case-planning meeting, the counselor proposes asking learners to retrieve key ideas from memory before reviewing notes. for a child aged 7 seen in the school-based service. Which concept does this illustrate?

A. Formative assessment
B. Retrieval practice
C. Feedback literacy
D. Experiential learning

0578. A planning meeting about a preadolescent child includes a play therapist. The proposed practice in the family resource center is modeling a skill and gradually reducing prompts as learners gain mastery. Which idea underlies it?

A. Scaffolding in instruction
B. Experiential learning
C. Feedback literacy
D. Metacognition

0579. A school counselor is explaining a choice to a older adolescent client and caregiver in the classroom support meeting. The choice centers on offering accessible ways to encounter material and demonstrate learning. Which idea is illustrated?

A. Metacognition
B. Universal Design for Learning
C. Retrieval practice
D. Experiential learning

0580. In the community service agency, a school counselor describes the most appropriate support for a young person aged 16 as using an exit question to decide what to reteach in the next class. Which framework is being applied?

A. Retrieval practice
B. Metacognition
C. Summative assessment
D. Formative assessment

0581. A supervisor asks how Feedback literacy would appear in practice. Which choice should be selected?

A. Evaluating mastery after a course unit concludes.
B. Connecting examples to students' contexts and checking whose perspectives are represented.
C. Modeling a skill and gradually reducing prompts as learners gain mastery.
D. Teaching students to interpret feedback and plan a concrete revision.

0582. Which pair of actions illustrates Formative assessment and Culturally responsive pedagogy, respectively?

A. Formative assessment: Using an exit question to decide what to reteach in the next class. / Culturally responsive pedagogy: Connecting examples to students' contexts and checking whose perspectives are represented.
B. Formative assessment: Connecting examples to students' contexts and checking whose perspectives are represented. / Culturally responsive pedagogy: Using an exit question to decide what to reteach in the next class.
C. Formative assessment: Pairing an activity with structured reflection and transfer to a new situation. / Culturally responsive pedagogy: Connecting examples to students' contexts and checking whose perspectives are represented.
D. Formative assessment: Using an exit question to decide what to reteach in the next class. / Culturally responsive pedagogy: Offering accessible ways to encounter material and demonstrate learning.

0583. In a professional consultation about a high-school student, the member of a clinical team describes this response in the community service agency: asking learners to retrieve key ideas from memory before reviewing notes. Which term is most apt?

A. Metacognition
B. Experiential learning
C. Retrieval practice
D. Universal Design for Learning

0584. During work in the outpatient clinic, a teacher and counselor identifies this need: checking that an assessment measures the skill stated in the course outcome. Which idea should guide the response?

A. Scaffolding in instruction
B. Formative assessment
C. Universal Design for Learning
D. Constructive alignment

0585. Which applied comparison correctly identifies what belongs to Constructive alignment versus Formative assessment?

A. Constructive alignment: Teaching students to interpret feedback and plan a concrete revision. / Formative assessment: Using an exit question to decide what to reteach in the next class.
B. Constructive alignment: Checking that an assessment measures the skill stated in the course outcome. / Formative assessment: Offering accessible ways to encounter material and demonstrate learning.
C. Constructive alignment: Checking that an assessment measures the skill stated in the course outcome. / Formative assessment: Using an exit question to decide what to reteach in the next class.
D. Constructive alignment: Using an exit question to decide what to reteach in the next class. / Formative assessment: Checking that an assessment measures the skill stated in the course outcome.

0586. In a supervision quiz, how should Universal Design for Learning be distinguished from Retrieval practice?

A. Universal Design for Learning: Learning through purposeful experience, reflection, conceptualization, and application. / Retrieval practice: Effortful recall of learned material that strengthens retention and reveals learning needs.
B. Universal Design for Learning: A framework for designing flexible learning environments with multiple means of engagement, representation, and action or expression. / Retrieval practice: Effortful recall of learned material that strengthens retention and reveals learning needs.
C. Universal Design for Learning: Effortful recall of learned material that strengthens retention and reveals learning needs. / Retrieval practice: A framework for designing flexible learning environments with multiple means of engagement, representation, and action or expression.
D. Universal Design for Learning: A framework for designing flexible learning environments with multiple means of engagement, representation, and action or expression. / Retrieval practice: Awareness and regulation of one's own learning, including planning, monitoring, and evaluation.

0587. A team must select a support approach for a school-age child at the community service agency. The case coordinator recommends having students explain which strategy helped and what they will change next time. Which idea is most relevant?

A. Metacognition
B. Scaffolding in instruction
C. Formative assessment
D. Experiential learning

0588. A behavior specialist is asked to evaluate a proposed service for a young person in the parent meeting. The defining feature is having students explain which strategy helped and what they will change next time. Which concept fits?

A. Metacognition
B. Retrieval practice
C. Summative assessment
D. Culturally responsive pedagogy

0589. In the community mental-health service, a group facilitator explains why a high-school student would benefit from modeling a skill and gradually reducing prompts as learners gain mastery. Which course concept underpins the explanation?

A. Summative assessment
B. Scaffolding in instruction
C. Formative assessment
D. Retrieval practice

0590. Consider a young person receiving help in the outpatient clinic. The youth worker focuses on asking learners to retrieve key ideas from memory before reviewing notes. Which term best describes the guiding idea?

A. Retrieval practice
B. Metacognition
C. Feedback literacy
D. Formative assessment

0591. A research trainee is asked what should shape a young person aged 16's support in the telehealth session. The proposed focus is connecting examples to students' contexts and checking whose perspectives are represented. Which principle does it represent?

A. Constructive alignment
B. Summative assessment
C. Formative assessment
D. Culturally responsive pedagogy

0592. Which choice aligns each practice with the correct idea, Summative assessment or Experiential learning?

A. Summative assessment: Evaluating mastery after a course unit concludes. / Experiential learning: Pairing an activity with structured reflection and transfer to a new situation.
B. Summative assessment: Pairing an activity with structured reflection and transfer to a new situation. / Experiential learning: Evaluating mastery after a course unit concludes.
C. Summative assessment: Asking learners to retrieve key ideas from memory before reviewing notes. / Experiential learning: Pairing an activity with structured reflection and transfer to a new situation.
D. Summative assessment: Evaluating mastery after a course unit concludes. / Experiential learning: Using an exit question to decide what to reteach in the next class.

0593. A supervisor asks for an applied contrast between Retrieval practice and Culturally responsive pedagogy. Which option fits?

A. Retrieval practice: Connecting examples to students' contexts and checking whose perspectives are represented. / Culturally responsive pedagogy: Asking learners to retrieve key ideas from memory before reviewing notes.
B. Retrieval practice: Asking learners to retrieve key ideas from memory before reviewing notes. / Culturally responsive pedagogy: Connecting examples to students' contexts and checking whose perspectives are represented.
C. Retrieval practice: Asking learners to retrieve key ideas from memory before reviewing notes. / Culturally responsive pedagogy: Offering accessible ways to encounter material and demonstrate learning.
D. Retrieval practice: Modeling a skill and gradually reducing prompts as learners gain mastery. / Culturally responsive pedagogy: Connecting examples to students' contexts and checking whose perspectives are represented.

0594. A mental-health professional prepares for a session in the learning-support meeting with a student aged 15. The intended approach is using an exit question to decide what to reteach in the next class. Which concept is most relevant?

A. Scaffolding in instruction
B. Formative assessment
C. Metacognition
D. Universal Design for Learning

0595. Which applied comparison correctly identifies what belongs to Culturally responsive pedagogy versus Experiential learning?

A. Culturally responsive pedagogy: Pairing an activity with structured reflection and transfer to a new situation. / Experiential learning: Connecting examples to students' contexts and checking whose perspectives are represented.
B. Culturally responsive pedagogy: Connecting examples to students' contexts and checking whose perspectives are represented. / Experiential learning: Checking that an assessment measures the skill stated in the course outcome.
C. Culturally responsive pedagogy: Evaluating mastery after a course unit concludes. / Experiential learning: Pairing an activity with structured reflection and transfer to a new situation.
D. Culturally responsive pedagogy: Connecting examples to students' contexts and checking whose perspectives are represented. / Experiential learning: Pairing an activity with structured reflection and transfer to a new situation.

0596. A student confuses Retrieval practice with Experiential learning. Which explanation most accurately separates them?

A. Retrieval practice: Effortful recall of learned material that strengthens retention and reveals learning needs. / Experiential learning: Learning through purposeful experience, reflection, conceptualization, and application.
B. Retrieval practice: Learning through purposeful experience, reflection, conceptualization, and application. / Experiential learning: Effortful recall of learned material that strengthens retention and reveals learning needs.
C. Retrieval practice: Alignment among learning outcomes, teaching and learning activities, and assessment. / Experiential learning: Learning through purposeful experience, reflection, conceptualization, and application.
D. Retrieval practice: Effortful recall of learned material that strengthens retention and reveals learning needs. / Experiential learning: Learners' capacity to understand, evaluate, and use feedback to improve work.

0597. How should a practitioner distinguish the applications of Universal Design for Learning and Retrieval practice?

A. Universal Design for Learning: Pairing an activity with structured reflection and transfer to a new situation. / Retrieval practice: Asking learners to retrieve key ideas from memory before reviewing notes.
B. Universal Design for Learning: Offering accessible ways to encounter material and demonstrate learning. / Retrieval practice: Asking learners to retrieve key ideas from memory before reviewing notes.
C. Universal Design for Learning: Asking learners to retrieve key ideas from memory before reviewing notes. / Retrieval practice: Offering accessible ways to encounter material and demonstrate learning.
D. Universal Design for Learning: Offering accessible ways to encounter material and demonstrate learning. / Retrieval practice: Having students explain which strategy helped and what they will change next time.

0598. Choose the definition pair that correctly explains Scaffolding in instruction first and Feedback literacy second.

A. Scaffolding in instruction: Evaluation of learning at the end of an instructional period or unit. / Feedback literacy: Learners' capacity to understand, evaluate, and use feedback to improve work.
B. Scaffolding in instruction: Temporary instructional support that enables increasingly independent performance. / Feedback literacy: Learners' capacity to understand, evaluate, and use feedback to improve work.
C. Scaffolding in instruction: Temporary instructional support that enables increasingly independent performance. / Feedback literacy: Learning through purposeful experience, reflection, conceptualization, and application.
D. Scaffolding in instruction: Learners' capacity to understand, evaluate, and use feedback to improve work. / Feedback literacy: Temporary instructional support that enables increasingly independent performance.

0599. Which comparison would correct a trainee's misunderstanding of Universal Design for Learning versus Feedback literacy?

A. Universal Design for Learning: Alignment among learning outcomes, teaching and learning activities, and assessment. / Feedback literacy: Learners' capacity to understand, evaluate, and use feedback to improve work.
B. Universal Design for Learning: Learners' capacity to understand, evaluate, and use feedback to improve work. / Feedback literacy: A framework for designing flexible learning environments with multiple means of engagement, representation, and action or expression.
C. Universal Design for Learning: A framework for designing flexible learning environments with multiple means of engagement, representation, and action or expression. / Feedback literacy: Teaching that draws on learners' cultural knowledge and experiences while maintaining high expectations and belonging.
D. Universal Design for Learning: A framework for designing flexible learning environments with multiple means of engagement, representation, and action or expression. / Feedback literacy: Learners' capacity to understand, evaluate, and use feedback to improve work.

0600. A team must select a support approach for a student aged 17 at the outpatient clinic. The school-based clinician recommends pairing an activity with structured reflection and transfer to a new situation. Which idea is most relevant?

A. Retrieval practice
B. Scaffolding in instruction
C. Summative assessment
D. Experiential learning

0601. Which comparison would correct a trainee's misunderstanding of Constructive alignment versus Culturally responsive pedagogy?

A. Constructive alignment: Alignment among learning outcomes, teaching and learning activities, and assessment. / Culturally responsive pedagogy: Teaching that draws on learners' cultural knowledge and experiences while maintaining high expectations and belonging.
B. Constructive alignment: Alignment among learning outcomes, teaching and learning activities, and assessment. / Culturally responsive pedagogy: Learners' capacity to understand, evaluate, and use feedback to improve work.
C. Constructive alignment: Teaching that draws on learners' cultural knowledge and experiences while maintaining high expectations and belonging. / Culturally responsive pedagogy: Alignment among learning outcomes, teaching and learning activities, and assessment.
D. Constructive alignment: Evaluation of learning at the end of an instructional period or unit. / Culturally responsive pedagogy: Teaching that draws on learners' cultural knowledge and experiences while maintaining high expectations and belonging.

0602. A doctoral student reads the following description. Which concept does it define? Evaluation of learning at the end of an instructional period or unit.

A. Feedback literacy
B. Metacognition
C. Summative assessment
D. Formative assessment

0603. Which statement accurately contrasts the course concepts Scaffolding in instruction and Culturally responsive pedagogy?

A. Scaffolding in instruction: Teaching that draws on learners' cultural knowledge and experiences while maintaining high expectations and belonging. / Culturally responsive pedagogy: Temporary instructional support that enables increasingly independent performance.
B. Scaffolding in instruction: Temporary instructional support that enables increasingly independent performance. / Culturally responsive pedagogy: Effortful recall of learned material that strengthens retention and reveals learning needs.
C. Scaffolding in instruction: Temporary instructional support that enables increasingly independent performance. / Culturally responsive pedagogy: Teaching that draws on learners' cultural knowledge and experiences while maintaining high expectations and belonging.
D. Scaffolding in instruction: Learners' capacity to understand, evaluate, and use feedback to improve work. / Culturally responsive pedagogy: Teaching that draws on learners' cultural knowledge and experiences while maintaining high expectations and belonging.

0604. Which named construct is captured by this account? Awareness and regulation of one's own learning, including planning, monitoring, and evaluation.

A. Metacognition
B. Summative assessment
C. Scaffolding in instruction
D. Formative assessment

0605. A trainee must distinguish how Culturally responsive pedagogy and Feedback literacy guide practice. Which comparison is accurate?

A. Culturally responsive pedagogy: Connecting examples to students' contexts and checking whose perspectives are represented. / Feedback literacy: Teaching students to interpret feedback and plan a concrete revision.
B. Culturally responsive pedagogy: Teaching students to interpret feedback and plan a concrete revision. / Feedback literacy: Connecting examples to students' contexts and checking whose perspectives are represented.
C. Culturally responsive pedagogy: Connecting examples to students' contexts and checking whose perspectives are represented. / Feedback literacy: Using an exit question to decide what to reteach in the next class.
D. Culturally responsive pedagogy: Having students explain which strategy helped and what they will change next time. / Feedback literacy: Teaching students to interpret feedback and plan a concrete revision.

0606. A student confuses Metacognition with Experiential learning. Which explanation most accurately separates them?

A. Metacognition: Awareness and regulation of one's own learning, including planning, monitoring, and evaluation. / Experiential learning: Evaluation of learning at the end of an instructional period or unit.
B. Metacognition: Awareness and regulation of one's own learning, including planning, monitoring, and evaluation. / Experiential learning: Learning through purposeful experience, reflection, conceptualization, and application.
C. Metacognition: Learning through purposeful experience, reflection, conceptualization, and application. / Experiential learning: Awareness and regulation of one's own learning, including planning, monitoring, and evaluation.
D. Metacognition: Temporary instructional support that enables increasingly independent performance. / Experiential learning: Learning through purposeful experience, reflection, conceptualization, and application.

0607. Choose the response that best puts Scaffolding in instruction into practice.

A. Offering accessible ways to encounter material and demonstrate learning.
B. Checking that an assessment measures the skill stated in the course outcome.
C. Connecting examples to students' contexts and checking whose perspectives are represented.
D. Modeling a skill and gradually reducing prompts as learners gain mastery.

0608. In a professional consultation about a student aged 17, the consultant describes this response in the behavior-support review: evaluating mastery after a course unit concludes. Which term is most apt?

A. Summative assessment
B. Culturally responsive pedagogy
C. Metacognition
D. Experiential learning

0609. For a client in early adolescence seen in the classroom support meeting, the service navigator recommends a plan built around modeling a skill and gradually reducing prompts as learners gain mastery. Which concept is reflected?

A. Feedback literacy
B. Scaffolding in instruction
C. Summative assessment
D. Experiential learning

0610. At the counseling practicum, a service navigator reviews whether a plan for a teenage client is appropriate. The relevant practice is offering accessible ways to encounter material and demonstrate learning. Which concept is tested?

A. Constructive alignment
B. Feedback literacy
C. Formative assessment
D. Universal Design for Learning

0611. A student confuses Universal Design for Learning with Summative assessment. Which explanation most accurately separates them?

A. Universal Design for Learning: A framework for designing flexible learning environments with multiple means of engagement, representation, and action or expression. / Summative assessment: Learning through purposeful experience, reflection, conceptualization, and application.
B. Universal Design for Learning: Teaching that draws on learners' cultural knowledge and experiences while maintaining high expectations and belonging. / Summative assessment: Evaluation of learning at the end of an instructional period or unit.
C. Universal Design for Learning: A framework for designing flexible learning environments with multiple means of engagement, representation, and action or expression. / Summative assessment: Evaluation of learning at the end of an instructional period or unit.
D. Universal Design for Learning: Evaluation of learning at the end of an instructional period or unit. / Summative assessment: A framework for designing flexible learning environments with multiple means of engagement, representation, and action or expression.

0612. How should a practitioner distinguish the applications of Metacognition and Experiential learning?

A. Metacognition: Modeling a skill and gradually reducing prompts as learners gain mastery. / Experiential learning: Pairing an activity with structured reflection and transfer to a new situation.
B. Metacognition: Having students explain which strategy helped and what they will change next time. / Experiential learning: Pairing an activity with structured reflection and transfer to a new situation.
C. Metacognition: Pairing an activity with structured reflection and transfer to a new situation. / Experiential learning: Having students explain which strategy helped and what they will change next time.
D. Metacognition: Having students explain which strategy helped and what they will change next time. / Experiential learning: Evaluating mastery after a course unit concludes.

0613. Choose the definition pair that correctly explains Constructive alignment first and Formative assessment second.

A. Constructive alignment: Alignment among learning outcomes, teaching and learning activities, and assessment. / Formative assessment: Low-stakes evidence gathered during learning to guide feedback and next instructional steps.
B. Constructive alignment: Low-stakes evidence gathered during learning to guide feedback and next instructional steps. / Formative assessment: Alignment among learning outcomes, teaching and learning activities, and assessment.
C. Constructive alignment: Alignment among learning outcomes, teaching and learning activities, and assessment. / Formative assessment: A framework for designing flexible learning environments with multiple means of engagement, representation, and action or expression.
D. Constructive alignment: Learners' capacity to understand, evaluate, and use feedback to improve work. / Formative assessment: Low-stakes evidence gathered during learning to guide feedback and next instructional steps.

0614. During work in the school consultation, a school counselor identifies this need: teaching students to interpret feedback and plan a concrete revision. Which idea should guide the response?

A. Culturally responsive pedagogy
B. Metacognition
C. Feedback literacy
D. Retrieval practice

0615. Which applied comparison correctly identifies what belongs to Formative assessment versus Summative assessment?

A. Formative assessment: Using an exit question to decide what to reteach in the next class. / Summative assessment: Checking that an assessment measures the skill stated in the course outcome.
B. Formative assessment: Evaluating mastery after a course unit concludes. / Summative assessment: Using an exit question to decide what to reteach in the next class.
C. Formative assessment: Asking learners to retrieve key ideas from memory before reviewing notes. / Summative assessment: Evaluating mastery after a course unit concludes.
D. Formative assessment: Using an exit question to decide what to reteach in the next class. / Summative assessment: Evaluating mastery after a course unit concludes.

0616. A case conference reviews a community practitioner's work with a preadolescent child in the school consultation: asking learners to retrieve key ideas from memory before reviewing notes. Which principle is central?

A. Retrieval practice
B. Constructive alignment
C. Summative assessment
D. Culturally responsive pedagogy

0617. When reviewing a young person aged 18's plan in the learning-support meeting, the parent educator notes that the next step is evaluating mastery after a course unit concludes. Which concept guides this step?

A. Summative assessment
B. Formative assessment
C. Experiential learning
D. Culturally responsive pedagogy

0618. A team must select a support approach for a preadolescent child at the multidisciplinary case conference. The school-based clinician recommends using an exit question to decide what to reteach in the next class. Which idea is most relevant?

A. Culturally responsive pedagogy
B. Formative assessment
C. Metacognition
D. Scaffolding in instruction

0619. What is the central meaning of Retrieval practice?

A. Awareness and regulation of one's own learning, including planning, monitoring, and evaluation.
B. Teaching that draws on learners' cultural knowledge and experiences while maintaining high expectations and belonging.
C. Evaluation of learning at the end of an instructional period or unit.
D. Effortful recall of learned material that strengthens retention and reveals learning needs.

0620. Which comparison correctly distinguishes Universal Design for Learning from Feedback literacy?

A. Universal Design for Learning: Alignment among learning outcomes, teaching and learning activities, and assessment. / Feedback literacy: Learners' capacity to understand, evaluate, and use feedback to improve work.
B. Universal Design for Learning: Learners' capacity to understand, evaluate, and use feedback to improve work. / Feedback literacy: A framework for designing flexible learning environments with multiple means of engagement, representation, and action or expression.
C. Universal Design for Learning: A framework for designing flexible learning environments with multiple means of engagement, representation, and action or expression. / Feedback literacy: Learners' capacity to understand, evaluate, and use feedback to improve work.
D. Universal Design for Learning: A framework for designing flexible learning environments with multiple means of engagement, representation, and action or expression. / Feedback literacy: Teaching that draws on learners' cultural knowledge and experiences while maintaining high expectations and belonging.

0621. Which paired example correctly applies Retrieval practice first and Metacognition second?

A. Retrieval practice: Having students explain which strategy helped and what they will change next time. / Metacognition: Asking learners to retrieve key ideas from memory before reviewing notes.
B. Retrieval practice: Asking learners to retrieve key ideas from memory before reviewing notes. / Metacognition: Teaching students to interpret feedback and plan a concrete revision.
C. Retrieval practice: Asking learners to retrieve key ideas from memory before reviewing notes. / Metacognition: Having students explain which strategy helped and what they will change next time.
D. Retrieval practice: Modeling a skill and gradually reducing prompts as learners gain mastery. / Metacognition: Having students explain which strategy helped and what they will change next time.

0622. In the child guidance clinic, a school counselor describes the most appropriate support for a client in early adolescence as pairing an activity with structured reflection and transfer to a new situation. Which framework is being applied?

A. Culturally responsive pedagogy
B. Scaffolding in instruction
C. Feedback literacy
D. Experiential learning

0623. A case coordinator presents a support plan for a child of elementary-school age at the supervision meeting. Its central feature is connecting examples to students' contexts and checking whose perspectives are represented. Which concept should be named?

A. Scaffolding in instruction
B. Culturally responsive pedagogy
C. Universal Design for Learning
D. Formative assessment

0624. A trainee must distinguish how Universal Design for Learning and Metacognition guide practice. Which comparison is accurate?

A. Universal Design for Learning: Having students explain which strategy helped and what they will change next time. / Metacognition: Offering accessible ways to encounter material and demonstrate learning.
B. Universal Design for Learning: Using an exit question to decide what to reteach in the next class. / Metacognition: Having students explain which strategy helped and what they will change next time.
C. Universal Design for Learning: Offering accessible ways to encounter material and demonstrate learning. / Metacognition: Evaluating mastery after a course unit concludes.
D. Universal Design for Learning: Offering accessible ways to encounter material and demonstrate learning. / Metacognition: Having students explain which strategy helped and what they will change next time.

0625. How are Retrieval practice and Experiential learning most accurately differentiated in this curriculum?

A. Retrieval practice: Effortful recall of learned material that strengthens retention and reveals learning needs. / Experiential learning: Learners' capacity to understand, evaluate, and use feedback to improve work.
B. Retrieval practice: Effortful recall of learned material that strengthens retention and reveals learning needs. / Experiential learning: Learning through purposeful experience, reflection, conceptualization, and application.
C. Retrieval practice: Learning through purposeful experience, reflection, conceptualization, and application. / Experiential learning: Effortful recall of learned material that strengthens retention and reveals learning needs.
D. Retrieval practice: Alignment among learning outcomes, teaching and learning activities, and assessment. / Experiential learning: Learning through purposeful experience, reflection, conceptualization, and application.

0626. Choose the term that matches this definition: Low-stakes evidence gathered during learning to guide feedback and next instructional steps.

A. Experiential learning
B. Summative assessment
C. Formative assessment
D. Scaffolding in instruction

0627. Which pair of actions illustrates Metacognition and Culturally responsive pedagogy, respectively?

A. Metacognition: Checking that an assessment measures the skill stated in the course outcome. / Culturally responsive pedagogy: Connecting examples to students' contexts and checking whose perspectives are represented.
B. Metacognition: Connecting examples to students' contexts and checking whose perspectives are represented. / Culturally responsive pedagogy: Having students explain which strategy helped and what they will change next time.
C. Metacognition: Having students explain which strategy helped and what they will change next time. / Culturally responsive pedagogy: Asking learners to retrieve key ideas from memory before reviewing notes.
D. Metacognition: Having students explain which strategy helped and what they will change next time. / Culturally responsive pedagogy: Connecting examples to students' contexts and checking whose perspectives are represented.

0628. A case conference asks for a distinction between Universal Design for Learning and Culturally responsive pedagogy. Which answer is sound?

A. Universal Design for Learning: Teaching that draws on learners' cultural knowledge and experiences while maintaining high expectations and belonging. / Culturally responsive pedagogy: A framework for designing flexible learning environments with multiple means of engagement, representation, and action or expression.
B. Universal Design for Learning: Evaluation of learning at the end of an instructional period or unit. / Culturally responsive pedagogy: Teaching that draws on learners' cultural knowledge and experiences while maintaining high expectations and belonging.
C. Universal Design for Learning: A framework for designing flexible learning environments with multiple means of engagement, representation, and action or expression. / Culturally responsive pedagogy: Teaching that draws on learners' cultural knowledge and experiences while maintaining high expectations and belonging.
D. Universal Design for Learning: A framework for designing flexible learning environments with multiple means of engagement, representation, and action or expression. / Culturally responsive pedagogy: Alignment among learning outcomes, teaching and learning activities, and assessment.

0629. A trainee must distinguish how Universal Design for Learning and Feedback literacy guide practice. Which comparison is accurate?

A. Universal Design for Learning: Offering accessible ways to encounter material and demonstrate learning. / Feedback literacy: Teaching students to interpret feedback and plan a concrete revision.
B. Universal Design for Learning: Offering accessible ways to encounter material and demonstrate learning. / Feedback literacy: Connecting examples to students' contexts and checking whose perspectives are represented.
C. Universal Design for Learning: Checking that an assessment measures the skill stated in the course outcome. / Feedback literacy: Teaching students to interpret feedback and plan a concrete revision.
D. Universal Design for Learning: Teaching students to interpret feedback and plan a concrete revision. / Feedback literacy: Offering accessible ways to encounter material and demonstrate learning.

0630. An interdisciplinary team reviews a preadolescent child's case at the family resource center. The play therapist recommends modeling a skill and gradually reducing prompts as learners gain mastery. Which course concept best fits?

A. Metacognition
B. Feedback literacy
C. Culturally responsive pedagogy
D. Scaffolding in instruction

0631. Which comparison would correct a trainee’s misunderstanding of Summative assessment versus Feedback literacy?

A. Summative assessment: Evaluation of learning at the end of an instructional period or unit. / Feedback literacy: Learners’ capacity to understand, evaluate, and use feedback to improve work.
B. Summative assessment: Learners’ capacity to understand, evaluate, and use feedback to improve work. / Feedback literacy: Evaluation of learning at the end of an instructional period or unit.
C. Summative assessment: Evaluation of learning at the end of an instructional period or unit. / Feedback literacy: Awareness and regulation of one’s own learning, including planning, monitoring, and evaluation.
D. Summative assessment: Low-stakes evidence gathered during learning to guide feedback and next instructional steps. / Feedback literacy: Learners’ capacity to understand, evaluate, and use feedback to improve work.

0632. While supporting a young person in the student wellness team, a caregiver working with a counselor adopts this practice: connecting examples to students’ contexts and checking whose perspectives are represented. Which concept best explains the choice?

A. Culturally responsive pedagogy
B. Metacognition
C. Summative assessment
D. Constructive alignment

0633. A trainee must choose a practice that exemplifies Scaffolding in instruction. Which action is the best fit?

A. Modeling a skill and gradually reducing prompts as learners gain mastery.
B. Checking that an assessment measures the skill stated in the course outcome.
C. Pairing an activity with structured reflection and transfer to a new situation.
D. Connecting examples to students’ contexts and checking whose perspectives are represented.

0634. Identify the most precise label for this idea: Effortful recall of learned material that strengthens retention and reveals learning needs.

A. Constructive alignment
B. Formative assessment
C. Scaffolding in instruction
D. Retrieval practice

0635. Identify the most precise label for this idea: Awareness and regulation of one’s own learning, including planning, monitoring, and evaluation.

A. Summative assessment
B. Culturally responsive pedagogy
C. Feedback literacy
D. Metacognition

0636. Which pair of actions illustrates Constructive alignment and Experiential learning, respectively?

A. Constructive alignment: Checking that an assessment measures the skill stated in the course outcome. / Experiential learning: Connecting examples to students’ contexts and checking whose perspectives are represented.
B. Constructive alignment: Pairing an activity with structured reflection and transfer to a new situation. / Experiential learning: Checking that an assessment measures the skill stated in the course outcome.
C. Constructive alignment: Checking that an assessment measures the skill stated in the course outcome. / Experiential learning: Pairing an activity with structured reflection and transfer to a new situation.
D. Constructive alignment: Teaching students to interpret feedback and plan a concrete revision. / Experiential learning: Pairing an activity with structured reflection and transfer to a new situation.

0637. Choose the response that best puts Experiential learning into practice.

A. Evaluating mastery after a course unit concludes.
B. Checking that an assessment measures the skill stated in the course outcome.
C. Pairing an activity with structured reflection and transfer to a new situation.
D. Using an exit question to decide what to reteach in the next class.

0638. Identify the most precise label for this idea: Teaching that draws on learners’ cultural knowledge and experiences while maintaining high expectations and belonging.

A. Experiential learning
B. Scaffolding in instruction
C. Metacognition
D. Culturally responsive pedagogy

0639. A school counselor is explaining a choice to a preadolescent child and caregiver in the school counseling office. The choice centers on having students explain which strategy helped and what they will change next time. Which idea is illustrated?

A. Feedback literacy
B. Experiential learning
C. Metacognition
D. Retrieval practice

0640. How should a practitioner distinguish the applications of Constructive alignment and Universal Design for Learning?

A. Constructive alignment: Checking that an assessment measures the skill stated in the course outcome. / Universal Design for Learning: Connecting examples to students’ contexts and checking whose perspectives are represented.
B. Constructive alignment: Checking that an assessment measures the skill stated in the course outcome. / Universal Design for Learning: Offering accessible ways to encounter material and demonstrate learning.
C. Constructive alignment: Pairing an activity with structured reflection and transfer to a new situation. / Universal Design for Learning: Offering accessible ways to encounter material and demonstrate learning.
D. Constructive alignment: Offering accessible ways to encounter material and demonstrate learning. / Universal Design for Learning: Checking that an assessment measures the skill stated in the course outcome.

0641. Which applied comparison correctly identifies what belongs to Metacognition versus Feedback literacy?

A. Metacognition: Having students explain which strategy helped and what they will change next time. / Feedback literacy: Using an exit question to decide what to reteach in the next class.
B. Metacognition: Checking that an assessment measures the skill stated in the course outcome. / Feedback literacy: Teaching students to interpret feedback and plan a concrete revision.
C. Metacognition: Having students explain which strategy helped and what they will change next time. / Feedback literacy: Teaching students to interpret feedback and plan a concrete revision.
D. Metacognition: Teaching students to interpret feedback and plan a concrete revision. / Feedback literacy: Having students explain which strategy helped and what they will change next time.

0642. Which statement accurately contrasts the course concepts Summative assessment and Experiential learning?

A. Summative assessment: Evaluation of learning at the end of an instructional period or unit. / Experiential learning: Low-stakes evidence gathered during learning to guide feedback and next instructional steps.
B. Summative assessment: Evaluation of learning at the end of an instructional period or unit. / Experiential learning: Learning through purposeful experience, reflection, conceptualization, and application.
C. Summative assessment: Effortful recall of learned material that strengthens retention and reveals learning needs. / Experiential learning: Learning through purposeful experience, reflection, conceptualization, and application.
D. Summative assessment: Learning through purposeful experience, reflection, conceptualization, and application. / Experiential learning: Evaluation of learning at the end of an instructional period or unit.

0643. In the school-based service, a group facilitator describes the most appropriate support for a client in late adolescence as offering accessible ways to encounter material and demonstrate learning. Which framework is being applied?

A. Constructive alignment
B. Feedback literacy
C. Metacognition
D. Universal Design for Learning

0644. Choose the practice comparison that best separates Experiential learning from Feedback literacy.

A. Experiential learning: Pairing an activity with structured reflection and transfer to a new situation. / Feedback literacy: Teaching students to interpret feedback and plan a concrete revision.
B. Experiential learning: Teaching students to interpret feedback and plan a concrete revision. / Feedback literacy: Pairing an activity with structured reflection and transfer to a new situation.
C. Experiential learning: Pairing an activity with structured reflection and transfer to a new situation. / Feedback literacy: Using an exit question to decide what to reteach in the next class.
D. Experiential learning: Checking that an assessment measures the skill stated in the course outcome. / Feedback literacy: Teaching students to interpret feedback and plan a concrete revision.

0645. A supervisor asks for an applied contrast between Universal Design for Learning and Feedback literacy. Which option fits?

A. Universal Design for Learning: Checking that an assessment measures the skill stated in the course outcome. / Feedback literacy: Teaching students to interpret feedback and plan a concrete revision.
B. Universal Design for Learning: Offering accessible ways to encounter material and demonstrate learning. / Feedback literacy: Connecting examples to students' contexts and checking whose perspectives are represented.
C. Universal Design for Learning: Offering accessible ways to encounter material and demonstrate learning. / Feedback literacy: Teaching students to interpret feedback and plan a concrete revision.
D. Universal Design for Learning: Teaching students to interpret feedback and plan a concrete revision. / Feedback literacy: Offering accessible ways to encounter material and demonstrate learning.

0646. Which choice aligns each practice with the correct idea, Universal Design for Learning or Retrieval practice?

A. Universal Design for Learning: Offering accessible ways to encounter material and demonstrate learning. / Retrieval practice: Asking learners to retrieve key ideas from memory before reviewing notes.
B. Universal Design for Learning: Pairing an activity with structured reflection and transfer to a new situation. / Retrieval practice: Asking learners to retrieve key ideas from memory before reviewing notes.
C. Universal Design for Learning: Offering accessible ways to encounter material and demonstrate learning. / Retrieval practice: Having students explain which strategy helped and what they will change next time.
D. Universal Design for Learning: Asking learners to retrieve key ideas from memory before reviewing notes. / Retrieval practice: Offering accessible ways to encounter material and demonstrate learning.

0647. Identify the most precise label for this idea: Low-stakes evidence gathered during learning to guide feedback and next instructional steps.

A. Summative assessment
B. Formative assessment
C. Feedback literacy
D. Retrieval practice

0648. Which choice aligns each practice with the correct idea, Scaffolding in instruction or Culturally responsive pedagogy?

A. Scaffolding in instruction: Teaching students to interpret feedback and plan a concrete revision. / Culturally responsive pedagogy: Connecting examples to students' contexts and checking whose perspectives are represented.
B. Scaffolding in instruction: Modeling a skill and gradually reducing prompts as learners gain mastery. / Culturally responsive pedagogy: Connecting examples to students' contexts and checking whose perspectives are represented.
C. Scaffolding in instruction: Connecting examples to students' contexts and checking whose perspectives are represented. / Culturally responsive pedagogy: Modeling a skill and gradually reducing prompts as learners gain mastery.
D. Scaffolding in instruction: Modeling a skill and gradually reducing prompts as learners gain mastery. / Culturally responsive pedagogy: Asking learners to retrieve key ideas from memory before reviewing notes.

0649. Which statement shows a sound practice-level distinction between Constructive alignment and Experiential learning?

A. Constructive alignment: Pairing an activity with structured reflection and transfer to a new situation. / Experiential learning: Checking that an assessment measures the skill stated in the course outcome.
B. Constructive alignment: Checking that an assessment measures the skill stated in the course outcome. / Experiential learning: Pairing an activity with structured reflection and transfer to a new situation.
C. Constructive alignment: Teaching students to interpret feedback and plan a concrete revision. / Experiential learning: Pairing an activity with structured reflection and transfer to a new situation.
D. Constructive alignment: Checking that an assessment measures the skill stated in the course outcome. / Experiential learning: Connecting examples to students' contexts and checking whose perspectives are represented.

0650. In a professional consultation about a adolescent student, the mental-health professional describes this response in the youth advocacy program: having students explain which strategy helped and what they will change next time. Which term is most apt?

A. Summative assessment
B. Metacognition
C. Culturally responsive pedagogy
D. Experiential learning

0651. Select the best explanation of Culturally responsive pedagogy.

A. Awareness and regulation of one's own learning, including planning, monitoring, and evaluation.
B. Learning through purposeful experience, reflection, conceptualization, and application.
C. Teaching that draws on learners' cultural knowledge and experiences while maintaining high expectations and belonging.
D. A framework for designing flexible learning environments with multiple means of engagement, representation, and action or expression.

0652. Which statement most accurately defines Culturally responsive pedagogy?

A. Low-stakes evidence gathered during learning to guide feedback and next instructional steps.
B. Temporary instructional support that enables increasingly independent performance.
C. Learners' capacity to understand, evaluate, and use feedback to improve work.
D. Teaching that draws on learners' cultural knowledge and experiences while maintaining high expectations and belonging.

0653. A trainee must explain Universal Design for Learning. Which answer is accurate?

A. A framework for designing flexible learning environments with multiple means of engagement, representation, and action or expression.
B. Effortful recall of learned material that strengthens retention and reveals learning needs.
C. Temporary instructional support that enables increasingly independent performance.
D. Teaching that draws on learners' cultural knowledge and experiences while maintaining high expectations and belonging.

0654. Which option is the clearest practical expression of Retrieval practice?

A. Asking learners to retrieve key ideas from memory before reviewing notes.
B. Modeling a skill and gradually reducing prompts as learners gain mastery.
C. Offering accessible ways to encounter material and demonstrate learning.
D. Connecting examples to students' contexts and checking whose perspectives are represented.

0655. Which comparison correctly distinguishes Metacognition from Experiential learning?

A. Metacognition: Awareness and regulation of one's own learning, including planning, monitoring, and evaluation. / Experiential learning: Learning through purposeful experience, reflection, conceptualization, and application.
B. Metacognition: Learning through purposeful experience, reflection, conceptualization, and application. / Experiential learning: Awareness and regulation of one's own learning, including planning, monitoring, and evaluation.
C. Metacognition: Awareness and regulation of one's own learning, including planning, monitoring, and evaluation. / Experiential learning: Evaluation of learning at the end of an instructional period or unit.
D. Metacognition: Temporary instructional support that enables increasingly independent performance. / Experiential learning: Learning through purposeful experience, reflection, conceptualization, and application.

0656. A case conference asks for a distinction between Culturally responsive pedagogy and Feedback literacy. Which answer is sound?

A. Culturally responsive pedagogy: Teaching that draws on learners' cultural knowledge and experiences while maintaining high expectations and belonging. / Feedback literacy: Learners' capacity to understand, evaluate, and use feedback to improve work.
B. Culturally responsive pedagogy: Teaching that draws on learners' cultural knowledge and experiences while maintaining high expectations and belonging. / Feedback literacy: Low-stakes evidence gathered during learning to guide feedback and next instructional steps.
C. Culturally responsive pedagogy: Awareness and regulation of one's own learning, including planning, monitoring, and evaluation. / Feedback literacy: Learners' capacity to understand, evaluate, and use feedback to improve work.
D. Culturally responsive pedagogy: Learners' capacity to understand, evaluate, and use feedback to improve work. / Feedback literacy: Teaching that draws on learners' cultural knowledge and experiences while maintaining high expectations and belonging.

0657. Which named construct is captured by this account? Temporary instructional support that enables increasingly independent performance.

A. Experiential learning
B. Constructive alignment
C. Retrieval practice
D. Scaffolding in instruction

0658. A supervisor asks how Metacognition would appear in practice. Which choice should be selected?

A. Checking that an assessment measures the skill stated in the course outcome.
B. Modeling a skill and gradually reducing prompts as learners gain mastery.
C. Having students explain which strategy helped and what they will change next time.
D. Asking learners to retrieve key ideas from memory before reviewing notes.

0659. Which choice aligns each practice with the correct idea, Metacognition or Feedback literacy?

A. Metacognition: Teaching students to interpret feedback and plan a concrete revision. / Feedback literacy: Having students explain which strategy helped and what they will change next time.
B. Metacognition: Having students explain which strategy helped and what they will change next time. / Feedback literacy: Teaching students to interpret feedback and plan a concrete revision.
C. Metacognition: Checking that an assessment measures the skill stated in the course outcome. / Feedback literacy: Teaching students to interpret feedback and plan a concrete revision.
D. Metacognition: Having students explain which strategy helped and what they will change next time. / Feedback literacy: Using an exit question to decide what to reteach in the next class.

0660. Which statement shows a sound practice-level distinction between Formative assessment and Culturally responsive pedagogy?

A. Formative assessment: Using an exit question to decide what to reteach in the next class. / Culturally responsive pedagogy: Connecting examples to students' contexts and checking whose perspectives are represented.
B. Formative assessment: Connecting examples to students' contexts and checking whose perspectives are represented. / Culturally responsive pedagogy: Using an exit question to decide what to reteach in the next class.
C. Formative assessment: Pairing an activity with structured reflection and transfer to a new situation. / Culturally responsive pedagogy: Connecting examples to students' contexts and checking whose perspectives are represented.
D. Formative assessment: Using an exit question to decide what to reteach in the next class. / Culturally responsive pedagogy: Offering accessible ways to encounter material and demonstrate learning.

0661. How are Formative assessment and Experiential learning most accurately differentiated in this curriculum?

A. Formative assessment: Low-stakes evidence gathered during learning to guide feedback and next instructional steps. / Experiential learning: Teaching that draws on learners' cultural knowledge and experiences while maintaining high expectations and belonging.
B. Formative assessment: Learners' capacity to understand, evaluate, and use feedback to improve work. / Experiential learning: Learning through purposeful experience, reflection, conceptualization, and application.
C. Formative assessment: Learning through purposeful experience, reflection, conceptualization, and application. / Experiential learning: Low-stakes evidence gathered during learning to guide feedback and next instructional steps.
D. Formative assessment: Low-stakes evidence gathered during learning to guide feedback and next instructional steps. / Experiential learning: Learning through purposeful experience, reflection, conceptualization, and application.

0662. Select the best explanation of Feedback literacy.

A. Awareness and regulation of one's own learning, including planning, monitoring, and evaluation.
B. Learners' capacity to understand, evaluate, and use feedback to improve work.
C. Low-stakes evidence gathered during learning to guide feedback and next instructional steps.
D. Alignment among learning outcomes, teaching and learning activities, and assessment.

0663. Choose the definition pair that correctly explains Universal Design for Learning first and Summative assessment second.

A. Universal Design for Learning: A framework for designing flexible learning environments with multiple means of engagement, representation, and action or expression. / Summative assessment: Learning through purposeful experience, reflection, conceptualization, and application.
B. Universal Design for Learning: Evaluation of learning at the end of an instructional period or unit. / Summative assessment: A framework for designing flexible learning environments with multiple means of engagement, representation, and action or expression.
C. Universal Design for Learning: Teaching that draws on learners' cultural knowledge and experiences while maintaining high expectations and belonging. / Summative assessment: Evaluation of learning at the end of an instructional period or unit.
D. Universal Design for Learning: A framework for designing flexible learning environments with multiple means of engagement, representation, and action or expression. / Summative assessment: Evaluation of learning at the end of an instructional period or unit.

0664. Which comparison would correct a trainee's misunderstanding of Formative assessment versus Summative assessment?

A. Formative assessment: Low-stakes evidence gathered during learning to guide feedback and next instructional steps. / Summative assessment: Alignment among learning outcomes, teaching and learning activities, and assessment.
B. Formative assessment: Low-stakes evidence gathered during learning to guide feedback and next instructional steps. / Summative assessment: Evaluation of learning at the end of an instructional period or unit.
C. Formative assessment: Effortful recall of learned material that strengthens retention and reveals learning needs. / Summative assessment: Evaluation of learning at the end of an instructional period or unit.
D. Formative assessment: Evaluation of learning at the end of an instructional period or unit. / Summative assessment: Low-stakes evidence gathered during learning to guide feedback and next instructional steps.

0665. In the telehealth session, a youth worker explains why a student aged 17 would benefit from offering accessible ways to encounter material and demonstrate learning. Which course concept underpins the explanation?

A. Summative assessment
B. Universal Design for Learning
C. Culturally responsive pedagogy
D. Metacognition

0666. Which professional action most closely applies Scaffolding in instruction?

A. Connecting examples to students' contexts and checking whose perspectives are represented.
B. Asking learners to retrieve key ideas from memory before reviewing notes.
C. Modeling a skill and gradually reducing prompts as learners gain mastery.
D. Evaluating mastery after a course unit concludes.

0667. A student confuses Formative assessment with Feedback literacy. Which explanation most accurately separates them?

A. Formative assessment: Learners' capacity to understand, evaluate, and use feedback to improve work. / Feedback literacy: Low-stakes evidence gathered during learning to guide feedback and next instructional steps.
B. Formative assessment: Low-stakes evidence gathered during learning to guide feedback and next instructional steps. / Feedback literacy: Teaching that draws on learners' cultural knowledge and experiences while maintaining high expectations and belonging.
C. Formative assessment: Low-stakes evidence gathered during learning to guide feedback and next instructional steps. / Feedback literacy: Learners' capacity to understand, evaluate, and use feedback to improve work.
D. Formative assessment: Awareness and regulation of one's own learning, including planning, monitoring, and evaluation. / Feedback literacy: Learners' capacity to understand, evaluate, and use feedback to improve work.

0668. A supervised trainee is preparing a follow-up plan for a preadolescent child in the after-school program. The plan calls for teaching students to interpret feedback and plan a concrete revision. Which concept names this approach?

A. Constructive alignment
B. Metacognition
C. Retrieval practice
D. Feedback literacy

0669. Which statement shows a sound practice-level distinction between Metacognition and Culturally responsive pedagogy?

A. Metacognition: Connecting examples to students' contexts and checking whose perspectives are represented. / Culturally responsive pedagogy: Having students explain which strategy helped and what they will change next time.
B. Metacognition: Having students explain which strategy helped and what they will change next time. / Culturally responsive pedagogy: Asking learners to retrieve key ideas from memory before reviewing notes.
C. Metacognition: Checking that an assessment measures the skill stated in the course outcome. / Culturally responsive pedagogy: Connecting examples to students' contexts and checking whose perspectives are represented.
D. Metacognition: Having students explain which strategy helped and what they will change next time. / Culturally responsive pedagogy: Connecting examples to students' contexts and checking whose perspectives are represented.

0670. A student confuses Retrieval practice with Feedback literacy. Which explanation most accurately separates them?

A. Retrieval practice: Evaluation of learning at the end of an instructional period or unit. / Feedback literacy: Learners' capacity to understand, evaluate, and use feedback to improve work.
B. Retrieval practice: Effortful recall of learned material that strengthens retention and reveals learning needs. / Feedback literacy: Learners' capacity to understand, evaluate, and use feedback to improve work.
C. Retrieval practice: Effortful recall of learned material that strengthens retention and reveals learning needs. / Feedback literacy: Temporary instructional support that enables increasingly independent performance.
D. Retrieval practice: Learners' capacity to understand, evaluate, and use feedback to improve work. / Feedback literacy: Effortful recall of learned material that strengthens retention and reveals learning needs.

0671. A group facilitator is asked to justify a plan for a student aged 15 in the multidisciplinary case conference. It calls for asking learners to retrieve key ideas from memory before reviewing notes. Which concept provides the rationale?

A. Retrieval practice
B. Metacognition
C. Universal Design for Learning
D. Formative assessment

0672. Which paired example correctly applies Formative assessment first and Metacognition second?

A. Formative assessment: Teaching students to interpret feedback and plan a concrete revision. / Metacognition: Having students explain which strategy helped and what they will change next time.
B. Formative assessment: Using an exit question to decide what to reteach in the next class. / Metacognition: Offering accessible ways to encounter material and demonstrate learning.
C. Formative assessment: Having students explain which strategy helped and what they will change next time. / Metacognition: Using an exit question to decide what to reteach in the next class.
D. Formative assessment: Using an exit question to decide what to reteach in the next class. / Metacognition: Having students explain which strategy helped and what they will change next time.

0673. A case conference asks for a distinction between Scaffolding in instruction and Formative assessment. Which answer is sound?

A. Scaffolding in instruction: Temporary instructional support that enables increasingly independent performance. / Formative assessment: Learners' capacity to understand, evaluate, and use feedback to improve work.
B. Scaffolding in instruction: Low-stakes evidence gathered during learning to guide feedback and next instructional steps. / Formative assessment: Temporary instructional support that enables increasingly independent performance.
C. Scaffolding in instruction: Temporary instructional support that enables increasingly independent performance. / Formative assessment: Low-stakes evidence gathered during learning to guide feedback and next instructional steps.
D. Scaffolding in instruction: Effortful recall of learned material that strengthens retention and reveals learning needs. / Formative assessment: Low-stakes evidence gathered during learning to guide feedback and next instructional steps.

0674. A planning meeting about a child aged 14 includes a behavior specialist. The proposed practice in the student wellness team is using an exit question to decide what to reteach in the next class. Which idea underlies it?

A. Formative assessment
B. Feedback literacy
C. Constructive alignment
D. Scaffolding in instruction

0675. Which comparison correctly distinguishes Constructive alignment from Feedback literacy?

A. Constructive alignment: Alignment among learning outcomes, teaching and learning activities, and assessment. / Feedback literacy: Low-stakes evidence gathered during learning to guide feedback and next instructional steps.
B. Constructive alignment: Learners' capacity to understand, evaluate, and use feedback to improve work. / Feedback literacy: Alignment among learning outcomes, teaching and learning activities, and assessment.
C. Constructive alignment: Learning through purposeful experience, reflection, conceptualization, and application. / Feedback literacy: Learners' capacity to understand, evaluate, and use feedback to improve work.
D. Constructive alignment: Alignment among learning outcomes, teaching and learning activities, and assessment. / Feedback literacy: Learners' capacity to understand, evaluate, and use feedback to improve work.

0676. Which pair of actions illustrates Retrieval practice and Experiential learning, respectively?

A. Retrieval practice: Pairing an activity with structured reflection and transfer to a new situation. / Experiential learning: Asking learners to retrieve key ideas from memory before reviewing notes.
B. Retrieval practice: Asking learners to retrieve key ideas from memory before reviewing notes. / Experiential learning: Pairing an activity with structured reflection and transfer to a new situation.
C. Retrieval practice: Checking that an assessment measures the skill stated in the course outcome. / Experiential learning: Pairing an activity with structured reflection and transfer to a new situation.
D. Retrieval practice: Asking learners to retrieve key ideas from memory before reviewing notes. / Experiential learning: Teaching students to interpret feedback and plan a concrete revision.

0677. How should a practitioner distinguish the applications of Metacognition and Culturally responsive pedagogy?

A. Metacognition: Connecting examples to students' contexts and checking whose perspectives are represented. / Culturally responsive pedagogy: Having students explain which strategy helped and what they will change next time.
B. Metacognition: Having students explain which strategy helped and what they will change next time. / Culturally responsive pedagogy: Asking learners to retrieve key ideas from memory before reviewing notes.
C. Metacognition: Checking that an assessment measures the skill stated in the course outcome. / Culturally responsive pedagogy: Connecting examples to students' contexts and checking whose perspectives are represented.
D. Metacognition: Having students explain which strategy helped and what they will change next time. / Culturally responsive pedagogy: Connecting examples to students' contexts and checking whose perspectives are represented.

0678. An interdisciplinary team reviews a child aged 14's case at the student wellness team. The behavior specialist recommends using an exit question to decide what to reteach in the next class. Which course concept best fits?

A. Constructive alignment
B. Universal Design for Learning
C. Feedback literacy
D. Formative assessment

0679. In a supervision quiz, how should Constructive alignment be distinguished from Summative assessment?

A. Constructive alignment: Alignment among learning outcomes, teaching and learning activities, and assessment. / Summative assessment: Effortful recall of learned material that strengthens retention and reveals learning needs.
B. Constructive alignment: Alignment among learning outcomes, teaching and learning activities, and assessment. / Summative assessment: Evaluation of learning at the end of an instructional period or unit.
C. Constructive alignment: Evaluation of learning at the end of an instructional period or unit. / Summative assessment: Alignment among learning outcomes, teaching and learning activities, and assessment.
D. Constructive alignment: Learners' capacity to understand, evaluate, and use feedback to improve work. / Summative assessment: Evaluation of learning at the end of an instructional period or unit.

0680. While consulting in the community service agency, a member of a clinical team supports a high-school student by using this approach: asking learners to retrieve key ideas from memory before reviewing notes. Which concept is being applied?

A. Retrieval practice
B. Culturally responsive pedagogy
C. Scaffolding in instruction
D. Universal Design for Learning

0681. Which statement shows a sound practice-level distinction between Retrieval practice and Feedback literacy?

A. Retrieval practice: Asking learners to retrieve key ideas from memory before reviewing notes. / Feedback literacy: Modeling a skill and gradually reducing prompts as learners gain mastery.
B. Retrieval practice: Teaching students to interpret feedback and plan a concrete revision. / Feedback literacy: Asking learners to retrieve key ideas from memory before reviewing notes.
C. Retrieval practice: Asking learners to retrieve key ideas from memory before reviewing notes. / Feedback literacy: Teaching students to interpret feedback and plan a concrete revision.
D. Retrieval practice: Evaluating mastery after a course unit concludes. / Feedback literacy: Teaching students to interpret feedback and plan a concrete revision.

0682. Identify the most precise label for this idea: A framework for designing flexible learning environments with multiple means of engagement, representation, and action or expression.

A. Metacognition
B. Summative assessment
C. Universal Design for Learning
D. Experiential learning

0683. At the school consultation, a community practitioner reviews whether a plan for a preadolescent child is appropriate. The relevant practice is asking learners to retrieve key ideas from memory before reviewing notes. Which concept is tested?

A. Formative assessment
B. Metacognition
C. Scaffolding in instruction
D. Retrieval practice

0684. A consultant prepares for a session in the school consultation with a child aged 11. The intended approach is having students explain which strategy helped and what they will change next time. Which concept is most relevant?

A. Metacognition
B. Culturally responsive pedagogy
C. Summative assessment
D. Retrieval practice

0685. Which option preserves the correct meaning of both Retrieval practice and Experiential learning?

A. Retrieval practice: Alignment among learning outcomes, teaching and learning activities, and assessment. / Experiential learning: Learning through purposeful experience, reflection, conceptualization, and application.
B. Retrieval practice: Learning through purposeful experience, reflection, conceptualization, and application. / Experiential learning: Effortful recall of learned material that strengthens retention and reveals learning needs.
C. Retrieval practice: Effortful recall of learned material that strengthens retention and reveals learning needs. / Experiential learning: Learning through purposeful experience, reflection, conceptualization, and application.
D. Retrieval practice: Effortful recall of learned material that strengthens retention and reveals learning needs. / Experiential learning: Learners' capacity to understand, evaluate, and use feedback to improve work.

0686. Which applied comparison correctly identifies what belongs to Universal Design for Learning versus Summative assessment?

A. Universal Design for Learning: Connecting examples to students' contexts and checking whose perspectives are represented. / Summative assessment: Evaluating mastery after a course unit concludes.
B. Universal Design for Learning: Offering accessible ways to encounter material and demonstrate learning. / Summative assessment: Pairing an activity with structured reflection and transfer to a new situation.
C. Universal Design for Learning: Offering accessible ways to encounter material and demonstrate learning. / Summative assessment: Evaluating mastery after a course unit concludes.
D. Universal Design for Learning: Evaluating mastery after a course unit concludes. / Summative assessment: Offering accessible ways to encounter material and demonstrate learning.

0687. A clinical supervisor reviews a plan for a student aged 9 in the supervision meeting. The plan emphasizes using an exit question to decide what to reteach in the next class. Which course idea does this reflect?

A. Formative assessment
B. Metacognition
C. Experiential learning
D. Constructive alignment

0688. At the caregiver consultation, a play therapist meets with a teenage client. The practice priority is: using an exit question to decide what to reteach in the next class. Which concept best captures that priority?

A. Culturally responsive pedagogy
B. Feedback literacy
C. Formative assessment
D. Summative assessment

0689. Which option preserves the correct meaning of both Scaffolding in instruction and Formative assessment?

A. Scaffolding in instruction: Low-stakes evidence gathered during learning to guide feedback and next instructional steps. / Formative assessment: Temporary instructional support that enables increasingly independent performance.
B. Scaffolding in instruction: Temporary instructional support that enables increasingly independent performance. / Formative assessment: Learners' capacity to understand, evaluate, and use feedback to improve work.
C. Scaffolding in instruction: Temporary instructional support that enables increasingly independent performance. / Formative assessment: Low-stakes evidence gathered during learning to guide feedback and next instructional steps.
D. Scaffolding in instruction: Effortful recall of learned material that strengthens retention and reveals learning needs. / Formative assessment: Low-stakes evidence gathered during learning to guide feedback and next instructional steps.

0690. Which paired example correctly applies Summative assessment first and Feedback literacy second?

A. Summative assessment: Evaluating mastery after a course unit concludes. / Feedback literacy: Teaching students to interpret feedback and plan a concrete revision.
B. Summative assessment: Teaching students to interpret feedback and plan a concrete revision. / Feedback literacy: Evaluating mastery after a course unit concludes.
C. Summative assessment: Using an exit question to decide what to reteach in the next class. / Feedback literacy: Teaching students to interpret feedback and plan a concrete revision.
D. Summative assessment: Evaluating mastery after a course unit concludes. / Feedback literacy: Having students explain which strategy helped and what they will change next time.

0691. Which option correctly matches each concept to its practice focus: Constructive alignment and Retrieval practice?

A. Constructive alignment: Checking that an assessment measures the skill stated in the course outcome. / Retrieval practice: Teaching students to interpret feedback and plan a concrete revision.
B. Constructive alignment: Asking learners to retrieve key ideas from memory before reviewing notes. / Retrieval practice: Checking that an assessment measures the skill stated in the course outcome.
C. Constructive alignment: Checking that an assessment measures the skill stated in the course outcome. / Retrieval practice: Asking learners to retrieve key ideas from memory before reviewing notes.
D. Constructive alignment: Modeling a skill and gradually reducing prompts as learners gain mastery. / Retrieval practice: Asking learners to retrieve key ideas from memory before reviewing notes.

0692. During work in the telehealth session, a youth worker identifies this need: offering accessible ways to encounter material and demonstrate learning. Which idea should guide the response?

A. Universal Design for Learning
B. Retrieval practice
C. Formative assessment
D. Metacognition

0693. Which comparison correctly distinguishes Scaffolding in instruction from Summative assessment?

A. Scaffolding in instruction: Evaluation of learning at the end of an instructional period or unit. / Summative assessment: Temporary instructional support that enables increasingly independent performance.
B. Scaffolding in instruction: Low-stakes evidence gathered during learning to guide feedback and next instructional steps. / Summative assessment: Evaluation of learning at the end of an instructional period or unit.
C. Scaffolding in instruction: Temporary instructional support that enables increasingly independent performance. / Summative assessment: Evaluation of learning at the end of an instructional period or unit.
D. Scaffolding in instruction: Temporary instructional support that enables increasingly independent performance. / Summative assessment: Effortful recall of learned material that strengthens retention and reveals learning needs.

0694. In a professional consultation about a young person aged 13, the supervised trainee describes this response in the outpatient clinic: connecting examples to students' contexts and checking whose perspectives are represented. Which term is most apt?

A. Summative assessment
B. Culturally responsive pedagogy
C. Feedback literacy
D. Experiential learning

0695. In a supervision quiz, how should Scaffolding in instruction be distinguished from Retrieval practice?

A. Scaffolding in instruction: Temporary instructional support that enables increasingly independent performance. / Retrieval practice: Effortful recall of learned material that strengthens retention and reveals learning needs.
B. Scaffolding in instruction: A framework for designing flexible learning environments with multiple means of engagement, representation, and action or expression. / Retrieval practice: Effortful recall of learned material that strengthens retention and reveals learning needs.
C. Scaffolding in instruction: Effortful recall of learned material that strengthens retention and reveals learning needs. / Retrieval practice: Temporary instructional support that enables increasingly independent performance.
D. Scaffolding in instruction: Temporary instructional support that enables increasingly independent performance. / Retrieval practice: Learning through purposeful experience, reflection, conceptualization, and application.

0696. A mental-health professional and a high-school student are discussing support in the family resource center. The selected practice is checking that an assessment measures the skill stated in the course outcome. Which concept does this demonstrate?

A. Constructive alignment
B. Metacognition
C. Summative assessment
D. Scaffolding in instruction

0697. Which option pairs the definitions of Metacognition and Experiential learning correctly, in that order?

A. Metacognition: Temporary instructional support that enables increasingly independent performance. / Experiential learning: Learning through purposeful experience, reflection, conceptualization, and application.
B. Metacognition: Awareness and regulation of one's own learning, including planning, monitoring, and evaluation. / Experiential learning: Learning through purposeful experience, reflection, conceptualization, and application.
C. Metacognition: Learning through purposeful experience, reflection, conceptualization, and application. / Experiential learning: Awareness and regulation of one's own learning, including planning, monitoring, and evaluation.
D. Metacognition: Awareness and regulation of one's own learning, including planning, monitoring, and evaluation. / Experiential learning: Evaluation of learning at the end of an instructional period or unit.

0698. Choose the practice comparison that best separates Formative assessment from Culturally responsive pedagogy.

A. Formative assessment: Pairing an activity with structured reflection and transfer to a new situation. / Culturally responsive pedagogy: Connecting examples to students' contexts and checking whose perspectives are represented.
B. Formative assessment: Using an exit question to decide what to reteach in the next class. / Culturally responsive pedagogy: Connecting examples to students' contexts and checking whose perspectives are represented.
C. Formative assessment: Connecting examples to students' contexts and checking whose perspectives are represented. / Culturally responsive pedagogy: Using an exit question to decide what to reteach in the next class.
D. Formative assessment: Using an exit question to decide what to reteach in the next class. / Culturally responsive pedagogy: Offering accessible ways to encounter material and demonstrate learning.

0699. A doctoral student reads the following description. Which concept does it define? Learning through purposeful experience, reflection, conceptualization, and application.

A. Experiential learning
B. Culturally responsive pedagogy
C. Scaffolding in instruction
D. Universal Design for Learning

0700. In a supervision review, a family therapist describes work with a student aged 15 in the school consultation: connecting examples to students' contexts and checking whose perspectives are represented. What concept is illustrated?

A. Universal Design for Learning
B. Summative assessment
C. Culturally responsive pedagogy
D. Metacognition

0701. In a supervision quiz, how should Universal Design for Learning be distinguished from Metacognition?

A. Universal Design for Learning: A framework for designing flexible learning environments with multiple means of engagement, representation, and action or expression. / Metacognition: Evaluation of learning at the end of an instructional period or unit.
B. Universal Design for Learning: A framework for designing flexible learning environments with multiple means of engagement, representation, and action or expression. / Metacognition: Awareness and regulation of one's own learning, including planning, monitoring, and evaluation.
C. Universal Design for Learning: Low-stakes evidence gathered during learning to guide feedback and next instructional steps. / Metacognition: Awareness and regulation of one's own learning, including planning, monitoring, and evaluation.
D. Universal Design for Learning: Awareness and regulation of one's own learning, including planning, monitoring, and evaluation. / Metacognition: A framework for designing flexible learning environments with multiple means of engagement, representation, and action or expression.

0702. While supporting a adolescent student in the parent meeting, a parent educator adopts this practice: checking that an assessment measures the skill stated in the course outcome. Which concept best explains the choice?

A. Constructive alignment
B. Scaffolding in instruction
C. Culturally responsive pedagogy
D. Summative assessment

0703. A supervisor asks for an applied contrast between Universal Design for Learning and Scaffolding in instruction. Which option fits?

A. Universal Design for Learning: Modeling a skill and gradually reducing prompts as learners gain mastery. / Scaffolding in instruction: Offering accessible ways to encounter material and demonstrate learning.
B. Universal Design for Learning: Offering accessible ways to encounter material and demonstrate learning. / Scaffolding in instruction: Modeling a skill and gradually reducing prompts as learners gain mastery.
C. Universal Design for Learning: Checking that an assessment measures the skill stated in the course outcome. / Scaffolding in instruction: Modeling a skill and gradually reducing prompts as learners gain mastery.
D. Universal Design for Learning: Offering accessible ways to encounter material and demonstrate learning. / Scaffolding in instruction: Teaching students to interpret feedback and plan a concrete revision.

0704. A school-age child is receiving support in the caregiver consultation. The group facilitator is guided by this practice: teaching students to interpret feedback and plan a concrete revision. Which principle best fits?

A. Summative assessment
B. Retrieval practice
C. Scaffolding in instruction
D. Feedback literacy

0705. Which applied comparison correctly identifies what belongs to Summative assessment versus Retrieval practice?

A. Summative assessment: Asking learners to retrieve key ideas from memory before reviewing notes. / Retrieval practice: Evaluating mastery after a course unit concludes.
B. Summative assessment: Checking that an assessment measures the skill stated in the course outcome. / Retrieval practice: Asking learners to retrieve key ideas from memory before reviewing notes.
C. Summative assessment: Evaluating mastery after a course unit concludes. / Retrieval practice: Asking learners to retrieve key ideas from memory before reviewing notes.
D. Summative assessment: Evaluating mastery after a course unit concludes. / Retrieval practice: Teaching students to interpret feedback and plan a concrete revision.

0706. A support meeting for a high-school student includes a counselor in the school consultation. The practice under consideration is using an exit question to decide what to reteach in the next class. Which concept guides it?

A. Culturally responsive pedagogy
B. Formative assessment
C. Experiential learning
D. Scaffolding in instruction

0707. In a case note about a preadolescent child, a assessment clinician working in the community mental-health service records this priority: evaluating mastery after a course unit concludes. What principle is reflected?

A. Feedback literacy
B. Summative assessment
C. Experiential learning
D. Constructive alignment

0708. Which comparison would correct a trainee’s misunderstanding of Summative assessment versus Culturally responsive pedagogy?

A. Summative assessment: Teaching that draws on learners’ cultural knowledge and experiences while maintaining high expectations and belonging. / Culturally responsive pedagogy: Evaluation of learning at the end of an instructional period or unit.
B. Summative assessment: Alignment among learning outcomes, teaching and learning activities, and assessment. / Culturally responsive pedagogy: Teaching that draws on learners’ cultural knowledge and experiences while maintaining high expectations and belonging.
C. Summative assessment: Evaluation of learning at the end of an instructional period or unit. / Culturally responsive pedagogy: Awareness and regulation of one’s own learning, including planning, monitoring, and evaluation.
D. Summative assessment: Evaluation of learning at the end of an instructional period or unit. / Culturally responsive pedagogy: Teaching that draws on learners’ cultural knowledge and experiences while maintaining high expectations and belonging.

0709. A student confuses Constructive alignment with Scaffolding in instruction. Which explanation most accurately separates them?

A. Constructive alignment: Alignment among learning outcomes, teaching and learning activities, and assessment. / Scaffolding in instruction: Low-stakes evidence gathered during learning to guide feedback and next instructional steps.
B. Constructive alignment: Temporary instructional support that enables increasingly independent performance. / Scaffolding in instruction: Alignment among learning outcomes, teaching and learning activities, and assessment.
C. Constructive alignment: Alignment among learning outcomes, teaching and learning activities, and assessment. / Scaffolding in instruction: Temporary instructional support that enables increasingly independent performance.
D. Constructive alignment: Evaluation of learning at the end of an instructional period or unit. / Scaffolding in instruction: Temporary instructional support that enables increasingly independent performance.

0710. Which paired example correctly applies Constructive alignment first and Experiential learning second?

A. Constructive alignment: Teaching students to interpret feedback and plan a concrete revision. / Experiential learning: Pairing an activity with structured reflection and transfer to a new situation.
B. Constructive alignment: Checking that an assessment measures the skill stated in the course outcome. / Experiential learning: Connecting examples to students’ contexts and checking whose perspectives are represented.
C. Constructive alignment: Pairing an activity with structured reflection and transfer to a new situation. / Experiential learning: Checking that an assessment measures the skill stated in the course outcome.
D. Constructive alignment: Checking that an assessment measures the skill stated in the course outcome. / Experiential learning: Pairing an activity with structured reflection and transfer to a new situation.

0711. For a student aged 15 seen in the family resource center, the program coordinator recommends a plan built around evaluating mastery after a course unit concludes. Which concept is reflected?

A. Summative assessment
B. Feedback literacy
C. Universal Design for Learning
D. Culturally responsive pedagogy

0712. A case discussion concerns a school-age child and a case coordinator in the community service agency. The practitioner is considering having students explain which strategy helped and what they will change next time. Which principle is involved?

A. Metacognition
B. Retrieval practice
C. Summative assessment
D. Culturally responsive pedagogy

0713. In the classroom support meeting, a team asks how a teacher and counselor can support a student aged 17. One proposed action is having students explain which strategy helped and what they will change next time. Which idea does it represent?

A. Metacognition
B. Scaffolding in instruction
C. Experiential learning
D. Feedback literacy

0714. Choose the definition pair that correctly explains Summative assessment first and Experiential learning second.

A. Summative assessment: Evaluation of learning at the end of an instructional period or unit. / Experiential learning: Low-stakes evidence gathered during learning to guide feedback and next instructional steps.
B. Summative assessment: Effortful recall of learned material that strengthens retention and reveals learning needs. / Experiential learning: Learning through purposeful experience, reflection, conceptualization, and application.
C. Summative assessment: Evaluation of learning at the end of an instructional period or unit. / Experiential learning: Learning through purposeful experience, reflection, conceptualization, and application.
D. Summative assessment: Learning through purposeful experience, reflection, conceptualization, and application. / Experiential learning: Evaluation of learning at the end of an instructional period or unit.

0715. Which statement accurately contrasts the course concepts Scaffolding in instruction and Experiential learning?

A. Scaffolding in instruction: Temporary instructional support that enables increasingly independent performance. / Experiential learning: Learning through purposeful experience, reflection, conceptualization, and application.
B. Scaffolding in instruction: Teaching that draws on learners’ cultural knowledge and experiences while maintaining high expectations and belonging. / Experiential learning: Learning through purposeful experience, reflection, conceptualization, and application.
C. Scaffolding in instruction: Learning through purposeful experience, reflection, conceptualization, and application. / Experiential learning: Temporary instructional support that enables increasingly independent performance.
D. Scaffolding in instruction: Temporary instructional support that enables increasingly independent performance. / Experiential learning: Low-stakes evidence gathered during learning to guide feedback and next instructional steps.

0716. A supervised trainee prepares for a session in the after-school program with a preadolescent child. The intended approach is teaching students to interpret feedback and plan a concrete revision. Which concept is most relevant?

A. Summative assessment
B. Experiential learning
C. Feedback literacy
D. Culturally responsive pedagogy

0717. A case conference asks for a distinction between Retrieval practice and Metacognition. Which answer is sound?

A. Retrieval practice: Awareness and regulation of one's own learning, including planning, monitoring, and evaluation. / Metacognition: Effortful recall of learned material that strengthens retention and reveals learning needs.
B. Retrieval practice: Effortful recall of learned material that strengthens retention and reveals learning needs. / Metacognition: Awareness and regulation of one's own learning, including planning, monitoring, and evaluation.
C. Retrieval practice: Effortful recall of learned material that strengthens retention and reveals learning needs. / Metacognition: Learners' capacity to understand, evaluate, and use feedback to improve work.
D. Retrieval practice: Temporary instructional support that enables increasingly independent performance. / Metacognition: Awareness and regulation of one's own learning, including planning, monitoring, and evaluation.

0718. A program coordinator is asked what should shape a student aged 9's support in the outpatient clinic. The proposed focus is having students explain which strategy helped and what they will change next time. Which principle does it represent?

A. Metacognition
B. Formative assessment
C. Constructive alignment
D. Feedback literacy

0719. At a case-planning meeting, the play therapist proposes using an exit question to decide what to reteach in the next class. for a teenage client seen in the caregiver consultation. Which concept does this illustrate?

A. Summative assessment
B. Scaffolding in instruction
C. Constructive alignment
D. Formative assessment

0720. A member of a clinical team and a client in late adolescence are discussing support in the family session. The selected practice is evaluating mastery after a course unit concludes. Which concept does this demonstrate?

A. Constructive alignment
B. Summative assessment
C. Retrieval practice
D. Culturally responsive pedagogy

0721. Which statement most accurately defines Retrieval practice?

A. Learning through purposeful experience, reflection, conceptualization, and application.
B. Temporary instructional support that enables increasingly independent performance.
C. Effortful recall of learned material that strengthens retention and reveals learning needs.
D. Evaluation of learning at the end of an instructional period or unit.

0722. Identify the most precise label for this idea: Learners' capacity to understand, evaluate, and use feedback to improve work.

A. Formative assessment
B. Summative assessment
C. Constructive alignment
D. Feedback literacy

0723. A trainee must choose a practice that exemplifies Constructive alignment. Which action is the best fit?

A. Using an exit question to decide what to reteach in the next class.
B. Checking that an assessment measures the skill stated in the course outcome.
C. Modeling a skill and gradually reducing prompts as learners gain mastery.
D. Asking learners to retrieve key ideas from memory before reviewing notes.

0724. Which named construct is captured by this account? Evaluation of learning at the end of an instructional period or unit.

A. Retrieval practice
B. Constructive alignment
C. Culturally responsive pedagogy
D. Summative assessment

0725. Which applied comparison correctly identifies what belongs to Experiential learning versus Feedback literacy?

A. Experiential learning: Pairing an activity with structured reflection and transfer to a new situation. / Feedback literacy: Using an exit question to decide what to reteach in the next class.
B. Experiential learning: Teaching students to interpret feedback and plan a concrete revision. / Feedback literacy: Pairing an activity with structured reflection and transfer to a new situation.
C. Experiential learning: Checking that an assessment measures the skill stated in the course outcome. / Feedback literacy: Teaching students to interpret feedback and plan a concrete revision.
D. Experiential learning: Pairing an activity with structured reflection and transfer to a new situation. / Feedback literacy: Teaching students to interpret feedback and plan a concrete revision.

0726. Choose the definition pair that correctly explains Universal Design for Learning first and Culturally responsive pedagogy second.

A. Universal Design for Learning: Evaluation of learning at the end of an instructional period or unit. / Culturally responsive pedagogy: Teaching that draws on learners' cultural knowledge and experiences while maintaining high expectations and belonging.
B. Universal Design for Learning: A framework for designing flexible learning environments with multiple means of engagement, representation, and action or expression. / Culturally responsive pedagogy: Teaching that draws on learners' cultural knowledge and experiences while maintaining high expectations and belonging.
C. Universal Design for Learning: Teaching that draws on learners' cultural knowledge and experiences while maintaining high expectations and belonging. / Culturally responsive pedagogy: A framework for designing flexible learning environments with multiple means of engagement, representation, and action or expression.
D. Universal Design for Learning: A framework for designing flexible learning environments with multiple means of engagement, representation, and action or expression. / Culturally responsive pedagogy: Alignment among learning outcomes, teaching and learning activities, and assessment.

0727. How are Constructive alignment and Culturally responsive pedagogy most accurately differentiated in this curriculum?

A. Constructive alignment: Teaching that draws on learners' cultural knowledge and experiences while maintaining high expectations and belonging. / Culturally responsive pedagogy: Alignment among learning outcomes, teaching and learning activities, and assessment.
B. Constructive alignment: Alignment among learning outcomes, teaching and learning activities, and assessment. / Culturally responsive pedagogy: Learners' capacity to understand, evaluate, and use feedback to improve work.
C. Constructive alignment: Evaluation of learning at the end of an instructional period or unit. / Culturally responsive pedagogy: Teaching that draws on learners' cultural knowledge and experiences while maintaining high expectations and belonging.
D. Constructive alignment: Alignment among learning outcomes, teaching and learning activities, and assessment. / Culturally responsive pedagogy: Teaching that draws on learners' cultural knowledge and experiences while maintaining high expectations and belonging.

0728. In the child guidance clinic, a consulting counselor explains why a adolescent student would benefit from using an exit question to decide what to reteach in the next class. Which course concept underpins the explanation?

A. Formative assessment
B. Retrieval practice
C. Scaffolding in instruction
D. Experiential learning

0729. While consulting in the behavior-support review, a consultant supports a student aged 17 by using this approach: evaluating mastery after a course unit concludes. Which concept is being applied?

A. Retrieval practice
B. Constructive alignment
C. Experiential learning
D. Summative assessment

0730. A school support specialist reviews a plan for a client in early adolescence in the youth group. The plan emphasizes teaching students to interpret feedback and plan a concrete revision. Which course idea does this reflect?

A. Feedback literacy
B. Experiential learning
C. Culturally responsive pedagogy
D. Metacognition

0731. A young adolescent client is receiving support in the student-support meeting. The youth worker is guided by this practice: pairing an activity with structured reflection and transfer to a new situation. Which principle best fits?

A. Feedback literacy
B. Retrieval practice
C. Experiential learning
D. Scaffolding in instruction

0732. Which option preserves the correct meaning of both Constructive alignment and Retrieval practice?

A. Constructive alignment: Alignment among learning outcomes, teaching and learning activities, and assessment. / Retrieval practice: Learners' capacity to understand, evaluate, and use feedback to improve work.
B. Constructive alignment: Temporary instructional support that enables increasingly independent performance. / Retrieval practice: Effortful recall of learned material that strengthens retention and reveals learning needs.
C. Constructive alignment: Alignment among learning outcomes, teaching and learning activities, and assessment. / Retrieval practice: Effortful recall of learned material that strengthens retention and reveals learning needs.
D. Constructive alignment: Effortful recall of learned material that strengthens retention and reveals learning needs. / Retrieval practice: Alignment among learning outcomes, teaching and learning activities, and assessment.

0733. During service review in the caregiver consultation, a program coordinator describes asking learners to retrieve key ideas from memory before reviewing notes. for a student aged 12. Which course idea is most applicable?

A. Retrieval practice
B. Constructive alignment
C. Summative assessment
D. Culturally responsive pedagogy

0734. Which option preserves the correct meaning of both Universal Design for Learning and Feedback literacy?

A. Universal Design for Learning: Alignment among learning outcomes, teaching and learning activities, and assessment. / Feedback literacy: Learners' capacity to understand, evaluate, and use feedback to improve work.
B. Universal Design for Learning: Learners' capacity to understand, evaluate, and use feedback to improve work. / Feedback literacy: A framework for designing flexible learning environments with multiple means of engagement, representation, and action or expression.
C. Universal Design for Learning: A framework for designing flexible learning environments with multiple means of engagement, representation, and action or expression. / Feedback literacy: Learners' capacity to understand, evaluate, and use feedback to improve work.
D. Universal Design for Learning: A framework for designing flexible learning environments with multiple means of engagement, representation, and action or expression. / Feedback literacy: Teaching that draws on learners' cultural knowledge and experiences while maintaining high expectations and belonging.

0735. In the community mental-health service, a consulting counselor describes the most appropriate support for a young person aged 18 as connecting examples to students' contexts and checking whose perspectives are represented. Which framework is being applied?

A. Scaffolding in instruction
B. Metacognition
C. Experiential learning
D. Culturally responsive pedagogy

0736. In the caregiver consultation, a school-based clinician is considering this approach for a child aged 6: connecting examples to students' contexts and checking whose perspectives are represented. Which framework does it represent?

A. Metacognition
B. Culturally responsive pedagogy
C. Feedback literacy
D. Retrieval practice

0737. Select the best explanation of Experiential learning.

A. A framework for designing flexible learning environments with multiple means of engagement, representation, and action or expression.
B. Teaching that draws on learners' cultural knowledge and experiences while maintaining high expectations and belonging.
C. Learning through purposeful experience, reflection, conceptualization, and application.
D. Alignment among learning outcomes, teaching and learning activities, and assessment.

0738. Which applied comparison correctly identifies what belongs to Scaffolding in instruction versus Feedback literacy?

A. Scaffolding in instruction: Modeling a skill and gradually reducing prompts as learners gain mastery. / Feedback literacy: Pairing an activity with structured reflection and transfer to a new situation.
B. Scaffolding in instruction: Teaching students to interpret feedback and plan a concrete revision. / Feedback literacy: Modeling a skill and gradually reducing prompts as learners gain mastery.
C. Scaffolding in instruction: Evaluating mastery after a course unit concludes. / Feedback literacy: Teaching students to interpret feedback and plan a concrete revision.
D. Scaffolding in instruction: Modeling a skill and gradually reducing prompts as learners gain mastery. / Feedback literacy: Teaching students to interpret feedback and plan a concrete revision.

0739. In the family resource center, a parent educator is considering this approach for a school-age child: offering accessible ways to encounter material and demonstrate learning. Which framework does it represent?

A. Experiential learning
B. Culturally responsive pedagogy
C. Constructive alignment
D. Universal Design for Learning

0740. A group facilitator is asked to justify a plan for a young person in the clinical planning session. It calls for checking that an assessment measures the skill stated in the course outcome. Which concept provides the rationale?

A. Scaffolding in instruction
B. Formative assessment
C. Retrieval practice
D. Constructive alignment

0741. A trainee must distinguish how Universal Design for Learning and Experiential learning guide practice. Which comparison is accurate?

A. Universal Design for Learning: Offering accessible ways to encounter material and demonstrate learning. / Experiential learning: Modeling a skill and gradually reducing prompts as learners gain mastery.
B. Universal Design for Learning: Offering accessible ways to encounter material and demonstrate learning. / Experiential learning: Pairing an activity with structured reflection and transfer to a new situation.
C. Universal Design for Learning: Evaluating mastery after a course unit concludes. / Experiential learning: Pairing an activity with structured reflection and transfer to a new situation.
D. Universal Design for Learning: Pairing an activity with structured reflection and transfer to a new situation. / Experiential learning: Offering accessible ways to encounter material and demonstrate learning.

0742. While consulting in the outpatient clinic, a supervised trainee supports a young person aged 13 by using this approach: connecting examples to students' contexts and checking whose perspectives are represented. Which concept is being applied?

A. Metacognition
B. Constructive alignment
C. Culturally responsive pedagogy
D. Retrieval practice

0743. In a supervision quiz, how should Scaffolding in instruction be distinguished from Feedback literacy?

A. Scaffolding in instruction: Temporary instructional support that enables increasingly independent performance. / Feedback literacy: Learners' capacity to understand, evaluate, and use feedback to improve work.
B. Scaffolding in instruction: Evaluation of learning at the end of an instructional period or unit. / Feedback literacy: Learners' capacity to understand, evaluate, and use feedback to improve work.
C. Scaffolding in instruction: Learners' capacity to understand, evaluate, and use feedback to improve work. / Feedback literacy: Temporary instructional support that enables increasingly independent performance.
D. Scaffolding in instruction: Temporary instructional support that enables increasingly independent performance. / Feedback literacy: Learning through purposeful experience, reflection, conceptualization, and application.

0744. Which statement accurately contrasts the course concepts Summative assessment and Feedback literacy?

A. Summative assessment: Low-stakes evidence gathered during learning to guide feedback and next instructional steps. / Feedback literacy: Learners' capacity to understand, evaluate, and use feedback to improve work.
B. Summative assessment: Learners' capacity to understand, evaluate, and use feedback to improve work. / Feedback literacy: Evaluation of learning at the end of an instructional period or unit.
C. Summative assessment: Evaluation of learning at the end of an instructional period or unit. / Feedback literacy: Awareness and regulation of one's own learning, including planning, monitoring, and evaluation.
D. Summative assessment: Evaluation of learning at the end of an instructional period or unit. / Feedback literacy: Learners' capacity to understand, evaluate, and use feedback to improve work.

0745. A member of a clinical team prepares for a session in the counseling practicum with a child aged 8. The intended approach is modeling a skill and gradually reducing prompts as learners gain mastery. Which concept is most relevant?

A. Universal Design for Learning
B. Formative assessment
C. Scaffolding in instruction
D. Culturally responsive pedagogy

0746. How are Universal Design for Learning and Feedback literacy most accurately differentiated in this curriculum?

A. Universal Design for Learning: A framework for designing flexible learning environments with multiple means of engagement, representation, and action or expression. / Feedback literacy: Learners' capacity to understand, evaluate, and use feedback to improve work.
B. Universal Design for Learning: Alignment among learning outcomes, teaching and learning activities, and assessment. / Feedback literacy: Learners' capacity to understand, evaluate, and use feedback to improve work.
C. Universal Design for Learning: A framework for designing flexible learning environments with multiple means of engagement, representation, and action or expression. / Feedback literacy: Teaching that draws on learners' cultural knowledge and experiences while maintaining high expectations and belonging.
D. Universal Design for Learning: Learners' capacity to understand, evaluate, and use feedback to improve work. / Feedback literacy: A framework for designing flexible learning environments with multiple means of engagement, representation, and action or expression.

0747. Choose the term that matches this definition: Temporary instructional support that enables increasingly independent performance.

A. Scaffolding in instruction
B. Constructive alignment
C. Formative assessment
D. Universal Design for Learning

0748. Which comparison would correct a trainee's misunderstanding of Universal Design for Learning versus Retrieval practice?

A. Universal Design for Learning: Learning through purposeful experience, reflection, conceptualization, and application. / Retrieval practice: Effortful recall of learned material that strengthens retention and reveals learning needs.
B. Universal Design for Learning: A framework for designing flexible learning environments with multiple means of engagement, representation, and action or expression. / Retrieval practice: Effortful recall of learned material that strengthens retention and reveals learning needs.
C. Universal Design for Learning: Effortful recall of learned material that strengthens retention and reveals learning needs. / Retrieval practice: A framework for designing flexible learning environments with multiple means of engagement, representation, and action or expression.
D. Universal Design for Learning: A framework for designing flexible learning environments with multiple means of engagement, representation, and action or expression. / Retrieval practice: Awareness and regulation of one's own learning, including planning, monitoring, and evaluation.

0749. Which comparison would correct a trainee's misunderstanding of Culturally responsive pedagogy versus Feedback literacy?

A. Culturally responsive pedagogy: Awareness and regulation of one's own learning, including planning, monitoring, and evaluation. / Feedback literacy: Learners' capacity to understand, evaluate, and use feedback to improve work.
B. Culturally responsive pedagogy: Teaching that draws on learners' cultural knowledge and experiences while maintaining high expectations and belonging. / Feedback literacy: Learners' capacity to understand, evaluate, and use feedback to improve work.
C. Culturally responsive pedagogy: Teaching that draws on learners' cultural knowledge and experiences while maintaining high expectations and belonging. / Feedback literacy: Low-stakes evidence gathered during learning to guide feedback and next instructional steps.
D. Culturally responsive pedagogy: Learners' capacity to understand, evaluate, and use feedback to improve work. / Feedback literacy: Teaching that draws on learners' cultural knowledge and experiences while maintaining high expectations and belonging.

0750. Which course concept is defined as follows: A framework for designing flexible learning environments with multiple means of engagement, representation, and action or expression.

A. Retrieval practice
B. Feedback literacy
C. Constructive alignment
D. Universal Design for Learning

0751. Which option preserves the correct meaning of both Retrieval practice and Metacognition?

A. Retrieval practice: Effortful recall of learned material that strengthens retention and reveals learning needs. / Metacognition: Awareness and regulation of one's own learning, including planning, monitoring, and evaluation.
B. Retrieval practice: Effortful recall of learned material that strengthens retention and reveals learning needs. / Metacognition: Learners' capacity to understand, evaluate, and use feedback to improve work.
C. Retrieval practice: Temporary instructional support that enables increasingly independent performance. / Metacognition: Awareness and regulation of one's own learning, including planning, monitoring, and evaluation.
D. Retrieval practice: Awareness and regulation of one's own learning, including planning, monitoring, and evaluation. / Metacognition: Effortful recall of learned material that strengthens retention and reveals learning needs.

0752. A trainee must distinguish how Constructive alignment and Culturally responsive pedagogy guide practice. Which comparison is accurate?

A. Constructive alignment: Checking that an assessment measures the skill stated in the course outcome. / Culturally responsive pedagogy: Teaching students to interpret feedback and plan a concrete revision.
B. Constructive alignment: Connecting examples to students' contexts and checking whose perspectives are represented. / Culturally responsive pedagogy: Checking that an assessment measures the skill stated in the course outcome.
C. Constructive alignment: Checking that an assessment measures the skill stated in the course outcome. / Culturally responsive pedagogy: Connecting examples to students' contexts and checking whose perspectives are represented.
D. Constructive alignment: Evaluating mastery after a course unit concludes. / Culturally responsive pedagogy: Connecting examples to students' contexts and checking whose perspectives are represented.

0753. Which statement most accurately defines Constructive alignment?

A. Awareness and regulation of one's own learning, including planning, monitoring, and evaluation.
B. Effortful recall of learned material that strengthens retention and reveals learning needs.
C. Alignment among learning outcomes, teaching and learning activities, and assessment.
D. Temporary instructional support that enables increasingly independent performance.

0754. Which option correctly matches each concept to its practice focus: Scaffolding in instruction and Feedback literacy?

A. Scaffolding in instruction: Evaluating mastery after a course unit concludes. / Feedback literacy: Teaching students to interpret feedback and plan a concrete revision.
B. Scaffolding in instruction: Modeling a skill and gradually reducing prompts as learners gain mastery. / Feedback literacy: Pairing an activity with structured reflection and transfer to a new situation.
C. Scaffolding in instruction: Modeling a skill and gradually reducing prompts as learners gain mastery. / Feedback literacy: Teaching students to interpret feedback and plan a concrete revision.
D. Scaffolding in instruction: Teaching students to interpret feedback and plan a concrete revision. / Feedback literacy: Modeling a skill and gradually reducing prompts as learners gain mastery.

0755. Which course concept is defined as follows: Teaching that draws on learners' cultural knowledge and experiences while maintaining high expectations and belonging.

A. Retrieval practice
B. Scaffolding in instruction
C. Constructive alignment
D. Culturally responsive pedagogy

0756. Identify the most precise label for this idea: Alignment among learning outcomes, teaching and learning activities, and assessment.

A. Formative assessment
B. Culturally responsive pedagogy
C. Constructive alignment
D. Feedback literacy

0757. Which option correctly matches each concept to its practice focus: Universal Design for Learning and Experiential learning?

A. Universal Design for Learning: Offering accessible ways to encounter material and demonstrate learning. / Experiential learning: Modeling a skill and gradually reducing prompts as learners gain mastery.
B. Universal Design for Learning: Offering accessible ways to encounter material and demonstrate learning. / Experiential learning: Pairing an activity with structured reflection and transfer to a new situation.
C. Universal Design for Learning: Evaluating mastery after a course unit concludes. / Experiential learning: Pairing an activity with structured reflection and transfer to a new situation.
D. Universal Design for Learning: Pairing an activity with structured reflection and transfer to a new situation. / Experiential learning: Offering accessible ways to encounter material and demonstrate learning.

0758. A student confuses Constructive alignment with Feedback literacy. Which explanation most accurately separates them?

A. Constructive alignment: Alignment among learning outcomes, teaching and learning activities, and assessment. / Feedback literacy: Learners' capacity to understand, evaluate, and use feedback to improve work.
B. Constructive alignment: Alignment among learning outcomes, teaching and learning activities, and assessment. / Feedback literacy: Low-stakes evidence gathered during learning to guide feedback and next instructional steps.
C. Constructive alignment: Learning through purposeful experience, reflection, conceptualization, and application. / Feedback literacy: Learners' capacity to understand, evaluate, and use feedback to improve work.
D. Constructive alignment: Learners' capacity to understand, evaluate, and use feedback to improve work. / Feedback literacy: Alignment among learning outcomes, teaching and learning activities, and assessment.

0759. Which pair of actions illustrates Constructive alignment and Scaffolding in instruction, respectively?

A. Constructive alignment: Evaluating mastery after a course unit concludes. / Scaffolding in instruction: Modeling a skill and gradually reducing prompts as learners gain mastery.
B. Constructive alignment: Modeling a skill and gradually reducing prompts as learners gain mastery. / Scaffolding in instruction: Checking that an assessment measures the skill stated in the course outcome.
C. Constructive alignment: Checking that an assessment measures the skill stated in the course outcome. / Scaffolding in instruction: Modeling a skill and gradually reducing prompts as learners gain mastery.
D. Constructive alignment: Checking that an assessment measures the skill stated in the course outcome. / Scaffolding in instruction: Using an exit question to decide what to reteach in the next class.

0760. Which option pairs the definitions of Universal Design for Learning and Summative assessment correctly, in that order?

A. Universal Design for Learning: Teaching that draws on learners' cultural knowledge and experiences while maintaining high expectations and belonging. / Summative assessment: Evaluation of learning at the end of an instructional period or unit.
B. Universal Design for Learning: Evaluation of learning at the end of an instructional period or unit. / Summative assessment: A framework for designing flexible learning environments with multiple means of engagement, representation, and action or expression.
C. Universal Design for Learning: A framework for designing flexible learning environments with multiple means of engagement, representation, and action or expression. / Summative assessment: Learning through purposeful experience, reflection, conceptualization, and application.
D. Universal Design for Learning: A framework for designing flexible learning environments with multiple means of engagement, representation, and action or expression. / Summative assessment: Evaluation of learning at the end of an instructional period or unit.

0761. Select the best explanation of Summative assessment.

A. Effortful recall of learned material that strengthens retention and reveals learning needs.
B. Low-stakes evidence gathered during learning to guide feedback and next instructional steps.
C. Evaluation of learning at the end of an instructional period or unit.
D. Alignment among learning outcomes, teaching and learning activities, and assessment.

0762. At the learning-support meeting, a therapist reviews whether a plan for a child aged 11 is appropriate. The relevant practice is modeling a skill and gradually reducing prompts as learners gain mastery. Which concept is tested?

A. Formative assessment
B. Retrieval practice
C. Metacognition
D. Scaffolding in instruction

0763. A trainee must distinguish how Scaffolding in instruction and Feedback literacy guide practice. Which comparison is accurate?

A. Scaffolding in instruction: Modeling a skill and gradually reducing prompts as learners gain mastery. / Feedback literacy: Pairing an activity with structured reflection and transfer to a new situation.
B. Scaffolding in instruction: Evaluating mastery after a course unit concludes. / Feedback literacy: Teaching students to interpret feedback and plan a concrete revision.
C. Scaffolding in instruction: Modeling a skill and gradually reducing prompts as learners gain mastery. / Feedback literacy: Teaching students to interpret feedback and plan a concrete revision.
D. Scaffolding in instruction: Teaching students to interpret feedback and plan a concrete revision. / Feedback literacy: Modeling a skill and gradually reducing prompts as learners gain mastery.

0764. A therapist describes an intervention for a high-school student in the counseling practicum, centered on having students explain which strategy helped and what they will change next time. Which named idea is most relevant?

A. Retrieval practice
B. Metacognition
C. Experiential learning
D. Feedback literacy

0765. A therapist describes an intervention for a child aged 14 in the outpatient clinic, centered on offering accessible ways to encounter material and demonstrate learning. Which named idea is most relevant?

A. Summative assessment
B. Retrieval practice
C. Universal Design for Learning
D. Feedback literacy

0766. Which option correctly matches each concept to its practice focus: Scaffolding in instruction and Culturally responsive pedagogy?

A. Scaffolding in instruction: Connecting examples to students' contexts and checking whose perspectives are represented. / Culturally responsive pedagogy: Modeling a skill and gradually reducing prompts as learners gain mastery.
B. Scaffolding in instruction: Teaching students to interpret feedback and plan a concrete revision. / Culturally responsive pedagogy: Connecting examples to students' contexts and checking whose perspectives are represented.
C. Scaffolding in instruction: Modeling a skill and gradually reducing prompts as learners gain mastery. / Culturally responsive pedagogy: Connecting examples to students' contexts and checking whose perspectives are represented.
D. Scaffolding in instruction: Modeling a skill and gradually reducing prompts as learners gain mastery. / Culturally responsive pedagogy: Asking learners to retrieve key ideas from memory before reviewing notes.

0767. While consulting in the community mental-health service, a consultant supports a client in late adolescence by using this approach: teaching students to interpret feedback and plan a concrete revision. Which concept is being applied?

A. Metacognition
B. Culturally responsive pedagogy
C. Retrieval practice
D. Feedback literacy

0768. A student confuses Scaffolding in instruction with Retrieval practice. Which explanation most accurately separates them?

A. Scaffolding in instruction: Effortful recall of learned material that strengthens retention and reveals learning needs. / Retrieval practice: Temporary instructional support that enables increasingly independent performance.
B. Scaffolding in instruction: Temporary instructional support that enables increasingly independent performance. / Retrieval practice: Learning through purposeful experience, reflection, conceptualization, and application.
C. Scaffolding in instruction: Temporary instructional support that enables increasingly independent performance. / Retrieval practice: Effortful recall of learned material that strengthens retention and reveals learning needs.
D. Scaffolding in instruction: A framework for designing flexible learning environments with multiple means of engagement, representation, and action or expression. / Retrieval practice: Effortful recall of learned material that strengthens retention and reveals learning needs.

0769. A group facilitator is explaining a choice to a child aged 7 and caregiver in the student wellness team. The choice centers on evaluating mastery after a course unit concludes. Which idea is illustrated?

A. Metacognition
B. Retrieval practice
C. Summative assessment
D. Constructive alignment

0770. Which choice aligns each practice with the correct idea, Universal Design for Learning or Scaffolding in instruction?

A. Universal Design for Learning: Offering accessible ways to encounter material and demonstrate learning. / Scaffolding in instruction: Modeling a skill and gradually reducing prompts as learners gain mastery.
B. Universal Design for Learning: Modeling a skill and gradually reducing prompts as learners gain mastery. / Scaffolding in instruction: Offering accessible ways to encounter material and demonstrate learning.
C. Universal Design for Learning: Checking that an assessment measures the skill stated in the course outcome. / Scaffolding in instruction: Modeling a skill and gradually reducing prompts as learners gain mastery.
D. Universal Design for Learning: Offering accessible ways to encounter material and demonstrate learning. / Scaffolding in instruction: Teaching students to interpret feedback and plan a concrete revision.

0771. Which option pairs the definitions of Summative assessment and Metacognition correctly, in that order?

A. Summative assessment: Evaluation of learning at the end of an instructional period or unit. / Metacognition: Awareness and regulation of one's own learning, including planning, monitoring, and evaluation.
B. Summative assessment: Awareness and regulation of one's own learning, including planning, monitoring, and evaluation. / Metacognition: Evaluation of learning at the end of an instructional period or unit.
C. Summative assessment: Low-stakes evidence gathered during learning to guide feedback and next instructional steps. / Metacognition: Awareness and regulation of one's own learning, including planning, monitoring, and evaluation.
D. Summative assessment: Evaluation of learning at the end of an instructional period or unit. / Metacognition: A framework for designing flexible learning environments with multiple means of engagement, representation, and action or expression.

0772. A behavior specialist reviews a plan for a child aged 6 in the community mental-health service. The plan emphasizes offering accessible ways to encounter material and demonstrate learning. Which course idea does this reflect?

A. Universal Design for Learning
B. Metacognition
C. Formative assessment
D. Retrieval practice

0773. Select the best explanation of Universal Design for Learning.

A. Teaching that draws on learners' cultural knowledge and experiences while maintaining high expectations and belonging.
B. Effortful recall of learned material that strengthens retention and reveals learning needs.
C. A framework for designing flexible learning environments with multiple means of engagement, representation, and action or expression.
D. Learning through purposeful experience, reflection, conceptualization, and application.

0774. A student confuses Universal Design for Learning with Scaffolding in instruction. Which explanation most accurately separates them?

A. Universal Design for Learning: A framework for designing flexible learning environments with multiple means of engagement, representation, and action or expression. / Scaffolding in instruction: Temporary instructional support that enables increasingly independent performance.
B. Universal Design for Learning: Temporary instructional support that enables increasingly independent performance. / Scaffolding in instruction: A framework for designing flexible learning environments with multiple means of engagement, representation, and action or expression.
C. Universal Design for Learning: Alignment among learning outcomes, teaching and learning activities, and assessment. / Scaffolding in instruction: Temporary instructional support that enables increasingly independent performance.
D. Universal Design for Learning: A framework for designing flexible learning environments with multiple means of engagement, representation, and action or expression. / Scaffolding in instruction: Learners' capacity to understand, evaluate, and use feedback to improve work.

0775. At the student-support meeting, a school support specialist meets with a older adolescent client. The practice priority is: modeling a skill and gradually reducing prompts as learners gain mastery. Which concept best captures that priority?

A. Scaffolding in instruction
B. Formative assessment
C. Retrieval practice
D. Constructive alignment

0776. When reviewing a teenage client's plan in the classroom support meeting, the parent educator notes that the next step is teaching students to interpret feedback and plan a concrete revision. Which concept guides this step?

A. Retrieval practice
B. Culturally responsive pedagogy
C. Feedback literacy
D. Constructive alignment

0777. Which description belongs with the term Experiential learning?

A. Awareness and regulation of one's own learning, including planning, monitoring, and evaluation.
B. Teaching that draws on learners' cultural knowledge and experiences while maintaining high expectations and belonging.
C. Learning through purposeful experience, reflection, conceptualization, and application.
D. Effortful recall of learned material that strengthens retention and reveals learning needs.

0778. In a case note about a school-age child, a mental-health professional working in the counseling practicum records this priority: connecting examples to students' contexts and checking whose perspectives are represented. What principle is reflected?

A. Retrieval practice
B. Formative assessment
C. Scaffolding in instruction
D. Culturally responsive pedagogy

0779. Which statement shows a sound practice-level distinction between Formative assessment and Metacognition?

A. Formative assessment: Using an exit question to decide what to reteach in the next class. / Metacognition: Offering accessible ways to encounter material and demonstrate learning.
B. Formative assessment: Using an exit question to decide what to reteach in the next class. / Metacognition: Having students explain which strategy helped and what they will change next time.
C. Formative assessment: Having students explain which strategy helped and what they will change next time. / Metacognition: Using an exit question to decide what to reteach in the next class.
D. Formative assessment: Teaching students to interpret feedback and plan a concrete revision. / Metacognition: Having students explain which strategy helped and what they will change next time.

0780. For a young person aged 18 seen in the youth group, the community practitioner recommends a plan built around offering accessible ways to encounter material and demonstrate learning. Which concept is reflected?

A. Universal Design for Learning
B. Formative assessment
C. Metacognition
D. Scaffolding in instruction

0781. Which option pairs the definitions of Scaffolding in instruction and Experiential learning correctly, in that order?

A. Scaffolding in instruction: Temporary instructional support that enables increasingly independent performance. / Experiential learning: Low-stakes evidence gathered during learning to guide feedback and next instructional steps.
B. Scaffolding in instruction: Teaching that draws on learners' cultural knowledge and experiences while maintaining high expectations and belonging. / Experiential learning: Learning through purposeful experience, reflection, conceptualization, and application.
C. Scaffolding in instruction: Learning through purposeful experience, reflection, conceptualization, and application. / Experiential learning: Temporary instructional support that enables increasingly independent performance.
D. Scaffolding in instruction: Temporary instructional support that enables increasingly independent performance. / Experiential learning: Learning through purposeful experience, reflection, conceptualization, and application.

0782. A supervisor asks how Scaffolding in instruction would appear in practice. Which choice should be selected?

A. Pairing an activity with structured reflection and transfer to a new situation.
B. Having students explain which strategy helped and what they will change next time.
C. Using an exit question to decide what to reteach in the next class.
D. Modeling a skill and gradually reducing prompts as learners gain mastery.

0783. Which pair of actions illustrates Formative assessment and Experiential learning, respectively?

A. Formative assessment: Pairing an activity with structured reflection and transfer to a new situation. / Experiential learning: Using an exit question to decide what to reteach in the next class.
B. Formative assessment: Using an exit question to decide what to reteach in the next class. / Experiential learning: Pairing an activity with structured reflection and transfer to a new situation.
C. Formative assessment: Teaching students to interpret feedback and plan a concrete revision. / Experiential learning: Pairing an activity with structured reflection and transfer to a new situation.
D. Formative assessment: Using an exit question to decide what to reteach in the next class. / Experiential learning: Connecting examples to students' contexts and checking whose perspectives are represented.

0784. An interdisciplinary team reviews a student aged 17's case at the student-support meeting. The play therapist recommends connecting examples to students' contexts and checking whose perspectives are represented. Which course concept best fits?

A. Metacognition
B. Scaffolding in instruction
C. Culturally responsive pedagogy
D. Summative assessment

0785. In a professional consultation about a client in late adolescence, the consultant describes this response in the community mental-health service: teaching students to interpret feedback and plan a concrete revision. Which term is most apt?

A. Constructive alignment
B. Feedback literacy
C. Culturally responsive pedagogy
D. Formative assessment

0786. A supervisor asks for an applied contrast between Scaffolding in instruction and Formative assessment. Which option fits?

A. Scaffolding in instruction: Modeling a skill and gradually reducing prompts as learners gain mastery. / Formative assessment: Using an exit question to decide what to reteach in the next class.
B. Scaffolding in instruction: Modeling a skill and gradually reducing prompts as learners gain mastery. / Formative assessment: Teaching students to interpret feedback and plan a concrete revision.
C. Scaffolding in instruction: Asking learners to retrieve key ideas from memory before reviewing notes. / Formative assessment: Using an exit question to decide what to reteach in the next class.
D. Scaffolding in instruction: Using an exit question to decide what to reteach in the next class. / Formative assessment: Modeling a skill and gradually reducing prompts as learners gain mastery.

0787. Which option correctly matches each concept to its practice focus: Constructive alignment and Formative assessment?

A. Constructive alignment: Checking that an assessment measures the skill stated in the course outcome. / Formative assessment: Offering accessible ways to encounter material and demonstrate learning.
B. Constructive alignment: Teaching students to interpret feedback and plan a concrete revision. / Formative assessment: Using an exit question to decide what to reteach in the next class.
C. Constructive alignment: Using an exit question to decide what to reteach in the next class. / Formative assessment: Checking that an assessment measures the skill stated in the course outcome.
D. Constructive alignment: Checking that an assessment measures the skill stated in the course outcome. / Formative assessment: Using an exit question to decide what to reteach in the next class.

0788. At a case-planning meeting, the behavior specialist proposes evaluating mastery after a course unit concludes. for a child aged 11 seen in the multidisciplinary case conference. Which concept does this illustrate?

A. Summative assessment
B. Metacognition
C. Scaffolding in instruction
D. Culturally responsive pedagogy

0789. Which description belongs with the term Constructive alignment?

A. Alignment among learning outcomes, teaching and learning activities, and assessment.
B. Effortful recall of learned material that strengthens retention and reveals learning needs.
C. Evaluation of learning at the end of an instructional period or unit.
D. A framework for designing flexible learning environments with multiple means of engagement, representation, and action or expression.

0790. Which applied comparison correctly identifies what belongs to Summative assessment versus Feedback literacy?

A. Summative assessment: Evaluating mastery after a course unit concludes. / Feedback literacy: Teaching students to interpret feedback and plan a concrete revision.
B. Summative assessment: Teaching students to interpret feedback and plan a concrete revision. / Feedback literacy: Evaluating mastery after a course unit concludes.
C. Summative assessment: Using an exit question to decide what to reteach in the next class. / Feedback literacy: Teaching students to interpret feedback and plan a concrete revision.
D. Summative assessment: Evaluating mastery after a course unit concludes. / Feedback literacy: Having students explain which strategy helped and what they will change next time.

0791. Choose the term that matches this definition: Alignment among learning outcomes, teaching and learning activities, and assessment.

A. Retrieval practice
B. Constructive alignment
C. Experiential learning
D. Summative assessment

0792. A student confuses Summative assessment with Metacognition. Which explanation most accurately separates them?

A. Summative assessment: Low-stakes evidence gathered during learning to guide feedback and next instructional steps. / Metacognition: Awareness and regulation of one’s own learning, including planning, monitoring, and evaluation.
B. Summative assessment: Evaluation of learning at the end of an instructional period or unit. / Metacognition: Awareness and regulation of one’s own learning, including planning, monitoring, and evaluation.
C. Summative assessment: Awareness and regulation of one’s own learning, including planning, monitoring, and evaluation. / Metacognition: Evaluation of learning at the end of an instructional period or unit.
D. Summative assessment: Evaluation of learning at the end of an instructional period or unit. / Metacognition: A framework for designing flexible learning environments with multiple means of engagement, representation, and action or expression.

0793. An interdisciplinary team reviews a young adolescent client’s case at the clinical planning session. The counselor recommends evaluating mastery after a course unit concludes. Which course concept best fits?

A. Experiential learning
B. Formative assessment
C. Summative assessment
D. Constructive alignment

0794. Which comparison would correct a trainee’s misunderstanding of Summative assessment versus Experiential learning?

A. Summative assessment: Effortful recall of learned material that strengthens retention and reveals learning needs. / Experiential learning: Learning through purposeful experience, reflection, conceptualization, and application.
B. Summative assessment: Evaluation of learning at the end of an instructional period or unit. / Experiential learning: Learning through purposeful experience, reflection, conceptualization, and application.
C. Summative assessment: Evaluation of learning at the end of an instructional period or unit. / Experiential learning: Low-stakes evidence gathered during learning to guide feedback and next instructional steps.
D. Summative assessment: Learning through purposeful experience, reflection, conceptualization, and application. / Experiential learning: Evaluation of learning at the end of an instructional period or unit.

0795. A support meeting for a school-age child includes a school support specialist in the learning-support meeting. The practice under consideration is checking that an assessment measures the skill stated in the course outcome. Which concept guides it?

A. Culturally responsive pedagogy
B. Constructive alignment
C. Metacognition
D. Feedback literacy

0796. A student aged 15 is receiving support in the youth group. The consulting counselor is guided by this practice: checking that an assessment measures the skill stated in the course outcome. Which principle best fits?

A. Feedback literacy
B. Culturally responsive pedagogy
C. Constructive alignment
D. Scaffolding in instruction

0797. A supervisor asks for an applied contrast between Universal Design for Learning and Formative assessment. Which option fits?

A. Universal Design for Learning: Offering accessible ways to encounter material and demonstrate learning. / Formative assessment: Using an exit question to decide what to reteach in the next class.
B. Universal Design for Learning: Offering accessible ways to encounter material and demonstrate learning. / Formative assessment: Modeling a skill and gradually reducing prompts as learners gain mastery.
C. Universal Design for Learning: Using an exit question to decide what to reteach in the next class. / Formative assessment: Offering accessible ways to encounter material and demonstrate learning.
D. Universal Design for Learning: Checking that an assessment measures the skill stated in the course outcome. / Formative assessment: Using an exit question to decide what to reteach in the next class.

0798. Choose the definition pair that correctly explains Experiential learning first and Feedback literacy second.

A. Experiential learning: Learning through purposeful experience, reflection, conceptualization, and application. / Feedback literacy: Low-stakes evidence gathered during learning to guide feedback and next instructional steps.
B. Experiential learning: Alignment among learning outcomes, teaching and learning activities, and assessment. / Feedback literacy: Learners' capacity to understand, evaluate, and use feedback to improve work.
C. Experiential learning: Learning through purposeful experience, reflection, conceptualization, and application. / Feedback literacy: Learners' capacity to understand, evaluate, and use feedback to improve work.
D. Experiential learning: Learners' capacity to understand, evaluate, and use feedback to improve work. / Feedback literacy: Learning through purposeful experience, reflection, conceptualization, and application.

0799. For a young person aged 18 in the youth advocacy program, a school support specialist makes this practice the immediate priority: using an exit question to decide what to reteach in the next class. Which concept fits best?

A. Formative assessment
B. Experiential learning
C. Metacognition
D. Constructive alignment

0800. In the classroom support meeting, the agreed focus for a service navigator working with a client in early adolescence is modeling a skill and gradually reducing prompts as learners gain mastery. Which concept names this focus?

A. Formative assessment
B. Universal Design for Learning
C. Scaffolding in instruction
D. Feedback literacy

0801. A support meeting for a young person aged 10 includes a play therapist in the parent meeting. The practice under consideration is offering accessible ways to encounter material and demonstrate learning. Which concept guides it?

A. Experiential learning
B. Universal Design for Learning
C. Constructive alignment
D. Scaffolding in instruction

0802. A trainee must distinguish how Universal Design for Learning and Culturally responsive pedagogy guide practice. Which comparison is accurate?

A. Universal Design for Learning: Offering accessible ways to encounter material and demonstrate learning. / Culturally responsive pedagogy: Checking that an assessment measures the skill stated in the course outcome.
B. Universal Design for Learning: Connecting examples to students' contexts and checking whose perspectives are represented. / Culturally responsive pedagogy: Offering accessible ways to encounter material and demonstrate learning.
C. Universal Design for Learning: Evaluating mastery after a course unit concludes. / Culturally responsive pedagogy: Connecting examples to students' contexts and checking whose perspectives are represented.
D. Universal Design for Learning: Offering accessible ways to encounter material and demonstrate learning. / Culturally responsive pedagogy: Connecting examples to students' contexts and checking whose perspectives are represented.

0803. An interdisciplinary team reviews a school-age child's case at the school counseling office. The clinical supervisor recommends asking learners to retrieve key ideas from memory before reviewing notes. Which course concept best fits?

A. Summative assessment
B. Feedback literacy
C. Retrieval practice
D. Scaffolding in instruction

0804. A case conference reviews a research trainee's work with a young person aged 10 in the family resource center: teaching students to interpret feedback and plan a concrete revision. Which principle is central?

A. Formative assessment
B. Feedback literacy
C. Metacognition
D. Experiential learning

0805. A student aged 17's service team meets in the clinical planning session. The caregiver working with a counselor recommends a change involving using an exit question to decide what to reteach in the next class. Which idea best explains it?

A. Formative assessment
B. Experiential learning
C. Retrieval practice
D. Summative assessment

0806. A teacher and counselor is asked to justify a plan for a client in early adolescence in the student-support meeting. It calls for using an exit question to decide what to reteach in the next class. Which concept provides the rationale?

A. Universal Design for Learning
B. Retrieval practice
C. Formative assessment
D. Feedback literacy

0807. For a student aged 12 in the community service agency, a clinical supervisor makes this practice the immediate priority: modeling a skill and gradually reducing prompts as learners gain mastery. Which concept fits best?

A. Culturally responsive pedagogy
B. Scaffolding in instruction
C. Feedback literacy
D. Experiential learning

0808. In the youth group, the agreed focus for a community practitioner working with a young person aged 18 is offering accessible ways to encounter material and demonstrate learning. Which concept names this focus?

A. Culturally responsive pedagogy
B. Experiential learning
C. Universal Design for Learning
D. Scaffolding in instruction

0809. During service review in the school counseling office, a community practitioner describes modeling a skill and gradually reducing prompts as learners gain mastery. for a young person aged 16. Which course idea is most applicable?

A. Scaffolding in instruction
B. Experiential learning
C. Constructive alignment
D. Formative assessment

0810. How are Retrieval practice and Feedback literacy most accurately differentiated in this curriculum?

A. Retrieval practice: Evaluation of learning at the end of an instructional period or unit. / Feedback literacy: Learners' capacity to understand, evaluate, and use feedback to improve work.
B. Retrieval practice: Learners' capacity to understand, evaluate, and use feedback to improve work. / Feedback literacy: Effortful recall of learned material that strengthens retention and reveals learning needs.
C. Retrieval practice: Effortful recall of learned material that strengthens retention and reveals learning needs. / Feedback literacy: Learners' capacity to understand, evaluate, and use feedback to improve work.
D. Retrieval practice: Effortful recall of learned material that strengthens retention and reveals learning needs. / Feedback literacy: Temporary instructional support that enables increasingly independent performance.

0811. In a supervision quiz, how should Culturally responsive pedagogy be distinguished from Feedback literacy?

A. Culturally responsive pedagogy: Teaching that draws on learners' cultural knowledge and experiences while maintaining high expectations and belonging. / Feedback literacy: Learners' capacity to understand, evaluate, and use feedback to improve work.
B. Culturally responsive pedagogy: Awareness and regulation of one's own learning, including planning, monitoring, and evaluation. / Feedback literacy: Learners' capacity to understand, evaluate, and use feedback to improve work.
C. Culturally responsive pedagogy: Learners' capacity to understand, evaluate, and use feedback to improve work. / Feedback literacy: Teaching that draws on learners' cultural knowledge and experiences while maintaining high expectations and belonging.
D. Culturally responsive pedagogy: Teaching that draws on learners' cultural knowledge and experiences while maintaining high expectations and belonging. / Feedback literacy: Low-stakes evidence gathered during learning to guide feedback and next instructional steps.

0812. A consultant prepares for a session in the supervision meeting with a client in early adolescence. The intended approach is offering accessible ways to encounter material and demonstrate learning. Which concept is most relevant?

A. Scaffolding in instruction
B. Experiential learning
C. Summative assessment
D. Universal Design for Learning

0813. A high-school student's service team meets in the school counseling office. The family therapist recommends a change involving evaluating mastery after a course unit concludes. Which idea best explains it?

A. Retrieval practice
B. Constructive alignment
C. Summative assessment
D. Experiential learning

0814. Which paired example correctly applies Formative assessment first and Retrieval practice second?

A. Formative assessment: Asking learners to retrieve key ideas from memory before reviewing notes. / Retrieval practice: Using an exit question to decide what to reteach in the next class.
B. Formative assessment: Using an exit question to decide what to reteach in the next class. / Retrieval practice: Asking learners to retrieve key ideas from memory before reviewing notes.
C. Formative assessment: Using an exit question to decide what to reteach in the next class. / Retrieval practice: Checking that an assessment measures the skill stated in the course outcome.
D. Formative assessment: Evaluating mastery after a course unit concludes. / Retrieval practice: Asking learners to retrieve key ideas from memory before reviewing notes.

0815. Which paired example correctly applies Culturally responsive pedagogy first and Feedback literacy second?

A. Culturally responsive pedagogy: Connecting examples to students' contexts and checking whose perspectives are represented. / Feedback literacy: Using an exit question to decide what to reteach in the next class.
B. Culturally responsive pedagogy: Having students explain which strategy helped and what they will change next time. / Feedback literacy: Teaching students to interpret feedback and plan a concrete revision.
C. Culturally responsive pedagogy: Connecting examples to students' contexts and checking whose perspectives are represented. / Feedback literacy: Teaching students to interpret feedback and plan a concrete revision.
D. Culturally responsive pedagogy: Teaching students to interpret feedback and plan a concrete revision. / Feedback literacy: Connecting examples to students' contexts and checking whose perspectives are represented.

0816. Which comparison would correct a trainee’s misunderstanding of Constructive alignment versus Formative assessment?

A. Constructive alignment: Alignment among learning outcomes, teaching and learning activities, and assessment. / Formative assessment: A framework for designing flexible learning environments with multiple means of engagement, representation, and action or expression.
B. Constructive alignment: Low-stakes evidence gathered during learning to guide feedback and next instructional steps. / Formative assessment: Alignment among learning outcomes, teaching and learning activities, and assessment.
C. Constructive alignment: Learners’ capacity to understand, evaluate, and use feedback to improve work. / Formative assessment: Low-stakes evidence gathered during learning to guide feedback and next instructional steps.
D. Constructive alignment: Alignment among learning outcomes, teaching and learning activities, and assessment. / Formative assessment: Low-stakes evidence gathered during learning to guide feedback and next instructional steps.

0817. Which option preserves the correct meaning of both Constructive alignment and Experiential learning?

A. Constructive alignment: Learning through purposeful experience, reflection, conceptualization, and application. / Experiential learning: Alignment among learning outcomes, teaching and learning activities, and assessment.
B. Constructive alignment: Alignment among learning outcomes, teaching and learning activities, and assessment. / Experiential learning: Learning through purposeful experience, reflection, conceptualization, and application.
C. Constructive alignment: Learners’ capacity to understand, evaluate, and use feedback to improve work. / Experiential learning: Learning through purposeful experience, reflection, conceptualization, and application.
D. Constructive alignment: Alignment among learning outcomes, teaching and learning activities, and assessment. / Experiential learning: Teaching that draws on learners’ cultural knowledge and experiences while maintaining high expectations and belonging.

0818. In the student wellness team, a team asks how a consulting counselor can support a young person aged 13. One proposed action is teaching students to interpret feedback and plan a concrete revision. Which idea does it represent?

A. Scaffolding in instruction
B. Formative assessment
C. Retrieval practice
D. Feedback literacy

0819. A student aged 9’s service team meets in the school-based service. The family therapist recommends a change involving teaching students to interpret feedback and plan a concrete revision. Which idea best explains it?

A. Feedback literacy
B. Constructive alignment
C. Formative assessment
D. Retrieval practice

0820. A doctoral student reads the following description. Which concept does it define? Learners’ capacity to understand, evaluate, and use feedback to improve work.

A. Retrieval practice
B. Feedback literacy
C. Culturally responsive pedagogy
D. Constructive alignment

0821. Which course concept is defined as follows: Evaluation of learning at the end of an instructional period or unit.

A. Formative assessment
B. Retrieval practice
C. Summative assessment
D. Culturally responsive pedagogy

0822. How should a practitioner distinguish the applications of Constructive alignment and Formative assessment?

A. Constructive alignment: Checking that an assessment measures the skill stated in the course outcome. / Formative assessment: Using an exit question to decide what to reteach in the next class.
B. Constructive alignment: Teaching students to interpret feedback and plan a concrete revision. / Formative assessment: Using an exit question to decide what to reteach in the next class.
C. Constructive alignment: Checking that an assessment measures the skill stated in the course outcome. / Formative assessment: Offering accessible ways to encounter material and demonstrate learning.
D. Constructive alignment: Using an exit question to decide what to reteach in the next class. / Formative assessment: Checking that an assessment measures the skill stated in the course outcome.

0823. A counselor is asked to evaluate a proposed service for a student aged 12 in the community youth program. The defining feature is connecting examples to students’ contexts and checking whose perspectives are represented. Which concept fits?

A. Universal Design for Learning
B. Metacognition
C. Culturally responsive pedagogy
D. Experiential learning

0824. How are Scaffolding in instruction and Summative assessment most accurately differentiated in this curriculum?

A. Scaffolding in instruction: Temporary instructional support that enables increasingly independent performance. / Summative assessment: Evaluation of learning at the end of an instructional period or unit.
B. Scaffolding in instruction: Temporary instructional support that enables increasingly independent performance. / Summative assessment: Effortful recall of learned material that strengthens retention and reveals learning needs.
C. Scaffolding in instruction: Evaluation of learning at the end of an instructional period or unit. / Summative assessment: Temporary instructional support that enables increasingly independent performance.
D. Scaffolding in instruction: Low-stakes evidence gathered during learning to guide feedback and next instructional steps. / Summative assessment: Evaluation of learning at the end of an instructional period or unit.

0825. Which pair of actions illustrates Constructive alignment and Feedback literacy, respectively?

A. Constructive alignment: Checking that an assessment measures the skill stated in the course outcome. / Feedback literacy: Using an exit question to decide what to reteach in the next class.
B. Constructive alignment: Pairing an activity with structured reflection and transfer to a new situation. / Feedback literacy: Teaching students to interpret feedback and plan a concrete revision.
C. Constructive alignment: Teaching students to interpret feedback and plan a concrete revision. / Feedback literacy: Checking that an assessment measures the skill stated in the course outcome.
D. Constructive alignment: Checking that an assessment measures the skill stated in the course outcome. / Feedback literacy: Teaching students to interpret feedback and plan a concrete revision.

0826. While consulting in the student-support meeting, a member of a clinical team supports a child aged 14 by using this approach: checking that an assessment measures the skill stated in the course outcome. Which concept is being applied?

A. Constructive alignment
B. Scaffolding in instruction
C. Metacognition
D. Culturally responsive pedagogy

0827. A trainee must distinguish how Formative assessment and Metacognition guide practice. Which comparison is accurate?

A. Formative assessment: Having students explain which strategy helped and what they will change next time. / Metacognition: Using an exit question to decide what to reteach in the next class.
B. Formative assessment: Using an exit question to decide what to reteach in the next class. / Metacognition: Offering accessible ways to encounter material and demonstrate learning.
C. Formative assessment: Using an exit question to decide what to reteach in the next class. / Metacognition: Having students explain which strategy helped and what they will change next time.
D. Formative assessment: Teaching students to interpret feedback and plan a concrete revision. / Metacognition: Having students explain which strategy helped and what they will change next time.

0828. Which option correctly matches each concept to its practice focus: Constructive alignment and Scaffolding in instruction?

A. Constructive alignment: Checking that an assessment measures the skill stated in the course outcome. / Scaffolding in instruction: Modeling a skill and gradually reducing prompts as learners gain mastery.
B. Constructive alignment: Checking that an assessment measures the skill stated in the course outcome. / Scaffolding in instruction: Using an exit question to decide what to reteach in the next class.
C. Constructive alignment: Evaluating mastery after a course unit concludes. / Scaffolding in instruction: Modeling a skill and gradually reducing prompts as learners gain mastery.
D. Constructive alignment: Modeling a skill and gradually reducing prompts as learners gain mastery. / Scaffolding in instruction: Checking that an assessment measures the skill stated in the course outcome.

0829. Which statement most accurately defines Metacognition?

A. Awareness and regulation of one’s own learning, including planning, monitoring, and evaluation.
B. Alignment among learning outcomes, teaching and learning activities, and assessment.
C. Learners’ capacity to understand, evaluate, and use feedback to improve work.
D. Temporary instructional support that enables increasingly independent performance.

0830. In the supervision meeting, a teacher and counselor describes the most appropriate support for a child aged 8 as teaching students to interpret feedback and plan a concrete revision. Which framework is being applied?

A. Scaffolding in instruction
B. Constructive alignment
C. Feedback literacy
D. Formative assessment

0831. Which statement accurately contrasts the course concepts Universal Design for Learning and Retrieval practice?

A. Universal Design for Learning: Effortful recall of learned material that strengthens retention and reveals learning needs. / Retrieval practice: A framework for designing flexible learning environments with multiple means of engagement, representation, and action or expression.
B. Universal Design for Learning: A framework for designing flexible learning environments with multiple means of engagement, representation, and action or expression. / Retrieval practice: Awareness and regulation of one’s own learning, including planning, monitoring, and evaluation.
C. Universal Design for Learning: Learning through purposeful experience, reflection, conceptualization, and application. / Retrieval practice: Effortful recall of learned material that strengthens retention and reveals learning needs.
D. Universal Design for Learning: A framework for designing flexible learning environments with multiple means of engagement, representation, and action or expression. / Retrieval practice: Effortful recall of learned material that strengthens retention and reveals learning needs.

0832. In the family resource center, a team asks how a group facilitator can support a adolescent student. One proposed action is pairing an activity with structured reflection and transfer to a new situation. Which idea does it represent?

A. Formative assessment
B. Metacognition
C. Scaffolding in instruction
D. Experiential learning

0833. At the family session, a clinical supervisor meets with a student aged 15. The practice priority is: offering accessible ways to encounter material and demonstrate learning. Which concept best captures that priority?

A. Formative assessment
B. Universal Design for Learning
C. Experiential learning
D. Scaffolding in instruction

0834. A support meeting for a adolescent student includes a clinical supervisor in the youth group. The practice under consideration is evaluating mastery after a course unit concludes. Which concept guides it?

A. Formative assessment
B. Summative assessment
C. Metacognition
D. Universal Design for Learning

0835. How should a practitioner distinguish the applications of Culturally responsive pedagogy and Experiential learning?

A. Culturally responsive pedagogy: Pairing an activity with structured reflection and transfer to a new situation. / Experiential learning: Connecting examples to students’ contexts and checking whose perspectives are represented.
B. Culturally responsive pedagogy: Evaluating mastery after a course unit concludes. / Experiential learning: Pairing an activity with structured reflection and transfer to a new situation.
C. Culturally responsive pedagogy: Connecting examples to students’ contexts and checking whose perspectives are represented. / Experiential learning: Pairing an activity with structured reflection and transfer to a new situation.
D. Culturally responsive pedagogy: Connecting examples to students’ contexts and checking whose perspectives are represented. / Experiential learning: Checking that an assessment measures the skill stated in the course outcome.

0836. A child aged 7 is receiving support in the student wellness team. The group facilitator is guided by this practice: evaluating mastery after a course unit concludes. Which principle best fits?

A. Culturally responsive pedagogy
B. Feedback literacy
C. Summative assessment
D. Experiential learning

0837. A service navigator describes an intervention for a student aged 17 in the supervision meeting, centered on asking learners to retrieve key ideas from memory before reviewing notes. Which named idea is most relevant?

A. Constructive alignment
B. Scaffolding in instruction
C. Formative assessment
D. Retrieval practice

0838. Which description belongs with the term Universal Design for Learning?

A. Teaching that draws on learners' cultural knowledge and experiences while maintaining high expectations and belonging.
B. Temporary instructional support that enables increasingly independent performance.
C. A framework for designing flexible learning environments with multiple means of engagement, representation, and action or expression.
D. Evaluation of learning at the end of an instructional period or unit.

0839. Which option preserves the correct meaning of both Formative assessment and Metacognition?

A. Formative assessment: Awareness and regulation of one's own learning, including planning, monitoring, and evaluation. / Metacognition: Low-stakes evidence gathered during learning to guide feedback and next instructional steps.
B. Formative assessment: Learners' capacity to understand, evaluate, and use feedback to improve work. / Metacognition: Awareness and regulation of one's own learning, including planning, monitoring, and evaluation.
C. Formative assessment: Low-stakes evidence gathered during learning to guide feedback and next instructional steps. / Metacognition: A framework for designing flexible learning environments with multiple means of engagement, representation, and action or expression.
D. Formative assessment: Low-stakes evidence gathered during learning to guide feedback and next instructional steps. / Metacognition: Awareness and regulation of one's own learning, including planning, monitoring, and evaluation.

0840. A assessment clinician is preparing a follow-up plan for a young person aged 18 in the child guidance clinic. The plan calls for checking that an assessment measures the skill stated in the course outcome. Which concept names this approach?

A. Retrieval practice
B. Culturally responsive pedagogy
C. Universal Design for Learning
D. Constructive alignment

0841. In a supervision quiz, how should Summative assessment be distinguished from Metacognition?

A. Summative assessment: Awareness and regulation of one's own learning, including planning, monitoring, and evaluation. / Metacognition: Evaluation of learning at the end of an instructional period or unit.
B. Summative assessment: Evaluation of learning at the end of an instructional period or unit. / Metacognition: Awareness and regulation of one's own learning, including planning, monitoring, and evaluation.
C. Summative assessment: Evaluation of learning at the end of an instructional period or unit. / Metacognition: A framework for designing flexible learning environments with multiple means of engagement, representation, and action or expression.
D. Summative assessment: Low-stakes evidence gathered during learning to guide feedback and next instructional steps. / Metacognition: Awareness and regulation of one's own learning, including planning, monitoring, and evaluation.

0842. Choose the practice comparison that best separates Formative assessment from Experiential learning.

A. Formative assessment: Using an exit question to decide what to reteach in the next class. / Experiential learning: Pairing an activity with structured reflection and transfer to a new situation.
B. Formative assessment: Pairing an activity with structured reflection and transfer to a new situation. / Experiential learning: Using an exit question to decide what to reteach in the next class.
C. Formative assessment: Teaching students to interpret feedback and plan a concrete revision. / Experiential learning: Pairing an activity with structured reflection and transfer to a new situation.
D. Formative assessment: Using an exit question to decide what to reteach in the next class. / Experiential learning: Connecting examples to students' contexts and checking whose perspectives are represented.

0843. In a supervision review, a caregiver working with a counselor describes work with a middle-school student in the child guidance clinic: offering accessible ways to encounter material and demonstrate learning. What concept is illustrated?

A. Formative assessment
B. Universal Design for Learning
C. Constructive alignment
D. Summative assessment

0844. A consulting counselor is asked to justify a plan for a older adolescent client in the school-based service. It calls for having students explain which strategy helped and what they will change next time. Which concept provides the rationale?

A. Constructive alignment
B. Summative assessment
C. Culturally responsive pedagogy
D. Metacognition

0845. Choose the response that best puts Formative assessment into practice.

A. Asking learners to retrieve key ideas from memory before reviewing notes.
B. Offering accessible ways to encounter material and demonstrate learning.
C. Having students explain which strategy helped and what they will change next time.
D. Using an exit question to decide what to reteach in the next class.

0846. A preadolescent child is receiving support in the school counseling office. The school counselor is guided by this practice: having students explain which strategy helped and what they will change next time. Which principle best fits?

A. Culturally responsive pedagogy
B. Experiential learning
C. Metacognition
D. Universal Design for Learning

0847. A supervisor asks how Retrieval practice would appear in practice. Which choice should be selected?

A. Connecting examples to students' contexts and checking whose perspectives are represented.
B. Asking learners to retrieve key ideas from memory before reviewing notes.
C. Teaching students to interpret feedback and plan a concrete revision.
D. Having students explain which strategy helped and what they will change next time.

0848. In the parent meeting, a team asks how a youth worker can support a child aged 14. One proposed action is modeling a skill and gradually reducing prompts as learners gain mastery. Which idea does it represent?

A. Summative assessment
B. Culturally responsive pedagogy
C. Scaffolding in instruction
D. Metacognition

0849. While supporting a student aged 9 in the classroom support meeting, a case coordinator adopts this practice: evaluating mastery after a course unit concludes. Which concept best explains the choice?

A. Summative assessment
B. Formative assessment
C. Retrieval practice
D. Universal Design for Learning

0850. What is the central meaning of Constructive alignment?

A. Low-stakes evidence gathered during learning to guide feedback and next instructional steps.
B. Alignment among learning outcomes, teaching and learning activities, and assessment.
C. Evaluation of learning at the end of an instructional period or unit.
D. A framework for designing flexible learning environments with multiple means of engagement, representation, and action or expression.

0851. Identify the most precise label for this idea: Learning through purposeful experience, reflection, conceptualization, and application.

A. Universal Design for Learning
B. Summative assessment
C. Experiential learning
D. Culturally responsive pedagogy

0852. A case conference asks for a distinction between Constructive alignment and Experiential learning. Which answer is sound?

A. Constructive alignment: Learning through purposeful experience, reflection, conceptualization, and application. / Experiential learning: Alignment among learning outcomes, teaching and learning activities, and assessment.
B. Constructive alignment: Learners' capacity to understand, evaluate, and use feedback to improve work. / Experiential learning: Learning through purposeful experience, reflection, conceptualization, and application.
C. Constructive alignment: Alignment among learning outcomes, teaching and learning activities, and assessment. / Experiential learning: Teaching that draws on learners' cultural knowledge and experiences while maintaining high expectations and belonging.
D. Constructive alignment: Alignment among learning outcomes, teaching and learning activities, and assessment. / Experiential learning: Learning through purposeful experience, reflection, conceptualization, and application.

0853. How should a practitioner distinguish the applications of Scaffolding in instruction and Summative assessment?

A. Scaffolding in instruction: Using an exit question to decide what to reteach in the next class. / Summative assessment: Evaluating mastery after a course unit concludes.
B. Scaffolding in instruction: Evaluating mastery after a course unit concludes. / Summative assessment: Modeling a skill and gradually reducing prompts as learners gain mastery.
C. Scaffolding in instruction: Modeling a skill and gradually reducing prompts as learners gain mastery. / Summative assessment: Evaluating mastery after a course unit concludes.
D. Scaffolding in instruction: Modeling a skill and gradually reducing prompts as learners gain mastery. / Summative assessment: Asking learners to retrieve key ideas from memory before reviewing notes.

0854. While supporting a young person aged 13 in the community youth program, a school-based clinician adopts this practice: offering accessible ways to encounter material and demonstrate learning. Which concept best explains the choice?

A. Metacognition
B. Culturally responsive pedagogy
C. Universal Design for Learning
D. Formative assessment

0855. Choose the response that best puts Constructive alignment into practice.

A. Having students explain which strategy helped and what they will change next time.
B. Checking that an assessment measures the skill stated in the course outcome.
C. Connecting examples to students' contexts and checking whose perspectives are represented.
D. Evaluating mastery after a course unit concludes.

0856. Which professional action most closely applies Metacognition?

A. Teaching students to interpret feedback and plan a concrete revision.
B. Having students explain which strategy helped and what they will change next time.
C. Modeling a skill and gradually reducing prompts as learners gain mastery.
D. Pairing an activity with structured reflection and transfer to a new situation.

0857. Select the best explanation of Formative assessment.

A. Low-stakes evidence gathered during learning to guide feedback and next instructional steps.
B. Teaching that draws on learners' cultural knowledge and experiences while maintaining high expectations and belonging.
C. A framework for designing flexible learning environments with multiple means of engagement, representation, and action or expression.
D. Learners' capacity to understand, evaluate, and use feedback to improve work.

0858. In a supervision review, a caregiver working with a counselor describes work with a child aged 8 in the community youth program: having students explain which strategy helped and what they will change next time. What concept is illustrated?

A. Constructive alignment
B. Retrieval practice
C. Metacognition
D. Culturally responsive pedagogy

0859. How are Universal Design for Learning and Experiential learning most accurately differentiated in this curriculum?

A. Universal Design for Learning: Evaluation of learning at the end of an instructional period or unit. / Experiential learning: Learning through purposeful experience, reflection, conceptualization, and application.
B. Universal Design for Learning: A framework for designing flexible learning environments with multiple means of engagement, representation, and action or expression. / Experiential learning: Learning through purposeful experience, reflection, conceptualization, and application.
C. Universal Design for Learning: A framework for designing flexible learning environments with multiple means of engagement, representation, and action or expression. / Experiential learning: Temporary instructional support that enables increasingly independent performance.
D. Universal Design for Learning: Learning through purposeful experience, reflection, conceptualization, and application. / Experiential learning: A framework for designing flexible learning environments with multiple means of engagement, representation, and action or expression.

0860. A support meeting for a young person aged 16 includes a clinical supervisor in the clinical planning session. The practice under consideration is teaching students to interpret feedback and plan a concrete revision. Which concept guides it?

A. Summative assessment
B. Feedback literacy
C. Experiential learning
D. Metacognition

0861. Which statement accurately contrasts the course concepts Scaffolding in instruction and Metacognition?

A. Scaffolding in instruction: Temporary instructional support that enables increasingly independent performance. / Metacognition: Awareness and regulation of one's own learning, including planning, monitoring, and evaluation.
B. Scaffolding in instruction: Teaching that draws on learners' cultural knowledge and experiences while maintaining high expectations and belonging. / Metacognition: Awareness and regulation of one's own learning, including planning, monitoring, and evaluation.
C. Scaffolding in instruction: Awareness and regulation of one's own learning, including planning, monitoring, and evaluation. / Metacognition: Temporary instructional support that enables increasingly independent performance.
D. Scaffolding in instruction: Temporary instructional support that enables increasingly independent performance. / Metacognition: Evaluation of learning at the end of an instructional period or unit.

0862. A trainee must explain Culturally responsive pedagogy. Which answer is accurate?

A. Learning through purposeful experience, reflection, conceptualization, and application.
B. Temporary instructional support that enables increasingly independent performance.
C. Alignment among learning outcomes, teaching and learning activities, and assessment.
D. Teaching that draws on learners' cultural knowledge and experiences while maintaining high expectations and belonging.

0863. Which comparison correctly distinguishes Retrieval practice from Feedback literacy?

A. Retrieval practice: Learners' capacity to understand, evaluate, and use feedback to improve work. / Feedback literacy: Effortful recall of learned material that strengthens retention and reveals learning needs.
B. Retrieval practice: Effortful recall of learned material that strengthens retention and reveals learning needs. / Feedback literacy: Temporary instructional support that enables increasingly independent performance.
C. Retrieval practice: Evaluation of learning at the end of an instructional period or unit. / Feedback literacy: Learners' capacity to understand, evaluate, and use feedback to improve work.
D. Retrieval practice: Effortful recall of learned material that strengthens retention and reveals learning needs. / Feedback literacy: Learners' capacity to understand, evaluate, and use feedback to improve work.

0864. A therapist is asked what should shape a client in late adolescence's support in the youth advocacy program. The proposed focus is asking learners to retrieve key ideas from memory before reviewing notes. Which principle does it represent?

A. Universal Design for Learning
B. Retrieval practice
C. Constructive alignment
D. Scaffolding in instruction

0865. Which paired example correctly applies Universal Design for Learning first and Experiential learning second?

A. Universal Design for Learning: Offering accessible ways to encounter material and demonstrate learning. / Experiential learning: Modeling a skill and gradually reducing prompts as learners gain mastery.
B. Universal Design for Learning: Offering accessible ways to encounter material and demonstrate learning. / Experiential learning: Pairing an activity with structured reflection and transfer to a new situation.
C. Universal Design for Learning: Pairing an activity with structured reflection and transfer to a new situation. / Experiential learning: Offering accessible ways to encounter material and demonstrate learning.
D. Universal Design for Learning: Evaluating mastery after a course unit concludes. / Experiential learning: Pairing an activity with structured reflection and transfer to a new situation.

0866. During service review in the student wellness team, a program coordinator describes checking that an assessment measures the skill stated in the course outcome. for a client in late adolescence. Which course idea is most applicable?

A. Feedback literacy
B. Formative assessment
C. Constructive alignment
D. Retrieval practice

0867. Which comparison correctly distinguishes Scaffolding in instruction from Formative assessment?

A. Scaffolding in instruction: Effortful recall of learned material that strengthens retention and reveals learning needs. / Formative assessment: Low-stakes evidence gathered during learning to guide feedback and next instructional steps.
B. Scaffolding in instruction: Temporary instructional support that enables increasingly independent performance. / Formative assessment: Low-stakes evidence gathered during learning to guide feedback and next instructional steps.
C. Scaffolding in instruction: Low-stakes evidence gathered during learning to guide feedback and next instructional steps. / Formative assessment: Temporary instructional support that enables increasingly independent performance.
D. Scaffolding in instruction: Temporary instructional support that enables increasingly independent performance. / Formative assessment: Learners' capacity to understand, evaluate, and use feedback to improve work.

0868. How are Metacognition and Culturally responsive pedagogy most accurately differentiated in this curriculum?

A. Metacognition: Alignment among learning outcomes, teaching and learning activities, and assessment. / Culturally responsive pedagogy: Teaching that draws on learners' cultural knowledge and experiences while maintaining high expectations and belonging.
B. Metacognition: Awareness and regulation of one's own learning, including planning, monitoring, and evaluation. / Culturally responsive pedagogy: Teaching that draws on learners' cultural knowledge and experiences while maintaining high expectations and belonging.
C. Metacognition: Teaching that draws on learners' cultural knowledge and experiences while maintaining high expectations and belonging. / Culturally responsive pedagogy: Awareness and regulation of one's own learning, including planning, monitoring, and evaluation.
D. Metacognition: Awareness and regulation of one's own learning, including planning, monitoring, and evaluation. / Culturally responsive pedagogy: Effortful recall of learned material that strengthens retention and reveals learning needs.

0869. Which choice aligns each practice with the correct idea, Constructive alignment or Scaffolding in instruction?

A. Constructive alignment: Modeling a skill and gradually reducing prompts as learners gain mastery. / Scaffolding in instruction: Checking that an assessment measures the skill stated in the course outcome.
B. Constructive alignment: Checking that an assessment measures the skill stated in the course outcome. / Scaffolding in instruction: Using an exit question to decide what to reteach in the next class.
C. Constructive alignment: Checking that an assessment measures the skill stated in the course outcome. / Scaffolding in instruction: Modeling a skill and gradually reducing prompts as learners gain mastery.
D. Constructive alignment: Evaluating mastery after a course unit concludes. / Scaffolding in instruction: Modeling a skill and gradually reducing prompts as learners gain mastery.

0870. A child aged 11 is receiving support in the family resource center. The youth worker is guided by this practice: using an exit question to decide what to reteach in the next class. Which principle best fits?

A. Formative assessment
B. Constructive alignment
C. Retrieval practice
D. Experiential learning

0871. Which paired example correctly applies Summative assessment first and Experiential learning second?

A. Summative assessment: Evaluating mastery after a course unit concludes. / Experiential learning: Using an exit question to decide what to reteach in the next class.
B. Summative assessment: Evaluating mastery after a course unit concludes. / Experiential learning: Pairing an activity with structured reflection and transfer to a new situation.
C. Summative assessment: Asking learners to retrieve key ideas from memory before reviewing notes. / Experiential learning: Pairing an activity with structured reflection and transfer to a new situation.
D. Summative assessment: Pairing an activity with structured reflection and transfer to a new situation. / Experiential learning: Evaluating mastery after a course unit concludes.

0872. At the school counseling office, a counselor meets with a child aged 8. The practice priority is: checking that an assessment measures the skill stated in the course outcome. Which concept best captures that priority?

A. Metacognition
B. Summative assessment
C. Culturally responsive pedagogy
D. Constructive alignment

0873. How are Constructive alignment and Experiential learning most accurately differentiated in this curriculum?

A. Constructive alignment: Alignment among learning outcomes, teaching and learning activities, and assessment. / Experiential learning: Learning through purposeful experience, reflection, conceptualization, and application.
B. Constructive alignment: Learners' capacity to understand, evaluate, and use feedback to improve work. / Experiential learning: Learning through purposeful experience, reflection, conceptualization, and application.
C. Constructive alignment: Learning through purposeful experience, reflection, conceptualization, and application. / Experiential learning: Alignment among learning outcomes, teaching and learning activities, and assessment.
D. Constructive alignment: Alignment among learning outcomes, teaching and learning activities, and assessment. / Experiential learning: Teaching that draws on learners' cultural knowledge and experiences while maintaining high expectations and belonging.

0874. A play therapist reviews a plan for a young person aged 13 in the telehealth session. The plan emphasizes checking that an assessment measures the skill stated in the course outcome. Which course idea does this reflect?

A. Metacognition
B. Constructive alignment
C. Experiential learning
D. Formative assessment

0875. A counselor is asked to evaluate a proposed service for a client in late adolescence in the child guidance clinic. The defining feature is modeling a skill and gradually reducing prompts as learners gain mastery. Which concept fits?

A. Metacognition
B. Feedback literacy
C. Culturally responsive pedagogy
D. Scaffolding in instruction

0876. Choose the term that matches this definition: Teaching that draws on learners' cultural knowledge and experiences while maintaining high expectations and belonging.

A. Scaffolding in instruction
B. Culturally responsive pedagogy
C. Formative assessment
D. Metacognition

0877. Which professional action most closely applies Experiential learning?

A. Connecting examples to students' contexts and checking whose perspectives are represented.
B. Evaluating mastery after a course unit concludes.
C. Using an exit question to decide what to reteach in the next class.
D. Pairing an activity with structured reflection and transfer to a new situation.

0878. Which option pairs the definitions of Scaffolding in instruction and Culturally responsive pedagogy correctly, in that order?

A. Scaffolding in instruction: Temporary instructional support that enables increasingly independent performance. / Culturally responsive pedagogy: Teaching that draws on learners' cultural knowledge and experiences while maintaining high expectations and belonging.
B. Scaffolding in instruction: Learners' capacity to understand, evaluate, and use feedback to improve work. / Culturally responsive pedagogy: Teaching that draws on learners' cultural knowledge and experiences while maintaining high expectations and belonging.
C. Scaffolding in instruction: Teaching that draws on learners' cultural knowledge and experiences while maintaining high expectations and belonging. / Culturally responsive pedagogy: Temporary instructional support that enables increasingly independent performance.
D. Scaffolding in instruction: Temporary instructional support that enables increasingly independent performance. / Culturally responsive pedagogy: Effortful recall of learned material that strengthens retention and reveals learning needs.

0879. A trainee must choose a practice that exemplifies Formative assessment. Which action is the best fit?

A. Asking learners to retrieve key ideas from memory before reviewing notes.
B. Using an exit question to decide what to reteach in the next class.
C. Offering accessible ways to encounter material and demonstrate learning.
D. Pairing an activity with structured reflection and transfer to a new situation.

0880. Which pair of actions illustrates Constructive alignment and Universal Design for Learning, respectively?

A. Constructive alignment: Checking that an assessment measures the skill stated in the course outcome. / Universal Design for Learning: Connecting examples to students' contexts and checking whose perspectives are represented.
B. Constructive alignment: Offering accessible ways to encounter material and demonstrate learning. / Universal Design for Learning: Checking that an assessment measures the skill stated in the course outcome.
C. Constructive alignment: Pairing an activity with structured reflection and transfer to a new situation. / Universal Design for Learning: Offering accessible ways to encounter material and demonstrate learning.
D. Constructive alignment: Checking that an assessment measures the skill stated in the course outcome. / Universal Design for Learning: Offering accessible ways to encounter material and demonstrate learning.

0881. Which statement accurately contrasts the course concepts Summative assessment and Metacognition?

A. Summative assessment: Awareness and regulation of one's own learning, including planning, monitoring, and evaluation. / Metacognition: Evaluation of learning at the end of an instructional period or unit.
B. Summative assessment: Evaluation of learning at the end of an instructional period or unit. / Metacognition: A framework for designing flexible learning environments with multiple means of engagement, representation, and action or expression.
C. Summative assessment: Evaluation of learning at the end of an instructional period or unit. / Metacognition: Awareness and regulation of one's own learning, including planning, monitoring, and evaluation.
D. Summative assessment: Low-stakes evidence gathered during learning to guide feedback and next instructional steps. / Metacognition: Awareness and regulation of one's own learning, including planning, monitoring, and evaluation.

0882. Which option pairs the definitions of Constructive alignment and Universal Design for Learning correctly, in that order?

A. Constructive alignment: A framework for designing flexible learning environments with multiple means of engagement, representation, and action or expression. / Universal Design for Learning: Alignment among learning outcomes, teaching and learning activities, and assessment.
B. Constructive alignment: Learning through purposeful experience, reflection, conceptualization, and application. / Universal Design for Learning: A framework for designing flexible learning environments with multiple means of engagement, representation, and action or expression.
C. Constructive alignment: Alignment among learning outcomes, teaching and learning activities, and assessment. / Universal Design for Learning: A framework for designing flexible learning environments with multiple means of engagement, representation, and action or expression.
D. Constructive alignment: Alignment among learning outcomes, teaching and learning activities, and assessment. / Universal Design for Learning: Teaching that draws on learners' cultural knowledge and experiences while maintaining high expectations and belonging.

0883. Which paired example correctly applies Constructive alignment first and Culturally responsive pedagogy second?

A. Constructive alignment: Checking that an assessment measures the skill stated in the course outcome. / Culturally responsive pedagogy: Teaching students to interpret feedback and plan a concrete revision.
B. Constructive alignment: Connecting examples to students' contexts and checking whose perspectives are represented. / Culturally responsive pedagogy: Checking that an assessment measures the skill stated in the course outcome.
C. Constructive alignment: Evaluating mastery after a course unit concludes. / Culturally responsive pedagogy: Connecting examples to students' contexts and checking whose perspectives are represented.
D. Constructive alignment: Checking that an assessment measures the skill stated in the course outcome. / Culturally responsive pedagogy: Connecting examples to students' contexts and checking whose perspectives are represented.

0884. A adolescent student's service team meets in the family session. The case coordinator recommends a change involving asking learners to retrieve key ideas from memory before reviewing notes. Which idea best explains it?

A. Metacognition
B. Experiential learning
C. Retrieval practice
D. Constructive alignment

0885. A case conference asks for a distinction between Universal Design for Learning and Metacognition. Which answer is sound?

A. Universal Design for Learning: Low-stakes evidence gathered during learning to guide feedback and next instructional steps. / Metacognition: Awareness and regulation of one's own learning, including planning, monitoring, and evaluation.
B. Universal Design for Learning: A framework for designing flexible learning environments with multiple means of engagement, representation, and action or expression. / Metacognition: Evaluation of learning at the end of an instructional period or unit.
C. Universal Design for Learning: A framework for designing flexible learning environments with multiple means of engagement, representation, and action or expression. / Metacognition: Awareness and regulation of one's own learning, including planning, monitoring, and evaluation.
D. Universal Design for Learning: Awareness and regulation of one's own learning, including planning, monitoring, and evaluation. / Metacognition: A framework for designing flexible learning environments with multiple means of engagement, representation, and action or expression.

0886. At a case-planning meeting, the behavior specialist proposes teaching students to interpret feedback and plan a concrete revision. for a young adolescent client seen in the outpatient clinic. Which concept does this illustrate?

A. Universal Design for Learning
B. Formative assessment
C. Feedback literacy
D. Retrieval practice

0887. A community practitioner is asked what should shape a young person aged 13’s support in the behavior-support review. The proposed focus is using an exit question to decide what to reteach in the next class. Which principle does it represent?

A. Formative assessment
B. Universal Design for Learning
C. Experiential learning
D. Feedback literacy

0888. Which paired example correctly applies Retrieval practice first and Culturally responsive pedagogy second?

A. Retrieval practice: Modeling a skill and gradually reducing prompts as learners gain mastery. / Culturally responsive pedagogy: Connecting examples to students’ contexts and checking whose perspectives are represented.
B. Retrieval practice: Asking learners to retrieve key ideas from memory before reviewing notes. / Culturally responsive pedagogy: Connecting examples to students’ contexts and checking whose perspectives are represented.
C. Retrieval practice: Asking learners to retrieve key ideas from memory before reviewing notes. / Culturally responsive pedagogy: Offering accessible ways to encounter material and demonstrate learning.
D. Retrieval practice: Connecting examples to students’ contexts and checking whose perspectives are represented. / Culturally responsive pedagogy: Asking learners to retrieve key ideas from memory before reviewing notes.

0889. A supervised trainee and a young person aged 16 are discussing support in the caregiver consultation. The selected practice is having students explain which strategy helped and what they will change next time. Which concept does this demonstrate?

A. Constructive alignment
B. Formative assessment
C. Experiential learning
D. Metacognition

0890. In the family session, the agreed focus for a therapist working with a child aged 7 is pairing an activity with structured reflection and transfer to a new situation. Which concept names this focus?

A. Formative assessment
B. Metacognition
C. Universal Design for Learning
D. Experiential learning

0891. Which comparison would correct a trainee’s misunderstanding of Constructive alignment versus Retrieval practice?

A. Constructive alignment: Temporary instructional support that enables increasingly independent performance. / Retrieval practice: Effortful recall of learned material that strengthens retention and reveals learning needs.
B. Constructive alignment: Alignment among learning outcomes, teaching and learning activities, and assessment. / Retrieval practice: Effortful recall of learned material that strengthens retention and reveals learning needs.
C. Constructive alignment: Effortful recall of learned material that strengthens retention and reveals learning needs. / Retrieval practice: Alignment among learning outcomes, teaching and learning activities, and assessment.
D. Constructive alignment: Alignment among learning outcomes, teaching and learning activities, and assessment. / Retrieval practice: Learners’ capacity to understand, evaluate, and use feedback to improve work.

0892. Which option pairs the definitions of Retrieval practice and Feedback literacy correctly, in that order?

A. Retrieval practice: Evaluation of learning at the end of an instructional period or unit. / Feedback literacy: Learners’ capacity to understand, evaluate, and use feedback to improve work.
B. Retrieval practice: Effortful recall of learned material that strengthens retention and reveals learning needs. / Feedback literacy: Temporary instructional support that enables increasingly independent performance.
C. Retrieval practice: Effortful recall of learned material that strengthens retention and reveals learning needs. / Feedback literacy: Learners’ capacity to understand, evaluate, and use feedback to improve work.
D. Retrieval practice: Learners’ capacity to understand, evaluate, and use feedback to improve work. / Feedback literacy: Effortful recall of learned material that strengthens retention and reveals learning needs.

0893. Which professional action most closely applies Retrieval practice?

A. Using an exit question to decide what to reteach in the next class.
B. Asking learners to retrieve key ideas from memory before reviewing notes.
C. Connecting examples to students’ contexts and checking whose perspectives are represented.
D. Checking that an assessment measures the skill stated in the course outcome.

0894. When reviewing a student aged 15’s plan in the school consultation, the family therapist notes that the next step is connecting examples to students’ contexts and checking whose perspectives are represented. Which concept guides this step?

A. Culturally responsive pedagogy
B. Scaffolding in instruction
C. Metacognition
D. Experiential learning

0895. Which option is the clearest practical expression of Metacognition?

A. Having students explain which strategy helped and what they will change next time.
B. Offering accessible ways to encounter material and demonstrate learning.
C. Checking that an assessment measures the skill stated in the course outcome.
D. Teaching students to interpret feedback and plan a concrete revision.

0896. A trainee must distinguish how Retrieval practice and Culturally responsive pedagogy guide practice. Which comparison is accurate?

A. Retrieval practice: Modeling a skill and gradually reducing prompts as learners gain mastery. / Culturally responsive pedagogy: Connecting examples to students’ contexts and checking whose perspectives are represented.
B. Retrieval practice: Asking learners to retrieve key ideas from memory before reviewing notes. / Culturally responsive pedagogy: Connecting examples to students’ contexts and checking whose perspectives are represented.
C. Retrieval practice: Connecting examples to students’ contexts and checking whose perspectives are represented. / Culturally responsive pedagogy: Asking learners to retrieve key ideas from memory before reviewing notes.
D. Retrieval practice: Asking learners to retrieve key ideas from memory before reviewing notes. / Culturally responsive pedagogy: Offering accessible ways to encounter material and demonstrate learning.

0897. A older adolescent client is receiving support in the classroom support meeting. The school counselor is guided by this practice: offering accessible ways to encounter material and demonstrate learning. Which principle best fits?

A. Scaffolding in instruction
B. Universal Design for Learning
C. Constructive alignment
D. Formative assessment

0898. A consulting counselor is explaining a choice to a child of elementary-school age and caregiver in the clinical planning session. The choice centers on asking learners to retrieve key ideas from memory before reviewing notes. Which idea is illustrated?

A. Summative assessment
B. Universal Design for Learning
C. Feedback literacy
D. Retrieval practice

0899. Which paired example correctly applies Constructive alignment first and Metacognition second?

A. Constructive alignment: Asking learners to retrieve key ideas from memory before reviewing notes. / Metacognition: Having students explain which strategy helped and what they will change next time.
B. Constructive alignment: Having students explain which strategy helped and what they will change next time. / Metacognition: Checking that an assessment measures the skill stated in the course outcome.
C. Constructive alignment: Checking that an assessment measures the skill stated in the course outcome. / Metacognition: Having students explain which strategy helped and what they will change next time.
D. Constructive alignment: Checking that an assessment measures the skill stated in the course outcome. / Metacognition: Connecting examples to students' contexts and checking whose perspectives are represented.

0900. In a professional consultation about a young person aged 10, the assessment clinician describes this response in the school-based service: using an exit question to decide what to reteach in the next class. Which term is most apt?

A. Experiential learning
B. Formative assessment
C. Retrieval practice
D. Culturally responsive pedagogy

0901. A older adolescent client and a mental-health professional are reviewing goals in the family session. The agreed action is teaching students to interpret feedback and plan a concrete revision. Which principle best accounts for it?

A. Feedback literacy
B. Metacognition
C. Constructive alignment
D. Scaffolding in instruction

0902. What is the central meaning of Formative assessment?

A. Learners' capacity to understand, evaluate, and use feedback to improve work.
B. Temporary instructional support that enables increasingly independent performance.
C. Low-stakes evidence gathered during learning to guide feedback and next instructional steps.
D. Alignment among learning outcomes, teaching and learning activities, and assessment.

0903. A supervisor asks how Culturally responsive pedagogy would appear in practice. Which choice should be selected?

A. Evaluating mastery after a course unit concludes.
B. Checking that an assessment measures the skill stated in the course outcome.
C. Connecting examples to students' contexts and checking whose perspectives are represented.
D. Using an exit question to decide what to reteach in the next class.

0904. Which statement accurately contrasts the course concepts Constructive alignment and Formative assessment?

A. Constructive alignment: Low-stakes evidence gathered during learning to guide feedback and next instructional steps. / Formative assessment: Alignment among learning outcomes, teaching and learning activities, and assessment.
B. Constructive alignment: Alignment among learning outcomes, teaching and learning activities, and assessment. / Formative assessment: A framework for designing flexible learning environments with multiple means of engagement, representation, and action or expression.
C. Constructive alignment: Learners' capacity to understand, evaluate, and use feedback to improve work. / Formative assessment: Low-stakes evidence gathered during learning to guide feedback and next instructional steps.
D. Constructive alignment: Alignment among learning outcomes, teaching and learning activities, and assessment. / Formative assessment: Low-stakes evidence gathered during learning to guide feedback and next instructional steps.

0905. When reviewing a child aged 8's plan in the community youth program, the caregiver working with a counselor notes that the next step is having students explain which strategy helped and what they will change next time. Which concept guides this step?

A. Constructive alignment
B. Feedback literacy
C. Metacognition
D. Universal Design for Learning

0906. A case discussion concerns a child of elementary-school age and a parent educator in the caregiver consultation. The practitioner is considering modeling a skill and gradually reducing prompts as learners gain mastery. Which principle is involved?

A. Summative assessment
B. Feedback literacy
C. Metacognition
D. Scaffolding in instruction

0907. A case discussion concerns a young adolescent client and a family therapist in the behavior-support review. The practitioner is considering asking learners to retrieve key ideas from memory before reviewing notes. Which principle is involved?

A. Metacognition
B. Retrieval practice
C. Universal Design for Learning
D. Summative assessment

0908. In a case note about a child of elementary-school age, a supervised trainee working in the telehealth session records this priority: using an exit question to decide what to reteach in the next class. What principle is reflected?

A. Formative assessment
B. Culturally responsive pedagogy
C. Scaffolding in instruction
D. Feedback literacy

0909. Which option pairs the definitions of Constructive alignment and Scaffolding in instruction correctly, in that order?

A. Constructive alignment: Evaluation of learning at the end of an instructional period or unit. / Scaffolding in instruction: Temporary instructional support that enables increasingly independent performance.
B. Constructive alignment: Temporary instructional support that enables increasingly independent performance. / Scaffolding in instruction: Alignment among learning outcomes, teaching and learning activities, and assessment.
C. Constructive alignment: Alignment among learning outcomes, teaching and learning activities, and assessment. / Scaffolding in instruction: Low-stakes evidence gathered during learning to guide feedback and next instructional steps.
D. Constructive alignment: Alignment among learning outcomes, teaching and learning activities, and assessment. / Scaffolding in instruction: Temporary instructional support that enables increasingly independent performance.

0910. At a case-planning meeting, the counselor proposes checking that an assessment measures the skill stated in the course outcome. for a child aged 8 seen in the school counseling office. Which concept does this illustrate?

A. Summative assessment
B. Constructive alignment
C. Retrieval practice
D. Feedback literacy

0911. Choose the practice comparison that best separates Formative assessment from Metacognition.

A. Formative assessment: Teaching students to interpret feedback and plan a concrete revision. / Metacognition: Having students explain which strategy helped and what they will change next time.
B. Formative assessment: Using an exit question to decide what to reteach in the next class. / Metacognition: Offering accessible ways to encounter material and demonstrate learning.
C. Formative assessment: Having students explain which strategy helped and what they will change next time. / Metacognition: Using an exit question to decide what to reteach in the next class.
D. Formative assessment: Using an exit question to decide what to reteach in the next class. / Metacognition: Having students explain which strategy helped and what they will change next time.

0912. In the learning-support meeting, a team asks how a teacher and counselor can support a preadolescent child. One proposed action is offering accessible ways to encounter material and demonstrate learning. Which idea does it represent?

A. Constructive alignment
B. Universal Design for Learning
C. Retrieval practice
D. Feedback literacy

0913. Which comparison would correct a trainee's misunderstanding of Universal Design for Learning versus Metacognition?

A. Universal Design for Learning: A framework for designing flexible learning environments with multiple means of engagement, representation, and action or expression. / Metacognition: Awareness and regulation of one's own learning, including planning, monitoring, and evaluation.
B. Universal Design for Learning: A framework for designing flexible learning environments with multiple means of engagement, representation, and action or expression. / Metacognition: Evaluation of learning at the end of an instructional period or unit.
C. Universal Design for Learning: Low-stakes evidence gathered during learning to guide feedback and next instructional steps. / Metacognition: Awareness and regulation of one's own learning, including planning, monitoring, and evaluation.
D. Universal Design for Learning: Awareness and regulation of one's own learning, including planning, monitoring, and evaluation. / Metacognition: A framework for designing flexible learning environments with multiple means of engagement, representation, and action or expression.

0914. In the student wellness team, the agreed focus for a research trainee working with a older adolescent client is asking learners to retrieve key ideas from memory before reviewing notes. Which concept names this focus?

A. Constructive alignment
B. Retrieval practice
C. Culturally responsive pedagogy
D. Experiential learning

0915. In a professional consultation about a school-age child, the supervised trainee describes this response in the multidisciplinary case conference: modeling a skill and gradually reducing prompts as learners gain mastery. Which term is most apt?

A. Retrieval practice
B. Universal Design for Learning
C. Culturally responsive pedagogy
D. Scaffolding in instruction

0916. A supervised trainee is supporting a young person aged 18 in the family resource center. The key practice is asking learners to retrieve key ideas from memory before reviewing notes. Which course concept is most relevant?

A. Retrieval practice
B. Metacognition
C. Constructive alignment
D. Scaffolding in instruction

0917. Consider a student aged 12 receiving help in the telehealth session. The group facilitator focuses on having students explain which strategy helped and what they will change next time. Which term best describes the guiding idea?

A. Experiential learning
B. Metacognition
C. Summative assessment
D. Feedback literacy

0918. Which statement shows a sound practice-level distinction between Constructive alignment and Feedback literacy?

A. Constructive alignment: Checking that an assessment measures the skill stated in the course outcome. / Feedback literacy: Using an exit question to decide what to reteach in the next class.
B. Constructive alignment: Checking that an assessment measures the skill stated in the course outcome. / Feedback literacy: Teaching students to interpret feedback and plan a concrete revision.
C. Constructive alignment: Teaching students to interpret feedback and plan a concrete revision. / Feedback literacy: Checking that an assessment measures the skill stated in the course outcome.
D. Constructive alignment: Pairing an activity with structured reflection and transfer to a new situation. / Feedback literacy: Teaching students to interpret feedback and plan a concrete revision.

0919. A play therapist is asked to evaluate a proposed service for a middle-school student in the learning-support meeting. The defining feature is asking learners to retrieve key ideas from memory before reviewing notes. Which concept fits?

A. Feedback literacy
B. Retrieval practice
C. Formative assessment
D. Experiential learning

0920. A mental-health professional and a student aged 9 are discussing support in the student-support meeting. The selected practice is asking learners to retrieve key ideas from memory before reviewing notes. Which concept does this demonstrate?

A. Retrieval practice
B. Formative assessment
C. Scaffolding in instruction
D. Feedback literacy

0921. A case conference asks for a distinction between Retrieval practice and Experiential learning. Which answer is sound?

A. Retrieval practice: Learning through purposeful experience, reflection, conceptualization, and application. / Experiential learning: Effortful recall of learned material that strengthens retention and reveals learning needs.
B. Retrieval practice: Alignment among learning outcomes, teaching and learning activities, and assessment. / Experiential learning: Learning through purposeful experience, reflection, conceptualization, and application.
C. Retrieval practice: Effortful recall of learned material that strengthens retention and reveals learning needs. / Experiential learning: Learning through purposeful experience, reflection, conceptualization, and application.
D. Retrieval practice: Effortful recall of learned material that strengthens retention and reveals learning needs. / Experiential learning: Learners' capacity to understand, evaluate, and use feedback to improve work.

0922. Consider a client in early adolescence receiving help in the child guidance clinic. The school counselor focuses on pairing an activity with structured reflection and transfer to a new situation. Which term best describes the guiding idea?

A. Constructive alignment
B. Experiential learning
C. Formative assessment
D. Retrieval practice

0923. Which option pairs the definitions of Culturally responsive pedagogy and Experiential learning correctly, in that order?

A. Culturally responsive pedagogy: Teaching that draws on learners' cultural knowledge and experiences while maintaining high expectations and belonging. / Experiential learning: Learning through purposeful experience, reflection, conceptualization, and application.
B. Culturally responsive pedagogy: Learning through purposeful experience, reflection, conceptualization, and application. / Experiential learning: Teaching that draws on learners' cultural knowledge and experiences while maintaining high expectations and belonging.
C. Culturally responsive pedagogy: Teaching that draws on learners' cultural knowledge and experiences while maintaining high expectations and belonging. / Experiential learning: Alignment among learning outcomes, teaching and learning activities, and assessment.
D. Culturally responsive pedagogy: Evaluation of learning at the end of an instructional period or unit. / Experiential learning: Learning through purposeful experience, reflection, conceptualization, and application.

0924. A assessment clinician and a young person aged 13 are discussing support in the clinical planning session. The selected practice is modeling a skill and gradually reducing prompts as learners gain mastery. Which concept does this demonstrate?

A. Scaffolding in instruction
B. Metacognition
C. Formative assessment
D. Retrieval practice

0925. How should a practitioner distinguish the applications of Summative assessment and Metacognition?

A. Summative assessment: Having students explain which strategy helped and what they will change next time. / Metacognition: Evaluating mastery after a course unit concludes.
B. Summative assessment: Evaluating mastery after a course unit concludes. / Metacognition: Offering accessible ways to encounter material and demonstrate learning.
C. Summative assessment: Using an exit question to decide what to reteach in the next class. / Metacognition: Having students explain which strategy helped and what they will change next time.
D. Summative assessment: Evaluating mastery after a course unit concludes. / Metacognition: Having students explain which strategy helped and what they will change next time.

0926. Which professional action most closely applies Culturally responsive pedagogy?

A. Connecting examples to students' contexts and checking whose perspectives are represented.
B. Using an exit question to decide what to reteach in the next class.
C. Having students explain which strategy helped and what they will change next time.
D. Evaluating mastery after a course unit concludes.

0927. A supervisor asks for an applied contrast between Constructive alignment and Universal Design for Learning. Which option fits?

A. Constructive alignment: Pairing an activity with structured reflection and transfer to a new situation. / Universal Design for Learning: Offering accessible ways to encounter material and demonstrate learning.
B. Constructive alignment: Offering accessible ways to encounter material and demonstrate learning. / Universal Design for Learning: Checking that an assessment measures the skill stated in the course outcome.
C. Constructive alignment: Checking that an assessment measures the skill stated in the course outcome. / Universal Design for Learning: Offering accessible ways to encounter material and demonstrate learning.
D. Constructive alignment: Checking that an assessment measures the skill stated in the course outcome. / Universal Design for Learning: Connecting examples to students' contexts and checking whose perspectives are represented.

0928. In a supervision quiz, how should Universal Design for Learning be distinguished from Summative assessment?

A. Universal Design for Learning: A framework for designing flexible learning environments with multiple means of engagement, representation, and action or expression. / Summative assessment: Learning through purposeful experience, reflection, conceptualization, and application.
B. Universal Design for Learning: Teaching that draws on learners' cultural knowledge and experiences while maintaining high expectations and belonging. / Summative assessment: Evaluation of learning at the end of an instructional period or unit.
C. Universal Design for Learning: Evaluation of learning at the end of an instructional period or unit. / Summative assessment: A framework for designing flexible learning environments with multiple means of engagement, representation, and action or expression.
D. Universal Design for Learning: A framework for designing flexible learning environments with multiple means of engagement, representation, and action or expression. / Summative assessment: Evaluation of learning at the end of an instructional period or unit.

0929. In the youth advocacy program, a teacher and counselor describes the most appropriate support for a middle-school student as evaluating mastery after a course unit concludes. Which framework is being applied?

A. Retrieval practice
B. Formative assessment
C. Scaffolding in instruction
D. Summative assessment

0930. How are Universal Design for Learning and Scaffolding in instruction most accurately differentiated in this curriculum?

A. Universal Design for Learning: A framework for designing flexible learning environments with multiple means of engagement, representation, and action or expression. / Scaffolding in instruction: Temporary instructional support that enables increasingly independent performance.
B. Universal Design for Learning: A framework for designing flexible learning environments with multiple means of engagement, representation, and action or expression. / Scaffolding in instruction: Learners' capacity to understand, evaluate, and use feedback to improve work.
C. Universal Design for Learning: Alignment among learning outcomes, teaching and learning activities, and assessment. / Scaffolding in instruction: Temporary instructional support that enables increasingly independent performance.
D. Universal Design for Learning: Temporary instructional support that enables increasingly independent performance. / Scaffolding in instruction: A framework for designing flexible learning environments with multiple means of engagement, representation, and action or expression.

0931. Choose the practice comparison that best separates Constructive alignment from Culturally responsive pedagogy.

A. Constructive alignment: Evaluating mastery after a course unit concludes. / Culturally responsive pedagogy: Connecting examples to students' contexts and checking whose perspectives are represented.
B. Constructive alignment: Checking that an assessment measures the skill stated in the course outcome. / Culturally responsive pedagogy: Connecting examples to students' contexts and checking whose perspectives are represented.
C. Constructive alignment: Checking that an assessment measures the skill stated in the course outcome. / Culturally responsive pedagogy: Teaching students to interpret feedback and plan a concrete revision.
D. Constructive alignment: Connecting examples to students' contexts and checking whose perspectives are represented. / Culturally responsive pedagogy: Checking that an assessment measures the skill stated in the course outcome.

0932. Which choice aligns each practice with the correct idea, Summative assessment or Culturally responsive pedagogy?

A. Summative assessment: Checking that an assessment measures the skill stated in the course outcome. / Culturally responsive pedagogy: Connecting examples to students' contexts and checking whose perspectives are represented.
B. Summative assessment: Evaluating mastery after a course unit concludes. / Culturally responsive pedagogy: Having students explain which strategy helped and what they will change next time.
C. Summative assessment: Evaluating mastery after a course unit concludes. / Culturally responsive pedagogy: Connecting examples to students' contexts and checking whose perspectives are represented.
D. Summative assessment: Connecting examples to students' contexts and checking whose perspectives are represented. / Culturally responsive pedagogy: Evaluating mastery after a course unit concludes.

0933. A support meeting for a student aged 9 includes a counselor in the student wellness team. The practice under consideration is pairing an activity with structured reflection and transfer to a new situation. Which concept guides it?

A. Experiential learning
B. Scaffolding in instruction
C. Summative assessment
D. Constructive alignment

0934. A consulting counselor is asked to justify a plan for a student aged 12 in the school counseling office. It calls for offering accessible ways to encounter material and demonstrate learning. Which concept provides the rationale?

A. Constructive alignment
B. Universal Design for Learning
C. Feedback literacy
D. Formative assessment

0935. Choose the practice comparison that best separates Retrieval practice from Metacognition.

A. Retrieval practice: Having students explain which strategy helped and what they will change next time. / Metacognition: Asking learners to retrieve key ideas from memory before reviewing notes.
B. Retrieval practice: Asking learners to retrieve key ideas from memory before reviewing notes. / Metacognition: Teaching students to interpret feedback and plan a concrete revision.
C. Retrieval practice: Asking learners to retrieve key ideas from memory before reviewing notes. / Metacognition: Having students explain which strategy helped and what they will change next time.
D. Retrieval practice: Modeling a skill and gradually reducing prompts as learners gain mastery. / Metacognition: Having students explain which strategy helped and what they will change next time.

0936. Which option pairs the definitions of Scaffolding in instruction and Retrieval practice correctly, in that order?

A. Scaffolding in instruction: Effortful recall of learned material that strengthens retention and reveals learning needs. / Retrieval practice: Temporary instructional support that enables increasingly independent performance.
B. Scaffolding in instruction: Temporary instructional support that enables increasingly independent performance. / Retrieval practice: Learning through purposeful experience, reflection, conceptualization, and application.
C. Scaffolding in instruction: Temporary instructional support that enables increasingly independent performance. / Retrieval practice: Effortful recall of learned material that strengthens retention and reveals learning needs.
D. Scaffolding in instruction: A framework for designing flexible learning environments with multiple means of engagement, representation, and action or expression. / Retrieval practice: Effortful recall of learned material that strengthens retention and reveals learning needs.

0937. In a supervision review, a school-based clinician describes work with a young person aged 16 in the community mental-health service: checking that an assessment measures the skill stated in the course outcome. What concept is illustrated?

A. Constructive alignment
B. Scaffolding in instruction
C. Metacognition
D. Retrieval practice

0938. At the youth advocacy program, a play therapist meets with a child aged 14. The practice priority is: pairing an activity with structured reflection and transfer to a new situation. Which concept best captures that priority?

A. Universal Design for Learning
B. Scaffolding in instruction
C. Experiential learning
D. Constructive alignment

0939. A supervisor asks for an applied contrast between Formative assessment and Feedback literacy. Which option fits?

A. Formative assessment: Having students explain which strategy helped and what they will change next time. / Feedback literacy: Teaching students to interpret feedback and plan a concrete revision.
B. Formative assessment: Teaching students to interpret feedback and plan a concrete revision. / Feedback literacy: Using an exit question to decide what to reteach in the next class.
C. Formative assessment: Using an exit question to decide what to reteach in the next class. / Feedback literacy: Connecting examples to students' contexts and checking whose perspectives are represented.
D. Formative assessment: Using an exit question to decide what to reteach in the next class. / Feedback literacy: Teaching students to interpret feedback and plan a concrete revision.

0940. Which option correctly matches each concept to its practice focus: Universal Design for Learning and Retrieval practice?

A. Universal Design for Learning: Pairing an activity with structured reflection and transfer to a new situation. / Retrieval practice: Asking learners to retrieve key ideas from memory before reviewing notes.
B. Universal Design for Learning: Offering accessible ways to encounter material and demonstrate learning. / Retrieval practice: Having students explain which strategy helped and what they will change next time.
C. Universal Design for Learning: Offering accessible ways to encounter material and demonstrate learning. / Retrieval practice: Asking learners to retrieve key ideas from memory before reviewing notes.
D. Universal Design for Learning: Asking learners to retrieve key ideas from memory before reviewing notes. / Retrieval practice: Offering accessible ways to encounter material and demonstrate learning.

0941. A service team discusses a young person aged 13 in the behavior-support review. Their proposed next step is using an exit question to decide what to reteach in the next class. Which course concept supports it?

A. Formative assessment
B. Universal Design for Learning
C. Scaffolding in instruction
D. Culturally responsive pedagogy

0942. In a supervision quiz, how should Metacognition be distinguished from Feedback literacy?

A. Metacognition: Awareness and regulation of one's own learning, including planning, monitoring, and evaluation. / Feedback literacy: Low-stakes evidence gathered during learning to guide feedback and next instructional steps.
B. Metacognition: Awareness and regulation of one's own learning, including planning, monitoring, and evaluation. / Feedback literacy: Learners' capacity to understand, evaluate, and use feedback to improve work.
C. Metacognition: Learners' capacity to understand, evaluate, and use feedback to improve work. / Feedback literacy: Awareness and regulation of one's own learning, including planning, monitoring, and evaluation.
D. Metacognition: Alignment among learning outcomes, teaching and learning activities, and assessment. / Feedback literacy: Learners' capacity to understand, evaluate, and use feedback to improve work.

0943. A trainee must distinguish how Constructive alignment and Retrieval practice guide practice. Which comparison is accurate?

A. Constructive alignment: Checking that an assessment measures the skill stated in the course outcome. / Retrieval practice: Asking learners to retrieve key ideas from memory before reviewing notes.
B. Constructive alignment: Asking learners to retrieve key ideas from memory before reviewing notes. / Retrieval practice: Checking that an assessment measures the skill stated in the course outcome.
C. Constructive alignment: Checking that an assessment measures the skill stated in the course outcome. / Retrieval practice: Teaching students to interpret feedback and plan a concrete revision.
D. Constructive alignment: Modeling a skill and gradually reducing prompts as learners gain mastery. / Retrieval practice: Asking learners to retrieve key ideas from memory before reviewing notes.

0944. In the multidisciplinary case conference, a youth worker describes the most appropriate support for a child aged 6 as checking that an assessment measures the skill stated in the course outcome. Which framework is being applied?

A. Constructive alignment
B. Culturally responsive pedagogy
C. Universal Design for Learning
D. Feedback literacy

0945. Choose the response that best puts Culturally responsive pedagogy into practice.

A. Connecting examples to students' contexts and checking whose perspectives are represented.
B. Modeling a skill and gradually reducing prompts as learners gain mastery.
C. Offering accessible ways to encounter material and demonstrate learning.
D. Using an exit question to decide what to reteach in the next class.

0946. A assessment clinician is supporting a young person aged 16 in the school consultation. The key practice is offering accessible ways to encounter material and demonstrate learning. Which course concept is most relevant?

A. Universal Design for Learning
B. Retrieval practice
C. Culturally responsive pedagogy
D. Summative assessment

0947. Choose the definition pair that correctly explains Universal Design for Learning first and Experiential learning second.

A. Universal Design for Learning: A framework for designing flexible learning environments with multiple means of engagement, representation, and action or expression. / Experiential learning: Temporary instructional support that enables increasingly independent performance.
B. Universal Design for Learning: A framework for designing flexible learning environments with multiple means of engagement, representation, and action or expression. / Experiential learning: Learning through purposeful experience, reflection, conceptualization, and application.
C. Universal Design for Learning: Evaluation of learning at the end of an instructional period or unit. / Experiential learning: Learning through purposeful experience, reflection, conceptualization, and application.
D. Universal Design for Learning: Learning through purposeful experience, reflection, conceptualization, and application. / Experiential learning: A framework for designing flexible learning environments with multiple means of engagement, representation, and action or expression.

0948. What is the central meaning of Metacognition?

A. Low-stakes evidence gathered during learning to guide feedback and next instructional steps.
B. Learners' capacity to understand, evaluate, and use feedback to improve work.
C. Learning through purposeful experience, reflection, conceptualization, and application.
D. Awareness and regulation of one's own learning, including planning, monitoring, and evaluation.

0949. Which description belongs with the term Scaffolding in instruction?

A. Low-stakes evidence gathered during learning to guide feedback and next instructional steps.
B. Alignment among learning outcomes, teaching and learning activities, and assessment.
C. A framework for designing flexible learning environments with multiple means of engagement, representation, and action or expression.
D. Temporary instructional support that enables increasingly independent performance.

0950. Which option preserves the correct meaning of both Summative assessment and Feedback literacy?

A. Summative assessment: Low-stakes evidence gathered during learning to guide feedback and next instructional steps. / Feedback literacy: Learners' capacity to understand, evaluate, and use feedback to improve work.
B. Summative assessment: Evaluation of learning at the end of an instructional period or unit. / Feedback literacy: Awareness and regulation of one's own learning, including planning, monitoring, and evaluation.
C. Summative assessment: Evaluation of learning at the end of an instructional period or unit. / Feedback literacy: Learners' capacity to understand, evaluate, and use feedback to improve work.
D. Summative assessment: Learners' capacity to understand, evaluate, and use feedback to improve work. / Feedback literacy: Evaluation of learning at the end of an instructional period or unit.

0951. Which option pairs the definitions of Constructive alignment and Feedback literacy correctly, in that order?

A. Constructive alignment: Alignment among learning outcomes, teaching and learning activities, and assessment. / Feedback literacy: Learners' capacity to understand, evaluate, and use feedback to improve work.
B. Constructive alignment: Learning through purposeful experience, reflection, conceptualization, and application. / Feedback literacy: Learners' capacity to understand, evaluate, and use feedback to improve work.
C. Constructive alignment: Alignment among learning outcomes, teaching and learning activities, and assessment. / Feedback literacy: Low-stakes evidence gathered during learning to guide feedback and next instructional steps.
D. Constructive alignment: Learners' capacity to understand, evaluate, and use feedback to improve work. / Feedback literacy: Alignment among learning outcomes, teaching and learning activities, and assessment.

0952. A support meeting for a child aged 6 includes a play therapist in the after-school program. The practice under consideration is having students explain which strategy helped and what they will change next time. Which concept guides it?

A. Metacognition
B. Experiential learning
C. Universal Design for Learning
D. Formative assessment

0953. Which named construct is captured by this account? Learning through purposeful experience, reflection, conceptualization, and application.

A. Scaffolding in instruction
B. Experiential learning
C. Culturally responsive pedagogy
D. Metacognition

0954. Which statement accurately contrasts the course concepts Constructive alignment and Scaffolding in instruction?

A. Constructive alignment: Alignment among learning outcomes, teaching and learning activities, and assessment. / Scaffolding in instruction: Low-stakes evidence gathered during learning to guide feedback and next instructional steps.
B. Constructive alignment: Evaluation of learning at the end of an instructional period or unit. / Scaffolding in instruction: Temporary instructional support that enables increasingly independent performance.
C. Constructive alignment: Temporary instructional support that enables increasingly independent performance. / Scaffolding in instruction: Alignment among learning outcomes, teaching and learning activities, and assessment.
D. Constructive alignment: Alignment among learning outcomes, teaching and learning activities, and assessment. / Scaffolding in instruction: Temporary instructional support that enables increasingly independent performance.

0955. During service review in the multidisciplinary case conference, a research trainee describes having students explain which strategy helped and what they will change next time. for a young person aged 18. Which course idea is most applicable?

A. Scaffolding in instruction
B. Retrieval practice
C. Metacognition
D. Universal Design for Learning

0956. Which course concept is defined as follows: Low-stakes evidence gathered during learning to guide feedback and next instructional steps.

A. Formative assessment
B. Retrieval practice
C. Constructive alignment
D. Metacognition

0957. A program coordinator describes an intervention for a adolescent student in the learning-support meeting, centered on connecting examples to students' contexts and checking whose perspectives are represented. Which named idea is most relevant?

A. Retrieval practice
B. Culturally responsive pedagogy
C. Feedback literacy
D. Summative assessment

0958. A trainee must explain Constructive alignment. Which answer is accurate?

A. Alignment among learning outcomes, teaching and learning activities, and assessment.
B. Learning through purposeful experience, reflection, conceptualization, and application.
C. Temporary instructional support that enables increasingly independent performance.
D. Evaluation of learning at the end of an instructional period or unit.

0959. How are Constructive alignment and Feedback literacy most accurately differentiated in this curriculum?

A. Constructive alignment: Learning through purposeful experience, reflection, conceptualization, and application. / Feedback literacy: Learners' capacity to understand, evaluate, and use feedback to improve work.
B. Constructive alignment: Alignment among learning outcomes, teaching and learning activities, and assessment. / Feedback literacy: Low-stakes evidence gathered during learning to guide feedback and next instructional steps.
C. Constructive alignment: Alignment among learning outcomes, teaching and learning activities, and assessment. / Feedback literacy: Learners' capacity to understand, evaluate, and use feedback to improve work.
D. Constructive alignment: Learners' capacity to understand, evaluate, and use feedback to improve work. / Feedback literacy: Alignment among learning outcomes, teaching and learning activities, and assessment.

0960. Choose the response that best puts Universal Design for Learning into practice.

A. Offering accessible ways to encounter material and demonstrate learning.
B. Having students explain which strategy helped and what they will change next time.
C. Checking that an assessment measures the skill stated in the course outcome.
D. Evaluating mastery after a course unit concludes.

0961. Which paired example correctly applies Universal Design for Learning first and Culturally responsive pedagogy second?

A. Universal Design for Learning: Evaluating mastery after a course unit concludes. / Culturally responsive pedagogy: Connecting examples to students' contexts and checking whose perspectives are represented.
B. Universal Design for Learning: Offering accessible ways to encounter material and demonstrate learning. / Culturally responsive pedagogy: Connecting examples to students' contexts and checking whose perspectives are represented.
C. Universal Design for Learning: Offering accessible ways to encounter material and demonstrate learning. / Culturally responsive pedagogy: Checking that an assessment measures the skill stated in the course outcome.
D. Universal Design for Learning: Connecting examples to students' contexts and checking whose perspectives are represented. / Culturally responsive pedagogy: Offering accessible ways to encounter material and demonstrate learning.

0962. A supervisor asks for an applied contrast between Formative assessment and Metacognition. Which option fits?

A. Formative assessment: Teaching students to interpret feedback and plan a concrete revision. / Metacognition: Having students explain which strategy helped and what they will change next time.
B. Formative assessment: Using an exit question to decide what to reteach in the next class. / Metacognition: Having students explain which strategy helped and what they will change next time.
C. Formative assessment: Using an exit question to decide what to reteach in the next class. / Metacognition: Offering accessible ways to encounter material and demonstrate learning.
D. Formative assessment: Having students explain which strategy helped and what they will change next time. / Metacognition: Using an exit question to decide what to reteach in the next class.

0963. In a supervision quiz, how should Universal Design for Learning be distinguished from Formative assessment?

A. Universal Design for Learning: Low-stakes evidence gathered during learning to guide feedback and next instructional steps. / Formative assessment: A framework for designing flexible learning environments with multiple means of engagement, representation, and action or expression.
B. Universal Design for Learning: A framework for designing flexible learning environments with multiple means of engagement, representation, and action or expression. / Formative assessment: Temporary instructional support that enables increasingly independent performance.
C. Universal Design for Learning: Alignment among learning outcomes, teaching and learning activities, and assessment. / Formative assessment: Low-stakes evidence gathered during learning to guide feedback and next instructional steps.
D. Universal Design for Learning: A framework for designing flexible learning environments with multiple means of engagement, representation, and action or expression. / Formative assessment: Low-stakes evidence gathered during learning to guide feedback and next instructional steps.

0964. A doctoral student reads the following description. Which concept does it define? A framework for designing flexible learning environments with multiple means of engagement, representation, and action or expression.

A. Metacognition
B. Universal Design for Learning
C. Feedback literacy
D. Culturally responsive pedagogy

0965. How should a practitioner distinguish the applications of Universal Design for Learning and Summative assessment?

A. Universal Design for Learning: Evaluating mastery after a course unit concludes. / Summative assessment: Offering accessible ways to encounter material and demonstrate learning.
B. Universal Design for Learning: Connecting examples to students' contexts and checking whose perspectives are represented. / Summative assessment: Evaluating mastery after a course unit concludes.
C. Universal Design for Learning: Offering accessible ways to encounter material and demonstrate learning. / Summative assessment: Pairing an activity with structured reflection and transfer to a new situation.
D. Universal Design for Learning: Offering accessible ways to encounter material and demonstrate learning. / Summative assessment: Evaluating mastery after a course unit concludes.

0966. In a professional consultation about a young adolescent client, the mental-health professional describes this response in the caregiver consultation: offering accessible ways to encounter material and demonstrate learning. Which term is most apt?

A. Scaffolding in instruction
B. Metacognition
C. Feedback literacy
D. Universal Design for Learning

0967. Which comparison correctly distinguishes Constructive alignment from Universal Design for Learning?

A. Constructive alignment: Alignment among learning outcomes, teaching and learning activities, and assessment. / Universal Design for Learning: Teaching that draws on learners' cultural knowledge and experiences while maintaining high expectations and belonging.
B. Constructive alignment: A framework for designing flexible learning environments with multiple means of engagement, representation, and action or expression. / Universal Design for Learning: Alignment among learning outcomes, teaching and learning activities, and assessment.
C. Constructive alignment: Learning through purposeful experience, reflection, conceptualization, and application. / Universal Design for Learning: A framework for designing flexible learning environments with multiple means of engagement, representation, and action or expression.
D. Constructive alignment: Alignment among learning outcomes, teaching and learning activities, and assessment. / Universal Design for Learning: A framework for designing flexible learning environments with multiple means of engagement, representation, and action or expression.

0968. In a supervision quiz, how should Constructive alignment be distinguished from Universal Design for Learning?

A. Constructive alignment: Alignment among learning outcomes, teaching and learning activities, and assessment. / Universal Design for Learning: Teaching that draws on learners' cultural knowledge and experiences while maintaining high expectations and belonging.
B. Constructive alignment: A framework for designing flexible learning environments with multiple means of engagement, representation, and action or expression. / Universal Design for Learning: Alignment among learning outcomes, teaching and learning activities, and assessment.
C. Constructive alignment: Alignment among learning outcomes, teaching and learning activities, and assessment. / Universal Design for Learning: A framework for designing flexible learning environments with multiple means of engagement, representation, and action or expression.
D. Constructive alignment: Learning through purposeful experience, reflection, conceptualization, and application. / Universal Design for Learning: A framework for designing flexible learning environments with multiple means of engagement, representation, and action or expression.

0969. In a supervision quiz, how should Summative assessment be distinguished from Culturally responsive pedagogy?

A. Summative assessment: Alignment among learning outcomes, teaching and learning activities, and assessment. / Culturally responsive pedagogy: Teaching that draws on learners' cultural knowledge and experiences while maintaining high expectations and belonging.
B. Summative assessment: Evaluation of learning at the end of an instructional period or unit. / Culturally responsive pedagogy: Teaching that draws on learners' cultural knowledge and experiences while maintaining high expectations and belonging.
C. Summative assessment: Teaching that draws on learners' cultural knowledge and experiences while maintaining high expectations and belonging. / Culturally responsive pedagogy: Evaluation of learning at the end of an instructional period or unit.
D. Summative assessment: Evaluation of learning at the end of an instructional period or unit. / Culturally responsive pedagogy: Awareness and regulation of one's own learning, including planning, monitoring, and evaluation.

0970. Which statement most accurately defines Summative assessment?

A. Effortful recall of learned material that strengthens retention and reveals learning needs.
B. Evaluation of learning at the end of an instructional period or unit.
C. Temporary instructional support that enables increasingly independent performance.
D. Learners' capacity to understand, evaluate, and use feedback to improve work.

0971. Choose the practice comparison that best separates Summative assessment from Feedback literacy.

A. Summative assessment: Teaching students to interpret feedback and plan a concrete revision. / Feedback literacy: Evaluating mastery after a course unit concludes.
B. Summative assessment: Evaluating mastery after a course unit concludes. / Feedback literacy: Teaching students to interpret feedback and plan a concrete revision.
C. Summative assessment: Evaluating mastery after a course unit concludes. / Feedback literacy: Having students explain which strategy helped and what they will change next time.
D. Summative assessment: Using an exit question to decide what to reteach in the next class. / Feedback literacy: Teaching students to interpret feedback and plan a concrete revision.

0972. A case conference asks for a distinction between Formative assessment and Metacognition. Which answer is sound?

A. Formative assessment: Learners' capacity to understand, evaluate, and use feedback to improve work. / Metacognition: Awareness and regulation of one's own learning, including planning, monitoring, and evaluation.
B. Formative assessment: Low-stakes evidence gathered during learning to guide feedback and next instructional steps. / Metacognition: Awareness and regulation of one's own learning, including planning, monitoring, and evaluation.
C. Formative assessment: Awareness and regulation of one's own learning, including planning, monitoring, and evaluation. / Metacognition: Low-stakes evidence gathered during learning to guide feedback and next instructional steps.
D. Formative assessment: Low-stakes evidence gathered during learning to guide feedback and next instructional steps. / Metacognition: A framework for designing flexible learning environments with multiple means of engagement, representation, and action or expression.

0973. Which statement accurately contrasts the course concepts Universal Design for Learning and Formative assessment?

A. Universal Design for Learning: A framework for designing flexible learning environments with multiple means of engagement, representation, and action or expression. / Formative assessment: Temporary instructional support that enables increasingly independent performance.
B. Universal Design for Learning: Low-stakes evidence gathered during learning to guide feedback and next instructional steps. / Formative assessment: A framework for designing flexible learning environments with multiple means of engagement, representation, and action or expression.
C. Universal Design for Learning: A framework for designing flexible learning environments with multiple means of engagement, representation, and action or expression. / Formative assessment: Low-stakes evidence gathered during learning to guide feedback and next instructional steps.
D. Universal Design for Learning: Alignment among learning outcomes, teaching and learning activities, and assessment. / Formative assessment: Low-stakes evidence gathered during learning to guide feedback and next instructional steps.

0974. At the community service agency, a school support specialist meets with a preadolescent child. The practice priority is: connecting examples to students' contexts and checking whose perspectives are represented. Which concept best captures that priority?

A. Culturally responsive pedagogy
B. Universal Design for Learning
C. Metacognition
D. Constructive alignment

0975. A trainee must explain Retrieval practice. Which answer is accurate?

A. Evaluation of learning at the end of an instructional period or unit.
B. Effortful recall of learned material that strengthens retention and reveals learning needs.
C. Low-stakes evidence gathered during learning to guide feedback and next instructional steps.
D. Learning through purposeful experience, reflection, conceptualization, and application.

0976. A service team discusses a client in late adolescence in the youth advocacy program. Their proposed next step is asking learners to retrieve key ideas from memory before reviewing notes. Which course concept supports it?

A. Universal Design for Learning
B. Experiential learning
C. Retrieval practice
D. Feedback literacy

0977. Choose the practice comparison that best separates Scaffolding in instruction from Summative assessment.

A. Scaffolding in instruction: Modeling a skill and gradually reducing prompts as learners gain mastery. / Summative assessment: Evaluating mastery after a course unit concludes.
B. Scaffolding in instruction: Modeling a skill and gradually reducing prompts as learners gain mastery. / Summative assessment: Asking learners to retrieve key ideas from memory before reviewing notes.
C. Scaffolding in instruction: Using an exit question to decide what to reteach in the next class. / Summative assessment: Evaluating mastery after a course unit concludes.
D. Scaffolding in instruction: Evaluating mastery after a course unit concludes. / Summative assessment: Modeling a skill and gradually reducing prompts as learners gain mastery.

0978. Which course concept is defined as follows: Effortful recall of learned material that strengthens retention and reveals learning needs.

A. Scaffolding in instruction
B. Retrieval practice
C. Metacognition
D. Experiential learning

0979. In the outpatient clinic, a youth worker describes the most appropriate support for a young person as asking learners to retrieve key ideas from memory before reviewing notes. Which framework is being applied?

A. Retrieval practice
B. Culturally responsive pedagogy
C. Universal Design for Learning
D. Feedback literacy

0980. A consultant and a young person are discussing support in the school-based service. The selected practice is pairing an activity with structured reflection and transfer to a new situation. Which concept does this demonstrate?

A. Universal Design for Learning
B. Constructive alignment
C. Metacognition
D. Experiential learning

0981. In the after-school program, a team asks how a youth worker can support a high-school student. One proposed action is connecting examples to students' contexts and checking whose perspectives are represented. Which idea does it represent?

A. Formative assessment
B. Summative assessment
C. Culturally responsive pedagogy
D. Universal Design for Learning

0982. At the behavior-support review, a clinical supervisor meets with a child of elementary-school age. The practice priority is: having students explain which strategy helped and what they will change next time. Which concept best captures that priority?

A. Formative assessment
B. Culturally responsive pedagogy
C. Scaffolding in instruction
D. Metacognition

0983. For a child aged 8 in the telehealth session, a behavior specialist makes this practice the immediate priority: asking learners to retrieve key ideas from memory before reviewing notes. Which concept fits best?

A. Constructive alignment
B. Retrieval practice
C. Scaffolding in instruction
D. Culturally responsive pedagogy

0984. Choose the definition pair that correctly explains Summative assessment first and Feedback literacy second.

A. Summative assessment: Learners' capacity to understand, evaluate, and use feedback to improve work. / Feedback literacy: Evaluation of learning at the end of an instructional period or unit.
B. Summative assessment: Evaluation of learning at the end of an instructional period or unit. / Feedback literacy: Learners' capacity to understand, evaluate, and use feedback to improve work.
C. Summative assessment: Low-stakes evidence gathered during learning to guide feedback and next instructional steps. / Feedback literacy: Learners' capacity to understand, evaluate, and use feedback to improve work.
D. Summative assessment: Evaluation of learning at the end of an instructional period or unit. / Feedback literacy: Awareness and regulation of one's own learning, including planning, monitoring, and evaluation.

0985. Which option preserves the correct meaning of both Formative assessment and Culturally responsive pedagogy?

A. Formative assessment: Learning through purposeful experience, reflection, conceptualization, and application. / Culturally responsive pedagogy: Teaching that draws on learners' cultural knowledge and experiences while maintaining high expectations and belonging.
B. Formative assessment: Teaching that draws on learners' cultural knowledge and experiences while maintaining high expectations and belonging. / Culturally responsive pedagogy: Low-stakes evidence gathered during learning to guide feedback and next instructional steps.
C. Formative assessment: Low-stakes evidence gathered during learning to guide feedback and next instructional steps. / Culturally responsive pedagogy: Teaching that draws on learners' cultural knowledge and experiences while maintaining high expectations and belonging.
D. Formative assessment: Low-stakes evidence gathered during learning to guide feedback and next instructional steps. / Culturally responsive pedagogy: A framework for designing flexible learning environments with multiple means of engagement, representation, and action or expression.

0986. A trainee must explain Metacognition. Which answer is accurate?

A. Awareness and regulation of one's own learning, including planning, monitoring, and evaluation.
B. Evaluation of learning at the end of an instructional period or unit.
C. Alignment among learning outcomes, teaching and learning activities, and assessment.
D. Teaching that draws on learners' cultural knowledge and experiences while maintaining high expectations and belonging.

0987. A supervisor asks how Experiential learning would appear in practice. Which choice should be selected?

A. Pairing an activity with structured reflection and transfer to a new situation.
B. Modeling a skill and gradually reducing prompts as learners gain mastery.
C. Asking learners to retrieve key ideas from memory before reviewing notes.
D. Teaching students to interpret feedback and plan a concrete revision.

0988. In the multidisciplinary case conference, a caregiver working with a counselor is considering this approach for a client in late adolescence: pairing an activity with structured reflection and transfer to a new situation. Which framework does it represent?

A. Metacognition
B. Culturally responsive pedagogy
C. Formative assessment
D. Experiential learning

0989. In the school consultation, a team asks how a consulting counselor can support a school-age child. One proposed action is evaluating mastery after a course unit concludes. Which idea does it represent?

A. Retrieval practice
B. Metacognition
C. Culturally responsive pedagogy
D. Summative assessment

0990. A trainee must choose a practice that exemplifies Universal Design for Learning. Which action is the best fit?

A. Having students explain which strategy helped and what they will change next time.
B. Offering accessible ways to encounter material and demonstrate learning.
C. Asking learners to retrieve key ideas from memory before reviewing notes.
D. Using an exit question to decide what to reteach in the next class.

0991. In a supervision review, a parent educator describes work with a teenage client in the classroom support meeting: teaching students to interpret feedback and plan a concrete revision. What concept is illustrated?

A. Feedback literacy
B. Experiential learning
C. Retrieval practice
D. Formative assessment

0992. A supervised trainee is supporting a student aged 9 in the community youth program. The key practice is checking that an assessment measures the skill stated in the course outcome. Which course concept is most relevant?

A. Feedback literacy
B. Formative assessment
C. Constructive alignment
D. Summative assessment

0993. A client in early adolescence and a assessment clinician are reviewing goals in the student wellness team. The agreed action is having students explain which strategy helped and what they will change next time. Which principle best accounts for it?

A. Metacognition
B. Universal Design for Learning
C. Formative assessment
D. Scaffolding in instruction

0994. Which statement most accurately defines Scaffolding in instruction?

A. Low-stakes evidence gathered during learning to guide feedback and next instructional steps.
B. Temporary instructional support that enables increasingly independent performance.
C. Evaluation of learning at the end of an instructional period or unit.
D. Effortful recall of learned material that strengthens retention and reveals learning needs.

0995. Which comparison correctly distinguishes Retrieval practice from Culturally responsive pedagogy?

A. Retrieval practice: Temporary instructional support that enables increasingly independent performance. / Culturally responsive pedagogy: Teaching that draws on learners' cultural knowledge and experiences while maintaining high expectations and belonging.
B. Retrieval practice: Effortful recall of learned material that strengthens retention and reveals learning needs. / Culturally responsive pedagogy: A framework for designing flexible learning environments with multiple means of engagement, representation, and action or expression.
C. Retrieval practice: Effortful recall of learned material that strengthens retention and reveals learning needs. / Culturally responsive pedagogy: Teaching that draws on learners' cultural knowledge and experiences while maintaining high expectations and belonging.
D. Retrieval practice: Teaching that draws on learners' cultural knowledge and experiences while maintaining high expectations and belonging. / Culturally responsive pedagogy: Effortful recall of learned material that strengthens retention and reveals learning needs.

0996. Which paired example correctly applies Universal Design for Learning first and Feedback literacy second?

A. Universal Design for Learning: Offering accessible ways to encounter material and demonstrate learning. / Feedback literacy: Teaching students to interpret feedback and plan a concrete revision.
B. Universal Design for Learning: Checking that an assessment measures the skill stated in the course outcome. / Feedback literacy: Teaching students to interpret feedback and plan a concrete revision.
C. Universal Design for Learning: Teaching students to interpret feedback and plan a concrete revision. / Feedback literacy: Offering accessible ways to encounter material and demonstrate learning.
D. Universal Design for Learning: Offering accessible ways to encounter material and demonstrate learning. / Feedback literacy: Connecting examples to students' contexts and checking whose perspectives are represented.

0997. A assessment clinician prepares for a session in the child guidance clinic with a young person aged 18. The intended approach is checking that an assessment measures the skill stated in the course outcome. Which concept is most relevant?

A. Constructive alignment
B. Retrieval practice
C. Summative assessment
D. Universal Design for Learning

0998. Choose the definition pair that correctly explains Constructive alignment first and Metacognition second.

A. Constructive alignment: Effortful recall of learned material that strengthens retention and reveals learning needs. / Metacognition: Awareness and regulation of one’s own learning, including planning, monitoring, and evaluation.
B. Constructive alignment: Alignment among learning outcomes, teaching and learning activities, and assessment. / Metacognition: Awareness and regulation of one’s own learning, including planning, monitoring, and evaluation.
C. Constructive alignment: Awareness and regulation of one’s own learning, including planning, monitoring, and evaluation. / Metacognition: Alignment among learning outcomes, teaching and learning activities, and assessment.
D. Constructive alignment: Alignment among learning outcomes, teaching and learning activities, and assessment. / Metacognition: Teaching that draws on learners’ cultural knowledge and experiences while maintaining high expectations and belonging.

0999. A school counselor is asked to justify a plan for a teenage client in the behavior-support review. It calls for connecting examples to students’ contexts and checking whose perspectives are represented. Which concept provides the rationale?

A. Universal Design for Learning
B. Constructive alignment
C. Culturally responsive pedagogy
D. Scaffolding in instruction

1000. A family therapist presents a support plan for a child aged 7 at the child guidance clinic. Its central feature is having students explain which strategy helped and what they will change next time. Which concept should be named?

A. Retrieval practice
B. Culturally responsive pedagogy
C. Experiential learning
D. Metacognition

Full Answer Key

The answer keys follow all 32 course question sections. Each entry gives the question number, correct option letter, full correct option text, and the concept it assesses.

CAC.901 | Advanced Developmental Psychology

QUESTION | CORRECT OPTION AND CONCEPT

0001. D - Transactional model: Tracking how a child's behavior changes caregiver responses and how those responses then affect the child. / Executive function: Supporting a student who must hold instructions in mind, pause an impulse, and shift strategies. [Concept: Transactional model and Executive function]

0002. A - Executive function [Concept: Executive function]

0003. C - Temperament: Adapting support to a child's activity level, emotional intensity, and regulation rather than labeling the child. / Theory of mind: Interpreting a child's growing ability to understand that another person may not know what the child knows. [Concept: Temperament and Theory of mind]

0004. A - Transactional model: Tracking how a child's behavior changes caregiver responses and how those responses then affect the child. / Executive function: Supporting a student who must hold instructions in mind, pause an impulse, and shift strategies. [Concept: Transactional model and Executive function]

0005. B - Transactional model [Concept: Transactional model]

0006. C - Executive function: A set of goal-directed capacities that includes working memory, inhibitory control, and cognitive flexibility. / Sensitive period: A developmental window when experience has especially strong influence on a particular capacity, without implying that later change is impossible. [Concept: Executive function and Sensitive period]

0007. C - Ecological systems model [Concept: Ecological systems model]

0008. D - Scaffolding [Concept: Scaffolding]

0009. D - Attachment security: Understanding how reliable caregiver availability supports both comfort seeking and exploration. / Ecological systems model: Mapping influences across home, school, community, policy, and historical context. [Concept: Attachment security and Ecological systems model]

0010. D - Scaffolding: Providing just enough structure for a challenging task, then gradually withdrawing prompts. / Theory of mind: Interpreting a child's growing ability to understand that another person may not know what the child knows. [Concept: Scaffolding and Theory of mind]

0011. D - Supporting a student who must hold instructions in mind, pause an impulse, and shift strategies. [Concept: Executive function]

0012. D - Ecological systems model [Concept: Ecological systems model]

0013. A - Scaffolding: Temporary, calibrated support that enables a learner to perform beyond current independent capacity and is reduced as mastery grows. / Developmental cascade: A process in which change in one skill or domain influences later outcomes in other domains. [Concept: Scaffolding and Developmental cascade]

0014. D - Ecological systems model [Concept: Ecological systems model]

0015. B - Developmental cascade [Concept: Developmental cascade]

0016. D - Executive function [Concept: Executive function]

0017. A - Temporary, calibrated support that enables a learner to perform beyond current independent capacity and is reduced as mastery grows. [Concept: Scaffolding]

0018. D - Attachment security [Concept: Attachment security]

0019. B - Executive function [Concept: Executive function]

0020. A - Attachment security [Concept: Attachment security]

0021. D - Understanding how reliable caregiver availability supports both comfort seeking and exploration. [Concept: Attachment security]

0022. B - Executive function: Supporting a student who must hold instructions in mind, pause an impulse, and shift strategies. / Theory of mind: Interpreting a child's growing ability to understand that another person may not know what the child knows. [Concept: Executive function and Theory of mind]

0023. B - Sensitive period [Concept: Sensitive period]

0024. B - Transactional model: Child characteristics and environmental responses reciprocally shape later development. / Executive function: A set of goal-directed capacities that includes working memory, inhibitory control, and cognitive flexibility. [Concept: Transactional model and Executive function]

0025. D - Ecological systems model [Concept: Ecological systems model]

0026. C - Adapting support to a child's activity level, emotional intensity, and regulation rather than labeling the child. [Concept: Temperament]

0027. B - Developmental systems perspective: Considering how a young person and changing environments influence one another over time. / Scaffolding: Providing just enough structure for a challenging task, then gradually withdrawing prompts. [Concept: Developmental systems perspective and Scaffolding]

0028. B - Scaffolding: Providing just enough structure for a challenging task, then gradually withdrawing prompts. / Theory of mind: Interpreting a child's growing ability to understand that another person may not know what the child knows. [Concept: Scaffolding and Theory of mind]

0029. B - Adapting support to a child's activity level, emotional intensity, and regulation rather than labeling the child. [Concept: Temperament]

0030. B - Temperament [Concept: Temperament]

0031. A - Tracking how a child's behavior changes caregiver responses and how those responses then affect the child. [Concept: Transactional model]

0032. B - Transactional model [Concept: Transactional model]

0033. B - Attachment security: A relationship pattern in which a child can seek comfort and use a caregiver as a secure base for exploration. / Scaffolding: Temporary, calibrated support that enables a learner to perform beyond current independent capacity and is reduced as mastery grows. [Concept: Attachment security and Scaffolding]

0034. D - Sensitive period [Concept: Sensitive period]

0035. A - Transactional model [Concept: Transactional model]

0036. D - Theory of mind [Concept: Theory of mind]

0037. B - Transactional model [Concept: Transactional model]

0038. C - Understanding how reliable caregiver availability supports both comfort seeking and exploration. [Concept: Attachment security]

0039. C - Attachment security [Concept: Attachment security]

0040. C - Developmental systems perspective [Concept: Developmental systems perspective]

0041. C - Executive function: Supporting a student who must hold instructions in mind, pause an impulse, and shift strategies. / Scaffolding: Providing just enough structure for a challenging task, then gradually withdrawing prompts. [Concept: Executive function and Scaffolding]

0042. D - Sensitive period: Discussing why timing of experience matters while avoiding claims that later learning cannot occur. / Ecological systems model: Mapping influences across home, school, community, policy, and historical context. [Concept: Sensitive period and Ecological systems model]

0043. B - Mapping influences across home, school, community, policy, and historical context. [Concept: Ecological systems model]

0044. A - Temperament: Adapting support to a child's activity level, emotional intensity, and regulation rather than labeling the child. / Sensitive period: Discussing why timing of experience matters while avoiding claims that later learning cannot occur. [Concept: Temperament and Sensitive period]

0045. C - A developmental window when experience has especially strong influence on a particular capacity, without implying that later change is impossible. [Concept: Sensitive period]

0046. D - Executive function [Concept: Executive function]

0047. C - Developmental systems perspective [Concept: Developmental systems perspective]

0048. D - Transactional model: Tracking how a child's behavior changes caregiver responses and how those responses then affect the child. / Temperament: Adapting support to a child's activity level, emotional intensity, and regulation rather than labeling the child. [Concept: Transactional model and Temperament]

0049. B - Attachment security: A relationship pattern in which a child can seek comfort and use a caregiver as a secure base for exploration. / Developmental cascade: A process in which change in one skill or domain influences later outcomes in other domains. [Concept: Attachment security and Developmental cascade]

0050. B - Scaffolding: Providing just enough structure for a challenging task, then gradually withdrawing prompts. / Theory of mind: Interpreting a child's growing ability to understand that another person may not know what the child knows. [Concept: Scaffolding and Theory of mind]

0051. B - Ecological systems model [Concept: Ecological systems model]

0052. A - Transactional model: Tracking how a child's behavior changes caregiver responses and how those responses then affect the child. / Ecological systems model: Mapping influences across home, school, community, policy, and historical context. [Concept: Transactional model and Ecological systems model]

0053. D - Attachment security [Concept: Attachment security]

0054. D - Temperament: Early-appearing individual differences in emotional reactivity and self-regulation that interact with caregiving and context. / Sensitive period: A developmental window when experience has especially strong influence on a particular capacity, without implying that later change is impossible. [Concept: Temperament and Sensitive period]

0055. B - Scaffolding [Concept: Scaffolding]

0056. A - Temperament [Concept: Temperament]

0057. D - Attachment security [Concept: Attachment security]

0058. D - Transactional model: Tracking how a child's behavior changes caregiver responses and how those responses then affect the child. / Developmental cascade: Examining how early language difficulty may affect peer interaction and later classroom participation. [Concept: Transactional model and Developmental cascade]

0059. C - Child characteristics and environmental responses reciprocally shape later development. [Concept: Transactional model]

0060. B - Temperament [Concept: Temperament]

0061. C - Sensitive period [Concept: Sensitive period]

0062. C - Developmental systems perspective [Concept: Developmental systems perspective]

0063. B - Transactional model: Child characteristics and environmental responses reciprocally shape later development. / Developmental cascade: A process in which change in one skill or domain influences later outcomes in other domains. [Concept: Transactional model and Developmental cascade]

CAC.901 | Advanced Developmental Psychology

QUESTION | CORRECT OPTION AND CONCEPT

0064. A - Scaffolding: Temporary, calibrated support that enables a learner to perform beyond current independent capacity and is reduced as mastery grows. / Ecological systems model: A framework that locates development within nested settings and broader cultural, institutional, and historical conditions. [Concept: Scaffolding and Ecological systems model]

0065. C - Attachment security [Concept: Attachment security]

0066. D - Developmental cascade: Examining how early language difficulty may affect peer interaction and later classroom participation. / Sensitive period: Discussing why timing of experience matters while avoiding claims that later learning cannot occur. [Concept: Developmental cascade and Sensitive period]

0067. A - Developmental systems perspective: Development emerges through ongoing transactions among biological, psychological, relational, cultural, and historical contexts. / Ecological systems model: A framework that locates development within nested settings and broader cultural, institutional, and historical conditions. [Concept: Developmental systems perspective and Ecological systems model]

0068. B - Executive function: Supporting a student who must hold instructions in mind, pause an impulse, and shift strategies. / Sensitive period: Discussing why timing of experience matters while avoiding claims that later learning cannot occur. [Concept: Executive function and Sensitive period]

0069. C - Developmental systems perspective: Considering how a young person and changing environments influence one another over time. / Temperament: Adapting support to a child's activity level, emotional intensity, and regulation rather than labeling the child. [Concept: Developmental systems perspective and Temperament]

0070. D - Temperament [Concept: Temperament]

0071. B - Developmental cascade [Concept: Developmental cascade]

0072. C - Theory of mind [Concept: Theory of mind]

0073. D - Scaffolding: Temporary, calibrated support that enables a learner to perform beyond current independent capacity and is reduced as mastery grows. / Ecological systems model: A framework that locates development within nested settings and broader cultural, institutional, and historical conditions. [Concept: Scaffolding and Ecological systems model]

0074. A - Developmental systems perspective [Concept: Developmental systems perspective]

0075. A - Temperament: Early-appearing individual differences in emotional reactivity and self-regulation that interact with caregiving and context. / Ecological systems model: A framework that locates development within nested settings and broader cultural, institutional, and historical conditions. [Concept: Temperament and Ecological systems model]

0076. D - Temperament: Adapting support to a child's activity level, emotional intensity, and regulation rather than labeling the child. / Executive function: Supporting a student who must hold instructions in mind, pause an impulse, and shift strategies. [Concept: Temperament and Executive function]

0077. A - Sensitive period [Concept: Sensitive period]

0078. D - Developmental systems perspective: Considering how a young person and changing environments influence one another over time. / Executive function: Supporting a student who must hold instructions in mind, pause an impulse, and shift strategies. [Concept: Developmental systems perspective and Executive function]

0079. B - Developmental cascade: Examining how early language difficulty may affect peer interaction and later classroom participation. / Sensitive period: Discussing why timing of experience matters while avoiding claims that later learning cannot occur. [Concept: Developmental cascade and Sensitive period]

0080. D - Transactional model: Tracking how a child's behavior changes caregiver responses and how those responses then affect the child. / Scaffolding: Providing just enough structure for a challenging task, then gradually withdrawing prompts. [Concept: Transactional model and Scaffolding]

0081. B - Scaffolding [Concept: Scaffolding]

0082. C - Transactional model: Child characteristics and environmental responses reciprocally shape later development. / Executive function: A set of goal-directed capacities that includes working memory, inhibitory control, and cognitive flexibility. [Concept: Transactional model and Executive function]

0083. D - Transactional model: Tracking how a child's behavior changes caregiver responses and how those responses then affect the child. / Temperament: Adapting support to a child's activity level, emotional intensity, and regulation rather than labeling the child. [Concept: Transactional model and Temperament]

0084. B - Executive function [Concept: Executive function]

0085. B - Transactional model: Child characteristics and environmental responses reciprocally shape later development. / Temperament: Early-appearing individual differences in emotional reactivity and self-regulation that interact with caregiving and context. [Concept: Transactional model and Temperament]

0086. A - Transactional model [Concept: Transactional model]

0087. A - Developmental systems perspective: Development emerges through ongoing transactions among biological, psychological, relational, cultural, and historical contexts. / Executive function: A set of goal-directed capacities that includes working memory, inhibitory control, and cognitive flexibility. [Concept: Developmental systems perspective and Executive function]

0088. C - A developmental window when experience has especially strong influence on a particular capacity, without implying that later change is impossible. [Concept: Sensitive period]

0089. A - Attachment security: Understanding how reliable caregiver availability supports both comfort seeking and exploration. / Developmental cascade: Examining how early language difficulty may affect peer interaction and later classroom participation. [Concept: Attachment security and Developmental cascade]

0090. B - Theory of mind: Interpreting a child's growing ability to understand that another person may not know what the child knows. / Sensitive period: Discussing why timing of experience matters while avoiding claims that later learning cannot occur. 0225. B - Developmental cascade: A process in which change in one skill or domain influences later outcomes in other domains. / Sensitive period: A developmental window when experience has especially strong influence on a particular capacity, without implying that later change is impossible. [Concept: Developmental cascade and Sensitive period]

0226. A - Developmental systems perspective [Concept: Developmental systems perspective]

0227. A - Adapting support to a child's activity level, emotional intensity, and regulation rather than labeling the child. [Concept: Temperament]

0228. A - Ecological systems model [Concept: Ecological systems model]

0229. B - A process in which change in one skill or domain influences later outcomes in other domains. [Concept: Developmental cascade]

0230. A - Sensitive period [Concept: Sensitive period]

0231. D - Attachment security [Concept: Attachment security]

0232. D - Supporting a student who must hold instructions in mind, pause an impulse, and shift strategies. [Concept: Executive function]

0233. D - Temperament [Concept: Temperament]

0234. A - Developmental cascade [Concept: Developmental cascade]

0235. C - Theory of mind [Concept: Theory of mind]

0236. A - Temperament [Concept: Temperament]

0237. D - Executive function: Supporting a student who must hold instructions in mind, pause an impulse, and shift strategies. / Developmental cascade: Examining how early language difficulty may affect peer interaction and later classroom participation. [Concept: Executive function and Developmental cascade]

0238. A - Developmental systems perspective [Concept: Developmental systems perspective]

0239. D - Scaffolding: Temporary, calibrated support that enables a learner to perform beyond current independent capacity and is reduced as mastery grows. / Developmental cascade: A process in which change in one skill or domain influences later outcomes in other domains. [Concept: Scaffolding and Developmental cascade]

0240. C - Developmental systems perspective: Considering how a young person and changing environments influence one another over time. / Theory of mind: Interpreting a child's growing ability to understand that another person may not know what the child knows. [Concept: Developmental systems perspective and Theory of mind]

0241. D - Sensitive period [Concept: Sensitive period]

0242. B - Early-appearing individual differences in emotional reactivity and self-regulation that interact with caregiving and context. [Concept: Temperament]

0243. A - Scaffolding [Concept: Scaffolding]

0244. B - Executive function [Concept: Executive function]

0245. D - Transactional model: Child characteristics and environmental responses reciprocally shape later development. / Developmental cascade: A process in which change in one skill or domain influences later outcomes in other domains. [Concept: Transactional model and Developmental cascade]

0246. C - Developmental systems perspective: Development emerges through ongoing transactions among biological, psychological, relational, cultural, and historical contexts. / Transactional model: Child characteristics and environmental responses reciprocally shape later development. [Concept: Developmental systems perspective and Transactional model]

0247. B - Executive function: A set of goal-directed capacities that includes working memory, inhibitory control, and cognitive flexibility. / Scaffolding: Temporary, calibrated support that enables a learner to perform beyond current independent capacity and is reduced as mastery grows. [Concept: Executive function and Scaffolding]

0248. A - Scaffolding: Providing just enough structure for a challenging task, then gradually withdrawing prompts. / Sensitive period: Discussing why timing of experience matters while avoiding claims that later learning cannot occur. [Concept: Scaffolding and Sensitive period]

0249. A - Developmental cascade [Concept: Developmental cascade]

0250. D - Developmental cascade [Concept: Developmental cascade]

0251. D - Considering how a young person and changing environments influence one another over time. [Concept: Developmental systems perspective]

0252. B - Developmental cascade [Concept: Developmental cascade]

0253. A - Theory of mind [Concept: Theory of mind]

0254. C - Developmental systems perspective: Development emerges through ongoing transactions among biological, psychological, relational, cultural, and historical contexts. / Attachment security: A relationship pattern in which a child can seek comfort and use a caregiver as a secure base for exploration. [Concept: Developmental systems perspective and Attachment security]

0255. A - Transactional model [Concept: Transactional model]

0256. B - Attachment security [Concept: Attachment security]

0257. A - Developmental systems perspective: Considering how a young person and changing environments influence one another over time. / Ecological systems model: Mapping influences across home, school, community, policy, and historical context. [Concept: Developmental systems perspective and Ecological systems model]

0258. B - Temperament: Adapting support to a child's activity level, emotional intensity, and regulation rather than labeling the child. / Scaffolding: Providing just enough structure for a challenging task, then gradually withdrawing prompts. [Concept: Temperament and Scaffolding]

0259. A - Sensitive period [Concept: Sensitive period]

0260. B - Transactional model [Concept: Transactional model]

0261. C - Attachment security [Concept: Attachment security]

0262. C - Transactional model [Concept: Transactional model]

0263. B - Executive function [Concept: Executive function]

0264. D - Ecological systems model [Concept: Ecological systems model]

0265. C - The developing ability to represent that other people can hold beliefs, knowledge, and perspectives different from one's own. [Concept: Theory of mind]

0266. B - Developmental systems perspective: Considering how a young person and changing environments influence one another over time. / Theory of mind: Interpreting a child's growing ability to understand that another person may not know what the child knows. [Concept: Developmental systems perspective and Theory of mind]

0267. B - Attachment security: Understanding how reliable caregiver availability supports both comfort seeking and exploration. / Scaffolding: Providing just enough structure for a challenging task, then gradually withdrawing prompts. [Concept: Attachment security and Scaffolding]

0268. C - Developmental systems perspective: Considering how a young person and changing environments influence one another over time. / Executive function: Supporting a student who must hold instructions in mind, pause an impulse, and shift strategies. [Concept: Developmental systems perspective and Executive function]

0269. A - Attachment security: A relationship pattern in which a child can seek comfort and use a caregiver as a secure base for exploration. / Scaffolding: Temporary, calibrated support that enables a learner to perform beyond current independent capacity and is reduced as mastery grows. [Concept: Attachment security and Scaffolding]

0270. B - Transactional model [Concept: Transactional model]

0271. C - Sensitive period [Concept: Sensitive period]

0272. C - Executive function [Concept: Executive function]

0273. D - Transactional model [Concept: Transactional model]

0274. C - Executive function [Concept: Executive function]

0275. C - Early-appearing individual differences in emotional reactivity and self-regulation that interact with caregiving and context. [Concept: Temperament]

0276. C - Executive function: A set of goal-directed capacities that includes working memory, inhibitory control, and cognitive flexibility. / Theory of mind: The developing ability to represent that other people can hold beliefs, knowledge, and perspectives different from one's own. [Concept: Executive function and Theory of mind]

0277. A - Transactional model: Tracking how a child's behavior changes caregiver responses and how those responses then affect the child. / Developmental cascade: Examining how early language difficulty may affect peer interaction and later classroom participation. [Concept: Transactional model and Developmental cascade]

0278. C - Developmental systems perspective [Concept: Developmental systems perspective]

0279. C - Developmental cascade [Concept: Developmental cascade]

0280. A - Temperament: Early-appearing individual differences in emotional reactivity and self-regulation that interact with caregiving and context. / Theory of mind: The developing ability to represent that other people can hold beliefs, knowledge, and perspectives different from one's own. [Concept: Temperament and Theory of mind]

0281. B - Executive function [Concept: Executive function]

0282. B - Developmental systems perspective [Concept: Developmental systems perspective]

0283. C - Attachment security: Understanding how reliable caregiver availability supports both comfort seeking and exploration. / Scaffolding: Providing just enough structure for a challenging task, then gradually withdrawing prompts. [Concept: Attachment security and Scaffolding]

0284. A - Theory of mind: Interpreting a child's growing ability to understand that another person may not know what the child knows. / Developmental cascade: Examining how early language difficulty may affect peer interaction and later classroom participation. [Concept: Theory of mind and Developmental cascade]

0285. B - Attachment security: Understanding how reliable caregiver availability supports both comfort seeking and exploration. / Developmental cascade: Examining how early language difficulty may affect peer interaction and later classroom participation. [Concept: Attachment security and Developmental cascade]

0286. A - Developmental systems perspective [Concept: Developmental systems perspective]

0287. A - Theory of mind [Concept: Theory of mind]

0288. B - Scaffolding [Concept: Scaffolding]

CAC.901 | Advanced Developmental Psychology

QUESTION | CORRECT OPTION AND CONCEPT

0289. D - Child characteristics and environmental responses reciprocally shape later development. [Concept: Transactional model]

0290. D - Tracking how a child's behavior changes caregiver responses and how those responses then affect the child. [Concept: Transactional model]

0291. C - Developmental systems perspective: Development emerges through ongoing transactions among biological, psychological, relational, cultural, and historical contexts. / Developmental cascade: A process in which change in one skill or domain influences later outcomes in other domains. [Concept: Developmental systems perspective and Developmental cascade]

0292. C - Temperament [Concept: Temperament]

0293. B - Examining how early language difficulty may affect peer interaction and later classroom participation. [Concept: Developmental cascade]

0294. A - Theory of mind [Concept: Theory of mind]

0295. D - Transactional model: Tracking how a child's behavior changes caregiver responses and how those responses then affect the child. / Sensitive period: Discussing why timing of experience matters while avoiding claims that later learning cannot occur. [Concept: Transactional model and Sensitive period]

0296. C - Executive function: Supporting a student who must hold instructions in mind, pause an impulse, and shift strategies. / Scaffolding: Providing just enough structure for a challenging task, then gradually withdrawing prompts. [Concept: Executive function and Scaffolding]

0297. D - Providing just enough structure for a challenging task, then gradually withdrawing prompts. [Concept: Scaffolding]

0298. A - Theory of mind [Concept: Theory of mind]

0299. D - Scaffolding [Concept: Scaffolding]

0300. C - Scaffolding: Providing just enough structure for a challenging task, then gradually withdrawing prompts. / Sensitive period: Discussing why timing of experience matters while avoiding claims that later learning cannot occur. [Concept: Scaffolding and Sensitive period]

0301. B - Executive function [Concept: Executive function]

0302. C - Executive function: A set of goal-directed capacities that includes working memory, inhibitory control, and cognitive flexibility. / Sensitive period: A developmental window when experience has especially strong influence on a particular capacity, without implying that later change is impossible. [Concept: Executive function and Sensitive period]

0303. B - Theory of mind [Concept: Theory of mind]

0304. A - Transactional model: Child characteristics and environmental responses reciprocally shape later development. / Temperament: Early-appearing individual differences in emotional reactivity and self-regulation that interact with caregiving and context. [Concept: Transactional model and Temperament]

0305. A - Scaffolding [Concept: Scaffolding]

0306. C - Transactional model [Concept: Transactional model]

0307. B - Theory of mind: The developing ability to represent that other people can hold beliefs, knowledge, and perspectives different from one's own. / Sensitive period: A developmental window when experience has especially strong influence on a particular capacity, without implying that later change is impossible. [Concept: Theory of mind and Sensitive period]

0308. A - Scaffolding: Providing just enough structure for a challenging task, then gradually withdrawing prompts. / Sensitive period: Discussing why timing of experience matters while avoiding claims that later learning cannot occur. [Concept: Scaffolding and Sensitive period]

0309. D - Discussing why timing of experience matters while avoiding claims that later learning cannot occur. [Concept: Sensitive period]

0310. A - Theory of mind [Concept: Theory of mind]

0311. C - Child characteristics and environmental responses reciprocally shape later development. [Concept: Transactional model]

0312. D - Theory of mind [Concept: Theory of mind]

0313. A - Developmental cascade [Concept: Developmental cascade]

0314. D - Executive function: A set of goal-directed capacities that includes working memory, inhibitory control, and cognitive flexibility. / Developmental cascade: A process in which change in one skill or domain influences later outcomes in other domains. [Concept: Executive function and Developmental cascade]

0315. A - Developmental systems perspective: Development emerges through ongoing transactions among biological, psychological, relational, cultural, and historical contexts. / Theory of mind: The developing ability to represent that other people can hold beliefs, knowledge, and perspectives different from one's own. [Concept: Developmental systems perspective and Theory of mind]

0316. B - Developmental cascade [Concept: Developmental cascade]

0317. C - Developmental systems perspective: Considering how a young person and changing environments influence one another over time. / Developmental cascade: Examining how early language difficulty may affect peer interaction and later classroom participation. [Concept: Developmental systems perspective and Developmental cascade]

0318. B - Temperament: Early-appearing individual differences in emotional reactivity and self-regulation that interact with caregiving and context. / Developmental cascade: A process in which change in one skill or domain influences later outcomes in other domains. [Concept: Temperament and Developmental cascade]

0319. A - Ecological systems model [Concept: Ecological systems model]

0320. C - Theory of mind: Interpreting a child's growing ability to understand that another person may not know what the child knows. / Ecological systems model: Mapping influences across home, school, community, policy, and historical context. [Concept: Theory of mind and Ecological systems model]

0321. B - Transactional model [Concept: Transactional model]

0322. B - Executive function: Supporting a student who must hold instructions in mind, pause an impulse, and shift strategies. / Developmental cascade: Examining how early language difficulty may affect peer interaction and later classroom participation. [Concept: Executive function and Developmental cascade]

0323. C - Transactional model [Concept: Transactional model]

0324. D - Transactional model [Concept: Transactional model]

0325. D - Child characteristics and environmental responses reciprocally shape later development. [Concept: Transactional model]

0326. B - Scaffolding [Concept: Scaffolding]

0327. B - Transactional model: Child characteristics and environmental responses reciprocally shape later development. / Temperament: Early-appearing individual differences in emotional reactivity and self-regulation that interact with caregiving and context. [Concept: Transactional model and Temperament]

0328. D - Theory of mind [Concept: Theory of mind]

0329. D - Ecological systems model [Concept: Ecological systems model]

0330. A - Transactional model: Tracking how a child's behavior changes caregiver responses and how those responses then affect the child. / Sensitive period: Discussing why timing of experience matters while avoiding claims that later learning cannot occur. [Concept: Transactional model and Sensitive period]

0331. B - Temperament [Concept: Temperament]

0332. B - Scaffolding [Concept: Scaffolding]

0333. C - Sensitive period: Discussing why timing of experience matters while avoiding claims that later learning cannot occur. / Ecological systems model: Mapping influences across home, school, community, policy, and historical context. [Concept: Sensitive period and Ecological systems model]

0334. C - Early-appearing individual differences in emotional reactivity and self-regulation that interact with caregiving and context. [Concept: Temperament]

0335. A - Theory of mind: Interpreting a child's growing ability to understand that another person may not know what the child knows. / Sensitive period: Discussing why timing of experience matters while avoiding claims that later learning cannot occur. [Concept: Theory of mind and Sensitive period]

0336. A - Executive function: A set of goal-directed capacities that includes working memory, inhibitory control, and cognitive flexibility. / Theory of mind: The developing ability to represent that other people can hold beliefs, knowledge, and perspectives different from one's own. 0426. D - Transactional model: Child characteristics and environmental responses reciprocally shape later development. / Developmental cascade: A process in which change in one skill or domain influences later outcomes in other domains. [Concept: Transactional model and Developmental cascade]

0427. B - Scaffolding: Temporary, calibrated support that enables a learner to perform beyond current independent capacity and is reduced as mastery grows. / Theory of mind: The developing ability to represent that other people can hold beliefs, knowledge, and perspectives different from one's own. [Concept: Scaffolding and Theory of mind]

0428. C - Theory of mind [Concept: Theory of mind]

0429. A - Temperament [Concept: Temperament]

0430. D - Theory of mind [Concept: Theory of mind]

0431. C - Attachment security [Concept: Attachment security]

0432. D - Scaffolding: Temporary, calibrated support that enables a learner to perform beyond current independent capacity and is reduced as mastery grows. / Developmental cascade: A process in which change in one skill or domain influences later outcomes in other domains. [Concept: Scaffolding and Developmental cascade]

0433. A - Executive function [Concept: Executive function]

0434. B - Transactional model [Concept: Transactional model]

0435. D - Scaffolding: Temporary, calibrated support that enables a learner to perform beyond current independent capacity and is reduced as mastery grows. / Ecological systems model: A framework that locates development within nested settings and broader cultural, institutional, and historical conditions. [Concept: Scaffolding and Ecological systems model]

0436. D - Developmental systems perspective [Concept: Developmental systems perspective]

0437. B - Temperament [Concept: Temperament]

0438. B - Transactional model: Child characteristics and environmental responses reciprocally shape later development. / Temperament: Early-appearing individual differences in emotional reactivity and self-regulation that interact with caregiving and context. [Concept: Transactional model and Temperament]

0439. A - Sensitive period [Concept: Sensitive period]

0440. A - Sensitive period [Concept: Sensitive period]

0441. A - Attachment security: Understanding how reliable caregiver availability supports both comfort seeking and exploration. / Ecological systems model: Mapping influences across home, school, community, policy, and historical context. [Concept: Attachment security and Ecological systems model]

0442. B - Ecological systems model [Concept: Ecological systems model]

0443. C - Temperament: Adapting support to a child's activity level, emotional intensity, and regulation rather than labeling the child. / Executive function: Supporting a student who must hold instructions in mind, pause an impulse, and shift strategies. [Concept: Temperament and Executive function]

0444. D - Theory of mind: The developing ability to represent that other people can hold beliefs, knowledge, and perspectives different from one's own. / Sensitive period: A developmental window when experience has especially strong influence on a particular capacity, without implying that later change is impossible. [Concept: Theory of mind and Sensitive period]

0445. B - Considering how a young person and changing environments influence one another over time. [Concept: Developmental systems perspective]

0446. D - Developmental cascade [Concept: Developmental cascade]

0447. B - Developmental systems perspective: Considering how a young person and changing environments influence one another over time. / Attachment security: Understanding how reliable caregiver availability supports both comfort seeking and exploration. [Concept: Developmental systems perspective and Attachment security]

0448. D - Sensitive period [Concept: Sensitive period]

0449. C - Attachment security [Concept: Attachment security]

0450. D - Transactional model: Child characteristics and environmental responses reciprocally shape later development. / Sensitive period: A developmental window when experience has especially strong influence on a particular capacity, without implying that later change is impossible. [Concept: Transactional model and Sensitive period]

0451. A - Executive function: A set of goal-directed capacities that includes working memory, inhibitory control, and cognitive flexibility. / Ecological systems model: A framework that locates development within nested settings and broader cultural, institutional, and historical conditions. [Concept: Executive function and Ecological systems model]

0452. B - Scaffolding [Concept: Scaffolding]

0453. C - Sensitive period [Concept: Sensitive period]

0454. B - Temporary, calibrated support that enables a learner to perform beyond current independent capacity and is reduced as mastery grows. [Concept: Scaffolding]

0455. D - Ecological systems model [Concept: Ecological systems model]

0456. C - Scaffolding: Temporary, calibrated support that enables a learner to perform beyond current independent capacity and is reduced as mastery grows. / Sensitive period: A developmental window when experience has especially strong influence on a particular capacity, without implying that later change is impossible. [Concept: Scaffolding and Sensitive period]

0457. C - Transactional model [Concept: Transactional model]

0458. D - Developmental systems perspective [Concept: Developmental systems perspective]

0459. B - Transactional model [Concept: Transactional model]

0460. A - Developmental systems perspective: Considering how a young person and changing environments influence one another over time. / Ecological systems model: Mapping influences across home, school, community, policy, and historical context. [Concept: Developmental systems perspective and Ecological systems model]

0461. D - Attachment security [Concept: Attachment security]

0462. A - Transactional model [Concept: Transactional model]

CAC.901 | Advanced Developmental Psychology

QUESTION | CORRECT OPTION AND CONCEPT

0463. D - Scaffolding [Concept: Scaffolding]

0464. C - Developmental systems perspective [Concept: Developmental systems perspective]

0465. A - Developmental cascade [Concept: Developmental cascade]

0466. A - Transactional model: Tracking how a child's behavior changes caregiver responses and how those responses then affect the child. / Temperament: Adapting support to a child's activity level, emotional intensity, and regulation rather than labeling the child. [Concept: Transactional model and Temperament]

0467. A - Transactional model: Tracking how a child's behavior changes caregiver responses and how those responses then affect the child. / Attachment security: Understanding how reliable caregiver availability supports both comfort seeking and exploration. [Concept: Transactional model and Attachment security]

0468. C - A process in which change in one skill or domain influences later outcomes in other domains. [Concept: Developmental cascade]

0469. C - Scaffolding: Temporary, calibrated support that enables a learner to perform beyond current independent capacity and is reduced as mastery grows. / Developmental cascade: A process in which change in one skill or domain influences later outcomes in other domains. [Concept: Scaffolding and Developmental cascade]

0470. B - Attachment security: A relationship pattern in which a child can seek comfort and use a caregiver as a secure base for exploration. / Sensitive period: A developmental window when experience has especially strong influence on a particular capacity, without implying that later change is impossible. [Concept: Attachment security and Sensitive period]

0471. C - Developmental cascade: Examining how early language difficulty may affect peer interaction and later classroom participation. / Sensitive period: Discussing why timing of experience matters while avoiding claims that later learning cannot occur. [Concept: Developmental cascade and Sensitive period]

0472. D - Attachment security [Concept: Attachment security]

0473. B - Developmental cascade: Examining how early language difficulty may affect peer interaction and later classroom participation. / Ecological systems model: Mapping influences across home, school, community, policy, and historical context. [Concept: Developmental cascade and Ecological systems model]

0474. B - A framework that locates development within nested settings and broader cultural, institutional, and historical conditions. [Concept: Ecological systems model]

0475. A - Sensitive period [Concept: Sensitive period]

0476. C - Ecological systems model [Concept: Ecological systems model]

0477. D - Temperament [Concept: Temperament]

0478. D - Sensitive period [Concept: Sensitive period]

0479. B - Temperament: Early-appearing individual differences in emotional reactivity and self-regulation that interact with caregiving and context. / Ecological systems model: A framework that locates development within nested settings and broader cultural, institutional, and historical conditions. [Concept: Temperament and Ecological systems model]

0480. A - Temperament [Concept: Temperament]

0481. D - Executive function [Concept: Executive function]

0482. D - Transactional model [Concept: Transactional model]

0483. C - Temperament [Concept: Temperament]

0484. B - Transactional model: Child characteristics and environmental responses reciprocally shape later development. / Ecological systems model: A framework that locates development within nested settings and broader cultural, institutional, and historical conditions. [Concept: Transactional model and Ecological systems model]

0485. D - Scaffolding [Concept: Scaffolding]

0486. A - Transactional model: Child characteristics and environmental responses reciprocally shape later development. / Attachment security: A relationship pattern in which a child can seek comfort and use a caregiver as a secure base for exploration. [Concept: Transactional model and Attachment security]

0487. A - Sensitive period [Concept: Sensitive period]

0488. C - Developmental systems perspective [Concept: Developmental systems perspective]

0489. D - Attachment security: Understanding how reliable caregiver availability supports both comfort seeking and exploration. / Temperament: Adapting support to a child's activity level, emotional intensity, and regulation rather than labeling the child. [Concept: Attachment security and Temperament]

0490. D - Developmental systems perspective [Concept: Developmental systems perspective]

0491. B - Considering how a young person and changing environments influence one another over time. [Concept: Developmental systems perspective]

0492. C - Developmental cascade [Concept: Developmental cascade]

0493. D - Sensitive period [Concept: Sensitive period]

0494. D - Developmental systems perspective: Development emerges through ongoing transactions among biological, psychological, relational, cultural, and historical contexts. / Transactional model: Child characteristics and environmental responses reciprocally shape later development. [Concept: Developmental systems perspective and Transactional model]

0495. D - Developmental systems perspective [Concept: Developmental systems perspective]

0496. B - Temperament: Early-appearing individual differences in emotional reactivity and self-regulation that interact with caregiving and context. / Developmental cascade: A process in which change in one skill or domain influences later outcomes in other domains. [Concept: Temperament and Developmental cascade]

0497. B - Temperament: Adapting support to a child's activity level, emotional intensity, and regulation rather than labeling the child. / Developmental cascade: Examining how early language difficulty may affect peer interaction and later classroom participation. [Concept: Temperament and Developmental cascade]

0498. D - Supporting a student who must hold instructions in mind, pause an impulse, and shift strategies. [Concept: Executive function]

0499. B - Executive function [Concept: Executive function]

0500. B - Developmental systems perspective [Concept: Developmental systems perspective]

0501. C - Understanding how reliable caregiver availability supports both comfort seeking and exploration. [Concept: Attachment security]

0502. A - Temperament: Early-appearing individual differences in emotional reactivity and self-regulation that interact with caregiving and context. / Ecological systems model: A framework that locates development within nested settings and broader cultural, institutional, and historical conditions. [Concept: Temperament and Ecological systems model]

0503. B - Developmental cascade [Concept: Developmental cascade]

0504. A - Transactional model [Concept: Transactional model]

0505. D - Developmental systems perspective: Considering how a young person and changing environments influence one another over time. / Developmental cascade: Examining how early language difficulty may affect peer interaction and later classroom participation. [Concept: Developmental systems perspective and Developmental cascade]

0506. B - Scaffolding [Concept: Scaffolding]

0507. C - The developing ability to represent that other people can hold beliefs, knowledge, and perspectives different from one's own. [Concept: Theory of mind]

0508. B - Developmental systems perspective: Considering how a young person and changing environments influence one another over time. / Temperament: Adapting support to a child's activity level, emotional intensity, and regulation rather than labeling the child. [Concept: Developmental systems perspective and Temperament]

0509. C - Executive function: Supporting a student who must hold instructions in mind, pause an impulse, and shift strategies. / Scaffolding: Providing just enough structure for a challenging task, then gradually withdrawing prompts. [Concept: Executive function and Scaffolding]

0510. B - Temperament: Adapting support to a child's activity level, emotional intensity, and regulation rather than labeling the child. / Sensitive period: Discussing why timing of experience matters while avoiding claims that later learning cannot occur. [Concept: Temperament and Sensitive period]

0511. B - Attachment security [Concept: Attachment security]

0512. C - Attachment security: Understanding how reliable caregiver availability supports both comfort seeking and exploration. / Developmental cascade: Examining how early language difficulty may affect peer interaction and later classroom participation. [Concept: Attachment security and Developmental cascade]

0513. C - Developmental systems perspective: Development emerges through ongoing transactions among biological, psychological, relational, cultural, and historical contexts. / Executive function: A set of goal-directed capacities that includes working memory, inhibitory control, and cognitive flexibility. [Concept: Developmental systems perspective and Executive function]

0514. A - Child characteristics and environmental responses reciprocally shape later development. [Concept: Transactional model]

0515. B - Developmental systems perspective [Concept: Developmental systems perspective]

0516. C - Developmental cascade [Concept: Developmental cascade]

0517. A - Developmental cascade: Examining how early language difficulty may affect peer interaction and later classroom participation. / Sensitive period: Discussing why timing of experience matters while avoiding claims that later learning cannot occur. [Concept: Developmental cascade and Sensitive period]

0518. C - Transactional model: Child characteristics and environmental responses reciprocally shape later development. / Attachment security: A relationship pattern in which a child can seek comfort and use a caregiver as a secure base for exploration. [Concept: Transactional model and Attachment security]

0519. A - Ecological systems model [Concept: Ecological systems model]

0520. D - A developmental window when experience has especially strong influence on a particular capacity, without implying that later change is impossible. [Concept: Sensitive period]

0521. B - Temperament: Early-appearing individual differences in emotional reactivity and self-regulation that interact with caregiving and context. / Theory of mind: The developing ability to represent that other people can hold beliefs, knowledge, and perspectives different from one's own. [Concept: Temperament and Theory of mind]

CAC.901 | Advanced Developmental Psychology

QUESTION | CORRECT OPTION AND CONCEPT

0522. B - Developmental cascade: A process in which change in one skill or domain influences later outcomes in other domains. / Sensitive period: A developmental window when experience has especially strong influence on a particular capacity, without implying that later change is impossible. [Concept: Developmental cascade and Sensitive period]

0523. A - Executive function: Supporting a student who must hold instructions in mind, pause an impulse, and shift strategies. / Theory of mind: Interpreting a child's growing ability to understand that another person may not know what the child knows. [Concept: Executive function and Theory of mind]

0524. A - Developmental systems perspective [Concept: Developmental systems perspective]

0525. [Concept: Developmental systems perspective and Sensitive period]

0626. B - Theory of mind: Interpreting a child's growing ability to understand that another person may not know what the child knows. / Developmental cascade: Examining how early language difficulty may affect peer interaction and later classroom participation. [Concept: Theory of mind and Developmental cascade]

0627. C - Developmental cascade [Concept: Developmental cascade]

0628. D - Scaffolding [Concept: Scaffolding]

0629. D - Theory of mind: Interpreting a child's growing ability to understand that another person may not know what the child knows. / Ecological systems model: Mapping influences across home, school, community, policy, and historical context. [Concept: Theory of mind and Ecological systems model]

0630. D - Theory of mind [Concept: Theory of mind]

0631. D - Tracking how a child's behavior changes caregiver responses and how those responses then affect the child. [Concept: Transactional model]

CAC.901 | Advanced Developmental Psychology

QUESTION | CORRECT OPTION AND CONCEPT

0632. D - Attachment security: A relationship pattern in which a child can seek comfort and use a caregiver as a secure base for exploration. / Scaffolding: Temporary, calibrated support that enables a learner to perform beyond current independent capacity and is reduced as mastery grows. [Concept: Attachment security and Scaffolding]

0633. B - Sensitive period [Concept: Sensitive period]

0634. C - Theory of mind [Concept: Theory of mind]

0635. C - Executive function [Concept: Executive function]

0636. A - A relationship pattern in which a child can seek comfort and use a caregiver as a secure base for exploration. [Concept: Attachment security]

0637. D - Transactional model: Child characteristics and environmental responses reciprocally shape later development. / Developmental cascade: A process in which change in one skill or domain influences later outcomes in other domains. [Concept: Transactional model and Developmental cascade]

0638. B - Attachment security: Understanding how reliable caregiver availability supports both comfort seeking and exploration. / Temperament: Adapting support to a child's activity level, emotional intensity, and regulation rather than labeling the child. [Concept: Attachment security and Temperament]

0639. B - Executive function: Supporting a student who must hold instructions in mind, pause an impulse, and shift strategies. / Developmental cascade: Examining how early language difficulty may affect peer interaction and later classroom participation. [Concept: Executive function and Developmental cascade]

0640. D - Theory of mind [Concept: Theory of mind]

0641. A - Temperament: Early-appearing individual differences in emotional reactivity and self-regulation that interact with caregiving and context. / Executive function: A set of goal-directed capacities that includes working memory, inhibitory control, and cognitive flexibility. [Concept: Temperament and Executive function]

0642. B - Temperament [Concept: Temperament]

0643. D - Executive function: A set of goal-directed capacities that includes working memory, inhibitory control, and cognitive flexibility. / Developmental cascade: A process in which change in one skill or domain influences later outcomes in other domains. [Concept: Executive function and Developmental cascade]

0644. A - Attachment security [Concept: Attachment security]

0645. B - Attachment security: A relationship pattern in which a child can seek comfort and use a caregiver as a secure base for exploration. / Temperament: Early-appearing individual differences in emotional reactivity and self-regulation that interact with caregiving and context. [Concept: Attachment security and Temperament]

0646. C - Theory of mind: Interpreting a child's growing ability to understand that another person may not know what the child knows. / Ecological systems model: Mapping influences across home, school, community, policy, and historical context. [Concept: Theory of mind and Ecological systems model]

0647. C - Temperament: Adapting support to a child's activity level, emotional intensity, and regulation rather than labeling the child. / Scaffolding: Providing just enough structure for a challenging task, then gradually withdrawing prompts. [Concept: Temperament and Scaffolding]

0648. B - Ecological systems model [Concept: Ecological systems model]

0649. C - Developmental systems perspective: Considering how a young person and changing environments influence one another over time. / Attachment security: Understanding how reliable caregiver availability supports both comfort seeking and exploration. [Concept: Developmental systems perspective and Attachment security]

0650. B - Executive function: A set of goal-directed capacities that includes working memory, inhibitory control, and cognitive flexibility. / Scaffolding: Temporary, calibrated support that enables a learner to perform beyond current independent capacity and is reduced as mastery grows. [Concept: Executive function and Scaffolding]

0651. D - Attachment security: Understanding how reliable caregiver availability supports both comfort seeking and exploration. / Sensitive period: Discussing why timing of experience matters while avoiding claims that later learning cannot occur. [Concept: Attachment security and Sensitive period]

0652. D - Executive function [Concept: Executive function]

0653. B - Developmental systems perspective [Concept: Developmental systems perspective]

0654. C - Executive function: Supporting a student who must hold instructions in mind, pause an impulse, and shift strategies. / Sensitive period: Discussing why timing of experience matters while avoiding claims that later learning cannot occur. [Concept: Executive function and Sensitive period]

0655. A - Transactional model [Concept: Transactional model]

0656. C - Attachment security: Understanding how reliable caregiver availability supports both comfort seeking and exploration. / Scaffolding: Providing just enough structure for a challenging task, then gradually withdrawing prompts. [Concept: Attachment security and Scaffolding]

0657. C - Sensitive period [Concept: Sensitive period]

0658. C - Ecological systems model [Concept: Ecological systems model]

0659. D - Ecological systems model [Concept: Ecological systems model]

0660. A - Transactional model: Child characteristics and environmental responses reciprocally shape later development. / Scaffolding: Temporary, calibrated support that enables a learner to perform beyond current independent capacity and is reduced as mastery grows. [Concept: Transactional model and Scaffolding]

0661. D - Sensitive period [Concept: Sensitive period]

0662. D - Attachment security: Understanding how reliable caregiver availability supports both comfort seeking and exploration. / Scaffolding: Providing just enough structure for a challenging task, then gradually withdrawing prompts. [Concept: Attachment security and Scaffolding]

0663. B - Attachment security: Understanding how reliable caregiver availability supports both comfort seeking and exploration. / Sensitive period: Discussing why timing of experience matters while avoiding claims that later learning cannot occur. [Concept: Attachment security and Sensitive period]

0664. A - Scaffolding: Temporary, calibrated support that enables a learner to perform beyond current independent capacity and is reduced as mastery grows. / Theory of mind: The developing ability to represent that other people can hold beliefs, knowledge, and perspectives different from one's own. [Concept: Scaffolding and Theory of mind]

0665. B - Scaffolding [Concept: Scaffolding]

0666. B - Transactional model: Child characteristics and environmental responses reciprocally shape later development. / Attachment security: A relationship pattern in which a child can seek comfort and use a caregiver as a secure base for exploration. [Concept: Transactional model and Attachment security]

0667. A - Transactional model: Tracking how a child's behavior changes caregiver responses and how those responses then affect the child. / Developmental cascade: Examining how early language difficulty may affect peer interaction and later classroom participation. [Concept: Transactional model and Developmental cascade]

0668. A - Temporary, calibrated support that enables a learner to perform beyond current independent capacity and is reduced as mastery grows. [Concept: Scaffolding]

0669. C - Temperament [Concept: Temperament]

0670. C - Temperament [Concept: Temperament]

0671. A - Transactional model [Concept: Transactional model]

0672. B - Scaffolding [Concept: Scaffolding]

0673. D - Discussing why timing of experience matters while avoiding claims that later learning cannot occur. [Concept: Sensitive period]

0674. C - Executive function: Supporting a student who must hold instructions in mind, pause an impulse, and shift strategies. / Sensitive period: Discussing why timing of experience matters while avoiding claims that later learning cannot occur. [Concept: Executive function and Sensitive period]

0675. C - Transactional model: Tracking how a child's behavior changes caregiver responses and how those responses then affect the child. / Ecological systems model: Mapping influences across home, school, community, policy, and historical context. [Concept: Transactional model and Ecological systems model]

0676. A - Ecological systems model [Concept: Ecological systems model]

0677. A - Sensitive period [Concept: Sensitive period]

0678. C - Theory of mind [Concept: Theory of mind]

0679. B - Developmental cascade [Concept: Developmental cascade]

0680. C - Temperament [Concept: Temperament]

0681. C - Scaffolding [Concept: Scaffolding]

0682. D - Transactional model: Child characteristics and environmental responses reciprocally shape later development. / Ecological systems model: A framework that locates development within nested settings and broader cultural, institutional, and historical conditions. [Concept: Transactional model and Ecological systems model]

0683. D - Temperament: Adapting support to a child's activity level, emotional intensity, and regulation rather than labeling the child. / Scaffolding: Providing just enough structure for a challenging task, then gradually withdrawing prompts. [Concept: Temperament and Scaffolding]

0684. C - Transactional model: Tracking how a child's behavior changes caregiver responses and how those responses then affect the child. / Temperament: Adapting support to a child's activity level, emotional intensity, and regulation rather than labeling the child. [Concept: Transactional model and Temperament]

0685. B - A relationship pattern in which a child can seek comfort and use a caregiver as a secure base for exploration. [Concept: Attachment security]

0686. C - Temperament: Early-appearing individual differences in emotional reactivity and self-regulation that interact with caregiving and context. / Developmental cascade: A process in which change in one skill or domain influences later outcomes in other domains. [Concept: Temperament and Developmental cascade]

0687. C - Attachment security: Understanding how reliable caregiver availability supports both comfort seeking and exploration. / Temperament: Adapting support to a child's activity level, emotional intensity, and regulation rather than labeling the child. [Concept: Attachment security and Temperament]

CAC.901 | Advanced Developmental Psychology

QUESTION | CORRECT OPTION AND CONCEPT

0688. D - Attachment security: A relationship pattern in which a child can seek comfort and use a caregiver as a secure base for exploration. / Theory of mind: The developing ability to represent that other people can hold beliefs, knowledge, and perspectives different from one's own. [Concept: Attachment security and Theory of mind]

0689. A - Sensitive period [Concept: Sensitive period]

0690. A - Ecological systems model [Concept: Ecological systems model]

0691. D - Temperament: Adapting support to a child's activity level, emotional intensity, and regulation rather than labeling the child. / Ecological systems model: Mapping influences across home, school, community, policy, and historical context. [Concept: Temperament and Ecological systems model]

0692. D - Developmental cascade [Concept: Developmental cascade]

0693. B - Attachment security: Understanding how reliable caregiver availability supports both comfort seeking and exploration. / Temperament: Adapting support to a child's activity level, emotional intensity, and regulation rather than labeling the child. [Concept: Attachment security and Temperament]

0694. C - Developmental cascade [Concept: Developmental cascade]

0695. C - Scaffolding [Concept: Scaffolding]

0696. A - Attachment security: Understanding how reliable caregiver availability supports both comfort seeking and exploration. / Ecological systems model: Mapping influences across home, school, community, policy, and historical context. [Concept: Attachment security and Ecological systems model]

0697. C - Transactional model: Child characteristics and environmental responses reciprocally shape later development. / Executive function: A set of goal-directed capacities that includes working memory, inhibitory control, and cognitive flexibility. [Concept: Transactional model and Executive function]

0698. D - Theory of mind [Concept: Theory of mind]

0699. D - Transactional model: Tracking how a child's behavior changes caregiver responses and how those responses then affect the child. / Developmental cascade: Examining how early language difficulty may affect peer interaction and later classroom participation. [Concept: Transactional model and Developmental cascade]

0700. A - Transactional model: Tracking how a child's behavior changes caregiver responses and how those responses then affect the child. / Ecological systems model: Mapping influences across home, school, community, policy, and historical context. [Concept: Transactional model and Ecological systems model]

0701. A - Theory of mind [Concept: Theory of mind]

0702. C - Developmental systems perspective [Concept: Developmental systems perspective]

0703. B - Scaffolding: Temporary, calibrated support that enables a learner to perform beyond current independent capacity and is reduced as mastery grows. / Theory of mind: The developing ability to represent that other people can hold beliefs, knowledge, and perspectives different from one's own. [Concept: Scaffolding and Theory of mind]

0704. C - Developmental systems perspective: Development emerges through ongoing transactions among biological, psychological, relational, cultural, and historical contexts. / Theory of mind: The developing ability to represent that other people can hold beliefs, knowledge, and perspectives different from one's own. [Concept: Developmental systems perspective and Theory of mind]

0705. D - Attachment security: Understanding how reliable caregiver availability supports both comfort seeking and exploration. / Scaffolding: Providing just enough structure for a challenging task, then gradually withdrawing prompts. [Concept: Attachment security and Scaffolding]

0706. B - Adapting support to a child's activity level, emotional intensity, and regulation rather than labeling the child. [Concept: Temperament]

0707. A - Attachment security: A relationship pattern in which a child can seek comfort and use a caregiver as a secure base for exploration. / Temperament: Early-appearing individual differences in emotional reactivity and self-regulation that interact with caregiving and context. [Concept: Attachment security and Temperament]

0708. B - Executive function [Concept: Executive function]

0709. C - Interpreting a child's growing ability to understand that another person may not know what the child knows. [Concept: Theory of mind]

0710. D - Considering how a young person and changing environments influence one another over time. [Concept: Developmental systems perspective]

0711. C - Sensitive period [Concept: Sensitive period]

0712. B - Sensitive period [Concept: Sensitive period]

0713. D - Transactional model [Concept: Transactional model]

0714. B - Executive function: Supporting a student who must hold instructions in mind, pause an impulse, and shift strategies. / Ecological systems model: Mapping influences across home, school, community, policy, and historical context. [Concept: Executive function and Ecological systems model]

0715. D - Developmental cascade: Examining how early language difficulty may affect peer interaction and later classroom participation. / Ecological systems model: Mapping influences across home, school, community, policy, and historical context. [Concept: Developmental cascade and Ecological systems model]

0716. C - Executive function [Concept: Executive function]

0717. B - Interpreting a child's growing ability to understand that another person may not know what the child knows. [Concept: Theory of mind]

0718. B - Theory of mind [Concept: Theory of mind]

0719. C - Theory of mind [Concept: Theory of mind]

0720. B - Developmental systems perspective: Considering how a young person and changing environments influence one another over time. / Theory of mind: Interpreting a child's growing ability to understand that another person may not know what the child knows. [Concept: Developmental systems perspective and Theory of mind]

0721. C - Scaffolding: Temporary, calibrated support that enables a learner to perform beyond current independent capacity and is reduced as mastery grows. / Sensitive period: A developmental window when experience has especially strong influence on a particular capacity, without implying that later change is impossible. [Concept: Scaffolding and Sensitive period]

0722. B - Temperament: Adapting support to a child's activity level, emotional intensity, and regulation rather than labeling the child. / Theory of mind: Interpreting a child's growing ability to understand that another person may not know what the child knows. [Concept: Temperament and Theory of mind]

0723. A - Theory of mind: The developing ability to represent that other people can hold beliefs, knowledge, and perspectives different from one's own. / Ecological systems model: A framework that locates development within nested settings and broader cultural, institutional, and historical conditions. [Concept: Theory of mind and Ecological systems model]

0724. C - Scaffolding: Providing just enough structure for a challenging task, then gradually withdrawing prompts. / Developmental cascade: Examining how early language difficulty may affect peer interaction and later classroom participation. [Concept: Scaffolding and Developmental cascade]

0725. A - Attachment security [Concept: Attachment security]

0726. D - Attachment security: Understanding how reliable caregiver availability supports both comfort seeking and exploration. / Ecological systems model: Mapping influences across home, school, community, policy, and historical context. [Concept: Attachment security and Ecological systems model]

0727. C - Developmental cascade: A process in which change in one skill or domain influences later outcomes in other domains. / Ecological systems model: A framework that locates development within nested settings and broader cultural, institutional, and historical conditions. [Concept: Developmental cascade and Ecological systems model]

0728. B - Temperament [Concept: Temperament]

0729. C - Scaffolding [Concept: Scaffolding]

0730. D - Developmental systems perspective [Concept: Developmental systems perspective]

0731. B - Executive function [Concept: Executive function]

0732. C - Developmental cascade: A process in which change in one skill or domain influences later outcomes in other domains. / Sensitive period: A developmental window when experience has especially strong influence on a particular capacity, without implying that later change is impossible. [Concept: Developmental cascade and Sensitive period]

0733. C - Scaffolding [Concept: Scaffolding]

0734. B - Temperament: Adapting support to a child's activity level, emotional intensity, and regulation rather than labeling the child. / Developmental cascade: Examining how early language difficulty may affect peer interaction and later classroom participation. [Concept: Temperament and Developmental cascade]

0735. A - Attachment security: A relationship pattern in which a child can seek comfort and use a caregiver as a secure base for exploration. / Temperament: Early-appearing individual differences in emotional reactivity and self-regulation that interact with caregiving and context. [Concept: Attachment security and Temperament]

0736. B - Executive function: A set of goal-directed capacities that includes working memory, inhibitory control, and cognitive flexibility. / Ecological systems model: A framework that locates development within nested settings and broader cultural, institutional, and historical conditions. [Concept: Executive function and Ecological systems model]

0737. A - Executive function [Concept: Executive function]

0738. A - Ecological systems model [Concept: Ecological systems model]

0739. D - Scaffolding [Concept: Scaffolding]

0740. A - Temperament [Concept: Temperament]

0741. D - Scaffolding: Temporary, calibrated support that enables a learner to perform beyond current independent capacity and is reduced as mastery grows. / Ecological systems model: A framework that locates development within nested settings and broader cultural, institutional, and historical conditions. D - Sensitive period: A developmental window when experience has especially strong influence on a particular capacity, without implying that later change is impossible. / Ecological systems model: A framework that locates development within nested settings and broader cultural, institutional, and historical conditions. [Concept: Sensitive period and Ecological systems model]

0813. C - Sensitive period [Concept: Sensitive period]

0814. A - Scaffolding [Concept: Scaffolding]

0815. C - Theory of mind: The developing ability to represent that other people can hold beliefs, knowledge, and perspectives different from one's own. / Sensitive period: A developmental window when experience has especially strong influence on a particular capacity, without implying that later change is impossible. [Concept: Theory of mind and Sensitive period]

0816. B - Transactional model: Child characteristics and environmental responses reciprocally shape later development. / Sensitive period: A developmental window when experience has especially strong influence on a particular capacity, without implying that later change is impossible. [Concept: Transactional model and Sensitive period]

0817. D - Theory of mind: Interpreting a child's growing ability to understand that another person may not know what the child knows. / Ecological systems model: Mapping influences across home, school, community, policy, and historical context. [Concept: Theory of mind and Ecological systems model]

0818. A - Sensitive period [Concept: Sensitive period]

0819. B - Temperament [Concept: Temperament]

0820. D - Executive function [Concept: Executive function]

0821. B - Theory of mind [Concept: Theory of mind]

0822. B - Attachment security: A relationship pattern in which a child can seek comfort and use a caregiver as a secure base for exploration. / Ecological systems model: A framework that locates development within nested settings and broader cultural, institutional, and historical conditions. [Concept: Attachment security and Ecological systems model]

0823. B - Developmental cascade: A process in which change in one skill or domain influences later outcomes in other domains. / Ecological systems model: A framework that locates development within nested settings and broader cultural, institutional, and historical conditions. [Concept: Developmental cascade and Ecological systems model]

0824. A - Mapping influences across home, school, community, policy, and historical context. [Concept: Ecological systems model]

0825. A - Ecological systems model [Concept: Ecological systems model]

0826. B - Developmental cascade: Examining how early language difficulty may affect peer interaction and later classroom participation. / Ecological systems model: Mapping influences across home, school, community, policy, and historical context. [Concept: Developmental cascade and Ecological systems model]

0827. B - Developmental cascade [Concept: Developmental cascade]

0828. A - Attachment security: A relationship pattern in which a child can seek comfort and use a caregiver as a secure base for exploration. / Temperament: Early-appearing individual differences in emotional reactivity and self-regulation that interact with caregiving and context. [Concept: Attachment security and Temperament]

0829. D - Development emerges through ongoing transactions among biological, psychological, relational, cultural, and historical contexts. [Concept: Developmental systems perspective]

0830. C - Developmental cascade [Concept: Developmental cascade]

0831. D - Temperament [Concept: Temperament]

0832. C - Scaffolding [Concept: Scaffolding]

0833. B - Temperament [Concept: Temperament]

0834. D - Ecological systems model [Concept: Ecological systems model]

0835. A - Developmental systems perspective: Development emerges through ongoing transactions among biological, psychological, relational, cultural, and historical contexts. / Sensitive period: A developmental window when experience has especially strong influence on a particular capacity, without implying that later change is impossible. [Concept: Developmental systems perspective and Sensitive period]

0836. D - Temperament [Concept: Temperament]

0837. C - Scaffolding: Providing just enough structure for a challenging task, then gradually withdrawing prompts. / Ecological systems model: Mapping influences across home, school, community, policy, and historical context. [Concept: Scaffolding and Ecological systems model]

0838. D - Theory of mind [Concept: Theory of mind]

0839. D - Executive function: A set of goal-directed capacities that includes working memory, inhibitory control, and cognitive flexibility. / Ecological systems model: A framework that locates development within nested settings and broader cultural, institutional, and historical conditions. [Concept: Executive function and Ecological systems model]

0840. A - Transactional model: Tracking how a child's behavior changes caregiver responses and how those responses then affect the child. / Scaffolding: Providing just enough structure for a challenging task, then gradually withdrawing prompts. [Concept: Transactional model and Scaffolding]

0841. A - Transactional model [Concept: Transactional model]

0842. A - A relationship pattern in which a child can seek comfort and use a caregiver as a secure base for exploration. [Concept: Attachment security]

0843. C - Developmental systems perspective: Development emerges through ongoing transactions among biological, psychological, relational, cultural, and historical contexts. / Ecological systems model: A framework that locates development within nested settings and broader cultural, institutional, and historical conditions. [Concept: Developmental systems perspective and Ecological systems model]

0844. D - Ecological systems model [Concept: Ecological systems model]

0845. D - Ecological systems model [Concept: Ecological systems model]

0846. D - Attachment security: Understanding how reliable caregiver availability supports both comfort seeking and exploration. / Executive function: Supporting a student who must hold instructions in mind, pause an impulse, and shift strategies. [Concept: Attachment security and Executive function]

0847. D - Developmental systems perspective: Considering how a young person and changing environments influence one another over time. / Attachment security: Understanding how reliable caregiver availability supports both comfort seeking and exploration. [Concept: Developmental systems perspective and Attachment security]

0848. D - Executive function: Supporting a student who must hold instructions in mind, pause an impulse, and shift strategies. / Ecological systems model: Mapping influences across home, school, community, policy, and historical context. [Concept: Executive function and Ecological systems model]

0849. B - Ecological systems model [Concept: Ecological systems model]

0850. D - Temperament [Concept: Temperament]

CAC.901 | Advanced Developmental Psychology

QUESTION | CORRECT OPTION AND CONCEPT

0851. D - Sensitive period: A developmental window when experience has especially strong influence on a particular capacity, without implying that later change is impossible. / Ecological systems model: A framework that locates development within nested settings and broader cultural, institutional, and historical conditions. [Concept: Sensitive period and Ecological systems model]

0852. C - Temperament: Adapting support to a child's activity level, emotional intensity, and regulation rather than labeling the child. / Executive function: Supporting a student who must hold instructions in mind, pause an impulse, and shift strategies. [Concept: Temperament and Executive function]

0853. C - Providing just enough structure for a challenging task, then gradually withdrawing prompts. [Concept: Scaffolding]

0854. D - Attachment security: Understanding how reliable caregiver availability supports both comfort seeking and exploration. / Developmental cascade: Examining how early language difficulty may affect peer interaction and later classroom participation. [Concept: Attachment security and Developmental cascade]

0855. B - Transactional model: Child characteristics and environmental responses reciprocally shape later development. / Attachment security: A relationship pattern in which a child can seek comfort and use a caregiver as a secure base for exploration. [Concept: Transactional model and Attachment security]

0856. C - Scaffolding: Providing just enough structure for a challenging task, then gradually withdrawing prompts. / Developmental cascade: Examining how early language difficulty may affect peer interaction and later classroom participation. [Concept: Scaffolding and Developmental cascade]

0857. B - Development emerges through ongoing transactions among biological, psychological, relational, cultural, and historical contexts. [Concept: Developmental systems perspective]

0858. C - Developmental systems perspective: Development emerges through ongoing transactions among biological, psychological, relational, cultural, and historical contexts. / Temperament: Early-appearing individual differences in emotional reactivity and self-regulation that interact with caregiving and context. [Concept: Developmental systems perspective and Temperament]

0859. A - Executive function: Supporting a student who must hold instructions in mind, pause an impulse, and shift strategies. / Scaffolding: Providing just enough structure for a challenging task, then gradually withdrawing prompts. [Concept: Executive function and Scaffolding]

0860. D - Developmental systems perspective: Development emerges through ongoing transactions among biological, psychological, relational, cultural, and historical contexts. / Temperament: Early-appearing individual differences in emotional reactivity and self-regulation that interact with caregiving and context. [Concept: Developmental systems perspective and Temperament]

0861. D - Developmental systems perspective [Concept: Developmental systems perspective]

0862. C - Temperament [Concept: Temperament]

0863. B - Scaffolding [Concept: Scaffolding]

0864. D - Scaffolding: Providing just enough structure for a challenging task, then gradually withdrawing prompts. / Sensitive period: Discussing why timing of experience matters while avoiding claims that later learning cannot occur. [Concept: Scaffolding and Sensitive period]

0865. A - Temperament: Early-appearing individual differences in emotional reactivity and self-regulation that interact with caregiving and context. / Theory of mind: The developing ability to represent that other people can hold beliefs, knowledge, and perspectives different from one's own. [Concept: Temperament and Theory of mind]

0866. D - Transactional model: Tracking how a child's behavior changes caregiver responses and how those responses then affect the child. / Scaffolding: Providing just enough structure for a challenging task, then gradually withdrawing prompts. [Concept: Transactional model and Scaffolding]

0867. B - Theory of mind: The developing ability to represent that other people can hold beliefs, knowledge, and perspectives different from one's own. / Developmental cascade: A process in which change in one skill or domain influences later outcomes in other domains. [Concept: Theory of mind and Developmental cascade]

0868. A - Developmental cascade: A process in which change in one skill or domain influences later outcomes in other domains. / Sensitive period: A developmental window when experience has especially strong influence on a particular capacity, without implying that later change is impossible. [Concept: Developmental cascade and Sensitive period]

0869. B - Developmental cascade [Concept: Developmental cascade]

0870. C - Attachment security [Concept: Attachment security]

0871. C - Temperament [Concept: Temperament]

0872. A - Sensitive period: A developmental window when experience has especially strong influence on a particular capacity, without implying that later change is impossible. / Ecological systems model: A framework that locates development within nested settings and broader cultural, institutional, and historical conditions. [Concept: Sensitive period and Ecological systems model]

0873. A - Executive function: A set of goal-directed capacities that includes working memory, inhibitory control, and cognitive flexibility. / Ecological systems model: A framework that locates development within nested settings and broader cultural, institutional, and historical conditions. [Concept: Executive function and Ecological systems model]

0874. A - Developmental systems perspective [Concept: Developmental systems perspective]

0875. C - Developmental systems perspective: Considering how a young person and changing environments influence one another over time. / Sensitive period: Discussing why timing of experience matters while avoiding claims that later learning cannot occur. [Concept: Developmental systems perspective and Sensitive period]

0876. C - Scaffolding: Providing just enough structure for a challenging task, then gradually withdrawing prompts. / Developmental cascade: Examining how early language difficulty may affect peer interaction and later classroom participation. [Concept: Scaffolding and Developmental cascade]

0877. D - Attachment security: Understanding how reliable caregiver availability supports both comfort seeking and exploration. / Executive function: Supporting a student who must hold instructions in mind, pause an impulse, and shift strategies. [Concept: Attachment security and Executive function]

0878. B - Attachment security [Concept: Attachment security]

0879. C - Transactional model: Tracking how a child's behavior changes caregiver responses and how those responses then affect the child. / Sensitive period: Discussing why timing of experience matters while avoiding claims that later learning cannot occur. [Concept: Transactional model and Sensitive period]

0880. B - Attachment security: A relationship pattern in which a child can seek comfort and use a caregiver as a secure base for exploration. / Sensitive period: A developmental window when experience has especially strong influence on a particular capacity, without implying that later change is impossible. [Concept: Attachment security and Sensitive period]

0881. A - Transactional model: Child characteristics and environmental responses reciprocally shape later development. / Sensitive period: A developmental window when experience has especially strong influence on a particular capacity, without implying that later change is impossible. [Concept: Transactional model and Sensitive period]

0882. B - Developmental systems perspective: Considering how a young person and changing environments influence one another over time. / Attachment security: Understanding how reliable caregiver availability supports both comfort seeking and exploration. [Concept: Developmental systems perspective and Attachment security]

0883. C - Executive function [Concept: Executive function]

0884. D - Temperament: Early-appearing individual differences in emotional reactivity and self-regulation that interact with caregiving and context. / Scaffolding: Temporary, calibrated support that enables a learner to perform beyond current independent capacity and is reduced as mastery grows. [Concept: Temperament and Scaffolding]

0885. D - Attachment security: Understanding how reliable caregiver availability supports both comfort seeking and exploration. / Developmental cascade: Examining how early language difficulty may affect peer interaction and later classroom participation. [Concept: Attachment security and Developmental cascade]

0886. B - Transactional model: Tracking how a child's behavior changes caregiver responses and how those responses then affect the child. / Sensitive period: Discussing why timing of experience matters while avoiding claims that later learning cannot occur. [Concept: Transactional model and Sensitive period]

0887. A - Developmental systems perspective [Concept: Developmental systems perspective]

0888. D - Attachment security: A relationship pattern in which a child can seek comfort and use a caregiver as a secure base for exploration. / Executive function: A set of goal-directed capacities that includes working memory, inhibitory control, and cognitive flexibility. [Concept: Attachment security and Executive function]

0889. B - Sensitive period [Concept: Sensitive period]

0890. C - Transactional model: Child characteristics and environmental responses reciprocally shape later development. / Ecological systems model: A framework that locates development within nested settings and broader cultural, institutional, and historical conditions. [Concept: Transactional model and Ecological systems model]

0891. A - Attachment security [Concept: Attachment security]

0892. C - Sensitive period [Concept: Sensitive period]

0893. D - Executive function: Supporting a student who must hold instructions in mind, pause an impulse, and shift strategies. / Ecological systems model: Mapping influences across home, school, community, policy, and historical context. [Concept: Executive function and Ecological systems model]

0999. C - Ecological systems model [Concept: Ecological systems model]

1000. C - Transactional model: Child characteristics and environmental responses reciprocally shape later development. / Scaffolding: Temporary, calibrated support that enables a learner to perform beyond current independent capacity and is reduced as mastery grows. [Concept: Transactional model and Scaffolding]

CAC.902 | Theories of Counseling and Psychotherapy

QUESTION | CORRECT OPTION AND CONCEPT

0001. C - Externalizing a problem and eliciting times the young person has resisted its influence. [Concept: Narrative therapy]

0002. A - Motivational interviewing: Reflecting both sides of ambivalence and inviting the adolescent to voice personally meaningful change reasons. / Existential approach: Supporting exploration of meaning and agency without imposing the counselor's worldview. [Concept: Motivational interviewing and Existential approach]

0003. C - Cognitive behavioral therapy: A structured, collaborative approach that examines links among thoughts, feelings, behavior, and context and tests useful changes. / Existential approach: A therapeutic orientation that explores meaning, choice, responsibility, relationships, and limits of human existence. [Concept: Cognitive behavioral therapy and Existential approach]

0004. A - Psychodynamic formulation [Concept: Psychodynamic formulation]

0005. B - Psychodynamic formulation: An account of how relational patterns, affect, defenses, and often out-of-awareness processes may contribute to current difficulties. / Existential approach: A therapeutic orientation that explores meaning, choice, responsibility, relationships, and limits of human existence. [Concept: Psychodynamic formulation and Existential approach]

0006. B - Solution-focused brief therapy: A goal-oriented approach that elicits exceptions, strengths, preferred futures, and small observable steps. / Common factors: Therapeutic elements shared across approaches, including a credible rationale, collaboration, alliance, and client responsiveness. [Concept: Solution-focused brief therapy and Common factors]

0007. B - Common factors [Concept: Common factors]

0008. D - Narrative therapy: Externalizing a problem and eliciting times the young person has resisted its influence. / Common factors: Monitoring the working alliance and adapting the approach to client feedback and context. [Concept: Narrative therapy and Common factors]

0009. D - Family systems therapy [Concept: Family systems therapy]

0010. A - Cognitive behavioral therapy [Concept: Cognitive behavioral therapy]

0011. D - Narrative therapy: An approach that separates people from problems and explores alternative, preferred stories grounded in their values and actions. / Common factors: Therapeutic elements shared across approaches, including a credible rationale, collaboration, alliance, and client responsiveness. [Concept: Narrative therapy and Common factors]

0012. B - Motivational interviewing: Reflecting both sides of ambivalence and inviting the adolescent to voice personally meaningful change reasons. / Common factors: Monitoring the working alliance and adapting the approach to client feedback and context. [Concept: Motivational interviewing and Common factors]

0013. C - Existential approach [Concept: Existential approach]

0014. A - Common factors [Concept: Common factors]

0015. D - Person-centered approach: A humanistic approach emphasizing empathic understanding, congruence, and unconditional positive regard to support client growth. / Family systems therapy: A relational approach that understands symptoms in the context of interaction patterns and the family system. [Concept: Person-centered approach and Family systems therapy]

0016. B - Narrative therapy: Externalizing a problem and eliciting times the young person has resisted its influence. / Motivational interviewing: Reflecting both sides of ambivalence and inviting the adolescent to voice personally meaningful change reasons. [Concept: Narrative therapy and Motivational interviewing]

0017. B - Psychodynamic formulation: An account of how relational patterns, affect, defenses, and often out-of-awareness processes may contribute to current difficulties. / Solution-focused brief therapy: A goal-oriented approach that elicits exceptions, strengths, preferred futures, and small observable steps. [Concept: Psychodynamic formulation and Solution-focused brief therapy]

0018. D - Cognitive behavioral therapy [Concept: Cognitive behavioral therapy]

0019. C - Motivational interviewing [Concept: Motivational interviewing]

0020. D - Person-centered approach: A humanistic approach emphasizing empathic understanding, congruence, and unconditional positive regard to support client growth. / Family systems therapy: A relational approach that understands symptoms in the context of interaction patterns and the family system. [Concept: Person-centered approach and Family systems therapy]

0021. D - Psychodynamic formulation: An account of how relational patterns, affect, defenses, and often out-of-awareness processes may contribute to current difficulties. / Motivational interviewing: A collaborative, autonomy-supportive style that evokes a person's own reasons for change while attending to ambivalence. [Concept: Psychodynamic formulation and Motivational interviewing]

0022. C - Psychodynamic formulation: Exploring recurring relationship expectations and emotional patterns while treating interpretations as hypotheses. / Existential approach: Supporting exploration of meaning and agency without imposing the counselor's worldview. [Concept: Psychodynamic formulation and Existential approach]

0023. C - Behavioral learning theory: Identifying what precedes a behavior and what consequences may maintain or reduce it. / Common factors: Monitoring the working alliance and adapting the approach to client feedback and context. [Concept: Behavioral learning theory and Common factors]

0024. A - Person-centered approach [Concept: Person-centered approach]

0025. C - Narrative therapy: Externalizing a problem and eliciting times the young person has resisted its influence. / Common factors: Monitoring the working alliance and adapting the approach to client feedback and context. [Concept: Narrative therapy and Common factors]

0026. A - Cognitive behavioral therapy: A structured, collaborative approach that examines links among thoughts, feelings, behavior, and context and tests useful changes. / Common factors: Therapeutic elements shared across approaches, including a credible rationale, collaboration, alliance, and client responsiveness. [Concept: Cognitive behavioral therapy and Common factors]

0027. A - Solution-focused brief therapy: Asking what would be different in a preferred future and when the concern is already less intense. / Existential approach: Supporting exploration of meaning and agency without imposing the counselor's worldview. [Concept: Solution-focused brief therapy and Existential approach]

0028. A - Narrative therapy: An approach that separates people from problems and explores alternative, preferred stories grounded in their values and actions. / Common factors: Therapeutic elements shared across approaches, including a credible rationale, collaboration, alliance, and client responsiveness. [Concept: Narrative therapy and Common factors]

0029. D - Solution-focused brief therapy: A goal-oriented approach that elicits exceptions, strengths, preferred futures, and small observable steps. / Family systems therapy: A relational approach that understands symptoms in the context of interaction patterns and the family system. [Concept: Solution-focused brief therapy and Family systems therapy]

0030. C - Person-centered approach: A humanistic approach emphasizing empathic understanding, congruence, and unconditional positive regard to support client growth. / Family systems therapy: A relational approach that understands symptoms in the context of interaction patterns and the family system. [Concept: Person-centered approach and Family systems therapy]

0031. A - Existential approach [Concept: Existential approach]

0032. C - Behavioral learning theory: An account of behavior change through antecedents, consequences, modeling, and learning history. / Family systems therapy: A relational approach that understands symptoms in the context of interaction patterns and the family system. [Concept: Behavioral learning theory and Family systems therapy]

0033. C - Family systems therapy [Concept: Family systems therapy]

0034. B - Person-centered approach [Concept: Person-centered approach]

0035. D - Person-centered approach: A humanistic approach emphasizing empathic understanding, congruence, and unconditional positive regard to support client growth. / Behavioral learning theory: An account of behavior change through antecedents, consequences, modeling, and learning history. [Concept: Person-centered approach and Behavioral learning theory]

0036. D - Behavioral learning theory: Identifying what precedes a behavior and what consequences may maintain or reduce it. / Existential approach: Supporting exploration of meaning and agency without imposing the counselor's worldview. [Concept: Behavioral learning theory and Existential approach]

0037. D - Existential approach [Concept: Existential approach]

0038. D - Psychodynamic formulation: Exploring recurring relationship expectations and emotional patterns while treating interpretations as hypotheses. / Family systems therapy: Examining reciprocal interaction patterns rather than locating the entire problem inside one child. [Concept: Psychodynamic formulation and Family systems therapy]

0039. B - Person-centered approach: A humanistic approach emphasizing empathic understanding, congruence, and unconditional positive regard to support client growth. / Behavioral learning theory: An account of behavior change through antecedents, consequences, modeling, and learning history. [Concept: Person-centered approach and Behavioral learning theory]

0040. C - A relational approach that understands symptoms in the context of interaction patterns and the family system. [Concept: Family systems therapy]

0041. D - Behavioral learning theory [Concept: Behavioral learning theory]

0042. A - Narrative therapy [Concept: Narrative therapy]

0043. B - Motivational interviewing: A collaborative, autonomy-supportive style that evokes a person's own reasons for change while attending to ambivalence. / Family systems therapy: A relational approach that understands symptoms in the context of interaction patterns and the family system. [Concept: Motivational interviewing and Family systems therapy]

0044. B - Cognitive behavioral therapy: Helping a young client notice a thought, observe its emotional effect, and try a behavior-based experiment. / Existential approach: Supporting exploration of meaning and agency without imposing the counselor's worldview. [Concept: Cognitive behavioral therapy and Existential approach]

0045. B - Motivational interviewing: A collaborative, autonomy-supportive style that evokes a person's own reasons for change while attending to ambivalence. / Common factors: Therapeutic elements shared across approaches, including a credible rationale, collaboration, alliance, and client responsiveness. [Concept: Motivational interviewing and Common factors]

0046. C - Supporting exploration of meaning and agency without imposing the counselor's worldview. [Concept: Existential approach]

[Concept: Cognitive behavioral therapy and Family systems therapy]

0177. B - Motivational interviewing: A collaborative, autonomy-supportive style that evokes a person's own reasons for change while attending to ambivalence. / Common factors: Therapeutic elements shared across approaches, including a credible rationale, collaboration, alliance, and client responsiveness. [Concept: Motivational interviewing and Common factors]

0178. D - Narrative therapy: An approach that separates people from problems and explores alternative, preferred stories grounded in their values and actions. / Motivational interviewing: A collaborative, autonomy-supportive style that evokes a person's own reasons for change while attending to ambivalence. [Concept: Narrative therapy and Motivational interviewing]

0179. C - Psychodynamic formulation [Concept: Psychodynamic formulation]

0180. A - Examining reciprocal interaction patterns rather than locating the entire problem inside one child. [Concept: Family systems therapy]

0181. A - Motivational interviewing [Concept: Motivational interviewing]

0182. C - Psychodynamic formulation: Exploring recurring relationship expectations and emotional patterns while treating interpretations as hypotheses. / Narrative therapy: Externalizing a problem and eliciting times the young person has resisted its influence. [Concept: Psychodynamic formulation and Narrative therapy]

0183. C - Behavioral learning theory: An account of behavior change through antecedents, consequences, modeling, and learning history. / Existential approach: A therapeutic orientation that explores meaning, choice, responsibility, relationships, and limits of human existence. [Concept: Behavioral learning theory and Existential approach]

0184. C - Family systems therapy [Concept: Family systems therapy]

0185. D - Person-centered approach: A humanistic approach emphasizing empathic understanding, congruence, and unconditional positive regard to support client growth. / Existential approach: A therapeutic orientation that explores meaning, choice, responsibility, relationships, and limits of human existence. [Concept: Person-centered approach and Existential approach]

0186. A - Psychodynamic formulation: An account of how relational patterns, affect, defenses, and often out-of-awareness processes may contribute to current difficulties. / Common factors: Therapeutic elements shared across approaches, including a credible rationale, collaboration, alliance, and client responsiveness. [Concept: Psychodynamic formulation and Common factors]

0187. A - Motivational interviewing: A collaborative, autonomy-supportive style that evokes a person's own reasons for change while attending to ambivalence. / Existential approach: A therapeutic orientation that explores meaning, choice, responsibility, relationships, and limits of human existence. [Concept: Motivational interviewing and Existential approach]

0188. B - Behavioral learning theory: Identifying what precedes a behavior and what consequences may maintain or reduce it. / Motivational interviewing: Reflecting both sides of ambivalence and inviting the adolescent to voice personally meaningful change reasons. [Concept: Behavioral learning theory and Motivational interviewing]

0189. B - Common factors [Concept: Common factors]

0190. C - Narrative therapy [Concept: Narrative therapy]

0191. D - Motivational interviewing: A collaborative, autonomy-supportive style that evokes a person's own reasons for change while attending to ambivalence. / Common factors: Therapeutic elements shared across approaches, including a credible rationale, collaboration, alliance, and client responsiveness. [Concept: Motivational interviewing and Common factors]

0192. A - Behavioral learning theory: An account of behavior change through antecedents, consequences, modeling, and learning history. / Narrative therapy: An approach that separates people from problems and explores alternative, preferred stories grounded in their values and actions. [Concept: Behavioral learning theory and Narrative therapy]

0193. A - Behavioral learning theory: An account of behavior change through antecedents, consequences, modeling, and learning history. / Motivational interviewing: A collaborative, autonomy-supportive style that evokes a person's own reasons for change while attending to ambivalence. [Concept: Behavioral learning theory and Motivational interviewing]

0194. C - Behavioral learning theory [Concept: Behavioral learning theory]

0195. B - Person-centered approach: Offering empathic listening and a nonjudgmental relationship rather than directing the client toward the counselor's preferred outcome. / Solution-focused brief therapy: Asking what would be different in a preferred future and when the concern is already less intense. [Concept: Person-centered approach and Solution-focused brief therapy]

0196. C - Psychodynamic formulation: Exploring recurring relationship expectations and emotional patterns while treating interpretations as hypotheses. / Behavioral learning theory: Identifying what precedes a behavior and what consequences may maintain or reduce it. [Concept: Psychodynamic formulation and Behavioral learning theory]

0197. C - Person-centered approach: A humanistic approach emphasizing empathic understanding, congruence, and unconditional positive regard to support client growth. / Common factors: Therapeutic elements shared across approaches, including a credible rationale, collaboration, alliance, and client responsiveness. [Concept: Person-centered approach and Common factors]

0198. B - Reflecting both sides of ambivalence and inviting the adolescent to voice personally meaningful change reasons. [Concept: Motivational interviewing]

0199. B - Person-centered approach [Concept: Person-centered approach]

0200. D - Person-centered approach: A humanistic approach emphasizing empathic understanding, congruence, and unconditional positive regard to support client growth. / Solution-focused brief therapy: A goal-oriented approach that elicits exceptions, strengths, preferred futures, and small observable steps. [Concept: Person-centered approach and Solution-focused brief therapy]

0201. B - Existential approach [Concept: Existential approach]

0202. D - Common factors [Concept: Common factors]

0203. B - Helping a young client notice a thought, observe its emotional effect, and try a behavior-based experiment. [Concept: Cognitive behavioral therapy]

D - Person-centered approach: A humanistic approach emphasizing empathic understanding, congruence, and unconditional positive regard to support client growth. / Psychodynamic formulation: An account of how relational patterns, affect, defenses, and often out-of-awareness processes may contribute to current difficulties. [Concept: Person-centered approach and Psychodynamic formulation]

0363. C - Family systems therapy: Examining reciprocal interaction patterns rather than locating the entire problem inside one child. / Common factors: Monitoring the working alliance and adapting the approach to client feedback and context. [Concept: Family systems therapy and Common factors]

0364. D - Motivational interviewing: A collaborative, autonomy-supportive style that evokes a person's own reasons for change while attending to ambivalence. / Family systems therapy: A relational approach that understands symptoms in the context of interaction patterns and the family system. [Concept: Motivational interviewing and Family systems therapy]

0365. B - Psychodynamic formulation: Exploring recurring relationship expectations and emotional patterns while treating interpretations as hypotheses. / Family systems therapy: Examining reciprocal interaction patterns rather than locating the entire problem inside one child. [Concept: Psychodynamic formulation and Family systems therapy]

0366. A - Psychodynamic formulation: An account of how relational patterns, affect, defenses, and often out-of-awareness processes may contribute to current difficulties. / Solution-focused brief therapy: A goal-oriented approach that elicits exceptions, strengths, preferred futures, and small observable steps. [Concept: Psychodynamic formulation and Solution-focused brief therapy]

0367. C - Family systems therapy [Concept: Family systems therapy]

CAC.902 | Theories of Counseling and Psychotherapy

QUESTION | CORRECT OPTION AND CONCEPT

0368. D - Psychodynamic formulation: An account of how relational patterns, affect, defenses, and often out-of-awareness processes may contribute to current difficulties. / Cognitive behavioral therapy: A structured, collaborative approach that examines links among thoughts, feelings, behavior, and context and tests useful changes. [Concept: Psychodynamic formulation and Cognitive behavioral therapy]

0369. B - Person-centered approach [Concept: Person-centered approach]

0370. D - Existential approach [Concept: Existential approach]

0371. A - Existential approach: Supporting exploration of meaning and agency without imposing the counselor's worldview. / Common factors: Monitoring the working alliance and adapting the approach to client feedback and context. [Concept: Existential approach and Common factors]

0372. D - Psychodynamic formulation: Exploring recurring relationship expectations and emotional patterns while treating interpretations as hypotheses. / Motivational interviewing: Reflecting both sides of ambivalence and inviting the adolescent to voice personally meaningful change reasons. [Concept: Psychodynamic formulation and Motivational interviewing]

0373. D - Behavioral learning theory [Concept: Behavioral learning theory]

0374. B - Common factors [Concept: Common factors]

0375. B - Psychodynamic formulation: An account of how relational patterns, affect, defenses, and often out-of-awareness processes may contribute to current difficulties. / Behavioral learning theory: An account of behavior change through antecedents, consequences, modeling, and learning history. [Concept: Psychodynamic formulation and Behavioral learning theory]

0376. B - Family systems therapy [Concept: Family systems therapy]

0377. D - Cognitive behavioral therapy [Concept: Cognitive behavioral therapy]

0378. D - Person-centered approach: A humanistic approach emphasizing empathic understanding, congruence, and unconditional positive regard to support client growth. / Solution-focused brief therapy: A goal-oriented approach that elicits exceptions, strengths, preferred futures, and small observable steps. [Concept: Person-centered approach and Solution-focused brief therapy]

0379. D - Psychodynamic formulation: An account of how relational patterns, affect, defenses, and often out-of-awareness processes may contribute to current difficulties. / Behavioral learning theory: An account of behavior change through antecedents, consequences, modeling, and learning history. [Concept: Psychodynamic formulation and Behavioral learning theory]

0380. D - An account of how relational patterns, affect, defenses, and often out-of-awareness processes may contribute to current difficulties. [Concept: Psychodynamic formulation]

0381. D - Common factors [Concept: Common factors]

0382. B - Family systems therapy [Concept: Family systems therapy]

0383. A - Motivational interviewing: Reflecting both sides of ambivalence and inviting the adolescent to voice personally meaningful change reasons. / Existential approach: Supporting exploration of meaning and agency without imposing the counselor's worldview. [Concept: Motivational interviewing and Existential approach]

0384. B - Therapeutic elements shared across approaches, including a credible rationale, collaboration, alliance, and client responsiveness. [Concept: Common factors]

0385. D - Behavioral learning theory [Concept: Behavioral learning theory]

0386. B - Person-centered approach: Offering empathic listening and a nonjudgmental relationship rather than directing the client toward the counselor's preferred outcome. / Family systems therapy: Examining reciprocal interaction patterns rather than locating the entire problem inside one child. [Concept: Person-centered approach and Family systems therapy]

0387. B - Cognitive behavioral therapy: A structured, collaborative approach that examines links among thoughts, feelings, behavior, and context and tests useful changes. / Motivational interviewing: A collaborative, autonomy-supportive style that evokes a person's own reasons for change while attending to ambivalence. [Concept: Cognitive behavioral therapy and Motivational interviewing]

0388. C - Behavioral learning theory: An account of behavior change through antecedents, consequences, modeling, and learning history. / Solution-focused brief therapy: A goal-oriented approach that elicits exceptions, strengths, preferred futures, and small observable steps. [Concept: Behavioral learning theory and Solution-focused brief therapy]

0389. B - Person-centered approach: Offering empathic listening and a nonjudgmental relationship rather than directing the client toward the counselor's preferred outcome. / Behavioral learning theory: Identifying what precedes a behavior and what consequences may maintain or reduce it. [Concept: Person-centered approach and Behavioral learning theory]

0390. D - Cognitive behavioral therapy [Concept: Cognitive behavioral therapy]

0391. D - Narrative therapy: Externalizing a problem and eliciting times the young person has resisted its influence. / Existential approach: Supporting exploration of meaning and agency without imposing the counselor's worldview. [Concept: Narrative therapy and Existential approach]

0392. A - Person-centered approach [Concept: Person-centered approach]

0393. A - Narrative therapy [Concept: Narrative therapy]

0394. C - Therapeutic elements shared across approaches, including a credible rationale, collaboration, alliance, and client responsiveness. [Concept: Common factors]

0395. A - Existential approach [Concept: Existential approach]

0396. B - Person-centered approach: A humanistic approach emphasizing empathic understanding, congruence, and unconditional positive regard to support client growth. / Narrative therapy: An approach that separates people from problems and explores alternative, preferred stories grounded in their values and actions. [Concept: Person-centered approach and Narrative therapy]

0397. C - Narrative therapy: An approach that separates people from problems and explores alternative, preferred stories grounded in their values and actions. / Existential approach: A therapeutic orientation that explores meaning, choice, responsibility, relationships, and limits of human existence. [Concept: Narrative therapy and Existential approach]

0398. B - Person-centered approach: A humanistic approach emphasizing empathic understanding, congruence, and unconditional positive regard to support client growth. / Behavioral learning theory: An account of behavior change through antecedents, consequences, modeling, and learning history. [Concept: Person-centered approach and Behavioral learning theory]

0399. D - Motivational interviewing [Concept: Motivational interviewing]

0400. D - Cognitive behavioral therapy: Helping a young client notice a thought, observe its emotional effect, and try a behavior-based experiment. / Family systems therapy: Examining reciprocal interaction patterns rather than locating the entire problem inside one child. [Concept: Cognitive behavioral therapy and Family systems therapy]

0401. C - Examining reciprocal interaction patterns rather than locating the entire problem inside one child. [Concept: Family systems therapy]

0402. D - Narrative therapy: An approach that separates people from problems and explores alternative, preferred stories grounded in their values and actions. / Common factors: Therapeutic elements shared across approaches, including a credible rationale, collaboration, alliance, and client responsiveness. [Concept: Narrative therapy and Common factors]

0403. D - Person-centered approach: Offering empathic listening and a nonjudgmental relationship rather than directing the client toward the counselor's preferred outcome. / Cognitive behavioral therapy: Helping a young client notice a thought, observe its emotional effect, and try a behavior-based experiment. [Concept: Person-centered approach and Cognitive behavioral therapy]

0404. D - Cognitive behavioral therapy: A structured, collaborative approach that examines links among thoughts, feelings, behavior, and context and tests useful changes. / Behavioral learning theory: An account of behavior change through antecedents, consequences, modeling, and learning history. 0902. C - Solution-focused brief therapy [Concept: Solution-focused brief therapy]

0903. C - Psychodynamic formulation: An account of how relational patterns, affect, defenses, and often out-of-awareness processes may contribute to current difficulties. / Existential approach: A therapeutic orientation that explores meaning, choice, responsibility, relationships, and limits of human existence. [Concept: Psychodynamic formulation and Existential approach]

0904. C - Existential approach: Supporting exploration of meaning and agency without imposing the counselor's worldview. / Common factors: Monitoring the working alliance and adapting the approach to client feedback and context. [Concept: Existential approach and Common factors]

0905. D - Cognitive behavioral therapy: A structured, collaborative approach that examines links among thoughts, feelings, behavior, and context and tests useful changes. / Narrative therapy: An approach that separates people from problems and explores alternative, preferred stories grounded in their values and actions. [Concept: Cognitive behavioral therapy and Narrative therapy]

0906. B - Person-centered approach: Offering empathic listening and a nonjudgmental relationship rather than directing the client toward the counselor's preferred outcome. / Motivational interviewing: Reflecting both sides of ambivalence and inviting the adolescent to voice personally meaningful change reasons. [Concept: Person-centered approach and Motivational interviewing]

0907. D - Behavioral learning theory: Identifying what precedes a behavior and what consequences may maintain or reduce it. / Solution-focused brief therapy: Asking what would be different in a preferred future and when the concern is already less intense. [Concept: Behavioral learning theory and Solution-focused brief therapy]

0908. C - Narrative therapy [Concept: Narrative therapy]

0909. C - Person-centered approach: Offering empathic listening and a nonjudgmental relationship rather than directing the client toward the counselor's preferred outcome. / Behavioral learning theory: Identifying what precedes a behavior and what consequences may maintain or reduce it. [Concept: Person-centered approach and Behavioral learning theory]

0910. B - Existential approach [Concept: Existential approach]

0911. B - Cognitive behavioral therapy [Concept: Cognitive behavioral therapy]

0912. C - Psychodynamic formulation: An account of how relational patterns, affect, defenses, and often out-of-awareness processes may contribute to current difficulties. / Narrative therapy: An approach that separates people from problems and explores alternative, preferred stories grounded in their values and actions. [Concept: Psychodynamic formulation and Narrative therapy]

0913. B - Common factors [Concept: Common factors]

0914. B - Common factors [Concept: Common factors]

0915. B - Cognitive behavioral therapy: A structured, collaborative approach that examines links among thoughts, feelings, behavior, and context and tests useful changes. / Family systems therapy: A relational approach that understands symptoms in the context of interaction patterns and the family system. [Concept: Cognitive behavioral therapy and Family systems therapy]

0916. B - Solution-focused brief therapy [Concept: Solution-focused brief therapy]

0917. A - Family systems therapy [Concept: Family systems therapy]

0918. A - Motivational interviewing [Concept: Motivational interviewing]

0919. C - Asking what would be different in a preferred future and when the concern is already less intense. [Concept: Solution-focused brief therapy]

0920. D - Person-centered approach [Concept: Person-centered approach]

0921. C - Person-centered approach: A humanistic approach emphasizing empathic understanding, congruence, and unconditional positive regard to support client growth. / Motivational interviewing: A collaborative, autonomy-supportive style that evokes a person's own reasons for change while attending to ambivalence. [Concept: Person-centered approach and Motivational interviewing]

0922. B - Existential approach [Concept: Existential approach]

0923. D - Psychodynamic formulation [Concept: Psychodynamic formulation]

0924. B - Person-centered approach: Offering empathic listening and a nonjudgmental relationship rather than directing the client toward the counselor's preferred outcome. / Common factors: Monitoring the working alliance and adapting the approach to client feedback and context. [Concept: Person-centered approach and Common factors]

0925. C - Behavioral learning theory [Concept: Behavioral learning theory]

0926. D - Cognitive behavioral therapy: A structured, collaborative approach that examines links among thoughts, feelings, behavior, and context and tests useful changes. / Family systems therapy: A relational approach that understands symptoms in the context of interaction patterns and the family system. [Concept: Cognitive behavioral therapy and Family systems therapy]

0927. C - Common factors [Concept: Common factors]

0928. D - A therapeutic orientation that explores meaning, choice, responsibility, relationships, and limits of human existence. [Concept: Existential approach]

0929. C - Common factors [Concept: Common factors]

0930. D - Psychodynamic formulation: An account of how relational patterns, affect, defenses, and often out-of-awareness processes may contribute to current difficulties. / Existential approach: A therapeutic orientation that explores meaning, choice, responsibility, relationships, and limits of human existence. [Concept: Psychodynamic formulation and Existential approach]

0931. A - Cognitive behavioral therapy: A structured, collaborative approach that examines links among thoughts, feelings, behavior, and context and tests useful changes. / Common factors: Therapeutic elements shared across approaches, including a credible rationale, collaboration, alliance, and client responsiveness. [Concept: Cognitive behavioral therapy and Common factors]

0932. B - Motivational interviewing [Concept: Motivational interviewing]

0933. A - Solution-focused brief therapy: A goal-oriented approach that elicits exceptions, strengths, preferred futures, and small observable steps. / Motivational interviewing: A collaborative, autonomy-supportive style that evokes a person's own reasons for change while attending to ambivalence. [Concept: Solution-focused brief therapy and Motivational interviewing]

0934. D - Behavioral learning theory: Identifying what precedes a behavior and what consequences may maintain or reduce it. / Existential approach: Supporting exploration of meaning and agency without imposing the counselor's worldview. [Concept: Behavioral learning theory and Existential approach]

0935. D - Person-centered approach: A humanistic approach emphasizing empathic understanding, congruence, and unconditional positive regard to support client growth. / Solution-focused brief therapy: A goal-oriented approach that elicits exceptions, strengths, preferred futures, and small observable steps. [Concept: Person-centered approach and Solution-focused brief therapy]

0936. C - Existential approach: Supporting exploration of meaning and agency without imposing the counselor's worldview. / Family systems therapy: Examining reciprocal interaction patterns rather than locating the entire problem inside one child. [Concept: Existential approach and Family systems therapy]

0937. C - Common factors [Concept: Common factors]

0938. D - Motivational interviewing: Reflecting both sides of ambivalence and inviting the adolescent to voice personally meaningful change reasons. / Family systems therapy: Examining reciprocal interaction patterns rather than locating the entire problem inside one child. [Concept: Motivational interviewing and Family systems therapy]

0939. C - Solution-focused brief therapy: A goal-oriented approach that elicits exceptions, strengths, preferred futures, and small observable steps. / Existential approach: A therapeutic orientation that explores meaning, choice, responsibility, relationships, and limits of human existence. CAC.903 | Child and Adolescent Assessment Techniques

QUESTION | CORRECT OPTION AND CONCEPT

0001. C - Developmentally appropriate assessment [Concept: Developmentally appropriate assessment]

0002. B - Multi-informant assessment: Integrating reports from multiple observers because each sees the young person in different settings and conditions. / Screening versus diagnosis: Screening identifies possible need for further evaluation; diagnosis requires a fuller evaluation under applicable standards. [Concept: Multi-informant assessment and Screening versus diagnosis]

0003. A - Interpreting performance against a defined skill, benchmark, or criterion rather than a norm group. [Concept: Criterion-referenced interpretation]

0004. A - Validity [Concept: Validity]

0005. A - Reliability: The consistency or precision of scores across relevant occasions, items, or raters. / Criterion-referenced interpretation: Interpreting performance against a defined skill, benchmark, or criterion rather than a norm group. [Concept: Reliability and Criterion-referenced interpretation]

0006. A - Criterion-referenced interpretation: Determining whether a learner has mastered a specified skill standard. / Screening versus diagnosis: Treating an elevated screening result as a prompt for follow-up rather than as a diagnosis. [Concept: Criterion-referenced interpretation and Screening versus diagnosis]

0007. A - Developmentally appropriate assessment: Selecting procedures, language, and interpretation suited to the client's developmental abilities and communication needs. / Behavioral observation: Systematically recording observable behavior in context using a defined observation method. [Concept: Developmentally appropriate assessment and Behavioral observation]

0008. A - Behavioral observation [Concept: Behavioral observation]

0009. B - Multi-informant assessment: Integrating reports from multiple observers because each sees the young person in different settings and conditions. / Validity: The degree to which evidence and theory support a proposed interpretation and use of assessment scores. [Concept: Multi-informant assessment and Validity]

0010. C - Norm-referenced interpretation [Concept: Norm-referenced interpretation]

0011. A - Norm-referenced interpretation [Concept: Norm-referenced interpretation]

0012. A - Assessment feedback [Concept: Assessment feedback]

0013. B - Developmentally appropriate assessment: Selecting procedures, language, and interpretation suited to the client's developmental abilities and communication needs. / Validity: The degree to which evidence and theory support a proposed interpretation and use of assessment scores. [Concept: Developmentally appropriate assessment and Validity]

0014. A - Assessment feedback [Concept: Assessment feedback]

0015. D - Multi-informant assessment: Integrating reports from multiple observers because each sees the young person in different settings and conditions. / Clinical interview: A purposeful conversation used to gather history, current concerns, strengths, risk information, and the client's perspective. [Concept: Multi-informant assessment and Clinical interview]

0016. C - Assessment feedback [Concept: Assessment feedback]

0017. A - Norm-referenced interpretation: Checking whether the norm group is suitable before comparing a child's score with it. / Screening versus diagnosis: Treating an elevated screening result as a prompt for follow-up rather than as a diagnosis. [Concept: Norm-referenced interpretation and Screening versus diagnosis]

0018. C - Specifying what behavior is counted, when it is observed, and in which setting. [Concept: Behavioral observation]

0019. B - Developmentally appropriate assessment: Using concrete, age-accessible instructions and checking comprehension before interpreting performance. / Validity: Evaluating whether available evidence supports the specific conclusion a practitioner plans to draw from a score. [Concept: Developmentally appropriate assessment and Validity]

0020. C - Behavioral observation: Specifying what behavior is counted, when it is observed, and in which setting. / Screening versus diagnosis: Treating an elevated screening result as a prompt for follow-up rather than as a diagnosis. [Concept: Behavioral observation and Screening versus diagnosis]

0021. A - Reliability: Asking whether a measure produces sufficiently consistent scores for its intended use. / Screening versus diagnosis: Treating an elevated screening result as a prompt for follow-up rather than as a diagnosis. [Concept: Reliability and Screening versus diagnosis]

0022. C - Developmentally appropriate assessment: Selecting procedures, language, and interpretation suited to the client's developmental abilities and communication needs. / Norm-referenced interpretation: Interpreting a score by comparison with a defined reference group tested under specified conditions. [Concept: Developmentally appropriate assessment and Norm-referenced interpretation]

0023. D - Norm-referenced interpretation: Interpreting a score by comparison with a defined reference group tested under specified conditions. / Screening versus diagnosis: Screening identifies possible need for further evaluation; diagnosis requires a fuller evaluation under applicable standards. [Concept: Norm-referenced interpretation and Screening versus diagnosis]

0024. D - Systematically recording observable behavior in context using a defined observation method. [Concept: Behavioral observation]

0025. C - Behavioral observation: Systematically recording observable behavior in context using a defined observation method. / Screening versus diagnosis: Screening identifies possible need for further evaluation; diagnosis requires a fuller evaluation under applicable standards. [Concept: Behavioral observation and Screening versus diagnosis]

0026. D - Reliability [Concept: Reliability]

0027. A - Integrating reports from multiple observers because each sees the young person in different settings and conditions. [Concept: Multi-informant assessment]

0028. D - Validity: The degree to which evidence and theory support a proposed interpretation and use of assessment scores. / Assessment feedback: Communicating findings in understandable, strengths-aware language and explaining limits and next steps. [Concept: Validity and Assessment feedback]

0029. A - Clinical interview [Concept: Clinical interview]

0030. B - Multi-informant assessment: Comparing caregiver, youth, and teacher perspectives without assuming one report is automatically correct. / Clinical interview: Using open and developmentally accessible questions while clarifying timeline, context, and impact. [Concept: Multi-informant assessment and Clinical interview]

0031. C - Clinical interview [Concept: Clinical interview]

0032. D - Validity [Concept: Validity]

0033. B - Multi-informant assessment: Comparing caregiver, youth, and teacher perspectives without assuming one report is automatically correct. / Behavioral observation: Specifying what behavior is counted, when it is observed, and in which setting. [Concept: Multi-informant assessment and Behavioral observation]

0034. A - Developmentally appropriate assessment: Using concrete, age-accessible instructions and checking comprehension before interpreting performance. / Validity: Evaluating whether available evidence supports the specific conclusion a practitioner plans to draw from a score. [Concept: Developmentally appropriate assessment and Validity]

0035. D - Norm-referenced interpretation: Interpreting a score by comparison with a defined reference group tested under specified conditions. / Assessment feedback: Communicating findings in understandable, strengths-aware language and explaining limits and next steps. [Concept: Norm-referenced interpretation and Assessment feedback]

0036. A - Screening versus diagnosis [Concept: Screening versus diagnosis]

0037. A - Assessment feedback [Concept: Assessment feedback]

0038. C - Multi-informant assessment [Concept: Multi-informant assessment]

0039. C - Specifying what behavior is counted, when it is observed, and in which setting. [Concept: Behavioral observation]

0040. B - Screening versus diagnosis [Concept: Screening versus diagnosis]

0041. B - Validity: Evaluating whether available evidence supports the specific conclusion a practitioner plans to draw from a score. / Norm-referenced interpretation: Checking whether the norm group is suitable before comparing a child's score with it. [Concept: Validity and Norm-referenced interpretation]

0042. A - Clinical interview: Using open and developmentally accessible questions while clarifying timeline, context, and impact. / Screening versus diagnosis: Treating an elevated screening result as a prompt for follow-up rather than as a diagnosis. [Concept: Clinical interview and Screening versus diagnosis]

0043. B - Developmentally appropriate assessment: Selecting procedures, language, and interpretation suited to the client's developmental abilities and communication needs. / Assessment feedback: Communicating findings in understandable, strengths-aware language and explaining limits and next steps. [Concept: Developmentally appropriate assessment and Assessment feedback]

0044. B - Criterion-referenced interpretation: Interpreting performance against a defined skill, benchmark, or criterion rather than a norm group. / Assessment feedback: Communicating findings in understandable, strengths-aware language and explaining limits and next steps. [Concept: Criterion-referenced interpretation and Assessment feedback]

0045. C - Multi-informant assessment: Integrating reports from multiple observers because each sees the young person in different settings and conditions. / Reliability: The consistency or precision of scores across relevant occasions, items, or raters. [Concept: Multi-informant assessment and Reliability]

0046. A - Developmentally appropriate assessment: Using concrete, age-accessible instructions and checking comprehension before interpreting performance. / Assessment feedback: Sharing results with the young person and caregivers in accessible language and inviting questions. [Concept: Developmentally appropriate assessment and Assessment feedback]

0047. B - Norm-referenced interpretation [Concept: Norm-referenced interpretation]

0048. D - Behavioral observation [Concept: Behavioral observation]

0049. D - Clinical interview: Using open and developmentally accessible questions while clarifying timeline, context, and impact. / Screening versus diagnosis: Treating an elevated screening result as a prompt for follow-up rather than as a diagnosis. 0094. D - Screening versus diagnosis [Concept: Screening versus diagnosis]

0095. A - Behavioral observation: Systematically recording observable behavior in context using a defined observation method. / Assessment feedback: Communicating findings in understandable, strengths-aware language and explaining limits and next steps. [Concept: Behavioral observation and Assessment feedback]

0096. A - Norm-referenced interpretation [Concept: Norm-referenced interpretation]

0097. A - Criterion-referenced interpretation [Concept: Criterion-referenced interpretation]

0098. C - Multi-informant assessment: Comparing caregiver, youth, and teacher perspectives without assuming one report is automatically correct. / Assessment feedback: Sharing results with the young person and caregivers in accessible language and inviting questions. [Concept: Multi-informant assessment and Assessment feedback]

0099. C - Reliability [Concept: Reliability]

0100. A - Validity: Evaluating whether available evidence supports the specific conclusion a practitioner plans to draw from a score. / Behavioral observation: Specifying what behavior is counted, when it is observed, and in which setting. [Concept: Validity and Behavioral observation]

0101. A - Developmentally appropriate assessment [Concept: Developmentally appropriate assessment]

0102. C - Validity [Concept: Validity]

0103. C - Developmentally appropriate assessment: Selecting procedures, language, and interpretation suited to the client's developmental abilities and communication needs. / Behavioral observation: Systematically recording observable behavior in context using a defined observation method. [Concept: Developmentally appropriate assessment and Behavioral observation]

0104. B - Multi-informant assessment [Concept: Multi-informant assessment]

0105. D - Developmentally appropriate assessment [Concept: Developmentally appropriate assessment]

0106. C - Interpreting a score by comparison with a defined reference group tested under specified conditions. [Concept: Norm-referenced interpretation]

0107. C - Assessment feedback [Concept: Assessment feedback]

0108. B - Developmentally appropriate assessment: Selecting procedures, language, and interpretation suited to the client's developmental abilities and communication needs. / Clinical interview: A purposeful conversation used to gather history, current concerns, strengths, risk information, and the client's perspective. [Concept: Developmentally appropriate assessment and Clinical interview]

0109. D - Behavioral observation [Concept: Behavioral observation]

0110. A - Behavioral observation: Specifying what behavior is counted, when it is observed, and in which setting. / Screening versus diagnosis: Treating an elevated screening result as a prompt for follow-up rather than as a diagnosis. [Concept: Behavioral observation and Screening versus diagnosis]

CAC.903 | Child and Adolescent Assessment Techniques

QUESTION | CORRECT OPTION AND CONCEPT

0111. A - Validity: The degree to which evidence and theory support a proposed interpretation and use of assessment scores. / Screening versus diagnosis: Screening identifies possible need for further evaluation; diagnosis requires a fuller evaluation under applicable standards. [Concept: Validity and Screening versus diagnosis]

0112. C - Norm-referenced interpretation: Checking whether the norm group is suitable before comparing a child's score with it. / Assessment feedback: Sharing results with the young person and caregivers in accessible language and inviting questions. [Concept: Norm-referenced interpretation and Assessment feedback]

0113. A - Behavioral observation: Specifying what behavior is counted, when it is observed, and in which setting. / Screening versus diagnosis: Treating an elevated screening result as a prompt for follow-up rather than as a diagnosis. [Concept: Behavioral observation and Screening versus diagnosis]

0114. C - Developmentally appropriate assessment: Selecting procedures, language, and interpretation suited to the client's developmental abilities and communication needs. / Norm-referenced interpretation: Interpreting a score by comparison with a defined reference group tested under specified conditions. [Concept: Developmentally appropriate assessment and Norm-referenced interpretation]

0115. A - Reliability: The consistency or precision of scores across relevant occasions, items, or raters. / Validity: The degree to which evidence and theory support a proposed interpretation and use of assessment scores. [Concept: Reliability and Validity]

0116. C - Behavioral observation [Concept: Behavioral observation]

0117. C - Screening versus diagnosis [Concept: Screening versus diagnosis]

0118. D - Validity [Concept: Validity]

0119. A - The degree to which evidence and theory support a proposed interpretation and use of assessment scores. [Concept: Validity]

0120. B - Evaluating whether available evidence supports the specific conclusion a practitioner plans to draw from a score. [Concept: Validity]

0121. C - Assessment feedback [Concept: Assessment feedback]

0122. B - Screening versus diagnosis [Concept: Screening versus diagnosis]

0123. D - Developmentally appropriate assessment [Concept: Developmentally appropriate assessment]

0124. A - Clinical interview [Concept: Clinical interview]

0125. D - Criterion-referenced interpretation: Determining whether a learner has mastered a specified skill standard. / Clinical interview: Using open and developmentally accessible questions while clarifying timeline, context, and impact. [Concept: Criterion-referenced interpretation and Clinical interview]

0126. C - Evaluating whether available evidence supports the specific conclusion a practitioner plans to draw from a score. [Concept: Validity]

0127. A - Validity: Evaluating whether available evidence supports the specific conclusion a practitioner plans to draw from a score. / Norm-referenced interpretation: Checking whether the norm group is suitable before comparing a child's score with it. [Concept: Validity and Norm-referenced interpretation]

0128. B - Developmentally appropriate assessment: Using concrete, age-accessible instructions and checking comprehension before interpreting performance. / Criterion-referenced interpretation: Determining whether a learner has mastered a specified skill standard. [Concept: Developmentally appropriate assessment and Criterion-referenced interpretation]

0129. D - Reliability [Concept: Reliability]

0130. D - Screening versus diagnosis [Concept: Screening versus diagnosis]

0131. A - Determining whether a learner has mastered a specified skill standard. [Concept: Criterion-referenced interpretation]

0132. C - Behavioral observation: Systematically recording observable behavior in context using a defined observation method. / Clinical interview: A purposeful conversation used to gather history, current concerns, strengths, risk information, and the client's perspective. [Concept: Behavioral observation and Clinical interview]

0133. A - Interpreting performance against a defined skill, benchmark, or criterion rather than a norm group. [Concept: Criterion-referenced interpretation]

0134. D - Criterion-referenced interpretation: Interpreting performance against a defined skill, benchmark, or criterion rather than a norm group. / Clinical interview: A purposeful conversation used to gather history, current concerns, strengths, risk information, and the client's perspective. [Concept: Criterion-referenced interpretation and Clinical interview]

0135. C - Norm-referenced interpretation: Interpreting a score by comparison with a defined reference group tested under specified conditions. / Behavioral observation: Systematically recording observable behavior in context using a defined observation method. [Concept: Norm-referenced interpretation and Behavioral observation]

0136. B - Treating an elevated screening result as a prompt for follow-up rather than as a diagnosis. [Concept: Screening versus diagnosis]

0137. C - Communicating findings in understandable, strengths-aware language and explaining limits and next steps. [Concept: Assessment feedback]

0138. D - Using concrete, age-accessible instructions and checking comprehension before interpreting performance. [Concept: Developmentally appropriate assessment]

0139. A - Reliability: Asking whether a measure produces sufficiently consistent scores for its intended use. / Norm-referenced interpretation: Checking whether the norm group is suitable before comparing a child's score with it. [Concept: Reliability and Norm-referenced interpretation]

0140. D - Reliability: The consistency or precision of scores across relevant occasions, items, or raters. / Behavioral observation: Systematically recording observable behavior in context using a defined observation method. [Concept: Reliability and Behavioral observation]

0141. A - Developmentally appropriate assessment [Concept: Developmentally appropriate assessment]

0142. D - Criterion-referenced interpretation: Interpreting performance against a defined skill, benchmark, or criterion rather than a norm group. / Behavioral observation: Systematically recording observable behavior in context using a defined observation method. [Concept: Criterion-referenced interpretation and Behavioral observation]

0143. B - Multi-informant assessment: Integrating reports from multiple observers because each sees the young person in different settings and conditions. / Norm-referenced interpretation: Interpreting a score by comparison with a defined reference group tested under specified conditions. [Concept: Multi-informant assessment and Norm-referenced interpretation]

0144. D - Norm-referenced interpretation: Interpreting a score by comparison with a defined reference group tested under specified conditions. / Assessment feedback: Communicating findings in understandable, strengths-aware language and explaining limits and next steps. [Concept: Norm-referenced interpretation and Assessment feedback]

0294. D - Assessment feedback [Concept: Assessment feedback]

0295. C - Reliability [Concept: Reliability]

0296. A - Validity: Evaluating whether available evidence supports the specific conclusion a practitioner plans to draw from a score. / Behavioral observation: Specifying what behavior is counted, when it is observed, and in which setting. [Concept: Validity and Behavioral observation]

0297. C - Multi-informant assessment: Comparing caregiver, youth, and teacher perspectives without assuming one report is automatically correct. / Developmentally appropriate assessment: Using concrete, age-accessible instructions and checking comprehension before interpreting performance. [Concept: Multi-informant assessment and Developmentally appropriate assessment]

0298. B - Clinical interview [Concept: Clinical interview]

0299. B - Developmentally appropriate assessment: Selecting procedures, language, and interpretation suited to the client's developmental abilities and communication needs. / Assessment feedback: Communicating findings in understandable, strengths-aware language and explaining limits and next steps. [Concept: Developmentally appropriate assessment and Assessment feedback]

0300. C - Reliability [Concept: Reliability]

0301. C - Criterion-referenced interpretation [Concept: Criterion-referenced interpretation]

0302. B - Criterion-referenced interpretation: Determining whether a learner has mastered a specified skill standard. / Behavioral observation: Specifying what behavior is counted, when it is observed, and in which setting. [Concept: Criterion-referenced interpretation and Behavioral observation]

0303. A - Criterion-referenced interpretation [Concept: Criterion-referenced interpretation]

0304. D - Developmentally appropriate assessment [Concept: Developmentally appropriate assessment]

0305. B - Criterion-referenced interpretation [Concept: Criterion-referenced interpretation]

0306. B - Norm-referenced interpretation: Checking whether the norm group is suitable before comparing a child's score with it. / Criterion-referenced interpretation: Determining whether a learner has mastered a specified skill standard. [Concept: Norm-referenced interpretation and Criterion-referenced interpretation]

0307. B - Reliability [Concept: Reliability]

0308. C - Behavioral observation: Specifying what behavior is counted, when it is observed, and in which setting. / Clinical interview: Using open and developmentally accessible questions while clarifying timeline, context, and impact. [Concept: Behavioral observation and Clinical interview]

0309. D - Criterion-referenced interpretation: Interpreting performance against a defined skill, benchmark, or criterion rather than a norm group. / Assessment feedback: Communicating findings in understandable, strengths-aware language and explaining limits and next steps. [Concept: Criterion-referenced interpretation and Assessment feedback]

0310. B - Clinical interview: Using open and developmentally accessible questions while clarifying timeline, context, and impact. / Assessment feedback: Sharing results with the young person and caregivers in accessible language and inviting questions. [Concept: Clinical interview and Assessment feedback]

0311. B - Developmentally appropriate assessment: Using concrete, age-accessible instructions and checking comprehension before interpreting performance. / Reliability: Asking whether a measure produces sufficiently consistent scores for its intended use. [Concept: Developmentally appropriate assessment and Reliability]

0312. B - Developmentally appropriate assessment [Concept: Developmentally appropriate assessment]

0313. A - The degree to which evidence and theory support a proposed interpretation and use of assessment scores. [Concept: Validity]

0314. C - Behavioral observation [Concept: Behavioral observation]

0315. A - Behavioral observation: Systematically recording observable behavior in context using a defined observation method. / Screening versus diagnosis: Screening identifies possible need for further evaluation; diagnosis requires a fuller evaluation under applicable standards. [Concept: Behavioral observation and Screening versus diagnosis]

0316. B - Sharing results with the young person and caregivers in accessible language and inviting questions. [Concept: Assessment feedback]

0317. B - Reliability [Concept: Reliability]

0318. C - Criterion-referenced interpretation [Concept: Criterion-referenced interpretation]

0319. B - Validity [Concept: Validity]

0320. D - Validity [Concept: Validity]

0321. A - Reliability [Concept: Reliability]

0322. A - Criterion-referenced interpretation [Concept: Criterion-referenced interpretation]

0323. D - Norm-referenced interpretation [Concept: Norm-referenced interpretation]

0324. B - Clinical interview [Concept: Clinical interview]

0325. A - Integrating reports from multiple observers because each sees the young person in different settings and conditions. [Concept: Multi-informant assessment]

0326. D - Clinical interview [Concept: Clinical interview]

0327. A - Developmentally appropriate assessment: Selecting procedures, language, and interpretation suited to the client's developmental abilities and communication needs. / Validity: The degree to which evidence and theory support a proposed interpretation and use of assessment scores. [Concept: Developmentally appropriate assessment and Validity]

0328. B - Selecting procedures, language, and interpretation suited to the client's developmental abilities and communication needs. [Concept: Developmentally appropriate assessment]

0329. B - Multi-informant assessment: Comparing caregiver, youth, and teacher perspectives without assuming one report is automatically correct. / Screening versus diagnosis: Treating an elevated screening result as a prompt for follow-up rather than as a diagnosis. [Concept: Multi-informant assessment and Screening versus diagnosis]

0330. A - Systematically recording observable behavior in context using a defined observation method. [Concept: Behavioral observation]

CAC.903 | Child and Adolescent Assessment Techniques

QUESTION | CORRECT OPTION AND CONCEPT

0331. D - Multi-informant assessment: Integrating reports from multiple observers because each sees the young person in different settings and conditions. / Validity: The degree to which evidence and theory support a proposed interpretation and use of assessment scores. [Concept: Multi-informant assessment and Validity]

0332. D - Behavioral observation [Concept: Behavioral observation]

0333. A - Reliability [Concept: Reliability]

0334. A - Criterion-referenced interpretation: Determining whether a learner has mastered a specified skill standard. / Behavioral observation: Specifying what behavior is counted, when it is observed, and in which setting. [Concept: Criterion-referenced interpretation and Behavioral observation]

0335. B - Reliability [Concept: Reliability]

0336. D - Assessment feedback [Concept: Assessment feedback]

0337. A - Screening versus diagnosis [Concept: Screening versus diagnosis]

0338. C - Developmentally appropriate assessment: Selecting procedures, language, and interpretation suited to the client's developmental abilities and communication needs. / Criterion-referenced interpretation: Interpreting performance against a defined skill, benchmark, or criterion rather than a norm group. [Concept: Developmentally appropriate assessment and Criterion-referenced interpretation]

0339. C - Developmentally appropriate assessment [Concept: Developmentally appropriate assessment]

0340. B - Norm-referenced interpretation: Interpreting a score by comparison with a defined reference group tested under specified conditions. / Behavioral observation: Systematically recording observable behavior in context using a defined observation method. [Concept: Norm-referenced interpretation and Behavioral observation]

0341. C - Assessment feedback [Concept: Assessment feedback]

0342. B - Reliability: The consistency or precision of scores across relevant occasions, items, or raters. / Clinical interview: A purposeful conversation used to gather history, current concerns, strengths, risk information, and the client's perspective. [Concept: Reliability and Clinical interview]

0343. D - Assessment feedback [Concept: Assessment feedback]

0344. B - Validity: The degree to which evidence and theory support a proposed interpretation and use of assessment scores. / Behavioral observation: Systematically recording observable behavior in context using a defined observation method. [Concept: Validity and Behavioral observation]

0345. A - Reliability: Asking whether a measure produces sufficiently consistent scores for its intended use. / Behavioral observation: Specifying what behavior is counted, when it is observed, and in which setting. [Concept: Reliability and Behavioral observation]

0346. B - Developmentally appropriate assessment: Using concrete, age-accessible instructions and checking comprehension before interpreting performance. / Assessment feedback: Sharing results with the young person and caregivers in accessible language and inviting questions. [Concept: Developmentally appropriate assessment and Assessment feedback]

0347. C - Norm-referenced interpretation: Checking whether the norm group is suitable before comparing a child's score with it. / Criterion-referenced interpretation: Determining whether a learner has mastered a specified skill standard. [Concept: Norm-referenced interpretation and Criterion-referenced interpretation]

0348. D - Clinical interview [Concept: Clinical interview]

0349. A - Reliability [Concept: Reliability]

0350. A - Screening versus diagnosis [Concept: Screening versus diagnosis]

0351. A - Validity: The degree to which evidence and theory support a proposed interpretation and use of assessment scores. / Clinical interview: A purposeful conversation used to gather history, current concerns, strengths, risk information, and the client's perspective. [Concept: Validity and Clinical interview]

0352. A - Developmentally appropriate assessment: Selecting procedures, language, and interpretation suited to the client's developmental abilities and communication needs. / Screening versus diagnosis: Screening identifies possible need for further evaluation; diagnosis requires a fuller evaluation under applicable standards. [Concept: Developmentally appropriate assessment and Screening versus diagnosis]

0507. A - Criterion-referenced interpretation: Interpreting performance against a defined skill, benchmark, or criterion rather than a norm group. / Clinical interview: A purposeful conversation used to gather history, current concerns, strengths, risk information, and the client's perspective. [Concept: Criterion-referenced interpretation and Clinical interview]

0508. A - Developmentally appropriate assessment: Selecting procedures, language, and interpretation suited to the client's developmental abilities and communication needs. / Validity: The degree to which evidence and theory support a proposed interpretation and use of assessment scores. [Concept: Developmentally appropriate assessment and Validity]

0509. A - Multi-informant assessment: Integrating reports from multiple observers because each sees the young person in different settings and conditions. / Criterion-referenced interpretation: Interpreting performance against a defined skill, benchmark, or criterion rather than a norm group. [Concept: Multi-informant assessment and Criterion-referenced interpretation]

0510. C - Sharing results with the young person and caregivers in accessible language and inviting questions. [Concept: Assessment feedback]

0511. C - Criterion-referenced interpretation: Determining whether a learner has mastered a specified skill standard. / Clinical interview: Using open and developmentally accessible questions while clarifying timeline, context, and impact. [Concept: Criterion-referenced interpretation and Clinical interview]

0512. A - Reliability [Concept: Reliability]

0513. A - Validity: The degree to which evidence and theory support a proposed interpretation and use of assessment scores. / Behavioral observation: Systematically recording observable behavior in context using a defined observation method. [Concept: Validity and Behavioral observation]

0514. D - Multi-informant assessment: Comparing caregiver, youth, and teacher perspectives without assuming one report is automatically correct. / Norm-referenced interpretation: Checking whether the norm group is suitable before comparing a child's score with it. [Concept: Multi-informant assessment and Norm-referenced interpretation]

0515. B - Validity: Evaluating whether available evidence supports the specific conclusion a practitioner plans to draw from a score. / Clinical interview: Using open and developmentally accessible questions while clarifying timeline, context, and impact. [Concept: Validity and Clinical interview]

0516. B - Developmentally appropriate assessment: Selecting procedures, language, and interpretation suited to the client's developmental abilities and communication needs. / Screening versus diagnosis: Screening identifies possible need for further evaluation; diagnosis requires a fuller evaluation under applicable standards. [Concept: Developmentally appropriate assessment and Screening versus diagnosis]

0517. B - A purposeful conversation used to gather history, current concerns, strengths, risk information, and the client's perspective. [Concept: Clinical interview]

0518. A - Criterion-referenced interpretation: Interpreting performance against a defined skill, benchmark, or criterion rather than a norm group. / Clinical interview: A purposeful conversation used to gather history, current concerns, strengths, risk information, and the client's perspective. [Concept: Criterion-referenced interpretation and Clinical interview]

0519. D - Multi-informant assessment [Concept: Multi-informant assessment]

0520. C - Multi-informant assessment: Integrating reports from multiple observers because each sees the young person in different settings and conditions. / Clinical interview: A purposeful conversation used to gather history, current concerns, strengths, risk information, and the client's perspective. [Concept: Multi-informant assessment and Clinical interview]

0521. B - Screening versus diagnosis [Concept: Screening versus diagnosis]

0522. B - Criterion-referenced interpretation [Concept: Criterion-referenced interpretation]

0523. B - Systematically recording observable behavior in context using a defined observation method. [Concept: Behavioral observation]

0524. C - Screening versus diagnosis [Concept: Screening versus diagnosis]

0525. B - Behavioral observation [Concept: Behavioral observation]

0526. D - Multi-informant assessment: Comparing caregiver, youth, and teacher perspectives without assuming one report is automatically correct. / Reliability: Asking whether a measure produces sufficiently consistent scores for its intended use. [Concept: Multi-informant assessment and Reliability]

0527. B - Clinical interview [Concept: Clinical interview]

0528. B - Criterion-referenced interpretation: Determining whether a learner has mastered a specified skill standard. / Behavioral observation: Specifying what behavior is counted, when it is observed, and in which setting. [Concept: Criterion-referenced interpretation and Behavioral observation]

0529. A - Multi-informant assessment: Integrating reports from multiple observers because each sees the young person in different settings and conditions. / Criterion-referenced interpretation: Interpreting performance against a defined skill, benchmark, or criterion rather than a norm group. [Concept: Multi-informant assessment and Criterion-referenced interpretation]

0530. B - Validity: Evaluating whether available evidence supports the specific conclusion a practitioner plans to draw from a score. / Clinical interview: Using open and developmentally accessible questions while clarifying timeline, context, and impact. [Concept: Validity and Clinical interview]

0531. A - Assessment feedback [Concept: Assessment feedback]

0532. C - Multi-informant assessment: Comparing caregiver, youth, and teacher perspectives without assuming one report is automatically correct. / Behavioral observation: Specifying what behavior is counted, when it is observed, and in which setting. [Concept: Multi-informant assessment and Behavioral observation]

0533. A - Behavioral observation [Concept: Behavioral observation]

0534. B - Reliability [Concept: Reliability]

0535. D - Screening versus diagnosis: Treating an elevated screening result as a prompt for follow-up rather than as a diagnosis. / Assessment feedback: Sharing results with the young person and caregivers in accessible language and inviting questions. [Concept: Screening versus diagnosis and Assessment feedback]

0536. C - Developmentally appropriate assessment [Concept: Developmentally appropriate assessment]

0537. C - Norm-referenced interpretation [Concept: Norm-referenced interpretation]

0538. D - Multi-informant assessment [Concept: Multi-informant assessment]

0539. A - Reliability: The consistency or precision of scores across relevant occasions, items, or raters. / Screening versus diagnosis: Screening identifies possible need for further evaluation; diagnosis requires a fuller evaluation under applicable standards. [Concept: Reliability and Screening versus diagnosis]

0540. A - Screening identifies possible need for further evaluation; diagnosis requires a fuller evaluation under applicable standards. [Concept: Screening versus diagnosis]

0541. C - Norm-referenced interpretation [Concept: Norm-referenced interpretation]

0542. C - Behavioral observation: Systematically recording observable behavior in context using a defined observation method. / Assessment feedback: Communicating findings in understandable, strengths-aware language and explaining limits and next steps. [Concept: Behavioral observation and Assessment feedback]

0543. C - Behavioral observation [Concept: Behavioral observation]

0544. A - Developmentally appropriate assessment [Concept: Developmentally appropriate assessment]

0545. B - Asking whether a measure produces sufficiently consistent scores for its intended use. [Concept: Reliability]

0546. D - Validity: Evaluating whether available evidence supports the specific conclusion a practitioner plans to draw from a score. / Assessment feedback: Sharing results with the young person and caregivers in accessible language and inviting questions. [Concept: Validity and Assessment feedback]

0547. A - Multi-informant assessment: Comparing caregiver, youth, and teacher perspectives without assuming one report is automatically correct. / Developmentally appropriate assessment: Using concrete, age-accessible instructions and checking comprehension before interpreting performance. [Concept: Multi-informant assessment and Developmentally appropriate assessment]

0548. B - Norm-referenced interpretation: Interpreting a score by comparison with a defined reference group tested under specified conditions. / Assessment feedback: Communicating findings in understandable, strengths-aware language and explaining limits and next steps. [Concept: Norm-referenced interpretation and Assessment feedback]

0549. C - Multi-informant assessment: Comparing caregiver, youth, and teacher perspectives without assuming one report is automatically correct. / Screening versus diagnosis: Treating an elevated screening result as a prompt for follow-up rather than as a diagnosis. [Concept: Multi-informant assessment and Screening versus diagnosis]

0550. B - Multi-informant assessment: Comparing caregiver, youth, and teacher perspectives without assuming one report is automatically correct. / Clinical interview: Using open and developmentally accessible questions while clarifying timeline, context, and impact. [Concept: Multi-informant assessment and Clinical interview]

0551. A - Developmentally appropriate assessment: Using concrete, age-accessible instructions and checking comprehension before interpreting performance. / Clinical interview: Using open and developmentally accessible questions while clarifying timeline, context, and impact. [Concept: Developmentally appropriate assessment and Clinical interview]

0552. D - Criterion-referenced interpretation [Concept: Criterion-referenced interpretation]

0553. B - Checking whether the norm group is suitable before comparing a child's score with it. [Concept: Norm-referenced interpretation]

CAC.903 | Child and Adolescent Assessment Techniques

QUESTION | CORRECT OPTION AND CONCEPT

0554. D - Multi-informant assessment: Integrating reports from multiple observers because each sees the young person in different settings and conditions. / Validity: The degree to which evidence and theory support a proposed interpretation and use of assessment scores. [Concept: Multi-informant assessment and Validity]

0555. C - Clinical interview: A purposeful conversation used to gather history, current concerns, strengths, risk information, and the client's perspective. / Assessment feedback: Communicating findings in understandable, strengths-aware language and explaining limits and next steps. [Concept: Clinical interview and Assessment feedback]

0556. B - Screening versus diagnosis [Concept: Screening versus diagnosis]

0557. B - Reliability: The consistency or precision of scores across relevant occasions, items, or raters. / Screening versus diagnosis: Screening identifies possible need for further evaluation; diagnosis requires a fuller evaluation under applicable standards. [Concept: Reliability and Screening versus diagnosis]

0558. C - Multi-informant assessment [Concept: Multi-informant assessment]

0559. D - Reliability: Asking whether a measure produces sufficiently consistent scores for its intended use. / Screening versus diagnosis: Treating an elevated screening result as a prompt for follow-up rather than as a diagnosis. [Concept: Reliability and Screening versus diagnosis]

0560. D - Validity: The degree to which evidence and theory support a proposed interpretation and use of assessment scores. / Criterion-referenced interpretation: Interpreting performance against a defined skill, benchmark, or criterion rather than a norm group. [Concept: Validity and Criterion-referenced interpretation]

0561. A - Reliability: The consistency or precision of scores across relevant occasions, items, or raters. / Criterion-referenced interpretation: Interpreting performance against a defined skill, benchmark, or criterion rather than a norm group. [Concept: Reliability and Criterion-referenced interpretation]

0562. A - Assessment feedback [Concept: Assessment feedback]

0563. D - Clinical interview [Concept: Clinical interview]

0564. A - The consistency or precision of scores across relevant occasions, items, or raters. [Concept: Reliability]

0565. A - Multi-informant assessment [Concept: Multi-informant assessment]

0566. C - Reliability [Concept: Reliability]

0567. D - Clinical interview [Concept: Clinical interview]

0568. D - Developmentally appropriate assessment: Selecting procedures, language, and interpretation suited to the client's developmental abilities and communication needs. / Clinical interview: A purposeful conversation used to gather history, current concerns, strengths, risk information, and the client's perspective. [Concept: Developmentally appropriate assessment and Clinical interview]

0569. B - Multi-informant assessment: Comparing caregiver, youth, and teacher perspectives without assuming one report is automatically correct. / Reliability: Asking whether a measure produces sufficiently consistent scores for its intended use. [Concept: Multi-informant assessment and Reliability]

0570. C - Multi-informant assessment: Integrating reports from multiple observers because each sees the young person in different settings and conditions. / Developmentally appropriate assessment: Selecting procedures, language, and interpretation suited to the client's developmental abilities and communication needs. [Concept: Multi-informant assessment and Developmentally appropriate assessment]

0571. B - Multi-informant assessment [Concept: Multi-informant assessment]

0572. D - Behavioral observation: Specifying what behavior is counted, when it is observed, and in which setting. / Assessment feedback: Sharing results with the young person and caregivers in accessible language and inviting questions. [Concept: Behavioral observation and Assessment feedback]

0573. B - Behavioral observation [Concept: Behavioral observation]

0574. B - Developmentally appropriate assessment [Concept: Developmentally appropriate assessment]

0575. D - Clinical interview [Concept: Clinical interview]

0576. B - Reliability [Concept: Reliability]

0577. C - Behavioral observation [Concept: Behavioral observation]

0578. C - Behavioral observation: Systematically recording observable behavior in context using a defined observation method. / Screening versus diagnosis: Screening identifies possible need for further evaluation; diagnosis requires a fuller evaluation under applicable standards. [Concept: Behavioral observation and Screening versus diagnosis]

0579. B - Multi-informant assessment: Integrating reports from multiple observers because each sees the young person in different settings and conditions. / Criterion-referenced interpretation: Interpreting performance against a defined skill, benchmark, or criterion rather than a norm group. [Concept: Multi-informant assessment and Criterion-referenced interpretation]

0580. D - Developmentally appropriate assessment: Selecting procedures, language, and interpretation suited to the client's developmental abilities and communication needs. / Screening versus diagnosis: Screening identifies possible need for further evaluation; diagnosis requires a fuller evaluation under applicable standards. [Concept: Developmentally appropriate assessment and Screening versus diagnosis]

0581. A - Multi-informant assessment [Concept: Multi-informant assessment]

0582. C - Developmentally appropriate assessment: Selecting procedures, language, and interpretation suited to the client's developmental abilities and communication needs. / Criterion-referenced interpretation: Interpreting performance against a defined skill, benchmark, or criterion rather than a norm group. [Concept: Developmentally appropriate assessment and Screening versus diagnosis]

0691. D - Behavioral observation: Specifying what behavior is counted, when it is observed, and in which setting. / Screening versus diagnosis: Treating an elevated screening result as a prompt for follow-up rather than as a diagnosis. [Concept: Behavioral observation and Screening versus diagnosis]

0692. D - Multi-informant assessment: Comparing caregiver, youth, and teacher perspectives without assuming one report is automatically correct. / Validity: Evaluating whether available evidence supports the specific conclusion a practitioner plans to draw from a score. [Concept: Multi-informant assessment and Validity]

0693. B - Clinical interview [Concept: Clinical interview]

0694. A - Reliability [Concept: Reliability]

0695. B - Developmentally appropriate assessment: Selecting procedures, language, and interpretation suited to the client's developmental abilities and communication needs. / Screening versus diagnosis: Screening identifies possible need for further evaluation; diagnosis requires a fuller evaluation under applicable standards. [Concept: Developmentally appropriate assessment and Screening versus diagnosis]

0696. D - Reliability: Asking whether a measure produces sufficiently consistent scores for its intended use. / Clinical interview: Using open and developmentally accessible questions while clarifying timeline, context, and impact. [Concept: Reliability and Clinical interview]

0697. A - Clinical interview [Concept: Clinical interview]

0698. B - Behavioral observation: Specifying what behavior is counted, when it is observed, and in which setting. / Assessment feedback: Sharing results with the young person and caregivers in accessible language and inviting questions. [Concept: Behavioral observation and Assessment feedback]

0699. D - Assessment feedback [Concept: Assessment feedback]

0700. C - Norm-referenced interpretation: Checking whether the norm group is suitable before comparing a child's score with it. / Behavioral observation: Specifying what behavior is counted, when it is observed, and in which setting. [Concept: Norm-referenced interpretation and Behavioral observation]

0701. B - Validity: The degree to which evidence and theory support a proposed interpretation and use of assessment scores. / Criterion-referenced interpretation: Interpreting performance against a defined skill, benchmark, or criterion rather than a norm group. [Concept: Validity and Criterion-referenced interpretation]

0702. B - Norm-referenced interpretation [Concept: Norm-referenced interpretation]

0703. B - Norm-referenced interpretation: Interpreting a score by comparison with a defined reference group tested under specified conditions. / Screening versus diagnosis: Screening identifies possible need for further evaluation; diagnosis requires a fuller evaluation under applicable standards. [Concept: Norm-referenced interpretation and Screening versus diagnosis]

0704. D - Multi-informant assessment [Concept: Multi-informant assessment]

0705. C - Criterion-referenced interpretation: Interpreting performance against a defined skill, benchmark, or criterion rather than a norm group. / Behavioral observation: Systematically recording observable behavior in context using a defined observation method. [Concept: Criterion-referenced interpretation and Behavioral observation]

0706. B - Developmentally appropriate assessment [Concept: Developmentally appropriate assessment]

0707. B - Clinical interview [Concept: Clinical interview]

0708. D - Developmentally appropriate assessment: Selecting procedures, language, and interpretation suited to the client's developmental abilities and communication needs. / Reliability: The consistency or precision of scores across relevant occasions, items, or raters. [Concept: Developmentally appropriate assessment and Reliability]

0709. C - Developmentally appropriate assessment [Concept: Developmentally appropriate assessment]

0710. B - Behavioral observation: Specifying what behavior is counted, when it is observed, and in which setting. / Screening versus diagnosis: Treating an elevated screening result as a prompt for follow-up rather than as a diagnosis. [Concept: Behavioral observation and Screening versus diagnosis]

0711. A - The consistency or precision of scores across relevant occasions, items, or raters. [Concept: Reliability]

0712. C - Screening versus diagnosis [Concept: Screening versus diagnosis]

CAC.903 | Child and Adolescent Assessment Techniques

QUESTION | CORRECT OPTION AND CONCEPT

0713. C - Multi-informant assessment: Integrating reports from multiple observers because each sees the young person in different settings and conditions. / Behavioral observation: Systematically recording observable behavior in context using a defined observation method. [Concept: Multi-informant assessment and Behavioral observation]

0714. C - Developmentally appropriate assessment: Selecting procedures, language, and interpretation suited to the client's developmental abilities and communication needs. / Behavioral observation: Systematically recording observable behavior in context using a defined observation method. [Concept: Developmentally appropriate assessment and Behavioral observation]

0715. C - Developmentally appropriate assessment [Concept: Developmentally appropriate assessment]

0716. C - Interpreting performance against a defined skill, benchmark, or criterion rather than a norm group. [Concept: Criterion-referenced interpretation]

0717. B - Criterion-referenced interpretation: Determining whether a learner has mastered a specified skill standard. / Behavioral observation: Specifying what behavior is counted, when it is observed, and in which setting. [Concept: Criterion-referenced interpretation and Behavioral observation]

0718. A - Multi-informant assessment: Comparing caregiver, youth, and teacher perspectives without assuming one report is automatically correct. / Clinical interview: Using open and developmentally accessible questions while clarifying timeline, context, and impact. [Concept: Multi-informant assessment and Clinical interview]

0719. A - Behavioral observation [Concept: Behavioral observation]

0720. D - Norm-referenced interpretation: Interpreting a score by comparison with a defined reference group tested under specified conditions. / Screening versus diagnosis: Screening identifies possible need for further evaluation; diagnosis requires a fuller evaluation under applicable standards. [Concept: Norm-referenced interpretation and Screening versus diagnosis]

0721. D - Using open and developmentally accessible questions while clarifying timeline, context, and impact. [Concept: Clinical interview]

0722. D - Using open and developmentally accessible questions while clarifying timeline, context, and impact. [Concept: Clinical interview]

0723. A - Developmentally appropriate assessment: Using concrete, age-accessible instructions and checking comprehension before interpreting performance. / Validity: Evaluating whether available evidence supports the specific conclusion a practitioner plans to draw from a score. [Concept: Developmentally appropriate assessment and Validity]

0724. A - Using open and developmentally accessible questions while clarifying timeline, context, and impact. [Concept: Clinical interview]

0725. A - Behavioral observation [Concept: Behavioral observation]

0880. B - Selecting procedures, language, and interpretation suited to the client's developmental abilities and communication needs. [Concept: Developmentally appropriate assessment]

0881. A - Norm-referenced interpretation: Interpreting a score by comparison with a defined reference group tested under specified conditions. / Criterion-referenced interpretation: Interpreting performance against a defined skill, benchmark, or criterion rather than a norm group. [Concept: Norm-referenced interpretation and Criterion-referenced interpretation]

0882. D - Multi-informant assessment: Comparing caregiver, youth, and teacher perspectives without assuming one report is automatically correct. / Assessment feedback: Sharing results with the young person and caregivers in accessible language and inviting questions. [Concept: Multi-informant assessment and Assessment feedback]

0883. A - Criterion-referenced interpretation: Interpreting performance against a defined skill, benchmark, or criterion rather than a norm group. / Behavioral observation: Systematically recording observable behavior in context using a defined observation method. [Concept: Criterion-referenced interpretation and Behavioral observation]

0884. D - Behavioral observation [Concept: Behavioral observation]

0885. D - Multi-informant assessment: Comparing caregiver, youth, and teacher perspectives without assuming one report is automatically correct. / Assessment feedback: Sharing results with the young person and caregivers in accessible language and inviting questions. [Concept: Multi-informant assessment and Assessment feedback]

0886. C - Reliability: The consistency or precision of scores across relevant occasions, items, or raters. / Validity: The degree to which evidence and theory support a proposed interpretation and use of assessment scores. [Concept: Reliability and Validity]

0887. D - Developmentally appropriate assessment: Using concrete, age-accessible instructions and checking comprehension before interpreting performance. / Norm-referenced interpretation: Checking whether the norm group is suitable before comparing a child's score with it. [Concept: Developmentally appropriate assessment and Norm-referenced interpretation]

0888. D - Integrating reports from multiple observers because each sees the young person in different settings and conditions. [Concept: Multi-informant assessment]

0889. D - Clinical interview [Concept: Clinical interview]

0890. B - Criterion-referenced interpretation: Interpreting performance against a defined skill, benchmark, or criterion rather than a norm group. / Screening versus diagnosis: Screening identifies possible need for further evaluation; diagnosis requires a fuller evaluation under applicable standards. [Concept: Criterion-referenced interpretation and Screening versus diagnosis]

0891. A - Reliability: Asking whether a measure produces sufficiently consistent scores for its intended use. / Assessment feedback: Sharing results with the young person and caregivers in accessible language and inviting questions. [Concept: Reliability and Assessment feedback]

0892. D - Criterion-referenced interpretation: Interpreting performance against a defined skill, benchmark, or criterion rather than a norm group. / Clinical interview: A purposeful conversation used to gather history, current concerns, strengths, risk information, and the client's perspective. [Concept: Criterion-referenced interpretation and Clinical interview]

0893. C - Reliability: The consistency or precision of scores across relevant occasions, items, or raters. / Criterion-referenced interpretation: Interpreting performance against a defined skill, benchmark, or criterion rather than a norm group. [Concept: Reliability and Criterion-referenced interpretation]

0894. A - Validity: Evaluating whether available evidence supports the specific conclusion a practitioner plans to draw from a score. / Criterion-referenced interpretation: Determining whether a learner has mastered a specified skill standard. [Concept: Validity and Criterion-referenced interpretation]

0895. D - Specifying what behavior is counted, when it is observed, and in which setting. [Concept: Behavioral observation]

0896. B - Developmentally appropriate assessment: Selecting procedures, language, and interpretation suited to the client's developmental abilities and communication needs. / Reliability: The consistency or precision of scores across relevant occasions, items, or raters. [Concept: Developmentally appropriate assessment and Reliability]

0897. D - Reliability: Asking whether a measure produces sufficiently consistent scores for its intended use. / Norm-referenced interpretation: Checking whether the norm group is suitable before comparing a child's score with it. [Concept: Reliability and Norm-referenced interpretation]

0898. B - Developmentally appropriate assessment: Using concrete, age-accessible instructions and checking comprehension before interpreting performance. / Norm-referenced interpretation: Checking whether the norm group is suitable before comparing a child's score with it. [Concept: Developmentally appropriate assessment and Norm-referenced interpretation]

0899. C - Norm-referenced interpretation [Concept: Norm-referenced interpretation]

0900. D - Screening versus diagnosis [Concept: Screening versus diagnosis]

0901. B - Multi-informant assessment [Concept: Multi-informant assessment]

0902. A - Assessment feedback [Concept: Assessment feedback]

0903. A - Assessment feedback [Concept: Assessment feedback]

0904. B - Multi-informant assessment: Comparing caregiver, youth, and teacher perspectives without assuming one report is automatically correct. / Reliability: Asking whether a measure produces sufficiently consistent scores for its intended use. [Concept: Multi-informant assessment and Reliability]

0905. C - Criterion-referenced interpretation [Concept: Criterion-referenced interpretation]

0906. B - Multi-informant assessment: Comparing caregiver, youth, and teacher perspectives without assuming one report is automatically correct. / Criterion-referenced interpretation: Determining whether a learner has mastered a specified skill standard. [Concept: Multi-informant assessment and Criterion-referenced interpretation]

0907. C - Behavioral observation [Concept: Behavioral observation]

0908. C - Assessment feedback [Concept: Assessment feedback]

0909. D - Criterion-referenced interpretation [Concept: Criterion-referenced interpretation]

0910. D - Multi-informant assessment [Concept: Multi-informant assessment]

0911. C - Developmentally appropriate assessment: Selecting procedures, language, and interpretation suited to the client's developmental abilities and communication needs. / Norm-referenced interpretation: Interpreting a score by comparison with a defined reference group tested under specified conditions. [Concept: Developmentally appropriate assessment and Norm-referenced interpretation]

0912. C - Norm-referenced interpretation: Checking whether the norm group is suitable before comparing a child's score with it. / Criterion-referenced interpretation: Determining whether a learner has mastered a specified skill standard. [Concept: Norm-referenced interpretation and Criterion-referenced interpretation]

0913. B - Multi-informant assessment [Concept: Multi-informant assessment]

0914. B - Criterion-referenced interpretation: Determining whether a learner has mastered a specified skill standard. / Clinical interview: Using open and developmentally accessible questions while clarifying timeline, context, and impact. [Concept: Criterion-referenced interpretation and Clinical interview]

0915. A - Validity [Concept: Validity]

0916. C - Multi-informant assessment: Integrating reports from multiple observers because each sees the young person in different settings and conditions. / Screening versus diagnosis: Screening identifies possible need for further evaluation; diagnosis requires a fuller evaluation under applicable standards. [Concept: Multi-informant assessment and Screening versus diagnosis]

0917. C - Validity [Concept: Validity]

0918. A - Developmentally appropriate assessment: Selecting procedures, language, and interpretation suited to the client's developmental abilities and communication needs. / Clinical interview: A purposeful conversation used to gather history, current concerns, strengths, risk information, and the client's perspective. [Concept: Developmentally appropriate assessment and Clinical interview]

CAC.903 | Child and Adolescent Assessment Techniques

QUESTION | CORRECT OPTION AND CONCEPT

0919. A - Criterion-referenced interpretation: Determining whether a learner has mastered a specified skill standard. / Screening versus diagnosis: Treating an elevated screening result as a prompt for follow-up rather than as a diagnosis. [Concept: Criterion-referenced interpretation and Screening versus diagnosis]

0920. D - Assessment feedback [Concept: Assessment feedback]

0921. C - Screening versus diagnosis [Concept: Screening versus diagnosis]

0922. D - Interpreting performance against a defined skill, benchmark, or criterion rather than a norm group. [Concept: Criterion-referenced interpretation]

C - Informed consent: Explaining purpose, foreseeable risks, alternatives, confidentiality limits, and voluntary choice before beginning. / Boundary management: Considering how dual roles, gifts, or online contact could affect the young client and documenting a reasoned response. [Concept: Informed consent and Boundary management]

0063. C - Privacy in records: Limiting access to records and disclosing only what is authorized or legally required. / Power differential: Recognizing a young client may feel unable to disagree and actively supporting questions and choice. [Concept: Privacy in records and Power differential]

0064. D - Informed consent: Explaining purpose, foreseeable risks, alternatives, confidentiality limits, and voluntary choice before beginning. / Ethical decision-making: Consulting relevant codes, law, supervisors, and the young person’s context before documenting a defensible decision. [Concept: Informed consent and Ethical decision-making]

0065. D - Informed consent: A voluntary, adequately informed authorization from a person legally able to consent, obtained before services or procedures. / Boundary management: Maintaining clear, clinically appropriate limits in professional roles, relationships, and communications. [Concept: Informed consent and Boundary management]

0066. C - Assent: Seeking a child’s meaningful willingness and questions even when an authorized adult provides consent. / Ethical decision-making: Consulting relevant codes, law, supervisors, and the young person’s context before documenting a defensible decision. [Concept: Assent and Ethical decision-making]

0067. A - Considering how dual roles, gifts, or online contact could affect the young client and documenting a reasoned response. [Concept: Boundary management]

0068. B - Best-interest standard [Concept: Best-interest standard]

0069. C - Confidentiality limits [Concept: Confidentiality limits]

0070. C - Explaining purpose, foreseeable risks, alternatives, confidentiality limits, and voluntary choice before beginning. [Concept: Informed consent]

0071. D - Boundary management [Concept: Boundary management]

0072. A - Power differential [Concept: Power differential]

0073. C - Competence: Seeking qualified supervision or referral when a case exceeds one’s training. / Mandatory reporting: Checking current local reporting rules and promptly following required procedures when a threshold is met. [Concept: Competence and Mandatory reporting]

0074. B - Ethical decision-making [Concept: Ethical decision-making]

0075. D - Mandatory reporting: A legally defined duty to report specified concerns to designated authorities, subject to applicable jurisdictional requirements. / Privacy in records: Safeguarding records and sharing only information permitted and necessary under applicable law, consent, and professional standards. [Concept: Mandatory reporting and Privacy in records]

0076. A - A legally defined duty to report specified concerns to designated authorities, subject to applicable jurisdictional requirements. [Concept: Mandatory reporting]

0077. D - Mandatory reporting [Concept: Mandatory reporting]

0078. A - Competence [Concept: Competence]

0079. A - Assent: A developmentally informed affirmative indication that a child is willing to participate, distinct from legal consent. / Ethical decision-making: A structured process of identifying stakeholders and standards, consulting, considering options, documenting, and reviewing outcomes. [Concept: Assent and Ethical decision-making]

0080. C - Seeking qualified supervision or referral when a case exceeds one’s training. [Concept: Competence]

0081. A - Power differential [Concept: Power differential]

0082. C - Assent: A developmentally informed affirmative indication that a child is willing to participate, distinct from legal consent. / Ethical decision-making: A structured process of identifying stakeholders and standards, consulting, considering options, documenting, and reviewing outcomes. [Concept: Assent and Ethical decision-making]

0083. A - Confidentiality limits [Concept: Confidentiality limits]

0084. A - Informed consent [Concept: Informed consent]

0085. C - Assent: Seeking a child’s meaningful willingness and questions even when an authorized adult provides consent. / Confidentiality limits: Explaining privacy boundaries before sessions and consulting current law and policy when a disclosure raises concern. [Concept: Assent and Confidentiality limits]

0086. C - Mandatory reporting: A legally defined duty to report specified concerns to designated authorities, subject to applicable jurisdictional requirements. / Ethical decision-making: A structured process of identifying stakeholders and standards, consulting, considering options, documenting, and reviewing outcomes. [Concept: Mandatory reporting and Ethical decision-making]

0087. D - Ethical decision-making [Concept: Ethical decision-making]

0088. C - Best-interest standard: A decision-making principle that prioritizes the young person’s welfare while considering rights, voice, relationships, and context. / Boundary management: Maintaining clear, clinically appropriate limits in professional roles, relationships, and communications. [Concept: Best-interest standard and Boundary management]

0089. B - Assent: Seeking a child’s meaningful willingness and questions even when an authorized adult provides consent. / Competence: Seeking qualified supervision or referral when a case exceeds one’s training. [Concept: Assent and Competence]

0090. D - Checking current local reporting rules and promptly following required procedures when a threshold is met. [Concept: Mandatory reporting]

0091. D - Power differential [Concept: Power differential]

0092. A - Best-interest standard: Weighing safety, developmental needs, and the young person’s views rather than relying on adult convenience. / Power differential: Recognizing a young client may feel unable to disagree and actively supporting questions and choice. [Concept: Best-interest standard and Power differential]

0093. D - Informed consent [Concept: Informed consent]

0094. B - Informed consent [Concept: Informed consent]

0095. C - Mandatory reporting: A legally defined duty to report specified concerns to designated authorities, subject to applicable jurisdictional requirements. / Ethical decision-making: A structured process of identifying stakeholders and standards, consulting, considering options, documenting, and reviewing outcomes. [Concept: Mandatory reporting and Ethical decision-making]

0096. A - Assent: A developmentally informed affirmative indication that a child is willing to participate, distinct from legal consent. / Ethical decision-making: A structured process of identifying stakeholders and standards, consulting, considering options, documenting, and reviewing outcomes. [Concept: Assent and Ethical decision-making]

0097. B - Assent: Seeking a child’s meaningful willingness and questions even when an authorized adult provides consent. / Power differential: Recognizing a young client may feel unable to disagree and actively supporting questions and choice. [Concept: Assent and Power differential]

0098. A - Considering how dual roles, gifts, or online contact could affect the young client and documenting a reasoned response. [Concept: Boundary management]

0099. D - Explaining privacy boundaries before sessions and consulting current law and policy when a disclosure raises concern. [Concept: Confidentiality limits]

0100. C - Assent [Concept: Assent]

0101. C - Mandatory reporting [Concept: Mandatory reporting]

0102. A - Informed consent [Concept: Informed consent]

0103. C - Privacy in records [Concept: Privacy in records]

0104. C - Best-interest standard [Concept: Best-interest standard]

0105. D - Informed consent [Concept: Informed consent]

0106. C - Boundary management: Considering how dual roles, gifts, or online contact could affect the young client and documenting a reasoned response. / Ethical decision-making: Consulting relevant codes, law, supervisors, and the young person’s context before documenting a defensible decision. [Concept: Boundary management and Ethical decision-making]

0107. A - Assent: Seeking a child’s meaningful willingness and questions even when an authorized adult provides consent. / Ethical decision-making: Consulting relevant codes, law, supervisors, and the young person’s context before documenting a defensible decision. [Concept: Assent and Ethical decision-making]

0108. C - Assent: A developmentally informed affirmative indication that a child is willing to participate, distinct from legal consent. / Power differential: The inherent imbalance in authority and influence between counselor and client that requires safeguards against exploitation. [Concept: Assent and Power differential]

0812. B - Assent: A developmentally informed affirmative indication that a child is willing to participate, distinct from legal consent. / Informed consent: A voluntary, adequately informed authorization from a person legally able to consent, obtained before services or procedures. [Concept: Assent and Informed consent]

0813. B - Power differential [Concept: Power differential]

0814. D - Informed consent: Explaining purpose, foreseeable risks, alternatives, confidentiality limits, and voluntary choice before beginning. / Mandatory reporting: Checking current local reporting rules and promptly following required procedures when a threshold is met. [Concept: Informed consent and Mandatory reporting]

0815. D - Privacy in records [Concept: Privacy in records]

0816. B - Confidentiality limits: Specific circumstances in which information may need to be disclosed, explained in advance and applied under governing law and policy. / Ethical decision-making: A structured process of identifying stakeholders and standards, consulting, considering options, documenting, and reviewing outcomes. [Concept: Confidentiality limits and Ethical decision-making]

0817. A - Best-interest standard: Weighing safety, developmental needs, and the young person's views rather than relying on adult convenience. / Competence: Seeking qualified supervision or referral when a case exceeds one's training. [Concept: Best-interest standard and Competence]

0818. B - Boundary management [Concept: Boundary management]

0819. B - Informed consent [Concept: Informed consent]

0820. A - Assent [Concept: Assent]

0821. C - Boundary management: Maintaining clear, clinically appropriate limits in professional roles, relationships, and communications. / Privacy in records: Safeguarding records and sharing only information permitted and necessary under applicable law, consent, and professional standards. [Concept: Boundary management and Privacy in records]

0822. D - Informed consent [Concept: Informed consent]

0823. D - Competence [Concept: Competence]

0824. D - Informed consent: Explaining purpose, foreseeable risks, alternatives, confidentiality limits, and voluntary choice before beginning. / Ethical decision-making: Consulting relevant codes, law, supervisors, and the young person's context before documenting a defensible decision. [Concept: Informed consent and Ethical decision-making]

0825. D - Confidentiality limits: Explaining privacy boundaries before sessions and consulting current law and policy when a disclosure raises concern. / Competence: Seeking qualified supervision or referral when a case exceeds one's training. [Concept: Confidentiality limits and Competence]

0826. B - Confidentiality limits [Concept: Confidentiality limits]

0827. D - Assent [Concept: Assent]

0828. D - Best-interest standard: A decision-making principle that prioritizes the young person's welfare while considering rights, voice, relationships, and context. / Privacy in records: Safeguarding records and sharing only information permitted and necessary under applicable law, consent, and professional standards. [Concept: Best-interest standard and Privacy in records]

0829. C - Assent: A developmentally informed affirmative indication that a child is willing to participate, distinct from legal consent. / Competence: Practicing within one's education, supervised experience, and demonstrated ability, with referral or consultation when needed. [Concept: Assent and Competence]

0830. C - Assent: Seeking a child's meaningful willingness and questions even when an authorized adult provides consent. / Privacy in records: Limiting access to records and disclosing only what is authorized or legally required. [Concept: Assent and Privacy in records]

0831. C - Recognizing a young client may feel unable to disagree and actively supporting questions and choice. [Concept: Power differential]

0832. A - Confidentiality limits: Explaining privacy boundaries before sessions and consulting current law and policy when a disclosure raises concern. / Privacy in records: Limiting access to records and disclosing only what is authorized or legally required. [Concept: Confidentiality limits and Privacy in records]

0833. B - Assent [Concept: Assent]

0834. B - Power differential [Concept: Power differential]

0835. B - Confidentiality limits: Explaining privacy boundaries before sessions and consulting current law and policy when a disclosure raises concern. / Mandatory reporting: Checking current local reporting rules and promptly following required procedures when a threshold is met. [Concept: Confidentiality limits and Mandatory reporting]

0836. B - Power differential [Concept: Power differential]

0837. A - Assent: Seeking a child's meaningful willingness and questions even when an authorized adult provides consent. / Best-interest standard: Weighing safety, developmental needs, and the young person's views rather than relying on adult convenience. [Concept: Assent and Best-interest standard]

0838. B - Best-interest standard [Concept: Best-interest standard]

0839. C - Boundary management: Maintaining clear, clinically appropriate limits in professional roles, relationships, and communications. / Privacy in records: Safeguarding records and sharing only information permitted and necessary under applicable law, consent, and professional standards. [Concept: Boundary management and Privacy in records]

0840. B - Mandatory reporting [Concept: Mandatory reporting]

0841. A - Competence [Concept: Competence]

0842. B - Competence [Concept: Competence]

0843. C - Privacy in records [Concept: Privacy in records]

0844. D - Informed consent: A voluntary, adequately informed authorization from a person legally able to consent, obtained before services or procedures. / Privacy in records: Safeguarding records and sharing only information permitted and necessary under applicable law, consent, and professional standards. [Concept: Informed consent and Privacy in records]

0845. C - Confidentiality limits [Concept: Confidentiality limits]

0846. B - Mandatory reporting: A legally defined duty to report specified concerns to designated authorities, subject to applicable jurisdictional requirements. / Power differential: The inherent imbalance in authority and influence between counselor and client that requires safeguards against exploitation. [Concept: Mandatory reporting and Power differential]

0847. B - Privacy in records [Concept: Privacy in records]

0848. C - Mandatory reporting [Concept: Mandatory reporting]

0849. A - Assent: Seeking a child's meaningful willingness and questions even when an authorized adult provides consent. / Confidentiality limits: Explaining privacy boundaries before sessions and consulting current law and policy when a disclosure raises concern. [Concept: Assent and Confidentiality limits]

0850. B - Mandatory reporting [Concept: Mandatory reporting]

0851. C - Boundary management: Considering how dual roles, gifts, or online contact could affect the young client and documenting a reasoned response. / Ethical decision-making: Consulting relevant codes, law, supervisors, and the young person's context before documenting a defensible decision. [Concept: Boundary management and Ethical decision-making]

0852. C - Mandatory reporting: A legally defined duty to report specified concerns to designated authorities, subject to applicable jurisdictional requirements. / Power differential: The inherent imbalance in authority and influence between counselor and client that requires safeguards against exploitation. [Concept: Mandatory reporting and Power differential]

0853. A - Power differential [Concept: Power differential]

0854. D - Informed consent: A voluntary, adequately informed authorization from a person legally able to consent, obtained before services or procedures. / Competence: Practicing within one's education, supervised experience, and demonstrated ability, with referral or consultation when needed. [Concept: Informed consent and Competence]

0855. C - Competence: Seeking qualified supervision or referral when a case exceeds one's training. / Privacy in records: Limiting access to records and disclosing only what is authorized or legally required. [Concept: Competence and Privacy in records]

0856. C - Informed consent: Explaining purpose, foreseeable risks, alternatives, confidentiality limits, and voluntary choice before beginning. / Privacy in records: Limiting access to records and disclosing only what is authorized or legally required. [Concept: Informed consent and Privacy in records]

0857. A - Boundary management [Concept: Boundary management]

0858. A - Privacy in records [Concept: Privacy in records]

0859. A - Specific circumstances in which information may need to be disclosed, explained in advance and applied under governing law and policy. [Concept: Confidentiality limits]

0860. A - Ethical decision-making [Concept: Ethical decision-making]

0861. B - Boundary management: Maintaining clear, clinically appropriate limits in professional roles, relationships, and communications. / Power differential: The inherent imbalance in authority and influence between counselor and client that requires safeguards against exploitation. [Concept: Boundary management and Power differential]

0862. D - Mandatory reporting [Concept: Mandatory reporting]

0863. A - Mandatory reporting [Concept: Mandatory reporting]

0864. D - A decision-making principle that prioritizes the young person's welfare while considering rights, voice, relationships, and context. [Concept: Best-interest standard]

0865. C - Best-interest standard [Concept: Best-interest standard]

0866. A - Best-interest standard [Concept: Best-interest standard]

0867. C - Assent: Seeking a child's meaningful willingness and questions even when an authorized adult provides consent. / Confidentiality limits: Explaining privacy boundaries before sessions and consulting current law and policy when a disclosure raises concern. [Concept: Assent and Confidentiality limits]

0962. A - Interpreter ethics [Concept: Interpreter ethics]

0963. B - Cultural humility [Concept: Cultural humility]

0964. D - Cultural responsiveness [Concept: Cultural responsiveness]

0965. B - Structural competence [Concept: Structural competence]

0966. A - Worldview: Eliciting the family's own meanings and values before recommending a culturally responsive plan. / Cultural responsiveness: Checking fit with the client and revising care rather than treating cultural competence as a one-time achievement. [Concept: Worldview and Cultural responsiveness]

0967. D - Cultural broaching: Opening space to discuss whether identity or power dynamics matter to the client's experience of counseling. / Cultural responsiveness: Checking fit with the client and revising care rather than treating cultural competence as a one-time achievement. [Concept: Cultural broaching and Cultural responsiveness]

0968. B - Interpreter ethics: Addressing the client directly while a qualified interpreter conveys meaning accurately and privately. / Cultural responsiveness: Checking fit with the client and revising care rather than treating cultural competence as a one-time achievement. [Concept: Interpreter ethics and Cultural responsiveness]

0969. A - Cultural adaptation [Concept: Cultural adaptation]

0970. A - Acculturation: Processes of cultural and psychological change that may occur through sustained contact between cultural groups. / Cultural responsiveness: Ongoing practice of adapting care to clients' cultural identities, preferences, and context in a respectful way. [Concept: Acculturation and Cultural responsiveness]

0971. C - Worldview [Concept: Worldview]

0972. A - Use of qualified language support that protects accuracy, confidentiality, and the client's direct participation. [Concept: Interpreter ethics]

0973. D - Intersectionality [Concept: Intersectionality]

0974. C - Interpreter ethics [Concept: Interpreter ethics]

0975. C - Cultural broaching [Concept: Cultural broaching]

0976. A - Interpreter ethics [Concept: Interpreter ethics]

0977. D - Acculturation: Processes of cultural and psychological change that may occur through sustained contact between cultural groups. / Cultural broaching: Respectfully inviting discussion of identity, culture, and power as relevant to the therapeutic relationship or concern. [Concept: Acculturation and Cultural broaching]

0978. C - Interpreter ethics [Concept: Interpreter ethics]

0979. D - Cultural broaching [Concept: Cultural broaching]

0980. D - Intersectionality: A framework for understanding how interlocking social identities and systems of power shape lived experience. / Cultural broaching: Respectfully inviting discussion of identity, culture, and power as relevant to the therapeutic relationship or concern. [Concept: Intersectionality and Cultural broaching]

0981. B - Intersectionality [Concept: Intersectionality]

0982. D - Structural competence [Concept: Structural competence]

0983. D - Cultural broaching [Concept: Cultural broaching]

0984. D - Cultural humility: A lifelong stance of self-reflection, openness, and accountability that recognizes limits to one's cultural knowledge. / Acculturation: Processes of cultural and psychological change that may occur through sustained contact between cultural groups. [Concept: Cultural humility and Acculturation]

CAC.905 | Cultural Competence in Counseling

QUESTION | CORRECT OPTION AND CONCEPT

0985. D - Worldview [Concept: Worldview]

0986. D - Respectfully inviting discussion of identity, culture, and power as relevant to the therapeutic relationship or concern. [Concept: Cultural broaching]

0987. C - Cultural broaching [Concept: Cultural broaching]

0988. D - Acculturation: Exploring a young person’s own experience of cultural adaptation without assuming a single pathway. / Cultural adaptation: Adapting examples and delivery with client input while monitoring whether the intervention’s intended mechanism remains intact. [Concept: Acculturation and Cultural adaptation]

0989. A - Thoughtful modification of an intervention’s language, examples, or delivery while preserving its core active elements. [Concept: Cultural adaptation]

0990. D - Ongoing practice of adapting care to clients’ cultural identities, preferences, and context in a respectful way. [Concept: Cultural responsiveness]

0991. B - Thoughtful modification of an intervention’s language, examples, or delivery while preserving its core active elements. [Concept: Cultural adaptation]

0992. C - Cultural broaching: Respectfully inviting discussion of identity, culture, and power as relevant to the therapeutic relationship or concern. / Worldview: A person’s organized assumptions and meanings concerning self, relationships, reality, and values. [Concept: Cultural broaching and Worldview]

0993. B - Interpreter ethics: Addressing the client directly while a qualified interpreter conveys meaning accurately and privately. / Cultural adaptation: Adapting examples and delivery with client input while monitoring whether the intervention’s intended mechanism remains intact. [Concept: Interpreter ethics and Cultural adaptation]

0994. A - Cultural humility: Asking how the client understands an experience rather than assuming the counselor already knows its cultural meaning. / Worldview: Eliciting the family’s own meanings and values before recommending a culturally responsive plan. [Concept: Cultural humility and Worldview]

0995. C - Intersectionality: A framework for understanding how interlocking social identities and systems of power shape lived experience. / Cultural adaptation: Thoughtful modification of an intervention’s language, examples, or delivery while preserving its core active elements. [Concept: Intersectionality and Cultural adaptation]

0996. C - Respectfully inviting discussion of identity, culture, and power as relevant to the therapeutic relationship or concern. [Concept: Cultural broaching]

0997. D - Cultural adaptation [Concept: Cultural adaptation]

0998. D - Cultural humility: Asking how the client understands an experience rather than assuming the counselor already knows its cultural meaning. / Cultural adaptation: Adapting examples and delivery with client input while monitoring whether the intervention’s intended mechanism remains intact. [Concept: Cultural humility and Cultural adaptation]

0999. B - Cultural formulation: A structured exploration of how culture shapes the meaning, context, supports, and help-seeking related to a concern. / Cultural adaptation: Thoughtful modification of an intervention’s language, examples, or delivery while preserving its core active elements. [Concept: Cultural formulation and Cultural adaptation]

1000. B - Worldview [Concept: Worldview]

CAC.906 | Trauma-Informed Care Practices

QUESTION | CORRECT OPTION AND CONCEPT

0001. D - Trauma-informed screening [Concept: Trauma-informed screening]

0002. C - Strengths-based practice [Concept: Strengths-based practice]

0003. B - Resilience: Identifying relationships and resources that support adaptation without portraying resilience as invulnerability. / Re-traumatization prevention: Explaining procedures, offering choices where possible, and avoiding unnecessary repeated retelling. [Concept: Resilience and Re-traumatization prevention]

0004. C - Psychological safety: A felt sense of emotional and interpersonal safety that supports participation without promising absence of distress. / Grounding: Present-focused strategies that help orient attention to immediate sensory or environmental cues. [Concept: Psychological safety and Grounding]

0005. C - Trauma-informed screening: Asking only what is needed, explaining why, and ensuring support is available if screening raises distress. / Re-traumatization prevention: Explaining procedures, offering choices where possible, and avoiding unnecessary repeated retelling. [Concept: Trauma-informed screening and Re-traumatization prevention]

0006. D - Window of tolerance [Concept: Window of tolerance]

0007. C - Re-traumatization prevention [Concept: Re-traumatization prevention]

0008. C - Re-traumatization prevention: Reducing avoidable practices that reproduce threat, coercion, or loss of control for people affected by trauma. / Trauma memory: Memory processes that may be fragmented, sensory, or cue-linked after overwhelming experiences and vary across individuals. [Concept: Re-traumatization prevention and Trauma memory]

0009. A - Psychological safety [Concept: Psychological safety]

0010. D - Stabilization [Concept: Stabilization]

0011. A - Trauma memory [Concept: Trauma memory]

0012. A - Re-traumatization prevention [Concept: Re-traumatization prevention]

0013. A - Strengths-based practice [Concept: Strengths-based practice]

0014. A - Window of tolerance [Concept: Window of tolerance]

0015. B - Psychological safety: A felt sense of emotional and interpersonal safety that supports participation without promising absence of distress. / Stabilization: Initial support focused on safety, coping, and emotional regulation before or alongside deeper trauma processing as clinically appropriate. [Concept: Psychological safety and Stabilization]

0016. B - An approach that recognizes existing capacities, relationships, cultural resources, and survival strategies alongside needs. [Concept: Strengths-based practice]

0017. D - Trauma-informed screening [Concept: Trauma-informed screening]

0018. A - Resilience [Concept: Resilience]

0019. B - Offering predictability and choice while avoiding unnecessary practices that may recreate powerlessness. [Concept: Trauma-informed approach]

0020. A - Psychological safety: A felt sense of emotional and interpersonal safety that supports participation without promising absence of distress. / Re-traumatization prevention: Reducing avoidable practices that reproduce threat, coercion, or loss of control for people affected by trauma. [Concept: Psychological safety and Re-traumatization prevention]

0021. D - Building coping and safety supports before asking a client to engage in intensive trauma-focused work. [Concept: Stabilization]

0022. B - Strengths-based practice [Concept: Strengths-based practice]

0023. C - Trauma-informed approach [Concept: Trauma-informed approach]

0024. C - Trauma-informed screening [Concept: Trauma-informed screening]

0025. B - Stabilization [Concept: Stabilization]

0026. D - Resilience: Identifying relationships and resources that support adaptation without portraying resilience as invulnerability. / Stabilization: Building coping and safety supports before asking a client to engage in intensive trauma-focused work. [Concept: Resilience and Stabilization]

0027. A - Window of tolerance: A model describing a range of arousal within which a person can process experience and remain engaged. / Trauma-informed screening: Sensitive inquiry about possible trauma exposure and impact with a clear purpose, privacy safeguards, and follow-up plan. [Concept: Window of tolerance and Trauma-informed screening]

0028. A - Re-traumatization prevention: Reducing avoidable practices that reproduce threat, coercion, or loss of control for people affected by trauma. / Strengths-based practice: An approach that recognizes existing capacities, relationships, cultural resources, and survival strategies alongside needs. [Concept: Re-traumatization prevention and Strengths-based practice]

0029. C - Trauma-informed screening [Concept: Trauma-informed screening]

0030. B - Stabilization [Concept: Stabilization]

0031. B - Memory processes that may be fragmented, sensory, or cue-linked after overwhelming experiences and vary across individuals. [Concept: Trauma memory]

0032. C - Trauma-informed approach: An organizational and clinical stance that recognizes trauma's possible effects and emphasizes safety, choice, collaboration, trust, and empowerment. / Grounding: Present-focused strategies that help orient attention to immediate sensory or environmental cues. [Concept: Trauma-informed approach and Grounding]

0033. C - Window of tolerance [Concept: Window of tolerance]

0034. C - Resilience [Concept: Resilience]

0035. A - Asking only what is needed, explaining why, and ensuring support is available if screening raises distress. [Concept: Trauma-informed screening]

0036. B - Grounding [Concept: Grounding]

0037. D - Window of tolerance: Noticing when arousal is too high or too low for reflective work and using regulation support first. / Trauma-informed screening: Asking only what is needed, explaining why, and ensuring support is available if screening raises distress. [Concept: Window of tolerance and Trauma-informed screening]

0038. D - Stabilization [Concept: Stabilization]

0039. D - Trauma memory [Concept: Trauma memory]

0040. A - Psychological safety: A felt sense of emotional and interpersonal safety that supports participation without promising absence of distress. / Strengths-based practice: An approach that recognizes existing capacities, relationships, cultural resources, and survival strategies alongside needs. [Concept: Psychological safety and Strengths-based practice]

0041. C - Trauma-informed approach [Concept: Trauma-informed approach]

0042. A - Trauma memory [Concept: Trauma memory]

0043. A - Trauma-informed screening: Sensitive inquiry about possible trauma exposure and impact with a clear purpose, privacy safeguards, and follow-up plan. / Trauma memory: Memory processes that may be fragmented, sensory, or cue-linked after overwhelming experiences and vary across individuals. [Concept: Trauma-informed screening and Trauma memory]

0044. D - Trauma-informed approach: An organizational and clinical stance that recognizes trauma's possible effects and emphasizes safety, choice, collaboration, trust, and empowerment. / Resilience: A dynamic process of adaptation supported by individual capacities, relationships, and resources amid adversity. [Concept: Trauma-informed approach and Resilience]

0045. D - Resilience [Concept: Resilience]

0046. D - Trauma-informed approach: An organizational and clinical stance that recognizes trauma's possible effects and emphasizes safety, choice, collaboration, trust, and empowerment. / Window of tolerance: A model describing a range of arousal within which a person can process experience and remain engaged. [Concept: Trauma-informed approach and Window of tolerance]

0047. B - Inviting a client to notice current sights, sounds, or physical contact with the room when feeling overwhelmed. [Concept: Grounding]

0048. C - Psychological safety: Checking what helps a client feel sufficiently safe to participate and adjusting pace accordingly. / Resilience: Identifying relationships and resources that support adaptation without portraying resilience as invulnerability. [Concept: Psychological safety and Resilience]

0049. D - Strengths-based practice [Concept: Strengths-based practice]

0050. B - Trauma memory: Responding to a trauma reminder with curiosity and regulation support rather than assuming a uniform memory pattern. / Stabilization: Building coping and safety supports before asking a client to engage in intensive trauma-focused work. [Concept: Trauma memory and Stabilization]

0051. B - Psychological safety: A felt sense of emotional and interpersonal safety that supports participation without promising absence of distress. / Trauma memory: Memory processes that may be fragmented, sensory, or cue-linked after overwhelming experiences and vary across individuals. [Concept: Psychological safety and Trauma memory]

0052. D - Trauma-informed approach: Offering predictability and choice while avoiding unnecessary practices that may recreate powerlessness. / Trauma memory: Responding to a trauma reminder with curiosity and regulation support rather than assuming a uniform memory pattern. [Concept: Trauma-informed approach and Trauma memory]

0053. C - Grounding: Present-focused strategies that help orient attention to immediate sensory or environmental cues. / Stabilization: Initial support focused on safety, coping, and emotional regulation before or alongside deeper trauma processing as clinically appropriate. [Concept: Grounding and Stabilization]

0054. B - Trauma memory [Concept: Trauma memory]

0055. B - Re-traumatization prevention [Concept: Re-traumatization prevention]

0056. D - Window of tolerance: Noticing when arousal is too high or too low for reflective work and using regulation support first. / Trauma memory: Responding to a trauma reminder with curiosity and regulation support rather than assuming a uniform memory pattern. [Concept: Window of tolerance and Trauma memory]

0057. B - Window of tolerance [Concept: Window of tolerance]

0058. D - Checking what helps a client feel sufficiently safe to participate and adjusting pace accordingly. [Concept: Psychological safety]

0059. D - Trauma memory [Concept: Trauma memory]

0060. C - Stabilization [Concept: Stabilization]

0061. B - Window of tolerance: Noticing when arousal is too high or too low for reflective work and using regulation support first. / Resilience: Identifying relationships and resources that support adaptation without portraying resilience as invulnerability. [Concept: Window of tolerance and Resilience]

A - Trauma-informed approach: An organizational and clinical stance that recognizes trauma's possible effects and emphasizes safety, choice, collaboration, trust, and empowerment. / Trauma memory: Memory processes that may be fragmented, sensory, or cue-linked after overwhelming experiences and vary across individuals. [Concept: Trauma-informed approach and Trauma memory]

0532. C - Grounding [Concept: Grounding]

0533. D - Window of tolerance: Noticing when arousal is too high or too low for reflective work and using regulation support first. / Stabilization: Building coping and safety supports before asking a client to engage in intensive trauma-focused work. [Concept: Window of tolerance and Stabilization]

0534. A - Trauma-informed screening: Asking only what is needed, explaining why, and ensuring support is available if screening raises distress. / Resilience: Identifying relationships and resources that support adaptation without portraying resilience as invulnerability. [Concept: Trauma-informed screening and Resilience]

0535. B - Stabilization [Concept: Stabilization]

0536. A - Re-traumatization prevention: Explaining procedures, offering choices where possible, and avoiding unnecessary repeated retelling. / Strengths-based practice: Identifying what has helped the young person cope and incorporating those resources into planning. [Concept: Re-traumatization prevention and Strengths-based practice]

0537. A - Psychological safety: Checking what helps a client feel sufficiently safe to participate and adjusting pace accordingly. / Grounding: Inviting a client to notice current sights, sounds, or physical contact with the room when feeling overwhelmed. [Concept: Psychological safety and Grounding]

0538. C - Grounding: Present-focused strategies that help orient attention to immediate sensory or environmental cues. / Trauma-informed screening: Sensitive inquiry about possible trauma exposure and impact with a clear purpose, privacy safeguards, and follow-up plan. [Concept: Grounding and Trauma-informed screening]

0539. B - Window of tolerance [Concept: Window of tolerance]

0540. C - Memory processes that may be fragmented, sensory, or cue-linked after overwhelming experiences and vary across individuals. [Concept: Trauma memory]

0541. A - Explaining procedures, offering choices where possible, and avoiding unnecessary repeated retelling. [Concept: Re-traumatization prevention]

0542. C - Resilience: Identifying relationships and resources that support adaptation without portraying resilience as invulnerability. / Re-traumatization prevention: Explaining procedures, offering choices where possible, and avoiding unnecessary repeated retelling. [Concept: Resilience and Re-traumatization prevention]

0543. C - Resilience: A dynamic process of adaptation supported by individual capacities, relationships, and resources amid adversity. / Re-traumatization prevention: Reducing avoidable practices that reproduce threat, coercion, or loss of control for people affected by trauma. [Concept: Resilience and Re-traumatization prevention]

0544. A - Stabilization [Concept: Stabilization]

0545. B - Asking only what is needed, explaining why, and ensuring support is available if screening raises distress. [Concept: Trauma-informed screening]

0546. D - Trauma-informed screening: Asking only what is needed, explaining why, and ensuring support is available if screening raises distress. / Re-traumatization prevention: Explaining procedures, offering choices where possible, and avoiding unnecessary repeated retelling. [Concept: Trauma-informed screening and Re-traumatization prevention]

0547. C - Psychological safety: A felt sense of emotional and interpersonal safety that supports participation without promising absence of distress. / Resilience: A dynamic process of adaptation supported by individual capacities, relationships, and resources amid adversity. [Concept: Psychological safety and Resilience]

0548. C - Window of tolerance: Noticing when arousal is too high or too low for reflective work and using regulation support first. / Strengths-based practice: Identifying what has helped the young person cope and incorporating those resources into planning. [Concept: Window of tolerance and Strengths-based practice]

0549. D - Re-traumatization prevention: Explaining procedures, offering choices where possible, and avoiding unnecessary repeated retelling. / Trauma memory: Responding to a trauma reminder with curiosity and regulation support rather than assuming a uniform memory pattern. [Concept: Re-traumatization prevention and Trauma memory]

0550. B - Psychological safety [Concept: Psychological safety]

0551. B - Resilience: Identifying relationships and resources that support adaptation without portraying resilience as invulnerability. / Stabilization: Building coping and safety supports before asking a client to engage in intensive trauma-focused work. [Concept: Resilience and Stabilization]

0552. D - Window of tolerance: Noticing when arousal is too high or too low for reflective work and using regulation support first. / Strengths-based practice: Identifying what has helped the young person cope and incorporating those resources into planning. [Concept: Window of tolerance and Strengths-based practice]

0553. C - Trauma-informed approach [Concept: Trauma-informed approach]

0554. A - Window of tolerance [Concept: Window of tolerance]

0555. C - Re-traumatization prevention: Reducing avoidable practices that reproduce threat, coercion, or loss of control for people affected by trauma. / Strengths-based practice: An approach that recognizes existing capacities, relationships, cultural resources, and survival strategies alongside needs. [Concept: Re-traumatization prevention and Strengths-based practice]

0556. C - Checking what helps a client feel sufficiently safe to participate and adjusting pace accordingly. [Concept: Psychological safety]

0557. C - Present-focused strategies that help orient attention to immediate sensory or environmental cues. [Concept: Grounding]

0558. D - Trauma-informed approach [Concept: Trauma-informed approach]

0559. C - Re-traumatization prevention [Concept: Re-traumatization prevention]

0560. D - Resilience: A dynamic process of adaptation supported by individual capacities, relationships, and resources amid adversity. / Strengths-based practice: An approach that recognizes existing capacities, relationships, cultural resources, and survival strategies alongside needs. [Concept: Resilience and Strengths-based practice]

0561. D - A dynamic process of adaptation supported by individual capacities, relationships, and resources amid adversity. [Concept: Resilience]

0562. C - Trauma-informed approach [Concept: Trauma-informed approach]

CAC.906 | Trauma-Informed Care Practices

QUESTION | CORRECT OPTION AND CONCEPT

0563. A - Grounding: Present-focused strategies that help orient attention to immediate sensory or environmental cues. / Trauma memory: Memory processes that may be fragmented, sensory, or cue-linked after overwhelming experiences and vary across individuals. [Concept: Grounding and Trauma memory]

0701. B - Reducing avoidable practices that reproduce threat, coercion, or loss of control for people affected by trauma. [Concept: Re-traumatization prevention]

0702. D - Trauma-informed approach [Concept: Trauma-informed approach]

0703. B - Psychological safety: Checking what helps a client feel sufficiently safe to participate and adjusting pace accordingly. / Resilience: Identifying relationships and resources that support adaptation without portraying resilience as invulnerability. [Concept: Psychological safety and Resilience]

0704. B - Trauma-informed screening: Sensitive inquiry about possible trauma exposure and impact with a clear purpose, privacy safeguards, and follow-up plan. / Trauma memory: Memory processes that may be fragmented, sensory, or cue-linked after overwhelming experiences and vary across individuals. [Concept: Trauma-informed screening and Trauma memory]

0705. B - Trauma-informed screening: Sensitive inquiry about possible trauma exposure and impact with a clear purpose, privacy safeguards, and follow-up plan. / Re-traumatization prevention: Reducing avoidable practices that reproduce threat, coercion, or loss of control for people affected by trauma. [Concept: Trauma-informed screening and Re-traumatization prevention]

0706. B - Re-traumatization prevention [Concept: Re-traumatization prevention]

0707. D - Re-traumatization prevention: Reducing avoidable practices that reproduce threat, coercion, or loss of control for people affected by trauma. / Trauma memory: Memory processes that may be fragmented, sensory, or cue-linked after overwhelming experiences and vary across individuals. [Concept: Re-traumatization prevention and Trauma memory]

0708. B - Trauma-informed approach: Offering predictability and choice while avoiding unnecessary practices that may recreate powerlessness. / Re-traumatization prevention: Explaining procedures, offering choices where possible, and avoiding unnecessary repeated retelling. [Concept: Trauma-informed approach and Re-traumatization prevention]

0709. D - Trauma-informed approach: Offering predictability and choice while avoiding unnecessary practices that may recreate powerlessness. / Trauma memory: Responding to a trauma reminder with curiosity and regulation support rather than assuming a uniform memory pattern. [Concept: Trauma-informed approach and Trauma memory]

0710. C - Resilience: Identifying relationships and resources that support adaptation without portraying resilience as invulnerability. / Stabilization: Building coping and safety supports before asking a client to engage in intensive trauma-focused work. [Concept: Resilience and Stabilization]

0711. B - Trauma-informed screening [Concept: Trauma-informed screening]

0712. D - Re-traumatization prevention [Concept: Re-traumatization prevention]

0713. C - Strengths-based practice [Concept: Strengths-based practice]

0714. B - Strengths-based practice [Concept: Strengths-based practice]

CAC.906 | Trauma-Informed Care Practices

QUESTION | CORRECT OPTION AND CONCEPT

0715. A - Resilience: Identifying relationships and resources that support adaptation without portraying resilience as invulnerability. / Strengths-based practice: Identifying what has helped the young person cope and incorporating those resources into planning. [Concept: Resilience and Strengths-based practice]

0716. A - Strengths-based practice [Concept: Strengths-based practice]

0717. A - Grounding: Present-focused strategies that help orient attention to immediate sensory or environmental cues. / Strengths-based practice: An approach that recognizes existing capacities, relationships, cultural resources, and survival strategies alongside needs. [Concept: Grounding and Strengths-based practice]

0718. A - Window of tolerance [Concept: Window of tolerance]

0719. A - Trauma-informed approach: An organizational and clinical stance that recognizes trauma's possible effects and emphasizes safety, choice, collaboration, trust, and empowerment. / Resilience: A dynamic process of adaptation supported by individual capacities, relationships, and resources amid adversity. [Concept: Trauma-informed approach and Resilience]

0720. C - Trauma-informed approach: Offering predictability and choice while avoiding unnecessary practices that may recreate powerlessness. / Strengths-based practice: Identifying what has helped the young person cope and incorporating those resources into planning. [Concept: Trauma-informed approach and Strengths-based practice]

0721. C - Psychological safety: Checking what helps a client feel sufficiently safe to participate and adjusting pace accordingly. / Trauma memory: Responding to a trauma reminder with curiosity and regulation support rather than assuming a uniform memory pattern. [Concept: Psychological safety and Trauma memory]

0722. B - Resilience [Concept: Resilience]

0723. A - Initial support focused on safety, coping, and emotional regulation before or alongside deeper trauma processing as clinically appropriate. [Concept: Stabilization]

0724. A - Strengths-based practice [Concept: Strengths-based practice]

0725. D - Window of tolerance [Concept: Window of tolerance]

0726. A - Stabilization [Concept: Stabilization]

0727. B - Trauma-informed approach: An organizational and clinical stance that recognizes trauma's possible effects and emphasizes safety, choice, collaboration, trust, and empowerment. / Window of tolerance: A model describing a range of arousal within which a person can process experience and remain engaged. [Concept: Trauma-informed approach and Window of tolerance]

0728. B - Resilience [Concept: Resilience]

0729. B - Grounding [Concept: Grounding]

0730. C - Psychological safety [Concept: Psychological safety]

0731. C - Psychological safety [Concept: Psychological safety]

0732. A - Grounding [Concept: Grounding]

0733. D - Noticing when arousal is too high or too low for reflective work and using regulation support first. [Concept: Window of tolerance]

0734. D - Trauma-informed screening [Concept: Trauma-informed screening]

0735. A - Strengths-based practice [Concept: Strengths-based practice]

0736. C - Window of tolerance [Concept: Window of tolerance]

0737. C - Trauma-informed approach: Offering predictability and choice while avoiding unnecessary practices that may recreate powerlessness. / Grounding: Inviting a client to notice current sights, sounds, or physical contact with the room when feeling overwhelmed. [Concept: Trauma-informed approach and Grounding]

0738. C - Resilience: A dynamic process of adaptation supported by individual capacities, relationships, and resources amid adversity. / Re-traumatization prevention: Reducing avoidable practices that reproduce threat, coercion, or loss of control for people affected by trauma. [Concept: Resilience and Re-traumatization prevention]

0739. A - Trauma memory [Concept: Trauma memory]

0740. B - Grounding: Inviting a client to notice current sights, sounds, or physical contact with the room when feeling overwhelmed. / Stabilization: Building coping and safety supports before asking a client to engage in intensive trauma-focused work. [Concept: Grounding and Stabilization]

0741. A - Resilience: A dynamic process of adaptation supported by individual capacities, relationships, and resources amid adversity. / Stabilization: Initial support focused on safety, coping, and emotional regulation before or alongside deeper trauma processing as clinically appropriate. [Concept: Resilience and Stabilization]

0742. A - Psychological safety: A felt sense of emotional and interpersonal safety that supports participation without promising absence of distress. / Stabilization: Initial support focused on safety, coping, and emotional regulation before or alongside deeper trauma processing as clinically appropriate. [Concept: Psychological safety and Stabilization]

0743. B - Stabilization [Concept: Stabilization]

0744. B - Stabilization [Concept: Stabilization]

0745. B - Trauma-informed screening: Asking only what is needed, explaining why, and ensuring support is available if screening raises distress. / Stabilization: Building coping and safety supports before asking a client to engage in intensive trauma-focused work. [Concept: Trauma-informed screening and Stabilization]

0746. D - Psychological safety [Concept: Psychological safety]

0747. D - Psychological safety: A felt sense of emotional and interpersonal safety that supports participation without promising absence of distress. / Trauma memory: Memory processes that may be fragmented, sensory, or cue-linked after overwhelming experiences and vary across individuals. [Concept: Psychological safety and Trauma memory]

0890. B - Window of tolerance [Concept: Window of tolerance]

0891. D - Psychological safety: Checking what helps a client feel sufficiently safe to participate and adjusting pace accordingly. / Window of tolerance: Noticing when arousal is too high or too low for reflective work and using regulation support first. [Concept: Psychological safety and Window of tolerance]

0892. A - Window of tolerance: A model describing a range of arousal within which a person can process experience and remain engaged. / Stabilization: Initial support focused on safety, coping, and emotional regulation before or alongside deeper trauma processing as clinically appropriate. [Concept: Window of tolerance and Stabilization]

0893. B - Trauma-informed approach [Concept: Trauma-informed approach]

0894. C - Trauma-informed approach: Offering predictability and choice while avoiding unnecessary practices that may recreate powerlessness. / Trauma-informed screening: Asking only what is needed, explaining why, and ensuring support is available if screening raises distress. [Concept: Trauma-informed approach and Trauma-informed screening]

0895. C - Grounding: Present-focused strategies that help orient attention to immediate sensory or environmental cues. / Resilience: A dynamic process of adaptation supported by individual capacities, relationships, and resources amid adversity. [Concept: Grounding and Resilience]

0896. B - Psychological safety [Concept: Psychological safety]

0897. A - Psychological safety [Concept: Psychological safety]

0898. A - Window of tolerance: A model describing a range of arousal within which a person can process experience and remain engaged. / Grounding: Present-focused strategies that help orient attention to immediate sensory or environmental cues. [Concept: Window of tolerance and Grounding]

0899. C - Re-traumatization prevention: Reducing avoidable practices that reproduce threat, coercion, or loss of control for people affected by trauma. / Strengths-based practice: An approach that recognizes existing capacities, relationships, cultural resources, and survival strategies alongside needs. [Concept: Re-traumatization prevention and Strengths-based practice]

0900. D - Psychological safety: Checking what helps a client feel sufficiently safe to participate and adjusting pace accordingly. / Strengths-based practice: Identifying what has helped the young person cope and incorporating those resources into planning. [Concept: Psychological safety and Strengths-based practice]

0901. B - Trauma memory [Concept: Trauma memory]

0902. D - Window of tolerance: A model describing a range of arousal within which a person can process experience and remain engaged. / Grounding: Present-focused strategies that help orient attention to immediate sensory or environmental cues. [Concept: Window of tolerance and Grounding]

0903. C - Re-traumatization prevention: Reducing avoidable practices that reproduce threat, coercion, or loss of control for people affected by trauma. / Trauma memory: Memory processes that may be fragmented, sensory, or cue-linked after overwhelming experiences and vary across individuals. [Concept: Re-traumatization prevention and Trauma memory]

0904. C - Trauma memory: Responding to a trauma reminder with curiosity and regulation support rather than assuming a uniform memory pattern. / Strengths-based practice: Identifying what has helped the young person cope and incorporating those resources into planning. [Concept: Trauma memory and Strengths-based practice]

0905. B - Trauma-informed screening: Asking only what is needed, explaining why, and ensuring support is available if screening raises distress. / Stabilization: Building coping and safety supports before asking a client to engage in intensive trauma-focused work. [Concept: Trauma-informed screening and Stabilization]

0906. B - Re-traumatization prevention [Concept: Re-traumatization prevention]

0907. C - Psychological safety [Concept: Psychological safety]

0908. B - Window of tolerance: Noticing when arousal is too high or too low for reflective work and using regulation support first. / Grounding: Inviting a client to notice current sights, sounds, or physical contact with the room when feeling overwhelmed. [Concept: Window of tolerance and Grounding]

0909. C - Resilience [Concept: Resilience]

0910. D - Grounding [Concept: Grounding]

0911. C - Grounding: Present-focused strategies that help orient attention to immediate sensory or environmental cues. / Resilience: A dynamic process of adaptation supported by individual capacities, relationships, and resources amid adversity. [Concept: Grounding and Resilience]

0912. B - Trauma memory [Concept: Trauma memory]

0913. B - Grounding: Inviting a client to notice current sights, sounds, or physical contact with the room when feeling overwhelmed. / Trauma memory: Responding to a trauma reminder with curiosity and regulation support rather than assuming a uniform memory pattern. [Concept: Grounding and Trauma memory]

0914. B - Re-traumatization prevention: Explaining procedures, offering choices where possible, and avoiding unnecessary repeated retelling. / Strengths-based practice: Identifying what has helped the young person cope and incorporating those resources into planning. [Concept: Re-traumatization prevention and Strengths-based practice]

0915. B - Grounding: Present-focused strategies that help orient attention to immediate sensory or environmental cues. / Resilience: A dynamic process of adaptation supported by individual capacities, relationships, and resources amid adversity. [Concept: Grounding and Resilience]

0916. B - Psychological safety: Checking what helps a client feel sufficiently safe to participate and adjusting pace accordingly. / Re-traumatization prevention: Explaining procedures, offering choices where possible, and avoiding unnecessary repeated retelling. [Concept: Psychological safety and Re-traumatization prevention]

0917. D - A dynamic process of adaptation supported by individual capacities, relationships, and resources amid adversity. [Concept: Resilience]

0918. B - Trauma-informed screening: Sensitive inquiry about possible trauma exposure and impact with a clear purpose, privacy safeguards, and follow-up plan. / Resilience: A dynamic process of adaptation supported by individual capacities, relationships, and resources amid adversity. [Concept: Trauma-informed screening and Resilience]

0919. C - Trauma-informed approach [Concept: Trauma-informed approach]

0920. B - Psychological safety: A felt sense of emotional and interpersonal safety that supports participation without promising absence of distress. / Trauma memory: Memory processes that may be fragmented, sensory, or cue-linked after overwhelming experiences and vary across individuals. [Concept: Psychological safety and Trauma memory]

0921. A - Offering predictability and choice while avoiding unnecessary practices that may recreate powerlessness. [Concept: Trauma-informed approach]

0922. B - Trauma-informed approach: An organizational and clinical stance that recognizes trauma's possible effects and emphasizes safety, choice, collaboration, trust, and empowerment. / Re-traumatization prevention: Reducing avoidable practices that reproduce threat, coercion, or loss of control for people affected by trauma. [Concept: Trauma-informed approach and Re-traumatization prevention]

0923. A - Re-traumatization prevention [Concept: Re-traumatization prevention]

0924. A - Present-focused strategies that help orient attention to immediate sensory or environmental cues. [Concept: Grounding]

0925. D - Psychological safety [Concept: Psychological safety]

0926. D - Window of tolerance [Concept: Window of tolerance]

0927. B - Trauma-informed approach: An organizational and clinical stance that recognizes trauma's possible effects and emphasizes safety, choice, collaboration, trust, and empowerment. / Psychological safety: A felt sense of emotional and interpersonal safety that supports participation without promising absence of distress. [Concept: Trauma-informed approach and Psychological safety]

0928. B - Trauma-informed approach [Concept: Trauma-informed approach]

0929. B - Stabilization: Initial support focused on safety, coping, and emotional regulation before or alongside deeper trauma processing as clinically appropriate. / Strengths-based practice: An approach that recognizes existing capacities, relationships, cultural resources, and survival strategies alongside needs. [Concept: Stabilization and Strengths-based practice]

0930. B - Trauma-informed approach: An organizational and clinical stance that recognizes trauma's possible effects and emphasizes safety, choice, collaboration, trust, and empowerment. / Resilience: A dynamic process of adaptation supported by individual capacities, relationships, and resources amid adversity. [Concept: Trauma-informed approach and Resilience]

0931. C - Trauma memory [Concept: Trauma memory]

0932. B - Re-traumatization prevention [Concept: Re-traumatization prevention]

0933. D - Trauma-informed screening [Concept: Trauma-informed screening]

0934. C - An approach that recognizes existing capacities, relationships, cultural resources, and survival strategies alongside needs. [Concept: Strengths-based practice]

0935. B - Trauma memory [Concept: Trauma memory]

0936. C - Psychological safety [Concept: Psychological safety]

0937. B - Trauma-informed screening [Concept: Trauma-informed screening]

CAC.906 | Trauma-Informed Care Practices

QUESTION | CORRECT OPTION AND CONCEPT

0938. B - Re-traumatization prevention: Reducing avoidable practices that reproduce threat, coercion, or loss of control for people affected by trauma. / Stabilization: Initial support focused on safety, coping, and emotional regulation before or alongside deeper trauma processing as clinically appropriate. [Concept: Re-traumatization prevention and Stabilization]

0939. B - Stabilization [Concept: Stabilization]

0940. B - Psychological safety: Checking what helps a client feel sufficiently safe to participate and adjusting pace accordingly. / Trauma-informed screening: Asking only what is needed, explaining why, and ensuring support is available if screening raises distress. [Concept: Psychological safety and Trauma-informed screening]

0941. C - Explaining procedures, offering choices where possible, and avoiding unnecessary repeated retelling. [Concept: Re-traumatization prevention]

0942. C - Trauma-informed screening [Concept: Trauma-informed screening]

0943. A - Trauma-informed approach: An organizational and clinical stance that recognizes trauma's possible effects and emphasizes safety, choice, collaboration, trust, and empowerment. / Strengths-based practice: An approach that recognizes existing capacities, relationships, cultural resources, and survival strategies alongside needs. CAC.906 | Trauma-Informed Care Practices

QUESTION | CORRECT OPTION AND CONCEPT

0998. B - Trauma-informed approach [Concept: Trauma-informed approach]

0999. D - Strengths-based practice [Concept: Strengths-based practice]

1000. C - Offering predictability and choice while avoiding unnecessary practices that may recreate powerlessness. [Concept: Trauma-informed approach]

CAC.907 | Family Systems Theory

QUESTION | CORRECT OPTION AND CONCEPT

0001. D - Family life-cycle transition: Understanding conflict in light of a transition such as a child entering adolescence or leaving home. / Circular questioning: Asking one family member how another responds when a third person becomes distressed. [Concept: Family life-cycle transition and Circular questioning]

0002. A - Noticing that a family may return to familiar interaction patterns after an initial change. [Concept: Homeostasis]

0003. D - Differentiation of self: The capacity to maintain a sense of self while remaining emotionally connected to significant others. / Enmeshment: A pattern of diffuse boundaries and excessive emotional involvement that can restrict individual autonomy. [Concept: Differentiation of self and Enmeshment]

0004. A - Family life-cycle transition [Concept: Family life-cycle transition]

0005. B - Circular causality [Concept: Circular causality]

0006. C - Triangulation [Concept: Triangulation]

0007. A - Triangulation: Recognizing when a child is repeatedly recruited into managing conflict between caregivers. / Minuchin structural mapping: Mapping who aligns with whom and how boundaries operate during family interaction. [Concept: Triangulation and Minuchin structural mapping]

0008. A - Minuchin structural mapping: Mapping who aligns with whom and how boundaries operate during family interaction. / Circular questioning: Asking one family member how another responds when a third person becomes distressed. [Concept: Minuchin structural mapping and Circular questioning]

0009. B - Homeostasis [Concept: Homeostasis]

0010. D - Triangulation [Concept: Triangulation]

0011. C - Assessing whether role boundaries support appropriate caregiving and age-appropriate autonomy. [Concept: Boundary]

0012. C - Circular questioning [Concept: Circular questioning]

0013. B - Differentiation of self: The capacity to maintain a sense of self while remaining emotionally connected to significant others. / Minuchin structural mapping: A method for depicting family structure, subsystems, boundaries, and interaction patterns. [Concept: Differentiation of self and Minuchin structural mapping]

0014. B - Homeostasis [Concept: Homeostasis]

0015. B - Exploring whether closeness in a family leaves adequate room for developmentally appropriate independence. [Concept: Enmeshment]

0016. D - Circular causality: Mapping how one person's action and another's response repeatedly reinforce each other. / Triangulation: Recognizing when a child is repeatedly recruited into managing conflict between caregivers. [Concept: Circular causality and Triangulation]

0017. D - Homeostasis: Noticing that a family may return to familiar interaction patterns after an initial change. / Boundary: Assessing whether role boundaries support appropriate caregiving and age-appropriate autonomy. [Concept: Homeostasis and Boundary]

0018. B - Boundary: Assessing whether role boundaries support appropriate caregiving and age-appropriate autonomy. / Circular questioning: Asking one family member how another responds when a third person becomes distressed. [Concept: Boundary and Circular questioning]

0019. D - Exploring whether closeness in a family leaves adequate room for developmentally appropriate independence. [Concept: Enmeshment]

0020. A - Circular questioning [Concept: Circular questioning]

0021. C - Differentiation of self: Supporting a family member to express a view while staying engaged in the relationship. / Boundary: Assessing whether role boundaries support appropriate caregiving and age-appropriate autonomy. [Concept: Differentiation of self and Boundary]

0022. B - Triangulation: Recognizing when a child is repeatedly recruited into managing conflict between caregivers. / Enmeshment: Exploring whether closeness in a family leaves adequate room for developmentally appropriate independence. [Concept: Triangulation and Enmeshment]

0023. A - Subsystem: A smaller relational unit within a family system, such as a caregiver partnership or sibling group. / Boundary: A rule or pattern regulating contact and roles between family members or subsystems. [Concept: Subsystem and Boundary]

0024. B - Enmeshment [Concept: Enmeshment]

0025. A - Mapping how one person's action and another's response repeatedly reinforce each other. [Concept: Circular causality]

0026. A - Homeostasis: Noticing that a family may return to familiar interaction patterns after an initial change. / Subsystem: Considering how caregiver, sibling, and whole-family interactions may each have distinct patterns. [Concept: Homeostasis and Subsystem]

0027. C - Differentiation of self: Supporting a family member to express a view while staying engaged in the relationship. / Subsystem: Considering how caregiver, sibling, and whole-family interactions may each have distinct patterns. [Concept: Differentiation of self and Subsystem]

0028. A - Subsystem [Concept: Subsystem]

0029. D - Minuchin structural mapping [Concept: Minuchin structural mapping]

0030. A - Circular causality: A view of interaction in which each person's behavior both influences and is influenced by others over time. / Subsystem: A smaller relational unit within a family system, such as a caregiver partnership or sibling group. [Concept: Circular causality and Subsystem]

0031. B - Triangulation: Recognizing when a child is repeatedly recruited into managing conflict between caregivers. / Circular questioning: Asking one family member how another responds when a third person becomes distressed. [Concept: Triangulation and Circular questioning]

0032. A - Differentiation of self: Supporting a family member to express a view while staying engaged in the relationship. / Subsystem: Considering how caregiver, sibling, and whole-family interactions may each have distinct patterns. [Concept: Differentiation of self and Subsystem]

0033. D - Circular causality [Concept: Circular causality]

0034. D - Triangulation [Concept: Triangulation]

0035. A - Homeostasis [Concept: Homeostasis]

0036. B - Homeostasis: A system's tendency to preserve familiar patterns of interaction, including patterns that may be unhelpful. / Circular causality: A view of interaction in which each person's behavior both influences and is influenced by others over time. [Concept: Homeostasis and Circular causality]

0037. A - Asking one family member how another responds when a third person becomes distressed. [Concept: Circular questioning]

0038. C - Subsystem [Concept: Subsystem]

0039. B - Understanding conflict in light of a transition such as a child entering adolescence or leaving home. [Concept: Family life-cycle transition]

0040. C - Homeostasis [Concept: Homeostasis]

0041. D - Boundary: A rule or pattern regulating contact and roles between family members or subsystems. / Circular questioning: Questions that invite family members to describe differences and reciprocal patterns in relationships. [Concept: Boundary and Circular questioning]

0042. B - A method for depicting family structure, subsystems, boundaries, and interaction patterns. [Concept: Minuchin structural mapping]

0043. C - Family life-cycle transition [Concept: Family life-cycle transition]

0044. A - Circular causality: Mapping how one person's action and another's response repeatedly reinforce each other. / Boundary: Assessing whether role boundaries support appropriate caregiving and age-appropriate autonomy. [Concept: Circular causality and Boundary]

0045. B - Triangulation: A pattern in which tension between two people is managed by drawing a third person into the relationship. / Family life-cycle transition: A developmental change in family roles and tasks that may require the system to reorganize. [Concept: Triangulation and Family life-cycle transition]

0046. D - Subsystem: Considering how caregiver, sibling, and whole-family interactions may each have distinct patterns. / Family life-cycle transition: Understanding conflict in light of a transition such as a child entering adolescence or leaving home. [Concept: Subsystem and Family life-cycle transition]

0047. D - Boundary: A rule or pattern regulating contact and roles between family members or subsystems. / Enmeshment: A pattern of diffuse boundaries and excessive emotional involvement that can restrict individual autonomy. [Concept: Boundary and Enmeshment]

0048. C - Enmeshment [Concept: Enmeshment]

0049. A - Minuchin structural mapping [Concept: Minuchin structural mapping]

0050. A - Boundary: A rule or pattern regulating contact and roles between family members or subsystems. / Circular questioning: Questions that invite family members to describe differences and reciprocal patterns in relationships. [Concept: Boundary and Circular questioning]

0051. D - Family life-cycle transition [Concept: Family life-cycle transition]

0052. B - Homeostasis: A system's tendency to preserve familiar patterns of interaction, including patterns that may be unhelpful. / Circular questioning: Questions that invite family members to describe differences and reciprocal patterns in relationships. [Concept: Homeostasis and Circular questioning]

0053. B - Boundary [Concept: Boundary]

0054. A - Family life-cycle transition [Concept: Family life-cycle transition]

0055. C - Homeostasis [Concept: Homeostasis]

0056. C - Family life-cycle transition: A developmental change in family roles and tasks that may require the system to reorganize. / Circular questioning: Questions that invite family members to describe differences and reciprocal patterns in relationships. [Concept: Family life-cycle transition and Circular questioning]

0057. C - Enmeshment [Concept: Enmeshment]

0058. C - Triangulation: A pattern in which tension between two people is managed by drawing a third person into the relationship. / Enmeshment: A pattern of diffuse boundaries and excessive emotional involvement that can restrict individual autonomy. [Concept: Triangulation and Enmeshment]

CAC.907 | Family Systems Theory

QUESTION | CORRECT OPTION AND CONCEPT

0059. D - Circular causality: Mapping how one person's action and another's response repeatedly reinforce each other. / Subsystem: Considering how caregiver, sibling, and whole-family interactions may each have distinct patterns. [Concept: Circular causality and Subsystem]

0060. A - Enmeshment [Concept: Enmeshment]

0061. D - Asking one family member how another responds when a third person becomes distressed. [Concept: Circular questioning]

0062. B - Subsystem [Concept: Subsystem]

0063. [Concept: Triangulation and Circular questioning]

0077. A - Circular causality: A view of interaction in which each person's behavior both influences and is influenced by others over time. / Family life-cycle transition: A developmental change in family roles and tasks that may require the system to reorganize. [Concept: Circular causality and Family life-cycle transition]

0078. B - Homeostasis: Noticing that a family may return to familiar interaction patterns after an initial change. / Differentiation of self: Supporting a family member to express a view while staying engaged in the relationship. [Concept: Homeostasis and Differentiation of self]

0079. C - Circular causality: A view of interaction in which each person's behavior both influences and is influenced by others over time. / Enmeshment: A pattern of diffuse boundaries and excessive emotional involvement that can restrict individual autonomy. [Concept: Circular causality and Enmeshment]

0080. C - Homeostasis: Noticing that a family may return to familiar interaction patterns after an initial change. / Circular questioning: Asking one family member how another responds when a third person becomes distressed. [Concept: Homeostasis and Circular questioning]

0081. A - Enmeshment [Concept: Enmeshment]

0082. A - Minuchin structural mapping [Concept: Minuchin structural mapping]

0083. D - Circular causality [Concept: Circular causality]

0084. D - Mapping who aligns with whom and how boundaries operate during family interaction. [Concept: Minuchin structural mapping]

0085. B - Homeostasis: Noticing that a family may return to familiar interaction patterns after an initial change. / Subsystem: Considering how caregiver, sibling, and whole-family interactions may each have distinct patterns. [Concept: Homeostasis and Subsystem]

0086. C - Family life-cycle transition: Understanding conflict in light of a transition such as a child entering adolescence or leaving home. / Circular questioning: Asking one family member how another responds when a third person becomes distressed. [Concept: Family life-cycle transition and Circular questioning]

0087. B - Family life-cycle transition [Concept: Family life-cycle transition]

0088. C - Differentiation of self: The capacity to maintain a sense of self while remaining emotionally connected to significant others. / Boundary: A rule or pattern regulating contact and roles between family members or subsystems. [Concept: Differentiation of self and Boundary]

0089. D - Minuchin structural mapping [Concept: Minuchin structural mapping]

0090. B - Family life-cycle transition [Concept: Family life-cycle transition]

0091. D - Homeostasis: A system's tendency to preserve familiar patterns of interaction, including patterns that may be unhelpful. / Triangulation: A pattern in which tension between two people is managed by drawing a third person into the relationship. [Concept: Homeostasis and Triangulation]

0092. A - Subsystem: Considering how caregiver, sibling, and whole-family interactions may each have distinct patterns. / Triangulation: Recognizing when a child is repeatedly recruited into managing conflict between caregivers. [Concept: Subsystem and Triangulation]

0093. D - Circular causality [Concept: Circular causality]

0094. D - Enmeshment: Exploring whether closeness in a family leaves adequate room for developmentally appropriate independence. / Family life-cycle transition: Understanding conflict in light of a transition such as a child entering adolescence or leaving home. [Concept: Enmeshment and Family life-cycle transition]

0095. A - Differentiation of self [Concept: Differentiation of self]

0096. A - Considering how caregiver, sibling, and whole-family interactions may each have distinct patterns. [Concept: Subsystem]

0097. D - Minuchin structural mapping [Concept: Minuchin structural mapping]

0098. C - Homeostasis: Noticing that a family may return to familiar interaction patterns after an initial change. / Triangulation: Recognizing when a child is repeatedly recruited into managing conflict between caregivers. [Concept: Homeostasis and Triangulation]

0099. B - Subsystem [Concept: Subsystem]

0100. A - Homeostasis [Concept: Homeostasis]

0101. B - Homeostasis: Noticing that a family may return to familiar interaction patterns after an initial change. / Circular questioning: Asking one family member how another responds when a third person becomes distressed. [Concept: Homeostasis and Circular questioning]

0102. D - Differentiation of self: Supporting a family member to express a view while staying engaged in the relationship. / Boundary: Assessing whether role boundaries support appropriate caregiving and age-appropriate autonomy. [Concept: Differentiation of self and Boundary]

0103. C - Minuchin structural mapping: Mapping who aligns with whom and how boundaries operate during family interaction. / Family life-cycle transition: Understanding conflict in light of a transition such as a child entering adolescence or leaving home. [Concept: Minuchin structural mapping and Family life-cycle transition]

0104. D - Homeostasis [Concept: Homeostasis]

0105. B - Subsystem [Concept: Subsystem]

0106. B - Circular questioning [Concept: Circular questioning]

0107. B - Circular causality: A view of interaction in which each person's behavior both influences and is influenced by others over time. / Minuchin structural mapping: A method for depicting family structure, subsystems, boundaries, and interaction patterns. [Concept: Circular causality and Minuchin structural mapping]

0108. A - Enmeshment [Concept: Enmeshment]

0109. C - Boundary: A rule or pattern regulating contact and roles between family members or subsystems. / Circular questioning: Questions that invite family members to describe differences and reciprocal patterns in relationships. [Concept: Boundary and Circular questioning]

0110. D - Enmeshment [Concept: Enmeshment]

0111. A - Minuchin structural mapping [Concept: Minuchin structural mapping]

0112. A - Minuchin structural mapping [Concept: Minuchin structural mapping]

0113. C - Circular causality: Mapping how one person's action and another's response repeatedly reinforce each other. / Enmeshment: Exploring whether closeness in a family leaves adequate room for developmentally appropriate independence. [Concept: Circular causality and Enmeshment]

0114. D - Differentiation of self [Concept: Differentiation of self]

0115. A - Homeostasis: Noticing that a family may return to familiar interaction patterns after an initial change. / Circular causality: Mapping how one person's action and another's response repeatedly reinforce each other. [Concept: Homeostasis and Circular causality]

0116. B - A rule or pattern regulating contact and roles between family members or subsystems. [Concept: Boundary]

0117. C - Family life-cycle transition [Concept: Family life-cycle transition]

0118. A - Enmeshment [Concept: Enmeshment]

0119. B - Minuchin structural mapping [Concept: Minuchin structural mapping]

0120. C - Differentiation of self: The capacity to maintain a sense of self while remaining emotionally connected to significant others. / Boundary: A rule or pattern regulating contact and roles between family members or subsystems. [Concept: Differentiation of self and Boundary]

CAC.907 | Family Systems Theory

QUESTION | CORRECT OPTION AND CONCEPT

0121. D - Enmeshment: Exploring whether closeness in a family leaves adequate room for developmentally appropriate independence. / Circular questioning: Asking one family member how another responds when a third person becomes distressed. [Concept: Enmeshment and Circular questioning]

0122. A - Circular causality [Concept: Circular causality]

0123. D - Minuchin structural mapping: Mapping who aligns with whom and how boundaries operate during family interaction. / Family life-cycle transition: Understanding conflict in light of a transition such as a child entering adolescence or leaving home. [Concept: Minuchin structural mapping and Family life-cycle transition]

0124. D - Boundary: A rule or pattern regulating contact and roles between family members or subsystems. / Family life-cycle transition: A developmental change in family roles and tasks that may require the system to reorganize. [Concept: Boundary and Family life-cycle transition]

0125. A - Homeostasis [Concept: Homeostasis]

0126. B - Minuchin structural mapping [Concept: Minuchin structural mapping]

0127. C - Subsystem: Considering how caregiver, sibling, and whole-family interactions may each have distinct patterns. / Boundary: Assessing whether role boundaries support appropriate caregiving and age-appropriate autonomy. [Concept: Subsystem and Boundary]

0128. A - Family life-cycle transition [Concept: Family life-cycle transition]

0129. C - Subsystem: A smaller relational unit within a family system, such as a caregiver partnership or sibling group. / Family life-cycle transition: A developmental change in family roles and tasks that may require the system to reorganize. [Concept: Subsystem and Family life-cycle transition]

0130. D - Circular causality: A view of interaction in which each person's behavior both influences and is influenced by others over time. / Differentiation of self: The capacity to maintain a sense of self while remaining emotionally connected to significant others. [Concept: Circular causality and Differentiation of self]

0131. B - Differentiation of self: Supporting a family member to express a view while staying engaged in the relationship. / Boundary: Assessing whether role boundaries support appropriate caregiving and age-appropriate autonomy. [Concept: Differentiation of self and Boundary]

0132. C - A pattern in which tension between two people is managed by drawing a third person into the relationship. [Concept: Triangulation]

0133. A - Circular causality: A view of interaction in which each person's behavior both influences and is influenced by others over time. / Family life-cycle transition: A developmental change in family roles and tasks that may require the system to reorganize. [Concept: Circular causality and Family life-cycle transition]

0134. B - Homeostasis: A system's tendency to preserve familiar patterns of interaction, including patterns that may be unhelpful. / Minuchin structural mapping: A method for depicting family structure, subsystems, boundaries, and interaction patterns. [Concept: Homeostasis and Minuchin structural mapping]

0135. C - Circular questioning [Concept: Circular questioning]

0136. C - Triangulation: A pattern in which tension between two people is managed by drawing a third person into the relationship. / Minuchin structural mapping: A method for depicting family structure, subsystems, boundaries, and interaction patterns. [Concept: Triangulation and Minuchin structural mapping]

0137. B - Enmeshment [Concept: Enmeshment]

0138. B - Circular causality [Concept: Circular causality]

0139. A - Circular questioning [Concept: Circular questioning]

0140. A - Minuchin structural mapping [Concept: Minuchin structural mapping]

0141. B - Enmeshment: Exploring whether closeness in a family leaves adequate room for developmentally appropriate independence. / Family life-cycle transition: Understanding conflict in light of a transition such as a child entering adolescence or leaving home. [Concept: Enmeshment and Family life-cycle transition]

0142. C - Boundary [Concept: Boundary]

0143. A - Circular causality [Concept: Circular causality]

0144. C - Boundary [Concept: Boundary]

0145. C - Subsystem: Considering how caregiver, sibling, and whole-family interactions may each have distinct patterns. / Enmeshment: Exploring whether closeness in a family leaves adequate room for developmentally appropriate independence. [Concept: Subsystem and Enmeshment]

0146. D - Circular causality: A view of interaction in which each person's behavior both influences and is influenced by others over time. / Subsystem: A smaller relational unit within a family system, such as a caregiver partnership or sibling group. [Concept: Circular causality and Subsystem]

0147. A - Circular causality: Mapping how one person's action and another's response repeatedly reinforce each other. / Minuchin structural mapping: Mapping who aligns with whom and how boundaries operate during family interaction. [Concept: Circular causality and Minuchin structural mapping]

0148. B - Homeostasis: A system's tendency to preserve familiar patterns of interaction, including patterns that may be unhelpful. / Boundary: A rule or pattern regulating contact and roles between family members or subsystems. [Concept: Homeostasis and Boundary]

0149. C - Circular causality: A view of interaction in which each person's behavior both influences and is influenced by others over time. / Minuchin structural mapping: A method for depicting family structure, subsystems, boundaries, and interaction patterns. [Concept: Circular causality and Minuchin structural mapping]

0150. C - Triangulation [Concept: Triangulation]

0151. B - A rule or pattern regulating contact and roles between family members or subsystems. [Concept: Boundary]

0152. B - Circular questioning [Concept: Circular questioning]

0153. C - Enmeshment [Concept: Enmeshment]

0154. D - Boundary: Assessing whether role boundaries support appropriate caregiving and age-appropriate autonomy. / Triangulation: Recognizing when a child is repeatedly recruited into managing conflict between caregivers. [Concept: Boundary and Triangulation]

0155. D - Homeostasis: Noticing that a family may return to familiar interaction patterns after an initial change. / Boundary: Assessing whether role boundaries support appropriate caregiving and age-appropriate autonomy. [Concept: Homeostasis and Boundary]

0156. B - Circular causality: A view of interaction in which each person's behavior both influences and is influenced by others over time. / Differentiation of self: The capacity to maintain a sense of self while remaining emotionally connected to significant others. [Concept: Circular causality and Differentiation of self]

0157. D - Subsystem [Concept: Subsystem]

0158. C - Subsystem [Concept: Subsystem]

0159. D - Questions that invite family members to describe differences and reciprocal patterns in relationships. [Concept: Circular questioning]

0160. D - Differentiation of self: Supporting a family member to express a view while staying engaged in the relationship. / Circular questioning: Asking one family member how another responds when a third person becomes distressed. [Concept: Differentiation of self and Circular questioning]

0161. B - Family life-cycle transition [Concept: Family life-cycle transition]

0162. C - Circular causality: A view of interaction in which each person's behavior both influences and is influenced by others over time. / Triangulation: A pattern in which tension between two people is managed by drawing a third person into the relationship. [Concept: Circular causality and Triangulation]

0163. C - Circular causality [Concept: Circular causality]

0164. B - Differentiation of self: Supporting a family member to express a view while staying engaged in the relationship. / Boundary: Assessing whether role boundaries support appropriate caregiving and age-appropriate autonomy. [Concept: Differentiation of self and Boundary]

0165. C - Subsystem [Concept: Subsystem]

0166. A - Differentiation of self [Concept: Differentiation of self]

0167. D - Noticing that a family may return to familiar interaction patterns after an initial change. [Concept: Homeostasis]

0168. D - Family life-cycle transition: Understanding conflict in light of a transition such as a child entering adolescence or leaving home. / Circular questioning: Asking one family member how another responds when a third person becomes distressed. [Concept: Family life-cycle transition and Circular questioning]

0169. A - Boundary: Assessing whether role boundaries support appropriate caregiving and age-appropriate autonomy. / Circular questioning: Asking one family member how another responds when a third person becomes distressed. [Concept: Boundary and Circular questioning]

0170. B - Triangulation [Concept: Triangulation]

0171. C - Exploring whether closeness in a family leaves adequate room for developmentally appropriate independence. [Concept: Enmeshment]

0172. C - Triangulation: Recognizing when a child is repeatedly recruited into managing conflict between caregivers. / Enmeshment: Exploring whether closeness in a family leaves adequate room for developmentally appropriate independence. [Concept: Triangulation and Enmeshment]

0173. B - Family life-cycle transition [Concept: Family life-cycle transition]

0174. A - Supporting a family member to express a view while staying engaged in the relationship. [Concept: Differentiation of self]

0175. B - Subsystem [Concept: Subsystem]

0176. D - A developmental change in family roles and tasks that may require the system to reorganize. [Concept: Family life-cycle transition]

0177. D - Circular causality: Mapping how one person's action and another's response repeatedly reinforce each other. / Enmeshment: Exploring whether closeness in a family leaves adequate room for developmentally appropriate independence. [Concept: Circular causality and Enmeshment]

0178. B - Triangulation [Concept: Triangulation]

0179. A - A pattern of diffuse boundaries and excessive emotional involvement that can restrict individual autonomy. [Concept: Enmeshment]

0180. D - Family life-cycle transition [Concept: Family life-cycle transition]

0181. B - Boundary [Concept: Boundary]

CAC.907 | Family Systems Theory

QUESTION | CORRECT OPTION AND CONCEPT

0182. A - Subsystem: A smaller relational unit within a family system, such as a caregiver partnership or sibling group. / Enmeshment: A pattern of diffuse boundaries and excessive emotional involvement that can restrict individual autonomy. [Concept: Subsystem and Enmeshment]

0183. C - Subsystem: A smaller relational unit within a family system, such as a caregiver partnership or sibling group. / Family life-cycle transition: A developmental change in family roles and tasks that may require the system to reorganize. [Concept: Subsystem and Family life-cycle transition]

0184. A - Differentiation of self [Concept: Differentiation of self]

0185. B - A rule or pattern regulating contact and roles between family members or subsystems. [Concept: Boundary]

0186. B - Boundary [Concept: Boundary]

0187. B - Subsystem: A smaller relational unit within a family system, such as a caregiver partnership or sibling group. / Minuchin structural mapping: A method for depicting family structure, subsystems, boundaries, and interaction patterns. [Concept: Subsystem and Minuchin structural mapping]

0188. A - Differentiation of self [Concept: Differentiation of self]

0189. C - Mapping how one person's action and another's response repeatedly reinforce each other. [Concept: Circular causality]

0190. B - Differentiation of self: Supporting a family member to express a view while staying engaged in the relationship. / Triangulation: Recognizing when a child is repeatedly recruited into managing conflict between caregivers. [Concept: Differentiation of self and Triangulation]

0191. D - Circular questioning [Concept: Circular questioning]

0192. A - Family life-cycle transition [Concept: Family life-cycle transition]

0193. B - Circular causality: A view of interaction in which each person's behavior both influences and is influenced by others over time. / Differentiation of self: The capacity to maintain a sense of self while remaining emotionally connected to significant others. [Concept: Circular causality and Differentiation of self]

0194. C - Homeostasis [Concept: Homeostasis]

0195. B - Homeostasis: A system's tendency to preserve familiar patterns of interaction, including patterns that may be unhelpful. / Boundary: A rule or pattern regulating contact and roles between family members or subsystems. [Concept: Homeostasis and Boundary]

0196. B - Homeostasis [Concept: Homeostasis]

0197. A - Subsystem [Concept: Subsystem]

0198. B - Differentiation of self: The capacity to maintain a sense of self while remaining emotionally connected to significant others. / Triangulation: A pattern in which tension between two people is managed by drawing a third person into the relationship. [Concept: Differentiation of self and Triangulation]

0199. B - Subsystem: Considering how caregiver, sibling, and whole-family interactions may each have distinct patterns. / Circular questioning: Asking one family member how another responds when a third person becomes distressed. [Concept: Subsystem and Circular questioning]

0200. C - Circular questioning [Concept: Circular questioning]

0201. B - Triangulation [Concept: Triangulation]

0202. A - Differentiation of self: Supporting a family member to express a view while staying engaged in the relationship. / Triangulation: Recognizing when a child is repeatedly recruited into managing conflict between caregivers. [Concept: Differentiation of self and Triangulation]

0203. A - Homeostasis: A system's tendency to preserve familiar patterns of interaction, including patterns that may be unhelpful. / Enmeshment: A pattern of diffuse boundaries and excessive emotional involvement that can restrict individual autonomy. [Concept: Homeostasis and Enmeshment]

0204. D - Triangulation [Concept: Triangulation]

0205. A - Triangulation: Recognizing when a child is repeatedly recruited into managing conflict between caregivers. / Circular questioning: Asking one family member how another responds when a third person becomes distressed. [Concept: Triangulation and Circular questioning]

0206. B - Circular causality: A view of interaction in which each person's behavior both influences and is influenced by others over time. / Minuchin structural mapping: A method for depicting family structure, subsystems, boundaries, and interaction patterns. [Concept: Circular causality and Minuchin structural mapping]

0207. A - Differentiation of self: Supporting a family member to express a view while staying engaged in the relationship. / Circular questioning: Asking one family member how another responds when a third person becomes distressed. [Concept: Differentiation of self and Circular questioning]

0208. A - Minuchin structural mapping [Concept: Minuchin structural mapping]

0209. A - Enmeshment: A pattern of diffuse boundaries and excessive emotional involvement that can restrict individual autonomy. / Circular questioning: Questions that invite family members to describe differences and reciprocal patterns in relationships. [Concept: Enmeshment and Circular questioning]

0210. B - Differentiation of self [Concept: Differentiation of self]

0211. B - Circular causality [Concept: Circular causality]

0212. A - Homeostasis: A system's tendency to preserve familiar patterns of interaction, including patterns that may be unhelpful. / Subsystem: A smaller relational unit within a family system, such as a caregiver partnership or sibling group. [Concept: Homeostasis and Subsystem]

0213. C - Circular questioning [Concept: Circular questioning]

0214. C - Minuchin structural mapping [Concept: Minuchin structural mapping]

0215. D - Differentiation of self [Concept: Differentiation of self]

0216. C - Differentiation of self: Supporting a family member to express a view while staying engaged in the relationship. / Subsystem: Considering how caregiver, sibling, and whole-family interactions may each have distinct patterns. [Concept: Differentiation of self and Subsystem]

0217. B - Homeostasis [Concept: Homeostasis]

0218. C - A pattern of diffuse boundaries and excessive emotional involvement that can restrict individual autonomy. [Concept: Enmeshment]

0219. C - Subsystem: Considering how caregiver, sibling, and whole-family interactions may each have distinct patterns. / Enmeshment: Exploring whether closeness in a family leaves adequate room for developmentally appropriate independence. [Concept: Subsystem and Enmeshment]

0220. B - Boundary [Concept: Boundary]

0221. C - Family life-cycle transition [Concept: Family life-cycle transition]

0222. D - Differentiation of self: Supporting a family member to express a view while staying engaged in the relationship. / Enmeshment: Exploring whether closeness in a family leaves adequate room for developmentally appropriate independence. [Concept: Differentiation of self and Enmeshment]

0223. D - Differentiation of self: The capacity to maintain a sense of self while remaining emotionally connected to significant others. / Triangulation: A pattern in which tension between two people is managed by drawing a third person into the relationship. [Concept: Differentiation of self and Triangulation]

0224. C - Circular causality: Mapping how one person's action and another's response repeatedly reinforce each other. / Circular questioning: Asking one family member how another responds when a third person becomes distressed. [Concept: Circular causality and Circular questioning]

0225. D - Homeostasis: Noticing that a family may return to familiar interaction patterns after an initial change. / Enmeshment: Exploring whether closeness in a family leaves adequate room for developmentally appropriate independence. [Concept: Homeostasis and Enmeshment]

0226. B - Triangulation [Concept: Triangulation]

0227. B - Homeostasis [Concept: Homeostasis]

0228. B - Circular causality: Mapping how one person's action and another's response repeatedly reinforce each other. / Boundary: Assessing whether role boundaries support appropriate caregiving and age-appropriate autonomy. [Concept: Circular causality and Boundary]

0229. D - A pattern in which tension between two people is managed by drawing a third person into the relationship. [Concept: Triangulation]

0230. D - Family life-cycle transition [Concept: Family life-cycle transition]

0231. B - Circular questioning [Concept: Circular questioning]

0232. A - Minuchin structural mapping: A method for depicting family structure, subsystems, boundaries, and interaction patterns. / Family life-cycle transition: A developmental change in family roles and tasks that may require the system to reorganize. [Concept: Minuchin structural mapping and Family life-cycle transition]

0233. A - Circular causality [Concept: Circular causality]

0234. C - Boundary: A rule or pattern regulating contact and roles between family members or subsystems. / Enmeshment: A pattern of diffuse boundaries and excessive emotional involvement that can restrict individual autonomy. [Concept: Boundary and Enmeshment]

0235. D - Boundary: A rule or pattern regulating contact and roles between family members or subsystems. / Minuchin structural mapping: A method for depicting family structure, subsystems, boundaries, and interaction patterns. [Concept: Boundary and Minuchin structural mapping]

0236. A - Circular questioning [Concept: Circular questioning]

0237. D - Subsystem: A smaller relational unit within a family system, such as a caregiver partnership or sibling group. / Family life-cycle transition: A developmental change in family roles and tasks that may require the system to reorganize. [Concept: Subsystem and Family life-cycle transition]

0238. D - Boundary [Concept: Boundary]

0239. B - Boundary: Assessing whether role boundaries support appropriate caregiving and age-appropriate autonomy. / Family life-cycle transition: Understanding conflict in light of a transition such as a child entering adolescence or leaving home. [Concept: Boundary and Family life-cycle transition]

0240. D - Differentiation of self [Concept: Differentiation of self]

0241. A - Minuchin structural mapping [Concept: Minuchin structural mapping]

0242. A - Homeostasis [Concept: Homeostasis]

CAC.907 | Family Systems Theory

QUESTION | CORRECT OPTION AND CONCEPT

0243. B - Boundary: Assessing whether role boundaries support appropriate caregiving and age-appropriate autonomy. / Triangulation: Recognizing when a child is repeatedly recruited into managing conflict between caregivers. [Concept: Boundary and Triangulation]

0244. D - Boundary [Concept: Boundary]

0245. C - Exploring whether closeness in a family leaves adequate room for developmentally appropriate independence. [Concept: Enmeshment]

0246. B - Subsystem [Concept: Subsystem]

0247. C - A smaller relational unit within a family system, such as a caregiver partnership or sibling group. [Concept: Subsystem]

0248. D - Circular causality: Mapping how one person's action and another's response repeatedly reinforce each other. / Circular questioning: Asking one family member how another responds when a third person becomes distressed. [Concept: Circular causality and Circular questioning]

0249. D - Triangulation [Concept: Triangulation]

0250. B - Circular questioning [Concept: Circular questioning]

0251. B - Circular questioning [Concept: Circular questioning]

0252. A - Circular causality: A view of interaction in which each person's behavior both influences and is influenced by others over time. / Subsystem: A smaller relational unit within a family system, such as a caregiver partnership or sibling group. [Concept: Circular causality and Subsystem]

0253. C - Homeostasis: A system's tendency to preserve familiar patterns of interaction, including patterns that may be unhelpful. / Minuchin structural mapping: A method for depicting family structure, subsystems, boundaries, and interaction patterns. [Concept: Homeostasis and Minuchin structural mapping]

0254. D - Enmeshment [Concept: Enmeshment]

0255. D - Subsystem: Considering how caregiver, sibling, and whole-family interactions may each have distinct patterns. / Minuchin structural mapping: Mapping who aligns with whom and how boundaries operate during family interaction. [Concept: Subsystem and Minuchin structural mapping]

0256. B - Circular causality: Mapping how one person's action and another's response repeatedly reinforce each other. / Triangulation: Recognizing when a child is repeatedly recruited into managing conflict between caregivers. [Concept: Circular causality and Triangulation]

0257. B - Circular causality: A view of interaction in which each person's behavior both influences and is influenced by others over time. / Subsystem: A smaller relational unit within a family system, such as a caregiver partnership or sibling group. [Concept: Circular causality and Subsystem]

0258. C - Minuchin structural mapping: A method for depicting family structure, subsystems, boundaries, and interaction patterns. / Circular questioning: Questions that invite family members to describe differences and reciprocal patterns in relationships. [Concept: Minuchin structural mapping and Circular questioning]

0259. A - Circular questioning [Concept: Circular questioning]

0260. C - Circular causality: Mapping how one person's action and another's response repeatedly reinforce each other. / Subsystem: Considering how caregiver, sibling, and whole-family interactions may each have distinct patterns. [Concept: Circular causality and Subsystem]

0261. D - A smaller relational unit within a family system, such as a caregiver partnership or sibling group. [Concept: Subsystem]

0262. D - Homeostasis: Noticing that a family may return to familiar interaction patterns after an initial change. / Circular causality: Mapping how one person's action and another's response repeatedly reinforce each other. [Concept: Homeostasis and Circular causality]

0263. B - Minuchin structural mapping [Concept: Minuchin structural mapping]

0264. D - Homeostasis: Noticing that a family may return to familiar interaction patterns after an initial change. / Subsystem: Considering how caregiver, sibling, and whole-family interactions may each have distinct patterns. [Concept: Homeostasis and Subsystem]

0265. A - Triangulation [Concept: Triangulation]

0266. B - Homeostasis: Noticing that a family may return to familiar interaction patterns after an initial change. / Family life-cycle transition: Understanding conflict in light of a transition such as a child entering adolescence or leaving home. [Concept: Homeostasis and Family life-cycle transition]

0267. A - Circular causality: Mapping how one person's action and another's response repeatedly reinforce each other. / Family life-cycle transition: Understanding conflict in light of a transition such as a child entering adolescence or leaving home. [Concept: Circular causality and Family life-cycle transition]

0268. C - Homeostasis: Noticing that a family may return to familiar interaction patterns after an initial change. / Boundary: Assessing whether role boundaries support appropriate caregiving and age-appropriate autonomy. [Concept: Homeostasis and Boundary]

0269. C - Minuchin structural mapping: Mapping who aligns with whom and how boundaries operate during family interaction. / Family life-cycle transition: Understanding conflict in light of a transition such as a child entering adolescence or leaving home. [Concept: Minuchin structural mapping and Family life-cycle transition]

0270. D - Differentiation of self: The capacity to maintain a sense of self while remaining emotionally connected to significant others. / Family life-cycle transition: A developmental change in family roles and tasks that may require the system to reorganize. [Concept: Differentiation of self and Family life-cycle transition]

0271. D - Circular questioning [Concept: Circular questioning]

0272. A - Circular causality: A view of interaction in which each person's behavior both influences and is influenced by others over time. / Triangulation: A pattern in which tension between two people is managed by drawing a third person into the relationship. [Concept: Circular causality and Triangulation]

0273. D - Subsystem: A smaller relational unit within a family system, such as a caregiver partnership or sibling group. / Circular questioning: Questions that invite family members to describe differences and reciprocal patterns in relationships. [Concept: Subsystem and Circular questioning]

0274. B - Boundary [Concept: Boundary]

0275. A - Minuchin structural mapping [Concept: Minuchin structural mapping]

0276. C - Differentiation of self: The capacity to maintain a sense of self while remaining emotionally connected to significant others. / Minuchin structural mapping: A method for depicting family structure, subsystems, boundaries, and interaction patterns. [Concept: Differentiation of self and Minuchin structural mapping]

0277. D - Differentiation of self [Concept: Differentiation of self]

0278. B - Family life-cycle transition: Understanding conflict in light of a transition such as a child entering adolescence or leaving home. / Circular questioning: Asking one family member how another responds when a third person becomes distressed. [Concept: Family life-cycle transition and Circular questioning]

0279. B - Triangulation [Concept: Triangulation]

0280. D - A developmental change in family roles and tasks that may require the system to reorganize. [Concept: Family life-cycle transition]

0281. A - Homeostasis: Noticing that a family may return to familiar interaction patterns after an initial change. / Differentiation of self: Supporting a family member to express a view while staying engaged in the relationship. [Concept: Homeostasis and Differentiation of self]

0282. D - Subsystem [Concept: Subsystem]

0283. B - Homeostasis [Concept: Homeostasis]

0284. D - Circular questioning [Concept: Circular questioning]

0285. B - A pattern in which tension between two people is managed by drawing a third person into the relationship. [Concept: Triangulation]

0286. C - The capacity to maintain a sense of self while remaining emotionally connected to significant others. [Concept: Differentiation of self]

0287. C - Circular causality: A view of interaction in which each person's behavior both influences and is influenced by others over time. / Minuchin structural mapping: A method for depicting family structure, subsystems, boundaries, and interaction patterns. [Concept: Circular causality and Minuchin structural mapping]

0288. C - Noticing that a family may return to familiar interaction patterns after an initial change. [Concept: Homeostasis]

0289. C - Homeostasis: A system's tendency to preserve familiar patterns of interaction, including patterns that may be unhelpful. / Triangulation: A pattern in which tension between two people is managed by drawing a third person into the relationship. [Concept: Homeostasis and Triangulation]

0290. C - Subsystem: Considering how caregiver, sibling, and whole-family interactions may each have distinct patterns. / Triangulation: Recognizing when a child is repeatedly recruited into managing conflict between caregivers. [Concept: Subsystem and Triangulation]

0291. C - Circular questioning [Concept: Circular questioning]

0292. A - Homeostasis: Noticing that a family may return to familiar interaction patterns after an initial change. / Subsystem: Considering how caregiver, sibling, and whole-family interactions may each have distinct patterns. [Concept: Homeostasis and Subsystem]

0293. C - Boundary [Concept: Boundary]

0294. D - Homeostasis: A system's tendency to preserve familiar patterns of interaction, including patterns that may be unhelpful. / Boundary: A rule or pattern regulating contact and roles between family members or subsystems. [Concept: Homeostasis and Boundary]

0295. C - Homeostasis: Noticing that a family may return to familiar interaction patterns after an initial change. / Circular causality: Mapping how one person's action and another's response repeatedly reinforce each other. [Concept: Homeostasis and Circular causality]

0296. C - Differentiation of self [Concept: Differentiation of self]

0297. C - Triangulation [Concept: Triangulation]

0298. C - Boundary [Concept: Boundary]

0299. B - Boundary: A rule or pattern regulating contact and roles between family members or subsystems. / Circular questioning: Questions that invite family members to describe differences and reciprocal patterns in relationships. [Concept: Boundary and Circular questioning]

CAC.907 | Family Systems Theory

QUESTION | CORRECT OPTION AND CONCEPT

0300. A - A system's tendency to preserve familiar patterns of interaction, including patterns that may be unhelpful. [Concept: Homeostasis]

0301. C - Family life-cycle transition: A developmental change in family roles and tasks that may require the system to reorganize. / Circular questioning: Questions that invite family members to describe differences and reciprocal patterns in relationships. [Concept: Family life-cycle transition and Circular questioning]

0302. D - Triangulation: A pattern in which tension between two people is managed by drawing a third person into the relationship. / Enmeshment: A pattern of diffuse boundaries and excessive emotional involvement that can restrict individual autonomy. [Concept: Triangulation and Enmeshment]

0303. A - Differentiation of self [Concept: Differentiation of self]

0304. A - Subsystem: A smaller relational unit within a family system, such as a caregiver partnership or sibling group. / Triangulation: A pattern in which tension between two people is managed by drawing a third person into the relationship. [Concept: Subsystem and Triangulation]

0305. A - Minuchin structural mapping [Concept: Minuchin structural mapping]

0306. A - Subsystem: Considering how caregiver, sibling, and whole-family interactions may each have distinct patterns. / Triangulation: Recognizing when a child is repeatedly recruited into managing conflict between caregivers. [Concept: Subsystem and Triangulation]

0307. A - Triangulation [Concept: Triangulation]

0308. B - Subsystem: Considering how caregiver, sibling, and whole-family interactions may each have distinct patterns. / Family life-cycle transition: Understanding conflict in light of a transition such as a child entering adolescence or leaving home. [Concept: Subsystem and Family life-cycle transition]

0309. A - Circular causality: Mapping how one person's action and another's response repeatedly reinforce each other. / Family life-cycle transition: Understanding conflict in light of a transition such as a child entering adolescence or leaving home. [Concept: Circular causality and Family life-cycle transition]

0310. D - Triangulation: Recognizing when a child is repeatedly recruited into managing conflict between caregivers. / Enmeshment: Exploring whether closeness in a family leaves adequate room for developmentally appropriate independence. [Concept: Triangulation and Enmeshment]

0311. C - Triangulation: A pattern in which tension between two people is managed by drawing a third person into the relationship. / Circular questioning: Questions that invite family members to describe differences and reciprocal patterns in relationships. [Concept: Triangulation and Circular questioning]

0312. C - A view of interaction in which each person's behavior both influences and is influenced by others over time. [Concept: Circular causality]

0313. B - Circular causality: A view of interaction in which each person's behavior both influences and is influenced by others over time. / Circular questioning: Questions that invite family members to describe differences and reciprocal patterns in relationships. [Concept: Circular causality and Circular questioning]

0314. C - Circular causality: A view of interaction in which each person's behavior both influences and is influenced by others over time. / Circular questioning: Questions that invite family members to describe differences and reciprocal patterns in relationships. [Concept: Circular causality and Circular questioning]

0315. C - Differentiation of self: The capacity to maintain a sense of self while remaining emotionally connected to significant others. / Subsystem: A smaller relational unit within a family system, such as a caregiver partnership or sibling group. [Concept: Differentiation of self and Subsystem]

0316. D - Differentiation of self: Supporting a family member to express a view while staying engaged in the relationship. / Minuchin structural mapping: Mapping who aligns with whom and how boundaries operate during family interaction. [Concept: Differentiation of self and Minuchin structural mapping]

0317. C - Triangulation: Recognizing when a child is repeatedly recruited into managing conflict between caregivers. / Minuchin structural mapping: Mapping who aligns with whom and how boundaries operate during family interaction. [Concept: Triangulation and Minuchin structural mapping]

0318. C - Differentiation of self [Concept: Differentiation of self]

0319. D - Boundary: A rule or pattern regulating contact and roles between family members or subsystems. / Triangulation: A pattern in which tension between two people is managed by drawing a third person into the relationship. [Concept: Boundary and Triangulation]

0320. B - Subsystem: A smaller relational unit within a family system, such as a caregiver partnership or sibling group. / Boundary: A rule or pattern regulating contact and roles between family members or subsystems. [Concept: Subsystem and Boundary]

0321. D - Homeostasis: A system's tendency to preserve familiar patterns of interaction, including patterns that may be unhelpful. / Family life-cycle transition: A developmental change in family roles and tasks that may require the system to reorganize. [Concept: Homeostasis and Family life-cycle transition]

0322. C - Circular causality: Mapping how one person's action and another's response repeatedly reinforce each other. / Differentiation of self: Supporting a family member to express a view while staying engaged in the relationship. [Concept: Circular causality and Differentiation of self]

0323. C - Differentiation of self: The capacity to maintain a sense of self while remaining emotionally connected to significant others. / Circular questioning: Questions that invite family members to describe differences and reciprocal patterns in relationships. [Concept: Differentiation of self and Circular questioning]

0324. B - Homeostasis: A system's tendency to preserve familiar patterns of interaction, including patterns that may be unhelpful. / Differentiation of self: The capacity to maintain a sense of self while remaining emotionally connected to significant others. [Concept: Homeostasis and Differentiation of self]

0325. B - A system's tendency to preserve familiar patterns of interaction, including patterns that may be unhelpful. [Concept: Homeostasis]

0326. C - Homeostasis: A system's tendency to preserve familiar patterns of interaction, including patterns that may be unhelpful. / Minuchin structural mapping: A method for depicting family structure, subsystems, boundaries, and interaction patterns. [Concept: Homeostasis and Minuchin structural mapping]

0327. C - Boundary: Assessing whether role boundaries support appropriate caregiving and age-appropriate autonomy. / Minuchin structural mapping: Mapping who aligns with whom and how boundaries operate during family interaction. [Concept: Boundary and Minuchin structural mapping]

0328. C - Circular causality [Concept: Circular causality]

0329. A - Boundary: Assessing whether role boundaries support appropriate caregiving and age-appropriate autonomy. / Minuchin structural mapping: Mapping who aligns with whom and how boundaries operate during family interaction. [Concept: Boundary and Minuchin structural mapping]

0330. D - Boundary [Concept: Boundary]

0331. A - Homeostasis: A system's tendency to preserve familiar patterns of interaction, including patterns that may be unhelpful. / Triangulation: A pattern in which tension between two people is managed by drawing a third person into the relationship. [Concept: Homeostasis and Triangulation]

0332. C - Boundary: Assessing whether role boundaries support appropriate caregiving and age-appropriate autonomy. / Enmeshment: Exploring whether closeness in a family leaves adequate room for developmentally appropriate independence. [Concept: Boundary and Enmeshment]

0333. B - Subsystem [Concept: Subsystem]

0334. D - Minuchin structural mapping [Concept: Minuchin structural mapping]

0335. A - Family life-cycle transition [Concept: Family life-cycle transition]

0336. D - Boundary: Assessing whether role boundaries support appropriate caregiving and age-appropriate autonomy. / Minuchin structural mapping: Mapping who aligns with whom and how boundaries operate during family interaction. [Concept: Boundary and Minuchin structural mapping]

0337. B - Homeostasis: Noticing that a family may return to familiar interaction patterns after an initial change. / Circular causality: Mapping how one person's action and another's response repeatedly reinforce each other. [Concept: Homeostasis and Circular causality]

0338. A - Minuchin structural mapping: A method for depicting family structure, subsystems, boundaries, and interaction patterns. / Circular questioning: Questions that invite family members to describe differences and reciprocal patterns in relationships. [Concept: Minuchin structural mapping and Circular questioning]

0339. C - Homeostasis: A system's tendency to preserve familiar patterns of interaction, including patterns that may be unhelpful. / Circular questioning: Questions that invite family members to describe differences and reciprocal patterns in relationships. [Concept: Homeostasis and Circular questioning]

0340. D - Enmeshment: A pattern of diffuse boundaries and excessive emotional involvement that can restrict individual autonomy. / Minuchin structural mapping: A method for depicting family structure, subsystems, boundaries, and interaction patterns. [Concept: Enmeshment and Minuchin structural mapping]

0341. A - A pattern in which tension between two people is managed by drawing a third person into the relationship. [Concept: Triangulation]

0342. D - Boundary: Assessing whether role boundaries support appropriate caregiving and age-appropriate autonomy. / Circular questioning: Asking one family member how another responds when a third person becomes distressed. [Concept: Boundary and Circular questioning]

0343. C - Triangulation: Recognizing when a child is repeatedly recruited into managing conflict between caregivers. / Family life-cycle transition: Understanding conflict in light of a transition such as a child entering adolescence or leaving home. [Concept: Triangulation and Family life-cycle transition]

0344. A - Circular causality [Concept: Circular causality]

0345. C - Triangulation: Recognizing when a child is repeatedly recruited into managing conflict between caregivers. / Family life-cycle transition: Understanding conflict in light of a transition such as a child entering adolescence or leaving home. [Concept: Triangulation and Family life-cycle transition]

0346. D - Homeostasis: Noticing that a family may return to familiar interaction patterns after an initial change. / Triangulation: Recognizing when a child is repeatedly recruited into managing conflict between caregivers. [Concept: Homeostasis and Triangulation]

0347. D - Circular causality [Concept: Circular causality]

CAC.907 | Family Systems Theory

QUESTION | CORRECT OPTION AND CONCEPT

0348. A - Circular causality: Mapping how one person's action and another's response repeatedly reinforce each other. / Triangulation: Recognizing when a child is repeatedly recruited into managing conflict between caregivers. [Concept: Circular causality and Triangulation]

0349. D - Triangulation: A pattern in which tension between two people is managed by drawing a third person into the relationship. / Family life-cycle transition: A developmental change in family roles and tasks that may require the system to reorganize. [Concept: Triangulation and Family life-cycle transition]

0350. D - Circular questioning [Concept: Circular questioning]

0351. A - Homeostasis: A system's tendency to preserve familiar patterns of interaction, including patterns that may be unhelpful. / Triangulation: A pattern in which tension between two people is managed by drawing a third person into the relationship. [Concept: Homeostasis and Triangulation]

0352. C - Enmeshment [Concept: Enmeshment]

0353. A - Homeostasis: A system's tendency to preserve familiar patterns of interaction, including patterns that may be unhelpful. / Minuchin structural mapping: A method for depicting family structure, subsystems, boundaries, and interaction patterns. [Concept: Homeostasis and Minuchin structural mapping]

0354. C - Circular questioning [Concept: Circular questioning]

0355. C - Differentiation of self [Concept: Differentiation of self]

0356. B - Subsystem [Concept: Subsystem]

0357. B - Boundary: Assessing whether role boundaries support appropriate caregiving and age-appropriate autonomy. / Family life-cycle transition: Understanding conflict in light of a transition such as a child entering adolescence or leaving home. [Concept: Boundary and Family life-cycle transition]

0358. A - Triangulation [Concept: Triangulation]

0359. C - Differentiation of self [Concept: Differentiation of self]

0360. B - Differentiation of self: Supporting a family member to express a view while staying engaged in the relationship. / Triangulation: Recognizing when a child is repeatedly recruited into managing conflict between caregivers. [Concept: Differentiation of self and Triangulation]

0361. C - Differentiation of self [Concept: Differentiation of self]

0362. D - Subsystem [Concept: Subsystem]

0363. B - Family life-cycle transition [Concept: Family life-cycle transition]

0364. B - Subsystem: A smaller relational unit within a family system, such as a caregiver partnership or sibling group. / Family life-cycle transition: A developmental change in family roles and tasks that may require the system to reorganize. [Concept: Subsystem and Family life-cycle transition]

0365. D - Circular questioning [Concept: Circular questioning]

0366. A - Subsystem: Considering how caregiver, sibling, and whole-family interactions may each have distinct patterns. / Boundary: Assessing whether role boundaries support appropriate caregiving and age-appropriate autonomy. [Concept: Subsystem and Boundary]

0367. A - Boundary [Concept: Boundary]

0368. C - Asking one family member how another responds when a third person becomes distressed. [Concept: Circular questioning]

0369. D - Differentiation of self [Concept: Differentiation of self]

0370. A - Considering how caregiver, sibling, and whole-family interactions may each have distinct patterns. [Concept: Subsystem]

0371. A - Circular questioning [Concept: Circular questioning]

0372. D - Enmeshment [Concept: Enmeshment]

0373. B - Circular questioning [Concept: Circular questioning]

0374. D - Differentiation of self: Supporting a family member to express a view while staying engaged in the relationship. / Family life-cycle transition: Understanding conflict in light of a transition such as a child entering adolescence or leaving home. [Concept: Differentiation of self and Family life-cycle transition]

0375. B - Triangulation: Recognizing when a child is repeatedly recruited into managing conflict between caregivers. / Enmeshment: Exploring whether closeness in a family leaves adequate room for developmentally appropriate independence. [Concept: Triangulation and Enmeshment]

0376. B - Circular causality: Mapping how one person's action and another's response repeatedly reinforce each other. / Minuchin structural mapping: Mapping who aligns with whom and how boundaries operate during family interaction. [Concept: Circular causality and Minuchin structural mapping]

0377. A - Triangulation [Concept: Triangulation]

0378. A - Enmeshment: A pattern of diffuse boundaries and excessive emotional involvement that can restrict individual autonomy. / Family life-cycle transition: A developmental change in family roles and tasks that may require the system to reorganize. [Concept: Enmeshment and Family life-cycle transition]

0379. A - Circular causality [Concept: Circular causality]

0380. A - Triangulation: Recognizing when a child is repeatedly recruited into managing conflict between caregivers. / Circular questioning: Asking one family member how another responds when a third person becomes distressed. [Concept: Triangulation and Circular questioning]

0381. D - Differentiation of self [Concept: Differentiation of self]

0382. C - Subsystem [Concept: Subsystem]

0383. D - Minuchin structural mapping [Concept: Minuchin structural mapping]

0384. C - Homeostasis: Noticing that a family may return to familiar interaction patterns after an initial change. / Enmeshment: Exploring whether closeness in a family leaves adequate room for developmentally appropriate independence. [Concept: Homeostasis and Enmeshment]

0385. 0437. A - Triangulation [Concept: Triangulation]

0438. D - Subsystem [Concept: Subsystem]

0439. D - Boundary: Assessing whether role boundaries support appropriate caregiving and age-appropriate autonomy. / Circular questioning: Asking one family member how another responds when a third person becomes distressed. [Concept: Boundary and Circular questioning]

0440. D - Family life-cycle transition [Concept: Family life-cycle transition]

0441. B - Family life-cycle transition [Concept: Family life-cycle transition]

0442. B - Mapping who aligns with whom and how boundaries operate during family interaction. [Concept: Minuchin structural mapping]

0443. C - Enmeshment: Exploring whether closeness in a family leaves adequate room for developmentally appropriate independence. / Family life-cycle transition: Understanding conflict in light of a transition such as a child entering adolescence or leaving home. [Concept: Enmeshment and Family life-cycle transition]

0444. B - Boundary [Concept: Boundary]

0445. B - Differentiation of self [Concept: Differentiation of self]

0446. D - Subsystem [Concept: Subsystem]

0447. A - Triangulation: A pattern in which tension between two people is managed by drawing a third person into the relationship. / Enmeshment: A pattern of diffuse boundaries and excessive emotional involvement that can restrict individual autonomy. [Concept: Triangulation and Enmeshment]

0448. B - Circular questioning [Concept: Circular questioning]

0449. D - A view of interaction in which each person’s behavior both influences and is influenced by others over time. [Concept: Circular causality]

0450. B - Circular causality: Mapping how one person’s action and another’s response repeatedly reinforce each other. / Boundary: Assessing whether role boundaries support appropriate caregiving and age-appropriate autonomy. [Concept: Circular causality and Boundary]

0451. B - Enmeshment [Concept: Enmeshment]

0452. D - Subsystem: Considering how caregiver, sibling, and whole-family interactions may each have distinct patterns. / Circular questioning: Asking one family member how another responds when a third person becomes distressed. [Concept: Subsystem and Circular questioning]

0453. D - Subsystem [Concept: Subsystem]

0454. C - Enmeshment: Exploring whether closeness in a family leaves adequate room for developmentally appropriate independence. / Minuchin structural mapping: Mapping who aligns with whom and how boundaries operate during family interaction. [Concept: Enmeshment and Minuchin structural mapping]

0455. B - Circular causality [Concept: Circular causality]

0456. A - Differentiation of self: The capacity to maintain a sense of self while remaining emotionally connected to significant others. / Triangulation: A pattern in which tension between two people is managed by drawing a third person into the relationship. [Concept: Differentiation of self and Triangulation]

0457. D - Homeostasis [Concept: Homeostasis]

0458. C - Boundary: A rule or pattern regulating contact and roles between family members or subsystems. / Triangulation: A pattern in which tension between two people is managed by drawing a third person into the relationship. [Concept: Boundary and Triangulation]

0459. D - Circular causality [Concept: Circular causality]

0460. D - Differentiation of self: The capacity to maintain a sense of self while remaining emotionally connected to significant others. / Circular questioning: Questions that invite family members to describe differences and reciprocal patterns in relationships. [Concept: Differentiation of self and Circular questioning]

0461. D - Boundary [Concept: Boundary]

0462. B - Homeostasis [Concept: Homeostasis]

0463. A - Subsystem: Considering how caregiver, sibling, and whole-family interactions may each have distinct patterns. / Boundary: Assessing whether role boundaries support appropriate caregiving and age-appropriate autonomy. [Concept: Subsystem and Boundary]

0464. D - Boundary: Assessing whether role boundaries support appropriate caregiving and age-appropriate autonomy. / Enmeshment: Exploring whether closeness in a family leaves adequate room for developmentally appropriate independence. [Concept: Boundary and Enmeshment]

0465. D - Homeostasis [Concept: Homeostasis]

0466. C - A system’s tendency to preserve familiar patterns of interaction, including patterns that may be unhelpful. [Concept: Homeostasis]

0467. C - Triangulation [Concept: Triangulation]

0468. C - Boundary [Concept: Boundary]

0469. B - Triangulation: A pattern in which tension between two people is managed by drawing a third person into the relationship. / Family life-cycle transition: A developmental change in family roles and tasks that may require the system to reorganize. [Concept: Triangulation and Family life-cycle transition]

0470. C - Homeostasis [Concept: Homeostasis]

0471. A - Circular causality [Concept: Circular causality]

0472. B - Differentiation of self [Concept: Differentiation of self]

0473. B - Enmeshment [Concept: Enmeshment]

0474. C - Enmeshment [Concept: Enmeshment]

0475. B - Minuchin structural mapping: A method for depicting family structure, subsystems, boundaries, and interaction patterns. / Family life-cycle transition: A developmental change in family roles and tasks that may require the system to reorganize. [Concept: Minuchin structural mapping and Family life-cycle transition]

0476. B - Circular questioning [Concept: Circular questioning]

0477. C - Triangulation: Recognizing when a child is repeatedly recruited into managing conflict between caregivers. / Circular questioning: Asking one family member how another responds when a third person becomes distressed. [Concept: Triangulation and Circular questioning]

0478. C - Minuchin structural mapping [Concept: Minuchin structural mapping]

0479. C - Subsystem: Considering how caregiver, sibling, and whole-family interactions may each have distinct patterns. / Family life-cycle transition: Understanding conflict in light of a transition such as a child entering adolescence or leaving home. [Concept: Subsystem and Family life-cycle transition]

CAC.907 | Family Systems Theory

QUESTION | CORRECT OPTION AND CONCEPT

0480. B - Subsystem: A smaller relational unit within a family system, such as a caregiver partnership or sibling group. / Enmeshment: A pattern of diffuse boundaries and excessive emotional involvement that can restrict individual autonomy. [Concept: Subsystem and Enmeshment]

0481. B - Enmeshment: Exploring whether closeness in a family leaves adequate room for developmentally appropriate independence. / Circular questioning: Asking one family member how another responds when a third person becomes distressed. [Concept: Enmeshment and Circular questioning]

0482. D - A smaller relational unit within a family system, such as a caregiver partnership or sibling group. [Concept: Subsystem]

0483. B - Family life-cycle transition [Concept: Family life-cycle transition]

0484. D - Subsystem: A smaller relational unit within a family system, such as a caregiver partnership or sibling group. / Circular questioning: Questions that invite family members to describe differences and reciprocal patterns in relationships. [Concept: Subsystem and Circular questioning]

0485. B - Circular causality: Mapping how one person's action and another's response repeatedly reinforce each other. / Family life-cycle transition: Understanding conflict in light of a transition such as a child entering adolescence or leaving home. [Concept: Circular causality and Family life-cycle transition]

0486. D - Circular questioning [Concept: Circular questioning]

0487. B - Minuchin structural mapping [Concept: Minuchin structural mapping]

0488. C - Homeostasis: A system's tendency to preserve familiar patterns of interaction, including patterns that may be unhelpful. / Differentiation of self: The capacity to maintain a sense of self while remaining emotionally connected to significant others. [Concept: Homeostasis and Differentiation of self]

0489. C - Circular questioning [Concept: Circular questioning]

0490. C - Boundary: Assessing whether role boundaries support appropriate caregiving and age-appropriate autonomy. / Circular questioning: Asking one family member how another responds when a third person becomes distressed. [Concept: Boundary and Circular questioning]

0491. C - Differentiation of self [Concept: Differentiation of self]

0492. B - Triangulation: A pattern in which tension between two people is managed by drawing a third person into the relationship. / Enmeshment: A pattern of diffuse boundaries and excessive emotional involvement that can restrict individual autonomy. [Concept: Triangulation and Enmeshment]

0493. D - Subsystem: A smaller relational unit within a family system, such as a caregiver partnership or sibling group. / Minuchin structural mapping: A method for depicting family structure, subsystems, boundaries, and interaction patterns. [Concept: Subsystem and Minuchin structural mapping]

0494. A - Homeostasis [Concept: Homeostasis]

0495. A - Circular causality: A view of interaction in which each person's behavior both influences and is influenced by others over time. / Minuchin structural mapping: A method for depicting family structure, subsystems, boundaries, and interaction patterns. [Concept: Circular causality and Minuchin structural mapping]

0496. B - Enmeshment: Exploring whether closeness in a family leaves adequate room for developmentally appropriate independence. / Family life-cycle transition: Understanding conflict in light of a transition such as a child entering adolescence or leaving home. [Concept: Enmeshment and Family life-cycle transition]

0497. D - Circular questioning [Concept: Circular questioning]

0498. D - Questions that invite family members to describe differences and reciprocal patterns in relationships. [Concept: Circular questioning]

0499. C - Differentiation of self [Concept: Differentiation of self]

0500. D - Subsystem [Concept: Subsystem]

0501. C - Family life-cycle transition [Concept: Family life-cycle transition]

0502. C - Enmeshment [Concept: Enmeshment]

0503. B - Circular questioning [Concept: Circular questioning]

0504. D - Boundary: Assessing whether role boundaries support appropriate caregiving and age-appropriate autonomy. / Triangulation: Recognizing when a child is repeatedly recruited into managing conflict between caregivers. [Concept: Boundary and Triangulation]

0505. D - Enmeshment [Concept: Enmeshment]

0506. D - Homeostasis: A system's tendency to preserve familiar patterns of interaction, including patterns that may be unhelpful. / Circular causality: A view of interaction in which each person's behavior both influences and is influenced by others over time. [Concept: Homeostasis and Circular causality]

0507. D - A pattern of diffuse boundaries and excessive emotional involvement that can restrict individual autonomy. [Concept: Enmeshment]

0508. C - Boundary [Concept: Boundary]

0509. C - Circular questioning [Concept: Circular questioning]

0510. A - Minuchin structural mapping: Mapping who aligns with whom and how boundaries operate during family interaction. / Circular questioning: Asking one family member how another responds when a third person becomes distressed. [Concept: Minuchin structural mapping and Circular questioning]

0511. A - Differentiation of self [Concept: Differentiation of self]

0512. B - Boundary [Concept: Boundary]

0513. A - Boundary [Concept: Boundary]

0514. A - The capacity to maintain a sense of self while remaining emotionally connected to significant others. [Concept: Differentiation of self]

0515. B - Triangulation [Concept: Triangulation]

0516. C - Circular causality [Concept: Circular causality]

0517. B - Enmeshment: Exploring whether closeness in a family leaves adequate room for developmentally appropriate independence. / Circular questioning: Asking one family member how another responds when a third person becomes distressed. [Concept: Enmeshment and Circular questioning]

0518. D - Minuchin structural mapping [Concept: Minuchin structural mapping]

0519. C - Enmeshment [Concept: Enmeshment]

0520. B - Homeostasis [Concept: Homeostasis]

0521. C - Differentiation of self: Supporting a family member to express a view while staying engaged in the relationship. / Family life-cycle transition: Understanding conflict in light of a transition such as a child entering adolescence or leaving home. [Concept: Differentiation of self and Family life-cycle transition]

0522. A - Homeostasis: A system's tendency to preserve familiar patterns of interaction, including patterns that may be unhelpful. / Family life-cycle transition: A developmental change in family roles and tasks that may require the system to reorganize. [Concept: Homeostasis and Family life-cycle transition]

0523. D - Minuchin structural mapping [Concept: Minuchin structural mapping]

0524. A - Minuchin structural mapping [Concept: Minuchin structural mapping]

0525. C - Homeostasis: A system's tendency to preserve familiar patterns of interaction, including patterns that may be unhelpful. / Triangulation: A pattern in which tension between two people is managed by drawing a third person into the relationship. [Concept: Homeostasis and Triangulation]

0526. D - Differentiation of self: Supporting a family member to express a view while staying engaged in the relationship. / Subsystem: Considering how caregiver, sibling, and whole-family interactions may each have distinct patterns. [Concept: Differentiation of self and Subsystem]

0527. A - Circular questioning [Concept: Circular questioning]

0528. A - Circular questioning [Concept: Circular questioning]

0529. B - Family life-cycle transition [Concept: Family life-cycle transition]

0530. B - Homeostasis: A system's tendency to preserve familiar patterns of interaction, including patterns that may be unhelpful. / Minuchin structural mapping: A method for depicting family structure, subsystems, boundaries, and interaction patterns. [Concept: Homeostasis and Minuchin structural mapping]

0531. A - Boundary [Concept: Boundary]

0532. B - Circular causality: Mapping how one person's action and another's response repeatedly reinforce each other. / Minuchin structural mapping: Mapping who aligns with whom and how boundaries operate during family interaction. [Concept: Circular causality and Minuchin structural mapping]

0533. B - Homeostasis: Noticing that a family may return to familiar interaction patterns after an initial change. / Triangulation: Recognizing when a child is repeatedly recruited into managing conflict between caregivers. [Concept: Homeostasis and Triangulation]

0534. A - Noticing that a family may return to familiar interaction patterns after an initial change. [Concept: Homeostasis]

0535. D - Subsystem [Concept: Subsystem]

0536. C - Boundary: A rule or pattern regulating contact and roles between family members or subsystems. / Enmeshment: A pattern of diffuse boundaries and excessive emotional involvement that can restrict individual autonomy. [Concept: Boundary and Enmeshment]

0537. A - Enmeshment: A pattern of diffuse boundaries and excessive emotional involvement that can restrict individual autonomy. / Minuchin structural mapping: A method for depicting family structure, subsystems, boundaries, and interaction patterns. [Concept: Enmeshment and Minuchin structural mapping]

0538. B - Minuchin structural mapping: Mapping who aligns with whom and how boundaries operate during family interaction. / Family life-cycle transition: Understanding conflict in light of a transition such as a child entering adolescence or leaving home. [Concept: Minuchin structural mapping and Family life-cycle transition]

0539. B - Differentiation of self: Supporting a family member to express a view while staying engaged in the relationship. / Family life-cycle transition: Understanding conflict in light of a transition such as a child entering adolescence or leaving home. [Concept: Differentiation of self and Family life-cycle transition]

0540. A - Circular questioning [Concept: Circular questioning]

0541. B - Subsystem [Concept: Subsystem]

0542. A - Circular causality [Concept: Circular causality]

0543. C - Differentiation of self: The capacity to maintain a sense of self while remaining emotionally connected to significant others. / Boundary: A rule or pattern regulating contact and roles between family members or subsystems. [Concept: Differentiation of self and Boundary]

CAC.907 | Family Systems Theory

QUESTION | CORRECT OPTION AND CONCEPT

0544. C - Differentiation of self: Supporting a family member to express a view while staying engaged in the relationship. / Minuchin structural mapping: Mapping who aligns with whom and how boundaries operate during family interaction. [Concept: Differentiation of self and Minuchin structural mapping]

0545. D - Family life-cycle transition [Concept: Family life-cycle transition]

0546. C - Minuchin structural mapping [Concept: Minuchin structural mapping]

0547. A - Homeostasis [Concept: Homeostasis]

0548. D - Homeostasis [Concept: Homeostasis]

0549. A - Minuchin structural mapping [Concept: Minuchin structural mapping]

0550. A - Subsystem: Considering how caregiver, sibling, and whole-family interactions may each have distinct patterns. / Minuchin structural mapping: Mapping who aligns with whom and how boundaries operate during family interaction. [Concept: Subsystem and Minuchin structural mapping]

0551. C - Circular causality: Mapping how one person's action and another's response repeatedly reinforce each other. / Family life-cycle transition: Understanding conflict in light of a transition such as a child entering adolescence or leaving home. [Concept: Circular causality and Family life-cycle transition]

0552. B - Subsystem: A smaller relational unit within a family system, such as a caregiver partnership or sibling group. / Circular questioning: Questions that invite family members to describe differences and reciprocal patterns in relationships. [Concept: Subsystem and Circular questioning]

0553. C - Subsystem: A smaller relational unit within a family system, such as a caregiver partnership or sibling group. / Minuchin structural mapping: A method for depicting family structure, subsystems, boundaries, and interaction patterns. [Concept: Subsystem and Minuchin structural mapping]

0554. A - Minuchin structural mapping: Mapping who aligns with whom and how boundaries operate during family interaction. / Family life-cycle transition: Understanding conflict in light of a transition such as a child entering adolescence or leaving home. [Concept: Minuchin structural mapping and Family life-cycle transition]

0555. C - Enmeshment: A pattern of diffuse boundaries and excessive emotional involvement that can restrict individual autonomy. / Circular questioning: Questions that invite family members to describe differences and reciprocal patterns in relationships. [Concept: Enmeshment and Circular questioning]

0556. B - Boundary: A rule or pattern regulating contact and roles between family members or subsystems. / Family life-cycle transition: A developmental change in family roles and tasks that may require the system to reorganize. [Concept: Boundary and Family life-cycle transition]

0557. C - Triangulation [Concept: Triangulation]

0558. D - Differentiation of self: The capacity to maintain a sense of self while remaining emotionally connected to significant others. / Circular questioning: Questions that invite family members to describe differences and reciprocal patterns in relationships. [Concept: Differentiation of self and Circular questioning]

0559. B - A method for depicting family structure, subsystems, boundaries, and interaction patterns. [Concept: Minuchin structural mapping]

0560. A - Circular questioning [Concept: Circular questioning]

0561. D - Boundary [Concept: Boundary]

0562. D - Circular causality: Mapping how one person's action and another's response repeatedly reinforce each other. / Triangulation: Recognizing when a child is repeatedly recruited into managing conflict between caregivers. [Concept: Circular causality and Triangulation]

0563. D - Subsystem [Concept: Subsystem]

0564. A - Differentiation of self: The capacity to maintain a sense of self while remaining emotionally connected to significant others. / Family life-cycle transition: A developmental change in family roles and tasks that may require the system to reorganize. [Concept: Differentiation of self and Family life-cycle transition]

0565. C - Homeostasis [Concept: Homeostasis]

0566. A - A pattern of diffuse boundaries and excessive emotional involvement that can restrict individual autonomy. [Concept: Enmeshment]

0567. A - Boundary [Concept: Boundary]

0568. B - Homeostasis: A system's tendency to preserve familiar patterns of interaction, including patterns that may be unhelpful. / Boundary: A rule or pattern regulating contact and roles between family members or subsystems. [Concept: Homeostasis and Boundary]

0569. D - Minuchin structural mapping [Concept: Minuchin structural mapping]

0570. B - Minuchin structural mapping: A method for depicting family structure, subsystems, boundaries, and interaction patterns. / Family life-cycle transition: A developmental change in family roles and tasks that may require the system to reorganize. [Concept: Minuchin structural mapping and Family life-cycle transition]

0571. A - Minuchin structural mapping: Mapping who aligns with whom and how boundaries operate during family interaction. / Circular questioning: Asking one family member how another responds when a third person becomes distressed. [Concept: Minuchin structural mapping and Circular questioning]

0572. B - Boundary [Concept: Boundary]

0573. D - Enmeshment [Concept: Enmeshment]

0574. C - Mapping how one person's action and another's response repeatedly reinforce each other. [Concept: Circular causality]

0575. A - Boundary [Concept: Boundary]

0576. D - Homeostasis: Noticing that a family may return to familiar interaction patterns after an initial change. / Enmeshment: Exploring whether closeness in a family leaves adequate room for developmentally appropriate independence. [Concept: Homeostasis and Enmeshment]

0577. D - Triangulation: A pattern in which tension between two people is managed by drawing a third person into the relationship. / Family life-cycle transition: A developmental change in family roles and tasks that may require the system to reorganize. [Concept: Triangulation and Family life-cycle transition]

0578. B - Enmeshment [Concept: Enmeshment]

0579. D - Subsystem: Considering how caregiver, sibling, and whole-family interactions may each have distinct patterns. / Circular questioning: Asking one family member how another responds when a third person becomes distressed. [Concept: Subsystem and Circular questioning]

0580. B - Homeostasis: A system's tendency to preserve familiar patterns of interaction, including patterns that may be unhelpful. / Circular causality: A view of interaction in which each person's behavior both influences and is influenced by others over time. [Concept: Homeostasis and Circular causality]

0581. A - Subsystem: Considering how caregiver, sibling, and whole-family interactions may each have distinct patterns. / Minuchin structural mapping: Mapping who aligns with whom and how boundaries operate during family interaction. [Concept: Subsystem and Minuchin structural mapping]

0582. B - Triangulation: Recognizing when a child is repeatedly recruited into managing conflict between caregivers. / Enmeshment: Exploring whether closeness in a family leaves adequate room for developmentally appropriate independence. [Concept: Triangulation and Enmeshment]

0583. B - Circular causality [Concept: Circular causality]

0584. A - Boundary: A rule or pattern regulating contact and roles between family members or subsystems. / Minuchin structural mapping: A method for depicting family structure, subsystems, boundaries, and interaction patterns. [Concept: Boundary and Minuchin structural mapping]

0585. D - Circular causality: Mapping how one person's action and another's response repeatedly reinforce each other. / Subsystem: Considering how caregiver, sibling, and whole-family interactions may each have distinct patterns. [Concept: Circular causality and Subsystem]

0586. A - Family life-cycle transition [Concept: Family life-cycle transition]

0587. D - Family life-cycle transition [Concept: Family life-cycle transition]

0588. D - Homeostasis: Noticing that a family may return to familiar interaction patterns after an initial change. / Minuchin structural mapping: Mapping who aligns with whom and how boundaries operate during family interaction. [Concept: Homeostasis and Minuchin structural mapping]

0589. C - Circular causality [Concept: Circular causality]

0590. D - Differentiation of self: The capacity to maintain a sense of self while remaining emotionally connected to significant others. / Minuchin structural mapping: A method for depicting family structure, subsystems, boundaries, and interaction patterns. [Concept: Differentiation of self and Minuchin structural mapping]

0591. A - Enmeshment: Exploring whether closeness in a family leaves adequate room for developmentally appropriate independence. / Minuchin structural mapping: Mapping who aligns with whom and how boundaries operate during family interaction. [Concept: Enmeshment and Minuchin structural mapping]

0592. D - Enmeshment [Concept: Enmeshment]

0593. C - Subsystem [Concept: Subsystem]

0594. A - Homeostasis: Noticing that a family may return to familiar interaction patterns after an initial change. / Minuchin structural mapping: Mapping who aligns with whom and how boundaries operate during family interaction. [Concept: Homeostasis and Minuchin structural mapping]

0595. D - Circular causality [Concept: Circular causality]

0596. D - Enmeshment: A pattern of diffuse boundaries and excessive emotional involvement that can restrict individual autonomy. / Circular questioning: Questions that invite family members to describe differences and reciprocal patterns in relationships. [Concept: Enmeshment and Circular questioning]

0597. D - Questions that invite family members to describe differences and reciprocal patterns in relationships. [Concept: Circular questioning]

0598. C - Homeostasis: Noticing that a family may return to familiar interaction patterns after an initial change. / Circular questioning: Asking one family member how another responds when a third person becomes distressed. [Concept: Homeostasis and Circular questioning]

0599. C - Circular questioning [Concept: Circular questioning]

0600. B - Differentiation of self: The capacity to maintain a sense of self while remaining emotionally connected to significant others. / Enmeshment: A pattern of diffuse boundaries and excessive emotional involvement that can restrict individual autonomy. [Concept: Differentiation of self and Enmeshment]

CAC.907 | Family Systems Theory

QUESTION | CORRECT OPTION AND CONCEPT

0601. C - Minuchin structural mapping: A method for depicting family structure, subsystems, boundaries, and interaction patterns. / Family life-cycle transition: A developmental change in family roles and tasks that may require the system to reorganize. [Concept: Minuchin structural mapping and Family life-cycle transition]

0602. D - Triangulation [Concept: Triangulation]

0603. D - Differentiation of self: Supporting a family member to express a view while staying engaged in the relationship. / Subsystem: Considering how caregiver, sibling, and whole-family interactions may each have distinct patterns. [Concept: Differentiation of self and Subsystem]

0604. B - Differentiation of self: Supporting a family member to express a view while staying engaged in the relationship. / Enmeshment: Exploring whether closeness in a family leaves adequate room for developmentally appropriate independence. [Concept: Differentiation of self and Enmeshment]

0605. D - Homeostasis [Concept: Homeostasis]

0606. D - Boundary [Concept: Boundary]

0607. D - Circular causality: Mapping how one person's action and another's response repeatedly reinforce each other. / Boundary: Assessing whether role boundaries support appropriate caregiving and age-appropriate autonomy. [Concept: Circular causality and Boundary]

0608. B - Subsystem [Concept: Subsystem]

0609. B - Boundary: A rule or pattern regulating contact and roles between family members or subsystems. / Minuchin structural mapping: A method for depicting family structure, subsystems, boundaries, and interaction patterns. [Concept: Boundary and Minuchin structural mapping]

0610. B - Circular causality [Concept: Circular causality]

0611. A - Homeostasis [Concept: Homeostasis]

0612. A - Boundary: A rule or pattern regulating contact and roles between family members or subsystems. / Family life-cycle transition: A developmental change in family roles and tasks that may require the system to reorganize. [Concept: Boundary and Family life-cycle transition]

0613. B - Subsystem: A smaller relational unit within a family system, such as a caregiver partnership or sibling group. / Boundary: A rule or pattern regulating contact and roles between family members or subsystems. [Concept: Subsystem and Boundary]

0614. A - Enmeshment [Concept: Enmeshment]

0615. C - Circular causality: Mapping how one person's action and another's response repeatedly reinforce each other. / Enmeshment: Exploring whether closeness in a family leaves adequate room for developmentally appropriate independence. [Concept: Circular causality and Enmeshment]

0616. D - Differentiation of self [Concept: Differentiation of self]

0617. A - Boundary: A rule or pattern regulating contact and roles between family members or subsystems. / Enmeshment: A pattern of diffuse boundaries and excessive emotional involvement that can restrict individual autonomy. [Concept: Boundary and Enmeshment]

0618. A - Subsystem: Considering how caregiver, sibling, and whole-family interactions may each have distinct patterns. / Enmeshment: Exploring whether closeness in a family leaves adequate room for developmentally appropriate independence. [Concept: Subsystem and Enmeshment]

0619. B - Circular questioning [Concept: Circular questioning]

0620. B - Triangulation [Concept: Triangulation]

0621. A - Subsystem: A smaller relational unit within a family system, such as a caregiver partnership or sibling group. / Circular questioning: Questions that invite family members to describe differences and reciprocal patterns in relationships. [Concept: Subsystem and Circular questioning]

0622. A - Differentiation of self: The capacity to maintain a sense of self while remaining emotionally connected to significant others. / Enmeshment: A pattern of diffuse boundaries and excessive emotional involvement that can restrict individual autonomy. [Concept: Differentiation of self and Enmeshment]

0623. D - Considering how caregiver, sibling, and whole-family interactions may each have distinct patterns. [Concept: Subsystem]

0624. C - Differentiation of self [Concept: Differentiation of self]

0625. B - Subsystem: Considering how caregiver, sibling, and whole-family interactions may each have distinct patterns. / Boundary: Assessing whether role boundaries support appropriate caregiving and age-appropriate autonomy. [Concept: Subsystem and Boundary]

0626. B - Homeostasis: Noticing that a family may return to familiar interaction patterns after an initial change. / Minuchin structural mapping: Mapping who aligns with whom and how boundaries operate during family interaction. [Concept: Homeostasis and Minuchin structural mapping]

0627. B - Homeostasis: Noticing that a family may return to familiar interaction patterns after an initial change. / Enmeshment: Exploring whether closeness in a family leaves adequate room for developmentally appropriate independence. [Concept: Homeostasis and Enmeshment]

0628. D - Recognizing when a child is repeatedly recruited into managing conflict between caregivers. [Concept: Triangulation]

0629. A - A view of interaction in which each person's behavior both influences and is influenced by others over time. [Concept: Circular causality]

0630. A - Homeostasis: Noticing that a family may return to familiar interaction patterns after an initial change. / Triangulation: Recognizing when a child is repeatedly recruited into managing conflict between caregivers. [Concept: Homeostasis and Triangulation]

0631. A - Triangulation: A pattern in which tension between two people is managed by drawing a third person into the relationship. / Circular questioning: Questions that invite family members to describe differences and reciprocal patterns in relationships. [Concept: Triangulation and Circular questioning]

0632. A - Minuchin structural mapping [Concept: Minuchin structural mapping]

0633. D - Family life-cycle transition [Concept: Family life-cycle transition]

0634. B - Circular causality [Concept: Circular causality]

0635. C - Differentiation of self: The capacity to maintain a sense of self while remaining emotionally connected to significant others. / Subsystem: A smaller relational unit within a family system, such as a caregiver partnership or sibling group. [Concept: Differentiation of self and Subsystem]

0636. D - Family life-cycle transition [Concept: Family life-cycle transition]

0637. D - Boundary [Concept: Boundary]

0638. A - Family life-cycle transition [Concept: Family life-cycle transition]

0639. B - Circular causality: Mapping how one person's action and another's response repeatedly reinforce each other. / Circular questioning: Asking one family member how another responds when a third person becomes distressed. [Concept: Circular causality and Circular questioning]

0640. D - Homeostasis: A system's tendency to preserve familiar patterns of interaction, including patterns that may be unhelpful. / Circular causality: A view of interaction in which each person's behavior both influences and is influenced by others over time. [Concept: Homeostasis and Circular causality]

0641. C - Enmeshment: Exploring whether closeness in a family leaves adequate room for developmentally appropriate independence. / Circular questioning: Asking one family member how another responds when a third person becomes distressed. [Concept: Enmeshment and Circular questioning]

0642. B - Triangulation [Concept: Triangulation]

0643. A - Family life-cycle transition [Concept: Family life-cycle transition]

0644. C - The capacity to maintain a sense of self while remaining emotionally connected to significant others. [Concept: Differentiation of self]

0645. A - Circular causality: Mapping how one person's action and another's response repeatedly reinforce each other. / Differentiation of self: Supporting a family member to express a view while staying engaged in the relationship. [Concept: Circular causality and Differentiation of self]

0646. C - Subsystem [Concept: Subsystem]

0647. B - Enmeshment [Concept: Enmeshment]

0648. D - Boundary: Assessing whether role boundaries support appropriate caregiving and age-appropriate autonomy. / Enmeshment: Exploring whether closeness in a family leaves adequate room for developmentally appropriate independence. [Concept: Boundary and Enmeshment]

0649. C - The capacity to maintain a sense of self while remaining emotionally connected to significant others. [Concept: Differentiation of self]

0650. D - Circular causality [Concept: Circular causality]

0651. C - Circular causality: Mapping how one person's action and another's response repeatedly reinforce each other. / Boundary: Assessing whether role boundaries support appropriate caregiving and age-appropriate autonomy. [Concept: Circular causality and Boundary]

0652. A - Boundary [Concept: Boundary]

0653. A - Homeostasis: A system's tendency to preserve familiar patterns of interaction, including patterns that may be unhelpful. / Enmeshment: A pattern of diffuse boundaries and excessive emotional involvement that can restrict individual autonomy. [Concept: Homeostasis and Enmeshment]

0654. A - Circular causality: A view of interaction in which each person's behavior both influences and is influenced by others over time. / Enmeshment: A pattern of diffuse boundaries and excessive emotional involvement that can restrict individual autonomy. [Concept: Circular causality and Enmeshment]

0655. D - Circular causality [Concept: Circular causality]

0656. B - Boundary: A rule or pattern regulating contact and roles between family members or subsystems. / Minuchin structural mapping: A method for depicting family structure, subsystems, boundaries, and interaction patterns. [Concept: Boundary and Minuchin structural mapping]

0657. B - Noticing that a family may return to familiar interaction patterns after an initial change. [Concept: Homeostasis]

0658. C - Boundary [Concept: Boundary]

0659. D - Differentiation of self: The capacity to maintain a sense of self while remaining emotionally connected to significant others. / Enmeshment: A pattern of diffuse boundaries and excessive emotional involvement that can restrict individual autonomy. [Concept: Differentiation of self and Enmeshment]

CAC.907 | Family Systems Theory

QUESTION | CORRECT OPTION AND CONCEPT

0660. D - Subsystem: A smaller relational unit within a family system, such as a caregiver partnership or sibling group. / Minuchin structural mapping: A method for depicting family structure, subsystems, boundaries, and interaction patterns. [Concept: Subsystem and Minuchin structural mapping]

0661. C - Homeostasis: A system's tendency to preserve familiar patterns of interaction, including patterns that may be unhelpful. / Boundary: A rule or pattern regulating contact and roles between family members or subsystems. [Concept: Homeostasis and Boundary]

0662. B - Homeostasis: A system's tendency to preserve familiar patterns of interaction, including patterns that may be unhelpful. / Subsystem: A smaller relational unit within a family system, such as a caregiver partnership or sibling group. [Concept: Homeostasis and Subsystem]

0663. B - Subsystem: A smaller relational unit within a family system, such as a caregiver partnership or sibling group. / Triangulation: A pattern in which tension between two people is managed by drawing a third person into the relationship. [Concept: Subsystem and Triangulation]

0664. B - Triangulation: A pattern in which tension between two people is managed by drawing a third person into the relationship. / Minuchin structural mapping: A method for depicting family structure, subsystems, boundaries, and interaction patterns. [Concept: Triangulation and Minuchin structural mapping]

0665. D - Enmeshment: A pattern of diffuse boundaries and excessive emotional involvement that can restrict individual autonomy. / Minuchin structural mapping: A method for depicting family structure, subsystems, boundaries, and interaction patterns. [Concept: Enmeshment and Minuchin structural mapping]

0666. D - Minuchin structural mapping: A method for depicting family structure, subsystems, boundaries, and interaction patterns. / Circular questioning: Questions that invite family members to describe differences and reciprocal patterns in relationships. [Concept: Minuchin structural mapping and Circular questioning]

0667. C - Circular causality: A view of interaction in which each person's behavior both influences and is influenced by others over time. / Differentiation of self: The capacity to maintain a sense of self while remaining emotionally connected to significant others. [Concept: Circular causality and Differentiation of self]

0668. C - Supporting a family member to express a view while staying engaged in the relationship. [Concept: Differentiation of self]

0669. B - Exploring whether closeness in a family leaves adequate room for developmentally appropriate independence. [Concept: Enmeshment]

0670. C - Homeostasis: Noticing that a family may return to familiar interaction patterns after an initial change. / Circular questioning: Asking one family member how another responds when a third person becomes distressed. [Concept: Homeostasis and Circular questioning]

0671. C - Differentiation of self: Supporting a family member to express a view while staying engaged in the relationship. / Circular questioning: Asking one family member how another responds when a third person becomes distressed. [Concept: Differentiation of self and Circular questioning]

0672. A - Circular questioning [Concept: Circular questioning]

0673. B - Enmeshment [Concept: Enmeshment]

0674. B - Subsystem [Concept: Subsystem]

0675. C - Triangulation [Concept: Triangulation]

0676. B - Circular causality [Concept: Circular causality]

0677. A - Subsystem: Considering how caregiver, sibling, and whole-family interactions may each have distinct patterns. / Circular questioning: Asking one family member how another responds when a third person becomes distressed. [Concept: Subsystem and Circular questioning]

0678. D - Enmeshment [Concept: Enmeshment]

0679. C - Circular causality: A view of interaction in which each person's behavior both influences and is influenced by others over time. / Boundary: A rule or pattern regulating contact and roles between family members or subsystems. [Concept: Circular causality and Boundary]

0680. B - Subsystem: Considering how caregiver, sibling, and whole-family interactions may each have distinct patterns. / Triangulation: Recognizing when a child is repeatedly recruited into managing conflict between caregivers. [Concept: Subsystem and Triangulation]

0681. C - Differentiation of self: The capacity to maintain a sense of self while remaining emotionally connected to significant others. / Subsystem: A smaller relational unit within a family system, such as a caregiver partnership or sibling group. [Concept: Differentiation of self and Subsystem]

0682. C - Homeostasis [Concept: Homeostasis]

0683. A - A developmental change in family roles and tasks that may require the system to reorganize. [Concept: Family life-cycle transition]

0684. A - Differentiation of self [Concept: Differentiation of self]

0685. C - Family life-cycle transition [Concept: Family life-cycle transition]

0686. D - Circular questioning [Concept: Circular questioning]

0687. D - Subsystem: Considering how caregiver, sibling, and whole-family interactions may each have distinct patterns. / Minuchin structural mapping: Mapping who aligns with whom and how boundaries operate during family interaction. [Concept: Subsystem and Minuchin structural mapping]

0688. D - Homeostasis [Concept: Homeostasis]

0689. D - Enmeshment [Concept: Enmeshment]

0690. C - Asking one family member how another responds when a third person becomes distressed. [Concept: Circular questioning]

0691. A - Circular causality: A view of interaction in which each person's behavior both influences and is influenced by others over time. / Circular questioning: Questions that invite family members to describe differences and reciprocal patterns in relationships. [Concept: Circular causality and Circular questioning]

0692. A - Differentiation of self [Concept: Differentiation of self]

0693. B - Understanding conflict in light of a transition such as a child entering adolescence or leaving home. [Concept: Family life-cycle transition]

0694. C - Subsystem: A smaller relational unit within a family system, such as a caregiver partnership or sibling group. / Enmeshment: A pattern of diffuse boundaries and excessive emotional involvement that can restrict individual autonomy. [Concept: Subsystem and Enmeshment]

0695. A - Subsystem [Concept: Subsystem]

0696. D - Circular causality: A view of interaction in which each person's behavior both influences and is influenced by others over time. / Enmeshment: A pattern of diffuse boundaries and excessive emotional involvement that can restrict individual autonomy. [Concept: Circular causality and Enmeshment]

0697. C - Boundary [Concept: Boundary]

0698. C - Homeostasis: Noticing that a family may return to familiar interaction patterns after an initial change. / Family life-cycle transition: Understanding conflict in light of a transition such as a child entering adolescence or leaving home. [Concept: Homeostasis and Family life-cycle transition]

0699. B - Boundary [Concept: Boundary]

0700. C - Subsystem [Concept: Subsystem]

0701. C - Differentiation of self [Concept: Differentiation of self]

0702. A - Differentiation of self: Supporting a family member to express a view while staying engaged in the relationship. / Enmeshment: Exploring whether closeness in a family leaves adequate room for developmentally appropriate independence. [Concept: Differentiation of self and Enmeshment]

0703. D - Boundary: A rule or pattern regulating contact and roles between family members or subsystems. / Family life-cycle transition: A developmental change in family roles and tasks that may require the system to reorganize. [Concept: Boundary and Family life-cycle transition]

0704. C - Homeostasis: Noticing that a family may return to familiar interaction patterns after an initial change. / Subsystem: Considering how caregiver, sibling, and whole-family interactions may each have distinct patterns. [Concept: Homeostasis and Subsystem]

0705. D - Differentiation of self: The capacity to maintain a sense of self while remaining emotionally connected to significant others. / Minuchin structural mapping: A method for depicting family structure, subsystems, boundaries, and interaction patterns. [Concept: Differentiation of self and Minuchin structural mapping]

0706. A - Triangulation [Concept: Triangulation]

0707. D - Boundary: Assessing whether role boundaries support appropriate caregiving and age-appropriate autonomy. / Minuchin structural mapping: Mapping who aligns with whom and how boundaries operate during family interaction. [Concept: Boundary and Minuchin structural mapping]

0708. D - Boundary [Concept: Boundary]

0709. D - Triangulation [Concept: Triangulation]

0710. A - Triangulation [Concept: Triangulation]

0711. D - Circular causality: A view of interaction in which each person's behavior both influences and is influenced by others over time. / Family life-cycle transition: A developmental change in family roles and tasks that may require the system to reorganize. [Concept: Circular causality and Family life-cycle transition]

0712. B - Triangulation [Concept: Triangulation]

0713. D - Family life-cycle transition: A developmental change in family roles and tasks that may require the system to reorganize. / Circular questioning: Questions that invite family members to describe differences and reciprocal patterns in relationships. [Concept: Family life-cycle transition and Circular questioning]

0714. C - Differentiation of self: Supporting a family member to express a view while staying engaged in the relationship. / Enmeshment: Exploring whether closeness in a family leaves adequate room for developmentally appropriate independence. [Concept: Differentiation of self and Enmeshment]

0715. A - Boundary: A rule or pattern regulating contact and roles between family members or subsystems. / Enmeshment: A pattern of diffuse boundaries and excessive emotional involvement that can restrict individual autonomy. [Concept: Boundary and Enmeshment]

CAC.907 | Family Systems Theory

QUESTION | CORRECT OPTION AND CONCEPT

0716. C - Homeostasis: A system's tendency to preserve familiar patterns of interaction, including patterns that may be unhelpful. / Differentiation of self: The capacity to maintain a sense of self while remaining emotionally connected to significant others. [Concept: Homeostasis and Differentiation of self]

0717. D - Recognizing when a child is repeatedly recruited into managing conflict between caregivers. [Concept: Triangulation]

0718. C - Circular causality: A view of interaction in which each person's behavior both influences and is influenced by others over time. / Enmeshment: A pattern of diffuse boundaries and excessive emotional involvement that can restrict individual autonomy. [Concept: Circular causality and Enmeshment]

0719. A - Circular causality: Mapping how one person's action and another's response repeatedly reinforce each other. / Minuchin structural mapping: Mapping who aligns with whom and how boundaries operate during family interaction. [Concept: Circular causality and Minuchin structural mapping]

0720. C - Subsystem: A smaller relational unit within a family system, such as a caregiver partnership or sibling group. / Circular questioning: Questions that invite family members to describe differences and reciprocal patterns in relationships. [Concept: Subsystem and Circular questioning]

0721. A - Differentiation of self [Concept: Differentiation of self]

0722. B - Enmeshment [Concept: Enmeshment]

0723. B - Circular causality [Concept: Circular causality]

0724. A - Enmeshment [Concept: Enmeshment]

0725. D - Boundary [Concept: Boundary]

0726. B - Subsystem [Concept: Subsystem]

0727. D - Circular causality: A view of interaction in which each person's behavior both influences and is influenced by others over time. / Boundary: A rule or pattern regulating contact and roles between family members or subsystems. [Concept: Circular causality and Boundary]

0728. C - Subsystem: A smaller relational unit within a family system, such as a caregiver partnership or sibling group. / Triangulation: A pattern in which tension between two people is managed by drawing a third person into the relationship. [Concept: Subsystem and Triangulation]

0729. C - Subsystem [Concept: Subsystem]

0730. D - Homeostasis [Concept: Homeostasis]

0731. B - A rule or pattern regulating contact and roles between family members or subsystems. [Concept: Boundary]

0732. A - Circular causality: A view of interaction in which each person's behavior both influences and is influenced by others over time. / Family life-cycle transition: A developmental change in family roles and tasks that may require the system to reorganize. [Concept: Circular causality and Family life-cycle transition]

0733. B - Enmeshment [Concept: Enmeshment]

0734. A - Circular causality: Mapping how one person's action and another's response repeatedly reinforce each other. / Subsystem: Considering how caregiver, sibling, and whole-family interactions may each have distinct patterns. [Concept: Circular causality and Subsystem]

0735. C - Triangulation: Recognizing when a child is repeatedly recruited into managing conflict between caregivers. / Family life-cycle transition: Understanding conflict in light of a transition such as a child entering adolescence or leaving home. [Concept: Triangulation and Family life-cycle transition]

0736. B - Homeostasis [Concept: Homeostasis]

0737. B - Homeostasis: A system's tendency to preserve familiar patterns of interaction, including patterns that may be unhelpful. / Enmeshment: A pattern of diffuse boundaries and excessive emotional involvement that can restrict individual autonomy. [Concept: Homeostasis and Enmeshment]

0738. C - Subsystem: Considering how caregiver, sibling, and whole-family interactions may each have distinct patterns. / Enmeshment: Exploring whether closeness in a family leaves adequate room for developmentally appropriate independence. [Concept: Subsystem and Enmeshment]

0739. A - Homeostasis: A system's tendency to preserve familiar patterns of interaction, including patterns that may be unhelpful. / Subsystem: A smaller relational unit within a family system, such as a caregiver partnership or sibling group. [Concept: Homeostasis and Subsystem]

0740. D - Differentiation of self: The capacity to maintain a sense of self while remaining emotionally connected to significant others. / Family life-cycle transition: A developmental change in family roles and tasks that may require the system to reorganize. [Concept: Differentiation of self and Family life-cycle transition]

0741. C - Homeostasis: A system's tendency to preserve familiar patterns of interaction, including patterns that may be unhelpful. / Family life-cycle transition: A developmental change in family roles and tasks that may require the system to reorganize. [Concept: Homeostasis and Family life-cycle transition]

0742. B - Circular causality [Concept: Circular causality]

0743. D - Differentiation of self [Concept: Differentiation of self]

0744. D - A pattern of diffuse boundaries and excessive emotional involvement that can restrict individual autonomy. [Concept: Enmeshment]

0745. B - Circular causality [Concept: Circular causality]

0746. C - Triangulation: A pattern in which tension between two people is managed by drawing a third person into the relationship. / Circular questioning: Questions that invite family members to describe differences and reciprocal patterns in relationships. [Concept: Triangulation and Circular questioning]

0747. D - Enmeshment [Concept: Enmeshment]

0748. B - Enmeshment: A pattern of diffuse boundaries and excessive emotional involvement that can restrict individual autonomy. / Minuchin structural mapping: A method for depicting family structure, subsystems, boundaries, and interaction patterns. [Concept: Enmeshment and Minuchin structural mapping]

0749. D - Minuchin structural mapping [Concept: Minuchin structural mapping]

0750. D - Boundary [Concept: Boundary]

0751. B - Subsystem: A smaller relational unit within a family system, such as a caregiver partnership or sibling group. / Enmeshment: A pattern of diffuse boundaries and excessive emotional involvement that can restrict individual autonomy. [Concept: Subsystem and Enmeshment]

0752. C - Differentiation of self [Concept: Differentiation of self]

0753. C - Differentiation of self: The capacity to maintain a sense of self while remaining emotionally connected to significant others. / Family life-cycle transition: A developmental change in family roles and tasks that may require the system to reorganize. [Concept: Differentiation of self and Family life-cycle transition]

0754. D - Family life-cycle transition [Concept: Family life-cycle transition]

0755. D - Differentiation of self: The capacity to maintain a sense of self while remaining emotionally connected to significant others. / Boundary: A rule or pattern regulating contact and roles between family members or subsystems. [Concept: Differentiation of self and Boundary]

0756. B - Family life-cycle transition [Concept: Family life-cycle transition]

0757. D - Triangulation: A pattern in which tension between two people is managed by drawing a third person into the relationship. / Enmeshment: A pattern of diffuse boundaries and excessive emotional involvement that can restrict individual autonomy. [Concept: Triangulation and Enmeshment]

0758. A - Minuchin structural mapping [Concept: Minuchin structural mapping]

0759. A - Triangulation [Concept: Triangulation]

0760. A - Boundary [Concept: Boundary]

0761. B - Circular causality [Concept: Circular causality]

0762. B - Family life-cycle transition: A developmental change in family roles and tasks that may require the system to reorganize. / Circular questioning: Questions that invite family members to describe differences and reciprocal patterns in relationships. [Concept: Family life-cycle transition and Circular questioning]

0763. B - Minuchin structural mapping [Concept: Minuchin structural mapping]

0764. A - Minuchin structural mapping [Concept: Minuchin structural mapping]

0765. D - Family life-cycle transition [Concept: Family life-cycle transition]

0766. D - Enmeshment: Exploring whether closeness in a family leaves adequate room for developmentally appropriate independence. / Minuchin structural mapping: Mapping who aligns with whom and how boundaries operate during family interaction. [Concept: Enmeshment and Minuchin structural mapping]

0767. A - Family life-cycle transition [Concept: Family life-cycle transition]

0768. B - Differentiation of self: The capacity to maintain a sense of self while remaining emotionally connected to significant others. / Circular questioning: Questions that invite family members to describe differences and reciprocal patterns in relationships. [Concept: Differentiation of self and Circular questioning]

0769. D - Boundary: Assessing whether role boundaries support appropriate caregiving and age-appropriate autonomy. / Family life-cycle transition: Understanding conflict in light of a transition such as a child entering adolescence or leaving home. [Concept: Boundary and Family life-cycle transition]

0770. A - Family life-cycle transition [Concept: Family life-cycle transition]

0771. B - A view of interaction in which each person's behavior both influences and is influenced by others over time. [Concept: Circular causality]

0772. B - Circular causality: Mapping how one person's action and another's response repeatedly reinforce each other. / Differentiation of self: Supporting a family member to express a view while staying engaged in the relationship. [Concept: Circular causality and Differentiation of self]

0773. C - Understanding conflict in light of a transition such as a child entering adolescence or leaving home. [Concept: Family life-cycle transition]

0774. B - Considering how caregiver, sibling, and whole-family interactions may each have distinct patterns. [Concept: Subsystem]

0775. A - Family life-cycle transition [Concept: Family life-cycle transition]

0776. B - Differentiation of self: Supporting a family member to express a view while staying engaged in the relationship. / Triangulation: Recognizing when a child is repeatedly recruited into managing conflict between caregivers. [Concept: Differentiation of self and Triangulation]

0777. B - Recognizing when a child is repeatedly recruited into managing conflict between caregivers. [Concept: Triangulation]

CAC.907 | Family Systems Theory

QUESTION | CORRECT OPTION AND CONCEPT

0778. A - Homeostasis: A system's tendency to preserve familiar patterns of interaction, including patterns that may be unhelpful. / Differentiation of self: The capacity to maintain a sense of self while remaining emotionally connected to significant others. [Concept: Homeostasis and Differentiation of self]

0779. D - Supporting a family member to express a view while staying engaged in the relationship. [Concept: Differentiation of self]

0780. B - Homeostasis: A system's tendency to preserve familiar patterns of interaction, including patterns that may be unhelpful. / Enmeshment: A pattern of diffuse boundaries and excessive emotional involvement that can restrict individual autonomy. [Concept: Homeostasis and Enmeshment]

0781. C - Circular causality: Mapping how one person's action and another's response repeatedly reinforce each other. / Circular questioning: Asking one family member how another responds when a third person becomes distressed. [Concept: Circular causality and Circular questioning]

0782. D - Circular causality: Mapping how one person's action and another's response repeatedly reinforce each other. / Enmeshment: Exploring whether closeness in a family leaves adequate room for developmentally appropriate independence. [Concept: Circular causality and Enmeshment]

0783. C - Differentiation of self [Concept: Differentiation of self]

0784. C - Subsystem: Considering how caregiver, sibling, and whole-family interactions may each have distinct patterns. / Family life-cycle transition: Understanding conflict in light of a transition such as a child entering adolescence or leaving home. [Concept: Subsystem and Family life-cycle transition]

0785. B - Boundary: Assessing whether role boundaries support appropriate caregiving and age-appropriate autonomy. / Minuchin structural mapping: Mapping who aligns with whom and how boundaries operate during family interaction. [Concept: Boundary and Minuchin structural mapping]

0786. A - Subsystem: A smaller relational unit within a family system, such as a caregiver partnership or sibling group. / Minuchin structural mapping: A method for depicting family structure, subsystems, boundaries, and interaction patterns. [Concept: Subsystem and Minuchin structural mapping]

0787. B - Differentiation of self: Supporting a family member to express a view while staying engaged in the relationship. / Family life-cycle transition: Understanding conflict in light of a transition such as a child entering adolescence or leaving home. [Concept: Differentiation of self and Family life-cycle transition]

0788. C - Supporting a family member to express a view while staying engaged in the relationship. [Concept: Differentiation of self]

0789. B - Homeostasis: A system's tendency to preserve familiar patterns of interaction, including patterns that may be unhelpful. / Circular questioning: Questions that invite family members to describe differences and reciprocal patterns in relationships. [Concept: Homeostasis and Circular questioning]

0790. A - Boundary [Concept: Boundary]

0791. D - Mapping how one person's action and another's response repeatedly reinforce each other. [Concept: Circular causality]

0792. B - Homeostasis [Concept: Homeostasis]

0793. D - Homeostasis: Noticing that a family may return to familiar interaction patterns after an initial change. / Boundary: Assessing whether role boundaries support appropriate caregiving and age-appropriate autonomy. [Concept: Homeostasis and Boundary]

0794. D - Differentiation of self: The capacity to maintain a sense of self while remaining emotionally connected to significant others. / Triangulation: A pattern in which tension between two people is managed by drawing a third person into the relationship. [Concept: Differentiation of self and Triangulation]

0795. D - Circular questioning [Concept: Circular questioning]

0796. B - Circular causality: A view of interaction in which each person's behavior both influences and is influenced by others over time. / Subsystem: A smaller relational unit within a family system, such as a caregiver partnership or sibling group. [Concept: Circular causality and Subsystem]

0797. C - Minuchin structural mapping [Concept: Minuchin structural mapping]

0798. D - Considering how caregiver, sibling, and whole-family interactions may each have distinct patterns. [Concept: Subsystem]

0799. C - Family life-cycle transition [Concept: Family life-cycle transition]

0800. B - Triangulation: A pattern in which tension between two people is managed by drawing a third person into the relationship. / Minuchin structural mapping: A method for depicting family structure, subsystems, boundaries, and interaction patterns. [Concept: Triangulation and Minuchin structural mapping]

0801. A - Homeostasis [Concept: Homeostasis]

0802. A - Family life-cycle transition [Concept: Family life-cycle transition]

0803. D - Homeostasis: Noticing that a family may return to familiar interaction patterns after an initial change. / Boundary: Assessing whether role boundaries support appropriate caregiving and age-appropriate autonomy. [Concept: Homeostasis and Boundary]

0804. B - Triangulation [Concept: Triangulation]

0805. D - Triangulation [Concept: Triangulation]

0806. C - Assessing whether role boundaries support appropriate caregiving and age-appropriate autonomy. [Concept: Boundary]

0807. A - Triangulation: Recognizing when a child is repeatedly recruited into managing conflict between caregivers. / Family life-cycle transition: Understanding conflict in light of a transition such as a child entering adolescence or leaving home. [Concept: Triangulation and Family life-cycle transition]

0808. D - Circular causality [Concept: Circular causality]

0809. D - Boundary: A rule or pattern regulating contact and roles between family members or subsystems. / Minuchin structural mapping: A method for depicting family structure, subsystems, boundaries, and interaction patterns. [Concept: Boundary and Minuchin structural mapping]

0810. A - Subsystem: A smaller relational unit within a family system, such as a caregiver partnership or sibling group. / Family life-cycle transition: A developmental change in family roles and tasks that may require the system to reorganize. [Concept: Subsystem and Family life-cycle transition]

0811. A - Subsystem: A smaller relational unit within a family system, such as a caregiver partnership or sibling group. / Enmeshment: A pattern of diffuse boundaries and excessive emotional involvement that can restrict individual autonomy. [Concept: Subsystem and Enmeshment]

0812. D - Boundary [Concept: Boundary]

0813. C - Minuchin structural mapping [Concept: Minuchin structural mapping]

0814. C - Boundary: A rule or pattern regulating contact and roles between family members or subsystems. / Triangulation: A pattern in which tension between two people is managed by drawing a third person into the relationship. [Concept: Boundary and Triangulation]

0815. D - Homeostasis: Noticing that a family may return to familiar interaction patterns after an initial change. / Minuchin structural mapping: Mapping who aligns with whom and how boundaries operate during family interaction. [Concept: Homeostasis and Minuchin structural mapping]

0816. A - Boundary [Concept: Boundary]

0817. D - Boundary [Concept: Boundary]

0818. A - Triangulation [Concept: Triangulation]

0819. D - Subsystem [Concept: Subsystem]

0820. C - Circular causality [Concept: Circular causality]

0821. A - Triangulation: Recognizing when a child is repeatedly recruited into managing conflict between caregivers. / Minuchin structural mapping: Mapping who aligns with whom and how boundaries operate during family interaction. [Concept: Triangulation and Minuchin structural mapping]

0822. C - Circular questioning [Concept: Circular questioning]

0823. A - Differentiation of self: The capacity to maintain a sense of self while remaining emotionally connected to significant others. / Family life-cycle transition: A developmental change in family roles and tasks that may require the system to reorganize. [Concept: Differentiation of self and Family life-cycle transition]

0824. C - Family life-cycle transition [Concept: Family life-cycle transition]

0825. C - Circular causality: A view of interaction in which each person's behavior both influences and is influenced by others over time. / Boundary: A rule or pattern regulating contact and roles between family members or subsystems. [Concept: Circular causality and Boundary]

0826. A - Differentiation of self [Concept: Differentiation of self]

0827. B - Circular causality: Mapping how one person's action and another's response repeatedly reinforce each other. / Differentiation of self: Supporting a family member to express a view while staying engaged in the relationship. [Concept: Circular causality and Differentiation of self]

0828. A - Minuchin structural mapping [Concept: Minuchin structural mapping]

0829. A - A developmental change in family roles and tasks that may require the system to reorganize. [Concept: Family life-cycle transition]

0830. C - Homeostasis [Concept: Homeostasis]

0831. D - Homeostasis: Noticing that a family may return to familiar interaction patterns after an initial change. / Minuchin structural mapping: Mapping who aligns with whom and how boundaries operate during family interaction. [Concept: Homeostasis and Minuchin structural mapping]

0832. A - Homeostasis [Concept: Homeostasis]

0833. D - Circular causality: Mapping how one person's action and another's response repeatedly reinforce each other. / Minuchin structural mapping: Mapping who aligns with whom and how boundaries operate during family interaction. [Concept: Circular causality and Minuchin structural mapping]

0834. C - Differentiation of self: The capacity to maintain a sense of self while remaining emotionally connected to significant others. / Minuchin structural mapping: A method for depicting family structure, subsystems, boundaries, and interaction patterns. [Concept: Differentiation of self and Minuchin structural mapping]

0835. B - Boundary: Assessing whether role boundaries support appropriate caregiving and age-appropriate autonomy. / Enmeshment: Exploring whether closeness in a family leaves adequate room for developmentally appropriate independence. [Concept: Boundary and Enmeshment]

0854. C - A method for depicting family structure, subsystems, boundaries, and interaction patterns. [Concept: Minuchin structural mapping]

0855. D - Homeostasis [Concept: Homeostasis]

0856. A - Minuchin structural mapping [Concept: Minuchin structural mapping]

0857. D - Circular causality: Mapping how one person's action and another's response repeatedly reinforce each other. / Subsystem: Considering how caregiver, sibling, and whole-family interactions may each have distinct patterns. [Concept: Circular causality and Subsystem]

0858. A - Homeostasis [Concept: Homeostasis]

0859. A - Family life-cycle transition [Concept: Family life-cycle transition]

0860. D - Circular causality [Concept: Circular causality]

0861. B - Subsystem: A smaller relational unit within a family system, such as a caregiver partnership or sibling group. / Triangulation: A pattern in which tension between two people is managed by drawing a third person into the relationship. [Concept: Subsystem and Triangulation]

0862. C - Circular causality: Mapping how one person's action and another's response repeatedly reinforce each other. / Triangulation: Recognizing when a child is repeatedly recruited into managing conflict between caregivers. [Concept: Circular causality and Triangulation]

0863. A - Minuchin structural mapping: Mapping who aligns with whom and how boundaries operate during family interaction. / Circular questioning: Asking one family member how another responds when a third person becomes distressed. [Concept: Minuchin structural mapping and Circular questioning]

0864. A - A system's tendency to preserve familiar patterns of interaction, including patterns that may be unhelpful. [Concept: Homeostasis]

0865. D - Homeostasis: A system's tendency to preserve familiar patterns of interaction, including patterns that may be unhelpful. / Circular questioning: Questions that invite family members to describe differences and reciprocal patterns in relationships. [Concept: Homeostasis and Circular questioning]

0866. B - A method for depicting family structure, subsystems, boundaries, and interaction patterns. [Concept: Minuchin structural mapping]

0867. C - Circular causality: A view of interaction in which each person's behavior both influences and is influenced by others over time. / Enmeshment: A pattern of diffuse boundaries and excessive emotional involvement that can restrict individual autonomy. [Concept: Circular causality and Enmeshment]

0868. A - Differentiation of self [Concept: Differentiation of self]

0869. D - Triangulation: Recognizing when a child is repeatedly recruited into managing conflict between caregivers. / Minuchin structural mapping: Mapping who aligns with whom and how boundaries operate during family interaction. [Concept: Triangulation and Minuchin structural mapping]

0870. B - Enmeshment: A pattern of diffuse boundaries and excessive emotional involvement that can restrict individual autonomy. / Circular questioning: Questions that invite family members to describe differences and reciprocal patterns in relationships. [Concept: Enmeshment and Circular questioning]

0871. D - Differentiation of self [Concept: Differentiation of self]

0872. D - Subsystem [Concept: Subsystem]

0873. C - Homeostasis: Noticing that a family may return to familiar interaction patterns after an initial change. / Circular questioning: Asking one family member how another responds when a third person becomes distressed. [Concept: Homeostasis and Circular questioning]

0874. D - Enmeshment: A pattern of diffuse boundaries and excessive emotional involvement that can restrict individual autonomy. / Minuchin structural mapping: A method for depicting family structure, subsystems, boundaries, and interaction patterns. [Concept: Enmeshment and Minuchin structural mapping]

0875. A - A smaller relational unit within a family system, such as a caregiver partnership or sibling group. [Concept: Subsystem]

0876. D - Circular causality [Concept: Circular causality]

0877. A - Circular causality: A view of interaction in which each person's behavior both influences and is influenced by others over time. / Circular questioning: Questions that invite family members to describe differences and reciprocal patterns in relationships. [Concept: Circular causality and Circular questioning]

0878. B - Minuchin structural mapping [Concept: Minuchin structural mapping]

0879. D - Triangulation: Recognizing when a child is repeatedly recruited into managing conflict between caregivers. / Family life-cycle transition: Understanding conflict in light of a transition such as a child entering adolescence or leaving home. [Concept: Triangulation and Family life-cycle transition]

0880. D - Subsystem: A smaller relational unit within a family system, such as a caregiver partnership or sibling group. / Triangulation: A pattern in which tension between two people is managed by drawing a third person into the relationship. [Concept: Subsystem and Triangulation]

0881. A - Differentiation of self [Concept: Differentiation of self]

0882. B - Circular causality [Concept: Circular causality]

0883. B - Boundary: A rule or pattern regulating contact and roles between family members or subsystems. / Triangulation: A pattern in which tension between two people is managed by drawing a third person into the relationship. [Concept: Boundary and Triangulation]

0884. A - Differentiation of self: Supporting a family member to express a view while staying engaged in the relationship. / Circular questioning: Asking one family member how another responds when a third person becomes distressed. [Concept: Differentiation of self and Circular questioning]

0885. A - Minuchin structural mapping: A method for depicting family structure, subsystems, boundaries, and interaction patterns. / Family life-cycle transition: A developmental change in family roles and tasks that may require the system to reorganize. [Concept: Minuchin structural mapping and Family life-cycle transition]

0886. B - Differentiation of self: Supporting a family member to express a view while staying engaged in the relationship. / Minuchin structural mapping: Mapping who aligns with whom and how boundaries operate during family interaction. [Concept: Differentiation of self and Minuchin structural mapping]

0887. B - Enmeshment [Concept: Enmeshment]

0888. A - Subsystem [Concept: Subsystem]

0889. A - Triangulation: A pattern in which tension between two people is managed by drawing a third person into the relationship. / Family life-cycle transition: A developmental change in family roles and tasks that may require the system to reorganize. [Concept: Triangulation and Family life-cycle transition]

0890. B - Minuchin structural mapping: A method for depicting family structure, subsystems, boundaries, and interaction patterns. / Circular questioning: Questions that invite family members to describe differences and reciprocal patterns in relationships. [Concept: Minuchin structural mapping and Circular questioning]

0891. A - Subsystem [Concept: Subsystem]

0892. D - Mapping who aligns with whom and how boundaries operate during family interaction. [Concept: Minuchin structural mapping]

0893. A - Subsystem [Concept: Subsystem]

0894. D - Asking one family member how another responds when a third person becomes distressed. [Concept: Circular questioning]

CAC.907 | Family Systems Theory

QUESTION | CORRECT OPTION AND CONCEPT

0895. B - Differentiation of self: Supporting a family member to express a view while staying engaged in the relationship. / Enmeshment: Exploring whether closeness in a family leaves adequate room for developmentally appropriate independence. [Concept: Differentiation of self and Enmeshment]

0896. A - Homeostasis [Concept: Homeostasis]

0897. A - Triangulation [Concept: Triangulation]

0898. B - Subsystem [Concept: Subsystem]

0899. A - Differentiation of self: The capacity to maintain a sense of self while remaining emotionally connected to significant others. / Enmeshment: A pattern of diffuse boundaries and excessive emotional involvement that can restrict individual autonomy. [Concept: Differentiation of self and Enmeshment]

0900. B - Circular causality: A view of interaction in which each person's behavior both influences and is influenced by others over time. / Triangulation: A pattern in which tension between two people is managed by drawing a third person into the relationship. [Concept: Circular causality and Triangulation]

0901. C - Homeostasis: Noticing that a family may return to familiar interaction patterns after an initial change. / Family life-cycle transition: Understanding conflict in light of a transition such as a child entering adolescence or leaving home. [Concept: Homeostasis and Family life-cycle transition]

0902. D - Differentiation of self: Supporting a family member to express a view while staying engaged in the relationship. / Triangulation: Recognizing when a child is repeatedly recruited into managing conflict between caregivers. [Concept: Differentiation of self and Triangulation]

0903. D - Triangulation: Recognizing when a child is repeatedly recruited into managing conflict between caregivers. / Minuchin structural mapping: Mapping who aligns with whom and how boundaries operate during family interaction. [Concept: Triangulation and Minuchin structural mapping]

0904. B - Subsystem: A smaller relational unit within a family system, such as a caregiver partnership or sibling group. / Boundary: A rule or pattern regulating contact and roles between family members or subsystems. [Concept: Subsystem and Boundary]

0905. B - Triangulation [Concept: Triangulation]

0906. C - A system's tendency to preserve familiar patterns of interaction, including patterns that may be unhelpful. [Concept: Homeostasis]

0907. D - Circular causality [Concept: Circular causality]

0908. D - A smaller relational unit within a family system, such as a caregiver partnership or sibling group. [Concept: Subsystem]

0909. A - A method for depicting family structure, subsystems, boundaries, and interaction patterns. [Concept: Minuchin structural mapping]

0910. A - Family life-cycle transition: A developmental change in family roles and tasks that may require the system to reorganize. / Circular questioning: Questions that invite family members to describe differences and reciprocal patterns in relationships. [Concept: Family life-cycle transition and Circular questioning]

0911. A - Subsystem [Concept: Subsystem]

0912. A - Homeostasis: Noticing that a family may return to familiar interaction patterns after an initial change. / Family life-cycle transition: Understanding conflict in light of a transition such as a child entering adolescence or leaving home. [Concept: Homeostasis and Family life-cycle transition]

0913. D - Recognizing when a child is repeatedly recruited into managing conflict between caregivers. [Concept: Triangulation]

0914. A - Assessing whether role boundaries support appropriate caregiving and age-appropriate autonomy. [Concept: Boundary]

0915. D - Boundary: A rule or pattern regulating contact and roles between family members or subsystems. / Family life-cycle transition: A developmental change in family roles and tasks that may require the system to reorganize. [Concept: Boundary and Family life-cycle transition]

0916. C - Circular causality: A view of interaction in which each person's behavior both influences and is influenced by others over time. / Boundary: A rule or pattern regulating contact and roles between family members or subsystems. [Concept: Circular causality and Boundary]

0917. B - Boundary [Concept: Boundary]

0918. C - Triangulation [Concept: Triangulation]

0919. D - Subsystem: A smaller relational unit within a family system, such as a caregiver partnership or sibling group. / Boundary: A rule or pattern regulating contact and roles between family members or subsystems. [Concept: Subsystem and Boundary]

0920. D - Triangulation [Concept: Triangulation]

0921. D - Mapping how one person's action and another's response repeatedly reinforce each other. [Concept: Circular causality]

0922. D - Supporting a family member to express a view while staying engaged in the relationship. [Concept: Differentiation of self]

0923. C - A rule or pattern regulating contact and roles between family members or subsystems. [Concept: Boundary]

0924. B - Assessing whether role boundaries support appropriate caregiving and age-appropriate autonomy. [Concept: Boundary]

0925. D - Circular causality: A view of interaction in which each person's behavior both influences and is influenced by others over time. / Family life-cycle transition: A developmental change in family roles and tasks that may require the system to reorganize. [Concept: Circular causality and Family life-cycle transition]

0926. D - Boundary [Concept: Boundary]

0927. C - Boundary: Assessing whether role boundaries support appropriate caregiving and age-appropriate autonomy. / Triangulation: Recognizing when a child is repeatedly recruited into managing conflict between caregivers. [Concept: Boundary and Triangulation]

0928. B - Minuchin structural mapping [Concept: Minuchin structural mapping]

0929. D - Subsystem [Concept: Subsystem]

0930. B - Subsystem: Considering how caregiver, sibling, and whole-family interactions may each have distinct patterns. / Family life-cycle transition: Understanding conflict in light of a transition such as a child entering adolescence or leaving home. [Concept: Subsystem and Family life-cycle transition]

0931. D - Questions that invite family members to describe differences and reciprocal patterns in relationships. [Concept: Circular questioning]

0932. D - Enmeshment [Concept: Enmeshment]

0933. A - Family life-cycle transition [Concept: Family life-cycle transition]

0934. B - Circular questioning [Concept: Circular questioning]

0935. B - Homeostasis [Concept: Homeostasis]

0936. A - Differentiation of self [Concept: Differentiation of self]

0937. B - Triangulation: A pattern in which tension between two people is managed by drawing a third person into the relationship. / Minuchin structural mapping: A method for depicting family structure, subsystems, boundaries, and interaction patterns. [Concept: Triangulation and Minuchin structural mapping]

0938. A - Triangulation: A pattern in which tension between two people is managed by drawing a third person into the relationship. / Minuchin structural mapping: A method for depicting family structure, subsystems, boundaries, and interaction patterns. [Concept: Triangulation and Minuchin structural mapping]

0939. A - Enmeshment [Concept: Enmeshment]

0940. D - Triangulation [Concept: Triangulation]

0941. B - Homeostasis: A system's tendency to preserve familiar patterns of interaction, including patterns that may be unhelpful. / Differentiation of self: The capacity to maintain a sense of self while remaining emotionally connected to significant others. [Concept: Homeostasis and Differentiation of self]

0942. A - Subsystem [Concept: Subsystem]

0943. D - Family life-cycle transition [Concept: Family life-cycle transition]

0944. D - Triangulation: A pattern in which tension between two people is managed by drawing a third person into the relationship. / Circular questioning: Questions that invite family members to describe differences and reciprocal patterns in relationships. [Concept: Triangulation and Circular questioning]

0945. C - Homeostasis: A system's tendency to preserve familiar patterns of interaction, including patterns that may be unhelpful. / Subsystem: A smaller relational unit within a family system, such as a caregiver partnership or sibling group. [Concept: Homeostasis and Subsystem]

0946. C - Subsystem: Considering how caregiver, sibling, and whole-family interactions may each have distinct patterns. / Minuchin structural mapping: Mapping who aligns with whom and how boundaries operate during family interaction. [Concept: Subsystem and Minuchin structural mapping]

0947. C - Boundary: Assessing whether role boundaries support appropriate caregiving and age-appropriate autonomy. / Enmeshment: Exploring whether closeness in a family leaves adequate room for developmentally appropriate independence. [Concept: Boundary and Enmeshment]

0948. B - A developmental change in family roles and tasks that may require the system to reorganize. [Concept: Family life-cycle transition]

0949. C - Differentiation of self: The capacity to maintain a sense of self while remaining emotionally connected to significant others. / Subsystem: A smaller relational unit within a family system, such as a caregiver partnership or sibling group. [Concept: Differentiation of self and Subsystem]

0950. D - Homeostasis [Concept: Homeostasis]

0951. A - Boundary: Assessing whether role boundaries support appropriate caregiving and age-appropriate autonomy. / Triangulation: Recognizing when a child is repeatedly recruited into managing conflict between caregivers. [Concept: Boundary and Triangulation]

0952. D - Enmeshment [Concept: Enmeshment]

0953. C - Boundary [Concept: Boundary]

0954. B - Homeostasis: Noticing that a family may return to familiar interaction patterns after an initial change. / Circular causality: Mapping how one person's action and another's response repeatedly reinforce each other. [Concept: Homeostasis and Circular causality]

CAC.908 | Group Counseling for Youth

QUESTION | CORRECT OPTION AND CONCEPT

0001. C - Yalom group development [Concept: Yalom group development]

0002. A - Confidentiality in groups: Clearly explaining privacy expectations and their limits to youth and caregivers before group participation. / Group termination: Preparing members for the group's end and reviewing how they will use skills afterward. [Concept: Confidentiality in groups and Group termination]

0003. C - Screening for group fit [Concept: Screening for group fit]

0004. B - Group cohesion [Concept: Group cohesion]

0005. A - Peer feedback [Concept: Peer feedback]

0006. D - Group norms: Shared explicit or implicit expectations that shape member behavior and interaction. / Group termination: A planned ending that reviews learning, addresses feelings about separation, and supports continuity. [Concept: Group norms and Group termination]

0007. D - Confidentiality in groups [Concept: Confidentiality in groups]

0008. B - Group cohesion: Monitoring whether members feel connected enough to participate and offer feedback. / Confidentiality in groups: Clearly explaining privacy expectations and their limits to youth and caregivers before group participation. [Concept: Group cohesion and Confidentiality in groups]

0009. C - Group norms [Concept: Group norms]

0010. A - Universality: Recognition that others share related struggles, which can reduce isolation without erasing individual differences. / Yalom group development: A framework describing therapeutic factors and interpersonal processes that can support change in groups. [Concept: Universality and Yalom group development]

0011. D - Yalom group development [Concept: Yalom group development]

0012. A - Developmental fit [Concept: Developmental fit]

0013. A - Facilitative leadership: Redirecting domination and inviting quieter members without coercing disclosure. / Group termination: Preparing members for the group's end and reviewing how they will use skills afterward. [Concept: Facilitative leadership and Group termination]

0014. A - Group cohesion: Members' sense of belonging, trust, and commitment to the group and its work. / Universality: Recognition that others share related struggles, which can reduce isolation without erasing individual differences. [Concept: Group cohesion and Universality]

0015. B - Facilitative leadership [Concept: Facilitative leadership]

0016. C - Group cohesion: Monitoring whether members feel connected enough to participate and offer feedback. / Screening for group fit: Considering whether the group's purpose and safeguards fit the youth's needs before enrollment. [Concept: Group cohesion and Screening for group fit]

0017. A - Screening for group fit: Considering whether the group's purpose and safeguards fit the youth's needs before enrollment. / Peer feedback: Teaching members to offer behavior-specific feedback rather than labels or unsolicited advice. [Concept: Screening for group fit and Peer feedback]

0018. B - Group cohesion: Monitoring whether members feel connected enough to participate and offer feedback. / Screening for group fit: Considering whether the group's purpose and safeguards fit the youth's needs before enrollment. [Concept: Group cohesion and Screening for group fit]

0019. D - Peer feedback: Teaching members to offer behavior-specific feedback rather than labels or unsolicited advice. / Developmental fit: Using concrete activities and clear explanations suited to the participants' ages and abilities. [Concept: Peer feedback and Developmental fit]

0020. D - Universality: Recognition that others share related struggles, which can reduce isolation without erasing individual differences. / Group termination: A planned ending that reviews learning, addresses feelings about separation, and supports continuity. [Concept: Universality and Group termination]

0021. B - Group cohesion: Monitoring whether members feel connected enough to participate and offer feedback. / Developmental fit: Using concrete activities and clear explanations suited to the participants' ages and abilities. [Concept: Group cohesion and Developmental fit]

0022. C - Developmental fit [Concept: Developmental fit]

0023. D - Confidentiality in groups: Clearly explaining privacy expectations and their limits to youth and caregivers before group participation. / Developmental fit: Using concrete activities and clear explanations suited to the participants' ages and abilities. [Concept: Confidentiality in groups and Developmental fit]

0024. D - Universality [Concept: Universality]

0025. B - Universality: Helping a member notice shared experience while honoring what remains unique about their story. / Screening for group fit: Considering whether the group's purpose and safeguards fit the youth's needs before enrollment. [Concept: Universality and Screening for group fit]

0026. A - Group norms: Shared explicit or implicit expectations that shape member behavior and interaction. / Group termination: A planned ending that reviews learning, addresses feelings about separation, and supports continuity. [Concept: Group norms and Group termination]

0027. D - Group cohesion: Monitoring whether members feel connected enough to participate and offer feedback. / Universality: Helping a member notice shared experience while honoring what remains unique about their story. [Concept: Group cohesion and Universality]

0028. B - Group termination [Concept: Group termination]

0029. B - Group cohesion [Concept: Group cohesion]

0030. D - Group cohesion [Concept: Group cohesion]

0031. C - Universality: Recognition that others share related struggles, which can reduce isolation without erasing individual differences. / Yalom group development: A framework describing therapeutic factors and interpersonal processes that can support change in groups. [Concept: Universality and Yalom group development]

0032. C - Group termination [Concept: Group termination]

0033. C - Facilitative leadership [Concept: Facilitative leadership]

0034. A - Confidentiality in groups: A group agreement and professional duty to protect information, with limits because the leader cannot guarantee member behavior. / Facilitative leadership: Leadership that supports safety, equitable participation, member interaction, and progress toward group goals. [Concept: Confidentiality in groups and Facilitative leadership]

0035. D - Screening for group fit: Considering whether the group's purpose and safeguards fit the youth's needs before enrollment. / Confidentiality in groups: Clearly explaining privacy expectations and their limits to youth and caregivers before group participation. [Concept: Screening for group fit and Confidentiality in groups]

0036. C - Yalom group development [Concept: Yalom group development]

0037. C - Universality: Helping a member notice shared experience while honoring what remains unique about their story. / Yalom group development: Using mutual feedback and peer connection as potential learning processes rather than relying only on leader instruction. [Concept: Universality and Yalom group development]

0038. C - Group cohesion: Monitoring whether members feel connected enough to participate and offer feedback. / Group norms: Co-creating clear expectations for respect, participation, and privacy at the group's start. [Concept: Group cohesion and Group norms]

0039. A - Facilitative leadership: Redirecting domination and inviting quieter members without coercing disclosure. / Developmental fit: Using concrete activities and clear explanations suited to the participants' ages and abilities. [Concept: Facilitative leadership and Developmental fit]

0040. A - Group norms [Concept: Group norms]

0041. B - Universality: Helping a member notice shared experience while honoring what remains unique about their story. / Group termination: Preparing members for the group's end and reviewing how they will use skills afterward. [Concept: Universality and Group termination]

0042. A - Using concrete activities and clear explanations suited to the participants' ages and abilities. [Concept: Developmental fit]

0043. A - Group cohesion: Members' sense of belonging, trust, and commitment to the group and its work. / Group norms: Shared explicit or implicit expectations that shape member behavior and interaction. [Concept: Group cohesion and Group norms]

0044. A - Screening for group fit [Concept: Screening for group fit]

0045. C - Group cohesion: Members' sense of belonging, trust, and commitment to the group and its work. / Screening for group fit: Assessment of a prospective member's goals, readiness, safety needs, and compatibility with a particular group. [Concept: Group cohesion and Screening for group fit]

0046. B - Assessment of a prospective member's goals, readiness, safety needs, and compatibility with a particular group. [Concept: Screening for group fit]

0047. D - Developmental fit [Concept: Developmental fit]

0048. B - Screening for group fit: Assessment of a prospective member's goals, readiness, safety needs, and compatibility with a particular group. / Facilitative leadership: Leadership that supports safety, equitable participation, member interaction, and progress toward group goals. [Concept: Screening for group fit and Facilitative leadership]

0049. C - Universality: Recognition that others share related struggles, which can reduce isolation without erasing individual differences. / Developmental fit: Alignment of group language, activities, expectations, and confidentiality explanation with members' developmental levels. [Concept: Universality and Developmental fit]

0050. A - Using concrete activities and clear explanations suited to the participants' ages and abilities. [Concept: Developmental fit]

0051. A - Group norms: Shared explicit or implicit expectations that shape member behavior and interaction. / Developmental fit: Alignment of group language, activities, expectations, and confidentiality explanation with members' developmental levels. [Concept: Group norms and Developmental fit]

0052. B - Confidentiality in groups: Clearly explaining privacy expectations and their limits to youth and caregivers before group participation. / Group termination: Preparing members for the group's end and reviewing how they will use skills afterward. [Concept: Confidentiality in groups and Group termination]

0053. B - Group cohesion: Monitoring whether members feel connected enough to participate and offer feedback. / Facilitative leadership: Redirecting domination and inviting quieter members without coercing disclosure. [Concept: Group cohesion and Facilitative leadership]

0054. C - Screening for group fit: Considering whether the group's purpose and safeguards fit the youth's needs before enrollment. / Confidentiality in groups: Clearly explaining privacy expectations and their limits to youth and caregivers before group participation. [Concept: Screening for group fit and Confidentiality in groups]

CAC.908 | Group Counseling for Youth

QUESTION | CORRECT OPTION AND CONCEPT

0055. D - Confidentiality in groups: A group agreement and professional duty to protect information, with limits because the leader cannot guarantee member behavior. / Group termination: A planned ending that reviews learning, addresses feelings about separation, and supports continuity. [Concept: Confidentiality in groups and Group termination]

0056. C - Group norms [Concept: Group norms]

0057. D - Facilitative leadership [Concept: Facilitative leadership]

0058. D - A framework describing therapeutic factors and interpersonal processes that can support change in groups. [Concept: Yalom group development]

0059. A - Peer feedback [Concept: Peer feedback]

0060. A - Universality: Recognition that others share related struggles, which can reduce isolation without erasing individual differences. / Facilitative leadership: Leadership that supports safety, equitable participation, member interaction, and progress toward group goals. [Concept: Universality and Facilitative leadership]

0061. A - Screening for group fit: Assessment of a prospective member's goals, readiness, safety needs, and compatibility with a particular group. / Group termination: A planned ending that reviews learning, addresses feelings about separation, and supports continuity. [Concept: Screening for group fit and Group termination]

0062. B - Helping a member notice shared experience while honoring what remains unique about their story. [Concept: Universality]

0063. D - Using mutual feedback and peer connection as potential learning processes rather than relying only on leader instruction. [Concept: Yalom group development]

0064. C - Group cohesion: Members' sense of belonging, trust, and commitment to the group and its work. / Developmental fit: Alignment of group language, activities, expectations, and confidentiality explanation with members' developmental levels. [Concept: Group cohesion and Developmental fit]

0065. A - Redirecting domination and inviting quieter members without coercing disclosure. [Concept: Facilitative leadership]

0066. C - Assessment of a prospective member's goals, readiness, safety needs, and compatibility with a particular group. [Concept: Screening for group fit]

0067. A - Group cohesion: Members' sense of belonging, trust, and commitment to the group and its work. / Yalom group development: A framework describing therapeutic factors and interpersonal processes that can support change in groups. [Concept: Group cohesion and Yalom group development]

0068. D - Screening for group fit: Considering whether the group's purpose and safeguards fit the youth's needs before enrollment. / Peer feedback: Teaching members to offer behavior-specific feedback rather than labels or unsolicited advice. [Concept: Screening for group fit and Peer feedback]

0069. C - Group cohesion: Monitoring whether members feel connected enough to participate and offer feedback. / Group termination: Preparing members for the group's end and reviewing how they will use skills afterward. [Concept: Group cohesion and Group termination]

0070. A - Facilitative leadership [Concept: Facilitative leadership]

0071. B - Group cohesion: Members' sense of belonging, trust, and commitment to the group and its work. / Group termination: A planned ending that reviews learning, addresses feelings about separation, and supports continuity. [Concept: Group cohesion and Group termination]

0072. C - Universality: Helping a member notice shared experience while honoring what remains unique about their story. / Peer feedback: Teaching members to offer behavior-specific feedback rather than labels or unsolicited advice. [Concept: Universality and Peer feedback]

0073. B - Confidentiality in groups: A group agreement and professional duty to protect information, with limits because the leader cannot guarantee member behavior. / Peer feedback: Respectful, specific responses from members that may support insight when appropriately structured. [Concept: Confidentiality in groups and Peer feedback]

0074. A - Universality: Recognition that others share related struggles, which can reduce isolation without erasing individual differences. / Confidentiality in groups: A group agreement and professional duty to protect information, with limits because the leader cannot guarantee member behavior. [Concept: Universality and Confidentiality in groups]

0075. A - Members' sense of belonging, trust, and commitment to the group and its work. [Concept: Group cohesion]

0076. A - Facilitative leadership: Leadership that supports safety, equitable participation, member interaction, and progress toward group goals. / Developmental fit: Alignment of group language, activities, expectations, and confidentiality explanation with members' developmental levels. 0296. B - Therapeutic limit setting: A clear, empathic boundary that protects people or property while offering acceptable alternatives. / Caregiver involvement: Planned collaboration with caregivers that supports the child's goals while preserving appropriate therapeutic boundaries. [Concept: Therapeutic limit setting and Caregiver involvement]

0297. C - Offering a tentative feeling reflection and allowing the child to correct it. [Concept: Reflecting feelings]

0298. A - Therapeutic play: Following the child's symbolic play as a communication channel while maintaining therapeutic purpose. / Child-centered play therapy: Reflecting a child's play and feelings rather than taking over the play narrative. [Concept: Therapeutic play and Child-centered play therapy]

CAC.909 | Play Therapy Techniques

QUESTION | CORRECT OPTION AND CONCEPT

0299. D - Therapeutic play: Following the child's symbolic play as a communication channel while maintaining therapeutic purpose. / Symbolic play: Remaining curious about a toy character's role instead of assuming its play meaning. [Concept: Therapeutic play and Symbolic play]

0300. B - Directive play therapy [Concept: Directive play therapy]

0301. A - Playroom safety: Choosing materials and rules that allow agency without foreseeable harm. / Play therapy documentation: Documenting what occurred and separating directly observed behavior from interpretation. [Concept: Playroom safety and Play therapy documentation]

0302. C - Child-centered play therapy [Concept: Child-centered play therapy]

0303. D - Tracking [Concept: Tracking]

0304. B - Directive play therapy [Concept: Directive play therapy]

0305. C - Child-centered play therapy: A non-directive approach emphasizing acceptance, empathy, tracking, and the child's lead within safe limits. / Directive play therapy: A therapist-guided use of play activities selected to address identified therapeutic goals. [Concept: Child-centered play therapy and Directive play therapy]

0306. B - Therapeutic limit setting [Concept: Therapeutic limit setting]

0307. D - Therapeutic limit setting: A clear, empathic boundary that protects people or property while offering acceptable alternatives. / Symbolic play: Use of objects, actions, or characters to represent ideas and experiences beyond their literal form. [Concept: Therapeutic limit setting and Symbolic play]

0308. A - Tracking: Describing a child's observable play actions in a clear, nonjudgmental way. / Play therapy documentation: Recording observable play, interventions, response, and clinical rationale while distinguishing observation from inference. [Concept: Tracking and Play therapy documentation]

0309. A - Child-centered play therapy: A non-directive approach emphasizing acceptance, empathy, tracking, and the child's lead within safe limits. / Play therapy documentation: Recording observable play, interventions, response, and clinical rationale while distinguishing observation from inference. [Concept: Child-centered play therapy and Play therapy documentation]

0310. C - Caregiver involvement: Planned collaboration with caregivers that supports the child's goals while preserving appropriate therapeutic boundaries. / Play therapy documentation: Recording observable play, interventions, response, and clinical rationale while distinguishing observation from inference. [Concept: Caregiver involvement and Play therapy documentation]

0311. D - Child-centered play therapy [Concept: Child-centered play therapy]

0312. C - Therapeutic limit setting [Concept: Therapeutic limit setting]

0313. C - Reflecting feelings: Offering a tentative feeling reflection and allowing the child to correct it. / Playroom safety: Choosing materials and rules that allow agency without foreseeable harm. [Concept: Reflecting feelings and Playroom safety]

0314. C - Reflecting feelings: Offering a tentative feeling reflection and allowing the child to correct it. / Playroom safety: Choosing materials and rules that allow agency without foreseeable harm. [Concept: Reflecting feelings and Playroom safety]

0315. B - Reflecting feelings: Naming or tentatively reflecting the emotional meaning conveyed through a child's words or play. / Play therapy documentation: Recording observable play, interventions, response, and clinical rationale while distinguishing observation from inference. [Concept: Reflecting feelings and Play therapy documentation]

0316. C - Therapeutic limit setting: A clear, empathic boundary that protects people or property while offering acceptable alternatives. / Symbolic play: Use of objects, actions, or characters to represent ideas and experiences beyond their literal form. [Concept: Therapeutic limit setting and Symbolic play]

0317. D - Tracking: Saying what the child is doing in play without adding an unsupported interpretation. / Playroom safety: Choosing materials and rules that allow agency without foreseeable harm. [Concept: Tracking and Playroom safety]

0318. A - Therapeutic limit setting [Concept: Therapeutic limit setting]

0319. D - Reflecting feelings: Naming or tentatively reflecting the emotional meaning conveyed through a child's words or play. / Play therapy documentation: Recording observable play, interventions, response, and clinical rationale while distinguishing observation from inference. [Concept: Reflecting feelings and Play therapy documentation]

0320. B - Caregiver involvement: Planned collaboration with caregivers that supports the child's goals while preserving appropriate therapeutic boundaries. / Play therapy documentation: Recording observable play, interventions, response, and clinical rationale while distinguishing observation from inference. [Concept: Caregiver involvement and Play therapy documentation]

0321. C - Symbolic play [Concept: Symbolic play]

0322. A - Tracking [Concept: Tracking]

0323. D - Caregiver involvement [Concept: Caregiver involvement]

0486. C - Therapeutic limit setting: Stating the limit, acknowledging the feeling, and identifying a safe alternative action. / Caregiver involvement: Sharing general progress and practical support strategies with caregivers under the consent and privacy plan. [Concept: Therapeutic limit setting and Caregiver involvement]

0487. B - Therapeutic play: Following the child's symbolic play as a communication channel while maintaining therapeutic purpose. / Caregiver involvement: Sharing general progress and practical support strategies with caregivers under the consent and privacy plan. [Concept: Therapeutic play and Caregiver involvement]

0488. C - Play therapy documentation [Concept: Play therapy documentation]

0489. C - Child-centered play therapy: A non-directive approach emphasizing acceptance, empathy, tracking, and the child's lead within safe limits. / Therapeutic limit setting: A clear, empathic boundary that protects people or property while offering acceptable alternatives. [Concept: Child-centered play therapy and Therapeutic limit setting]

0490. C - Reflecting feelings: Naming or tentatively reflecting the emotional meaning conveyed through a child's words or play. / Symbolic play: Use of objects, actions, or characters to represent ideas and experiences beyond their literal form. [Concept: Reflecting feelings and Symbolic play]

0491. B - Play therapy documentation [Concept: Play therapy documentation]

0492. D - Tracking [Concept: Tracking]

0493. C - Child-centered play therapy: A non-directive approach emphasizing acceptance, empathy, tracking, and the child's lead within safe limits. / Playroom safety: Thoughtful arrangement and selection of materials that permit expression while protecting physical and emotional safety. [Concept: Child-centered play therapy and Playroom safety]

0494. D - Therapeutic play: Following the child's symbolic play as a communication channel while maintaining therapeutic purpose. / Directive play therapy: Choosing and structuring a play activity to practice a specified coping or communication skill. [Concept: Therapeutic play and Directive play therapy]

0495. C - Directive play therapy: Choosing and structuring a play activity to practice a specified coping or communication skill. / Reflecting feelings: Offering a tentative feeling reflection and allowing the child to correct it. [Concept: Directive play therapy and Reflecting feelings]

0496. B - Caregiver involvement [Concept: Caregiver involvement]

0497. C - Reflecting feelings: Offering a tentative feeling reflection and allowing the child to correct it. / Symbolic play: Remaining curious about a toy character's role instead of assuming its play meaning. [Concept: Reflecting feelings and Symbolic play]

0498. A - Reflecting a child's play and feelings rather than taking over the play narrative. [Concept: Child-centered play therapy]

0499. C - Therapeutic play: Purposeful use of play within a helping relationship to support expression, exploration, and development. / Playroom safety: Thoughtful arrangement and selection of materials that permit expression while protecting physical and emotional safety. [Concept: Therapeutic play and Playroom safety]

0500. B - Therapeutic limit setting: Stating the limit, acknowledging the feeling, and identifying a safe alternative action. / Symbolic play: Remaining curious about a toy character's role instead of assuming its play meaning. [Concept: Therapeutic limit setting and Symbolic play]

0501. D - Reflecting feelings: Naming or tentatively reflecting the emotional meaning conveyed through a child's words or play. / Caregiver involvement: Planned collaboration with caregivers that supports the child's goals while preserving appropriate therapeutic boundaries. [Concept: Reflecting feelings and Caregiver involvement]

0502. B - Caregiver involvement: Sharing general progress and practical support strategies with caregivers under the consent and privacy plan. / Play therapy documentation: Documenting what occurred and separating directly observed behavior from interpretation. [Concept: Caregiver involvement and Play therapy documentation]

0503. B - Therapeutic play: Following the child's symbolic play as a communication channel while maintaining therapeutic purpose. / Directive play therapy: Choosing and structuring a play activity to practice a specified coping or communication skill. [Concept: Therapeutic play and Directive play therapy]

0504. D - Playroom safety [Concept: Playroom safety]

0505. C - Recording observable play, interventions, response, and clinical rationale while distinguishing observation from inference. [Concept: Play therapy documentation]

0506. B - Symbolic play [Concept: Symbolic play]

0507. A - Reflecting feelings [Concept: Reflecting feelings]

0508. B - Therapeutic play [Concept: Therapeutic play]

0509. C - Sharing general progress and practical support strategies with caregivers under the consent and privacy plan. [Concept: Caregiver involvement]

0510. A - Playroom safety [Concept: Playroom safety]

0511. C - Tracking: Describing a child's observable play actions in a clear, nonjudgmental way. / Playroom safety: Thoughtful arrangement and selection of materials that permit expression while protecting physical and emotional safety. [Concept: Tracking and Playroom safety]

0512. D - Therapeutic limit setting [Concept: Therapeutic limit setting]

0513. A - Child-centered play therapy: Reflecting a child's play and feelings rather than taking over the play narrative. / Tracking: Saying what the child is doing in play without adding an unsupported interpretation. [Concept: Child-centered play therapy and Tracking]

0514. C - Child-centered play therapy [Concept: Child-centered play therapy]

0515. B - Therapeutic play: Purposeful use of play within a helping relationship to support expression, exploration, and development. / Tracking: Describing a child's observable play actions in a clear, nonjudgmental way. [Concept: Therapeutic play and Tracking]

0516. C - Play therapy documentation [Concept: Play therapy documentation]

0517. B - Child-centered play therapy: Reflecting a child's play and feelings rather than taking over the play narrative. / Symbolic play: Remaining curious about a toy character's role instead of assuming its play meaning. [Concept: Child-centered play therapy and Symbolic play]

0518. B - Therapeutic play [Concept: Therapeutic play]

0519. C - Caregiver involvement [Concept: Caregiver involvement]

0520. D - Reflecting feelings [Concept: Reflecting feelings]

0521. A - Reflecting feelings: Naming or tentatively reflecting the emotional meaning conveyed through a child's words or play. / Playroom safety: Thoughtful arrangement and selection of materials that permit expression while protecting physical and emotional safety. [Concept: Reflecting feelings and Playroom safety]

0522. A - Therapeutic play [Concept: Therapeutic play]

0523. D - Offering a tentative feeling reflection and allowing the child to correct it. [Concept: Reflecting feelings]

0524. A - Symbolic play: Remaining curious about a toy character's role instead of assuming its play meaning. / Play therapy documentation: Documenting what occurred and separating directly observed behavior from interpretation. [Concept: Symbolic play and Play therapy documentation]

0525. A - Tracking: Saying what the child is doing in play without adding an unsupported interpretation. / Symbolic play: Remaining curious about a toy character's role instead of assuming its play meaning. [Concept: Tracking and Symbolic play]
