A. Diaphragmatic breathing: A breathing practice emphasizing comfortable movement of the diaphragm to support regulation. / Stress appraisal: Gradually practicing a regulation technique in increasingly challenging but manageable contexts.
B. Diaphragmatic breathing: A breathing practice emphasizing comfortable movement of the diaphragm to support regulation. / Stress appraisal: The process of evaluating whether a situation is threatening, manageable, or relevant to one's resources.
C. Diaphragmatic breathing: The process of evaluating whether a situation is threatening, manageable, or relevant to one's resources. / Stress appraisal: A breathing practice emphasizing comfortable movement of the diaphragm to support regulation.
D. Diaphragmatic breathing: A guided practice of noticing sensations across body regions without requiring a particular sensation. / Stress appraisal: The process of evaluating whether a situation is threatening, manageable, or relevant to one's resources.

0474. While supporting a young person in the student wellness team, a caregiver working with a counselor adopts this practice: supporting a young person to acknowledge difficulty without harsh self-judgment. Which concept best explains the choice?

A. Mindful self-compassion
B. Mindfulness
C. Coping flexibility
D. Diaphragmatic breathing

0475. A group facilitator is asked to justify a plan for a young person in the clinical planning session. It calls for guiding attention to current experience while allowing thoughts to come and go. Which concept provides the rationale?

A. Contraindication-sensitive practice
B. Body scan
C. Progressive muscle relaxation
D. Mindfulness

0476. In mindfulness and stress-reduction practice, a team must select a support approach for a child aged 14 at the school-based service. The caregiver working with a counselor recommends noticing neutral sights or sounds in the room when distress makes attention feel disconnected. Which idea is most relevant?

A. Mindfulness
B. Mindful self-compassion
C. Grounding
D. Coping flexibility

0477. In mindfulness and stress-reduction practice, a case conference asks for a distinction between Grounding and Contraindication-sensitive practice. Which answer is sound?

A. Grounding: The capacity to select and adapt coping strategies to fit changing demands and context. / Contraindication-sensitive practice: Adapting or pausing an exercise when it increases distress, discomfort, or is not a good fit.
B. Grounding: Present-focused orientation using sensory or environmental cues to reconnect with the immediate moment. / Contraindication-sensitive practice: Adapting or pausing an exercise when it increases distress, discomfort, or is not a good fit.
C. Grounding: Adapting or pausing an exercise when it increases distress, discomfort, or is not a good fit. / Contraindication-sensitive practice: Present-focused orientation using sensory or environmental cues to reconnect with the immediate moment.
D. Grounding: Present-focused orientation using sensory or environmental cues to reconnect with the immediate moment. / Contraindication-sensitive practice: A stance combining awareness of distress, common humanity, and kindness toward oneself.

0478. In mindfulness and stress-reduction practice, in a supervision quiz, how should Grounding be distinguished from Stress appraisal?

A. Grounding: Present-focused orientation using sensory or environmental cues to reconnect with the immediate moment. / Stress appraisal: A guided practice of noticing sensations across body regions without requiring a particular sensation.
B. Grounding: Present-focused orientation using sensory or environmental cues to reconnect with the immediate moment. / Stress appraisal: The process of evaluating whether a situation is threatening, manageable, or relevant to one's resources.
C. Grounding: Gradually practicing a regulation technique in increasingly challenging but manageable contexts. / Stress appraisal: The process of evaluating whether a situation is threatening, manageable, or relevant to one's resources.
D. Grounding: The process of evaluating whether a situation is threatening, manageable, or relevant to one's resources. / Stress appraisal: Present-focused orientation using sensory or environmental cues to reconnect with the immediate moment.

0479. In the community youth program, a team asks how a group facilitator can support a young adolescent client. One proposed action is inviting nonjudgmental attention to sensations from one body area to another. Which idea does it represent?

A. Body scan
B. Progressive exposure to relaxation
C. Coping flexibility
D. Progressive muscle relaxation

0480. In mindfulness and stress-reduction practice, which option preserves the correct meaning of both Progressive muscle relaxation and Grounding?

A. Progressive muscle relaxation: Present-focused orientation using sensory or environmental cues to reconnect with the immediate moment. / Grounding: A structured practice of tensing and releasing muscle groups to increase awareness of bodily tension.
B. Progressive muscle relaxation: The capacity to select and adapt coping strategies to fit changing demands and context. / Grounding: Present-focused orientation using sensory or environmental cues to reconnect with the immediate moment.
C. Progressive muscle relaxation: A structured practice of tensing and releasing muscle groups to increase awareness of bodily tension. / Grounding: A stance combining awareness of distress, common humanity, and kindness toward oneself.
D. Progressive muscle relaxation: A structured practice of tensing and releasing muscle groups to increase awareness of bodily tension. / Grounding: Present-focused orientation using sensory or environmental cues to reconnect with the immediate moment.

0481. When reviewing a client in early adolescence's plan in the parent meeting, the school-based clinician notes that the next step is exploring how a young person interprets a demand and what coping resources seem available. Which concept guides this step?

A. Diaphragmatic breathing
B. Mindfulness
C. Stress appraisal
D. Body scan

0482. Which comparison correctly distinguishes Coping flexibility from Mindful self-compassion?

A. Coping flexibility: A breathing practice emphasizing comfortable movement of the diaphragm to support regulation. / Mindful self-compassion: A stance combining awareness of distress, common humanity, and kindness toward oneself.
B. Coping flexibility: A stance combining awareness of distress, common humanity, and kindness toward oneself. / Mindful self-compassion: The capacity to select and adapt coping strategies to fit changing demands and context.
C. Coping flexibility: The capacity to select and adapt coping strategies to fit changing demands and context. / Mindful self-compassion: A stance combining awareness of distress, common humanity, and kindness toward oneself.
D. Coping flexibility: The capacity to select and adapt coping strategies to fit changing demands and context. / Mindful self-compassion: A structured practice of tensing and releasing muscle groups to increase awareness of bodily tension.

0483. In mindfulness and stress-reduction practice, which statement accurately contrasts the course concepts Body scan and Grounding?

A. Body scan: A guided practice of noticing sensations across body regions without requiring a particular sensation. / Grounding: The process of evaluating whether a situation is threatening, manageable, or relevant to one's resources.
B. Body scan: Adapting or pausing an exercise when it increases distress, discomfort, or is not a good fit. / Grounding: Present-focused orientation using sensory or environmental cues to reconnect with the immediate moment.
C. Body scan: Present-focused orientation using sensory or environmental cues to reconnect with the immediate moment. / Grounding: A guided practice of noticing sensations across body regions without requiring a particular sensation.
D. Body scan: A guided practice of noticing sensations across body regions without requiring a particular sensation. / Grounding: Present-focused orientation using sensory or environmental cues to reconnect with the immediate moment.

0484. In mindfulness and stress-reduction practice, a service team discusses a child aged 6 in the community service agency. Their proposed next step is noticing neutral sights or sounds in the room when distress makes attention feel disconnected. Which course concept supports it?

A. Mindfulness
B. Body scan
C. Contraindication-sensitive practice
D. Grounding

0485. A child aged 14 is receiving support in the family session. The teacher and counselor is guided by this practice: supporting a young person to acknowledge difficulty without harsh self-judgment. Which principle best fits?

A. Stress appraisal
B. Diaphragmatic breathing
C. Mindful self-compassion
D. Body scan

0486. Which option preserves the correct meaning of both Body scan and Coping flexibility?

A. Body scan: A guided practice of noticing sensations across body regions without requiring a particular sensation. / Coping flexibility: Gradually practicing a regulation technique in increasingly challenging but manageable contexts.
B. Body scan: Adapting or pausing an exercise when it increases distress, discomfort, or is not a good fit. / Coping flexibility: The capacity to select and adapt coping strategies to fit changing demands and context.
C. Body scan: The capacity to select and adapt coping strategies to fit changing demands and context. / Coping flexibility: A guided practice of noticing sensations across body regions without requiring a particular sensation.
D. Body scan: A guided practice of noticing sensations across body regions without requiring a particular sensation. / Coping flexibility: The capacity to select and adapt coping strategies to fit changing demands and context.

0487. Consider a child aged 6 receiving help in the multidisciplinary case conference. The youth worker focuses on guiding attention to current experience while allowing thoughts to come and go. Which term best describes the guiding idea?

A. Stress appraisal
B. Mindfulness
C. Coping flexibility
D. Diaphragmatic breathing

0488. In the school consultation, a school counselor explains why a middle-school student would benefit from offering choice to stop or use an alternative when inward attention feels unsafe or uncomfortable. Which course concept underpins the explanation?

A. Contraindication-sensitive practice
B. Mindfulness
C. Progressive muscle relaxation
D. Coping flexibility

0489. At a case-planning meeting, the clinical supervisor proposes helping a client compare strategies and choose one suited to the current stressor. for a child of elementary-school age seen in the behavior-support review. Which concept does this illustrate?

A. Grounding
B. Progressive muscle relaxation
C. Mindfulness
D. Coping flexibility

0490. A young person aged 16 and a assessment clinician are reviewing goals in the school consultation. The agreed action is inviting slow, comfortable abdominal breathing without forcing depth or pace. Which principle best accounts for it?

A. Body scan
B. Contraindication-sensitive practice
C. Coping flexibility
D. Diaphragmatic breathing

0491. Which statement most accurately defines Progressive muscle relaxation?

A. Gradually practicing a regulation technique in increasingly challenging but manageable contexts.
B. A structured practice of tensing and releasing muscle groups to increase awareness of bodily tension.
C. The capacity to select and adapt coping strategies to fit changing demands and context.
D. A stance combining awareness of distress, common humanity, and kindness toward oneself.

0492. At the family session, a clinical supervisor meets with a student aged 15. The practice priority is: inviting slow, comfortable abdominal breathing without forcing depth or pace. Which concept best captures that priority?

A. Progressive muscle relaxation
B. Coping flexibility
C. Diaphragmatic breathing
D. Mindfulness

0493. Choose the term that matches this definition: Gradually practicing a regulation technique in increasingly challenging but manageable contexts.

A. Diaphragmatic breathing
B. Progressive exposure to relaxation
C. Stress appraisal
D. Body scan

0494. How are Mindfulness and Contraindication-sensitive practice most accurately differentiated in this curriculum?

A. Mindfulness: Purposeful, present-moment attention with an attitude of openness and reduced automatic judgment. / Contraindication-sensitive practice: Adapting or pausing an exercise when it increases distress, discomfort, or is not a good fit.
B. Mindfulness: Adapting or pausing an exercise when it increases distress, discomfort, or is not a good fit. / Contraindication-sensitive practice: Purposeful, present-moment attention with an attitude of openness and reduced automatic judgment.
C. Mindfulness: Purposeful, present-moment attention with an attitude of openness and reduced automatic judgment. / Contraindication-sensitive practice: Present-focused orientation using sensory or environmental cues to reconnect with the immediate moment.
D. Mindfulness: A guided practice of noticing sensations across body regions without requiring a particular sensation. / Contraindication-sensitive practice: Adapting or pausing an exercise when it increases distress, discomfort, or is not a good fit.

0495. Which comparison would correct a trainee’s misunderstanding of Mindful self-compassion versus Contraindication-sensitive practice?

A. Mindful self-compassion: Adapting or pausing an exercise when it increases distress, discomfort, or is not a good fit. / Contraindication-sensitive practice: A stance combining awareness of distress, common humanity, and kindness toward oneself.
B. Mindful self-compassion: A stance combining awareness of distress, common humanity, and kindness toward oneself. / Contraindication-sensitive practice: The process of evaluating whether a situation is threatening, manageable, or relevant to one’s resources.
C. Mindful self-compassion: The capacity to select and adapt coping strategies to fit changing demands and context. / Contraindication-sensitive practice: Adapting or pausing an exercise when it increases distress, discomfort, or is not a good fit.
D. Mindful self-compassion: A stance combining awareness of distress, common humanity, and kindness toward oneself. / Contraindication-sensitive practice: Adapting or pausing an exercise when it increases distress, discomfort, or is not a good fit.

0496. A doctoral student reads the following description. Which concept does it define? A stance combining awareness of distress, common humanity, and kindness toward oneself.

A. Stress appraisal
B. Coping flexibility
C. Contraindication-sensitive practice
D. Mindful self-compassion

0497. In the multidisciplinary case conference, a youth worker describes the most appropriate support for a child aged 6 as guiding attention to current experience while allowing thoughts to come and go. Which framework is being applied?

A. Stress appraisal
B. Diaphragmatic breathing
C. Mindfulness
D. Progressive muscle relaxation

0498. What is the central meaning of Mindfulness?

A. Purposeful, present-moment attention with an attitude of openness and reduced automatic judgment.
B. The process of evaluating whether a situation is threatening, manageable, or relevant to one’s resources.
C. Adapting or pausing an exercise when it increases distress, discomfort, or is not a good fit.
D. Present-focused orientation using sensory or environmental cues to reconnect with the immediate moment.

0499. Which paired example correctly applies Body scan first and Coping flexibility second?

A. Body scan: Inviting nonjudgmental attention to sensations from one body area to another. / Coping flexibility: Helping a client compare strategies and choose one suited to the current stressor.
B. Body scan: Helping a client compare strategies and choose one suited to the current stressor. / Coping flexibility: Inviting nonjudgmental attention to sensations from one body area to another.
C. Body scan: Offering choice to stop or use an alternative when inward attention feels unsafe or uncomfortable. / Coping flexibility: Helping a client compare strategies and choose one suited to the current stressor.
D. Body scan: Inviting nonjudgmental attention to sensations from one body area to another. / Coping flexibility: Practicing a calming skill in session and then in a planned everyday situation.

0500. A case conference reviews a research trainee’s work with a young person aged 10 in the family resource center: offering choice to stop or use an alternative when inward attention feels unsafe or uncomfortable. Which principle is central?

A. Progressive exposure to relaxation
B. Stress appraisal
C. Mindfulness
D. Contraindication-sensitive practice

0501. A trainee must distinguish how Mindful self-compassion and Contraindication-sensitive practice guide practice. Which comparison is accurate?

A. Mindful self-compassion: Helping a client compare strategies and choose one suited to the current stressor. / Contraindication-sensitive practice: Offering choice to stop or use an alternative when inward attention feels unsafe or uncomfortable.
B. Mindful self-compassion: Offering choice to stop or use an alternative when inward attention feels unsafe or uncomfortable. / Contraindication-sensitive practice: Supporting a young person to acknowledge difficulty without harsh self-judgment.
C. Mindful self-compassion: Supporting a young person to acknowledge difficulty without harsh self-judgment. / Contraindication-sensitive practice: Exploring how a young person interprets a demand and what coping resources seem available.
D. Mindful self-compassion: Supporting a young person to acknowledge difficulty without harsh self-judgment. / Contraindication-sensitive practice: Offering choice to stop or use an alternative when inward attention feels unsafe or uncomfortable.

0502. A case conference asks for a distinction between Mindful self-compassion and Contraindication-sensitive practice. Which answer is sound?

A. Mindful self-compassion: A stance combining awareness of distress, common humanity, and kindness toward oneself. / Contraindication-sensitive practice: The process of evaluating whether a situation is threatening, manageable, or relevant to one’s resources.
B. Mindful self-compassion: A stance combining awareness of distress, common humanity, and kindness toward oneself. / Contraindication-sensitive practice: Adapting or pausing an exercise when it increases distress, discomfort, or is not a good fit.
C. Mindful self-compassion: The capacity to select and adapt coping strategies to fit changing demands and context. / Contraindication-sensitive practice: Adapting or pausing an exercise when it increases distress, discomfort, or is not a good fit.
D. Mindful self-compassion: Adapting or pausing an exercise when it increases distress, discomfort, or is not a good fit. / Contraindication-sensitive practice: A stance combining awareness of distress, common humanity, and kindness toward oneself.

0503. Which course concept is defined as follows: Purposeful, present-moment attention with an attitude of openness and reduced automatic judgment.

A. Mindfulness
B. Grounding
C. Progressive muscle relaxation
D. Diaphragmatic breathing

0504. A clinical supervisor reviews a plan for a young person aged 18 in the school consultation. The plan emphasizes practicing a calming skill in session and then in a planned everyday situation. Which course idea does this reflect?

A. Stress appraisal
B. Progressive exposure to relaxation
C. Body scan
D. Diaphragmatic breathing

0505. Which option pairs the definitions of Coping flexibility and Mindful self-compassion correctly, in that order?

A. Coping flexibility: A stance combining awareness of distress, common humanity, and kindness toward oneself. / Mindful self-compassion: The capacity to select and adapt coping strategies to fit changing demands and context.
B. Coping flexibility: The capacity to select and adapt coping strategies to fit changing demands and context. / Mindful self-compassion: A structured practice of tensing and releasing muscle groups to increase awareness of bodily tension.
C. Coping flexibility: A breathing practice emphasizing comfortable movement of the diaphragm to support regulation. / Mindful self-compassion: A stance combining awareness of distress, common humanity, and kindness toward oneself.
D. Coping flexibility: The capacity to select and adapt coping strategies to fit changing demands and context. / Mindful self-compassion: A stance combining awareness of distress, common humanity, and kindness toward oneself.

0506. In a professional consultation about a school-age child, the supervised trainee describes this response in the multidisciplinary case conference: teaching gradual muscle release and adapting the exercise if it causes discomfort. Which term is most apt?

A. Progressive exposure to relaxation
B. Progressive muscle relaxation
C. Mindfulness
D. Stress appraisal

0507. A trainee must explain Coping flexibility. Which answer is accurate?

A. A structured practice of tensing and releasing muscle groups to increase awareness of bodily tension.
B. A breathing practice emphasizing comfortable movement of the diaphragm to support regulation.
C. A guided practice of noticing sensations across body regions without requiring a particular sensation.
D. The capacity to select and adapt coping strategies to fit changing demands and context.

0508. In a case note about a child aged 7, a mental-health professional working in the outpatient clinic records this priority: teaching gradual muscle release and adapting the exercise if it causes discomfort. What principle is reflected?

A. Progressive muscle relaxation
B. Mindfulness
C. Grounding
D. Contraindication-sensitive practice

0509. A supervisor asks for an applied contrast between Body scan and Mindful self-compassion. Which option fits?

A. Body scan: Inviting nonjudgmental attention to sensations from one body area to another. / Mindful self-compassion: Noticing neutral sights or sounds in the room when distress makes attention feel disconnected.
B. Body scan: Inviting nonjudgmental attention to sensations from one body area to another. / Mindful self-compassion: Supporting a young person to acknowledge difficulty without harsh self-judgment.
C. Body scan: Supporting a young person to acknowledge difficulty without harsh self-judgment. / Mindful self-compassion: Inviting nonjudgmental attention to sensations from one body area to another.
D. Body scan: Teaching gradual muscle release and adapting the exercise if it causes discomfort. / Mindful self-compassion: Supporting a young person to acknowledge difficulty without harsh self-judgment.

0510. Which statement shows a sound practice-level distinction between Stress appraisal and Mindful self-compassion?

A. Stress appraisal: Exploring how a young person interprets a demand and what coping resources seem available. / Mindful self-compassion: Supporting a young person to acknowledge difficulty without harsh self-judgment.
B. Stress appraisal: Supporting a young person to acknowledge difficulty without harsh self-judgment. / Mindful self-compassion: Exploring how a young person interprets a demand and what coping resources seem available.
C. Stress appraisal: Offering choice to stop or use an alternative when inward attention feels unsafe or uncomfortable. / Mindful self-compassion: Supporting a young person to acknowledge difficulty without harsh self-judgment.
D. Stress appraisal: Exploring how a young person interprets a demand and what coping resources seem available. / Mindful self-compassion: Noticing neutral sights or sounds in the room when distress makes attention feel disconnected.

0511. Which paired example correctly applies Progressive muscle relaxation first and Body scan second?

A. Progressive muscle relaxation: Teaching gradual muscle release and adapting the exercise if it causes discomfort. / Body scan: Exploring how a young person interprets a demand and what coping resources seem available.
B. Progressive muscle relaxation: Teaching gradual muscle release and adapting the exercise if it causes discomfort. / Body scan: Inviting nonjudgmental attention to sensations from one body area to another.
C. Progressive muscle relaxation: Guiding attention to current experience while allowing thoughts to come and go. / Body scan: Inviting nonjudgmental attention to sensations from one body area to another.
D. Progressive muscle relaxation: Inviting nonjudgmental attention to sensations from one body area to another. / Body scan: Teaching gradual muscle release and adapting the exercise if it causes discomfort.

0512. In the learning-support meeting, a team asks how a teacher and counselor can support a preadolescent child. One proposed action is inviting slow, comfortable abdominal breathing without forcing depth or pace. Which idea does it represent?

A. Diaphragmatic breathing
B. Progressive exposure to relaxation
C. Mindfulness
D. Mindful self-compassion

0513. A supervisor asks how Progressive exposure to relaxation would appear in practice. Which choice should be selected?

A. Noticing neutral sights or sounds in the room when distress makes attention feel disconnected.
B. Practicing a calming skill in session and then in a planned everyday situation.
C. Inviting slow, comfortable abdominal breathing without forcing depth or pace.
D. Exploring how a young person interprets a demand and what coping resources seem available.

0514. Which comparison would correct a trainee's misunderstanding of Diaphragmatic breathing versus Contraindication-sensitive practice?

A. Diaphragmatic breathing: A stance combining awareness of distress, common humanity, and kindness toward oneself. / Contraindication-sensitive practice: Adapting or pausing an exercise when it increases distress, discomfort, or is not a good fit.
B. Diaphragmatic breathing: A breathing practice emphasizing comfortable movement of the diaphragm to support regulation. / Contraindication-sensitive practice: Purposeful, present-moment attention with an attitude of openness and reduced automatic judgment.
C. Diaphragmatic breathing: A breathing practice emphasizing comfortable movement of the diaphragm to support regulation. / Contraindication-sensitive practice: Adapting or pausing an exercise when it increases distress, discomfort, or is not a good fit.
D. Diaphragmatic breathing: Adapting or pausing an exercise when it increases distress, discomfort, or is not a good fit. / Contraindication-sensitive practice: A breathing practice emphasizing comfortable movement of the diaphragm to support regulation.

0515. During service review in the caregiver consultation, a program coordinator describes exploring how a young person interprets a demand and what coping resources seem available. for a student aged 12. Which course idea is most applicable?

A. Stress appraisal
B. Diaphragmatic breathing
C. Body scan
D. Mindful self-compassion

0516. A member of a clinical team is preparing a follow-up plan for a child aged 7 in the youth group. The plan calls for supporting a young person to acknowledge difficulty without harsh self-judgment. Which concept names this approach?

A. Progressive muscle relaxation
B. Body scan
C. Grounding
D. Mindful self-compassion

0517. Choose the practice comparison that best separates Mindfulness from Progressive exposure to relaxation.

A. Mindfulness: Supporting a young person to acknowledge difficulty without harsh self-judgment. / Progressive exposure to relaxation: Practicing a calming skill in session and then in a planned everyday situation.
B. Mindfulness: Guiding attention to current experience while allowing thoughts to come and go. / Progressive exposure to relaxation: Helping a client compare strategies and choose one suited to the current stressor.
C. Mindfulness: Guiding attention to current experience while allowing thoughts to come and go. / Progressive exposure to relaxation: Practicing a calming skill in session and then in a planned everyday situation.
D. Mindfulness: Practicing a calming skill in session and then in a planned everyday situation. / Progressive exposure to relaxation: Guiding attention to current experience while allowing thoughts to come and go.

0518. Choose the definition pair that correctly explains Mindful self-compassion first and Progressive exposure to relaxation second.

A. Mindful self-compassion: A stance combining awareness of distress, common humanity, and kindness toward oneself. / Progressive exposure to relaxation: Present-focused orientation using sensory or environmental cues to reconnect with the immediate moment.
B. Mindful self-compassion: A stance combining awareness of distress, common humanity, and kindness toward oneself. / Progressive exposure to relaxation: Gradually practicing a regulation technique in increasingly challenging but manageable contexts.
C. Mindful self-compassion: Gradually practicing a regulation technique in increasingly challenging but manageable contexts. / Progressive exposure to relaxation: A stance combining awareness of distress, common humanity, and kindness toward oneself.
D. Mindful self-compassion: A guided practice of noticing sensations across body regions without requiring a particular sensation. / Progressive exposure to relaxation: Gradually practicing a regulation technique in increasingly challenging but manageable contexts.

0519. In a supervision quiz, how should Mindfulness be distinguished from Diaphragmatic breathing?

A. Mindfulness: A breathing practice emphasizing comfortable movement of the diaphragm to support regulation. / Diaphragmatic breathing: Purposeful, present-moment attention with an attitude of openness and reduced automatic judgment.
B. Mindfulness: Purposeful, present-moment attention with an attitude of openness and reduced automatic judgment. / Diaphragmatic breathing: Adapting or pausing an exercise when it increases distress, discomfort, or is not a good fit.
C. Mindfulness: Purposeful, present-moment attention with an attitude of openness and reduced automatic judgment. / Diaphragmatic breathing: A breathing practice emphasizing comfortable movement of the diaphragm to support regulation.
D. Mindfulness: A stance combining awareness of distress, common humanity, and kindness toward oneself. / Diaphragmatic breathing: A breathing practice emphasizing comfortable movement of the diaphragm to support regulation.

0520. A team must select a support approach for a high-school student at the telehealth session. The caregiver working with a counselor recommends offering choice to stop or use an alternative when inward attention feels unsafe or uncomfortable. Which idea is most relevant?

A. Stress appraisal
B. Mindfulness
C. Progressive muscle relaxation
D. Contraindication-sensitive practice

0521. A consultant is preparing a follow-up plan for a client in early adolescence in the supervision meeting. The plan calls for inviting slow, comfortable abdominal breathing without forcing depth or pace. Which concept names this approach?

A. Diaphragmatic breathing
B. Mindfulness
C. Grounding
D. Stress appraisal

0522. A trainee must distinguish how Diaphragmatic breathing and Stress appraisal guide practice. Which comparison is accurate?

A. Diaphragmatic breathing: Inviting slow, comfortable abdominal breathing without forcing depth or pace. / Stress appraisal: Exploring how a young person interprets a demand and what coping resources seem available.
B. Diaphragmatic breathing: Inviting slow, comfortable abdominal breathing without forcing depth or pace. / Stress appraisal: Practicing a calming skill in session and then in a planned everyday situation.
C. Diaphragmatic breathing: Exploring how a young person interprets a demand and what coping resources seem available. / Stress appraisal: Inviting slow, comfortable abdominal breathing without forcing depth or pace.
D. Diaphragmatic breathing: Inviting nonjudgmental attention to sensations from one body area to another. / Stress appraisal: Exploring how a young person interprets a demand and what coping resources seem available.

0523. A supervisor asks for an applied contrast between Mindfulness and Contraindication-sensitive practice. Which option fits?

A. Mindfulness: Guiding attention to current experience while allowing thoughts to come and go. / Contraindication-sensitive practice: Noticing neutral sights or sounds in the room when distress makes attention feel disconnected.
B. Mindfulness: Guiding attention to current experience while allowing thoughts to come and go. / Contraindication-sensitive practice: Offering choice to stop or use an alternative when inward attention feels unsafe or uncomfortable.
C. Mindfulness: Inviting nonjudgmental attention to sensations from one body area to another. / Contraindication-sensitive practice: Offering choice to stop or use an alternative when inward attention feels unsafe or uncomfortable.
D. Mindfulness: Offering choice to stop or use an alternative when inward attention feels unsafe or uncomfortable. / Contraindication-sensitive practice: Guiding attention to current experience while allowing thoughts to come and go.

0524. Which option is the clearest practical expression of Mindful self-compassion?

A. Teaching gradual muscle release and adapting the exercise if it causes discomfort.
B. Inviting nonjudgmental attention to sensations from one body area to another.
C. Practicing a calming skill in session and then in a planned everyday situation.
D. Supporting a young person to acknowledge difficulty without harsh self-judgment.

0525. Choose the term that matches this definition: Adapting or pausing an exercise when it increases distress, discomfort, or is not a good fit.

A. Body scan
B. Contraindication-sensitive practice
C. Diaphragmatic breathing
D. Progressive muscle relaxation

0526. How are Stress appraisal and Contraindication-sensitive practice most accurately differentiated in this curriculum?

A. Stress appraisal: Adapting or pausing an exercise when it increases distress, discomfort, or is not a good fit. / Contraindication-sensitive practice: The process of evaluating whether a situation is threatening, manageable, or relevant to one's resources.
B. Stress appraisal: A breathing practice emphasizing comfortable movement of the diaphragm to support regulation. / Contraindication-sensitive practice: Adapting or pausing an exercise when it increases distress, discomfort, or is not a good fit.
C. Stress appraisal: The process of evaluating whether a situation is threatening, manageable, or relevant to one's resources. / Contraindication-sensitive practice: Adapting or pausing an exercise when it increases distress, discomfort, or is not a good fit.
D. Stress appraisal: The process of evaluating whether a situation is threatening, manageable, or relevant to one's resources. / Contraindication-sensitive practice: The capacity to select and adapt coping strategies to fit changing demands and context.

0527. In the clinical planning session, a caregiver working with a counselor is considering this approach for a student aged 17: inviting nonjudgmental attention to sensations from one body area to another. Which framework does it represent?

A. Mindful self-compassion
B. Diaphragmatic breathing
C. Progressive muscle relaxation
D. Body scan

0528. A support meeting for a child aged 6 includes a play therapist in the after-school program. The practice under consideration is helping a client compare strategies and choose one suited to the current stressor. Which concept guides it?

A. Mindful self-compassion
B. Contraindication-sensitive practice
C. Coping flexibility
D. Progressive muscle relaxation

0529. In mindfulness and stress-reduction practice, which comparison would correct a trainee's misunderstanding of Mindfulness versus Grounding?

A. Mindfulness: Present-focused orientation using sensory or environmental cues to reconnect with the immediate moment. / Grounding: Purposeful, present-moment attention with an attitude of openness and reduced automatic judgment.
B. Mindfulness: Purposeful, present-moment attention with an attitude of openness and reduced automatic judgment. / Grounding: Present-focused orientation using sensory or environmental cues to reconnect with the immediate moment.
C. Mindfulness: Gradually practicing a regulation technique in increasingly challenging but manageable contexts. / Grounding: Present-focused orientation using sensory or environmental cues to reconnect with the immediate moment.
D. Mindfulness: Purposeful, present-moment attention with an attitude of openness and reduced automatic judgment. / Grounding: A guided practice of noticing sensations across body regions without requiring a particular sensation.

0530. In mindfulness and stress-reduction practice, which paired example correctly applies Grounding first and Progressive exposure to relaxation second?

A. Grounding: Noticing neutral sights or sounds in the room when distress makes attention feel disconnected. / Progressive exposure to relaxation: Practicing a calming skill in session and then in a planned everyday situation.
B. Grounding: Practicing a calming skill in session and then in a planned everyday situation. / Progressive exposure to relaxation: Noticing neutral sights or sounds in the room when distress makes attention feel disconnected.
C. Grounding: Helping a client compare strategies and choose one suited to the current stressor. / Progressive exposure to relaxation: Practicing a calming skill in session and then in a planned everyday situation.
D. Grounding: Noticing neutral sights or sounds in the room when distress makes attention feel disconnected. / Progressive exposure to relaxation: Exploring how a young person interprets a demand and what coping resources seem available.

0531. In mindfulness and stress-reduction practice, choose the definition pair that correctly explains Grounding first and Progressive exposure to relaxation second.

A. Grounding: Present-focused orientation using sensory or environmental cues to reconnect with the immediate moment. / Progressive exposure to relaxation: The process of evaluating whether a situation is threatening, manageable, or relevant to one's resources.
B. Grounding: Gradually practicing a regulation technique in increasingly challenging but manageable contexts. / Progressive exposure to relaxation: Present-focused orientation using sensory or environmental cues to reconnect with the immediate moment.
C. Grounding: Present-focused orientation using sensory or environmental cues to reconnect with the immediate moment. / Progressive exposure to relaxation: Gradually practicing a regulation technique in increasingly challenging but manageable contexts.
D. Grounding: The capacity to select and adapt coping strategies to fit changing demands and context. / Progressive exposure to relaxation: Gradually practicing a regulation technique in increasingly challenging but manageable contexts.

0532. A student aged 15 is receiving support in the youth group. The consulting counselor is guided by this practice: guiding attention to current experience while allowing thoughts to come and go. Which principle best fits?

A. Mindful self-compassion
B. Mindfulness
C. Contraindication-sensitive practice
D. Diaphragmatic breathing

0533. In mindfulness and stress-reduction practice, how should a practitioner distinguish the applications of Grounding and Mindful self-compassion?

A. Grounding: Noticing neutral sights or sounds in the room when distress makes attention feel disconnected. / Mindful self-compassion: Practicing a calming skill in session and then in a planned everyday situation.
B. Grounding: Supporting a young person to acknowledge difficulty without harsh self-judgment. / Mindful self-compassion: Noticing neutral sights or sounds in the room when distress makes attention feel disconnected.
C. Grounding: Noticing neutral sights or sounds in the room when distress makes attention feel disconnected. / Mindful self-compassion: Supporting a young person to acknowledge difficulty without harsh self-judgment.
D. Grounding: Exploring how a young person interprets a demand and what coping resources seem available. / Mindful self-compassion: Supporting a young person to acknowledge difficulty without harsh self-judgment.

0534. A assessment clinician and a middle-school student are discussing support in the multidisciplinary case conference. The selected practice is supporting a young person to acknowledge difficulty without harsh self-judgment. Which concept does this demonstrate?

A. Mindful self-compassion
B. Diaphragmatic breathing
C. Coping flexibility
D. Contraindication-sensitive practice

0535. Which choice aligns each practice with the correct idea, Mindful self-compassion or Progressive exposure to relaxation?

A. Mindful self-compassion: Inviting nonjudgmental attention to sensations from one body area to another. / Progressive exposure to relaxation: Practicing a calming skill in session and then in a planned everyday situation.
B. Mindful self-compassion: Supporting a young person to acknowledge difficulty without harsh self-judgment. / Progressive exposure to relaxation: Practicing a calming skill in session and then in a planned everyday situation.
C. Mindful self-compassion: Practicing a calming skill in session and then in a planned everyday situation. / Progressive exposure to relaxation: Supporting a young person to acknowledge difficulty without harsh self-judgment.
D. Mindful self-compassion: Supporting a young person to acknowledge difficulty without harsh self-judgment. / Progressive exposure to relaxation: Noticing neutral sights or sounds in the room when distress makes attention feel disconnected.

0536. Which pair of actions illustrates Progressive muscle relaxation and Mindful self-compassion, respectively?

A. Progressive muscle relaxation: Supporting a young person to acknowledge difficulty without harsh self-judgment. / Mindful self-compassion: Teaching gradual muscle release and adapting the exercise if it causes discomfort.
B. Progressive muscle relaxation: Teaching gradual muscle release and adapting the exercise if it causes discomfort. / Mindful self-compassion: Helping a client compare strategies and choose one suited to the current stressor.
C. Progressive muscle relaxation: Teaching gradual muscle release and adapting the exercise if it causes discomfort. / Mindful self-compassion: Supporting a young person to acknowledge difficulty without harsh self-judgment.
D. Progressive muscle relaxation: Inviting nonjudgmental attention to sensations from one body area to another. / Mindful self-compassion: Supporting a young person to acknowledge difficulty without harsh self-judgment.

0537. Which course concept is defined as follows: A breathing practice emphasizing comfortable movement of the diaphragm to support regulation.

A. Diaphragmatic breathing
B. Grounding
C. Progressive muscle relaxation
D. Mindfulness

0538. While supporting a young person aged 13 in the community youth program, a school-based clinician adopts this practice: inviting slow, comfortable abdominal breathing without forcing depth or pace. Which concept best explains the choice?

A. Progressive exposure to relaxation
B. Grounding
C. Body scan
D. Diaphragmatic breathing

0539. Which option preserves the correct meaning of both Body scan and Progressive exposure to relaxation?

A. Body scan: A breathing practice emphasizing comfortable movement of the diaphragm to support regulation. / Progressive exposure to relaxation: Gradually practicing a regulation technique in increasingly challenging but manageable contexts.
B. Body scan: Gradually practicing a regulation technique in increasingly challenging but manageable contexts. / Progressive exposure to relaxation: A guided practice of noticing sensations across body regions without requiring a particular sensation.
C. Body scan: A guided practice of noticing sensations across body regions without requiring a particular sensation. / Progressive exposure to relaxation: Present-focused orientation using sensory or environmental cues to reconnect with the immediate moment.
D. Body scan: A guided practice of noticing sensations across body regions without requiring a particular sensation. / Progressive exposure to relaxation: Gradually practicing a regulation technique in increasingly challenging but manageable contexts.

0540. In a supervision review, a family therapist describes work with a student aged 15 in the school consultation: supporting a young person to acknowledge difficulty without harsh self-judgment. What concept is illustrated?

A. Mindful self-compassion
B. Mindfulness
C. Progressive muscle relaxation
D. Contraindication-sensitive practice

0541. In the family resource center, a team asks how a group facilitator can support a adolescent student. One proposed action is practicing a calming skill in session and then in a planned everyday situation. Which idea does it represent?

A. Progressive exposure to relaxation
B. Grounding
C. Progressive muscle relaxation
D. Mindfulness

0542. Which applied comparison correctly identifies what belongs to Progressive muscle relaxation versus Mindful self-compassion?

A. Progressive muscle relaxation: Teaching gradual muscle release and adapting the exercise if it causes discomfort. / Mindful self-compassion: Helping a client compare strategies and choose one suited to the current stressor.
B. Progressive muscle relaxation: Teaching gradual muscle release and adapting the exercise if it causes discomfort. / Mindful self-compassion: Supporting a young person to acknowledge difficulty without harsh self-judgment.
C. Progressive muscle relaxation: Supporting a young person to acknowledge difficulty without harsh self-judgment. / Mindful self-compassion: Teaching gradual muscle release and adapting the exercise if it causes discomfort.
D. Progressive muscle relaxation: Inviting nonjudgmental attention to sensations from one body area to another. / Mindful self-compassion: Supporting a young person to acknowledge difficulty without harsh self-judgment.

0543. During service review in the student wellness team, a program coordinator describes guiding attention to current experience while allowing thoughts to come and go. for a client in late adolescence. Which course idea is most applicable?

A. Progressive exposure to relaxation
B. Progressive muscle relaxation
C. Mindfulness
D. Diaphragmatic breathing

0544. A service navigator is asked what should shape a young person’s support in the child guidance clinic. The proposed focus is offering choice to stop or use an alternative when inward attention feels unsafe or uncomfortable. Which principle does it represent?

A. Contraindication-sensitive practice
B. Mindful self-compassion
C. Mindfulness
D. Diaphragmatic breathing

0545. In mindfulness and stress-reduction practice, which paired example correctly applies Body scan first and Grounding second?

A. Body scan: Offering choice to stop or use an alternative when inward attention feels unsafe or uncomfortable. / Grounding: Noticing neutral sights or sounds in the room when distress makes attention feel disconnected.
B. Body scan: Inviting nonjudgmental attention to sensations from one body area to another. / Grounding: Noticing neutral sights or sounds in the room when distress makes attention feel disconnected.
C. Body scan: Inviting nonjudgmental attention to sensations from one body area to another. / Grounding: Exploring how a young person interprets a demand and what coping resources seem available.
D. Body scan: Noticing neutral sights or sounds in the room when distress makes attention feel disconnected. / Grounding: Inviting nonjudgmental attention to sensations from one body area to another.

0546. A community practitioner is asked what should shape a middle-school student’s support in the community mental-health service. The proposed focus is practicing a calming skill in session and then in a planned everyday situation. Which principle does it represent?

A. Mindfulness
B. Progressive exposure to relaxation
C. Progressive muscle relaxation
D. Contraindication-sensitive practice

0547. A trainee must distinguish how Mindfulness and Coping flexibility guide practice. Which comparison is accurate?

A. Mindfulness: Guiding attention to current experience while allowing thoughts to come and go. / Coping flexibility: Helping a client compare strategies and choose one suited to the current stressor.
B. Mindfulness: Guiding attention to current experience while allowing thoughts to come and go. / Coping flexibility: Inviting nonjudgmental attention to sensations from one body area to another.
C. Mindfulness: Helping a client compare strategies and choose one suited to the current stressor. / Coping flexibility: Guiding attention to current experience while allowing thoughts to come and go.
D. Mindfulness: Practicing a calming skill in session and then in a planned everyday situation. / Coping flexibility: Helping a client compare strategies and choose one suited to the current stressor.

0548. In mindfulness and stress-reduction practice, identify the most precise label for this idea: Present-focused orientation using sensory or environmental cues to reconnect with the immediate moment.

A. Grounding
B. Mindful self-compassion
C. Diaphragmatic breathing
D. Progressive exposure to relaxation

0549. How should a practitioner distinguish the applications of Diaphragmatic breathing and Progressive muscle relaxation?

A. Diaphragmatic breathing: Inviting slow, comfortable abdominal breathing without forcing depth or pace. / Progressive muscle relaxation: Practicing a calming skill in session and then in a planned everyday situation.
B. Diaphragmatic breathing: Inviting slow, comfortable abdominal breathing without forcing depth or pace. / Progressive muscle relaxation: Teaching gradual muscle release and adapting the exercise if it causes discomfort.
C. Diaphragmatic breathing: Exploring how a young person interprets a demand and what coping resources seem available. / Progressive muscle relaxation: Teaching gradual muscle release and adapting the exercise if it causes discomfort.
D. Diaphragmatic breathing: Teaching gradual muscle release and adapting the exercise if it causes discomfort. / Progressive muscle relaxation: Inviting slow, comfortable abdominal breathing without forcing depth or pace.

0550. Select the best explanation of Body scan.

A. A guided practice of noticing sensations across body regions without requiring a particular sensation.
B. Present-focused orientation using sensory or environmental cues to reconnect with the immediate moment.
C. Purposeful, present-moment attention with an attitude of openness and reduced automatic judgment.
D. A structured practice of tensing and releasing muscle groups to increase awareness of bodily tension.

0551. A student confuses Body scan with Progressive exposure to relaxation. Which explanation most accurately separates them?

A. Body scan: A guided practice of noticing sensations across body regions without requiring a particular sensation. / Progressive exposure to relaxation: Present-focused orientation using sensory or environmental cues to reconnect with the immediate moment.
B. Body scan: A guided practice of noticing sensations across body regions without requiring a particular sensation. / Progressive exposure to relaxation: Gradually practicing a regulation technique in increasingly challenging but manageable contexts.
C. Body scan: Gradually practicing a regulation technique in increasingly challenging but manageable contexts. / Progressive exposure to relaxation: A guided practice of noticing sensations across body regions without requiring a particular sensation.
D. Body scan: A breathing practice emphasizing comfortable movement of the diaphragm to support regulation. / Progressive exposure to relaxation: Gradually practicing a regulation technique in increasingly challenging but manageable contexts.

0552. A support meeting for a young person aged 13 includes a school support specialist in the classroom support meeting. The practice under consideration is exploring how a young person interprets a demand and what coping resources seem available. Which concept guides it?

A. Mindful self-compassion
B. Mindfulness
C. Stress appraisal
D. Grounding

0553. Consider a client in early adolescence receiving help in the child guidance clinic. The school counselor focuses on practicing a calming skill in session and then in a planned everyday situation. Which term best describes the guiding idea?

A. Body scan
B. Progressive exposure to relaxation
C. Coping flexibility
D. Mindfulness

0554. A counselor reviews a plan for a client in late adolescence in the child guidance clinic. The plan emphasizes teaching gradual muscle release and adapting the exercise if it causes discomfort. Which course idea does this reflect?

A. Mindful self-compassion
B. Coping flexibility
C. Progressive muscle relaxation
D. Contraindication-sensitive practice

0555. A behavior specialist is asked to evaluate a proposed service for a child aged 6 in the community mental-health service. The defining feature is inviting slow, comfortable abdominal breathing without forcing depth or pace. Which concept fits?

A. Diaphragmatic breathing
B. Mindful self-compassion
C. Progressive muscle relaxation
D. Stress appraisal

0556. In the after-school program, a team asks how a youth worker can support a high-school student. One proposed action is supporting a young person to acknowledge difficulty without harsh self-judgment. Which idea does it represent?

A. Progressive exposure to relaxation
B. Stress appraisal
C. Mindful self-compassion
D. Grounding

0557. A supervisor asks for an applied contrast between Mindfulness and Diaphragmatic breathing. Which option fits?

A. Mindfulness: Guiding attention to current experience while allowing thoughts to come and go. / Diaphragmatic breathing: Inviting slow, comfortable abdominal breathing without forcing depth or pace.
B. Mindfulness: Guiding attention to current experience while allowing thoughts to come and go. / Diaphragmatic breathing: Offering choice to stop or use an alternative when inward attention feels unsafe or uncomfortable.
C. Mindfulness: Supporting a young person to acknowledge difficulty without harsh self-judgment. / Diaphragmatic breathing: Inviting slow, comfortable abdominal breathing without forcing depth or pace.
D. Mindfulness: Inviting slow, comfortable abdominal breathing without forcing depth or pace. / Diaphragmatic breathing: Guiding attention to current experience while allowing thoughts to come and go.

0558. In mindfulness and stress-reduction practice, a case conference reviews a research trainee's work with a child of elementary-school age in the community youth program: noticing neutral sights or sounds in the room when distress makes attention feel disconnected. Which principle is central?

A. Body scan
B. Progressive muscle relaxation
C. Grounding
D. Stress appraisal

0559. Which statement shows a sound practice-level distinction between Mindfulness and Coping flexibility?

A. Mindfulness: Practicing a calming skill in session and then in a planned everyday situation. / Coping flexibility: Helping a client compare strategies and choose one suited to the current stressor.
B. Mindfulness: Guiding attention to current experience while allowing thoughts to come and go. / Coping flexibility: Inviting nonjudgmental attention to sensations from one body area to another.
C. Mindfulness: Helping a client compare strategies and choose one suited to the current stressor. / Coping flexibility: Guiding attention to current experience while allowing thoughts to come and go.
D. Mindfulness: Guiding attention to current experience while allowing thoughts to come and go. / Coping flexibility: Helping a client compare strategies and choose one suited to the current stressor.

0560. Which option pairs the definitions of Diaphragmatic breathing and Progressive muscle relaxation correctly, in that order?

A. Diaphragmatic breathing: A breathing practice emphasizing comfortable movement of the diaphragm to support regulation. / Progressive muscle relaxation: Gradually practicing a regulation technique in increasingly challenging but manageable contexts.
B. Diaphragmatic breathing: A structured practice of tensing and releasing muscle groups to increase awareness of bodily tension. / Progressive muscle relaxation: A breathing practice emphasizing comfortable movement of the diaphragm to support regulation.
C. Diaphragmatic breathing: A breathing practice emphasizing comfortable movement of the diaphragm to support regulation. / Progressive muscle relaxation: A structured practice of tensing and releasing muscle groups to increase awareness of bodily tension.
D. Diaphragmatic breathing: The process of evaluating whether a situation is threatening, manageable, or relevant to one's resources. / Progressive muscle relaxation: A structured practice of tensing and releasing muscle groups to increase awareness of bodily tension.

0561. A doctoral student reads the following description. Which concept does it define? Purposeful, present-moment attention with an attitude of openness and reduced automatic judgment.

A. Stress appraisal
B. Diaphragmatic breathing
C. Mindfulness
D. Progressive muscle relaxation

0562. Which statement accurately contrasts the course concepts Progressive exposure to relaxation and Contraindication-sensitive practice?

A. Progressive exposure to relaxation: Gradually practicing a regulation technique in increasingly challenging but manageable contexts. / Contraindication-sensitive practice: A guided practice of noticing sensations across body regions without requiring a particular sensation.
B. Progressive exposure to relaxation: A structured practice of tensing and releasing muscle groups to increase awareness of bodily tension. / Contraindication-sensitive practice: Adapting or pausing an exercise when it increases distress, discomfort, or is not a good fit.
C. Progressive exposure to relaxation: Gradually practicing a regulation technique in increasingly challenging but manageable contexts. / Contraindication-sensitive practice: Adapting or pausing an exercise when it increases distress, discomfort, or is not a good fit.
D. Progressive exposure to relaxation: Adapting or pausing an exercise when it increases distress, discomfort, or is not a good fit. / Contraindication-sensitive practice: Gradually practicing a regulation technique in increasingly challenging but manageable contexts.

0563. While consulting in the multidisciplinary case conference, a supervised trainee supports a school-age child by using this approach: teaching gradual muscle release and adapting the exercise if it causes discomfort. Which concept is being applied?

A. Coping flexibility
B. Mindful self-compassion
C. Grounding
D. Progressive muscle relaxation

0564. For a child aged 8 in the telehealth session, a behavior specialist makes this practice the immediate priority: exploring how a young person interprets a demand and what coping resources seem available. Which concept fits best?

A. Mindfulness
B. Mindful self-compassion
C. Stress appraisal
D. Body scan

0565. How are Body scan and Mindful self-compassion most accurately differentiated in this curriculum?

A. Body scan: A guided practice of noticing sensations across body regions without requiring a particular sensation. / Mindful self-compassion: Present-focused orientation using sensory or environmental cues to reconnect with the immediate moment.
B. Body scan: A stance combining awareness of distress, common humanity, and kindness toward oneself. / Mindful self-compassion: A guided practice of noticing sensations across body regions without requiring a particular sensation.
C. Body scan: A guided practice of noticing sensations across body regions without requiring a particular sensation. / Mindful self-compassion: A stance combining awareness of distress, common humanity, and kindness toward oneself.
D. Body scan: A structured practice of tensing and releasing muscle groups to increase awareness of bodily tension. / Mindful self-compassion: A stance combining awareness of distress, common humanity, and kindness toward oneself.

0566. What is the central meaning of Stress appraisal?

A. Purposeful, present-moment attention with an attitude of openness and reduced automatic judgment.
B. Present-focused orientation using sensory or environmental cues to reconnect with the immediate moment.
C. The process of evaluating whether a situation is threatening, manageable, or relevant to one's resources.
D. Adapting or pausing an exercise when it increases distress, discomfort, or is not a good fit.

0567. Choose the practice comparison that best separates Body scan from Mindful self-compassion.

A. Body scan: Supporting a young person to acknowledge difficulty without harsh self-judgment. / Mindful self-compassion: Inviting nonjudgmental attention to sensations from one body area to another.
B. Body scan: Inviting nonjudgmental attention to sensations from one body area to another. / Mindful self-compassion: Supporting a young person to acknowledge difficulty without harsh self-judgment.
C. Body scan: Teaching gradual muscle release and adapting the exercise if it causes discomfort. / Mindful self-compassion: Supporting a young person to acknowledge difficulty without harsh self-judgment.
D. Body scan: Inviting nonjudgmental attention to sensations from one body area to another. / Mindful self-compassion: Noticing neutral sights or sounds in the room when distress makes attention feel disconnected.

0568. For a child aged 11 in the counseling practicum, a play therapist makes this practice the immediate priority: offering choice to stop or use an alternative when inward attention feels unsafe or uncomfortable. Which concept fits best?

A. Body scan
B. Contraindication-sensitive practice
C. Grounding
D. Coping flexibility

0569. Which description belongs with the term Body scan?

A. Purposeful, present-moment attention with an attitude of openness and reduced automatic judgment.
B. A stance combining awareness of distress, common humanity, and kindness toward oneself.
C. A guided practice of noticing sensations across body regions without requiring a particular sensation.
D. Present-focused orientation using sensory or environmental cues to reconnect with the immediate moment.

0570. Which comparison correctly distinguishes Diaphragmatic breathing from Body scan?

A. Diaphragmatic breathing: A guided practice of noticing sensations across body regions without requiring a particular sensation. / Body scan: A breathing practice emphasizing comfortable movement of the diaphragm to support regulation.
B. Diaphragmatic breathing: A breathing practice emphasizing comfortable movement of the diaphragm to support regulation. / Body scan: Purposeful, present-moment attention with an attitude of openness and reduced automatic judgment.
C. Diaphragmatic breathing: A breathing practice emphasizing comfortable movement of the diaphragm to support regulation. / Body scan: A guided practice of noticing sensations across body regions without requiring a particular sensation.
D. Diaphragmatic breathing: The process of evaluating whether a situation is threatening, manageable, or relevant to one's resources. / Body scan: A guided practice of noticing sensations across body regions without requiring a particular sensation.

0571. A member of a clinical team and a student aged 12 are discussing support in the behavior-support review. The selected practice is offering choice to stop or use an alternative when inward attention feels unsafe or uncomfortable. Which concept does this demonstrate?

A. Coping flexibility
B. Contraindication-sensitive practice
C. Body scan
D. Grounding

0572. A member of a clinical team is supporting a young person in the classroom support meeting. The key practice is inviting nonjudgmental attention to sensations from one body area to another. Which course concept is most relevant?

A. Grounding
B. Stress appraisal
C. Coping flexibility
D. Body scan

0573. Which option preserves the correct meaning of both Diaphragmatic breathing and Contraindication-sensitive practice?

A. Diaphragmatic breathing: A breathing practice emphasizing comfortable movement of the diaphragm to support regulation. / Contraindication-sensitive practice: Purposeful, present-moment attention with an attitude of openness and reduced automatic judgment.
B. Diaphragmatic breathing: A breathing practice emphasizing comfortable movement of the diaphragm to support regulation. / Contraindication-sensitive practice: Adapting or pausing an exercise when it increases distress, discomfort, or is not a good fit.
C. Diaphragmatic breathing: Adapting or pausing an exercise when it increases distress, discomfort, or is not a good fit. / Contraindication-sensitive practice: A breathing practice emphasizing comfortable movement of the diaphragm to support regulation.
D. Diaphragmatic breathing: A stance combining awareness of distress, common humanity, and kindness toward oneself. / Contraindication-sensitive practice: Adapting or pausing an exercise when it increases distress, discomfort, or is not a good fit.

0574. Which option correctly matches each concept to its practice focus: Mindfulness and Body scan?

A. Mindfulness: Guiding attention to current experience while allowing thoughts to come and go. / Body scan: Exploring how a young person interprets a demand and what coping resources seem available.
B. Mindfulness: Inviting nonjudgmental attention to sensations from one body area to another. / Body scan: Guiding attention to current experience while allowing thoughts to come and go.
C. Mindfulness: Guiding attention to current experience while allowing thoughts to come and go. / Body scan: Inviting nonjudgmental attention to sensations from one body area to another.
D. Mindfulness: Noticing neutral sights or sounds in the room when distress makes attention feel disconnected. / Body scan: Inviting nonjudgmental attention to sensations from one body area to another.

0575. A counselor is asked to evaluate a proposed service for a client in late adolescence in the child guidance clinic. The defining feature is teaching gradual muscle release and adapting the exercise if it causes discomfort. Which concept fits?

A. Progressive muscle relaxation
B. Mindfulness
C. Coping flexibility
D. Diaphragmatic breathing

0576. Consider a student aged 12 receiving help in the telehealth session. The group facilitator focuses on helping a client compare strategies and choose one suited to the current stressor. Which term best describes the guiding idea?

A. Contraindication-sensitive practice
B. Coping flexibility
C. Grounding
D. Diaphragmatic breathing

0577. How should a practitioner distinguish the applications of Body scan and Contraindication-sensitive practice?

A. Body scan: Supporting a young person to acknowledge difficulty without harsh self-judgment. / Contraindication-sensitive practice: Offering choice to stop or use an alternative when inward attention feels unsafe or uncomfortable.
B. Body scan: Inviting nonjudgmental attention to sensations from one body area to another. / Contraindication-sensitive practice: Practicing a calming skill in session and then in a planned everyday situation.
C. Body scan: Offering choice to stop or use an alternative when inward attention feels unsafe or uncomfortable. / Contraindication-sensitive practice: Inviting nonjudgmental attention to sensations from one body area to another.
D. Body scan: Inviting nonjudgmental attention to sensations from one body area to another. / Contraindication-sensitive practice: Offering choice to stop or use an alternative when inward attention feels unsafe or uncomfortable.

0578. In a professional consultation about a child aged 6, the assessment clinician describes this response in the telehealth session: practicing a calming skill in session and then in a planned everyday situation. Which term is most apt?

A. Grounding
B. Progressive muscle relaxation
C. Progressive exposure to relaxation
D. Mindfulness

0579. A supervisor asks for an applied contrast between Body scan and Contraindication-sensitive practice. Which option fits?

A. Body scan: Supporting a young person to acknowledge difficulty without harsh self-judgment. / Contraindication-sensitive practice: Offering choice to stop or use an alternative when inward attention feels unsafe or uncomfortable.
B. Body scan: Inviting nonjudgmental attention to sensations from one body area to another. / Contraindication-sensitive practice: Practicing a calming skill in session and then in a planned everyday situation.
C. Body scan: Offering choice to stop or use an alternative when inward attention feels unsafe or uncomfortable. / Contraindication-sensitive practice: Inviting nonjudgmental attention to sensations from one body area to another.
D. Body scan: Inviting nonjudgmental attention to sensations from one body area to another. / Contraindication-sensitive practice: Offering choice to stop or use an alternative when inward attention feels unsafe or uncomfortable.

0580. At the family resource center, a research trainee reviews whether a plan for a young person aged 10 is appropriate. The relevant practice is offering choice to stop or use an alternative when inward attention feels unsafe or uncomfortable. Which concept is tested?

A. Contraindication-sensitive practice
B. Mindfulness
C. Stress appraisal
D. Diaphragmatic breathing

0581. In mindfulness and stress-reduction practice, which named construct is captured by this account? Present-focused orientation using sensory or environmental cues to reconnect with the immediate moment.

A. Body scan
B. Stress appraisal
C. Grounding
D. Diaphragmatic breathing

0582. A middle-school student and a consultant are reviewing goals in the youth group. The agreed action is teaching gradual muscle release and adapting the exercise if it causes discomfort. Which principle best accounts for it?

A. Mindfulness
B. Grounding
C. Progressive muscle relaxation
D. Stress appraisal

0583. Which option pairs the definitions of Body scan and Contraindication-sensitive practice correctly, in that order?

A. Body scan: A stance combining awareness of distress, common humanity, and kindness toward oneself. / Contraindication-sensitive practice: Adapting or pausing an exercise when it increases distress, discomfort, or is not a good fit.
B. Body scan: Adapting or pausing an exercise when it increases distress, discomfort, or is not a good fit. / Contraindication-sensitive practice: A guided practice of noticing sensations across body regions without requiring a particular sensation.
C. Body scan: A guided practice of noticing sensations across body regions without requiring a particular sensation. / Contraindication-sensitive practice: Gradually practicing a regulation technique in increasingly challenging but manageable contexts.
D. Body scan: A guided practice of noticing sensations across body regions without requiring a particular sensation. / Contraindication-sensitive practice: Adapting or pausing an exercise when it increases distress, discomfort, or is not a good fit.

0584. A trainee must explain Mindfulness. Which answer is accurate?

A. Adapting or pausing an exercise when it increases distress, discomfort, or is not a good fit.
B. Purposeful, present-moment attention with an attitude of openness and reduced automatic judgment.
C. A structured practice of tensing and releasing muscle groups to increase awareness of bodily tension.
D. Gradually practicing a regulation technique in increasingly challenging but manageable contexts.

0585. For a older adolescent client in the child guidance clinic, a clinical supervisor makes this practice the immediate priority: supporting a young person to acknowledge difficulty without harsh self-judgment. Which concept fits best?

A. Grounding
B. Stress appraisal
C. Progressive muscle relaxation
D. Mindful self-compassion

0586. In the school counseling office, the agreed focus for a service navigator working with a child aged 11 is supporting a young person to acknowledge difficulty without harsh self-judgment. Which concept names this focus?

A. Progressive exposure to relaxation
B. Mindful self-compassion
C. Diaphragmatic breathing
D. Grounding

0587. A mental-health professional prepares for a session in the classroom support meeting with a child of elementary-school age. The intended approach is practicing a calming skill in session and then in a planned everyday situation. Which concept is most relevant?

A. Progressive muscle relaxation
B. Stress appraisal
C. Progressive exposure to relaxation
D. Body scan

0588. A student confuses Progressive muscle relaxation with Body scan. Which explanation most accurately separates them?

A. Progressive muscle relaxation: A guided practice of noticing sensations across body regions without requiring a particular sensation. / Body scan: A structured practice of tensing and releasing muscle groups to increase awareness of bodily tension.
B. Progressive muscle relaxation: A structured practice of tensing and releasing muscle groups to increase awareness of bodily tension. / Body scan: The process of evaluating whether a situation is threatening, manageable, or relevant to one's resources.
C. Progressive muscle relaxation: A structured practice of tensing and releasing muscle groups to increase awareness of bodily tension. / Body scan: A guided practice of noticing sensations across body regions without requiring a particular sensation.
D. Progressive muscle relaxation: Purposeful, present-moment attention with an attitude of openness and reduced automatic judgment. / Body scan: A guided practice of noticing sensations across body regions without requiring a particular sensation.

0589. At the school-based service, a counselor meets with a child aged 7. The practice priority is: exploring how a young person interprets a demand and what coping resources seem available. Which concept best captures that priority?

A. Progressive muscle relaxation
B. Stress appraisal
C. Grounding
D. Mindfulness

0590. For a young person aged 18 seen in the youth group, the community practitioner recommends a plan built around inviting slow, comfortable abdominal breathing without forcing depth or pace. Which concept is reflected?

A. Grounding
B. Diaphragmatic breathing
C. Contraindication-sensitive practice
D. Body scan

0591. Which paired example correctly applies Mindfulness first and Mindful self-compassion second?

A. Mindfulness: Guiding attention to current experience while allowing thoughts to come and go. / Mindful self-compassion: Exploring how a young person interprets a demand and what coping resources seem available.
B. Mindfulness: Offering choice to stop or use an alternative when inward attention feels unsafe or uncomfortable. / Mindful self-compassion: Supporting a young person to acknowledge difficulty without harsh self-judgment.
C. Mindfulness: Supporting a young person to acknowledge difficulty without harsh self-judgment. / Mindful self-compassion: Guiding attention to current experience while allowing thoughts to come and go.
D. Mindfulness: Guiding attention to current experience while allowing thoughts to come and go. / Mindful self-compassion: Supporting a young person to acknowledge difficulty without harsh self-judgment.

0592. Which pair of actions illustrates Progressive muscle relaxation and Stress appraisal, respectively?

A. Progressive muscle relaxation: Offering choice to stop or use an alternative when inward attention feels unsafe or uncomfortable. / Stress appraisal: Exploring how a young person interprets a demand and what coping resources seem available.
B. Progressive muscle relaxation: Teaching gradual muscle release and adapting the exercise if it causes discomfort. / Stress appraisal: Exploring how a young person interprets a demand and what coping resources seem available.
C. Progressive muscle relaxation: Exploring how a young person interprets a demand and what coping resources seem available. / Stress appraisal: Teaching gradual muscle release and adapting the exercise if it causes discomfort.
D. Progressive muscle relaxation: Teaching gradual muscle release and adapting the exercise if it causes discomfort. / Stress appraisal: Inviting nonjudgmental attention to sensations from one body area to another.

0593. Which option correctly matches each concept to its practice focus: Mindfulness and Progressive muscle relaxation?

A. Mindfulness: Guiding attention to current experience while allowing thoughts to come and go. / Progressive muscle relaxation: Teaching gradual muscle release and adapting the exercise if it causes discomfort.
B. Mindfulness: Teaching gradual muscle release and adapting the exercise if it causes discomfort. / Progressive muscle relaxation: Guiding attention to current experience while allowing thoughts to come and go.
C. Mindfulness: Guiding attention to current experience while allowing thoughts to come and go. / Progressive muscle relaxation: Supporting a young person to acknowledge difficulty without harsh self-judgment.
D. Mindfulness: Exploring how a young person interprets a demand and what coping resources seem available. / Progressive muscle relaxation: Teaching gradual muscle release and adapting the exercise if it causes discomfort.

0594. Which option correctly matches each concept to its practice focus: Diaphragmatic breathing and Mindful self-compassion?

A. Diaphragmatic breathing: Inviting slow, comfortable abdominal breathing without forcing depth or pace. / Mindful self-compassion: Supporting a young person to acknowledge difficulty without harsh self-judgment.
B. Diaphragmatic breathing: Inviting slow, comfortable abdominal breathing without forcing depth or pace. / Mindful self-compassion: Teaching gradual muscle release and adapting the exercise if it causes discomfort.
C. Diaphragmatic breathing: Inviting nonjudgmental attention to sensations from one body area to another. / Mindful self-compassion: Supporting a young person to acknowledge difficulty without harsh self-judgment.
D. Diaphragmatic breathing: Supporting a young person to acknowledge difficulty without harsh self-judgment. / Mindful self-compassion: Inviting slow, comfortable abdominal breathing without forcing depth or pace.

0595. Choose the definition pair that correctly explains Mindfulness first and Progressive muscle relaxation second.

A. Mindfulness: Purposeful, present-moment attention with an attitude of openness and reduced automatic judgment. / Progressive muscle relaxation: A stance combining awareness of distress, common humanity, and kindness toward oneself.
B. Mindfulness: A structured practice of tensing and releasing muscle groups to increase awareness of bodily tension. / Progressive muscle relaxation: Purposeful, present-moment attention with an attitude of openness and reduced automatic judgment.
C. Mindfulness: The process of evaluating whether a situation is threatening, manageable, or relevant to one's resources. / Progressive muscle relaxation: A structured practice of tensing and releasing muscle groups to increase awareness of bodily tension.
D. Mindfulness: Purposeful, present-moment attention with an attitude of openness and reduced automatic judgment. / Progressive muscle relaxation: A structured practice of tensing and releasing muscle groups to increase awareness of bodily tension.

0596. A research trainee describes an intervention for a school-age child in the community mental-health service, centered on inviting nonjudgmental attention to sensations from one body area to another. Which named idea is most relevant?

A. Grounding
B. Body scan
C. Progressive exposure to relaxation
D. Contraindication-sensitive practice

0597. In mindfulness and stress-reduction practice, what is the central meaning of Grounding?

A. The capacity to select and adapt coping strategies to fit changing demands and context.
B. A guided practice of noticing sensations across body regions without requiring a particular sensation.
C. Gradually practicing a regulation technique in increasingly challenging but manageable contexts.
D. Present-focused orientation using sensory or environmental cues to reconnect with the immediate moment.

0598. Which option preserves the correct meaning of both Stress appraisal and Mindful self-compassion?

A. Stress appraisal: The process of evaluating whether a situation is threatening, manageable, or relevant to one's resources. / Mindful self-compassion: Present-focused orientation using sensory or environmental cues to reconnect with the immediate moment.
B. Stress appraisal: A stance combining awareness of distress, common humanity, and kindness toward oneself. / Mindful self-compassion: The process of evaluating whether a situation is threatening, manageable, or relevant to one's resources.
C. Stress appraisal: The process of evaluating whether a situation is threatening, manageable, or relevant to one's resources. / Mindful self-compassion: A stance combining awareness of distress, common humanity, and kindness toward oneself.
D. Stress appraisal: Adapting or pausing an exercise when it increases distress, discomfort, or is not a good fit. / Mindful self-compassion: A stance combining awareness of distress, common humanity, and kindness toward oneself.

0599. What is the central meaning of Progressive exposure to relaxation?

A. A stance combining awareness of distress, common humanity, and kindness toward oneself.
B. Adapting or pausing an exercise when it increases distress, discomfort, or is not a good fit.
C. Gradually practicing a regulation technique in increasingly challenging but manageable contexts.
D. Purposeful, present-moment attention with an attitude of openness and reduced automatic judgment.

0600. Which option is the clearest practical expression of Stress appraisal?

A. Exploring how a young person interprets a demand and what coping resources seem available.
B. Noticing neutral sights or sounds in the room when distress makes attention feel disconnected.
C. Helping a client compare strategies and choose one suited to the current stressor.
D. Teaching gradual muscle release and adapting the exercise if it causes discomfort.

0601. Consider a student aged 9 receiving help in the behavior-support review. The consulting counselor focuses on teaching gradual muscle release and adapting the exercise if it causes discomfort. Which term best describes the guiding idea?

A. Mindfulness
B. Progressive exposure to relaxation
C. Stress appraisal
D. Progressive muscle relaxation

0602. Choose the definition pair that correctly explains Mindfulness first and Body scan second.

A. Mindfulness: Purposeful, present-moment attention with an attitude of openness and reduced automatic judgment. / Body scan: The process of evaluating whether a situation is threatening, manageable, or relevant to one's resources.
B. Mindfulness: A guided practice of noticing sensations across body regions without requiring a particular sensation. / Body scan: Purposeful, present-moment attention with an attitude of openness and reduced automatic judgment.
C. Mindfulness: Purposeful, present-moment attention with an attitude of openness and reduced automatic judgment. / Body scan: A guided practice of noticing sensations across body regions without requiring a particular sensation.
D. Mindfulness: Present-focused orientation using sensory or environmental cues to reconnect with the immediate moment. / Body scan: A guided practice of noticing sensations across body regions without requiring a particular sensation.

0603. Which statement shows a sound practice-level distinction between Stress appraisal and Coping flexibility?

A. Stress appraisal: Offering choice to stop or use an alternative when inward attention feels unsafe or uncomfortable. / Coping flexibility: Helping a client compare strategies and choose one suited to the current stressor.
B. Stress appraisal: Exploring how a young person interprets a demand and what coping resources seem available. / Coping flexibility: Teaching gradual muscle release and adapting the exercise if it causes discomfort.
C. Stress appraisal: Exploring how a young person interprets a demand and what coping resources seem available. / Coping flexibility: Helping a client compare strategies and choose one suited to the current stressor.
D. Stress appraisal: Helping a client compare strategies and choose one suited to the current stressor. / Coping flexibility: Exploring how a young person interprets a demand and what coping resources seem available.

0604. In the counseling practicum, a teacher and counselor explains why a child aged 6 would benefit from exploring how a young person interprets a demand and what coping resources seem available. Which course concept underpins the explanation?

A. Diaphragmatic breathing
B. Grounding
C. Stress appraisal
D. Coping flexibility

0605. How are Body scan and Contraindication-sensitive practice most accurately differentiated in this curriculum?

A. Body scan: A guided practice of noticing sensations across body regions without requiring a particular sensation. / Contraindication-sensitive practice: Adapting or pausing an exercise when it increases distress, discomfort, or is not a good fit.
B. Body scan: A stance combining awareness of distress, common humanity, and kindness toward oneself. / Contraindication-sensitive practice: Adapting or pausing an exercise when it increases distress, discomfort, or is not a good fit.
C. Body scan: A guided practice of noticing sensations across body regions without requiring a particular sensation. / Contraindication-sensitive practice: Gradually practicing a regulation technique in increasingly challenging but manageable contexts.
D. Body scan: Adapting or pausing an exercise when it increases distress, discomfort, or is not a good fit. / Contraindication-sensitive practice: A guided practice of noticing sensations across body regions without requiring a particular sensation.

0606. In the learning-support meeting, a youth worker explains why a client in late adolescence would benefit from helping a client compare strategies and choose one suited to the current stressor. Which course concept underpins the explanation?

A. Stress appraisal
B. Coping flexibility
C. Body scan
D. Progressive exposure to relaxation

0607. During work in the child guidance clinic, a consulting counselor identifies this need: inviting nonjudgmental attention to sensations from one body area to another. Which idea should guide the response?

A. Mindful self-compassion
B. Grounding
C. Coping flexibility
D. Body scan

0608. Which choice aligns each practice with the correct idea, Progressive muscle relaxation or Coping flexibility?

A. Progressive muscle relaxation: Helping a client compare strategies and choose one suited to the current stressor. / Coping flexibility: Teaching gradual muscle release and adapting the exercise if it causes discomfort.
B. Progressive muscle relaxation: Noticing neutral sights or sounds in the room when distress makes attention feel disconnected. / Coping flexibility: Helping a client compare strategies and choose one suited to the current stressor.
C. Progressive muscle relaxation: Teaching gradual muscle release and adapting the exercise if it causes discomfort. / Coping flexibility: Practicing a calming skill in session and then in a planned everyday situation.
D. Progressive muscle relaxation: Teaching gradual muscle release and adapting the exercise if it causes discomfort. / Coping flexibility: Helping a client compare strategies and choose one suited to the current stressor.

0609. A child aged 8 and a consultant are reviewing goals in the clinical planning session. The agreed action is supporting a young person to acknowledge difficulty without harsh self-judgment. Which principle best accounts for it?

A. Stress appraisal
B. Progressive muscle relaxation
C. Mindful self-compassion
D. Mindfulness

0610. Choose the definition pair that correctly explains Diaphragmatic breathing first and Mindful self-compassion second.

A. Diaphragmatic breathing: A stance combining awareness of distress, common humanity, and kindness toward oneself. / Mindful self-compassion: A breathing practice emphasizing comfortable movement of the diaphragm to support regulation.
B. Diaphragmatic breathing: A guided practice of noticing sensations across body regions without requiring a particular sensation. / Mindful self-compassion: A stance combining awareness of distress, common humanity, and kindness toward oneself.
C. Diaphragmatic breathing: A breathing practice emphasizing comfortable movement of the diaphragm to support regulation. / Mindful self-compassion: A stance combining awareness of distress, common humanity, and kindness toward oneself.
D. Diaphragmatic breathing: A breathing practice emphasizing comfortable movement of the diaphragm to support regulation. / Mindful self-compassion: A structured practice of tensing and releasing muscle groups to increase awareness of bodily tension.

0611. Which description belongs with the term Mindful self-compassion?

A. Gradually practicing a regulation technique in increasingly challenging but manageable contexts.
B. A stance combining awareness of distress, common humanity, and kindness toward oneself.
C. A breathing practice emphasizing comfortable movement of the diaphragm to support regulation.
D. Present-focused orientation using sensory or environmental cues to reconnect with the immediate moment.

0612. Which option pairs the definitions of Mindfulness and Diaphragmatic breathing correctly, in that order?

A. Mindfulness: Purposeful, present-moment attention with an attitude of openness and reduced automatic judgment. / Diaphragmatic breathing: Adapting or pausing an exercise when it increases distress, discomfort, or is not a good fit.
B. Mindfulness: Purposeful, present-moment attention with an attitude of openness and reduced automatic judgment. / Diaphragmatic breathing: A breathing practice emphasizing comfortable movement of the diaphragm to support regulation.
C. Mindfulness: A stance combining awareness of distress, common humanity, and kindness toward oneself. / Diaphragmatic breathing: A breathing practice emphasizing comfortable movement of the diaphragm to support regulation.
D. Mindfulness: A breathing practice emphasizing comfortable movement of the diaphragm to support regulation. / Diaphragmatic breathing: Purposeful, present-moment attention with an attitude of openness and reduced automatic judgment.

0613. While consulting in the school-based service, a assessment clinician supports a young person aged 10 by using this approach: inviting nonjudgmental attention to sensations from one body area to another. Which concept is being applied?

A. Progressive exposure to relaxation
B. Mindfulness
C. Body scan
D. Stress appraisal

0614. In the community mental-health service, a consulting counselor describes the most appropriate support for a young person aged 18 as supporting a young person to acknowledge difficulty without harsh self-judgment. Which framework is being applied?

A. Mindful self-compassion
B. Contraindication-sensitive practice
C. Grounding
D. Diaphragmatic breathing

0615. Which statement shows a sound practice-level distinction between Diaphragmatic breathing and Progressive muscle relaxation?

A. Diaphragmatic breathing: Teaching gradual muscle release and adapting the exercise if it causes discomfort. / Progressive muscle relaxation: Inviting slow, comfortable abdominal breathing without forcing depth or pace.
B. Diaphragmatic breathing: Inviting slow, comfortable abdominal breathing without forcing depth or pace. / Progressive muscle relaxation: Teaching gradual muscle release and adapting the exercise if it causes discomfort.
C. Diaphragmatic breathing: Inviting slow, comfortable abdominal breathing without forcing depth or pace. / Progressive muscle relaxation: Practicing a calming skill in session and then in a planned everyday situation.
D. Diaphragmatic breathing: Exploring how a young person interprets a demand and what coping resources seem available. / Progressive muscle relaxation: Teaching gradual muscle release and adapting the exercise if it causes discomfort.

0616. Which option correctly matches each concept to its practice focus: Diaphragmatic breathing and Stress appraisal?

A. Diaphragmatic breathing: Inviting slow, comfortable abdominal breathing without forcing depth or pace. / Stress appraisal: Practicing a calming skill in session and then in a planned everyday situation.
B. Diaphragmatic breathing: Exploring how a young person interprets a demand and what coping resources seem available. / Stress appraisal: Inviting slow, comfortable abdominal breathing without forcing depth or pace.
C. Diaphragmatic breathing: Inviting nonjudgmental attention to sensations from one body area to another. / Stress appraisal: Exploring how a young person interprets a demand and what coping resources seem available.
D. Diaphragmatic breathing: Inviting slow, comfortable abdominal breathing without forcing depth or pace. / Stress appraisal: Exploring how a young person interprets a demand and what coping resources seem available.

0617. In mindfulness and stress-reduction practice, in a supervision quiz, how should Grounding be distinguished from Progressive exposure to relaxation?

A. Grounding: Present-focused orientation using sensory or environmental cues to reconnect with the immediate moment. / Progressive exposure to relaxation: The process of evaluating whether a situation is threatening, manageable, or relevant to one's resources.
B. Grounding: Present-focused orientation using sensory or environmental cues to reconnect with the immediate moment. / Progressive exposure to relaxation: Gradually practicing a regulation technique in increasingly challenging but manageable contexts.
C. Grounding: The capacity to select and adapt coping strategies to fit changing demands and context. / Progressive exposure to relaxation: Gradually practicing a regulation technique in increasingly challenging but manageable contexts.
D. Grounding: Gradually practicing a regulation technique in increasingly challenging but manageable contexts. / Progressive exposure to relaxation: Present-focused orientation using sensory or environmental cues to reconnect with the immediate moment.

0618. A student confuses Progressive muscle relaxation with Mindful self-compassion. Which explanation most accurately separates them?

A. Progressive muscle relaxation: A stance combining awareness of distress, common humanity, and kindness toward oneself. / Mindful self-compassion: A structured practice of tensing and releasing muscle groups to increase awareness of bodily tension.
B. Progressive muscle relaxation: A guided practice of noticing sensations across body regions without requiring a particular sensation. / Mindful self-compassion: A stance combining awareness of distress, common humanity, and kindness toward oneself.
C. Progressive muscle relaxation: A structured practice of tensing and releasing muscle groups to increase awareness of bodily tension. / Mindful self-compassion: The capacity to select and adapt coping strategies to fit changing demands and context.
D. Progressive muscle relaxation: A structured practice of tensing and releasing muscle groups to increase awareness of bodily tension. / Mindful self-compassion: A stance combining awareness of distress, common humanity, and kindness toward oneself.

0619. At the after-school program, a program coordinator reviews whether a plan for a school-age child is appropriate. The relevant practice is practicing a calming skill in session and then in a planned everyday situation. Which concept is tested?

A. Contraindication-sensitive practice
B. Body scan
C. Coping flexibility
D. Progressive exposure to relaxation

0620. Which choice aligns each practice with the correct idea, Mindfulness or Body scan?

A. Mindfulness: Guiding attention to current experience while allowing thoughts to come and go. / Body scan: Exploring how a young person interprets a demand and what coping resources seem available.
B. Mindfulness: Inviting nonjudgmental attention to sensations from one body area to another. / Body scan: Guiding attention to current experience while allowing thoughts to come and go.
C. Mindfulness: Noticing neutral sights or sounds in the room when distress makes attention feel disconnected. / Body scan: Inviting nonjudgmental attention to sensations from one body area to another.
D. Mindfulness: Guiding attention to current experience while allowing thoughts to come and go. / Body scan: Inviting nonjudgmental attention to sensations from one body area to another.

0621. In mindfulness and stress-reduction practice, choose the practice comparison that best separates Grounding from Contraindication-sensitive practice.

A. Grounding: Helping a client compare strategies and choose one suited to the current stressor. / Contraindication-sensitive practice: Offering choice to stop or use an alternative when inward attention feels unsafe or uncomfortable.
B. Grounding: Offering choice to stop or use an alternative when inward attention feels unsafe or uncomfortable. / Contraindication-sensitive practice: Noticing neutral sights or sounds in the room when distress makes attention feel disconnected.
C. Grounding: Noticing neutral sights or sounds in the room when distress makes attention feel disconnected. / Contraindication-sensitive practice: Supporting a young person to acknowledge difficulty without harsh self-judgment.
D. Grounding: Noticing neutral sights or sounds in the room when distress makes attention feel disconnected. / Contraindication-sensitive practice: Offering choice to stop or use an alternative when inward attention feels unsafe or uncomfortable.

0622. Which applied comparison correctly identifies what belongs to Mindfulness versus Stress appraisal?

A. Mindfulness: Guiding attention to current experience while allowing thoughts to come and go. / Stress appraisal: Exploring how a young person interprets a demand and what coping resources seem available.
B. Mindfulness: Exploring how a young person interprets a demand and what coping resources seem available. / Stress appraisal: Guiding attention to current experience while allowing thoughts to come and go.
C. Mindfulness: Guiding attention to current experience while allowing thoughts to come and go. / Stress appraisal: Inviting slow, comfortable abdominal breathing without forcing depth or pace.
D. Mindfulness: Noticing neutral sights or sounds in the room when distress makes attention feel disconnected. / Stress appraisal: Exploring how a young person interprets a demand and what coping resources seem available.

0623. Which statement most accurately defines Stress appraisal?

A. The process of evaluating whether a situation is threatening, manageable, or relevant to one's resources.
B. Purposeful, present-moment attention with an attitude of openness and reduced automatic judgment.
C. Gradually practicing a regulation technique in increasingly challenging but manageable contexts.
D. A breathing practice emphasizing comfortable movement of the diaphragm to support regulation.

0624. In a professional consultation about a adolescent student, the mental-health professional describes this response in the youth advocacy program: helping a client compare strategies and choose one suited to the current stressor. Which term is most apt?

A. Contraindication-sensitive practice
B. Coping flexibility
C. Progressive exposure to relaxation
D. Progressive muscle relaxation

0625. In mindfulness and stress-reduction practice, which pair of actions illustrates Diaphragmatic breathing and Grounding, respectively?

A. Diaphragmatic breathing: Inviting nonjudgmental attention to sensations from one body area to another. / Grounding: Noticing neutral sights or sounds in the room when distress makes attention feel disconnected.
B. Diaphragmatic breathing: Noticing neutral sights or sounds in the room when distress makes attention feel disconnected. / Grounding: Inviting slow, comfortable abdominal breathing without forcing depth or pace.
C. Diaphragmatic breathing: Inviting slow, comfortable abdominal breathing without forcing depth or pace. / Grounding: Noticing neutral sights or sounds in the room when distress makes attention feel disconnected.
D. Diaphragmatic breathing: Inviting slow, comfortable abdominal breathing without forcing depth or pace. / Grounding: Teaching gradual muscle release and adapting the exercise if it causes discomfort.

0626. Which statement shows a sound practice-level distinction between Body scan and Mindful self-compassion?

A. Body scan: Inviting nonjudgmental attention to sensations from one body area to another. / Mindful self-compassion: Supporting a young person to acknowledge difficulty without harsh self-judgment.
B. Body scan: Inviting nonjudgmental attention to sensations from one body area to another. / Mindful self-compassion: Noticing neutral sights or sounds in the room when distress makes attention feel disconnected.
C. Body scan: Supporting a young person to acknowledge difficulty without harsh self-judgment. / Mindful self-compassion: Inviting nonjudgmental attention to sensations from one body area to another.
D. Body scan: Teaching gradual muscle release and adapting the exercise if it causes discomfort. / Mindful self-compassion: Supporting a young person to acknowledge difficulty without harsh self-judgment.

0627. A member of a clinical team is preparing a follow-up plan for a child aged 8 in the counseling practicum. The plan calls for teaching gradual muscle release and adapting the exercise if it causes discomfort. Which concept names this approach?

A. Mindful self-compassion
B. Progressive muscle relaxation
C. Grounding
D. Progressive exposure to relaxation

0628. At the school counseling office, a counselor meets with a child aged 8. The practice priority is: guiding attention to current experience while allowing thoughts to come and go. Which concept best captures that priority?

A. Body scan
B. Diaphragmatic breathing
C. Stress appraisal
D. Mindfulness

0629. In mindfulness and stress-reduction practice, which professional action most closely applies Grounding?

A. Guiding attention to current experience while allowing thoughts to come and go.
B. Inviting nonjudgmental attention to sensations from one body area to another.
C. Exploring how a young person interprets a demand and what coping resources seem available.
D. Noticing neutral sights or sounds in the room when distress makes attention feel disconnected.

0630. In mindfulness and stress-reduction practice, a support meeting for a adolescent student includes a clinical supervisor in the youth group. The practice under consideration is noticing neutral sights or sounds in the room when distress makes attention feel disconnected. Which concept guides it?

A. Mindful self-compassion
B. Grounding
C. Contraindication-sensitive practice
D. Progressive muscle relaxation

0631. When reviewing a young person's plan in the supervision meeting, the family therapist notes that the next step is teaching gradual muscle release and adapting the exercise if it causes discomfort. Which concept guides this step?

A. Stress appraisal
B. Progressive muscle relaxation
C. Body scan
D. Mindful self-compassion

0632. How are Body scan and Stress appraisal most accurately differentiated in this curriculum?

A. Body scan: The process of evaluating whether a situation is threatening, manageable, or relevant to one's resources. / Stress appraisal: A guided practice of noticing sensations across body regions without requiring a particular sensation.
B. Body scan: Present-focused orientation using sensory or environmental cues to reconnect with the immediate moment. / Stress appraisal: The process of evaluating whether a situation is threatening, manageable, or relevant to one's resources.
C. Body scan: A guided practice of noticing sensations across body regions without requiring a particular sensation. / Stress appraisal: A breathing practice emphasizing comfortable movement of the diaphragm to support regulation.
D. Body scan: A guided practice of noticing sensations across body regions without requiring a particular sensation. / Stress appraisal: The process of evaluating whether a situation is threatening, manageable, or relevant to one's resources.

0633. Which option is the clearest practical expression of Progressive muscle relaxation?

A. Offering choice to stop or use an alternative when inward attention feels unsafe or uncomfortable.
B. Practicing a calming skill in session and then in a planned everyday situation.
C. Inviting slow, comfortable abdominal breathing without forcing depth or pace.
D. Teaching gradual muscle release and adapting the exercise if it causes discomfort.

0634. In mindfulness and stress-reduction practice, which applied comparison correctly identifies what belongs to Mindfulness versus Grounding?

A. Mindfulness: Guiding attention to current experience while allowing thoughts to come and go. / Grounding: Inviting nonjudgmental attention to sensations from one body area to another.
B. Mindfulness: Noticing neutral sights or sounds in the room when distress makes attention feel disconnected. / Grounding: Guiding attention to current experience while allowing thoughts to come and go.
C. Mindfulness: Guiding attention to current experience while allowing thoughts to come and go. / Grounding: Noticing neutral sights or sounds in the room when distress makes attention feel disconnected.
D. Mindfulness: Practicing a calming skill in session and then in a planned everyday situation. / Grounding: Noticing neutral sights or sounds in the room when distress makes attention feel disconnected.

0635. Which statement accurately contrasts the course concepts Progressive muscle relaxation and Mindful self-compassion?

A. Progressive muscle relaxation: A structured practice of tensing and releasing muscle groups to increase awareness of bodily tension. / Mindful self-compassion: A stance combining awareness of distress, common humanity, and kindness toward oneself.
B. Progressive muscle relaxation: A guided practice of noticing sensations across body regions without requiring a particular sensation. / Mindful self-compassion: A stance combining awareness of distress, common humanity, and kindness toward oneself.
C. Progressive muscle relaxation: A structured practice of tensing and releasing muscle groups to increase awareness of bodily tension. / Mindful self-compassion: The capacity to select and adapt coping strategies to fit changing demands and context.
D. Progressive muscle relaxation: A stance combining awareness of distress, common humanity, and kindness toward oneself. / Mindful self-compassion: A structured practice of tensing and releasing muscle groups to increase awareness of bodily tension.

0636. Which comparison would correct a trainee's misunderstanding of Diaphragmatic breathing versus Stress appraisal?

A. Diaphragmatic breathing: A guided practice of noticing sensations across body regions without requiring a particular sensation. / Stress appraisal: The process of evaluating whether a situation is threatening, manageable, or relevant to one's resources.
B. Diaphragmatic breathing: The process of evaluating whether a situation is threatening, manageable, or relevant to one's resources. / Stress appraisal: A breathing practice emphasizing comfortable movement of the diaphragm to support regulation.
C. Diaphragmatic breathing: A breathing practice emphasizing comfortable movement of the diaphragm to support regulation. / Stress appraisal: Gradually practicing a regulation technique in increasingly challenging but manageable contexts.
D. Diaphragmatic breathing: A breathing practice emphasizing comfortable movement of the diaphragm to support regulation. / Stress appraisal: The process of evaluating whether a situation is threatening, manageable, or relevant to one's resources.

0637. Which statement accurately contrasts the course concepts Progressive muscle relaxation and Progressive exposure to relaxation?

A. Progressive muscle relaxation: Gradually practicing a regulation technique in increasingly challenging but manageable contexts. / Progressive exposure to relaxation: A structured practice of tensing and releasing muscle groups to increase awareness of bodily tension.
B. Progressive muscle relaxation: Present-focused orientation using sensory or environmental cues to reconnect with the immediate moment. / Progressive exposure to relaxation: Gradually practicing a regulation technique in increasingly challenging but manageable contexts.
C. Progressive muscle relaxation: A structured practice of tensing and releasing muscle groups to increase awareness of bodily tension. / Progressive exposure to relaxation: Gradually practicing a regulation technique in increasingly challenging but manageable contexts.
D. Progressive muscle relaxation: A structured practice of tensing and releasing muscle groups to increase awareness of bodily tension. / Progressive exposure to relaxation: Adapting or pausing an exercise when it increases distress, discomfort, or is not a good fit.

0638. How should a practitioner distinguish the applications of Mindfulness and Progressive muscle relaxation?

A. Mindfulness: Exploring how a young person interprets a demand and what coping resources seem available. / Progressive muscle relaxation: Teaching gradual muscle release and adapting the exercise if it causes discomfort.
B. Mindfulness: Guiding attention to current experience while allowing thoughts to come and go. / Progressive muscle relaxation: Supporting a young person to acknowledge difficulty without harsh self-judgment.
C. Mindfulness: Guiding attention to current experience while allowing thoughts to come and go. / Progressive muscle relaxation: Teaching gradual muscle release and adapting the exercise if it causes discomfort.
D. Mindfulness: Teaching gradual muscle release and adapting the exercise if it causes discomfort. / Progressive muscle relaxation: Guiding attention to current experience while allowing thoughts to come and go.

0639. In the behavior-support review, a consulting counselor describes the most appropriate support for a student aged 9 as teaching gradual muscle release and adapting the exercise if it causes discomfort. Which framework is being applied?

A. Progressive muscle relaxation
B. Contraindication-sensitive practice
C. Body scan
D. Grounding

0640. A case conference asks for a distinction between Diaphragmatic breathing and Mindful self-compassion. Which answer is sound?

A. Diaphragmatic breathing: A breathing practice emphasizing comfortable movement of the diaphragm to support regulation. / Mindful self-compassion: A stance combining awareness of distress, common humanity, and kindness toward oneself.
B. Diaphragmatic breathing: A breathing practice emphasizing comfortable movement of the diaphragm to support regulation. / Mindful self-compassion: A structured practice of tensing and releasing muscle groups to increase awareness of bodily tension.
C. Diaphragmatic breathing: A guided practice of noticing sensations across body regions without requiring a particular sensation. / Mindful self-compassion: A stance combining awareness of distress, common humanity, and kindness toward oneself.
D. Diaphragmatic breathing: A stance combining awareness of distress, common humanity, and kindness toward oneself. / Mindful self-compassion: A breathing practice emphasizing comfortable movement of the diaphragm to support regulation.

0641. Which option correctly matches each concept to its practice focus: Mindfulness and Stress appraisal?

A. Mindfulness: Noticing neutral sights or sounds in the room when distress makes attention feel disconnected. / Stress appraisal: Exploring how a young person interprets a demand and what coping resources seem available.
B. Mindfulness: Guiding attention to current experience while allowing thoughts to come and go. / Stress appraisal: Exploring how a young person interprets a demand and what coping resources seem available.
C. Mindfulness: Exploring how a young person interprets a demand and what coping resources seem available. / Stress appraisal: Guiding attention to current experience while allowing thoughts to come and go.
D. Mindfulness: Guiding attention to current experience while allowing thoughts to come and go. / Stress appraisal: Inviting slow, comfortable abdominal breathing without forcing depth or pace.

0642. A service navigator describes an intervention for a preadolescent child in the youth advocacy program, centered on guiding attention to current experience while allowing thoughts to come and go. Which named idea is most relevant?

A. Body scan
B. Mindful self-compassion
C. Progressive exposure to relaxation
D. Mindfulness

0643. How are Progressive muscle relaxation and Stress appraisal most accurately differentiated in this curriculum?

A. Progressive muscle relaxation: A structured practice of tensing and releasing muscle groups to increase awareness of bodily tension. / Stress appraisal: The process of evaluating whether a situation is threatening, manageable, or relevant to one's resources.
B. Progressive muscle relaxation: The process of evaluating whether a situation is threatening, manageable, or relevant to one's resources. / Stress appraisal: A structured practice of tensing and releasing muscle groups to increase awareness of bodily tension.
C. Progressive muscle relaxation: A structured practice of tensing and releasing muscle groups to increase awareness of bodily tension. / Stress appraisal: A guided practice of noticing sensations across body regions without requiring a particular sensation.
D. Progressive muscle relaxation: Adapting or pausing an exercise when it increases distress, discomfort, or is not a good fit. / Stress appraisal: The process of evaluating whether a situation is threatening, manageable, or relevant to one's resources.

0644. In the student-support meeting, the agreed focus for a program coordinator working with a child of elementary-school age is offering choice to stop or use an alternative when inward attention feels unsafe or uncomfortable. Which concept names this focus?

A. Stress appraisal
B. Progressive exposure to relaxation
C. Contraindication-sensitive practice
D. Diaphragmatic breathing

0645. In the classroom support meeting, a team asks how a teacher and counselor can support a student aged 17. One proposed action is helping a client compare strategies and choose one suited to the current stressor. Which idea does it represent?

A. Coping flexibility
B. Progressive muscle relaxation
C. Contraindication-sensitive practice
D. Diaphragmatic breathing

0646. In mindfulness and stress-reduction practice, in the youth advocacy program, a teacher and counselor describes the most appropriate support for a middle-school student as noticing neutral sights or sounds in the room when distress makes attention feel disconnected. Which framework is being applied?

A. Mindfulness
B. Body scan
C. Grounding
D. Stress appraisal

0647. In a case note about a child of elementary-school age, a supervised trainee working in the telehealth session records this priority: inviting nonjudgmental attention to sensations from one body area to another. What principle is reflected?

A. Mindfulness
B. Mindful self-compassion
C. Progressive exposure to relaxation
D. Body scan

0648. In a supervision review, a case coordinator describes work with a student aged 12 in the counseling practicum: inviting nonjudgmental attention to sensations from one body area to another. What concept is illustrated?

A. Contraindication-sensitive practice
B. Diaphragmatic breathing
C. Body scan
D. Stress appraisal

0649. A case conference asks for a distinction between Body scan and Coping flexibility. Which answer is sound?

A. Body scan: A guided practice of noticing sensations across body regions without requiring a particular sensation. / Coping flexibility: Gradually practicing a regulation technique in increasingly challenging but manageable contexts.
B. Body scan: A guided practice of noticing sensations across body regions without requiring a particular sensation. / Coping flexibility: The capacity to select and adapt coping strategies to fit changing demands and context.
C. Body scan: Adapting or pausing an exercise when it increases distress, discomfort, or is not a good fit. / Coping flexibility: The capacity to select and adapt coping strategies to fit changing demands and context.
D. Body scan: The capacity to select and adapt coping strategies to fit changing demands and context. / Coping flexibility: A guided practice of noticing sensations across body regions without requiring a particular sensation.

0650. Choose the practice comparison that best separates Body scan from Coping flexibility.

A. Body scan: Offering choice to stop or use an alternative when inward attention feels unsafe or uncomfortable. / Coping flexibility: Helping a client compare strategies and choose one suited to the current stressor.
B. Body scan: Inviting nonjudgmental attention to sensations from one body area to another. / Coping flexibility: Practicing a calming skill in session and then in a planned everyday situation.
C. Body scan: Helping a client compare strategies and choose one suited to the current stressor. / Coping flexibility: Inviting nonjudgmental attention to sensations from one body area to another.
D. Body scan: Inviting nonjudgmental attention to sensations from one body area to another. / Coping flexibility: Helping a client compare strategies and choose one suited to the current stressor.

0651. How should a practitioner distinguish the applications of Progressive muscle relaxation and Mindful self-compassion?

A. Progressive muscle relaxation: Supporting a young person to acknowledge difficulty without harsh self-judgment. / Mindful self-compassion: Teaching gradual muscle release and adapting the exercise if it causes discomfort.
B. Progressive muscle relaxation: Inviting nonjudgmental attention to sensations from one body area to another. / Mindful self-compassion: Supporting a young person to acknowledge difficulty without harsh self-judgment.
C. Progressive muscle relaxation: Teaching gradual muscle release and adapting the exercise if it causes discomfort. / Mindful self-compassion: Helping a client compare strategies and choose one suited to the current stressor.
D. Progressive muscle relaxation: Teaching gradual muscle release and adapting the exercise if it causes discomfort. / Mindful self-compassion: Supporting a young person to acknowledge difficulty without harsh self-judgment.

0652. In mindfulness and stress-reduction practice, at the community youth program, a research trainee reviews whether a plan for a child of elementary-school age is appropriate. The relevant practice is noticing neutral sights or sounds in the room when distress makes attention feel disconnected. Which concept is tested?

A. Diaphragmatic breathing
B. Grounding
C. Mindfulness
D. Stress appraisal

0653. A doctoral student reads the following description. Which concept does it define? Adapting or pausing an exercise when it increases distress, discomfort, or is not a good fit.

A. Contraindication-sensitive practice
B. Mindfulness
C. Progressive exposure to relaxation
D. Stress appraisal

0654. A support meeting for a student aged 9 includes a counselor in the student wellness team. The practice under consideration is practicing a calming skill in session and then in a planned everyday situation. Which concept guides it?

A. Body scan
B. Diaphragmatic breathing
C. Stress appraisal
D. Progressive exposure to relaxation

0655. In mindfulness and stress-reduction practice, choose the definition pair that correctly explains Mindfulness first and Grounding second.

A. Mindfulness: Purposeful, present-moment attention with an attitude of openness and reduced automatic judgment. / Grounding: A guided practice of noticing sensations across body regions without requiring a particular sensation.
B. Mindfulness: Gradually practicing a regulation technique in increasingly challenging but manageable contexts. / Grounding: Present-focused orientation using sensory or environmental cues to reconnect with the immediate moment.
C. Mindfulness: Present-focused orientation using sensory or environmental cues to reconnect with the immediate moment. / Grounding: Purposeful, present-moment attention with an attitude of openness and reduced automatic judgment.
D. Mindfulness: Purposeful, present-moment attention with an attitude of openness and reduced automatic judgment. / Grounding: Present-focused orientation using sensory or environmental cues to reconnect with the immediate moment.

0656. Which statement most accurately defines Mindful self-compassion?

A. The capacity to select and adapt coping strategies to fit changing demands and context.
B. The process of evaluating whether a situation is threatening, manageable, or relevant to one’s resources.
C. Gradually practicing a regulation technique in increasingly challenging but manageable contexts.
D. A stance combining awareness of distress, common humanity, and kindness toward oneself.

0657. A school-based clinician presents a support plan for a child aged 14 at the learning-support meeting. Its central feature is offering choice to stop or use an alternative when inward attention feels unsafe or uncomfortable. Which concept should be named?

A. Contraindication-sensitive practice
B. Body scan
C. Mindfulness
D. Mindful self-compassion

0658. In mindfulness and stress-reduction practice, which statement shows a sound practice-level distinction between Progressive muscle relaxation and Grounding?

A. Progressive muscle relaxation: Noticing neutral sights or sounds in the room when distress makes attention feel disconnected. / Grounding: Teaching gradual muscle release and adapting the exercise if it causes discomfort.
B. Progressive muscle relaxation: Teaching gradual muscle release and adapting the exercise if it causes discomfort. / Grounding: Noticing neutral sights or sounds in the room when distress makes attention feel disconnected.
C. Progressive muscle relaxation: Teaching gradual muscle release and adapting the exercise if it causes discomfort. / Grounding: Supporting a young person to acknowledge difficulty without harsh self-judgment.
D. Progressive muscle relaxation: Helping a client compare strategies and choose one suited to the current stressor. / Grounding: Noticing neutral sights or sounds in the room when distress makes attention feel disconnected.

0659. Choose the response that best puts Contraindication-sensitive practice into practice.

A. Teaching gradual muscle release and adapting the exercise if it causes discomfort.
B. Offering choice to stop or use an alternative when inward attention feels unsafe or uncomfortable.
C. Inviting slow, comfortable abdominal breathing without forcing depth or pace.
D. Guiding attention to current experience while allowing thoughts to come and go.

0660. Which statement accurately contrasts the course concepts Diaphragmatic breathing and Coping flexibility?

A. Diaphragmatic breathing: A breathing practice emphasizing comfortable movement of the diaphragm to support regulation. / Coping flexibility: Present-focused orientation using sensory or environmental cues to reconnect with the immediate moment.
B. Diaphragmatic breathing: The capacity to select and adapt coping strategies to fit changing demands and context. / Coping flexibility: A breathing practice emphasizing comfortable movement of the diaphragm to support regulation.
C. Diaphragmatic breathing: A breathing practice emphasizing comfortable movement of the diaphragm to support regulation. / Coping flexibility: The capacity to select and adapt coping strategies to fit changing demands and context.
D. Diaphragmatic breathing: Adapting or pausing an exercise when it increases distress, discomfort, or is not a good fit. / Coping flexibility: The capacity to select and adapt coping strategies to fit changing demands and context.

0661. In the outpatient clinic, a teacher and counselor explains why a young person aged 10 would benefit from guiding attention to current experience while allowing thoughts to come and go. Which course concept underpins the explanation?

A. Progressive exposure to relaxation
B. Coping flexibility
C. Mindfulness
D. Mindful self-compassion

0662. How are Stress appraisal and Coping flexibility most accurately differentiated in this curriculum?

A. Stress appraisal: Adapting or pausing an exercise when it increases distress, discomfort, or is not a good fit. / Coping flexibility: The capacity to select and adapt coping strategies to fit changing demands and context.
B. Stress appraisal: The process of evaluating whether a situation is threatening, manageable, or relevant to one's resources. / Coping flexibility: A structured practice of tensing and releasing muscle groups to increase awareness of bodily tension.
C. Stress appraisal: The process of evaluating whether a situation is threatening, manageable, or relevant to one's resources. / Coping flexibility: The capacity to select and adapt coping strategies to fit changing demands and context.
D. Stress appraisal: The capacity to select and adapt coping strategies to fit changing demands and context. / Coping flexibility: The process of evaluating whether a situation is threatening, manageable, or relevant to one's resources.

0663. How are Diaphragmatic breathing and Contraindication-sensitive practice most accurately differentiated in this curriculum?

A. Diaphragmatic breathing: A stance combining awareness of distress, common humanity, and kindness toward oneself. / Contraindication-sensitive practice: Adapting or pausing an exercise when it increases distress, discomfort, or is not a good fit.
B. Diaphragmatic breathing: A breathing practice emphasizing comfortable movement of the diaphragm to support regulation. / Contraindication-sensitive practice: Purposeful, present-moment attention with an attitude of openness and reduced automatic judgment.
C. Diaphragmatic breathing: Adapting or pausing an exercise when it increases distress, discomfort, or is not a good fit. / Contraindication-sensitive practice: A breathing practice emphasizing comfortable movement of the diaphragm to support regulation.
D. Diaphragmatic breathing: A breathing practice emphasizing comfortable movement of the diaphragm to support regulation. / Contraindication-sensitive practice: Adapting or pausing an exercise when it increases distress, discomfort, or is not a good fit.

0664. In mindfulness and stress-reduction practice, which applied comparison correctly identifies what belongs to Grounding versus Mindful self-compassion?

A. Grounding: Noticing neutral sights or sounds in the room when distress makes attention feel disconnected. / Mindful self-compassion: Supporting a young person to acknowledge difficulty without harsh self-judgment.
B. Grounding: Exploring how a young person interprets a demand and what coping resources seem available. / Mindful self-compassion: Supporting a young person to acknowledge difficulty without harsh self-judgment.
C. Grounding: Supporting a young person to acknowledge difficulty without harsh self-judgment. / Mindful self-compassion: Noticing neutral sights or sounds in the room when distress makes attention feel disconnected.
D. Grounding: Noticing neutral sights or sounds in the room when distress makes attention feel disconnected. / Mindful self-compassion: Practicing a calming skill in session and then in a planned everyday situation.

0665. In a supervision review, a case coordinator describes work with a older adolescent client in the youth group: practicing a calming skill in session and then in a planned everyday situation. What concept is illustrated?

A. Progressive exposure to relaxation
B. Body scan
C. Diaphragmatic breathing
D. Contraindication-sensitive practice

0666. While supporting a adolescent student in the parent meeting, a parent educator adopts this practice: guiding attention to current experience while allowing thoughts to come and go. Which concept best explains the choice?

A. Stress appraisal
B. Mindfulness
C. Diaphragmatic breathing
D. Contraindication-sensitive practice

0667. In a supervision quiz, how should Diaphragmatic breathing be distinguished from Body scan?

A. Diaphragmatic breathing: A guided practice of noticing sensations across body regions without requiring a particular sensation. / Body scan: A breathing practice emphasizing comfortable movement of the diaphragm to support regulation.
B. Diaphragmatic breathing: A breathing practice emphasizing comfortable movement of the diaphragm to support regulation. / Body scan: A guided practice of noticing sensations across body regions without requiring a particular sensation.
C. Diaphragmatic breathing: A breathing practice emphasizing comfortable movement of the diaphragm to support regulation. / Body scan: Purposeful, present-moment attention with an attitude of openness and reduced automatic judgment.
D. Diaphragmatic breathing: The process of evaluating whether a situation is threatening, manageable, or relevant to one's resources. / Body scan: A guided practice of noticing sensations across body regions without requiring a particular sensation.

0668. In mindfulness and stress-reduction practice, a service navigator is asked what should shape a child aged 6's support in the community service agency. The proposed focus is noticing neutral sights or sounds in the room when distress makes attention feel disconnected. Which principle does it represent?

A. Grounding
B. Progressive muscle relaxation
C. Mindfulness
D. Contraindication-sensitive practice

0669. Which description belongs with the term Coping flexibility?

A. Purposeful, present-moment attention with an attitude of openness and reduced automatic judgment.
B. Gradually practicing a regulation technique in increasingly challenging but manageable contexts.
C. The capacity to select and adapt coping strategies to fit changing demands and context.
D. A breathing practice emphasizing comfortable movement of the diaphragm to support regulation.

0670. A doctoral student reads the following description. Which concept does it define? A breathing practice emphasizing comfortable movement of the diaphragm to support regulation.

A. Diaphragmatic breathing
B. Progressive muscle relaxation
C. Grounding
D. Mindful self-compassion

0671. Which choice aligns each practice with the correct idea, Diaphragmatic breathing or Coping flexibility?

A. Diaphragmatic breathing: Helping a client compare strategies and choose one suited to the current stressor. / Coping flexibility: Inviting slow, comfortable abdominal breathing without forcing depth or pace.
B. Diaphragmatic breathing: Inviting slow, comfortable abdominal breathing without forcing depth or pace. / Coping flexibility: Noticing neutral sights or sounds in the room when distress makes attention feel disconnected.
C. Diaphragmatic breathing: Offering choice to stop or use an alternative when inward attention feels unsafe or uncomfortable. / Coping flexibility: Helping a client compare strategies and choose one suited to the current stressor.
D. Diaphragmatic breathing: Inviting slow, comfortable abdominal breathing without forcing depth or pace. / Coping flexibility: Helping a client compare strategies and choose one suited to the current stressor.

0672. A student confuses Stress appraisal with Progressive exposure to relaxation. Which explanation most accurately separates them?

A. Stress appraisal: Gradually practicing a regulation technique in increasingly challenging but manageable contexts. / Progressive exposure to relaxation: The process of evaluating whether a situation is threatening, manageable, or relevant to one's resources.
B. Stress appraisal: The process of evaluating whether a situation is threatening, manageable, or relevant to one's resources. / Progressive exposure to relaxation: A structured practice of tensing and releasing muscle groups to increase awareness of bodily tension.
C. Stress appraisal: The process of evaluating whether a situation is threatening, manageable, or relevant to one's resources. / Progressive exposure to relaxation: Gradually practicing a regulation technique in increasingly challenging but manageable contexts.
D. Stress appraisal: Adapting or pausing an exercise when it increases distress, discomfort, or is not a good fit. / Progressive exposure to relaxation: Gradually practicing a regulation technique in increasingly challenging but manageable contexts.

0673. For a older adolescent client seen in the student wellness team, the research trainee recommends a plan built around exploring how a young person interprets a demand and what coping resources seem available. Which concept is reflected?

A. Progressive exposure to relaxation
B. Body scan
C. Contraindication-sensitive practice
D. Stress appraisal

0674. In mindfulness and stress-reduction practice, which pair of actions illustrates Grounding and Stress appraisal, respectively?

A. Grounding: Noticing neutral sights or sounds in the room when distress makes attention feel disconnected. / Stress appraisal: Inviting nonjudgmental attention to sensations from one body area to another.
B. Grounding: Exploring how a young person interprets a demand and what coping resources seem available. / Stress appraisal: Noticing neutral sights or sounds in the room when distress makes attention feel disconnected.
C. Grounding: Noticing neutral sights or sounds in the room when distress makes attention feel disconnected. / Stress appraisal: Exploring how a young person interprets a demand and what coping resources seem available.
D. Grounding: Practicing a calming skill in session and then in a planned everyday situation. / Stress appraisal: Exploring how a young person interprets a demand and what coping resources seem available.

0675. While consulting in the caregiver consultation, a mental-health professional supports a young adolescent client by using this approach: inviting slow, comfortable abdominal breathing without forcing depth or pace. Which concept is being applied?

A. Body scan
B. Diaphragmatic breathing
C. Contraindication-sensitive practice
D. Progressive muscle relaxation

0676. Which comparison would correct a trainee's misunderstanding of Diaphragmatic breathing versus Mindful self-compassion?

A. Diaphragmatic breathing: A stance combining awareness of distress, common humanity, and kindness toward oneself. / Mindful self-compassion: A breathing practice emphasizing comfortable movement of the diaphragm to support regulation.
B. Diaphragmatic breathing: A guided practice of noticing sensations across body regions without requiring a particular sensation. / Mindful self-compassion: A stance combining awareness of distress, common humanity, and kindness toward oneself.
C. Diaphragmatic breathing: A breathing practice emphasizing comfortable movement of the diaphragm to support regulation. / Mindful self-compassion: A stance combining awareness of distress, common humanity, and kindness toward oneself.
D. Diaphragmatic breathing: A breathing practice emphasizing comfortable movement of the diaphragm to support regulation. / Mindful self-compassion: A structured practice of tensing and releasing muscle groups to increase awareness of bodily tension.

0677. A school-age child is receiving support in the caregiver consultation. The group facilitator is guided by this practice: offering choice to stop or use an alternative when inward attention feels unsafe or uncomfortable. Which principle best fits?

A. Progressive muscle relaxation
B. Contraindication-sensitive practice
C. Grounding
D. Diaphragmatic breathing

0678. A trainee must distinguish how Mindfulness and Mindful self-compassion guide practice. Which comparison is accurate?

A. Mindfulness: Guiding attention to current experience while allowing thoughts to come and go. / Mindful self-compassion: Exploring how a young person interprets a demand and what coping resources seem available.
B. Mindfulness: Guiding attention to current experience while allowing thoughts to come and go. / Mindful self-compassion: Supporting a young person to acknowledge difficulty without harsh self-judgment.
C. Mindfulness: Offering choice to stop or use an alternative when inward attention feels unsafe or uncomfortable. / Mindful self-compassion: Supporting a young person to acknowledge difficulty without harsh self-judgment.
D. Mindfulness: Supporting a young person to acknowledge difficulty without harsh self-judgment. / Mindful self-compassion: Guiding attention to current experience while allowing thoughts to come and go.

0679. An interdisciplinary team reviews a student aged 17's case at the student-support meeting. The play therapist recommends supporting a young person to acknowledge difficulty without harsh self-judgment. Which course concept best fits?

A. Contraindication-sensitive practice
B. Progressive muscle relaxation
C. Coping flexibility
D. Mindful self-compassion

0680. In a professional consultation about a client in late adolescence, the consultant describes this response in the community mental-health service: offering choice to stop or use an alternative when inward attention feels unsafe or uncomfortable. Which term is most apt?

A. Mindfulness
B. Progressive exposure to relaxation
C. Contraindication-sensitive practice
D. Stress appraisal

0681. In the family session, the agreed focus for a therapist working with a child aged 7 is practicing a calming skill in session and then in a planned everyday situation. Which concept names this focus?

A. Progressive exposure to relaxation
B. Mindful self-compassion
C. Stress appraisal
D. Body scan

0682. Which paired example correctly applies Mindful self-compassion first and Contraindication-sensitive practice second?

A. Mindful self-compassion: Supporting a young person to acknowledge difficulty without harsh self-judgment. / Contraindication-sensitive practice: Exploring how a young person interprets a demand and what coping resources seem available.
B. Mindful self-compassion: Offering choice to stop or use an alternative when inward attention feels unsafe or uncomfortable. / Contraindication-sensitive practice: Supporting a young person to acknowledge difficulty without harsh self-judgment.
C. Mindful self-compassion: Helping a client compare strategies and choose one suited to the current stressor. / Contraindication-sensitive practice: Offering choice to stop or use an alternative when inward attention feels unsafe or uncomfortable.
D. Mindful self-compassion: Supporting a young person to acknowledge difficulty without harsh self-judgment. / Contraindication-sensitive practice: Offering choice to stop or use an alternative when inward attention feels unsafe or uncomfortable.

0683. In mindfulness and stress-reduction practice, a supervisor asks for an applied contrast between Grounding and Stress appraisal. Which option fits?

A. Grounding: Noticing neutral sights or sounds in the room when distress makes attention feel disconnected. / Stress appraisal: Exploring how a young person interprets a demand and what coping resources seem available.
B. Grounding: Noticing neutral sights or sounds in the room when distress makes attention feel disconnected. / Stress appraisal: Inviting nonjudgmental attention to sensations from one body area to another.
C. Grounding: Practicing a calming skill in session and then in a planned everyday situation. / Stress appraisal: Exploring how a young person interprets a demand and what coping resources seem available.
D. Grounding: Exploring how a young person interprets a demand and what coping resources seem available. / Stress appraisal: Noticing neutral sights or sounds in the room when distress makes attention feel disconnected.

0684. Which option preserves the correct meaning of both Mindfulness and Stress appraisal?

A. Mindfulness: The process of evaluating whether a situation is threatening, manageable, or relevant to one's resources. / Stress appraisal: Purposeful, present-moment attention with an attitude of openness and reduced automatic judgment.
B. Mindfulness: Present-focused orientation using sensory or environmental cues to reconnect with the immediate moment. / Stress appraisal: The process of evaluating whether a situation is threatening, manageable, or relevant to one's resources.
C. Mindfulness: Purposeful, present-moment attention with an attitude of openness and reduced automatic judgment. / Stress appraisal: The process of evaluating whether a situation is threatening, manageable, or relevant to one's resources.
D. Mindfulness: Purposeful, present-moment attention with an attitude of openness and reduced automatic judgment. / Stress appraisal: A breathing practice emphasizing comfortable movement of the diaphragm to support regulation.

0685. A child aged 6's service team meets in the caregiver consultation. The school-based clinician recommends a change involving supporting a young person to acknowledge difficulty without harsh self-judgment. Which idea best explains it?

A. Mindful self-compassion
B. Diaphragmatic breathing
C. Mindfulness
D. Body scan

0686. In the multidisciplinary case conference, a caregiver working with a counselor is considering this approach for a client in late adolescence: practicing a calming skill in session and then in a planned everyday situation. Which framework does it represent?

A. Progressive exposure to relaxation
B. Diaphragmatic breathing
C. Grounding
D. Mindful self-compassion

0687. A student confuses Progressive muscle relaxation with Coping flexibility. Which explanation most accurately separates them?

A. Progressive muscle relaxation: A structured practice of tensing and releasing muscle groups to increase awareness of bodily tension. / Coping flexibility: The capacity to select and adapt coping strategies to fit changing demands and context.
B. Progressive muscle relaxation: Present-focused orientation using sensory or environmental cues to reconnect with the immediate moment. / Coping flexibility: The capacity to select and adapt coping strategies to fit changing demands and context.
C. Progressive muscle relaxation: A structured practice of tensing and releasing muscle groups to increase awareness of bodily tension. / Coping flexibility: Gradually practicing a regulation technique in increasingly challenging but manageable contexts.
D. Progressive muscle relaxation: The capacity to select and adapt coping strategies to fit changing demands and context. / Coping flexibility: A structured practice of tensing and releasing muscle groups to increase awareness of bodily tension.

0688. In mindfulness and stress-reduction practice, which option correctly matches each concept to its practice focus: Mindfulness and Grounding?

A. Mindfulness: Noticing neutral sights or sounds in the room when distress makes attention feel disconnected. / Grounding: Guiding attention to current experience while allowing thoughts to come and go.
B. Mindfulness: Practicing a calming skill in session and then in a planned everyday situation. / Grounding: Noticing neutral sights or sounds in the room when distress makes attention feel disconnected.
C. Mindfulness: Guiding attention to current experience while allowing thoughts to come and go. / Grounding: Inviting nonjudgmental attention to sensations from one body area to another.
D. Mindfulness: Guiding attention to current experience while allowing thoughts to come and go. / Grounding: Noticing neutral sights or sounds in the room when distress makes attention feel disconnected.

0689. A planning meeting about a high-school student includes a behavior specialist. The proposed practice in the caregiver consultation is practicing a calming skill in session and then in a planned everyday situation. Which idea underlies it?

A. Progressive exposure to relaxation
B. Coping flexibility
C. Body scan
D. Stress appraisal

0690. A trainee must choose a practice that exemplifies Diaphragmatic breathing. Which action is the best fit?

A. Teaching gradual muscle release and adapting the exercise if it causes discomfort.
B. Noticing neutral sights or sounds in the room when distress makes attention feel disconnected.
C. Guiding attention to current experience while allowing thoughts to come and go.
D. Inviting slow, comfortable abdominal breathing without forcing depth or pace.

0691. In mindfulness and stress-reduction practice, which option pairs the definitions of Grounding and Mindful self-compassion correctly, in that order?

A. Grounding: Present-focused orientation using sensory or environmental cues to reconnect with the immediate moment. / Mindful self-compassion: A stance combining awareness of distress, common humanity, and kindness toward oneself.
B. Grounding: The process of evaluating whether a situation is threatening, manageable, or relevant to one's resources. / Mindful self-compassion: A stance combining awareness of distress, common humanity, and kindness toward oneself.
C. Grounding: Present-focused orientation using sensory or environmental cues to reconnect with the immediate moment. / Mindful self-compassion: Gradually practicing a regulation technique in increasingly challenging but manageable contexts.
D. Grounding: A stance combining awareness of distress, common humanity, and kindness toward oneself. / Mindful self-compassion: Present-focused orientation using sensory or environmental cues to reconnect with the immediate moment.

0692. A parent educator presents a support plan for a preadolescent child at the counseling practicum. Its central feature is practicing a calming skill in session and then in a planned everyday situation. Which concept should be named?

A. Diaphragmatic breathing
B. Mindful self-compassion
C. Progressive exposure to relaxation
D. Contraindication-sensitive practice

0693. In the community youth program, a consulting counselor explains why a young person aged 16 would benefit from practicing a calming skill in session and then in a planned everyday situation. Which course concept underpins the explanation?

A. Contraindication-sensitive practice
B. Progressive exposure to relaxation
C. Stress appraisal
D. Diaphragmatic breathing

0694. An interdisciplinary team reviews a child aged 7's case at the classroom support meeting. The clinical supervisor recommends guiding attention to current experience while allowing thoughts to come and go. Which course concept best fits?

A. Grounding
B. Progressive muscle relaxation
C. Mindfulness
D. Stress appraisal

0695. A case discussion concerns a young adolescent client and a family therapist in the behavior-support review. The practitioner is considering exploring how a young person interprets a demand and what coping resources seem available. Which principle is involved?

A. Mindful self-compassion
B. Coping flexibility
C. Progressive exposure to relaxation
D. Stress appraisal

0696. A caregiver working with a counselor presents a support plan for a client in early adolescence at the behavior-support review. Its central feature is guiding attention to current experience while allowing thoughts to come and go. Which concept should be named?

A. Body scan
B. Mindfulness
C. Stress appraisal
D. Grounding

0697. While supporting a young person aged 18 in the school counseling office, a case coordinator adopts this practice: offering choice to stop or use an alternative when inward attention feels unsafe or uncomfortable. Which concept best explains the choice?

A. Grounding
B. Contraindication-sensitive practice
C. Diaphragmatic breathing
D. Stress appraisal

0698. Identify the most precise label for this idea: The capacity to select and adapt coping strategies to fit changing demands and context.

A. Grounding
B. Progressive exposure to relaxation
C. Coping flexibility
D. Mindfulness

0699. Which comparison would correct a trainee's misunderstanding of Stress appraisal versus Coping flexibility?

A. Stress appraisal: Adapting or pausing an exercise when it increases distress, discomfort, or is not a good fit. / Coping flexibility: The capacity to select and adapt coping strategies to fit changing demands and context.
B. Stress appraisal: The capacity to select and adapt coping strategies to fit changing demands and context. / Coping flexibility: The process of evaluating whether a situation is threatening, manageable, or relevant to one's resources.
C. Stress appraisal: The process of evaluating whether a situation is threatening, manageable, or relevant to one's resources. / Coping flexibility: The capacity to select and adapt coping strategies to fit changing demands and context.
D. Stress appraisal: The process of evaluating whether a situation is threatening, manageable, or relevant to one's resources. / Coping flexibility: A structured practice of tensing and releasing muscle groups to increase awareness of bodily tension.

0700. Which pair of actions illustrates Mindfulness and Progressive exposure to relaxation, respectively?

A. Mindfulness: Supporting a young person to acknowledge difficulty without harsh self-judgment. / Progressive exposure to relaxation: Practicing a calming skill in session and then in a planned everyday situation.
B. Mindfulness: Practicing a calming skill in session and then in a planned everyday situation. / Progressive exposure to relaxation: Guiding attention to current experience while allowing thoughts to come and go.
C. Mindfulness: Guiding attention to current experience while allowing thoughts to come and go. / Progressive exposure to relaxation: Practicing a calming skill in session and then in a planned everyday situation.
D. Mindfulness: Guiding attention to current experience while allowing thoughts to come and go. / Progressive exposure to relaxation: Helping a client compare strategies and choose one suited to the current stressor.

0701. Choose the definition pair that correctly explains Progressive muscle relaxation first and Mindful self-compassion second.

A. Progressive muscle relaxation: A structured practice of tensing and releasing muscle groups to increase awareness of bodily tension. / Mindful self-compassion: The capacity to select and adapt coping strategies to fit changing demands and context.
B. Progressive muscle relaxation: A stance combining awareness of distress, common humanity, and kindness toward oneself. / Mindful self-compassion: A structured practice of tensing and releasing muscle groups to increase awareness of bodily tension.
C. Progressive muscle relaxation: A structured practice of tensing and releasing muscle groups to increase awareness of bodily tension. / Mindful self-compassion: A stance combining awareness of distress, common humanity, and kindness toward oneself.
D. Progressive muscle relaxation: A guided practice of noticing sensations across body regions without requiring a particular sensation. / Mindful self-compassion: A stance combining awareness of distress, common humanity, and kindness toward oneself.

0702. A trainee must distinguish how Stress appraisal and Coping flexibility guide practice. Which comparison is accurate?

A. Stress appraisal: Helping a client compare strategies and choose one suited to the current stressor. / Coping flexibility: Exploring how a young person interprets a demand and what coping resources seem available.
B. Stress appraisal: Exploring how a young person interprets a demand and what coping resources seem available. / Coping flexibility: Helping a client compare strategies and choose one suited to the current stressor.
C. Stress appraisal: Exploring how a young person interprets a demand and what coping resources seem available. / Coping flexibility: Teaching gradual muscle release and adapting the exercise if it causes discomfort.
D. Stress appraisal: Offering choice to stop or use an alternative when inward attention feels unsafe or uncomfortable. / Coping flexibility: Helping a client compare strategies and choose one suited to the current stressor.

0703. In the caregiver consultation, a school-based clinician is considering this approach for a child aged 6: supporting a young person to acknowledge difficulty without harsh self-judgment. Which framework does it represent?

A. Progressive muscle relaxation
B. Mindfulness
C. Diaphragmatic breathing
D. Mindful self-compassion

0704. Which professional action most closely applies Mindfulness?

A. Practicing a calming skill in session and then in a planned everyday situation.
B. Supporting a young person to acknowledge difficulty without harsh self-judgment.
C. Guiding attention to current experience while allowing thoughts to come and go.
D. Inviting slow, comfortable abdominal breathing without forcing depth or pace.

0705. A support meeting for a high-school student includes a counselor in the school consultation. The practice under consideration is inviting nonjudgmental attention to sensations from one body area to another. Which concept guides it?

A. Diaphragmatic breathing
B. Progressive exposure to relaxation
C. Body scan
D. Stress appraisal

0706. In mindfulness and stress-reduction practice, which option preserves the correct meaning of both Grounding and Contraindication-sensitive practice?

A. Grounding: Present-focused orientation using sensory or environmental cues to reconnect with the immediate moment. / Contraindication-sensitive practice: Adapting or pausing an exercise when it increases distress, discomfort, or is not a good fit.
B. Grounding: The capacity to select and adapt coping strategies to fit changing demands and context. / Contraindication-sensitive practice: Adapting or pausing an exercise when it increases distress, discomfort, or is not a good fit.
C. Grounding: Present-focused orientation using sensory or environmental cues to reconnect with the immediate moment. / Contraindication-sensitive practice: A stance combining awareness of distress, common humanity, and kindness toward oneself.
D. Grounding: Adapting or pausing an exercise when it increases distress, discomfort, or is not a good fit. / Contraindication-sensitive practice: Present-focused orientation using sensory or environmental cues to reconnect with the immediate moment.

0707. A mental-health professional prepares for a session in the learning-support meeting with a student aged 15. The intended approach is inviting nonjudgmental attention to sensations from one body area to another. Which concept is most relevant?

A. Stress appraisal
B. Diaphragmatic breathing
C. Progressive exposure to relaxation
D. Body scan

0708. Which choice aligns each practice with the correct idea, Diaphragmatic breathing or Progressive muscle relaxation?

A. Diaphragmatic breathing: Exploring how a young person interprets a demand and what coping resources seem available. / Progressive muscle relaxation: Teaching gradual muscle release and adapting the exercise if it causes discomfort.
B. Diaphragmatic breathing: Inviting slow, comfortable abdominal breathing without forcing depth or pace. / Progressive muscle relaxation: Practicing a calming skill in session and then in a planned everyday situation.
C. Diaphragmatic breathing: Teaching gradual muscle release and adapting the exercise if it causes discomfort. / Progressive muscle relaxation: Inviting slow, comfortable abdominal breathing without forcing depth or pace.
D. Diaphragmatic breathing: Inviting slow, comfortable abdominal breathing without forcing depth or pace. / Progressive muscle relaxation: Teaching gradual muscle release and adapting the exercise if it causes discomfort.

0709. How should a practitioner distinguish the applications of Mindfulness and Diaphragmatic breathing?

A. Mindfulness: Inviting slow, comfortable abdominal breathing without forcing depth or pace. / Diaphragmatic breathing: Guiding attention to current experience while allowing thoughts to come and go.
B. Mindfulness: Guiding attention to current experience while allowing thoughts to come and go. / Diaphragmatic breathing: Offering choice to stop or use an alternative when inward attention feels unsafe or uncomfortable.
C. Mindfulness: Supporting a young person to acknowledge difficulty without harsh self-judgment. / Diaphragmatic breathing: Inviting slow, comfortable abdominal breathing without forcing depth or pace.
D. Mindfulness: Guiding attention to current experience while allowing thoughts to come and go. / Diaphragmatic breathing: Inviting slow, comfortable abdominal breathing without forcing depth or pace.

0710. Which choice aligns each practice with the correct idea, Mindful self-compassion or Contraindication-sensitive practice?

A. Mindful self-compassion: Supporting a young person to acknowledge difficulty without harsh self-judgment. / Contraindication-sensitive practice: Exploring how a young person interprets a demand and what coping resources seem available.
B. Mindful self-compassion: Helping a client compare strategies and choose one suited to the current stressor. / Contraindication-sensitive practice: Offering choice to stop or use an alternative when inward attention feels unsafe or uncomfortable.
C. Mindful self-compassion: Supporting a young person to acknowledge difficulty without harsh self-judgment. / Contraindication-sensitive practice: Offering choice to stop or use an alternative when inward attention feels unsafe or uncomfortable.
D. Mindful self-compassion: Offering choice to stop or use an alternative when inward attention feels unsafe or uncomfortable. / Contraindication-sensitive practice: Supporting a young person to acknowledge difficulty without harsh self-judgment.

0711. Which named construct is captured by this account? Gradually practicing a regulation technique in increasingly challenging but manageable contexts.

A. Progressive muscle relaxation
B. Progressive exposure to relaxation
C. Contraindication-sensitive practice
D. Mindful self-compassion

0712. A supervisor asks how Progressive muscle relaxation would appear in practice. Which choice should be selected?

A. Teaching gradual muscle release and adapting the exercise if it causes discomfort.
B. Exploring how a young person interprets a demand and what coping resources seem available.
C. Inviting slow, comfortable abdominal breathing without forcing depth or pace.
D. Inviting nonjudgmental attention to sensations from one body area to another.

0713. In the student-support meeting, a parent educator is considering this approach for a young person aged 13: helping a client compare strategies and choose one suited to the current stressor. Which framework does it represent?

A. Progressive muscle relaxation
B. Body scan
C. Contraindication-sensitive practice
D. Coping flexibility

0714. During work in the telehealth session, a youth worker identifies this need: inviting slow, comfortable abdominal breathing without forcing depth or pace. Which idea should guide the response?

A. Coping flexibility
B. Contraindication-sensitive practice
C. Mindful self-compassion
D. Diaphragmatic breathing

0715. During work in the learning-support meeting, a youth worker identifies this need: helping a client compare strategies and choose one suited to the current stressor. Which idea should guide the response?

A. Mindful self-compassion
B. Coping flexibility
C. Body scan
D. Progressive exposure to relaxation

0716. In mindfulness and stress-reduction practice, a group facilitator is explaining a choice to a child aged 7 and caregiver in the student wellness team. The choice centers on noticing neutral sights or sounds in the room when distress makes attention feel disconnected. Which idea is illustrated?

A. Mindfulness
B. Grounding
C. Body scan
D. Coping flexibility

0717. Which option correctly matches each concept to its practice focus: Coping flexibility and Contraindication-sensitive practice?

A. Coping flexibility: Offering choice to stop or use an alternative when inward attention feels unsafe or uncomfortable. / Contraindication-sensitive practice: Helping a client compare strategies and choose one suited to the current stressor.
B. Coping flexibility: Helping a client compare strategies and choose one suited to the current stressor. / Contraindication-sensitive practice: Offering choice to stop or use an alternative when inward attention feels unsafe or uncomfortable.
C. Coping flexibility: Helping a client compare strategies and choose one suited to the current stressor. / Contraindication-sensitive practice: Exploring how a young person interprets a demand and what coping resources seem available.
D. Coping flexibility: Practicing a calming skill in session and then in a planned everyday situation. / Contraindication-sensitive practice: Offering choice to stop or use an alternative when inward attention feels unsafe or uncomfortable.

0718. Which paired example correctly applies Stress appraisal first and Coping flexibility second?

A. Stress appraisal: Exploring how a young person interprets a demand and what coping resources seem available. / Coping flexibility: Teaching gradual muscle release and adapting the exercise if it causes discomfort.
B. Stress appraisal: Offering choice to stop or use an alternative when inward attention feels unsafe or uncomfortable. / Coping flexibility: Helping a client compare strategies and choose one suited to the current stressor.
C. Stress appraisal: Exploring how a young person interprets a demand and what coping resources seem available. / Coping flexibility: Helping a client compare strategies and choose one suited to the current stressor.
D. Stress appraisal: Helping a client compare strategies and choose one suited to the current stressor. / Coping flexibility: Exploring how a young person interprets a demand and what coping resources seem available.

0719. Identify the most precise label for this idea: A breathing practice emphasizing comfortable movement of the diaphragm to support regulation.

A. Progressive muscle relaxation
B. Diaphragmatic breathing
C. Grounding
D. Mindfulness

0720. A team must select a support approach for a child of elementary-school age at the caregiver consultation. The parent educator recommends teaching gradual muscle release and adapting the exercise if it causes discomfort. Which idea is most relevant?

A. Progressive muscle relaxation
B. Coping flexibility
C. Contraindication-sensitive practice
D. Mindfulness

0721. Consider a child aged 8 receiving help in the supervision meeting. The teacher and counselor focuses on offering choice to stop or use an alternative when inward attention feels unsafe or uncomfortable. Which term best describes the guiding idea?

A. Stress appraisal
B. Contraindication-sensitive practice
C. Mindfulness
D. Progressive muscle relaxation

0722. Which statement accurately contrasts the course concepts Mindfulness and Stress appraisal?

A. Mindfulness: Purposeful, present-moment attention with an attitude of openness and reduced automatic judgment. / Stress appraisal: A breathing practice emphasizing comfortable movement of the diaphragm to support regulation.
B. Mindfulness: The process of evaluating whether a situation is threatening, manageable, or relevant to one's resources. / Stress appraisal: Purposeful, present-moment attention with an attitude of openness and reduced automatic judgment.
C. Mindfulness: Present-focused orientation using sensory or environmental cues to reconnect with the immediate moment. / Stress appraisal: The process of evaluating whether a situation is threatening, manageable, or relevant to one's resources.
D. Mindfulness: Purposeful, present-moment attention with an attitude of openness and reduced automatic judgment. / Stress appraisal: The process of evaluating whether a situation is threatening, manageable, or relevant to one's resources.

0723. Select the best explanation of Diaphragmatic breathing.

A. A breathing practice emphasizing comfortable movement of the diaphragm to support regulation.
B. Present-focused orientation using sensory or environmental cues to reconnect with the immediate moment.
C. A stance combining awareness of distress, common humanity, and kindness toward oneself.
D. The process of evaluating whether a situation is threatening, manageable, or relevant to one's resources.

0724. In mindfulness and stress-reduction practice, which option pairs the definitions of Diaphragmatic breathing and Grounding correctly, in that order?

A. Diaphragmatic breathing: A breathing practice emphasizing comfortable movement of the diaphragm to support regulation. / Grounding: A structured practice of tensing and releasing muscle groups to increase awareness of bodily tension.
B. Diaphragmatic breathing: A guided practice of noticing sensations across body regions without requiring a particular sensation. / Grounding: Present-focused orientation using sensory or environmental cues to reconnect with the immediate moment.
C. Diaphragmatic breathing: A breathing practice emphasizing comfortable movement of the diaphragm to support regulation. / Grounding: Present-focused orientation using sensory or environmental cues to reconnect with the immediate moment.
D. Diaphragmatic breathing: Present-focused orientation using sensory or environmental cues to reconnect with the immediate moment. / Grounding: A breathing practice emphasizing comfortable movement of the diaphragm to support regulation.

0725. A supervised trainee and a adolescent student are discussing support in the student wellness team. The selected practice is inviting slow, comfortable abdominal breathing without forcing depth or pace. Which concept does this demonstrate?

A. Mindful self-compassion
B. Stress appraisal
C. Diaphragmatic breathing
D. Progressive muscle relaxation

0726. Select the best explanation of Progressive muscle relaxation.

A. Adapting or pausing an exercise when it increases distress, discomfort, or is not a good fit.
B. A structured practice of tensing and releasing muscle groups to increase awareness of bodily tension.
C. The capacity to select and adapt coping strategies to fit changing demands and context.
D. Purposeful, present-moment attention with an attitude of openness and reduced automatic judgment.

0727. Which statement accurately contrasts the course concepts Mindful self-compassion and Progressive exposure to relaxation?

A. Mindful self-compassion: A guided practice of noticing sensations across body regions without requiring a particular sensation. / Progressive exposure to relaxation: Gradually practicing a regulation technique in increasingly challenging but manageable contexts.
B. Mindful self-compassion: A stance combining awareness of distress, common humanity, and kindness toward oneself. / Progressive exposure to relaxation: Present-focused orientation using sensory or environmental cues to reconnect with the immediate moment.
C. Mindful self-compassion: Gradually practicing a regulation technique in increasingly challenging but manageable contexts. / Progressive exposure to relaxation: A stance combining awareness of distress, common humanity, and kindness toward oneself.
D. Mindful self-compassion: A stance combining awareness of distress, common humanity, and kindness toward oneself. / Progressive exposure to relaxation: Gradually practicing a regulation technique in increasingly challenging but manageable contexts.

0728. Which description belongs with the term Mindfulness?

A. A guided practice of noticing sensations across body regions without requiring a particular sensation.
B. The process of evaluating whether a situation is threatening, manageable, or relevant to one's resources.
C. Purposeful, present-moment attention with an attitude of openness and reduced automatic judgment.
D. A breathing practice emphasizing comfortable movement of the diaphragm to support regulation.

0729. In a supervision quiz, how should Coping flexibility be distinguished from Mindful self-compassion?

A. Coping flexibility: The capacity to select and adapt coping strategies to fit changing demands and context. / Mindful self-compassion: A structured practice of tensing and releasing muscle groups to increase awareness of bodily tension.
B. Coping flexibility: A stance combining awareness of distress, common humanity, and kindness toward oneself. / Mindful self-compassion: The capacity to select and adapt coping strategies to fit changing demands and context.
C. Coping flexibility: A breathing practice emphasizing comfortable movement of the diaphragm to support regulation. / Mindful self-compassion: A stance combining awareness of distress, common humanity, and kindness toward oneself.
D. Coping flexibility: The capacity to select and adapt coping strategies to fit changing demands and context. / Mindful self-compassion: A stance combining awareness of distress, common humanity, and kindness toward oneself.

0730. Which comparison would correct a trainee’s misunderstanding of Stress appraisal versus Mindful self-compassion?

A. Stress appraisal: The process of evaluating whether a situation is threatening, manageable, or relevant to one’s resources. / Mindful self-compassion: Present-focused orientation using sensory or environmental cues to reconnect with the immediate moment.
B. Stress appraisal: Adapting or pausing an exercise when it increases distress, discomfort, or is not a good fit. / Mindful self-compassion: A stance combining awareness of distress, common humanity, and kindness toward oneself.
C. Stress appraisal: The process of evaluating whether a situation is threatening, manageable, or relevant to one’s resources. / Mindful self-compassion: A stance combining awareness of distress, common humanity, and kindness toward oneself.
D. Stress appraisal: A stance combining awareness of distress, common humanity, and kindness toward oneself. / Mindful self-compassion: The process of evaluating whether a situation is threatening, manageable, or relevant to one’s resources.

0731. Which comparison correctly distinguishes Stress appraisal from Contraindication-sensitive practice?

A. Stress appraisal: The process of evaluating whether a situation is threatening, manageable, or relevant to one’s resources. / Contraindication-sensitive practice: Adapting or pausing an exercise when it increases distress, discomfort, or is not a good fit.
B. Stress appraisal: Adapting or pausing an exercise when it increases distress, discomfort, or is not a good fit. / Contraindication-sensitive practice: The process of evaluating whether a situation is threatening, manageable, or relevant to one’s resources.
C. Stress appraisal: A breathing practice emphasizing comfortable movement of the diaphragm to support regulation. / Contraindication-sensitive practice: Adapting or pausing an exercise when it increases distress, discomfort, or is not a good fit.
D. Stress appraisal: The process of evaluating whether a situation is threatening, manageable, or relevant to one’s resources. / Contraindication-sensitive practice: The capacity to select and adapt coping strategies to fit changing demands and context.

0732. A supervisor asks for an applied contrast between Stress appraisal and Progressive exposure to relaxation. Which option fits?

A. Stress appraisal: Exploring how a young person interprets a demand and what coping resources seem available. / Progressive exposure to relaxation: Teaching gradual muscle release and adapting the exercise if it causes discomfort.
B. Stress appraisal: Offering choice to stop or use an alternative when inward attention feels unsafe or uncomfortable. / Progressive exposure to relaxation: Practicing a calming skill in session and then in a planned everyday situation.
C. Stress appraisal: Practicing a calming skill in session and then in a planned everyday situation. / Progressive exposure to relaxation: Exploring how a young person interprets a demand and what coping resources seem available.
D. Stress appraisal: Exploring how a young person interprets a demand and what coping resources seem available. / Progressive exposure to relaxation: Practicing a calming skill in session and then in a planned everyday situation.

0733. When reviewing a older adolescent client’s plan in the youth group, the case coordinator notes that the next step is practicing a calming skill in session and then in a planned everyday situation. Which concept guides this step?

A. Body scan
B. Diaphragmatic breathing
C. Progressive exposure to relaxation
D. Coping flexibility

0734. A team must select a support approach for a student aged 17 at the outpatient clinic. The school-based clinician recommends practicing a calming skill in session and then in a planned everyday situation. Which idea is most relevant?

A. Mindfulness
B. Coping flexibility
C. Mindful self-compassion
D. Progressive exposure to relaxation

0735. Which comparison correctly distinguishes Mindfulness from Diaphragmatic breathing?

A. Mindfulness: Purposeful, present-moment attention with an attitude of openness and reduced automatic judgment. / Diaphragmatic breathing: Adapting or pausing an exercise when it increases distress, discomfort, or is not a good fit.
B. Mindfulness: A stance combining awareness of distress, common humanity, and kindness toward oneself. / Diaphragmatic breathing: A breathing practice emphasizing comfortable movement of the diaphragm to support regulation.
C. Mindfulness: Purposeful, present-moment attention with an attitude of openness and reduced automatic judgment. / Diaphragmatic breathing: A breathing practice emphasizing comfortable movement of the diaphragm to support regulation.
D. Mindfulness: A breathing practice emphasizing comfortable movement of the diaphragm to support regulation. / Diaphragmatic breathing: Purposeful, present-moment attention with an attitude of openness and reduced automatic judgment.

0736. During work in the outpatient clinic, a teacher and counselor identifies this need: guiding attention to current experience while allowing thoughts to come and go. Which idea should guide the response?

A. Grounding
B. Diaphragmatic breathing
C. Stress appraisal
D. Mindfulness

0737. In mindfulness and stress-reduction practice, which pair of actions illustrates Grounding and Coping flexibility, respectively?

A. Grounding: Helping a client compare strategies and choose one suited to the current stressor. / Coping flexibility: Noticing neutral sights or sounds in the room when distress makes attention feel disconnected.
B. Grounding: Noticing neutral sights or sounds in the room when distress makes attention feel disconnected. / Coping flexibility: Helping a client compare strategies and choose one suited to the current stressor.
C. Grounding: Offering choice to stop or use an alternative when inward attention feels unsafe or uncomfortable. / Coping flexibility: Helping a client compare strategies and choose one suited to the current stressor.
D. Grounding: Noticing neutral sights or sounds in the room when distress makes attention feel disconnected. / Coping flexibility: Practicing a calming skill in session and then in a planned everyday situation.

0738. A case conference asks for a distinction between Progressive muscle relaxation and Contraindication-sensitive practice. Which answer is sound?

A. Progressive muscle relaxation: A structured practice of tensing and releasing muscle groups to increase awareness of bodily tension. / Contraindication-sensitive practice: Adapting or pausing an exercise when it increases distress, discomfort, or is not a good fit.
B. Progressive muscle relaxation: A structured practice of tensing and releasing muscle groups to increase awareness of bodily tension. / Contraindication-sensitive practice: Gradually practicing a regulation technique in increasingly challenging but manageable contexts.
C. Progressive muscle relaxation: Adapting or pausing an exercise when it increases distress, discomfort, or is not a good fit. / Contraindication-sensitive practice: A structured practice of tensing and releasing muscle groups to increase awareness of bodily tension.
D. Progressive muscle relaxation: Present-focused orientation using sensory or environmental cues to reconnect with the immediate moment. / Contraindication-sensitive practice: Adapting or pausing an exercise when it increases distress, discomfort, or is not a good fit.

0739. In mindfulness and stress-reduction practice, a high-school student's service team meets in the school counseling office. The family therapist recommends a change involving noticing neutral sights or sounds in the room when distress makes attention feel disconnected. Which idea best explains it?

A. Grounding
B. Progressive exposure to relaxation
C. Body scan
D. Mindfulness

0740. A trainee must distinguish how Body scan and Coping flexibility guide practice. Which comparison is accurate?

A. Body scan: Inviting nonjudgmental attention to sensations from one body area to another. / Coping flexibility: Helping a client compare strategies and choose one suited to the current stressor.
B. Body scan: Offering choice to stop or use an alternative when inward attention feels unsafe or uncomfortable. / Coping flexibility: Helping a client compare strategies and choose one suited to the current stressor.
C. Body scan: Helping a client compare strategies and choose one suited to the current stressor. / Coping flexibility: Inviting nonjudgmental attention to sensations from one body area to another.
D. Body scan: Inviting nonjudgmental attention to sensations from one body area to another. / Coping flexibility: Practicing a calming skill in session and then in a planned everyday situation.

0741. A team must select a support approach for a child aged 7 at the student-support meeting. The case coordinator recommends inviting slow, comfortable abdominal breathing without forcing depth or pace. Which idea is most relevant?

A. Progressive exposure to relaxation
B. Diaphragmatic breathing
C. Stress appraisal
D. Contraindication-sensitive practice

0742. An interdisciplinary team reviews a child of elementary-school age's case at the after-school program. The school support specialist recommends inviting slow, comfortable abdominal breathing without forcing depth or pace. Which course concept best fits?

A. Contraindication-sensitive practice
B. Grounding
C. Diaphragmatic breathing
D. Body scan

0743. Which paired example correctly applies Mindfulness first and Progressive exposure to relaxation second?

A. Mindfulness: Guiding attention to current experience while allowing thoughts to come and go. / Progressive exposure to relaxation: Practicing a calming skill in session and then in a planned everyday situation.
B. Mindfulness: Supporting a young person to acknowledge difficulty without harsh self-judgment. / Progressive exposure to relaxation: Practicing a calming skill in session and then in a planned everyday situation.
C. Mindfulness: Guiding attention to current experience while allowing thoughts to come and go. / Progressive exposure to relaxation: Helping a client compare strategies and choose one suited to the current stressor.
D. Mindfulness: Practicing a calming skill in session and then in a planned everyday situation. / Progressive exposure to relaxation: Guiding attention to current experience while allowing thoughts to come and go.

0744. Which pair of actions illustrates Mindfulness and Progressive muscle relaxation, respectively?

A. Mindfulness: Guiding attention to current experience while allowing thoughts to come and go. / Progressive muscle relaxation: Teaching gradual muscle release and adapting the exercise if it causes discomfort.
B. Mindfulness: Exploring how a young person interprets a demand and what coping resources seem available. / Progressive muscle relaxation: Teaching gradual muscle release and adapting the exercise if it causes discomfort.
C. Mindfulness: Teaching gradual muscle release and adapting the exercise if it causes discomfort. / Progressive muscle relaxation: Guiding attention to current experience while allowing thoughts to come and go.
D. Mindfulness: Guiding attention to current experience while allowing thoughts to come and go. / Progressive muscle relaxation: Supporting a young person to acknowledge difficulty without harsh self-judgment.

0745. In the youth group, the agreed focus for a community practitioner working with a young person aged 18 is inviting slow, comfortable abdominal breathing without forcing depth or pace. Which concept names this focus?

A. Progressive muscle relaxation
B. Stress appraisal
C. Mindful self-compassion
D. Diaphragmatic breathing

0746. A trainee must distinguish how Mindfulness and Body scan guide practice. Which comparison is accurate?

A. Mindfulness: Noticing neutral sights or sounds in the room when distress makes attention feel disconnected. / Body scan: Inviting nonjudgmental attention to sensations from one body area to another.
B. Mindfulness: Inviting nonjudgmental attention to sensations from one body area to another. / Body scan: Guiding attention to current experience while allowing thoughts to come and go.
C. Mindfulness: Guiding attention to current experience while allowing thoughts to come and go. / Body scan: Exploring how a young person interprets a demand and what coping resources seem available.
D. Mindfulness: Guiding attention to current experience while allowing thoughts to come and go. / Body scan: Inviting nonjudgmental attention to sensations from one body area to another.

0747. A trainee must explain Progressive muscle relaxation. Which answer is accurate?

A. A structured practice of tensing and releasing muscle groups to increase awareness of bodily tension.
B. Purposeful, present-moment attention with an attitude of openness and reduced automatic judgment.
C. The process of evaluating whether a situation is threatening, manageable, or relevant to one's resources.
D. A stance combining awareness of distress, common humanity, and kindness toward oneself.

0748. Which named construct is captured by this account? A structured practice of tensing and releasing muscle groups to increase awareness of bodily tension.

A. Mindful self-compassion
B. Grounding
C. Contraindication-sensitive practice
D. Progressive muscle relaxation

0749. Which comparison correctly distinguishes Diaphragmatic breathing from Progressive muscle relaxation?

A. Diaphragmatic breathing: A structured practice of tensing and releasing muscle groups to increase awareness of bodily tension. / Progressive muscle relaxation: A breathing practice emphasizing comfortable movement of the diaphragm to support regulation.
B. Diaphragmatic breathing: A breathing practice emphasizing comfortable movement of the diaphragm to support regulation. / Progressive muscle relaxation: Gradually practicing a regulation technique in increasingly challenging but manageable contexts.
C. Diaphragmatic breathing: A breathing practice emphasizing comfortable movement of the diaphragm to support regulation. / Progressive muscle relaxation: A structured practice of tensing and releasing muscle groups to increase awareness of bodily tension.
D. Diaphragmatic breathing: The process of evaluating whether a situation is threatening, manageable, or relevant to one's resources. / Progressive muscle relaxation: A structured practice of tensing and releasing muscle groups to increase awareness of bodily tension.

0750. Which comparison correctly distinguishes Progressive muscle relaxation from Stress appraisal?

A. Progressive muscle relaxation: Adapting or pausing an exercise when it increases distress, discomfort, or is not a good fit. / Stress appraisal: The process of evaluating whether a situation is threatening, manageable, or relevant to one's resources.
B. Progressive muscle relaxation: The process of evaluating whether a situation is threatening, manageable, or relevant to one's resources. / Stress appraisal: A structured practice of tensing and releasing muscle groups to increase awareness of bodily tension.
C. Progressive muscle relaxation: A structured practice of tensing and releasing muscle groups to increase awareness of bodily tension. / Stress appraisal: A guided practice of noticing sensations across body regions without requiring a particular sensation.
D. Progressive muscle relaxation: A structured practice of tensing and releasing muscle groups to increase awareness of bodily tension. / Stress appraisal: The process of evaluating whether a situation is threatening, manageable, or relevant to one's resources.

0751. Which named construct is captured by this account? The capacity to select and adapt coping strategies to fit changing demands and context.

A. Mindful self-compassion
B. Coping flexibility
C. Mindfulness
D. Contraindication-sensitive practice

0752. A clinical supervisor is asked to evaluate a proposed service for a student aged 9 in the supervision meeting. The defining feature is inviting nonjudgmental attention to sensations from one body area to another. Which concept fits?

A. Contraindication-sensitive practice
B. Body scan
C. Mindful self-compassion
D. Mindfulness

0753. A case conference asks for a distinction between Mindfulness and Mindful self-compassion. Which answer is sound?

A. Mindfulness: Purposeful, present-moment attention with an attitude of openness and reduced automatic judgment. / Mindful self-compassion: A stance combining awareness of distress, common humanity, and kindness toward oneself.
B. Mindfulness: A stance combining awareness of distress, common humanity, and kindness toward oneself. / Mindful self-compassion: Purposeful, present-moment attention with an attitude of openness and reduced automatic judgment.
C. Mindfulness: Adapting or pausing an exercise when it increases distress, discomfort, or is not a good fit. / Mindful self-compassion: A stance combining awareness of distress, common humanity, and kindness toward oneself.
D. Mindfulness: Purposeful, present-moment attention with an attitude of openness and reduced automatic judgment. / Mindful self-compassion: The process of evaluating whether a situation is threatening, manageable, or relevant to one's resources.

0754. In the family resource center, a parent educator is considering this approach for a school-age child: inviting slow, comfortable abdominal breathing without forcing depth or pace. Which framework does it represent?

A. Body scan
B. Diaphragmatic breathing
C. Stress appraisal
D. Coping flexibility

0755. Which option pairs the definitions of Body scan and Progressive exposure to relaxation correctly, in that order?

A. Body scan: A breathing practice emphasizing comfortable movement of the diaphragm to support regulation. / Progressive exposure to relaxation: Gradually practicing a regulation technique in increasingly challenging but manageable contexts.
B. Body scan: A guided practice of noticing sensations across body regions without requiring a particular sensation. / Progressive exposure to relaxation: Gradually practicing a regulation technique in increasingly challenging but manageable contexts.
C. Body scan: A guided practice of noticing sensations across body regions without requiring a particular sensation. / Progressive exposure to relaxation: Present-focused orientation using sensory or environmental cues to reconnect with the immediate moment.
D. Body scan: Gradually practicing a regulation technique in increasingly challenging but manageable contexts. / Progressive exposure to relaxation: A guided practice of noticing sensations across body regions without requiring a particular sensation.

0756. In mindfulness and stress-reduction practice, in the supervision meeting, a school counselor explains why a young person aged 13 would benefit from noticing neutral sights or sounds in the room when distress makes attention feel disconnected. Which course concept underpins the explanation?

A. Grounding
B. Coping flexibility
C. Diaphragmatic breathing
D. Mindfulness

0757. A case conference reviews a therapist's work with a young adolescent client in the classroom support meeting: supporting a young person to acknowledge difficulty without harsh self-judgment. Which principle is central?

A. Contraindication-sensitive practice
B. Mindfulness
C. Mindful self-compassion
D. Stress appraisal

0758. In the after-school program, a case coordinator is considering this approach for a young adolescent client: guiding attention to current experience while allowing thoughts to come and go. Which framework does it represent?

A. Coping flexibility
B. Mindfulness
C. Stress appraisal
D. Grounding

0759. A supervised trainee is supporting a young person aged 18 in the family resource center. The key practice is exploring how a young person interprets a demand and what coping resources seem available. Which course concept is most relevant?

A. Body scan
B. Contraindication-sensitive practice
C. Progressive exposure to relaxation
D. Stress appraisal

0760. While supporting a child aged 6 in the school consultation, a caregiver working with a counselor adopts this practice: teaching gradual muscle release and adapting the exercise if it causes discomfort. Which concept best explains the choice?

A. Progressive muscle relaxation
B. Progressive exposure to relaxation
C. Grounding
D. Diaphragmatic breathing

0761. A trainee must choose a practice that exemplifies Coping flexibility. Which action is the best fit?

A. Inviting nonjudgmental attention to sensations from one body area to another.
B. Supporting a young person to acknowledge difficulty without harsh self-judgment.
C. Inviting slow, comfortable abdominal breathing without forcing depth or pace.
D. Helping a client compare strategies and choose one suited to the current stressor.

0762. A assessment clinician is supporting a young person aged 16 in the school consultation. The key practice is inviting slow, comfortable abdominal breathing without forcing depth or pace. Which course concept is most relevant?

A. Mindful self-compassion
B. Progressive muscle relaxation
C. Diaphragmatic breathing
D. Grounding

0763. Which pair of actions illustrates Coping flexibility and Mindful self-compassion, respectively?

A. Coping flexibility: Helping a client compare strategies and choose one suited to the current stressor. / Mindful self-compassion: Teaching gradual muscle release and adapting the exercise if it causes discomfort.
B. Coping flexibility: Helping a client compare strategies and choose one suited to the current stressor. / Mindful self-compassion: Supporting a young person to acknowledge difficulty without harsh self-judgment.
C. Coping flexibility: Inviting slow, comfortable abdominal breathing without forcing depth or pace. / Mindful self-compassion: Supporting a young person to acknowledge difficulty without harsh self-judgment.
D. Coping flexibility: Supporting a young person to acknowledge difficulty without harsh self-judgment. / Mindful self-compassion: Helping a client compare strategies and choose one suited to the current stressor.

0764. Which option preserves the correct meaning of both Mindfulness and Coping flexibility?

A. Mindfulness: Purposeful, present-moment attention with an attitude of openness and reduced automatic judgment. / Coping flexibility: A guided practice of noticing sensations across body regions without requiring a particular sensation.
B. Mindfulness: Purposeful, present-moment attention with an attitude of openness and reduced automatic judgment. / Coping flexibility: The capacity to select and adapt coping strategies to fit changing demands and context.
C. Mindfulness: The capacity to select and adapt coping strategies to fit changing demands and context. / Coping flexibility: Purposeful, present-moment attention with an attitude of openness and reduced automatic judgment.
D. Mindfulness: Gradually practicing a regulation technique in increasingly challenging but manageable contexts. / Coping flexibility: The capacity to select and adapt coping strategies to fit changing demands and context.

0765. How should a practitioner distinguish the applications of Body scan and Progressive exposure to relaxation?

A. Body scan: Inviting nonjudgmental attention to sensations from one body area to another. / Progressive exposure to relaxation: Practicing a calming skill in session and then in a planned everyday situation.
B. Body scan: Practicing a calming skill in session and then in a planned everyday situation. / Progressive exposure to relaxation: Inviting nonjudgmental attention to sensations from one body area to another.
C. Body scan: Inviting nonjudgmental attention to sensations from one body area to another. / Progressive exposure to relaxation: Noticing neutral sights or sounds in the room when distress makes attention feel disconnected.
D. Body scan: Inviting slow, comfortable abdominal breathing without forcing depth or pace. / Progressive exposure to relaxation: Practicing a calming skill in session and then in a planned everyday situation.

0766. In a supervision quiz, how should Diaphragmatic breathing be distinguished from Stress appraisal?

A. Diaphragmatic breathing: A breathing practice emphasizing comfortable movement of the diaphragm to support regulation. / Stress appraisal: Gradually practicing a regulation technique in increasingly challenging but manageable contexts.
B. Diaphragmatic breathing: The process of evaluating whether a situation is threatening, manageable, or relevant to one's resources. / Stress appraisal: A breathing practice emphasizing comfortable movement of the diaphragm to support regulation.
C. Diaphragmatic breathing: A breathing practice emphasizing comfortable movement of the diaphragm to support regulation. / Stress appraisal: The process of evaluating whether a situation is threatening, manageable, or relevant to one's resources.
D. Diaphragmatic breathing: A guided practice of noticing sensations across body regions without requiring a particular sensation. / Stress appraisal: The process of evaluating whether a situation is threatening, manageable, or relevant to one's resources.

0767. Which statement most accurately defines Progressive exposure to relaxation?

A. Present-focused orientation using sensory or environmental cues to reconnect with the immediate moment.
B. Gradually practicing a regulation technique in increasingly challenging but manageable contexts.
C. A guided practice of noticing sensations across body regions without requiring a particular sensation.
D. A stance combining awareness of distress, common humanity, and kindness toward oneself.

0768. A child aged 11 is receiving support in the family resource center. The youth worker is guided by this practice: inviting nonjudgmental attention to sensations from one body area to another. Which principle best fits?

A. Body scan
B. Progressive exposure to relaxation
C. Contraindication-sensitive practice
D. Coping flexibility

0769. In mindfulness and stress-reduction practice, a student aged 12 and a mental-health professional are reviewing goals in the after-school program. The agreed action is noticing neutral sights or sounds in the room when distress makes attention feel disconnected. Which principle best accounts for it?

A. Mindfulness
B. Stress appraisal
C. Progressive exposure to relaxation
D. Grounding

0770. Which statement accurately contrasts the course concepts Mindfulness and Body scan?

A. Mindfulness: Purposeful, present-moment attention with an attitude of openness and reduced automatic judgment. / Body scan: A guided practice of noticing sensations across body regions without requiring a particular sensation.
B. Mindfulness: A guided practice of noticing sensations across body regions without requiring a particular sensation. / Body scan: Purposeful, present-moment attention with an attitude of openness and reduced automatic judgment.
C. Mindfulness: Purposeful, present-moment attention with an attitude of openness and reduced automatic judgment. / Body scan: The process of evaluating whether a situation is threatening, manageable, or relevant to one's resources.
D. Mindfulness: Present-focused orientation using sensory or environmental cues to reconnect with the immediate moment. / Body scan: A guided practice of noticing sensations across body regions without requiring a particular sensation.

0771. In mindfulness and stress-reduction practice, a school support specialist is asked to evaluate a proposed service for a young person aged 16 in the counseling practicum. The defining feature is noticing neutral sights or sounds in the room when distress makes attention feel disconnected. Which concept fits?

A. Diaphragmatic breathing
B. Progressive muscle relaxation
C. Grounding
D. Contraindication-sensitive practice

0772. A young person and a member of a clinical team are reviewing goals in the classroom support meeting. The agreed action is inviting nonjudgmental attention to sensations from one body area to another. Which principle best accounts for it?

A. Coping flexibility
B. Grounding
C. Body scan
D. Contraindication-sensitive practice

0773. In the clinical planning session, the agreed focus for a community practitioner working with a teenage client is helping a client compare strategies and choose one suited to the current stressor. Which concept names this focus?

A. Progressive muscle relaxation
B. Stress appraisal
C. Grounding
D. Coping flexibility

0774. What is the central meaning of Progressive muscle relaxation?

A. A guided practice of noticing sensations across body regions without requiring a particular sensation.
B. The process of evaluating whether a situation is threatening, manageable, or relevant to one's resources.
C. A breathing practice emphasizing comfortable movement of the diaphragm to support regulation.
D. A structured practice of tensing and releasing muscle groups to increase awareness of bodily tension.

0775. Which professional action most closely applies Coping flexibility?

A. Guiding attention to current experience while allowing thoughts to come and go.
B. Inviting slow, comfortable abdominal breathing without forcing depth or pace.
C. Helping a client compare strategies and choose one suited to the current stressor.
D. Inviting nonjudgmental attention to sensations from one body area to another.

0776. A behavior specialist is asked to evaluate a proposed service for a young person in the parent meeting. The defining feature is helping a client compare strategies and choose one suited to the current stressor. Which concept fits?

A. Diaphragmatic breathing
B. Grounding
C. Coping flexibility
D. Stress appraisal

0777. In mindfulness and stress-reduction practice, choose the practice comparison that best separates Progressive muscle relaxation from Grounding.

A. Progressive muscle relaxation: Teaching gradual muscle release and adapting the exercise if it causes discomfort. / Grounding: Supporting a young person to acknowledge difficulty without harsh self-judgment.
B. Progressive muscle relaxation: Helping a client compare strategies and choose one suited to the current stressor. / Grounding: Noticing neutral sights or sounds in the room when distress makes attention feel disconnected.
C. Progressive muscle relaxation: Noticing neutral sights or sounds in the room when distress makes attention feel disconnected. / Grounding: Teaching gradual muscle release and adapting the exercise if it causes discomfort.
D. Progressive muscle relaxation: Teaching gradual muscle release and adapting the exercise if it causes discomfort. / Grounding: Noticing neutral sights or sounds in the room when distress makes attention feel disconnected.

0778. A planning meeting about a preadolescent child includes a play therapist. The proposed practice in the family resource center is teaching gradual muscle release and adapting the exercise if it causes discomfort. Which idea underlies it?

A. Mindfulness
B. Contraindication-sensitive practice
C. Progressive muscle relaxation
D. Stress appraisal

0779. Consider a young person aged 16 receiving help in the community service agency. The school counselor focuses on inviting nonjudgmental attention to sensations from one body area to another. Which term best describes the guiding idea?

A. Body scan
B. Grounding
C. Progressive muscle relaxation
D. Coping flexibility

0780. In a supervision quiz, how should Coping flexibility be distinguished from Contraindication-sensitive practice?

A. Coping flexibility: Gradually practicing a regulation technique in increasingly challenging but manageable contexts. / Contraindication-sensitive practice: Adapting or pausing an exercise when it increases distress, discomfort, or is not a good fit.
B. Coping flexibility: The capacity to select and adapt coping strategies to fit changing demands and context. / Contraindication-sensitive practice: Adapting or pausing an exercise when it increases distress, discomfort, or is not a good fit.
C. Coping flexibility: Adapting or pausing an exercise when it increases distress, discomfort, or is not a good fit. / Contraindication-sensitive practice: The capacity to select and adapt coping strategies to fit changing demands and context.
D. Coping flexibility: The capacity to select and adapt coping strategies to fit changing demands and context. / Contraindication-sensitive practice: The process of evaluating whether a situation is threatening, manageable, or relevant to one's resources.

0781. A research trainee is asked what should shape a adolescent student's support in the school-based service. The proposed focus is teaching gradual muscle release and adapting the exercise if it causes discomfort. Which principle does it represent?

A. Progressive muscle relaxation
B. Mindful self-compassion
C. Stress appraisal
D. Contraindication-sensitive practice

0782. Which course concept is defined as follows: Adapting or pausing an exercise when it increases distress, discomfort, or is not a good fit.

A. Grounding
B. Body scan
C. Contraindication-sensitive practice
D. Progressive exposure to relaxation

0783. Which pair of actions illustrates Diaphragmatic breathing and Progressive muscle relaxation, respectively?

A. Diaphragmatic breathing: Inviting slow, comfortable abdominal breathing without forcing depth or pace. / Progressive muscle relaxation: Teaching gradual muscle release and adapting the exercise if it causes discomfort.
B. Diaphragmatic breathing: Teaching gradual muscle release and adapting the exercise if it causes discomfort. / Progressive muscle relaxation: Inviting slow, comfortable abdominal breathing without forcing depth or pace.
C. Diaphragmatic breathing: Exploring how a young person interprets a demand and what coping resources seem available. / Progressive muscle relaxation: Teaching gradual muscle release and adapting the exercise if it causes discomfort.
D. Diaphragmatic breathing: Inviting slow, comfortable abdominal breathing without forcing depth or pace. / Progressive muscle relaxation: Practicing a calming skill in session and then in a planned everyday situation.

0784. While supporting a middle-school student in the family resource center, a school-based clinician adopts this practice: helping a client compare strategies and choose one suited to the current stressor. Which concept best explains the choice?

A. Mindfulness
B. Contraindication-sensitive practice
C. Coping flexibility
D. Diaphragmatic breathing

0785. In mindfulness and stress-reduction practice, for a client in early adolescence in the outpatient clinic, a play therapist makes this practice the immediate priority: noticing neutral sights or sounds in the room when distress makes attention feel disconnected. Which concept fits best?

A. Progressive muscle relaxation
B. Grounding
C. Stress appraisal
D. Diaphragmatic breathing

0786. A consultant is preparing a follow-up plan for a child aged 11 in the school consultation. The plan calls for helping a client compare strategies and choose one suited to the current stressor. Which concept names this approach?

A. Mindful self-compassion
B. Diaphragmatic breathing
C. Coping flexibility
D. Progressive exposure to relaxation

0787. Choose the definition pair that correctly explains Body scan first and Stress appraisal second.

A. Body scan: A guided practice of noticing sensations across body regions without requiring a particular sensation. / Stress appraisal: A breathing practice emphasizing comfortable movement of the diaphragm to support regulation.
B. Body scan: The process of evaluating whether a situation is threatening, manageable, or relevant to one's resources. / Stress appraisal: A guided practice of noticing sensations across body regions without requiring a particular sensation.
C. Body scan: Present-focused orientation using sensory or environmental cues to reconnect with the immediate moment. / Stress appraisal: The process of evaluating whether a situation is threatening, manageable, or relevant to one's resources.
D. Body scan: A guided practice of noticing sensations across body regions without requiring a particular sensation. / Stress appraisal: The process of evaluating whether a situation is threatening, manageable, or relevant to one's resources.

0788. A assessment clinician prepares for a session in the child guidance clinic with a young person aged 18. The intended approach is guiding attention to current experience while allowing thoughts to come and go. Which concept is most relevant?

A. Mindfulness
B. Progressive exposure to relaxation
C. Coping flexibility
D. Stress appraisal

0789. A supervised trainee prepares for a session in the after-school program with a preadolescent child. The intended approach is offering choice to stop or use an alternative when inward attention feels unsafe or uncomfortable. Which concept is most relevant?

A. Stress appraisal
B. Contraindication-sensitive practice
C. Mindfulness
D. Body scan

0790. A adolescent student’s service team meets in the family session. The case coordinator recommends a change involving exploring how a young person interprets a demand and what coping resources seem available. Which idea best explains it?

A. Body scan
B. Coping flexibility
C. Stress appraisal
D. Mindfulness

0791. Which comparison correctly distinguishes Stress appraisal from Mindful self-compassion?

A. Stress appraisal: A stance combining awareness of distress, common humanity, and kindness toward oneself. / Mindful self-compassion: The process of evaluating whether a situation is threatening, manageable, or relevant to one’s resources.
B. Stress appraisal: Adapting or pausing an exercise when it increases distress, discomfort, or is not a good fit. / Mindful self-compassion: A stance combining awareness of distress, common humanity, and kindness toward oneself.
C. Stress appraisal: The process of evaluating whether a situation is threatening, manageable, or relevant to one’s resources. / Mindful self-compassion: Present-focused orientation using sensory or environmental cues to reconnect with the immediate moment.
D. Stress appraisal: The process of evaluating whether a situation is threatening, manageable, or relevant to one’s resources. / Mindful self-compassion: A stance combining awareness of distress, common humanity, and kindness toward oneself.

0792. At the caregiver consultation, a play therapist meets with a teenage client. The practice priority is: inviting nonjudgmental attention to sensations from one body area to another. Which concept best captures that priority?

A. Body scan
B. Diaphragmatic breathing
C. Grounding
D. Mindfulness

0793. Which option preserves the correct meaning of both Diaphragmatic breathing and Mindful self-compassion?

A. Diaphragmatic breathing: A guided practice of noticing sensations across body regions without requiring a particular sensation. / Mindful self-compassion: A stance combining awareness of distress, common humanity, and kindness toward oneself.
B. Diaphragmatic breathing: A breathing practice emphasizing comfortable movement of the diaphragm to support regulation. / Mindful self-compassion: A stance combining awareness of distress, common humanity, and kindness toward oneself.
C. Diaphragmatic breathing: A stance combining awareness of distress, common humanity, and kindness toward oneself. / Mindful self-compassion: A breathing practice emphasizing comfortable movement of the diaphragm to support regulation.
D. Diaphragmatic breathing: A breathing practice emphasizing comfortable movement of the diaphragm to support regulation. / Mindful self-compassion: A structured practice of tensing and releasing muscle groups to increase awareness of bodily tension.

0794. A client in late adolescence’s service team meets in the multidisciplinary case conference. The caregiver working with a counselor recommends a change involving practicing a calming skill in session and then in a planned everyday situation. Which idea best explains it?

A. Grounding
B. Progressive exposure to relaxation
C. Mindful self-compassion
D. Contraindication-sensitive practice

0795. For a student aged 15 in the community mental-health service, a counselor makes this practice the immediate priority: helping a client compare strategies and choose one suited to the current stressor. Which concept fits best?

A. Coping flexibility
B. Progressive muscle relaxation
C. Contraindication-sensitive practice
D. Mindfulness

0796. In the student wellness team, a school-based clinician is considering this approach for a young person aged 10: teaching gradual muscle release and adapting the exercise if it causes discomfort. Which framework does it represent?

A. Progressive exposure to relaxation
B. Progressive muscle relaxation
C. Mindful self-compassion
D. Coping flexibility

0797. A consulting counselor is asked to justify a plan for a older adolescent client in the school-based service. It calls for helping a client compare strategies and choose one suited to the current stressor. Which concept provides the rationale?

A. Coping flexibility
B. Mindful self-compassion
C. Diaphragmatic breathing
D. Grounding

0798. A case conference asks for a distinction between Body scan and Mindful self-compassion. Which answer is sound?

A. Body scan: A stance combining awareness of distress, common humanity, and kindness toward oneself. / Mindful self-compassion: A guided practice of noticing sensations across body regions without requiring a particular sensation.
B. Body scan: A guided practice of noticing sensations across body regions without requiring a particular sensation. / Mindful self-compassion: Present-focused orientation using sensory or environmental cues to reconnect with the immediate moment.
C. Body scan: A structured practice of tensing and releasing muscle groups to increase awareness of bodily tension. / Mindful self-compassion: A stance combining awareness of distress, common humanity, and kindness toward oneself.
D. Body scan: A guided practice of noticing sensations across body regions without requiring a particular sensation. / Mindful self-compassion: A stance combining awareness of distress, common humanity, and kindness toward oneself.

0799. In mindfulness and stress-reduction practice, a child aged 7 is receiving support in the student wellness team. The group facilitator is guided by this practice: noticing neutral sights or sounds in the room when distress makes attention feel disconnected. Which principle best fits?

A. Mindful self-compassion
B. Progressive exposure to relaxation
C. Grounding
D. Contraindication-sensitive practice

0800. Which option preserves the correct meaning of both Progressive muscle relaxation and Body scan?

A. Progressive muscle relaxation: Purposeful, present-moment attention with an attitude of openness and reduced automatic judgment. / Body scan: A guided practice of noticing sensations across body regions without requiring a particular sensation.
B. Progressive muscle relaxation: A structured practice of tensing and releasing muscle groups to increase awareness of bodily tension. / Body scan: The process of evaluating whether a situation is threatening, manageable, or relevant to one's resources.
C. Progressive muscle relaxation: A structured practice of tensing and releasing muscle groups to increase awareness of bodily tension. / Body scan: A guided practice of noticing sensations across body regions without requiring a particular sensation.
D. Progressive muscle relaxation: A guided practice of noticing sensations across body regions without requiring a particular sensation. / Body scan: A structured practice of tensing and releasing muscle groups to increase awareness of bodily tension.

0801. A supervisor asks how Mindful self-compassion would appear in practice. Which choice should be selected?

A. Guiding attention to current experience while allowing thoughts to come and go.
B. Inviting slow, comfortable abdominal breathing without forcing depth or pace.
C. Helping a client compare strategies and choose one suited to the current stressor.
D. Supporting a young person to acknowledge difficulty without harsh self-judgment.

0802. A consultant and a young person are discussing support in the school-based service. The selected practice is practicing a calming skill in session and then in a planned everyday situation. Which concept does this demonstrate?

A. Mindful self-compassion
B. Mindfulness
C. Coping flexibility
D. Progressive exposure to relaxation

0803. Choose the definition pair that correctly explains Progressive muscle relaxation first and Progressive exposure to relaxation second.

A. Progressive muscle relaxation: Gradually practicing a regulation technique in increasingly challenging but manageable contexts. / Progressive exposure to relaxation: A structured practice of tensing and releasing muscle groups to increase awareness of bodily tension.
B. Progressive muscle relaxation: A structured practice of tensing and releasing muscle groups to increase awareness of bodily tension. / Progressive exposure to relaxation: Adapting or pausing an exercise when it increases distress, discomfort, or is not a good fit.
C. Progressive muscle relaxation: A structured practice of tensing and releasing muscle groups to increase awareness of bodily tension. / Progressive exposure to relaxation: Gradually practicing a regulation technique in increasingly challenging but manageable contexts.
D. Progressive muscle relaxation: Present-focused orientation using sensory or environmental cues to reconnect with the immediate moment. / Progressive exposure to relaxation: Gradually practicing a regulation technique in increasingly challenging but manageable contexts.

0804. Which statement most accurately defines Body scan?

A. The process of evaluating whether a situation is threatening, manageable, or relevant to one's resources.
B. A stance combining awareness of distress, common humanity, and kindness toward oneself.
C. Gradually practicing a regulation technique in increasingly challenging but manageable contexts.
D. A guided practice of noticing sensations across body regions without requiring a particular sensation.

0805. During service review in the school-based service, a community practitioner describes supporting a young person to acknowledge difficulty without harsh self-judgment. for a client in early adolescence. Which course idea is most applicable?

A. Progressive exposure to relaxation
B. Mindful self-compassion
C. Coping flexibility
D. Diaphragmatic breathing

0806. In mindfulness and stress-reduction practice, which choice aligns each practice with the correct idea, Diaphragmatic breathing or Grounding?

A. Diaphragmatic breathing: Inviting slow, comfortable abdominal breathing without forcing depth or pace. / Grounding: Noticing neutral sights or sounds in the room when distress makes attention feel disconnected.
B. Diaphragmatic breathing: Noticing neutral sights or sounds in the room when distress makes attention feel disconnected. / Grounding: Inviting slow, comfortable abdominal breathing without forcing depth or pace.
C. Diaphragmatic breathing: Inviting nonjudgmental attention to sensations from one body area to another. / Grounding: Noticing neutral sights or sounds in the room when distress makes attention feel disconnected.
D. Diaphragmatic breathing: Inviting slow, comfortable abdominal breathing without forcing depth or pace. / Grounding: Teaching gradual muscle release and adapting the exercise if it causes discomfort.

0807. Choose the term that matches this definition: A breathing practice emphasizing comfortable movement of the diaphragm to support regulation.

A. Mindful self-compassion
B. Stress appraisal
C. Diaphragmatic breathing
D. Mindfulness

0808. Select the best explanation of Stress appraisal.

A. The process of evaluating whether a situation is threatening, manageable, or relevant to one's resources.
B. Present-focused orientation using sensory or environmental cues to reconnect with the immediate moment.
C. Purposeful, present-moment attention with an attitude of openness and reduced automatic judgment.
D. A stance combining awareness of distress, common humanity, and kindness toward oneself.

0809. Choose the response that best puts Progressive exposure to relaxation into practice.

A. Practicing a calming skill in session and then in a planned everyday situation.
B. Noticing neutral sights or sounds in the room when distress makes attention feel disconnected.
C. Offering choice to stop or use an alternative when inward attention feels unsafe or uncomfortable.
D. Exploring how a young person interprets a demand and what coping resources seem available.

0810. A student confuses Coping flexibility with Mindful self-compassion. Which explanation most accurately separates them?

A. Coping flexibility: The capacity to select and adapt coping strategies to fit changing demands and context. / Mindful self-compassion: A stance combining awareness of distress, common humanity, and kindness toward oneself.
B. Coping flexibility: A stance combining awareness of distress, common humanity, and kindness toward oneself. / Mindful self-compassion: The capacity to select and adapt coping strategies to fit changing demands and context.
C. Coping flexibility: A breathing practice emphasizing comfortable movement of the diaphragm to support regulation. / Mindful self-compassion: A stance combining awareness of distress, common humanity, and kindness toward oneself.
D. Coping flexibility: The capacity to select and adapt coping strategies to fit changing demands and context. / Mindful self-compassion: A structured practice of tensing and releasing muscle groups to increase awareness of bodily tension.

0811. An interdisciplinary team reviews a school-age child’s case at the school counseling office. The clinical supervisor recommends exploring how a young person interprets a demand and what coping resources seem available. Which course concept best fits?

A. Stress appraisal
B. Progressive muscle relaxation
C. Progressive exposure to relaxation
D. Body scan

0812. Choose the practice comparison that best separates Body scan from Stress appraisal.

A. Body scan: Inviting nonjudgmental attention to sensations from one body area to another. / Stress appraisal: Inviting slow, comfortable abdominal breathing without forcing depth or pace.
B. Body scan: Noticing neutral sights or sounds in the room when distress makes attention feel disconnected. / Stress appraisal: Exploring how a young person interprets a demand and what coping resources seem available.
C. Body scan: Inviting nonjudgmental attention to sensations from one body area to another. / Stress appraisal: Exploring how a young person interprets a demand and what coping resources seem available.
D. Body scan: Exploring how a young person interprets a demand and what coping resources seem available. / Stress appraisal: Inviting nonjudgmental attention to sensations from one body area to another.

0813. How are Mindfulness and Progressive exposure to relaxation most accurately differentiated in this curriculum?

A. Mindfulness: A stance combining awareness of distress, common humanity, and kindness toward oneself. / Progressive exposure to relaxation: Gradually practicing a regulation technique in increasingly challenging but manageable contexts.
B. Mindfulness: Gradually practicing a regulation technique in increasingly challenging but manageable contexts. / Progressive exposure to relaxation: Purposeful, present-moment attention with an attitude of openness and reduced automatic judgment.
C. Mindfulness: Purposeful, present-moment attention with an attitude of openness and reduced automatic judgment. / Progressive exposure to relaxation: The capacity to select and adapt coping strategies to fit changing demands and context.
D. Mindfulness: Purposeful, present-moment attention with an attitude of openness and reduced automatic judgment. / Progressive exposure to relaxation: Gradually practicing a regulation technique in increasingly challenging but manageable contexts.

0814. In mindfulness and stress-reduction practice, which description belongs with the term Grounding?

A. Present-focused orientation using sensory or environmental cues to reconnect with the immediate moment.
B. Adapting or pausing an exercise when it increases distress, discomfort, or is not a good fit.
C. The capacity to select and adapt coping strategies to fit changing demands and context.
D. A structured practice of tensing and releasing muscle groups to increase awareness of bodily tension.

0815. Which option pairs the definitions of Diaphragmatic breathing and Body scan correctly, in that order?

A. Diaphragmatic breathing: The process of evaluating whether a situation is threatening, manageable, or relevant to one’s resources. / Body scan: A guided practice of noticing sensations across body regions without requiring a particular sensation.
B. Diaphragmatic breathing: A breathing practice emphasizing comfortable movement of the diaphragm to support regulation. / Body scan: A guided practice of noticing sensations across body regions without requiring a particular sensation.
C. Diaphragmatic breathing: A breathing practice emphasizing comfortable movement of the diaphragm to support regulation. / Body scan: Purposeful, present-moment attention with an attitude of openness and reduced automatic judgment.
D. Diaphragmatic breathing: A guided practice of noticing sensations across body regions without requiring a particular sensation. / Body scan: A breathing practice emphasizing comfortable movement of the diaphragm to support regulation.

0816. Choose the response that best puts Progressive muscle relaxation into practice.

A. Helping a client compare strategies and choose one suited to the current stressor.
B. Offering choice to stop or use an alternative when inward attention feels unsafe or uncomfortable.
C. Guiding attention to current experience while allowing thoughts to come and go.
D. Teaching gradual muscle release and adapting the exercise if it causes discomfort.

0817. Which option pairs the definitions of Mindfulness and Progressive muscle relaxation correctly, in that order?

A. Mindfulness: Purposeful, present-moment attention with an attitude of openness and reduced automatic judgment. / Progressive muscle relaxation: A stance combining awareness of distress, common humanity, and kindness toward oneself.
B. Mindfulness: A structured practice of tensing and releasing muscle groups to increase awareness of bodily tension. / Progressive muscle relaxation: Purposeful, present-moment attention with an attitude of openness and reduced automatic judgment.
C. Mindfulness: The process of evaluating whether a situation is threatening, manageable, or relevant to one’s resources. / Progressive muscle relaxation: A structured practice of tensing and releasing muscle groups to increase awareness of bodily tension.
D. Mindfulness: Purposeful, present-moment attention with an attitude of openness and reduced automatic judgment. / Progressive muscle relaxation: A structured practice of tensing and releasing muscle groups to increase awareness of bodily tension.

0818. A program coordinator is asked what should shape a student aged 9’s support in the outpatient clinic. The proposed focus is helping a client compare strategies and choose one suited to the current stressor. Which principle does it represent?

A. Mindful self-compassion
B. Stress appraisal
C. Progressive muscle relaxation
D. Coping flexibility

0819. Which option correctly matches each concept to its practice focus: Progressive exposure to relaxation and Contraindication-sensitive practice?

A. Progressive exposure to relaxation: Practicing a calming skill in session and then in a planned everyday situation. / Contraindication-sensitive practice: Inviting nonjudgmental attention to sensations from one body area to another.
B. Progressive exposure to relaxation: Offering choice to stop or use an alternative when inward attention feels unsafe or uncomfortable. / Contraindication-sensitive practice: Practicing a calming skill in session and then in a planned everyday situation.
C. Progressive exposure to relaxation: Practicing a calming skill in session and then in a planned everyday situation. / Contraindication-sensitive practice: Offering choice to stop or use an alternative when inward attention feels unsafe or uncomfortable.
D. Progressive exposure to relaxation: Teaching gradual muscle release and adapting the exercise if it causes discomfort. / Contraindication-sensitive practice: Offering choice to stop or use an alternative when inward attention feels unsafe or uncomfortable.

0820. Which statement shows a sound practice-level distinction between Diaphragmatic breathing and Contraindication-sensitive practice?

A. Diaphragmatic breathing: Inviting slow, comfortable abdominal breathing without forcing depth or pace. / Contraindication-sensitive practice: Guiding attention to current experience while allowing thoughts to come and go.
B. Diaphragmatic breathing: Supporting a young person to acknowledge difficulty without harsh self-judgment. / Contraindication-sensitive practice: Offering choice to stop or use an alternative when inward attention feels unsafe or uncomfortable.
C. Diaphragmatic breathing: Inviting slow, comfortable abdominal breathing without forcing depth or pace. / Contraindication-sensitive practice: Offering choice to stop or use an alternative when inward attention feels unsafe or uncomfortable.
D. Diaphragmatic breathing: Offering choice to stop or use an alternative when inward attention feels unsafe or uncomfortable. / Contraindication-sensitive practice: Inviting slow, comfortable abdominal breathing without forcing depth or pace.

0821. In mindfulness and stress-reduction practice, which pair of actions illustrates Progressive muscle relaxation and Grounding, respectively?

A. Progressive muscle relaxation: Noticing neutral sights or sounds in the room when distress makes attention feel disconnected. / Grounding: Teaching gradual muscle release and adapting the exercise if it causes discomfort.
B. Progressive muscle relaxation: Teaching gradual muscle release and adapting the exercise if it causes discomfort. / Grounding: Supporting a young person to acknowledge difficulty without harsh self-judgment.
C. Progressive muscle relaxation: Helping a client compare strategies and choose one suited to the current stressor. / Grounding: Noticing neutral sights or sounds in the room when distress makes attention feel disconnected.
D. Progressive muscle relaxation: Teaching gradual muscle release and adapting the exercise if it causes discomfort. / Grounding: Noticing neutral sights or sounds in the room when distress makes attention feel disconnected.

0822. Which paired example correctly applies Stress appraisal first and Progressive exposure to relaxation second?

A. Stress appraisal: Practicing a calming skill in session and then in a planned everyday situation. / Progressive exposure to relaxation: Exploring how a young person interprets a demand and what coping resources seem available.
B. Stress appraisal: Offering choice to stop or use an alternative when inward attention feels unsafe or uncomfortable. / Progressive exposure to relaxation: Practicing a calming skill in session and then in a planned everyday situation.
C. Stress appraisal: Exploring how a young person interprets a demand and what coping resources seem available. / Progressive exposure to relaxation: Practicing a calming skill in session and then in a planned everyday situation.
D. Stress appraisal: Exploring how a young person interprets a demand and what coping resources seem available. / Progressive exposure to relaxation: Teaching gradual muscle release and adapting the exercise if it causes discomfort.

0823. In mindfulness and stress-reduction practice, consider a middle-school student receiving help in the youth advocacy program. The teacher and counselor focuses on noticing neutral sights or sounds in the room when distress makes attention feel disconnected. Which term best describes the guiding idea?

A. Coping flexibility
B. Grounding
C. Contraindication-sensitive practice
D. Mindful self-compassion

0824. For a teenage client seen in the clinical planning session, the community practitioner recommends a plan built around helping a client compare strategies and choose one suited to the current stressor. Which concept is reflected?

A. Body scan
B. Coping flexibility
C. Mindfulness
D. Progressive exposure to relaxation

0825. Which choice aligns each practice with the correct idea, Mindfulness or Progressive muscle relaxation?

A. Mindfulness: Teaching gradual muscle release and adapting the exercise if it causes discomfort. / Progressive muscle relaxation: Guiding attention to current experience while allowing thoughts to come and go.
B. Mindfulness: Guiding attention to current experience while allowing thoughts to come and go. / Progressive muscle relaxation: Supporting a young person to acknowledge difficulty without harsh self-judgment.
C. Mindfulness: Exploring how a young person interprets a demand and what coping resources seem available. / Progressive muscle relaxation: Teaching gradual muscle release and adapting the exercise if it causes discomfort.
D. Mindfulness: Guiding attention to current experience while allowing thoughts to come and go. / Progressive muscle relaxation: Teaching gradual muscle release and adapting the exercise if it causes discomfort.

0826. Which applied comparison correctly identifies what belongs to Coping flexibility versus Progressive exposure to relaxation?

A. Coping flexibility: Supporting a young person to acknowledge difficulty without harsh self-judgment. / Progressive exposure to relaxation: Practicing a calming skill in session and then in a planned everyday situation.
B. Coping flexibility: Helping a client compare strategies and choose one suited to the current stressor. / Progressive exposure to relaxation: Practicing a calming skill in session and then in a planned everyday situation.
C. Coping flexibility: Practicing a calming skill in session and then in a planned everyday situation. / Progressive exposure to relaxation: Helping a client compare strategies and choose one suited to the current stressor.
D. Coping flexibility: Helping a client compare strategies and choose one suited to the current stressor. / Progressive exposure to relaxation: Offering choice to stop or use an alternative when inward attention feels unsafe or uncomfortable.

0827. Which option correctly matches each concept to its practice focus: Diaphragmatic breathing and Coping flexibility?

A. Diaphragmatic breathing: Offering choice to stop or use an alternative when inward attention feels unsafe or uncomfortable. / Coping flexibility: Helping a client compare strategies and choose one suited to the current stressor.
B. Diaphragmatic breathing: Inviting slow, comfortable abdominal breathing without forcing depth or pace. / Coping flexibility: Helping a client compare strategies and choose one suited to the current stressor.
C. Diaphragmatic breathing: Inviting slow, comfortable abdominal breathing without forcing depth or pace. / Coping flexibility: Noticing neutral sights or sounds in the room when distress makes attention feel disconnected.
D. Diaphragmatic breathing: Helping a client compare strategies and choose one suited to the current stressor. / Coping flexibility: Inviting slow, comfortable abdominal breathing without forcing depth or pace.

0828. Which statement accurately contrasts the course concepts Coping flexibility and Contraindication-sensitive practice?

A. Coping flexibility: Adapting or pausing an exercise when it increases distress, discomfort, or is not a good fit. / Contraindication-sensitive practice: The capacity to select and adapt coping strategies to fit changing demands and context.
B. Coping flexibility: The capacity to select and adapt coping strategies to fit changing demands and context. / Contraindication-sensitive practice: Adapting or pausing an exercise when it increases distress, discomfort, or is not a good fit.
C. Coping flexibility: The capacity to select and adapt coping strategies to fit changing demands and context. / Contraindication-sensitive practice: The process of evaluating whether a situation is threatening, manageable, or relevant to one's resources.
D. Coping flexibility: Gradually practicing a regulation technique in increasingly challenging but manageable contexts. / Contraindication-sensitive practice: Adapting or pausing an exercise when it increases distress, discomfort, or is not a good fit.

0829. Select the best explanation of Contraindication-sensitive practice.

A. Gradually practicing a regulation technique in increasingly challenging but manageable contexts.
B. Adapting or pausing an exercise when it increases distress, discomfort, or is not a good fit.
C. The process of evaluating whether a situation is threatening, manageable, or relevant to one's resources.
D. A breathing practice emphasizing comfortable movement of the diaphragm to support regulation.

0830. When reviewing a child aged 8's plan in the community youth program, the caregiver working with a counselor notes that the next step is helping a client compare strategies and choose one suited to the current stressor. Which concept guides this step?

A. Progressive exposure to relaxation
B. Diaphragmatic breathing
C. Coping flexibility
D. Body scan

0831. A research trainee is asked what should shape a young person aged 16's support in the telehealth session. The proposed focus is supporting a young person to acknowledge difficulty without harsh self-judgment. Which principle does it represent?

A. Mindfulness
B. Grounding
C. Body scan
D. Mindful self-compassion

0832. A community practitioner is asked what should shape a young person aged 13's support in the behavior-support review. The proposed focus is inviting nonjudgmental attention to sensations from one body area to another. Which principle does it represent?

A. Body scan
B. Progressive muscle relaxation
C. Contraindication-sensitive practice
D. Coping flexibility

0833. A doctoral student reads the following description. Which concept does it define? A structured practice of tensing and releasing muscle groups to increase awareness of bodily tension.

A. Mindful self-compassion
B. Body scan
C. Progressive muscle relaxation
D. Mindfulness

0834. Which professional action most closely applies Progressive muscle relaxation?

A. Teaching gradual muscle release and adapting the exercise if it causes discomfort.
B. Supporting a young person to acknowledge difficulty without harsh self-judgment.
C. Guiding attention to current experience while allowing thoughts to come and go.
D. Inviting nonjudgmental attention to sensations from one body area to another.

0835. At a case-planning meeting, the behavior specialist proposes offering choice to stop or use an alternative when inward attention feels unsafe or uncomfortable. for a young adolescent client seen in the outpatient clinic. Which concept does this illustrate?

A. Coping flexibility
B. Progressive exposure to relaxation
C. Mindful self-compassion
D. Contraindication-sensitive practice

0836. A supervisor asks for an applied contrast between Progressive muscle relaxation and Body scan. Which option fits?

A. Progressive muscle relaxation: Teaching gradual muscle release and adapting the exercise if it causes discomfort. / Body scan: Exploring how a young person interprets a demand and what coping resources seem available.
B. Progressive muscle relaxation: Inviting nonjudgmental attention to sensations from one body area to another. / Body scan: Teaching gradual muscle release and adapting the exercise if it causes discomfort.
C. Progressive muscle relaxation: Teaching gradual muscle release and adapting the exercise if it causes discomfort. / Body scan: Inviting nonjudgmental attention to sensations from one body area to another.
D. Progressive muscle relaxation: Guiding attention to current experience while allowing thoughts to come and go. / Body scan: Inviting nonjudgmental attention to sensations from one body area to another.

0837. Which choice aligns each practice with the correct idea, Coping flexibility or Contraindication-sensitive practice?

A. Coping flexibility: Helping a client compare strategies and choose one suited to the current stressor. / Contraindication-sensitive practice: Exploring how a young person interprets a demand and what coping resources seem available.
B. Coping flexibility: Practicing a calming skill in session and then in a planned everyday situation. / Contraindication-sensitive practice: Offering choice to stop or use an alternative when inward attention feels unsafe or uncomfortable.
C. Coping flexibility: Helping a client compare strategies and choose one suited to the current stressor. / Contraindication-sensitive practice: Offering choice to stop or use an alternative when inward attention feels unsafe or uncomfortable.
D. Coping flexibility: Offering choice to stop or use an alternative when inward attention feels unsafe or uncomfortable. / Contraindication-sensitive practice: Helping a client compare strategies and choose one suited to the current stressor.

0838. In mindfulness and stress-reduction practice, choose the definition pair that correctly explains Grounding first and Contraindication-sensitive practice second.

A. Grounding: Present-focused orientation using sensory or environmental cues to reconnect with the immediate moment. / Contraindication-sensitive practice: Adapting or pausing an exercise when it increases distress, discomfort, or is not a good fit.
B. Grounding: Adapting or pausing an exercise when it increases distress, discomfort, or is not a good fit. / Contraindication-sensitive practice: Present-focused orientation using sensory or environmental cues to reconnect with the immediate moment.
C. Grounding: Present-focused orientation using sensory or environmental cues to reconnect with the immediate moment. / Contraindication-sensitive practice: A stance combining awareness of distress, common humanity, and kindness toward oneself.
D. Grounding: The capacity to select and adapt coping strategies to fit changing demands and context. / Contraindication-sensitive practice: Adapting or pausing an exercise when it increases distress, discomfort, or is not a good fit.

0839. While consulting in the student-support meeting, a member of a clinical team supports a child aged 14 by using this approach: guiding attention to current experience while allowing thoughts to come and go. Which concept is being applied?

A. Mindfulness
B. Diaphragmatic breathing
C. Body scan
D. Mindful self-compassion

0840. A clinical supervisor is asked to evaluate a proposed service for a young person aged 18 in the school consultation. The defining feature is practicing a calming skill in session and then in a planned everyday situation. Which concept fits?

A. Mindful self-compassion
B. Coping flexibility
C. Grounding
D. Progressive exposure to relaxation

0841. A supervisor asks for an applied contrast between Diaphragmatic breathing and Progressive muscle relaxation. Which option fits?

A. Diaphragmatic breathing: Teaching gradual muscle release and adapting the exercise if it causes discomfort. / Progressive muscle relaxation: Inviting slow, comfortable abdominal breathing without forcing depth or pace.
B. Diaphragmatic breathing: Exploring how a young person interprets a demand and what coping resources seem available. / Progressive muscle relaxation: Teaching gradual muscle release and adapting the exercise if it causes discomfort.
C. Diaphragmatic breathing: Inviting slow, comfortable abdominal breathing without forcing depth or pace. / Progressive muscle relaxation: Practicing a calming skill in session and then in a planned everyday situation.
D. Diaphragmatic breathing: Inviting slow, comfortable abdominal breathing without forcing depth or pace. / Progressive muscle relaxation: Teaching gradual muscle release and adapting the exercise if it causes discomfort.

0842. An interdisciplinary team reviews a high-school student's case at the caregiver consultation. The behavior specialist recommends practicing a calming skill in session and then in a planned everyday situation. Which course concept best fits?

A. Progressive exposure to relaxation
B. Stress appraisal
C. Body scan
D. Diaphragmatic breathing

0843. A trainee must distinguish how Mindfulness and Stress appraisal guide practice. Which comparison is accurate?

A. Mindfulness: Noticing neutral sights or sounds in the room when distress makes attention feel disconnected. / Stress appraisal: Exploring how a young person interprets a demand and what coping resources seem available.
B. Mindfulness: Guiding attention to current experience while allowing thoughts to come and go. / Stress appraisal: Exploring how a young person interprets a demand and what coping resources seem available.
C. Mindfulness: Guiding attention to current experience while allowing thoughts to come and go. / Stress appraisal: Inviting slow, comfortable abdominal breathing without forcing depth or pace.
D. Mindfulness: Exploring how a young person interprets a demand and what coping resources seem available. / Stress appraisal: Guiding attention to current experience while allowing thoughts to come and go.

0844. In a supervision quiz, how should Progressive muscle relaxation be distinguished from Contraindication-sensitive practice?

A. Progressive muscle relaxation: Present-focused orientation using sensory or environmental cues to reconnect with the immediate moment. / Contraindication-sensitive practice: Adapting or pausing an exercise when it increases distress, discomfort, or is not a good fit.
B. Progressive muscle relaxation: A structured practice of tensing and releasing muscle groups to increase awareness of bodily tension. / Contraindication-sensitive practice: Gradually practicing a regulation technique in increasingly challenging but manageable contexts.
C. Progressive muscle relaxation: Adapting or pausing an exercise when it increases distress, discomfort, or is not a good fit. / Contraindication-sensitive practice: A structured practice of tensing and releasing muscle groups to increase awareness of bodily tension.
D. Progressive muscle relaxation: A structured practice of tensing and releasing muscle groups to increase awareness of bodily tension. / Contraindication-sensitive practice: Adapting or pausing an exercise when it increases distress, discomfort, or is not a good fit.

0845. In mindfulness and stress-reduction practice, choose the term that matches this definition: Present-focused orientation using sensory or environmental cues to reconnect with the immediate moment.

A. Mindfulness
B. Diaphragmatic breathing
C. Grounding
D. Progressive exposure to relaxation

0846. In mindfulness and stress-reduction practice, in a professional consultation about a student aged 17, the consultant describes this response in the behavior-support review: noticing neutral sights or sounds in the room when distress makes attention feel disconnected. Which term is most apt?

A. Diaphragmatic breathing
B. Stress appraisal
C. Contraindication-sensitive practice
D. Grounding

0847. A case conference asks for a distinction between Mindfulness and Coping flexibility. Which answer is sound?

A. Mindfulness: Purposeful, present-moment attention with an attitude of openness and reduced automatic judgment. / Coping flexibility: The capacity to select and adapt coping strategies to fit changing demands and context.
B. Mindfulness: Gradually practicing a regulation technique in increasingly challenging but manageable contexts. / Coping flexibility: The capacity to select and adapt coping strategies to fit changing demands and context.
C. Mindfulness: Purposeful, present-moment attention with an attitude of openness and reduced automatic judgment. / Coping flexibility: A guided practice of noticing sensations across body regions without requiring a particular sensation.
D. Mindfulness: The capacity to select and adapt coping strategies to fit changing demands and context. / Coping flexibility: Purposeful, present-moment attention with an attitude of openness and reduced automatic judgment.

0848. Which option preserves the correct meaning of both Stress appraisal and Contraindication-sensitive practice?

A. Stress appraisal: A breathing practice emphasizing comfortable movement of the diaphragm to support regulation. / Contraindication-sensitive practice: Adapting or pausing an exercise when it increases distress, discomfort, or is not a good fit.
B. Stress appraisal: The process of evaluating whether a situation is threatening, manageable, or relevant to one's resources. / Contraindication-sensitive practice: The capacity to select and adapt coping strategies to fit changing demands and context.
C. Stress appraisal: Adapting or pausing an exercise when it increases distress, discomfort, or is not a good fit. / Contraindication-sensitive practice: The process of evaluating whether a situation is threatening, manageable, or relevant to one's resources.
D. Stress appraisal: The process of evaluating whether a situation is threatening, manageable, or relevant to one's resources. / Contraindication-sensitive practice: Adapting or pausing an exercise when it increases distress, discomfort, or is not a good fit.

0849. A supervisor asks how Diaphragmatic breathing would appear in practice. Which choice should be selected?

A. Practicing a calming skill in session and then in a planned everyday situation.
B. Inviting slow, comfortable abdominal breathing without forcing depth or pace.
C. Noticing neutral sights or sounds in the room when distress makes attention feel disconnected.
D. Exploring how a young person interprets a demand and what coping resources seem available.

0850. Which paired example correctly applies Mindfulness first and Coping flexibility second?

A. Mindfulness: Guiding attention to current experience while allowing thoughts to come and go. / Coping flexibility: Inviting nonjudgmental attention to sensations from one body area to another.
B. Mindfulness: Guiding attention to current experience while allowing thoughts to come and go. / Coping flexibility: Helping a client compare strategies and choose one suited to the current stressor.
C. Mindfulness: Helping a client compare strategies and choose one suited to the current stressor. / Coping flexibility: Guiding attention to current experience while allowing thoughts to come and go.
D. Mindfulness: Practicing a calming skill in session and then in a planned everyday situation. / Coping flexibility: Helping a client compare strategies and choose one suited to the current stressor.

0851. A school counselor is asked to justify a plan for a young person aged 18 in the family session. It calls for teaching gradual muscle release and adapting the exercise if it causes discomfort. Which concept provides the rationale?

A. Diaphragmatic breathing
B. Coping flexibility
C. Stress appraisal
D. Progressive muscle relaxation

0852. Which description belongs with the term Contraindication-sensitive practice?

A. Gradually practicing a regulation technique in increasingly challenging but manageable contexts.
B. The process of evaluating whether a situation is threatening, manageable, or relevant to one's resources.
C. A stance combining awareness of distress, common humanity, and kindness toward oneself.
D. Adapting or pausing an exercise when it increases distress, discomfort, or is not a good fit.

0853. How should a practitioner distinguish the applications of Progressive muscle relaxation and Coping flexibility?

A. Progressive muscle relaxation: Teaching gradual muscle release and adapting the exercise if it causes discomfort. / Coping flexibility: Helping a client compare strategies and choose one suited to the current stressor.
B. Progressive muscle relaxation: Teaching gradual muscle release and adapting the exercise if it causes discomfort. / Coping flexibility: Practicing a calming skill in session and then in a planned everyday situation.
C. Progressive muscle relaxation: Helping a client compare strategies and choose one suited to the current stressor. / Coping flexibility: Teaching gradual muscle release and adapting the exercise if it causes discomfort.
D. Progressive muscle relaxation: Noticing neutral sights or sounds in the room when distress makes attention feel disconnected. / Coping flexibility: Helping a client compare strategies and choose one suited to the current stressor.

0854. In the family session, a case coordinator is considering this approach for a adolescent student: exploring how a young person interprets a demand and what coping resources seem available. Which framework does it represent?

A. Stress appraisal
B. Progressive muscle relaxation
C. Grounding
D. Diaphragmatic breathing

0855. At the behavior-support review, a clinical supervisor meets with a child of elementary-school age. The practice priority is: helping a client compare strategies and choose one suited to the current stressor. Which concept best captures that priority?

A. Coping flexibility
B. Mindfulness
C. Progressive exposure to relaxation
D. Stress appraisal

0856. A case coordinator presents a support plan for a student aged 15 at the youth advocacy program. Its central feature is teaching gradual muscle release and adapting the exercise if it causes discomfort. Which concept should be named?

A. Progressive exposure to relaxation
B. Progressive muscle relaxation
C. Coping flexibility
D. Grounding

0857. Choose the practice comparison that best separates Diaphragmatic breathing from Progressive exposure to relaxation.

A. Diaphragmatic breathing: Inviting slow, comfortable abdominal breathing without forcing depth or pace. / Progressive exposure to relaxation: Practicing a calming skill in session and then in a planned everyday situation.
B. Diaphragmatic breathing: Exploring how a young person interprets a demand and what coping resources seem available. / Progressive exposure to relaxation: Practicing a calming skill in session and then in a planned everyday situation.
C. Diaphragmatic breathing: Inviting slow, comfortable abdominal breathing without forcing depth or pace. / Progressive exposure to relaxation: Guiding attention to current experience while allowing thoughts to come and go.
D. Diaphragmatic breathing: Practicing a calming skill in session and then in a planned everyday situation. / Progressive exposure to relaxation: Inviting slow, comfortable abdominal breathing without forcing depth or pace.

0858. Which option preserves the correct meaning of both Progressive exposure to relaxation and Contraindication-sensitive practice?

A. Progressive exposure to relaxation: Gradually practicing a regulation technique in increasingly challenging but manageable contexts. / Contraindication-sensitive practice: A guided practice of noticing sensations across body regions without requiring a particular sensation.
B. Progressive exposure to relaxation: Gradually practicing a regulation technique in increasingly challenging but manageable contexts. / Contraindication-sensitive practice: Adapting or pausing an exercise when it increases distress, discomfort, or is not a good fit.
C. Progressive exposure to relaxation: Adapting or pausing an exercise when it increases distress, discomfort, or is not a good fit. / Contraindication-sensitive practice: Gradually practicing a regulation technique in increasingly challenging but manageable contexts.
D. Progressive exposure to relaxation: A structured practice of tensing and releasing muscle groups to increase awareness of bodily tension. / Contraindication-sensitive practice: Adapting or pausing an exercise when it increases distress, discomfort, or is not a good fit.

0859. A supervisor asks for an applied contrast between Progressive muscle relaxation and Coping flexibility. Which option fits?

A. Progressive muscle relaxation: Noticing neutral sights or sounds in the room when distress makes attention feel disconnected. / Coping flexibility: Helping a client compare strategies and choose one suited to the current stressor.
B. Progressive muscle relaxation: Teaching gradual muscle release and adapting the exercise if it causes discomfort. / Coping flexibility: Helping a client compare strategies and choose one suited to the current stressor.
C. Progressive muscle relaxation: Helping a client compare strategies and choose one suited to the current stressor. / Coping flexibility: Teaching gradual muscle release and adapting the exercise if it causes discomfort.
D. Progressive muscle relaxation: Teaching gradual muscle release and adapting the exercise if it causes discomfort. / Coping flexibility: Practicing a calming skill in session and then in a planned everyday situation.

0860. At a case-planning meeting, the school support specialist proposes teaching gradual muscle release and adapting the exercise if it causes discomfort. for a older adolescent client seen in the student-support meeting. Which concept does this illustrate?

A. Grounding
B. Body scan
C. Stress appraisal
D. Progressive muscle relaxation

0861. A consultant prepares for a session in the school consultation with a child aged 11. The intended approach is helping a client compare strategies and choose one suited to the current stressor. Which concept is most relevant?

A. Stress appraisal
B. Mindful self-compassion
C. Contraindication-sensitive practice
D. Coping flexibility

0862. Which statement accurately contrasts the course concepts Mindfulness and Diaphragmatic breathing?

A. Mindfulness: A breathing practice emphasizing comfortable movement of the diaphragm to support regulation. / Diaphragmatic breathing: Purposeful, present-moment attention with an attitude of openness and reduced automatic judgment.
B. Mindfulness: Purposeful, present-moment attention with an attitude of openness and reduced automatic judgment. / Diaphragmatic breathing: A breathing practice emphasizing comfortable movement of the diaphragm to support regulation.
C. Mindfulness: Purposeful, present-moment attention with an attitude of openness and reduced automatic judgment. / Diaphragmatic breathing: Adapting or pausing an exercise when it increases distress, discomfort, or is not a good fit.
D. Mindfulness: A stance combining awareness of distress, common humanity, and kindness toward oneself. / Diaphragmatic breathing: A breathing practice emphasizing comfortable movement of the diaphragm to support regulation.

0863. Which statement shows a sound practice-level distinction between Stress appraisal and Progressive exposure to relaxation?

A. Stress appraisal: Exploring how a young person interprets a demand and what coping resources seem available. / Progressive exposure to relaxation: Practicing a calming skill in session and then in a planned everyday situation.
B. Stress appraisal: Exploring how a young person interprets a demand and what coping resources seem available. / Progressive exposure to relaxation: Teaching gradual muscle release and adapting the exercise if it causes discomfort.
C. Stress appraisal: Offering choice to stop or use an alternative when inward attention feels unsafe or uncomfortable. / Progressive exposure to relaxation: Practicing a calming skill in session and then in a planned everyday situation.
D. Stress appraisal: Practicing a calming skill in session and then in a planned everyday situation. / Progressive exposure to relaxation: Exploring how a young person interprets a demand and what coping resources seem available.

0864. A supervisor asks for an applied contrast between Diaphragmatic breathing and Body scan. Which option fits?

A. Diaphragmatic breathing: Inviting nonjudgmental attention to sensations from one body area to another. / Body scan: Inviting slow, comfortable abdominal breathing without forcing depth or pace.
B. Diaphragmatic breathing: Inviting slow, comfortable abdominal breathing without forcing depth or pace. / Body scan: Inviting nonjudgmental attention to sensations from one body area to another.
C. Diaphragmatic breathing: Inviting slow, comfortable abdominal breathing without forcing depth or pace. / Body scan: Guiding attention to current experience while allowing thoughts to come and go.
D. Diaphragmatic breathing: Exploring how a young person interprets a demand and what coping resources seem available. / Body scan: Inviting nonjudgmental attention to sensations from one body area to another.

0865. Which statement shows a sound practice-level distinction between Body scan and Contraindication-sensitive practice?

A. Body scan: Inviting nonjudgmental attention to sensations from one body area to another. / Contraindication-sensitive practice: Practicing a calming skill in session and then in a planned everyday situation.
B. Body scan: Offering choice to stop or use an alternative when inward attention feels unsafe or uncomfortable. / Contraindication-sensitive practice: Inviting nonjudgmental attention to sensations from one body area to another.
C. Body scan: Supporting a young person to acknowledge difficulty without harsh self-judgment. / Contraindication-sensitive practice: Offering choice to stop or use an alternative when inward attention feels unsafe or uncomfortable.
D. Body scan: Inviting nonjudgmental attention to sensations from one body area to another. / Contraindication-sensitive practice: Offering choice to stop or use an alternative when inward attention feels unsafe or uncomfortable.

0866. A supervisor asks for an applied contrast between Body scan and Progressive exposure to relaxation. Which option fits?

A. Body scan: Inviting nonjudgmental attention to sensations from one body area to another. / Progressive exposure to relaxation: Noticing neutral sights or sounds in the room when distress makes attention feel disconnected.
B. Body scan: Practicing a calming skill in session and then in a planned everyday situation. / Progressive exposure to relaxation: Inviting nonjudgmental attention to sensations from one body area to another.
C. Body scan: Inviting nonjudgmental attention to sensations from one body area to another. / Progressive exposure to relaxation: Practicing a calming skill in session and then in a planned everyday situation.
D. Body scan: Inviting slow, comfortable abdominal breathing without forcing depth or pace. / Progressive exposure to relaxation: Practicing a calming skill in session and then in a planned everyday situation.

0867. In mindfulness and stress-reduction practice, which comparison would correct a trainee’s misunderstanding of Grounding versus Mindful self-compassion?

A. Grounding: Present-focused orientation using sensory or environmental cues to reconnect with the immediate moment. / Mindful self-compassion: A stance combining awareness of distress, common humanity, and kindness toward oneself.
B. Grounding: The process of evaluating whether a situation is threatening, manageable, or relevant to one’s resources. / Mindful self-compassion: A stance combining awareness of distress, common humanity, and kindness toward oneself.
C. Grounding: Present-focused orientation using sensory or environmental cues to reconnect with the immediate moment. / Mindful self-compassion: Gradually practicing a regulation technique in increasingly challenging but manageable contexts.
D. Grounding: A stance combining awareness of distress, common humanity, and kindness toward oneself. / Mindful self-compassion: Present-focused orientation using sensory or environmental cues to reconnect with the immediate moment.

0868. Which statement shows a sound practice-level distinction between Progressive muscle relaxation and Stress appraisal?

A. Progressive muscle relaxation: Teaching gradual muscle release and adapting the exercise if it causes discomfort. / Stress appraisal: Inviting nonjudgmental attention to sensations from one body area to another.
B. Progressive muscle relaxation: Offering choice to stop or use an alternative when inward attention feels unsafe or uncomfortable. / Stress appraisal: Exploring how a young person interprets a demand and what coping resources seem available.
C. Progressive muscle relaxation: Exploring how a young person interprets a demand and what coping resources seem available. / Stress appraisal: Teaching gradual muscle release and adapting the exercise if it causes discomfort.
D. Progressive muscle relaxation: Teaching gradual muscle release and adapting the exercise if it causes discomfort. / Stress appraisal: Exploring how a young person interprets a demand and what coping resources seem available.

0869. Which comparison correctly distinguishes Body scan from Mindful self-compassion?

A. Body scan: A structured practice of tensing and releasing muscle groups to increase awareness of bodily tension. / Mindful self-compassion: A stance combining awareness of distress, common humanity, and kindness toward oneself.
B. Body scan: A guided practice of noticing sensations across body regions without requiring a particular sensation. / Mindful self-compassion: A stance combining awareness of distress, common humanity, and kindness toward oneself.
C. Body scan: A guided practice of noticing sensations across body regions without requiring a particular sensation. / Mindful self-compassion: Present-focused orientation using sensory or environmental cues to reconnect with the immediate moment.
D. Body scan: A stance combining awareness of distress, common humanity, and kindness toward oneself. / Mindful self-compassion: A guided practice of noticing sensations across body regions without requiring a particular sensation.

0870. Identify the most precise label for this idea: Adapting or pausing an exercise when it increases distress, discomfort, or is not a good fit.

A. Progressive exposure to relaxation
B. Contraindication-sensitive practice
C. Coping flexibility
D. Stress appraisal

0871. In mindfulness and stress-reduction practice, in a supervision quiz, how should Diaphragmatic breathing be distinguished from Grounding?

A. Diaphragmatic breathing: A guided practice of noticing sensations across body regions without requiring a particular sensation. / Grounding: Present-focused orientation using sensory or environmental cues to reconnect with the immediate moment.
B. Diaphragmatic breathing: Present-focused orientation using sensory or environmental cues to reconnect with the immediate moment. / Grounding: A breathing practice emphasizing comfortable movement of the diaphragm to support regulation.
C. Diaphragmatic breathing: A breathing practice emphasizing comfortable movement of the diaphragm to support regulation. / Grounding: A structured practice of tensing and releasing muscle groups to increase awareness of bodily tension.
D. Diaphragmatic breathing: A breathing practice emphasizing comfortable movement of the diaphragm to support regulation. / Grounding: Present-focused orientation using sensory or environmental cues to reconnect with the immediate moment.

0872. Identify the most precise label for this idea: Gradually practicing a regulation technique in increasingly challenging but manageable contexts.

A. Progressive exposure to relaxation
B. Stress appraisal
C. Body scan
D. Contraindication-sensitive practice

0873. In mindfulness and stress-reduction practice, which applied comparison correctly identifies what belongs to Grounding versus Stress appraisal?

A. Grounding: Noticing neutral sights or sounds in the room when distress makes attention feel disconnected. / Stress appraisal: Inviting nonjudgmental attention to sensations from one body area to another.
B. Grounding: Exploring how a young person interprets a demand and what coping resources seem available. / Stress appraisal: Noticing neutral sights or sounds in the room when distress makes attention feel disconnected.
C. Grounding: Noticing neutral sights or sounds in the room when distress makes attention feel disconnected. / Stress appraisal: Exploring how a young person interprets a demand and what coping resources seem available.
D. Grounding: Practicing a calming skill in session and then in a planned everyday situation. / Stress appraisal: Exploring how a young person interprets a demand and what coping resources seem available.

0874. A assessment clinician prepares for a session in the community youth program with a teenage client. The intended approach is exploring how a young person interprets a demand and what coping resources seem available. Which concept is most relevant?

A. Stress appraisal
B. Progressive muscle relaxation
C. Diaphragmatic breathing
D. Grounding

0875. Choose the definition pair that correctly explains Progressive exposure to relaxation first and Contraindication-sensitive practice second.

A. Progressive exposure to relaxation: Adapting or pausing an exercise when it increases distress, discomfort, or is not a good fit. / Contraindication-sensitive practice: Gradually practicing a regulation technique in increasingly challenging but manageable contexts.
B. Progressive exposure to relaxation: Gradually practicing a regulation technique in increasingly challenging but manageable contexts. / Contraindication-sensitive practice: A guided practice of noticing sensations across body regions without requiring a particular sensation.
C. Progressive exposure to relaxation: A structured practice of tensing and releasing muscle groups to increase awareness of bodily tension. / Contraindication-sensitive practice: Adapting or pausing an exercise when it increases distress, discomfort, or is not a good fit.
D. Progressive exposure to relaxation: Gradually practicing a regulation technique in increasingly challenging but manageable contexts. / Contraindication-sensitive practice: Adapting or pausing an exercise when it increases distress, discomfort, or is not a good fit.

0876. Choose the practice comparison that best separates Stress appraisal from Mindful self-compassion.

A. Stress appraisal: Offering choice to stop or use an alternative when inward attention feels unsafe or uncomfortable. / Mindful self-compassion: Supporting a young person to acknowledge difficulty without harsh self-judgment.
B. Stress appraisal: Supporting a young person to acknowledge difficulty without harsh self-judgment. / Mindful self-compassion: Exploring how a young person interprets a demand and what coping resources seem available.
C. Stress appraisal: Exploring how a young person interprets a demand and what coping resources seem available. / Mindful self-compassion: Supporting a young person to acknowledge difficulty without harsh self-judgment.
D. Stress appraisal: Exploring how a young person interprets a demand and what coping resources seem available. / Mindful self-compassion: Noticing neutral sights or sounds in the room when distress makes attention feel disconnected.

0877. Choose the response that best puts Body scan into practice.

A. Guiding attention to current experience while allowing thoughts to come and go.
B. Inviting nonjudgmental attention to sensations from one body area to another.
C. Supporting a young person to acknowledge difficulty without harsh self-judgment.
D. Helping a client compare strategies and choose one suited to the current stressor.

0878. A member of a clinical team prepares for a session in the counseling practicum with a child aged 8. The intended approach is teaching gradual muscle release and adapting the exercise if it causes discomfort. Which concept is most relevant?

A. Contraindication-sensitive practice
B. Diaphragmatic breathing
C. Progressive muscle relaxation
D. Coping flexibility

0879. A young adolescent client is receiving support in the student-support meeting. The youth worker is guided by this practice: practicing a calming skill in session and then in a planned everyday situation. Which principle best fits?

A. Mindfulness
B. Progressive exposure to relaxation
C. Progressive muscle relaxation
D. Stress appraisal

0880. A case conference asks for a distinction between Stress appraisal and Coping flexibility. Which answer is sound?

A. Stress appraisal: The process of evaluating whether a situation is threatening, manageable, or relevant to one's resources. / Coping flexibility: The capacity to select and adapt coping strategies to fit changing demands and context.
B. Stress appraisal: The capacity to select and adapt coping strategies to fit changing demands and context. / Coping flexibility: The process of evaluating whether a situation is threatening, manageable, or relevant to one's resources.
C. Stress appraisal: Adapting or pausing an exercise when it increases distress, discomfort, or is not a good fit. / Coping flexibility: The capacity to select and adapt coping strategies to fit changing demands and context.
D. Stress appraisal: The process of evaluating whether a situation is threatening, manageable, or relevant to one's resources. / Coping flexibility: A structured practice of tensing and releasing muscle groups to increase awareness of bodily tension.

0881. In mindfulness and stress-reduction practice, how are Progressive muscle relaxation and Grounding most accurately differentiated in this curriculum?

A. Progressive muscle relaxation: Present-focused orientation using sensory or environmental cues to reconnect with the immediate moment. / Grounding: A structured practice of tensing and releasing muscle groups to increase awareness of bodily tension.
B. Progressive muscle relaxation: The capacity to select and adapt coping strategies to fit changing demands and context. / Grounding: Present-focused orientation using sensory or environmental cues to reconnect with the immediate moment.
C. Progressive muscle relaxation: A structured practice of tensing and releasing muscle groups to increase awareness of bodily tension. / Grounding: A stance combining awareness of distress, common humanity, and kindness toward oneself.
D. Progressive muscle relaxation: A structured practice of tensing and releasing muscle groups to increase awareness of bodily tension. / Grounding: Present-focused orientation using sensory or environmental cues to reconnect with the immediate moment.

0882. In mindfulness and stress-reduction practice, a case discussion concerns a child aged 14 and a caregiver working with a counselor in the school-based service. The practitioner is considering noticing neutral sights or sounds in the room when distress makes attention feel disconnected. Which principle is involved?

A. Progressive muscle relaxation
B. Diaphragmatic breathing
C. Grounding
D. Coping flexibility

0883. Which professional action most closely applies Progressive exposure to relaxation?

A. Exploring how a young person interprets a demand and what coping resources seem available.
B. Inviting slow, comfortable abdominal breathing without forcing depth or pace.
C. Guiding attention to current experience while allowing thoughts to come and go.
D. Practicing a calming skill in session and then in a planned everyday situation.

0884. Which pair of actions illustrates Mindfulness and Contraindication-sensitive practice, respectively?

A. Mindfulness: Offering choice to stop or use an alternative when inward attention feels unsafe or uncomfortable. / Contraindication-sensitive practice: Guiding attention to current experience while allowing thoughts to come and go.
B. Mindfulness: Guiding attention to current experience while allowing thoughts to come and go. / Contraindication-sensitive practice: Offering choice to stop or use an alternative when inward attention feels unsafe or uncomfortable.
C. Mindfulness: Guiding attention to current experience while allowing thoughts to come and go. / Contraindication-sensitive practice: Noticing neutral sights or sounds in the room when distress makes attention feel disconnected.
D. Mindfulness: Inviting nonjudgmental attention to sensations from one body area to another. / Contraindication-sensitive practice: Offering choice to stop or use an alternative when inward attention feels unsafe or uncomfortable.

0885. Which pair of actions illustrates Stress appraisal and Progressive exposure to relaxation, respectively?

A. Stress appraisal: Exploring how a young person interprets a demand and what coping resources seem available. / Progressive exposure to relaxation: Teaching gradual muscle release and adapting the exercise if it causes discomfort.
B. Stress appraisal: Offering choice to stop or use an alternative when inward attention feels unsafe or uncomfortable. / Progressive exposure to relaxation: Practicing a calming skill in session and then in a planned everyday situation.
C. Stress appraisal: Practicing a calming skill in session and then in a planned everyday situation. / Progressive exposure to relaxation: Exploring how a young person interprets a demand and what coping resources seem available.
D. Stress appraisal: Exploring how a young person interprets a demand and what coping resources seem available. / Progressive exposure to relaxation: Practicing a calming skill in session and then in a planned everyday situation.

0886. A mental-health professional is preparing a follow-up plan for a student aged 15 in the learning-support meeting. The plan calls for inviting nonjudgmental attention to sensations from one body area to another. Which concept names this approach?

A. Body scan
B. Contraindication-sensitive practice
C. Grounding
D. Mindful self-compassion

0887. Which option preserves the correct meaning of both Body scan and Mindful self-compassion?

A. Body scan: A stance combining awareness of distress, common humanity, and kindness toward oneself. / Mindful self-compassion: A guided practice of noticing sensations across body regions without requiring a particular sensation.
B. Body scan: A structured practice of tensing and releasing muscle groups to increase awareness of bodily tension. / Mindful self-compassion: A stance combining awareness of distress, common humanity, and kindness toward oneself.
C. Body scan: A guided practice of noticing sensations across body regions without requiring a particular sensation. / Mindful self-compassion: Present-focused orientation using sensory or environmental cues to reconnect with the immediate moment.
D. Body scan: A guided practice of noticing sensations across body regions without requiring a particular sensation. / Mindful self-compassion: A stance combining awareness of distress, common humanity, and kindness toward oneself.

0888. Choose the response that best puts Mindful self-compassion into practice.

A. Inviting slow, comfortable abdominal breathing without forcing depth or pace.
B. Teaching gradual muscle release and adapting the exercise if it causes discomfort.
C. Inviting nonjudgmental attention to sensations from one body area to another.
D. Supporting a young person to acknowledge difficulty without harsh self-judgment.

0889. Choose the term that matches this definition: A stance combining awareness of distress, common humanity, and kindness toward oneself.

A. Diaphragmatic breathing
B. Progressive exposure to relaxation
C. Grounding
D. Mindful self-compassion

0890. Which comparison would correct a trainee's misunderstanding of Mindfulness versus Body scan?

A. Mindfulness: A guided practice of noticing sensations across body regions without requiring a particular sensation. / Body scan: Purposeful, present-moment attention with an attitude of openness and reduced automatic judgment.
B. Mindfulness: Purposeful, present-moment attention with an attitude of openness and reduced automatic judgment. / Body scan: The process of evaluating whether a situation is threatening, manageable, or relevant to one's resources.
C. Mindfulness: Purposeful, present-moment attention with an attitude of openness and reduced automatic judgment. / Body scan: A guided practice of noticing sensations across body regions without requiring a particular sensation.
D. Mindfulness: Present-focused orientation using sensory or environmental cues to reconnect with the immediate moment. / Body scan: A guided practice of noticing sensations across body regions without requiring a particular sensation.

0891. In mindfulness and stress-reduction practice, in a case note about a preadolescent child, a assessment clinician working in the community mental-health service records this priority: noticing neutral sights or sounds in the room when distress makes attention feel disconnected. What principle is reflected?

A. Stress appraisal
B. Progressive exposure to relaxation
C. Grounding
D. Progressive muscle relaxation

0892. Which option pairs the definitions of Progressive muscle relaxation and Mindful self-compassion correctly, in that order?

A. Progressive muscle relaxation: A stance combining awareness of distress, common humanity, and kindness toward oneself. / Mindful self-compassion: A structured practice of tensing and releasing muscle groups to increase awareness of bodily tension.
B. Progressive muscle relaxation: A structured practice of tensing and releasing muscle groups to increase awareness of bodily tension. / Mindful self-compassion: The capacity to select and adapt coping strategies to fit changing demands and context.
C. Progressive muscle relaxation: A structured practice of tensing and releasing muscle groups to increase awareness of bodily tension. / Mindful self-compassion: A stance combining awareness of distress, common humanity, and kindness toward oneself.
D. Progressive muscle relaxation: A guided practice of noticing sensations across body regions without requiring a particular sensation. / Mindful self-compassion: A stance combining awareness of distress, common humanity, and kindness toward oneself.

0893. What is the central meaning of Mindful self-compassion?

A. Purposeful, present-moment attention with an attitude of openness and reduced automatic judgment.
B. Gradually practicing a regulation technique in increasingly challenging but manageable contexts.
C. The process of evaluating whether a situation is threatening, manageable, or relevant to one's resources.
D. A stance combining awareness of distress, common humanity, and kindness toward oneself.

0894. In mindfulness and stress-reduction practice, which comparison correctly distinguishes Progressive muscle relaxation from Grounding?

A. Progressive muscle relaxation: Present-focused orientation using sensory or environmental cues to reconnect with the immediate moment. / Grounding: A structured practice of tensing and releasing muscle groups to increase awareness of bodily tension.
B. Progressive muscle relaxation: The capacity to select and adapt coping strategies to fit changing demands and context. / Grounding: Present-focused orientation using sensory or environmental cues to reconnect with the immediate moment.
C. Progressive muscle relaxation: A structured practice of tensing and releasing muscle groups to increase awareness of bodily tension. / Grounding: Present-focused orientation using sensory or environmental cues to reconnect with the immediate moment.
D. Progressive muscle relaxation: A structured practice of tensing and releasing muscle groups to increase awareness of bodily tension. / Grounding: A stance combining awareness of distress, common humanity, and kindness toward oneself.

0895. In mindfulness and stress-reduction practice, which option correctly matches each concept to its practice focus: Diaphragmatic breathing and Grounding?

A. Diaphragmatic breathing: Inviting nonjudgmental attention to sensations from one body area to another. / Grounding: Noticing neutral sights or sounds in the room when distress makes attention feel disconnected.
B. Diaphragmatic breathing: Inviting slow, comfortable abdominal breathing without forcing depth or pace. / Grounding: Noticing neutral sights or sounds in the room when distress makes attention feel disconnected.
C. Diaphragmatic breathing: Noticing neutral sights or sounds in the room when distress makes attention feel disconnected. / Grounding: Inviting slow, comfortable abdominal breathing without forcing depth or pace.
D. Diaphragmatic breathing: Inviting slow, comfortable abdominal breathing without forcing depth or pace. / Grounding: Teaching gradual muscle release and adapting the exercise if it causes discomfort.

0896. Which statement most accurately defines Coping flexibility?

A. The capacity to select and adapt coping strategies to fit changing demands and context.
B. A structured practice of tensing and releasing muscle groups to increase awareness of bodily tension.
C. Purposeful, present-moment attention with an attitude of openness and reduced automatic judgment.
D. A stance combining awareness of distress, common humanity, and kindness toward oneself.

0897. During work in the counseling practicum, a teacher and counselor identifies this need: exploring how a young person interprets a demand and what coping resources seem available. Which idea should guide the response?

A. Diaphragmatic breathing
B. Grounding
C. Progressive exposure to relaxation
D. Stress appraisal

0898. When reviewing a student aged 12's plan in the counseling practicum, the case coordinator notes that the next step is inviting nonjudgmental attention to sensations from one body area to another. Which concept guides this step?

A. Contraindication-sensitive practice
B. Grounding
C. Body scan
D. Progressive muscle relaxation

0899. In mindfulness and stress-reduction practice, which applied comparison correctly identifies what belongs to Grounding versus Contraindication-sensitive practice?

A. Grounding: Helping a client compare strategies and choose one suited to the current stressor. / Contraindication-sensitive practice: Offering choice to stop or use an alternative when inward attention feels unsafe or uncomfortable.
B. Grounding: Noticing neutral sights or sounds in the room when distress makes attention feel disconnected. / Contraindication-sensitive practice: Offering choice to stop or use an alternative when inward attention feels unsafe or uncomfortable.
C. Grounding: Noticing neutral sights or sounds in the room when distress makes attention feel disconnected. / Contraindication-sensitive practice: Supporting a young person to acknowledge difficulty without harsh self-judgment.
D. Grounding: Offering choice to stop or use an alternative when inward attention feels unsafe or uncomfortable. / Contraindication-sensitive practice: Noticing neutral sights or sounds in the room when distress makes attention feel disconnected.

0900. Which option correctly matches each concept to its practice focus: Stress appraisal and Coping flexibility?

A. Stress appraisal: Exploring how a young person interprets a demand and what coping resources seem available. / Coping flexibility: Helping a client compare strategies and choose one suited to the current stressor.
B. Stress appraisal: Helping a client compare strategies and choose one suited to the current stressor. / Coping flexibility: Exploring how a young person interprets a demand and what coping resources seem available.
C. Stress appraisal: Exploring how a young person interprets a demand and what coping resources seem available. / Coping flexibility: Teaching gradual muscle release and adapting the exercise if it causes discomfort.
D. Stress appraisal: Offering choice to stop or use an alternative when inward attention feels unsafe or uncomfortable. / Coping flexibility: Helping a client compare strategies and choose one suited to the current stressor.

0901. Which pair of actions illustrates Mindfulness and Diaphragmatic breathing, respectively?

A. Mindfulness: Supporting a young person to acknowledge difficulty without harsh self-judgment. / Diaphragmatic breathing: Inviting slow, comfortable abdominal breathing without forcing depth or pace.
B. Mindfulness: Guiding attention to current experience while allowing thoughts to come and go. / Diaphragmatic breathing: Offering choice to stop or use an alternative when inward attention feels unsafe or uncomfortable.
C. Mindfulness: Inviting slow, comfortable abdominal breathing without forcing depth or pace. / Diaphragmatic breathing: Guiding attention to current experience while allowing thoughts to come and go.
D. Mindfulness: Guiding attention to current experience while allowing thoughts to come and go. / Diaphragmatic breathing: Inviting slow, comfortable abdominal breathing without forcing depth or pace.

0902. Which comparison would correct a trainee's misunderstanding of Progressive muscle relaxation versus Contraindication-sensitive practice?

A. Progressive muscle relaxation: A structured practice of tensing and releasing muscle groups to increase awareness of bodily tension. / Contraindication-sensitive practice: Gradually practicing a regulation technique in increasingly challenging but manageable contexts.
B. Progressive muscle relaxation: A structured practice of tensing and releasing muscle groups to increase awareness of bodily tension. / Contraindication-sensitive practice: Adapting or pausing an exercise when it increases distress, discomfort, or is not a good fit.
C. Progressive muscle relaxation: Adapting or pausing an exercise when it increases distress, discomfort, or is not a good fit. / Contraindication-sensitive practice: A structured practice of tensing and releasing muscle groups to increase awareness of bodily tension.
D. Progressive muscle relaxation: Present-focused orientation using sensory or environmental cues to reconnect with the immediate moment. / Contraindication-sensitive practice: Adapting or pausing an exercise when it increases distress, discomfort, or is not a good fit.

0903. A trainee must explain Progressive exposure to relaxation. Which answer is accurate?

A. Purposeful, present-moment attention with an attitude of openness and reduced automatic judgment.
B. The capacity to select and adapt coping strategies to fit changing demands and context.
C. A stance combining awareness of distress, common humanity, and kindness toward oneself.
D. Gradually practicing a regulation technique in increasingly challenging but manageable contexts.

0904. Which named construct is captured by this account? A breathing practice emphasizing comfortable movement of the diaphragm to support regulation.

A. Mindful self-compassion
B. Body scan
C. Diaphragmatic breathing
D. Progressive exposure to relaxation

0905. A student confuses Mindfulness with Progressive exposure to relaxation. Which explanation most accurately separates them?

A. Mindfulness: Purposeful, present-moment attention with an attitude of openness and reduced automatic judgment. / Progressive exposure to relaxation: The capacity to select and adapt coping strategies to fit changing demands and context.
B. Mindfulness: Gradually practicing a regulation technique in increasingly challenging but manageable contexts. / Progressive exposure to relaxation: Purposeful, present-moment attention with an attitude of openness and reduced automatic judgment.
C. Mindfulness: A stance combining awareness of distress, common humanity, and kindness toward oneself. / Progressive exposure to relaxation: Gradually practicing a regulation technique in increasingly challenging but manageable contexts.
D. Mindfulness: Purposeful, present-moment attention with an attitude of openness and reduced automatic judgment. / Progressive exposure to relaxation: Gradually practicing a regulation technique in increasingly challenging but manageable contexts.

0906. Which option is the clearest practical expression of Diaphragmatic breathing?

A. Exploring how a young person interprets a demand and what coping resources seem available.
B. Inviting slow, comfortable abdominal breathing without forcing depth or pace.
C. Supporting a young person to acknowledge difficulty without harsh self-judgment.
D. Guiding attention to current experience while allowing thoughts to come and go.

0907. At the learning-support meeting, a therapist reviews whether a plan for a child aged 11 is appropriate. The relevant practice is teaching gradual muscle release and adapting the exercise if it causes discomfort. Which concept is tested?

A. Mindfulness
B. Stress appraisal
C. Mindful self-compassion
D. Progressive muscle relaxation

0908. A trainee must choose a practice that exemplifies Mindful self-compassion. Which action is the best fit?

A. Inviting nonjudgmental attention to sensations from one body area to another.
B. Supporting a young person to acknowledge difficulty without harsh self-judgment.
C. Inviting slow, comfortable abdominal breathing without forcing depth or pace.
D. Practicing a calming skill in session and then in a planned everyday situation.

0909. In a supervision quiz, how should Progressive muscle relaxation be distinguished from Mindful self-compassion?

A. Progressive muscle relaxation: A structured practice of tensing and releasing muscle groups to increase awareness of bodily tension. / Mindful self-compassion: The capacity to select and adapt coping strategies to fit changing demands and context.
B. Progressive muscle relaxation: A guided practice of noticing sensations across body regions without requiring a particular sensation. / Mindful self-compassion: A stance combining awareness of distress, common humanity, and kindness toward oneself.
C. Progressive muscle relaxation: A stance combining awareness of distress, common humanity, and kindness toward oneself. / Mindful self-compassion: A structured practice of tensing and releasing muscle groups to increase awareness of bodily tension.
D. Progressive muscle relaxation: A structured practice of tensing and releasing muscle groups to increase awareness of bodily tension. / Mindful self-compassion: A stance combining awareness of distress, common humanity, and kindness toward oneself.

0910. A trainee must choose a practice that exemplifies Contraindication-sensitive practice. Which action is the best fit?

A. Exploring how a young person interprets a demand and what coping resources seem available.
B. Offering choice to stop or use an alternative when inward attention feels unsafe or uncomfortable.
C. Supporting a young person to acknowledge difficulty without harsh self-judgment.
D. Helping a client compare strategies and choose one suited to the current stressor.

0911. A student confuses Stress appraisal with Contraindication-sensitive practice. Which explanation most accurately separates them?

A. Stress appraisal: The process of evaluating whether a situation is threatening, manageable, or relevant to one's resources. / Contraindication-sensitive practice: The capacity to select and adapt coping strategies to fit changing demands and context.
B. Stress appraisal: Adapting or pausing an exercise when it increases distress, discomfort, or is not a good fit. / Contraindication-sensitive practice: The process of evaluating whether a situation is threatening, manageable, or relevant to one's resources.
C. Stress appraisal: The process of evaluating whether a situation is threatening, manageable, or relevant to one's resources. / Contraindication-sensitive practice: Adapting or pausing an exercise when it increases distress, discomfort, or is not a good fit.
D. Stress appraisal: A breathing practice emphasizing comfortable movement of the diaphragm to support regulation. / Contraindication-sensitive practice: Adapting or pausing an exercise when it increases distress, discomfort, or is not a good fit.

0912. Which option correctly matches each concept to its practice focus: Progressive muscle relaxation and Mindful self-compassion?

A. Progressive muscle relaxation: Teaching gradual muscle release and adapting the exercise if it causes discomfort. / Mindful self-compassion: Supporting a young person to acknowledge difficulty without harsh self-judgment.
B. Progressive muscle relaxation: Teaching gradual muscle release and adapting the exercise if it causes discomfort. / Mindful self-compassion: Helping a client compare strategies and choose one suited to the current stressor.
C. Progressive muscle relaxation: Supporting a young person to acknowledge difficulty without harsh self-judgment. / Mindful self-compassion: Teaching gradual muscle release and adapting the exercise if it causes discomfort.
D. Progressive muscle relaxation: Inviting nonjudgmental attention to sensations from one body area to another. / Mindful self-compassion: Supporting a young person to acknowledge difficulty without harsh self-judgment.

0913. In the child guidance clinic, a consulting counselor explains why a adolescent student would benefit from inviting nonjudgmental attention to sensations from one body area to another. Which course concept underpins the explanation?

A. Grounding
B. Mindfulness
C. Progressive muscle relaxation
D. Body scan

0914. In mindfulness and stress-reduction practice, during service review in the student-support meeting, a therapist describes noticing neutral sights or sounds in the room when distress makes attention feel disconnected. for a young person. Which course idea is most applicable?

A. Progressive exposure to relaxation
B. Grounding
C. Coping flexibility
D. Diaphragmatic breathing

0915. At a case-planning meeting, the counselor proposes exploring how a young person interprets a demand and what coping resources seem available. for a child aged 7 seen in the school-based service. Which concept does this illustrate?

A. Body scan
B. Coping flexibility
C. Stress appraisal
D. Grounding

0916. In mindfulness and stress-reduction practice, a mental-health professional is supporting a student aged 12 in the after-school program. The key practice is noticing neutral sights or sounds in the room when distress makes attention feel disconnected. Which course concept is most relevant?

A. Grounding
B. Coping flexibility
C. Body scan
D. Progressive muscle relaxation

0917. How should a practitioner distinguish the applications of Coping flexibility and Contraindication-sensitive practice?

A. Coping flexibility: Offering choice to stop or use an alternative when inward attention feels unsafe or uncomfortable. / Contraindication-sensitive practice: Helping a client compare strategies and choose one suited to the current stressor.
B. Coping flexibility: Practicing a calming skill in session and then in a planned everyday situation. / Contraindication-sensitive practice: Offering choice to stop or use an alternative when inward attention feels unsafe or uncomfortable.
C. Coping flexibility: Helping a client compare strategies and choose one suited to the current stressor. / Contraindication-sensitive practice: Exploring how a young person interprets a demand and what coping resources seem available.
D. Coping flexibility: Helping a client compare strategies and choose one suited to the current stressor. / Contraindication-sensitive practice: Offering choice to stop or use an alternative when inward attention feels unsafe or uncomfortable.

0918. Which statement shows a sound practice-level distinction between Coping flexibility and Mindful self-compassion?

A. Coping flexibility: Supporting a young person to acknowledge difficulty without harsh self-judgment. / Mindful self-compassion: Helping a client compare strategies and choose one suited to the current stressor.
B. Coping flexibility: Inviting slow, comfortable abdominal breathing without forcing depth or pace. / Mindful self-compassion: Supporting a young person to acknowledge difficulty without harsh self-judgment.
C. Coping flexibility: Helping a client compare strategies and choose one suited to the current stressor. / Mindful self-compassion: Supporting a young person to acknowledge difficulty without harsh self-judgment.
D. Coping flexibility: Helping a client compare strategies and choose one suited to the current stressor. / Mindful self-compassion: Teaching gradual muscle release and adapting the exercise if it causes discomfort.

0919. A doctoral student reads the following description. Which concept does it define? The capacity to select and adapt coping strategies to fit changing demands and context.

A. Diaphragmatic breathing
B. Mindfulness
C. Contraindication-sensitive practice
D. Coping flexibility

0920. A student aged 15 and a member of a clinical team are reviewing goals in the school counseling office. The agreed action is practicing a calming skill in session and then in a planned everyday situation. Which principle best accounts for it?

A. Grounding
B. Progressive exposure to relaxation
C. Mindfulness
D. Coping flexibility

0921. Which comparison correctly distinguishes Coping flexibility from Progressive exposure to relaxation?

A. Coping flexibility: The capacity to select and adapt coping strategies to fit changing demands and context. / Progressive exposure to relaxation: Adapting or pausing an exercise when it increases distress, discomfort, or is not a good fit.
B. Coping flexibility: The capacity to select and adapt coping strategies to fit changing demands and context. / Progressive exposure to relaxation: Gradually practicing a regulation technique in increasingly challenging but manageable contexts.
C. Coping flexibility: A stance combining awareness of distress, common humanity, and kindness toward oneself. / Progressive exposure to relaxation: Gradually practicing a regulation technique in increasingly challenging but manageable contexts.
D. Coping flexibility: Gradually practicing a regulation technique in increasingly challenging but manageable contexts. / Progressive exposure to relaxation: The capacity to select and adapt coping strategies to fit changing demands and context.

0922. How should a practitioner distinguish the applications of Progressive muscle relaxation and Progressive exposure to relaxation?

A. Progressive muscle relaxation: Practicing a calming skill in session and then in a planned everyday situation. / Progressive exposure to relaxation: Teaching gradual muscle release and adapting the exercise if it causes discomfort.
B. Progressive muscle relaxation: Noticing neutral sights or sounds in the room when distress makes attention feel disconnected. / Progressive exposure to relaxation: Practicing a calming skill in session and then in a planned everyday situation.
C. Progressive muscle relaxation: Teaching gradual muscle release and adapting the exercise if it causes discomfort. / Progressive exposure to relaxation: Practicing a calming skill in session and then in a planned everyday situation.
D. Progressive muscle relaxation: Teaching gradual muscle release and adapting the exercise if it causes discomfort. / Progressive exposure to relaxation: Offering choice to stop or use an alternative when inward attention feels unsafe or uncomfortable.

0923. A service team discusses a young person in the child guidance clinic. Their proposed next step is offering choice to stop or use an alternative when inward attention feels unsafe or uncomfortable. Which course concept supports it?

A. Contraindication-sensitive practice
B. Progressive exposure to relaxation
C. Mindfulness
D. Body scan

0924. In the school-based service, a family therapist is considering this approach for a student aged 9: offering choice to stop or use an alternative when inward attention feels unsafe or uncomfortable. Which framework does it represent?

A. Contraindication-sensitive practice
B. Mindful self-compassion
C. Coping flexibility
D. Stress appraisal

0925. At the school consultation, a community practitioner reviews whether a plan for a preadolescent child is appropriate. The relevant practice is exploring how a young person interprets a demand and what coping resources seem available. Which concept is tested?

A. Stress appraisal
B. Progressive exposure to relaxation
C. Body scan
D. Coping flexibility

0926. Which pair of actions illustrates Progressive muscle relaxation and Coping flexibility, respectively?

A. Progressive muscle relaxation: Teaching gradual muscle release and adapting the exercise if it causes discomfort. / Coping flexibility: Helping a client compare strategies and choose one suited to the current stressor.
B. Progressive muscle relaxation: Noticing neutral sights or sounds in the room when distress makes attention feel disconnected. / Coping flexibility: Helping a client compare strategies and choose one suited to the current stressor.
C. Progressive muscle relaxation: Helping a client compare strategies and choose one suited to the current stressor. / Coping flexibility: Teaching gradual muscle release and adapting the exercise if it causes discomfort.
D. Progressive muscle relaxation: Teaching gradual muscle release and adapting the exercise if it causes discomfort. / Coping flexibility: Practicing a calming skill in session and then in a planned everyday situation.

0927. Which option correctly matches each concept to its practice focus: Diaphragmatic breathing and Progressive exposure to relaxation?

A. Diaphragmatic breathing: Exploring how a young person interprets a demand and what coping resources seem available. / Progressive exposure to relaxation: Practicing a calming skill in session and then in a planned everyday situation.
B. Diaphragmatic breathing: Inviting slow, comfortable abdominal breathing without forcing depth or pace. / Progressive exposure to relaxation: Practicing a calming skill in session and then in a planned everyday situation.
C. Diaphragmatic breathing: Practicing a calming skill in session and then in a planned everyday situation. / Progressive exposure to relaxation: Inviting slow, comfortable abdominal breathing without forcing depth or pace.
D. Diaphragmatic breathing: Inviting slow, comfortable abdominal breathing without forcing depth or pace. / Progressive exposure to relaxation: Guiding attention to current experience while allowing thoughts to come and go.

0928. A school counselor is explaining a choice to a older adolescent client and caregiver in the classroom support meeting. The choice centers on inviting slow, comfortable abdominal breathing without forcing depth or pace. Which idea is illustrated?

A. Coping flexibility
B. Grounding
C. Diaphragmatic breathing
D. Contraindication-sensitive practice

0929. A case conference asks for a distinction between Progressive exposure to relaxation and Contraindication-sensitive practice. Which answer is sound?

A. Progressive exposure to relaxation: Gradually practicing a regulation technique in increasingly challenging but manageable contexts. / Contraindication-sensitive practice: Adapting or pausing an exercise when it increases distress, discomfort, or is not a good fit.
B. Progressive exposure to relaxation: Adapting or pausing an exercise when it increases distress, discomfort, or is not a good fit. / Contraindication-sensitive practice: Gradually practicing a regulation technique in increasingly challenging but manageable contexts.
C. Progressive exposure to relaxation: A structured practice of tensing and releasing muscle groups to increase awareness of bodily tension. / Contraindication-sensitive practice: Adapting or pausing an exercise when it increases distress, discomfort, or is not a good fit.
D. Progressive exposure to relaxation: Gradually practicing a regulation technique in increasingly challenging but manageable contexts. / Contraindication-sensitive practice: A guided practice of noticing sensations across body regions without requiring a particular sensation.

0930. Which named construct is captured by this account? Purposeful, present-moment attention with an attitude of openness and reduced automatic judgment.

A. Mindful self-compassion
B. Body scan
C. Progressive muscle relaxation
D. Mindfulness

0931. A mental-health professional and a high-school student are discussing support in the family resource center. The selected practice is guiding attention to current experience while allowing thoughts to come and go. Which concept does this demonstrate?

A. Progressive muscle relaxation
B. Diaphragmatic breathing
C. Mindfulness
D. Stress appraisal

0932. In mindfulness and stress-reduction practice, choose the definition pair that correctly explains Diaphragmatic breathing first and Grounding second.

A. Diaphragmatic breathing: A guided practice of noticing sensations across body regions without requiring a particular sensation. / Grounding: Present-focused orientation using sensory or environmental cues to reconnect with the immediate moment.
B. Diaphragmatic breathing: A breathing practice emphasizing comfortable movement of the diaphragm to support regulation. / Grounding: A structured practice of tensing and releasing muscle groups to increase awareness of bodily tension.
C. Diaphragmatic breathing: Present-focused orientation using sensory or environmental cues to reconnect with the immediate moment. / Grounding: A breathing practice emphasizing comfortable movement of the diaphragm to support regulation.
D. Diaphragmatic breathing: A breathing practice emphasizing comfortable movement of the diaphragm to support regulation. / Grounding: Present-focused orientation using sensory or environmental cues to reconnect with the immediate moment.

0933. Identify the most precise label for this idea: Purposeful, present-moment attention with an attitude of openness and reduced automatic judgment.

A. Stress appraisal
B. Mindfulness
C. Diaphragmatic breathing
D. Body scan

0934. A team must select a support approach for a young adolescent client at the behavior-support review. The family therapist recommends exploring how a young person interprets a demand and what coping resources seem available. Which idea is most relevant?

A. Progressive exposure to relaxation
B. Stress appraisal
C. Progressive muscle relaxation
D. Body scan

0935. In mindfulness and stress-reduction practice, a school-based clinician presents a support plan for a teenage client at the telehealth session. Its central feature is noticing neutral sights or sounds in the room when distress makes attention feel disconnected. Which concept should be named?

A. Body scan
B. Mindful self-compassion
C. Stress appraisal
D. Grounding

0936. In mindfulness and stress-reduction practice, which choice aligns each practice with the correct idea, Grounding or Mindful self-compassion?

A. Grounding: Supporting a young person to acknowledge difficulty without harsh self-judgment. / Mindful self-compassion: Noticing neutral sights or sounds in the room when distress makes attention feel disconnected.
B. Grounding: Noticing neutral sights or sounds in the room when distress makes attention feel disconnected. / Mindful self-compassion: Practicing a calming skill in session and then in a planned everyday situation.
C. Grounding: Noticing neutral sights or sounds in the room when distress makes attention feel disconnected. / Mindful self-compassion: Supporting a young person to acknowledge difficulty without harsh self-judgment.
D. Grounding: Exploring how a young person interprets a demand and what coping resources seem available. / Mindful self-compassion: Supporting a young person to acknowledge difficulty without harsh self-judgment.

0937. A supervised trainee is preparing a follow-up plan for a preadolescent child in the after-school program. The plan calls for offering choice to stop or use an alternative when inward attention feels unsafe or uncomfortable. Which concept names this approach?

A. Contraindication-sensitive practice
B. Mindful self-compassion
C. Mindfulness
D. Progressive muscle relaxation

0938. Which paired example correctly applies Diaphragmatic breathing first and Contraindication-sensitive practice second?

A. Diaphragmatic breathing: Supporting a young person to acknowledge difficulty without harsh self-judgment. / Contraindication-sensitive practice: Offering choice to stop or use an alternative when inward attention feels unsafe or uncomfortable.
B. Diaphragmatic breathing: Inviting slow, comfortable abdominal breathing without forcing depth or pace. / Contraindication-sensitive practice: Guiding attention to current experience while allowing thoughts to come and go.
C. Diaphragmatic breathing: Inviting slow, comfortable abdominal breathing without forcing depth or pace. / Contraindication-sensitive practice: Offering choice to stop or use an alternative when inward attention feels unsafe or uncomfortable.
D. Diaphragmatic breathing: Offering choice to stop or use an alternative when inward attention feels unsafe or uncomfortable. / Contraindication-sensitive practice: Inviting slow, comfortable abdominal breathing without forcing depth or pace.

0939. In mindfulness and stress-reduction practice, which option pairs the definitions of Grounding and Coping flexibility correctly, in that order?

A. Grounding: Present-focused orientation using sensory or environmental cues to reconnect with the immediate moment. / Coping flexibility: The capacity to select and adapt coping strategies to fit changing demands and context.
B. Grounding: Adapting or pausing an exercise when it increases distress, discomfort, or is not a good fit. / Coping flexibility: The capacity to select and adapt coping strategies to fit changing demands and context.
C. Grounding: The capacity to select and adapt coping strategies to fit changing demands and context. / Coping flexibility: Present-focused orientation using sensory or environmental cues to reconnect with the immediate moment.
D. Grounding: Present-focused orientation using sensory or environmental cues to reconnect with the immediate moment. / Coping flexibility: Gradually practicing a regulation technique in increasingly challenging but manageable contexts.

0940. In mindfulness and stress-reduction practice, which paired example correctly applies Mindfulness first and Grounding second?

A. Mindfulness: Guiding attention to current experience while allowing thoughts to come and go. / Grounding: Inviting nonjudgmental attention to sensations from one body area to another.
B. Mindfulness: Practicing a calming skill in session and then in a planned everyday situation. / Grounding: Noticing neutral sights or sounds in the room when distress makes attention feel disconnected.
C. Mindfulness: Guiding attention to current experience while allowing thoughts to come and go. / Grounding: Noticing neutral sights or sounds in the room when distress makes attention feel disconnected.
D. Mindfulness: Noticing neutral sights or sounds in the room when distress makes attention feel disconnected. / Grounding: Guiding attention to current experience while allowing thoughts to come and go.

0941. Which option correctly matches each concept to its practice focus: Progressive muscle relaxation and Contraindication-sensitive practice?

A. Progressive muscle relaxation: Offering choice to stop or use an alternative when inward attention feels unsafe or uncomfortable. / Contraindication-sensitive practice: Teaching gradual muscle release and adapting the exercise if it causes discomfort.
B. Progressive muscle relaxation: Noticing neutral sights or sounds in the room when distress makes attention feel disconnected. / Contraindication-sensitive practice: Offering choice to stop or use an alternative when inward attention feels unsafe or uncomfortable.
C. Progressive muscle relaxation: Teaching gradual muscle release and adapting the exercise if it causes discomfort. / Contraindication-sensitive practice: Offering choice to stop or use an alternative when inward attention feels unsafe or uncomfortable.
D. Progressive muscle relaxation: Teaching gradual muscle release and adapting the exercise if it causes discomfort. / Contraindication-sensitive practice: Practicing a calming skill in session and then in a planned everyday situation.

0942. A trainee must distinguish how Diaphragmatic breathing and Mindful self-compassion guide practice. Which comparison is accurate?

A. Diaphragmatic breathing: Inviting slow, comfortable abdominal breathing without forcing depth or pace. / Mindful self-compassion: Supporting a young person to acknowledge difficulty without harsh self-judgment.
B. Diaphragmatic breathing: Supporting a young person to acknowledge difficulty without harsh self-judgment. / Mindful self-compassion: Inviting slow, comfortable abdominal breathing without forcing depth or pace.
C. Diaphragmatic breathing: Inviting slow, comfortable abdominal breathing without forcing depth or pace. / Mindful self-compassion: Teaching gradual muscle release and adapting the exercise if it causes discomfort.
D. Diaphragmatic breathing: Inviting nonjudgmental attention to sensations from one body area to another. / Mindful self-compassion: Supporting a young person to acknowledge difficulty without harsh self-judgment.

0943. In the parent meeting, a team asks how a youth worker can support a child aged 14. One proposed action is teaching gradual muscle release and adapting the exercise if it causes discomfort. Which idea does it represent?

A. Contraindication-sensitive practice
B. Progressive muscle relaxation
C. Mindful self-compassion
D. Coping flexibility

0944. In a case note about a child aged 11, a member of a clinical team working in the youth advocacy program records this priority: inviting slow, comfortable abdominal breathing without forcing depth or pace. What principle is reflected?

A. Mindfulness
B. Progressive muscle relaxation
C. Diaphragmatic breathing
D. Body scan

0945. An interdisciplinary team reviews a adolescent student's case at the multidisciplinary case conference. The counselor recommends offering choice to stop or use an alternative when inward attention feels unsafe or uncomfortable. Which course concept best fits?

A. Grounding
B. Stress appraisal
C. Contraindication-sensitive practice
D. Progressive muscle relaxation

0946. A teacher and counselor is explaining a choice to a child aged 14 and caregiver in the family session. The choice centers on supporting a young person to acknowledge difficulty without harsh self-judgment. Which idea is illustrated?

A. Mindful self-compassion
B. Diaphragmatic breathing
C. Contraindication-sensitive practice
D. Grounding

0947. A supervised trainee is supporting a student aged 9 in the community youth program. The key practice is guiding attention to current experience while allowing thoughts to come and go. Which course concept is most relevant?

A. Progressive muscle relaxation
B. Mindfulness
C. Mindful self-compassion
D. Contraindication-sensitive practice

0948. In a professional consultation about a high-school student, the member of a clinical team describes this response in the community service agency: exploring how a young person interprets a demand and what coping resources seem available. Which term is most apt?

A. Body scan
B. Diaphragmatic breathing
C. Stress appraisal
D. Mindful self-compassion

0949. Which option pairs the definitions of Coping flexibility and Contraindication-sensitive practice correctly, in that order?

A. Coping flexibility: The capacity to select and adapt coping strategies to fit changing demands and context. / Contraindication-sensitive practice: The process of evaluating whether a situation is threatening, manageable, or relevant to one's resources.
B. Coping flexibility: Adapting or pausing an exercise when it increases distress, discomfort, or is not a good fit. / Contraindication-sensitive practice: The capacity to select and adapt coping strategies to fit changing demands and context.
C. Coping flexibility: Gradually practicing a regulation technique in increasingly challenging but manageable contexts. / Contraindication-sensitive practice: Adapting or pausing an exercise when it increases distress, discomfort, or is not a good fit.
D. Coping flexibility: The capacity to select and adapt coping strategies to fit changing demands and context. / Contraindication-sensitive practice: Adapting or pausing an exercise when it increases distress, discomfort, or is not a good fit.

0950. A clinical supervisor reviews a plan for a student aged 9 in the supervision meeting. The plan emphasizes inviting nonjudgmental attention to sensations from one body area to another. Which course idea does this reflect?

A. Mindful self-compassion
B. Contraindication-sensitive practice
C. Body scan
D. Stress appraisal

0951. A trainee must distinguish how Diaphragmatic breathing and Coping flexibility guide practice. Which comparison is accurate?

A. Diaphragmatic breathing: Offering choice to stop or use an alternative when inward attention feels unsafe or uncomfortable. / Coping flexibility: Helping a client compare strategies and choose one suited to the current stressor.
B. Diaphragmatic breathing: Inviting slow, comfortable abdominal breathing without forcing depth or pace. / Coping flexibility: Helping a client compare strategies and choose one suited to the current stressor.
C. Diaphragmatic breathing: Inviting slow, comfortable abdominal breathing without forcing depth or pace. / Coping flexibility: Noticing neutral sights or sounds in the room when distress makes attention feel disconnected.
D. Diaphragmatic breathing: Helping a client compare strategies and choose one suited to the current stressor. / Coping flexibility: Inviting slow, comfortable abdominal breathing without forcing depth or pace.

0952. Which applied comparison correctly identifies what belongs to Coping flexibility versus Contraindication-sensitive practice?

A. Coping flexibility: Offering choice to stop or use an alternative when inward attention feels unsafe or uncomfortable. / Contraindication-sensitive practice: Helping a client compare strategies and choose one suited to the current stressor.
B. Coping flexibility: Practicing a calming skill in session and then in a planned everyday situation. / Contraindication-sensitive practice: Offering choice to stop or use an alternative when inward attention feels unsafe or uncomfortable.
C. Coping flexibility: Helping a client compare strategies and choose one suited to the current stressor. / Contraindication-sensitive practice: Exploring how a young person interprets a demand and what coping resources seem available.
D. Coping flexibility: Helping a client compare strategies and choose one suited to the current stressor. / Contraindication-sensitive practice: Offering choice to stop or use an alternative when inward attention feels unsafe or uncomfortable.

0953. A mental-health professional is supporting a older adolescent client in the family session. The key practice is offering choice to stop or use an alternative when inward attention feels unsafe or uncomfortable. Which course concept is most relevant?

A. Progressive muscle relaxation
B. Grounding
C. Contraindication-sensitive practice
D. Progressive exposure to relaxation

0954. Identify the most precise label for this idea: A structured practice of tensing and releasing muscle groups to increase awareness of bodily tension.

A. Body scan
B. Stress appraisal
C. Progressive muscle relaxation
D. Progressive exposure to relaxation

0955. How should a practitioner distinguish the applications of Progressive muscle relaxation and Stress appraisal?

A. Progressive muscle relaxation: Offering choice to stop or use an alternative when inward attention feels unsafe or uncomfortable. / Stress appraisal: Exploring how a young person interprets a demand and what coping resources seem available.
B. Progressive muscle relaxation: Exploring how a young person interprets a demand and what coping resources seem available. / Stress appraisal: Teaching gradual muscle release and adapting the exercise if it causes discomfort.
C. Progressive muscle relaxation: Teaching gradual muscle release and adapting the exercise if it causes discomfort. / Stress appraisal: Inviting nonjudgmental attention to sensations from one body area to another.
D. Progressive muscle relaxation: Teaching gradual muscle release and adapting the exercise if it causes discomfort. / Stress appraisal: Exploring how a young person interprets a demand and what coping resources seem available.

0956. A therapist is asked what should shape a client in late adolescence's support in the youth advocacy program. The proposed focus is exploring how a young person interprets a demand and what coping resources seem available. Which principle does it represent?

A. Mindful self-compassion
B. Mindfulness
C. Progressive exposure to relaxation
D. Stress appraisal

0957. In mindfulness and stress-reduction practice, a trainee must choose a practice that exemplifies Grounding. Which action is the best fit?

A. Noticing neutral sights or sounds in the room when distress makes attention feel disconnected.
B. Supporting a young person to acknowledge difficulty without harsh self-judgment.
C. Exploring how a young person interprets a demand and what coping resources seem available.
D. Helping a client compare strategies and choose one suited to the current stressor.

0958. A team must select a support approach for a young person aged 10 at the youth advocacy program. The parent educator recommends supporting a young person to acknowledge difficulty without harsh self-judgment. Which idea is most relevant?

A. Grounding
B. Body scan
C. Mindful self-compassion
D. Diaphragmatic breathing

0959. Which comparison correctly distinguishes Mindfulness from Progressive exposure to relaxation?

A. Mindfulness: Purposeful, present-moment attention with an attitude of openness and reduced automatic judgment. / Progressive exposure to relaxation: The capacity to select and adapt coping strategies to fit changing demands and context.
B. Mindfulness: A stance combining awareness of distress, common humanity, and kindness toward oneself. / Progressive exposure to relaxation: Gradually practicing a regulation technique in increasingly challenging but manageable contexts.
C. Mindfulness: Purposeful, present-moment attention with an attitude of openness and reduced automatic judgment. / Progressive exposure to relaxation: Gradually practicing a regulation technique in increasingly challenging but manageable contexts.
D. Mindfulness: Gradually practicing a regulation technique in increasingly challenging but manageable contexts. / Progressive exposure to relaxation: Purposeful, present-moment attention with an attitude of openness and reduced automatic judgment.

0960. A therapist describes an intervention for a high-school student in the counseling practicum, centered on helping a client compare strategies and choose one suited to the current stressor. Which named idea is most relevant?

A. Progressive muscle relaxation
B. Coping flexibility
C. Grounding
D. Body scan

0961. In the school-based service, a group facilitator describes the most appropriate support for a client in late adolescence as inviting slow, comfortable abdominal breathing without forcing depth or pace. Which framework is being applied?

A. Diaphragmatic breathing
B. Body scan
C. Mindful self-compassion
D. Grounding

0962. A parent educator presents a support plan for a older adolescent client at the outpatient clinic. Its central feature is inviting nonjudgmental attention to sensations from one body area to another. Which concept should be named?

A. Mindfulness
B. Progressive muscle relaxation
C. Body scan
D. Diaphragmatic breathing

0963. A supervisor asks for an applied contrast between Coping flexibility and Mindful self-compassion. Which option fits?

A. Coping flexibility: Helping a client compare strategies and choose one suited to the current stressor. / Mindful self-compassion: Teaching gradual muscle release and adapting the exercise if it causes discomfort.
B. Coping flexibility: Supporting a young person to acknowledge difficulty without harsh self-judgment. / Mindful self-compassion: Helping a client compare strategies and choose one suited to the current stressor.
C. Coping flexibility: Helping a client compare strategies and choose one suited to the current stressor. / Mindful self-compassion: Supporting a young person to acknowledge difficulty without harsh self-judgment.
D. Coping flexibility: Inviting slow, comfortable abdominal breathing without forcing depth or pace. / Mindful self-compassion: Supporting a young person to acknowledge difficulty without harsh self-judgment.

0964. In a supervision quiz, how should Mindfulness be distinguished from Body scan?

A. Mindfulness: Present-focused orientation using sensory or environmental cues to reconnect with the immediate moment. / Body scan: A guided practice of noticing sensations across body regions without requiring a particular sensation.
B. Mindfulness: A guided practice of noticing sensations across body regions without requiring a particular sensation. / Body scan: Purposeful, present-moment attention with an attitude of openness and reduced automatic judgment.
C. Mindfulness: Purposeful, present-moment attention with an attitude of openness and reduced automatic judgment. / Body scan: The process of evaluating whether a situation is threatening, manageable, or relevant to one's resources.
D. Mindfulness: Purposeful, present-moment attention with an attitude of openness and reduced automatic judgment. / Body scan: A guided practice of noticing sensations across body regions without requiring a particular sensation.

0965. Choose the term that matches this definition: A structured practice of tensing and releasing muscle groups to increase awareness of bodily tension.

A. Coping flexibility
B. Stress appraisal
C. Progressive muscle relaxation
D. Body scan

0966. A research trainee describes an intervention for a young person aged 13 in the parent meeting, centered on practicing a calming skill in session and then in a planned everyday situation. Which named idea is most relevant?

A. Stress appraisal
B. Progressive exposure to relaxation
C. Progressive muscle relaxation
D. Diaphragmatic breathing

0967. A teacher and counselor is asked to justify a plan for a child aged 11 in the community service agency. It calls for practicing a calming skill in session and then in a planned everyday situation. Which concept provides the rationale?

A. Grounding
B. Progressive exposure to relaxation
C. Contraindication-sensitive practice
D. Progressive muscle relaxation

0968. Which paired example correctly applies Diaphragmatic breathing first and Progressive exposure to relaxation second?

A. Diaphragmatic breathing: Inviting slow, comfortable abdominal breathing without forcing depth or pace. / Progressive exposure to relaxation: Practicing a calming skill in session and then in a planned everyday situation.
B. Diaphragmatic breathing: Practicing a calming skill in session and then in a planned everyday situation. / Progressive exposure to relaxation: Inviting slow, comfortable abdominal breathing without forcing depth or pace.
C. Diaphragmatic breathing: Exploring how a young person interprets a demand and what coping resources seem available. / Progressive exposure to relaxation: Practicing a calming skill in session and then in a planned everyday situation.
D. Diaphragmatic breathing: Inviting slow, comfortable abdominal breathing without forcing depth or pace. / Progressive exposure to relaxation: Guiding attention to current experience while allowing thoughts to come and go.

0969. A community practitioner describes an intervention for a child aged 6 in the community youth program, centered on offering choice to stop or use an alternative when inward attention feels unsafe or uncomfortable. Which named idea is most relevant?

A. Progressive exposure to relaxation
B. Progressive muscle relaxation
C. Mindfulness
D. Contraindication-sensitive practice

0970. A supervisor asks how Stress appraisal would appear in practice. Which choice should be selected?

A. Noticing neutral sights or sounds in the room when distress makes attention feel disconnected.
B. Exploring how a young person interprets a demand and what coping resources seem available.
C. Offering choice to stop or use an alternative when inward attention feels unsafe or uncomfortable.
D. Supporting a young person to acknowledge difficulty without harsh self-judgment.

0971. A trainee must distinguish how Diaphragmatic breathing and Contraindication-sensitive practice guide practice. Which comparison is accurate?

A. Diaphragmatic breathing: Inviting slow, comfortable abdominal breathing without forcing depth or pace. / Contraindication-sensitive practice: Offering choice to stop or use an alternative when inward attention feels unsafe or uncomfortable.
B. Diaphragmatic breathing: Inviting slow, comfortable abdominal breathing without forcing depth or pace. / Contraindication-sensitive practice: Guiding attention to current experience while allowing thoughts to come and go.
C. Diaphragmatic breathing: Supporting a young person to acknowledge difficulty without harsh self-judgment. / Contraindication-sensitive practice: Offering choice to stop or use an alternative when inward attention feels unsafe or uncomfortable.
D. Diaphragmatic breathing: Offering choice to stop or use an alternative when inward attention feels unsafe or uncomfortable. / Contraindication-sensitive practice: Inviting slow, comfortable abdominal breathing without forcing depth or pace.

0972. In mindfulness and stress-reduction practice, a member of a clinical team and a client in late adolescence are discussing support in the family session. The selected practice is noticing neutral sights or sounds in the room when distress makes attention feel disconnected. Which concept does this demonstrate?

A. Progressive exposure to relaxation
B. Diaphragmatic breathing
C. Progressive muscle relaxation
D. Grounding

0973. In mindfulness and stress-reduction practice, a youth worker is asked to justify a plan for a child aged 8 in the caregiver consultation. It calls for noticing neutral sights or sounds in the room when distress makes attention feel disconnected. Which concept provides the rationale?

A. Mindfulness
B. Stress appraisal
C. Grounding
D. Progressive muscle relaxation

0974. Which statement shows a sound practice-level distinction between Body scan and Coping flexibility?

A. Body scan: Inviting nonjudgmental attention to sensations from one body area to another. / Coping flexibility: Practicing a calming skill in session and then in a planned everyday situation.
B. Body scan: Helping a client compare strategies and choose one suited to the current stressor. / Coping flexibility: Inviting nonjudgmental attention to sensations from one body area to another.
C. Body scan: Offering choice to stop or use an alternative when inward attention feels unsafe or uncomfortable. / Coping flexibility: Helping a client compare strategies and choose one suited to the current stressor.
D. Body scan: Inviting nonjudgmental attention to sensations from one body area to another. / Coping flexibility: Helping a client compare strategies and choose one suited to the current stressor.

0975. In mindfulness and stress-reduction practice, which comparison would correct a trainee's misunderstanding of Body scan versus Grounding?

A. Body scan: Present-focused orientation using sensory or environmental cues to reconnect with the immediate moment. / Grounding: A guided practice of noticing sensations across body regions without requiring a particular sensation.
B. Body scan: A guided practice of noticing sensations across body regions without requiring a particular sensation. / Grounding: Present-focused orientation using sensory or environmental cues to reconnect with the immediate moment.
C. Body scan: A guided practice of noticing sensations across body regions without requiring a particular sensation. / Grounding: The process of evaluating whether a situation is threatening, manageable, or relevant to one's resources.
D. Body scan: Adapting or pausing an exercise when it increases distress, discomfort, or is not a good fit. / Grounding: Present-focused orientation using sensory or environmental cues to reconnect with the immediate moment.

0976. Consider a young person aged 18 receiving help in the community mental-health service. The consulting counselor focuses on supporting a young person to acknowledge difficulty without harsh self-judgment. Which term best describes the guiding idea?

A. Mindfulness
B. Progressive exposure to relaxation
C. Mindful self-compassion
D. Contraindication-sensitive practice

0977. During service review in the school counseling office, a community practitioner describes teaching gradual muscle release and adapting the exercise if it causes discomfort. for a young person aged 16. Which course idea is most applicable?

A. Body scan
B. Progressive muscle relaxation
C. Mindful self-compassion
D. Mindfulness

0978. Select the best explanation of Mindful self-compassion.

A. A stance combining awareness of distress, common humanity, and kindness toward oneself.
B. The process of evaluating whether a situation is threatening, manageable, or relevant to one's resources.
C. Present-focused orientation using sensory or environmental cues to reconnect with the immediate moment.
D. The capacity to select and adapt coping strategies to fit changing demands and context.

0979. A service team discusses a adolescent student in the school-based service. Their proposed next step is teaching gradual muscle release and adapting the exercise if it causes discomfort. Which course concept supports it?

A. Progressive muscle relaxation
B. Progressive exposure to relaxation
C. Mindful self-compassion
D. Grounding

0980. Which option preserves the correct meaning of both Mindfulness and Progressive exposure to relaxation?

A. Mindfulness: Purposeful, present-moment attention with an attitude of openness and reduced automatic judgment. / Progressive exposure to relaxation: Gradually practicing a regulation technique in increasingly challenging but manageable contexts.
B. Mindfulness: Purposeful, present-moment attention with an attitude of openness and reduced automatic judgment. / Progressive exposure to relaxation: The capacity to select and adapt coping strategies to fit changing demands and context.
C. Mindfulness: Gradually practicing a regulation technique in increasingly challenging but manageable contexts. / Progressive exposure to relaxation: Purposeful, present-moment attention with an attitude of openness and reduced automatic judgment.
D. Mindfulness: A stance combining awareness of distress, common humanity, and kindness toward oneself. / Progressive exposure to relaxation: Gradually practicing a regulation technique in increasingly challenging but manageable contexts.

0981. Choose the definition pair that correctly explains Coping flexibility first and Contraindication-sensitive practice second.

A. Coping flexibility: Adapting or pausing an exercise when it increases distress, discomfort, or is not a good fit. / Contraindication-sensitive practice: The capacity to select and adapt coping strategies to fit changing demands and context.
B. Coping flexibility: Gradually practicing a regulation technique in increasingly challenging but manageable contexts. / Contraindication-sensitive practice: Adapting or pausing an exercise when it increases distress, discomfort, or is not a good fit.
C. Coping flexibility: The capacity to select and adapt coping strategies to fit changing demands and context. / Contraindication-sensitive practice: The process of evaluating whether a situation is threatening, manageable, or relevant to one's resources.
D. Coping flexibility: The capacity to select and adapt coping strategies to fit changing demands and context. / Contraindication-sensitive practice: Adapting or pausing an exercise when it increases distress, discomfort, or is not a good fit.

0982. A service team discusses a student aged 17 in the caregiver consultation. Their proposed next step is guiding attention to current experience while allowing thoughts to come and go. Which course concept supports it?

A. Contraindication-sensitive practice
B. Mindfulness
C. Progressive exposure to relaxation
D. Stress appraisal

0983. In a supervision quiz, how should Body scan be distinguished from Contraindication-sensitive practice?

A. Body scan: A guided practice of noticing sensations across body regions without requiring a particular sensation. / Contraindication-sensitive practice: Adapting or pausing an exercise when it increases distress, discomfort, or is not a good fit.
B. Body scan: A guided practice of noticing sensations across body regions without requiring a particular sensation. / Contraindication-sensitive practice: Gradually practicing a regulation technique in increasingly challenging but manageable contexts.
C. Body scan: A stance combining awareness of distress, common humanity, and kindness toward oneself. / Contraindication-sensitive practice: Adapting or pausing an exercise when it increases distress, discomfort, or is not a good fit.
D. Body scan: Adapting or pausing an exercise when it increases distress, discomfort, or is not a good fit. / Contraindication-sensitive practice: A guided practice of noticing sensations across body regions without requiring a particular sensation.

0984. Which named construct is captured by this account? A stance combining awareness of distress, common humanity, and kindness toward oneself.

A. Contraindication-sensitive practice
B. Coping flexibility
C. Body scan
D. Mindful self-compassion

0985. How are Mindfulness and Coping flexibility most accurately differentiated in this curriculum?

A. Mindfulness: Purposeful, present-moment attention with an attitude of openness and reduced automatic judgment. / Coping flexibility: A guided practice of noticing sensations across body regions without requiring a particular sensation.
B. Mindfulness: Purposeful, present-moment attention with an attitude of openness and reduced automatic judgment. / Coping flexibility: The capacity to select and adapt coping strategies to fit changing demands and context.
C. Mindfulness: Gradually practicing a regulation technique in increasingly challenging but manageable contexts. / Coping flexibility: The capacity to select and adapt coping strategies to fit changing demands and context.
D. Mindfulness: The capacity to select and adapt coping strategies to fit changing demands and context. / Coping flexibility: Purposeful, present-moment attention with an attitude of openness and reduced automatic judgment.

0986. Which option correctly matches each concept to its practice focus: Mindful self-compassion and Progressive exposure to relaxation?

A. Mindful self-compassion: Supporting a young person to acknowledge difficulty without harsh self-judgment. / Progressive exposure to relaxation: Noticing neutral sights or sounds in the room when distress makes attention feel disconnected.
B. Mindful self-compassion: Inviting nonjudgmental attention to sensations from one body area to another. / Progressive exposure to relaxation: Practicing a calming skill in session and then in a planned everyday situation.
C. Mindful self-compassion: Supporting a young person to acknowledge difficulty without harsh self-judgment. / Progressive exposure to relaxation: Practicing a calming skill in session and then in a planned everyday situation.
D. Mindful self-compassion: Practicing a calming skill in session and then in a planned everyday situation. / Progressive exposure to relaxation: Supporting a young person to acknowledge difficulty without harsh self-judgment.

0987. In mindfulness and stress-reduction practice, which option correctly matches each concept to its practice focus: Grounding and Progressive exposure to relaxation?

A. Grounding: Noticing neutral sights or sounds in the room when distress makes attention feel disconnected. / Progressive exposure to relaxation: Practicing a calming skill in session and then in a planned everyday situation.
B. Grounding: Helping a client compare strategies and choose one suited to the current stressor. / Progressive exposure to relaxation: Practicing a calming skill in session and then in a planned everyday situation.
C. Grounding: Noticing neutral sights or sounds in the room when distress makes attention feel disconnected. / Progressive exposure to relaxation: Exploring how a young person interprets a demand and what coping resources seem available.
D. Grounding: Practicing a calming skill in session and then in a planned everyday situation. / Progressive exposure to relaxation: Noticing neutral sights or sounds in the room when distress makes attention feel disconnected.

0988. Which pair of actions illustrates Stress appraisal and Contraindication-sensitive practice, respectively?

A. Stress appraisal: Inviting slow, comfortable abdominal breathing without forcing depth or pace. / Contraindication-sensitive practice: Offering choice to stop or use an alternative when inward attention feels unsafe or uncomfortable.
B. Stress appraisal: Exploring how a young person interprets a demand and what coping resources seem available. / Contraindication-sensitive practice: Helping a client compare strategies and choose one suited to the current stressor.
C. Stress appraisal: Exploring how a young person interprets a demand and what coping resources seem available. / Contraindication-sensitive practice: Offering choice to stop or use an alternative when inward attention feels unsafe or uncomfortable.
D. Stress appraisal: Offering choice to stop or use an alternative when inward attention feels unsafe or uncomfortable. / Contraindication-sensitive practice: Exploring how a young person interprets a demand and what coping resources seem available.

0989. Which statement accurately contrasts the course concepts Coping flexibility and Progressive exposure to relaxation?

A. Coping flexibility: The capacity to select and adapt coping strategies to fit changing demands and context. / Progressive exposure to relaxation: Gradually practicing a regulation technique in increasingly challenging but manageable contexts.
B. Coping flexibility: The capacity to select and adapt coping strategies to fit changing demands and context. / Progressive exposure to relaxation: Adapting or pausing an exercise when it increases distress, discomfort, or is not a good fit.
C. Coping flexibility: Gradually practicing a regulation technique in increasingly challenging but manageable contexts. / Progressive exposure to relaxation: The capacity to select and adapt coping strategies to fit changing demands and context.
D. Coping flexibility: A stance combining awareness of distress, common humanity, and kindness toward oneself. / Progressive exposure to relaxation: Gradually practicing a regulation technique in increasingly challenging but manageable contexts.

0990. A trainee must distinguish how Body scan and Stress appraisal guide practice. Which comparison is accurate?

A. Body scan: Noticing neutral sights or sounds in the room when distress makes attention feel disconnected. / Stress appraisal: Exploring how a young person interprets a demand and what coping resources seem available.
B. Body scan: Exploring how a young person interprets a demand and what coping resources seem available. / Stress appraisal: Inviting nonjudgmental attention to sensations from one body area to another.
C. Body scan: Inviting nonjudgmental attention to sensations from one body area to another. / Stress appraisal: Inviting slow, comfortable abdominal breathing without forcing depth or pace.
D. Body scan: Inviting nonjudgmental attention to sensations from one body area to another. / Stress appraisal: Exploring how a young person interprets a demand and what coping resources seem available.

0991. During work in the parent meeting, a group facilitator identifies this need: supporting a young person to acknowledge difficulty without harsh self-judgment. Which idea should guide the response?

A. Mindfulness
B. Mindful self-compassion
C. Stress appraisal
D. Grounding

0992. Which statement most accurately defines Diaphragmatic breathing?

A. A guided practice of noticing sensations across body regions without requiring a particular sensation.
B. A breathing practice emphasizing comfortable movement of the diaphragm to support regulation.
C. A stance combining awareness of distress, common humanity, and kindness toward oneself.
D. The capacity to select and adapt coping strategies to fit changing demands and context.

0993. Which applied comparison correctly identifies what belongs to Diaphragmatic breathing versus Coping flexibility?

A. Diaphragmatic breathing: Helping a client compare strategies and choose one suited to the current stressor. / Coping flexibility: Inviting slow, comfortable abdominal breathing without forcing depth or pace.
B. Diaphragmatic breathing: Inviting slow, comfortable abdominal breathing without forcing depth or pace. / Coping flexibility: Helping a client compare strategies and choose one suited to the current stressor.
C. Diaphragmatic breathing: Offering choice to stop or use an alternative when inward attention feels unsafe or uncomfortable. / Coping flexibility: Helping a client compare strategies and choose one suited to the current stressor.
D. Diaphragmatic breathing: Inviting slow, comfortable abdominal breathing without forcing depth or pace. / Coping flexibility: Noticing neutral sights or sounds in the room when distress makes attention feel disconnected.

0994. Choose the practice comparison that best separates Body scan from Progressive exposure to relaxation.

A. Body scan: Practicing a calming skill in session and then in a planned everyday situation. / Progressive exposure to relaxation: Inviting nonjudgmental attention to sensations from one body area to another.
B. Body scan: Inviting slow, comfortable abdominal breathing without forcing depth or pace. / Progressive exposure to relaxation: Practicing a calming skill in session and then in a planned everyday situation.
C. Body scan: Inviting nonjudgmental attention to sensations from one body area to another. / Progressive exposure to relaxation: Noticing neutral sights or sounds in the room when distress makes attention feel disconnected.
D. Body scan: Inviting nonjudgmental attention to sensations from one body area to another. / Progressive exposure to relaxation: Practicing a calming skill in session and then in a planned everyday situation.

0995. In mindfulness and stress-reduction practice, which statement accurately contrasts the course concepts Grounding and Mindful self-compassion?

A. Grounding: A stance combining awareness of distress, common humanity, and kindness toward oneself. / Mindful self-compassion: Present-focused orientation using sensory or environmental cues to reconnect with the immediate moment.
B. Grounding: Present-focused orientation using sensory or environmental cues to reconnect with the immediate moment. / Mindful self-compassion: A stance combining awareness of distress, common humanity, and kindness toward oneself.
C. Grounding: Present-focused orientation using sensory or environmental cues to reconnect with the immediate moment. / Mindful self-compassion: Gradually practicing a regulation technique in increasingly challenging but manageable contexts.
D. Grounding: The process of evaluating whether a situation is threatening, manageable, or relevant to one’s resources. / Mindful self-compassion: A stance combining awareness of distress, common humanity, and kindness toward oneself.

0996. A consultant is supporting a middle-school student in the youth group. The key practice is teaching gradual muscle release and adapting the exercise if it causes discomfort. Which course concept is most relevant?

A. Mindfulness
B. Progressive muscle relaxation
C. Grounding
D. Contraindication-sensitive practice

0997. A consulting counselor is explaining a choice to a child of elementary-school age and caregiver in the clinical planning session. The choice centers on exploring how a young person interprets a demand and what coping resources seem available. Which idea is illustrated?

A. Contraindication-sensitive practice
B. Coping flexibility
C. Stress appraisal
D. Progressive muscle relaxation

0998. How should a practitioner distinguish the applications of Diaphragmatic breathing and Stress appraisal?

A. Diaphragmatic breathing: Inviting slow, comfortable abdominal breathing without forcing depth or pace. / Stress appraisal: Practicing a calming skill in session and then in a planned everyday situation.
B. Diaphragmatic breathing: Inviting nonjudgmental attention to sensations from one body area to another. / Stress appraisal: Exploring how a young person interprets a demand and what coping resources seem available.
C. Diaphragmatic breathing: Inviting slow, comfortable abdominal breathing without forcing depth or pace. / Stress appraisal: Exploring how a young person interprets a demand and what coping resources seem available.
D. Diaphragmatic breathing: Exploring how a young person interprets a demand and what coping resources seem available. / Stress appraisal: Inviting slow, comfortable abdominal breathing without forcing depth or pace.

0999. A member of a clinical team prepares for a session in the youth group with a child aged 7. The intended approach is supporting a young person to acknowledge difficulty without harsh self-judgment. Which concept is most relevant?

A. Contraindication-sensitive practice
B. Coping flexibility
C. Mindful self-compassion
D. Body scan

1000. A supervisor asks for an applied contrast between Progressive muscle relaxation and Stress appraisal. Which option fits?

A. Progressive muscle relaxation: Exploring how a young person interprets a demand and what coping resources seem available. / Stress appraisal: Teaching gradual muscle release and adapting the exercise if it causes discomfort.
B. Progressive muscle relaxation: Offering choice to stop or use an alternative when inward attention feels unsafe or uncomfortable. / Stress appraisal: Exploring how a young person interprets a demand and what coping resources seem available.
C. Progressive muscle relaxation: Teaching gradual muscle release and adapting the exercise if it causes discomfort. / Stress appraisal: Inviting nonjudgmental attention to sensations from one body area to another.
D. Progressive muscle relaxation: Teaching gradual muscle release and adapting the exercise if it causes discomfort. / Stress appraisal: Exploring how a young person interprets a demand and what coping resources seem available.

CAC.926 | Technology in Counseling Practice

QUESTION BANK | 1,000 ITEMS | ANSWERS AT THE END

0001. A supervised trainee is preparing a follow-up plan for a older adolescent client in the parent meeting. The plan calls for clarifying approved communication channels and response times with families. Which concept names this approach?

A. Telehealth informed consent
B. Cybersecurity hygiene
C. Data minimization
D. Digital boundaries

0002. Which course concept is defined as follows: Professional limits governing online contact, social media, and technology-mediated relationships.

A. Cybersecurity hygiene
B. Data minimization
C. Telehealth emergency planning
D. Digital boundaries

0003. Which description belongs with the term Cybersecurity hygiene?

A. A plan for continuing or safely pausing care when devices, connectivity, or platforms fail.
B. Routine practices such as strong authentication, updates, and secure handling that reduce digital risk.
C. Collecting and retaining only the personal information necessary for a defined legitimate purpose.
D. Clear disclosure and oversight when artificial intelligence tools materially affect clinical work or client information.

0004. When reviewing a young person's plan in the supervision meeting, the family therapist notes that the next step is confirming current location and emergency contacts at the start of a remote session as appropriate. Which concept guides this step?

A. Data minimization
B. Telehealth emergency planning
C. AI use transparency
D. Technology contingency planning

0005. How should a practitioner distinguish the applications of Telehealth informed consent and Digital confidentiality?

A. Telehealth informed consent: Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care. / Digital confidentiality: Agreeing on a backup contact method and next step if a session disconnects.
B. Telehealth informed consent: Checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool. / Digital confidentiality: Using approved secure systems and avoiding sensitive information on shared or unsecured channels.
C. Telehealth informed consent: Using approved secure systems and avoiding sensitive information on shared or unsecured channels. / Digital confidentiality: Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care.
D. Telehealth informed consent: Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care. / Digital confidentiality: Using approved secure systems and avoiding sensitive information on shared or unsecured channels.

0006. In the school-based service, a family therapist is considering this approach for a student aged 9: agreeing on a backup contact method and next step if a session disconnects. Which framework does it represent?

A. Digital boundaries
B. Data minimization
C. Technology contingency planning
D. AI use transparency

0007. Which course concept is defined as follows: A plan for continuing or safely pausing care when devices, connectivity, or platforms fail.

A. Data minimization
B. Cybersecurity hygiene
C. Therapeutic app evaluation
D. Technology contingency planning

0008. A trainee must choose a practice that exemplifies Technology access equity. Which action is the best fit?

A. Confirming current location and emergency contacts at the start of a remote session as appropriate.
B. Agreeing on a backup contact method and next step if a session disconnects.
C. Reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate.
D. Asking about device and privacy barriers before assuming a youth can participate remotely.

0009. Which statement accurately contrasts the course concepts Telehealth emergency planning and Cybersecurity hygiene?

A. Telehealth emergency planning: Routine practices such as strong authentication, updates, and secure handling that reduce digital risk. / Cybersecurity hygiene: Advance procedures for responding to an urgent event during remote care, including location and contacts.
B. Telehealth emergency planning: Advance procedures for responding to an urgent event during remote care, including location and contacts. / Cybersecurity hygiene: Professional limits governing online contact, social media, and technology-mediated relationships.
C. Telehealth emergency planning: Clear disclosure and oversight when artificial intelligence tools materially affect clinical work or client information. / Cybersecurity hygiene: Routine practices such as strong authentication, updates, and secure handling that reduce digital risk.
D. Telehealth emergency planning: Advance procedures for responding to an urgent event during remote care, including location and contacts. / Cybersecurity hygiene: Routine practices such as strong authentication, updates, and secure handling that reduce digital risk.

0010. Which paired example correctly applies Telehealth informed consent first and Digital boundaries second?

A. Telehealth informed consent: Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care. / Digital boundaries: Clarifying approved communication channels and response times with families.
B. Telehealth informed consent: Clarifying approved communication channels and response times with families. / Digital boundaries: Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care.
C. Telehealth informed consent: Using approved secure systems and avoiding sensitive information on shared or unsecured channels. / Digital boundaries: Clarifying approved communication channels and response times with families.
D. Telehealth informed consent: Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care. / Digital boundaries: Using access controls and keeping approved systems updated.

0011. In the community youth program, a team asks how a group facilitator can support a young adolescent client. One proposed action is asking about device and privacy barriers before assuming a youth can participate remotely. Which idea does it represent?

A. Digital boundaries
B. Technology contingency planning
C. Technology access equity
D. Therapeutic app evaluation

0012. Which option correctly matches each concept to its practice focus: Telehealth informed consent and Technology access equity?

A. Telehealth informed consent: Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care. / Technology access equity: Asking about device and privacy barriers before assuming a youth can participate remotely.
B. Telehealth informed consent: Asking about device and privacy barriers before assuming a youth can participate remotely. / Technology access equity: Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care.
C. Telehealth informed consent: Confirming current location and emergency contacts at the start of a remote session as appropriate. / Technology access equity: Asking about device and privacy barriers before assuming a youth can participate remotely.
D. Telehealth informed consent: Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care. / Technology access equity: Checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool.

0013. A school counselor is asked to justify a plan for a teenage client in the behavior-support review. It calls for reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate. Which concept provides the rationale?

A. Technology access equity
B. Therapeutic app evaluation
C. Data minimization
D. Digital confidentiality

0014. A supervisor asks for an applied contrast between Telehealth emergency planning and Technology access equity. Which option fits?

A. Telehealth emergency planning: Confirming current location and emergency contacts at the start of a remote session as appropriate. / Technology access equity: Avoiding unnecessary data capture and retaining only what policy and law require.
B. Telehealth emergency planning: Asking about device and privacy barriers before assuming a youth can participate remotely. / Technology access equity: Confirming current location and emergency contacts at the start of a remote session as appropriate.
C. Telehealth emergency planning: Confirming current location and emergency contacts at the start of a remote session as appropriate. / Technology access equity: Asking about device and privacy barriers before assuming a youth can participate remotely.
D. Telehealth emergency planning: Clarifying approved communication channels and response times with families. / Technology access equity: Asking about device and privacy barriers before assuming a youth can participate remotely.

0015. Which option pairs the definitions of Technology access equity and Technology contingency planning correctly, in that order?

A. Technology access equity: Attention to unequal access to devices, bandwidth, private space, and digital skills. / Technology contingency planning: A plan for continuing or safely pausing care when devices, connectivity, or platforms fail.
B. Technology access equity: Routine practices such as strong authentication, updates, and secure handling that reduce digital risk. / Technology contingency planning: A plan for continuing or safely pausing care when devices, connectivity, or platforms fail.
C. Technology access equity: A plan for continuing or safely pausing care when devices, connectivity, or platforms fail. / Technology contingency planning: Attention to unequal access to devices, bandwidth, private space, and digital skills.
D. Technology access equity: Attention to unequal access to devices, bandwidth, private space, and digital skills. / Technology contingency planning: An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans.

0016. A trainee must distinguish how Therapeutic app evaluation and Technology contingency planning guide practice. Which comparison is accurate?

A. Therapeutic app evaluation: Using access controls and keeping approved systems updated. / Technology contingency planning: Agreeing on a backup contact method and next step if a session disconnects.
B. Therapeutic app evaluation: Reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate. / Technology contingency planning: Avoiding unnecessary data capture and retaining only what policy and law require.
C. Therapeutic app evaluation: Agreeing on a backup contact method and next step if a session disconnects. / Technology contingency planning: Reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate.
D. Therapeutic app evaluation: Reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate. / Technology contingency planning: Agreeing on a backup contact method and next step if a session disconnects.

0017. Choose the definition pair that correctly explains Telehealth informed consent first and Data minimization second.

A. Telehealth informed consent: Collecting and retaining only the personal information necessary for a defined legitimate purpose. / Data minimization: An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans.
B. Telehealth informed consent: An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans. / Data minimization: Collecting and retaining only the personal information necessary for a defined legitimate purpose.
C. Telehealth informed consent: Attention to unequal access to devices, bandwidth, private space, and digital skills. / Data minimization: Collecting and retaining only the personal information necessary for a defined legitimate purpose.
D. Telehealth informed consent: An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans. / Data minimization: A plan for continuing or safely pausing care when devices, connectivity, or platforms fail.

0018. Which option preserves the correct meaning of both Data minimization and Technology contingency planning?

A. Data minimization: Collecting and retaining only the personal information necessary for a defined legitimate purpose. / Technology contingency planning: Advance procedures for responding to an urgent event during remote care, including location and contacts.
B. Data minimization: Routine practices such as strong authentication, updates, and secure handling that reduce digital risk. / Technology contingency planning: A plan for continuing or safely pausing care when devices, connectivity, or platforms fail.
C. Data minimization: A plan for continuing or safely pausing care when devices, connectivity, or platforms fail. / Technology contingency planning: Collecting and retaining only the personal information necessary for a defined legitimate purpose.
D. Data minimization: Collecting and retaining only the personal information necessary for a defined legitimate purpose. / Technology contingency planning: A plan for continuing or safely pausing care when devices, connectivity, or platforms fail.

0019. Which comparison would correct a trainee's misunderstanding of Data minimization versus Cybersecurity hygiene?

A. Data minimization: Collecting and retaining only the personal information necessary for a defined legitimate purpose. / Cybersecurity hygiene: Routine practices such as strong authentication, updates, and secure handling that reduce digital risk.
B. Data minimization: Routine practices such as strong authentication, updates, and secure handling that reduce digital risk. / Cybersecurity hygiene: Collecting and retaining only the personal information necessary for a defined legitimate purpose.
C. Data minimization: Protection of sensitive information across devices, networks, platforms, and communications. / Cybersecurity hygiene: Routine practices such as strong authentication, updates, and secure handling that reduce digital risk.
D. Data minimization: Collecting and retaining only the personal information necessary for a defined legitimate purpose. / Cybersecurity hygiene: An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans.

0020. A case conference asks for a distinction between Telehealth informed consent and Cybersecurity hygiene. Which answer is sound?

A. Telehealth informed consent: A plan for continuing or safely pausing care when devices, connectivity, or platforms fail. / Cybersecurity hygiene: Routine practices such as strong authentication, updates, and secure handling that reduce digital risk.
B. Telehealth informed consent: An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans. / Cybersecurity hygiene: Advance procedures for responding to an urgent event during remote care, including location and contacts.
C. Telehealth informed consent: An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans. / Cybersecurity hygiene: Routine practices such as strong authentication, updates, and secure handling that reduce digital risk.
D. Telehealth informed consent: Routine practices such as strong authentication, updates, and secure handling that reduce digital risk. / Cybersecurity hygiene: An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans.

0021. A trainee must distinguish how Digital confidentiality and Technology contingency planning guide practice. Which comparison is accurate?

A. Digital confidentiality: Agreeing on a backup contact method and next step if a session disconnects. / Technology contingency planning: Using approved secure systems and avoiding sensitive information on shared or unsecured channels.
B. Digital confidentiality: Using approved secure systems and avoiding sensitive information on shared or unsecured channels. / Technology contingency planning: Clarifying approved communication channels and response times with families.
C. Digital confidentiality: Reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate. / Technology contingency planning: Agreeing on a backup contact method and next step if a session disconnects.
D. Digital confidentiality: Using approved secure systems and avoiding sensitive information on shared or unsecured channels. / Technology contingency planning: Agreeing on a backup contact method and next step if a session disconnects.

0022. A service team discusses a middle-school student in the community mental-health service. Their proposed next step is checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool. Which course concept supports it?

A. Data minimization
B. Therapeutic app evaluation
C. AI use transparency
D. Technology contingency planning

0023. In a supervision review, a case coordinator describes work with a older adolescent client in the youth group: checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool. What concept is illustrated?

A. Digital boundaries
B. Data minimization
C. Telehealth emergency planning
D. AI use transparency

0024. A student confuses Technology access equity with Therapeutic app evaluation. Which explanation most accurately separates them?

A. Technology access equity: Collecting and retaining only the personal information necessary for a defined legitimate purpose. / Therapeutic app evaluation: Assessment of an app’s evidence, privacy, accessibility, usability, and fit before recommending it.
B. Technology access equity: Assessment of an app’s evidence, privacy, accessibility, usability, and fit before recommending it. / Therapeutic app evaluation: Attention to unequal access to devices, bandwidth, private space, and digital skills.
C. Technology access equity: Attention to unequal access to devices, bandwidth, private space, and digital skills. / Therapeutic app evaluation: Assessment of an app’s evidence, privacy, accessibility, usability, and fit before recommending it.
D. Technology access equity: Attention to unequal access to devices, bandwidth, private space, and digital skills. / Therapeutic app evaluation: Advance procedures for responding to an urgent event during remote care, including location and contacts.

0025. At a case-planning meeting, the counselor proposes avoiding unnecessary data capture and retaining only what policy and law require. for a child aged 7 seen in the school-based service. Which concept does this illustrate?

A. Telehealth emergency planning
B. Technology access equity
C. Telehealth informed consent
D. Data minimization

0026. A service navigator describes an intervention for a preadolescent child in the youth advocacy program, centered on reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care. Which named idea is most relevant?

A. Digital boundaries
B. Digital confidentiality
C. AI use transparency
D. Telehealth informed consent

0027. In a supervision review, a family therapist describes work with a student aged 15 in the school consultation: reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate. What concept is illustrated?

A. Therapeutic app evaluation
B. Cybersecurity hygiene
C. AI use transparency
D. Technology access equity

0028. A counselor is asked to evaluate a proposed service for a student aged 12 in the community youth program. The defining feature is reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate. Which concept fits?

A. Digital boundaries
B. Therapeutic app evaluation
C. Data minimization
D. Cybersecurity hygiene

0029. In a supervision quiz, how should Digital boundaries be distinguished from Cybersecurity hygiene?

A. Digital boundaries: Professional limits governing online contact, social media, and technology-mediated relationships. / Cybersecurity hygiene: Routine practices such as strong authentication, updates, and secure handling that reduce digital risk.
B. Digital boundaries: Routine practices such as strong authentication, updates, and secure handling that reduce digital risk. / Cybersecurity hygiene: Professional limits governing online contact, social media, and technology-mediated relationships.
C. Digital boundaries: Professional limits governing online contact, social media, and technology-mediated relationships. / Cybersecurity hygiene: Protection of sensitive information across devices, networks, platforms, and communications.
D. Digital boundaries: An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans. / Cybersecurity hygiene: Routine practices such as strong authentication, updates, and secure handling that reduce digital risk.

0030. A family therapist presents a support plan for a child aged 8 at the community service agency. Its central feature is using approved secure systems and avoiding sensitive information on shared or unsecured channels. Which concept should be named?

A. Digital confidentiality
B. Cybersecurity hygiene
C. AI use transparency
D. Technology contingency planning

0031. In the parent meeting, a team asks how a youth worker can support a child aged 14. One proposed action is confirming current location and emergency contacts at the start of a remote session as appropriate. Which idea does it represent?

A. Technology contingency planning
B. Telehealth emergency planning
C. Cybersecurity hygiene
D. Technology access equity

0032. For a older adolescent client in the child guidance clinic, a clinical supervisor makes this practice the immediate priority: reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate. Which concept fits best?

A. Therapeutic app evaluation
B. Telehealth emergency planning
C. Digital confidentiality
D. Digital boundaries

0033. Which course concept is defined as follows: An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans.

A. Telehealth emergency planning
B. Therapeutic app evaluation
C. Telehealth informed consent
D. Digital boundaries

0034. A consultant is preparing a follow-up plan for a client in early adolescence in the supervision meeting. The plan calls for using approved secure systems and avoiding sensitive information on shared or unsecured channels. Which concept names this approach?

A. Technology access equity
B. Digital confidentiality
C. Therapeutic app evaluation
D. Telehealth emergency planning

0035. A consulting counselor is explaining a choice to a child of elementary-school age and caregiver in the clinical planning session. The choice centers on avoiding unnecessary data capture and retaining only what policy and law require. Which idea is illustrated?

A. Technology access equity
B. Digital boundaries
C. AI use transparency
D. Data minimization

0036. Which statement shows a sound practice-level distinction between Digital confidentiality and Telehealth emergency planning?

A. Digital confidentiality: Reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate. / Telehealth emergency planning: Confirming current location and emergency contacts at the start of a remote session as appropriate.
B. Digital confidentiality: Using approved secure systems and avoiding sensitive information on shared or unsecured channels. / Telehealth emergency planning: Confirming current location and emergency contacts at the start of a remote session as appropriate.
C. Digital confidentiality: Confirming current location and emergency contacts at the start of a remote session as appropriate. / Telehealth emergency planning: Using approved secure systems and avoiding sensitive information on shared or unsecured channels.
D. Digital confidentiality: Using approved secure systems and avoiding sensitive information on shared or unsecured channels. / Telehealth emergency planning: Asking about device and privacy barriers before assuming a youth can participate remotely.

0037. During work in the outpatient clinic, a teacher and counselor identifies this need: reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care. Which idea should guide the response?

A. Technology contingency planning
B. Therapeutic app evaluation
C. Telehealth informed consent
D. Digital boundaries

0038. A planning meeting about a school-age child includes a clinical supervisor. The proposed practice in the school counseling office is avoiding unnecessary data capture and retaining only what policy and law require. Which idea underlies it?

A. Cybersecurity hygiene
B. AI use transparency
C. Data minimization
D. Technology access equity

0039. Which comparison correctly distinguishes Telehealth informed consent from Digital confidentiality?

A. Telehealth informed consent: An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans. / Digital confidentiality: A plan for continuing or safely pausing care when devices, connectivity, or platforms fail.
B. Telehealth informed consent: Clear disclosure and oversight when artificial intelligence tools materially affect clinical work or client information. / Digital confidentiality: Protection of sensitive information across devices, networks, platforms, and communications.
C. Telehealth informed consent: Protection of sensitive information across devices, networks, platforms, and communications. / Digital confidentiality: An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans.
D. Telehealth informed consent: An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans. / Digital confidentiality: Protection of sensitive information across devices, networks, platforms, and communications.

0040. Which named construct is captured by this account? Clear disclosure and oversight when artificial intelligence tools materially affect clinical work or client information.

A. Therapeutic app evaluation
B. Telehealth informed consent
C. AI use transparency
D. Data minimization

0041. Choose the practice comparison that best separates Technology access equity from Data minimization.

A. Technology access equity: Asking about device and privacy barriers before assuming a youth can participate remotely. / Data minimization: Avoiding unnecessary data capture and retaining only what policy and law require.
B. Technology access equity: Avoiding unnecessary data capture and retaining only what policy and law require. / Data minimization: Asking about device and privacy barriers before assuming a youth can participate remotely.
C. Technology access equity: Asking about device and privacy barriers before assuming a youth can participate remotely. / Data minimization: Confirming current location and emergency contacts at the start of a remote session as appropriate.
D. Technology access equity: Agreeing on a backup contact method and next step if a session disconnects. / Data minimization: Avoiding unnecessary data capture and retaining only what policy and law require.

0042. How are Telehealth emergency planning and Data minimization most accurately differentiated in this curriculum?

A. Telehealth emergency planning: Collecting and retaining only the personal information necessary for a defined legitimate purpose. / Data minimization: Advance procedures for responding to an urgent event during remote care, including location and contacts.
B. Telehealth emergency planning: Advance procedures for responding to an urgent event during remote care, including location and contacts. / Data minimization: An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans.
C. Telehealth emergency planning: Professional limits governing online contact, social media, and technology-mediated relationships. / Data minimization: Collecting and retaining only the personal information necessary for a defined legitimate purpose.
D. Telehealth emergency planning: Advance procedures for responding to an urgent event during remote care, including location and contacts. / Data minimization: Collecting and retaining only the personal information necessary for a defined legitimate purpose.

0043. When reviewing a young person aged 18’s plan in the learning-support meeting, the parent educator notes that the next step is clarifying approved communication channels and response times with families. Which concept guides this step?

A. Digital boundaries
B. Therapeutic app evaluation
C. Digital confidentiality
D. Telehealth informed consent

0044. A trainee must distinguish how Telehealth informed consent and Technology access equity guide practice. Which comparison is accurate?

A. Telehealth informed consent: Confirming current location and emergency contacts at the start of a remote session as appropriate. / Technology access equity: Asking about device and privacy barriers before assuming a youth can participate remotely.
B. Telehealth informed consent: Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care. / Technology access equity: Checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool.
C. Telehealth informed consent: Asking about device and privacy barriers before assuming a youth can participate remotely. / Technology access equity: Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care.
D. Telehealth informed consent: Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care. / Technology access equity: Asking about device and privacy barriers before assuming a youth can participate remotely.

0045. Which comparison correctly distinguishes Data minimization from Technology contingency planning?

A. Data minimization: A plan for continuing or safely pausing care when devices, connectivity, or platforms fail. / Technology contingency planning: Collecting and retaining only the personal information necessary for a defined legitimate purpose.
B. Data minimization: Routine practices such as strong authentication, updates, and secure handling that reduce digital risk. / Technology contingency planning: A plan for continuing or safely pausing care when devices, connectivity, or platforms fail.
C. Data minimization: Collecting and retaining only the personal information necessary for a defined legitimate purpose. / Technology contingency planning: A plan for continuing or safely pausing care when devices, connectivity, or platforms fail.
D. Data minimization: Collecting and retaining only the personal information necessary for a defined legitimate purpose. / Technology contingency planning: Advance procedures for responding to an urgent event during remote care, including location and contacts.

0046. How should a practitioner distinguish the applications of Technology access equity and Technology contingency planning?

A. Technology access equity: Agreeing on a backup contact method and next step if a session disconnects. / Technology contingency planning: Asking about device and privacy barriers before assuming a youth can participate remotely.
B. Technology access equity: Using access controls and keeping approved systems updated. / Technology contingency planning: Agreeing on a backup contact method and next step if a session disconnects.
C. Technology access equity: Asking about device and privacy barriers before assuming a youth can participate remotely. / Technology contingency planning: Agreeing on a backup contact method and next step if a session disconnects.
D. Technology access equity: Asking about device and privacy barriers before assuming a youth can participate remotely. / Technology contingency planning: Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care.

0047. Which option is the clearest practical expression of Therapeutic app evaluation?

A. Avoiding unnecessary data capture and retaining only what policy and law require.
B. Using approved secure systems and avoiding sensitive information on shared or unsecured channels.
C. Reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate.
D. Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care.

0048. Which course concept is defined as follows: Routine practices such as strong authentication, updates, and secure handling that reduce digital risk.

A. Cybersecurity hygiene
B. Telehealth emergency planning
C. Digital boundaries
D. Technology access equity

0049. An interdisciplinary team reviews a child aged 7’s case at the classroom support meeting. The clinical supervisor recommends reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care. Which course concept best fits?

A. AI use transparency
B. Therapeutic app evaluation
C. Digital boundaries
D. Telehealth informed consent

0050. Which statement shows a sound practice-level distinction between Data minimization and Therapeutic app evaluation?

A. Data minimization: Avoiding unnecessary data capture and retaining only what policy and law require. / Therapeutic app evaluation: Reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate.
B. Data minimization: Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care. / Therapeutic app evaluation: Reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate.
C. Data minimization: Reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate. / Therapeutic app evaluation: Avoiding unnecessary data capture and retaining only what policy and law require.
D. Data minimization: Avoiding unnecessary data capture and retaining only what policy and law require. / Therapeutic app evaluation: Agreeing on a backup contact method and next step if a session disconnects.

0051. A trainee must explain Digital boundaries. Which answer is accurate?

A. Collecting and retaining only the personal information necessary for a defined legitimate purpose.
B. An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans.
C. Clear disclosure and oversight when artificial intelligence tools materially affect clinical work or client information.
D. Professional limits governing online contact, social media, and technology-mediated relationships.

0052. A supervisor asks for an applied contrast between Data minimization and AI use transparency. Which option fits?

A. Data minimization: Checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool. / AI use transparency: Avoiding unnecessary data capture and retaining only what policy and law require.
B. Data minimization: Avoiding unnecessary data capture and retaining only what policy and law require. / AI use transparency: Checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool.
C. Data minimization: Avoiding unnecessary data capture and retaining only what policy and law require. / AI use transparency: Reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate.
D. Data minimization: Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care. / AI use transparency: Checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool.

0053. A trainee must choose a practice that exemplifies Telehealth emergency planning. Which action is the best fit?

A. Checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool.
B. Confirming current location and emergency contacts at the start of a remote session as appropriate.
C. Using approved secure systems and avoiding sensitive information on shared or unsecured channels.
D. Avoiding unnecessary data capture and retaining only what policy and law require.

0054. A consulting counselor is explaining a choice to a student aged 15 and caregiver in the youth group. The choice centers on reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care. Which idea is illustrated?

A. Telehealth informed consent
B. Technology contingency planning
C. Therapeutic app evaluation
D. Data minimization

0055. A supervisor asks for an applied contrast between Telehealth emergency planning and Data minimization. Which option fits?

A. Telehealth emergency planning: Confirming current location and emergency contacts at the start of a remote session as appropriate. / Data minimization: Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care.
B. Telehealth emergency planning: Clarifying approved communication channels and response times with families. / Data minimization: Avoiding unnecessary data capture and retaining only what policy and law require.
C. Telehealth emergency planning: Confirming current location and emergency contacts at the start of a remote session as appropriate. / Data minimization: Avoiding unnecessary data capture and retaining only what policy and law require.
D. Telehealth emergency planning: Avoiding unnecessary data capture and retaining only what policy and law require. / Data minimization: Confirming current location and emergency contacts at the start of a remote session as appropriate.

0056. A student aged 15 and a member of a clinical team are reviewing goals in the school counseling office. The agreed action is checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool. Which principle best accounts for it?

A. Cybersecurity hygiene
B. Digital confidentiality
C. Technology access equity
D. AI use transparency

0057. Which option preserves the correct meaning of both Telehealth informed consent and AI use transparency?

A. Telehealth informed consent: An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans. / AI use transparency: Clear disclosure and oversight when artificial intelligence tools materially affect clinical work or client information.
B. Telehealth informed consent: Advance procedures for responding to an urgent event during remote care, including location and contacts. / AI use transparency: Clear disclosure and oversight when artificial intelligence tools materially affect clinical work or client information.
C. Telehealth informed consent: An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans. / AI use transparency: Collecting and retaining only the personal information necessary for a defined legitimate purpose.
D. Telehealth informed consent: Clear disclosure and oversight when artificial intelligence tools materially affect clinical work or client information. / AI use transparency: An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans.

0058. Choose the definition pair that correctly explains AI use transparency first and Technology contingency planning second.

A. AI use transparency: Clear disclosure and oversight when artificial intelligence tools materially affect clinical work or client information. / Technology contingency planning: Routine practices such as strong authentication, updates, and secure handling that reduce digital risk.
B. AI use transparency: A plan for continuing or safely pausing care when devices, connectivity, or platforms fail. / Technology contingency planning: Clear disclosure and oversight when artificial intelligence tools materially affect clinical work or client information.
C. AI use transparency: Clear disclosure and oversight when artificial intelligence tools materially affect clinical work or client information. / Technology contingency planning: A plan for continuing or safely pausing care when devices, connectivity, or platforms fail.
D. AI use transparency: Advance procedures for responding to an urgent event during remote care, including location and contacts. / Technology contingency planning: A plan for continuing or safely pausing care when devices, connectivity, or platforms fail.

0059. A school support specialist is asked to evaluate a proposed service for a client in early adolescence in the youth group. The defining feature is agreeing on a backup contact method and next step if a session disconnects. Which concept fits?

A. AI use transparency
B. Telehealth emergency planning
C. Technology contingency planning
D. Digital confidentiality

0060. Which pair of actions illustrates Technology access equity and Therapeutic app evaluation, respectively?

A. Technology access equity: Asking about device and privacy barriers before assuming a youth can participate remotely. / Therapeutic app evaluation: Confirming current location and emergency contacts at the start of a remote session as appropriate.
B. Technology access equity: Reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate. / Therapeutic app evaluation: Asking about device and privacy barriers before assuming a youth can participate remotely.
C. Technology access equity: Asking about device and privacy barriers before assuming a youth can participate remotely. / Therapeutic app evaluation: Reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate.
D. Technology access equity: Avoiding unnecessary data capture and retaining only what policy and law require. / Therapeutic app evaluation: Reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate.

0061. A support meeting for a school-age child includes a school support specialist in the learning-support meeting. The practice under consideration is reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care. Which concept guides it?

A. Digital boundaries
B. Telehealth informed consent
C. Digital confidentiality
D. Data minimization

0062. In a supervision review, a parent educator describes work with a teenage client in the classroom support meeting: agreeing on a backup contact method and next step if a session disconnects. What concept is illustrated?

A. Technology contingency planning
B. Digital boundaries
C. Digital confidentiality
D. Technology access equity

0063. Which applied comparison correctly identifies what belongs to Cybersecurity hygiene versus Technology contingency planning?

A. Cybersecurity hygiene: Agreeing on a backup contact method and next step if a session disconnects. / Technology contingency planning: Using access controls and keeping approved systems updated.
B. Cybersecurity hygiene: Using access controls and keeping approved systems updated. / Technology contingency planning: Agreeing on a backup contact method and next step if a session disconnects.
C. Cybersecurity hygiene: Asking about device and privacy barriers before assuming a youth can participate remotely. / Technology contingency planning: Agreeing on a backup contact method and next step if a session disconnects.
D. Cybersecurity hygiene: Using access controls and keeping approved systems updated. / Technology contingency planning: Using approved secure systems and avoiding sensitive information on shared or unsecured channels.

0064. A young person aged 18 and a supervised trainee are reviewing goals in the family resource center. The agreed action is avoiding unnecessary data capture and retaining only what policy and law require. Which principle best accounts for it?

A. Telehealth informed consent
B. Therapeutic app evaluation
C. Data minimization
D. Digital confidentiality

0065. Which option preserves the correct meaning of both Technology access equity and Cybersecurity hygiene?

A. Technology access equity: An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans. / Cybersecurity hygiene: Routine practices such as strong authentication, updates, and secure handling that reduce digital risk.
B. Technology access equity: Attention to unequal access to devices, bandwidth, private space, and digital skills. / Cybersecurity hygiene: Professional limits governing online contact, social media, and technology-mediated relationships.
C. Technology access equity: Attention to unequal access to devices, bandwidth, private space, and digital skills. / Cybersecurity hygiene: Routine practices such as strong authentication, updates, and secure handling that reduce digital risk.
D. Technology access equity: Routine practices such as strong authentication, updates, and secure handling that reduce digital risk. / Cybersecurity hygiene: Attention to unequal access to devices, bandwidth, private space, and digital skills.

0066. For a student aged 12 in the community service agency, a clinical supervisor makes this practice the immediate priority: confirming current location and emergency contacts at the start of a remote session as appropriate. Which concept fits best?

A. Cybersecurity hygiene
B. Digital boundaries
C. Data minimization
D. Telehealth emergency planning

0067. How are Technology access equity and Therapeutic app evaluation most accurately differentiated in this curriculum?

A. Technology access equity: Attention to unequal access to devices, bandwidth, private space, and digital skills. / Therapeutic app evaluation: Assessment of an app’s evidence, privacy, accessibility, usability, and fit before recommending it.
B. Technology access equity: Attention to unequal access to devices, bandwidth, private space, and digital skills. / Therapeutic app evaluation: Advance procedures for responding to an urgent event during remote care, including location and contacts.
C. Technology access equity: Assessment of an app’s evidence, privacy, accessibility, usability, and fit before recommending it. / Therapeutic app evaluation: Attention to unequal access to devices, bandwidth, private space, and digital skills.
D. Technology access equity: Collecting and retaining only the personal information necessary for a defined legitimate purpose. / Therapeutic app evaluation: Assessment of an app’s evidence, privacy, accessibility, usability, and fit before recommending it.

0068. How should a practitioner distinguish the applications of Digital boundaries and Data minimization?

A. Digital boundaries: Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care. / Data minimization: Avoiding unnecessary data capture and retaining only what policy and law require.
B. Digital boundaries: Clarifying approved communication channels and response times with families. / Data minimization: Avoiding unnecessary data capture and retaining only what policy and law require.
C. Digital boundaries: Avoiding unnecessary data capture and retaining only what policy and law require. / Data minimization: Clarifying approved communication channels and response times with families.
D. Digital boundaries: Clarifying approved communication channels and response times with families. / Data minimization: Reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate.

0069. In a supervision quiz, how should Telehealth informed consent be distinguished from Digital confidentiality?

A. Telehealth informed consent: An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans. / Digital confidentiality: Protection of sensitive information across devices, networks, platforms, and communications.
B. Telehealth informed consent: An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans. / Digital confidentiality: A plan for continuing or safely pausing care when devices, connectivity, or platforms fail.
C. Telehealth informed consent: Clear disclosure and oversight when artificial intelligence tools materially affect clinical work or client information. / Digital confidentiality: Protection of sensitive information across devices, networks, platforms, and communications.
D. Telehealth informed consent: Protection of sensitive information across devices, networks, platforms, and communications. / Digital confidentiality: An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans.

0070. How should a practitioner distinguish the applications of Data minimization and Technology contingency planning?

A. Data minimization: Avoiding unnecessary data capture and retaining only what policy and law require. / Technology contingency planning: Confirming current location and emergency contacts at the start of a remote session as appropriate.
B. Data minimization: Agreeing on a backup contact method and next step if a session disconnects. / Technology contingency planning: Avoiding unnecessary data capture and retaining only what policy and law require.
C. Data minimization: Using access controls and keeping approved systems updated. / Technology contingency planning: Agreeing on a backup contact method and next step if a session disconnects.
D. Data minimization: Avoiding unnecessary data capture and retaining only what policy and law require. / Technology contingency planning: Agreeing on a backup contact method and next step if a session disconnects.

0071. Which choice aligns each practice with the correct idea, Telehealth emergency planning or Cybersecurity hygiene?

A. Telehealth emergency planning: Confirming current location and emergency contacts at the start of a remote session as appropriate. / Cybersecurity hygiene: Clarifying approved communication channels and response times with families.
B. Telehealth emergency planning: Using access controls and keeping approved systems updated. / Cybersecurity hygiene: Confirming current location and emergency contacts at the start of a remote session as appropriate.
C. Telehealth emergency planning: Confirming current location and emergency contacts at the start of a remote session as appropriate. / Cybersecurity hygiene: Using access controls and keeping approved systems updated.
D. Telehealth emergency planning: Checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool. / Cybersecurity hygiene: Using access controls and keeping approved systems updated.

0072. In the school consultation, the agreed focus for a research trainee working with a student aged 12 is reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care. Which concept names this focus?

A. Telehealth informed consent
B. Technology access equity
C. Digital confidentiality
D. Technology contingency planning

0073. A supervisor asks for an applied contrast between Telehealth informed consent and Digital confidentiality. Which option fits?

A. Telehealth informed consent: Using approved secure systems and avoiding sensitive information on shared or unsecured channels. / Digital confidentiality: Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care.
B. Telehealth informed consent: Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care. / Digital confidentiality: Using approved secure systems and avoiding sensitive information on shared or unsecured channels.
C. Telehealth informed consent: Checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool. / Digital confidentiality: Using approved secure systems and avoiding sensitive information on shared or unsecured channels.
D. Telehealth informed consent: Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care. / Digital confidentiality: Agreeing on a backup contact method and next step if a session disconnects.

0074. An interdisciplinary team reviews a high-school student's case at the caregiver consultation. The behavior specialist recommends checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool. Which course concept best fits?

A. Data minimization
B. Cybersecurity hygiene
C. AI use transparency
D. Technology contingency planning

0075. Which comparison correctly distinguishes Digital confidentiality from Technology contingency planning?

A. Digital confidentiality: A plan for continuing or safely pausing care when devices, connectivity, or platforms fail. / Technology contingency planning: Protection of sensitive information across devices, networks, platforms, and communications.
B. Digital confidentiality: Assessment of an app's evidence, privacy, accessibility, usability, and fit before recommending it. / Technology contingency planning: A plan for continuing or safely pausing care when devices, connectivity, or platforms fail.
C. Digital confidentiality: Protection of sensitive information across devices, networks, platforms, and communications. / Technology contingency planning: Professional limits governing online contact, social media, and technology-mediated relationships.
D. Digital confidentiality: Protection of sensitive information across devices, networks, platforms, and communications. / Technology contingency planning: A plan for continuing or safely pausing care when devices, connectivity, or platforms fail.

0076. A trainee must explain Cybersecurity hygiene. Which answer is accurate?

A. Protection of sensitive information across devices, networks, platforms, and communications.
B. Advance procedures for responding to an urgent event during remote care, including location and contacts.
C. Routine practices such as strong authentication, updates, and secure handling that reduce digital risk.
D. Assessment of an app's evidence, privacy, accessibility, usability, and fit before recommending it.

0077. In the family resource center, the agreed focus for a program coordinator working with a student aged 15 is clarifying approved communication channels and response times with families. Which concept names this focus?

A. Digital boundaries
B. Digital confidentiality
C. Data minimization
D. AI use transparency

0078. A play therapist reviews a plan for a young person aged 13 in the telehealth session. The plan emphasizes reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care. Which course idea does this reflect?

A. Cybersecurity hygiene
B. Data minimization
C. Telehealth informed consent
D. AI use transparency

0079. Which pair of actions illustrates Telehealth emergency planning and Therapeutic app evaluation, respectively?

A. Telehealth emergency planning: Reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate. / Therapeutic app evaluation: Confirming current location and emergency contacts at the start of a remote session as appropriate.
B. Telehealth emergency planning: Confirming current location and emergency contacts at the start of a remote session as appropriate. / Therapeutic app evaluation: Using access controls and keeping approved systems updated.
C. Telehealth emergency planning: Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care. / Therapeutic app evaluation: Reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate.
D. Telehealth emergency planning: Confirming current location and emergency contacts at the start of a remote session as appropriate. / Therapeutic app evaluation: Reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate.

0080. In the outpatient clinic, a teacher and counselor explains why a young person aged 10 would benefit from reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care. Which course concept underpins the explanation?

A. Telehealth emergency planning
B. Digital confidentiality
C. Telehealth informed consent
D. Technology contingency planning

0081. Which statement accurately contrasts the course concepts Digital boundaries and AI use transparency?

A. Digital boundaries: Collecting and retaining only the personal information necessary for a defined legitimate purpose. / AI use transparency: Clear disclosure and oversight when artificial intelligence tools materially affect clinical work or client information.
B. Digital boundaries: Clear disclosure and oversight when artificial intelligence tools materially affect clinical work or client information. / AI use transparency: Professional limits governing online contact, social media, and technology-mediated relationships.
C. Digital boundaries: Professional limits governing online contact, social media, and technology-mediated relationships. / AI use transparency: Advance procedures for responding to an urgent event during remote care, including location and contacts.
D. Digital boundaries: Professional limits governing online contact, social media, and technology-mediated relationships. / AI use transparency: Clear disclosure and oversight when artificial intelligence tools materially affect clinical work or client information.

0082. Identify the most precise label for this idea: Attention to unequal access to devices, bandwidth, private space, and digital skills.

A. Technology access equity
B. AI use transparency
C. Cybersecurity hygiene
D. Data minimization

0083. A support meeting for a young person aged 10 includes a play therapist in the parent meeting. The practice under consideration is using approved secure systems and avoiding sensitive information on shared or unsecured channels. Which concept guides it?

A. AI use transparency
B. Digital confidentiality
C. Cybersecurity hygiene
D. Therapeutic app evaluation

0084. Which professional action most closely applies Digital confidentiality?

A. Using approved secure systems and avoiding sensitive information on shared or unsecured channels.
B. Confirming current location and emergency contacts at the start of a remote session as appropriate.
C. Clarifying approved communication channels and response times with families.
D. Asking about device and privacy barriers before assuming a youth can participate remotely.

0085. A case conference asks for a distinction between Therapeutic app evaluation and Technology contingency planning. Which answer is sound?

A. Therapeutic app evaluation: A plan for continuing or safely pausing care when devices, connectivity, or platforms fail. / Technology contingency planning: Assessment of an app’s evidence, privacy, accessibility, usability, and fit before recommending it.
B. Therapeutic app evaluation: Assessment of an app’s evidence, privacy, accessibility, usability, and fit before recommending it. / Technology contingency planning: A plan for continuing or safely pausing care when devices, connectivity, or platforms fail.
C. Therapeutic app evaluation: Assessment of an app’s evidence, privacy, accessibility, usability, and fit before recommending it. / Technology contingency planning: Collecting and retaining only the personal information necessary for a defined legitimate purpose.
D. Therapeutic app evaluation: Routine practices such as strong authentication, updates, and secure handling that reduce digital risk. / Technology contingency planning: A plan for continuing or safely pausing care when devices, connectivity, or platforms fail.

0086. Which comparison would correct a trainee’s misunderstanding of Digital confidentiality versus Data minimization?

A. Digital confidentiality: Collecting and retaining only the personal information necessary for a defined legitimate purpose. / Data minimization: Protection of sensitive information across devices, networks, platforms, and communications.
B. Digital confidentiality: Protection of sensitive information across devices, networks, platforms, and communications. / Data minimization: A plan for continuing or safely pausing care when devices, connectivity, or platforms fail.
C. Digital confidentiality: Professional limits governing online contact, social media, and technology-mediated relationships. / Data minimization: Collecting and retaining only the personal information necessary for a defined legitimate purpose.
D. Digital confidentiality: Protection of sensitive information across devices, networks, platforms, and communications. / Data minimization: Collecting and retaining only the personal information necessary for a defined legitimate purpose.

0087. How should a practitioner distinguish the applications of Technology access equity and AI use transparency?

A. Technology access equity: Checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool. / AI use transparency: Asking about device and privacy barriers before assuming a youth can participate remotely.
B. Technology access equity: Agreeing on a backup contact method and next step if a session disconnects. / AI use transparency: Checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool.
C. Technology access equity: Asking about device and privacy barriers before assuming a youth can participate remotely. / AI use transparency: Checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool.
D. Technology access equity: Asking about device and privacy barriers before assuming a youth can participate remotely. / AI use transparency: Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care.

0088. Which course concept is defined as follows: Assessment of an app’s evidence, privacy, accessibility, usability, and fit before recommending it.

A. Therapeutic app evaluation
B. Digital confidentiality
C. Telehealth informed consent
D. Digital boundaries

0089. Which option correctly matches each concept to its practice focus: Digital confidentiality and Cybersecurity hygiene?

A. Digital confidentiality: Using access controls and keeping approved systems updated. / Cybersecurity hygiene: Using approved secure systems and avoiding sensitive information on shared or unsecured channels.
B. Digital confidentiality: Checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool. / Cybersecurity hygiene: Using access controls and keeping approved systems updated.
C. Digital confidentiality: Using approved secure systems and avoiding sensitive information on shared or unsecured channels. / Cybersecurity hygiene: Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care.
D. Digital confidentiality: Using approved secure systems and avoiding sensitive information on shared or unsecured channels. / Cybersecurity hygiene: Using access controls and keeping approved systems updated.

0090. A consultant is supporting a child aged 8 in the clinical planning session. The key practice is reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate. Which course concept is most relevant?

A. Telehealth informed consent
B. Data minimization
C. Therapeutic app evaluation
D. Digital confidentiality

0091. How are Telehealth informed consent and Therapeutic app evaluation most accurately differentiated in this curriculum?

A. Telehealth informed consent: An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans. / Therapeutic app evaluation: Assessment of an app's evidence, privacy, accessibility, usability, and fit before recommending it.
B. Telehealth informed consent: Advance procedures for responding to an urgent event during remote care, including location and contacts. / Therapeutic app evaluation: Assessment of an app's evidence, privacy, accessibility, usability, and fit before recommending it.
C. Telehealth informed consent: An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans. / Therapeutic app evaluation: Clear disclosure and oversight when artificial intelligence tools materially affect clinical work or client information.
D. Telehealth informed consent: Assessment of an app's evidence, privacy, accessibility, usability, and fit before recommending it. / Therapeutic app evaluation: An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans.

0092. A supervisor asks how Therapeutic app evaluation would appear in practice. Which choice should be selected?

A. Using access controls and keeping approved systems updated.
B. Avoiding unnecessary data capture and retaining only what policy and law require.
C. Reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate.
D. Asking about device and privacy barriers before assuming a youth can participate remotely.

0093. A trainee must distinguish how Digital confidentiality and Therapeutic app evaluation guide practice. Which comparison is accurate?

A. Digital confidentiality: Confirming current location and emergency contacts at the start of a remote session as appropriate. / Therapeutic app evaluation: Reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate.
B. Digital confidentiality: Using approved secure systems and avoiding sensitive information on shared or unsecured channels. / Therapeutic app evaluation: Reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate.
C. Digital confidentiality: Using approved secure systems and avoiding sensitive information on shared or unsecured channels. / Therapeutic app evaluation: Agreeing on a backup contact method and next step if a session disconnects.
D. Digital confidentiality: Reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate. / Therapeutic app evaluation: Using approved secure systems and avoiding sensitive information on shared or unsecured channels.

0094. A clinical supervisor reviews a plan for a student aged 9 in the supervision meeting. The plan emphasizes asking about device and privacy barriers before assuming a youth can participate remotely. Which course idea does this reflect?

A. Technology access equity
B. Telehealth emergency planning
C. Cybersecurity hygiene
D. Therapeutic app evaluation

0095. A school counselor is explaining a choice to a preadolescent child and caregiver in the school counseling office. The choice centers on using access controls and keeping approved systems updated. Which idea is illustrated?

A. Cybersecurity hygiene
B. Technology contingency planning
C. AI use transparency
D. Digital boundaries

0096. An interdisciplinary team reviews a young person aged 10's case at the family session. The school support specialist recommends using access controls and keeping approved systems updated. Which course concept best fits?

A. AI use transparency
B. Cybersecurity hygiene
C. Therapeutic app evaluation
D. Technology contingency planning

0097. At the youth group, a service navigator reviews whether a plan for a child aged 14 is appropriate. The relevant practice is using access controls and keeping approved systems updated. Which concept is tested?

A. Technology contingency planning
B. Cybersecurity hygiene
C. AI use transparency
D. Data minimization

0098. An interdisciplinary team reviews a young adolescent client's case at the clinical planning session. The counselor recommends clarifying approved communication channels and response times with families. Which course concept best fits?

A. Therapeutic app evaluation
B. Cybersecurity hygiene
C. Digital boundaries
D. Technology access equity

0099. Choose the definition pair that correctly explains Telehealth emergency planning first and AI use transparency second.

A. Telehealth emergency planning: Advance procedures for responding to an urgent event during remote care, including location and contacts. / AI use transparency: Clear disclosure and oversight when artificial intelligence tools materially affect clinical work or client information.
B. Telehealth emergency planning: Advance procedures for responding to an urgent event during remote care, including location and contacts. / AI use transparency: Routine practices such as strong authentication, updates, and secure handling that reduce digital risk.
C. Telehealth emergency planning: Clear disclosure and oversight when artificial intelligence tools materially affect clinical work or client information. / AI use transparency: Advance procedures for responding to an urgent event during remote care, including location and contacts.
D. Telehealth emergency planning: Assessment of an app's evidence, privacy, accessibility, usability, and fit before recommending it. / AI use transparency: Clear disclosure and oversight when artificial intelligence tools materially affect clinical work or client information.

0100. A youth worker is explaining a choice to a young adolescent client and caregiver in the student-support meeting. The choice centers on checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool. Which idea is illustrated?

A. Telehealth emergency planning
B. Digital boundaries
C. AI use transparency
D. Telehealth informed consent

0101. A young person aged 16 and a assessment clinician are reviewing goals in the school consultation. The agreed action is using approved secure systems and avoiding sensitive information on shared or unsecured channels. Which principle best accounts for it?

A. Cybersecurity hygiene
B. Digital confidentiality
C. AI use transparency
D. Technology contingency planning

0102. A student confuses Telehealth informed consent with Digital confidentiality. Which explanation most accurately separates them?

A. Telehealth informed consent: An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans. / Digital confidentiality: Protection of sensitive information across devices, networks, platforms, and communications.
B. Telehealth informed consent: An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans. / Digital confidentiality: A plan for continuing or safely pausing care when devices, connectivity, or platforms fail.
C. Telehealth informed consent: Protection of sensitive information across devices, networks, platforms, and communications. / Digital confidentiality: An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans.
D. Telehealth informed consent: Clear disclosure and oversight when artificial intelligence tools materially affect clinical work or client information. / Digital confidentiality: Protection of sensitive information across devices, networks, platforms, and communications.

0103. At the multidisciplinary case conference, a behavior specialist meets with a child aged 11. The practice priority is: clarifying approved communication channels and response times with families. Which concept best captures that priority?

A. Digital boundaries
B. AI use transparency
C. Therapeutic app evaluation
D. Data minimization

0104. Choose the term that matches this definition: An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans.

A. AI use transparency
B. Digital boundaries
C. Telehealth emergency planning
D. Telehealth informed consent

0105. A doctoral student reads the following description. Which concept does it define? Professional limits governing online contact, social media, and technology-mediated relationships.

A. Data minimization
B. Telehealth emergency planning
C. Therapeutic app evaluation
D. Digital boundaries

0106. Which option preserves the correct meaning of both Data minimization and Cybersecurity hygiene?

A. Data minimization: Collecting and retaining only the personal information necessary for a defined legitimate purpose. / Cybersecurity hygiene: Routine practices such as strong authentication, updates, and secure handling that reduce digital risk.
B. Data minimization: Protection of sensitive information across devices, networks, platforms, and communications. / Cybersecurity hygiene: Routine practices such as strong authentication, updates, and secure handling that reduce digital risk.
C. Data minimization: Routine practices such as strong authentication, updates, and secure handling that reduce digital risk. / Cybersecurity hygiene: Collecting and retaining only the personal information necessary for a defined legitimate purpose.
D. Data minimization: Collecting and retaining only the personal information necessary for a defined legitimate purpose. / Cybersecurity hygiene: An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans.

0107. Which professional action most closely applies Telehealth informed consent?

A. Using access controls and keeping approved systems updated.
B. Checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool.
C. Agreeing on a backup contact method and next step if a session disconnects.
D. Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care.

0108. How should a practitioner distinguish the applications of Digital boundaries and Cybersecurity hygiene?

A. Digital boundaries: Clarifying approved communication channels and response times with families. / Cybersecurity hygiene: Using access controls and keeping approved systems updated.
B. Digital boundaries: Using access controls and keeping approved systems updated. / Cybersecurity hygiene: Clarifying approved communication channels and response times with families.
C. Digital boundaries: Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care. / Cybersecurity hygiene: Using access controls and keeping approved systems updated.
D. Digital boundaries: Clarifying approved communication channels and response times with families. / Cybersecurity hygiene: Using approved secure systems and avoiding sensitive information on shared or unsecured channels.

0109. During work in the community youth program, a consulting counselor identifies this need: checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool. Which idea should guide the response?

A. Telehealth emergency planning
B. Technology contingency planning
C. AI use transparency
D. Digital confidentiality

0110. Identify the most precise label for this idea: Professional limits governing online contact, social media, and technology-mediated relationships.

A. Technology access equity
B. Digital confidentiality
C. AI use transparency
D. Digital boundaries

0111. Which statement shows a sound practice-level distinction between Data minimization and Cybersecurity hygiene?

A. Data minimization: Using approved secure systems and avoiding sensitive information on shared or unsecured channels. / Cybersecurity hygiene: Using access controls and keeping approved systems updated.
B. Data minimization: Avoiding unnecessary data capture and retaining only what policy and law require. / Cybersecurity hygiene: Using access controls and keeping approved systems updated.
C. Data minimization: Using access controls and keeping approved systems updated. / Cybersecurity hygiene: Avoiding unnecessary data capture and retaining only what policy and law require.
D. Data minimization: Avoiding unnecessary data capture and retaining only what policy and law require. / Cybersecurity hygiene: Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care.

0112. In the youth group, a team asks how a school counselor can support a young person aged 10. One proposed action is avoiding unnecessary data capture and retaining only what policy and law require. Which idea does it represent?

A. Technology contingency planning
B. Telehealth emergency planning
C. Data minimization
D. Telehealth informed consent

0113. A member of a clinical team is supporting a young person in the classroom support meeting. The key practice is asking about device and privacy barriers before assuming a youth can participate remotely. Which course concept is most relevant?

A. Telehealth emergency planning
B. Digital boundaries
C. Technology contingency planning
D. Technology access equity

0114. Which comparison would correct a trainee's misunderstanding of Therapeutic app evaluation versus Technology contingency planning?

A. Therapeutic app evaluation: Assessment of an app's evidence, privacy, accessibility, usability, and fit before recommending it. / Technology contingency planning: Collecting and retaining only the personal information necessary for a defined legitimate purpose.
B. Therapeutic app evaluation: A plan for continuing or safely pausing care when devices, connectivity, or platforms fail. / Technology contingency planning: Assessment of an app's evidence, privacy, accessibility, usability, and fit before recommending it.
C. Therapeutic app evaluation: Assessment of an app's evidence, privacy, accessibility, usability, and fit before recommending it. / Technology contingency planning: A plan for continuing or safely pausing care when devices, connectivity, or platforms fail.
D. Therapeutic app evaluation: Routine practices such as strong authentication, updates, and secure handling that reduce digital risk. / Technology contingency planning: A plan for continuing or safely pausing care when devices, connectivity, or platforms fail.

0115. Which paired example correctly applies Technology access equity first and Data minimization second?

A. Technology access equity: Agreeing on a backup contact method and next step if a session disconnects. / Data minimization: Avoiding unnecessary data capture and retaining only what policy and law require.
B. Technology access equity: Avoiding unnecessary data capture and retaining only what policy and law require. / Data minimization: Asking about device and privacy barriers before assuming a youth can participate remotely.
C. Technology access equity: Asking about device and privacy barriers before assuming a youth can participate remotely. / Data minimization: Avoiding unnecessary data capture and retaining only what policy and law require.
D. Technology access equity: Asking about device and privacy barriers before assuming a youth can participate remotely. / Data minimization: Confirming current location and emergency contacts at the start of a remote session as appropriate.

0116. A therapist is asked what should shape a student aged 17's support in the caregiver consultation. The proposed focus is reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care. Which principle does it represent?

A. AI use transparency
B. Telehealth informed consent
C. Technology access equity
D. Digital boundaries

0117. A high-school student's service team meets in the school counseling office. The family therapist recommends a change involving clarifying approved communication channels and response times with families. Which idea best explains it?

A. Digital boundaries
B. Technology contingency planning
C. Data minimization
D. Cybersecurity hygiene

0118. In the clinical planning session, a caregiver working with a counselor is considering this approach for a student aged 17: asking about device and privacy barriers before assuming a youth can participate remotely. Which framework does it represent?

A. Digital boundaries
B. Technology contingency planning
C. Telehealth informed consent
D. Technology access equity

0119. Which option correctly matches each concept to its practice focus: Digital boundaries and Therapeutic app evaluation?

A. Digital boundaries: Clarifying approved communication channels and response times with families. / Therapeutic app evaluation: Checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool.
B. Digital boundaries: Using approved secure systems and avoiding sensitive information on shared or unsecured channels. / Therapeutic app evaluation: Reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate.
C. Digital boundaries: Reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate. / Therapeutic app evaluation: Clarifying approved communication channels and response times with families.
D. Digital boundaries: Clarifying approved communication channels and response times with families. / Therapeutic app evaluation: Reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate.

0120. At the family session, a clinical supervisor meets with a student aged 15. The practice priority is: using approved secure systems and avoiding sensitive information on shared or unsecured channels. Which concept best captures that priority?

A. Digital boundaries
B. Cybersecurity hygiene
C. Digital confidentiality
D. Therapeutic app evaluation

0121. At a case-planning meeting, the behavior specialist proposes agreeing on a backup contact method and next step if a session disconnects. for a young adolescent client seen in the outpatient clinic. Which concept does this illustrate?

A. Therapeutic app evaluation
B. Digital boundaries
C. Telehealth emergency planning
D. Technology contingency planning

0122. A case discussion concerns a school-age child and a case coordinator in the community service agency. The practitioner is considering using access controls and keeping approved systems updated. Which principle is involved?

A. Cybersecurity hygiene
B. Digital confidentiality
C. Technology contingency planning
D. Telehealth informed consent

0123. At the counseling practicum, a service navigator reviews whether a plan for a teenage client is appropriate. The relevant practice is using approved secure systems and avoiding sensitive information on shared or unsecured channels. Which concept is tested?

A. Technology contingency planning
B. Digital confidentiality
C. AI use transparency
D. Cybersecurity hygiene

0124. A case conference asks for a distinction between Digital confidentiality and Technology contingency planning. Which answer is sound?

A. Digital confidentiality: Protection of sensitive information across devices, networks, platforms, and communications. / Technology contingency planning: A plan for continuing or safely pausing care when devices, connectivity, or platforms fail.
B. Digital confidentiality: A plan for continuing or safely pausing care when devices, connectivity, or platforms fail. / Technology contingency planning: Protection of sensitive information across devices, networks, platforms, and communications.
C. Digital confidentiality: Protection of sensitive information across devices, networks, platforms, and communications. / Technology contingency planning: Professional limits governing online contact, social media, and technology-mediated relationships.
D. Digital confidentiality: Assessment of an app’s evidence, privacy, accessibility, usability, and fit before recommending it. / Technology contingency planning: A plan for continuing or safely pausing care when devices, connectivity, or platforms fail.

0125. A assessment clinician and a middle-school student are discussing support in the multidisciplinary case conference. The selected practice is reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate. Which concept does this demonstrate?

A. Therapeutic app evaluation
B. AI use transparency
C. Telehealth emergency planning
D. Digital boundaries

0126. What is the central meaning of Cybersecurity hygiene?

A. Professional limits governing online contact, social media, and technology-mediated relationships.
B. Collecting and retaining only the personal information necessary for a defined legitimate purpose.
C. Assessment of an app’s evidence, privacy, accessibility, usability, and fit before recommending it.
D. Routine practices such as strong authentication, updates, and secure handling that reduce digital risk.

0127. Which professional action most closely applies Telehealth emergency planning?

A. Confirming current location and emergency contacts at the start of a remote session as appropriate.
B. Using access controls and keeping approved systems updated.
C. Using approved secure systems and avoiding sensitive information on shared or unsecured channels.
D. Clarifying approved communication channels and response times with families.

0128. A service navigator describes an intervention for a student aged 17 in the supervision meeting, centered on avoiding unnecessary data capture and retaining only what policy and law require. Which named idea is most relevant?

A. Data minimization
B. Digital boundaries
C. Telehealth emergency planning
D. Technology access equity

0129. Which pair of actions illustrates Technology access equity and AI use transparency, respectively?

A. Technology access equity: Asking about device and privacy barriers before assuming a youth can participate remotely. / AI use transparency: Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care.
B. Technology access equity: Agreeing on a backup contact method and next step if a session disconnects. / AI use transparency: Checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool.
C. Technology access equity: Asking about device and privacy barriers before assuming a youth can participate remotely. / AI use transparency: Checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool.
D. Technology access equity: Checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool. / AI use transparency: Asking about device and privacy barriers before assuming a youth can participate remotely.

0130. Choose the definition pair that correctly explains Cybersecurity hygiene first and Technology contingency planning second.

A. Cybersecurity hygiene: Routine practices such as strong authentication, updates, and secure handling that reduce digital risk. / Technology contingency planning: A plan for continuing or safely pausing care when devices, connectivity, or platforms fail.
B. Cybersecurity hygiene: A plan for continuing or safely pausing care when devices, connectivity, or platforms fail. / Technology contingency planning: Routine practices such as strong authentication, updates, and secure handling that reduce digital risk.
C. Cybersecurity hygiene: Routine practices such as strong authentication, updates, and secure handling that reduce digital risk. / Technology contingency planning: Protection of sensitive information across devices, networks, platforms, and communications.
D. Cybersecurity hygiene: Attention to unequal access to devices, bandwidth, private space, and digital skills. / Technology contingency planning: A plan for continuing or safely pausing care when devices, connectivity, or platforms fail.

0131. Which option correctly matches each concept to its practice focus: Digital boundaries and AI use transparency?

A. Digital boundaries: Avoiding unnecessary data capture and retaining only what policy and law require. / AI use transparency: Checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool.
B. Digital boundaries: Clarifying approved communication channels and response times with families. / AI use transparency: Confirming current location and emergency contacts at the start of a remote session as appropriate.
C. Digital boundaries: Clarifying approved communication channels and response times with families. / AI use transparency: Checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool.
D. Digital boundaries: Checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool. / AI use transparency: Clarifying approved communication channels and response times with families.

0132. Choose the practice comparison that best separates Telehealth informed consent from AI use transparency.

A. Telehealth informed consent: Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care. / AI use transparency: Checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool.
B. Telehealth informed consent: Confirming current location and emergency contacts at the start of a remote session as appropriate. / AI use transparency: Checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool.
C. Telehealth informed consent: Checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool. / AI use transparency: Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care.
D. Telehealth informed consent: Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care. / AI use transparency: Avoiding unnecessary data capture and retaining only what policy and law require.

0133. While supporting a student aged 9 in the classroom support meeting, a case coordinator adopts this practice: clarifying approved communication channels and response times with families. Which concept best explains the choice?

A. Digital boundaries
B. Technology contingency planning
C. Cybersecurity hygiene
D. Data minimization

0134. How should a practitioner distinguish the applications of Therapeutic app evaluation and AI use transparency?

A. Therapeutic app evaluation: Reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate. / AI use transparency: Checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool.
B. Therapeutic app evaluation: Clarifying approved communication channels and response times with families. / AI use transparency: Checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool.
C. Therapeutic app evaluation: Reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate. / AI use transparency: Confirming current location and emergency contacts at the start of a remote session as appropriate.
D. Therapeutic app evaluation: Checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool. / AI use transparency: Reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate.

0135. For a teenage client seen in the clinical planning session, the community practitioner recommends a plan built around using access controls and keeping approved systems updated. Which concept is reflected?

A. Digital boundaries
B. Cybersecurity hygiene
C. AI use transparency
D. Therapeutic app evaluation

0136. In the school counseling office, the agreed focus for a service navigator working with a child aged 11 is reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate. Which concept names this focus?

A. Digital boundaries
B. Telehealth emergency planning
C. Technology access equity
D. Therapeutic app evaluation

0137. In the telehealth session, a group facilitator describes the most appropriate support for a student aged 12 as using access controls and keeping approved systems updated. Which framework is being applied?

A. Technology contingency planning
B. Telehealth informed consent
C. Therapeutic app evaluation
D. Cybersecurity hygiene

0138. In a case note about a young adolescent client, a member of a clinical team working in the supervision meeting records this priority: using access controls and keeping approved systems updated. What principle is reflected?

A. Telehealth informed consent
B. Technology access equity
C. Cybersecurity hygiene
D. AI use transparency

0139. Which statement accurately contrasts the course concepts Digital boundaries and Data minimization?

A. Digital boundaries: Professional limits governing online contact, social media, and technology-mediated relationships. / Data minimization: Assessment of an app's evidence, privacy, accessibility, usability, and fit before recommending it.
B. Digital boundaries: An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans. / Data minimization: Collecting and retaining only the personal information necessary for a defined legitimate purpose.
C. Digital boundaries: Collecting and retaining only the personal information necessary for a defined legitimate purpose. / Data minimization: Professional limits governing online contact, social media, and technology-mediated relationships.
D. Digital boundaries: Professional limits governing online contact, social media, and technology-mediated relationships. / Data minimization: Collecting and retaining only the personal information necessary for a defined legitimate purpose.

0140. Which choice aligns each practice with the correct idea, Digital confidentiality or Technology access equity?

A. Digital confidentiality: Asking about device and privacy barriers before assuming a youth can participate remotely. / Technology access equity: Using approved secure systems and avoiding sensitive information on shared or unsecured channels.
B. Digital confidentiality: Using approved secure systems and avoiding sensitive information on shared or unsecured channels. / Technology access equity: Asking about device and privacy barriers before assuming a youth can participate remotely.
C. Digital confidentiality: Using approved secure systems and avoiding sensitive information on shared or unsecured channels. / Technology access equity: Checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool.
D. Digital confidentiality: Avoiding unnecessary data capture and retaining only what policy and law require. / Technology access equity: Asking about device and privacy barriers before assuming a youth can participate remotely.

0141. A member of a clinical team prepares for a session in the youth group with a child aged 7. The intended approach is reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate. Which concept is most relevant?

A. Telehealth informed consent
B. Therapeutic app evaluation
C. Technology contingency planning
D. Data minimization

0142. A planning meeting about a child of elementary-school age includes a school support specialist. The proposed practice in the after-school program is using approved secure systems and avoiding sensitive information on shared or unsecured channels. Which idea underlies it?

A. Cybersecurity hygiene
B. Technology access equity
C. Digital confidentiality
D. Therapeutic app evaluation

0143. In the school consultation, a school counselor explains why a middle-school student would benefit from agreeing on a backup contact method and next step if a session disconnects. Which course concept underpins the explanation?

A. Digital confidentiality
B. Telehealth emergency planning
C. Telehealth informed consent
D. Technology contingency planning

0144. Which pair of actions illustrates Telehealth informed consent and Telehealth emergency planning, respectively?

A. Telehealth informed consent: Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care. / Telehealth emergency planning: Using access controls and keeping approved systems updated.
B. Telehealth informed consent: Confirming current location and emergency contacts at the start of a remote session as appropriate. / Telehealth emergency planning: Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care.
C. Telehealth informed consent: Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care. / Telehealth emergency planning: Confirming current location and emergency contacts at the start of a remote session as appropriate.
D. Telehealth informed consent: Asking about device and privacy barriers before assuming a youth can participate remotely. / Telehealth emergency planning: Confirming current location and emergency contacts at the start of a remote session as appropriate.

0145. Which option preserves the correct meaning of both Digital boundaries and Technology contingency planning?

A. Digital boundaries: Professional limits governing online contact, social media, and technology-mediated relationships. / Technology contingency planning: An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans.
B. Digital boundaries: A plan for continuing or safely pausing care when devices, connectivity, or platforms fail. / Technology contingency planning: Professional limits governing online contact, social media, and technology-mediated relationships.
C. Digital boundaries: Professional limits governing online contact, social media, and technology-mediated relationships. / Technology contingency planning: A plan for continuing or safely pausing care when devices, connectivity, or platforms fail.
D. Digital boundaries: Advance procedures for responding to an urgent event during remote care, including location and contacts. / Technology contingency planning: A plan for continuing or safely pausing care when devices, connectivity, or platforms fail.

0146. While consulting in the behavior-support review, a consultant supports a student aged 17 by using this approach: clarifying approved communication channels and response times with families. Which concept is being applied?

A. AI use transparency
B. Digital boundaries
C. Technology access equity
D. Technology contingency planning

0147. Which statement shows a sound practice-level distinction between Telehealth emergency planning and Technology access equity?

A. Telehealth emergency planning: Clarifying approved communication channels and response times with families. / Technology access equity: Asking about device and privacy barriers before assuming a youth can participate remotely.
B. Telehealth emergency planning: Confirming current location and emergency contacts at the start of a remote session as appropriate. / Technology access equity: Avoiding unnecessary data capture and retaining only what policy and law require.
C. Telehealth emergency planning: Asking about device and privacy barriers before assuming a youth can participate remotely. / Technology access equity: Confirming current location and emergency contacts at the start of a remote session as appropriate.
D. Telehealth emergency planning: Confirming current location and emergency contacts at the start of a remote session as appropriate. / Technology access equity: Asking about device and privacy barriers before assuming a youth can participate remotely.

0148. At the family resource center, a research trainee reviews whether a plan for a young person aged 10 is appropriate. The relevant practice is agreeing on a backup contact method and next step if a session disconnects. Which concept is tested?

A. Technology contingency planning
B. Cybersecurity hygiene
C. Data minimization
D. Telehealth informed consent

0149. A service team discusses a young person aged 16 in the telehealth session. Their proposed next step is reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate. Which course concept supports it?

A. Telehealth informed consent
B. Therapeutic app evaluation
C. Digital boundaries
D. Data minimization

0150. A student confuses Telehealth informed consent with Technology contingency planning. Which explanation most accurately separates them?

A. Telehealth informed consent: A plan for continuing or safely pausing care when devices, connectivity, or platforms fail. / Technology contingency planning: An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans.
B. Telehealth informed consent: An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans. / Technology contingency planning: A plan for continuing or safely pausing care when devices, connectivity, or platforms fail.
C. Telehealth informed consent: An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans. / Technology contingency planning: Collecting and retaining only the personal information necessary for a defined legitimate purpose.
D. Telehealth informed consent: Routine practices such as strong authentication, updates, and secure handling that reduce digital risk. / Technology contingency planning: A plan for continuing or safely pausing care when devices, connectivity, or platforms fail.

0151. For a student aged 12 seen in the school consultation, the research trainee recommends a plan built around reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care. Which concept is reflected?

A. AI use transparency
B. Digital boundaries
C. Telehealth emergency planning
D. Telehealth informed consent

0152. Which statement accurately contrasts the course concepts AI use transparency and Technology contingency planning?

A. AI use transparency: A plan for continuing or safely pausing care when devices, connectivity, or platforms fail. / Technology contingency planning: Clear disclosure and oversight when artificial intelligence tools materially affect clinical work or client information.
B. AI use transparency: Clear disclosure and oversight when artificial intelligence tools materially affect clinical work or client information. / Technology contingency planning: A plan for continuing or safely pausing care when devices, connectivity, or platforms fail.
C. AI use transparency: Clear disclosure and oversight when artificial intelligence tools materially affect clinical work or client information. / Technology contingency planning: Routine practices such as strong authentication, updates, and secure handling that reduce digital risk.
D. AI use transparency: Advance procedures for responding to an urgent event during remote care, including location and contacts. / Technology contingency planning: A plan for continuing or safely pausing care when devices, connectivity, or platforms fail.

0153. Which choice aligns each practice with the correct idea, Digital boundaries or Therapeutic app evaluation?

A. Digital boundaries: Using approved secure systems and avoiding sensitive information on shared or unsecured channels. / Therapeutic app evaluation: Reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate.
B. Digital boundaries: Clarifying approved communication channels and response times with families. / Therapeutic app evaluation: Checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool.
C. Digital boundaries: Reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate. / Therapeutic app evaluation: Clarifying approved communication channels and response times with families.
D. Digital boundaries: Clarifying approved communication channels and response times with families. / Therapeutic app evaluation: Reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate.

0154. Choose the term that matches this definition: A plan for continuing or safely pausing care when devices, connectivity, or platforms fail.

A. AI use transparency
B. Technology contingency planning
C. Digital confidentiality
D. Therapeutic app evaluation

0155. Which option pairs the definitions of Telehealth informed consent and Technology access equity correctly, in that order?

A. Telehealth informed consent: An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans. / Technology access equity: Attention to unequal access to devices, bandwidth, private space, and digital skills.
B. Telehealth informed consent: Advance procedures for responding to an urgent event during remote care, including location and contacts. / Technology access equity: Attention to unequal access to devices, bandwidth, private space, and digital skills.
C. Telehealth informed consent: Attention to unequal access to devices, bandwidth, private space, and digital skills. / Technology access equity: An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans.
D. Telehealth informed consent: An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans. / Technology access equity: Clear disclosure and oversight when artificial intelligence tools materially affect clinical work or client information.

0156. A group facilitator is explaining a choice to a school-age child and caregiver in the caregiver consultation. The choice centers on agreeing on a backup contact method and next step if a session disconnects. Which idea is illustrated?

A. Technology contingency planning
B. Digital confidentiality
C. AI use transparency
D. Telehealth emergency planning

0157. A team must select a support approach for a child aged 14 at the school-based service. The caregiver working with a counselor recommends clarifying approved communication channels and response times with families. Which idea is most relevant?

A. Telehealth emergency planning
B. Technology contingency planning
C. Digital boundaries
D. AI use transparency

0158. A assessment clinician prepares for a session in the community youth program with a teenage client. The intended approach is avoiding unnecessary data capture and retaining only what policy and law require. Which concept is most relevant?

A. Cybersecurity hygiene
B. Telehealth emergency planning
C. Technology contingency planning
D. Data minimization

0159. A case discussion concerns a young adolescent client and a family therapist in the behavior-support review. The practitioner is considering avoiding unnecessary data capture and retaining only what policy and law require. Which principle is involved?

A. Technology access equity
B. Digital confidentiality
C. Data minimization
D. Therapeutic app evaluation

0160. A doctoral student reads the following description. Which concept does it define? Assessment of an app’s evidence, privacy, accessibility, usability, and fit before recommending it.

A. Technology contingency planning
B. Data minimization
C. Therapeutic app evaluation
D. Digital confidentiality

0161. When reviewing a teenage client’s plan in the classroom support meeting, the parent educator notes that the next step is agreeing on a backup contact method and next step if a session disconnects. Which concept guides this step?

A. Therapeutic app evaluation
B. Digital confidentiality
C. Data minimization
D. Technology contingency planning

0162. Which option correctly matches each concept to its practice focus: Telehealth informed consent and Telehealth emergency planning?

A. Telehealth informed consent: Confirming current location and emergency contacts at the start of a remote session as appropriate. / Telehealth emergency planning: Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care.
B. Telehealth informed consent: Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care. / Telehealth emergency planning: Confirming current location and emergency contacts at the start of a remote session as appropriate.
C. Telehealth informed consent: Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care. / Telehealth emergency planning: Using access controls and keeping approved systems updated.
D. Telehealth informed consent: Asking about device and privacy barriers before assuming a youth can participate remotely. / Telehealth emergency planning: Confirming current location and emergency contacts at the start of a remote session as appropriate.

0163. In the outpatient clinic, a youth worker describes the most appropriate support for a young person as avoiding unnecessary data capture and retaining only what policy and law require. Which framework is being applied?

A. Telehealth emergency planning
B. Technology contingency planning
C. Data minimization
D. Digital confidentiality

0164. A student confuses Telehealth informed consent with Telehealth emergency planning. Which explanation most accurately separates them?

A. Telehealth informed consent: Attention to unequal access to devices, bandwidth, private space, and digital skills. / Telehealth emergency planning: Advance procedures for responding to an urgent event during remote care, including location and contacts.
B. Telehealth informed consent: Advance procedures for responding to an urgent event during remote care, including location and contacts. / Telehealth emergency planning: An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans.
C. Telehealth informed consent: An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans. / Telehealth emergency planning: Routine practices such as strong authentication, updates, and secure handling that reduce digital risk.
D. Telehealth informed consent: An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans. / Telehealth emergency planning: Advance procedures for responding to an urgent event during remote care, including location and contacts.

0165. A case conference asks for a distinction between AI use transparency and Technology contingency planning. Which answer is sound?

A. AI use transparency: Clear disclosure and oversight when artificial intelligence tools materially affect clinical work or client information. / Technology contingency planning: A plan for continuing or safely pausing care when devices, connectivity, or platforms fail.
B. AI use transparency: Advance procedures for responding to an urgent event during remote care, including location and contacts. / Technology contingency planning: A plan for continuing or safely pausing care when devices, connectivity, or platforms fail.
C. AI use transparency: A plan for continuing or safely pausing care when devices, connectivity, or platforms fail. / Technology contingency planning: Clear disclosure and oversight when artificial intelligence tools materially affect clinical work or client information.
D. AI use transparency: Clear disclosure and oversight when artificial intelligence tools materially affect clinical work or client information. / Technology contingency planning: Routine practices such as strong authentication, updates, and secure handling that reduce digital risk.

0166. How are Cybersecurity hygiene and Therapeutic app evaluation most accurately differentiated in this curriculum?

A. Cybersecurity hygiene: Routine practices such as strong authentication, updates, and secure handling that reduce digital risk. / Therapeutic app evaluation: Assessment of an app’s evidence, privacy, accessibility, usability, and fit before recommending it.
B. Cybersecurity hygiene: Assessment of an app’s evidence, privacy, accessibility, usability, and fit before recommending it. / Therapeutic app evaluation: Routine practices such as strong authentication, updates, and secure handling that reduce digital risk.
C. Cybersecurity hygiene: Routine practices such as strong authentication, updates, and secure handling that reduce digital risk. / Therapeutic app evaluation: An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans.
D. Cybersecurity hygiene: Protection of sensitive information across devices, networks, platforms, and communications. / Therapeutic app evaluation: Assessment of an app’s evidence, privacy, accessibility, usability, and fit before recommending it.

0167. Which choice aligns each practice with the correct idea, Digital confidentiality or Digital boundaries?

A. Digital confidentiality: Using approved secure systems and avoiding sensitive information on shared or unsecured channels. / Digital boundaries: Avoiding unnecessary data capture and retaining only what policy and law require.
B. Digital confidentiality: Reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate. / Digital boundaries: Clarifying approved communication channels and response times with families.
C. Digital confidentiality: Using approved secure systems and avoiding sensitive information on shared or unsecured channels. / Digital boundaries: Clarifying approved communication channels and response times with families.
D. Digital confidentiality: Clarifying approved communication channels and response times with families. / Digital boundaries: Using approved secure systems and avoiding sensitive information on shared or unsecured channels.

0168. What is the central meaning of Technology access equity?

A. An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans.
B. Collecting and retaining only the personal information necessary for a defined legitimate purpose.
C. Assessment of an app's evidence, privacy, accessibility, usability, and fit before recommending it.
D. Attention to unequal access to devices, bandwidth, private space, and digital skills.

0169. Choose the practice comparison that best separates Data minimization from Therapeutic app evaluation.

A. Data minimization: Avoiding unnecessary data capture and retaining only what policy and law require. / Therapeutic app evaluation: Agreeing on a backup contact method and next step if a session disconnects.
B. Data minimization: Avoiding unnecessary data capture and retaining only what policy and law require. / Therapeutic app evaluation: Reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate.
C. Data minimization: Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care. / Therapeutic app evaluation: Reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate.
D. Data minimization: Reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate. / Therapeutic app evaluation: Avoiding unnecessary data capture and retaining only what policy and law require.

0170. Which comparison would correct a trainee's misunderstanding of Technology access equity versus Digital boundaries?

A. Technology access equity: Attention to unequal access to devices, bandwidth, private space, and digital skills. / Digital boundaries: Collecting and retaining only the personal information necessary for a defined legitimate purpose.
B. Technology access equity: Protection of sensitive information across devices, networks, platforms, and communications. / Digital boundaries: Professional limits governing online contact, social media, and technology-mediated relationships.
C. Technology access equity: Attention to unequal access to devices, bandwidth, private space, and digital skills. / Digital boundaries: Professional limits governing online contact, social media, and technology-mediated relationships.
D. Technology access equity: Professional limits governing online contact, social media, and technology-mediated relationships. / Digital boundaries: Attention to unequal access to devices, bandwidth, private space, and digital skills.

0171. An interdisciplinary team reviews a child aged 14's case at the student wellness team. The behavior specialist recommends asking about device and privacy barriers before assuming a youth can participate remotely. Which course concept best fits?

A. Telehealth informed consent
B. Therapeutic app evaluation
C. AI use transparency
D. Technology access equity

0172. Which professional action most closely applies Cybersecurity hygiene?

A. Asking about device and privacy barriers before assuming a youth can participate remotely.
B. Using access controls and keeping approved systems updated.
C. Using approved secure systems and avoiding sensitive information on shared or unsecured channels.
D. Avoiding unnecessary data capture and retaining only what policy and law require.

0173. In the child guidance clinic, a consulting counselor explains why a adolescent student would benefit from asking about device and privacy barriers before assuming a youth can participate remotely. Which course concept underpins the explanation?

A. Telehealth informed consent
B. Technology access equity
C. Therapeutic app evaluation
D. AI use transparency

0174. A doctoral student reads the following description. Which concept does it define? Collecting and retaining only the personal information necessary for a defined legitimate purpose.

A. Data minimization
B. Digital confidentiality
C. Telehealth emergency planning
D. AI use transparency

0175. Which statement shows a sound practice-level distinction between Digital confidentiality and AI use transparency?

A. Digital confidentiality: Asking about device and privacy barriers before assuming a youth can participate remotely. / AI use transparency: Checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool.
B. Digital confidentiality: Using approved secure systems and avoiding sensitive information on shared or unsecured channels. / AI use transparency: Confirming current location and emergency contacts at the start of a remote session as appropriate.
C. Digital confidentiality: Using approved secure systems and avoiding sensitive information on shared or unsecured channels. / AI use transparency: Checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool.
D. Digital confidentiality: Checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool. / AI use transparency: Using approved secure systems and avoiding sensitive information on shared or unsecured channels.

0176. A trainee must distinguish how Telehealth informed consent and Data minimization guide practice. Which comparison is accurate?

A. Telehealth informed consent: Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care. / Data minimization: Agreeing on a backup contact method and next step if a session disconnects.
B. Telehealth informed consent: Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care. / Data minimization: Avoiding unnecessary data capture and retaining only what policy and law require.
C. Telehealth informed consent: Asking about device and privacy barriers before assuming a youth can participate remotely. / Data minimization: Avoiding unnecessary data capture and retaining only what policy and law require.
D. Telehealth informed consent: Avoiding unnecessary data capture and retaining only what policy and law require. / Data minimization: Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care.

0177. Which applied comparison correctly identifies what belongs to Telehealth emergency planning versus Technology contingency planning?

A. Telehealth emergency planning: Confirming current location and emergency contacts at the start of a remote session as appropriate. / Technology contingency planning: Agreeing on a backup contact method and next step if a session disconnects.
B. Telehealth emergency planning: Confirming current location and emergency contacts at the start of a remote session as appropriate. / Technology contingency planning: Asking about device and privacy barriers before assuming a youth can participate remotely.
C. Telehealth emergency planning: Avoiding unnecessary data capture and retaining only what policy and law require. / Technology contingency planning: Agreeing on a backup contact method and next step if a session disconnects.
D. Telehealth emergency planning: Agreeing on a backup contact method and next step if a session disconnects. / Technology contingency planning: Confirming current location and emergency contacts at the start of a remote session as appropriate.

0178. A therapist is asked what should shape a client in late adolescence's support in the youth advocacy program. The proposed focus is avoiding unnecessary data capture and retaining only what policy and law require. Which principle does it represent?

A. AI use transparency
B. Digital boundaries
C. Data minimization
D. Therapeutic app evaluation

0179. Which applied comparison correctly identifies what belongs to Digital boundaries versus Cybersecurity hygiene?

A. Digital boundaries: Clarifying approved communication channels and response times with families. / Cybersecurity hygiene: Using access controls and keeping approved systems updated.
B. Digital boundaries: Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care. / Cybersecurity hygiene: Using access controls and keeping approved systems updated.
C. Digital boundaries: Using access controls and keeping approved systems updated. / Cybersecurity hygiene: Clarifying approved communication channels and response times with families.
D. Digital boundaries: Clarifying approved communication channels and response times with families. / Cybersecurity hygiene: Using approved secure systems and avoiding sensitive information on shared or unsecured channels.

0180. For a child aged 7 seen in the family session, the therapist recommends a plan built around checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool. Which concept is reflected?

A. Data minimization
B. Digital confidentiality
C. AI use transparency
D. Technology contingency planning

0181. During service review in the school counseling office, a community practitioner describes confirming current location and emergency contacts at the start of a remote session as appropriate. for a young person aged 16. Which course idea is most applicable?

A. Data minimization
B. Technology access equity
C. Telehealth emergency planning
D. Cybersecurity hygiene

0182. A young adolescent client is receiving support in the student-support meeting. The youth worker is guided by this practice: checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool. Which principle best fits?

A. AI use transparency
B. Technology access equity
C. Therapeutic app evaluation
D. Telehealth informed consent

0183. During work in the school consultation, a school counselor identifies this need: agreeing on a backup contact method and next step if a session disconnects. Which idea should guide the response?

A. Digital boundaries
B. Technology contingency planning
C. AI use transparency
D. Therapeutic app evaluation

0184. A supervisor asks for an applied contrast between Cybersecurity hygiene and AI use transparency. Which option fits?

A. Cybersecurity hygiene: Confirming current location and emergency contacts at the start of a remote session as appropriate. / AI use transparency: Checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool.
B. Cybersecurity hygiene: Checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool. / AI use transparency: Using access controls and keeping approved systems updated.
C. Cybersecurity hygiene: Using access controls and keeping approved systems updated. / AI use transparency: Checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool.
D. Cybersecurity hygiene: Using access controls and keeping approved systems updated. / AI use transparency: Clarifying approved communication channels and response times with families.

0185. Which statement accurately contrasts the course concepts Technology access equity and Digital boundaries?

A. Technology access equity: Attention to unequal access to devices, bandwidth, private space, and digital skills. / Digital boundaries: Collecting and retaining only the personal information necessary for a defined legitimate purpose.
B. Technology access equity: Professional limits governing online contact, social media, and technology-mediated relationships. / Digital boundaries: Attention to unequal access to devices, bandwidth, private space, and digital skills.
C. Technology access equity: Attention to unequal access to devices, bandwidth, private space, and digital skills. / Digital boundaries: Professional limits governing online contact, social media, and technology-mediated relationships.
D. Technology access equity: Protection of sensitive information across devices, networks, platforms, and communications. / Digital boundaries: Professional limits governing online contact, social media, and technology-mediated relationships.

0186. A supervisor asks for an applied contrast between Digital confidentiality and Telehealth emergency planning. Which option fits?

A. Digital confidentiality: Using approved secure systems and avoiding sensitive information on shared or unsecured channels. / Telehealth emergency planning: Asking about device and privacy barriers before assuming a youth can participate remotely.
B. Digital confidentiality: Reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate. / Telehealth emergency planning: Confirming current location and emergency contacts at the start of a remote session as appropriate.
C. Digital confidentiality: Using approved secure systems and avoiding sensitive information on shared or unsecured channels. / Telehealth emergency planning: Confirming current location and emergency contacts at the start of a remote session as appropriate.
D. Digital confidentiality: Confirming current location and emergency contacts at the start of a remote session as appropriate. / Telehealth emergency planning: Using approved secure systems and avoiding sensitive information on shared or unsecured channels.

0187. Which applied comparison correctly identifies what belongs to AI use transparency versus Technology contingency planning?

A. AI use transparency: Checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool. / Technology contingency planning: Agreeing on a backup contact method and next step if a session disconnects.
B. AI use transparency: Checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool. / Technology contingency planning: Using access controls and keeping approved systems updated.
C. AI use transparency: Agreeing on a backup contact method and next step if a session disconnects. / Technology contingency planning: Checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool.
D. AI use transparency: Confirming current location and emergency contacts at the start of a remote session as appropriate. / Technology contingency planning: Agreeing on a backup contact method and next step if a session disconnects.

0188. Choose the term that matches this definition: Advance procedures for responding to an urgent event during remote care, including location and contacts.

A. Digital boundaries
B. Telehealth emergency planning
C. Data minimization
D. Digital confidentiality

0189. Which statement shows a sound practice-level distinction between Technology access equity and AI use transparency?

A. Technology access equity: Asking about device and privacy barriers before assuming a youth can participate remotely. / AI use transparency: Checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool.
B. Technology access equity: Agreeing on a backup contact method and next step if a session disconnects. / AI use transparency: Checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool.
C. Technology access equity: Asking about device and privacy barriers before assuming a youth can participate remotely. / AI use transparency: Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care.
D. Technology access equity: Checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool. / AI use transparency: Asking about device and privacy barriers before assuming a youth can participate remotely.

0190. How are Telehealth emergency planning and Digital boundaries most accurately differentiated in this curriculum?

A. Telehealth emergency planning: Advance procedures for responding to an urgent event during remote care, including location and contacts. / Digital boundaries: An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans.
B. Telehealth emergency planning: Advance procedures for responding to an urgent event during remote care, including location and contacts. / Digital boundaries: Professional limits governing online contact, social media, and technology-mediated relationships.
C. Telehealth emergency planning: Routine practices such as strong authentication, updates, and secure handling that reduce digital risk. / Digital boundaries: Professional limits governing online contact, social media, and technology-mediated relationships.
D. Telehealth emergency planning: Professional limits governing online contact, social media, and technology-mediated relationships. / Digital boundaries: Advance procedures for responding to an urgent event during remote care, including location and contacts.

0191. An interdisciplinary team reviews a adolescent student's case at the multidisciplinary case conference. The counselor recommends agreeing on a backup contact method and next step if a session disconnects. Which course concept best fits?

A. Digital boundaries
B. Telehealth emergency planning
C. Technology contingency planning
D. Digital confidentiality

0192. A case coordinator presents a support plan for a child of elementary-school age at the supervision meeting. Its central feature is reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate. Which concept should be named?

A. Technology contingency planning
B. Digital boundaries
C. Telehealth emergency planning
D. Therapeutic app evaluation

0193. A school-age child is receiving support in the caregiver consultation. The group facilitator is guided by this practice: agreeing on a backup contact method and next step if a session disconnects. Which principle best fits?

A. Technology contingency planning
B. Telehealth informed consent
C. Therapeutic app evaluation
D. AI use transparency

0194. A consultant prepares for a session in the school consultation with a child aged 11. The intended approach is using access controls and keeping approved systems updated. Which concept is most relevant?

A. Digital confidentiality
B. Cybersecurity hygiene
C. Telehealth emergency planning
D. Digital boundaries

0195. A trainee must explain Technology contingency planning. Which answer is accurate?

A. Advance procedures for responding to an urgent event during remote care, including location and contacts.
B. An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans.
C. A plan for continuing or safely pausing care when devices, connectivity, or platforms fail.
D. Assessment of an app's evidence, privacy, accessibility, usability, and fit before recommending it.

0196. A mental-health professional is supporting a student aged 12 in the after-school program. The key practice is clarifying approved communication channels and response times with families. Which course concept is most relevant?

A. Cybersecurity hygiene
B. Digital confidentiality
C. Technology access equity
D. Digital boundaries

0197. Which professional action most closely applies Therapeutic app evaluation?

A. Checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool.
B. Using approved secure systems and avoiding sensitive information on shared or unsecured channels.
C. Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care.
D. Reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate.

0198. A team must select a support approach for a child aged 11 at the family session. The family therapist recommends reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care. Which idea is most relevant?

A. Therapeutic app evaluation
B. Telehealth informed consent
C. Technology contingency planning
D. Cybersecurity hygiene

0199. Which option pairs the definitions of Cybersecurity hygiene and Technology contingency planning correctly, in that order?

A. Cybersecurity hygiene: Attention to unequal access to devices, bandwidth, private space, and digital skills. / Technology contingency planning: A plan for continuing or safely pausing care when devices, connectivity, or platforms fail.
B. Cybersecurity hygiene: A plan for continuing or safely pausing care when devices, connectivity, or platforms fail. / Technology contingency planning: Routine practices such as strong authentication, updates, and secure handling that reduce digital risk.
C. Cybersecurity hygiene: Routine practices such as strong authentication, updates, and secure handling that reduce digital risk. / Technology contingency planning: A plan for continuing or safely pausing care when devices, connectivity, or platforms fail.
D. Cybersecurity hygiene: Routine practices such as strong authentication, updates, and secure handling that reduce digital risk. / Technology contingency planning: Protection of sensitive information across devices, networks, platforms, and communications.

0200. Identify the most precise label for this idea: Routine practices such as strong authentication, updates, and secure handling that reduce digital risk.

A. Therapeutic app evaluation
B. Digital boundaries
C. Technology contingency planning
D. Cybersecurity hygiene

0201. A student confuses Telehealth emergency planning with Technology access equity. Which explanation most accurately separates them?

A. Telehealth emergency planning: Professional limits governing online contact, social media, and technology-mediated relationships. / Technology access equity: Attention to unequal access to devices, bandwidth, private space, and digital skills.
B. Telehealth emergency planning: Advance procedures for responding to an urgent event during remote care, including location and contacts. / Technology access equity: Attention to unequal access to devices, bandwidth, private space, and digital skills.
C. Telehealth emergency planning: Advance procedures for responding to an urgent event during remote care, including location and contacts. / Technology access equity: Collecting and retaining only the personal information necessary for a defined legitimate purpose.
D. Telehealth emergency planning: Attention to unequal access to devices, bandwidth, private space, and digital skills. / Technology access equity: Advance procedures for responding to an urgent event during remote care, including location and contacts.

0202. A research trainee is asked what should shape a adolescent student's support in the school-based service. The proposed focus is confirming current location and emergency contacts at the start of a remote session as appropriate. Which principle does it represent?

A. Therapeutic app evaluation
B. Digital boundaries
C. Telehealth emergency planning
D. Cybersecurity hygiene

0203. Which option correctly matches each concept to its practice focus: Digital boundaries and Cybersecurity hygiene?

A. Digital boundaries: Clarifying approved communication channels and response times with families. / Cybersecurity hygiene: Using approved secure systems and avoiding sensitive information on shared or unsecured channels.
B. Digital boundaries: Clarifying approved communication channels and response times with families. / Cybersecurity hygiene: Using access controls and keeping approved systems updated.
C. Digital boundaries: Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care. / Cybersecurity hygiene: Using access controls and keeping approved systems updated.
D. Digital boundaries: Using access controls and keeping approved systems updated. / Cybersecurity hygiene: Clarifying approved communication channels and response times with families.

0204. Which pair of actions illustrates Cybersecurity hygiene and Technology contingency planning, respectively?

A. Cybersecurity hygiene: Using access controls and keeping approved systems updated. / Technology contingency planning: Agreeing on a backup contact method and next step if a session disconnects.
B. Cybersecurity hygiene: Asking about device and privacy barriers before assuming a youth can participate remotely. / Technology contingency planning: Agreeing on a backup contact method and next step if a session disconnects.
C. Cybersecurity hygiene: Using access controls and keeping approved systems updated. / Technology contingency planning: Using approved secure systems and avoiding sensitive information on shared or unsecured channels.
D. Cybersecurity hygiene: Agreeing on a backup contact method and next step if a session disconnects. / Technology contingency planning: Using access controls and keeping approved systems updated.

0205. A school-based clinician presents a support plan for a child aged 14 at the learning-support meeting. Its central feature is agreeing on a backup contact method and next step if a session disconnects. Which concept should be named?

A. Telehealth emergency planning
B. Technology contingency planning
C. AI use transparency
D. Technology access equity

0206. Which paired example correctly applies Telehealth informed consent first and AI use transparency second?

A. Telehealth informed consent: Confirming current location and emergency contacts at the start of a remote session as appropriate. / AI use transparency: Checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool.
B. Telehealth informed consent: Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care. / AI use transparency: Checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool.
C. Telehealth informed consent: Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care. / AI use transparency: Avoiding unnecessary data capture and retaining only what policy and law require.
D. Telehealth informed consent: Checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool. / AI use transparency: Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care.

0207. Which named construct is captured by this account? Protection of sensitive information across devices, networks, platforms, and communications.

A. Technology contingency planning
B. Telehealth informed consent
C. Digital confidentiality
D. AI use transparency

0208. A student aged 15 is receiving support in the youth group. The consulting counselor is guided by this practice: reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care. Which principle best fits?

A. Telehealth emergency planning
B. Telehealth informed consent
C. Data minimization
D. Cybersecurity hygiene

0209. A trainee must explain Therapeutic app evaluation. Which answer is accurate?

A. Routine practices such as strong authentication, updates, and secure handling that reduce digital risk.
B. Assessment of an app's evidence, privacy, accessibility, usability, and fit before recommending it.
C. Advance procedures for responding to an urgent event during remote care, including location and contacts.
D. Clear disclosure and oversight when artificial intelligence tools materially affect clinical work or client information.

0210. A trainee must distinguish how Data minimization and Cybersecurity hygiene guide practice. Which comparison is accurate?

A. Data minimization: Avoiding unnecessary data capture and retaining only what policy and law require. / Cybersecurity hygiene: Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care.
B. Data minimization: Using access controls and keeping approved systems updated. / Cybersecurity hygiene: Avoiding unnecessary data capture and retaining only what policy and law require.
C. Data minimization: Avoiding unnecessary data capture and retaining only what policy and law require. / Cybersecurity hygiene: Using access controls and keeping approved systems updated.
D. Data minimization: Using approved secure systems and avoiding sensitive information on shared or unsecured channels. / Cybersecurity hygiene: Using access controls and keeping approved systems updated.

0211. Which option preserves the correct meaning of both AI use transparency and Technology contingency planning?

A. AI use transparency: A plan for continuing or safely pausing care when devices, connectivity, or platforms fail. / Technology contingency planning: Clear disclosure and oversight when artificial intelligence tools materially affect clinical work or client information.
B. AI use transparency: Clear disclosure and oversight when artificial intelligence tools materially affect clinical work or client information. / Technology contingency planning: A plan for continuing or safely pausing care when devices, connectivity, or platforms fail.
C. AI use transparency: Advance procedures for responding to an urgent event during remote care, including location and contacts. / Technology contingency planning: A plan for continuing or safely pausing care when devices, connectivity, or platforms fail.
D. AI use transparency: Clear disclosure and oversight when artificial intelligence tools materially affect clinical work or client information. / Technology contingency planning: Routine practices such as strong authentication, updates, and secure handling that reduce digital risk.

0212. Choose the practice comparison that best separates Telehealth informed consent from Data minimization.

A. Telehealth informed consent: Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care. / Data minimization: Avoiding unnecessary data capture and retaining only what policy and law require.
B. Telehealth informed consent: Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care. / Data minimization: Agreeing on a backup contact method and next step if a session disconnects.
C. Telehealth informed consent: Asking about device and privacy barriers before assuming a youth can participate remotely. / Data minimization: Avoiding unnecessary data capture and retaining only what policy and law require.
D. Telehealth informed consent: Avoiding unnecessary data capture and retaining only what policy and law require. / Data minimization: Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care.

0213. Choose the response that best puts Cybersecurity hygiene into practice.

A. Checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool.
B. Reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate.
C. Confirming current location and emergency contacts at the start of a remote session as appropriate.
D. Using access controls and keeping approved systems updated.

0214. Which option is the clearest practical expression of Telehealth informed consent?

A. Agreeing on a backup contact method and next step if a session disconnects.
B. Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care.
C. Avoiding unnecessary data capture and retaining only what policy and law require.
D. Using access controls and keeping approved systems updated.

0215. Choose the definition pair that correctly explains Digital confidentiality first and Therapeutic app evaluation second.

A. Digital confidentiality: Assessment of an app's evidence, privacy, accessibility, usability, and fit before recommending it. / Therapeutic app evaluation: Protection of sensitive information across devices, networks, platforms, and communications.
B. Digital confidentiality: Advance procedures for responding to an urgent event during remote care, including location and contacts. / Therapeutic app evaluation: Assessment of an app's evidence, privacy, accessibility, usability, and fit before recommending it.
C. Digital confidentiality: Protection of sensitive information across devices, networks, platforms, and communications. / Therapeutic app evaluation: Assessment of an app's evidence, privacy, accessibility, usability, and fit before recommending it.
D. Digital confidentiality: Protection of sensitive information across devices, networks, platforms, and communications. / Therapeutic app evaluation: A plan for continuing or safely pausing care when devices, connectivity, or platforms fail.

0216. At a case-planning meeting, the school support specialist proposes confirming current location and emergency contacts at the start of a remote session as appropriate. for a older adolescent client seen in the student-support meeting. Which concept does this illustrate?

A. Telehealth emergency planning
B. Telehealth informed consent
C. Cybersecurity hygiene
D. Digital confidentiality

0217. Which applied comparison correctly identifies what belongs to Digital confidentiality versus Digital boundaries?

A. Digital confidentiality: Reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate. / Digital boundaries: Clarifying approved communication channels and response times with families.
B. Digital confidentiality: Using approved secure systems and avoiding sensitive information on shared or unsecured channels. / Digital boundaries: Clarifying approved communication channels and response times with families.
C. Digital confidentiality: Using approved secure systems and avoiding sensitive information on shared or unsecured channels. / Digital boundaries: Avoiding unnecessary data capture and retaining only what policy and law require.
D. Digital confidentiality: Clarifying approved communication channels and response times with families. / Digital boundaries: Using approved secure systems and avoiding sensitive information on shared or unsecured channels.

0218. Select the best explanation of Telehealth emergency planning.

A. Attention to unequal access to devices, bandwidth, private space, and digital skills.
B. Advance procedures for responding to an urgent event during remote care, including location and contacts.
C. Assessment of an app's evidence, privacy, accessibility, usability, and fit before recommending it.
D. Professional limits governing online contact, social media, and technology-mediated relationships.

0219. While consulting in the multidisciplinary case conference, a supervised trainee supports a school-age child by using this approach: confirming current location and emergency contacts at the start of a remote session as appropriate. Which concept is being applied?

A. Digital confidentiality
B. Technology contingency planning
C. Telehealth emergency planning
D. AI use transparency

0220. Choose the definition pair that correctly explains Telehealth informed consent first and Telehealth emergency planning second.

A. Telehealth informed consent: Attention to unequal access to devices, bandwidth, private space, and digital skills. / Telehealth emergency planning: Advance procedures for responding to an urgent event during remote care, including location and contacts.
B. Telehealth informed consent: An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans. / Telehealth emergency planning: Routine practices such as strong authentication, updates, and secure handling that reduce digital risk.
C. Telehealth informed consent: An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans. / Telehealth emergency planning: Advance procedures for responding to an urgent event during remote care, including location and contacts.
D. Telehealth informed consent: Advance procedures for responding to an urgent event during remote care, including location and contacts. / Telehealth emergency planning: An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans.

0221. In a case note about a teenage client, a consultant working in the community service agency records this priority: reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care. What principle is reflected?

A. Telehealth emergency planning
B. AI use transparency
C. Telehealth informed consent
D. Data minimization

0222. In a professional consultation about a young person aged 13, the supervised trainee describes this response in the outpatient clinic: reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate. Which term is most apt?

A. Therapeutic app evaluation
B. Technology contingency planning
C. Digital confidentiality
D. Telehealth informed consent

0223. A trainee must choose a practice that exemplifies Telehealth informed consent. Which action is the best fit?

A. Checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool.
B. Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care.
C. Avoiding unnecessary data capture and retaining only what policy and law require.
D. Reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate.

0224. Which option correctly matches each concept to its practice focus: Telehealth emergency planning and Technology contingency planning?

A. Telehealth emergency planning: Confirming current location and emergency contacts at the start of a remote session as appropriate. / Technology contingency planning: Agreeing on a backup contact method and next step if a session disconnects.
B. Telehealth emergency planning: Agreeing on a backup contact method and next step if a session disconnects. / Technology contingency planning: Confirming current location and emergency contacts at the start of a remote session as appropriate.
C. Telehealth emergency planning: Confirming current location and emergency contacts at the start of a remote session as appropriate. / Technology contingency planning: Asking about device and privacy barriers before assuming a youth can participate remotely.
D. Telehealth emergency planning: Avoiding unnecessary data capture and retaining only what policy and law require. / Technology contingency planning: Agreeing on a backup contact method and next step if a session disconnects.

0225. In the youth advocacy program, a teacher and counselor describes the most appropriate support for a middle-school student as clarifying approved communication channels and response times with families. Which framework is being applied?

A. Telehealth emergency planning
B. Telehealth informed consent
C. Digital boundaries
D. Technology contingency planning

0226. A case discussion concerns a child of elementary-school age and a parent educator in the caregiver consultation. The practitioner is considering confirming current location and emergency contacts at the start of a remote session as appropriate. Which principle is involved?

A. Telehealth emergency planning
B. Technology access equity
C. Digital boundaries
D. Cybersecurity hygiene

0227. A supervisor asks for an applied contrast between Digital confidentiality and Technology contingency planning. Which option fits?

A. Digital confidentiality: Using approved secure systems and avoiding sensitive information on shared or unsecured channels. / Technology contingency planning: Clarifying approved communication channels and response times with families.
B. Digital confidentiality: Reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate. / Technology contingency planning: Agreeing on a backup contact method and next step if a session disconnects.
C. Digital confidentiality: Using approved secure systems and avoiding sensitive information on shared or unsecured channels. / Technology contingency planning: Agreeing on a backup contact method and next step if a session disconnects.
D. Digital confidentiality: Agreeing on a backup contact method and next step if a session disconnects. / Technology contingency planning: Using approved secure systems and avoiding sensitive information on shared or unsecured channels.

0228. How should a practitioner distinguish the applications of Telehealth emergency planning and Therapeutic app evaluation?

A. Telehealth emergency planning: Reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate. / Therapeutic app evaluation: Confirming current location and emergency contacts at the start of a remote session as appropriate.
B. Telehealth emergency planning: Confirming current location and emergency contacts at the start of a remote session as appropriate. / Therapeutic app evaluation: Reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate.
C. Telehealth emergency planning: Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care. / Therapeutic app evaluation: Reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate.
D. Telehealth emergency planning: Confirming current location and emergency contacts at the start of a remote session as appropriate. / Therapeutic app evaluation: Using access controls and keeping approved systems updated.

0229. Which option is the clearest practical expression of Technology contingency planning?

A. Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care.
B. Reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate.
C. Agreeing on a backup contact method and next step if a session disconnects.
D. Asking about device and privacy barriers before assuming a youth can participate remotely.

0230. Choose the definition pair that correctly explains Therapeutic app evaluation first and Technology contingency planning second.

A. Therapeutic app evaluation: Assessment of an app's evidence, privacy, accessibility, usability, and fit before recommending it. / Technology contingency planning: Collecting and retaining only the personal information necessary for a defined legitimate purpose.
B. Therapeutic app evaluation: Routine practices such as strong authentication, updates, and secure handling that reduce digital risk. / Technology contingency planning: A plan for continuing or safely pausing care when devices, connectivity, or platforms fail.
C. Therapeutic app evaluation: A plan for continuing or safely pausing care when devices, connectivity, or platforms fail. / Technology contingency planning: Assessment of an app's evidence, privacy, accessibility, usability, and fit before recommending it.
D. Therapeutic app evaluation: Assessment of an app's evidence, privacy, accessibility, usability, and fit before recommending it. / Technology contingency planning: A plan for continuing or safely pausing care when devices, connectivity, or platforms fail.

0231. Which description belongs with the term Telehealth emergency planning?

A. Collecting and retaining only the personal information necessary for a defined legitimate purpose.
B. Advance procedures for responding to an urgent event during remote care, including location and contacts.
C. A plan for continuing or safely pausing care when devices, connectivity, or platforms fail.
D. Assessment of an app's evidence, privacy, accessibility, usability, and fit before recommending it.

0232. In the student-support meeting, the agreed focus for a program coordinator working with a child of elementary-school age is agreeing on a backup contact method and next step if a session disconnects. Which concept names this focus?

A. Technology contingency planning
B. Digital boundaries
C. Telehealth informed consent
D. AI use transparency

0233. A behavior specialist reviews a plan for a young person in the parent meeting. The plan emphasizes using access controls and keeping approved systems updated. Which course idea does this reflect?

A. Digital confidentiality
B. Telehealth emergency planning
C. Digital boundaries
D. Cybersecurity hygiene

0234. A supervised trainee prepares for a session in the parent meeting with a older adolescent client. The intended approach is clarifying approved communication channels and response times with families. Which concept is most relevant?

A. Cybersecurity hygiene
B. Technology access equity
C. Digital boundaries
D. Digital confidentiality

0235. A trainee must distinguish how Digital confidentiality and Cybersecurity hygiene guide practice. Which comparison is accurate?

A. Digital confidentiality: Using approved secure systems and avoiding sensitive information on shared or unsecured channels. / Cybersecurity hygiene: Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care.
B. Digital confidentiality: Using access controls and keeping approved systems updated. / Cybersecurity hygiene: Using approved secure systems and avoiding sensitive information on shared or unsecured channels.
C. Digital confidentiality: Checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool. / Cybersecurity hygiene: Using access controls and keeping approved systems updated.
D. Digital confidentiality: Using approved secure systems and avoiding sensitive information on shared or unsecured channels. / Cybersecurity hygiene: Using access controls and keeping approved systems updated.

0236. Which option pairs the definitions of Telehealth emergency planning and Therapeutic app evaluation correctly, in that order?

A. Telehealth emergency planning: Assessment of an app's evidence, privacy, accessibility, usability, and fit before recommending it. / Therapeutic app evaluation: Advance procedures for responding to an urgent event during remote care, including location and contacts.
B. Telehealth emergency planning: Advance procedures for responding to an urgent event during remote care, including location and contacts. / Therapeutic app evaluation: Assessment of an app's evidence, privacy, accessibility, usability, and fit before recommending it.
C. Telehealth emergency planning: Advance procedures for responding to an urgent event during remote care, including location and contacts. / Therapeutic app evaluation: Routine practices such as strong authentication, updates, and secure handling that reduce digital risk.
D. Telehealth emergency planning: An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans. / Therapeutic app evaluation: Assessment of an app's evidence, privacy, accessibility, usability, and fit before recommending it.

0237. Which option is the clearest practical expression of Technology access equity?

A. Using approved secure systems and avoiding sensitive information on shared or unsecured channels.
B. Checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool.
C. Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care.
D. Asking about device and privacy barriers before assuming a youth can participate remotely.

0238. Which named construct is captured by this account? Routine practices such as strong authentication, updates, and secure handling that reduce digital risk.

A. Cybersecurity hygiene
B. Digital boundaries
C. Digital confidentiality
D. Telehealth informed consent

0239. Which comparison correctly distinguishes Technology access equity from Cybersecurity hygiene?

A. Technology access equity: Attention to unequal access to devices, bandwidth, private space, and digital skills. / Cybersecurity hygiene: Routine practices such as strong authentication, updates, and secure handling that reduce digital risk.
B. Technology access equity: An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans. / Cybersecurity hygiene: Routine practices such as strong authentication, updates, and secure handling that reduce digital risk.
C. Technology access equity: Routine practices such as strong authentication, updates, and secure handling that reduce digital risk. / Cybersecurity hygiene: Attention to unequal access to devices, bandwidth, private space, and digital skills.
D. Technology access equity: Attention to unequal access to devices, bandwidth, private space, and digital skills. / Cybersecurity hygiene: Professional limits governing online contact, social media, and technology-mediated relationships.

0240. Choose the definition pair that correctly explains Therapeutic app evaluation first and AI use transparency second.

A. Therapeutic app evaluation: Professional limits governing online contact, social media, and technology-mediated relationships. / AI use transparency: Clear disclosure and oversight when artificial intelligence tools materially affect clinical work or client information.
B. Therapeutic app evaluation: Clear disclosure and oversight when artificial intelligence tools materially affect clinical work or client information. / AI use transparency: Assessment of an app's evidence, privacy, accessibility, usability, and fit before recommending it.
C. Therapeutic app evaluation: Assessment of an app's evidence, privacy, accessibility, usability, and fit before recommending it. / AI use transparency: Advance procedures for responding to an urgent event during remote care, including location and contacts.
D. Therapeutic app evaluation: Assessment of an app's evidence, privacy, accessibility, usability, and fit before recommending it. / AI use transparency: Clear disclosure and oversight when artificial intelligence tools materially affect clinical work or client information.

0241. In a supervision review, a school-based clinician describes work with a young person aged 16 in the community mental-health service: reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care. What concept is illustrated?

A. Data minimization
B. Technology contingency planning
C. Therapeutic app evaluation
D. Telehealth informed consent

0242. Which named construct is captured by this account? Collecting and retaining only the personal information necessary for a defined legitimate purpose.

A. Technology contingency planning
B. Data minimization
C. Technology access equity
D. Therapeutic app evaluation

0243. A play therapist reviews a plan for a middle-school student in the learning-support meeting. The plan emphasizes avoiding unnecessary data capture and retaining only what policy and law require. Which course idea does this reflect?

A. Data minimization
B. Technology access equity
C. Telehealth emergency planning
D. Technology contingency planning

0244. How are Digital confidentiality and AI use transparency most accurately differentiated in this curriculum?

A. Digital confidentiality: Protection of sensitive information across devices, networks, platforms, and communications. / AI use transparency: Advance procedures for responding to an urgent event during remote care, including location and contacts.
B. Digital confidentiality: Clear disclosure and oversight when artificial intelligence tools materially affect clinical work or client information. / AI use transparency: Protection of sensitive information across devices, networks, platforms, and communications.
C. Digital confidentiality: Attention to unequal access to devices, bandwidth, private space, and digital skills. / AI use transparency: Clear disclosure and oversight when artificial intelligence tools materially affect clinical work or client information.
D. Digital confidentiality: Protection of sensitive information across devices, networks, platforms, and communications. / AI use transparency: Clear disclosure and oversight when artificial intelligence tools materially affect clinical work or client information.

0245. Which named construct is captured by this account? Attention to unequal access to devices, bandwidth, private space, and digital skills.

A. Digital boundaries
B. Cybersecurity hygiene
C. Technology access equity
D. Data minimization

0246. During work in the counseling practicum, a teacher and counselor identifies this need: avoiding unnecessary data capture and retaining only what policy and law require. Which idea should guide the response?

A. AI use transparency
B. Telehealth informed consent
C. Data minimization
D. Therapeutic app evaluation

0247. A counselor reviews a plan for a student aged 12 in the community youth program. The plan emphasizes reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate. Which course idea does this reflect?

A. Digital confidentiality
B. Therapeutic app evaluation
C. Telehealth informed consent
D. Digital boundaries

0248. Choose the response that best puts Telehealth informed consent into practice.

A. Asking about device and privacy barriers before assuming a youth can participate remotely.
B. Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care.
C. Avoiding unnecessary data capture and retaining only what policy and law require.
D. Agreeing on a backup contact method and next step if a session disconnects.

0249. Which course concept is defined as follows: Protection of sensitive information across devices, networks, platforms, and communications.

A. Digital confidentiality
B. Digital boundaries
C. Therapeutic app evaluation
D. Technology contingency planning

0250. Which paired example correctly applies Digital boundaries first and Technology contingency planning second?

A. Digital boundaries: Clarifying approved communication channels and response times with families. / Technology contingency planning: Agreeing on a backup contact method and next step if a session disconnects.
B. Digital boundaries: Agreeing on a backup contact method and next step if a session disconnects. / Technology contingency planning: Clarifying approved communication channels and response times with families.
C. Digital boundaries: Confirming current location and emergency contacts at the start of a remote session as appropriate. / Technology contingency planning: Agreeing on a backup contact method and next step if a session disconnects.
D. Digital boundaries: Clarifying approved communication channels and response times with families. / Technology contingency planning: Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care.

0251. During service review in the clinical planning session, a research trainee describes using approved secure systems and avoiding sensitive information on shared or unsecured channels. for a student aged 9. Which course idea is most applicable?

A. Data minimization
B. Technology contingency planning
C. Technology access equity
D. Digital confidentiality

0252. A research trainee describes an intervention for a young person aged 13 in the parent meeting, centered on checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool. Which named idea is most relevant?

A. Cybersecurity hygiene
B. AI use transparency
C. Digital confidentiality
D. Technology contingency planning

0253. Which choice aligns each practice with the correct idea, Telehealth emergency planning or AI use transparency?

A. Telehealth emergency planning: Confirming current location and emergency contacts at the start of a remote session as appropriate. / AI use transparency: Checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool.
B. Telehealth emergency planning: Confirming current location and emergency contacts at the start of a remote session as appropriate. / AI use transparency: Using access controls and keeping approved systems updated.
C. Telehealth emergency planning: Reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate. / AI use transparency: Checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool.
D. Telehealth emergency planning: Checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool. / AI use transparency: Confirming current location and emergency contacts at the start of a remote session as appropriate.

0254. For a young person aged 18 seen in the youth group, the community practitioner recommends a plan built around using approved secure systems and avoiding sensitive information on shared or unsecured channels. Which concept is reflected?

A. Digital confidentiality
B. Technology access equity
C. AI use transparency
D. Digital boundaries

0255. Which statement accurately contrasts the course concepts Telehealth emergency planning and Technology contingency planning?

A. Telehealth emergency planning: A plan for continuing or safely pausing care when devices, connectivity, or platforms fail. / Technology contingency planning: Advance procedures for responding to an urgent event during remote care, including location and contacts.
B. Telehealth emergency planning: Advance procedures for responding to an urgent event during remote care, including location and contacts. / Technology contingency planning: Attention to unequal access to devices, bandwidth, private space, and digital skills.
C. Telehealth emergency planning: Collecting and retaining only the personal information necessary for a defined legitimate purpose. / Technology contingency planning: A plan for continuing or safely pausing care when devices, connectivity, or platforms fail.
D. Telehealth emergency planning: Advance procedures for responding to an urgent event during remote care, including location and contacts. / Technology contingency planning: A plan for continuing or safely pausing care when devices, connectivity, or platforms fail.

0256. How are Digital confidentiality and Technology contingency planning most accurately differentiated in this curriculum?

A. Digital confidentiality: Protection of sensitive information across devices, networks, platforms, and communications. / Technology contingency planning: A plan for continuing or safely pausing care when devices, connectivity, or platforms fail.
B. Digital confidentiality: Assessment of an app's evidence, privacy, accessibility, usability, and fit before recommending it. / Technology contingency planning: A plan for continuing or safely pausing care when devices, connectivity, or platforms fail.
C. Digital confidentiality: Protection of sensitive information across devices, networks, platforms, and communications. / Technology contingency planning: Professional limits governing online contact, social media, and technology-mediated relationships.
D. Digital confidentiality: A plan for continuing or safely pausing care when devices, connectivity, or platforms fail. / Technology contingency planning: Protection of sensitive information across devices, networks, platforms, and communications.

0257. Which option pairs the definitions of Cybersecurity hygiene and AI use transparency correctly, in that order?

A. Cybersecurity hygiene: Routine practices such as strong authentication, updates, and secure handling that reduce digital risk. / AI use transparency: Clear disclosure and oversight when artificial intelligence tools materially affect clinical work or client information.
B. Cybersecurity hygiene: Clear disclosure and oversight when artificial intelligence tools materially affect clinical work or client information. / AI use transparency: Routine practices such as strong authentication, updates, and secure handling that reduce digital risk.
C. Cybersecurity hygiene: Advance procedures for responding to an urgent event during remote care, including location and contacts. / AI use transparency: Clear disclosure and oversight when artificial intelligence tools materially affect clinical work or client information.
D. Cybersecurity hygiene: Routine practices such as strong authentication, updates, and secure handling that reduce digital risk. / AI use transparency: Professional limits governing online contact, social media, and technology-mediated relationships.

0258. What is the central meaning of AI use transparency?

A. A plan for continuing or safely pausing care when devices, connectivity, or platforms fail.
B. Advance procedures for responding to an urgent event during remote care, including location and contacts.
C. Clear disclosure and oversight when artificial intelligence tools materially affect clinical work or client information.
D. Collecting and retaining only the personal information necessary for a defined legitimate purpose.

0259. In a supervision quiz, how should Telehealth informed consent be distinguished from Digital boundaries?

A. Telehealth informed consent: Professional limits governing online contact, social media, and technology-mediated relationships. / Digital boundaries: An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans.
B. Telehealth informed consent: An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans. / Digital boundaries: Professional limits governing online contact, social media, and technology-mediated relationships.
C. Telehealth informed consent: An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans. / Digital boundaries: Routine practices such as strong authentication, updates, and secure handling that reduce digital risk.
D. Telehealth informed consent: Protection of sensitive information across devices, networks, platforms, and communications. / Digital boundaries: Professional limits governing online contact, social media, and technology-mediated relationships.

0260. Which option preserves the correct meaning of both Telehealth informed consent and Cybersecurity hygiene?

A. Telehealth informed consent: An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans. / Cybersecurity hygiene: Routine practices such as strong authentication, updates, and secure handling that reduce digital risk.
B. Telehealth informed consent: An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans. / Cybersecurity hygiene: Advance procedures for responding to an urgent event during remote care, including location and contacts.
C. Telehealth informed consent: Routine practices such as strong authentication, updates, and secure handling that reduce digital risk. / Cybersecurity hygiene: An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans.
D. Telehealth informed consent: A plan for continuing or safely pausing care when devices, connectivity, or platforms fail. / Cybersecurity hygiene: Routine practices such as strong authentication, updates, and secure handling that reduce digital risk.

0261. A trainee must explain Digital confidentiality. Which answer is accurate?

A. Attention to unequal access to devices, bandwidth, private space, and digital skills.
B. Assessment of an app's evidence, privacy, accessibility, usability, and fit before recommending it.
C. Professional limits governing online contact, social media, and technology-mediated relationships.
D. Protection of sensitive information across devices, networks, platforms, and communications.

0262. When reviewing a student aged 15's plan in the school consultation, the family therapist notes that the next step is reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate. Which concept guides this step?

A. Data minimization
B. Therapeutic app evaluation
C. Technology contingency planning
D. Telehealth emergency planning

0263. A case discussion concerns a student aged 17 and a school-based clinician in the outpatient clinic. The practitioner is considering checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool. Which principle is involved?

A. Digital confidentiality
B. AI use transparency
C. Technology contingency planning
D. Technology access equity

0264. Which option correctly matches each concept to its practice focus: Therapeutic app evaluation and Technology contingency planning?

A. Therapeutic app evaluation: Agreeing on a backup contact method and next step if a session disconnects. / Technology contingency planning: Reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate.
B. Therapeutic app evaluation: Reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate. / Technology contingency planning: Agreeing on a backup contact method and next step if a session disconnects.
C. Therapeutic app evaluation: Reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate. / Technology contingency planning: Avoiding unnecessary data capture and retaining only what policy and law require.
D. Therapeutic app evaluation: Using access controls and keeping approved systems updated. / Technology contingency planning: Agreeing on a backup contact method and next step if a session disconnects.

0265. A supervisor asks how AI use transparency would appear in practice. Which choice should be selected?

A. Reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate.
B. Checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool.
C. Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care.
D. Using approved secure systems and avoiding sensitive information on shared or unsecured channels.

0266. A supervisor asks how Cybersecurity hygiene would appear in practice. Which choice should be selected?

A. Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care.
B. Confirming current location and emergency contacts at the start of a remote session as appropriate.
C. Asking about device and privacy barriers before assuming a youth can participate remotely.
D. Using access controls and keeping approved systems updated.

0267. At the student-support meeting, a school support specialist meets with a older adolescent client. The practice priority is: confirming current location and emergency contacts at the start of a remote session as appropriate. Which concept best captures that priority?

A. Telehealth emergency planning
B. Data minimization
C. Telehealth informed consent
D. Digital confidentiality

0268. A doctoral student reads the following description. Which concept does it define? Advance procedures for responding to an urgent event during remote care, including location and contacts.

A. Telehealth informed consent
B. Telehealth emergency planning
C. Technology access equity
D. Digital boundaries

0269. A teacher and counselor is asked to justify a plan for a child aged 11 in the community service agency. It calls for checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool. Which concept provides the rationale?

A. Telehealth emergency planning
B. Technology contingency planning
C. AI use transparency
D. Digital confidentiality

0270. A older adolescent client and a mental-health professional are reviewing goals in the family session. The agreed action is agreeing on a backup contact method and next step if a session disconnects. Which principle best accounts for it?

A. Telehealth emergency planning
B. Technology contingency planning
C. Technology access equity
D. Telehealth informed consent

0271. A therapist describes an intervention for a child aged 14 in the outpatient clinic, centered on using approved secure systems and avoiding sensitive information on shared or unsecured channels. Which named idea is most relevant?

A. Cybersecurity hygiene
B. Technology access equity
C. Telehealth emergency planning
D. Digital confidentiality

0272. In the supervision meeting, a school counselor explains why a young person aged 13 would benefit from clarifying approved communication channels and response times with families. Which course concept underpins the explanation?

A. Technology contingency planning
B. Digital boundaries
C. Digital confidentiality
D. Telehealth emergency planning

0273. Which option pairs the definitions of Therapeutic app evaluation and AI use transparency correctly, in that order?

A. Therapeutic app evaluation: Professional limits governing online contact, social media, and technology-mediated relationships. / AI use transparency: Clear disclosure and oversight when artificial intelligence tools materially affect clinical work or client information.
B. Therapeutic app evaluation: Assessment of an app's evidence, privacy, accessibility, usability, and fit before recommending it. / AI use transparency: Clear disclosure and oversight when artificial intelligence tools materially affect clinical work or client information.
C. Therapeutic app evaluation: Clear disclosure and oversight when artificial intelligence tools materially affect clinical work or client information. / AI use transparency: Assessment of an app's evidence, privacy, accessibility, usability, and fit before recommending it.
D. Therapeutic app evaluation: Assessment of an app's evidence, privacy, accessibility, usability, and fit before recommending it. / AI use transparency: Advance procedures for responding to an urgent event during remote care, including location and contacts.

0274. Which option pairs the definitions of Telehealth informed consent and Digital confidentiality correctly, in that order?

A. Telehealth informed consent: Protection of sensitive information across devices, networks, platforms, and communications. / Digital confidentiality: An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans.
B. Telehealth informed consent: An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans. / Digital confidentiality: A plan for continuing or safely pausing care when devices, connectivity, or platforms fail.
C. Telehealth informed consent: Clear disclosure and oversight when artificial intelligence tools materially affect clinical work or client information. / Digital confidentiality: Protection of sensitive information across devices, networks, platforms, and communications.
D. Telehealth informed consent: An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans. / Digital confidentiality: Protection of sensitive information across devices, networks, platforms, and communications.

0275. A case discussion concerns a young person aged 10 and a parent educator in the youth advocacy program. The practitioner is considering reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate. Which principle is involved?

A. Therapeutic app evaluation
B. Telehealth emergency planning
C. Digital boundaries
D. Cybersecurity hygiene

0276. A student confuses Telehealth emergency planning with Therapeutic app evaluation. Which explanation most accurately separates them?

A. Telehealth emergency planning: An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans. / Therapeutic app evaluation: Assessment of an app's evidence, privacy, accessibility, usability, and fit before recommending it.
B. Telehealth emergency planning: Assessment of an app's evidence, privacy, accessibility, usability, and fit before recommending it. / Therapeutic app evaluation: Advance procedures for responding to an urgent event during remote care, including location and contacts.
C. Telehealth emergency planning: Advance procedures for responding to an urgent event during remote care, including location and contacts. / Therapeutic app evaluation: Assessment of an app's evidence, privacy, accessibility, usability, and fit before recommending it.
D. Telehealth emergency planning: Advance procedures for responding to an urgent event during remote care, including location and contacts. / Therapeutic app evaluation: Routine practices such as strong authentication, updates, and secure handling that reduce digital risk.

0277. During work in the community mental-health service, a group facilitator identifies this need: confirming current location and emergency contacts at the start of a remote session as appropriate. Which idea should guide the response?

A. AI use transparency
B. Technology access equity
C. Digital boundaries
D. Telehealth emergency planning

0278. How should a practitioner distinguish the applications of Digital boundaries and Therapeutic app evaluation?

A. Digital boundaries: Clarifying approved communication channels and response times with families. / Therapeutic app evaluation: Reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate.
B. Digital boundaries: Using approved secure systems and avoiding sensitive information on shared or unsecured channels. / Therapeutic app evaluation: Reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate.
C. Digital boundaries: Reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate. / Therapeutic app evaluation: Clarifying approved communication channels and response times with families.
D. Digital boundaries: Clarifying approved communication channels and response times with families. / Therapeutic app evaluation: Checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool.

0279. In a case note about a school-age child, a mental-health professional working in the counseling practicum records this priority: reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate. What principle is reflected?

A. Cybersecurity hygiene
B. Telehealth informed consent
C. Therapeutic app evaluation
D. Data minimization

0280. Which paired example correctly applies Telehealth emergency planning first and Technology contingency planning second?

A. Telehealth emergency planning: Confirming current location and emergency contacts at the start of a remote session as appropriate. / Technology contingency planning: Asking about device and privacy barriers before assuming a youth can participate remotely.
B. Telehealth emergency planning: Avoiding unnecessary data capture and retaining only what policy and law require. / Technology contingency planning: Agreeing on a backup contact method and next step if a session disconnects.
C. Telehealth emergency planning: Confirming current location and emergency contacts at the start of a remote session as appropriate. / Technology contingency planning: Agreeing on a backup contact method and next step if a session disconnects.
D. Telehealth emergency planning: Agreeing on a backup contact method and next step if a session disconnects. / Technology contingency planning: Confirming current location and emergency contacts at the start of a remote session as appropriate.

0281. Which comparison would correct a trainee's misunderstanding of Technology access equity versus Cybersecurity hygiene?

A. Technology access equity: Attention to unequal access to devices, bandwidth, private space, and digital skills. / Cybersecurity hygiene: Professional limits governing online contact, social media, and technology-mediated relationships.
B. Technology access equity: An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans. / Cybersecurity hygiene: Routine practices such as strong authentication, updates, and secure handling that reduce digital risk.
C. Technology access equity: Routine practices such as strong authentication, updates, and secure handling that reduce digital risk. / Cybersecurity hygiene: Attention to unequal access to devices, bandwidth, private space, and digital skills.
D. Technology access equity: Attention to unequal access to devices, bandwidth, private space, and digital skills. / Cybersecurity hygiene: Routine practices such as strong authentication, updates, and secure handling that reduce digital risk.

0282. At the learning-support meeting, a therapist reviews whether a plan for a child aged 11 is appropriate. The relevant practice is confirming current location and emergency contacts at the start of a remote session as appropriate. Which concept is tested?

A. Technology contingency planning
B. Digital confidentiality
C. Telehealth informed consent
D. Telehealth emergency planning

0283. Which comparison would correct a trainee's misunderstanding of Telehealth informed consent versus Data minimization?

A. Telehealth informed consent: Collecting and retaining only the personal information necessary for a defined legitimate purpose. / Data minimization: An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans.
B. Telehealth informed consent: Attention to unequal access to devices, bandwidth, private space, and digital skills. / Data minimization: Collecting and retaining only the personal information necessary for a defined legitimate purpose.
C. Telehealth informed consent: An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans. / Data minimization: A plan for continuing or safely pausing care when devices, connectivity, or platforms fail.
D. Telehealth informed consent: An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans. / Data minimization: Collecting and retaining only the personal information necessary for a defined legitimate purpose.

0284. A service navigator is asked what should shape a child aged 6's support in the community service agency. The proposed focus is clarifying approved communication channels and response times with families. Which principle does it represent?

A. Telehealth emergency planning
B. Technology contingency planning
C. Digital boundaries
D. Digital confidentiality

0285. A trainee must choose a practice that exemplifies Digital confidentiality. Which action is the best fit?

A. Avoiding unnecessary data capture and retaining only what policy and law require.
B. Clarifying approved communication channels and response times with families.
C. Using approved secure systems and avoiding sensitive information on shared or unsecured channels.
D. Confirming current location and emergency contacts at the start of a remote session as appropriate.

0286. In a supervision quiz, how should Telehealth informed consent be distinguished from Technology access equity?

A. Telehealth informed consent: Attention to unequal access to devices, bandwidth, private space, and digital skills. / Technology access equity: An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans.
B. Telehealth informed consent: An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans. / Technology access equity: Clear disclosure and oversight when artificial intelligence tools materially affect clinical work or client information.
C. Telehealth informed consent: Advance procedures for responding to an urgent event during remote care, including location and contacts. / Technology access equity: Attention to unequal access to devices, bandwidth, private space, and digital skills.
D. Telehealth informed consent: An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans. / Technology access equity: Attention to unequal access to devices, bandwidth, private space, and digital skills.

0287. At the parent meeting, a program coordinator reviews whether a plan for a child aged 7 is appropriate. The relevant practice is asking about device and privacy barriers before assuming a youth can participate remotely. Which concept is tested?

A. Telehealth emergency planning
B. AI use transparency
C. Digital boundaries
D. Technology access equity

0288. A child aged 6's service team meets in the caregiver consultation. The school-based clinician recommends a change involving reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate. Which idea best explains it?

A. Cybersecurity hygiene
B. Therapeutic app evaluation
C. Technology access equity
D. AI use transparency

0289. Which applied comparison correctly identifies what belongs to Therapeutic app evaluation versus Technology contingency planning?

A. Therapeutic app evaluation: Reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate. / Technology contingency planning: Avoiding unnecessary data capture and retaining only what policy and law require.
B. Therapeutic app evaluation: Agreeing on a backup contact method and next step if a session disconnects. / Technology contingency planning: Reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate.
C. Therapeutic app evaluation: Reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate. / Technology contingency planning: Agreeing on a backup contact method and next step if a session disconnects.
D. Therapeutic app evaluation: Using access controls and keeping approved systems updated. / Technology contingency planning: Agreeing on a backup contact method and next step if a session disconnects.

0290. In a supervision review, a case coordinator describes work with a student aged 12 in the counseling practicum: asking about device and privacy barriers before assuming a youth can participate remotely. What concept is illustrated?

A. AI use transparency
B. Technology access equity
C. Therapeutic app evaluation
D. Data minimization

0291. A assessment clinician is preparing a follow-up plan for a young person aged 18 in the child guidance clinic. The plan calls for reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care. Which concept names this approach?

A. Cybersecurity hygiene
B. Telehealth emergency planning
C. Digital confidentiality
D. Telehealth informed consent

0292. A counselor is asked to evaluate a proposed service for a client in late adolescence in the child guidance clinic. The defining feature is confirming current location and emergency contacts at the start of a remote session as appropriate. Which concept fits?

A. Data minimization
B. Telehealth emergency planning
C. Therapeutic app evaluation
D. Digital boundaries

0293. A case conference asks for a distinction between Data minimization and Therapeutic app evaluation. Which answer is sound?

A. Data minimization: Assessment of an app's evidence, privacy, accessibility, usability, and fit before recommending it. / Therapeutic app evaluation: Collecting and retaining only the personal information necessary for a defined legitimate purpose.
B. Data minimization: Collecting and retaining only the personal information necessary for a defined legitimate purpose. / Therapeutic app evaluation: A plan for continuing or safely pausing care when devices, connectivity, or platforms fail.
C. Data minimization: Collecting and retaining only the personal information necessary for a defined legitimate purpose. / Therapeutic app evaluation: Assessment of an app's evidence, privacy, accessibility, usability, and fit before recommending it.
D. Data minimization: An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans. / Therapeutic app evaluation: Assessment of an app's evidence, privacy, accessibility, usability, and fit before recommending it.

0294. Consider a child aged 6 receiving help in the multidisciplinary case conference. The youth worker focuses on reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care. Which term best describes the guiding idea?

A. Technology contingency planning
B. Data minimization
C. Telehealth informed consent
D. Therapeutic app evaluation

0295. Which pair of actions illustrates Digital confidentiality and Telehealth emergency planning, respectively?

A. Digital confidentiality: Reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate. / Telehealth emergency planning: Confirming current location and emergency contacts at the start of a remote session as appropriate.
B. Digital confidentiality: Confirming current location and emergency contacts at the start of a remote session as appropriate. / Telehealth emergency planning: Using approved secure systems and avoiding sensitive information on shared or unsecured channels.
C. Digital confidentiality: Using approved secure systems and avoiding sensitive information on shared or unsecured channels. / Telehealth emergency planning: Asking about device and privacy barriers before assuming a youth can participate remotely.
D. Digital confidentiality: Using approved secure systems and avoiding sensitive information on shared or unsecured channels. / Telehealth emergency planning: Confirming current location and emergency contacts at the start of a remote session as appropriate.

0296. Which paired example correctly applies Telehealth informed consent first and Data minimization second?

A. Telehealth informed consent: Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care. / Data minimization: Agreeing on a backup contact method and next step if a session disconnects.
B. Telehealth informed consent: Avoiding unnecessary data capture and retaining only what policy and law require. / Data minimization: Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care.
C. Telehealth informed consent: Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care. / Data minimization: Avoiding unnecessary data capture and retaining only what policy and law require.
D. Telehealth informed consent: Asking about device and privacy barriers before assuming a youth can participate remotely. / Data minimization: Avoiding unnecessary data capture and retaining only what policy and law require.

0297. Which description belongs with the term AI use transparency?

A. An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans.
B. A plan for continuing or safely pausing care when devices, connectivity, or platforms fail.
C. Clear disclosure and oversight when artificial intelligence tools materially affect clinical work or client information.
D. Attention to unequal access to devices, bandwidth, private space, and digital skills.

0298. A case conference asks for a distinction between Telehealth informed consent and Digital boundaries. Which answer is sound?

A. Telehealth informed consent: An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans. / Digital boundaries: Routine practices such as strong authentication, updates, and secure handling that reduce digital risk.
B. Telehealth informed consent: Protection of sensitive information across devices, networks, platforms, and communications. / Digital boundaries: Professional limits governing online contact, social media, and technology-mediated relationships.
C. Telehealth informed consent: Professional limits governing online contact, social media, and technology-mediated relationships. / Digital boundaries: An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans.
D. Telehealth informed consent: An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans. / Digital boundaries: Professional limits governing online contact, social media, and technology-mediated relationships.

0299. In the school consultation, a team asks how a consulting counselor can support a school-age child. One proposed action is clarifying approved communication channels and response times with families. Which idea does it represent?

A. Cybersecurity hygiene
B. Digital boundaries
C. AI use transparency
D. Data minimization

0300. Choose the definition pair that correctly explains Technology access equity first and Digital boundaries second.

A. Technology access equity: Protection of sensitive information across devices, networks, platforms, and communications. / Digital boundaries: Professional limits governing online contact, social media, and technology-mediated relationships.
B. Technology access equity: Attention to unequal access to devices, bandwidth, private space, and digital skills. / Digital boundaries: Collecting and retaining only the personal information necessary for a defined legitimate purpose.
C. Technology access equity: Attention to unequal access to devices, bandwidth, private space, and digital skills. / Digital boundaries: Professional limits governing online contact, social media, and technology-mediated relationships.
D. Technology access equity: Professional limits governing online contact, social media, and technology-mediated relationships. / Digital boundaries: Attention to unequal access to devices, bandwidth, private space, and digital skills.

0301. Which option pairs the definitions of Technology access equity and AI use transparency correctly, in that order?

A. Technology access equity: Attention to unequal access to devices, bandwidth, private space, and digital skills. / AI use transparency: An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans.
B. Technology access equity: Clear disclosure and oversight when artificial intelligence tools materially affect clinical work or client information. / AI use transparency: Attention to unequal access to devices, bandwidth, private space, and digital skills.
C. Technology access equity: Attention to unequal access to devices, bandwidth, private space, and digital skills. / AI use transparency: Clear disclosure and oversight when artificial intelligence tools materially affect clinical work or client information.
D. Technology access equity: A plan for continuing or safely pausing care when devices, connectivity, or platforms fail. / AI use transparency: Clear disclosure and oversight when artificial intelligence tools materially affect clinical work or client information.

0302. A student confuses Telehealth emergency planning with Data minimization. Which explanation most accurately separates them?

A. Telehealth emergency planning: Professional limits governing online contact, social media, and technology-mediated relationships. / Data minimization: Collecting and retaining only the personal information necessary for a defined legitimate purpose.
B. Telehealth emergency planning: Collecting and retaining only the personal information necessary for a defined legitimate purpose. / Data minimization: Advance procedures for responding to an urgent event during remote care, including location and contacts.
C. Telehealth emergency planning: Advance procedures for responding to an urgent event during remote care, including location and contacts. / Data minimization: Collecting and retaining only the personal information necessary for a defined legitimate purpose.
D. Telehealth emergency planning: Advance procedures for responding to an urgent event during remote care, including location and contacts. / Data minimization: An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans.

0303. Which option pairs the definitions of Digital boundaries and Therapeutic app evaluation correctly, in that order?

A. Digital boundaries: Professional limits governing online contact, social media, and technology-mediated relationships. / Therapeutic app evaluation: Assessment of an app's evidence, privacy, accessibility, usability, and fit before recommending it.
B. Digital boundaries: Assessment of an app's evidence, privacy, accessibility, usability, and fit before recommending it. / Therapeutic app evaluation: Professional limits governing online contact, social media, and technology-mediated relationships.
C. Digital boundaries: Protection of sensitive information across devices, networks, platforms, and communications. / Therapeutic app evaluation: Assessment of an app's evidence, privacy, accessibility, usability, and fit before recommending it.
D. Digital boundaries: Professional limits governing online contact, social media, and technology-mediated relationships. / Therapeutic app evaluation: Clear disclosure and oversight when artificial intelligence tools materially affect clinical work or client information.

0304. A caregiver working with a counselor presents a support plan for a client in early adolescence at the behavior-support review. Its central feature is reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care. Which concept should be named?

A. Digital boundaries
B. Cybersecurity hygiene
C. Data minimization
D. Telehealth informed consent

0305. While supporting a young person aged 16 in the after-school program, a parent educator adopts this practice: avoiding unnecessary data capture and retaining only what policy and law require. Which concept best explains the choice?

A. Technology access equity
B. Telehealth emergency planning
C. Digital boundaries
D. Data minimization

0306. Which comparison correctly distinguishes Telehealth emergency planning from Technology access equity?

A. Telehealth emergency planning: Attention to unequal access to devices, bandwidth, private space, and digital skills. / Technology access equity: Advance procedures for responding to an urgent event during remote care, including location and contacts.
B. Telehealth emergency planning: Advance procedures for responding to an urgent event during remote care, including location and contacts. / Technology access equity: Collecting and retaining only the personal information necessary for a defined legitimate purpose.
C. Telehealth emergency planning: Professional limits governing online contact, social media, and technology-mediated relationships. / Technology access equity: Attention to unequal access to devices, bandwidth, private space, and digital skills.
D. Telehealth emergency planning: Advance procedures for responding to an urgent event during remote care, including location and contacts. / Technology access equity: Attention to unequal access to devices, bandwidth, private space, and digital skills.

0307. A student aged 17's service team meets in the clinical planning session. The caregiver working with a counselor recommends a change involving asking about device and privacy barriers before assuming a youth can participate remotely. Which idea best explains it?

A. Data minimization
B. Digital confidentiality
C. Technology access equity
D. Telehealth emergency planning

0308. Which option is the clearest practical expression of Cybersecurity hygiene?

A. Using approved secure systems and avoiding sensitive information on shared or unsecured channels.
B. Avoiding unnecessary data capture and retaining only what policy and law require.
C. Using access controls and keeping approved systems updated.
D. Agreeing on a backup contact method and next step if a session disconnects.

0309. Which option preserves the correct meaning of both Technology access equity and Therapeutic app evaluation?

A. Technology access equity: Assessment of an app's evidence, privacy, accessibility, usability, and fit before recommending it. / Therapeutic app evaluation: Attention to unequal access to devices, bandwidth, private space, and digital skills.
B. Technology access equity: Attention to unequal access to devices, bandwidth, private space, and digital skills. / Therapeutic app evaluation: Assessment of an app's evidence, privacy, accessibility, usability, and fit before recommending it.
C. Technology access equity: Attention to unequal access to devices, bandwidth, private space, and digital skills. / Therapeutic app evaluation: Advance procedures for responding to an urgent event during remote care, including location and contacts.
D. Technology access equity: Collecting and retaining only the personal information necessary for a defined legitimate purpose. / Therapeutic app evaluation: Assessment of an app's evidence, privacy, accessibility, usability, and fit before recommending it.

0310. For a student aged 15 seen in the family resource center, the program coordinator recommends a plan built around clarifying approved communication channels and response times with families. Which concept is reflected?

A. Digital boundaries
B. Telehealth emergency planning
C. Technology contingency planning
D. Technology access equity

0311. A case conference reviews a program coordinator's work with a child aged 7 in the parent meeting: asking about device and privacy barriers before assuming a youth can participate remotely. Which principle is central?

A. Technology access equity
B. Cybersecurity hygiene
C. AI use transparency
D. Technology contingency planning

0312. A team must select a support approach for a young adolescent client at the behavior-support review. The family therapist recommends avoiding unnecessary data capture and retaining only what policy and law require. Which idea is most relevant?

A. Data minimization
B. Technology contingency planning
C. Telehealth informed consent
D. Telehealth emergency planning

0313. Which option correctly matches each concept to its practice focus: Therapeutic app evaluation and AI use transparency?

A. Therapeutic app evaluation: Reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate. / AI use transparency: Checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool.
B. Therapeutic app evaluation: Checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool. / AI use transparency: Reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate.
C. Therapeutic app evaluation: Reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate. / AI use transparency: Confirming current location and emergency contacts at the start of a remote session as appropriate.
D. Therapeutic app evaluation: Clarifying approved communication channels and response times with families. / AI use transparency: Checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool.

0314. Which comparison would correct a trainee's misunderstanding of Digital boundaries versus AI use transparency?

A. Digital boundaries: Professional limits governing online contact, social media, and technology-mediated relationships. / AI use transparency: Clear disclosure and oversight when artificial intelligence tools materially affect clinical work or client information.
B. Digital boundaries: Clear disclosure and oversight when artificial intelligence tools materially affect clinical work or client information. / AI use transparency: Professional limits governing online contact, social media, and technology-mediated relationships.
C. Digital boundaries: Professional limits governing online contact, social media, and technology-mediated relationships. / AI use transparency: Advance procedures for responding to an urgent event during remote care, including location and contacts.
D. Digital boundaries: Collecting and retaining only the personal information necessary for a defined legitimate purpose. / AI use transparency: Clear disclosure and oversight when artificial intelligence tools materially affect clinical work or client information.

0315. A assessment clinician and a young person aged 13 are discussing support in the clinical planning session. The selected practice is confirming current location and emergency contacts at the start of a remote session as appropriate. Which concept does this demonstrate?

A. Digital boundaries
B. AI use transparency
C. Data minimization
D. Telehealth emergency planning

0316. Which statement most accurately defines Technology contingency planning?

A. Advance procedures for responding to an urgent event during remote care, including location and contacts.
B. Assessment of an app's evidence, privacy, accessibility, usability, and fit before recommending it.
C. A plan for continuing or safely pausing care when devices, connectivity, or platforms fail.
D. Routine practices such as strong authentication, updates, and secure handling that reduce digital risk.

0317. A trainee must distinguish how Technology access equity and Digital boundaries guide practice. Which comparison is accurate?

A. Technology access equity: Using approved secure systems and avoiding sensitive information on shared or unsecured channels. / Digital boundaries: Clarifying approved communication channels and response times with families.
B. Technology access equity: Asking about device and privacy barriers before assuming a youth can participate remotely. / Digital boundaries: Avoiding unnecessary data capture and retaining only what policy and law require.
C. Technology access equity: Clarifying approved communication channels and response times with families. / Digital boundaries: Asking about device and privacy barriers before assuming a youth can participate remotely.
D. Technology access equity: Asking about device and privacy barriers before assuming a youth can participate remotely. / Digital boundaries: Clarifying approved communication channels and response times with families.

0318. Which choice aligns each practice with the correct idea, Digital confidentiality or Telehealth emergency planning?

A. Digital confidentiality: Reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate. / Telehealth emergency planning: Confirming current location and emergency contacts at the start of a remote session as appropriate.
B. Digital confidentiality: Using approved secure systems and avoiding sensitive information on shared or unsecured channels. / Telehealth emergency planning: Asking about device and privacy barriers before assuming a youth can participate remotely.
C. Digital confidentiality: Confirming current location and emergency contacts at the start of a remote session as appropriate. / Telehealth emergency planning: Using approved secure systems and avoiding sensitive information on shared or unsecured channels.
D. Digital confidentiality: Using approved secure systems and avoiding sensitive information on shared or unsecured channels. / Telehealth emergency planning: Confirming current location and emergency contacts at the start of a remote session as appropriate.

0319. Which comparison correctly distinguishes Data minimization from AI use transparency?

A. Data minimization: Collecting and retaining only the personal information necessary for a defined legitimate purpose. / AI use transparency: Clear disclosure and oversight when artificial intelligence tools materially affect clinical work or client information.
B. Data minimization: Clear disclosure and oversight when artificial intelligence tools materially affect clinical work or client information. / AI use transparency: Collecting and retaining only the personal information necessary for a defined legitimate purpose.
C. Data minimization: Collecting and retaining only the personal information necessary for a defined legitimate purpose. / AI use transparency: Assessment of an app's evidence, privacy, accessibility, usability, and fit before recommending it.
D. Data minimization: An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans. / AI use transparency: Clear disclosure and oversight when artificial intelligence tools materially affect clinical work or client information.

0320. Which comparison would correct a trainee's misunderstanding of Therapeutic app evaluation versus AI use transparency?

A. Therapeutic app evaluation: Assessment of an app's evidence, privacy, accessibility, usability, and fit before recommending it. / AI use transparency: Clear disclosure and oversight when artificial intelligence tools materially affect clinical work or client information.
B. Therapeutic app evaluation: Professional limits governing online contact, social media, and technology-mediated relationships. / AI use transparency: Clear disclosure and oversight when artificial intelligence tools materially affect clinical work or client information.
C. Therapeutic app evaluation: Clear disclosure and oversight when artificial intelligence tools materially affect clinical work or client information. / AI use transparency: Assessment of an app's evidence, privacy, accessibility, usability, and fit before recommending it.
D. Therapeutic app evaluation: Assessment of an app's evidence, privacy, accessibility, usability, and fit before recommending it. / AI use transparency: Advance procedures for responding to an urgent event during remote care, including location and contacts.

0321. Choose the response that best puts Telehealth emergency planning into practice.

A. Agreeing on a backup contact method and next step if a session disconnects.
B. Confirming current location and emergency contacts at the start of a remote session as appropriate.
C. Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care.
D. Asking about device and privacy barriers before assuming a youth can participate remotely.

0322. Which named construct is captured by this account? Assessment of an app's evidence, privacy, accessibility, usability, and fit before recommending it.

A. Digital boundaries
B. Technology contingency planning
C. Therapeutic app evaluation
D. Data minimization

0323. How should a practitioner distinguish the applications of Cybersecurity hygiene and Technology contingency planning?

A. Cybersecurity hygiene: Agreeing on a backup contact method and next step if a session disconnects. / Technology contingency planning: Using access controls and keeping approved systems updated.
B. Cybersecurity hygiene: Using access controls and keeping approved systems updated. / Technology contingency planning: Using approved secure systems and avoiding sensitive information on shared or unsecured channels.
C. Cybersecurity hygiene: Asking about device and privacy barriers before assuming a youth can participate remotely. / Technology contingency planning: Agreeing on a backup contact method and next step if a session disconnects.
D. Cybersecurity hygiene: Using access controls and keeping approved systems updated. / Technology contingency planning: Agreeing on a backup contact method and next step if a session disconnects.

0324. Which comparison correctly distinguishes Data minimization from Therapeutic app evaluation?

A. Data minimization: An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans. / Therapeutic app evaluation: Assessment of an app's evidence, privacy, accessibility, usability, and fit before recommending it.
B. Data minimization: Collecting and retaining only the personal information necessary for a defined legitimate purpose. / Therapeutic app evaluation: A plan for continuing or safely pausing care when devices, connectivity, or platforms fail.
C. Data minimization: Assessment of an app's evidence, privacy, accessibility, usability, and fit before recommending it. / Therapeutic app evaluation: Collecting and retaining only the personal information necessary for a defined legitimate purpose.
D. Data minimization: Collecting and retaining only the personal information necessary for a defined legitimate purpose. / Therapeutic app evaluation: Assessment of an app's evidence, privacy, accessibility, usability, and fit before recommending it.

0325. A youth worker is asked to justify a plan for a child aged 7 in the youth advocacy program. It calls for agreeing on a backup contact method and next step if a session disconnects. Which concept provides the rationale?

A. Telehealth informed consent
B. Technology access equity
C. Cybersecurity hygiene
D. Technology contingency planning

0326. Which paired example correctly applies Therapeutic app evaluation first and Technology contingency planning second?

A. Therapeutic app evaluation: Reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate. / Technology contingency planning: Avoiding unnecessary data capture and retaining only what policy and law require.
B. Therapeutic app evaluation: Agreeing on a backup contact method and next step if a session disconnects. / Technology contingency planning: Reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate.
C. Therapeutic app evaluation: Reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate. / Technology contingency planning: Agreeing on a backup contact method and next step if a session disconnects.
D. Therapeutic app evaluation: Using access controls and keeping approved systems updated. / Technology contingency planning: Agreeing on a backup contact method and next step if a session disconnects.

0327. A child aged 11 is receiving support in the family resource center. The youth worker is guided by this practice: asking about device and privacy barriers before assuming a youth can participate remotely. Which principle best fits?

A. Telehealth emergency planning
B. Digital boundaries
C. Technology access equity
D. Telehealth informed consent

0328. A school support specialist is asked to evaluate a proposed service for a young person aged 16 in the counseling practicum. The defining feature is clarifying approved communication channels and response times with families. Which concept fits?

A. Technology contingency planning
B. Data minimization
C. Digital boundaries
D. Technology access equity

0329. In a supervision review, a caregiver working with a counselor describes work with a middle-school student in the child guidance clinic: using approved secure systems and avoiding sensitive information on shared or unsecured channels. What concept is illustrated?

A. AI use transparency
B. Digital confidentiality
C. Digital boundaries
D. Technology access equity

0330. A trainee must distinguish how Technology access equity and Cybersecurity hygiene guide practice. Which comparison is accurate?

A. Technology access equity: Asking about device and privacy barriers before assuming a youth can participate remotely. / Cybersecurity hygiene: Using access controls and keeping approved systems updated.
B. Technology access equity: Using access controls and keeping approved systems updated. / Cybersecurity hygiene: Asking about device and privacy barriers before assuming a youth can participate remotely.
C. Technology access equity: Asking about device and privacy barriers before assuming a youth can participate remotely. / Cybersecurity hygiene: Clarifying approved communication channels and response times with families.
D. Technology access equity: Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care. / Cybersecurity hygiene: Using access controls and keeping approved systems updated.

0331. Which option is the clearest practical expression of Data minimization?

A. Checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool.
B. Avoiding unnecessary data capture and retaining only what policy and law require.
C. Using access controls and keeping approved systems updated.
D. Confirming current location and emergency contacts at the start of a remote session as appropriate.

0332. Which option correctly matches each concept to its practice focus: Data minimization and Cybersecurity hygiene?

A. Data minimization: Avoiding unnecessary data capture and retaining only what policy and law require. / Cybersecurity hygiene: Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care.
B. Data minimization: Using access controls and keeping approved systems updated. / Cybersecurity hygiene: Avoiding unnecessary data capture and retaining only what policy and law require.
C. Data minimization: Using approved secure systems and avoiding sensitive information on shared or unsecured channels. / Cybersecurity hygiene: Using access controls and keeping approved systems updated.
D. Data minimization: Avoiding unnecessary data capture and retaining only what policy and law require. / Cybersecurity hygiene: Using access controls and keeping approved systems updated.

0333. In the multidisciplinary case conference, a caregiver working with a counselor is considering this approach for a client in late adolescence: checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool. Which framework does it represent?

A. Therapeutic app evaluation
B. Telehealth informed consent
C. AI use transparency
D. Digital boundaries

0334. In the community youth program, a consulting counselor explains why a young person aged 16 would benefit from checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool. Which course concept underpins the explanation?

A. Technology access equity
B. AI use transparency
C. Telehealth emergency planning
D. Digital confidentiality

0335. Choose the definition pair that correctly explains Telehealth informed consent first and Digital boundaries second.

A. Telehealth informed consent: An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans. / Digital boundaries: Routine practices such as strong authentication, updates, and secure handling that reduce digital risk.
B. Telehealth informed consent: An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans. / Digital boundaries: Professional limits governing online contact, social media, and technology-mediated relationships.
C. Telehealth informed consent: Protection of sensitive information across devices, networks, platforms, and communications. / Digital boundaries: Professional limits governing online contact, social media, and technology-mediated relationships.
D. Telehealth informed consent: Professional limits governing online contact, social media, and technology-mediated relationships. / Digital boundaries: An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans.

0336. Choose the practice comparison that best separates Technology access equity from Digital boundaries.

A. Technology access equity: Asking about device and privacy barriers before assuming a youth can participate remotely. / Digital boundaries: Avoiding unnecessary data capture and retaining only what policy and law require.
B. Technology access equity: Clarifying approved communication channels and response times with families. / Digital boundaries: Asking about device and privacy barriers before assuming a youth can participate remotely.
C. Technology access equity: Using approved secure systems and avoiding sensitive information on shared or unsecured channels. / Digital boundaries: Clarifying approved communication channels and response times with families.
D. Technology access equity: Asking about device and privacy barriers before assuming a youth can participate remotely. / Digital boundaries: Clarifying approved communication channels and response times with families.

0337. During service review in the behavior-support review, a service navigator describes checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool. for a child aged 8. Which course idea is most applicable?

A. Technology access equity
B. Digital boundaries
C. AI use transparency
D. Telehealth informed consent

0338. Which comparison correctly distinguishes Technology access equity from Therapeutic app evaluation?

A. Technology access equity: Attention to unequal access to devices, bandwidth, private space, and digital skills. / Therapeutic app evaluation: Advance procedures for responding to an urgent event during remote care, including location and contacts.
B. Technology access equity: Collecting and retaining only the personal information necessary for a defined legitimate purpose. / Therapeutic app evaluation: Assessment of an app's evidence, privacy, accessibility, usability, and fit before recommending it.
C. Technology access equity: Assessment of an app's evidence, privacy, accessibility, usability, and fit before recommending it. / Therapeutic app evaluation: Attention to unequal access to devices, bandwidth, private space, and digital skills.
D. Technology access equity: Attention to unequal access to devices, bandwidth, private space, and digital skills. / Therapeutic app evaluation: Assessment of an app's evidence, privacy, accessibility, usability, and fit before recommending it.

0339. Consider a young person aged 16 receiving help in the community service agency. The school counselor focuses on asking about device and privacy barriers before assuming a youth can participate remotely. Which term best describes the guiding idea?

A. Technology access equity
B. AI use transparency
C. Technology contingency planning
D. Therapeutic app evaluation

0340. A student confuses Digital confidentiality with Telehealth emergency planning. Which explanation most accurately separates them?

A. Digital confidentiality: Protection of sensitive information across devices, networks, platforms, and communications. / Telehealth emergency planning: Attention to unequal access to devices, bandwidth, private space, and digital skills.
B. Digital confidentiality: Assessment of an app's evidence, privacy, accessibility, usability, and fit before recommending it. / Telehealth emergency planning: Advance procedures for responding to an urgent event during remote care, including location and contacts.
C. Digital confidentiality: Advance procedures for responding to an urgent event during remote care, including location and contacts. / Telehealth emergency planning: Protection of sensitive information across devices, networks, platforms, and communications.
D. Digital confidentiality: Protection of sensitive information across devices, networks, platforms, and communications. / Telehealth emergency planning: Advance procedures for responding to an urgent event during remote care, including location and contacts.

0341. A member of a clinical team is preparing a follow-up plan for a child aged 8 in the counseling practicum. The plan calls for confirming current location and emergency contacts at the start of a remote session as appropriate. Which concept names this approach?

A. Telehealth emergency planning
B. Digital boundaries
C. Data minimization
D. Technology contingency planning

0342. A case discussion concerns a high-school student and a caregiver working with a counselor in the telehealth session. The practitioner is considering agreeing on a backup contact method and next step if a session disconnects. Which principle is involved?

A. Cybersecurity hygiene
B. Digital confidentiality
C. Technology contingency planning
D. Telehealth informed consent

0343. A supervised trainee and a young person aged 16 are discussing support in the caregiver consultation. The selected practice is using access controls and keeping approved systems updated. Which concept does this demonstrate?

A. Telehealth informed consent
B. Cybersecurity hygiene
C. Technology contingency planning
D. Digital confidentiality

0344. A youth worker is explaining a choice to a child aged 11 and caregiver in the family resource center. The choice centers on asking about device and privacy barriers before assuming a youth can participate remotely. Which idea is illustrated?

A. Digital boundaries
B. Data minimization
C. Technology access equity
D. Cybersecurity hygiene

0345. Which paired example correctly applies Data minimization first and AI use transparency second?

A. Data minimization: Avoiding unnecessary data capture and retaining only what policy and law require. / AI use transparency: Reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate.
B. Data minimization: Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care. / AI use transparency: Checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool.
C. Data minimization: Checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool. / AI use transparency: Avoiding unnecessary data capture and retaining only what policy and law require.
D. Data minimization: Avoiding unnecessary data capture and retaining only what policy and law require. / AI use transparency: Checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool.

0346. A trainee must choose a practice that exemplifies Therapeutic app evaluation. Which action is the best fit?

A. Avoiding unnecessary data capture and retaining only what policy and law require.
B. Agreeing on a backup contact method and next step if a session disconnects.
C. Reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate.
D. Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care.

0347. How should a practitioner distinguish the applications of Digital confidentiality and Data minimization?

A. Digital confidentiality: Avoiding unnecessary data capture and retaining only what policy and law require. / Data minimization: Using approved secure systems and avoiding sensitive information on shared or unsecured channels.
B. Digital confidentiality: Using approved secure systems and avoiding sensitive information on shared or unsecured channels. / Data minimization: Agreeing on a backup contact method and next step if a session disconnects.
C. Digital confidentiality: Using approved secure systems and avoiding sensitive information on shared or unsecured channels. / Data minimization: Avoiding unnecessary data capture and retaining only what policy and law require.
D. Digital confidentiality: Clarifying approved communication channels and response times with families. / Data minimization: Avoiding unnecessary data capture and retaining only what policy and law require.

0348. A case conference asks for a distinction between Technology access equity and Cybersecurity hygiene. Which answer is sound?

A. Technology access equity: Attention to unequal access to devices, bandwidth, private space, and digital skills. / Cybersecurity hygiene: Professional limits governing online contact, social media, and technology-mediated relationships.
B. Technology access equity: Routine practices such as strong authentication, updates, and secure handling that reduce digital risk. / Cybersecurity hygiene: Attention to unequal access to devices, bandwidth, private space, and digital skills.
C. Technology access equity: Attention to unequal access to devices, bandwidth, private space, and digital skills. / Cybersecurity hygiene: Routine practices such as strong authentication, updates, and secure handling that reduce digital risk.
D. Technology access equity: An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans. / Cybersecurity hygiene: Routine practices such as strong authentication, updates, and secure handling that reduce digital risk.

0349. A case conference reviews a service navigator's work with a teenage client in the counseling practicum: using approved secure systems and avoiding sensitive information on shared or unsecured channels. Which principle is central?

A. Therapeutic app evaluation
B. Cybersecurity hygiene
C. Telehealth emergency planning
D. Digital confidentiality

0350. Choose the practice comparison that best separates Telehealth informed consent from Technology contingency planning.

A. Telehealth informed consent: Agreeing on a backup contact method and next step if a session disconnects. / Technology contingency planning: Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care.
B. Telehealth informed consent: Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care. / Technology contingency planning: Agreeing on a backup contact method and next step if a session disconnects.
C. Telehealth informed consent: Using access controls and keeping approved systems updated. / Technology contingency planning: Agreeing on a backup contact method and next step if a session disconnects.
D. Telehealth informed consent: Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care. / Technology contingency planning: Avoiding unnecessary data capture and retaining only what policy and law require.

0351. In the supervision meeting, a teacher and counselor describes the most appropriate support for a child aged 8 as agreeing on a backup contact method and next step if a session disconnects. Which framework is being applied?

A. Therapeutic app evaluation
B. Digital boundaries
C. Telehealth informed consent
D. Technology contingency planning

0352. A group facilitator is asked to justify a plan for a young person in the clinical planning session. It calls for reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care. Which concept provides the rationale?

A. Technology access equity
B. Telehealth informed consent
C. Digital boundaries
D. Telehealth emergency planning

0353. How are Telehealth informed consent and AI use transparency most accurately differentiated in this curriculum?

A. Telehealth informed consent: Clear disclosure and oversight when artificial intelligence tools materially affect clinical work or client information. / AI use transparency: An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans.
B. Telehealth informed consent: Advance procedures for responding to an urgent event during remote care, including location and contacts. / AI use transparency: Clear disclosure and oversight when artificial intelligence tools materially affect clinical work or client information.
C. Telehealth informed consent: An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans. / AI use transparency: Clear disclosure and oversight when artificial intelligence tools materially affect clinical work or client information.
D. Telehealth informed consent: An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans. / AI use transparency: Collecting and retaining only the personal information necessary for a defined legitimate purpose.

0354. Which statement shows a sound practice-level distinction between Telehealth informed consent and Cybersecurity hygiene?

A. Telehealth informed consent: Using access controls and keeping approved systems updated. / Cybersecurity hygiene: Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care.
B. Telehealth informed consent: Agreeing on a backup contact method and next step if a session disconnects. / Cybersecurity hygiene: Using access controls and keeping approved systems updated.
C. Telehealth informed consent: Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care. / Cybersecurity hygiene: Using access controls and keeping approved systems updated.
D. Telehealth informed consent: Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care. / Cybersecurity hygiene: Confirming current location and emergency contacts at the start of a remote session as appropriate.

0355. A team must select a support approach for a preadolescent child at the multidisciplinary case conference. The school-based clinician recommends asking about device and privacy barriers before assuming a youth can participate remotely. Which idea is most relevant?

A. Technology contingency planning
B. Telehealth informed consent
C. Cybersecurity hygiene
D. Technology access equity

0356. Which applied comparison correctly identifies what belongs to Telehealth emergency planning versus AI use transparency?

A. Telehealth emergency planning: Checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool. / AI use transparency: Confirming current location and emergency contacts at the start of a remote session as appropriate.
B. Telehealth emergency planning: Reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate. / AI use transparency: Checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool.
C. Telehealth emergency planning: Confirming current location and emergency contacts at the start of a remote session as appropriate. / AI use transparency: Checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool.
D. Telehealth emergency planning: Confirming current location and emergency contacts at the start of a remote session as appropriate. / AI use transparency: Using access controls and keeping approved systems updated.

0357. A teacher and counselor is explaining a choice to a child aged 14 and caregiver in the family session. The choice centers on reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate. Which idea is illustrated?

A. Technology access equity
B. Technology contingency planning
C. Therapeutic app evaluation
D. Telehealth emergency planning

0358. A consultant and a young person are discussing support in the school-based service. The selected practice is checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool. Which concept does this demonstrate?

A. AI use transparency
B. Telehealth informed consent
C. Digital confidentiality
D. Therapeutic app evaluation

0359. Choose the practice comparison that best separates Digital confidentiality from Therapeutic app evaluation.

A. Digital confidentiality: Using approved secure systems and avoiding sensitive information on shared or unsecured channels. / Therapeutic app evaluation: Reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate.
B. Digital confidentiality: Reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate. / Therapeutic app evaluation: Using approved secure systems and avoiding sensitive information on shared or unsecured channels.
C. Digital confidentiality: Confirming current location and emergency contacts at the start of a remote session as appropriate. / Therapeutic app evaluation: Reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate.
D. Digital confidentiality: Using approved secure systems and avoiding sensitive information on shared or unsecured channels. / Therapeutic app evaluation: Agreeing on a backup contact method and next step if a session disconnects.

0360. A member of a clinical team and a student aged 12 are discussing support in the behavior-support review. The selected practice is agreeing on a backup contact method and next step if a session disconnects. Which concept does this demonstrate?

A. Therapeutic app evaluation
B. Technology access equity
C. Telehealth emergency planning
D. Technology contingency planning

0361. A consultant is supporting a middle-school student in the youth group. The key practice is confirming current location and emergency contacts at the start of a remote session as appropriate. Which course concept is most relevant?

A. Cybersecurity hygiene
B. Technology contingency planning
C. Telehealth emergency planning
D. Data minimization

0362. A community practitioner is asked what should shape a young person aged 13's support in the behavior-support review. The proposed focus is asking about device and privacy barriers before assuming a youth can participate remotely. Which principle does it represent?

A. Telehealth emergency planning
B. Telehealth informed consent
C. Digital confidentiality
D. Technology access equity

0363. In a supervision quiz, how should Telehealth emergency planning be distinguished from AI use transparency?

A. Telehealth emergency planning: Clear disclosure and oversight when artificial intelligence tools materially affect clinical work or client information. / AI use transparency: Advance procedures for responding to an urgent event during remote care, including location and contacts.
B. Telehealth emergency planning: Advance procedures for responding to an urgent event during remote care, including location and contacts. / AI use transparency: Routine practices such as strong authentication, updates, and secure handling that reduce digital risk.
C. Telehealth emergency planning: Assessment of an app's evidence, privacy, accessibility, usability, and fit before recommending it. / AI use transparency: Clear disclosure and oversight when artificial intelligence tools materially affect clinical work or client information.
D. Telehealth emergency planning: Advance procedures for responding to an urgent event during remote care, including location and contacts. / AI use transparency: Clear disclosure and oversight when artificial intelligence tools materially affect clinical work or client information.

0364. A planning meeting about a student aged 17 includes a play therapist. The proposed practice in the student-support meeting is reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate. Which idea underlies it?

A. AI use transparency
B. Digital boundaries
C. Therapeutic app evaluation
D. Digital confidentiality

0365. A student aged 12 and a mental-health professional are reviewing goals in the after-school program. The agreed action is clarifying approved communication channels and response times with families. Which principle best accounts for it?

A. Digital boundaries
B. Technology contingency planning
C. Telehealth informed consent
D. AI use transparency

0366. At the school counseling office, a counselor meets with a child aged 8. The practice priority is: reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care. Which concept best captures that priority?

A. Technology contingency planning
B. Digital boundaries
C. Data minimization
D. Telehealth informed consent

0367. At a case-planning meeting, the behavior specialist proposes clarifying approved communication channels and response times with families. for a child aged 11 seen in the multidisciplinary case conference. Which concept does this illustrate?

A. Telehealth informed consent
B. Digital confidentiality
C. Cybersecurity hygiene
D. Digital boundaries

0368. Which choice aligns each practice with the correct idea, Telehealth informed consent or Technology access equity?

A. Telehealth informed consent: Asking about device and privacy barriers before assuming a youth can participate remotely. / Technology access equity: Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care.
B. Telehealth informed consent: Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care. / Technology access equity: Asking about device and privacy barriers before assuming a youth can participate remotely.
C. Telehealth informed consent: Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care. / Technology access equity: Checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool.
D. Telehealth informed consent: Confirming current location and emergency contacts at the start of a remote session as appropriate. / Technology access equity: Asking about device and privacy barriers before assuming a youth can participate remotely.

0369. Which option is the clearest practical expression of Digital boundaries?

A. Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care.
B. Clarifying approved communication channels and response times with families.
C. Using approved secure systems and avoiding sensitive information on shared or unsecured channels.
D. Asking about device and privacy barriers before assuming a youth can participate remotely.

0370. A student confuses Cybersecurity hygiene with AI use transparency. Which explanation most accurately separates them?

A. Cybersecurity hygiene: Routine practices such as strong authentication, updates, and secure handling that reduce digital risk. / AI use transparency: Clear disclosure and oversight when artificial intelligence tools materially affect clinical work or client information.
B. Cybersecurity hygiene: Routine practices such as strong authentication, updates, and secure handling that reduce digital risk. / AI use transparency: Professional limits governing online contact, social media, and technology-mediated relationships.
C. Cybersecurity hygiene: Clear disclosure and oversight when artificial intelligence tools materially affect clinical work or client information. / AI use transparency: Routine practices such as strong authentication, updates, and secure handling that reduce digital risk.
D. Cybersecurity hygiene: Advance procedures for responding to an urgent event during remote care, including location and contacts. / AI use transparency: Clear disclosure and oversight when artificial intelligence tools materially affect clinical work or client information.

0371. Which pair of actions illustrates Data minimization and Technology contingency planning, respectively?

A. Data minimization: Using access controls and keeping approved systems updated. / Technology contingency planning: Agreeing on a backup contact method and next step if a session disconnects.
B. Data minimization: Avoiding unnecessary data capture and retaining only what policy and law require. / Technology contingency planning: Agreeing on a backup contact method and next step if a session disconnects.
C. Data minimization: Avoiding unnecessary data capture and retaining only what policy and law require. / Technology contingency planning: Confirming current location and emergency contacts at the start of a remote session as appropriate.
D. Data minimization: Agreeing on a backup contact method and next step if a session disconnects. / Technology contingency planning: Avoiding unnecessary data capture and retaining only what policy and law require.

0372. Which option is the clearest practical expression of AI use transparency?

A. Checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool.
B. Reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate.
C. Avoiding unnecessary data capture and retaining only what policy and law require.
D. Confirming current location and emergency contacts at the start of a remote session as appropriate.

0373. Which option correctly matches each concept to its practice focus: Digital confidentiality and Data minimization?

A. Digital confidentiality: Clarifying approved communication channels and response times with families. / Data minimization: Avoiding unnecessary data capture and retaining only what policy and law require.
B. Digital confidentiality: Using approved secure systems and avoiding sensitive information on shared or unsecured channels. / Data minimization: Avoiding unnecessary data capture and retaining only what policy and law require.
C. Digital confidentiality: Avoiding unnecessary data capture and retaining only what policy and law require. / Data minimization: Using approved secure systems and avoiding sensitive information on shared or unsecured channels.
D. Digital confidentiality: Using approved secure systems and avoiding sensitive information on shared or unsecured channels. / Data minimization: Agreeing on a backup contact method and next step if a session disconnects.

0374. A school support specialist reviews a plan for a client in early adolescence in the youth group. The plan emphasizes agreeing on a backup contact method and next step if a session disconnects. Which course idea does this reflect?

A. Digital boundaries
B. Technology contingency planning
C. Digital confidentiality
D. Data minimization

0375. Which choice aligns each practice with the correct idea, Digital boundaries or AI use transparency?

A. Digital boundaries: Avoiding unnecessary data capture and retaining only what policy and law require. / AI use transparency: Checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool.
B. Digital boundaries: Checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool. / AI use transparency: Clarifying approved communication channels and response times with families.
C. Digital boundaries: Clarifying approved communication channels and response times with families. / AI use transparency: Confirming current location and emergency contacts at the start of a remote session as appropriate.
D. Digital boundaries: Clarifying approved communication channels and response times with families. / AI use transparency: Checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool.

0376. Identify the most precise label for this idea: Protection of sensitive information across devices, networks, platforms, and communications.

A. Technology contingency planning
B. Digital confidentiality
C. Cybersecurity hygiene
D. Therapeutic app evaluation

0377. In a supervision review, a family therapist describes work with a young person in the supervision meeting: confirming current location and emergency contacts at the start of a remote session as appropriate. What concept is illustrated?

A. AI use transparency
B. Telehealth emergency planning
C. Therapeutic app evaluation
D. Technology access equity

0378. Which pair of actions illustrates Cybersecurity hygiene and Therapeutic app evaluation, respectively?

A. Cybersecurity hygiene: Using access controls and keeping approved systems updated. / Therapeutic app evaluation: Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care.
B. Cybersecurity hygiene: Reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate. / Therapeutic app evaluation: Using access controls and keeping approved systems updated.
C. Cybersecurity hygiene: Using access controls and keeping approved systems updated. / Therapeutic app evaluation: Reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate.
D. Cybersecurity hygiene: Using approved secure systems and avoiding sensitive information on shared or unsecured channels. / Therapeutic app evaluation: Reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate.

0379. A supervisor asks how Telehealth informed consent would appear in practice. Which choice should be selected?

A. Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care.
B. Reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate.
C. Clarifying approved communication channels and response times with families.
D. Checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool.

0380. A community practitioner is asked what should shape a middle-school student's support in the community mental-health service. The proposed focus is checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool. Which principle does it represent?

A. Cybersecurity hygiene
B. AI use transparency
C. Therapeutic app evaluation
D. Technology contingency planning

0381. Which choice aligns each practice with the correct idea, Digital confidentiality or Cybersecurity hygiene?

A. Digital confidentiality: Checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool. / Cybersecurity hygiene: Using access controls and keeping approved systems updated.
B. Digital confidentiality: Using approved secure systems and avoiding sensitive information on shared or unsecured channels. / Cybersecurity hygiene: Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care.
C. Digital confidentiality: Using access controls and keeping approved systems updated. / Cybersecurity hygiene: Using approved secure systems and avoiding sensitive information on shared or unsecured channels.
D. Digital confidentiality: Using approved secure systems and avoiding sensitive information on shared or unsecured channels. / Cybersecurity hygiene: Using access controls and keeping approved systems updated.

0382. How are Technology access equity and Technology contingency planning most accurately differentiated in this curriculum?

A. Technology access equity: Attention to unequal access to devices, bandwidth, private space, and digital skills. / Technology contingency planning: An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans.
B. Technology access equity: A plan for continuing or safely pausing care when devices, connectivity, or platforms fail. / Technology contingency planning: Attention to unequal access to devices, bandwidth, private space, and digital skills.
C. Technology access equity: Routine practices such as strong authentication, updates, and secure handling that reduce digital risk. / Technology contingency planning: A plan for continuing or safely pausing care when devices, connectivity, or platforms fail.
D. Technology access equity: Attention to unequal access to devices, bandwidth, private space, and digital skills. / Technology contingency planning: A plan for continuing or safely pausing care when devices, connectivity, or platforms fail.

0383. In the classroom support meeting, a team asks how a teacher and counselor can support a student aged 17. One proposed action is using access controls and keeping approved systems updated. Which idea does it represent?

A. Cybersecurity hygiene
B. AI use transparency
C. Technology access equity
D. Digital boundaries

0384. A case conference asks for a distinction between Technology access equity and Data minimization. Which answer is sound?

A. Technology access equity: Attention to unequal access to devices, bandwidth, private space, and digital skills. / Data minimization: Collecting and retaining only the personal information necessary for a defined legitimate purpose.
B. Technology access equity: Collecting and retaining only the personal information necessary for a defined legitimate purpose. / Data minimization: Attention to unequal access to devices, bandwidth, private space, and digital skills.
C. Technology access equity: Attention to unequal access to devices, bandwidth, private space, and digital skills. / Data minimization: Advance procedures for responding to an urgent event during remote care, including location and contacts.
D. Technology access equity: A plan for continuing or safely pausing care when devices, connectivity, or platforms fail. / Data minimization: Collecting and retaining only the personal information necessary for a defined legitimate purpose.

0385. A team must select a support approach for a high-school student at the telehealth session. The caregiver working with a counselor recommends agreeing on a backup contact method and next step if a session disconnects. Which idea is most relevant?

A. Data minimization
B. Digital confidentiality
C. Technology contingency planning
D. Digital boundaries

0386. At the supervision meeting, a community practitioner reviews whether a plan for a older adolescent client is appropriate. The relevant practice is reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care. Which concept is tested?

A. Technology contingency planning
B. Technology access equity
C. Telehealth emergency planning
D. Telehealth informed consent

0387. For a child aged 8 in the telehealth session, a behavior specialist makes this practice the immediate priority: avoiding unnecessary data capture and retaining only what policy and law require. Which concept fits best?

A. Digital confidentiality
B. Data minimization
C. Digital boundaries
D. Telehealth informed consent

0388. Which option preserves the correct meaning of both Telehealth informed consent and Data minimization?

A. Telehealth informed consent: Attention to unequal access to devices, bandwidth, private space, and digital skills. / Data minimization: Collecting and retaining only the personal information necessary for a defined legitimate purpose.
B. Telehealth informed consent: Collecting and retaining only the personal information necessary for a defined legitimate purpose. / Data minimization: An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans.
C. Telehealth informed consent: An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans. / Data minimization: Collecting and retaining only the personal information necessary for a defined legitimate purpose.
D. Telehealth informed consent: An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans. / Data minimization: A plan for continuing or safely pausing care when devices, connectivity, or platforms fail.

0389. A case conference asks for a distinction between Technology access equity and Digital boundaries. Which answer is sound?

A. Technology access equity: Protection of sensitive information across devices, networks, platforms, and communications. / Digital boundaries: Professional limits governing online contact, social media, and technology-mediated relationships.
B. Technology access equity: Professional limits governing online contact, social media, and technology-mediated relationships. / Digital boundaries: Attention to unequal access to devices, bandwidth, private space, and digital skills.
C. Technology access equity: Attention to unequal access to devices, bandwidth, private space, and digital skills. / Digital boundaries: Professional limits governing online contact, social media, and technology-mediated relationships.
D. Technology access equity: Attention to unequal access to devices, bandwidth, private space, and digital skills. / Digital boundaries: Collecting and retaining only the personal information necessary for a defined legitimate purpose.

0390. A middle-school student and a consultant are reviewing goals in the youth group. The agreed action is confirming current location and emergency contacts at the start of a remote session as appropriate. Which principle best accounts for it?

A. Technology access equity
B. Digital boundaries
C. Data minimization
D. Telehealth emergency planning

0391. Choose the definition pair that correctly explains Digital boundaries first and Therapeutic app evaluation second.

A. Digital boundaries: Professional limits governing online contact, social media, and technology-mediated relationships. / Therapeutic app evaluation: Assessment of an app’s evidence, privacy, accessibility, usability, and fit before recommending it.
B. Digital boundaries: Assessment of an app’s evidence, privacy, accessibility, usability, and fit before recommending it. / Therapeutic app evaluation: Professional limits governing online contact, social media, and technology-mediated relationships.
C. Digital boundaries: Professional limits governing online contact, social media, and technology-mediated relationships. / Therapeutic app evaluation: Clear disclosure and oversight when artificial intelligence tools materially affect clinical work or client information.
D. Digital boundaries: Protection of sensitive information across devices, networks, platforms, and communications. / Therapeutic app evaluation: Assessment of an app’s evidence, privacy, accessibility, usability, and fit before recommending it.

0392. For a client in early adolescence in the outpatient clinic, a play therapist makes this practice the immediate priority: clarifying approved communication channels and response times with families. Which concept fits best?

A. Cybersecurity hygiene
B. Therapeutic app evaluation
C. Telehealth informed consent
D. Digital boundaries

0393. Which pair of actions illustrates Telehealth informed consent and Technology contingency planning, respectively?

A. Telehealth informed consent: Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care. / Technology contingency planning: Agreeing on a backup contact method and next step if a session disconnects.
B. Telehealth informed consent: Agreeing on a backup contact method and next step if a session disconnects. / Technology contingency planning: Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care.
C. Telehealth informed consent: Using access controls and keeping approved systems updated. / Technology contingency planning: Agreeing on a backup contact method and next step if a session disconnects.
D. Telehealth informed consent: Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care. / Technology contingency planning: Avoiding unnecessary data capture and retaining only what policy and law require.

0394. A family therapist presents a support plan for a child aged 7 at the child guidance clinic. Its central feature is using access controls and keeping approved systems updated. Which concept should be named?

A. Digital confidentiality
B. Telehealth emergency planning
C. Data minimization
D. Cybersecurity hygiene

0395. In a professional consultation about a high-school student, the member of a clinical team describes this response in the community service agency: avoiding unnecessary data capture and retaining only what policy and law require. Which term is most apt?

A. Digital confidentiality
B. Therapeutic app evaluation
C. Data minimization
D. Cybersecurity hygiene

0396. In a case note about a young person aged 10, a supervised trainee working in the learning-support meeting records this priority: checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool. What principle is reflected?

A. Telehealth emergency planning
B. AI use transparency
C. Cybersecurity hygiene
D. Technology access equity

0397. Which pair of actions illustrates Digital confidentiality and Digital boundaries, respectively?

A. Digital confidentiality: Using approved secure systems and avoiding sensitive information on shared or unsecured channels. / Digital boundaries: Clarifying approved communication channels and response times with families.
B. Digital confidentiality: Clarifying approved communication channels and response times with families. / Digital boundaries: Using approved secure systems and avoiding sensitive information on shared or unsecured channels.
C. Digital confidentiality: Using approved secure systems and avoiding sensitive information on shared or unsecured channels. / Digital boundaries: Avoiding unnecessary data capture and retaining only what policy and law require.
D. Digital confidentiality: Reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate. / Digital boundaries: Clarifying approved communication channels and response times with families.

0398. Which applied comparison correctly identifies what belongs to Telehealth informed consent versus Technology access equity?

A. Telehealth informed consent: Asking about device and privacy barriers before assuming a youth can participate remotely. / Technology access equity: Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care.
B. Telehealth informed consent: Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care. / Technology access equity: Checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool.
C. Telehealth informed consent: Confirming current location and emergency contacts at the start of a remote session as appropriate. / Technology access equity: Asking about device and privacy barriers before assuming a youth can participate remotely.
D. Telehealth informed consent: Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care. / Technology access equity: Asking about device and privacy barriers before assuming a youth can participate remotely.

0399. Which paired example correctly applies Technology access equity first and Digital boundaries second?

A. Technology access equity: Clarifying approved communication channels and response times with families. / Digital boundaries: Asking about device and privacy barriers before assuming a youth can participate remotely.
B. Technology access equity: Asking about device and privacy barriers before assuming a youth can participate remotely. / Digital boundaries: Clarifying approved communication channels and response times with families.
C. Technology access equity: Using approved secure systems and avoiding sensitive information on shared or unsecured channels. / Digital boundaries: Clarifying approved communication channels and response times with families.
D. Technology access equity: Asking about device and privacy barriers before assuming a youth can participate remotely. / Digital boundaries: Avoiding unnecessary data capture and retaining only what policy and law require.

0400. A trainee must choose a practice that exemplifies Technology contingency planning. Which action is the best fit?

A. Agreeing on a backup contact method and next step if a session disconnects.
B. Avoiding unnecessary data capture and retaining only what policy and law require.
C. Using approved secure systems and avoiding sensitive information on shared or unsecured channels.
D. Clarifying approved communication channels and response times with families.

0401. Which choice aligns each practice with the correct idea, Telehealth emergency planning or Technology contingency planning?

A. Telehealth emergency planning: Confirming current location and emergency contacts at the start of a remote session as appropriate. / Technology contingency planning: Agreeing on a backup contact method and next step if a session disconnects.
B. Telehealth emergency planning: Agreeing on a backup contact method and next step if a session disconnects. / Technology contingency planning: Confirming current location and emergency contacts at the start of a remote session as appropriate.
C. Telehealth emergency planning: Confirming current location and emergency contacts at the start of a remote session as appropriate. / Technology contingency planning: Asking about device and privacy barriers before assuming a youth can participate remotely.
D. Telehealth emergency planning: Avoiding unnecessary data capture and retaining only what policy and law require. / Technology contingency planning: Agreeing on a backup contact method and next step if a session disconnects.

0402. A trainee must distinguish how AI use transparency and Technology contingency planning guide practice. Which comparison is accurate?

A. AI use transparency: Checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool. / Technology contingency planning: Agreeing on a backup contact method and next step if a session disconnects.
B. AI use transparency: Agreeing on a backup contact method and next step if a session disconnects. / Technology contingency planning: Checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool.
C. AI use transparency: Confirming current location and emergency contacts at the start of a remote session as appropriate. / Technology contingency planning: Agreeing on a backup contact method and next step if a session disconnects.
D. AI use transparency: Checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool. / Technology contingency planning: Using access controls and keeping approved systems updated.

0403. A trainee must distinguish how Telehealth informed consent and Therapeutic app evaluation guide practice. Which comparison is accurate?

A. Telehealth informed consent: Reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate. / Therapeutic app evaluation: Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care.
B. Telehealth informed consent: Confirming current location and emergency contacts at the start of a remote session as appropriate. / Therapeutic app evaluation: Reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate.
C. Telehealth informed consent: Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care. / Therapeutic app evaluation: Checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool.
D. Telehealth informed consent: Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care. / Therapeutic app evaluation: Reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate.

0404. A counselor reviews a plan for a client in late adolescence in the child guidance clinic. The plan emphasizes confirming current location and emergency contacts at the start of a remote session as appropriate. Which course idea does this reflect?

A. AI use transparency
B. Therapeutic app evaluation
C. Technology access equity
D. Telehealth emergency planning

0405. Which option preserves the correct meaning of both Data minimization and Therapeutic app evaluation?

A. Data minimization: Assessment of an app's evidence, privacy, accessibility, usability, and fit before recommending it. / Therapeutic app evaluation: Collecting and retaining only the personal information necessary for a defined legitimate purpose.
B. Data minimization: Collecting and retaining only the personal information necessary for a defined legitimate purpose. / Therapeutic app evaluation: Assessment of an app's evidence, privacy, accessibility, usability, and fit before recommending it.
C. Data minimization: Collecting and retaining only the personal information necessary for a defined legitimate purpose. / Therapeutic app evaluation: A plan for continuing or safely pausing care when devices, connectivity, or platforms fail.
D. Data minimization: An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans. / Therapeutic app evaluation: Assessment of an app's evidence, privacy, accessibility, usability, and fit before recommending it.

0406. Which professional action most closely applies Technology contingency planning?

A. Agreeing on a backup contact method and next step if a session disconnects.
B. Using approved secure systems and avoiding sensitive information on shared or unsecured channels.
C. Reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate.
D. Confirming current location and emergency contacts at the start of a remote session as appropriate.

0407. A case discussion concerns a child aged 11 and a family therapist in the family session. The practitioner is considering reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care. Which principle is involved?

A. Telehealth informed consent
B. Technology contingency planning
C. Therapeutic app evaluation
D. Digital confidentiality

0408. In a supervision quiz, how should Digital boundaries be distinguished from Data minimization?

A. Digital boundaries: Professional limits governing online contact, social media, and technology-mediated relationships. / Data minimization: Collecting and retaining only the personal information necessary for a defined legitimate purpose.
B. Digital boundaries: An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans. / Data minimization: Collecting and retaining only the personal information necessary for a defined legitimate purpose.
C. Digital boundaries: Collecting and retaining only the personal information necessary for a defined legitimate purpose. / Data minimization: Professional limits governing online contact, social media, and technology-mediated relationships.
D. Digital boundaries: Professional limits governing online contact, social media, and technology-mediated relationships. / Data minimization: Assessment of an app's evidence, privacy, accessibility, usability, and fit before recommending it.

0409. For a child aged 8 seen in the after-school program, the therapist recommends a plan built around asking about device and privacy barriers before assuming a youth can participate remotely. Which concept is reflected?

A. Technology access equity
B. Therapeutic app evaluation
C. Telehealth emergency planning
D. Digital boundaries

0410. A school counselor is asked to justify a plan for a young person aged 18 in the family session. It calls for confirming current location and emergency contacts at the start of a remote session as appropriate. Which concept provides the rationale?

A. AI use transparency
B. Cybersecurity hygiene
C. Telehealth emergency planning
D. Therapeutic app evaluation

0411. A student confuses Digital boundaries with Cybersecurity hygiene. Which explanation most accurately separates them?

A. Digital boundaries: Professional limits governing online contact, social media, and technology-mediated relationships. / Cybersecurity hygiene: Routine practices such as strong authentication, updates, and secure handling that reduce digital risk.
B. Digital boundaries: An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans. / Cybersecurity hygiene: Routine practices such as strong authentication, updates, and secure handling that reduce digital risk.
C. Digital boundaries: Professional limits governing online contact, social media, and technology-mediated relationships. / Cybersecurity hygiene: Protection of sensitive information across devices, networks, platforms, and communications.
D. Digital boundaries: Routine practices such as strong authentication, updates, and secure handling that reduce digital risk. / Cybersecurity hygiene: Professional limits governing online contact, social media, and technology-mediated relationships.

0412. A support meeting for a high-school student includes a counselor in the school consultation. The practice under consideration is asking about device and privacy barriers before assuming a youth can participate remotely. Which concept guides it?

A. AI use transparency
B. Therapeutic app evaluation
C. Technology access equity
D. Digital boundaries

0413. In a supervision review, a parent educator describes work with a young person aged 18 in the learning-support meeting: clarifying approved communication channels and response times with families. What concept is illustrated?

A. Digital boundaries
B. Therapeutic app evaluation
C. Telehealth emergency planning
D. Data minimization

0414. A school-age child's service team meets in the family resource center. The parent educator recommends a change involving using approved secure systems and avoiding sensitive information on shared or unsecured channels. Which idea best explains it?

A. AI use transparency
B. Data minimization
C. Digital boundaries
D. Digital confidentiality

0415. A case conference asks for a distinction between Digital confidentiality and Cybersecurity hygiene. Which answer is sound?

A. Digital confidentiality: Clear disclosure and oversight when artificial intelligence tools materially affect clinical work or client information. / Cybersecurity hygiene: Routine practices such as strong authentication, updates, and secure handling that reduce digital risk.
B. Digital confidentiality: Routine practices such as strong authentication, updates, and secure handling that reduce digital risk. / Cybersecurity hygiene: Protection of sensitive information across devices, networks, platforms, and communications.
C. Digital confidentiality: Protection of sensitive information across devices, networks, platforms, and communications. / Cybersecurity hygiene: An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans.
D. Digital confidentiality: Protection of sensitive information across devices, networks, platforms, and communications. / Cybersecurity hygiene: Routine practices such as strong authentication, updates, and secure handling that reduce digital risk.

0416. Which pair of actions illustrates Telehealth informed consent and AI use transparency, respectively?

A. Telehealth informed consent: Confirming current location and emergency contacts at the start of a remote session as appropriate. / AI use transparency: Checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool.
B. Telehealth informed consent: Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care. / AI use transparency: Avoiding unnecessary data capture and retaining only what policy and law require.
C. Telehealth informed consent: Checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool. / AI use transparency: Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care.
D. Telehealth informed consent: Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care. / AI use transparency: Checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool.

0417. Which statement shows a sound practice-level distinction between Digital confidentiality and Technology contingency planning?

A. Digital confidentiality: Reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate. / Technology contingency planning: Agreeing on a backup contact method and next step if a session disconnects.
B. Digital confidentiality: Using approved secure systems and avoiding sensitive information on shared or unsecured channels. / Technology contingency planning: Agreeing on a backup contact method and next step if a session disconnects.
C. Digital confidentiality: Using approved secure systems and avoiding sensitive information on shared or unsecured channels. / Technology contingency planning: Clarifying approved communication channels and response times with families.
D. Digital confidentiality: Agreeing on a backup contact method and next step if a session disconnects. / Technology contingency planning: Using approved secure systems and avoiding sensitive information on shared or unsecured channels.

0418. A case conference reviews a program coordinator's work with a school-age child in the after-school program: checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool. Which principle is central?

A. Therapeutic app evaluation
B. Telehealth informed consent
C. AI use transparency
D. Telehealth emergency planning

0419. A supervisor asks for an applied contrast between Telehealth informed consent and Therapeutic app evaluation. Which option fits?

A. Telehealth informed consent: Reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate. / Therapeutic app evaluation: Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care.
B. Telehealth informed consent: Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care. / Therapeutic app evaluation: Checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool.
C. Telehealth informed consent: Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care. / Therapeutic app evaluation: Reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate.
D. Telehealth informed consent: Confirming current location and emergency contacts at the start of a remote session as appropriate. / Therapeutic app evaluation: Reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate.

0420. At a case-planning meeting, the school support specialist proposes reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate. for a preadolescent child seen in the community service agency. Which concept does this illustrate?

A. Data minimization
B. Cybersecurity hygiene
C. Digital confidentiality
D. Therapeutic app evaluation

0421. A preadolescent child is receiving support in the school counseling office. The school counselor is guided by this practice: using access controls and keeping approved systems updated. Which principle best fits?

A. Cybersecurity hygiene
B. Telehealth emergency planning
C. Therapeutic app evaluation
D. Digital confidentiality

0422. Choose the term that matches this definition: Assessment of an app's evidence, privacy, accessibility, usability, and fit before recommending it.

A. Therapeutic app evaluation
B. Digital confidentiality
C. Telehealth informed consent
D. Data minimization

0423. Which statement shows a sound practice-level distinction between Telehealth emergency planning and Digital boundaries?

A. Telehealth emergency planning: Confirming current location and emergency contacts at the start of a remote session as appropriate. / Digital boundaries: Clarifying approved communication channels and response times with families.
B. Telehealth emergency planning: Clarifying approved communication channels and response times with families. / Digital boundaries: Confirming current location and emergency contacts at the start of a remote session as appropriate.
C. Telehealth emergency planning: Confirming current location and emergency contacts at the start of a remote session as appropriate. / Digital boundaries: Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care.
D. Telehealth emergency planning: Using access controls and keeping approved systems updated. / Digital boundaries: Clarifying approved communication channels and response times with families.

0424. Which choice aligns each practice with the correct idea, Telehealth informed consent or Telehealth emergency planning?

A. Telehealth informed consent: Asking about device and privacy barriers before assuming a youth can participate remotely. / Telehealth emergency planning: Confirming current location and emergency contacts at the start of a remote session as appropriate.
B. Telehealth informed consent: Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care. / Telehealth emergency planning: Confirming current location and emergency contacts at the start of a remote session as appropriate.
C. Telehealth informed consent: Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care. / Telehealth emergency planning: Using access controls and keeping approved systems updated.
D. Telehealth informed consent: Confirming current location and emergency contacts at the start of a remote session as appropriate. / Telehealth emergency planning: Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care.

0425. A supervisor asks for an applied contrast between Technology access equity and Cybersecurity hygiene. Which option fits?

A. Technology access equity: Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care. / Cybersecurity hygiene: Using access controls and keeping approved systems updated.
B. Technology access equity: Asking about device and privacy barriers before assuming a youth can participate remotely. / Cybersecurity hygiene: Using access controls and keeping approved systems updated.
C. Technology access equity: Asking about device and privacy barriers before assuming a youth can participate remotely. / Cybersecurity hygiene: Clarifying approved communication channels and response times with families.
D. Technology access equity: Using access controls and keeping approved systems updated. / Cybersecurity hygiene: Asking about device and privacy barriers before assuming a youth can participate remotely.

0426. Which professional action most closely applies Technology access equity?

A. Asking about device and privacy barriers before assuming a youth can participate remotely.
B. Confirming current location and emergency contacts at the start of a remote session as appropriate.
C. Using access controls and keeping approved systems updated.
D. Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care.

0427. Choose the practice comparison that best separates Digital confidentiality from Technology contingency planning.

A. Digital confidentiality: Reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate. / Technology contingency planning: Agreeing on a backup contact method and next step if a session disconnects.
B. Digital confidentiality: Agreeing on a backup contact method and next step if a session disconnects. / Technology contingency planning: Using approved secure systems and avoiding sensitive information on shared or unsecured channels.
C. Digital confidentiality: Using approved secure systems and avoiding sensitive information on shared or unsecured channels. / Technology contingency planning: Clarifying approved communication channels and response times with families.
D. Digital confidentiality: Using approved secure systems and avoiding sensitive information on shared or unsecured channels. / Technology contingency planning: Agreeing on a backup contact method and next step if a session disconnects.

0428. What is the central meaning of Digital confidentiality?

A. Professional limits governing online contact, social media, and technology-mediated relationships.
B. Collecting and retaining only the personal information necessary for a defined legitimate purpose.
C. Protection of sensitive information across devices, networks, platforms, and communications.
D. Attention to unequal access to devices, bandwidth, private space, and digital skills.

0429. A student confuses Telehealth emergency planning with Cybersecurity hygiene. Which explanation most accurately separates them?

A. Telehealth emergency planning: Clear disclosure and oversight when artificial intelligence tools materially affect clinical work or client information. / Cybersecurity hygiene: Routine practices such as strong authentication, updates, and secure handling that reduce digital risk.
B. Telehealth emergency planning: Advance procedures for responding to an urgent event during remote care, including location and contacts. / Cybersecurity hygiene: Professional limits governing online contact, social media, and technology-mediated relationships.
C. Telehealth emergency planning: Advance procedures for responding to an urgent event during remote care, including location and contacts. / Cybersecurity hygiene: Routine practices such as strong authentication, updates, and secure handling that reduce digital risk.
D. Telehealth emergency planning: Routine practices such as strong authentication, updates, and secure handling that reduce digital risk. / Cybersecurity hygiene: Advance procedures for responding to an urgent event during remote care, including location and contacts.

0430. Which comparison correctly distinguishes Telehealth emergency planning from Cybersecurity hygiene?

A. Telehealth emergency planning: Routine practices such as strong authentication, updates, and secure handling that reduce digital risk. / Cybersecurity hygiene: Advance procedures for responding to an urgent event during remote care, including location and contacts.
B. Telehealth emergency planning: Advance procedures for responding to an urgent event during remote care, including location and contacts. / Cybersecurity hygiene: Professional limits governing online contact, social media, and technology-mediated relationships.
C. Telehealth emergency planning: Clear disclosure and oversight when artificial intelligence tools materially affect clinical work or client information. / Cybersecurity hygiene: Routine practices such as strong authentication, updates, and secure handling that reduce digital risk.
D. Telehealth emergency planning: Advance procedures for responding to an urgent event during remote care, including location and contacts. / Cybersecurity hygiene: Routine practices such as strong authentication, updates, and secure handling that reduce digital risk.

0431. A program coordinator is asked what should shape a high-school student's support in the multidisciplinary case conference. The proposed focus is using approved secure systems and avoiding sensitive information on shared or unsecured channels. Which principle does it represent?

A. Digital confidentiality
B. Technology access equity
C. Telehealth informed consent
D. Cybersecurity hygiene

0432. A member of a clinical team is preparing a follow-up plan for a child aged 7 in the youth group. The plan calls for reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate. Which concept names this approach?

A. Technology access equity
B. Technology contingency planning
C. Therapeutic app evaluation
D. Telehealth informed consent

0433. A case conference asks for a distinction between Data minimization and AI use transparency. Which answer is sound?

A. Data minimization: Collecting and retaining only the personal information necessary for a defined legitimate purpose. / AI use transparency: Clear disclosure and oversight when artificial intelligence tools materially affect clinical work or client information.
B. Data minimization: Clear disclosure and oversight when artificial intelligence tools materially affect clinical work or client information. / AI use transparency: Collecting and retaining only the personal information necessary for a defined legitimate purpose.
C. Data minimization: Collecting and retaining only the personal information necessary for a defined legitimate purpose. / AI use transparency: Assessment of an app's evidence, privacy, accessibility, usability, and fit before recommending it.
D. Data minimization: An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans. / AI use transparency: Clear disclosure and oversight when artificial intelligence tools materially affect clinical work or client information.

0434. Which comparison would correct a trainee's misunderstanding of Telehealth informed consent versus Therapeutic app evaluation?

A. Telehealth informed consent: Advance procedures for responding to an urgent event during remote care, including location and contacts. / Therapeutic app evaluation: Assessment of an app's evidence, privacy, accessibility, usability, and fit before recommending it.
B. Telehealth informed consent: Assessment of an app's evidence, privacy, accessibility, usability, and fit before recommending it. / Therapeutic app evaluation: An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans.
C. Telehealth informed consent: An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans. / Therapeutic app evaluation: Clear disclosure and oversight when artificial intelligence tools materially affect clinical work or client information.
D. Telehealth informed consent: An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans. / Therapeutic app evaluation: Assessment of an app's evidence, privacy, accessibility, usability, and fit before recommending it.

0435. A student aged 9 and a supervised trainee are reviewing goals in the community youth program. The agreed action is reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care. Which principle best accounts for it?

A. Telehealth emergency planning
B. Telehealth informed consent
C. Cybersecurity hygiene
D. AI use transparency

0436. At a case-planning meeting, the play therapist proposes asking about device and privacy barriers before assuming a youth can participate remotely. for a teenage client seen in the caregiver consultation. Which concept does this illustrate?

A. Therapeutic app evaluation
B. Technology access equity
C. Telehealth informed consent
D. Digital boundaries

0437. In a case note about a child aged 7, a mental-health professional working in the outpatient clinic records this priority: confirming current location and emergency contacts at the start of a remote session as appropriate. What principle is reflected?

A. Telehealth emergency planning
B. Cybersecurity hygiene
C. Digital confidentiality
D. Digital boundaries

0438. A service team discusses a student aged 9 in the outpatient clinic. Their proposed next step is using access controls and keeping approved systems updated. Which course concept supports it?

A. Technology access equity
B. Telehealth emergency planning
C. Cybersecurity hygiene
D. Technology contingency planning

0439. How are Data minimization and Therapeutic app evaluation most accurately differentiated in this curriculum?

A. Data minimization: Collecting and retaining only the personal information necessary for a defined legitimate purpose. / Therapeutic app evaluation: A plan for continuing or safely pausing care when devices, connectivity, or platforms fail.
B. Data minimization: Collecting and retaining only the personal information necessary for a defined legitimate purpose. / Therapeutic app evaluation: Assessment of an app's evidence, privacy, accessibility, usability, and fit before recommending it.
C. Data minimization: An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans. / Therapeutic app evaluation: Assessment of an app's evidence, privacy, accessibility, usability, and fit before recommending it.
D. Data minimization: Assessment of an app's evidence, privacy, accessibility, usability, and fit before recommending it. / Therapeutic app evaluation: Collecting and retaining only the personal information necessary for a defined legitimate purpose.

0440. A student confuses Telehealth informed consent with AI use transparency. Which explanation most accurately separates them?

A. Telehealth informed consent: Advance procedures for responding to an urgent event during remote care, including location and contacts. / AI use transparency: Clear disclosure and oversight when artificial intelligence tools materially affect clinical work or client information.
B. Telehealth informed consent: An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans. / AI use transparency: Collecting and retaining only the personal information necessary for a defined legitimate purpose.
C. Telehealth informed consent: An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans. / AI use transparency: Clear disclosure and oversight when artificial intelligence tools materially affect clinical work or client information.
D. Telehealth informed consent: Clear disclosure and oversight when artificial intelligence tools materially affect clinical work or client information. / AI use transparency: An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans.

0441. Which comparison correctly distinguishes Telehealth emergency planning from Data minimization?

A. Telehealth emergency planning: Professional limits governing online contact, social media, and technology-mediated relationships. / Data minimization: Collecting and retaining only the personal information necessary for a defined legitimate purpose.
B. Telehealth emergency planning: Advance procedures for responding to an urgent event during remote care, including location and contacts. / Data minimization: An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans.
C. Telehealth emergency planning: Collecting and retaining only the personal information necessary for a defined legitimate purpose. / Data minimization: Advance procedures for responding to an urgent event during remote care, including location and contacts.
D. Telehealth emergency planning: Advance procedures for responding to an urgent event during remote care, including location and contacts. / Data minimization: Collecting and retaining only the personal information necessary for a defined legitimate purpose.

0442. At a case-planning meeting, the clinical supervisor proposes using access controls and keeping approved systems updated. for a child of elementary-school age seen in the behavior-support review. Which concept does this illustrate?

A. Therapeutic app evaluation
B. Cybersecurity hygiene
C. Technology access equity
D. Digital confidentiality

0443. Which option correctly matches each concept to its practice focus: AI use transparency and Technology contingency planning?

A. AI use transparency: Confirming current location and emergency contacts at the start of a remote session as appropriate. / Technology contingency planning: Agreeing on a backup contact method and next step if a session disconnects.
B. AI use transparency: Checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool. / Technology contingency planning: Using access controls and keeping approved systems updated.
C. AI use transparency: Checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool. / Technology contingency planning: Agreeing on a backup contact method and next step if a session disconnects.
D. AI use transparency: Agreeing on a backup contact method and next step if a session disconnects. / Technology contingency planning: Checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool.

0444. A student confuses Telehealth emergency planning with Digital boundaries. Which explanation most accurately separates them?

A. Telehealth emergency planning: Advance procedures for responding to an urgent event during remote care, including location and contacts. / Digital boundaries: An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans.
B. Telehealth emergency planning: Routine practices such as strong authentication, updates, and secure handling that reduce digital risk. / Digital boundaries: Professional limits governing online contact, social media, and technology-mediated relationships.
C. Telehealth emergency planning: Advance procedures for responding to an urgent event during remote care, including location and contacts. / Digital boundaries: Professional limits governing online contact, social media, and technology-mediated relationships.
D. Telehealth emergency planning: Professional limits governing online contact, social media, and technology-mediated relationships. / Digital boundaries: Advance procedures for responding to an urgent event during remote care, including location and contacts.

0445. A consultant is preparing a follow-up plan for a child aged 11 in the school consultation. The plan calls for using access controls and keeping approved systems updated. Which concept names this approach?

A. Cybersecurity hygiene
B. AI use transparency
C. Data minimization
D. Telehealth emergency planning

0446. Which option preserves the correct meaning of both Technology access equity and Data minimization?

A. Technology access equity: Attention to unequal access to devices, bandwidth, private space, and digital skills. / Data minimization: Advance procedures for responding to an urgent event during remote care, including location and contacts.
B. Technology access equity: Attention to unequal access to devices, bandwidth, private space, and digital skills. / Data minimization: Collecting and retaining only the personal information necessary for a defined legitimate purpose.
C. Technology access equity: A plan for continuing or safely pausing care when devices, connectivity, or platforms fail. / Data minimization: Collecting and retaining only the personal information necessary for a defined legitimate purpose.
D. Technology access equity: Collecting and retaining only the personal information necessary for a defined legitimate purpose. / Data minimization: Attention to unequal access to devices, bandwidth, private space, and digital skills.

0447. For a child of elementary-school age seen in the student-support meeting, the program coordinator recommends a plan built around agreeing on a backup contact method and next step if a session disconnects. Which concept is reflected?

A. Technology access equity
B. Therapeutic app evaluation
C. Cybersecurity hygiene
D. Technology contingency planning

0448. For a young person aged 18 in the youth advocacy program, a school support specialist makes this practice the immediate priority: asking about device and privacy barriers before assuming a youth can participate remotely. Which concept fits best?

A. Data minimization
B. Technology contingency planning
C. Technology access equity
D. Telehealth informed consent

0449. How should a practitioner distinguish the applications of Telehealth informed consent and Technology contingency planning?

A. Telehealth informed consent: Agreeing on a backup contact method and next step if a session disconnects. / Technology contingency planning: Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care.
B. Telehealth informed consent: Using access controls and keeping approved systems updated. / Technology contingency planning: Agreeing on a backup contact method and next step if a session disconnects.
C. Telehealth informed consent: Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care. / Technology contingency planning: Agreeing on a backup contact method and next step if a session disconnects.
D. Telehealth informed consent: Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care. / Technology contingency planning: Avoiding unnecessary data capture and retaining only what policy and law require.

0450. In the counseling practicum, a team asks how a school counselor can support a child of elementary-school age. One proposed action is reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care. Which idea does it represent?

A. Telehealth informed consent
B. Digital confidentiality
C. Technology access equity
D. Cybersecurity hygiene

0451. A supervisor asks how Data minimization would appear in practice. Which choice should be selected?

A. Asking about device and privacy barriers before assuming a youth can participate remotely.
B. Checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool.
C. Avoiding unnecessary data capture and retaining only what policy and law require.
D. Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care.

0452. Which applied comparison correctly identifies what belongs to Cybersecurity hygiene versus AI use transparency?

A. Cybersecurity hygiene: Using access controls and keeping approved systems updated. / AI use transparency: Checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool.
B. Cybersecurity hygiene: Using access controls and keeping approved systems updated. / AI use transparency: Clarifying approved communication channels and response times with families.
C. Cybersecurity hygiene: Checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool. / AI use transparency: Using access controls and keeping approved systems updated.
D. Cybersecurity hygiene: Confirming current location and emergency contacts at the start of a remote session as appropriate. / AI use transparency: Checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool.

0453. Which applied comparison correctly identifies what belongs to Digital confidentiality versus Cybersecurity hygiene?

A. Digital confidentiality: Using access controls and keeping approved systems updated. / Cybersecurity hygiene: Using approved secure systems and avoiding sensitive information on shared or unsecured channels.
B. Digital confidentiality: Using approved secure systems and avoiding sensitive information on shared or unsecured channels. / Cybersecurity hygiene: Using access controls and keeping approved systems updated.
C. Digital confidentiality: Using approved secure systems and avoiding sensitive information on shared or unsecured channels. / Cybersecurity hygiene: Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care.
D. Digital confidentiality: Checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool. / Cybersecurity hygiene: Using access controls and keeping approved systems updated.

0454. Consider a student aged 9 receiving help in the behavior-support review. The consulting counselor focuses on confirming current location and emergency contacts at the start of a remote session as appropriate. Which term best describes the guiding idea?

A. Telehealth emergency planning
B. Technology contingency planning
C. Data minimization
D. Digital boundaries

0455. Which statement most accurately defines Telehealth informed consent?

A. An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans.
B. Advance procedures for responding to an urgent event during remote care, including location and contacts.
C. Collecting and retaining only the personal information necessary for a defined legitimate purpose.
D. Routine practices such as strong authentication, updates, and secure handling that reduce digital risk.

0456. How should a practitioner distinguish the applications of Telehealth emergency planning and Digital boundaries?

A. Telehealth emergency planning: Confirming current location and emergency contacts at the start of a remote session as appropriate. / Digital boundaries: Clarifying approved communication channels and response times with families.
B. Telehealth emergency planning: Confirming current location and emergency contacts at the start of a remote session as appropriate. / Digital boundaries: Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care.
C. Telehealth emergency planning: Clarifying approved communication channels and response times with families. / Digital boundaries: Confirming current location and emergency contacts at the start of a remote session as appropriate.
D. Telehealth emergency planning: Using access controls and keeping approved systems updated. / Digital boundaries: Clarifying approved communication channels and response times with families.

0457. A planning meeting about a young adolescent client includes a counselor. The proposed practice in the clinical planning session is clarifying approved communication channels and response times with families. Which idea underlies it?

A. Technology contingency planning
B. Data minimization
C. Digital boundaries
D. Digital confidentiality

0458. How should a practitioner distinguish the applications of Cybersecurity hygiene and AI use transparency?

A. Cybersecurity hygiene: Confirming current location and emergency contacts at the start of a remote session as appropriate. / AI use transparency: Checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool.
B. Cybersecurity hygiene: Using access controls and keeping approved systems updated. / AI use transparency: Checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool.
C. Cybersecurity hygiene: Checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool. / AI use transparency: Using access controls and keeping approved systems updated.
D. Cybersecurity hygiene: Using access controls and keeping approved systems updated. / AI use transparency: Clarifying approved communication channels and response times with families.

0459. At the behavior-support review, a clinical supervisor meets with a child of elementary-school age. The practice priority is: using access controls and keeping approved systems updated. Which concept best captures that priority?

A. Technology contingency planning
B. Technology access equity
C. Cybersecurity hygiene
D. Digital confidentiality

0460. Which description belongs with the term Digital boundaries?

A. Professional limits governing online contact, social media, and technology-mediated relationships.
B. Routine practices such as strong authentication, updates, and secure handling that reduce digital risk.
C. Clear disclosure and oversight when artificial intelligence tools materially affect clinical work or client information.
D. A plan for continuing or safely pausing care when devices, connectivity, or platforms fail.

0461. Which statement accurately contrasts the course concepts Telehealth informed consent and Technology access equity?

A. Telehealth informed consent: An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans. / Technology access equity: Clear disclosure and oversight when artificial intelligence tools materially affect clinical work or client information.
B. Telehealth informed consent: An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans. / Technology access equity: Attention to unequal access to devices, bandwidth, private space, and digital skills.
C. Telehealth informed consent: Advance procedures for responding to an urgent event during remote care, including location and contacts. / Technology access equity: Attention to unequal access to devices, bandwidth, private space, and digital skills.
D. Telehealth informed consent: Attention to unequal access to devices, bandwidth, private space, and digital skills. / Technology access equity: An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans.

0462. A school-based clinician presents a support plan for a teenage client at the telehealth session. Its central feature is clarifying approved communication channels and response times with families. Which concept should be named?

A. Data minimization
B. Digital boundaries
C. AI use transparency
D. Technology access equity

0463. A supervisor asks for an applied contrast between Telehealth emergency planning and Cybersecurity hygiene. Which option fits?

A. Telehealth emergency planning: Confirming current location and emergency contacts at the start of a remote session as appropriate. / Cybersecurity hygiene: Clarifying approved communication channels and response times with families.
B. Telehealth emergency planning: Checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool. / Cybersecurity hygiene: Using access controls and keeping approved systems updated.
C. Telehealth emergency planning: Confirming current location and emergency contacts at the start of a remote session as appropriate. / Cybersecurity hygiene: Using access controls and keeping approved systems updated.
D. Telehealth emergency planning: Using access controls and keeping approved systems updated. / Cybersecurity hygiene: Confirming current location and emergency contacts at the start of a remote session as appropriate.

0464. Which statement accurately contrasts the course concepts Digital boundaries and Therapeutic app evaluation?

A. Digital boundaries: Professional limits governing online contact, social media, and technology-mediated relationships. / Therapeutic app evaluation: Assessment of an app's evidence, privacy, accessibility, usability, and fit before recommending it.
B. Digital boundaries: Professional limits governing online contact, social media, and technology-mediated relationships. / Therapeutic app evaluation: Clear disclosure and oversight when artificial intelligence tools materially affect clinical work or client information.
C. Digital boundaries: Protection of sensitive information across devices, networks, platforms, and communications. / Therapeutic app evaluation: Assessment of an app's evidence, privacy, accessibility, usability, and fit before recommending it.
D. Digital boundaries: Assessment of an app's evidence, privacy, accessibility, usability, and fit before recommending it. / Therapeutic app evaluation: Professional limits governing online contact, social media, and technology-mediated relationships.

0465. A mental-health professional prepares for a session in the learning-support meeting with a student aged 15. The intended approach is asking about device and privacy barriers before assuming a youth can participate remotely. Which concept is most relevant?

A. Technology access equity
B. Cybersecurity hygiene
C. AI use transparency
D. Telehealth informed consent

0466. A parent educator presents a support plan for a older adolescent client at the outpatient clinic. Its central feature is asking about device and privacy barriers before assuming a youth can participate remotely. Which concept should be named?

A. Cybersecurity hygiene
B. Therapeutic app evaluation
C. Digital boundaries
D. Technology access equity

0467. A case discussion concerns a child aged 14 and a caregiver working with a counselor in the school-based service. The practitioner is considering clarifying approved communication channels and response times with families. Which principle is involved?

A. Digital boundaries
B. Digital confidentiality
C. Therapeutic app evaluation
D. Telehealth informed consent

0468. A supervisor asks for an applied contrast between Digital confidentiality and Technology access equity. Which option fits?

A. Digital confidentiality: Avoiding unnecessary data capture and retaining only what policy and law require. / Technology access equity: Asking about device and privacy barriers before assuming a youth can participate remotely.
B. Digital confidentiality: Asking about device and privacy barriers before assuming a youth can participate remotely. / Technology access equity: Using approved secure systems and avoiding sensitive information on shared or unsecured channels.
C. Digital confidentiality: Using approved secure systems and avoiding sensitive information on shared or unsecured channels. / Technology access equity: Checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool.
D. Digital confidentiality: Using approved secure systems and avoiding sensitive information on shared or unsecured channels. / Technology access equity: Asking about device and privacy barriers before assuming a youth can participate remotely.

0469. A young person and a member of a clinical team are reviewing goals in the classroom support meeting. The agreed action is asking about device and privacy barriers before assuming a youth can participate remotely. Which principle best accounts for it?

A. Data minimization
B. Technology access equity
C. Technology contingency planning
D. Telehealth informed consent

0470. Which applied comparison correctly identifies what belongs to Digital boundaries versus Technology contingency planning?

A. Digital boundaries: Agreeing on a backup contact method and next step if a session disconnects. / Technology contingency planning: Clarifying approved communication channels and response times with families.
B. Digital boundaries: Clarifying approved communication channels and response times with families. / Technology contingency planning: Agreeing on a backup contact method and next step if a session disconnects.
C. Digital boundaries: Clarifying approved communication channels and response times with families. / Technology contingency planning: Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care.
D. Digital boundaries: Confirming current location and emergency contacts at the start of a remote session as appropriate. / Technology contingency planning: Agreeing on a backup contact method and next step if a session disconnects.

0471. Which choice aligns each practice with the correct idea, Telehealth emergency planning or Therapeutic app evaluation?

A. Telehealth emergency planning: Confirming current location and emergency contacts at the start of a remote session as appropriate. / Therapeutic app evaluation: Using access controls and keeping approved systems updated.
B. Telehealth emergency planning: Reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate. / Therapeutic app evaluation: Confirming current location and emergency contacts at the start of a remote session as appropriate.
C. Telehealth emergency planning: Confirming current location and emergency contacts at the start of a remote session as appropriate. / Therapeutic app evaluation: Reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate.
D. Telehealth emergency planning: Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care. / Therapeutic app evaluation: Reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate.

0472. In a supervision quiz, how should Digital confidentiality be distinguished from Digital boundaries?

A. Digital confidentiality: Protection of sensitive information across devices, networks, platforms, and communications. / Digital boundaries: Professional limits governing online contact, social media, and technology-mediated relationships.
B. Digital confidentiality: Protection of sensitive information across devices, networks, platforms, and communications. / Digital boundaries: Collecting and retaining only the personal information necessary for a defined legitimate purpose.
C. Digital confidentiality: Assessment of an app's evidence, privacy, accessibility, usability, and fit before recommending it. / Digital boundaries: Professional limits governing online contact, social media, and technology-mediated relationships.
D. Digital confidentiality: Professional limits governing online contact, social media, and technology-mediated relationships. / Digital boundaries: Protection of sensitive information across devices, networks, platforms, and communications.

0473. In the after-school program, the agreed focus for a therapist working with a child aged 8 is asking about device and privacy barriers before assuming a youth can participate remotely. Which concept names this focus?

A. Technology access equity
B. Telehealth informed consent
C. Technology contingency planning
D. Therapeutic app evaluation

0474. In a supervision quiz, how should Digital confidentiality be distinguished from Cybersecurity hygiene?

A. Digital confidentiality: Clear disclosure and oversight when artificial intelligence tools materially affect clinical work or client information. / Cybersecurity hygiene: Routine practices such as strong authentication, updates, and secure handling that reduce digital risk.
B. Digital confidentiality: Protection of sensitive information across devices, networks, platforms, and communications. / Cybersecurity hygiene: An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans.
C. Digital confidentiality: Protection of sensitive information across devices, networks, platforms, and communications. / Cybersecurity hygiene: Routine practices such as strong authentication, updates, and secure handling that reduce digital risk.
D. Digital confidentiality: Routine practices such as strong authentication, updates, and secure handling that reduce digital risk. / Cybersecurity hygiene: Protection of sensitive information across devices, networks, platforms, and communications.

0475. A case conference reviews a community practitioner's work with a older adolescent client in the supervision meeting: reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care. Which principle is central?

A. Therapeutic app evaluation
B. Telehealth informed consent
C. Telehealth emergency planning
D. AI use transparency

0476. A case conference asks for a distinction between Data minimization and Cybersecurity hygiene. Which answer is sound?

A. Data minimization: Collecting and retaining only the personal information necessary for a defined legitimate purpose. / Cybersecurity hygiene: An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans.
B. Data minimization: Protection of sensitive information across devices, networks, platforms, and communications. / Cybersecurity hygiene: Routine practices such as strong authentication, updates, and secure handling that reduce digital risk.
C. Data minimization: Routine practices such as strong authentication, updates, and secure handling that reduce digital risk. / Cybersecurity hygiene: Collecting and retaining only the personal information necessary for a defined legitimate purpose.
D. Data minimization: Collecting and retaining only the personal information necessary for a defined legitimate purpose. / Cybersecurity hygiene: Routine practices such as strong authentication, updates, and secure handling that reduce digital risk.

0477. A supervisor asks how Telehealth emergency planning would appear in practice. Which choice should be selected?

A. Clarifying approved communication channels and response times with families.
B. Confirming current location and emergency contacts at the start of a remote session as appropriate.
C. Asking about device and privacy barriers before assuming a youth can participate remotely.
D. Checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool.

0478. A supervisor asks for an applied contrast between Technology access equity and Therapeutic app evaluation. Which option fits?

A. Technology access equity: Asking about device and privacy barriers before assuming a youth can participate remotely. / Therapeutic app evaluation: Confirming current location and emergency contacts at the start of a remote session as appropriate.
B. Technology access equity: Asking about device and privacy barriers before assuming a youth can participate remotely. / Therapeutic app evaluation: Reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate.
C. Technology access equity: Avoiding unnecessary data capture and retaining only what policy and law require. / Therapeutic app evaluation: Reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate.
D. Technology access equity: Reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate. / Therapeutic app evaluation: Asking about device and privacy barriers before assuming a youth can participate remotely.

0479. Which comparison would correct a trainee's misunderstanding of Digital boundaries versus Technology contingency planning?

A. Digital boundaries: Advance procedures for responding to an urgent event during remote care, including location and contacts. / Technology contingency planning: A plan for continuing or safely pausing care when devices, connectivity, or platforms fail.
B. Digital boundaries: Professional limits governing online contact, social media, and technology-mediated relationships. / Technology contingency planning: A plan for continuing or safely pausing care when devices, connectivity, or platforms fail.
C. Digital boundaries: A plan for continuing or safely pausing care when devices, connectivity, or platforms fail. / Technology contingency planning: Professional limits governing online contact, social media, and technology-mediated relationships.
D. Digital boundaries: Professional limits governing online contact, social media, and technology-mediated relationships. / Technology contingency planning: An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans.

0480. Which statement accurately contrasts the course concepts Telehealth informed consent and Digital boundaries?

A. Telehealth informed consent: An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans. / Digital boundaries: Professional limits governing online contact, social media, and technology-mediated relationships.
B. Telehealth informed consent: An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans. / Digital boundaries: Routine practices such as strong authentication, updates, and secure handling that reduce digital risk.
C. Telehealth informed consent: Professional limits governing online contact, social media, and technology-mediated relationships. / Digital boundaries: An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans.
D. Telehealth informed consent: Protection of sensitive information across devices, networks, platforms, and communications. / Digital boundaries: Professional limits governing online contact, social media, and technology-mediated relationships.

0481. While consulting in the community service agency, a member of a clinical team supports a high-school student by using this approach: avoiding unnecessary data capture and retaining only what policy and law require. Which concept is being applied?

A. Data minimization
B. Digital confidentiality
C. Telehealth emergency planning
D. Telehealth informed consent

0482. Which option pairs the definitions of Digital confidentiality and Telehealth emergency planning correctly, in that order?

A. Digital confidentiality: Protection of sensitive information across devices, networks, platforms, and communications. / Telehealth emergency planning: Attention to unequal access to devices, bandwidth, private space, and digital skills.
B. Digital confidentiality: Assessment of an app's evidence, privacy, accessibility, usability, and fit before recommending it. / Telehealth emergency planning: Advance procedures for responding to an urgent event during remote care, including location and contacts.
C. Digital confidentiality: Protection of sensitive information across devices, networks, platforms, and communications. / Telehealth emergency planning: Advance procedures for responding to an urgent event during remote care, including location and contacts.
D. Digital confidentiality: Advance procedures for responding to an urgent event during remote care, including location and contacts. / Telehealth emergency planning: Protection of sensitive information across devices, networks, platforms, and communications.

0483. Which statement most accurately defines Digital confidentiality?

A. Collecting and retaining only the personal information necessary for a defined legitimate purpose.
B. Protection of sensitive information across devices, networks, platforms, and communications.
C. Professional limits governing online contact, social media, and technology-mediated relationships.
D. Assessment of an app's evidence, privacy, accessibility, usability, and fit before recommending it.

0484. A trainee must explain Telehealth informed consent. Which answer is accurate?

A. Professional limits governing online contact, social media, and technology-mediated relationships.
B. An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans.
C. Clear disclosure and oversight when artificial intelligence tools materially affect clinical work or client information.
D. Advance procedures for responding to an urgent event during remote care, including location and contacts.

0485. In the student-support meeting, a parent educator is considering this approach for a young person aged 13: using access controls and keeping approved systems updated. Which framework does it represent?

A. Digital boundaries
B. AI use transparency
C. Cybersecurity hygiene
D. Telehealth emergency planning

0486. A play therapist is asked to evaluate a proposed service for a middle-school student in the learning-support meeting. The defining feature is avoiding unnecessary data capture and retaining only what policy and law require. Which concept fits?

A. Digital boundaries
B. Cybersecurity hygiene
C. Digital confidentiality
D. Data minimization

0487. A child aged 14 is receiving support in the family session. The teacher and counselor is guided by this practice: reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate. Which principle best fits?

A. Technology contingency planning
B. Technology access equity
C. Therapeutic app evaluation
D. Digital boundaries

0488. While supporting a adolescent student in the parent meeting, a parent educator adopts this practice: reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care. Which concept best explains the choice?

A. Telehealth informed consent
B. Cybersecurity hygiene
C. AI use transparency
D. Data minimization

0489. Select the best explanation of Digital boundaries.

A. Advance procedures for responding to an urgent event during remote care, including location and contacts.
B. Assessment of an app's evidence, privacy, accessibility, usability, and fit before recommending it.
C. Professional limits governing online contact, social media, and technology-mediated relationships.
D. Clear disclosure and oversight when artificial intelligence tools materially affect clinical work or client information.

0490. When reviewing a student aged 12's plan in the counseling practicum, the case coordinator notes that the next step is asking about device and privacy barriers before assuming a youth can participate remotely. Which concept guides this step?

A. Digital confidentiality
B. Technology contingency planning
C. Technology access equity
D. Cybersecurity hygiene

0491. A behavior specialist is asked to evaluate a proposed service for a child aged 6 in the community mental-health service. The defining feature is using approved secure systems and avoiding sensitive information on shared or unsecured channels. Which concept fits?

A. Telehealth emergency planning
B. AI use transparency
C. Digital confidentiality
D. Data minimization

0492. A trainee must distinguish how Telehealth emergency planning and Technology contingency planning guide practice. Which comparison is accurate?

A. Telehealth emergency planning: Confirming current location and emergency contacts at the start of a remote session as appropriate. / Technology contingency planning: Agreeing on a backup contact method and next step if a session disconnects.
B. Telehealth emergency planning: Avoiding unnecessary data capture and retaining only what policy and law require. / Technology contingency planning: Agreeing on a backup contact method and next step if a session disconnects.
C. Telehealth emergency planning: Confirming current location and emergency contacts at the start of a remote session as appropriate. / Technology contingency planning: Asking about device and privacy barriers before assuming a youth can participate remotely.
D. Telehealth emergency planning: Agreeing on a backup contact method and next step if a session disconnects. / Technology contingency planning: Confirming current location and emergency contacts at the start of a remote session as appropriate.

0493. During service review in the caregiver consultation, a program coordinator describes avoiding unnecessary data capture and retaining only what policy and law require. for a student aged 12. Which course idea is most applicable?

A. Therapeutic app evaluation
B. Technology access equity
C. Data minimization
D. Technology contingency planning

0494. Which choice aligns each practice with the correct idea, Cybersecurity hygiene or Therapeutic app evaluation?

A. Cybersecurity hygiene: Using access controls and keeping approved systems updated. / Therapeutic app evaluation: Reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate.
B. Cybersecurity hygiene: Using approved secure systems and avoiding sensitive information on shared or unsecured channels. / Therapeutic app evaluation: Reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate.
C. Cybersecurity hygiene: Using access controls and keeping approved systems updated. / Therapeutic app evaluation: Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care.
D. Cybersecurity hygiene: Reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate. / Therapeutic app evaluation: Using access controls and keeping approved systems updated.

0495. In the student wellness team, a school-based clinician is considering this approach for a young person aged 10: confirming current location and emergency contacts at the start of a remote session as appropriate. Which framework does it represent?

A. Data minimization
B. Technology access equity
C. Cybersecurity hygiene
D. Telehealth emergency planning

0496. A trainee must distinguish how Digital confidentiality and AI use transparency guide practice. Which comparison is accurate?

A. Digital confidentiality: Checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool. / AI use transparency: Using approved secure systems and avoiding sensitive information on shared or unsecured channels.
B. Digital confidentiality: Using approved secure systems and avoiding sensitive information on shared or unsecured channels. / AI use transparency: Checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool.
C. Digital confidentiality: Asking about device and privacy barriers before assuming a youth can participate remotely. / AI use transparency: Checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool.
D. Digital confidentiality: Using approved secure systems and avoiding sensitive information on shared or unsecured channels. / AI use transparency: Confirming current location and emergency contacts at the start of a remote session as appropriate.

0497. Which paired example correctly applies Technology access equity first and Therapeutic app evaluation second?

A. Technology access equity: Reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate. / Therapeutic app evaluation: Asking about device and privacy barriers before assuming a youth can participate remotely.
B. Technology access equity: Avoiding unnecessary data capture and retaining only what policy and law require. / Therapeutic app evaluation: Reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate.
C. Technology access equity: Asking about device and privacy barriers before assuming a youth can participate remotely. / Therapeutic app evaluation: Reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate.
D. Technology access equity: Asking about device and privacy barriers before assuming a youth can participate remotely. / Therapeutic app evaluation: Confirming current location and emergency contacts at the start of a remote session as appropriate.

0498. Which option correctly matches each concept to its practice focus: Digital boundaries and Technology contingency planning?

A. Digital boundaries: Clarifying approved communication channels and response times with families. / Technology contingency planning: Agreeing on a backup contact method and next step if a session disconnects.
B. Digital boundaries: Confirming current location and emergency contacts at the start of a remote session as appropriate. / Technology contingency planning: Agreeing on a backup contact method and next step if a session disconnects.
C. Digital boundaries: Clarifying approved communication channels and response times with families. / Technology contingency planning: Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care.
D. Digital boundaries: Agreeing on a backup contact method and next step if a session disconnects. / Technology contingency planning: Clarifying approved communication channels and response times with families.

0499. During service review in the multidisciplinary case conference, a research trainee describes using access controls and keeping approved systems updated. for a young person aged 18. Which course idea is most applicable?

A. AI use transparency
B. Therapeutic app evaluation
C. Digital confidentiality
D. Cybersecurity hygiene

0500. Choose the definition pair that correctly explains Digital confidentiality first and AI use transparency second.

A. Digital confidentiality: Protection of sensitive information across devices, networks, platforms, and communications. / AI use transparency: Advance procedures for responding to an urgent event during remote care, including location and contacts.
B. Digital confidentiality: Attention to unequal access to devices, bandwidth, private space, and digital skills. / AI use transparency: Clear disclosure and oversight when artificial intelligence tools materially affect clinical work or client information.
C. Digital confidentiality: Protection of sensitive information across devices, networks, platforms, and communications. / AI use transparency: Clear disclosure and oversight when artificial intelligence tools materially affect clinical work or client information.
D. Digital confidentiality: Clear disclosure and oversight when artificial intelligence tools materially affect clinical work or client information. / AI use transparency: Protection of sensitive information across devices, networks, platforms, and communications.

0501. A behavior specialist is asked to evaluate a proposed service for a young person in the parent meeting. The defining feature is using access controls and keeping approved systems updated. Which concept fits?

A. AI use transparency
B. Technology contingency planning
C. Therapeutic app evaluation
D. Cybersecurity hygiene

0502. A child aged 8 and a consultant are reviewing goals in the clinical planning session. The agreed action is reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate. Which principle best accounts for it?

A. Therapeutic app evaluation
B. Technology access equity
C. AI use transparency
D. Data minimization

0503. A service team discusses a high-school student in the multidisciplinary case conference. Their proposed next step is using approved secure systems and avoiding sensitive information on shared or unsecured channels. Which course concept supports it?

A. Digital confidentiality
B. AI use transparency
C. Technology access equity
D. Digital boundaries

0504. Which option pairs the definitions of Digital confidentiality and Digital boundaries correctly, in that order?

A. Digital confidentiality: Protection of sensitive information across devices, networks, platforms, and communications. / Digital boundaries: Professional limits governing online contact, social media, and technology-mediated relationships.
B. Digital confidentiality: Professional limits governing online contact, social media, and technology-mediated relationships. / Digital boundaries: Protection of sensitive information across devices, networks, platforms, and communications.
C. Digital confidentiality: Assessment of an app's evidence, privacy, accessibility, usability, and fit before recommending it. / Digital boundaries: Professional limits governing online contact, social media, and technology-mediated relationships.
D. Digital confidentiality: Protection of sensitive information across devices, networks, platforms, and communications. / Digital boundaries: Collecting and retaining only the personal information necessary for a defined legitimate purpose.

0505. Which statement accurately contrasts the course concepts Therapeutic app evaluation and Technology contingency planning?

A. Therapeutic app evaluation: Assessment of an app's evidence, privacy, accessibility, usability, and fit before recommending it. / Technology contingency planning: A plan for continuing or safely pausing care when devices, connectivity, or platforms fail.
B. Therapeutic app evaluation: Routine practices such as strong authentication, updates, and secure handling that reduce digital risk. / Technology contingency planning: A plan for continuing or safely pausing care when devices, connectivity, or platforms fail.
C. Therapeutic app evaluation: Assessment of an app's evidence, privacy, accessibility, usability, and fit before recommending it. / Technology contingency planning: Collecting and retaining only the personal information necessary for a defined legitimate purpose.
D. Therapeutic app evaluation: A plan for continuing or safely pausing care when devices, connectivity, or platforms fail. / Technology contingency planning: Assessment of an app's evidence, privacy, accessibility, usability, and fit before recommending it.

0506. Which applied comparison correctly identifies what belongs to Digital confidentiality versus Therapeutic app evaluation?

A. Digital confidentiality: Using approved secure systems and avoiding sensitive information on shared or unsecured channels. / Therapeutic app evaluation: Agreeing on a backup contact method and next step if a session disconnects.
B. Digital confidentiality: Using approved secure systems and avoiding sensitive information on shared or unsecured channels. / Therapeutic app evaluation: Reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate.
C. Digital confidentiality: Confirming current location and emergency contacts at the start of a remote session as appropriate. / Therapeutic app evaluation: Reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate.
D. Digital confidentiality: Reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate. / Therapeutic app evaluation: Using approved secure systems and avoiding sensitive information on shared or unsecured channels.

0507. A client in early adolescence and a assessment clinician are reviewing goals in the student wellness team. The agreed action is using access controls and keeping approved systems updated. Which principle best accounts for it?

A. AI use transparency
B. Cybersecurity hygiene
C. Digital confidentiality
D. Digital boundaries

0508. Which option correctly matches each concept to its practice focus: Technology access equity and Digital boundaries?

A. Technology access equity: Using approved secure systems and avoiding sensitive information on shared or unsecured channels. / Digital boundaries: Clarifying approved communication channels and response times with families.
B. Technology access equity: Asking about device and privacy barriers before assuming a youth can participate remotely. / Digital boundaries: Avoiding unnecessary data capture and retaining only what policy and law require.
C. Technology access equity: Clarifying approved communication channels and response times with families. / Digital boundaries: Asking about device and privacy barriers before assuming a youth can participate remotely.
D. Technology access equity: Asking about device and privacy barriers before assuming a youth can participate remotely. / Digital boundaries: Clarifying approved communication channels and response times with families.

0509. Which named construct is captured by this account? Advance procedures for responding to an urgent event during remote care, including location and contacts.

A. Therapeutic app evaluation
B. Technology access equity
C. Telehealth informed consent
D. Telehealth emergency planning

0510. Which applied comparison correctly identifies what belongs to Digital boundaries versus Data minimization?

A. Digital boundaries: Avoiding unnecessary data capture and retaining only what policy and law require. / Data minimization: Clarifying approved communication channels and response times with families.
B. Digital boundaries: Clarifying approved communication channels and response times with families. / Data minimization: Avoiding unnecessary data capture and retaining only what policy and law require.
C. Digital boundaries: Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care. / Data minimization: Avoiding unnecessary data capture and retaining only what policy and law require.
D. Digital boundaries: Clarifying approved communication channels and response times with families. / Data minimization: Reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate.

0511. A trainee must distinguish how Data minimization and Therapeutic app evaluation guide practice. Which comparison is accurate?

A. Data minimization: Avoiding unnecessary data capture and retaining only what policy and law require. / Therapeutic app evaluation: Reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate.
B. Data minimization: Reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate. / Therapeutic app evaluation: Avoiding unnecessary data capture and retaining only what policy and law require.
C. Data minimization: Avoiding unnecessary data capture and retaining only what policy and law require. / Therapeutic app evaluation: Agreeing on a backup contact method and next step if a session disconnects.
D. Data minimization: Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care. / Therapeutic app evaluation: Reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate.

0512. Choose the term that matches this definition: Protection of sensitive information across devices, networks, platforms, and communications.

A. Telehealth informed consent
B. Digital confidentiality
C. Technology access equity
D. Therapeutic app evaluation

0513. A supervisor asks how Digital confidentiality would appear in practice. Which choice should be selected?

A. Agreeing on a backup contact method and next step if a session disconnects.
B. Using approved secure systems and avoiding sensitive information on shared or unsecured channels.
C. Avoiding unnecessary data capture and retaining only what policy and law require.
D. Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care.

0514. A case conference reviews a research trainee's work with a young person aged 10 in the family resource center: agreeing on a backup contact method and next step if a session disconnects. Which principle is central?

A. AI use transparency
B. Technology contingency planning
C. Cybersecurity hygiene
D. Telehealth informed consent

0515. Choose the response that best puts Technology contingency planning into practice.

A. Checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool.
B. Reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate.
C. Agreeing on a backup contact method and next step if a session disconnects.
D. Asking about device and privacy barriers before assuming a youth can participate remotely.

0516. Which statement most accurately defines Digital boundaries?

A. Professional limits governing online contact, social media, and technology-mediated relationships.
B. An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans.
C. Assessment of an app's evidence, privacy, accessibility, usability, and fit before recommending it.
D. Clear disclosure and oversight when artificial intelligence tools materially affect clinical work or client information.

0517. A supervised trainee and a adolescent student are discussing support in the student wellness team. The selected practice is using approved secure systems and avoiding sensitive information on shared or unsecured channels. Which concept does this demonstrate?

A. Data minimization
B. Telehealth informed consent
C. Technology contingency planning
D. Digital confidentiality

0518. Which option pairs the definitions of Data minimization and Technology contingency planning correctly, in that order?

A. Data minimization: A plan for continuing or safely pausing care when devices, connectivity, or platforms fail. / Technology contingency planning: Collecting and retaining only the personal information necessary for a defined legitimate purpose.
B. Data minimization: Collecting and retaining only the personal information necessary for a defined legitimate purpose. / Technology contingency planning: Advance procedures for responding to an urgent event during remote care, including location and contacts.
C. Data minimization: Routine practices such as strong authentication, updates, and secure handling that reduce digital risk. / Technology contingency planning: A plan for continuing or safely pausing care when devices, connectivity, or platforms fail.
D. Data minimization: Collecting and retaining only the personal information necessary for a defined legitimate purpose. / Technology contingency planning: A plan for continuing or safely pausing care when devices, connectivity, or platforms fail.

0519. In a supervision quiz, how should Cybersecurity hygiene be distinguished from Therapeutic app evaluation?

A. Cybersecurity hygiene: Protection of sensitive information across devices, networks, platforms, and communications. / Therapeutic app evaluation: Assessment of an app's evidence, privacy, accessibility, usability, and fit before recommending it.
B. Cybersecurity hygiene: Assessment of an app's evidence, privacy, accessibility, usability, and fit before recommending it. / Therapeutic app evaluation: Routine practices such as strong authentication, updates, and secure handling that reduce digital risk.
C. Cybersecurity hygiene: Routine practices such as strong authentication, updates, and secure handling that reduce digital risk. / Therapeutic app evaluation: Assessment of an app's evidence, privacy, accessibility, usability, and fit before recommending it.
D. Cybersecurity hygiene: Routine practices such as strong authentication, updates, and secure handling that reduce digital risk. / Therapeutic app evaluation: An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans.

0520. Which option preserves the correct meaning of both Digital confidentiality and AI use transparency?

A. Digital confidentiality: Protection of sensitive information across devices, networks, platforms, and communications. / AI use transparency: Clear disclosure and oversight when artificial intelligence tools materially affect clinical work or client information.
B. Digital confidentiality: Clear disclosure and oversight when artificial intelligence tools materially affect clinical work or client information. / AI use transparency: Protection of sensitive information across devices, networks, platforms, and communications.
C. Digital confidentiality: Attention to unequal access to devices, bandwidth, private space, and digital skills. / AI use transparency: Clear disclosure and oversight when artificial intelligence tools materially affect clinical work or client information.
D. Digital confidentiality: Protection of sensitive information across devices, networks, platforms, and communications. / AI use transparency: Advance procedures for responding to an urgent event during remote care, including location and contacts.

0521. Which option pairs the definitions of Telehealth emergency planning and AI use transparency correctly, in that order?

A. Telehealth emergency planning: Assessment of an app's evidence, privacy, accessibility, usability, and fit before recommending it. / AI use transparency: Clear disclosure and oversight when artificial intelligence tools materially affect clinical work or client information.
B. Telehealth emergency planning: Advance procedures for responding to an urgent event during remote care, including location and contacts. / AI use transparency: Routine practices such as strong authentication, updates, and secure handling that reduce digital risk.
C. Telehealth emergency planning: Advance procedures for responding to an urgent event during remote care, including location and contacts. / AI use transparency: Clear disclosure and oversight when artificial intelligence tools materially affect clinical work or client information.
D. Telehealth emergency planning: Clear disclosure and oversight when artificial intelligence tools materially affect clinical work or client information. / AI use transparency: Advance procedures for responding to an urgent event during remote care, including location and contacts.

0522. Which statement accurately contrasts the course concepts Cybersecurity hygiene and Technology contingency planning?

A. Cybersecurity hygiene: Attention to unequal access to devices, bandwidth, private space, and digital skills. / Technology contingency planning: A plan for continuing or safely pausing care when devices, connectivity, or platforms fail.
B. Cybersecurity hygiene: A plan for continuing or safely pausing care when devices, connectivity, or platforms fail. / Technology contingency planning: Routine practices such as strong authentication, updates, and secure handling that reduce digital risk.
C. Cybersecurity hygiene: Routine practices such as strong authentication, updates, and secure handling that reduce digital risk. / Technology contingency planning: A plan for continuing or safely pausing care when devices, connectivity, or platforms fail.
D. Cybersecurity hygiene: Routine practices such as strong authentication, updates, and secure handling that reduce digital risk. / Technology contingency planning: Protection of sensitive information across devices, networks, platforms, and communications.

0523. An interdisciplinary team reviews a preadolescent child's case at the family resource center. The play therapist recommends confirming current location and emergency contacts at the start of a remote session as appropriate. Which course concept best fits?

A. Telehealth emergency planning
B. Technology contingency planning
C. Data minimization
D. Cybersecurity hygiene

0524. Choose the definition pair that correctly explains Telehealth emergency planning first and Technology contingency planning second.

A. Telehealth emergency planning: A plan for continuing or safely pausing care when devices, connectivity, or platforms fail. / Technology contingency planning: Advance procedures for responding to an urgent event during remote care, including location and contacts.
B. Telehealth emergency planning: Advance procedures for responding to an urgent event during remote care, including location and contacts. / Technology contingency planning: Attention to unequal access to devices, bandwidth, private space, and digital skills.
C. Telehealth emergency planning: Collecting and retaining only the personal information necessary for a defined legitimate purpose. / Technology contingency planning: A plan for continuing or safely pausing care when devices, connectivity, or platforms fail.
D. Telehealth emergency planning: Advance procedures for responding to an urgent event during remote care, including location and contacts. / Technology contingency planning: A plan for continuing or safely pausing care when devices, connectivity, or platforms fail.

0525. Which pair of actions illustrates Telehealth emergency planning and Data minimization, respectively?

A. Telehealth emergency planning: Confirming current location and emergency contacts at the start of a remote session as appropriate. / Data minimization: Avoiding unnecessary data capture and retaining only what policy and law require.
B. Telehealth emergency planning: Clarifying approved communication channels and response times with families. / Data minimization: Avoiding unnecessary data capture and retaining only what policy and law require.
C. Telehealth emergency planning: Confirming current location and emergency contacts at the start of a remote session as appropriate. / Data minimization: Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care.
D. Telehealth emergency planning: Avoiding unnecessary data capture and retaining only what policy and law require. / Data minimization: Confirming current location and emergency contacts at the start of a remote session as appropriate.

0526. In the school counseling office, a family therapist is considering this approach for a high-school student: clarifying approved communication channels and response times with families. Which framework does it represent?

A. Data minimization
B. Digital boundaries
C. Technology contingency planning
D. Therapeutic app evaluation

0527. Which pair of actions illustrates Digital boundaries and Cybersecurity hygiene, respectively?

A. Digital boundaries: Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care. / Cybersecurity hygiene: Using access controls and keeping approved systems updated.
B. Digital boundaries: Clarifying approved communication channels and response times with families. / Cybersecurity hygiene: Using approved secure systems and avoiding sensitive information on shared or unsecured channels.
C. Digital boundaries: Using access controls and keeping approved systems updated. / Cybersecurity hygiene: Clarifying approved communication channels and response times with families.
D. Digital boundaries: Clarifying approved communication channels and response times with families. / Cybersecurity hygiene: Using access controls and keeping approved systems updated.

0528. Consider a middle-school student receiving help in the youth advocacy program. The teacher and counselor focuses on clarifying approved communication channels and response times with families. Which term best describes the guiding idea?

A. Digital boundaries
B. Telehealth informed consent
C. AI use transparency
D. Telehealth emergency planning

0529. In the behavior-support review, a consulting counselor describes the most appropriate support for a student aged 9 as confirming current location and emergency contacts at the start of a remote session as appropriate. Which framework is being applied?

A. Telehealth emergency planning
B. Telehealth informed consent
C. Technology contingency planning
D. Cybersecurity hygiene

0530. A case conference asks for a distinction between Digital confidentiality and Therapeutic app evaluation. Which answer is sound?

A. Digital confidentiality: Protection of sensitive information across devices, networks, platforms, and communications. / Therapeutic app evaluation: Assessment of an app's evidence, privacy, accessibility, usability, and fit before recommending it.
B. Digital confidentiality: Protection of sensitive information across devices, networks, platforms, and communications. / Therapeutic app evaluation: A plan for continuing or safely pausing care when devices, connectivity, or platforms fail.
C. Digital confidentiality: Advance procedures for responding to an urgent event during remote care, including location and contacts. / Therapeutic app evaluation: Assessment of an app's evidence, privacy, accessibility, usability, and fit before recommending it.
D. Digital confidentiality: Assessment of an app's evidence, privacy, accessibility, usability, and fit before recommending it. / Therapeutic app evaluation: Protection of sensitive information across devices, networks, platforms, and communications.

0531. A service team discusses a student aged 17 in the caregiver consultation. Their proposed next step is reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care. Which course concept supports it?

A. Digital boundaries
B. Data minimization
C. Telehealth informed consent
D. Technology contingency planning

0532. In a supervision quiz, how should Digital confidentiality be distinguished from Telehealth emergency planning?

A. Digital confidentiality: Protection of sensitive information across devices, networks, platforms, and communications. / Telehealth emergency planning: Advance procedures for responding to an urgent event during remote care, including location and contacts.
B. Digital confidentiality: Assessment of an app's evidence, privacy, accessibility, usability, and fit before recommending it. / Telehealth emergency planning: Advance procedures for responding to an urgent event during remote care, including location and contacts.
C. Digital confidentiality: Protection of sensitive information across devices, networks, platforms, and communications. / Telehealth emergency planning: Attention to unequal access to devices, bandwidth, private space, and digital skills.
D. Digital confidentiality: Advance procedures for responding to an urgent event during remote care, including location and contacts. / Telehealth emergency planning: Protection of sensitive information across devices, networks, platforms, and communications.

0533. A student confuses Data minimization with AI use transparency. Which explanation most accurately separates them?

A. Data minimization: Collecting and retaining only the personal information necessary for a defined legitimate purpose. / AI use transparency: Assessment of an app's evidence, privacy, accessibility, usability, and fit before recommending it.
B. Data minimization: An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans. / AI use transparency: Clear disclosure and oversight when artificial intelligence tools materially affect clinical work or client information.
C. Data minimization: Collecting and retaining only the personal information necessary for a defined legitimate purpose. / AI use transparency: Clear disclosure and oversight when artificial intelligence tools materially affect clinical work or client information.
D. Data minimization: Clear disclosure and oversight when artificial intelligence tools materially affect clinical work or client information. / AI use transparency: Collecting and retaining only the personal information necessary for a defined legitimate purpose.

0534. A therapist describes an intervention for a high-school student in the counseling practicum, centered on using access controls and keeping approved systems updated. Which named idea is most relevant?

A. Cybersecurity hygiene
B. Telehealth emergency planning
C. Technology contingency planning
D. Digital confidentiality

0535. Which comparison would correct a trainee's misunderstanding of Data minimization versus Therapeutic app evaluation?

A. Data minimization: Collecting and retaining only the personal information necessary for a defined legitimate purpose. / Therapeutic app evaluation: A plan for continuing or safely pausing care when devices, connectivity, or platforms fail.
B. Data minimization: An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans. / Therapeutic app evaluation: Assessment of an app's evidence, privacy, accessibility, usability, and fit before recommending it.
C. Data minimization: Collecting and retaining only the personal information necessary for a defined legitimate purpose. / Therapeutic app evaluation: Assessment of an app's evidence, privacy, accessibility, usability, and fit before recommending it.
D. Data minimization: Assessment of an app's evidence, privacy, accessibility, usability, and fit before recommending it. / Therapeutic app evaluation: Collecting and retaining only the personal information necessary for a defined legitimate purpose.

0536. Choose the definition pair that correctly explains Data minimization first and Cybersecurity hygiene second.

A. Data minimization: Collecting and retaining only the personal information necessary for a defined legitimate purpose. / Cybersecurity hygiene: Routine practices such as strong authentication, updates, and secure handling that reduce digital risk.
B. Data minimization: Protection of sensitive information across devices, networks, platforms, and communications. / Cybersecurity hygiene: Routine practices such as strong authentication, updates, and secure handling that reduce digital risk.
C. Data minimization: Collecting and retaining only the personal information necessary for a defined legitimate purpose. / Cybersecurity hygiene: An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans.
D. Data minimization: Routine practices such as strong authentication, updates, and secure handling that reduce digital risk. / Cybersecurity hygiene: Collecting and retaining only the personal information necessary for a defined legitimate purpose.

0537. A case conference reviews a therapist's work with a young adolescent client in the classroom support meeting: reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate. Which principle is central?

A. AI use transparency
B. Data minimization
C. Therapeutic app evaluation
D. Technology access equity

0538. At the caregiver consultation, a play therapist meets with a teenage client. The practice priority is: asking about device and privacy barriers before assuming a youth can participate remotely. Which concept best captures that priority?

A. Digital boundaries
B. AI use transparency
C. Technology contingency planning
D. Technology access equity

0539. A trainee must explain Telehealth emergency planning. Which answer is accurate?

A. Clear disclosure and oversight when artificial intelligence tools materially affect clinical work or client information.
B. Assessment of an app's evidence, privacy, accessibility, usability, and fit before recommending it.
C. An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans.
D. Advance procedures for responding to an urgent event during remote care, including location and contacts.

0540. What is the central meaning of Data minimization?

A. A plan for continuing or safely pausing care when devices, connectivity, or platforms fail.
B. Collecting and retaining only the personal information necessary for a defined legitimate purpose.
C. An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans.
D. Clear disclosure and oversight when artificial intelligence tools materially affect clinical work or client information.

0541. How are Telehealth emergency planning and Technology access equity most accurately differentiated in this curriculum?

A. Telehealth emergency planning: Advance procedures for responding to an urgent event during remote care, including location and contacts. / Technology access equity: Attention to unequal access to devices, bandwidth, private space, and digital skills.
B. Telehealth emergency planning: Attention to unequal access to devices, bandwidth, private space, and digital skills. / Technology access equity: Advance procedures for responding to an urgent event during remote care, including location and contacts.
C. Telehealth emergency planning: Professional limits governing online contact, social media, and technology-mediated relationships. / Technology access equity: Attention to unequal access to devices, bandwidth, private space, and digital skills.
D. Telehealth emergency planning: Advance procedures for responding to an urgent event during remote care, including location and contacts. / Technology access equity: Collecting and retaining only the personal information necessary for a defined legitimate purpose.

0542. Identify the most precise label for this idea: Advance procedures for responding to an urgent event during remote care, including location and contacts.

A. Digital boundaries
B. Telehealth emergency planning
C. Cybersecurity hygiene
D. Therapeutic app evaluation

0543. During service review in the family session, a service navigator describes asking about device and privacy barriers before assuming a youth can participate remotely. for a middle-school student. Which course idea is most applicable?

A. Technology contingency planning
B. Cybersecurity hygiene
C. Telehealth emergency planning
D. Technology access equity

0544. At a case-planning meeting, the counselor proposes reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care. for a child aged 8 seen in the school counseling office. Which concept does this illustrate?

A. Telehealth informed consent
B. Data minimization
C. Digital boundaries
D. Telehealth emergency planning

0545. Which statement accurately contrasts the course concepts Digital confidentiality and Digital boundaries?

A. Digital confidentiality: Professional limits governing online contact, social media, and technology-mediated relationships. / Digital boundaries: Protection of sensitive information across devices, networks, platforms, and communications.
B. Digital confidentiality: Assessment of an app's evidence, privacy, accessibility, usability, and fit before recommending it. / Digital boundaries: Professional limits governing online contact, social media, and technology-mediated relationships.
C. Digital confidentiality: Protection of sensitive information across devices, networks, platforms, and communications. / Digital boundaries: Professional limits governing online contact, social media, and technology-mediated relationships.
D. Digital confidentiality: Protection of sensitive information across devices, networks, platforms, and communications. / Digital boundaries: Collecting and retaining only the personal information necessary for a defined legitimate purpose.

0546. During service review in the student wellness team, a program coordinator describes reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care. for a client in late adolescence. Which course idea is most applicable?

A. Therapeutic app evaluation
B. Telehealth emergency planning
C. Digital boundaries
D. Telehealth informed consent

0547. Which option preserves the correct meaning of both Data minimization and AI use transparency?

A. Data minimization: Collecting and retaining only the personal information necessary for a defined legitimate purpose. / AI use transparency: Assessment of an app's evidence, privacy, accessibility, usability, and fit before recommending it.
B. Data minimization: An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans. / AI use transparency: Clear disclosure and oversight when artificial intelligence tools materially affect clinical work or client information.
C. Data minimization: Collecting and retaining only the personal information necessary for a defined legitimate purpose. / AI use transparency: Clear disclosure and oversight when artificial intelligence tools materially affect clinical work or client information.
D. Data minimization: Clear disclosure and oversight when artificial intelligence tools materially affect clinical work or client information. / AI use transparency: Collecting and retaining only the personal information necessary for a defined legitimate purpose.

0548. When reviewing a client in early adolescence's plan in the parent meeting, the school-based clinician notes that the next step is avoiding unnecessary data capture and retaining only what policy and law require. Which concept guides this step?

A. Technology access equity
B. Data minimization
C. Cybersecurity hygiene
D. Digital confidentiality

0549. In a supervision quiz, how should Telehealth emergency planning be distinguished from Data minimization?

A. Telehealth emergency planning: Collecting and retaining only the personal information necessary for a defined legitimate purpose. / Data minimization: Advance procedures for responding to an urgent event during remote care, including location and contacts.
B. Telehealth emergency planning: Professional limits governing online contact, social media, and technology-mediated relationships. / Data minimization: Collecting and retaining only the personal information necessary for a defined legitimate purpose.
C. Telehealth emergency planning: Advance procedures for responding to an urgent event during remote care, including location and contacts. / Data minimization: An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans.
D. Telehealth emergency planning: Advance procedures for responding to an urgent event during remote care, including location and contacts. / Data minimization: Collecting and retaining only the personal information necessary for a defined legitimate purpose.

0550. Which pair of actions illustrates Technology access equity and Technology contingency planning, respectively?

A. Technology access equity: Using access controls and keeping approved systems updated. / Technology contingency planning: Agreeing on a backup contact method and next step if a session disconnects.
B. Technology access equity: Agreeing on a backup contact method and next step if a session disconnects. / Technology contingency planning: Asking about device and privacy barriers before assuming a youth can participate remotely.
C. Technology access equity: Asking about device and privacy barriers before assuming a youth can participate remotely. / Technology contingency planning: Agreeing on a backup contact method and next step if a session disconnects.
D. Technology access equity: Asking about device and privacy barriers before assuming a youth can participate remotely. / Technology contingency planning: Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care.

0551. Which option preserves the correct meaning of both Telehealth emergency planning and Technology access equity?

A. Telehealth emergency planning: Professional limits governing online contact, social media, and technology-mediated relationships. / Technology access equity: Attention to unequal access to devices, bandwidth, private space, and digital skills.
B. Telehealth emergency planning: Attention to unequal access to devices, bandwidth, private space, and digital skills. / Technology access equity: Advance procedures for responding to an urgent event during remote care, including location and contacts.
C. Telehealth emergency planning: Advance procedures for responding to an urgent event during remote care, including location and contacts. / Technology access equity: Collecting and retaining only the personal information necessary for a defined legitimate purpose.
D. Telehealth emergency planning: Advance procedures for responding to an urgent event during remote care, including location and contacts. / Technology access equity: Attention to unequal access to devices, bandwidth, private space, and digital skills.

0552. Which option correctly matches each concept to its practice focus: Digital confidentiality and Digital boundaries?

A. Digital confidentiality: Using approved secure systems and avoiding sensitive information on shared or unsecured channels. / Digital boundaries: Clarifying approved communication channels and response times with families.
B. Digital confidentiality: Clarifying approved communication channels and response times with families. / Digital boundaries: Using approved secure systems and avoiding sensitive information on shared or unsecured channels.
C. Digital confidentiality: Using approved secure systems and avoiding sensitive information on shared or unsecured channels. / Digital boundaries: Avoiding unnecessary data capture and retaining only what policy and law require.
D. Digital confidentiality: Reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate. / Digital boundaries: Clarifying approved communication channels and response times with families.

0553. Identify the most precise label for this idea: Collecting and retaining only the personal information necessary for a defined legitimate purpose.

A. Technology contingency planning
B. Cybersecurity hygiene
C. AI use transparency
D. Data minimization

0554. Which option correctly matches each concept to its practice focus: Cybersecurity hygiene and Technology contingency planning?

A. Cybersecurity hygiene: Using access controls and keeping approved systems updated. / Technology contingency planning: Agreeing on a backup contact method and next step if a session disconnects.
B. Cybersecurity hygiene: Agreeing on a backup contact method and next step if a session disconnects. / Technology contingency planning: Using access controls and keeping approved systems updated.
C. Cybersecurity hygiene: Using access controls and keeping approved systems updated. / Technology contingency planning: Using approved secure systems and avoiding sensitive information on shared or unsecured channels.
D. Cybersecurity hygiene: Asking about device and privacy barriers before assuming a youth can participate remotely. / Technology contingency planning: Agreeing on a backup contact method and next step if a session disconnects.

0555. In the learning-support meeting, a team asks how a teacher and counselor can support a preadolescent child. One proposed action is using approved secure systems and avoiding sensitive information on shared or unsecured channels. Which idea does it represent?

A. Cybersecurity hygiene
B. Digital confidentiality
C. Telehealth informed consent
D. Digital boundaries

0556. Which paired example correctly applies Digital confidentiality first and Cybersecurity hygiene second?

A. Digital confidentiality: Checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool. / Cybersecurity hygiene: Using access controls and keeping approved systems updated.
B. Digital confidentiality: Using approved secure systems and avoiding sensitive information on shared or unsecured channels. / Cybersecurity hygiene: Using access controls and keeping approved systems updated.
C. Digital confidentiality: Using approved secure systems and avoiding sensitive information on shared or unsecured channels. / Cybersecurity hygiene: Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care.
D. Digital confidentiality: Using access controls and keeping approved systems updated. / Cybersecurity hygiene: Using approved secure systems and avoiding sensitive information on shared or unsecured channels.

0557. Which option pairs the definitions of Telehealth emergency planning and Cybersecurity hygiene correctly, in that order?

A. Telehealth emergency planning: Clear disclosure and oversight when artificial intelligence tools materially affect clinical work or client information. / Cybersecurity hygiene: Routine practices such as strong authentication, updates, and secure handling that reduce digital risk.
B. Telehealth emergency planning: Advance procedures for responding to an urgent event during remote care, including location and contacts. / Cybersecurity hygiene: Routine practices such as strong authentication, updates, and secure handling that reduce digital risk.
C. Telehealth emergency planning: Advance procedures for responding to an urgent event during remote care, including location and contacts. / Cybersecurity hygiene: Professional limits governing online contact, social media, and technology-mediated relationships.
D. Telehealth emergency planning: Routine practices such as strong authentication, updates, and secure handling that reduce digital risk. / Cybersecurity hygiene: Advance procedures for responding to an urgent event during remote care, including location and contacts.

0558. Which applied comparison correctly identifies what belongs to Telehealth emergency planning versus Therapeutic app evaluation?

A. Telehealth emergency planning: Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care. / Therapeutic app evaluation: Reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate.
B. Telehealth emergency planning: Reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate. / Therapeutic app evaluation: Confirming current location and emergency contacts at the start of a remote session as appropriate.
C. Telehealth emergency planning: Confirming current location and emergency contacts at the start of a remote session as appropriate. / Therapeutic app evaluation: Using access controls and keeping approved systems updated.
D. Telehealth emergency planning: Confirming current location and emergency contacts at the start of a remote session as appropriate. / Therapeutic app evaluation: Reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate.

0559. Which option correctly matches each concept to its practice focus: Telehealth informed consent and Digital boundaries?

A. Telehealth informed consent: Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care. / Digital boundaries: Clarifying approved communication channels and response times with families.
B. Telehealth informed consent: Using approved secure systems and avoiding sensitive information on shared or unsecured channels. / Digital boundaries: Clarifying approved communication channels and response times with families.
C. Telehealth informed consent: Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care. / Digital boundaries: Using access controls and keeping approved systems updated.
D. Telehealth informed consent: Clarifying approved communication channels and response times with families. / Digital boundaries: Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care.

0560. Which pair of actions illustrates Telehealth informed consent and Digital confidentiality, respectively?

A. Telehealth informed consent: Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care. / Digital confidentiality: Agreeing on a backup contact method and next step if a session disconnects.
B. Telehealth informed consent: Checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool. / Digital confidentiality: Using approved secure systems and avoiding sensitive information on shared or unsecured channels.
C. Telehealth informed consent: Using approved secure systems and avoiding sensitive information on shared or unsecured channels. / Digital confidentiality: Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care.
D. Telehealth informed consent: Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care. / Digital confidentiality: Using approved secure systems and avoiding sensitive information on shared or unsecured channels.

0561. Which applied comparison correctly identifies what belongs to Digital boundaries versus Therapeutic app evaluation?

A. Digital boundaries: Clarifying approved communication channels and response times with families. / Therapeutic app evaluation: Checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool.
B. Digital boundaries: Reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate. / Therapeutic app evaluation: Clarifying approved communication channels and response times with families.
C. Digital boundaries: Using approved secure systems and avoiding sensitive information on shared or unsecured channels. / Therapeutic app evaluation: Reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate.
D. Digital boundaries: Clarifying approved communication channels and response times with families. / Therapeutic app evaluation: Reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate.

0562. What is the central meaning of Therapeutic app evaluation?

A. Assessment of an app's evidence, privacy, accessibility, usability, and fit before recommending it.
B. Attention to unequal access to devices, bandwidth, private space, and digital skills.
C. Protection of sensitive information across devices, networks, platforms, and communications.
D. Professional limits governing online contact, social media, and technology-mediated relationships.

0563. A older adolescent client is receiving support in the classroom support meeting. The school counselor is guided by this practice: using approved secure systems and avoiding sensitive information on shared or unsecured channels. Which principle best fits?

A. AI use transparency
B. Telehealth emergency planning
C. Telehealth informed consent
D. Digital confidentiality

0564. A student confuses Technology access equity with AI use transparency. Which explanation most accurately separates them?

A. Technology access equity: Attention to unequal access to devices, bandwidth, private space, and digital skills. / AI use transparency: An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans.
B. Technology access equity: Attention to unequal access to devices, bandwidth, private space, and digital skills. / AI use transparency: Clear disclosure and oversight when artificial intelligence tools materially affect clinical work or client information.
C. Technology access equity: A plan for continuing or safely pausing care when devices, connectivity, or platforms fail. / AI use transparency: Clear disclosure and oversight when artificial intelligence tools materially affect clinical work or client information.
D. Technology access equity: Clear disclosure and oversight when artificial intelligence tools materially affect clinical work or client information. / AI use transparency: Attention to unequal access to devices, bandwidth, private space, and digital skills.

0565. Which paired example correctly applies Digital confidentiality first and Therapeutic app evaluation second?

A. Digital confidentiality: Confirming current location and emergency contacts at the start of a remote session as appropriate. / Therapeutic app evaluation: Reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate.
B. Digital confidentiality: Using approved secure systems and avoiding sensitive information on shared or unsecured channels. / Therapeutic app evaluation: Reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate.
C. Digital confidentiality: Reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate. / Therapeutic app evaluation: Using approved secure systems and avoiding sensitive information on shared or unsecured channels.
D. Digital confidentiality: Using approved secure systems and avoiding sensitive information on shared or unsecured channels. / Therapeutic app evaluation: Agreeing on a backup contact method and next step if a session disconnects.

0566. Choose the practice comparison that best separates Telehealth emergency planning from Technology access equity.

A. Telehealth emergency planning: Clarifying approved communication channels and response times with families. / Technology access equity: Asking about device and privacy barriers before assuming a youth can participate remotely.
B. Telehealth emergency planning: Confirming current location and emergency contacts at the start of a remote session as appropriate. / Technology access equity: Avoiding unnecessary data capture and retaining only what policy and law require.
C. Telehealth emergency planning: Asking about device and privacy barriers before assuming a youth can participate remotely. / Technology access equity: Confirming current location and emergency contacts at the start of a remote session as appropriate.
D. Telehealth emergency planning: Confirming current location and emergency contacts at the start of a remote session as appropriate. / Technology access equity: Asking about device and privacy barriers before assuming a youth can participate remotely.

0567. Which comparison would correct a trainee’s misunderstanding of Telehealth informed consent versus Technology access equity?

A. Telehealth informed consent: An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans. / Technology access equity: Attention to unequal access to devices, bandwidth, private space, and digital skills.
B. Telehealth informed consent: An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans. / Technology access equity: Clear disclosure and oversight when artificial intelligence tools materially affect clinical work or client information.
C. Telehealth informed consent: Attention to unequal access to devices, bandwidth, private space, and digital skills. / Technology access equity: An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans.
D. Telehealth informed consent: Advance procedures for responding to an urgent event during remote care, including location and contacts. / Technology access equity: Attention to unequal access to devices, bandwidth, private space, and digital skills.

0568. Which named construct is captured by this account? A plan for continuing or safely pausing care when devices, connectivity, or platforms fail.

A. Technology access equity
B. Therapeutic app evaluation
C. Technology contingency planning
D. AI use transparency

0569. Which statement shows a sound practice-level distinction between Telehealth informed consent and Technology contingency planning?

A. Telehealth informed consent: Using access controls and keeping approved systems updated. / Technology contingency planning: Agreeing on a backup contact method and next step if a session disconnects.
B. Telehealth informed consent: Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care. / Technology contingency planning: Avoiding unnecessary data capture and retaining only what policy and law require.
C. Telehealth informed consent: Agreeing on a backup contact method and next step if a session disconnects. / Technology contingency planning: Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care.
D. Telehealth informed consent: Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care. / Technology contingency planning: Agreeing on a backup contact method and next step if a session disconnects.

0570. Which comparison correctly distinguishes Technology access equity from AI use transparency?

A. Technology access equity: Attention to unequal access to devices, bandwidth, private space, and digital skills. / AI use transparency: Clear disclosure and oversight when artificial intelligence tools materially affect clinical work or client information.
B. Technology access equity: Clear disclosure and oversight when artificial intelligence tools materially affect clinical work or client information. / AI use transparency: Attention to unequal access to devices, bandwidth, private space, and digital skills.
C. Technology access equity: A plan for continuing or safely pausing care when devices, connectivity, or platforms fail. / AI use transparency: Clear disclosure and oversight when artificial intelligence tools materially affect clinical work or client information.
D. Technology access equity: Attention to unequal access to devices, bandwidth, private space, and digital skills. / AI use transparency: An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans.

0571. In the youth group, the agreed focus for a community practitioner working with a young person aged 18 is using approved secure systems and avoiding sensitive information on shared or unsecured channels. Which concept names this focus?

A. Technology access equity
B. Digital confidentiality
C. Data minimization
D. Cybersecurity hygiene

0572. A trainee must distinguish how Digital boundaries and Technology contingency planning guide practice. Which comparison is accurate?

A. Digital boundaries: Confirming current location and emergency contacts at the start of a remote session as appropriate. / Technology contingency planning: Agreeing on a backup contact method and next step if a session disconnects.
B. Digital boundaries: Clarifying approved communication channels and response times with families. / Technology contingency planning: Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care.
C. Digital boundaries: Clarifying approved communication channels and response times with families. / Technology contingency planning: Agreeing on a backup contact method and next step if a session disconnects.
D. Digital boundaries: Agreeing on a backup contact method and next step if a session disconnects. / Technology contingency planning: Clarifying approved communication channels and response times with families.

0573. Which pair of actions illustrates Telehealth emergency planning and Digital boundaries, respectively?

A. Telehealth emergency planning: Using access controls and keeping approved systems updated. / Digital boundaries: Clarifying approved communication channels and response times with families.
B. Telehealth emergency planning: Clarifying approved communication channels and response times with families. / Digital boundaries: Confirming current location and emergency contacts at the start of a remote session as appropriate.
C. Telehealth emergency planning: Confirming current location and emergency contacts at the start of a remote session as appropriate. / Digital boundaries: Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care.
D. Telehealth emergency planning: Confirming current location and emergency contacts at the start of a remote session as appropriate. / Digital boundaries: Clarifying approved communication channels and response times with families.

0574. Which statement accurately contrasts the course concepts Telehealth informed consent and Telehealth emergency planning?

A. Telehealth informed consent: An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans. / Telehealth emergency planning: Routine practices such as strong authentication, updates, and secure handling that reduce digital risk.
B. Telehealth informed consent: An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans. / Telehealth emergency planning: Advance procedures for responding to an urgent event during remote care, including location and contacts.
C. Telehealth informed consent: Advance procedures for responding to an urgent event during remote care, including location and contacts. / Telehealth emergency planning: An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans.
D. Telehealth informed consent: Attention to unequal access to devices, bandwidth, private space, and digital skills. / Telehealth emergency planning: Advance procedures for responding to an urgent event during remote care, including location and contacts.

0575. Which comparison would correct a trainee’s misunderstanding of Digital confidentiality versus Therapeutic app evaluation?

A. Digital confidentiality: Assessment of an app’s evidence, privacy, accessibility, usability, and fit before recommending it. / Therapeutic app evaluation: Protection of sensitive information across devices, networks, platforms, and communications.
B. Digital confidentiality: Protection of sensitive information across devices, networks, platforms, and communications. / Therapeutic app evaluation: Assessment of an app’s evidence, privacy, accessibility, usability, and fit before recommending it.
C. Digital confidentiality: Advance procedures for responding to an urgent event during remote care, including location and contacts. / Therapeutic app evaluation: Assessment of an app’s evidence, privacy, accessibility, usability, and fit before recommending it.
D. Digital confidentiality: Protection of sensitive information across devices, networks, platforms, and communications. / Therapeutic app evaluation: A plan for continuing or safely pausing care when devices, connectivity, or platforms fail.

0576. Which comparison correctly distinguishes Digital confidentiality from Telehealth emergency planning?

A. Digital confidentiality: Advance procedures for responding to an urgent event during remote care, including location and contacts. / Telehealth emergency planning: Protection of sensitive information across devices, networks, platforms, and communications.
B. Digital confidentiality: Protection of sensitive information across devices, networks, platforms, and communications. / Telehealth emergency planning: Attention to unequal access to devices, bandwidth, private space, and digital skills.
C. Digital confidentiality: Protection of sensitive information across devices, networks, platforms, and communications. / Telehealth emergency planning: Advance procedures for responding to an urgent event during remote care, including location and contacts.
D. Digital confidentiality: Assessment of an app's evidence, privacy, accessibility, usability, and fit before recommending it. / Telehealth emergency planning: Advance procedures for responding to an urgent event during remote care, including location and contacts.

0577. A mental-health professional is preparing a follow-up plan for a student aged 15 in the learning-support meeting. The plan calls for asking about device and privacy barriers before assuming a youth can participate remotely. Which concept names this approach?

A. Telehealth informed consent
B. Telehealth emergency planning
C. Therapeutic app evaluation
D. Technology access equity

0578. In a case note about a child aged 11, a member of a clinical team working in the youth advocacy program records this priority: using approved secure systems and avoiding sensitive information on shared or unsecured channels. What principle is reflected?

A. Telehealth emergency planning
B. Digital confidentiality
C. Digital boundaries
D. Technology contingency planning

0579. A case conference reviews a service navigator's work with a child aged 14 in the youth group: using access controls and keeping approved systems updated. Which principle is central?

A. Digital confidentiality
B. Telehealth informed consent
C. Cybersecurity hygiene
D. Technology contingency planning

0580. A mental-health professional and a high-school student are discussing support in the family resource center. The selected practice is reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care. Which concept does this demonstrate?

A. Technology contingency planning
B. Technology access equity
C. Telehealth informed consent
D. Digital confidentiality

0581. How should a practitioner distinguish the applications of Digital confidentiality and Telehealth emergency planning?

A. Digital confidentiality: Using approved secure systems and avoiding sensitive information on shared or unsecured channels. / Telehealth emergency planning: Asking about device and privacy barriers before assuming a youth can participate remotely.
B. Digital confidentiality: Confirming current location and emergency contacts at the start of a remote session as appropriate. / Telehealth emergency planning: Using approved secure systems and avoiding sensitive information on shared or unsecured channels.
C. Digital confidentiality: Reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate. / Telehealth emergency planning: Confirming current location and emergency contacts at the start of a remote session as appropriate.
D. Digital confidentiality: Using approved secure systems and avoiding sensitive information on shared or unsecured channels. / Telehealth emergency planning: Confirming current location and emergency contacts at the start of a remote session as appropriate.

0582. Which comparison correctly distinguishes Telehealth informed consent from Therapeutic app evaluation?

A. Telehealth informed consent: Advance procedures for responding to an urgent event during remote care, including location and contacts. / Therapeutic app evaluation: Assessment of an app's evidence, privacy, accessibility, usability, and fit before recommending it.
B. Telehealth informed consent: Assessment of an app's evidence, privacy, accessibility, usability, and fit before recommending it. / Therapeutic app evaluation: An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans.
C. Telehealth informed consent: An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans. / Therapeutic app evaluation: Clear disclosure and oversight when artificial intelligence tools materially affect clinical work or client information.
D. Telehealth informed consent: An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans. / Therapeutic app evaluation: Assessment of an app's evidence, privacy, accessibility, usability, and fit before recommending it.

0583. During work in the child guidance clinic, a consulting counselor identifies this need: asking about device and privacy barriers before assuming a youth can participate remotely. Which idea should guide the response?

A. Telehealth emergency planning
B. Technology access equity
C. Telehealth informed consent
D. Therapeutic app evaluation

0584. In a professional consultation about a student aged 17, the consultant describes this response in the behavior-support review: clarifying approved communication channels and response times with families. Which term is most apt?

A. Technology contingency planning
B. Digital boundaries
C. Therapeutic app evaluation
D. Cybersecurity hygiene

0585. In a professional consultation about a child aged 6, the assessment clinician describes this response in the telehealth session: checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool. Which term is most apt?

A. AI use transparency
B. Telehealth emergency planning
C. Telehealth informed consent
D. Digital boundaries

0586. A case conference asks for a distinction between Digital boundaries and AI use transparency. Which answer is sound?

A. Digital boundaries: Professional limits governing online contact, social media, and technology-mediated relationships. / AI use transparency: Clear disclosure and oversight when artificial intelligence tools materially affect clinical work or client information.
B. Digital boundaries: Professional limits governing online contact, social media, and technology-mediated relationships. / AI use transparency: Advance procedures for responding to an urgent event during remote care, including location and contacts.
C. Digital boundaries: Collecting and retaining only the personal information necessary for a defined legitimate purpose. / AI use transparency: Clear disclosure and oversight when artificial intelligence tools materially affect clinical work or client information.
D. Digital boundaries: Clear disclosure and oversight when artificial intelligence tools materially affect clinical work or client information. / AI use transparency: Professional limits governing online contact, social media, and technology-mediated relationships.

0587. A case conference asks for a distinction between Technology access equity and Therapeutic app evaluation. Which answer is sound?

A. Technology access equity: Collecting and retaining only the personal information necessary for a defined legitimate purpose. / Therapeutic app evaluation: Assessment of an app's evidence, privacy, accessibility, usability, and fit before recommending it.
B. Technology access equity: Attention to unequal access to devices, bandwidth, private space, and digital skills. / Therapeutic app evaluation: Assessment of an app's evidence, privacy, accessibility, usability, and fit before recommending it.
C. Technology access equity: Assessment of an app's evidence, privacy, accessibility, usability, and fit before recommending it. / Therapeutic app evaluation: Attention to unequal access to devices, bandwidth, private space, and digital skills.
D. Technology access equity: Attention to unequal access to devices, bandwidth, private space, and digital skills. / Therapeutic app evaluation: Advance procedures for responding to an urgent event during remote care, including location and contacts.

0588. While consulting in the outpatient clinic, a supervised trainee supports a young person aged 13 by using this approach: reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate. Which concept is being applied?

A. Therapeutic app evaluation
B. Telehealth informed consent
C. Telehealth emergency planning
D. Technology access equity

0589. In a professional consultation about a child aged 14, the member of a clinical team describes this response in the student-support meeting: reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care. Which term is most apt?

A. Digital boundaries
B. Technology contingency planning
C. Telehealth informed consent
D. Digital confidentiality

0590. A team must select a support approach for a child aged 7 at the student-support meeting. The case coordinator recommends using approved secure systems and avoiding sensitive information on shared or unsecured channels. Which idea is most relevant?

A. Digital confidentiality
B. Data minimization
C. Technology contingency planning
D. Telehealth emergency planning

0591. During service review in the school-based service, a community practitioner describes reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate. for a client in early adolescence. Which course idea is most applicable?

A. Telehealth informed consent
B. Digital confidentiality
C. Digital boundaries
D. Therapeutic app evaluation

0592. In the community mental-health service, a consulting counselor describes the most appropriate support for a young person aged 18 as reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate. Which framework is being applied?

A. Digital boundaries
B. Telehealth informed consent
C. Therapeutic app evaluation
D. AI use transparency

0593. Choose the practice comparison that best separates Technology access equity from Therapeutic app evaluation.

A. Technology access equity: Avoiding unnecessary data capture and retaining only what policy and law require. / Therapeutic app evaluation: Reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate.
B. Technology access equity: Asking about device and privacy barriers before assuming a youth can participate remotely. / Therapeutic app evaluation: Reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate.
C. Technology access equity: Reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate. / Therapeutic app evaluation: Asking about device and privacy barriers before assuming a youth can participate remotely.
D. Technology access equity: Asking about device and privacy barriers before assuming a youth can participate remotely. / Therapeutic app evaluation: Confirming current location and emergency contacts at the start of a remote session as appropriate.

0594. While supporting a young person aged 13 in the community youth program, a school-based clinician adopts this practice: using approved secure systems and avoiding sensitive information on shared or unsecured channels. Which concept best explains the choice?

A. Digital confidentiality
B. Digital boundaries
C. Cybersecurity hygiene
D. AI use transparency

0595. Which statement shows a sound practice-level distinction between Telehealth informed consent and AI use transparency?

A. Telehealth informed consent: Checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool. / AI use transparency: Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care.
B. Telehealth informed consent: Confirming current location and emergency contacts at the start of a remote session as appropriate. / AI use transparency: Checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool.
C. Telehealth informed consent: Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care. / AI use transparency: Avoiding unnecessary data capture and retaining only what policy and law require.
D. Telehealth informed consent: Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care. / AI use transparency: Checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool.

0596. A service team discusses a child aged 6 in the community service agency. Their proposed next step is clarifying approved communication channels and response times with families. Which course concept supports it?

A. Therapeutic app evaluation
B. Digital boundaries
C. Digital confidentiality
D. Telehealth emergency planning

0597. Which statement accurately contrasts the course concepts Telehealth emergency planning and AI use transparency?

A. Telehealth emergency planning: Advance procedures for responding to an urgent event during remote care, including location and contacts. / AI use transparency: Clear disclosure and oversight when artificial intelligence tools materially affect clinical work or client information.
B. Telehealth emergency planning: Assessment of an app's evidence, privacy, accessibility, usability, and fit before recommending it. / AI use transparency: Clear disclosure and oversight when artificial intelligence tools materially affect clinical work or client information.
C. Telehealth emergency planning: Advance procedures for responding to an urgent event during remote care, including location and contacts. / AI use transparency: Routine practices such as strong authentication, updates, and secure handling that reduce digital risk.
D. Telehealth emergency planning: Clear disclosure and oversight when artificial intelligence tools materially affect clinical work or client information. / AI use transparency: Advance procedures for responding to an urgent event during remote care, including location and contacts.

0598. Which option correctly matches each concept to its practice focus: Telehealth emergency planning and Therapeutic app evaluation?

A. Telehealth emergency planning: Confirming current location and emergency contacts at the start of a remote session as appropriate. / Therapeutic app evaluation: Using access controls and keeping approved systems updated.
B. Telehealth emergency planning: Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care. / Therapeutic app evaluation: Reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate.
C. Telehealth emergency planning: Confirming current location and emergency contacts at the start of a remote session as appropriate. / Therapeutic app evaluation: Reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate.
D. Telehealth emergency planning: Reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate. / Therapeutic app evaluation: Confirming current location and emergency contacts at the start of a remote session as appropriate.

0599. Which statement shows a sound practice-level distinction between Telehealth informed consent and Therapeutic app evaluation?

A. Telehealth informed consent: Reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate. / Therapeutic app evaluation: Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care.
B. Telehealth informed consent: Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care. / Therapeutic app evaluation: Reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate.
C. Telehealth informed consent: Confirming current location and emergency contacts at the start of a remote session as appropriate. / Therapeutic app evaluation: Reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate.
D. Telehealth informed consent: Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care. / Therapeutic app evaluation: Checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool.

0600. When reviewing a middle-school student's plan in the child guidance clinic, the caregiver working with a counselor notes that the next step is using approved secure systems and avoiding sensitive information on shared or unsecured channels. Which concept guides this step?

A. Digital confidentiality
B. AI use transparency
C. Data minimization
D. Telehealth emergency planning

0601. Which option correctly matches each concept to its practice focus: Telehealth informed consent and Data minimization?

A. Telehealth informed consent: Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care. / Data minimization: Agreeing on a backup contact method and next step if a session disconnects.
B. Telehealth informed consent: Asking about device and privacy barriers before assuming a youth can participate remotely. / Data minimization: Avoiding unnecessary data capture and retaining only what policy and law require.
C. Telehealth informed consent: Avoiding unnecessary data capture and retaining only what policy and law require. / Data minimization: Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care.
D. Telehealth informed consent: Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care. / Data minimization: Avoiding unnecessary data capture and retaining only what policy and law require.

0602. A trainee must distinguish how Digital boundaries and Therapeutic app evaluation guide practice. Which comparison is accurate?

A. Digital boundaries: Clarifying approved communication channels and response times with families. / Therapeutic app evaluation: Reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate.
B. Digital boundaries: Clarifying approved communication channels and response times with families. / Therapeutic app evaluation: Checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool.
C. Digital boundaries: Using approved secure systems and avoiding sensitive information on shared or unsecured channels. / Therapeutic app evaluation: Reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate.
D. Digital boundaries: Reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate. / Therapeutic app evaluation: Clarifying approved communication channels and response times with families.

0603. While supporting a young person aged 18 in the school counseling office, a case coordinator adopts this practice: agreeing on a backup contact method and next step if a session disconnects. Which concept best explains the choice?

A. Therapeutic app evaluation
B. Data minimization
C. Digital confidentiality
D. Technology contingency planning

0604. Choose the practice comparison that best separates Technology access equity from AI use transparency.

A. Technology access equity: Checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool. / AI use transparency: Asking about device and privacy barriers before assuming a youth can participate remotely.
B. Technology access equity: Asking about device and privacy barriers before assuming a youth can participate remotely. / AI use transparency: Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care.
C. Technology access equity: Agreeing on a backup contact method and next step if a session disconnects. / AI use transparency: Checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool.
D. Technology access equity: Asking about device and privacy barriers before assuming a youth can participate remotely. / AI use transparency: Checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool.

0605. A parent educator presents a support plan for a preadolescent child at the counseling practicum. Its central feature is checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool. Which concept should be named?

A. Technology access equity
B. AI use transparency
C. Telehealth emergency planning
D. Digital boundaries

0606. Choose the term that matches this definition: Clear disclosure and oversight when artificial intelligence tools materially affect clinical work or client information.

A. Digital boundaries
B. Technology contingency planning
C. AI use transparency
D. Digital confidentiality

0607. Select the best explanation of Data minimization.

A. Protection of sensitive information across devices, networks, platforms, and communications.
B. Advance procedures for responding to an urgent event during remote care, including location and contacts.
C. Assessment of an app's evidence, privacy, accessibility, usability, and fit before recommending it.
D. Collecting and retaining only the personal information necessary for a defined legitimate purpose.

0608. Which comparison correctly distinguishes Technology access equity from Technology contingency planning?

A. Technology access equity: Routine practices such as strong authentication, updates, and secure handling that reduce digital risk. / Technology contingency planning: A plan for continuing or safely pausing care when devices, connectivity, or platforms fail.
B. Technology access equity: Attention to unequal access to devices, bandwidth, private space, and digital skills. / Technology contingency planning: A plan for continuing or safely pausing care when devices, connectivity, or platforms fail.
C. Technology access equity: A plan for continuing or safely pausing care when devices, connectivity, or platforms fail. / Technology contingency planning: Attention to unequal access to devices, bandwidth, private space, and digital skills.
D. Technology access equity: Attention to unequal access to devices, bandwidth, private space, and digital skills. / Technology contingency planning: An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans.

0609. Choose the definition pair that correctly explains Digital boundaries first and Technology contingency planning second.

A. Digital boundaries: A plan for continuing or safely pausing care when devices, connectivity, or platforms fail. / Technology contingency planning: Professional limits governing online contact, social media, and technology-mediated relationships.
B. Digital boundaries: Professional limits governing online contact, social media, and technology-mediated relationships. / Technology contingency planning: An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans.
C. Digital boundaries: Professional limits governing online contact, social media, and technology-mediated relationships. / Technology contingency planning: A plan for continuing or safely pausing care when devices, connectivity, or platforms fail.
D. Digital boundaries: Advance procedures for responding to an urgent event during remote care, including location and contacts. / Technology contingency planning: A plan for continuing or safely pausing care when devices, connectivity, or platforms fail.

0610. Which option preserves the correct meaning of both Technology access equity and AI use transparency?

A. Technology access equity: Attention to unequal access to devices, bandwidth, private space, and digital skills. / AI use transparency: Clear disclosure and oversight when artificial intelligence tools materially affect clinical work or client information.
B. Technology access equity: A plan for continuing or safely pausing care when devices, connectivity, or platforms fail. / AI use transparency: Clear disclosure and oversight when artificial intelligence tools materially affect clinical work or client information.
C. Technology access equity: Clear disclosure and oversight when artificial intelligence tools materially affect clinical work or client information. / AI use transparency: Attention to unequal access to devices, bandwidth, private space, and digital skills.
D. Technology access equity: Attention to unequal access to devices, bandwidth, private space, and digital skills. / AI use transparency: An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans.

0611. Which option preserves the correct meaning of both Telehealth informed consent and Technology contingency planning?

A. Telehealth informed consent: A plan for continuing or safely pausing care when devices, connectivity, or platforms fail. / Technology contingency planning: An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans.
B. Telehealth informed consent: An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans. / Technology contingency planning: A plan for continuing or safely pausing care when devices, connectivity, or platforms fail.
C. Telehealth informed consent: An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans. / Technology contingency planning: Collecting and retaining only the personal information necessary for a defined legitimate purpose.
D. Telehealth informed consent: Routine practices such as strong authentication, updates, and secure handling that reduce digital risk. / Technology contingency planning: A plan for continuing or safely pausing care when devices, connectivity, or platforms fail.

0612. At the school consultation, a community practitioner reviews whether a plan for a preadolescent child is appropriate. The relevant practice is avoiding unnecessary data capture and retaining only what policy and law require. Which concept is tested?

A. Cybersecurity hygiene
B. Digital confidentiality
C. Data minimization
D. Therapeutic app evaluation

0613. Choose the response that best puts AI use transparency into practice.

A. Checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool.
B. Reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate.
C. Agreeing on a backup contact method and next step if a session disconnects.
D. Asking about device and privacy barriers before assuming a youth can participate remotely.

0614. Which comparison would correct a trainee's misunderstanding of Digital confidentiality versus Cybersecurity hygiene?

A. Digital confidentiality: Protection of sensitive information across devices, networks, platforms, and communications. / Cybersecurity hygiene: Routine practices such as strong authentication, updates, and secure handling that reduce digital risk.
B. Digital confidentiality: Clear disclosure and oversight when artificial intelligence tools materially affect clinical work or client information. / Cybersecurity hygiene: Routine practices such as strong authentication, updates, and secure handling that reduce digital risk.
C. Digital confidentiality: Protection of sensitive information across devices, networks, platforms, and communications. / Cybersecurity hygiene: An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans.
D. Digital confidentiality: Routine practices such as strong authentication, updates, and secure handling that reduce digital risk. / Cybersecurity hygiene: Protection of sensitive information across devices, networks, platforms, and communications.

0615. For a young person in the behavior-support review, a counselor makes this practice the immediate priority: using approved secure systems and avoiding sensitive information on shared or unsecured channels. Which concept fits best?

A. Telehealth informed consent
B. Cybersecurity hygiene
C. Technology contingency planning
D. Digital confidentiality

0616. Which option preserves the correct meaning of both Telehealth emergency planning and Digital boundaries?

A. Telehealth emergency planning: Advance procedures for responding to an urgent event during remote care, including location and contacts. / Digital boundaries: Professional limits governing online contact, social media, and technology-mediated relationships.
B. Telehealth emergency planning: Advance procedures for responding to an urgent event during remote care, including location and contacts. / Digital boundaries: An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans.
C. Telehealth emergency planning: Professional limits governing online contact, social media, and technology-mediated relationships. / Digital boundaries: Advance procedures for responding to an urgent event during remote care, including location and contacts.
D. Telehealth emergency planning: Routine practices such as strong authentication, updates, and secure handling that reduce digital risk. / Digital boundaries: Professional limits governing online contact, social media, and technology-mediated relationships.

0617. A student confuses Digital confidentiality with Technology access equity. Which explanation most accurately separates them?

A. Digital confidentiality: Protection of sensitive information across devices, networks, platforms, and communications. / Technology access equity: Clear disclosure and oversight when artificial intelligence tools materially affect clinical work or client information.
B. Digital confidentiality: Attention to unequal access to devices, bandwidth, private space, and digital skills. / Technology access equity: Protection of sensitive information across devices, networks, platforms, and communications.
C. Digital confidentiality: Collecting and retaining only the personal information necessary for a defined legitimate purpose. / Technology access equity: Attention to unequal access to devices, bandwidth, private space, and digital skills.
D. Digital confidentiality: Protection of sensitive information across devices, networks, platforms, and communications. / Technology access equity: Attention to unequal access to devices, bandwidth, private space, and digital skills.

0618. Select the best explanation of Cybersecurity hygiene.

A. Collecting and retaining only the personal information necessary for a defined legitimate purpose.
B. An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans.
C. Clear disclosure and oversight when artificial intelligence tools materially affect clinical work or client information.
D. Routine practices such as strong authentication, updates, and secure handling that reduce digital risk.

0619. A case conference asks for a distinction between Digital boundaries and Technology contingency planning. Which answer is sound?

A. Digital boundaries: Professional limits governing online contact, social media, and technology-mediated relationships. / Technology contingency planning: An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans.
B. Digital boundaries: Professional limits governing online contact, social media, and technology-mediated relationships. / Technology contingency planning: A plan for continuing or safely pausing care when devices, connectivity, or platforms fail.
C. Digital boundaries: Advance procedures for responding to an urgent event during remote care, including location and contacts. / Technology contingency planning: A plan for continuing or safely pausing care when devices, connectivity, or platforms fail.
D. Digital boundaries: A plan for continuing or safely pausing care when devices, connectivity, or platforms fail. / Technology contingency planning: Professional limits governing online contact, social media, and technology-mediated relationships.

0620. A school support specialist reviews a plan for a young person aged 16 in the counseling practicum. The plan emphasizes clarifying approved communication channels and response times with families. Which course idea does this reflect?

A. Therapeutic app evaluation
B. Cybersecurity hygiene
C. Telehealth informed consent
D. Digital boundaries

0621. While consulting in the telehealth session, a assessment clinician supports a child aged 6 by using this approach: checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool. Which concept is being applied?

A. Technology access equity
B. Telehealth informed consent
C. Technology contingency planning
D. AI use transparency

0622. In a supervision quiz, how should Telehealth emergency planning be distinguished from Technology contingency planning?

A. Telehealth emergency planning: Advance procedures for responding to an urgent event during remote care, including location and contacts. / Technology contingency planning: A plan for continuing or safely pausing care when devices, connectivity, or platforms fail.
B. Telehealth emergency planning: Collecting and retaining only the personal information necessary for a defined legitimate purpose. / Technology contingency planning: A plan for continuing or safely pausing care when devices, connectivity, or platforms fail.
C. Telehealth emergency planning: A plan for continuing or safely pausing care when devices, connectivity, or platforms fail. / Technology contingency planning: Advance procedures for responding to an urgent event during remote care, including location and contacts.
D. Telehealth emergency planning: Advance procedures for responding to an urgent event during remote care, including location and contacts. / Technology contingency planning: Attention to unequal access to devices, bandwidth, private space, and digital skills.

0623. How are Technology access equity and Cybersecurity hygiene most accurately differentiated in this curriculum?

A. Technology access equity: Routine practices such as strong authentication, updates, and secure handling that reduce digital risk. / Cybersecurity hygiene: Attention to unequal access to devices, bandwidth, private space, and digital skills.
B. Technology access equity: Attention to unequal access to devices, bandwidth, private space, and digital skills. / Cybersecurity hygiene: Professional limits governing online contact, social media, and technology-mediated relationships.
C. Technology access equity: Attention to unequal access to devices, bandwidth, private space, and digital skills. / Cybersecurity hygiene: Routine practices such as strong authentication, updates, and secure handling that reduce digital risk.
D. Technology access equity: An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans. / Cybersecurity hygiene: Routine practices such as strong authentication, updates, and secure handling that reduce digital risk.

0624. A clinical supervisor reviews a plan for a young person aged 18 in the school consultation. The plan emphasizes checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool. Which course idea does this reflect?

A. AI use transparency
B. Therapeutic app evaluation
C. Technology access equity
D. Technology contingency planning

0625. How are Digital confidentiality and Telehealth emergency planning most accurately differentiated in this curriculum?

A. Digital confidentiality: Advance procedures for responding to an urgent event during remote care, including location and contacts. / Telehealth emergency planning: Protection of sensitive information across devices, networks, platforms, and communications.
B. Digital confidentiality: Assessment of an app's evidence, privacy, accessibility, usability, and fit before recommending it. / Telehealth emergency planning: Advance procedures for responding to an urgent event during remote care, including location and contacts.
C. Digital confidentiality: Protection of sensitive information across devices, networks, platforms, and communications. / Telehealth emergency planning: Advance procedures for responding to an urgent event during remote care, including location and contacts.
D. Digital confidentiality: Protection of sensitive information across devices, networks, platforms, and communications. / Telehealth emergency planning: Attention to unequal access to devices, bandwidth, private space, and digital skills.

0626. Select the best explanation of Digital confidentiality.

A. Assessment of an app's evidence, privacy, accessibility, usability, and fit before recommending it.
B. Protection of sensitive information across devices, networks, platforms, and communications.
C. Clear disclosure and oversight when artificial intelligence tools materially affect clinical work or client information.
D. Advance procedures for responding to an urgent event during remote care, including location and contacts.

0627. While supporting a young person in the student wellness team, a caregiver working with a counselor adopts this practice: reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate. Which concept best explains the choice?

A. Therapeutic app evaluation
B. Cybersecurity hygiene
C. Data minimization
D. Telehealth informed consent

0628. Which choice aligns each practice with the correct idea, Cybersecurity hygiene or Technology contingency planning?

A. Cybersecurity hygiene: Using access controls and keeping approved systems updated. / Technology contingency planning: Agreeing on a backup contact method and next step if a session disconnects.
B. Cybersecurity hygiene: Agreeing on a backup contact method and next step if a session disconnects. / Technology contingency planning: Using access controls and keeping approved systems updated.
C. Cybersecurity hygiene: Asking about device and privacy barriers before assuming a youth can participate remotely. / Technology contingency planning: Agreeing on a backup contact method and next step if a session disconnects.
D. Cybersecurity hygiene: Using access controls and keeping approved systems updated. / Technology contingency planning: Using approved secure systems and avoiding sensitive information on shared or unsecured channels.

0629. A support meeting for a young person aged 16 includes a clinical supervisor in the clinical planning session. The practice under consideration is agreeing on a backup contact method and next step if a session disconnects. Which concept guides it?

A. Data minimization
B. Telehealth informed consent
C. Technology access equity
D. Technology contingency planning

0630. A supervisor asks how Digital boundaries would appear in practice. Which choice should be selected?

A. Clarifying approved communication channels and response times with families.
B. Agreeing on a backup contact method and next step if a session disconnects.
C. Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care.
D. Reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate.

0631. Which choice aligns each practice with the correct idea, Cybersecurity hygiene or AI use transparency?

A. Cybersecurity hygiene: Confirming current location and emergency contacts at the start of a remote session as appropriate. / AI use transparency: Checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool.
B. Cybersecurity hygiene: Using access controls and keeping approved systems updated. / AI use transparency: Clarifying approved communication channels and response times with families.
C. Cybersecurity hygiene: Checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool. / AI use transparency: Using access controls and keeping approved systems updated.
D. Cybersecurity hygiene: Using access controls and keeping approved systems updated. / AI use transparency: Checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool.

0632. A supervisor asks for an applied contrast between Data minimization and Therapeutic app evaluation. Which option fits?

A. Data minimization: Avoiding unnecessary data capture and retaining only what policy and law require. / Therapeutic app evaluation: Reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate.
B. Data minimization: Avoiding unnecessary data capture and retaining only what policy and law require. / Therapeutic app evaluation: Agreeing on a backup contact method and next step if a session disconnects.
C. Data minimization: Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care. / Therapeutic app evaluation: Reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate.
D. Data minimization: Reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate. / Therapeutic app evaluation: Avoiding unnecessary data capture and retaining only what policy and law require.

0633. A behavior specialist reviews a plan for a child aged 6 in the community mental-health service. The plan emphasizes using approved secure systems and avoiding sensitive information on shared or unsecured channels. Which course idea does this reflect?

A. Telehealth emergency planning
B. AI use transparency
C. Cybersecurity hygiene
D. Digital confidentiality

0634. A community practitioner describes an intervention for a child aged 6 in the community youth program, centered on agreeing on a backup contact method and next step if a session disconnects. Which named idea is most relevant?

A. Technology contingency planning
B. Digital confidentiality
C. Telehealth emergency planning
D. AI use transparency

0635. In a case note about a child of elementary-school age, a supervised trainee working in the telehealth session records this priority: asking about device and privacy barriers before assuming a youth can participate remotely. What principle is reflected?

A. AI use transparency
B. Data minimization
C. Technology access equity
D. Technology contingency planning

0636. What is the central meaning of Telehealth emergency planning?

A. Routine practices such as strong authentication, updates, and secure handling that reduce digital risk.
B. Advance procedures for responding to an urgent event during remote care, including location and contacts.
C. Assessment of an app's evidence, privacy, accessibility, usability, and fit before recommending it.
D. An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans.

0637. Which course concept is defined as follows: Collecting and retaining only the personal information necessary for a defined legitimate purpose.

A. Digital boundaries
B. Digital confidentiality
C. Data minimization
D. Telehealth emergency planning

0638. How are Telehealth informed consent and Cybersecurity hygiene most accurately differentiated in this curriculum?

A. Telehealth informed consent: An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans. / Cybersecurity hygiene: Advance procedures for responding to an urgent event during remote care, including location and contacts.
B. Telehealth informed consent: A plan for continuing or safely pausing care when devices, connectivity, or platforms fail. / Cybersecurity hygiene: Routine practices such as strong authentication, updates, and secure handling that reduce digital risk.
C. Telehealth informed consent: An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans. / Cybersecurity hygiene: Routine practices such as strong authentication, updates, and secure handling that reduce digital risk.
D. Telehealth informed consent: Routine practices such as strong authentication, updates, and secure handling that reduce digital risk. / Cybersecurity hygiene: An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans.

0639. A case conference reviews a research trainee's work with a child of elementary-school age in the community youth program: clarifying approved communication channels and response times with families. Which principle is central?

A. Therapeutic app evaluation
B. Digital boundaries
C. Technology access equity
D. AI use transparency

0640. A service team discusses a young person in the child guidance clinic. Their proposed next step is agreeing on a backup contact method and next step if a session disconnects. Which course concept supports it?

A. Therapeutic app evaluation
B. Technology contingency planning
C. Digital boundaries
D. Telehealth emergency planning

0641. While consulting in the youth advocacy program, a mental-health professional supports a adolescent student by using this approach: using access controls and keeping approved systems updated. Which concept is being applied?

A. Technology contingency planning
B. Digital boundaries
C. Telehealth informed consent
D. Cybersecurity hygiene

0642. What is the central meaning of Technology contingency planning?

A. Collecting and retaining only the personal information necessary for a defined legitimate purpose.
B. Routine practices such as strong authentication, updates, and secure handling that reduce digital risk.
C. A plan for continuing or safely pausing care when devices, connectivity, or platforms fail.
D. Professional limits governing online contact, social media, and technology-mediated relationships.

0643. In the family resource center, a parent educator is considering this approach for a school-age child: using approved secure systems and avoiding sensitive information on shared or unsecured channels. Which framework does it represent?

A. Telehealth emergency planning
B. Telehealth informed consent
C. Technology access equity
D. Digital confidentiality

0644. A doctoral student reads the following description. Which concept does it define? A plan for continuing or safely pausing care when devices, connectivity, or platforms fail.

A. Digital boundaries
B. Technology contingency planning
C. Technology access equity
D. Telehealth informed consent

0645. Select the best explanation of Telehealth informed consent.

A. An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans.
B. Assessment of an app's evidence, privacy, accessibility, usability, and fit before recommending it.
C. Professional limits governing online contact, social media, and technology-mediated relationships.
D. Clear disclosure and oversight when artificial intelligence tools materially affect clinical work or client information.

0646. Choose the practice comparison that best separates Telehealth informed consent from Therapeutic app evaluation.

A. Telehealth informed consent: Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care. / Therapeutic app evaluation: Checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool.
B. Telehealth informed consent: Confirming current location and emergency contacts at the start of a remote session as appropriate. / Therapeutic app evaluation: Reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate.
C. Telehealth informed consent: Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care. / Therapeutic app evaluation: Reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate.
D. Telehealth informed consent: Reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate. / Therapeutic app evaluation: Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care.

0647. Which description belongs with the term Technology contingency planning?

A. Collecting and retaining only the personal information necessary for a defined legitimate purpose.
B. A plan for continuing or safely pausing care when devices, connectivity, or platforms fail.
C. Clear disclosure and oversight when artificial intelligence tools materially affect clinical work or client information.
D. Protection of sensitive information across devices, networks, platforms, and communications.

0648. During service review in the student-support meeting, a therapist describes clarifying approved communication channels and response times with families. for a young person. Which course idea is most applicable?

A. AI use transparency
B. Digital confidentiality
C. Cybersecurity hygiene
D. Digital boundaries

0649. During service review in the community service agency, a therapist describes agreeing on a backup contact method and next step if a session disconnects. for a student aged 15. Which course idea is most applicable?

A. Technology contingency planning
B. Telehealth informed consent
C. Therapeutic app evaluation
D. Digital confidentiality

0650. In a supervision quiz, how should Digital boundaries be distinguished from Therapeutic app evaluation?

A. Digital boundaries: Protection of sensitive information across devices, networks, platforms, and communications. / Therapeutic app evaluation: Assessment of an app's evidence, privacy, accessibility, usability, and fit before recommending it.
B. Digital boundaries: Professional limits governing online contact, social media, and technology-mediated relationships. / Therapeutic app evaluation: Clear disclosure and oversight when artificial intelligence tools materially affect clinical work or client information.
C. Digital boundaries: Assessment of an app's evidence, privacy, accessibility, usability, and fit before recommending it. / Therapeutic app evaluation: Professional limits governing online contact, social media, and technology-mediated relationships.
D. Digital boundaries: Professional limits governing online contact, social media, and technology-mediated relationships. / Therapeutic app evaluation: Assessment of an app's evidence, privacy, accessibility, usability, and fit before recommending it.

0651. In a supervision quiz, how should Telehealth informed consent be distinguished from Telehealth emergency planning?

A. Telehealth informed consent: An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans. / Telehealth emergency planning: Advance procedures for responding to an urgent event during remote care, including location and contacts.
B. Telehealth informed consent: An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans. / Telehealth emergency planning: Routine practices such as strong authentication, updates, and secure handling that reduce digital risk.
C. Telehealth informed consent: Advance procedures for responding to an urgent event during remote care, including location and contacts. / Telehealth emergency planning: An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans.
D. Telehealth informed consent: Attention to unequal access to devices, bandwidth, private space, and digital skills. / Telehealth emergency planning: Advance procedures for responding to an urgent event during remote care, including location and contacts.

0652. How should a practitioner distinguish the applications of Digital confidentiality and Technology access equity?

A. Digital confidentiality: Using approved secure systems and avoiding sensitive information on shared or unsecured channels. / Technology access equity: Asking about device and privacy barriers before assuming a youth can participate remotely.
B. Digital confidentiality: Using approved secure systems and avoiding sensitive information on shared or unsecured channels. / Technology access equity: Checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool.
C. Digital confidentiality: Avoiding unnecessary data capture and retaining only what policy and law require. / Technology access equity: Asking about device and privacy barriers before assuming a youth can participate remotely.
D. Digital confidentiality: Asking about device and privacy barriers before assuming a youth can participate remotely. / Technology access equity: Using approved secure systems and avoiding sensitive information on shared or unsecured channels.

0653. While supporting a student aged 12 in the clinical planning session, a family therapist adopts this practice: checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool. Which concept best explains the choice?

A. AI use transparency
B. Technology contingency planning
C. Data minimization
D. Technology access equity

0654. A consulting counselor is asked to justify a plan for a student aged 12 in the school counseling office. It calls for using approved secure systems and avoiding sensitive information on shared or unsecured channels. Which concept provides the rationale?

A. Therapeutic app evaluation
B. Data minimization
C. Digital confidentiality
D. Telehealth emergency planning

0655. A mental-health professional and a student aged 9 are discussing support in the student-support meeting. The selected practice is avoiding unnecessary data capture and retaining only what policy and law require. Which concept does this demonstrate?

A. Cybersecurity hygiene
B. Telehealth emergency planning
C. Therapeutic app evaluation
D. Data minimization

0656. Which description belongs with the term Data minimization?

A. Collecting and retaining only the personal information necessary for a defined legitimate purpose.
B. Assessment of an app's evidence, privacy, accessibility, usability, and fit before recommending it.
C. Advance procedures for responding to an urgent event during remote care, including location and contacts.
D. An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans.

0657. How are Technology access equity and AI use transparency most accurately differentiated in this curriculum?

A. Technology access equity: Attention to unequal access to devices, bandwidth, private space, and digital skills. / AI use transparency: An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans.
B. Technology access equity: Clear disclosure and oversight when artificial intelligence tools materially affect clinical work or client information. / AI use transparency: Attention to unequal access to devices, bandwidth, private space, and digital skills.
C. Technology access equity: A plan for continuing or safely pausing care when devices, connectivity, or platforms fail. / AI use transparency: Clear disclosure and oversight when artificial intelligence tools materially affect clinical work or client information.
D. Technology access equity: Attention to unequal access to devices, bandwidth, private space, and digital skills. / AI use transparency: Clear disclosure and oversight when artificial intelligence tools materially affect clinical work or client information.

0658. Choose the response that best puts Technology access equity into practice.

A. Asking about device and privacy barriers before assuming a youth can participate remotely.
B. Using access controls and keeping approved systems updated.
C. Reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate.
D. Using approved secure systems and avoiding sensitive information on shared or unsecured channels.

0659. A youth worker is asked to justify a plan for a child aged 8 in the caregiver consultation. It calls for clarifying approved communication channels and response times with families. Which concept provides the rationale?

A. Digital boundaries
B. AI use transparency
C. Therapeutic app evaluation
D. Technology access equity

0660. For a middle-school student in the school-based service, a behavior specialist makes this practice the immediate priority: reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care. Which concept fits best?

A. Telehealth informed consent
B. Digital boundaries
C. AI use transparency
D. Data minimization

0661. Which statement shows a sound practice-level distinction between Technology access equity and Data minimization?

A. Technology access equity: Agreeing on a backup contact method and next step if a session disconnects. / Data minimization: Avoiding unnecessary data capture and retaining only what policy and law require.
B. Technology access equity: Asking about device and privacy barriers before assuming a youth can participate remotely. / Data minimization: Avoiding unnecessary data capture and retaining only what policy and law require.
C. Technology access equity: Asking about device and privacy barriers before assuming a youth can participate remotely. / Data minimization: Confirming current location and emergency contacts at the start of a remote session as appropriate.
D. Technology access equity: Avoiding unnecessary data capture and retaining only what policy and law require. / Data minimization: Asking about device and privacy barriers before assuming a youth can participate remotely.

0662. For a child aged 11 seen in the school counseling office, the service navigator recommends a plan built around reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate. Which concept is reflected?

A. AI use transparency
B. Telehealth emergency planning
C. Therapeutic app evaluation
D. Technology access equity

0663. In a supervision quiz, how should Telehealth emergency planning be distinguished from Therapeutic app evaluation?

A. Telehealth emergency planning: An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans. / Therapeutic app evaluation: Assessment of an app's evidence, privacy, accessibility, usability, and fit before recommending it.
B. Telehealth emergency planning: Advance procedures for responding to an urgent event during remote care, including location and contacts. / Therapeutic app evaluation: Routine practices such as strong authentication, updates, and secure handling that reduce digital risk.
C. Telehealth emergency planning: Assessment of an app's evidence, privacy, accessibility, usability, and fit before recommending it. / Therapeutic app evaluation: Advance procedures for responding to an urgent event during remote care, including location and contacts.
D. Telehealth emergency planning: Advance procedures for responding to an urgent event during remote care, including location and contacts. / Therapeutic app evaluation: Assessment of an app's evidence, privacy, accessibility, usability, and fit before recommending it.

0664. Which statement accurately contrasts the course concepts Digital confidentiality and Data minimization?

A. Digital confidentiality: Professional limits governing online contact, social media, and technology-mediated relationships. / Data minimization: Collecting and retaining only the personal information necessary for a defined legitimate purpose.
B. Digital confidentiality: Protection of sensitive information across devices, networks, platforms, and communications. / Data minimization: A plan for continuing or safely pausing care when devices, connectivity, or platforms fail.
C. Digital confidentiality: Collecting and retaining only the personal information necessary for a defined legitimate purpose. / Data minimization: Protection of sensitive information across devices, networks, platforms, and communications.
D. Digital confidentiality: Protection of sensitive information across devices, networks, platforms, and communications. / Data minimization: Collecting and retaining only the personal information necessary for a defined legitimate purpose.

0665. A child of elementary-school age is receiving support in the clinical planning session. The consulting counselor is guided by this practice: avoiding unnecessary data capture and retaining only what policy and law require. Which principle best fits?

A. Digital confidentiality
B. Telehealth emergency planning
C. Data minimization
D. Therapeutic app evaluation

0666. In the multidisciplinary case conference, a youth worker describes the most appropriate support for a child aged 6 as reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care. Which framework is being applied?

A. Data minimization
B. Cybersecurity hygiene
C. Telehealth informed consent
D. Telehealth emergency planning

0667. How should a practitioner distinguish the applications of Cybersecurity hygiene and Therapeutic app evaluation?

A. Cybersecurity hygiene: Reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate. / Therapeutic app evaluation: Using access controls and keeping approved systems updated.
B. Cybersecurity hygiene: Using access controls and keeping approved systems updated. / Therapeutic app evaluation: Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care.
C. Cybersecurity hygiene: Using approved secure systems and avoiding sensitive information on shared or unsecured channels. / Therapeutic app evaluation: Reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate.
D. Cybersecurity hygiene: Using access controls and keeping approved systems updated. / Therapeutic app evaluation: Reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate.

0668. How are Data minimization and Technology contingency planning most accurately differentiated in this curriculum?

A. Data minimization: Collecting and retaining only the personal information necessary for a defined legitimate purpose. / Technology contingency planning: A plan for continuing or safely pausing care when devices, connectivity, or platforms fail.
B. Data minimization: Routine practices such as strong authentication, updates, and secure handling that reduce digital risk. / Technology contingency planning: A plan for continuing or safely pausing care when devices, connectivity, or platforms fail.
C. Data minimization: Collecting and retaining only the personal information necessary for a defined legitimate purpose. / Technology contingency planning: Advance procedures for responding to an urgent event during remote care, including location and contacts.
D. Data minimization: A plan for continuing or safely pausing care when devices, connectivity, or platforms fail. / Technology contingency planning: Collecting and retaining only the personal information necessary for a defined legitimate purpose.

0669. Which option pairs the definitions of Telehealth emergency planning and Data minimization correctly, in that order?

A. Telehealth emergency planning: Professional limits governing online contact, social media, and technology-mediated relationships. / Data minimization: Collecting and retaining only the personal information necessary for a defined legitimate purpose.
B. Telehealth emergency planning: Collecting and retaining only the personal information necessary for a defined legitimate purpose. / Data minimization: Advance procedures for responding to an urgent event during remote care, including location and contacts.
C. Telehealth emergency planning: Advance procedures for responding to an urgent event during remote care, including location and contacts. / Data minimization: An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans.
D. Telehealth emergency planning: Advance procedures for responding to an urgent event during remote care, including location and contacts. / Data minimization: Collecting and retaining only the personal information necessary for a defined legitimate purpose.

0670. Select the best explanation of Technology contingency planning.

A. Routine practices such as strong authentication, updates, and secure handling that reduce digital risk.
B. Advance procedures for responding to an urgent event during remote care, including location and contacts.
C. Clear disclosure and oversight when artificial intelligence tools materially affect clinical work or client information.
D. A plan for continuing or safely pausing care when devices, connectivity, or platforms fail.

0671. A supervisor asks for an applied contrast between Technology access equity and AI use transparency. Which option fits?

A. Technology access equity: Agreeing on a backup contact method and next step if a session disconnects. / AI use transparency: Checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool.
B. Technology access equity: Checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool. / AI use transparency: Asking about device and privacy barriers before assuming a youth can participate remotely.
C. Technology access equity: Asking about device and privacy barriers before assuming a youth can participate remotely. / AI use transparency: Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care.
D. Technology access equity: Asking about device and privacy barriers before assuming a youth can participate remotely. / AI use transparency: Checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool.

0672. Which applied comparison correctly identifies what belongs to Digital confidentiality versus Data minimization?

A. Digital confidentiality: Using approved secure systems and avoiding sensitive information on shared or unsecured channels. / Data minimization: Avoiding unnecessary data capture and retaining only what policy and law require.
B. Digital confidentiality: Using approved secure systems and avoiding sensitive information on shared or unsecured channels. / Data minimization: Agreeing on a backup contact method and next step if a session disconnects.
C. Digital confidentiality: Avoiding unnecessary data capture and retaining only what policy and law require. / Data minimization: Using approved secure systems and avoiding sensitive information on shared or unsecured channels.
D. Digital confidentiality: Clarifying approved communication channels and response times with families. / Data minimization: Avoiding unnecessary data capture and retaining only what policy and law require.

0673. Which statement accurately contrasts the course concepts Cybersecurity hygiene and AI use transparency?

A. Cybersecurity hygiene: Clear disclosure and oversight when artificial intelligence tools materially affect clinical work or client information. / AI use transparency: Routine practices such as strong authentication, updates, and secure handling that reduce digital risk.
B. Cybersecurity hygiene: Routine practices such as strong authentication, updates, and secure handling that reduce digital risk. / AI use transparency: Professional limits governing online contact, social media, and technology-mediated relationships.
C. Cybersecurity hygiene: Routine practices such as strong authentication, updates, and secure handling that reduce digital risk. / AI use transparency: Clear disclosure and oversight when artificial intelligence tools materially affect clinical work or client information.
D. Cybersecurity hygiene: Advance procedures for responding to an urgent event during remote care, including location and contacts. / AI use transparency: Clear disclosure and oversight when artificial intelligence tools materially affect clinical work or client information.

0674. A trainee must choose a practice that exemplifies Cybersecurity hygiene. Which action is the best fit?

A. Asking about device and privacy barriers before assuming a youth can participate remotely.
B. Confirming current location and emergency contacts at the start of a remote session as appropriate.
C. Using access controls and keeping approved systems updated.
D. Reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate.

0675. A support meeting for a student aged 17 includes a behavior specialist in the community youth program. The practice under consideration is confirming current location and emergency contacts at the start of a remote session as appropriate. Which concept guides it?

A. Technology contingency planning
B. Cybersecurity hygiene
C. Telehealth emergency planning
D. Digital boundaries

0676. A group facilitator is asked to justify a plan for a student aged 15 in the multidisciplinary case conference. It calls for avoiding unnecessary data capture and retaining only what policy and law require. Which concept provides the rationale?

A. Data minimization
B. Digital confidentiality
C. Cybersecurity hygiene
D. Telehealth emergency planning

0677. In a supervision quiz, how should Telehealth emergency planning be distinguished from Cybersecurity hygiene?

A. Telehealth emergency planning: Clear disclosure and oversight when artificial intelligence tools materially affect clinical work or client information. / Cybersecurity hygiene: Routine practices such as strong authentication, updates, and secure handling that reduce digital risk.
B. Telehealth emergency planning: Advance procedures for responding to an urgent event during remote care, including location and contacts. / Cybersecurity hygiene: Professional limits governing online contact, social media, and technology-mediated relationships.
C. Telehealth emergency planning: Routine practices such as strong authentication, updates, and secure handling that reduce digital risk. / Cybersecurity hygiene: Advance procedures for responding to an urgent event during remote care, including location and contacts.
D. Telehealth emergency planning: Advance procedures for responding to an urgent event during remote care, including location and contacts. / Cybersecurity hygiene: Routine practices such as strong authentication, updates, and secure handling that reduce digital risk.

0678. A student confuses Cybersecurity hygiene with Therapeutic app evaluation. Which explanation most accurately separates them?

A. Cybersecurity hygiene: Assessment of an app's evidence, privacy, accessibility, usability, and fit before recommending it. / Therapeutic app evaluation: Routine practices such as strong authentication, updates, and secure handling that reduce digital risk.
B. Cybersecurity hygiene: Protection of sensitive information across devices, networks, platforms, and communications. / Therapeutic app evaluation: Assessment of an app's evidence, privacy, accessibility, usability, and fit before recommending it.
C. Cybersecurity hygiene: Routine practices such as strong authentication, updates, and secure handling that reduce digital risk. / Therapeutic app evaluation: Assessment of an app's evidence, privacy, accessibility, usability, and fit before recommending it.
D. Cybersecurity hygiene: Routine practices such as strong authentication, updates, and secure handling that reduce digital risk. / Therapeutic app evaluation: An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans.

0679. Choose the response that best puts Digital boundaries into practice.

A. Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care.
B. Agreeing on a backup contact method and next step if a session disconnects.
C. Clarifying approved communication channels and response times with families.
D. Using access controls and keeping approved systems updated.

0680. Which comparison would correct a trainee's misunderstanding of Telehealth informed consent versus Cybersecurity hygiene?

A. Telehealth informed consent: Routine practices such as strong authentication, updates, and secure handling that reduce digital risk. / Cybersecurity hygiene: An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans.
B. Telehealth informed consent: An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans. / Cybersecurity hygiene: Advance procedures for responding to an urgent event during remote care, including location and contacts.
C. Telehealth informed consent: An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans. / Cybersecurity hygiene: Routine practices such as strong authentication, updates, and secure handling that reduce digital risk.
D. Telehealth informed consent: A plan for continuing or safely pausing care when devices, connectivity, or platforms fail. / Cybersecurity hygiene: Routine practices such as strong authentication, updates, and secure handling that reduce digital risk.

0681. For a child aged 11 in the counseling practicum, a play therapist makes this practice the immediate priority: agreeing on a backup contact method and next step if a session disconnects. Which concept fits best?

A. Digital confidentiality
B. Telehealth emergency planning
C. Digital boundaries
D. Technology contingency planning

0682. Consider a student aged 12 receiving help in the telehealth session. The group facilitator focuses on using access controls and keeping approved systems updated. Which term best describes the guiding idea?

A. Cybersecurity hygiene
B. Technology access equity
C. Data minimization
D. Technology contingency planning

0683. Which statement accurately contrasts the course concepts Telehealth emergency planning and Therapeutic app evaluation?

A. Telehealth emergency planning: An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans. / Therapeutic app evaluation: Assessment of an app's evidence, privacy, accessibility, usability, and fit before recommending it.
B. Telehealth emergency planning: Advance procedures for responding to an urgent event during remote care, including location and contacts. / Therapeutic app evaluation: Assessment of an app's evidence, privacy, accessibility, usability, and fit before recommending it.
C. Telehealth emergency planning: Advance procedures for responding to an urgent event during remote care, including location and contacts. / Therapeutic app evaluation: Routine practices such as strong authentication, updates, and secure handling that reduce digital risk.
D. Telehealth emergency planning: Assessment of an app's evidence, privacy, accessibility, usability, and fit before recommending it. / Therapeutic app evaluation: Advance procedures for responding to an urgent event during remote care, including location and contacts.

0684. Which statement most accurately defines Telehealth emergency planning?

A. Advance procedures for responding to an urgent event during remote care, including location and contacts.
B. An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans.
C. Attention to unequal access to devices, bandwidth, private space, and digital skills.
D. Protection of sensitive information across devices, networks, platforms, and communications.

0685. A planning meeting about a adolescent student includes a counselor. The proposed practice in the multidisciplinary case conference is agreeing on a backup contact method and next step if a session disconnects. Which idea underlies it?

A. Digital confidentiality
B. Cybersecurity hygiene
C. Technology contingency planning
D. Therapeutic app evaluation

0686. Choose the response that best puts Therapeutic app evaluation into practice.

A. Using approved secure systems and avoiding sensitive information on shared or unsecured channels.
B. Reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate.
C. Avoiding unnecessary data capture and retaining only what policy and law require.
D. Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care.

0687. In a supervision quiz, how should Digital confidentiality be distinguished from Technology access equity?

A. Digital confidentiality: Attention to unequal access to devices, bandwidth, private space, and digital skills. / Technology access equity: Protection of sensitive information across devices, networks, platforms, and communications.
B. Digital confidentiality: Protection of sensitive information across devices, networks, platforms, and communications. / Technology access equity: Attention to unequal access to devices, bandwidth, private space, and digital skills.
C. Digital confidentiality: Collecting and retaining only the personal information necessary for a defined legitimate purpose. / Technology access equity: Attention to unequal access to devices, bandwidth, private space, and digital skills.
D. Digital confidentiality: Protection of sensitive information across devices, networks, platforms, and communications. / Technology access equity: Clear disclosure and oversight when artificial intelligence tools materially affect clinical work or client information.

0688. A supervisor asks for an applied contrast between Telehealth emergency planning and Digital boundaries. Which option fits?

A. Telehealth emergency planning: Clarifying approved communication channels and response times with families. / Digital boundaries: Confirming current location and emergency contacts at the start of a remote session as appropriate.
B. Telehealth emergency planning: Confirming current location and emergency contacts at the start of a remote session as appropriate. / Digital boundaries: Clarifying approved communication channels and response times with families.
C. Telehealth emergency planning: Confirming current location and emergency contacts at the start of a remote session as appropriate. / Digital boundaries: Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care.
D. Telehealth emergency planning: Using access controls and keeping approved systems updated. / Digital boundaries: Clarifying approved communication channels and response times with families.

0689. Choose the practice comparison that best separates Telehealth emergency planning from Digital boundaries.

A. Telehealth emergency planning: Using access controls and keeping approved systems updated. / Digital boundaries: Clarifying approved communication channels and response times with families.
B. Telehealth emergency planning: Confirming current location and emergency contacts at the start of a remote session as appropriate. / Digital boundaries: Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care.
C. Telehealth emergency planning: Confirming current location and emergency contacts at the start of a remote session as appropriate. / Digital boundaries: Clarifying approved communication channels and response times with families.
D. Telehealth emergency planning: Clarifying approved communication channels and response times with families. / Digital boundaries: Confirming current location and emergency contacts at the start of a remote session as appropriate.

0690. A client in late adolescence's service team meets in the multidisciplinary case conference. The caregiver working with a counselor recommends a change involving checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool. Which idea best explains it?

A. Digital confidentiality
B. AI use transparency
C. Technology access equity
D. Data minimization

0691. In a supervision quiz, how should Digital confidentiality be distinguished from Data minimization?

A. Digital confidentiality: Protection of sensitive information across devices, networks, platforms, and communications. / Data minimization: A plan for continuing or safely pausing care when devices, connectivity, or platforms fail.
B. Digital confidentiality: Professional limits governing online contact, social media, and technology-mediated relationships. / Data minimization: Collecting and retaining only the personal information necessary for a defined legitimate purpose.
C. Digital confidentiality: Collecting and retaining only the personal information necessary for a defined legitimate purpose. / Data minimization: Protection of sensitive information across devices, networks, platforms, and communications.
D. Digital confidentiality: Protection of sensitive information across devices, networks, platforms, and communications. / Data minimization: Collecting and retaining only the personal information necessary for a defined legitimate purpose.

0692. Identify the most precise label for this idea: An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans.

A. Digital boundaries
B. Telehealth informed consent
C. Technology contingency planning
D. Technology access equity

0693. Consider a young person aged 18 receiving help in the community mental-health service. The consulting counselor focuses on reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate. Which term best describes the guiding idea?

A. Digital confidentiality
B. Telehealth informed consent
C. Therapeutic app evaluation
D. Technology access equity

0694. A supervisor asks for an applied contrast between Digital boundaries and Data minimization. Which option fits?

A. Digital boundaries: Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care. / Data minimization: Avoiding unnecessary data capture and retaining only what policy and law require.
B. Digital boundaries: Clarifying approved communication channels and response times with families. / Data minimization: Reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate.
C. Digital boundaries: Clarifying approved communication channels and response times with families. / Data minimization: Avoiding unnecessary data capture and retaining only what policy and law require.
D. Digital boundaries: Avoiding unnecessary data capture and retaining only what policy and law require. / Data minimization: Clarifying approved communication channels and response times with families.

0695. Which course concept is defined as follows: Attention to unequal access to devices, bandwidth, private space, and digital skills.

A. Technology access equity
B. AI use transparency
C. Digital boundaries
D. Telehealth emergency planning

0696. In the counseling practicum, a teacher and counselor explains why a child aged 6 would benefit from avoiding unnecessary data capture and retaining only what policy and law require. Which course concept underpins the explanation?

A. Data minimization
B. Telehealth informed consent
C. AI use transparency
D. Technology contingency planning

0697. In the learning-support meeting, a youth worker explains why a client in late adolescence would benefit from using access controls and keeping approved systems updated. Which course concept underpins the explanation?

A. Telehealth emergency planning
B. Cybersecurity hygiene
C. AI use transparency
D. Digital confidentiality

0698. When reviewing a older adolescent client’s plan in the youth group, the case coordinator notes that the next step is checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool. Which concept guides this step?

A. Technology access equity
B. Therapeutic app evaluation
C. Digital boundaries
D. AI use transparency

0699. A student aged 9’s service team meets in the school-based service. The family therapist recommends a change involving agreeing on a backup contact method and next step if a session disconnects. Which idea best explains it?

A. Data minimization
B. AI use transparency
C. Therapeutic app evaluation
D. Technology contingency planning

0700. How should a practitioner distinguish the applications of Telehealth informed consent and Telehealth emergency planning?

A. Telehealth informed consent: Asking about device and privacy barriers before assuming a youth can participate remotely. / Telehealth emergency planning: Confirming current location and emergency contacts at the start of a remote session as appropriate.
B. Telehealth informed consent: Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care. / Telehealth emergency planning: Using access controls and keeping approved systems updated.
C. Telehealth informed consent: Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care. / Telehealth emergency planning: Confirming current location and emergency contacts at the start of a remote session as appropriate.
D. Telehealth informed consent: Confirming current location and emergency contacts at the start of a remote session as appropriate. / Telehealth emergency planning: Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care.

0701. A supervisor asks how Technology access equity would appear in practice. Which choice should be selected?

A. Reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate.
B. Asking about device and privacy barriers before assuming a youth can participate remotely.
C. Confirming current location and emergency contacts at the start of a remote session as appropriate.
D. Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care.

0702. A young person aged 13’s service team meets in the student-support meeting. The parent educator recommends a change involving using access controls and keeping approved systems updated. Which idea best explains it?

A. Data minimization
B. Technology access equity
C. Cybersecurity hygiene
D. Technology contingency planning

0703. A supervisor asks for an applied contrast between Data minimization and Technology contingency planning. Which option fits?

A. Data minimization: Avoiding unnecessary data capture and retaining only what policy and law require. / Technology contingency planning: Confirming current location and emergency contacts at the start of a remote session as appropriate.
B. Data minimization: Using access controls and keeping approved systems updated. / Technology contingency planning: Agreeing on a backup contact method and next step if a session disconnects.
C. Data minimization: Avoiding unnecessary data capture and retaining only what policy and law require. / Technology contingency planning: Agreeing on a backup contact method and next step if a session disconnects.
D. Data minimization: Agreeing on a backup contact method and next step if a session disconnects. / Technology contingency planning: Avoiding unnecessary data capture and retaining only what policy and law require.

0704. Which description belongs with the term Therapeutic app evaluation?

A. Advance procedures for responding to an urgent event during remote care, including location and contacts.
B. Collecting and retaining only the personal information necessary for a defined legitimate purpose.
C. An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans.
D. Assessment of an app’s evidence, privacy, accessibility, usability, and fit before recommending it.

0705. Which applied comparison correctly identifies what belongs to Telehealth emergency planning versus Cybersecurity hygiene?

A. Telehealth emergency planning: Using access controls and keeping approved systems updated. / Cybersecurity hygiene: Confirming current location and emergency contacts at the start of a remote session as appropriate.
B. Telehealth emergency planning: Checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool. / Cybersecurity hygiene: Using access controls and keeping approved systems updated.
C. Telehealth emergency planning: Confirming current location and emergency contacts at the start of a remote session as appropriate. / Cybersecurity hygiene: Clarifying approved communication channels and response times with families.
D. Telehealth emergency planning: Confirming current location and emergency contacts at the start of a remote session as appropriate. / Cybersecurity hygiene: Using access controls and keeping approved systems updated.

0706. A service team discusses a adolescent student in the school-based service. Their proposed next step is confirming current location and emergency contacts at the start of a remote session as appropriate. Which course concept supports it?

A. Digital boundaries
B. Technology access equity
C. Telehealth emergency planning
D. Telehealth informed consent

0707. A student confuses Data minimization with Technology contingency planning. Which explanation most accurately separates them?

A. Data minimization: Routine practices such as strong authentication, updates, and secure handling that reduce digital risk. / Technology contingency planning: A plan for continuing or safely pausing care when devices, connectivity, or platforms fail.
B. Data minimization: A plan for continuing or safely pausing care when devices, connectivity, or platforms fail. / Technology contingency planning: Collecting and retaining only the personal information necessary for a defined legitimate purpose.
C. Data minimization: Collecting and retaining only the personal information necessary for a defined legitimate purpose. / Technology contingency planning: A plan for continuing or safely pausing care when devices, connectivity, or platforms fail.
D. Data minimization: Collecting and retaining only the personal information necessary for a defined legitimate purpose. / Technology contingency planning: Advance procedures for responding to an urgent event during remote care, including location and contacts.

0708. Which option preserves the correct meaning of both Telehealth informed consent and Therapeutic app evaluation?

A. Telehealth informed consent: An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans. / Therapeutic app evaluation: Assessment of an app's evidence, privacy, accessibility, usability, and fit before recommending it.
B. Telehealth informed consent: Assessment of an app's evidence, privacy, accessibility, usability, and fit before recommending it. / Therapeutic app evaluation: An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans.
C. Telehealth informed consent: An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans. / Therapeutic app evaluation: Clear disclosure and oversight when artificial intelligence tools materially affect clinical work or client information.
D. Telehealth informed consent: Advance procedures for responding to an urgent event during remote care, including location and contacts. / Therapeutic app evaluation: Assessment of an app's evidence, privacy, accessibility, usability, and fit before recommending it.

0709. A trainee must choose a practice that exemplifies Data minimization. Which action is the best fit?

A. Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care.
B. Agreeing on a backup contact method and next step if a session disconnects.
C. Using approved secure systems and avoiding sensitive information on shared or unsecured channels.
D. Avoiding unnecessary data capture and retaining only what policy and law require.

0710. Which choice aligns each practice with the correct idea, Therapeutic app evaluation or Technology contingency planning?

A. Therapeutic app evaluation: Reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate. / Technology contingency planning: Agreeing on a backup contact method and next step if a session disconnects.
B. Therapeutic app evaluation: Using access controls and keeping approved systems updated. / Technology contingency planning: Agreeing on a backup contact method and next step if a session disconnects.
C. Therapeutic app evaluation: Agreeing on a backup contact method and next step if a session disconnects. / Technology contingency planning: Reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate.
D. Therapeutic app evaluation: Reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate. / Technology contingency planning: Avoiding unnecessary data capture and retaining only what policy and law require.

0711. Which applied comparison correctly identifies what belongs to Digital boundaries versus AI use transparency?

A. Digital boundaries: Clarifying approved communication channels and response times with families. / AI use transparency: Confirming current location and emergency contacts at the start of a remote session as appropriate.
B. Digital boundaries: Checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool. / AI use transparency: Clarifying approved communication channels and response times with families.
C. Digital boundaries: Clarifying approved communication channels and response times with families. / AI use transparency: Checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool.
D. Digital boundaries: Avoiding unnecessary data capture and retaining only what policy and law require. / AI use transparency: Checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool.

0712. A case conference asks for a distinction between Telehealth informed consent and AI use transparency. Which answer is sound?

A. Telehealth informed consent: Advance procedures for responding to an urgent event during remote care, including location and contacts. / AI use transparency: Clear disclosure and oversight when artificial intelligence tools materially affect clinical work or client information.
B. Telehealth informed consent: An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans. / AI use transparency: Clear disclosure and oversight when artificial intelligence tools materially affect clinical work or client information.
C. Telehealth informed consent: An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans. / AI use transparency: Collecting and retaining only the personal information necessary for a defined legitimate purpose.
D. Telehealth informed consent: Clear disclosure and oversight when artificial intelligence tools materially affect clinical work or client information. / AI use transparency: An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans.

0713. In the clinical planning session, the agreed focus for a community practitioner working with a teenage client is using access controls and keeping approved systems updated. Which concept names this focus?

A. AI use transparency
B. Data minimization
C. Cybersecurity hygiene
D. Telehealth informed consent

0714. In the school-based service, a group facilitator describes the most appropriate support for a client in late adolescence as using approved secure systems and avoiding sensitive information on shared or unsecured channels. Which framework is being applied?

A. Technology contingency planning
B. AI use transparency
C. Telehealth emergency planning
D. Digital confidentiality

0715. Which statement most accurately defines Technology access equity?

A. Attention to unequal access to devices, bandwidth, private space, and digital skills.
B. Collecting and retaining only the personal information necessary for a defined legitimate purpose.
C. Advance procedures for responding to an urgent event during remote care, including location and contacts.
D. Routine practices such as strong authentication, updates, and secure handling that reduce digital risk.

0716. Which statement accurately contrasts the course concepts Telehealth informed consent and Data minimization?

A. Telehealth informed consent: Attention to unequal access to devices, bandwidth, private space, and digital skills. / Data minimization: Collecting and retaining only the personal information necessary for a defined legitimate purpose.
B. Telehealth informed consent: An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans. / Data minimization: A plan for continuing or safely pausing care when devices, connectivity, or platforms fail.
C. Telehealth informed consent: An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans. / Data minimization: Collecting and retaining only the personal information necessary for a defined legitimate purpose.
D. Telehealth informed consent: Collecting and retaining only the personal information necessary for a defined legitimate purpose. / Data minimization: An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans.

0717. In the telehealth session, a youth worker explains why a student aged 17 would benefit from using approved secure systems and avoiding sensitive information on shared or unsecured channels. Which course concept underpins the explanation?

A. Technology contingency planning
B. Cybersecurity hygiene
C. Telehealth informed consent
D. Digital confidentiality

0718. In the after-school program, a team asks how a youth worker can support a high-school student. One proposed action is reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate. Which idea does it represent?

A. Data minimization
B. Therapeutic app evaluation
C. Telehealth emergency planning
D. AI use transparency

0719. At the outpatient clinic, a behavior specialist meets with a young adolescent client. The practice priority is: agreeing on a backup contact method and next step if a session disconnects. Which concept best captures that priority?

A. Technology access equity
B. Telehealth informed consent
C. Technology contingency planning
D. AI use transparency

0720. Which option preserves the correct meaning of both Digital confidentiality and Therapeutic app evaluation?

A. Digital confidentiality: Advance procedures for responding to an urgent event during remote care, including location and contacts. / Therapeutic app evaluation: Assessment of an app’s evidence, privacy, accessibility, usability, and fit before recommending it.
B. Digital confidentiality: Assessment of an app’s evidence, privacy, accessibility, usability, and fit before recommending it. / Therapeutic app evaluation: Protection of sensitive information across devices, networks, platforms, and communications.
C. Digital confidentiality: Protection of sensitive information across devices, networks, platforms, and communications. / Therapeutic app evaluation: A plan for continuing or safely pausing care when devices, connectivity, or platforms fail.
D. Digital confidentiality: Protection of sensitive information across devices, networks, platforms, and communications. / Therapeutic app evaluation: Assessment of an app’s evidence, privacy, accessibility, usability, and fit before recommending it.

0721. In the family session, the agreed focus for a therapist working with a child aged 7 is checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool. Which concept names this focus?

A. Technology access equity
B. Telehealth informed consent
C. AI use transparency
D. Cybersecurity hygiene

0722. A supervisor asks for an applied contrast between Telehealth informed consent and Technology contingency planning. Which option fits?

A. Telehealth informed consent: Agreeing on a backup contact method and next step if a session disconnects. / Technology contingency planning: Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care.
B. Telehealth informed consent: Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care. / Technology contingency planning: Agreeing on a backup contact method and next step if a session disconnects.
C. Telehealth informed consent: Using access controls and keeping approved systems updated. / Technology contingency planning: Agreeing on a backup contact method and next step if a session disconnects.
D. Telehealth informed consent: Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care. / Technology contingency planning: Avoiding unnecessary data capture and retaining only what policy and law require.

0723. A supervised trainee is supporting a young person aged 18 in the family resource center. The key practice is avoiding unnecessary data capture and retaining only what policy and law require. Which course concept is most relevant?

A. Therapeutic app evaluation
B. Telehealth informed consent
C. AI use transparency
D. Data minimization

0724. Which statement accurately contrasts the course concepts Therapeutic app evaluation and AI use transparency?

A. Therapeutic app evaluation: Clear disclosure and oversight when artificial intelligence tools materially affect clinical work or client information. / AI use transparency: Assessment of an app's evidence, privacy, accessibility, usability, and fit before recommending it.
B. Therapeutic app evaluation: Assessment of an app's evidence, privacy, accessibility, usability, and fit before recommending it. / AI use transparency: Clear disclosure and oversight when artificial intelligence tools materially affect clinical work or client information.
C. Therapeutic app evaluation: Assessment of an app's evidence, privacy, accessibility, usability, and fit before recommending it. / AI use transparency: Advance procedures for responding to an urgent event during remote care, including location and contacts.
D. Therapeutic app evaluation: Professional limits governing online contact, social media, and technology-mediated relationships. / AI use transparency: Clear disclosure and oversight when artificial intelligence tools materially affect clinical work or client information.

0725. Which option pairs the definitions of Telehealth informed consent and Telehealth emergency planning correctly, in that order?

A. Telehealth informed consent: Attention to unequal access to devices, bandwidth, private space, and digital skills. / Telehealth emergency planning: Advance procedures for responding to an urgent event during remote care, including location and contacts.
B. Telehealth informed consent: An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans. / Telehealth emergency planning: Routine practices such as strong authentication, updates, and secure handling that reduce digital risk.
C. Telehealth informed consent: An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans. / Telehealth emergency planning: Advance procedures for responding to an urgent event during remote care, including location and contacts.
D. Telehealth informed consent: Advance procedures for responding to an urgent event during remote care, including location and contacts. / Telehealth emergency planning: An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans.

0726. Which comparison correctly distinguishes Digital confidentiality from Technology access equity?

A. Digital confidentiality: Collecting and retaining only the personal information necessary for a defined legitimate purpose. / Technology access equity: Attention to unequal access to devices, bandwidth, private space, and digital skills.
B. Digital confidentiality: Attention to unequal access to devices, bandwidth, private space, and digital skills. / Technology access equity: Protection of sensitive information across devices, networks, platforms, and communications.
C. Digital confidentiality: Protection of sensitive information across devices, networks, platforms, and communications. / Technology access equity: Clear disclosure and oversight when artificial intelligence tools materially affect clinical work or client information.
D. Digital confidentiality: Protection of sensitive information across devices, networks, platforms, and communications. / Technology access equity: Attention to unequal access to devices, bandwidth, private space, and digital skills.

0727. A case conference asks for a distinction between Telehealth emergency planning and Technology contingency planning. Which answer is sound?

A. Telehealth emergency planning: Advance procedures for responding to an urgent event during remote care, including location and contacts. / Technology contingency planning: A plan for continuing or safely pausing care when devices, connectivity, or platforms fail.
B. Telehealth emergency planning: A plan for continuing or safely pausing care when devices, connectivity, or platforms fail. / Technology contingency planning: Advance procedures for responding to an urgent event during remote care, including location and contacts.
C. Telehealth emergency planning: Advance procedures for responding to an urgent event during remote care, including location and contacts. / Technology contingency planning: Attention to unequal access to devices, bandwidth, private space, and digital skills.
D. Telehealth emergency planning: Collecting and retaining only the personal information necessary for a defined legitimate purpose. / Technology contingency planning: A plan for continuing or safely pausing care when devices, connectivity, or platforms fail.

0728. In the parent meeting, a group facilitator explains why a student aged 9 would benefit from reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate. Which course concept underpins the explanation?

A. Cybersecurity hygiene
B. Telehealth emergency planning
C. Digital confidentiality
D. Therapeutic app evaluation

0729. Consider a child aged 8 receiving help in the supervision meeting. The teacher and counselor focuses on agreeing on a backup contact method and next step if a session disconnects. Which term best describes the guiding idea?

A. Digital boundaries
B. AI use transparency
C. Technology contingency planning
D. Telehealth emergency planning

0730. A planning meeting about a child aged 14 includes a behavior specialist. The proposed practice in the student wellness team is asking about device and privacy barriers before assuming a youth can participate remotely. Which idea underlies it?

A. Cybersecurity hygiene
B. Technology access equity
C. AI use transparency
D. Technology contingency planning

0731. Which option correctly matches each concept to its practice focus: Technology access equity and Data minimization?

A. Technology access equity: Avoiding unnecessary data capture and retaining only what policy and law require. / Data minimization: Asking about device and privacy barriers before assuming a youth can participate remotely.
B. Technology access equity: Asking about device and privacy barriers before assuming a youth can participate remotely. / Data minimization: Confirming current location and emergency contacts at the start of a remote session as appropriate.
C. Technology access equity: Asking about device and privacy barriers before assuming a youth can participate remotely. / Data minimization: Avoiding unnecessary data capture and retaining only what policy and law require.
D. Technology access equity: Agreeing on a backup contact method and next step if a session disconnects. / Data minimization: Avoiding unnecessary data capture and retaining only what policy and law require.

0732. At the school-based service, a counselor meets with a child aged 7. The practice priority is: avoiding unnecessary data capture and retaining only what policy and law require. Which concept best captures that priority?

A. Data minimization
B. Technology contingency planning
C. AI use transparency
D. Digital confidentiality

0733. Which choice aligns each practice with the correct idea, Telehealth emergency planning or Data minimization?

A. Telehealth emergency planning: Confirming current location and emergency contacts at the start of a remote session as appropriate. / Data minimization: Avoiding unnecessary data capture and retaining only what policy and law require.
B. Telehealth emergency planning: Avoiding unnecessary data capture and retaining only what policy and law require. / Data minimization: Confirming current location and emergency contacts at the start of a remote session as appropriate.
C. Telehealth emergency planning: Clarifying approved communication channels and response times with families. / Data minimization: Avoiding unnecessary data capture and retaining only what policy and law require.
D. Telehealth emergency planning: Confirming current location and emergency contacts at the start of a remote session as appropriate. / Data minimization: Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care.

0734. Which choice aligns each practice with the correct idea, Therapeutic app evaluation or AI use transparency?

A. Therapeutic app evaluation: Checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool. / AI use transparency: Reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate.
B. Therapeutic app evaluation: Clarifying approved communication channels and response times with families. / AI use transparency: Checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool.
C. Therapeutic app evaluation: Reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate. / AI use transparency: Checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool.
D. Therapeutic app evaluation: Reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate. / AI use transparency: Confirming current location and emergency contacts at the start of a remote session as appropriate.

0735. Choose the definition pair that correctly explains Telehealth emergency planning first and Therapeutic app evaluation second.

A. Telehealth emergency planning: Assessment of an app's evidence, privacy, accessibility, usability, and fit before recommending it. / Therapeutic app evaluation: Advance procedures for responding to an urgent event during remote care, including location and contacts.
B. Telehealth emergency planning: An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans. / Therapeutic app evaluation: Assessment of an app's evidence, privacy, accessibility, usability, and fit before recommending it.
C. Telehealth emergency planning: Advance procedures for responding to an urgent event during remote care, including location and contacts. / Therapeutic app evaluation: Assessment of an app's evidence, privacy, accessibility, usability, and fit before recommending it.
D. Telehealth emergency planning: Advance procedures for responding to an urgent event during remote care, including location and contacts. / Therapeutic app evaluation: Routine practices such as strong authentication, updates, and secure handling that reduce digital risk.

0736. A case conference asks for a distinction between Telehealth emergency planning and Technology access equity. Which answer is sound?

A. Telehealth emergency planning: Advance procedures for responding to an urgent event during remote care, including location and contacts. / Technology access equity: Attention to unequal access to devices, bandwidth, private space, and digital skills.
B. Telehealth emergency planning: Professional limits governing online contact, social media, and technology-mediated relationships. / Technology access equity: Attention to unequal access to devices, bandwidth, private space, and digital skills.
C. Telehealth emergency planning: Advance procedures for responding to an urgent event during remote care, including location and contacts. / Technology access equity: Collecting and retaining only the personal information necessary for a defined legitimate purpose.
D. Telehealth emergency planning: Attention to unequal access to devices, bandwidth, private space, and digital skills. / Technology access equity: Advance procedures for responding to an urgent event during remote care, including location and contacts.

0737. A trainee must distinguish how Digital confidentiality and Data minimization guide practice. Which comparison is accurate?

A. Digital confidentiality: Using approved secure systems and avoiding sensitive information on shared or unsecured channels. / Data minimization: Avoiding unnecessary data capture and retaining only what policy and law require.
B. Digital confidentiality: Avoiding unnecessary data capture and retaining only what policy and law require. / Data minimization: Using approved secure systems and avoiding sensitive information on shared or unsecured channels.
C. Digital confidentiality: Clarifying approved communication channels and response times with families. / Data minimization: Avoiding unnecessary data capture and retaining only what policy and law require.
D. Digital confidentiality: Using approved secure systems and avoiding sensitive information on shared or unsecured channels. / Data minimization: Agreeing on a backup contact method and next step if a session disconnects.

0738. While supporting a middle-school student in the family resource center, a school-based clinician adopts this practice: using access controls and keeping approved systems updated. Which concept best explains the choice?

A. AI use transparency
B. Data minimization
C. Therapeutic app evaluation
D. Cybersecurity hygiene

0739. Which choice aligns each practice with the correct idea, Digital boundaries or Cybersecurity hygiene?

A. Digital boundaries: Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care. / Cybersecurity hygiene: Using access controls and keeping approved systems updated.
B. Digital boundaries: Clarifying approved communication channels and response times with families. / Cybersecurity hygiene: Using access controls and keeping approved systems updated.
C. Digital boundaries: Using access controls and keeping approved systems updated. / Cybersecurity hygiene: Clarifying approved communication channels and response times with families.
D. Digital boundaries: Clarifying approved communication channels and response times with families. / Cybersecurity hygiene: Using approved secure systems and avoiding sensitive information on shared or unsecured channels.

0740. A service team discusses a client in late adolescence in the youth advocacy program. Their proposed next step is avoiding unnecessary data capture and retaining only what policy and law require. Which course concept supports it?

A. Telehealth informed consent
B. AI use transparency
C. Cybersecurity hygiene
D. Data minimization

0741. At a case-planning meeting, the play therapist proposes checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool. for a child aged 14 seen in the youth advocacy program. Which concept does this illustrate?

A. AI use transparency
B. Data minimization
C. Cybersecurity hygiene
D. Telehealth emergency planning

0742. Which statement shows a sound practice-level distinction between Technology access equity and Technology contingency planning?

A. Technology access equity: Using access controls and keeping approved systems updated. / Technology contingency planning: Agreeing on a backup contact method and next step if a session disconnects.
B. Technology access equity: Asking about device and privacy barriers before assuming a youth can participate remotely. / Technology contingency planning: Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care.
C. Technology access equity: Asking about device and privacy barriers before assuming a youth can participate remotely. / Technology contingency planning: Agreeing on a backup contact method and next step if a session disconnects.
D. Technology access equity: Agreeing on a backup contact method and next step if a session disconnects. / Technology contingency planning: Asking about device and privacy barriers before assuming a youth can participate remotely.

0743. Choose the practice comparison that best separates Digital boundaries from Technology contingency planning.

A. Digital boundaries: Confirming current location and emergency contacts at the start of a remote session as appropriate. / Technology contingency planning: Agreeing on a backup contact method and next step if a session disconnects.
B. Digital boundaries: Clarifying approved communication channels and response times with families. / Technology contingency planning: Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care.
C. Digital boundaries: Clarifying approved communication channels and response times with families. / Technology contingency planning: Agreeing on a backup contact method and next step if a session disconnects.
D. Digital boundaries: Agreeing on a backup contact method and next step if a session disconnects. / Technology contingency planning: Clarifying approved communication channels and response times with families.

0744. In a case note about a student aged 17, a assessment clinician working in the parent meeting records this priority: agreeing on a backup contact method and next step if a session disconnects. What principle is reflected?

A. Technology contingency planning
B. Digital confidentiality
C. AI use transparency
D. Cybersecurity hygiene

0745. A clinical supervisor is asked to evaluate a proposed service for a young person aged 18 in the school consultation. The defining feature is checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool. Which concept fits?

A. Technology contingency planning
B. Telehealth informed consent
C. AI use transparency
D. Technology access equity

0746. How should a practitioner distinguish the applications of Telehealth emergency planning and Data minimization?

A. Telehealth emergency planning: Confirming current location and emergency contacts at the start of a remote session as appropriate. / Data minimization: Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care.
B. Telehealth emergency planning: Avoiding unnecessary data capture and retaining only what policy and law require. / Data minimization: Confirming current location and emergency contacts at the start of a remote session as appropriate.
C. Telehealth emergency planning: Clarifying approved communication channels and response times with families. / Data minimization: Avoiding unnecessary data capture and retaining only what policy and law require.
D. Telehealth emergency planning: Confirming current location and emergency contacts at the start of a remote session as appropriate. / Data minimization: Avoiding unnecessary data capture and retaining only what policy and law require.

0747. Which comparison would correct a trainee's misunderstanding of Digital confidentiality versus Technology contingency planning?

A. Digital confidentiality: Assessment of an app's evidence, privacy, accessibility, usability, and fit before recommending it. / Technology contingency planning: A plan for continuing or safely pausing care when devices, connectivity, or platforms fail.
B. Digital confidentiality: Protection of sensitive information across devices, networks, platforms, and communications. / Technology contingency planning: Professional limits governing online contact, social media, and technology-mediated relationships.
C. Digital confidentiality: Protection of sensitive information across devices, networks, platforms, and communications. / Technology contingency planning: A plan for continuing or safely pausing care when devices, connectivity, or platforms fail.
D. Digital confidentiality: A plan for continuing or safely pausing care when devices, connectivity, or platforms fail. / Technology contingency planning: Protection of sensitive information across devices, networks, platforms, and communications.

0748. A planning meeting about a child aged 7 includes a clinical supervisor. The proposed practice in the classroom support meeting is reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care. Which idea underlies it?

A. Technology contingency planning
B. Data minimization
C. AI use transparency
D. Telehealth informed consent

0749. A team must select a support approach for a child of elementary-school age at the caregiver consultation. The parent educator recommends confirming current location and emergency contacts at the start of a remote session as appropriate. Which idea is most relevant?

A. Therapeutic app evaluation
B. Technology access equity
C. Telehealth emergency planning
D. AI use transparency

0750. A young person aged 10's service team meets in the student wellness team. The school-based clinician recommends a change involving confirming current location and emergency contacts at the start of a remote session as appropriate. Which idea best explains it?

A. Telehealth emergency planning
B. Technology access equity
C. Digital boundaries
D. Telehealth informed consent

0751. In the student wellness team, a team asks how a consulting counselor can support a young person aged 13. One proposed action is agreeing on a backup contact method and next step if a session disconnects. Which idea does it represent?

A. Technology contingency planning
B. Data minimization
C. AI use transparency
D. Cybersecurity hygiene

0752. Which comparison correctly distinguishes Cybersecurity hygiene from AI use transparency?

A. Cybersecurity hygiene: Clear disclosure and oversight when artificial intelligence tools materially affect clinical work or client information. / AI use transparency: Routine practices such as strong authentication, updates, and secure handling that reduce digital risk.
B. Cybersecurity hygiene: Routine practices such as strong authentication, updates, and secure handling that reduce digital risk. / AI use transparency: Clear disclosure and oversight when artificial intelligence tools materially affect clinical work or client information.
C. Cybersecurity hygiene: Advance procedures for responding to an urgent event during remote care, including location and contacts. / AI use transparency: Clear disclosure and oversight when artificial intelligence tools materially affect clinical work or client information.
D. Cybersecurity hygiene: Routine practices such as strong authentication, updates, and secure handling that reduce digital risk. / AI use transparency: Professional limits governing online contact, social media, and technology-mediated relationships.

0753. Which paired example correctly applies Data minimization first and Cybersecurity hygiene second?

A. Data minimization: Avoiding unnecessary data capture and retaining only what policy and law require. / Cybersecurity hygiene: Using access controls and keeping approved systems updated.
B. Data minimization: Avoiding unnecessary data capture and retaining only what policy and law require. / Cybersecurity hygiene: Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care.
C. Data minimization: Using approved secure systems and avoiding sensitive information on shared or unsecured channels. / Cybersecurity hygiene: Using access controls and keeping approved systems updated.
D. Data minimization: Using access controls and keeping approved systems updated. / Cybersecurity hygiene: Avoiding unnecessary data capture and retaining only what policy and law require.

0754. In a professional consultation about a young adolescent client, the mental-health professional describes this response in the caregiver consultation: using approved secure systems and avoiding sensitive information on shared or unsecured channels. Which term is most apt?

A. Digital boundaries
B. Technology contingency planning
C. AI use transparency
D. Digital confidentiality

0755. Choose the practice comparison that best separates Telehealth informed consent from Cybersecurity hygiene.

A. Telehealth informed consent: Agreeing on a backup contact method and next step if a session disconnects. / Cybersecurity hygiene: Using access controls and keeping approved systems updated.
B. Telehealth informed consent: Using access controls and keeping approved systems updated. / Cybersecurity hygiene: Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care.
C. Telehealth informed consent: Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care. / Cybersecurity hygiene: Confirming current location and emergency contacts at the start of a remote session as appropriate.
D. Telehealth informed consent: Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care. / Cybersecurity hygiene: Using access controls and keeping approved systems updated.

0756. A support meeting for a student aged 9 includes a counselor in the student wellness team. The practice under consideration is checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool. Which concept guides it?

A. Telehealth informed consent
B. Technology access equity
C. Digital boundaries
D. AI use transparency

0757. Which statement accurately contrasts the course concepts Digital confidentiality and Cybersecurity hygiene?

A. Digital confidentiality: Routine practices such as strong authentication, updates, and secure handling that reduce digital risk. / Cybersecurity hygiene: Protection of sensitive information across devices, networks, platforms, and communications.
B. Digital confidentiality: Protection of sensitive information across devices, networks, platforms, and communications. / Cybersecurity hygiene: Routine practices such as strong authentication, updates, and secure handling that reduce digital risk.
C. Digital confidentiality: Protection of sensitive information across devices, networks, platforms, and communications. / Cybersecurity hygiene: An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans.
D. Digital confidentiality: Clear disclosure and oversight when artificial intelligence tools materially affect clinical work or client information. / Cybersecurity hygiene: Routine practices such as strong authentication, updates, and secure handling that reduce digital risk.

0758. Select the best explanation of Therapeutic app evaluation.

A. Assessment of an app’s evidence, privacy, accessibility, usability, and fit before recommending it.
B. Attention to unequal access to devices, bandwidth, private space, and digital skills.
C. Routine practices such as strong authentication, updates, and secure handling that reduce digital risk.
D. Clear disclosure and oversight when artificial intelligence tools materially affect clinical work or client information.

0759. Which statement most accurately defines Data minimization?

A. Attention to unequal access to devices, bandwidth, private space, and digital skills.
B. An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans.
C. Assessment of an app’s evidence, privacy, accessibility, usability, and fit before recommending it.
D. Collecting and retaining only the personal information necessary for a defined legitimate purpose.

0760. A case conference asks for a distinction between Telehealth informed consent and Therapeutic app evaluation. Which answer is sound?

A. Telehealth informed consent: Assessment of an app’s evidence, privacy, accessibility, usability, and fit before recommending it. / Therapeutic app evaluation: An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans.
B. Telehealth informed consent: Advance procedures for responding to an urgent event during remote care, including location and contacts. / Therapeutic app evaluation: Assessment of an app’s evidence, privacy, accessibility, usability, and fit before recommending it.
C. Telehealth informed consent: An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans. / Therapeutic app evaluation: Assessment of an app’s evidence, privacy, accessibility, usability, and fit before recommending it.
D. Telehealth informed consent: An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans. / Therapeutic app evaluation: Clear disclosure and oversight when artificial intelligence tools materially affect clinical work or client information.

0761. A teenage client is receiving support in the after-school program. The teacher and counselor is guided by this practice: confirming current location and emergency contacts at the start of a remote session as appropriate. Which principle best fits?

A. AI use transparency
B. Digital boundaries
C. Technology contingency planning
D. Telehealth emergency planning

0762. In a supervision review, a caregiver working with a counselor describes work with a child aged 8 in the community youth program: using access controls and keeping approved systems updated. What concept is illustrated?

A. Telehealth informed consent
B. Telehealth emergency planning
C. AI use transparency
D. Cybersecurity hygiene

0763. Which comparison correctly distinguishes Digital boundaries from Data minimization?

A. Digital boundaries: Professional limits governing online contact, social media, and technology-mediated relationships. / Data minimization: Assessment of an app's evidence, privacy, accessibility, usability, and fit before recommending it.
B. Digital boundaries: An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans. / Data minimization: Collecting and retaining only the personal information necessary for a defined legitimate purpose.
C. Digital boundaries: Collecting and retaining only the personal information necessary for a defined legitimate purpose. / Data minimization: Professional limits governing online contact, social media, and technology-mediated relationships.
D. Digital boundaries: Professional limits governing online contact, social media, and technology-mediated relationships. / Data minimization: Collecting and retaining only the personal information necessary for a defined legitimate purpose.

0764. At the community youth program, a research trainee reviews whether a plan for a child of elementary-school age is appropriate. The relevant practice is clarifying approved communication channels and response times with families. Which concept is tested?

A. Digital boundaries
B. Technology access equity
C. Data minimization
D. Therapeutic app evaluation

0765. Which comparison correctly distinguishes Telehealth emergency planning from Digital boundaries?

A. Telehealth emergency planning: Professional limits governing online contact, social media, and technology-mediated relationships. / Digital boundaries: Advance procedures for responding to an urgent event during remote care, including location and contacts.
B. Telehealth emergency planning: Routine practices such as strong authentication, updates, and secure handling that reduce digital risk. / Digital boundaries: Professional limits governing online contact, social media, and technology-mediated relationships.
C. Telehealth emergency planning: Advance procedures for responding to an urgent event during remote care, including location and contacts. / Digital boundaries: An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans.
D. Telehealth emergency planning: Advance procedures for responding to an urgent event during remote care, including location and contacts. / Digital boundaries: Professional limits governing online contact, social media, and technology-mediated relationships.

0766. Which choice aligns each practice with the correct idea, Telehealth informed consent or Digital boundaries?

A. Telehealth informed consent: Clarifying approved communication channels and response times with families. / Digital boundaries: Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care.
B. Telehealth informed consent: Using approved secure systems and avoiding sensitive information on shared or unsecured channels. / Digital boundaries: Clarifying approved communication channels and response times with families.
C. Telehealth informed consent: Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care. / Digital boundaries: Using access controls and keeping approved systems updated.
D. Telehealth informed consent: Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care. / Digital boundaries: Clarifying approved communication channels and response times with families.

0767. A doctoral student reads the following description. Which concept does it define? Routine practices such as strong authentication, updates, and secure handling that reduce digital risk.

A. Digital confidentiality
B. Telehealth informed consent
C. Cybersecurity hygiene
D. Digital boundaries

0768. Choose the practice comparison that best separates Digital confidentiality from AI use transparency.

A. Digital confidentiality: Using approved secure systems and avoiding sensitive information on shared or unsecured channels. / AI use transparency: Confirming current location and emergency contacts at the start of a remote session as appropriate.
B. Digital confidentiality: Checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool. / AI use transparency: Using approved secure systems and avoiding sensitive information on shared or unsecured channels.
C. Digital confidentiality: Asking about device and privacy barriers before assuming a youth can participate remotely. / AI use transparency: Checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool.
D. Digital confidentiality: Using approved secure systems and avoiding sensitive information on shared or unsecured channels. / AI use transparency: Checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool.

0769. Which comparison correctly distinguishes Telehealth informed consent from Technology contingency planning?

A. Telehealth informed consent: A plan for continuing or safely pausing care when devices, connectivity, or platforms fail. / Technology contingency planning: An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans.
B. Telehealth informed consent: An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans. / Technology contingency planning: A plan for continuing or safely pausing care when devices, connectivity, or platforms fail.
C. Telehealth informed consent: An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans. / Technology contingency planning: Collecting and retaining only the personal information necessary for a defined legitimate purpose.
D. Telehealth informed consent: Routine practices such as strong authentication, updates, and secure handling that reduce digital risk. / Technology contingency planning: A plan for continuing or safely pausing care when devices, connectivity, or platforms fail.

0770. Choose the term that matches this definition: Attention to unequal access to devices, bandwidth, private space, and digital skills.

A. Digital boundaries
B. Telehealth emergency planning
C. Data minimization
D. Technology access equity

0771. Which option correctly matches each concept to its practice focus: Telehealth informed consent and Cybersecurity hygiene?

A. Telehealth informed consent: Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care. / Cybersecurity hygiene: Using access controls and keeping approved systems updated.
B. Telehealth informed consent: Using access controls and keeping approved systems updated. / Cybersecurity hygiene: Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care.
C. Telehealth informed consent: Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care. / Cybersecurity hygiene: Confirming current location and emergency contacts at the start of a remote session as appropriate.
D. Telehealth informed consent: Agreeing on a backup contact method and next step if a session disconnects. / Cybersecurity hygiene: Using access controls and keeping approved systems updated.

0772. A mental-health professional is preparing a follow-up plan for a child of elementary-school age in the classroom support meeting. The plan calls for checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool. Which concept names this approach?

A. Digital confidentiality
B. AI use transparency
C. Data minimization
D. Therapeutic app evaluation

0773. A consulting counselor is asked to justify a plan for a older adolescent client in the school-based service. It calls for using access controls and keeping approved systems updated. Which concept provides the rationale?

A. Therapeutic app evaluation
B. Digital confidentiality
C. Telehealth informed consent
D. Cybersecurity hygiene

0774. Choose the response that best puts Data minimization into practice.

A. Using approved secure systems and avoiding sensitive information on shared or unsecured channels.
B. Clarifying approved communication channels and response times with families.
C. Avoiding unnecessary data capture and retaining only what policy and law require.
D. Using access controls and keeping approved systems updated.

0775. Which statement accurately contrasts the course concepts Digital boundaries and Cybersecurity hygiene?

A. Digital boundaries: Professional limits governing online contact, social media, and technology-mediated relationships. / Cybersecurity hygiene: Protection of sensitive information across devices, networks, platforms, and communications.
B. Digital boundaries: Routine practices such as strong authentication, updates, and secure handling that reduce digital risk. / Cybersecurity hygiene: Professional limits governing online contact, social media, and technology-mediated relationships.
C. Digital boundaries: Professional limits governing online contact, social media, and technology-mediated relationships. / Cybersecurity hygiene: Routine practices such as strong authentication, updates, and secure handling that reduce digital risk.
D. Digital boundaries: An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans. / Cybersecurity hygiene: Routine practices such as strong authentication, updates, and secure handling that reduce digital risk.

0776. Which option preserves the correct meaning of both Technology access equity and Digital boundaries?

A. Technology access equity: Professional limits governing online contact, social media, and technology-mediated relationships. / Digital boundaries: Attention to unequal access to devices, bandwidth, private space, and digital skills.
B. Technology access equity: Protection of sensitive information across devices, networks, platforms, and communications. / Digital boundaries: Professional limits governing online contact, social media, and technology-mediated relationships.
C. Technology access equity: Attention to unequal access to devices, bandwidth, private space, and digital skills. / Digital boundaries: Collecting and retaining only the personal information necessary for a defined legitimate purpose.
D. Technology access equity: Attention to unequal access to devices, bandwidth, private space, and digital skills. / Digital boundaries: Professional limits governing online contact, social media, and technology-mediated relationships.

0777. A trainee must distinguish how Telehealth emergency planning and AI use transparency guide practice. Which comparison is accurate?

A. Telehealth emergency planning: Reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate. / AI use transparency: Checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool.
B. Telehealth emergency planning: Confirming current location and emergency contacts at the start of a remote session as appropriate. / AI use transparency: Checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool.
C. Telehealth emergency planning: Confirming current location and emergency contacts at the start of a remote session as appropriate. / AI use transparency: Using access controls and keeping approved systems updated.
D. Telehealth emergency planning: Checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool. / AI use transparency: Confirming current location and emergency contacts at the start of a remote session as appropriate.

0778. For a older adolescent client seen in the student wellness team, the research trainee recommends a plan built around avoiding unnecessary data capture and retaining only what policy and law require. Which concept is reflected?

A. Technology access equity
B. Cybersecurity hygiene
C. Digital boundaries
D. Data minimization

0779. Which paired example correctly applies Technology access equity first and Cybersecurity hygiene second?

A. Technology access equity: Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care. / Cybersecurity hygiene: Using access controls and keeping approved systems updated.
B. Technology access equity: Using access controls and keeping approved systems updated. / Cybersecurity hygiene: Asking about device and privacy barriers before assuming a youth can participate remotely.
C. Technology access equity: Asking about device and privacy barriers before assuming a youth can participate remotely. / Cybersecurity hygiene: Clarifying approved communication channels and response times with families.
D. Technology access equity: Asking about device and privacy barriers before assuming a youth can participate remotely. / Cybersecurity hygiene: Using access controls and keeping approved systems updated.

0780. A supervised trainee is supporting a student aged 9 in the community youth program. The key practice is reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care. Which course concept is most relevant?

A. Telehealth informed consent
B. Digital boundaries
C. Digital confidentiality
D. Cybersecurity hygiene

0781. A consultant prepares for a session in the supervision meeting with a client in early adolescence. The intended approach is using approved secure systems and avoiding sensitive information on shared or unsecured channels. Which concept is most relevant?

A. Technology contingency planning
B. Digital confidentiality
C. Therapeutic app evaluation
D. Digital boundaries

0782. Which option is the clearest practical expression of Telehealth emergency planning?

A. Confirming current location and emergency contacts at the start of a remote session as appropriate.
B. Clarifying approved communication channels and response times with families.
C. Using access controls and keeping approved systems updated.
D. Reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate.

0783. A program coordinator describes an intervention for a young adolescent client in the telehealth session, centered on confirming current location and emergency contacts at the start of a remote session as appropriate. Which named idea is most relevant?

A. Digital boundaries
B. Data minimization
C. Telehealth emergency planning
D. Therapeutic app evaluation

0784. Which paired example correctly applies Telehealth emergency planning first and Technology access equity second?

A. Telehealth emergency planning: Confirming current location and emergency contacts at the start of a remote session as appropriate. / Technology access equity: Avoiding unnecessary data capture and retaining only what policy and law require.
B. Telehealth emergency planning: Asking about device and privacy barriers before assuming a youth can participate remotely. / Technology access equity: Confirming current location and emergency contacts at the start of a remote session as appropriate.
C. Telehealth emergency planning: Confirming current location and emergency contacts at the start of a remote session as appropriate. / Technology access equity: Asking about device and privacy barriers before assuming a youth can participate remotely.
D. Telehealth emergency planning: Clarifying approved communication channels and response times with families. / Technology access equity: Asking about device and privacy barriers before assuming a youth can participate remotely.

0785. A trainee must distinguish how Digital boundaries and AI use transparency guide practice. Which comparison is accurate?

A. Digital boundaries: Clarifying approved communication channels and response times with families. / AI use transparency: Confirming current location and emergency contacts at the start of a remote session as appropriate.
B. Digital boundaries: Avoiding unnecessary data capture and retaining only what policy and law require. / AI use transparency: Checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool.
C. Digital boundaries: Clarifying approved communication channels and response times with families. / AI use transparency: Checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool.
D. Digital boundaries: Checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool. / AI use transparency: Clarifying approved communication channels and response times with families.

0786. A research trainee is asked what should shape a young person aged 16’s support in the telehealth session. The proposed focus is reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate. Which principle does it represent?

A. Technology contingency planning
B. Therapeutic app evaluation
C. Telehealth emergency planning
D. Digital boundaries

0787. A support meeting for a client in late adolescence includes a behavior specialist in the family resource center. The practice under consideration is reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate. Which concept guides it?

A. Digital boundaries
B. Therapeutic app evaluation
C. Digital confidentiality
D. AI use transparency

0788. A adolescent student’s service team meets in the family session. The case coordinator recommends a change involving avoiding unnecessary data capture and retaining only what policy and law require. Which idea best explains it?

A. Digital confidentiality
B. Data minimization
C. Technology access equity
D. AI use transparency

0789. Which statement shows a sound practice-level distinction between Telehealth emergency planning and Data minimization?

A. Telehealth emergency planning: Clarifying approved communication channels and response times with families. / Data minimization: Avoiding unnecessary data capture and retaining only what policy and law require.
B. Telehealth emergency planning: Confirming current location and emergency contacts at the start of a remote session as appropriate. / Data minimization: Avoiding unnecessary data capture and retaining only what policy and law require.
C. Telehealth emergency planning: Confirming current location and emergency contacts at the start of a remote session as appropriate. / Data minimization: Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care.
D. Telehealth emergency planning: Avoiding unnecessary data capture and retaining only what policy and law require. / Data minimization: Confirming current location and emergency contacts at the start of a remote session as appropriate.

0790. Which paired example correctly applies Digital confidentiality first and Technology contingency planning second?

A. Digital confidentiality: Using approved secure systems and avoiding sensitive information on shared or unsecured channels. / Technology contingency planning: Agreeing on a backup contact method and next step if a session disconnects.
B. Digital confidentiality: Using approved secure systems and avoiding sensitive information on shared or unsecured channels. / Technology contingency planning: Clarifying approved communication channels and response times with families.
C. Digital confidentiality: Agreeing on a backup contact method and next step if a session disconnects. / Technology contingency planning: Using approved secure systems and avoiding sensitive information on shared or unsecured channels.
D. Digital confidentiality: Reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate. / Technology contingency planning: Agreeing on a backup contact method and next step if a session disconnects.

0791. A trainee must explain Technology access equity. Which answer is accurate?

A. Professional limits governing online contact, social media, and technology-mediated relationships.
B. Attention to unequal access to devices, bandwidth, private space, and digital skills.
C. A plan for continuing or safely pausing care when devices, connectivity, or platforms fail.
D. Routine practices such as strong authentication, updates, and secure handling that reduce digital risk.

0792. Which named construct is captured by this account? An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans.

A. Data minimization
B. Telehealth informed consent
C. Technology contingency planning
D. Therapeutic app evaluation

0793. Choose the definition pair that correctly explains Technology access equity first and Data minimization second.

A. Technology access equity: Attention to unequal access to devices, bandwidth, private space, and digital skills. / Data minimization: Advance procedures for responding to an urgent event during remote care, including location and contacts.
B. Technology access equity: A plan for continuing or safely pausing care when devices, connectivity, or platforms fail. / Data minimization: Collecting and retaining only the personal information necessary for a defined legitimate purpose.
C. Technology access equity: Attention to unequal access to devices, bandwidth, private space, and digital skills. / Data minimization: Collecting and retaining only the personal information necessary for a defined legitimate purpose.
D. Technology access equity: Collecting and retaining only the personal information necessary for a defined legitimate purpose. / Data minimization: Attention to unequal access to devices, bandwidth, private space, and digital skills.

0794. Which choice aligns each practice with the correct idea, Technology access equity or Technology contingency planning?

A. Technology access equity: Asking about device and privacy barriers before assuming a youth can participate remotely. / Technology contingency planning: Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care.
B. Technology access equity: Asking about device and privacy barriers before assuming a youth can participate remotely. / Technology contingency planning: Agreeing on a backup contact method and next step if a session disconnects.
C. Technology access equity: Using access controls and keeping approved systems updated. / Technology contingency planning: Agreeing on a backup contact method and next step if a session disconnects.
D. Technology access equity: Agreeing on a backup contact method and next step if a session disconnects. / Technology contingency planning: Asking about device and privacy barriers before assuming a youth can participate remotely.

0795. At the community service agency, a school support specialist meets with a preadolescent child. The practice priority is: reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate. Which concept best captures that priority?

A. Data minimization
B. Therapeutic app evaluation
C. Technology access equity
D. Technology contingency planning

0796. A support meeting for a young person aged 13 includes a school support specialist in the classroom support meeting. The practice under consideration is avoiding unnecessary data capture and retaining only what policy and law require. Which concept guides it?

A. AI use transparency
B. Technology contingency planning
C. Data minimization
D. Digital confidentiality

0797. Which pair of actions illustrates Digital boundaries and Data minimization, respectively?

A. Digital boundaries: Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care. / Data minimization: Avoiding unnecessary data capture and retaining only what policy and law require.
B. Digital boundaries: Clarifying approved communication channels and response times with families. / Data minimization: Reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate.
C. Digital boundaries: Avoiding unnecessary data capture and retaining only what policy and law require. / Data minimization: Clarifying approved communication channels and response times with families.
D. Digital boundaries: Clarifying approved communication channels and response times with families. / Data minimization: Avoiding unnecessary data capture and retaining only what policy and law require.

0798. A member of a clinical team prepares for a session in the counseling practicum with a child aged 8. The intended approach is confirming current location and emergency contacts at the start of a remote session as appropriate. Which concept is most relevant?

A. Technology access equity
B. Technology contingency planning
C. Telehealth emergency planning
D. Cybersecurity hygiene

0799. At a case-planning meeting, the clinical supervisor proposes using approved secure systems and avoiding sensitive information on shared or unsecured channels. for a student aged 15 seen in the family session. Which concept does this illustrate?

A. AI use transparency
B. Data minimization
C. Digital confidentiality
D. Telehealth informed consent

0800. Which applied comparison correctly identifies what belongs to Telehealth informed consent versus Telehealth emergency planning?

A. Telehealth informed consent: Asking about device and privacy barriers before assuming a youth can participate remotely. / Telehealth emergency planning: Confirming current location and emergency contacts at the start of a remote session as appropriate.
B. Telehealth informed consent: Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care. / Telehealth emergency planning: Using access controls and keeping approved systems updated.
C. Telehealth informed consent: Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care. / Telehealth emergency planning: Confirming current location and emergency contacts at the start of a remote session as appropriate.
D. Telehealth informed consent: Confirming current location and emergency contacts at the start of a remote session as appropriate. / Telehealth emergency planning: Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care.

0801. Select the best explanation of AI use transparency.

A. Professional limits governing online contact, social media, and technology-mediated relationships.
B. Attention to unequal access to devices, bandwidth, private space, and digital skills.
C. Collecting and retaining only the personal information necessary for a defined legitimate purpose.
D. Clear disclosure and oversight when artificial intelligence tools materially affect clinical work or client information.

0802. Which statement shows a sound practice-level distinction between Technology access equity and Therapeutic app evaluation?

A. Technology access equity: Asking about device and privacy barriers before assuming a youth can participate remotely. / Therapeutic app evaluation: Confirming current location and emergency contacts at the start of a remote session as appropriate.
B. Technology access equity: Reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate. / Therapeutic app evaluation: Asking about device and privacy barriers before assuming a youth can participate remotely.
C. Technology access equity: Avoiding unnecessary data capture and retaining only what policy and law require. / Therapeutic app evaluation: Reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate.
D. Technology access equity: Asking about device and privacy barriers before assuming a youth can participate remotely. / Therapeutic app evaluation: Reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate.

0803. In a case note about a preadolescent child, a assessment clinician working in the community mental-health service records this priority: clarifying approved communication channels and response times with families. What principle is reflected?

A. Cybersecurity hygiene
B. Technology access equity
C. Technology contingency planning
D. Digital boundaries

0804. A child aged 7 is receiving support in the student wellness team. The group facilitator is guided by this practice: clarifying approved communication channels and response times with families. Which principle best fits?

A. Cybersecurity hygiene
B. Data minimization
C. Digital boundaries
D. Therapeutic app evaluation

0805. Which pair of actions illustrates Telehealth emergency planning and Cybersecurity hygiene, respectively?

A. Telehealth emergency planning: Confirming current location and emergency contacts at the start of a remote session as appropriate. / Cybersecurity hygiene: Using access controls and keeping approved systems updated.
B. Telehealth emergency planning: Checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool. / Cybersecurity hygiene: Using access controls and keeping approved systems updated.
C. Telehealth emergency planning: Confirming current location and emergency contacts at the start of a remote session as appropriate. / Cybersecurity hygiene: Clarifying approved communication channels and response times with families.
D. Telehealth emergency planning: Using access controls and keeping approved systems updated. / Cybersecurity hygiene: Confirming current location and emergency contacts at the start of a remote session as appropriate.

0806. A assessment clinician is preparing a follow-up plan for a teenage client in the community youth program. The plan calls for avoiding unnecessary data capture and retaining only what policy and law require. Which concept names this approach?

A. Cybersecurity hygiene
B. Telehealth informed consent
C. Data minimization
D. Therapeutic app evaluation

0807. Which option pairs the definitions of Digital confidentiality and Data minimization correctly, in that order?

A. Digital confidentiality: Protection of sensitive information across devices, networks, platforms, and communications. / Data minimization: Collecting and retaining only the personal information necessary for a defined legitimate purpose.
B. Digital confidentiality: Protection of sensitive information across devices, networks, platforms, and communications. / Data minimization: A plan for continuing or safely pausing care when devices, connectivity, or platforms fail.
C. Digital confidentiality: Collecting and retaining only the personal information necessary for a defined legitimate purpose. / Data minimization: Protection of sensitive information across devices, networks, platforms, and communications.
D. Digital confidentiality: Professional limits governing online contact, social media, and technology-mediated relationships. / Data minimization: Collecting and retaining only the personal information necessary for a defined legitimate purpose.

0808. Which statement most accurately defines Therapeutic app evaluation?

A. Clear disclosure and oversight when artificial intelligence tools materially affect clinical work or client information.
B. Attention to unequal access to devices, bandwidth, private space, and digital skills.
C. Professional limits governing online contact, social media, and technology-mediated relationships.
D. Assessment of an app’s evidence, privacy, accessibility, usability, and fit before recommending it.

0809. Which pair of actions illustrates Telehealth emergency planning and Technology access equity, respectively?

A. Telehealth emergency planning: Confirming current location and emergency contacts at the start of a remote session as appropriate. / Technology access equity: Avoiding unnecessary data capture and retaining only what policy and law require.
B. Telehealth emergency planning: Clarifying approved communication channels and response times with families. / Technology access equity: Asking about device and privacy barriers before assuming a youth can participate remotely.
C. Telehealth emergency planning: Confirming current location and emergency contacts at the start of a remote session as appropriate. / Technology access equity: Asking about device and privacy barriers before assuming a youth can participate remotely.
D. Telehealth emergency planning: Asking about device and privacy barriers before assuming a youth can participate remotely. / Technology access equity: Confirming current location and emergency contacts at the start of a remote session as appropriate.

0810. For a teenage client in the supervision meeting, a school support specialist makes this practice the immediate priority: checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool. Which concept fits best?

A. Technology access equity
B. Therapeutic app evaluation
C. Technology contingency planning
D. AI use transparency

0811. Choose the definition pair that correctly explains Digital boundaries first and AI use transparency second.

A. Digital boundaries: Collecting and retaining only the personal information necessary for a defined legitimate purpose. / AI use transparency: Clear disclosure and oversight when artificial intelligence tools materially affect clinical work or client information.
B. Digital boundaries: Professional limits governing online contact, social media, and technology-mediated relationships. / AI use transparency: Advance procedures for responding to an urgent event during remote care, including location and contacts.
C. Digital boundaries: Professional limits governing online contact, social media, and technology-mediated relationships. / AI use transparency: Clear disclosure and oversight when artificial intelligence tools materially affect clinical work or client information.
D. Digital boundaries: Clear disclosure and oversight when artificial intelligence tools materially affect clinical work or client information. / AI use transparency: Professional limits governing online contact, social media, and technology-mediated relationships.

0812. A supervisor asks for an applied contrast between Telehealth informed consent and AI use transparency. Which option fits?

A. Telehealth informed consent: Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care. / AI use transparency: Avoiding unnecessary data capture and retaining only what policy and law require.
B. Telehealth informed consent: Checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool. / AI use transparency: Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care.
C. Telehealth informed consent: Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care. / AI use transparency: Checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool.
D. Telehealth informed consent: Confirming current location and emergency contacts at the start of a remote session as appropriate. / AI use transparency: Checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool.

0813. During work in the telehealth session, a youth worker identifies this need: using approved secure systems and avoiding sensitive information on shared or unsecured channels. Which idea should guide the response?

A. AI use transparency
B. Telehealth informed consent
C. Digital confidentiality
D. Telehealth emergency planning

0814. Choose the practice comparison that best separates Data minimization from AI use transparency.

A. Data minimization: Avoiding unnecessary data capture and retaining only what policy and law require. / AI use transparency: Checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool.
B. Data minimization: Avoiding unnecessary data capture and retaining only what policy and law require. / AI use transparency: Reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate.
C. Data minimization: Checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool. / AI use transparency: Avoiding unnecessary data capture and retaining only what policy and law require.
D. Data minimization: Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care. / AI use transparency: Checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool.

0815. A case discussion concerns a preadolescent child and a school-based clinician in the multidisciplinary case conference. The practitioner is considering asking about device and privacy barriers before assuming a youth can participate remotely. Which principle is involved?

A. Data minimization
B. Digital confidentiality
C. Technology access equity
D. Therapeutic app evaluation

0816. Which paired example correctly applies Digital boundaries first and AI use transparency second?

A. Digital boundaries: Avoiding unnecessary data capture and retaining only what policy and law require. / AI use transparency: Checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool.
B. Digital boundaries: Clarifying approved communication channels and response times with families. / AI use transparency: Confirming current location and emergency contacts at the start of a remote session as appropriate.
C. Digital boundaries: Clarifying approved communication channels and response times with families. / AI use transparency: Checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool.
D. Digital boundaries: Checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool. / AI use transparency: Clarifying approved communication channels and response times with families.

0817. Identify the most precise label for this idea: Clear disclosure and oversight when artificial intelligence tools materially affect clinical work or client information.

A. Therapeutic app evaluation
B. Telehealth emergency planning
C. Telehealth informed consent
D. AI use transparency

0818. A planning meeting about a young person aged 10 includes a school support specialist. The proposed practice in the family session is using access controls and keeping approved systems updated. Which idea underlies it?

A. Cybersecurity hygiene
B. Telehealth emergency planning
C. Data minimization
D. Digital confidentiality

0819. Which comparison would correct a trainee’s misunderstanding of Digital confidentiality versus AI use transparency?

A. Digital confidentiality: Clear disclosure and oversight when artificial intelligence tools materially affect clinical work or client information. / AI use transparency: Protection of sensitive information across devices, networks, platforms, and communications.
B. Digital confidentiality: Attention to unequal access to devices, bandwidth, private space, and digital skills. / AI use transparency: Clear disclosure and oversight when artificial intelligence tools materially affect clinical work or client information.
C. Digital confidentiality: Protection of sensitive information across devices, networks, platforms, and communications. / AI use transparency: Advance procedures for responding to an urgent event during remote care, including location and contacts.
D. Digital confidentiality: Protection of sensitive information across devices, networks, platforms, and communications. / AI use transparency: Clear disclosure and oversight when artificial intelligence tools materially affect clinical work or client information.

0820. Which description belongs with the term Telehealth informed consent?

A. Protection of sensitive information across devices, networks, platforms, and communications.
B. Professional limits governing online contact, social media, and technology-mediated relationships.
C. An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans.
D. Advance procedures for responding to an urgent event during remote care, including location and contacts.

0821. A trainee must explain Data minimization. Which answer is accurate?

A. Routine practices such as strong authentication, updates, and secure handling that reduce digital risk.
B. Collecting and retaining only the personal information necessary for a defined legitimate purpose.
C. An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans.
D. Protection of sensitive information across devices, networks, platforms, and communications.

0822. Which course concept is defined as follows: Advance procedures for responding to an urgent event during remote care, including location and contacts.

A. Technology access equity
B. Telehealth informed consent
C. Telehealth emergency planning
D. Therapeutic app evaluation

0823. Which pair of actions illustrates Cybersecurity hygiene and AI use transparency, respectively?

A. Cybersecurity hygiene: Confirming current location and emergency contacts at the start of a remote session as appropriate. / AI use transparency: Checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool.
B. Cybersecurity hygiene: Checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool. / AI use transparency: Using access controls and keeping approved systems updated.
C. Cybersecurity hygiene: Using access controls and keeping approved systems updated. / AI use transparency: Checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool.
D. Cybersecurity hygiene: Using access controls and keeping approved systems updated. / AI use transparency: Clarifying approved communication channels and response times with families.

0824. Which course concept is defined as follows: Clear disclosure and oversight when artificial intelligence tools materially affect clinical work or client information.

A. AI use transparency
B. Cybersecurity hygiene
C. Telehealth emergency planning
D. Technology access equity

0825. A supervised trainee is preparing a follow-up plan for a preadolescent child in the after-school program. The plan calls for agreeing on a backup contact method and next step if a session disconnects. Which concept names this approach?

A. Therapeutic app evaluation
B. Digital confidentiality
C. Technology access equity
D. Technology contingency planning

0826. While consulting in the school-based service, a assessment clinician supports a young person aged 10 by using this approach: asking about device and privacy barriers before assuming a youth can participate remotely. Which concept is being applied?

A. Technology access equity
B. Digital boundaries
C. Technology contingency planning
D. Telehealth informed consent

0827. In a professional consultation about a young person aged 10, the assessment clinician describes this response in the school-based service: asking about device and privacy barriers before assuming a youth can participate remotely. Which term is most apt?

A. Technology contingency planning
B. Telehealth emergency planning
C. Technology access equity
D. Data minimization

0828. In a professional consultation about a school-age child, the supervised trainee describes this response in the multidisciplinary case conference: confirming current location and emergency contacts at the start of a remote session as appropriate. Which term is most apt?

A. Data minimization
B. Therapeutic app evaluation
C. Cybersecurity hygiene
D. Telehealth emergency planning

0829. How should a practitioner distinguish the applications of Telehealth emergency planning and AI use transparency?

A. Telehealth emergency planning: Confirming current location and emergency contacts at the start of a remote session as appropriate. / AI use transparency: Checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool.
B. Telehealth emergency planning: Checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool. / AI use transparency: Confirming current location and emergency contacts at the start of a remote session as appropriate.
C. Telehealth emergency planning: Reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate. / AI use transparency: Checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool.
D. Telehealth emergency planning: Confirming current location and emergency contacts at the start of a remote session as appropriate. / AI use transparency: Using access controls and keeping approved systems updated.

0830. While consulting in the community mental-health service, a consultant supports a client in late adolescence by using this approach: agreeing on a backup contact method and next step if a session disconnects. Which concept is being applied?

A. Therapeutic app evaluation
B. Technology contingency planning
C. Cybersecurity hygiene
D. Data minimization

0831. Which option pairs the definitions of Telehealth informed consent and Technology contingency planning correctly, in that order?

A. Telehealth informed consent: Routine practices such as strong authentication, updates, and secure handling that reduce digital risk. / Technology contingency planning: A plan for continuing or safely pausing care when devices, connectivity, or platforms fail.
B. Telehealth informed consent: An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans. / Technology contingency planning: A plan for continuing or safely pausing care when devices, connectivity, or platforms fail.
C. Telehealth informed consent: A plan for continuing or safely pausing care when devices, connectivity, or platforms fail. / Technology contingency planning: An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans.
D. Telehealth informed consent: An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans. / Technology contingency planning: Collecting and retaining only the personal information necessary for a defined legitimate purpose.

0832. Choose the practice comparison that best separates AI use transparency from Technology contingency planning.

A. AI use transparency: Agreeing on a backup contact method and next step if a session disconnects. / Technology contingency planning: Checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool.
B. AI use transparency: Checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool. / Technology contingency planning: Agreeing on a backup contact method and next step if a session disconnects.
C. AI use transparency: Checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool. / Technology contingency planning: Using access controls and keeping approved systems updated.
D. AI use transparency: Confirming current location and emergency contacts at the start of a remote session as appropriate. / Technology contingency planning: Agreeing on a backup contact method and next step if a session disconnects.

0833. How are Technology access equity and Data minimization most accurately differentiated in this curriculum?

A. Technology access equity: Attention to unequal access to devices, bandwidth, private space, and digital skills. / Data minimization: Collecting and retaining only the personal information necessary for a defined legitimate purpose.
B. Technology access equity: A plan for continuing or safely pausing care when devices, connectivity, or platforms fail. / Data minimization: Collecting and retaining only the personal information necessary for a defined legitimate purpose.
C. Technology access equity: Attention to unequal access to devices, bandwidth, private space, and digital skills. / Data minimization: Advance procedures for responding to an urgent event during remote care, including location and contacts.
D. Technology access equity: Collecting and retaining only the personal information necessary for a defined legitimate purpose. / Data minimization: Attention to unequal access to devices, bandwidth, private space, and digital skills.

0834. Choose the term that matches this definition: Routine practices such as strong authentication, updates, and secure handling that reduce digital risk.

A. Telehealth emergency planning
B. Therapeutic app evaluation
C. Cybersecurity hygiene
D. Digital boundaries

0835. A case discussion concerns a child aged 7 and a case coordinator in the student-support meeting. The practitioner is considering using approved secure systems and avoiding sensitive information on shared or unsecured channels. Which principle is involved?

A. Telehealth emergency planning
B. Digital confidentiality
C. Technology access equity
D. Digital boundaries

0836. A support meeting for a child aged 6 includes a play therapist in the after-school program. The practice under consideration is using access controls and keeping approved systems updated. Which concept guides it?

A. Cybersecurity hygiene
B. Therapeutic app evaluation
C. Data minimization
D. Telehealth informed consent

0837. A team must select a support approach for a school-age child at the community service agency. The case coordinator recommends using access controls and keeping approved systems updated. Which idea is most relevant?

A. Technology contingency planning
B. Technology access equity
C. Cybersecurity hygiene
D. Digital confidentiality

0838. A trainee must explain AI use transparency. Which answer is accurate?

A. Attention to unequal access to devices, bandwidth, private space, and digital skills.
B. An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans.
C. Clear disclosure and oversight when artificial intelligence tools materially affect clinical work or client information.
D. Protection of sensitive information across devices, networks, platforms, and communications.

0839. A student confuses Digital confidentiality with Digital boundaries. Which explanation most accurately separates them?

A. Digital confidentiality: Assessment of an app’s evidence, privacy, accessibility, usability, and fit before recommending it. / Digital boundaries: Professional limits governing online contact, social media, and technology-mediated relationships.
B. Digital confidentiality: Protection of sensitive information across devices, networks, platforms, and communications. / Digital boundaries: Professional limits governing online contact, social media, and technology-mediated relationships.
C. Digital confidentiality: Professional limits governing online contact, social media, and technology-mediated relationships. / Digital boundaries: Protection of sensitive information across devices, networks, platforms, and communications.
D. Digital confidentiality: Protection of sensitive information across devices, networks, platforms, and communications. / Digital boundaries: Collecting and retaining only the personal information necessary for a defined legitimate purpose.

0840. Which option preserves the correct meaning of both Digital confidentiality and Technology contingency planning?

A. Digital confidentiality: Protection of sensitive information across devices, networks, platforms, and communications. / Technology contingency planning: A plan for continuing or safely pausing care when devices, connectivity, or platforms fail.
B. Digital confidentiality: Assessment of an app's evidence, privacy, accessibility, usability, and fit before recommending it. / Technology contingency planning: A plan for continuing or safely pausing care when devices, connectivity, or platforms fail.
C. Digital confidentiality: A plan for continuing or safely pausing care when devices, connectivity, or platforms fail. / Technology contingency planning: Protection of sensitive information across devices, networks, platforms, and communications.
D. Digital confidentiality: Protection of sensitive information across devices, networks, platforms, and communications. / Technology contingency planning: Professional limits governing online contact, social media, and technology-mediated relationships.

0841. Which statement shows a sound practice-level distinction between Technology access equity and Cybersecurity hygiene?

A. Technology access equity: Using access controls and keeping approved systems updated. / Cybersecurity hygiene: Asking about device and privacy barriers before assuming a youth can participate remotely.
B. Technology access equity: Asking about device and privacy barriers before assuming a youth can participate remotely. / Cybersecurity hygiene: Clarifying approved communication channels and response times with families.
C. Technology access equity: Asking about device and privacy barriers before assuming a youth can participate remotely. / Cybersecurity hygiene: Using access controls and keeping approved systems updated.
D. Technology access equity: Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care. / Cybersecurity hygiene: Using access controls and keeping approved systems updated.

0842. During work in the supervision meeting, a school counselor identifies this need: clarifying approved communication channels and response times with families. Which idea should guide the response?

A. Digital confidentiality
B. Data minimization
C. Therapeutic app evaluation
D. Digital boundaries

0843. Which option pairs the definitions of Cybersecurity hygiene and Therapeutic app evaluation correctly, in that order?

A. Cybersecurity hygiene: Protection of sensitive information across devices, networks, platforms, and communications. / Therapeutic app evaluation: Assessment of an app's evidence, privacy, accessibility, usability, and fit before recommending it.
B. Cybersecurity hygiene: Routine practices such as strong authentication, updates, and secure handling that reduce digital risk. / Therapeutic app evaluation: An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans.
C. Cybersecurity hygiene: Routine practices such as strong authentication, updates, and secure handling that reduce digital risk. / Therapeutic app evaluation: Assessment of an app's evidence, privacy, accessibility, usability, and fit before recommending it.
D. Cybersecurity hygiene: Assessment of an app's evidence, privacy, accessibility, usability, and fit before recommending it. / Therapeutic app evaluation: Routine practices such as strong authentication, updates, and secure handling that reduce digital risk.

0844. Consider a client in early adolescence receiving help in the child guidance clinic. The school counselor focuses on checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool. Which term best describes the guiding idea?

A. AI use transparency
B. Therapeutic app evaluation
C. Telehealth emergency planning
D. Digital confidentiality

0845. A research trainee describes an intervention for a school-age child in the community mental-health service, centered on asking about device and privacy barriers before assuming a youth can participate remotely. Which named idea is most relevant?

A. Digital boundaries
B. Telehealth informed consent
C. Technology access equity
D. Data minimization

0846. At the classroom support meeting, a therapist reviews whether a plan for a young adolescent client is appropriate. The relevant practice is reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate. Which concept is tested?

A. Therapeutic app evaluation
B. Technology contingency planning
C. Technology access equity
D. Cybersecurity hygiene

0847. Which description belongs with the term Technology access equity?

A. Advance procedures for responding to an urgent event during remote care, including location and contacts.
B. Professional limits governing online contact, social media, and technology-mediated relationships.
C. Clear disclosure and oversight when artificial intelligence tools materially affect clinical work or client information.
D. Attention to unequal access to devices, bandwidth, private space, and digital skills.

0848. A clinical supervisor is asked to evaluate a proposed service for a student aged 9 in the supervision meeting. The defining feature is asking about device and privacy barriers before assuming a youth can participate remotely. Which concept fits?

A. AI use transparency
B. Cybersecurity hygiene
C. Digital confidentiality
D. Technology access equity

0849. A team must select a support approach for a young person aged 10 at the youth advocacy program. The parent educator recommends reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate. Which idea is most relevant?

A. Data minimization
B. Digital confidentiality
C. Cybersecurity hygiene
D. Therapeutic app evaluation

0850. An interdisciplinary team reviews a child of elementary-school age's case at the after-school program. The school support specialist recommends using approved secure systems and avoiding sensitive information on shared or unsecured channels. Which course concept best fits?

A. Telehealth emergency planning
B. Technology contingency planning
C. Cybersecurity hygiene
D. Digital confidentiality

0851. A service navigator is asked what should shape a young person's support in the child guidance clinic. The proposed focus is agreeing on a backup contact method and next step if a session disconnects. Which principle does it represent?

A. Therapeutic app evaluation
B. Technology access equity
C. AI use transparency
D. Technology contingency planning

0852. When reviewing a young person aged 16's plan in the community mental-health service, the school-based clinician notes that the next step is reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care. Which concept guides this step?

A. Technology contingency planning
B. Cybersecurity hygiene
C. Telehealth informed consent
D. Digital boundaries

0853. A trainee must distinguish how Therapeutic app evaluation and AI use transparency guide practice. Which comparison is accurate?

A. Therapeutic app evaluation: Reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate. / AI use transparency: Checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool.
B. Therapeutic app evaluation: Checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool. / AI use transparency: Reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate.
C. Therapeutic app evaluation: Clarifying approved communication channels and response times with families. / AI use transparency: Checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool.
D. Therapeutic app evaluation: Reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate. / AI use transparency: Confirming current location and emergency contacts at the start of a remote session as appropriate.

0854. Choose the response that best puts Digital confidentiality into practice.

A. Confirming current location and emergency contacts at the start of a remote session as appropriate.
B. Checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool.
C. Clarifying approved communication channels and response times with families.
D. Using approved secure systems and avoiding sensitive information on shared or unsecured channels.

0855. Choose the definition pair that correctly explains Digital confidentiality first and Cybersecurity hygiene second.

A. Digital confidentiality: Protection of sensitive information across devices, networks, platforms, and communications. / Cybersecurity hygiene: Routine practices such as strong authentication, updates, and secure handling that reduce digital risk.
B. Digital confidentiality: Routine practices such as strong authentication, updates, and secure handling that reduce digital risk. / Cybersecurity hygiene: Protection of sensitive information across devices, networks, platforms, and communications.
C. Digital confidentiality: Clear disclosure and oversight when artificial intelligence tools materially affect clinical work or client information. / Cybersecurity hygiene: Routine practices such as strong authentication, updates, and secure handling that reduce digital risk.
D. Digital confidentiality: Protection of sensitive information across devices, networks, platforms, and communications. / Cybersecurity hygiene: An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans.

0856. A school counselor is explaining a choice to a older adolescent client and caregiver in the classroom support meeting. The choice centers on using approved secure systems and avoiding sensitive information on shared or unsecured channels. Which idea is illustrated?

A. Data minimization
B. Digital confidentiality
C. AI use transparency
D. Therapeutic app evaluation

0857. Which option correctly matches each concept to its practice focus: Telehealth emergency planning and AI use transparency?

A. Telehealth emergency planning: Reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate. / AI use transparency: Checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool.
B. Telehealth emergency planning: Checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool. / AI use transparency: Confirming current location and emergency contacts at the start of a remote session as appropriate.
C. Telehealth emergency planning: Confirming current location and emergency contacts at the start of a remote session as appropriate. / AI use transparency: Checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool.
D. Telehealth emergency planning: Confirming current location and emergency contacts at the start of a remote session as appropriate. / AI use transparency: Using access controls and keeping approved systems updated.

0858. Which option pairs the definitions of Telehealth emergency planning and Digital boundaries correctly, in that order?

A. Telehealth emergency planning: Routine practices such as strong authentication, updates, and secure handling that reduce digital risk. / Digital boundaries: Professional limits governing online contact, social media, and technology-mediated relationships.
B. Telehealth emergency planning: Advance procedures for responding to an urgent event during remote care, including location and contacts. / Digital boundaries: Professional limits governing online contact, social media, and technology-mediated relationships.
C. Telehealth emergency planning: Professional limits governing online contact, social media, and technology-mediated relationships. / Digital boundaries: Advance procedures for responding to an urgent event during remote care, including location and contacts.
D. Telehealth emergency planning: Advance procedures for responding to an urgent event during remote care, including location and contacts. / Digital boundaries: An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans.

0859. Which applied comparison correctly identifies what belongs to Telehealth informed consent versus Digital confidentiality?

A. Telehealth informed consent: Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care. / Digital confidentiality: Using approved secure systems and avoiding sensitive information on shared or unsecured channels.
B. Telehealth informed consent: Using approved secure systems and avoiding sensitive information on shared or unsecured channels. / Digital confidentiality: Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care.
C. Telehealth informed consent: Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care. / Digital confidentiality: Agreeing on a backup contact method and next step if a session disconnects.
D. Telehealth informed consent: Checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool. / Digital confidentiality: Using approved secure systems and avoiding sensitive information on shared or unsecured channels.

0860. In the community mental-health service, a group facilitator explains why a high-school student would benefit from confirming current location and emergency contacts at the start of a remote session as appropriate. Which course concept underpins the explanation?

A. AI use transparency
B. Telehealth informed consent
C. Therapeutic app evaluation
D. Telehealth emergency planning

0861. In a supervision quiz, how should Cybersecurity hygiene be distinguished from AI use transparency?

A. Cybersecurity hygiene: Advance procedures for responding to an urgent event during remote care, including location and contacts. / AI use transparency: Clear disclosure and oversight when artificial intelligence tools materially affect clinical work or client information.
B. Cybersecurity hygiene: Routine practices such as strong authentication, updates, and secure handling that reduce digital risk. / AI use transparency: Clear disclosure and oversight when artificial intelligence tools materially affect clinical work or client information.
C. Cybersecurity hygiene: Clear disclosure and oversight when artificial intelligence tools materially affect clinical work or client information. / AI use transparency: Routine practices such as strong authentication, updates, and secure handling that reduce digital risk.
D. Cybersecurity hygiene: Routine practices such as strong authentication, updates, and secure handling that reduce digital risk. / AI use transparency: Professional limits governing online contact, social media, and technology-mediated relationships.

0862. Which option pairs the definitions of Digital confidentiality and Technology access equity correctly, in that order?

A. Digital confidentiality: Attention to unequal access to devices, bandwidth, private space, and digital skills. / Technology access equity: Protection of sensitive information across devices, networks, platforms, and communications.
B. Digital confidentiality: Protection of sensitive information across devices, networks, platforms, and communications. / Technology access equity: Clear disclosure and oversight when artificial intelligence tools materially affect clinical work or client information.
C. Digital confidentiality: Collecting and retaining only the personal information necessary for a defined legitimate purpose. / Technology access equity: Attention to unequal access to devices, bandwidth, private space, and digital skills.
D. Digital confidentiality: Protection of sensitive information across devices, networks, platforms, and communications. / Technology access equity: Attention to unequal access to devices, bandwidth, private space, and digital skills.

0863. Which applied comparison correctly identifies what belongs to Technology access equity versus Digital boundaries?

A. Technology access equity: Clarifying approved communication channels and response times with families. / Digital boundaries: Asking about device and privacy barriers before assuming a youth can participate remotely.
B. Technology access equity: Using approved secure systems and avoiding sensitive information on shared or unsecured channels. / Digital boundaries: Clarifying approved communication channels and response times with families.
C. Technology access equity: Asking about device and privacy barriers before assuming a youth can participate remotely. / Digital boundaries: Clarifying approved communication channels and response times with families.
D. Technology access equity: Asking about device and privacy barriers before assuming a youth can participate remotely. / Digital boundaries: Avoiding unnecessary data capture and retaining only what policy and law require.

0864. An interdisciplinary team reviews a student aged 17’s case at the student-support meeting. The play therapist recommends reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate. Which course concept best fits?

A. Therapeutic app evaluation
B. AI use transparency
C. Cybersecurity hygiene
D. Technology access equity

0865. A student confuses Digital boundaries with Data minimization. Which explanation most accurately separates them?

A. Digital boundaries: Professional limits governing online contact, social media, and technology-mediated relationships. / Data minimization: Collecting and retaining only the personal information necessary for a defined legitimate purpose.
B. Digital boundaries: Collecting and retaining only the personal information necessary for a defined legitimate purpose. / Data minimization: Professional limits governing online contact, social media, and technology-mediated relationships.
C. Digital boundaries: Professional limits governing online contact, social media, and technology-mediated relationships. / Data minimization: Assessment of an app’s evidence, privacy, accessibility, usability, and fit before recommending it.
D. Digital boundaries: An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans. / Data minimization: Collecting and retaining only the personal information necessary for a defined legitimate purpose.

0866. A program coordinator describes an intervention for a adolescent student in the learning-support meeting, centered on reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate. Which named idea is most relevant?

A. Technology contingency planning
B. Therapeutic app evaluation
C. Cybersecurity hygiene
D. Digital boundaries

0867. A play therapist is asked to evaluate a proposed service for a young person aged 13 in the telehealth session. The defining feature is reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care. Which concept fits?

A. Cybersecurity hygiene
B. Therapeutic app evaluation
C. Telehealth informed consent
D. Technology contingency planning

0868. In a professional consultation about a adolescent student, the mental-health professional describes this response in the youth advocacy program: using access controls and keeping approved systems updated. Which term is most apt?

A. Telehealth emergency planning
B. Cybersecurity hygiene
C. Data minimization
D. Technology access equity

0869. Which statement most accurately defines AI use transparency?

A. An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans.
B. Attention to unequal access to devices, bandwidth, private space, and digital skills.
C. Clear disclosure and oversight when artificial intelligence tools materially affect clinical work or client information.
D. Professional limits governing online contact, social media, and technology-mediated relationships.

0870. Which choice aligns each practice with the correct idea, Telehealth informed consent or Digital confidentiality?

A. Telehealth informed consent: Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care. / Digital confidentiality: Using approved secure systems and avoiding sensitive information on shared or unsecured channels.
B. Telehealth informed consent: Checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool. / Digital confidentiality: Using approved secure systems and avoiding sensitive information on shared or unsecured channels.
C. Telehealth informed consent: Using approved secure systems and avoiding sensitive information on shared or unsecured channels. / Digital confidentiality: Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care.
D. Telehealth informed consent: Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care. / Digital confidentiality: Agreeing on a backup contact method and next step if a session disconnects.

0871. A teacher and counselor is asked to justify a plan for a client in early adolescence in the student-support meeting. It calls for asking about device and privacy barriers before assuming a youth can participate remotely. Which concept provides the rationale?

A. Therapeutic app evaluation
B. Technology access equity
C. Cybersecurity hygiene
D. Data minimization

0872. In the student wellness team, the agreed focus for a research trainee working with a older adolescent client is avoiding unnecessary data capture and retaining only what policy and law require. Which concept names this focus?

A. Technology contingency planning
B. Technology access equity
C. AI use transparency
D. Data minimization

0873. A member of a clinical team and a client in late adolescence are discussing support in the family session. The selected practice is clarifying approved communication channels and response times with families. Which concept does this demonstrate?

A. Technology contingency planning
B. Cybersecurity hygiene
C. Technology access equity
D. Digital boundaries

0874. How should a practitioner distinguish the applications of Digital confidentiality and Digital boundaries?

A. Digital confidentiality: Clarifying approved communication channels and response times with families. / Digital boundaries: Using approved secure systems and avoiding sensitive information on shared or unsecured channels.
B. Digital confidentiality: Using approved secure systems and avoiding sensitive information on shared or unsecured channels. / Digital boundaries: Avoiding unnecessary data capture and retaining only what policy and law require.
C. Digital confidentiality: Using approved secure systems and avoiding sensitive information on shared or unsecured channels. / Digital boundaries: Clarifying approved communication channels and response times with families.
D. Digital confidentiality: Reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate. / Digital boundaries: Clarifying approved communication channels and response times with families.

0875. Choose the practice comparison that best separates Data minimization from Cybersecurity hygiene.

A. Data minimization: Using access controls and keeping approved systems updated. / Cybersecurity hygiene: Avoiding unnecessary data capture and retaining only what policy and law require.
B. Data minimization: Avoiding unnecessary data capture and retaining only what policy and law require. / Cybersecurity hygiene: Using access controls and keeping approved systems updated.
C. Data minimization: Using approved secure systems and avoiding sensitive information on shared or unsecured channels. / Cybersecurity hygiene: Using access controls and keeping approved systems updated.
D. Data minimization: Avoiding unnecessary data capture and retaining only what policy and law require. / Cybersecurity hygiene: Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care.

0876. Which applied comparison correctly identifies what belongs to Telehealth informed consent versus Data minimization?

A. Telehealth informed consent: Avoiding unnecessary data capture and retaining only what policy and law require. / Data minimization: Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care.
B. Telehealth informed consent: Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care. / Data minimization: Agreeing on a backup contact method and next step if a session disconnects.
C. Telehealth informed consent: Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care. / Data minimization: Avoiding unnecessary data capture and retaining only what policy and law require.
D. Telehealth informed consent: Asking about device and privacy barriers before assuming a youth can participate remotely. / Data minimization: Avoiding unnecessary data capture and retaining only what policy and law require.

0877. A caregiver working with a counselor presents a support plan for a child aged 11 at the community mental-health service. Its central feature is avoiding unnecessary data capture and retaining only what policy and law require. Which concept should be named?

A. Telehealth emergency planning
B. Technology access equity
C. Data minimization
D. Telehealth informed consent

0878. Choose the term that matches this definition: Professional limits governing online contact, social media, and technology-mediated relationships.

A. Digital confidentiality
B. Data minimization
C. Technology access equity
D. Digital boundaries

0879. While consulting in the caregiver consultation, a mental-health professional supports a young adolescent client by using this approach: using approved secure systems and avoiding sensitive information on shared or unsecured channels. Which concept is being applied?

A. Telehealth informed consent
B. Technology contingency planning
C. Digital boundaries
D. Digital confidentiality

0880. Which comparison would correct a trainee’s misunderstanding of Technology access equity versus Data minimization?

A. Technology access equity: A plan for continuing or safely pausing care when devices, connectivity, or platforms fail. / Data minimization: Collecting and retaining only the personal information necessary for a defined legitimate purpose.
B. Technology access equity: Attention to unequal access to devices, bandwidth, private space, and digital skills. / Data minimization: Collecting and retaining only the personal information necessary for a defined legitimate purpose.
C. Technology access equity: Attention to unequal access to devices, bandwidth, private space, and digital skills. / Data minimization: Advance procedures for responding to an urgent event during remote care, including location and contacts.
D. Technology access equity: Collecting and retaining only the personal information necessary for a defined legitimate purpose. / Data minimization: Attention to unequal access to devices, bandwidth, private space, and digital skills.

0881. Which option correctly matches each concept to its practice focus: Digital confidentiality and AI use transparency?

A. Digital confidentiality: Using approved secure systems and avoiding sensitive information on shared or unsecured channels. / AI use transparency: Checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool.
B. Digital confidentiality: Checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool. / AI use transparency: Using approved secure systems and avoiding sensitive information on shared or unsecured channels.
C. Digital confidentiality: Asking about device and privacy barriers before assuming a youth can participate remotely. / AI use transparency: Checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool.
D. Digital confidentiality: Using approved secure systems and avoiding sensitive information on shared or unsecured channels. / AI use transparency: Confirming current location and emergency contacts at the start of a remote session as appropriate.

0882. In the after-school program, a case coordinator is considering this approach for a young adolescent client: reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care. Which framework does it represent?

A. Technology contingency planning
B. Telehealth informed consent
C. Digital boundaries
D. Data minimization

0883. A supervisor asks how Technology contingency planning would appear in practice. Which choice should be selected?

A. Using approved secure systems and avoiding sensitive information on shared or unsecured channels.
B. Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care.
C. Reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate.
D. Agreeing on a backup contact method and next step if a session disconnects.

0884. Which option pairs the definitions of Digital boundaries and Cybersecurity hygiene correctly, in that order?

A. Digital boundaries: Professional limits governing online contact, social media, and technology-mediated relationships. / Cybersecurity hygiene: Routine practices such as strong authentication, updates, and secure handling that reduce digital risk.
B. Digital boundaries: An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans. / Cybersecurity hygiene: Routine practices such as strong authentication, updates, and secure handling that reduce digital risk.
C. Digital boundaries: Routine practices such as strong authentication, updates, and secure handling that reduce digital risk. / Cybersecurity hygiene: Professional limits governing online contact, social media, and technology-mediated relationships.
D. Digital boundaries: Professional limits governing online contact, social media, and technology-mediated relationships. / Cybersecurity hygiene: Protection of sensitive information across devices, networks, platforms, and communications.

0885. In a supervision quiz, how should Technology access equity be distinguished from Technology contingency planning?

A. Technology access equity: Routine practices such as strong authentication, updates, and secure handling that reduce digital risk. / Technology contingency planning: A plan for continuing or safely pausing care when devices, connectivity, or platforms fail.
B. Technology access equity: Attention to unequal access to devices, bandwidth, private space, and digital skills. / Technology contingency planning: A plan for continuing or safely pausing care when devices, connectivity, or platforms fail.
C. Technology access equity: Attention to unequal access to devices, bandwidth, private space, and digital skills. / Technology contingency planning: An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans.
D. Technology access equity: A plan for continuing or safely pausing care when devices, connectivity, or platforms fail. / Technology contingency planning: Attention to unequal access to devices, bandwidth, private space, and digital skills.

0886. How should a practitioner distinguish the applications of Telehealth informed consent and Technology access equity?

A. Telehealth informed consent: Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care. / Technology access equity: Asking about device and privacy barriers before assuming a youth can participate remotely.
B. Telehealth informed consent: Confirming current location and emergency contacts at the start of a remote session as appropriate. / Technology access equity: Asking about device and privacy barriers before assuming a youth can participate remotely.
C. Telehealth informed consent: Asking about device and privacy barriers before assuming a youth can participate remotely. / Technology access equity: Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care.
D. Telehealth informed consent: Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care. / Technology access equity: Checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool.

0887. A doctoral student reads the following description. Which concept does it define? Protection of sensitive information across devices, networks, platforms, and communications.

A. Cybersecurity hygiene
B. Technology access equity
C. Therapeutic app evaluation
D. Digital confidentiality

0888. A case conference reviews a therapist’s work with a child aged 11 in the learning-support meeting: confirming current location and emergency contacts at the start of a remote session as appropriate. Which principle is central?

A. Telehealth emergency planning
B. Technology access equity
C. AI use transparency
D. Technology contingency planning

0889. Choose the term that matches this definition: Collecting and retaining only the personal information necessary for a defined legitimate purpose.

A. Technology access equity
B. Digital confidentiality
C. Data minimization
D. Telehealth emergency planning

0890. Choose the definition pair that correctly explains Telehealth informed consent first and Technology access equity second.

A. Telehealth informed consent: Advance procedures for responding to an urgent event during remote care, including location and contacts. / Technology access equity: Attention to unequal access to devices, bandwidth, private space, and digital skills.
B. Telehealth informed consent: An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans. / Technology access equity: Clear disclosure and oversight when artificial intelligence tools materially affect clinical work or client information.
C. Telehealth informed consent: Attention to unequal access to devices, bandwidth, private space, and digital skills. / Technology access equity: An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans.
D. Telehealth informed consent: An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans. / Technology access equity: Attention to unequal access to devices, bandwidth, private space, and digital skills.

0891. Choose the definition pair that correctly explains Digital confidentiality first and Digital boundaries second.

A. Digital confidentiality: Protection of sensitive information across devices, networks, platforms, and communications. / Digital boundaries: Collecting and retaining only the personal information necessary for a defined legitimate purpose.
B. Digital confidentiality: Assessment of an app's evidence, privacy, accessibility, usability, and fit before recommending it. / Digital boundaries: Professional limits governing online contact, social media, and technology-mediated relationships.
C. Digital confidentiality: Professional limits governing online contact, social media, and technology-mediated relationships. / Digital boundaries: Protection of sensitive information across devices, networks, platforms, and communications.
D. Digital confidentiality: Protection of sensitive information across devices, networks, platforms, and communications. / Digital boundaries: Professional limits governing online contact, social media, and technology-mediated relationships.

0892. Which named construct is captured by this account? Professional limits governing online contact, social media, and technology-mediated relationships.

A. Data minimization
B. Technology access equity
C. AI use transparency
D. Digital boundaries

0893. While consulting in the student-support meeting, a member of a clinical team supports a child aged 14 by using this approach: reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care. Which concept is being applied?

A. Technology contingency planning
B. Digital boundaries
C. Digital confidentiality
D. Telehealth informed consent

0894. Which professional action most closely applies AI use transparency?

A. Checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool.
B. Agreeing on a backup contact method and next step if a session disconnects.
C. Confirming current location and emergency contacts at the start of a remote session as appropriate.
D. Reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate.

0895. Which statement shows a sound practice-level distinction between Data minimization and Technology contingency planning?

A. Data minimization: Avoiding unnecessary data capture and retaining only what policy and law require. / Technology contingency planning: Confirming current location and emergency contacts at the start of a remote session as appropriate.
B. Data minimization: Avoiding unnecessary data capture and retaining only what policy and law require. / Technology contingency planning: Agreeing on a backup contact method and next step if a session disconnects.
C. Data minimization: Using access controls and keeping approved systems updated. / Technology contingency planning: Agreeing on a backup contact method and next step if a session disconnects.
D. Data minimization: Agreeing on a backup contact method and next step if a session disconnects. / Technology contingency planning: Avoiding unnecessary data capture and retaining only what policy and law require.

0896. While supporting a child aged 6 in the school consultation, a caregiver working with a counselor adopts this practice: confirming current location and emergency contacts at the start of a remote session as appropriate. Which concept best explains the choice?

A. Technology contingency planning
B. Cybersecurity hygiene
C. Telehealth emergency planning
D. Digital confidentiality

0897. Choose the definition pair that correctly explains Digital confidentiality first and Data minimization second.

A. Digital confidentiality: Protection of sensitive information across devices, networks, platforms, and communications. / Data minimization: Collecting and retaining only the personal information necessary for a defined legitimate purpose.
B. Digital confidentiality: Professional limits governing online contact, social media, and technology-mediated relationships. / Data minimization: Collecting and retaining only the personal information necessary for a defined legitimate purpose.
C. Digital confidentiality: Protection of sensitive information across devices, networks, platforms, and communications. / Data minimization: A plan for continuing or safely pausing care when devices, connectivity, or platforms fail.
D. Digital confidentiality: Collecting and retaining only the personal information necessary for a defined legitimate purpose. / Data minimization: Protection of sensitive information across devices, networks, platforms, and communications.

0898. Which statement shows a sound practice-level distinction between Cybersecurity hygiene and Therapeutic app evaluation?

A. Cybersecurity hygiene: Using access controls and keeping approved systems updated. / Therapeutic app evaluation: Reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate.
B. Cybersecurity hygiene: Using approved secure systems and avoiding sensitive information on shared or unsecured channels. / Therapeutic app evaluation: Reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate.
C. Cybersecurity hygiene: Using access controls and keeping approved systems updated. / Therapeutic app evaluation: Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care.
D. Cybersecurity hygiene: Reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate. / Therapeutic app evaluation: Using access controls and keeping approved systems updated.

0899. Identify the most precise label for this idea: A plan for continuing or safely pausing care when devices, connectivity, or platforms fail.

A. Therapeutic app evaluation
B. Technology contingency planning
C. Cybersecurity hygiene
D. Digital confidentiality

0900. Which paired example correctly applies AI use transparency first and Technology contingency planning second?

A. AI use transparency: Checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool. / Technology contingency planning: Using access controls and keeping approved systems updated.
B. AI use transparency: Checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool. / Technology contingency planning: Agreeing on a backup contact method and next step if a session disconnects.
C. AI use transparency: Agreeing on a backup contact method and next step if a session disconnects. / Technology contingency planning: Checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool.
D. AI use transparency: Confirming current location and emergency contacts at the start of a remote session as appropriate. / Technology contingency planning: Agreeing on a backup contact method and next step if a session disconnects.

0901. Which option is the clearest practical expression of Digital confidentiality?

A. Asking about device and privacy barriers before assuming a youth can participate remotely.
B. Checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool.
C. Using approved secure systems and avoiding sensitive information on shared or unsecured channels.
D. Confirming current location and emergency contacts at the start of a remote session as appropriate.

0902. A case conference asks for a distinction between Telehealth informed consent and Data minimization. Which answer is sound?

A. Telehealth informed consent: Collecting and retaining only the personal information necessary for a defined legitimate purpose. / Data minimization: An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans.
B. Telehealth informed consent: An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans. / Data minimization: A plan for continuing or safely pausing care when devices, connectivity, or platforms fail.
C. Telehealth informed consent: Attention to unequal access to devices, bandwidth, private space, and digital skills. / Data minimization: Collecting and retaining only the personal information necessary for a defined legitimate purpose.
D. Telehealth informed consent: An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans. / Data minimization: Collecting and retaining only the personal information necessary for a defined legitimate purpose.

0903. Which statement accurately contrasts the course concepts Digital boundaries and Technology contingency planning?

A. Digital boundaries: Professional limits governing online contact, social media, and technology-mediated relationships. / Technology contingency planning: A plan for continuing or safely pausing care when devices, connectivity, or platforms fail.
B. Digital boundaries: A plan for continuing or safely pausing care when devices, connectivity, or platforms fail. / Technology contingency planning: Professional limits governing online contact, social media, and technology-mediated relationships.
C. Digital boundaries: Professional limits governing online contact, social media, and technology-mediated relationships. / Technology contingency planning: An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans.
D. Digital boundaries: Advance procedures for responding to an urgent event during remote care, including location and contacts. / Technology contingency planning: A plan for continuing or safely pausing care when devices, connectivity, or platforms fail.

0904. Which comparison correctly distinguishes Telehealth informed consent from AI use transparency?

A. Telehealth informed consent: Clear disclosure and oversight when artificial intelligence tools materially affect clinical work or client information. / AI use transparency: An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans.
B. Telehealth informed consent: An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans. / AI use transparency: Collecting and retaining only the personal information necessary for a defined legitimate purpose.
C. Telehealth informed consent: An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans. / AI use transparency: Clear disclosure and oversight when artificial intelligence tools materially affect clinical work or client information.
D. Telehealth informed consent: Advance procedures for responding to an urgent event during remote care, including location and contacts. / AI use transparency: Clear disclosure and oversight when artificial intelligence tools materially affect clinical work or client information.

0905. At the youth advocacy program, a play therapist meets with a child aged 14. The practice priority is: checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool. Which concept best captures that priority?

A. Telehealth emergency planning
B. Digital boundaries
C. Digital confidentiality
D. AI use transparency

0906. A trainee must choose a practice that exemplifies AI use transparency. Which action is the best fit?

A. Asking about device and privacy barriers before assuming a youth can participate remotely.
B. Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care.
C. Checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool.
D. Using approved secure systems and avoiding sensitive information on shared or unsecured channels.

0907. In a professional consultation about a client in late adolescence, the consultant describes this response in the community mental-health service: agreeing on a backup contact method and next step if a session disconnects. Which term is most apt?

A. Therapeutic app evaluation
B. Technology contingency planning
C. AI use transparency
D. Telehealth informed consent

0908. Which comparison would correct a trainee’s misunderstanding of Telehealth emergency planning versus Technology contingency planning?

A. Telehealth emergency planning: A plan for continuing or safely pausing care when devices, connectivity, or platforms fail. / Technology contingency planning: Advance procedures for responding to an urgent event during remote care, including location and contacts.
B. Telehealth emergency planning: Advance procedures for responding to an urgent event during remote care, including location and contacts. / Technology contingency planning: A plan for continuing or safely pausing care when devices, connectivity, or platforms fail.
C. Telehealth emergency planning: Collecting and retaining only the personal information necessary for a defined legitimate purpose. / Technology contingency planning: A plan for continuing or safely pausing care when devices, connectivity, or platforms fail.
D. Telehealth emergency planning: Advance procedures for responding to an urgent event during remote care, including location and contacts. / Technology contingency planning: Attention to unequal access to devices, bandwidth, private space, and digital skills.

0909. Which paired example correctly applies Data minimization first and Therapeutic app evaluation second?

A. Data minimization: Avoiding unnecessary data capture and retaining only what policy and law require. / Therapeutic app evaluation: Agreeing on a backup contact method and next step if a session disconnects.
B. Data minimization: Reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate. / Therapeutic app evaluation: Avoiding unnecessary data capture and retaining only what policy and law require.
C. Data minimization: Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care. / Therapeutic app evaluation: Reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate.
D. Data minimization: Avoiding unnecessary data capture and retaining only what policy and law require. / Therapeutic app evaluation: Reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate.

0910. Consider a young person receiving help in the outpatient clinic. The youth worker focuses on avoiding unnecessary data capture and retaining only what policy and law require. Which term best describes the guiding idea?

A. Data minimization
B. Digital boundaries
C. Therapeutic app evaluation
D. Technology access equity

0911. In the family session, a case coordinator is considering this approach for a adolescent student: avoiding unnecessary data capture and retaining only what policy and law require. Which framework does it represent?

A. Telehealth informed consent
B. Technology contingency planning
C. Technology access equity
D. Data minimization

0912. Consider a client in late adolescence receiving help in the school-based service. The group facilitator focuses on using approved secure systems and avoiding sensitive information on shared or unsecured channels. Which term best describes the guiding idea?

A. Digital confidentiality
B. Technology contingency planning
C. Cybersecurity hygiene
D. Therapeutic app evaluation

0913. What is the central meaning of Digital boundaries?

A. Professional limits governing online contact, social media, and technology-mediated relationships.
B. A plan for continuing or safely pausing care when devices, connectivity, or platforms fail.
C. Attention to unequal access to devices, bandwidth, private space, and digital skills.
D. Advance procedures for responding to an urgent event during remote care, including location and contacts.

0914. Which comparison would correct a trainee’s misunderstanding of AI use transparency versus Technology contingency planning?

A. AI use transparency: Advance procedures for responding to an urgent event during remote care, including location and contacts. / Technology contingency planning: A plan for continuing or safely pausing care when devices, connectivity, or platforms fail.
B. AI use transparency: A plan for continuing or safely pausing care when devices, connectivity, or platforms fail. / Technology contingency planning: Clear disclosure and oversight when artificial intelligence tools materially affect clinical work or client information.
C. AI use transparency: Clear disclosure and oversight when artificial intelligence tools materially affect clinical work or client information. / Technology contingency planning: A plan for continuing or safely pausing care when devices, connectivity, or platforms fail.
D. AI use transparency: Clear disclosure and oversight when artificial intelligence tools materially affect clinical work or client information. / Technology contingency planning: Routine practices such as strong authentication, updates, and secure handling that reduce digital risk.

0915. Which comparison correctly distinguishes Cybersecurity hygiene from Therapeutic app evaluation?

A. Cybersecurity hygiene: Protection of sensitive information across devices, networks, platforms, and communications. / Therapeutic app evaluation: Assessment of an app’s evidence, privacy, accessibility, usability, and fit before recommending it.
B. Cybersecurity hygiene: Routine practices such as strong authentication, updates, and secure handling that reduce digital risk. / Therapeutic app evaluation: Assessment of an app’s evidence, privacy, accessibility, usability, and fit before recommending it.
C. Cybersecurity hygiene: Assessment of an app’s evidence, privacy, accessibility, usability, and fit before recommending it. / Therapeutic app evaluation: Routine practices such as strong authentication, updates, and secure handling that reduce digital risk.
D. Cybersecurity hygiene: Routine practices such as strong authentication, updates, and secure handling that reduce digital risk. / Therapeutic app evaluation: An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans.

0916. A doctoral student reads the following description. Which concept does it define? Attention to unequal access to devices, bandwidth, private space, and digital skills.

A. Telehealth emergency planning
B. Technology access equity
C. Digital confidentiality
D. Telehealth informed consent

0917. A doctoral student reads the following description. Which concept does it define? Clear disclosure and oversight when artificial intelligence tools materially affect clinical work or client information.

A. Data minimization
B. Telehealth emergency planning
C. Therapeutic app evaluation
D. AI use transparency

0918. A support meeting for a adolescent student includes a clinical supervisor in the youth group. The practice under consideration is clarifying approved communication channels and response times with families. Which concept guides it?

A. Digital boundaries
B. Cybersecurity hygiene
C. Technology access equity
D. Therapeutic app evaluation

0919. In a case note about a child aged 14, a consultant working in the child guidance clinic records this priority: avoiding unnecessary data capture and retaining only what policy and law require. What principle is reflected?

A. Digital confidentiality
B. Technology contingency planning
C. Data minimization
D. Therapeutic app evaluation

0920. In a supervision quiz, how should Therapeutic app evaluation be distinguished from AI use transparency?

A. Therapeutic app evaluation: Professional limits governing online contact, social media, and technology-mediated relationships. / AI use transparency: Clear disclosure and oversight when artificial intelligence tools materially affect clinical work or client information.
B. Therapeutic app evaluation: Assessment of an app's evidence, privacy, accessibility, usability, and fit before recommending it. / AI use transparency: Advance procedures for responding to an urgent event during remote care, including location and contacts.
C. Therapeutic app evaluation: Assessment of an app's evidence, privacy, accessibility, usability, and fit before recommending it. / AI use transparency: Clear disclosure and oversight when artificial intelligence tools materially affect clinical work or client information.
D. Therapeutic app evaluation: Clear disclosure and oversight when artificial intelligence tools materially affect clinical work or client information. / AI use transparency: Assessment of an app's evidence, privacy, accessibility, usability, and fit before recommending it.

0921. A doctoral student reads the following description. Which concept does it define? An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans.

A. Data minimization
B. Technology access equity
C. Telehealth informed consent
D. Cybersecurity hygiene

0922. A program coordinator is asked what should shape a student aged 9's support in the outpatient clinic. The proposed focus is using access controls and keeping approved systems updated. Which principle does it represent?

A. Cybersecurity hygiene
B. Technology access equity
C. Telehealth emergency planning
D. Therapeutic app evaluation

0923. Which professional action most closely applies Digital boundaries?

A. Avoiding unnecessary data capture and retaining only what policy and law require.
B. Checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool.
C. Using access controls and keeping approved systems updated.
D. Clarifying approved communication channels and response times with families.

0924. Which professional action most closely applies Data minimization?

A. Reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate.
B. Avoiding unnecessary data capture and retaining only what policy and law require.
C. Agreeing on a backup contact method and next step if a session disconnects.
D. Checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool.

0925. Which choice aligns each practice with the correct idea, Digital confidentiality or Data minimization?

A. Digital confidentiality: Clarifying approved communication channels and response times with families. / Data minimization: Avoiding unnecessary data capture and retaining only what policy and law require.
B. Digital confidentiality: Using approved secure systems and avoiding sensitive information on shared or unsecured channels. / Data minimization: Agreeing on a backup contact method and next step if a session disconnects.
C. Digital confidentiality: Using approved secure systems and avoiding sensitive information on shared or unsecured channels. / Data minimization: Avoiding unnecessary data capture and retaining only what policy and law require.
D. Digital confidentiality: Avoiding unnecessary data capture and retaining only what policy and law require. / Data minimization: Using approved secure systems and avoiding sensitive information on shared or unsecured channels.

0926. A group facilitator is explaining a choice to a child aged 7 and caregiver in the student wellness team. The choice centers on clarifying approved communication channels and response times with families. Which idea is illustrated?

A. Technology contingency planning
B. Digital confidentiality
C. Digital boundaries
D. Cybersecurity hygiene

0927. A young adolescent client's service team meets in the after-school program. The case coordinator recommends a change involving reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care. Which idea best explains it?

A. Digital boundaries
B. Telehealth informed consent
C. Telehealth emergency planning
D. Technology contingency planning

0928. While supporting a client in late adolescence in the youth group, a family therapist adopts this practice: asking about device and privacy barriers before assuming a youth can participate remotely. Which concept best explains the choice?

A. Digital boundaries
B. Data minimization
C. Technology access equity
D. Telehealth informed consent

0929. Which pair of actions illustrates Digital confidentiality and Technology access equity, respectively?

A. Digital confidentiality: Asking about device and privacy barriers before assuming a youth can participate remotely. / Technology access equity: Using approved secure systems and avoiding sensitive information on shared or unsecured channels.
B. Digital confidentiality: Using approved secure systems and avoiding sensitive information on shared or unsecured channels. / Technology access equity: Asking about device and privacy barriers before assuming a youth can participate remotely.
C. Digital confidentiality: Avoiding unnecessary data capture and retaining only what policy and law require. / Technology access equity: Asking about device and privacy barriers before assuming a youth can participate remotely.
D. Digital confidentiality: Using approved secure systems and avoiding sensitive information on shared or unsecured channels. / Technology access equity: Checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool.

0930. A case conference asks for a distinction between Digital confidentiality and AI use transparency. Which answer is sound?

A. Digital confidentiality: Attention to unequal access to devices, bandwidth, private space, and digital skills. / AI use transparency: Clear disclosure and oversight when artificial intelligence tools materially affect clinical work or client information.
B. Digital confidentiality: Protection of sensitive information across devices, networks, platforms, and communications. / AI use transparency: Advance procedures for responding to an urgent event during remote care, including location and contacts.
C. Digital confidentiality: Clear disclosure and oversight when artificial intelligence tools materially affect clinical work or client information. / AI use transparency: Protection of sensitive information across devices, networks, platforms, and communications.
D. Digital confidentiality: Protection of sensitive information across devices, networks, platforms, and communications. / AI use transparency: Clear disclosure and oversight when artificial intelligence tools materially affect clinical work or client information.

0931. Choose the definition pair that correctly explains Telehealth informed consent first and Cybersecurity hygiene second.

A. Telehealth informed consent: An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans. / Cybersecurity hygiene: Routine practices such as strong authentication, updates, and secure handling that reduce digital risk.
B. Telehealth informed consent: An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans. / Cybersecurity hygiene: Advance procedures for responding to an urgent event during remote care, including location and contacts.
C. Telehealth informed consent: Routine practices such as strong authentication, updates, and secure handling that reduce digital risk. / Cybersecurity hygiene: An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans.
D. Telehealth informed consent: A plan for continuing or safely pausing care when devices, connectivity, or platforms fail. / Cybersecurity hygiene: Routine practices such as strong authentication, updates, and secure handling that reduce digital risk.

0932. A assessment clinician is supporting a client in early adolescence in the student wellness team. The key practice is using access controls and keeping approved systems updated. Which course concept is most relevant?

A. Telehealth informed consent
B. Cybersecurity hygiene
C. Therapeutic app evaluation
D. Telehealth emergency planning

0933. A trainee must distinguish how Telehealth informed consent and Digital boundaries guide practice. Which comparison is accurate?

A. Telehealth informed consent: Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care. / Digital boundaries: Using access controls and keeping approved systems updated.
B. Telehealth informed consent: Clarifying approved communication channels and response times with families. / Digital boundaries: Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care.
C. Telehealth informed consent: Using approved secure systems and avoiding sensitive information on shared or unsecured channels. / Digital boundaries: Clarifying approved communication channels and response times with families.
D. Telehealth informed consent: Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care. / Digital boundaries: Clarifying approved communication channels and response times with families.

0934. Which applied comparison correctly identifies what belongs to Digital confidentiality versus Technology access equity?

A. Digital confidentiality: Using approved secure systems and avoiding sensitive information on shared or unsecured channels. / Technology access equity: Asking about device and privacy barriers before assuming a youth can participate remotely.
B. Digital confidentiality: Avoiding unnecessary data capture and retaining only what policy and law require. / Technology access equity: Asking about device and privacy barriers before assuming a youth can participate remotely.
C. Digital confidentiality: Asking about device and privacy barriers before assuming a youth can participate remotely. / Technology access equity: Using approved secure systems and avoiding sensitive information on shared or unsecured channels.
D. Digital confidentiality: Using approved secure systems and avoiding sensitive information on shared or unsecured channels. / Technology access equity: Checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool.

0935. A team must select a support approach for a student aged 17 at the outpatient clinic. The school-based clinician recommends checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool. Which idea is most relevant?

A. AI use transparency
B. Therapeutic app evaluation
C. Digital confidentiality
D. Technology contingency planning

0936. How are Data minimization and AI use transparency most accurately differentiated in this curriculum?

A. Data minimization: An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans. / AI use transparency: Clear disclosure and oversight when artificial intelligence tools materially affect clinical work or client information.
B. Data minimization: Collecting and retaining only the personal information necessary for a defined legitimate purpose. / AI use transparency: Assessment of an app's evidence, privacy, accessibility, usability, and fit before recommending it.
C. Data minimization: Clear disclosure and oversight when artificial intelligence tools materially affect clinical work or client information. / AI use transparency: Collecting and retaining only the personal information necessary for a defined legitimate purpose.
D. Data minimization: Collecting and retaining only the personal information necessary for a defined legitimate purpose. / AI use transparency: Clear disclosure and oversight when artificial intelligence tools materially affect clinical work or client information.

0937. A planning meeting about a high-school student includes a behavior specialist. The proposed practice in the caregiver consultation is checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool. Which idea underlies it?

A. AI use transparency
B. Cybersecurity hygiene
C. Therapeutic app evaluation
D. Data minimization

0938. A assessment clinician prepares for a session in the child guidance clinic with a young person aged 18. The intended approach is reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care. Which concept is most relevant?

A. Telehealth informed consent
B. Cybersecurity hygiene
C. Data minimization
D. Telehealth emergency planning

0939. A trainee must distinguish how Technology access equity and Data minimization guide practice. Which comparison is accurate?

A. Technology access equity: Asking about device and privacy barriers before assuming a youth can participate remotely. / Data minimization: Confirming current location and emergency contacts at the start of a remote session as appropriate.
B. Technology access equity: Avoiding unnecessary data capture and retaining only what policy and law require. / Data minimization: Asking about device and privacy barriers before assuming a youth can participate remotely.
C. Technology access equity: Agreeing on a backup contact method and next step if a session disconnects. / Data minimization: Avoiding unnecessary data capture and retaining only what policy and law require.
D. Technology access equity: Asking about device and privacy barriers before assuming a youth can participate remotely. / Data minimization: Avoiding unnecessary data capture and retaining only what policy and law require.

0940. Which comparison would correct a trainee's misunderstanding of Telehealth informed consent versus Digital boundaries?

A. Telehealth informed consent: Professional limits governing online contact, social media, and technology-mediated relationships. / Digital boundaries: An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans.
B. Telehealth informed consent: An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans. / Digital boundaries: Routine practices such as strong authentication, updates, and secure handling that reduce digital risk.
C. Telehealth informed consent: An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans. / Digital boundaries: Professional limits governing online contact, social media, and technology-mediated relationships.
D. Telehealth informed consent: Protection of sensitive information across devices, networks, platforms, and communications. / Digital boundaries: Professional limits governing online contact, social media, and technology-mediated relationships.

0941. Identify the most precise label for this idea: Assessment of an app's evidence, privacy, accessibility, usability, and fit before recommending it.

A. Digital boundaries
B. Technology contingency planning
C. Therapeutic app evaluation
D. AI use transparency

0942. Choose the definition pair that correctly explains Digital boundaries first and Cybersecurity hygiene second.

A. Digital boundaries: Professional limits governing online contact, social media, and technology-mediated relationships. / Cybersecurity hygiene: Routine practices such as strong authentication, updates, and secure handling that reduce digital risk.
B. Digital boundaries: An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans. / Cybersecurity hygiene: Routine practices such as strong authentication, updates, and secure handling that reduce digital risk.
C. Digital boundaries: Professional limits governing online contact, social media, and technology-mediated relationships. / Cybersecurity hygiene: Protection of sensitive information across devices, networks, platforms, and communications.
D. Digital boundaries: Routine practices such as strong authentication, updates, and secure handling that reduce digital risk. / Cybersecurity hygiene: Professional limits governing online contact, social media, and technology-mediated relationships.

0943. Select the best explanation of Technology access equity.

A. Advance procedures for responding to an urgent event during remote care, including location and contacts.
B. Routine practices such as strong authentication, updates, and secure handling that reduce digital risk.
C. Attention to unequal access to devices, bandwidth, private space, and digital skills.
D. Collecting and retaining only the personal information necessary for a defined legitimate purpose.

0944. An interdisciplinary team reviews a school-age child's case at the school counseling office. The clinical supervisor recommends avoiding unnecessary data capture and retaining only what policy and law require. Which course concept best fits?

A. Digital boundaries
B. Telehealth informed consent
C. Cybersecurity hygiene
D. Data minimization

0945. Which paired example correctly applies Digital confidentiality first and AI use transparency second?

A. Digital confidentiality: Asking about device and privacy barriers before assuming a youth can participate remotely. / AI use transparency: Checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool.
B. Digital confidentiality: Checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool. / AI use transparency: Using approved secure systems and avoiding sensitive information on shared or unsecured channels.
C. Digital confidentiality: Using approved secure systems and avoiding sensitive information on shared or unsecured channels. / AI use transparency: Checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool.
D. Digital confidentiality: Using approved secure systems and avoiding sensitive information on shared or unsecured channels. / AI use transparency: Confirming current location and emergency contacts at the start of a remote session as appropriate.

0946. In a supervision quiz, how should Digital boundaries be distinguished from AI use transparency?

A. Digital boundaries: Professional limits governing online contact, social media, and technology-mediated relationships. / AI use transparency: Clear disclosure and oversight when artificial intelligence tools materially affect clinical work or client information.
B. Digital boundaries: Professional limits governing online contact, social media, and technology-mediated relationships. / AI use transparency: Advance procedures for responding to an urgent event during remote care, including location and contacts.
C. Digital boundaries: Clear disclosure and oversight when artificial intelligence tools materially affect clinical work or client information. / AI use transparency: Professional limits governing online contact, social media, and technology-mediated relationships.
D. Digital boundaries: Collecting and retaining only the personal information necessary for a defined legitimate purpose. / AI use transparency: Clear disclosure and oversight when artificial intelligence tools materially affect clinical work or client information.

0947. Which option pairs the definitions of Digital boundaries and Data minimization correctly, in that order?

A. Digital boundaries: Professional limits governing online contact, social media, and technology-mediated relationships. / Data minimization: Assessment of an app's evidence, privacy, accessibility, usability, and fit before recommending it.
B. Digital boundaries: Professional limits governing online contact, social media, and technology-mediated relationships. / Data minimization: Collecting and retaining only the personal information necessary for a defined legitimate purpose.
C. Digital boundaries: An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans. / Data minimization: Collecting and retaining only the personal information necessary for a defined legitimate purpose.
D. Digital boundaries: Collecting and retaining only the personal information necessary for a defined legitimate purpose. / Data minimization: Professional limits governing online contact, social media, and technology-mediated relationships.

0948. Which paired example correctly applies Telehealth informed consent first and Cybersecurity hygiene second?

A. Telehealth informed consent: Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care. / Cybersecurity hygiene: Confirming current location and emergency contacts at the start of a remote session as appropriate.
B. Telehealth informed consent: Using access controls and keeping approved systems updated. / Cybersecurity hygiene: Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care.
C. Telehealth informed consent: Agreeing on a backup contact method and next step if a session disconnects. / Cybersecurity hygiene: Using access controls and keeping approved systems updated.
D. Telehealth informed consent: Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care. / Cybersecurity hygiene: Using access controls and keeping approved systems updated.

0949. In the family resource center, a team asks how a group facilitator can support a adolescent student. One proposed action is checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool. Which idea does it represent?

A. Technology access equity
B. Telehealth emergency planning
C. Therapeutic app evaluation
D. AI use transparency

0950. Which pair of actions illustrates Data minimization and AI use transparency, respectively?

A. Data minimization: Avoiding unnecessary data capture and retaining only what policy and law require. / AI use transparency: Checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool.
B. Data minimization: Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care. / AI use transparency: Checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool.
C. Data minimization: Avoiding unnecessary data capture and retaining only what policy and law require. / AI use transparency: Reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate.
D. Data minimization: Checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool. / AI use transparency: Avoiding unnecessary data capture and retaining only what policy and law require.

0951. Which applied comparison correctly identifies what belongs to Telehealth informed consent versus Digital boundaries?

A. Telehealth informed consent: Using approved secure systems and avoiding sensitive information on shared or unsecured channels. / Digital boundaries: Clarifying approved communication channels and response times with families.
B. Telehealth informed consent: Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care. / Digital boundaries: Clarifying approved communication channels and response times with families.
C. Telehealth informed consent: Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care. / Digital boundaries: Using access controls and keeping approved systems updated.
D. Telehealth informed consent: Clarifying approved communication channels and response times with families. / Digital boundaries: Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care.

0952. Which comparison would correct a trainee's misunderstanding of Telehealth emergency planning versus AI use transparency?

A. Telehealth emergency planning: Assessment of an app's evidence, privacy, accessibility, usability, and fit before recommending it. / AI use transparency: Clear disclosure and oversight when artificial intelligence tools materially affect clinical work or client information.
B. Telehealth emergency planning: Clear disclosure and oversight when artificial intelligence tools materially affect clinical work or client information. / AI use transparency: Advance procedures for responding to an urgent event during remote care, including location and contacts.
C. Telehealth emergency planning: Advance procedures for responding to an urgent event during remote care, including location and contacts. / AI use transparency: Routine practices such as strong authentication, updates, and secure handling that reduce digital risk.
D. Telehealth emergency planning: Advance procedures for responding to an urgent event during remote care, including location and contacts. / AI use transparency: Clear disclosure and oversight when artificial intelligence tools materially affect clinical work or client information.

0953. A teacher and counselor is explaining a choice to a teenage client and caregiver in the after-school program. The choice centers on confirming current location and emergency contacts at the start of a remote session as appropriate. Which idea is illustrated?

A. Telehealth informed consent
B. Telehealth emergency planning
C. Data minimization
D. Therapeutic app evaluation

0954. In the community service agency, a school counselor describes the most appropriate support for a young person aged 16 as asking about device and privacy barriers before assuming a youth can participate remotely. Which framework is being applied?

A. Digital confidentiality
B. Telehealth informed consent
C. Technology access equity
D. Telehealth emergency planning

0955. Which statement accurately contrasts the course concepts Digital confidentiality and Technology access equity?

A. Digital confidentiality: Collecting and retaining only the personal information necessary for a defined legitimate purpose. / Technology access equity: Attention to unequal access to devices, bandwidth, private space, and digital skills.
B. Digital confidentiality: Protection of sensitive information across devices, networks, platforms, and communications. / Technology access equity: Clear disclosure and oversight when artificial intelligence tools materially affect clinical work or client information.
C. Digital confidentiality: Attention to unequal access to devices, bandwidth, private space, and digital skills. / Technology access equity: Protection of sensitive information across devices, networks, platforms, and communications.
D. Digital confidentiality: Protection of sensitive information across devices, networks, platforms, and communications. / Technology access equity: Attention to unequal access to devices, bandwidth, private space, and digital skills.

0956. How are Data minimization and Cybersecurity hygiene most accurately differentiated in this curriculum?

A. Data minimization: Routine practices such as strong authentication, updates, and secure handling that reduce digital risk. / Cybersecurity hygiene: Collecting and retaining only the personal information necessary for a defined legitimate purpose.
B. Data minimization: Collecting and retaining only the personal information necessary for a defined legitimate purpose. / Cybersecurity hygiene: Routine practices such as strong authentication, updates, and secure handling that reduce digital risk.
C. Data minimization: Collecting and retaining only the personal information necessary for a defined legitimate purpose. / Cybersecurity hygiene: An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans.
D. Data minimization: Protection of sensitive information across devices, networks, platforms, and communications. / Cybersecurity hygiene: Routine practices such as strong authentication, updates, and secure handling that reduce digital risk.

0957. During work in the parent meeting, a group facilitator identifies this need: reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate. Which idea should guide the response?

A. Telehealth emergency planning
B. Technology contingency planning
C. Digital boundaries
D. Therapeutic app evaluation

0958. Which choice aligns each practice with the correct idea, Digital boundaries or Data minimization?

A. Digital boundaries: Clarifying approved communication channels and response times with families. / Data minimization: Avoiding unnecessary data capture and retaining only what policy and law require.
B. Digital boundaries: Clarifying approved communication channels and response times with families. / Data minimization: Reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate.
C. Digital boundaries: Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care. / Data minimization: Avoiding unnecessary data capture and retaining only what policy and law require.
D. Digital boundaries: Avoiding unnecessary data capture and retaining only what policy and law require. / Data minimization: Clarifying approved communication channels and response times with families.

0959. For a student aged 15 in the community mental-health service, a counselor makes this practice the immediate priority: using access controls and keeping approved systems updated. Which concept fits best?

A. Cybersecurity hygiene
B. Data minimization
C. Technology access equity
D. Telehealth informed consent

0960. Which statement accurately contrasts the course concepts Telehealth informed consent and Digital confidentiality?

A. Telehealth informed consent: Clear disclosure and oversight when artificial intelligence tools materially affect clinical work or client information. / Digital confidentiality: Protection of sensitive information across devices, networks, platforms, and communications.
B. Telehealth informed consent: An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans. / Digital confidentiality: A plan for continuing or safely pausing care when devices, connectivity, or platforms fail.
C. Telehealth informed consent: Protection of sensitive information across devices, networks, platforms, and communications. / Digital confidentiality: An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans.
D. Telehealth informed consent: An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans. / Digital confidentiality: Protection of sensitive information across devices, networks, platforms, and communications.

0961. A mental-health professional prepares for a session in the classroom support meeting with a child of elementary-school age. The intended approach is checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool. Which concept is most relevant?

A. Data minimization
B. Cybersecurity hygiene
C. Telehealth emergency planning
D. AI use transparency

0962. A trainee must choose a practice that exemplifies Digital boundaries. Which action is the best fit?

A. Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care.
B. Clarifying approved communication channels and response times with families.
C. Confirming current location and emergency contacts at the start of a remote session as appropriate.
D. Avoiding unnecessary data capture and retaining only what policy and law require.

0963. A case conference reviews a community practitioner’s work with a preadolescent child in the school consultation: avoiding unnecessary data capture and retaining only what policy and law require. Which principle is central?

A. Data minimization
B. Therapeutic app evaluation
C. Technology access equity
D. Technology contingency planning

0964. During work in the learning-support meeting, a youth worker identifies this need: using access controls and keeping approved systems updated. Which idea should guide the response?

A. Cybersecurity hygiene
B. Data minimization
C. Technology contingency planning
D. Therapeutic app evaluation

0965. A service team discusses a young person aged 13 in the behavior-support review. Their proposed next step is asking about device and privacy barriers before assuming a youth can participate remotely. Which course concept supports it?

A. Data minimization
B. Cybersecurity hygiene
C. Technology access equity
D. AI use transparency

0966. A student confuses Technology access equity with Technology contingency planning. Which explanation most accurately separates them?

A. Technology access equity: Attention to unequal access to devices, bandwidth, private space, and digital skills. / Technology contingency planning: A plan for continuing or safely pausing care when devices, connectivity, or platforms fail.
B. Technology access equity: A plan for continuing or safely pausing care when devices, connectivity, or platforms fail. / Technology contingency planning: Attention to unequal access to devices, bandwidth, private space, and digital skills.
C. Technology access equity: Routine practices such as strong authentication, updates, and secure handling that reduce digital risk. / Technology contingency planning: A plan for continuing or safely pausing care when devices, connectivity, or platforms fail.
D. Technology access equity: Attention to unequal access to devices, bandwidth, private space, and digital skills. / Technology contingency planning: An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans.

0967. A consultant and a child aged 6 are discussing support in the school counseling office. The selected practice is asking about device and privacy barriers before assuming a youth can participate remotely. Which concept does this demonstrate?

A. AI use transparency
B. Telehealth informed consent
C. Therapeutic app evaluation
D. Technology access equity

0968. A member of a clinical team is supporting a student aged 15 in the school counseling office. The key practice is checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool. Which course concept is most relevant?

A. Data minimization
B. Technology contingency planning
C. AI use transparency
D. Telehealth emergency planning

0969. A case coordinator presents a support plan for a student aged 15 at the youth advocacy program. Its central feature is confirming current location and emergency contacts at the start of a remote session as appropriate. Which concept should be named?

A. Telehealth emergency planning
B. Digital boundaries
C. Technology contingency planning
D. Cybersecurity hygiene

0970. Which paired example correctly applies Telehealth informed consent first and Therapeutic app evaluation second?

A. Telehealth informed consent: Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care. / Therapeutic app evaluation: Reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate.
B. Telehealth informed consent: Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care. / Therapeutic app evaluation: Checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool.
C. Telehealth informed consent: Reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate. / Therapeutic app evaluation: Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care.
D. Telehealth informed consent: Confirming current location and emergency contacts at the start of a remote session as appropriate. / Therapeutic app evaluation: Reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate.

0971. How should a practitioner distinguish the applications of Telehealth emergency planning and Cybersecurity hygiene?

A. Telehealth emergency planning: Checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool. / Cybersecurity hygiene: Using access controls and keeping approved systems updated.
B. Telehealth emergency planning: Using access controls and keeping approved systems updated. / Cybersecurity hygiene: Confirming current location and emergency contacts at the start of a remote session as appropriate.
C. Telehealth emergency planning: Confirming current location and emergency contacts at the start of a remote session as appropriate. / Cybersecurity hygiene: Using access controls and keeping approved systems updated.
D. Telehealth emergency planning: Confirming current location and emergency contacts at the start of a remote session as appropriate. / Cybersecurity hygiene: Clarifying approved communication channels and response times with families.

0972. In the caregiver consultation, a school-based clinician is considering this approach for a child aged 6: reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate. Which framework does it represent?

A. Digital boundaries
B. Technology contingency planning
C. Therapeutic app evaluation
D. Telehealth informed consent

0973. A planning meeting about a preadolescent child includes a play therapist. The proposed practice in the family resource center is confirming current location and emergency contacts at the start of a remote session as appropriate. Which idea underlies it?

A. Digital boundaries
B. Telehealth emergency planning
C. AI use transparency
D. Telehealth informed consent

0974. In a supervision review, a school-based clinician describes work with a client in early adolescence in the parent meeting: avoiding unnecessary data capture and retaining only what policy and law require. What concept is illustrated?

A. Technology access equity
B. Data minimization
C. Cybersecurity hygiene
D. Technology contingency planning

0975. Which description belongs with the term Digital confidentiality?

A. An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans.
B. Routine practices such as strong authentication, updates, and secure handling that reduce digital risk.
C. Protection of sensitive information across devices, networks, platforms, and communications.
D. Clear disclosure and oversight when artificial intelligence tools materially affect clinical work or client information.

0976. At the after-school program, a program coordinator reviews whether a plan for a school-age child is appropriate. The relevant practice is checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool. Which concept is tested?

A. Telehealth informed consent
B. Cybersecurity hygiene
C. AI use transparency
D. Data minimization

0977. Choose the practice comparison that best separates Technology access equity from Cybersecurity hygiene.

A. Technology access equity: Asking about device and privacy barriers before assuming a youth can participate remotely. / Cybersecurity hygiene: Clarifying approved communication channels and response times with families.
B. Technology access equity: Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care. / Cybersecurity hygiene: Using access controls and keeping approved systems updated.
C. Technology access equity: Using access controls and keeping approved systems updated. / Cybersecurity hygiene: Asking about device and privacy barriers before assuming a youth can participate remotely.
D. Technology access equity: Asking about device and privacy barriers before assuming a youth can participate remotely. / Cybersecurity hygiene: Using access controls and keeping approved systems updated.

0978. A trainee must distinguish how Telehealth informed consent and Cybersecurity hygiene guide practice. Which comparison is accurate?

A. Telehealth informed consent: Agreeing on a backup contact method and next step if a session disconnects. / Cybersecurity hygiene: Using access controls and keeping approved systems updated.
B. Telehealth informed consent: Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care. / Cybersecurity hygiene: Confirming current location and emergency contacts at the start of a remote session as appropriate.
C. Telehealth informed consent: Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care. / Cybersecurity hygiene: Using access controls and keeping approved systems updated.
D. Telehealth informed consent: Using access controls and keeping approved systems updated. / Cybersecurity hygiene: Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care.

0979. A student confuses Cybersecurity hygiene with Technology contingency planning. Which explanation most accurately separates them?

A. Cybersecurity hygiene: Routine practices such as strong authentication, updates, and secure handling that reduce digital risk. / Technology contingency planning: A plan for continuing or safely pausing care when devices, connectivity, or platforms fail.
B. Cybersecurity hygiene: Attention to unequal access to devices, bandwidth, private space, and digital skills. / Technology contingency planning: A plan for continuing or safely pausing care when devices, connectivity, or platforms fail.
C. Cybersecurity hygiene: Routine practices such as strong authentication, updates, and secure handling that reduce digital risk. / Technology contingency planning: Protection of sensitive information across devices, networks, platforms, and communications.
D. Cybersecurity hygiene: A plan for continuing or safely pausing care when devices, connectivity, or platforms fail. / Technology contingency planning: Routine practices such as strong authentication, updates, and secure handling that reduce digital risk.

0980. When reviewing a child aged 8's plan in the community youth program, the caregiver working with a counselor notes that the next step is using access controls and keeping approved systems updated. Which concept guides this step?

A. Cybersecurity hygiene
B. AI use transparency
C. Digital confidentiality
D. Technology access equity

0981. Choose the practice comparison that best separates Data minimization from Technology contingency planning.

A. Data minimization: Using access controls and keeping approved systems updated. / Technology contingency planning: Agreeing on a backup contact method and next step if a session disconnects.
B. Data minimization: Agreeing on a backup contact method and next step if a session disconnects. / Technology contingency planning: Avoiding unnecessary data capture and retaining only what policy and law require.
C. Data minimization: Avoiding unnecessary data capture and retaining only what policy and law require. / Technology contingency planning: Agreeing on a backup contact method and next step if a session disconnects.
D. Data minimization: Avoiding unnecessary data capture and retaining only what policy and law require. / Technology contingency planning: Confirming current location and emergency contacts at the start of a remote session as appropriate.

0982. In the classroom support meeting, the agreed focus for a service navigator working with a client in early adolescence is confirming current location and emergency contacts at the start of a remote session as appropriate. Which concept names this focus?

A. AI use transparency
B. Telehealth informed consent
C. Telehealth emergency planning
D. Therapeutic app evaluation

0983. Which option correctly matches each concept to its practice focus: Digital confidentiality and Therapeutic app evaluation?

A. Digital confidentiality: Confirming current location and emergency contacts at the start of a remote session as appropriate. / Therapeutic app evaluation: Reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate.
B. Digital confidentiality: Using approved secure systems and avoiding sensitive information on shared or unsecured channels. / Therapeutic app evaluation: Reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate.
C. Digital confidentiality: Using approved secure systems and avoiding sensitive information on shared or unsecured channels. / Therapeutic app evaluation: Agreeing on a backup contact method and next step if a session disconnects.
D. Digital confidentiality: Reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate. / Therapeutic app evaluation: Using approved secure systems and avoiding sensitive information on shared or unsecured channels.

0984. Which comparison would correct a trainee's misunderstanding of Digital boundaries versus Therapeutic app evaluation?

A. Digital boundaries: Professional limits governing online contact, social media, and technology-mediated relationships. / Therapeutic app evaluation: Assessment of an app's evidence, privacy, accessibility, usability, and fit before recommending it.
B. Digital boundaries: Assessment of an app's evidence, privacy, accessibility, usability, and fit before recommending it. / Therapeutic app evaluation: Professional limits governing online contact, social media, and technology-mediated relationships.
C. Digital boundaries: Protection of sensitive information across devices, networks, platforms, and communications. / Therapeutic app evaluation: Assessment of an app's evidence, privacy, accessibility, usability, and fit before recommending it.
D. Digital boundaries: Professional limits governing online contact, social media, and technology-mediated relationships. / Therapeutic app evaluation: Clear disclosure and oversight when artificial intelligence tools materially affect clinical work or client information.

0985. A assessment clinician is supporting a young person aged 16 in the school consultation. The key practice is using approved secure systems and avoiding sensitive information on shared or unsecured channels. Which course concept is most relevant?

A. Telehealth emergency planning
B. Cybersecurity hygiene
C. Digital confidentiality
D. Telehealth informed consent

0986. A supervisor asks for an applied contrast between Technology access equity and Technology contingency planning. Which option fits?

A. Technology access equity: Agreeing on a backup contact method and next step if a session disconnects. / Technology contingency planning: Asking about device and privacy barriers before assuming a youth can participate remotely.
B. Technology access equity: Using access controls and keeping approved systems updated. / Technology contingency planning: Agreeing on a backup contact method and next step if a session disconnects.
C. Technology access equity: Asking about device and privacy barriers before assuming a youth can participate remotely. / Technology contingency planning: Agreeing on a backup contact method and next step if a session disconnects.
D. Technology access equity: Asking about device and privacy barriers before assuming a youth can participate remotely. / Technology contingency planning: Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care.

0987. A supervisor asks for an applied contrast between Cybersecurity hygiene and Therapeutic app evaluation. Which option fits?

A. Cybersecurity hygiene: Using access controls and keeping approved systems updated. / Therapeutic app evaluation: Reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate.
B. Cybersecurity hygiene: Using access controls and keeping approved systems updated. / Therapeutic app evaluation: Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care.
C. Cybersecurity hygiene: Reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate. / Therapeutic app evaluation: Using access controls and keeping approved systems updated.
D. Cybersecurity hygiene: Using approved secure systems and avoiding sensitive information on shared or unsecured channels. / Therapeutic app evaluation: Reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate.

0988. For a client in early adolescence seen in the classroom support meeting, the service navigator recommends a plan built around confirming current location and emergency contacts at the start of a remote session as appropriate. Which concept is reflected?

A. AI use transparency
B. Telehealth emergency planning
C. Technology access equity
D. Digital confidentiality

0989. Which statement shows a sound practice-level distinction between Data minimization and AI use transparency?

A. Data minimization: Avoiding unnecessary data capture and retaining only what policy and law require. / AI use transparency: Reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate.
B. Data minimization: Reviewing privacy, technology limitations, emergency procedures, and alternatives before remote care. / AI use transparency: Checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool.
C. Data minimization: Avoiding unnecessary data capture and retaining only what policy and law require. / AI use transparency: Checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool.
D. Data minimization: Checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool. / AI use transparency: Avoiding unnecessary data capture and retaining only what policy and law require.

0990. A community practitioner describes an intervention for a young person aged 10 in the child guidance clinic, centered on clarifying approved communication channels and response times with families. Which named idea is most relevant?

A. Digital boundaries
B. Data minimization
C. Therapeutic app evaluation
D. Telehealth informed consent

0991. Which statement accurately contrasts the course concepts Digital confidentiality and Therapeutic app evaluation?

A. Digital confidentiality: Protection of sensitive information across devices, networks, platforms, and communications. / Therapeutic app evaluation: A plan for continuing or safely pausing care when devices, connectivity, or platforms fail.
B. Digital confidentiality: Protection of sensitive information across devices, networks, platforms, and communications. / Therapeutic app evaluation: Assessment of an app’s evidence, privacy, accessibility, usability, and fit before recommending it.
C. Digital confidentiality: Advance procedures for responding to an urgent event during remote care, including location and contacts. / Therapeutic app evaluation: Assessment of an app’s evidence, privacy, accessibility, usability, and fit before recommending it.
D. Digital confidentiality: Assessment of an app’s evidence, privacy, accessibility, usability, and fit before recommending it. / Therapeutic app evaluation: Protection of sensitive information across devices, networks, platforms, and communications.

0992. A mental-health professional is supporting a older adolescent client in the family session. The key practice is agreeing on a backup contact method and next step if a session disconnects. Which course concept is most relevant?

A. Telehealth emergency planning
B. Technology contingency planning
C. Data minimization
D. Technology access equity

0993. How are Telehealth informed consent and Technology contingency planning most accurately differentiated in this curriculum?

A. Telehealth informed consent: Routine practices such as strong authentication, updates, and secure handling that reduce digital risk. / Technology contingency planning: A plan for continuing or safely pausing care when devices, connectivity, or platforms fail.
B. Telehealth informed consent: An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans. / Technology contingency planning: A plan for continuing or safely pausing care when devices, connectivity, or platforms fail.
C. Telehealth informed consent: An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans. / Technology contingency planning: Collecting and retaining only the personal information necessary for a defined legitimate purpose.
D. Telehealth informed consent: A plan for continuing or safely pausing care when devices, connectivity, or platforms fail. / Technology contingency planning: An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans.

0994. In a supervision quiz, how should Therapeutic app evaluation be distinguished from Technology contingency planning?

A. Therapeutic app evaluation: Assessment of an app’s evidence, privacy, accessibility, usability, and fit before recommending it. / Technology contingency planning: A plan for continuing or safely pausing care when devices, connectivity, or platforms fail.
B. Therapeutic app evaluation: A plan for continuing or safely pausing care when devices, connectivity, or platforms fail. / Technology contingency planning: Assessment of an app’s evidence, privacy, accessibility, usability, and fit before recommending it.
C. Therapeutic app evaluation: Assessment of an app’s evidence, privacy, accessibility, usability, and fit before recommending it. / Technology contingency planning: Collecting and retaining only the personal information necessary for a defined legitimate purpose.
D. Therapeutic app evaluation: Routine practices such as strong authentication, updates, and secure handling that reduce digital risk. / Technology contingency planning: A plan for continuing or safely pausing care when devices, connectivity, or platforms fail.

0995. In the child guidance clinic, a school counselor describes the most appropriate support for a client in early adolescence as checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool. Which framework is being applied?

A. Cybersecurity hygiene
B. Data minimization
C. Technology contingency planning
D. AI use transparency

0996. What is the central meaning of Telehealth informed consent?

A. Assessment of an app's evidence, privacy, accessibility, usability, and fit before recommending it.
B. Professional limits governing online contact, social media, and technology-mediated relationships.
C. An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans.
D. Attention to unequal access to devices, bandwidth, private space, and digital skills.

0997. Which statement most accurately defines Cybersecurity hygiene?

A. Attention to unequal access to devices, bandwidth, private space, and digital skills.
B. Clear disclosure and oversight when artificial intelligence tools materially affect clinical work or client information.
C. Routine practices such as strong authentication, updates, and secure handling that reduce digital risk.
D. An explanation and voluntary agreement addressing the telehealth format, benefits, risks, privacy, and contingency plans.

0998. A supervised trainee prepares for a session in the after-school program with a preadolescent child. The intended approach is agreeing on a backup contact method and next step if a session disconnects. Which concept is most relevant?

A. Technology access equity
B. Technology contingency planning
C. Telehealth emergency planning
D. Data minimization

0999. In a supervision quiz, how should Cybersecurity hygiene be distinguished from Technology contingency planning?

A. Cybersecurity hygiene: Routine practices such as strong authentication, updates, and secure handling that reduce digital risk. / Technology contingency planning: A plan for continuing or safely pausing care when devices, connectivity, or platforms fail.
B. Cybersecurity hygiene: Attention to unequal access to devices, bandwidth, private space, and digital skills. / Technology contingency planning: A plan for continuing or safely pausing care when devices, connectivity, or platforms fail.
C. Cybersecurity hygiene: Routine practices such as strong authentication, updates, and secure handling that reduce digital risk. / Technology contingency planning: Protection of sensitive information across devices, networks, platforms, and communications.
D. Cybersecurity hygiene: A plan for continuing or safely pausing care when devices, connectivity, or platforms fail. / Technology contingency planning: Routine practices such as strong authentication, updates, and secure handling that reduce digital risk.

1000. Which applied comparison correctly identifies what belongs to Therapeutic app evaluation versus AI use transparency?

A. Therapeutic app evaluation: Checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool. / AI use transparency: Reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate.
B. Therapeutic app evaluation: Reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate. / AI use transparency: Confirming current location and emergency contacts at the start of a remote session as appropriate.
C. Therapeutic app evaluation: Reviewing privacy terms and evidence rather than assuming a popular app is clinically appropriate. / AI use transparency: Checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool.
D. Therapeutic app evaluation: Clarifying approved communication channels and response times with families. / AI use transparency: Checking policy, privacy, and professional guidance and informing clients as appropriate before using an AI-enabled tool.

CAC.927 | Collaborative Practices with Schools and Communities

QUESTION BANK | 1,000 ITEMS | ANSWERS AT THE END

0001. In school-community collaboration, a case conference asks for a distinction between Interprofessional collaboration and Consent-based information sharing. Which answer is sound?

A. Interprofessional collaboration: Coordinated work among professionals who contribute distinct expertise toward shared client goals. / Consent-based information sharing: Explicit agreement about each partner's responsibilities, authority, and limits.
B. Interprofessional collaboration: Identification of local strengths, organizations, relationships, and resources relevant to community goals. / Consent-based information sharing: Exchange of relevant information under valid permission and applicable privacy requirements.
C. Interprofessional collaboration: Exchange of relevant information under valid permission and applicable privacy requirements. / Consent-based information sharing: Coordinated work among professionals who contribute distinct expertise toward shared client goals.
D. Interprofessional collaboration: Coordinated work among professionals who contribute distinct expertise toward shared client goals. / Consent-based information sharing: Exchange of relevant information under valid permission and applicable privacy requirements.

0002. A case conference reviews a research trainee's work with a young person aged 10 in the family resource center: reviewing attendance or wellbeing data together and adjusting supports with permission. Which principle is central?

A. Community-based participatory practice
B. Interprofessional collaboration
C. Role clarification
D. Outcome feedback loop

0003. In the youth group, the agreed focus for a community practitioner working with a young person aged 18 is documenting who will take each agreed next step and when progress will be reviewed. Which concept names this focus?

A. Shared care plan
B. Interprofessional collaboration
C. Warm referral
D. Consent-based information sharing

0004. Which pair of actions illustrates Warm referral and Community-based participatory practice, respectively?

A. Warm referral: Clarifying who contacts caregivers and who monitors a school support. / Community-based participatory practice: Involving youth and community partners in decisions throughout a project, not only at launch.
B. Warm referral: Helping the family make contact with a community service and checking whether connection occurred. / Community-based participatory practice: Involving youth and community partners in decisions throughout a project, not only at launch.
C. Warm referral: Involving youth and community partners in decisions throughout a project, not only at launch. / Community-based participatory practice: Helping the family make contact with a community service and checking whether connection occurred.
D. Warm referral: Helping the family make contact with a community service and checking whether connection occurred. / Community-based participatory practice: Agreeing on roles and communication with school and community partners, subject to permission.

0005. A mental-health professional is supporting a student aged 12 in the after-school program. The key practice is confirming authorization and sharing only information needed for coordinated support. Which course concept is most relevant?

A. Interprofessional collaboration
B. Consent-based information sharing
C. Community-based participatory practice
D. Outcome feedback loop

0006. In a professional consultation about a young person aged 13, the supervised trainee describes this response in the outpatient clinic: involving youth and community partners in decisions throughout a project, not only at launch. Which term is most apt?

A. Interprofessional collaboration
B. Boundary spanning
C. Warm referral
D. Community-based participatory practice

0007. Which option is the clearest practical expression of Collaborative problem solving?

A. Clarifying who contacts caregivers and who monitors a school support.
B. Agreeing on a measurable concern, trying one support, and reconvening to evaluate it.
C. Helping the family make contact with a community service and checking whether connection occurred.
D. Involving youth and community partners in decisions throughout a project, not only at launch.

0008. In school-community collaboration, which pair of actions illustrates Interprofessional collaboration and Shared care plan, respectively?

A. Interprofessional collaboration: Agreeing on roles and communication with school and community partners, subject to permission. / Shared care plan: Confirming authorization and sharing only information needed for coordinated support.
B. Interprofessional collaboration: Agreeing on roles and communication with school and community partners, subject to permission. / Shared care plan: Documenting who will take each agreed next step and when progress will be reviewed.
C. Interprofessional collaboration: Documenting who will take each agreed next step and when progress will be reviewed. / Shared care plan: Agreeing on roles and communication with school and community partners, subject to permission.
D. Interprofessional collaboration: Clarifying who contacts caregivers and who monitors a school support. / Shared care plan: Documenting who will take each agreed next step and when progress will be reviewed.

0009. How are Community asset mapping and Consent-based information sharing most accurately differentiated in this curriculum?

A. Community asset mapping: Identification of local strengths, organizations, relationships, and resources relevant to community goals. / Consent-based information sharing: A partnership in which community members share influence in defining questions, actions, and interpretation.
B. Community asset mapping: Identification of local strengths, organizations, relationships, and resources relevant to community goals. / Consent-based information sharing: Exchange of relevant information under valid permission and applicable privacy requirements.
C. Community asset mapping: A coordinated, mutually understood set of goals, responsibilities, and follow-up steps across helpers. / Consent-based information sharing: Exchange of relevant information under valid permission and applicable privacy requirements.
D. Community asset mapping: Exchange of relevant information under valid permission and applicable privacy requirements. / Consent-based information sharing: Identification of local strengths, organizations, relationships, and resources relevant to community goals.

0010. In school-community collaboration, choose the definition pair that correctly explains Interprofessional collaboration first and Community asset mapping second.

A. Interprofessional collaboration: A coordinated, mutually understood set of goals, responsibilities, and follow-up steps across helpers. / Community asset mapping: Identification of local strengths, organizations, relationships, and resources relevant to community goals.
B. Interprofessional collaboration: Coordinated work among professionals who contribute distinct expertise toward shared client goals. / Community asset mapping: Identification of local strengths, organizations, relationships, and resources relevant to community goals.
C. Interprofessional collaboration: Identification of local strengths, organizations, relationships, and resources relevant to community goals. / Community asset mapping: Coordinated work among professionals who contribute distinct expertise toward shared client goals.
D. Interprofessional collaboration: Coordinated work among professionals who contribute distinct expertise toward shared client goals. / Community asset mapping: Connecting organizations or professional groups while respecting each role's authority and accountability.

0011. A service team discusses a client in late adolescence in the youth advocacy program. Their proposed next step is agreeing on a measurable concern, trying one support, and reconvening to evaluate it. Which course concept supports it?

A. Interprofessional collaboration
B. Collaborative problem solving
C. Shared care plan
D. Community asset mapping

0012. A case discussion concerns a young person aged 10 and a parent educator in the youth advocacy program. The practitioner is considering involving youth and community partners in decisions throughout a project, not only at launch. Which principle is involved?

A. Community-based participatory practice
B. Outcome feedback loop
C. Boundary spanning
D. Warm referral

0013. Which option correctly matches each concept to its practice focus: Warm referral and Outcome feedback loop?

A. Warm referral: Helping the family make contact with a community service and checking whether connection occurred. / Outcome feedback loop: Reviewing attendance or wellbeing data together and adjusting supports with permission.
B. Warm referral: Reviewing attendance or wellbeing data together and adjusting supports with permission. / Outcome feedback loop: Helping the family make contact with a community service and checking whether connection occurred.
C. Warm referral: Confirming authorization and sharing only information needed for coordinated support. / Outcome feedback loop: Reviewing attendance or wellbeing data together and adjusting supports with permission.
D. Warm referral: Helping the family make contact with a community service and checking whether connection occurred. / Outcome feedback loop: Translating needs across systems without taking over another partner's responsibilities.

0014. Choose the response that best puts Boundary spanning into practice.

A. Reviewing attendance or wellbeing data together and adjusting supports with permission.
B. Mapping existing youth programs and trusted community networks before planning a new service.
C. Translating needs across systems without taking over another partner's responsibilities.
D. Documenting who will take each agreed next step and when progress will be reviewed.

0015. In school-community collaboration, choose the practice comparison that best separates Interprofessional collaboration from Warm referral.

A. Interprofessional collaboration: Involving youth and community partners in decisions throughout a project, not only at launch. / Warm referral: Helping the family make contact with a community service and checking whether connection occurred.
B. Interprofessional collaboration: Helping the family make contact with a community service and checking whether connection occurred. / Warm referral: Agreeing on roles and communication with school and community partners, subject to permission.
C. Interprofessional collaboration: Agreeing on roles and communication with school and community partners, subject to permission. / Warm referral: Helping the family make contact with a community service and checking whether connection occurred.
D. Interprofessional collaboration: Agreeing on roles and communication with school and community partners, subject to permission. / Warm referral: Mapping existing youth programs and trusted community networks before planning a new service.

0016. Which applied comparison correctly identifies what belongs to Warm referral versus Boundary spanning?

A. Warm referral: Translating needs across systems without taking over another partner's responsibilities. / Boundary spanning: Helping the family make contact with a community service and checking whether connection occurred.
B. Warm referral: Helping the family make contact with a community service and checking whether connection occurred. / Boundary spanning: Agreeing on roles and communication with school and community partners, subject to permission.
C. Warm referral: Helping the family make contact with a community service and checking whether connection occurred. / Boundary spanning: Translating needs across systems without taking over another partner's responsibilities.
D. Warm referral: Agreeing on a measurable concern, trying one support, and reconvening to evaluate it. / Boundary spanning: Translating needs across systems without taking over another partner's responsibilities.

0017. Which named construct is captured by this account? Explicit agreement about each partner's responsibilities, authority, and limits.

A. Community-based participatory practice
B. Shared care plan
C. Consent-based information sharing
D. Role clarification

0018. A case coordinator presents a support plan for a student aged 15 at the youth advocacy program. Its central feature is mapping existing youth programs and trusted community networks before planning a new service. Which concept should be named?

A. Collaborative problem solving
B. Consent-based information sharing
C. Community-based participatory practice
D. Community asset mapping

0019. How should a practitioner distinguish the applications of Shared care plan and Community asset mapping?

A. Shared care plan: Documenting who will take each agreed next step and when progress will be reviewed. / Community asset mapping: Mapping existing youth programs and trusted community networks before planning a new service.
B. Shared care plan: Documenting who will take each agreed next step and when progress will be reviewed. / Community asset mapping: Clarifying who contacts caregivers and who monitors a school support.
C. Shared care plan: Confirming authorization and sharing only information needed for coordinated support. / Community asset mapping: Mapping existing youth programs and trusted community networks before planning a new service.
D. Shared care plan: Mapping existing youth programs and trusted community networks before planning a new service. / Community asset mapping: Documenting who will take each agreed next step and when progress will be reviewed.

0020. In a supervision quiz, how should Shared care plan be distinguished from Role clarification?

A. Shared care plan: A coordinated, mutually understood set of goals, responsibilities, and follow-up steps across helpers. / Role clarification: Explicit agreement about each partner's responsibilities, authority, and limits.
B. Shared care plan: Connecting organizations or professional groups while respecting each role's authority and accountability. / Role clarification: Explicit agreement about each partner's responsibilities, authority, and limits.
C. Shared care plan: A coordinated, mutually understood set of goals, responsibilities, and follow-up steps across helpers. / Role clarification: Identification of local strengths, organizations, relationships, and resources relevant to community goals.
D. Shared care plan: Explicit agreement about each partner's responsibilities, authority, and limits. / Role clarification: A coordinated, mutually understood set of goals, responsibilities, and follow-up steps across helpers.

0021. Consider a young person aged 16 receiving help in the community service agency. The school counselor focuses on clarifying who contacts caregivers and who monitors a school support. Which term best describes the guiding idea?

A. Warm referral
B. Collaborative problem solving
C. Role clarification
D. Boundary spanning

0022. In a case note about a young person aged 10, a supervised trainee working in the learning-support meeting records this priority: translating needs across systems without taking over another partner's responsibilities. What principle is reflected?

A. Warm referral
B. Boundary spanning
C. Role clarification
D. Interprofessional collaboration

0023. In school-community collaboration, a supervisor asks for an applied contrast between Interprofessional collaboration and Shared care plan. Which option fits?

A. Interprofessional collaboration: Documenting who will take each agreed next step and when progress will be reviewed. / Shared care plan: Agreeing on roles and communication with school and community partners, subject to permission.
B. Interprofessional collaboration: Agreeing on roles and communication with school and community partners, subject to permission. / Shared care plan: Confirming authorization and sharing only information needed for coordinated support.
C. Interprofessional collaboration: Clarifying who contacts caregivers and who monitors a school support. / Shared care plan: Documenting who will take each agreed next step and when progress will be reviewed.
D. Interprofessional collaboration: Agreeing on roles and communication with school and community partners, subject to permission. / Shared care plan: Documenting who will take each agreed next step and when progress will be reviewed.

0024. In the classroom support meeting, a team asks how a teacher and counselor can support a student aged 17. One proposed action is helping the family make contact with a community service and checking whether connection occurred. Which idea does it represent?

A. Community asset mapping
B. Warm referral
C. Shared care plan
D. Outcome feedback loop

0025. Which description belongs with the term Warm referral?

A. An active, supported connection from one service to another that reduces barriers to follow-through.
B. A structured process in which partners define a concern, generate options, test a plan, and review outcomes.
C. Explicit agreement about each partner's responsibilities, authority, and limits.
D. Identification of local strengths, organizations, relationships, and resources relevant to community goals.

0026. Which option correctly matches each concept to its practice focus: Consent-based information sharing and Boundary spanning?

A. Consent-based information sharing: Translating needs across systems without taking over another partner's responsibilities. / Boundary spanning: Confirming authorization and sharing only information needed for coordinated support.
B. Consent-based information sharing: Confirming authorization and sharing only information needed for coordinated support. / Boundary spanning: Translating needs across systems without taking over another partner's responsibilities.
C. Consent-based information sharing: Confirming authorization and sharing only information needed for coordinated support. / Boundary spanning: Documenting who will take each agreed next step and when progress will be reviewed.
D. Consent-based information sharing: Agreeing on roles and communication with school and community partners, subject to permission. / Boundary spanning: Translating needs across systems without taking over another partner's responsibilities.

0027. In school-community collaboration, at a case-planning meeting, the counselor proposes agreeing on roles and communication with school and community partners, subject to permission. for a child aged 8 seen in the school counseling office. Which concept does this illustrate?

A. Interprofessional collaboration
B. Collaborative problem solving
C. Outcome feedback loop
D. Shared care plan

0028. A supervised trainee prepares for a session in the parent meeting with a older adolescent client. The intended approach is confirming authorization and sharing only information needed for coordinated support. Which concept is most relevant?

A. Collaborative problem solving
B. Boundary spanning
C. Outcome feedback loop
D. Consent-based information sharing

0029. A support meeting for a child aged 6 includes a play therapist in the after-school program. The practice under consideration is helping the family make contact with a community service and checking whether connection occurred. Which concept guides it?

A. Interprofessional collaboration
B. Warm referral
C. Consent-based information sharing
D. Community asset mapping

0030. Which statement shows a sound practice-level distinction between Shared care plan and Outcome feedback loop?

A. Shared care plan: Documenting who will take each agreed next step and when progress will be reviewed. / Outcome feedback loop: Reviewing attendance or wellbeing data together and adjusting supports with permission.
B. Shared care plan: Clarifying who contacts caregivers and who monitors a school support. / Outcome feedback loop: Reviewing attendance or wellbeing data together and adjusting supports with permission.
C. Shared care plan: Reviewing attendance or wellbeing data together and adjusting supports with permission. / Outcome feedback loop: Documenting who will take each agreed next step and when progress will be reviewed.
D. Shared care plan: Documenting who will take each agreed next step and when progress will be reviewed. / Outcome feedback loop: Mapping existing youth programs and trusted community networks before planning a new service.

0031. A supervisor asks how Warm referral would appear in practice. Which choice should be selected?

A. Confirming authorization and sharing only information needed for coordinated support.
B. Helping the family make contact with a community service and checking whether connection occurred.
C. Agreeing on a measurable concern, trying one support, and reconvening to evaluate it.
D. Involving youth and community partners in decisions throughout a project, not only at launch.

0032. In school-community collaboration, choose the practice comparison that best separates Interprofessional collaboration from Community-based participatory practice.

A. Interprofessional collaboration: Agreeing on roles and communication with school and community partners, subject to permission. / Community-based participatory practice: Agreeing on a measurable concern, trying one support, and reconvening to evaluate it.
B. Interprofessional collaboration: Documenting who will take each agreed next step and when progress will be reviewed. / Community-based participatory practice: Involving youth and community partners in decisions throughout a project, not only at launch.
C. Interprofessional collaboration: Involving youth and community partners in decisions throughout a project, not only at launch. / Community-based participatory practice: Agreeing on roles and communication with school and community partners, subject to permission.
D. Interprofessional collaboration: Agreeing on roles and communication with school and community partners, subject to permission. / Community-based participatory practice: Involving youth and community partners in decisions throughout a project, not only at launch.

0033. A young person aged 13’s service team meets in the student-support meeting. The parent educator recommends a change involving helping the family make contact with a community service and checking whether connection occurred. Which idea best explains it?

A. Community-based participatory practice
B. Interprofessional collaboration
C. Warm referral
D. Collaborative problem solving

0034. Which statement shows a sound practice-level distinction between Shared care plan and Community asset mapping?

A. Shared care plan: Confirming authorization and sharing only information needed for coordinated support. / Community asset mapping: Mapping existing youth programs and trusted community networks before planning a new service.
B. Shared care plan: Documenting who will take each agreed next step and when progress will be reviewed. / Community asset mapping: Clarifying who contacts caregivers and who monitors a school support.
C. Shared care plan: Mapping existing youth programs and trusted community networks before planning a new service. / Community asset mapping: Documenting who will take each agreed next step and when progress will be reviewed.
D. Shared care plan: Documenting who will take each agreed next step and when progress will be reviewed. / Community asset mapping: Mapping existing youth programs and trusted community networks before planning a new service.

0035. A supervisor asks for an applied contrast between Collaborative problem solving and Boundary spanning. Which option fits?

A. Collaborative problem solving: Agreeing on a measurable concern, trying one support, and reconvening to evaluate it. / Boundary spanning: Reviewing attendance or wellbeing data together and adjusting supports with permission.
B. Collaborative problem solving: Agreeing on a measurable concern, trying one support, and reconvening to evaluate it. / Boundary spanning: Translating needs across systems without taking over another partner’s responsibilities.
C. Collaborative problem solving: Translating needs across systems without taking over another partner’s responsibilities. / Boundary spanning: Agreeing on a measurable concern, trying one support, and reconvening to evaluate it.
D. Collaborative problem solving: Documenting who will take each agreed next step and when progress will be reviewed. / Boundary spanning: Translating needs across systems without taking over another partner’s responsibilities.

0036. In school-community collaboration, which comparison correctly distinguishes Interprofessional collaboration from Outcome feedback loop?

A. Interprofessional collaboration: Regular use of shared outcome information to adapt coordinated services. / Outcome feedback loop: Coordinated work among professionals who contribute distinct expertise toward shared client goals.
B. Interprofessional collaboration: Coordinated work among professionals who contribute distinct expertise toward shared client goals. / Outcome feedback loop: Explicit agreement about each partner’s responsibilities, authority, and limits.
C. Interprofessional collaboration: Coordinated work among professionals who contribute distinct expertise toward shared client goals. / Outcome feedback loop: Regular use of shared outcome information to adapt coordinated services.
D. Interprofessional collaboration: An active, supported connection from one service to another that reduces barriers to follow-through. / Outcome feedback loop: Regular use of shared outcome information to adapt coordinated services.

0037. An interdisciplinary team reviews a child aged 14’s case at the student wellness team. The behavior specialist recommends clarifying who contacts caregivers and who monitors a school support. Which course concept best fits?

A. Community-based participatory practice
B. Community asset mapping
C. Collaborative problem solving
D. Role clarification

0038. Which option preserves the correct meaning of both Role clarification and Community-based participatory practice?

A. Role clarification: Explicit agreement about each partner’s responsibilities, authority, and limits. / Community-based participatory practice: A partnership in which community members share influence in defining questions, actions, and interpretation.
B. Role clarification: Explicit agreement about each partner’s responsibilities, authority, and limits. / Community-based participatory practice: Coordinated work among professionals who contribute distinct expertise toward shared client goals.
C. Role clarification: A partnership in which community members share influence in defining questions, actions, and interpretation. / Community-based participatory practice: Explicit agreement about each partner’s responsibilities, authority, and limits.
D. Role clarification: Connecting organizations or professional groups while respecting each role’s authority and accountability. / Community-based participatory practice: A partnership in which community members share influence in defining questions, actions, and interpretation.

0039. Which option pairs the definitions of Warm referral and Community-based participatory practice correctly, in that order?

A. Warm referral: An active, supported connection from one service to another that reduces barriers to follow-through. / Community-based participatory practice: Coordinated work among professionals who contribute distinct expertise toward shared client goals.
B. Warm referral: An active, supported connection from one service to another that reduces barriers to follow-through. / Community-based participatory practice: A partnership in which community members share influence in defining questions, actions, and interpretation.
C. Warm referral: A partnership in which community members share influence in defining questions, actions, and interpretation. / Community-based participatory practice: An active, supported connection from one service to another that reduces barriers to follow-through.
D. Warm referral: Explicit agreement about each partner's responsibilities, authority, and limits. / Community-based participatory practice: A partnership in which community members share influence in defining questions, actions, and interpretation.

0040. In the student wellness team, a school-based clinician is considering this approach for a young person aged 10: mapping existing youth programs and trusted community networks before planning a new service. Which framework does it represent?

A. Outcome feedback loop
B. Community asset mapping
C. Consent-based information sharing
D. Warm referral

0041. In the community youth program, a team asks how a group facilitator can support a young adolescent client. One proposed action is clarifying who contacts caregivers and who monitors a school support. Which idea does it represent?

A. Collaborative problem solving
B. Role clarification
C. Community-based participatory practice
D. Boundary spanning

0042. Consider a client in late adolescence receiving help in the school-based service. The group facilitator focuses on documenting who will take each agreed next step and when progress will be reviewed. Which term best describes the guiding idea?

A. Shared care plan
B. Consent-based information sharing
C. Community-based participatory practice
D. Collaborative problem solving

0043. Choose the definition pair that correctly explains Boundary spanning first and Outcome feedback loop second.

A. Boundary spanning: Connecting organizations or professional groups while respecting each role's authority and accountability. / Outcome feedback loop: Exchange of relevant information under valid permission and applicable privacy requirements.
B. Boundary spanning: Connecting organizations or professional groups while respecting each role's authority and accountability. / Outcome feedback loop: Regular use of shared outcome information to adapt coordinated services.
C. Boundary spanning: Regular use of shared outcome information to adapt coordinated services. / Outcome feedback loop: Connecting organizations or professional groups while respecting each role's authority and accountability.
D. Boundary spanning: Coordinated work among professionals who contribute distinct expertise toward shared client goals. / Outcome feedback loop: Regular use of shared outcome information to adapt coordinated services.

0044. Choose the practice comparison that best separates Shared care plan from Boundary spanning.

A. Shared care plan: Translating needs across systems without taking over another partner's responsibilities. / Boundary spanning: Documenting who will take each agreed next step and when progress will be reviewed.
B. Shared care plan: Documenting who will take each agreed next step and when progress will be reviewed. / Boundary spanning: Translating needs across systems without taking over another partner's responsibilities.
C. Shared care plan: Documenting who will take each agreed next step and when progress will be reviewed. / Boundary spanning: Clarifying who contacts caregivers and who monitors a school support.
D. Shared care plan: Agreeing on roles and communication with school and community partners, subject to permission. / Boundary spanning: Translating needs across systems without taking over another partner's responsibilities.

0045. A trainee must explain Community asset mapping. Which answer is accurate?

A. A structured process in which partners define a concern, generate options, test a plan, and review outcomes.
B. A partnership in which community members share influence in defining questions, actions, and interpretation.
C. Coordinated work among professionals who contribute distinct expertise toward shared client goals.
D. Identification of local strengths, organizations, relationships, and resources relevant to community goals.

0046. In school-community collaboration, which paired example correctly applies Interprofessional collaboration first and Community-based participatory practice second?

A. Interprofessional collaboration: Involving youth and community partners in decisions throughout a project, not only at launch. / Community-based participatory practice: Agreeing on roles and communication with school and community partners, subject to permission.
B. Interprofessional collaboration: Documenting who will take each agreed next step and when progress will be reviewed. / Community-based participatory practice: Involving youth and community partners in decisions throughout a project, not only at launch.
C. Interprofessional collaboration: Agreeing on roles and communication with school and community partners, subject to permission. / Community-based participatory practice: Agreeing on a measurable concern, trying one support, and reconvening to evaluate it.
D. Interprofessional collaboration: Agreeing on roles and communication with school and community partners, subject to permission. / Community-based participatory practice: Involving youth and community partners in decisions throughout a project, not only at launch.

0047. In the youth advocacy program, a teacher and counselor describes the most appropriate support for a middle-school student as confirming authorization and sharing only information needed for coordinated support. Which framework is being applied?

A. Role clarification
B. Community asset mapping
C. Collaborative problem solving
D. Consent-based information sharing

0048. At a case-planning meeting, the play therapist proposes clarifying who contacts caregivers and who monitors a school support. for a teenage client seen in the caregiver consultation. Which concept does this illustrate?

A. Boundary spanning
B. Warm referral
C. Community-based participatory practice
D. Role clarification

0049. Choose the practice comparison that best separates Role clarification from Collaborative problem solving.

A. Role clarification: Agreeing on a measurable concern, trying one support, and reconvening to evaluate it. / Collaborative problem solving: Clarifying who contacts caregivers and who monitors a school support.
B. Role clarification: Clarifying who contacts caregivers and who monitors a school support. / Collaborative problem solving: Agreeing on a measurable concern, trying one support, and reconvening to evaluate it.
C. Role clarification: Helping the family make contact with a community service and checking whether connection occurred. / Collaborative problem solving: Agreeing on a measurable concern, trying one support, and reconvening to evaluate it.
D. Role clarification: Clarifying who contacts caregivers and who monitors a school support. / Collaborative problem solving: Documenting who will take each agreed next step and when progress will be reviewed.

0050. Which pair of actions illustrates Community asset mapping and Community-based participatory practice, respectively?

A. Community asset mapping: Mapping existing youth programs and trusted community networks before planning a new service. / Community-based participatory practice: Involving youth and community partners in decisions throughout a project, not only at launch.
B. Community asset mapping: Mapping existing youth programs and trusted community networks before planning a new service. / Community-based participatory practice: Agreeing on a measurable concern, trying one support, and reconvening to evaluate it.
C. Community asset mapping: Involving youth and community partners in decisions throughout a project, not only at launch. / Community-based participatory practice: Mapping existing youth programs and trusted community networks before planning a new service.
D. Community asset mapping: Helping the family make contact with a community service and checking whether connection occurred. / Community-based participatory practice: Involving youth and community partners in decisions throughout a project, not only at launch.

0051. Choose the term that matches this definition: Regular use of shared outcome information to adapt coordinated services.

A. Consent-based information sharing
B. Outcome feedback loop
C. Shared care plan
D. Collaborative problem solving

0052. A counselor is asked to evaluate a proposed service for a client in late adolescence in the child guidance clinic. The defining feature is mapping existing youth programs and trusted community networks before planning a new service. Which concept fits?

A. Warm referral
B. Role clarification
C. Community asset mapping
D. Interprofessional collaboration

0053. Which statement shows a sound practice-level distinction between Community asset mapping and Consent-based information sharing?

A. Community asset mapping: Mapping existing youth programs and trusted community networks before planning a new service. / Consent-based information sharing: Involving youth and community partners in decisions throughout a project, not only at launch.
B. Community asset mapping: Confirming authorization and sharing only information needed for coordinated support. / Consent-based information sharing: Mapping existing youth programs and trusted community networks before planning a new service.
C. Community asset mapping: Documenting who will take each agreed next step and when progress will be reviewed. / Consent-based information sharing: Confirming authorization and sharing only information needed for coordinated support.
D. Community asset mapping: Mapping existing youth programs and trusted community networks before planning a new service. / Consent-based information sharing: Confirming authorization and sharing only information needed for coordinated support.

0054. At the school consultation, a community practitioner reviews whether a plan for a preadolescent child is appropriate. The relevant practice is agreeing on a measurable concern, trying one support, and reconvening to evaluate it. Which concept is tested?

A. Collaborative problem solving
B. Interprofessional collaboration
C. Shared care plan
D. Community-based participatory practice

0055. Which choice aligns each practice with the correct idea, Community asset mapping or Outcome feedback loop?

A. Community asset mapping: Mapping existing youth programs and trusted community networks before planning a new service. / Outcome feedback loop: Reviewing attendance or wellbeing data together and adjusting supports with permission.
B. Community asset mapping: Mapping existing youth programs and trusted community networks before planning a new service. / Outcome feedback loop: Helping the family make contact with a community service and checking whether connection occurred.
C. Community asset mapping: Translating needs across systems without taking over another partner’s responsibilities. / Outcome feedback loop: Reviewing attendance or wellbeing data together and adjusting supports with permission.
D. Community asset mapping: Reviewing attendance or wellbeing data together and adjusting supports with permission. / Outcome feedback loop: Mapping existing youth programs and trusted community networks before planning a new service.

0056. A assessment clinician is supporting a young person aged 16 in the school consultation. The key practice is documenting who will take each agreed next step and when progress will be reviewed. Which course concept is most relevant?

A. Shared care plan
B. Boundary spanning
C. Consent-based information sharing
D. Outcome feedback loop

0057. Which comparison would correct a trainee’s misunderstanding of Shared care plan versus Warm referral?

A. Shared care plan: Coordinated work among professionals who contribute distinct expertise toward shared client goals. / Warm referral: An active, supported connection from one service to another that reduces barriers to follow-through.
B. Shared care plan: An active, supported connection from one service to another that reduces barriers to follow-through. / Warm referral: A coordinated, mutually understood set of goals, responsibilities, and follow-up steps across helpers.
C. Shared care plan: A coordinated, mutually understood set of goals, responsibilities, and follow-up steps across helpers. / Warm referral: An active, supported connection from one service to another that reduces barriers to follow-through.
D. Shared care plan: A coordinated, mutually understood set of goals, responsibilities, and follow-up steps across helpers. / Warm referral: Regular use of shared outcome information to adapt coordinated services.

0058. A supervisor asks how Community asset mapping would appear in practice. Which choice should be selected?

A. Clarifying who contacts caregivers and who monitors a school support.
B. Mapping existing youth programs and trusted community networks before planning a new service.
C. Agreeing on roles and communication with school and community partners, subject to permission.
D. Translating needs across systems without taking over another partner’s responsibilities.

0059. A case conference asks for a distinction between Role clarification and Consent-based information sharing. Which answer is sound?

A. Role clarification: Exchange of relevant information under valid permission and applicable privacy requirements. / Consent-based information sharing: Explicit agreement about each partner's responsibilities, authority, and limits.
B. Role clarification: Explicit agreement about each partner's responsibilities, authority, and limits. / Consent-based information sharing: An active, supported connection from one service to another that reduces barriers to follow-through.
C. Role clarification: Regular use of shared outcome information to adapt coordinated services. / Consent-based information sharing: Exchange of relevant information under valid permission and applicable privacy requirements.
D. Role clarification: Explicit agreement about each partner's responsibilities, authority, and limits. / Consent-based information sharing: Exchange of relevant information under valid permission and applicable privacy requirements.

0060. Which named construct is captured by this account? Exchange of relevant information under valid permission and applicable privacy requirements.

A. Shared care plan
B. Outcome feedback loop
C. Interprofessional collaboration
D. Consent-based information sharing

0061. In the after-school program, a team asks how a youth worker can support a high-school student. One proposed action is involving youth and community partners in decisions throughout a project, not only at launch. Which idea does it represent?

A. Community-based participatory practice
B. Outcome feedback loop
C. Role clarification
D. Collaborative problem solving

0062. In school-community collaboration, which option pairs the definitions of Interprofessional collaboration and Role clarification correctly, in that order?

A. Interprofessional collaboration: Coordinated work among professionals who contribute distinct expertise toward shared client goals. / Role clarification: An active, supported connection from one service to another that reduces barriers to follow-through.
B. Interprofessional collaboration: Connecting organizations or professional groups while respecting each role's authority and accountability. / Role clarification: Explicit agreement about each partner's responsibilities, authority, and limits.
C. Interprofessional collaboration: Explicit agreement about each partner's responsibilities, authority, and limits. / Role clarification: Coordinated work among professionals who contribute distinct expertise toward shared client goals.
D. Interprofessional collaboration: Coordinated work among professionals who contribute distinct expertise toward shared client goals. / Role clarification: Explicit agreement about each partner's responsibilities, authority, and limits.

0063. A case discussion concerns a high-school student and a caregiver working with a counselor in the telehealth session. The practitioner is considering reviewing attendance or wellbeing data together and adjusting supports with permission. Which principle is involved?

A. Role clarification
B. Community-based participatory practice
C. Outcome feedback loop
D. Boundary spanning

0064. How are Collaborative problem solving and Outcome feedback loop most accurately differentiated in this curriculum?

A. Collaborative problem solving: A structured process in which partners define a concern, generate options, test a plan, and review outcomes. / Outcome feedback loop: An active, supported connection from one service to another that reduces barriers to follow-through.
B. Collaborative problem solving: A structured process in which partners define a concern, generate options, test a plan, and review outcomes. / Outcome feedback loop: Regular use of shared outcome information to adapt coordinated services.
C. Collaborative problem solving: Regular use of shared outcome information to adapt coordinated services. / Outcome feedback loop: A structured process in which partners define a concern, generate options, test a plan, and review outcomes.
D. Collaborative problem solving: Identification of local strengths, organizations, relationships, and resources relevant to community goals. / Outcome feedback loop: Regular use of shared outcome information to adapt coordinated services.

0065. A young person aged 10's service team meets in the student wellness team. The school-based clinician recommends a change involving mapping existing youth programs and trusted community networks before planning a new service. Which idea best explains it?

A. Role clarification
B. Community asset mapping
C. Consent-based information sharing
D. Collaborative problem solving

0066. A case conference asks for a distinction between Collaborative problem solving and Community-based participatory practice. Which answer is sound?

A. Collaborative problem solving: Coordinated work among professionals who contribute distinct expertise toward shared client goals. / Community-based participatory practice: A partnership in which community members share influence in defining questions, actions, and interpretation.
B. Collaborative problem solving: A structured process in which partners define a concern, generate options, test a plan, and review outcomes. / Community-based participatory practice: An active, supported connection from one service to another that reduces barriers to follow-through.
C. Collaborative problem solving: A structured process in which partners define a concern, generate options, test a plan, and review outcomes. / Community-based participatory practice: A partnership in which community members share influence in defining questions, actions, and interpretation.
D. Collaborative problem solving: A partnership in which community members share influence in defining questions, actions, and interpretation. / Community-based participatory practice: A structured process in which partners define a concern, generate options, test a plan, and review outcomes.

0067. In the community mental-health service, a consulting counselor describes the most appropriate support for a young person aged 18 as involving youth and community partners in decisions throughout a project, not only at launch. Which framework is being applied?

A. Community-based participatory practice
B. Consent-based information sharing
C. Warm referral
D. Collaborative problem solving

0068. In school-community collaboration, which option correctly matches each concept to its practice focus: Interprofessional collaboration and Community asset mapping?

A. Interprofessional collaboration: Agreeing on roles and communication with school and community partners, subject to permission. / Community asset mapping: Mapping existing youth programs and trusted community networks before planning a new service.
B. Interprofessional collaboration: Mapping existing youth programs and trusted community networks before planning a new service. / Community asset mapping: Agreeing on roles and communication with school and community partners, subject to permission.
C. Interprofessional collaboration: Documenting who will take each agreed next step and when progress will be reviewed. / Community asset mapping: Mapping existing youth programs and trusted community networks before planning a new service.
D. Interprofessional collaboration: Agreeing on roles and communication with school and community partners, subject to permission. / Community asset mapping: Translating needs across systems without taking over another partner's responsibilities.

0069. For a child aged 11 in the counseling practicum, a play therapist makes this practice the immediate priority: reviewing attendance or wellbeing data together and adjusting supports with permission. Which concept fits best?

A. Community asset mapping
B. Outcome feedback loop
C. Consent-based information sharing
D. Collaborative problem solving

0070. In school-community collaboration, choose the definition pair that correctly explains Interprofessional collaboration first and Collaborative problem solving second.

A. Interprofessional collaboration: A structured process in which partners define a concern, generate options, test a plan, and review outcomes. / Collaborative problem solving: Coordinated work among professionals who contribute distinct expertise toward shared client goals.
B. Interprofessional collaboration: Coordinated work among professionals who contribute distinct expertise toward shared client goals. / Collaborative problem solving: A structured process in which partners define a concern, generate options, test a plan, and review outcomes.
C. Interprofessional collaboration: Regular use of shared outcome information to adapt coordinated services. / Collaborative problem solving: A structured process in which partners define a concern, generate options, test a plan, and review outcomes.
D. Interprofessional collaboration: Coordinated work among professionals who contribute distinct expertise toward shared client goals. / Collaborative problem solving: A coordinated, mutually understood set of goals, responsibilities, and follow-up steps across helpers.

0071. A case conference asks for a distinction between Consent-based information sharing and Outcome feedback loop. Which answer is sound?

A. Consent-based information sharing: Exchange of relevant information under valid permission and applicable privacy requirements. / Outcome feedback loop: Regular use of shared outcome information to adapt coordinated services.
B. Consent-based information sharing: Regular use of shared outcome information to adapt coordinated services. / Outcome feedback loop: Exchange of relevant information under valid permission and applicable privacy requirements.
C. Consent-based information sharing: A partnership in which community members share influence in defining questions, actions, and interpretation. / Outcome feedback loop: Regular use of shared outcome information to adapt coordinated services.
D. Consent-based information sharing: Exchange of relevant information under valid permission and applicable privacy requirements. / Outcome feedback loop: A coordinated, mutually understood set of goals, responsibilities, and follow-up steps across helpers.

0072. A doctoral student reads the following description. Which concept does it define? A coordinated, mutually understood set of goals, responsibilities, and follow-up steps across helpers.

A. Shared care plan
B. Outcome feedback loop
C. Interprofessional collaboration
D. Warm referral

0073. Which professional action most closely applies Community asset mapping?

A. Mapping existing youth programs and trusted community networks before planning a new service.
B. Involving youth and community partners in decisions throughout a project, not only at launch.
C. Confirming authorization and sharing only information needed for coordinated support.
D. Agreeing on a measurable concern, trying one support, and reconvening to evaluate it.

0074. In school-community collaboration, choose the practice comparison that best separates Interprofessional collaboration from Collaborative problem solving.

A. Interprofessional collaboration: Agreeing on roles and communication with school and community partners, subject to permission. / Collaborative problem solving: Agreeing on a measurable concern, trying one support, and reconvening to evaluate it.
B. Interprofessional collaboration: Reviewing attendance or wellbeing data together and adjusting supports with permission. / Collaborative problem solving: Agreeing on a measurable concern, trying one support, and reconvening to evaluate it.
C. Interprofessional collaboration: Agreeing on a measurable concern, trying one support, and reconvening to evaluate it. / Collaborative problem solving: Agreeing on roles and communication with school and community partners, subject to permission.
D. Interprofessional collaboration: Agreeing on roles and communication with school and community partners, subject to permission. / Collaborative problem solving: Documenting who will take each agreed next step and when progress will be reviewed.

0075. Which statement shows a sound practice-level distinction between Collaborative problem solving and Warm referral?

A. Collaborative problem solving: Agreeing on a measurable concern, trying one support, and reconvening to evaluate it. / Warm referral: Helping the family make contact with a community service and checking whether connection occurred.
B. Collaborative problem solving: Agreeing on a measurable concern, trying one support, and reconvening to evaluate it. / Warm referral: Documenting who will take each agreed next step and when progress will be reviewed.
C. Collaborative problem solving: Helping the family make contact with a community service and checking whether connection occurred. / Warm referral: Agreeing on a measurable concern, trying one support, and reconvening to evaluate it.
D. Collaborative problem solving: Agreeing on roles and communication with school and community partners, subject to permission. / Warm referral: Helping the family make contact with a community service and checking whether connection occurred.

0076. Identify the most precise label for this idea: A partnership in which community members share influence in defining questions, actions, and interpretation.

A. Community-based participatory practice
B. Collaborative problem solving
C. Outcome feedback loop
D. Interprofessional collaboration

0077. In school-community collaboration, which choice aligns each practice with the correct idea, Interprofessional collaboration or Role clarification?

A. Interprofessional collaboration: Translating needs across systems without taking over another partner's responsibilities. / Role clarification: Clarifying who contacts caregivers and who monitors a school support.
B. Interprofessional collaboration: Clarifying who contacts caregivers and who monitors a school support. / Role clarification: Agreeing on roles and communication with school and community partners, subject to permission.
C. Interprofessional collaboration: Agreeing on roles and communication with school and community partners, subject to permission. / Role clarification: Clarifying who contacts caregivers and who monitors a school support.
D. Interprofessional collaboration: Agreeing on roles and communication with school and community partners, subject to permission. / Role clarification: Helping the family make contact with a community service and checking whether connection occurred.

0078. A client in early adolescence and a assessment clinician are reviewing goals in the student wellness team. The agreed action is helping the family make contact with a community service and checking whether connection occurred. Which principle best accounts for it?

A. Interprofessional collaboration
B. Outcome feedback loop
C. Warm referral
D. Role clarification

0079. How should a practitioner distinguish the applications of Consent-based information sharing and Community-based participatory practice?

A. Consent-based information sharing: Mapping existing youth programs and trusted community networks before planning a new service. / Community-based participatory practice: Involving youth and community partners in decisions throughout a project, not only at launch.
B. Consent-based information sharing: Involving youth and community partners in decisions throughout a project, not only at launch. / Community-based participatory practice: Confirming authorization and sharing only information needed for coordinated support.
C. Consent-based information sharing: Confirming authorization and sharing only information needed for coordinated support. / Community-based participatory practice: Involving youth and community partners in decisions throughout a project, not only at launch.
D. Consent-based information sharing: Confirming authorization and sharing only information needed for coordinated support. / Community-based participatory practice: Translating needs across systems without taking over another partner's responsibilities.

0080. In a professional consultation about a young adolescent client, the mental-health professional describes this response in the caregiver consultation: documenting who will take each agreed next step and when progress will be reviewed. Which term is most apt?

A. Warm referral
B. Collaborative problem solving
C. Shared care plan
D. Consent-based information sharing

0081. A service team discusses a child aged 6 in the community service agency. Their proposed next step is confirming authorization and sharing only information needed for coordinated support. Which course concept supports it?

A. Consent-based information sharing
B. Shared care plan
C. Community-based participatory practice
D. Role clarification

0082. During work in the community youth program, a consulting counselor identifies this need: translating needs across systems without taking over another partner's responsibilities. Which idea should guide the response?

A. Boundary spanning
B. Shared care plan
C. Community asset mapping
D. Role clarification

0083. Which named construct is captured by this account? Identification of local strengths, organizations, relationships, and resources relevant to community goals.

A. Consent-based information sharing
B. Community asset mapping
C. Shared care plan
D. Interprofessional collaboration

0084. Choose the definition pair that correctly explains Community-based participatory practice first and Boundary spanning second.

A. Community-based participatory practice: Exchange of relevant information under valid permission and applicable privacy requirements. / Boundary spanning: Connecting organizations or professional groups while respecting each role's authority and accountability.
B. Community-based participatory practice: Connecting organizations or professional groups while respecting each role's authority and accountability. / Boundary spanning: A partnership in which community members share influence in defining questions, actions, and interpretation.
C. Community-based participatory practice: A partnership in which community members share influence in defining questions, actions, and interpretation. / Boundary spanning: Coordinated work among professionals who contribute distinct expertise toward shared client goals.
D. Community-based participatory practice: A partnership in which community members share influence in defining questions, actions, and interpretation. / Boundary spanning: Connecting organizations or professional groups while respecting each role's authority and accountability.

0085. Which comparison correctly distinguishes Collaborative problem solving from Outcome feedback loop?

A. Collaborative problem solving: A structured process in which partners define a concern, generate options, test a plan, and review outcomes. / Outcome feedback loop: Regular use of shared outcome information to adapt coordinated services.
B. Collaborative problem solving: A structured process in which partners define a concern, generate options, test a plan, and review outcomes. / Outcome feedback loop: An active, supported connection from one service to another that reduces barriers to follow-through.
C. Collaborative problem solving: Identification of local strengths, organizations, relationships, and resources relevant to community goals. / Outcome feedback loop: Regular use of shared outcome information to adapt coordinated services.
D. Collaborative problem solving: Regular use of shared outcome information to adapt coordinated services. / Outcome feedback loop: A structured process in which partners define a concern, generate options, test a plan, and review outcomes.

0086. In school-community collaboration, choose the definition pair that correctly explains Interprofessional collaboration first and Warm referral second.

A. Interprofessional collaboration: A partnership in which community members share influence in defining questions, actions, and interpretation. / Warm referral: An active, supported connection from one service to another that reduces barriers to follow-through.
B. Interprofessional collaboration: Coordinated work among professionals who contribute distinct expertise toward shared client goals. / Warm referral: An active, supported connection from one service to another that reduces barriers to follow-through.
C. Interprofessional collaboration: An active, supported connection from one service to another that reduces barriers to follow-through. / Warm referral: Coordinated work among professionals who contribute distinct expertise toward shared client goals.
D. Interprofessional collaboration: Coordinated work among professionals who contribute distinct expertise toward shared client goals. / Warm referral: Identification of local strengths, organizations, relationships, and resources relevant to community goals.

0087. At the multidisciplinary case conference, a behavior specialist meets with a child aged 11. The practice priority is: confirming authorization and sharing only information needed for coordinated support. Which concept best captures that priority?

A. Role clarification
B. Consent-based information sharing
C. Warm referral
D. Collaborative problem solving

0088. How are Role clarification and Collaborative problem solving most accurately differentiated in this curriculum?

A. Role clarification: A structured process in which partners define a concern, generate options, test a plan, and review outcomes. / Collaborative problem solving: Explicit agreement about each partner's responsibilities, authority, and limits.
B. Role clarification: Explicit agreement about each partner's responsibilities, authority, and limits. / Collaborative problem solving: A coordinated, mutually understood set of goals, responsibilities, and follow-up steps across helpers.
C. Role clarification: An active, supported connection from one service to another that reduces barriers to follow-through. / Collaborative problem solving: A structured process in which partners define a concern, generate options, test a plan, and review outcomes.
D. Role clarification: Explicit agreement about each partner's responsibilities, authority, and limits. / Collaborative problem solving: A structured process in which partners define a concern, generate options, test a plan, and review outcomes.

0089. A older adolescent client is receiving support in the classroom support meeting. The school counselor is guided by this practice: documenting who will take each agreed next step and when progress will be reviewed. Which principle best fits?

A. Outcome feedback loop
B. Collaborative problem solving
C. Boundary spanning
D. Shared care plan

0090. In the after-school program, the agreed focus for a therapist working with a child aged 8 is clarifying who contacts caregivers and who monitors a school support. Which concept names this focus?

A. Interprofessional collaboration
B. Role clarification
C. Consent-based information sharing
D. Community-based participatory practice

0091. An interdisciplinary team reviews a school-age child's case at the school counseling office. The clinical supervisor recommends agreeing on a measurable concern, trying one support, and reconvening to evaluate it. Which course concept best fits?

A. Shared care plan
B. Warm referral
C. Community asset mapping
D. Collaborative problem solving

0092. Which description belongs with the term Shared care plan?

A. An active, supported connection from one service to another that reduces barriers to follow-through.
B. A coordinated, mutually understood set of goals, responsibilities, and follow-up steps across helpers.
C. Connecting organizations or professional groups while respecting each role's authority and accountability.
D. Exchange of relevant information under valid permission and applicable privacy requirements.

0093. A program coordinator describes an intervention for a young adolescent client in the telehealth session, centered on mapping existing youth programs and trusted community networks before planning a new service. Which named idea is most relevant?

A. Community asset mapping
B. Role clarification
C. Outcome feedback loop
D. Collaborative problem solving

0094. A case conference asks for a distinction between Shared care plan and Community-based participatory practice. Which answer is sound?

A. Shared care plan: A coordinated, mutually understood set of goals, responsibilities, and follow-up steps across helpers. / Community-based participatory practice: A structured process in which partners define a concern, generate options, test a plan, and review outcomes.
B. Shared care plan: An active, supported connection from one service to another that reduces barriers to follow-through. / Community-based participatory practice: A partnership in which community members share influence in defining questions, actions, and interpretation.
C. Shared care plan: A coordinated, mutually understood set of goals, responsibilities, and follow-up steps across helpers. / Community-based participatory practice: A partnership in which community members share influence in defining questions, actions, and interpretation.
D. Shared care plan: A partnership in which community members share influence in defining questions, actions, and interpretation. / Community-based participatory practice: A coordinated, mutually understood set of goals, responsibilities, and follow-up steps across helpers.

0095. A student aged 12 and a mental-health professional are reviewing goals in the after-school program. The agreed action is confirming authorization and sharing only information needed for coordinated support. Which principle best accounts for it?

A. Outcome feedback loop
B. Consent-based information sharing
C. Community asset mapping
D. Role clarification

0096. What is the central meaning of Community-based participatory practice?

A. Regular use of shared outcome information to adapt coordinated services.
B. A partnership in which community members share influence in defining questions, actions, and interpretation.
C. Exchange of relevant information under valid permission and applicable privacy requirements.
D. A structured process in which partners define a concern, generate options, test a plan, and review outcomes.

0097. At a case-planning meeting, the play therapist proposes translating needs across systems without taking over another partner's responsibilities. for a child aged 14 seen in the youth advocacy program. Which concept does this illustrate?

A. Boundary spanning
B. Community-based participatory practice
C. Outcome feedback loop
D. Shared care plan

0098. In a case note about a child aged 11, a member of a clinical team working in the youth advocacy program records this priority: documenting who will take each agreed next step and when progress will be reviewed. What principle is reflected?

A. Warm referral
B. Shared care plan
C. Community asset mapping
D. Interprofessional collaboration

0099. Which course concept is defined as follows: A structured process in which partners define a concern, generate options, test a plan, and review outcomes.

A. Community asset mapping
B. Shared care plan
C. Consent-based information sharing
D. Collaborative problem solving

0100. In school-community collaboration, which named construct is captured by this account? Coordinated work among professionals who contribute distinct expertise toward shared client goals.

A. Warm referral
B. Interprofessional collaboration
C. Outcome feedback loop
D. Shared care plan

0101. In school-community collaboration, a support meeting for a school-age child includes a school support specialist in the learning-support meeting. The practice under consideration is agreeing on roles and communication with school and community partners, subject to permission. Which concept guides it?

A. Shared care plan
B. Warm referral
C. Consent-based information sharing
D. Interprofessional collaboration

0102. How should a practitioner distinguish the applications of Warm referral and Boundary spanning?

A. Warm referral: Helping the family make contact with a community service and checking whether connection occurred. / Boundary spanning: Agreeing on roles and communication with school and community partners, subject to permission.
B. Warm referral: Agreeing on a measurable concern, trying one support, and reconvening to evaluate it. / Boundary spanning: Translating needs across systems without taking over another partner's responsibilities.
C. Warm referral: Helping the family make contact with a community service and checking whether connection occurred. / Boundary spanning: Translating needs across systems without taking over another partner's responsibilities.
D. Warm referral: Translating needs across systems without taking over another partner's responsibilities. / Boundary spanning: Helping the family make contact with a community service and checking whether connection occurred.

0103. Which choice aligns each practice with the correct idea, Consent-based information sharing or Warm referral?

A. Consent-based information sharing: Confirming authorization and sharing only information needed for coordinated support. / Warm referral: Involving youth and community partners in decisions throughout a project, not only at launch.
B. Consent-based information sharing: Translating needs across systems without taking over another partner's responsibilities. / Warm referral: Helping the family make contact with a community service and checking whether connection occurred.
C. Consent-based information sharing: Confirming authorization and sharing only information needed for coordinated support. / Warm referral: Helping the family make contact with a community service and checking whether connection occurred.
D. Consent-based information sharing: Helping the family make contact with a community service and checking whether connection occurred. / Warm referral: Confirming authorization and sharing only information needed for coordinated support.

0104. A case conference asks for a distinction between Boundary spanning and Outcome feedback loop. Which answer is sound?

A. Boundary spanning: Connecting organizations or professional groups while respecting each role's authority and accountability. / Outcome feedback loop: Regular use of shared outcome information to adapt coordinated services.
B. Boundary spanning: Regular use of shared outcome information to adapt coordinated services. / Outcome feedback loop: Connecting organizations or professional groups while respecting each role's authority and accountability.
C. Boundary spanning: Connecting organizations or professional groups while respecting each role's authority and accountability. / Outcome feedback loop: Exchange of relevant information under valid permission and applicable privacy requirements.
D. Boundary spanning: Coordinated work among professionals who contribute distinct expertise toward shared client goals. / Outcome feedback loop: Regular use of shared outcome information to adapt coordinated services.

0105. A school-age child's service team meets in the family resource center. The parent educator recommends a change involving documenting who will take each agreed next step and when progress will be reviewed. Which idea best explains it?

A. Community asset mapping
B. Collaborative problem solving
C. Shared care plan
D. Warm referral

0106. A team must select a support approach for a preadolescent child at the multidisciplinary case conference. The school-based clinician recommends clarifying who contacts caregivers and who monitors a school support. Which idea is most relevant?

A. Role clarification
B. Boundary spanning
C. Shared care plan
D. Community-based participatory practice

0107. In a supervision quiz, how should Community asset mapping be distinguished from Warm referral?

A. Community asset mapping: Identification of local strengths, organizations, relationships, and resources relevant to community goals. / Warm referral: An active, supported connection from one service to another that reduces barriers to follow-through.
B. Community asset mapping: An active, supported connection from one service to another that reduces barriers to follow-through. / Warm referral: Identification of local strengths, organizations, relationships, and resources relevant to community goals.
C. Community asset mapping: Identification of local strengths, organizations, relationships, and resources relevant to community goals. / Warm referral: A structured process in which partners define a concern, generate options, test a plan, and review outcomes.
D. Community asset mapping: Exchange of relevant information under valid permission and applicable privacy requirements. / Warm referral: An active, supported connection from one service to another that reduces barriers to follow-through.

0108. While consulting in the youth advocacy program, a mental-health professional supports a adolescent student by using this approach: helping the family make contact with a community service and checking whether connection occurred. Which concept is being applied?

A. Boundary spanning
B. Role clarification
C. Warm referral
D. Shared care plan

0109. In school-community collaboration, in the outpatient clinic, a teacher and counselor explains why a young person aged 10 would benefit from agreeing on roles and communication with school and community partners, subject to permission. Which course concept underpins the explanation?

A. Shared care plan
B. Community asset mapping
C. Interprofessional collaboration
D. Role clarification

0110. Which statement accurately contrasts the course concepts Role clarification and Consent-based information sharing?

A. Role clarification: Regular use of shared outcome information to adapt coordinated services. / Consent-based information sharing: Exchange of relevant information under valid permission and applicable privacy requirements.
B. Role clarification: Explicit agreement about each partner’s responsibilities, authority, and limits. / Consent-based information sharing: Exchange of relevant information under valid permission and applicable privacy requirements.
C. Role clarification: Exchange of relevant information under valid permission and applicable privacy requirements. / Consent-based information sharing: Explicit agreement about each partner’s responsibilities, authority, and limits.
D. Role clarification: Explicit agreement about each partner’s responsibilities, authority, and limits. / Consent-based information sharing: An active, supported connection from one service to another that reduces barriers to follow-through.

0111. A supervisor asks how Boundary spanning would appear in practice. Which choice should be selected?

A. Translating needs across systems without taking over another partner’s responsibilities.
B. Involving youth and community partners in decisions throughout a project, not only at launch.
C. Reviewing attendance or wellbeing data together and adjusting supports with permission.
D. Confirming authorization and sharing only information needed for coordinated support.

0112. In school-community collaboration, in the counseling practicum, a team asks how a school counselor can support a child of elementary-school age. One proposed action is agreeing on roles and communication with school and community partners, subject to permission. Which idea does it represent?

A. Boundary spanning
B. Community asset mapping
C. Outcome feedback loop
D. Interprofessional collaboration

0113. In the parent meeting, a group facilitator explains why a student aged 9 would benefit from involving youth and community partners in decisions throughout a project, not only at launch. Which course concept underpins the explanation?

A. Community asset mapping
B. Consent-based information sharing
C. Collaborative problem solving
D. Community-based participatory practice

0114. Choose the response that best puts Role clarification into practice.

A. Reviewing attendance or wellbeing data together and adjusting supports with permission.
B. Clarifying who contacts caregivers and who monitors a school support.
C. Mapping existing youth programs and trusted community networks before planning a new service.
D. Helping the family make contact with a community service and checking whether connection occurred.

0115. In the learning-support meeting, a youth worker explains why a client in late adolescence would benefit from helping the family make contact with a community service and checking whether connection occurred. Which course concept underpins the explanation?

A. Outcome feedback loop
B. Boundary spanning
C. Interprofessional collaboration
D. Warm referral

0116. A student confuses Community asset mapping with Collaborative problem solving. Which explanation most accurately separates them?

A. Community asset mapping: Regular use of shared outcome information to adapt coordinated services. / Collaborative problem solving: A structured process in which partners define a concern, generate options, test a plan, and review outcomes.
B. Community asset mapping: Identification of local strengths, organizations, relationships, and resources relevant to community goals. / Collaborative problem solving: An active, supported connection from one service to another that reduces barriers to follow-through.
C. Community asset mapping: Identification of local strengths, organizations, relationships, and resources relevant to community goals. / Collaborative problem solving: A structured process in which partners define a concern, generate options, test a plan, and review outcomes.
D. Community asset mapping: A structured process in which partners define a concern, generate options, test a plan, and review outcomes. / Collaborative problem solving: Identification of local strengths, organizations, relationships, and resources relevant to community goals.

0117. Which comparison would correct a trainee’s misunderstanding of Consent-based information sharing versus Community-based participatory practice?

A. Consent-based information sharing: A partnership in which community members share influence in defining questions, actions, and interpretation. / Community-based participatory practice: Exchange of relevant information under valid permission and applicable privacy requirements.
B. Consent-based information sharing: Exchange of relevant information under valid permission and applicable privacy requirements. / Community-based participatory practice: Connecting organizations or professional groups while respecting each role’s authority and accountability.
C. Consent-based information sharing: Exchange of relevant information under valid permission and applicable privacy requirements. / Community-based participatory practice: A partnership in which community members share influence in defining questions, actions, and interpretation.
D. Consent-based information sharing: Identification of local strengths, organizations, relationships, and resources relevant to community goals. / Community-based participatory practice: A partnership in which community members share influence in defining questions, actions, and interpretation.

0118. A case conference reviews a service navigator’s work with a teenage client in the counseling practicum: documenting who will take each agreed next step and when progress will be reviewed. Which principle is central?

A. Shared care plan
B. Collaborative problem solving
C. Community asset mapping
D. Interprofessional collaboration

0119. Which choice aligns each practice with the correct idea, Community-based participatory practice or Boundary spanning?

A. Community-based participatory practice: Translating needs across systems without taking over another partner’s responsibilities. / Boundary spanning: Involving youth and community partners in decisions throughout a project, not only at launch.
B. Community-based participatory practice: Involving youth and community partners in decisions throughout a project, not only at launch. / Boundary spanning: Agreeing on roles and communication with school and community partners, subject to permission.
C. Community-based participatory practice: Involving youth and community partners in decisions throughout a project, not only at launch. / Boundary spanning: Translating needs across systems without taking over another partner’s responsibilities.
D. Community-based participatory practice: Confirming authorization and sharing only information needed for coordinated support. / Boundary spanning: Translating needs across systems without taking over another partner’s responsibilities.

0120. Which statement shows a sound practice-level distinction between Collaborative problem solving and Outcome feedback loop?

A. Collaborative problem solving: Agreeing on a measurable concern, trying one support, and reconvening to evaluate it. / Outcome feedback loop: Helping the family make contact with a community service and checking whether connection occurred.
B. Collaborative problem solving: Agreeing on a measurable concern, trying one support, and reconvening to evaluate it. / Outcome feedback loop: Reviewing attendance or wellbeing data together and adjusting supports with permission.
C. Collaborative problem solving: Mapping existing youth programs and trusted community networks before planning a new service. / Outcome feedback loop: Reviewing attendance or wellbeing data together and adjusting supports with permission.
D. Collaborative problem solving: Reviewing attendance or wellbeing data together and adjusting supports with permission. / Outcome feedback loop: Agreeing on a measurable concern, trying one support, and reconvening to evaluate it.

0121. A therapist describes an intervention for a child aged 14 in the outpatient clinic, centered on documenting who will take each agreed next step and when progress will be reviewed. Which named idea is most relevant?

A. Warm referral
B. Shared care plan
C. Interprofessional collaboration
D. Community-based participatory practice

0122. In a supervision quiz, how should Warm referral be distinguished from Boundary spanning?

A. Warm referral: Connecting organizations or professional groups while respecting each role’s authority and accountability. / Boundary spanning: An active, supported connection from one service to another that reduces barriers to follow-through.
B. Warm referral: A structured process in which partners define a concern, generate options, test a plan, and review outcomes. / Boundary spanning: Connecting organizations or professional groups while respecting each role’s authority and accountability.
C. Warm referral: An active, supported connection from one service to another that reduces barriers to follow-through. / Boundary spanning: Connecting organizations or professional groups while respecting each role’s authority and accountability.
D. Warm referral: An active, supported connection from one service to another that reduces barriers to follow-through. / Boundary spanning: Coordinated work among professionals who contribute distinct expertise toward shared client goals.

0123. Which paired example correctly applies Shared care plan first and Warm referral second?

A. Shared care plan: Helping the family make contact with a community service and checking whether connection occurred. / Warm referral: Documenting who will take each agreed next step and when progress will be reviewed.
B. Shared care plan: Documenting who will take each agreed next step and when progress will be reviewed. / Warm referral: Helping the family make contact with a community service and checking whether connection occurred.
C. Shared care plan: Documenting who will take each agreed next step and when progress will be reviewed. / Warm referral: Reviewing attendance or wellbeing data together and adjusting supports with permission.
D. Shared care plan: Agreeing on roles and communication with school and community partners, subject to permission. / Warm referral: Helping the family make contact with a community service and checking whether connection occurred.

0124. When reviewing a child aged 8’s plan in the community youth program, the caregiver working with a counselor notes that the next step is helping the family make contact with a community service and checking whether connection occurred. Which concept guides this step?

A. Role clarification
B. Interprofessional collaboration
C. Boundary spanning
D. Warm referral

0125. In a supervision review, a caregiver working with a counselor describes work with a child aged 8 in the community youth program: helping the family make contact with a community service and checking whether connection occurred. What concept is illustrated?

A. Role clarification
B. Warm referral
C. Outcome feedback loop
D. Collaborative problem solving

0126. A service team discusses a young person aged 13 in the behavior-support review. Their proposed next step is clarifying who contacts caregivers and who monitors a school support. Which course concept supports it?

A. Boundary spanning
B. Collaborative problem solving
C. Role clarification
D. Warm referral

0127. Which applied comparison correctly identifies what belongs to Consent-based information sharing versus Boundary spanning?

A. Consent-based information sharing: Confirming authorization and sharing only information needed for coordinated support. / Boundary spanning: Documenting who will take each agreed next step and when progress will be reviewed.
B. Consent-based information sharing: Confirming authorization and sharing only information needed for coordinated support. / Boundary spanning: Translating needs across systems without taking over another partner's responsibilities.
C. Consent-based information sharing: Agreeing on roles and communication with school and community partners, subject to permission. / Boundary spanning: Translating needs across systems without taking over another partner's responsibilities.
D. Consent-based information sharing: Translating needs across systems without taking over another partner's responsibilities. / Boundary spanning: Confirming authorization and sharing only information needed for coordinated support.

0128. Which comparison correctly distinguishes Shared care plan from Outcome feedback loop?

A. Shared care plan: Regular use of shared outcome information to adapt coordinated services. / Outcome feedback loop: A coordinated, mutually understood set of goals, responsibilities, and follow-up steps across helpers.
B. Shared care plan: A coordinated, mutually understood set of goals, responsibilities, and follow-up steps across helpers. / Outcome feedback loop: Identification of local strengths, organizations, relationships, and resources relevant to community goals.
C. Shared care plan: Explicit agreement about each partner's responsibilities, authority, and limits. / Outcome feedback loop: Regular use of shared outcome information to adapt coordinated services.
D. Shared care plan: A coordinated, mutually understood set of goals, responsibilities, and follow-up steps across helpers. / Outcome feedback loop: Regular use of shared outcome information to adapt coordinated services.

0129. Which applied comparison correctly identifies what belongs to Consent-based information sharing versus Warm referral?

A. Consent-based information sharing: Helping the family make contact with a community service and checking whether connection occurred. / Warm referral: Confirming authorization and sharing only information needed for coordinated support.
B. Consent-based information sharing: Translating needs across systems without taking over another partner's responsibilities. / Warm referral: Helping the family make contact with a community service and checking whether connection occurred.
C. Consent-based information sharing: Confirming authorization and sharing only information needed for coordinated support. / Warm referral: Helping the family make contact with a community service and checking whether connection occurred.
D. Consent-based information sharing: Confirming authorization and sharing only information needed for coordinated support. / Warm referral: Involving youth and community partners in decisions throughout a project, not only at launch.

0130. A member of a clinical team and a client in late adolescence are discussing support in the family session. The selected practice is confirming authorization and sharing only information needed for coordinated support. Which concept does this demonstrate?

A. Boundary spanning
B. Community-based participatory practice
C. Warm referral
D. Consent-based information sharing

0131. Which option correctly matches each concept to its practice focus: Boundary spanning and Outcome feedback loop?

A. Boundary spanning: Reviewing attendance or wellbeing data together and adjusting supports with permission. / Outcome feedback loop: Translating needs across systems without taking over another partner's responsibilities.
B. Boundary spanning: Translating needs across systems without taking over another partner's responsibilities. / Outcome feedback loop: Confirming authorization and sharing only information needed for coordinated support.
C. Boundary spanning: Translating needs across systems without taking over another partner's responsibilities. / Outcome feedback loop: Reviewing attendance or wellbeing data together and adjusting supports with permission.
D. Boundary spanning: Agreeing on roles and communication with school and community partners, subject to permission. / Outcome feedback loop: Reviewing attendance or wellbeing data together and adjusting supports with permission.

0132. During service review in the student-support meeting, a therapist describes confirming authorization and sharing only information needed for coordinated support. for a young person. Which course idea is most applicable?

A. Community asset mapping
B. Collaborative problem solving
C. Role clarification
D. Consent-based information sharing

0133. In school-community collaboration, which option preserves the correct meaning of both Interprofessional collaboration and Community-based participatory practice?

A. Interprofessional collaboration: A coordinated, mutually understood set of goals, responsibilities, and follow-up steps across helpers. / Community-based participatory practice: A partnership in which community members share influence in defining questions, actions, and interpretation.
B. Interprofessional collaboration: Coordinated work among professionals who contribute distinct expertise toward shared client goals. / Community-based participatory practice: A partnership in which community members share influence in defining questions, actions, and interpretation.
C. Interprofessional collaboration: Coordinated work among professionals who contribute distinct expertise toward shared client goals. / Community-based participatory practice: A structured process in which partners define a concern, generate options, test a plan, and review outcomes.
D. Interprofessional collaboration: A partnership in which community members share influence in defining questions, actions, and interpretation. / Community-based participatory practice: Coordinated work among professionals who contribute distinct expertise toward shared client goals.

0134. A trainee must distinguish how Consent-based information sharing and Community-based participatory practice guide practice. Which comparison is accurate?

A. Consent-based information sharing: Confirming authorization and sharing only information needed for coordinated support. / Community-based participatory practice: Involving youth and community partners in decisions throughout a project, not only at launch.
B. Consent-based information sharing: Mapping existing youth programs and trusted community networks before planning a new service. / Community-based participatory practice: Involving youth and community partners in decisions throughout a project, not only at launch.
C. Consent-based information sharing: Confirming authorization and sharing only information needed for coordinated support. / Community-based participatory practice: Translating needs across systems without taking over another partner's responsibilities.
D. Consent-based information sharing: Involving youth and community partners in decisions throughout a project, not only at launch. / Community-based participatory practice: Confirming authorization and sharing only information needed for coordinated support.

0135. Which option preserves the correct meaning of both Collaborative problem solving and Warm referral?

A. Collaborative problem solving: Coordinated work among professionals who contribute distinct expertise toward shared client goals. / Warm referral: An active, supported connection from one service to another that reduces barriers to follow-through.
B. Collaborative problem solving: A structured process in which partners define a concern, generate options, test a plan, and review outcomes. / Warm referral: An active, supported connection from one service to another that reduces barriers to follow-through.
C. Collaborative problem solving: A structured process in which partners define a concern, generate options, test a plan, and review outcomes. / Warm referral: A coordinated, mutually understood set of goals, responsibilities, and follow-up steps across helpers.
D. Collaborative problem solving: An active, supported connection from one service to another that reduces barriers to follow-through. / Warm referral: A structured process in which partners define a concern, generate options, test a plan, and review outcomes.

0136. Which applied comparison correctly identifies what belongs to Shared care plan versus Role clarification?

A. Shared care plan: Clarifying who contacts caregivers and who monitors a school support. / Role clarification: Documenting who will take each agreed next step and when progress will be reviewed.
B. Shared care plan: Translating needs across systems without taking over another partner's responsibilities. / Role clarification: Clarifying who contacts caregivers and who monitors a school support.
C. Shared care plan: Documenting who will take each agreed next step and when progress will be reviewed. / Role clarification: Clarifying who contacts caregivers and who monitors a school support.
D. Shared care plan: Documenting who will take each agreed next step and when progress will be reviewed. / Role clarification: Mapping existing youth programs and trusted community networks before planning a new service.

0137. In a supervision review, a family therapist describes work with a young person in the supervision meeting: mapping existing youth programs and trusted community networks before planning a new service. What concept is illustrated?

A. Boundary spanning
B. Collaborative problem solving
C. Consent-based information sharing
D. Community asset mapping

0138. A trainee must explain Outcome feedback loop. Which answer is accurate?

A. A coordinated, mutually understood set of goals, responsibilities, and follow-up steps across helpers.
B. Exchange of relevant information under valid permission and applicable privacy requirements.
C. Explicit agreement about each partner's responsibilities, authority, and limits.
D. Regular use of shared outcome information to adapt coordinated services.

0139. In the school counseling office, a family therapist is considering this approach for a high-school student: confirming authorization and sharing only information needed for coordinated support. Which framework does it represent?

A. Community-based participatory practice
B. Consent-based information sharing
C. Outcome feedback loop
D. Boundary spanning

0140. A trainee must distinguish how Community asset mapping and Outcome feedback loop guide practice. Which comparison is accurate?

A. Community asset mapping: Reviewing attendance or wellbeing data together and adjusting supports with permission. / Outcome feedback loop: Mapping existing youth programs and trusted community networks before planning a new service.
B. Community asset mapping: Mapping existing youth programs and trusted community networks before planning a new service. / Outcome feedback loop: Helping the family make contact with a community service and checking whether connection occurred.
C. Community asset mapping: Mapping existing youth programs and trusted community networks before planning a new service. / Outcome feedback loop: Reviewing attendance or wellbeing data together and adjusting supports with permission.
D. Community asset mapping: Translating needs across systems without taking over another partner's responsibilities. / Outcome feedback loop: Reviewing attendance or wellbeing data together and adjusting supports with permission.

0141. A school counselor is asked to justify a plan for a young person aged 18 in the family session. It calls for mapping existing youth programs and trusted community networks before planning a new service. Which concept provides the rationale?

A. Community-based participatory practice
B. Warm referral
C. Collaborative problem solving
D. Community asset mapping

0142. What is the central meaning of Collaborative problem solving?

A. Identification of local strengths, organizations, relationships, and resources relevant to community goals.
B. An active, supported connection from one service to another that reduces barriers to follow-through.
C. A structured process in which partners define a concern, generate options, test a plan, and review outcomes.
D. Exchange of relevant information under valid permission and applicable privacy requirements.

0143. In a supervision quiz, how should Role clarification be distinguished from Outcome feedback loop?

A. Role clarification: Explicit agreement about each partner's responsibilities, authority, and limits. / Outcome feedback loop: Connecting organizations or professional groups while respecting each role's authority and accountability.
B. Role clarification: Regular use of shared outcome information to adapt coordinated services. / Outcome feedback loop: Explicit agreement about each partner's responsibilities, authority, and limits.
C. Role clarification: Explicit agreement about each partner's responsibilities, authority, and limits. / Outcome feedback loop: Regular use of shared outcome information to adapt coordinated services.
D. Role clarification: Coordinated work among professionals who contribute distinct expertise toward shared client goals. / Outcome feedback loop: Regular use of shared outcome information to adapt coordinated services.

0144. A clinical supervisor is asked to evaluate a proposed service for a young person aged 18 in the school consultation. The defining feature is translating needs across systems without taking over another partner's responsibilities. Which concept fits?

A. Interprofessional collaboration
B. Boundary spanning
C. Shared care plan
D. Role clarification

0145. Which applied comparison correctly identifies what belongs to Community-based participatory practice versus Outcome feedback loop?

A. Community-based participatory practice: Involving youth and community partners in decisions throughout a project, not only at launch. / Outcome feedback loop: Agreeing on roles and communication with school and community partners, subject to permission.
B. Community-based participatory practice: Agreeing on a measurable concern, trying one support, and reconvening to evaluate it. / Outcome feedback loop: Reviewing attendance or wellbeing data together and adjusting supports with permission.
C. Community-based participatory practice: Reviewing attendance or wellbeing data together and adjusting supports with permission. / Outcome feedback loop: Involving youth and community partners in decisions throughout a project, not only at launch.
D. Community-based participatory practice: Involving youth and community partners in decisions throughout a project, not only at launch. / Outcome feedback loop: Reviewing attendance or wellbeing data together and adjusting supports with permission.

0146. How are Community asset mapping and Role clarification most accurately differentiated in this curriculum?

A. Community asset mapping: Explicit agreement about each partner's responsibilities, authority, and limits. / Role clarification: Identification of local strengths, organizations, relationships, and resources relevant to community goals.
B. Community asset mapping: Identification of local strengths, organizations, relationships, and resources relevant to community goals. / Role clarification: Explicit agreement about each partner's responsibilities, authority, and limits.
C. Community asset mapping: Identification of local strengths, organizations, relationships, and resources relevant to community goals. / Role clarification: Regular use of shared outcome information to adapt coordinated services.
D. Community asset mapping: A structured process in which partners define a concern, generate options, test a plan, and review outcomes. / Role clarification: Explicit agreement about each partner's responsibilities, authority, and limits.

0147. In a supervision quiz, how should Community asset mapping be distinguished from Collaborative problem solving?

A. Community asset mapping: Identification of local strengths, organizations, relationships, and resources relevant to community goals. / Collaborative problem solving: An active, supported connection from one service to another that reduces barriers to follow-through.
B. Community asset mapping: Regular use of shared outcome information to adapt coordinated services. / Collaborative problem solving: A structured process in which partners define a concern, generate options, test a plan, and review outcomes.
C. Community asset mapping: A structured process in which partners define a concern, generate options, test a plan, and review outcomes. / Collaborative problem solving: Identification of local strengths, organizations, relationships, and resources relevant to community goals.
D. Community asset mapping: Identification of local strengths, organizations, relationships, and resources relevant to community goals. / Collaborative problem solving: A structured process in which partners define a concern, generate options, test a plan, and review outcomes.

0148. A trainee must explain Boundary spanning. Which answer is accurate?

A. Connecting organizations or professional groups while respecting each role's authority and accountability.
B. A structured process in which partners define a concern, generate options, test a plan, and review outcomes.
C. A coordinated, mutually understood set of goals, responsibilities, and follow-up steps across helpers.
D. A partnership in which community members share influence in defining questions, actions, and interpretation.

0149. Which statement accurately contrasts the course concepts Consent-based information sharing and Community-based participatory practice?

A. Consent-based information sharing: Exchange of relevant information under valid permission and applicable privacy requirements. / Community-based participatory practice: Connecting organizations or professional groups while respecting each role's authority and accountability.
B. Consent-based information sharing: Exchange of relevant information under valid permission and applicable privacy requirements. / Community-based participatory practice: A partnership in which community members share influence in defining questions, actions, and interpretation.
C. Consent-based information sharing: A partnership in which community members share influence in defining questions, actions, and interpretation. / Community-based participatory practice: Exchange of relevant information under valid permission and applicable privacy requirements.
D. Consent-based information sharing: Identification of local strengths, organizations, relationships, and resources relevant to community goals. / Community-based participatory practice: A partnership in which community members share influence in defining questions, actions, and interpretation.

0150. Which option pairs the definitions of Role clarification and Boundary spanning correctly, in that order?

A. Role clarification: A structured process in which partners define a concern, generate options, test a plan, and review outcomes. / Boundary spanning: Connecting organizations or professional groups while respecting each role's authority and accountability.
B. Role clarification: Explicit agreement about each partner's responsibilities, authority, and limits. / Boundary spanning: Exchange of relevant information under valid permission and applicable privacy requirements.
C. Role clarification: Explicit agreement about each partner's responsibilities, authority, and limits. / Boundary spanning: Connecting organizations or professional groups while respecting each role's authority and accountability.
D. Role clarification: Connecting organizations or professional groups while respecting each role's authority and accountability. / Boundary spanning: Explicit agreement about each partner's responsibilities, authority, and limits.

0151. Which paired example correctly applies Role clarification first and Warm referral second?

A. Role clarification: Clarifying who contacts caregivers and who monitors a school support. / Warm referral: Mapping existing youth programs and trusted community networks before planning a new service.
B. Role clarification: Helping the family make contact with a community service and checking whether connection occurred. / Warm referral: Clarifying who contacts caregivers and who monitors a school support.
C. Role clarification: Agreeing on a measurable concern, trying one support, and reconvening to evaluate it. / Warm referral: Helping the family make contact with a community service and checking whether connection occurred.
D. Role clarification: Clarifying who contacts caregivers and who monitors a school support. / Warm referral: Helping the family make contact with a community service and checking whether connection occurred.

0152. How should a practitioner distinguish the applications of Shared care plan and Collaborative problem solving?

A. Shared care plan: Agreeing on a measurable concern, trying one support, and reconvening to evaluate it. / Collaborative problem solving: Documenting who will take each agreed next step and when progress will be reviewed.
B. Shared care plan: Documenting who will take each agreed next step and when progress will be reviewed. / Collaborative problem solving: Reviewing attendance or wellbeing data together and adjusting supports with permission.
C. Shared care plan: Involving youth and community partners in decisions throughout a project, not only at launch. / Collaborative problem solving: Agreeing on a measurable concern, trying one support, and reconvening to evaluate it.
D. Shared care plan: Documenting who will take each agreed next step and when progress will be reviewed. / Collaborative problem solving: Agreeing on a measurable concern, trying one support, and reconvening to evaluate it.

0153. Which comparison would correct a trainee’s misunderstanding of Community asset mapping versus Boundary spanning?

A. Community asset mapping: Connecting organizations or professional groups while respecting each role’s authority and accountability. / Boundary spanning: Identification of local strengths, organizations, relationships, and resources relevant to community goals.
B. Community asset mapping: Identification of local strengths, organizations, relationships, and resources relevant to community goals. / Boundary spanning: A coordinated, mutually understood set of goals, responsibilities, and follow-up steps across helpers.
C. Community asset mapping: A structured process in which partners define a concern, generate options, test a plan, and review outcomes. / Boundary spanning: Connecting organizations or professional groups while respecting each role’s authority and accountability.
D. Community asset mapping: Identification of local strengths, organizations, relationships, and resources relevant to community goals. / Boundary spanning: Connecting organizations or professional groups while respecting each role’s authority and accountability.

0154. Which paired example correctly applies Collaborative problem solving first and Warm referral second?

A. Collaborative problem solving: Agreeing on roles and communication with school and community partners, subject to permission. / Warm referral: Helping the family make contact with a community service and checking whether connection occurred.
B. Collaborative problem solving: Agreeing on a measurable concern, trying one support, and reconvening to evaluate it. / Warm referral: Helping the family make contact with a community service and checking whether connection occurred.
C. Collaborative problem solving: Helping the family make contact with a community service and checking whether connection occurred. / Warm referral: Agreeing on a measurable concern, trying one support, and reconvening to evaluate it.
D. Collaborative problem solving: Agreeing on a measurable concern, trying one support, and reconvening to evaluate it. / Warm referral: Documenting who will take each agreed next step and when progress will be reviewed.

0155. In a supervision quiz, how should Community-based participatory practice be distinguished from Outcome feedback loop?

A. Community-based participatory practice: A partnership in which community members share influence in defining questions, actions, and interpretation. / Outcome feedback loop: Regular use of shared outcome information to adapt coordinated services.
B. Community-based participatory practice: Regular use of shared outcome information to adapt coordinated services. / Outcome feedback loop: A partnership in which community members share influence in defining questions, actions, and interpretation.
C. Community-based participatory practice: A partnership in which community members share influence in defining questions, actions, and interpretation. / Outcome feedback loop: Coordinated work among professionals who contribute distinct expertise toward shared client goals.
D. Community-based participatory practice: A structured process in which partners define a concern, generate options, test a plan, and review outcomes. / Outcome feedback loop: Regular use of shared outcome information to adapt coordinated services.

0156. In the family session, the agreed focus for a therapist working with a child aged 7 is translating needs across systems without taking over another partner’s responsibilities. Which concept names this focus?

A. Boundary spanning
B. Interprofessional collaboration
C. Warm referral
D. Role clarification

0157. While supporting a middle-school student in the family resource center, a school-based clinician adopts this practice: helping the family make contact with a community service and checking whether connection occurred. Which concept best explains the choice?

A. Boundary spanning
B. Community-based participatory practice
C. Warm referral
D. Outcome feedback loop

0158. A consultant prepares for a session in the school consultation with a child aged 11. The intended approach is helping the family make contact with a community service and checking whether connection occurred. Which concept is most relevant?

A. Warm referral
B. Community-based participatory practice
C. Outcome feedback loop
D. Role clarification

0159. A therapist is asked what should shape a client in late adolescence’s support in the youth advocacy program. The proposed focus is agreeing on a measurable concern, trying one support, and reconvening to evaluate it. Which principle does it represent?

A. Collaborative problem solving
B. Warm referral
C. Outcome feedback loop
D. Boundary spanning

0160. Choose the definition pair that correctly explains Consent-based information sharing first and Boundary spanning second.

A. Consent-based information sharing: Connecting organizations or professional groups while respecting each role’s authority and accountability. / Boundary spanning: Exchange of relevant information under valid permission and applicable privacy requirements.
B. Consent-based information sharing: Exchange of relevant information under valid permission and applicable privacy requirements. / Boundary spanning: Connecting organizations or professional groups while respecting each role’s authority and accountability.
C. Consent-based information sharing: Coordinated work among professionals who contribute distinct expertise toward shared client goals. / Boundary spanning: Connecting organizations or professional groups while respecting each role’s authority and accountability.
D. Consent-based information sharing: Exchange of relevant information under valid permission and applicable privacy requirements. / Boundary spanning: A coordinated, mutually understood set of goals, responsibilities, and follow-up steps across helpers.

0161. How should a practitioner distinguish the applications of Consent-based information sharing and Warm referral?

A. Consent-based information sharing: Helping the family make contact with a community service and checking whether connection occurred. / Warm referral: Confirming authorization and sharing only information needed for coordinated support.
B. Consent-based information sharing: Confirming authorization and sharing only information needed for coordinated support. / Warm referral: Helping the family make contact with a community service and checking whether connection occurred.
C. Consent-based information sharing: Translating needs across systems without taking over another partner’s responsibilities. / Warm referral: Helping the family make contact with a community service and checking whether connection occurred.
D. Consent-based information sharing: Confirming authorization and sharing only information needed for coordinated support. / Warm referral: Involving youth and community partners in decisions throughout a project, not only at launch.

0162. Which statement shows a sound practice-level distinction between Role clarification and Warm referral?

A. Role clarification: Helping the family make contact with a community service and checking whether connection occurred. / Warm referral: Clarifying who contacts caregivers and who monitors a school support.
B. Role clarification: Agreeing on a measurable concern, trying one support, and reconvening to evaluate it. / Warm referral: Helping the family make contact with a community service and checking whether connection occurred.
C. Role clarification: Clarifying who contacts caregivers and who monitors a school support. / Warm referral: Mapping existing youth programs and trusted community networks before planning a new service.
D. Role clarification: Clarifying who contacts caregivers and who monitors a school support. / Warm referral: Helping the family make contact with a community service and checking whether connection occurred.

0163. In school-community collaboration, which comparison would correct a trainee's misunderstanding of Interprofessional collaboration versus Consent-based information sharing?

A. Interprofessional collaboration: Exchange of relevant information under valid permission and applicable privacy requirements. / Consent-based information sharing: Coordinated work among professionals who contribute distinct expertise toward shared client goals.
B. Interprofessional collaboration: Coordinated work among professionals who contribute distinct expertise toward shared client goals. / Consent-based information sharing: Explicit agreement about each partner's responsibilities, authority, and limits.
C. Interprofessional collaboration: Coordinated work among professionals who contribute distinct expertise toward shared client goals. / Consent-based information sharing: Exchange of relevant information under valid permission and applicable privacy requirements.
D. Interprofessional collaboration: Identification of local strengths, organizations, relationships, and resources relevant to community goals. / Consent-based information sharing: Exchange of relevant information under valid permission and applicable privacy requirements.

0164. Which statement accurately contrasts the course concepts Consent-based information sharing and Warm referral?

A. Consent-based information sharing: Connecting organizations or professional groups while respecting each role's authority and accountability. / Warm referral: An active, supported connection from one service to another that reduces barriers to follow-through.
B. Consent-based information sharing: Exchange of relevant information under valid permission and applicable privacy requirements. / Warm referral: An active, supported connection from one service to another that reduces barriers to follow-through.
C. Consent-based information sharing: Exchange of relevant information under valid permission and applicable privacy requirements. / Warm referral: A partnership in which community members share influence in defining questions, actions, and interpretation.
D. Consent-based information sharing: An active, supported connection from one service to another that reduces barriers to follow-through. / Warm referral: Exchange of relevant information under valid permission and applicable privacy requirements.

0165. A service navigator describes an intervention for a student aged 17 in the supervision meeting, centered on agreeing on a measurable concern, trying one support, and reconvening to evaluate it. Which named idea is most relevant?

A. Shared care plan
B. Consent-based information sharing
C. Role clarification
D. Collaborative problem solving

0166. A client in late adolescence's service team meets in the multidisciplinary case conference. The caregiver working with a counselor recommends a change involving translating needs across systems without taking over another partner's responsibilities. Which idea best explains it?

A. Role clarification
B. Interprofessional collaboration
C. Shared care plan
D. Boundary spanning

0167. In school-community collaboration, in the multidisciplinary case conference, a youth worker describes the most appropriate support for a child aged 6 as agreeing on roles and communication with school and community partners, subject to permission. Which framework is being applied?

A. Warm referral
B. Interprofessional collaboration
C. Collaborative problem solving
D. Shared care plan

0168. In the family resource center, the agreed focus for a program coordinator working with a student aged 15 is confirming authorization and sharing only information needed for coordinated support. Which concept names this focus?

A. Warm referral
B. Community-based participatory practice
C. Consent-based information sharing
D. Shared care plan

0169. In school-community collaboration, which choice aligns each practice with the correct idea, Interprofessional collaboration or Consent-based information sharing?

A. Interprofessional collaboration: Agreeing on roles and communication with school and community partners, subject to permission. / Consent-based information sharing: Confirming authorization and sharing only information needed for coordinated support.
B. Interprofessional collaboration: Confirming authorization and sharing only information needed for coordinated support. / Consent-based information sharing: Agreeing on roles and communication with school and community partners, subject to permission.
C. Interprofessional collaboration: Agreeing on roles and communication with school and community partners, subject to permission. / Consent-based information sharing: Clarifying who contacts caregivers and who monitors a school support.
D. Interprofessional collaboration: Mapping existing youth programs and trusted community networks before planning a new service. / Consent-based information sharing: Confirming authorization and sharing only information needed for coordinated support.

0170. A trainee must explain Community-based participatory practice. Which answer is accurate?

A. Regular use of shared outcome information to adapt coordinated services.
B. A structured process in which partners define a concern, generate options, test a plan, and review outcomes.
C. A partnership in which community members share influence in defining questions, actions, and interpretation.
D. Exchange of relevant information under valid permission and applicable privacy requirements.

0171. A team must select a support approach for a young adolescent client at the behavior-support review. The family therapist recommends agreeing on a measurable concern, trying one support, and reconvening to evaluate it. Which idea is most relevant?

A. Consent-based information sharing
B. Community asset mapping
C. Collaborative problem solving
D. Interprofessional collaboration

0172. A case conference asks for a distinction between Collaborative problem solving and Boundary spanning. Which answer is sound?

A. Collaborative problem solving: A coordinated, mutually understood set of goals, responsibilities, and follow-up steps across helpers. / Boundary spanning: Connecting organizations or professional groups while respecting each role's authority and accountability.
B. Collaborative problem solving: A structured process in which partners define a concern, generate options, test a plan, and review outcomes. / Boundary spanning: Regular use of shared outcome information to adapt coordinated services.
C. Collaborative problem solving: Connecting organizations or professional groups while respecting each role's authority and accountability. / Boundary spanning: A structured process in which partners define a concern, generate options, test a plan, and review outcomes.
D. Collaborative problem solving: A structured process in which partners define a concern, generate options, test a plan, and review outcomes. / Boundary spanning: Connecting organizations or professional groups while respecting each role's authority and accountability.

0173. Which applied comparison correctly identifies what belongs to Community asset mapping versus Boundary spanning?

A. Community asset mapping: Translating needs across systems without taking over another partner's responsibilities. / Boundary spanning: Mapping existing youth programs and trusted community networks before planning a new service.
B. Community asset mapping: Mapping existing youth programs and trusted community networks before planning a new service. / Boundary spanning: Documenting who will take each agreed next step and when progress will be reviewed.
C. Community asset mapping: Mapping existing youth programs and trusted community networks before planning a new service. / Boundary spanning: Translating needs across systems without taking over another partner's responsibilities.
D. Community asset mapping: Agreeing on a measurable concern, trying one support, and reconvening to evaluate it. / Boundary spanning: Translating needs across systems without taking over another partner's responsibilities.

0174. Identify the most precise label for this idea: Explicit agreement about each partner's responsibilities, authority, and limits.

A. Consent-based information sharing
B. Interprofessional collaboration
C. Community-based participatory practice
D. Role clarification

0175. Which statement shows a sound practice-level distinction between Role clarification and Community-based participatory practice?

A. Role clarification: Clarifying who contacts caregivers and who monitors a school support. / Community-based participatory practice: Agreeing on roles and communication with school and community partners, subject to permission.
B. Role clarification: Translating needs across systems without taking over another partner's responsibilities. / Community-based participatory practice: Involving youth and community partners in decisions throughout a project, not only at launch.
C. Role clarification: Involving youth and community partners in decisions throughout a project, not only at launch. / Community-based participatory practice: Clarifying who contacts caregivers and who monitors a school support.
D. Role clarification: Clarifying who contacts caregivers and who monitors a school support. / Community-based participatory practice: Involving youth and community partners in decisions throughout a project, not only at launch.

0176. A youth worker is explaining a choice to a child aged 11 and caregiver in the family resource center. The choice centers on clarifying who contacts caregivers and who monitors a school support. Which idea is illustrated?

A. Boundary spanning
B. Warm referral
C. Collaborative problem solving
D. Role clarification

0177. A research trainee describes an intervention for a young person aged 13 in the parent meeting, centered on translating needs across systems without taking over another partner's responsibilities. Which named idea is most relevant?

A. Consent-based information sharing
B. Interprofessional collaboration
C. Outcome feedback loop
D. Boundary spanning

0178. In school-community collaboration, which option preserves the correct meaning of both Interprofessional collaboration and Warm referral?

A. Interprofessional collaboration: Coordinated work among professionals who contribute distinct expertise toward shared client goals. / Warm referral: Identification of local strengths, organizations, relationships, and resources relevant to community goals.
B. Interprofessional collaboration: Coordinated work among professionals who contribute distinct expertise toward shared client goals. / Warm referral: An active, supported connection from one service to another that reduces barriers to follow-through.
C. Interprofessional collaboration: An active, supported connection from one service to another that reduces barriers to follow-through. / Warm referral: Coordinated work among professionals who contribute distinct expertise toward shared client goals.
D. Interprofessional collaboration: A partnership in which community members share influence in defining questions, actions, and interpretation. / Warm referral: An active, supported connection from one service to another that reduces barriers to follow-through.

0179. In school-community collaboration, how should a practitioner distinguish the applications of Interprofessional collaboration and Community asset mapping?

A. Interprofessional collaboration: Mapping existing youth programs and trusted community networks before planning a new service. / Community asset mapping: Agreeing on roles and communication with school and community partners, subject to permission.
B. Interprofessional collaboration: Documenting who will take each agreed next step and when progress will be reviewed. / Community asset mapping: Mapping existing youth programs and trusted community networks before planning a new service.
C. Interprofessional collaboration: Agreeing on roles and communication with school and community partners, subject to permission. / Community asset mapping: Translating needs across systems without taking over another partner's responsibilities.
D. Interprofessional collaboration: Agreeing on roles and communication with school and community partners, subject to permission. / Community asset mapping: Mapping existing youth programs and trusted community networks before planning a new service.

0180. Which option pairs the definitions of Community asset mapping and Community-based participatory practice correctly, in that order?

A. Community asset mapping: A partnership in which community members share influence in defining questions, actions, and interpretation. / Community-based participatory practice: Identification of local strengths, organizations, relationships, and resources relevant to community goals.
B. Community asset mapping: Identification of local strengths, organizations, relationships, and resources relevant to community goals. / Community-based participatory practice: A partnership in which community members share influence in defining questions, actions, and interpretation.
C. Community asset mapping: An active, supported connection from one service to another that reduces barriers to follow-through. / Community-based participatory practice: A partnership in which community members share influence in defining questions, actions, and interpretation.
D. Community asset mapping: Identification of local strengths, organizations, relationships, and resources relevant to community goals. / Community-based participatory practice: A structured process in which partners define a concern, generate options, test a plan, and review outcomes.

0181. Which paired example correctly applies Boundary spanning first and Outcome feedback loop second?

A. Boundary spanning: Translating needs across systems without taking over another partner’s responsibilities. / Outcome feedback loop: Confirming authorization and sharing only information needed for coordinated support.
B. Boundary spanning: Agreeing on roles and communication with school and community partners, subject to permission. / Outcome feedback loop: Reviewing attendance or wellbeing data together and adjusting supports with permission.
C. Boundary spanning: Reviewing attendance or wellbeing data together and adjusting supports with permission. / Outcome feedback loop: Translating needs across systems without taking over another partner’s responsibilities.
D. Boundary spanning: Translating needs across systems without taking over another partner’s responsibilities. / Outcome feedback loop: Reviewing attendance or wellbeing data together and adjusting supports with permission.

0182. In school-community collaboration, a case conference asks for a distinction between Interprofessional collaboration and Warm referral. Which answer is sound?

A. Interprofessional collaboration: Coordinated work among professionals who contribute distinct expertise toward shared client goals. / Warm referral: An active, supported connection from one service to another that reduces barriers to follow-through.
B. Interprofessional collaboration: A partnership in which community members share influence in defining questions, actions, and interpretation. / Warm referral: An active, supported connection from one service to another that reduces barriers to follow-through.
C. Interprofessional collaboration: An active, supported connection from one service to another that reduces barriers to follow-through. / Warm referral: Coordinated work among professionals who contribute distinct expertise toward shared client goals.
D. Interprofessional collaboration: Coordinated work among professionals who contribute distinct expertise toward shared client goals. / Warm referral: Identification of local strengths, organizations, relationships, and resources relevant to community goals.

0183. A trainee must distinguish how Shared care plan and Outcome feedback loop guide practice. Which comparison is accurate?

A. Shared care plan: Clarifying who contacts caregivers and who monitors a school support. / Outcome feedback loop: Reviewing attendance or wellbeing data together and adjusting supports with permission.
B. Shared care plan: Documenting who will take each agreed next step and when progress will be reviewed. / Outcome feedback loop: Mapping existing youth programs and trusted community networks before planning a new service.
C. Shared care plan: Documenting who will take each agreed next step and when progress will be reviewed. / Outcome feedback loop: Reviewing attendance or wellbeing data together and adjusting supports with permission.
D. Shared care plan: Reviewing attendance or wellbeing data together and adjusting supports with permission. / Outcome feedback loop: Documenting who will take each agreed next step and when progress will be reviewed.

0184. Identify the most precise label for this idea: A structured process in which partners define a concern, generate options, test a plan, and review outcomes.

A. Warm referral
B. Shared care plan
C. Outcome feedback loop
D. Collaborative problem solving

0185. A trainee must distinguish how Consent-based information sharing and Outcome feedback loop guide practice. Which comparison is accurate?

A. Consent-based information sharing: Reviewing attendance or wellbeing data together and adjusting supports with permission. / Outcome feedback loop: Confirming authorization and sharing only information needed for coordinated support.
B. Consent-based information sharing: Confirming authorization and sharing only information needed for coordinated support. / Outcome feedback loop: Reviewing attendance or wellbeing data together and adjusting supports with permission.
C. Consent-based information sharing: Involving youth and community partners in decisions throughout a project, not only at launch. / Outcome feedback loop: Reviewing attendance or wellbeing data together and adjusting supports with permission.
D. Consent-based information sharing: Confirming authorization and sharing only information needed for coordinated support. / Outcome feedback loop: Documenting who will take each agreed next step and when progress will be reviewed.

0186. How are Collaborative problem solving and Community-based participatory practice most accurately differentiated in this curriculum?

A. Collaborative problem solving: A partnership in which community members share influence in defining questions, actions, and interpretation. / Community-based participatory practice: A structured process in which partners define a concern, generate options, test a plan, and review outcomes.
B. Collaborative problem solving: A structured process in which partners define a concern, generate options, test a plan, and review outcomes. / Community-based participatory practice: A partnership in which community members share influence in defining questions, actions, and interpretation.
C. Collaborative problem solving: Coordinated work among professionals who contribute distinct expertise toward shared client goals. / Community-based participatory practice: A partnership in which community members share influence in defining questions, actions, and interpretation.
D. Collaborative problem solving: A structured process in which partners define a concern, generate options, test a plan, and review outcomes. / Community-based participatory practice: An active, supported connection from one service to another that reduces barriers to follow-through.

0187. A supervisor asks for an applied contrast between Collaborative problem solving and Community-based participatory practice. Which option fits?

A. Collaborative problem solving: Agreeing on roles and communication with school and community partners, subject to permission. / Community-based participatory practice: Involving youth and community partners in decisions throughout a project, not only at launch.
B. Collaborative problem solving: Agreeing on a measurable concern, trying one support, and reconvening to evaluate it. / Community-based participatory practice: Involving youth and community partners in decisions throughout a project, not only at launch.
C. Collaborative problem solving: Involving youth and community partners in decisions throughout a project, not only at launch. / Community-based participatory practice: Agreeing on a measurable concern, trying one support, and reconvening to evaluate it.
D. Collaborative problem solving: Agreeing on a measurable concern, trying one support, and reconvening to evaluate it. / Community-based participatory practice: Helping the family make contact with a community service and checking whether connection occurred.

0188. In school-community collaboration, a student confuses Interprofessional collaboration with Outcome feedback loop. Which explanation most accurately separates them?

A. Interprofessional collaboration: Coordinated work among professionals who contribute distinct expertise toward shared client goals. / Outcome feedback loop: Regular use of shared outcome information to adapt coordinated services.
B. Interprofessional collaboration: Regular use of shared outcome information to adapt coordinated services. / Outcome feedback loop: Coordinated work among professionals who contribute distinct expertise toward shared client goals.
C. Interprofessional collaboration: An active, supported connection from one service to another that reduces barriers to follow-through. / Outcome feedback loop: Regular use of shared outcome information to adapt coordinated services.
D. Interprofessional collaboration: Coordinated work among professionals who contribute distinct expertise toward shared client goals. / Outcome feedback loop: Explicit agreement about each partner’s responsibilities, authority, and limits.

0189. Which comparison would correct a trainee’s misunderstanding of Role clarification versus Consent-based information sharing?

A. Role clarification: Regular use of shared outcome information to adapt coordinated services. / Consent-based information sharing: Exchange of relevant information under valid permission and applicable privacy requirements.
B. Role clarification: Explicit agreement about each partner’s responsibilities, authority, and limits. / Consent-based information sharing: Exchange of relevant information under valid permission and applicable privacy requirements.
C. Role clarification: Explicit agreement about each partner’s responsibilities, authority, and limits. / Consent-based information sharing: An active, supported connection from one service to another that reduces barriers to follow-through.
D. Role clarification: Exchange of relevant information under valid permission and applicable privacy requirements. / Consent-based information sharing: Explicit agreement about each partner’s responsibilities, authority, and limits.

0190. In the supervision meeting, a school counselor explains why a young person aged 13 would benefit from confirming authorization and sharing only information needed for coordinated support. Which course concept underpins the explanation?

A. Interprofessional collaboration
B. Collaborative problem solving
C. Warm referral
D. Consent-based information sharing

0191. While consulting in the community service agency, a member of a clinical team supports a high-school student by using this approach: agreeing on a measurable concern, trying one support, and reconvening to evaluate it. Which concept is being applied?

A. Consent-based information sharing
B. Collaborative problem solving
C. Community asset mapping
D. Shared care plan

0192. In school-community collaboration, which comparison would correct a trainee’s misunderstanding of Interprofessional collaboration versus Collaborative problem solving?

A. Interprofessional collaboration: Coordinated work among professionals who contribute distinct expertise toward shared client goals. / Collaborative problem solving: A coordinated, mutually understood set of goals, responsibilities, and follow-up steps across helpers.
B. Interprofessional collaboration: Coordinated work among professionals who contribute distinct expertise toward shared client goals. / Collaborative problem solving: A structured process in which partners define a concern, generate options, test a plan, and review outcomes.
C. Interprofessional collaboration: Regular use of shared outcome information to adapt coordinated services. / Collaborative problem solving: A structured process in which partners define a concern, generate options, test a plan, and review outcomes.
D. Interprofessional collaboration: A structured process in which partners define a concern, generate options, test a plan, and review outcomes. / Collaborative problem solving: Coordinated work among professionals who contribute distinct expertise toward shared client goals.

0193. A case coordinator presents a support plan for a child of elementary-school age at the supervision meeting. Its central feature is involving youth and community partners in decisions throughout a project, not only at launch. Which concept should be named?

A. Community-based participatory practice
B. Warm referral
C. Community asset mapping
D. Collaborative problem solving

0194. For a client in early adolescence seen in the classroom support meeting, the service navigator recommends a plan built around mapping existing youth programs and trusted community networks before planning a new service. Which concept is reflected?

A. Community asset mapping
B. Warm referral
C. Shared care plan
D. Collaborative problem solving

0195. In school-community collaboration, for a middle-school student in the school-based service, a behavior specialist makes this practice the immediate priority: agreeing on roles and communication with school and community partners, subject to permission. Which concept fits best?

A. Outcome feedback loop
B. Shared care plan
C. Consent-based information sharing
D. Interprofessional collaboration

0196. Which statement shows a sound practice-level distinction between Collaborative problem solving and Boundary spanning?

A. Collaborative problem solving: Agreeing on a measurable concern, trying one support, and reconvening to evaluate it. / Boundary spanning: Translating needs across systems without taking over another partner’s responsibilities.
B. Collaborative problem solving: Agreeing on a measurable concern, trying one support, and reconvening to evaluate it. / Boundary spanning: Reviewing attendance or wellbeing data together and adjusting supports with permission.
C. Collaborative problem solving: Documenting who will take each agreed next step and when progress will be reviewed. / Boundary spanning: Translating needs across systems without taking over another partner’s responsibilities.
D. Collaborative problem solving: Translating needs across systems without taking over another partner’s responsibilities. / Boundary spanning: Agreeing on a measurable concern, trying one support, and reconvening to evaluate it.

0197. A case conference asks for a distinction between Shared care plan and Boundary spanning. Which answer is sound?

A. Shared care plan: A coordinated, mutually understood set of goals, responsibilities, and follow-up steps across helpers. / Boundary spanning: Connecting organizations or professional groups while respecting each role’s authority and accountability.
B. Shared care plan: A coordinated, mutually understood set of goals, responsibilities, and follow-up steps across helpers. / Boundary spanning: Explicit agreement about each partner’s responsibilities, authority, and limits.
C. Shared care plan: Coordinated work among professionals who contribute distinct expertise toward shared client goals. / Boundary spanning: Connecting organizations or professional groups while respecting each role’s authority and accountability.
D. Shared care plan: Connecting organizations or professional groups while respecting each role’s authority and accountability. / Boundary spanning: A coordinated, mutually understood set of goals, responsibilities, and follow-up steps across helpers.

0198. At a case-planning meeting, the behavior specialist proposes confirming authorization and sharing only information needed for coordinated support. for a child aged 11 seen in the multidisciplinary case conference. Which concept does this illustrate?

A. Boundary spanning
B. Interprofessional collaboration
C. Warm referral
D. Consent-based information sharing

0199. A student confuses Shared care plan with Community asset mapping. Which explanation most accurately separates them?

A. Shared care plan: Exchange of relevant information under valid permission and applicable privacy requirements. / Community asset mapping: Identification of local strengths, organizations, relationships, and resources relevant to community goals.
B. Shared care plan: A coordinated, mutually understood set of goals, responsibilities, and follow-up steps across helpers. / Community asset mapping: Explicit agreement about each partner's responsibilities, authority, and limits.
C. Shared care plan: Identification of local strengths, organizations, relationships, and resources relevant to community goals. / Community asset mapping: A coordinated, mutually understood set of goals, responsibilities, and follow-up steps across helpers.
D. Shared care plan: A coordinated, mutually understood set of goals, responsibilities, and follow-up steps across helpers. / Community asset mapping: Identification of local strengths, organizations, relationships, and resources relevant to community goals.

0200. A counselor is asked to evaluate a proposed service for a student aged 12 in the community youth program. The defining feature is involving youth and community partners in decisions throughout a project, not only at launch. Which concept fits?

A. Outcome feedback loop
B. Community asset mapping
C. Boundary spanning
D. Community-based participatory practice

0201. A mental-health professional prepares for a session in the learning-support meeting with a student aged 15. The intended approach is clarifying who contacts caregivers and who monitors a school support. Which concept is most relevant?

A. Collaborative problem solving
B. Community-based participatory practice
C. Community asset mapping
D. Role clarification

0202. Which comparison correctly distinguishes Consent-based information sharing from Collaborative problem solving?

A. Consent-based information sharing: Exchange of relevant information under valid permission and applicable privacy requirements. / Collaborative problem solving: A structured process in which partners define a concern, generate options, test a plan, and review outcomes.
B. Consent-based information sharing: Exchange of relevant information under valid permission and applicable privacy requirements. / Collaborative problem solving: An active, supported connection from one service to another that reduces barriers to follow-through.
C. Consent-based information sharing: Regular use of shared outcome information to adapt coordinated services. / Collaborative problem solving: A structured process in which partners define a concern, generate options, test a plan, and review outcomes.
D. Consent-based information sharing: A structured process in which partners define a concern, generate options, test a plan, and review outcomes. / Collaborative problem solving: Exchange of relevant information under valid permission and applicable privacy requirements.

0203. At the behavior-support review, a clinical supervisor meets with a child of elementary-school age. The practice priority is: helping the family make contact with a community service and checking whether connection occurred. Which concept best captures that priority?

A. Role clarification
B. Community-based participatory practice
C. Boundary spanning
D. Warm referral

0204. In a supervision quiz, how should Warm referral be distinguished from Community-based participatory practice?

A. Warm referral: A partnership in which community members share influence in defining questions, actions, and interpretation. / Community-based participatory practice: An active, supported connection from one service to another that reduces barriers to follow-through.
B. Warm referral: Explicit agreement about each partner's responsibilities, authority, and limits. / Community-based participatory practice: A partnership in which community members share influence in defining questions, actions, and interpretation.
C. Warm referral: An active, supported connection from one service to another that reduces barriers to follow-through. / Community-based participatory practice: A partnership in which community members share influence in defining questions, actions, and interpretation.
D. Warm referral: An active, supported connection from one service to another that reduces barriers to follow-through. / Community-based participatory practice: Coordinated work among professionals who contribute distinct expertise toward shared client goals.

0205. Which statement most accurately defines Collaborative problem solving?

A. A structured process in which partners define a concern, generate options, test a plan, and review outcomes.
B. Exchange of relevant information under valid permission and applicable privacy requirements.
C. Coordinated work among professionals who contribute distinct expertise toward shared client goals.
D. Connecting organizations or professional groups while respecting each role's authority and accountability.

0206. Which statement accurately contrasts the course concepts Shared care plan and Role clarification?

A. Shared care plan: A coordinated, mutually understood set of goals, responsibilities, and follow-up steps across helpers. / Role clarification: Explicit agreement about each partner's responsibilities, authority, and limits.
B. Shared care plan: Connecting organizations or professional groups while respecting each role's authority and accountability. / Role clarification: Explicit agreement about each partner's responsibilities, authority, and limits.
C. Shared care plan: A coordinated, mutually understood set of goals, responsibilities, and follow-up steps across helpers. / Role clarification: Identification of local strengths, organizations, relationships, and resources relevant to community goals.
D. Shared care plan: Explicit agreement about each partner's responsibilities, authority, and limits. / Role clarification: A coordinated, mutually understood set of goals, responsibilities, and follow-up steps across helpers.

0207. In school-community collaboration, a case discussion concerns a child aged 11 and a family therapist in the family session. The practitioner is considering agreeing on roles and communication with school and community partners, subject to permission. Which principle is involved?

A. Shared care plan
B. Interprofessional collaboration
C. Community-based participatory practice
D. Collaborative problem solving

0208. A child aged 14 is receiving support in the family session. The teacher and counselor is guided by this practice: involving youth and community partners in decisions throughout a project, not only at launch. Which principle best fits?

A. Role clarification
B. Outcome feedback loop
C. Community-based participatory practice
D. Community asset mapping

0209. In school-community collaboration, a trainee must distinguish how Interprofessional collaboration and Collaborative problem solving guide practice. Which comparison is accurate?

A. Interprofessional collaboration: Reviewing attendance or wellbeing data together and adjusting supports with permission. / Collaborative problem solving: Agreeing on a measurable concern, trying one support, and reconvening to evaluate it.
B. Interprofessional collaboration: Agreeing on roles and communication with school and community partners, subject to permission. / Collaborative problem solving: Documenting who will take each agreed next step and when progress will be reviewed.
C. Interprofessional collaboration: Agreeing on a measurable concern, trying one support, and reconvening to evaluate it. / Collaborative problem solving: Agreeing on roles and communication with school and community partners, subject to permission.
D. Interprofessional collaboration: Agreeing on roles and communication with school and community partners, subject to permission. / Collaborative problem solving: Agreeing on a measurable concern, trying one support, and reconvening to evaluate it.

0210. Which option correctly matches each concept to its practice focus: Community-based participatory practice and Boundary spanning?

A. Community-based participatory practice: Involving youth and community partners in decisions throughout a project, not only at launch. / Boundary spanning: Translating needs across systems without taking over another partner's responsibilities.
B. Community-based participatory practice: Confirming authorization and sharing only information needed for coordinated support. / Boundary spanning: Translating needs across systems without taking over another partner's responsibilities.
C. Community-based participatory practice: Involving youth and community partners in decisions throughout a project, not only at launch. / Boundary spanning: Agreeing on roles and communication with school and community partners, subject to permission.
D. Community-based participatory practice: Translating needs across systems without taking over another partner's responsibilities. / Boundary spanning: Involving youth and community partners in decisions throughout a project, not only at launch.

0211. In the school consultation, a team asks how a consulting counselor can support a school-age child. One proposed action is confirming authorization and sharing only information needed for coordinated support. Which idea does it represent?

A. Consent-based information sharing
B. Collaborative problem solving
C. Warm referral
D. Outcome feedback loop

0212. Which professional action most closely applies Shared care plan?

A. Agreeing on roles and communication with school and community partners, subject to permission.
B. Reviewing attendance or wellbeing data together and adjusting supports with permission.
C. Documenting who will take each agreed next step and when progress will be reviewed.
D. Helping the family make contact with a community service and checking whether connection occurred.

0213. A case conference asks for a distinction between Role clarification and Collaborative problem solving. Which answer is sound?

A. Role clarification: An active, supported connection from one service to another that reduces barriers to follow-through. / Collaborative problem solving: A structured process in which partners define a concern, generate options, test a plan, and review outcomes.
B. Role clarification: Explicit agreement about each partner's responsibilities, authority, and limits. / Collaborative problem solving: A structured process in which partners define a concern, generate options, test a plan, and review outcomes.
C. Role clarification: Explicit agreement about each partner's responsibilities, authority, and limits. / Collaborative problem solving: A coordinated, mutually understood set of goals, responsibilities, and follow-up steps across helpers.
D. Role clarification: A structured process in which partners define a concern, generate options, test a plan, and review outcomes. / Collaborative problem solving: Explicit agreement about each partner's responsibilities, authority, and limits.

0214. In school-community collaboration, during service review in the student wellness team, a program coordinator describes agreeing on roles and communication with school and community partners, subject to permission. for a client in late adolescence. Which course idea is most applicable?

A. Boundary spanning
B. Interprofessional collaboration
C. Collaborative problem solving
D. Community-based participatory practice

0215. A planning meeting about a child aged 14 includes a behavior specialist. The proposed practice in the student wellness team is clarifying who contacts caregivers and who monitors a school support. Which idea underlies it?

A. Consent-based information sharing
B. Warm referral
C. Community-based participatory practice
D. Role clarification

0216. A doctoral student reads the following description. Which concept does it define? Connecting organizations or professional groups while respecting each role's authority and accountability.

A. Community asset mapping
B. Boundary spanning
C. Community-based participatory practice
D. Role clarification

0217. In school-community collaboration, when reviewing a young person aged 16's plan in the community mental-health service, the school-based clinician notes that the next step is agreeing on roles and communication with school and community partners, subject to permission. Which concept guides this step?

A. Collaborative problem solving
B. Boundary spanning
C. Community asset mapping
D. Interprofessional collaboration

0218. Which paired example correctly applies Shared care plan first and Boundary spanning second?

A. Shared care plan: Documenting who will take each agreed next step and when progress will be reviewed. / Boundary spanning: Clarifying who contacts caregivers and who monitors a school support.
B. Shared care plan: Documenting who will take each agreed next step and when progress will be reviewed. / Boundary spanning: Translating needs across systems without taking over another partner's responsibilities.
C. Shared care plan: Translating needs across systems without taking over another partner's responsibilities. / Boundary spanning: Documenting who will take each agreed next step and when progress will be reviewed.
D. Shared care plan: Agreeing on roles and communication with school and community partners, subject to permission. / Boundary spanning: Translating needs across systems without taking over another partner's responsibilities.

0219. How should a practitioner distinguish the applications of Role clarification and Boundary spanning?

A. Role clarification: Clarifying who contacts caregivers and who monitors a school support. / Boundary spanning: Confirming authorization and sharing only information needed for coordinated support.
B. Role clarification: Translating needs across systems without taking over another partner's responsibilities. / Boundary spanning: Clarifying who contacts caregivers and who monitors a school support.
C. Role clarification: Clarifying who contacts caregivers and who monitors a school support. / Boundary spanning: Translating needs across systems without taking over another partner's responsibilities.
D. Role clarification: Agreeing on a measurable concern, trying one support, and reconvening to evaluate it. / Boundary spanning: Translating needs across systems without taking over another partner's responsibilities.

0220. A trainee must distinguish how Community asset mapping and Boundary spanning guide practice. Which comparison is accurate?

A. Community asset mapping: Translating needs across systems without taking over another partner's responsibilities. / Boundary spanning: Mapping existing youth programs and trusted community networks before planning a new service.
B. Community asset mapping: Agreeing on a measurable concern, trying one support, and reconvening to evaluate it. / Boundary spanning: Translating needs across systems without taking over another partner's responsibilities.
C. Community asset mapping: Mapping existing youth programs and trusted community networks before planning a new service. / Boundary spanning: Documenting who will take each agreed next step and when progress will be reviewed.
D. Community asset mapping: Mapping existing youth programs and trusted community networks before planning a new service. / Boundary spanning: Translating needs across systems without taking over another partner's responsibilities.

0221. A community practitioner is asked what should shape a middle-school student's support in the community mental-health service. The proposed focus is translating needs across systems without taking over another partner's responsibilities. Which principle does it represent?

A. Boundary spanning
B. Community asset mapping
C. Role clarification
D. Outcome feedback loop

0222. In school-community collaboration, a supervisor asks for an applied contrast between Interprofessional collaboration and Boundary spanning. Which option fits?

A. Interprofessional collaboration: Agreeing on roles and communication with school and community partners, subject to permission. / Boundary spanning: Confirming authorization and sharing only information needed for coordinated support.
B. Interprofessional collaboration: Documenting who will take each agreed next step and when progress will be reviewed. / Boundary spanning: Translating needs across systems without taking over another partner's responsibilities.
C. Interprofessional collaboration: Translating needs across systems without taking over another partner's responsibilities. / Boundary spanning: Agreeing on roles and communication with school and community partners, subject to permission.
D. Interprofessional collaboration: Agreeing on roles and communication with school and community partners, subject to permission. / Boundary spanning: Translating needs across systems without taking over another partner's responsibilities.

0223. Which option is the clearest practical expression of Shared care plan?

A. Helping the family make contact with a community service and checking whether connection occurred.
B. Documenting who will take each agreed next step and when progress will be reviewed.
C. Translating needs across systems without taking over another partner's responsibilities.
D. Confirming authorization and sharing only information needed for coordinated support.

0224. While consulting in the caregiver consultation, a mental-health professional supports a young adolescent client by using this approach: documenting who will take each agreed next step and when progress will be reviewed. Which concept is being applied?

A. Outcome feedback loop
B. Role clarification
C. Warm referral
D. Shared care plan

0225. When reviewing a client in early adolescence's plan in the parent meeting, the school-based clinician notes that the next step is agreeing on a measurable concern, trying one support, and reconvening to evaluate it. Which concept guides this step?

A. Role clarification
B. Outcome feedback loop
C. Collaborative problem solving
D. Interprofessional collaboration

0226. How should a practitioner distinguish the applications of Collaborative problem solving and Outcome feedback loop?

A. Collaborative problem solving: Mapping existing youth programs and trusted community networks before planning a new service. / Outcome feedback loop: Reviewing attendance or wellbeing data together and adjusting supports with permission.
B. Collaborative problem solving: Agreeing on a measurable concern, trying one support, and reconvening to evaluate it. / Outcome feedback loop: Reviewing attendance or wellbeing data together and adjusting supports with permission.
C. Collaborative problem solving: Agreeing on a measurable concern, trying one support, and reconvening to evaluate it. / Outcome feedback loop: Helping the family make contact with a community service and checking whether connection occurred.
D. Collaborative problem solving: Reviewing attendance or wellbeing data together and adjusting supports with permission. / Outcome feedback loop: Agreeing on a measurable concern, trying one support, and reconvening to evaluate it.

0227. During work in the learning-support meeting, a youth worker identifies this need: helping the family make contact with a community service and checking whether connection occurred. Which idea should guide the response?

A. Consent-based information sharing
B. Interprofessional collaboration
C. Warm referral
D. Boundary spanning

0228. A case discussion concerns a child aged 7 and a case coordinator in the student-support meeting. The practitioner is considering documenting who will take each agreed next step and when progress will be reviewed. Which principle is involved?

A. Warm referral
B. Outcome feedback loop
C. Interprofessional collaboration
D. Shared care plan

0229. Which option is the clearest practical expression of Community asset mapping?

A. Involving youth and community partners in decisions throughout a project, not only at launch.
B. Translating needs across systems without taking over another partner's responsibilities.
C. Agreeing on roles and communication with school and community partners, subject to permission.
D. Mapping existing youth programs and trusted community networks before planning a new service.

0230. Which choice aligns each practice with the correct idea, Community asset mapping or Collaborative problem solving?

A. Community asset mapping: Mapping existing youth programs and trusted community networks before planning a new service. / Collaborative problem solving: Agreeing on a measurable concern, trying one support, and reconvening to evaluate it.
B. Community asset mapping: Reviewing attendance or wellbeing data together and adjusting supports with permission. / Collaborative problem solving: Agreeing on a measurable concern, trying one support, and reconvening to evaluate it.
C. Community asset mapping: Agreeing on a measurable concern, trying one support, and reconvening to evaluate it. / Collaborative problem solving: Mapping existing youth programs and trusted community networks before planning a new service.
D. Community asset mapping: Mapping existing youth programs and trusted community networks before planning a new service. / Collaborative problem solving: Helping the family make contact with a community service and checking whether connection occurred.

0231. In school-community collaboration, which paired example correctly applies Interprofessional collaboration first and Boundary spanning second?

A. Interprofessional collaboration: Translating needs across systems without taking over another partner's responsibilities. / Boundary spanning: Agreeing on roles and communication with school and community partners, subject to permission.
B. Interprofessional collaboration: Documenting who will take each agreed next step and when progress will be reviewed. / Boundary spanning: Translating needs across systems without taking over another partner's responsibilities.
C. Interprofessional collaboration: Agreeing on roles and communication with school and community partners, subject to permission. / Boundary spanning: Confirming authorization and sharing only information needed for coordinated support.
D. Interprofessional collaboration: Agreeing on roles and communication with school and community partners, subject to permission. / Boundary spanning: Translating needs across systems without taking over another partner's responsibilities.

0232. Choose the definition pair that correctly explains Shared care plan first and Warm referral second.

A. Shared care plan: A coordinated, mutually understood set of goals, responsibilities, and follow-up steps across helpers. / Warm referral: Regular use of shared outcome information to adapt coordinated services.
B. Shared care plan: Coordinated work among professionals who contribute distinct expertise toward shared client goals. / Warm referral: An active, supported connection from one service to another that reduces barriers to follow-through.
C. Shared care plan: An active, supported connection from one service to another that reduces barriers to follow-through. / Warm referral: A coordinated, mutually understood set of goals, responsibilities, and follow-up steps across helpers.
D. Shared care plan: A coordinated, mutually understood set of goals, responsibilities, and follow-up steps across helpers. / Warm referral: An active, supported connection from one service to another that reduces barriers to follow-through.

0233. Which choice aligns each practice with the correct idea, Community-based participatory practice or Outcome feedback loop?

A. Community-based participatory practice: Involving youth and community partners in decisions throughout a project, not only at launch. / Outcome feedback loop: Agreeing on roles and communication with school and community partners, subject to permission.
B. Community-based participatory practice: Agreeing on a measurable concern, trying one support, and reconvening to evaluate it. / Outcome feedback loop: Reviewing attendance or wellbeing data together and adjusting supports with permission.
C. Community-based participatory practice: Involving youth and community partners in decisions throughout a project, not only at launch. / Outcome feedback loop: Reviewing attendance or wellbeing data together and adjusting supports with permission.
D. Community-based participatory practice: Reviewing attendance or wellbeing data together and adjusting supports with permission. / Outcome feedback loop: Involving youth and community partners in decisions throughout a project, not only at launch.

0234. A trainee must choose a practice that exemplifies Role clarification. Which action is the best fit?

A. Reviewing attendance or wellbeing data together and adjusting supports with permission.
B. Agreeing on a measurable concern, trying one support, and reconvening to evaluate it.
C. Helping the family make contact with a community service and checking whether connection occurred.
D. Clarifying who contacts caregivers and who monitors a school support.

0235. In school-community collaboration, a play therapist reviews a plan for a young person aged 13 in the telehealth session. The plan emphasizes agreeing on roles and communication with school and community partners, subject to permission. Which course idea does this reflect?

A. Outcome feedback loop
B. Interprofessional collaboration
C. Consent-based information sharing
D. Role clarification

0236. In a case note about a child aged 7, a mental-health professional working in the outpatient clinic records this priority: mapping existing youth programs and trusted community networks before planning a new service. What principle is reflected?

A. Warm referral
B. Community-based participatory practice
C. Community asset mapping
D. Interprofessional collaboration

0237. In school-community collaboration, how should a practitioner distinguish the applications of Interprofessional collaboration and Role clarification?

A. Interprofessional collaboration: Clarifying who contacts caregivers and who monitors a school support. / Role clarification: Agreeing on roles and communication with school and community partners, subject to permission.
B. Interprofessional collaboration: Agreeing on roles and communication with school and community partners, subject to permission. / Role clarification: Helping the family make contact with a community service and checking whether connection occurred.
C. Interprofessional collaboration: Agreeing on roles and communication with school and community partners, subject to permission. / Role clarification: Clarifying who contacts caregivers and who monitors a school support.
D. Interprofessional collaboration: Translating needs across systems without taking over another partner's responsibilities. / Role clarification: Clarifying who contacts caregivers and who monitors a school support.

0238. A doctoral student reads the following description. Which concept does it define? Identification of local strengths, organizations, relationships, and resources relevant to community goals.

A. Community asset mapping
B. Warm referral
C. Shared care plan
D. Collaborative problem solving

0239. An interdisciplinary team reviews a high-school student’s case at the caregiver consultation. The behavior specialist recommends translating needs across systems without taking over another partner’s responsibilities. Which course concept best fits?

A. Boundary spanning
B. Community asset mapping
C. Outcome feedback loop
D. Role clarification

0240. Which statement accurately contrasts the course concepts Community asset mapping and Community-based participatory practice?

A. Community asset mapping: Identification of local strengths, organizations, relationships, and resources relevant to community goals. / Community-based participatory practice: A partnership in which community members share influence in defining questions, actions, and interpretation.
B. Community asset mapping: A partnership in which community members share influence in defining questions, actions, and interpretation. / Community-based participatory practice: Identification of local strengths, organizations, relationships, and resources relevant to community goals.
C. Community asset mapping: Identification of local strengths, organizations, relationships, and resources relevant to community goals. / Community-based participatory practice: A structured process in which partners define a concern, generate options, test a plan, and review outcomes.
D. Community asset mapping: An active, supported connection from one service to another that reduces barriers to follow-through. / Community-based participatory practice: A partnership in which community members share influence in defining questions, actions, and interpretation.

0241. A member of a clinical team is preparing a follow-up plan for a child aged 7 in the youth group. The plan calls for involving youth and community partners in decisions throughout a project, not only at launch. Which concept names this approach?

A. Community-based participatory practice
B. Consent-based information sharing
C. Interprofessional collaboration
D. Warm referral

0242. Which professional action most closely applies Consent-based information sharing?

A. Agreeing on a measurable concern, trying one support, and reconvening to evaluate it.
B. Documenting who will take each agreed next step and when progress will be reviewed.
C. Confirming authorization and sharing only information needed for coordinated support.
D. Mapping existing youth programs and trusted community networks before planning a new service.

0243. For a child of elementary-school age seen in the student-support meeting, the program coordinator recommends a plan built around reviewing attendance or wellbeing data together and adjusting supports with permission. Which concept is reflected?

A. Interprofessional collaboration
B. Role clarification
C. Outcome feedback loop
D. Shared care plan

0244. A behavior specialist reviews a plan for a child aged 6 in the community mental-health service. The plan emphasizes documenting who will take each agreed next step and when progress will be reviewed. Which course idea does this reflect?

A. Shared care plan
B. Collaborative problem solving
C. Warm referral
D. Community-based participatory practice

0245. At a case-planning meeting, the counselor proposes agreeing on a measurable concern, trying one support, and reconvening to evaluate it. for a child aged 7 seen in the school-based service. Which concept does this illustrate?

A. Community asset mapping
B. Collaborative problem solving
C. Warm referral
D. Role clarification

0246. Which applied comparison correctly identifies what belongs to Boundary spanning versus Outcome feedback loop?

A. Boundary spanning: Reviewing attendance or wellbeing data together and adjusting supports with permission. / Outcome feedback loop: Translating needs across systems without taking over another partner’s responsibilities.
B. Boundary spanning: Translating needs across systems without taking over another partner’s responsibilities. / Outcome feedback loop: Reviewing attendance or wellbeing data together and adjusting supports with permission.
C. Boundary spanning: Translating needs across systems without taking over another partner’s responsibilities. / Outcome feedback loop: Confirming authorization and sharing only information needed for coordinated support.
D. Boundary spanning: Agreeing on roles and communication with school and community partners, subject to permission. / Outcome feedback loop: Reviewing attendance or wellbeing data together and adjusting supports with permission.

0247. Which choice aligns each practice with the correct idea, Community asset mapping or Boundary spanning?

A. Community asset mapping: Mapping existing youth programs and trusted community networks before planning a new service. / Boundary spanning: Documenting who will take each agreed next step and when progress will be reviewed.
B. Community asset mapping: Agreeing on a measurable concern, trying one support, and reconvening to evaluate it. / Boundary spanning: Translating needs across systems without taking over another partner’s responsibilities.
C. Community asset mapping: Translating needs across systems without taking over another partner’s responsibilities. / Boundary spanning: Mapping existing youth programs and trusted community networks before planning a new service.
D. Community asset mapping: Mapping existing youth programs and trusted community networks before planning a new service. / Boundary spanning: Translating needs across systems without taking over another partner’s responsibilities.

0248. For a teenage client in the supervision meeting, a school support specialist makes this practice the immediate priority: translating needs across systems without taking over another partner’s responsibilities. Which concept fits best?

A. Warm referral
B. Interprofessional collaboration
C. Boundary spanning
D. Role clarification

0249. Choose the practice comparison that best separates Role clarification from Warm referral.

A. Role clarification: Clarifying who contacts caregivers and who monitors a school support. / Warm referral: Mapping existing youth programs and trusted community networks before planning a new service.
B. Role clarification: Helping the family make contact with a community service and checking whether connection occurred. / Warm referral: Clarifying who contacts caregivers and who monitors a school support.
C. Role clarification: Agreeing on a measurable concern, trying one support, and reconvening to evaluate it. / Warm referral: Helping the family make contact with a community service and checking whether connection occurred.
D. Role clarification: Clarifying who contacts caregivers and who monitors a school support. / Warm referral: Helping the family make contact with a community service and checking whether connection occurred.

0250. Which paired example correctly applies Consent-based information sharing first and Boundary spanning second?

A. Consent-based information sharing: Confirming authorization and sharing only information needed for coordinated support. / Boundary spanning: Documenting who will take each agreed next step and when progress will be reviewed.
B. Consent-based information sharing: Agreeing on roles and communication with school and community partners, subject to permission. / Boundary spanning: Translating needs across systems without taking over another partner's responsibilities.
C. Consent-based information sharing: Translating needs across systems without taking over another partner's responsibilities. / Boundary spanning: Confirming authorization and sharing only information needed for coordinated support.
D. Consent-based information sharing: Confirming authorization and sharing only information needed for coordinated support. / Boundary spanning: Translating needs across systems without taking over another partner's responsibilities.

0251. Choose the definition pair that correctly explains Shared care plan first and Consent-based information sharing second.

A. Shared care plan: Exchange of relevant information under valid permission and applicable privacy requirements. / Consent-based information sharing: A coordinated, mutually understood set of goals, responsibilities, and follow-up steps across helpers.
B. Shared care plan: A coordinated, mutually understood set of goals, responsibilities, and follow-up steps across helpers. / Consent-based information sharing: Exchange of relevant information under valid permission and applicable privacy requirements.
C. Shared care plan: A coordinated, mutually understood set of goals, responsibilities, and follow-up steps across helpers. / Consent-based information sharing: Regular use of shared outcome information to adapt coordinated services.
D. Shared care plan: A structured process in which partners define a concern, generate options, test a plan, and review outcomes. / Consent-based information sharing: Exchange of relevant information under valid permission and applicable privacy requirements.

0252. A case discussion concerns a young adolescent client and a family therapist in the behavior-support review. The practitioner is considering agreeing on a measurable concern, trying one support, and reconvening to evaluate it. Which principle is involved?

A. Community-based participatory practice
B. Interprofessional collaboration
C. Collaborative problem solving
D. Consent-based information sharing

0253. Which option pairs the definitions of Warm referral and Boundary spanning correctly, in that order?

A. Warm referral: A structured process in which partners define a concern, generate options, test a plan, and review outcomes. / Boundary spanning: Connecting organizations or professional groups while respecting each role's authority and accountability.
B. Warm referral: An active, supported connection from one service to another that reduces barriers to follow-through. / Boundary spanning: Connecting organizations or professional groups while respecting each role's authority and accountability.
C. Warm referral: Connecting organizations or professional groups while respecting each role's authority and accountability. / Boundary spanning: An active, supported connection from one service to another that reduces barriers to follow-through.
D. Warm referral: An active, supported connection from one service to another that reduces barriers to follow-through. / Boundary spanning: Coordinated work among professionals who contribute distinct expertise toward shared client goals.

0254. A trainee must distinguish how Role clarification and Collaborative problem solving guide practice. Which comparison is accurate?

A. Role clarification: Agreeing on a measurable concern, trying one support, and reconvening to evaluate it. / Collaborative problem solving: Clarifying who contacts caregivers and who monitors a school support.
B. Role clarification: Clarifying who contacts caregivers and who monitors a school support. / Collaborative problem solving: Agreeing on a measurable concern, trying one support, and reconvening to evaluate it.
C. Role clarification: Helping the family make contact with a community service and checking whether connection occurred. / Collaborative problem solving: Agreeing on a measurable concern, trying one support, and reconvening to evaluate it.
D. Role clarification: Clarifying who contacts caregivers and who monitors a school support. / Collaborative problem solving: Documenting who will take each agreed next step and when progress will be reviewed.

0255. In school-community collaboration, a supervisor asks for an applied contrast between Interprofessional collaboration and Community-based participatory practice. Which option fits?

A. Interprofessional collaboration: Involving youth and community partners in decisions throughout a project, not only at launch. / Community-based participatory practice: Agreeing on roles and communication with school and community partners, subject to permission.
B. Interprofessional collaboration: Documenting who will take each agreed next step and when progress will be reviewed. / Community-based participatory practice: Involving youth and community partners in decisions throughout a project, not only at launch.
C. Interprofessional collaboration: Agreeing on roles and communication with school and community partners, subject to permission. / Community-based participatory practice: Involving youth and community partners in decisions throughout a project, not only at launch.
D. Interprofessional collaboration: Agreeing on roles and communication with school and community partners, subject to permission. / Community-based participatory practice: Agreeing on a measurable concern, trying one support, and reconvening to evaluate it.

0256. How should a practitioner distinguish the applications of Warm referral and Community-based participatory practice?

A. Warm referral: Involving youth and community partners in decisions throughout a project, not only at launch. / Community-based participatory practice: Helping the family make contact with a community service and checking whether connection occurred.
B. Warm referral: Helping the family make contact with a community service and checking whether connection occurred. / Community-based participatory practice: Agreeing on roles and communication with school and community partners, subject to permission.
C. Warm referral: Helping the family make contact with a community service and checking whether connection occurred. / Community-based participatory practice: Involving youth and community partners in decisions throughout a project, not only at launch.
D. Warm referral: Clarifying who contacts caregivers and who monitors a school support. / Community-based participatory practice: Involving youth and community partners in decisions throughout a project, not only at launch.

0257. Which comparison correctly distinguishes Shared care plan from Community asset mapping?

A. Shared care plan: Exchange of relevant information under valid permission and applicable privacy requirements. / Community asset mapping: Identification of local strengths, organizations, relationships, and resources relevant to community goals.
B. Shared care plan: A coordinated, mutually understood set of goals, responsibilities, and follow-up steps across helpers. / Community asset mapping: Explicit agreement about each partner's responsibilities, authority, and limits.
C. Shared care plan: Identification of local strengths, organizations, relationships, and resources relevant to community goals. / Community asset mapping: A coordinated, mutually understood set of goals, responsibilities, and follow-up steps across helpers.
D. Shared care plan: A coordinated, mutually understood set of goals, responsibilities, and follow-up steps across helpers. / Community asset mapping: Identification of local strengths, organizations, relationships, and resources relevant to community goals.

0258. A support meeting for a young person aged 13 includes a school support specialist in the classroom support meeting. The practice under consideration is agreeing on a measurable concern, trying one support, and reconvening to evaluate it. Which concept guides it?

A. Collaborative problem solving
B. Shared care plan
C. Outcome feedback loop
D. Community asset mapping

0259. Which comparison would correct a trainee's misunderstanding of Role clarification versus Collaborative problem solving?

A. Role clarification: Explicit agreement about each partner's responsibilities, authority, and limits. / Collaborative problem solving: A structured process in which partners define a concern, generate options, test a plan, and review outcomes.
B. Role clarification: Explicit agreement about each partner's responsibilities, authority, and limits. / Collaborative problem solving: A coordinated, mutually understood set of goals, responsibilities, and follow-up steps across helpers.
C. Role clarification: A structured process in which partners define a concern, generate options, test a plan, and review outcomes. / Collaborative problem solving: Explicit agreement about each partner's responsibilities, authority, and limits.
D. Role clarification: An active, supported connection from one service to another that reduces barriers to follow-through. / Collaborative problem solving: A structured process in which partners define a concern, generate options, test a plan, and review outcomes.

0260. When reviewing a young person aged 18's plan in the learning-support meeting, the parent educator notes that the next step is confirming authorization and sharing only information needed for coordinated support. Which concept guides this step?

A. Community asset mapping
B. Role clarification
C. Outcome feedback loop
D. Consent-based information sharing

0261. Which pair of actions illustrates Shared care plan and Community asset mapping, respectively?

A. Shared care plan: Mapping existing youth programs and trusted community networks before planning a new service. / Community asset mapping: Documenting who will take each agreed next step and when progress will be reviewed.
B. Shared care plan: Documenting who will take each agreed next step and when progress will be reviewed. / Community asset mapping: Clarifying who contacts caregivers and who monitors a school support.
C. Shared care plan: Confirming authorization and sharing only information needed for coordinated support. / Community asset mapping: Mapping existing youth programs and trusted community networks before planning a new service.
D. Shared care plan: Documenting who will take each agreed next step and when progress will be reviewed. / Community asset mapping: Mapping existing youth programs and trusted community networks before planning a new service.

0262. A service team discusses a high-school student in the multidisciplinary case conference. Their proposed next step is documenting who will take each agreed next step and when progress will be reviewed. Which course concept supports it?

A. Warm referral
B. Shared care plan
C. Consent-based information sharing
D. Boundary spanning

0263. A supervisor asks for an applied contrast between Collaborative problem solving and Outcome feedback loop. Which option fits?

A. Collaborative problem solving: Mapping existing youth programs and trusted community networks before planning a new service. / Outcome feedback loop: Reviewing attendance or wellbeing data together and adjusting supports with permission.
B. Collaborative problem solving: Reviewing attendance or wellbeing data together and adjusting supports with permission. / Outcome feedback loop: Agreeing on a measurable concern, trying one support, and reconvening to evaluate it.
C. Collaborative problem solving: Agreeing on a measurable concern, trying one support, and reconvening to evaluate it. / Outcome feedback loop: Helping the family make contact with a community service and checking whether connection occurred.
D. Collaborative problem solving: Agreeing on a measurable concern, trying one support, and reconvening to evaluate it. / Outcome feedback loop: Reviewing attendance or wellbeing data together and adjusting supports with permission.

0264. A support meeting for a high-school student includes a counselor in the school consultation. The practice under consideration is clarifying who contacts caregivers and who monitors a school support. Which concept guides it?

A. Role clarification
B. Community-based participatory practice
C. Interprofessional collaboration
D. Consent-based information sharing

0265. In school-community collaboration, how are Interprofessional collaboration and Boundary spanning most accurately differentiated in this curriculum?

A. Interprofessional collaboration: A coordinated, mutually understood set of goals, responsibilities, and follow-up steps across helpers. / Boundary spanning: Connecting organizations or professional groups while respecting each role's authority and accountability.
B. Interprofessional collaboration: Coordinated work among professionals who contribute distinct expertise toward shared client goals. / Boundary spanning: Exchange of relevant information under valid permission and applicable privacy requirements.
C. Interprofessional collaboration: Coordinated work among professionals who contribute distinct expertise toward shared client goals. / Boundary spanning: Connecting organizations or professional groups while respecting each role's authority and accountability.
D. Interprofessional collaboration: Connecting organizations or professional groups while respecting each role's authority and accountability. / Boundary spanning: Coordinated work among professionals who contribute distinct expertise toward shared client goals.

0266. A supervisor asks for an applied contrast between Community asset mapping and Warm referral. Which option fits?

A. Community asset mapping: Confirming authorization and sharing only information needed for coordinated support. / Warm referral: Helping the family make contact with a community service and checking whether connection occurred.
B. Community asset mapping: Helping the family make contact with a community service and checking whether connection occurred. / Warm referral: Mapping existing youth programs and trusted community networks before planning a new service.
C. Community asset mapping: Mapping existing youth programs and trusted community networks before planning a new service. / Warm referral: Agreeing on a measurable concern, trying one support, and reconvening to evaluate it.
D. Community asset mapping: Mapping existing youth programs and trusted community networks before planning a new service. / Warm referral: Helping the family make contact with a community service and checking whether connection occurred.

0267. In school-community collaboration, a assessment clinician prepares for a session in the child guidance clinic with a young person aged 18. The intended approach is agreeing on roles and communication with school and community partners, subject to permission. Which concept is most relevant?

A. Shared care plan
B. Interprofessional collaboration
C. Community-based participatory practice
D. Outcome feedback loop

0268. In a supervision quiz, how should Shared care plan be distinguished from Consent-based information sharing?

A. Shared care plan: A coordinated, mutually understood set of goals, responsibilities, and follow-up steps across helpers. / Consent-based information sharing: Regular use of shared outcome information to adapt coordinated services.
B. Shared care plan: A structured process in which partners define a concern, generate options, test a plan, and review outcomes. / Consent-based information sharing: Exchange of relevant information under valid permission and applicable privacy requirements.
C. Shared care plan: Exchange of relevant information under valid permission and applicable privacy requirements. / Consent-based information sharing: A coordinated, mutually understood set of goals, responsibilities, and follow-up steps across helpers.
D. Shared care plan: A coordinated, mutually understood set of goals, responsibilities, and follow-up steps across helpers. / Consent-based information sharing: Exchange of relevant information under valid permission and applicable privacy requirements.

0269. Which professional action most closely applies Outcome feedback loop?

A. Documenting who will take each agreed next step and when progress will be reviewed.
B. Reviewing attendance or wellbeing data together and adjusting supports with permission.
C. Clarifying who contacts caregivers and who monitors a school support.
D. Agreeing on roles and communication with school and community partners, subject to permission.

0270. Which statement shows a sound practice-level distinction between Role clarification and Collaborative problem solving?

A. Role clarification: Helping the family make contact with a community service and checking whether connection occurred. / Collaborative problem solving: Agreeing on a measurable concern, trying one support, and reconvening to evaluate it.
B. Role clarification: Clarifying who contacts caregivers and who monitors a school support. / Collaborative problem solving: Agreeing on a measurable concern, trying one support, and reconvening to evaluate it.
C. Role clarification: Clarifying who contacts caregivers and who monitors a school support. / Collaborative problem solving: Documenting who will take each agreed next step and when progress will be reviewed.
D. Role clarification: Agreeing on a measurable concern, trying one support, and reconvening to evaluate it. / Collaborative problem solving: Clarifying who contacts caregivers and who monitors a school support.

0271. A trainee must distinguish how Shared care plan and Community-based participatory practice guide practice. Which comparison is accurate?

A. Shared care plan: Involving youth and community partners in decisions throughout a project, not only at launch. / Community-based participatory practice: Documenting who will take each agreed next step and when progress will be reviewed.
B. Shared care plan: Documenting who will take each agreed next step and when progress will be reviewed. / Community-based participatory practice: Agreeing on a measurable concern, trying one support, and reconvening to evaluate it.
C. Shared care plan: Documenting who will take each agreed next step and when progress will be reviewed. / Community-based participatory practice: Involving youth and community partners in decisions throughout a project, not only at launch.
D. Shared care plan: Helping the family make contact with a community service and checking whether connection occurred. / Community-based participatory practice: Involving youth and community partners in decisions throughout a project, not only at launch.

0272. Consider a young person aged 18 receiving help in the community mental-health service. The consulting counselor focuses on involving youth and community partners in decisions throughout a project, not only at launch. Which term best describes the guiding idea?

A. Community-based participatory practice
B. Interprofessional collaboration
C. Boundary spanning
D. Shared care plan

0273. Which option correctly matches each concept to its practice focus: Role clarification and Collaborative problem solving?

A. Role clarification: Agreeing on a measurable concern, trying one support, and reconvening to evaluate it. / Collaborative problem solving: Clarifying who contacts caregivers and who monitors a school support.
B. Role clarification: Helping the family make contact with a community service and checking whether connection occurred. / Collaborative problem solving: Agreeing on a measurable concern, trying one support, and reconvening to evaluate it.
C. Role clarification: Clarifying who contacts caregivers and who monitors a school support. / Collaborative problem solving: Documenting who will take each agreed next step and when progress will be reviewed.
D. Role clarification: Clarifying who contacts caregivers and who monitors a school support. / Collaborative problem solving: Agreeing on a measurable concern, trying one support, and reconvening to evaluate it.

0274. Select the best explanation of Community asset mapping.

A. Identification of local strengths, organizations, relationships, and resources relevant to community goals.
B. An active, supported connection from one service to another that reduces barriers to follow-through.
C. Coordinated work among professionals who contribute distinct expertise toward shared client goals.
D. Explicit agreement about each partner’s responsibilities, authority, and limits.

0275. Which applied comparison correctly identifies what belongs to Consent-based information sharing versus Community-based participatory practice?

A. Consent-based information sharing: Confirming authorization and sharing only information needed for coordinated support. / Community-based participatory practice: Translating needs across systems without taking over another partner's responsibilities.
B. Consent-based information sharing: Mapping existing youth programs and trusted community networks before planning a new service. / Community-based participatory practice: Involving youth and community partners in decisions throughout a project, not only at launch.
C. Consent-based information sharing: Involving youth and community partners in decisions throughout a project, not only at launch. / Community-based participatory practice: Confirming authorization and sharing only information needed for coordinated support.
D. Consent-based information sharing: Confirming authorization and sharing only information needed for coordinated support. / Community-based participatory practice: Involving youth and community partners in decisions throughout a project, not only at launch.

0276. Which statement accurately contrasts the course concepts Boundary spanning and Outcome feedback loop?

A. Boundary spanning: Connecting organizations or professional groups while respecting each role's authority and accountability. / Outcome feedback loop: Exchange of relevant information under valid permission and applicable privacy requirements.
B. Boundary spanning: Coordinated work among professionals who contribute distinct expertise toward shared client goals. / Outcome feedback loop: Regular use of shared outcome information to adapt coordinated services.
C. Boundary spanning: Connecting organizations or professional groups while respecting each role's authority and accountability. / Outcome feedback loop: Regular use of shared outcome information to adapt coordinated services.
D. Boundary spanning: Regular use of shared outcome information to adapt coordinated services. / Outcome feedback loop: Connecting organizations or professional groups while respecting each role's authority and accountability.

0277. A case conference asks for a distinction between Community asset mapping and Outcome feedback loop. Which answer is sound?

A. Community asset mapping: Connecting organizations or professional groups while respecting each role's authority and accountability. / Outcome feedback loop: Regular use of shared outcome information to adapt coordinated services.
B. Community asset mapping: Regular use of shared outcome information to adapt coordinated services. / Outcome feedback loop: Identification of local strengths, organizations, relationships, and resources relevant to community goals.
C. Community asset mapping: Identification of local strengths, organizations, relationships, and resources relevant to community goals. / Outcome feedback loop: An active, supported connection from one service to another that reduces barriers to follow-through.
D. Community asset mapping: Identification of local strengths, organizations, relationships, and resources relevant to community goals. / Outcome feedback loop: Regular use of shared outcome information to adapt coordinated services.

0278. Which pair of actions illustrates Role clarification and Community-based participatory practice, respectively?

A. Role clarification: Clarifying who contacts caregivers and who monitors a school support. / Community-based participatory practice: Involving youth and community partners in decisions throughout a project, not only at launch.
B. Role clarification: Involving youth and community partners in decisions throughout a project, not only at launch. / Community-based participatory practice: Clarifying who contacts caregivers and who monitors a school support.
C. Role clarification: Translating needs across systems without taking over another partner's responsibilities. / Community-based participatory practice: Involving youth and community partners in decisions throughout a project, not only at launch.
D. Role clarification: Clarifying who contacts caregivers and who monitors a school support. / Community-based participatory practice: Agreeing on roles and communication with school and community partners, subject to permission.

0279. A young person aged 18 and a supervised trainee are reviewing goals in the family resource center. The agreed action is agreeing on a measurable concern, trying one support, and reconvening to evaluate it. Which principle best accounts for it?

A. Role clarification
B. Warm referral
C. Boundary spanning
D. Collaborative problem solving

0280. In a supervision quiz, how should Community asset mapping be distinguished from Community-based participatory practice?

A. Community asset mapping: A partnership in which community members share influence in defining questions, actions, and interpretation. / Community-based participatory practice: Identification of local strengths, organizations, relationships, and resources relevant to community goals.
B. Community asset mapping: Identification of local strengths, organizations, relationships, and resources relevant to community goals. / Community-based participatory practice: A partnership in which community members share influence in defining questions, actions, and interpretation.
C. Community asset mapping: Identification of local strengths, organizations, relationships, and resources relevant to community goals. / Community-based participatory practice: A structured process in which partners define a concern, generate options, test a plan, and review outcomes.
D. Community asset mapping: An active, supported connection from one service to another that reduces barriers to follow-through. / Community-based participatory practice: A partnership in which community members share influence in defining questions, actions, and interpretation.

0281. A consultant is supporting a middle-school student in the youth group. The key practice is mapping existing youth programs and trusted community networks before planning a new service. Which course concept is most relevant?

A. Role clarification
B. Community asset mapping
C. Boundary spanning
D. Warm referral

0282. In the school consultation, a school counselor explains why a middle-school student would benefit from reviewing attendance or wellbeing data together and adjusting supports with permission. Which course concept underpins the explanation?

A. Boundary spanning
B. Shared care plan
C. Outcome feedback loop
D. Community-based participatory practice

0283. Which applied comparison correctly identifies what belongs to Community asset mapping versus Outcome feedback loop?

A. Community asset mapping: Mapping existing youth programs and trusted community networks before planning a new service. / Outcome feedback loop: Reviewing attendance or wellbeing data together and adjusting supports with permission.
B. Community asset mapping: Translating needs across systems without taking over another partner's responsibilities. / Outcome feedback loop: Reviewing attendance or wellbeing data together and adjusting supports with permission.
C. Community asset mapping: Mapping existing youth programs and trusted community networks before planning a new service. / Outcome feedback loop: Helping the family make contact with a community service and checking whether connection occurred.
D. Community asset mapping: Reviewing attendance or wellbeing data together and adjusting supports with permission. / Outcome feedback loop: Mapping existing youth programs and trusted community networks before planning a new service.

0284. Which paired example correctly applies Community asset mapping first and Role clarification second?

A. Community asset mapping: Mapping existing youth programs and trusted community networks before planning a new service. / Role clarification: Reviewing attendance or wellbeing data together and adjusting supports with permission.
B. Community asset mapping: Clarifying who contacts caregivers and who monitors a school support. / Role clarification: Mapping existing youth programs and trusted community networks before planning a new service.
C. Community asset mapping: Agreeing on a measurable concern, trying one support, and reconvening to evaluate it. / Role clarification: Clarifying who contacts caregivers and who monitors a school support.
D. Community asset mapping: Mapping existing youth programs and trusted community networks before planning a new service. / Role clarification: Clarifying who contacts caregivers and who monitors a school support.

0285. Which comparison correctly distinguishes Community asset mapping from Collaborative problem solving?

A. Community asset mapping: Identification of local strengths, organizations, relationships, and resources relevant to community goals. / Collaborative problem solving: A structured process in which partners define a concern, generate options, test a plan, and review outcomes.
B. Community asset mapping: Regular use of shared outcome information to adapt coordinated services. / Collaborative problem solving: A structured process in which partners define a concern, generate options, test a plan, and review outcomes.
C. Community asset mapping: Identification of local strengths, organizations, relationships, and resources relevant to community goals. / Collaborative problem solving: An active, supported connection from one service to another that reduces barriers to follow-through.
D. Community asset mapping: A structured process in which partners define a concern, generate options, test a plan, and review outcomes. / Collaborative problem solving: Identification of local strengths, organizations, relationships, and resources relevant to community goals.

0286. At a case-planning meeting, the behavior specialist proposes reviewing attendance or wellbeing data together and adjusting supports with permission. for a young adolescent client seen in the outpatient clinic. Which concept does this illustrate?

A. Outcome feedback loop
B. Shared care plan
C. Role clarification
D. Consent-based information sharing

0287. Which applied comparison correctly identifies what belongs to Community asset mapping versus Community-based participatory practice?

A. Community asset mapping: Helping the family make contact with a community service and checking whether connection occurred. / Community-based participatory practice: Involving youth and community partners in decisions throughout a project, not only at launch.
B. Community asset mapping: Mapping existing youth programs and trusted community networks before planning a new service. / Community-based participatory practice: Involving youth and community partners in decisions throughout a project, not only at launch.
C. Community asset mapping: Mapping existing youth programs and trusted community networks before planning a new service. / Community-based participatory practice: Agreeing on a measurable concern, trying one support, and reconvening to evaluate it.
D. Community asset mapping: Involving youth and community partners in decisions throughout a project, not only at launch. / Community-based participatory practice: Mapping existing youth programs and trusted community networks before planning a new service.

0288. A consultant is preparing a follow-up plan for a client in early adolescence in the supervision meeting. The plan calls for documenting who will take each agreed next step and when progress will be reviewed. Which concept names this approach?

A. Boundary spanning
B. Consent-based information sharing
C. Interprofessional collaboration
D. Shared care plan

0289. For a older adolescent client in the child guidance clinic, a clinical supervisor makes this practice the immediate priority: involving youth and community partners in decisions throughout a project, not only at launch. Which concept fits best?

A. Warm referral
B. Shared care plan
C. Consent-based information sharing
D. Community-based participatory practice

0290. Which applied comparison correctly identifies what belongs to Shared care plan versus Consent-based information sharing?

A. Shared care plan: Documenting who will take each agreed next step and when progress will be reviewed. / Consent-based information sharing: Confirming authorization and sharing only information needed for coordinated support.
B. Shared care plan: Agreeing on a measurable concern, trying one support, and reconvening to evaluate it. / Consent-based information sharing: Confirming authorization and sharing only information needed for coordinated support.
C. Shared care plan: Documenting who will take each agreed next step and when progress will be reviewed. / Consent-based information sharing: Reviewing attendance or wellbeing data together and adjusting supports with permission.
D. Shared care plan: Confirming authorization and sharing only information needed for coordinated support. / Consent-based information sharing: Documenting who will take each agreed next step and when progress will be reviewed.

0291. In school-community collaboration, how should a practitioner distinguish the applications of Interprofessional collaboration and Outcome feedback loop?

A. Interprofessional collaboration: Agreeing on roles and communication with school and community partners, subject to permission. / Outcome feedback loop: Clarifying who contacts caregivers and who monitors a school support.
B. Interprofessional collaboration: Agreeing on roles and communication with school and community partners, subject to permission. / Outcome feedback loop: Reviewing attendance or wellbeing data together and adjusting supports with permission.
C. Interprofessional collaboration: Helping the family make contact with a community service and checking whether connection occurred. / Outcome feedback loop: Reviewing attendance or wellbeing data together and adjusting supports with permission.
D. Interprofessional collaboration: Reviewing attendance or wellbeing data together and adjusting supports with permission. / Outcome feedback loop: Agreeing on roles and communication with school and community partners, subject to permission.

0292. Which pair of actions illustrates Collaborative problem solving and Boundary spanning, respectively?

A. Collaborative problem solving: Documenting who will take each agreed next step and when progress will be reviewed. / Boundary spanning: Translating needs across systems without taking over another partner’s responsibilities.
B. Collaborative problem solving: Agreeing on a measurable concern, trying one support, and reconvening to evaluate it. / Boundary spanning: Reviewing attendance or wellbeing data together and adjusting supports with permission.
C. Collaborative problem solving: Translating needs across systems without taking over another partner’s responsibilities. / Boundary spanning: Agreeing on a measurable concern, trying one support, and reconvening to evaluate it.
D. Collaborative problem solving: Agreeing on a measurable concern, trying one support, and reconvening to evaluate it. / Boundary spanning: Translating needs across systems without taking over another partner’s responsibilities.

0293. Choose the term that matches this definition: Identification of local strengths, organizations, relationships, and resources relevant to community goals.

A. Outcome feedback loop
B. Community asset mapping
C. Consent-based information sharing
D. Shared care plan

0294. Which pair of actions illustrates Warm referral and Boundary spanning, respectively?

A. Warm referral: Helping the family make contact with a community service and checking whether connection occurred. / Boundary spanning: Translating needs across systems without taking over another partner's responsibilities.
B. Warm referral: Agreeing on a measurable concern, trying one support, and reconvening to evaluate it. / Boundary spanning: Translating needs across systems without taking over another partner's responsibilities.
C. Warm referral: Helping the family make contact with a community service and checking whether connection occurred. / Boundary spanning: Agreeing on roles and communication with school and community partners, subject to permission.
D. Warm referral: Translating needs across systems without taking over another partner's responsibilities. / Boundary spanning: Helping the family make contact with a community service and checking whether connection occurred.

0295. Which option pairs the definitions of Community-based participatory practice and Boundary spanning correctly, in that order?

A. Community-based participatory practice: Exchange of relevant information under valid permission and applicable privacy requirements. / Boundary spanning: Connecting organizations or professional groups while respecting each role's authority and accountability.
B. Community-based participatory practice: A partnership in which community members share influence in defining questions, actions, and interpretation. / Boundary spanning: Connecting organizations or professional groups while respecting each role's authority and accountability.
C. Community-based participatory practice: A partnership in which community members share influence in defining questions, actions, and interpretation. / Boundary spanning: Coordinated work among professionals who contribute distinct expertise toward shared client goals.
D. Community-based participatory practice: Connecting organizations or professional groups while respecting each role's authority and accountability. / Boundary spanning: A partnership in which community members share influence in defining questions, actions, and interpretation.

0296. How are Shared care plan and Community asset mapping most accurately differentiated in this curriculum?

A. Shared care plan: A coordinated, mutually understood set of goals, responsibilities, and follow-up steps across helpers. / Community asset mapping: Identification of local strengths, organizations, relationships, and resources relevant to community goals.
B. Shared care plan: Exchange of relevant information under valid permission and applicable privacy requirements. / Community asset mapping: Identification of local strengths, organizations, relationships, and resources relevant to community goals.
C. Shared care plan: Identification of local strengths, organizations, relationships, and resources relevant to community goals. / Community asset mapping: A coordinated, mutually understood set of goals, responsibilities, and follow-up steps across helpers.
D. Shared care plan: A coordinated, mutually understood set of goals, responsibilities, and follow-up steps across helpers. / Community asset mapping: Explicit agreement about each partner's responsibilities, authority, and limits.

0297. A consultant is supporting a child aged 8 in the clinical planning session. The key practice is involving youth and community partners in decisions throughout a project, not only at launch. Which course concept is most relevant?

A. Role clarification
B. Interprofessional collaboration
C. Collaborative problem solving
D. Community-based participatory practice

0298. When reviewing a middle-school student's plan in the child guidance clinic, the caregiver working with a counselor notes that the next step is documenting who will take each agreed next step and when progress will be reviewed. Which concept guides this step?

A. Interprofessional collaboration
B. Shared care plan
C. Community asset mapping
D. Outcome feedback loop

0299. Choose the definition pair that correctly explains Community asset mapping first and Outcome feedback loop second.

A. Community asset mapping: Connecting organizations or professional groups while respecting each role's authority and accountability. / Outcome feedback loop: Regular use of shared outcome information to adapt coordinated services.
B. Community asset mapping: Identification of local strengths, organizations, relationships, and resources relevant to community goals. / Outcome feedback loop: Regular use of shared outcome information to adapt coordinated services.
C. Community asset mapping: Regular use of shared outcome information to adapt coordinated services. / Outcome feedback loop: Identification of local strengths, organizations, relationships, and resources relevant to community goals.
D. Community asset mapping: Identification of local strengths, organizations, relationships, and resources relevant to community goals. / Outcome feedback loop: An active, supported connection from one service to another that reduces barriers to follow-through.

0300. At the youth advocacy program, a play therapist meets with a child aged 14. The practice priority is: translating needs across systems without taking over another partner's responsibilities. Which concept best captures that priority?

A. Interprofessional collaboration
B. Boundary spanning
C. Warm referral
D. Community asset mapping

0301. At the family session, a clinical supervisor meets with a student aged 15. The practice priority is: documenting who will take each agreed next step and when progress will be reviewed. Which concept best captures that priority?

A. Shared care plan
B. Collaborative problem solving
C. Role clarification
D. Outcome feedback loop

0302. Choose the term that matches this definition: A partnership in which community members share influence in defining questions, actions, and interpretation.

A. Community asset mapping
B. Interprofessional collaboration
C. Consent-based information sharing
D. Community-based participatory practice

0303. In the family resource center, a parent educator is considering this approach for a school-age child: documenting who will take each agreed next step and when progress will be reviewed. Which framework does it represent?

A. Warm referral
B. Shared care plan
C. Interprofessional collaboration
D. Consent-based information sharing

0304. Which pair of actions illustrates Role clarification and Outcome feedback loop, respectively?

A. Role clarification: Reviewing attendance or wellbeing data together and adjusting supports with permission. / Outcome feedback loop: Clarifying who contacts caregivers and who monitors a school support.
B. Role clarification: Clarifying who contacts caregivers and who monitors a school support. / Outcome feedback loop: Translating needs across systems without taking over another partner's responsibilities.
C. Role clarification: Agreeing on roles and communication with school and community partners, subject to permission. / Outcome feedback loop: Reviewing attendance or wellbeing data together and adjusting supports with permission.
D. Role clarification: Clarifying who contacts caregivers and who monitors a school support. / Outcome feedback loop: Reviewing attendance or wellbeing data together and adjusting supports with permission.

0305. During work in the parent meeting, a group facilitator identifies this need: involving youth and community partners in decisions throughout a project, not only at launch. Which idea should guide the response?

A. Interprofessional collaboration
B. Community-based participatory practice
C. Boundary spanning
D. Community asset mapping

0306. In school-community collaboration, which option preserves the correct meaning of both Interprofessional collaboration and Boundary spanning?

A. Interprofessional collaboration: Connecting organizations or professional groups while respecting each role's authority and accountability. / Boundary spanning: Coordinated work among professionals who contribute distinct expertise toward shared client goals.
B. Interprofessional collaboration: A coordinated, mutually understood set of goals, responsibilities, and follow-up steps across helpers. / Boundary spanning: Connecting organizations or professional groups while respecting each role's authority and accountability.
C. Interprofessional collaboration: Coordinated work among professionals who contribute distinct expertise toward shared client goals. / Boundary spanning: Exchange of relevant information under valid permission and applicable privacy requirements.
D. Interprofessional collaboration: Coordinated work among professionals who contribute distinct expertise toward shared client goals. / Boundary spanning: Connecting organizations or professional groups while respecting each role's authority and accountability.

0307. Which statement shows a sound practice-level distinction between Role clarification and Boundary spanning?

A. Role clarification: Agreeing on a measurable concern, trying one support, and reconvening to evaluate it. / Boundary spanning: Translating needs across systems without taking over another partner's responsibilities.
B. Role clarification: Translating needs across systems without taking over another partner's responsibilities. / Boundary spanning: Clarifying who contacts caregivers and who monitors a school support.
C. Role clarification: Clarifying who contacts caregivers and who monitors a school support. / Boundary spanning: Translating needs across systems without taking over another partner's responsibilities.
D. Role clarification: Clarifying who contacts caregivers and who monitors a school support. / Boundary spanning: Confirming authorization and sharing only information needed for coordinated support.

0308. In the school-based service, a family therapist is considering this approach for a student aged 9: reviewing attendance or wellbeing data together and adjusting supports with permission. Which framework does it represent?

A. Outcome feedback loop
B. Consent-based information sharing
C. Role clarification
D. Collaborative problem solving

0309. A teenage client is receiving support in the after-school program. The teacher and counselor is guided by this practice: mapping existing youth programs and trusted community networks before planning a new service. Which principle best fits?

A. Community asset mapping
B. Consent-based information sharing
C. Boundary spanning
D. Interprofessional collaboration

0310. A program coordinator is asked what should shape a student aged 9's support in the outpatient clinic. The proposed focus is helping the family make contact with a community service and checking whether connection occurred. Which principle does it represent?

A. Community asset mapping
B. Community-based participatory practice
C. Warm referral
D. Boundary spanning

0311. A case discussion concerns a preadolescent child and a school-based clinician in the multidisciplinary case conference. The practitioner is considering clarifying who contacts caregivers and who monitors a school support. Which principle is involved?

A. Warm referral
B. Community asset mapping
C. Consent-based information sharing
D. Role clarification

0312. A planning meeting about a student aged 17 includes a play therapist. The proposed practice in the student-support meeting is involving youth and community partners in decisions throughout a project, not only at launch. Which idea underlies it?

A. Role clarification
B. Community-based participatory practice
C. Shared care plan
D. Warm referral

0313. Which choice aligns each practice with the correct idea, Consent-based information sharing or Boundary spanning?

A. Consent-based information sharing: Confirming authorization and sharing only information needed for coordinated support. / Boundary spanning: Translating needs across systems without taking over another partner's responsibilities.
B. Consent-based information sharing: Translating needs across systems without taking over another partner's responsibilities. / Boundary spanning: Confirming authorization and sharing only information needed for coordinated support.
C. Consent-based information sharing: Confirming authorization and sharing only information needed for coordinated support. / Boundary spanning: Documenting who will take each agreed next step and when progress will be reviewed.
D. Consent-based information sharing: Agreeing on roles and communication with school and community partners, subject to permission. / Boundary spanning: Translating needs across systems without taking over another partner's responsibilities.

0314. A caregiver working with a counselor presents a support plan for a child aged 11 at the community mental-health service. Its central feature is agreeing on a measurable concern, trying one support, and reconvening to evaluate it. Which concept should be named?

A. Interprofessional collaboration
B. Role clarification
C. Consent-based information sharing
D. Collaborative problem solving

0315. A group facilitator is asked to justify a plan for a student aged 15 in the multidisciplinary case conference. It calls for agreeing on a measurable concern, trying one support, and reconvening to evaluate it. Which concept provides the rationale?

A. Warm referral
B. Collaborative problem solving
C. Shared care plan
D. Role clarification

0316. In the community youth program, a consulting counselor explains why a young person aged 16 would benefit from translating needs across systems without taking over another partner's responsibilities. Which course concept underpins the explanation?

A. Consent-based information sharing
B. Interprofessional collaboration
C. Boundary spanning
D. Collaborative problem solving

0317. Which option is the clearest practical expression of Community-based participatory practice?

A. Mapping existing youth programs and trusted community networks before planning a new service.
B. Involving youth and community partners in decisions throughout a project, not only at launch.
C. Helping the family make contact with a community service and checking whether connection occurred.
D. Confirming authorization and sharing only information needed for coordinated support.

0318. Choose the response that best puts Outcome feedback loop into practice.

A. Reviewing attendance or wellbeing data together and adjusting supports with permission.
B. Clarifying who contacts caregivers and who monitors a school support.
C. Confirming authorization and sharing only information needed for coordinated support.
D. Agreeing on roles and communication with school and community partners, subject to permission.

0319. A supervised trainee is preparing a follow-up plan for a older adolescent client in the parent meeting. The plan calls for confirming authorization and sharing only information needed for coordinated support. Which concept names this approach?

A. Consent-based information sharing
B. Outcome feedback loop
C. Interprofessional collaboration
D. Community asset mapping

0320. In a supervision quiz, how should Shared care plan be distinguished from Warm referral?

A. Shared care plan: A coordinated, mutually understood set of goals, responsibilities, and follow-up steps across helpers. / Warm referral: An active, supported connection from one service to another that reduces barriers to follow-through.
B. Shared care plan: An active, supported connection from one service to another that reduces barriers to follow-through. / Warm referral: A coordinated, mutually understood set of goals, responsibilities, and follow-up steps across helpers.
C. Shared care plan: Coordinated work among professionals who contribute distinct expertise toward shared client goals. / Warm referral: An active, supported connection from one service to another that reduces barriers to follow-through.
D. Shared care plan: A coordinated, mutually understood set of goals, responsibilities, and follow-up steps across helpers. / Warm referral: Regular use of shared outcome information to adapt coordinated services.

0321. A youth worker is asked to justify a plan for a child aged 7 in the youth advocacy program. It calls for reviewing attendance or wellbeing data together and adjusting supports with permission. Which concept provides the rationale?

A. Interprofessional collaboration
B. Outcome feedback loop
C. Role clarification
D. Consent-based information sharing

0322. What is the central meaning of Outcome feedback loop?

A. Exchange of relevant information under valid permission and applicable privacy requirements.
B. A partnership in which community members share influence in defining questions, actions, and interpretation.
C. Regular use of shared outcome information to adapt coordinated services.
D. An active, supported connection from one service to another that reduces barriers to follow-through.

0323. A supervisor asks how Shared care plan would appear in practice. Which choice should be selected?

A. Clarifying who contacts caregivers and who monitors a school support.
B. Documenting who will take each agreed next step and when progress will be reviewed.
C. Agreeing on a measurable concern, trying one support, and reconvening to evaluate it.
D. Confirming authorization and sharing only information needed for coordinated support.

0324. Select the best explanation of Collaborative problem solving.

A. Identification of local strengths, organizations, relationships, and resources relevant to community goals.
B. Exchange of relevant information under valid permission and applicable privacy requirements.
C. A structured process in which partners define a concern, generate options, test a plan, and review outcomes.
D. Coordinated work among professionals who contribute distinct expertise toward shared client goals.

0325. Which course concept is defined as follows: An active, supported connection from one service to another that reduces barriers to follow-through.

A. Role clarification
B. Outcome feedback loop
C. Consent-based information sharing
D. Warm referral

0326. Which comparison correctly distinguishes Collaborative problem solving from Community-based participatory practice?

A. Collaborative problem solving: Coordinated work among professionals who contribute distinct expertise toward shared client goals. / Community-based participatory practice: A partnership in which community members share influence in defining questions, actions, and interpretation.
B. Collaborative problem solving: A partnership in which community members share influence in defining questions, actions, and interpretation. / Community-based participatory practice: A structured process in which partners define a concern, generate options, test a plan, and review outcomes.
C. Collaborative problem solving: A structured process in which partners define a concern, generate options, test a plan, and review outcomes. / Community-based participatory practice: An active, supported connection from one service to another that reduces barriers to follow-through.
D. Collaborative problem solving: A structured process in which partners define a concern, generate options, test a plan, and review outcomes. / Community-based participatory practice: A partnership in which community members share influence in defining questions, actions, and interpretation.

0327. In the youth group, a team asks how a school counselor can support a young person aged 10. One proposed action is agreeing on a measurable concern, trying one support, and reconvening to evaluate it. Which idea does it represent?

A. Role clarification
B. Collaborative problem solving
C. Community-based participatory practice
D. Interprofessional collaboration

0328. While supporting a child aged 6 in the school consultation, a caregiver working with a counselor adopts this practice: mapping existing youth programs and trusted community networks before planning a new service. Which concept best explains the choice?

A. Warm referral
B. Community asset mapping
C. Shared care plan
D. Consent-based information sharing

0329. Which comparison correctly distinguishes Role clarification from Warm referral?

A. Role clarification: Explicit agreement about each partner’s responsibilities, authority, and limits. / Warm referral: An active, supported connection from one service to another that reduces barriers to follow-through.
B. Role clarification: Explicit agreement about each partner’s responsibilities, authority, and limits. / Warm referral: Identification of local strengths, organizations, relationships, and resources relevant to community goals.
C. Role clarification: A structured process in which partners define a concern, generate options, test a plan, and review outcomes. / Warm referral: An active, supported connection from one service to another that reduces barriers to follow-through.
D. Role clarification: An active, supported connection from one service to another that reduces barriers to follow-through. / Warm referral: Explicit agreement about each partner’s responsibilities, authority, and limits.

0330. A trainee must choose a practice that exemplifies Collaborative problem solving. Which action is the best fit?

A. Reviewing attendance or wellbeing data together and adjusting supports with permission.
B. Translating needs across systems without taking over another partner’s responsibilities.
C. Agreeing on a measurable concern, trying one support, and reconvening to evaluate it.
D. Mapping existing youth programs and trusted community networks before planning a new service.

0331. An interdisciplinary team reviews a adolescent student’s case at the multidisciplinary case conference. The counselor recommends reviewing attendance or wellbeing data together and adjusting supports with permission. Which course concept best fits?

A. Outcome feedback loop
B. Community-based participatory practice
C. Interprofessional collaboration
D. Consent-based information sharing

0332. While consulting in the community mental-health service, a consultant supports a client in late adolescence by using this approach: reviewing attendance or wellbeing data together and adjusting supports with permission. Which concept is being applied?

A. Boundary spanning
B. Community-based participatory practice
C. Outcome feedback loop
D. Role clarification

0333. A student confuses Shared care plan with Consent-based information sharing. Which explanation most accurately separates them?

A. Shared care plan: A coordinated, mutually understood set of goals, responsibilities, and follow-up steps across helpers. / Consent-based information sharing: Exchange of relevant information under valid permission and applicable privacy requirements.
B. Shared care plan: Exchange of relevant information under valid permission and applicable privacy requirements. / Consent-based information sharing: A coordinated, mutually understood set of goals, responsibilities, and follow-up steps across helpers.
C. Shared care plan: A coordinated, mutually understood set of goals, responsibilities, and follow-up steps across helpers. / Consent-based information sharing: Regular use of shared outcome information to adapt coordinated services.
D. Shared care plan: A structured process in which partners define a concern, generate options, test a plan, and review outcomes. / Consent-based information sharing: Exchange of relevant information under valid permission and applicable privacy requirements.

0334. A trainee must choose a practice that exemplifies Outcome feedback loop. Which action is the best fit?

A. Documenting who will take each agreed next step and when progress will be reviewed.
B. Clarifying who contacts caregivers and who monitors a school support.
C. Translating needs across systems without taking over another partner’s responsibilities.
D. Reviewing attendance or wellbeing data together and adjusting supports with permission.

0335. In the family session, a case coordinator is considering this approach for a adolescent student: agreeing on a measurable concern, trying one support, and reconvening to evaluate it. Which framework does it represent?

A. Community asset mapping
B. Consent-based information sharing
C. Shared care plan
D. Collaborative problem solving

0336. A student aged 17’s service team meets in the clinical planning session. The caregiver working with a counselor recommends a change involving clarifying who contacts caregivers and who monitors a school support. Which idea best explains it?

A. Consent-based information sharing
B. Community asset mapping
C. Interprofessional collaboration
D. Role clarification

0337. During work in the school consultation, a school counselor identifies this need: reviewing attendance or wellbeing data together and adjusting supports with permission. Which idea should guide the response?

A. Outcome feedback loop
B. Warm referral
C. Consent-based information sharing
D. Boundary spanning

0338. In school-community collaboration, a trainee must distinguish how Interprofessional collaboration and Community-based participatory practice guide practice. Which comparison is accurate?

A. Interprofessional collaboration: Documenting who will take each agreed next step and when progress will be reviewed. / Community-based participatory practice: Involving youth and community partners in decisions throughout a project, not only at launch.
B. Interprofessional collaboration: Involving youth and community partners in decisions throughout a project, not only at launch. / Community-based participatory practice: Agreeing on roles and communication with school and community partners, subject to permission.
C. Interprofessional collaboration: Agreeing on roles and communication with school and community partners, subject to permission. / Community-based participatory practice: Involving youth and community partners in decisions throughout a project, not only at launch.
D. Interprofessional collaboration: Agreeing on roles and communication with school and community partners, subject to permission. / Community-based participatory practice: Agreeing on a measurable concern, trying one support, and reconvening to evaluate it.

0339. A behavior specialist is asked to evaluate a proposed service for a young person in the parent meeting. The defining feature is helping the family make contact with a community service and checking whether connection occurred. Which concept fits?

A. Interprofessional collaboration
B. Shared care plan
C. Warm referral
D. Role clarification

0340. At a case-planning meeting, the school support specialist proposes mapping existing youth programs and trusted community networks before planning a new service. for a older adolescent client seen in the student-support meeting. Which concept does this illustrate?

A. Interprofessional collaboration
B. Collaborative problem solving
C. Community-based participatory practice
D. Community asset mapping

0341. A trainee must choose a practice that exemplifies Warm referral. Which action is the best fit?

A. Reviewing attendance or wellbeing data together and adjusting supports with permission.
B. Helping the family make contact with a community service and checking whether connection occurred.
C. Mapping existing youth programs and trusted community networks before planning a new service.
D. Translating needs across systems without taking over another partner’s responsibilities.

0342. Which option pairs the definitions of Warm referral and Outcome feedback loop correctly, in that order?

A. Warm referral: Exchange of relevant information under valid permission and applicable privacy requirements. / Outcome feedback loop: Regular use of shared outcome information to adapt coordinated services.
B. Warm referral: An active, supported connection from one service to another that reduces barriers to follow-through. / Outcome feedback loop: Connecting organizations or professional groups while respecting each role’s authority and accountability.
C. Warm referral: An active, supported connection from one service to another that reduces barriers to follow-through. / Outcome feedback loop: Regular use of shared outcome information to adapt coordinated services.
D. Warm referral: Regular use of shared outcome information to adapt coordinated services. / Outcome feedback loop: An active, supported connection from one service to another that reduces barriers to follow-through.

0343. Identify the most precise label for this idea: Connecting organizations or professional groups while respecting each role’s authority and accountability.

A. Community asset mapping
B. Boundary spanning
C. Shared care plan
D. Outcome feedback loop

0344. A school support specialist is asked to evaluate a proposed service for a young person aged 16 in the counseling practicum. The defining feature is confirming authorization and sharing only information needed for coordinated support. Which concept fits?

A. Consent-based information sharing
B. Interprofessional collaboration
C. Boundary spanning
D. Community asset mapping

0345. Which professional action most closely applies Boundary spanning?

A. Reviewing attendance or wellbeing data together and adjusting supports with permission.
B. Translating needs across systems without taking over another partner’s responsibilities.
C. Mapping existing youth programs and trusted community networks before planning a new service.
D. Helping the family make contact with a community service and checking whether connection occurred.

0346. For a young person in the behavior-support review, a counselor makes this practice the immediate priority: documenting who will take each agreed next step and when progress will be reviewed. Which concept fits best?

A. Collaborative problem solving
B. Shared care plan
C. Role clarification
D. Interprofessional collaboration

0347. In school-community collaboration, which statement most accurately defines Interprofessional collaboration?

A. A coordinated, mutually understood set of goals, responsibilities, and follow-up steps across helpers.
B. Explicit agreement about each partner's responsibilities, authority, and limits.
C. Coordinated work among professionals who contribute distinct expertise toward shared client goals.
D. Connecting organizations or professional groups while respecting each role's authority and accountability.

0348. In school-community collaboration, a student confuses Interprofessional collaboration with Shared care plan. Which explanation most accurately separates them?

A. Interprofessional collaboration: A coordinated, mutually understood set of goals, responsibilities, and follow-up steps across helpers. / Shared care plan: Coordinated work among professionals who contribute distinct expertise toward shared client goals.
B. Interprofessional collaboration: Coordinated work among professionals who contribute distinct expertise toward shared client goals. / Shared care plan: A coordinated, mutually understood set of goals, responsibilities, and follow-up steps across helpers.
C. Interprofessional collaboration: Explicit agreement about each partner's responsibilities, authority, and limits. / Shared care plan: A coordinated, mutually understood set of goals, responsibilities, and follow-up steps across helpers.
D. Interprofessional collaboration: Coordinated work among professionals who contribute distinct expertise toward shared client goals. / Shared care plan: Exchange of relevant information under valid permission and applicable privacy requirements.

0349. A case conference reviews a therapist's work with a young adolescent client in the classroom support meeting: involving youth and community partners in decisions throughout a project, not only at launch. Which principle is central?

A. Warm referral
B. Community-based participatory practice
C. Collaborative problem solving
D. Community asset mapping

0350. A mental-health professional is supporting a older adolescent client in the family session. The key practice is reviewing attendance or wellbeing data together and adjusting supports with permission. Which course concept is most relevant?

A. Boundary spanning
B. Community-based participatory practice
C. Interprofessional collaboration
D. Outcome feedback loop

0351. A assessment clinician prepares for a session in the community youth program with a teenage client. The intended approach is agreeing on a measurable concern, trying one support, and reconvening to evaluate it. Which concept is most relevant?

A. Outcome feedback loop
B. Shared care plan
C. Collaborative problem solving
D. Interprofessional collaboration

0352. What is the central meaning of Consent-based information sharing?

A. Connecting organizations or professional groups while respecting each role's authority and accountability.
B. Exchange of relevant information under valid permission and applicable privacy requirements.
C. Coordinated work among professionals who contribute distinct expertise toward shared client goals.
D. A coordinated, mutually understood set of goals, responsibilities, and follow-up steps across helpers.

0353. Which option preserves the correct meaning of both Role clarification and Consent-based information sharing?

A. Role clarification: Exchange of relevant information under valid permission and applicable privacy requirements. / Consent-based information sharing: Explicit agreement about each partner's responsibilities, authority, and limits.
B. Role clarification: Explicit agreement about each partner's responsibilities, authority, and limits. / Consent-based information sharing: Exchange of relevant information under valid permission and applicable privacy requirements.
C. Role clarification: Regular use of shared outcome information to adapt coordinated services. / Consent-based information sharing: Exchange of relevant information under valid permission and applicable privacy requirements.
D. Role clarification: Explicit agreement about each partner's responsibilities, authority, and limits. / Consent-based information sharing: An active, supported connection from one service to another that reduces barriers to follow-through.

0354. Which comparison would correct a trainee's misunderstanding of Community-based participatory practice versus Outcome feedback loop?

A. Community-based participatory practice: A partnership in which community members share influence in defining questions, actions, and interpretation. / Outcome feedback loop: Regular use of shared outcome information to adapt coordinated services.
B. Community-based participatory practice: A partnership in which community members share influence in defining questions, actions, and interpretation. / Outcome feedback loop: Coordinated work among professionals who contribute distinct expertise toward shared client goals.
C. Community-based participatory practice: A structured process in which partners define a concern, generate options, test a plan, and review outcomes. / Outcome feedback loop: Regular use of shared outcome information to adapt coordinated services.
D. Community-based participatory practice: Regular use of shared outcome information to adapt coordinated services. / Outcome feedback loop: A partnership in which community members share influence in defining questions, actions, and interpretation.

0355. An interdisciplinary team reviews a young person aged 10's case at the family session. The school support specialist recommends helping the family make contact with a community service and checking whether connection occurred. Which course concept best fits?

A. Shared care plan
B. Collaborative problem solving
C. Warm referral
D. Community asset mapping

0356. In school-community collaboration, which option preserves the correct meaning of both Interprofessional collaboration and Outcome feedback loop?

A. Interprofessional collaboration: An active, supported connection from one service to another that reduces barriers to follow-through. / Outcome feedback loop: Regular use of shared outcome information to adapt coordinated services.
B. Interprofessional collaboration: Coordinated work among professionals who contribute distinct expertise toward shared client goals. / Outcome feedback loop: Regular use of shared outcome information to adapt coordinated services.
C. Interprofessional collaboration: Coordinated work among professionals who contribute distinct expertise toward shared client goals. / Outcome feedback loop: Explicit agreement about each partner's responsibilities, authority, and limits.
D. Interprofessional collaboration: Regular use of shared outcome information to adapt coordinated services. / Outcome feedback loop: Coordinated work among professionals who contribute distinct expertise toward shared client goals.

0357. A supervisor asks for an applied contrast between Role clarification and Community-based participatory practice. Which option fits?

A. Role clarification: Clarifying who contacts caregivers and who monitors a school support. / Community-based participatory practice: Involving youth and community partners in decisions throughout a project, not only at launch.
B. Role clarification: Involving youth and community partners in decisions throughout a project, not only at launch. / Community-based participatory practice: Clarifying who contacts caregivers and who monitors a school support.
C. Role clarification: Translating needs across systems without taking over another partner's responsibilities. / Community-based participatory practice: Involving youth and community partners in decisions throughout a project, not only at launch.
D. Role clarification: Clarifying who contacts caregivers and who monitors a school support. / Community-based participatory practice: Agreeing on roles and communication with school and community partners, subject to permission.

0358. In the outpatient clinic, a youth worker describes the most appropriate support for a young person as agreeing on a measurable concern, trying one support, and reconvening to evaluate it. Which framework is being applied?

A. Collaborative problem solving
B. Shared care plan
C. Warm referral
D. Interprofessional collaboration

0359. A member of a clinical team is supporting a young person in the classroom support meeting. The key practice is clarifying who contacts caregivers and who monitors a school support. Which course concept is most relevant?

A. Role clarification
B. Collaborative problem solving
C. Shared care plan
D. Consent-based information sharing

0360. Which option pairs the definitions of Community asset mapping and Warm referral correctly, in that order?

A. Community asset mapping: Identification of local strengths, organizations, relationships, and resources relevant to community goals. / Warm referral: An active, supported connection from one service to another that reduces barriers to follow-through.
B. Community asset mapping: Exchange of relevant information under valid permission and applicable privacy requirements. / Warm referral: An active, supported connection from one service to another that reduces barriers to follow-through.
C. Community asset mapping: Identification of local strengths, organizations, relationships, and resources relevant to community goals. / Warm referral: A structured process in which partners define a concern, generate options, test a plan, and review outcomes.
D. Community asset mapping: An active, supported connection from one service to another that reduces barriers to follow-through. / Warm referral: Identification of local strengths, organizations, relationships, and resources relevant to community goals.

0361. Which pair of actions illustrates Shared care plan and Role clarification, respectively?

A. Shared care plan: Documenting who will take each agreed next step and when progress will be reviewed. / Role clarification: Clarifying who contacts caregivers and who monitors a school support.
B. Shared care plan: Clarifying who contacts caregivers and who monitors a school support. / Role clarification: Documenting who will take each agreed next step and when progress will be reviewed.
C. Shared care plan: Documenting who will take each agreed next step and when progress will be reviewed. / Role clarification: Mapping existing youth programs and trusted community networks before planning a new service.
D. Shared care plan: Translating needs across systems without taking over another partner's responsibilities. / Role clarification: Clarifying who contacts caregivers and who monitors a school support.

0362. A assessment clinician is preparing a follow-up plan for a teenage client in the community youth program. The plan calls for agreeing on a measurable concern, trying one support, and reconvening to evaluate it. Which concept names this approach?

A. Boundary spanning
B. Collaborative problem solving
C. Role clarification
D. Interprofessional collaboration

0363. In school-community collaboration, choose the definition pair that correctly explains Interprofessional collaboration first and Role clarification second.

A. Interprofessional collaboration: Connecting organizations or professional groups while respecting each role's authority and accountability. / Role clarification: Explicit agreement about each partner's responsibilities, authority, and limits.
B. Interprofessional collaboration: Coordinated work among professionals who contribute distinct expertise toward shared client goals. / Role clarification: An active, supported connection from one service to another that reduces barriers to follow-through.
C. Interprofessional collaboration: Coordinated work among professionals who contribute distinct expertise toward shared client goals. / Role clarification: Explicit agreement about each partner's responsibilities, authority, and limits.
D. Interprofessional collaboration: Explicit agreement about each partner's responsibilities, authority, and limits. / Role clarification: Coordinated work among professionals who contribute distinct expertise toward shared client goals.

0364. An interdisciplinary team reviews a student aged 17's case at the student-support meeting. The play therapist recommends involving youth and community partners in decisions throughout a project, not only at launch. Which course concept best fits?

A. Outcome feedback loop
B. Community-based participatory practice
C. Role clarification
D. Warm referral

0365. In a case note about a school-age child, a mental-health professional working in the counseling practicum records this priority: involving youth and community partners in decisions throughout a project, not only at launch. What principle is reflected?

A. Community asset mapping
B. Outcome feedback loop
C. Role clarification
D. Community-based participatory practice

0366. A doctoral student reads the following description. Which concept does it define? Regular use of shared outcome information to adapt coordinated services.

A. Warm referral
B. Outcome feedback loop
C. Consent-based information sharing
D. Interprofessional collaboration

0367. Choose the definition pair that correctly explains Role clarification first and Collaborative problem solving second.

A. Role clarification: Explicit agreement about each partner’s responsibilities, authority, and limits. / Collaborative problem solving: A coordinated, mutually understood set of goals, responsibilities, and follow-up steps across helpers.
B. Role clarification: An active, supported connection from one service to another that reduces barriers to follow-through. / Collaborative problem solving: A structured process in which partners define a concern, generate options, test a plan, and review outcomes.
C. Role clarification: A structured process in which partners define a concern, generate options, test a plan, and review outcomes. / Collaborative problem solving: Explicit agreement about each partner’s responsibilities, authority, and limits.
D. Role clarification: Explicit agreement about each partner’s responsibilities, authority, and limits. / Collaborative problem solving: A structured process in which partners define a concern, generate options, test a plan, and review outcomes.

0368. When reviewing a student aged 12’s plan in the counseling practicum, the case coordinator notes that the next step is clarifying who contacts caregivers and who monitors a school support. Which concept guides this step?

A. Warm referral
B. Role clarification
C. Interprofessional collaboration
D. Consent-based information sharing

0369. Which option correctly matches each concept to its practice focus: Shared care plan and Warm referral?

A. Shared care plan: Documenting who will take each agreed next step and when progress will be reviewed. / Warm referral: Reviewing attendance or wellbeing data together and adjusting supports with permission.
B. Shared care plan: Documenting who will take each agreed next step and when progress will be reviewed. / Warm referral: Helping the family make contact with a community service and checking whether connection occurred.
C. Shared care plan: Helping the family make contact with a community service and checking whether connection occurred. / Warm referral: Documenting who will take each agreed next step and when progress will be reviewed.
D. Shared care plan: Agreeing on roles and communication with school and community partners, subject to permission. / Warm referral: Helping the family make contact with a community service and checking whether connection occurred.

0370. In the school counseling office, the agreed focus for a service navigator working with a child aged 11 is involving youth and community partners in decisions throughout a project, not only at launch. Which concept names this focus?

A. Role clarification
B. Outcome feedback loop
C. Consent-based information sharing
D. Community-based participatory practice

0371. How are Role clarification and Outcome feedback loop most accurately differentiated in this curriculum?

A. Role clarification: Explicit agreement about each partner’s responsibilities, authority, and limits. / Outcome feedback loop: Regular use of shared outcome information to adapt coordinated services.
B. Role clarification: Regular use of shared outcome information to adapt coordinated services. / Outcome feedback loop: Explicit agreement about each partner’s responsibilities, authority, and limits.
C. Role clarification: Coordinated work among professionals who contribute distinct expertise toward shared client goals. / Outcome feedback loop: Regular use of shared outcome information to adapt coordinated services.
D. Role clarification: Explicit agreement about each partner’s responsibilities, authority, and limits. / Outcome feedback loop: Connecting organizations or professional groups while respecting each role’s authority and accountability.

0372. In school-community collaboration, in a supervision quiz, how should Interprofessional collaboration be distinguished from Community asset mapping?

A. Interprofessional collaboration: Identification of local strengths, organizations, relationships, and resources relevant to community goals. / Community asset mapping: Coordinated work among professionals who contribute distinct expertise toward shared client goals.
B. Interprofessional collaboration: Coordinated work among professionals who contribute distinct expertise toward shared client goals. / Community asset mapping: Connecting organizations or professional groups while respecting each role’s authority and accountability.
C. Interprofessional collaboration: Coordinated work among professionals who contribute distinct expertise toward shared client goals. / Community asset mapping: Identification of local strengths, organizations, relationships, and resources relevant to community goals.
D. Interprofessional collaboration: A coordinated, mutually understood set of goals, responsibilities, and follow-up steps across helpers. / Community asset mapping: Identification of local strengths, organizations, relationships, and resources relevant to community goals.

0373. An interdisciplinary team reviews a young adolescent client’s case at the clinical planning session. The counselor recommends confirming authorization and sharing only information needed for coordinated support. Which course concept best fits?

A. Shared care plan
B. Collaborative problem solving
C. Outcome feedback loop
D. Consent-based information sharing

0374. Which pair of actions illustrates Community asset mapping and Role clarification, respectively?

A. Community asset mapping: Clarifying who contacts caregivers and who monitors a school support. / Role clarification: Mapping existing youth programs and trusted community networks before planning a new service.
B. Community asset mapping: Mapping existing youth programs and trusted community networks before planning a new service. / Role clarification: Reviewing attendance or wellbeing data together and adjusting supports with permission.
C. Community asset mapping: Mapping existing youth programs and trusted community networks before planning a new service. / Role clarification: Clarifying who contacts caregivers and who monitors a school support.
D. Community asset mapping: Agreeing on a measurable concern, trying one support, and reconvening to evaluate it. / Role clarification: Clarifying who contacts caregivers and who monitors a school support.

0375. A case conference asks for a distinction between Community-based participatory practice and Outcome feedback loop. Which answer is sound?

A. Community-based participatory practice: A partnership in which community members share influence in defining questions, actions, and interpretation. / Outcome feedback loop: Regular use of shared outcome information to adapt coordinated services.
B. Community-based participatory practice: A structured process in which partners define a concern, generate options, test a plan, and review outcomes. / Outcome feedback loop: Regular use of shared outcome information to adapt coordinated services.
C. Community-based participatory practice: Regular use of shared outcome information to adapt coordinated services. / Outcome feedback loop: A partnership in which community members share influence in defining questions, actions, and interpretation.
D. Community-based participatory practice: A partnership in which community members share influence in defining questions, actions, and interpretation. / Outcome feedback loop: Coordinated work among professionals who contribute distinct expertise toward shared client goals.

0376. In school-community collaboration, which option correctly matches each concept to its practice focus: Interprofessional collaboration and Role clarification?

A. Interprofessional collaboration: Translating needs across systems without taking over another partner's responsibilities. / Role clarification: Clarifying who contacts caregivers and who monitors a school support.
B. Interprofessional collaboration: Clarifying who contacts caregivers and who monitors a school support. / Role clarification: Agreeing on roles and communication with school and community partners, subject to permission.
C. Interprofessional collaboration: Agreeing on roles and communication with school and community partners, subject to permission. / Role clarification: Helping the family make contact with a community service and checking whether connection occurred.
D. Interprofessional collaboration: Agreeing on roles and communication with school and community partners, subject to permission. / Role clarification: Clarifying who contacts caregivers and who monitors a school support.

0377. In school-community collaboration, which course concept is defined as follows: Coordinated work among professionals who contribute distinct expertise toward shared client goals.

A. Community-based participatory practice
B. Boundary spanning
C. Interprofessional collaboration
D. Shared care plan

0378. In a supervision quiz, how should Community-based participatory practice be distinguished from Boundary spanning?

A. Community-based participatory practice: Connecting organizations or professional groups while respecting each role's authority and accountability. / Boundary spanning: A partnership in which community members share influence in defining questions, actions, and interpretation.
B. Community-based participatory practice: A partnership in which community members share influence in defining questions, actions, and interpretation. / Boundary spanning: Coordinated work among professionals who contribute distinct expertise toward shared client goals.
C. Community-based participatory practice: Exchange of relevant information under valid permission and applicable privacy requirements. / Boundary spanning: Connecting organizations or professional groups while respecting each role's authority and accountability.
D. Community-based participatory practice: A partnership in which community members share influence in defining questions, actions, and interpretation. / Boundary spanning: Connecting organizations or professional groups while respecting each role's authority and accountability.

0379. Which statement accurately contrasts the course concepts Warm referral and Outcome feedback loop?

A. Warm referral: An active, supported connection from one service to another that reduces barriers to follow-through. / Outcome feedback loop: Regular use of shared outcome information to adapt coordinated services.
B. Warm referral: Regular use of shared outcome information to adapt coordinated services. / Outcome feedback loop: An active, supported connection from one service to another that reduces barriers to follow-through.
C. Warm referral: Exchange of relevant information under valid permission and applicable privacy requirements. / Outcome feedback loop: Regular use of shared outcome information to adapt coordinated services.
D. Warm referral: An active, supported connection from one service to another that reduces barriers to follow-through. / Outcome feedback loop: Connecting organizations or professional groups while respecting each role's authority and accountability.

0380. A student confuses Community asset mapping with Warm referral. Which explanation most accurately separates them?

A. Community asset mapping: Exchange of relevant information under valid permission and applicable privacy requirements. / Warm referral: An active, supported connection from one service to another that reduces barriers to follow-through.
B. Community asset mapping: Identification of local strengths, organizations, relationships, and resources relevant to community goals. / Warm referral: A structured process in which partners define a concern, generate options, test a plan, and review outcomes.
C. Community asset mapping: An active, supported connection from one service to another that reduces barriers to follow-through. / Warm referral: Identification of local strengths, organizations, relationships, and resources relevant to community goals.
D. Community asset mapping: Identification of local strengths, organizations, relationships, and resources relevant to community goals. / Warm referral: An active, supported connection from one service to another that reduces barriers to follow-through.

0381. In school-community collaboration, in a supervision quiz, how should Interprofessional collaboration be distinguished from Consent-based information sharing?

A. Interprofessional collaboration: Coordinated work among professionals who contribute distinct expertise toward shared client goals. / Consent-based information sharing: Explicit agreement about each partner's responsibilities, authority, and limits.
B. Interprofessional collaboration: Exchange of relevant information under valid permission and applicable privacy requirements. / Consent-based information sharing: Coordinated work among professionals who contribute distinct expertise toward shared client goals.
C. Interprofessional collaboration: Coordinated work among professionals who contribute distinct expertise toward shared client goals. / Consent-based information sharing: Exchange of relevant information under valid permission and applicable privacy requirements.
D. Interprofessional collaboration: Identification of local strengths, organizations, relationships, and resources relevant to community goals. / Consent-based information sharing: Exchange of relevant information under valid permission and applicable privacy requirements.

0382. Which option preserves the correct meaning of both Community asset mapping and Role clarification?

A. Community asset mapping: Explicit agreement about each partner's responsibilities, authority, and limits. / Role clarification: Identification of local strengths, organizations, relationships, and resources relevant to community goals.
B. Community asset mapping: Identification of local strengths, organizations, relationships, and resources relevant to community goals. / Role clarification: Explicit agreement about each partner's responsibilities, authority, and limits.
C. Community asset mapping: A structured process in which partners define a concern, generate options, test a plan, and review outcomes. / Role clarification: Explicit agreement about each partner's responsibilities, authority, and limits.
D. Community asset mapping: Identification of local strengths, organizations, relationships, and resources relevant to community goals. / Role clarification: Regular use of shared outcome information to adapt coordinated services.

0383. A play therapist is asked to evaluate a proposed service for a middle-school student in the learning-support meeting. The defining feature is agreeing on a measurable concern, trying one support, and reconvening to evaluate it. Which concept fits?

A. Community-based participatory practice
B. Collaborative problem solving
C. Role clarification
D. Boundary spanning

0384. In a professional consultation about a child aged 6, the assessment clinician describes this response in the telehealth session: translating needs across systems without taking over another partner's responsibilities. Which term is most apt?

A. Community asset mapping
B. Consent-based information sharing
C. Shared care plan
D. Boundary spanning

0385. A trainee must distinguish how Boundary spanning and Outcome feedback loop guide practice. Which comparison is accurate?

A. Boundary spanning: Agreeing on roles and communication with school and community partners, subject to permission. / Outcome feedback loop: Reviewing attendance or wellbeing data together and adjusting supports with permission.
B. Boundary spanning: Translating needs across systems without taking over another partner’s responsibilities. / Outcome feedback loop: Confirming authorization and sharing only information needed for coordinated support.
C. Boundary spanning: Reviewing attendance or wellbeing data together and adjusting supports with permission. / Outcome feedback loop: Translating needs across systems without taking over another partner’s responsibilities.
D. Boundary spanning: Translating needs across systems without taking over another partner’s responsibilities. / Outcome feedback loop: Reviewing attendance or wellbeing data together and adjusting supports with permission.

0386. Choose the definition pair that correctly explains Warm referral first and Outcome feedback loop second.

A. Warm referral: An active, supported connection from one service to another that reduces barriers to follow-through. / Outcome feedback loop: Regular use of shared outcome information to adapt coordinated services.
B. Warm referral: Regular use of shared outcome information to adapt coordinated services. / Outcome feedback loop: An active, supported connection from one service to another that reduces barriers to follow-through.
C. Warm referral: An active, supported connection from one service to another that reduces barriers to follow-through. / Outcome feedback loop: Connecting organizations or professional groups while respecting each role’s authority and accountability.
D. Warm referral: Exchange of relevant information under valid permission and applicable privacy requirements. / Outcome feedback loop: Regular use of shared outcome information to adapt coordinated services.

0387. In a supervision review, a parent educator describes work with a young person aged 18 in the learning-support meeting: confirming authorization and sharing only information needed for coordinated support. What concept is illustrated?

A. Shared care plan
B. Consent-based information sharing
C. Interprofessional collaboration
D. Warm referral

0388. A trainee must explain Consent-based information sharing. Which answer is accurate?

A. Identification of local strengths, organizations, relationships, and resources relevant to community goals.
B. A structured process in which partners define a concern, generate options, test a plan, and review outcomes.
C. Coordinated work among professionals who contribute distinct expertise toward shared client goals.
D. Exchange of relevant information under valid permission and applicable privacy requirements.

0389. Which applied comparison correctly identifies what belongs to Consent-based information sharing versus Outcome feedback loop?

A. Consent-based information sharing: Reviewing attendance or wellbeing data together and adjusting supports with permission. / Outcome feedback loop: Confirming authorization and sharing only information needed for coordinated support.
B. Consent-based information sharing: Confirming authorization and sharing only information needed for coordinated support. / Outcome feedback loop: Documenting who will take each agreed next step and when progress will be reviewed.
C. Consent-based information sharing: Confirming authorization and sharing only information needed for coordinated support. / Outcome feedback loop: Reviewing attendance or wellbeing data together and adjusting supports with permission.
D. Consent-based information sharing: Involving youth and community partners in decisions throughout a project, not only at launch. / Outcome feedback loop: Reviewing attendance or wellbeing data together and adjusting supports with permission.

0390. For a older adolescent client seen in the student wellness team, the research trainee recommends a plan built around agreeing on a measurable concern, trying one support, and reconvening to evaluate it. Which concept is reflected?

A. Role clarification
B. Warm referral
C. Community-based participatory practice
D. Collaborative problem solving

0391. Which paired example correctly applies Role clarification first and Community-based participatory practice second?

A. Role clarification: Involving youth and community partners in decisions throughout a project, not only at launch. / Community-based participatory practice: Clarifying who contacts caregivers and who monitors a school support.
B. Role clarification: Clarifying who contacts caregivers and who monitors a school support. / Community-based participatory practice: Involving youth and community partners in decisions throughout a project, not only at launch.
C. Role clarification: Clarifying who contacts caregivers and who monitors a school support. / Community-based participatory practice: Agreeing on roles and communication with school and community partners, subject to permission.
D. Role clarification: Translating needs across systems without taking over another partner’s responsibilities. / Community-based participatory practice: Involving youth and community partners in decisions throughout a project, not only at launch.

0392. What is the central meaning of Community asset mapping?

A. An active, supported connection from one service to another that reduces barriers to follow-through.
B. Explicit agreement about each partner’s responsibilities, authority, and limits.
C. A partnership in which community members share influence in defining questions, actions, and interpretation.
D. Identification of local strengths, organizations, relationships, and resources relevant to community goals.

0393. In the student wellness team, a team asks how a consulting counselor can support a young person aged 13. One proposed action is reviewing attendance or wellbeing data together and adjusting supports with permission. Which idea does it represent?

A. Outcome feedback loop
B. Warm referral
C. Shared care plan
D. Community asset mapping

0394. Choose the response that best puts Shared care plan into practice.

A. Reviewing attendance or wellbeing data together and adjusting supports with permission.
B. Helping the family make contact with a community service and checking whether connection occurred.
C. Documenting who will take each agreed next step and when progress will be reviewed.
D. Agreeing on roles and communication with school and community partners, subject to permission.

0395. A adolescent student’s service team meets in the family session. The case coordinator recommends a change involving agreeing on a measurable concern, trying one support, and reconvening to evaluate it. Which idea best explains it?

A. Role clarification
B. Collaborative problem solving
C. Boundary spanning
D. Warm referral

0396. A young person and a member of a clinical team are reviewing goals in the classroom support meeting. The agreed action is clarifying who contacts caregivers and who monitors a school support. Which principle best accounts for it?

A. Role clarification
B. Warm referral
C. Shared care plan
D. Community-based participatory practice

0397. Which option correctly matches each concept to its practice focus: Community asset mapping and Boundary spanning?

A. Community asset mapping: Translating needs across systems without taking over another partner’s responsibilities. / Boundary spanning: Mapping existing youth programs and trusted community networks before planning a new service.
B. Community asset mapping: Mapping existing youth programs and trusted community networks before planning a new service. / Boundary spanning: Translating needs across systems without taking over another partner’s responsibilities.
C. Community asset mapping: Agreeing on a measurable concern, trying one support, and reconvening to evaluate it. / Boundary spanning: Translating needs across systems without taking over another partner’s responsibilities.
D. Community asset mapping: Mapping existing youth programs and trusted community networks before planning a new service. / Boundary spanning: Documenting who will take each agreed next step and when progress will be reviewed.

0398. A consultant and a young person are discussing support in the school-based service. The selected practice is translating needs across systems without taking over another partner’s responsibilities. Which concept does this demonstrate?

A. Outcome feedback loop
B. Role clarification
C. Warm referral
D. Boundary spanning

0399. In school-community collaboration, choose the definition pair that correctly explains Interprofessional collaboration first and Consent-based information sharing second.

A. Interprofessional collaboration: Identification of local strengths, organizations, relationships, and resources relevant to community goals. / Consent-based information sharing: Exchange of relevant information under valid permission and applicable privacy requirements.
B. Interprofessional collaboration: Coordinated work among professionals who contribute distinct expertise toward shared client goals. / Consent-based information sharing: Explicit agreement about each partner’s responsibilities, authority, and limits.
C. Interprofessional collaboration: Exchange of relevant information under valid permission and applicable privacy requirements. / Consent-based information sharing: Coordinated work among professionals who contribute distinct expertise toward shared client goals.
D. Interprofessional collaboration: Coordinated work among professionals who contribute distinct expertise toward shared client goals. / Consent-based information sharing: Exchange of relevant information under valid permission and applicable privacy requirements.

0400. Choose the response that best puts Collaborative problem solving into practice.

A. Helping the family make contact with a community service and checking whether connection occurred.
B. Documenting who will take each agreed next step and when progress will be reviewed.
C. Agreeing on a measurable concern, trying one support, and reconvening to evaluate it.
D. Clarifying who contacts caregivers and who monitors a school support.

0401. A case conference asks for a distinction between Role clarification and Warm referral. Which answer is sound?

A. Role clarification: An active, supported connection from one service to another that reduces barriers to follow-through. / Warm referral: Explicit agreement about each partner’s responsibilities, authority, and limits.
B. Role clarification: Explicit agreement about each partner’s responsibilities, authority, and limits. / Warm referral: An active, supported connection from one service to another that reduces barriers to follow-through.
C. Role clarification: Explicit agreement about each partner’s responsibilities, authority, and limits. / Warm referral: Identification of local strengths, organizations, relationships, and resources relevant to community goals.
D. Role clarification: A structured process in which partners define a concern, generate options, test a plan, and review outcomes. / Warm referral: An active, supported connection from one service to another that reduces barriers to follow-through.

0402. Consider a student aged 9 receiving help in the behavior-support review. The consulting counselor focuses on mapping existing youth programs and trusted community networks before planning a new service. Which term best describes the guiding idea?

A. Community asset mapping
B. Collaborative problem solving
C. Boundary spanning
D. Outcome feedback loop

0403. How are Role clarification and Community-based participatory practice most accurately differentiated in this curriculum?

A. Role clarification: Explicit agreement about each partner’s responsibilities, authority, and limits. / Community-based participatory practice: Coordinated work among professionals who contribute distinct expertise toward shared client goals.
B. Role clarification: Explicit agreement about each partner’s responsibilities, authority, and limits. / Community-based participatory practice: A partnership in which community members share influence in defining questions, actions, and interpretation.
C. Role clarification: A partnership in which community members share influence in defining questions, actions, and interpretation. / Community-based participatory practice: Explicit agreement about each partner’s responsibilities, authority, and limits.
D. Role clarification: Connecting organizations or professional groups while respecting each role’s authority and accountability. / Community-based participatory practice: A partnership in which community members share influence in defining questions, actions, and interpretation.

0404. A research trainee describes an intervention for a school-age child in the community mental-health service, centered on clarifying who contacts caregivers and who monitors a school support. Which named idea is most relevant?

A. Community-based participatory practice
B. Shared care plan
C. Role clarification
D. Collaborative problem solving

0405. While consulting in the outpatient clinic, a supervised trainee supports a young person aged 13 by using this approach: involving youth and community partners in decisions throughout a project, not only at launch. Which concept is being applied?

A. Outcome feedback loop
B. Interprofessional collaboration
C. Shared care plan
D. Community-based participatory practice

0406. Which statement most accurately defines Role clarification?

A. Explicit agreement about each partner's responsibilities, authority, and limits.
B. An active, supported connection from one service to another that reduces barriers to follow-through.
C. A coordinated, mutually understood set of goals, responsibilities, and follow-up steps across helpers.
D. Exchange of relevant information under valid permission and applicable privacy requirements.

0407. Which option pairs the definitions of Community asset mapping and Collaborative problem solving correctly, in that order?

A. Community asset mapping: Regular use of shared outcome information to adapt coordinated services. / Collaborative problem solving: A structured process in which partners define a concern, generate options, test a plan, and review outcomes.
B. Community asset mapping: A structured process in which partners define a concern, generate options, test a plan, and review outcomes. / Collaborative problem solving: Identification of local strengths, organizations, relationships, and resources relevant to community goals.
C. Community asset mapping: Identification of local strengths, organizations, relationships, and resources relevant to community goals. / Collaborative problem solving: An active, supported connection from one service to another that reduces barriers to follow-through.
D. Community asset mapping: Identification of local strengths, organizations, relationships, and resources relevant to community goals. / Collaborative problem solving: A structured process in which partners define a concern, generate options, test a plan, and review outcomes.

0408. In school-community collaboration, a supervisor asks for an applied contrast between Interprofessional collaboration and Outcome feedback loop. Which option fits?

A. Interprofessional collaboration: Agreeing on roles and communication with school and community partners, subject to permission. / Outcome feedback loop: Clarifying who contacts caregivers and who monitors a school support.
B. Interprofessional collaboration: Helping the family make contact with a community service and checking whether connection occurred. / Outcome feedback loop: Reviewing attendance or wellbeing data together and adjusting supports with permission.
C. Interprofessional collaboration: Reviewing attendance or wellbeing data together and adjusting supports with permission. / Outcome feedback loop: Agreeing on roles and communication with school and community partners, subject to permission.
D. Interprofessional collaboration: Agreeing on roles and communication with school and community partners, subject to permission. / Outcome feedback loop: Reviewing attendance or wellbeing data together and adjusting supports with permission.

0409. In school-community collaboration, a student aged 15 is receiving support in the youth group. The consulting counselor is guided by this practice: agreeing on roles and communication with school and community partners, subject to permission. Which principle best fits?

A. Outcome feedback loop
B. Interprofessional collaboration
C. Community asset mapping
D. Collaborative problem solving

0410. A clinical supervisor reviews a plan for a student aged 9 in the supervision meeting. The plan emphasizes clarifying who contacts caregivers and who monitors a school support. Which course idea does this reflect?

A. Interprofessional collaboration
B. Consent-based information sharing
C. Role clarification
D. Warm referral

0411. Choose the practice comparison that best separates Consent-based information sharing from Outcome feedback loop.

A. Consent-based information sharing: Confirming authorization and sharing only information needed for coordinated support. / Outcome feedback loop: Documenting who will take each agreed next step and when progress will be reviewed.
B. Consent-based information sharing: Confirming authorization and sharing only information needed for coordinated support. / Outcome feedback loop: Reviewing attendance or wellbeing data together and adjusting supports with permission.
C. Consent-based information sharing: Involving youth and community partners in decisions throughout a project, not only at launch. / Outcome feedback loop: Reviewing attendance or wellbeing data together and adjusting supports with permission.
D. Consent-based information sharing: Reviewing attendance or wellbeing data together and adjusting supports with permission. / Outcome feedback loop: Confirming authorization and sharing only information needed for coordinated support.

0412. At the caregiver consultation, a play therapist meets with a teenage client. The practice priority is: clarifying who contacts caregivers and who monitors a school support. Which concept best captures that priority?

A. Collaborative problem solving
B. Outcome feedback loop
C. Community-based participatory practice
D. Role clarification

0413. Choose the response that best puts Community-based participatory practice into practice.

A. Agreeing on a measurable concern, trying one support, and reconvening to evaluate it.
B. Involving youth and community partners in decisions throughout a project, not only at launch.
C. Documenting who will take each agreed next step and when progress will be reviewed.
D. Helping the family make contact with a community service and checking whether connection occurred.

0414. In school-community collaboration, in a case note about a teenage client, a consultant working in the community service agency records this priority: agreeing on roles and communication with school and community partners, subject to permission. What principle is reflected?

A. Consent-based information sharing
B. Interprofessional collaboration
C. Role clarification
D. Boundary spanning

0415. Which description belongs with the term Community-based participatory practice?

A. A partnership in which community members share influence in defining questions, actions, and interpretation.
B. An active, supported connection from one service to another that reduces barriers to follow-through.
C. Identification of local strengths, organizations, relationships, and resources relevant to community goals.
D. Regular use of shared outcome information to adapt coordinated services.

0416. In school-community collaboration, for a student aged 12 seen in the school consultation, the research trainee recommends a plan built around agreeing on roles and communication with school and community partners, subject to permission. Which concept is reflected?

A. Warm referral
B. Role clarification
C. Consent-based information sharing
D. Interprofessional collaboration

0417. A trainee must explain Role clarification. Which answer is accurate?

A. A partnership in which community members share influence in defining questions, actions, and interpretation.
B. Exchange of relevant information under valid permission and applicable privacy requirements.
C. Explicit agreement about each partner's responsibilities, authority, and limits.
D. Identification of local strengths, organizations, relationships, and resources relevant to community goals.

0418. A case discussion concerns a child of elementary-school age and a parent educator in the caregiver consultation. The practitioner is considering mapping existing youth programs and trusted community networks before planning a new service. Which principle is involved?

A. Interprofessional collaboration
B. Community asset mapping
C. Warm referral
D. Outcome feedback loop

0419. In school-community collaboration, choose the practice comparison that best separates Interprofessional collaboration from Outcome feedback loop.

A. Interprofessional collaboration: Reviewing attendance or wellbeing data together and adjusting supports with permission. / Outcome feedback loop: Agreeing on roles and communication with school and community partners, subject to permission.
B. Interprofessional collaboration: Agreeing on roles and communication with school and community partners, subject to permission. / Outcome feedback loop: Clarifying who contacts caregivers and who monitors a school support.
C. Interprofessional collaboration: Agreeing on roles and communication with school and community partners, subject to permission. / Outcome feedback loop: Reviewing attendance or wellbeing data together and adjusting supports with permission.
D. Interprofessional collaboration: Helping the family make contact with a community service and checking whether connection occurred. / Outcome feedback loop: Reviewing attendance or wellbeing data together and adjusting supports with permission.

0420. For a young person aged 18 in the youth advocacy program, a school support specialist makes this practice the immediate priority: clarifying who contacts caregivers and who monitors a school support. Which concept fits best?

A. Warm referral
B. Consent-based information sharing
C. Role clarification
D. Boundary spanning

0421. In a supervision review, a school-based clinician describes work with a client in early adolescence in the parent meeting: agreeing on a measurable concern, trying one support, and reconvening to evaluate it. What concept is illustrated?

A. Collaborative problem solving
B. Boundary spanning
C. Outcome feedback loop
D. Warm referral

0422. Which applied comparison correctly identifies what belongs to Shared care plan versus Warm referral?

A. Shared care plan: Documenting who will take each agreed next step and when progress will be reviewed. / Warm referral: Helping the family make contact with a community service and checking whether connection occurred.
B. Shared care plan: Documenting who will take each agreed next step and when progress will be reviewed. / Warm referral: Reviewing attendance or wellbeing data together and adjusting supports with permission.
C. Shared care plan: Agreeing on roles and communication with school and community partners, subject to permission. / Warm referral: Helping the family make contact with a community service and checking whether connection occurred.
D. Shared care plan: Helping the family make contact with a community service and checking whether connection occurred. / Warm referral: Documenting who will take each agreed next step and when progress will be reviewed.

0423. A supervisor asks for an applied contrast between Community asset mapping and Consent-based information sharing. Which option fits?

A. Community asset mapping: Mapping existing youth programs and trusted community networks before planning a new service. / Consent-based information sharing: Involving youth and community partners in decisions throughout a project, not only at launch.
B. Community asset mapping: Mapping existing youth programs and trusted community networks before planning a new service. / Consent-based information sharing: Confirming authorization and sharing only information needed for coordinated support.
C. Community asset mapping: Confirming authorization and sharing only information needed for coordinated support. / Consent-based information sharing: Mapping existing youth programs and trusted community networks before planning a new service.
D. Community asset mapping: Documenting who will take each agreed next step and when progress will be reviewed. / Consent-based information sharing: Confirming authorization and sharing only information needed for coordinated support.

0424. How should a practitioner distinguish the applications of Community asset mapping and Community-based participatory practice?

A. Community asset mapping: Involving youth and community partners in decisions throughout a project, not only at launch. / Community-based participatory practice: Mapping existing youth programs and trusted community networks before planning a new service.
B. Community asset mapping: Helping the family make contact with a community service and checking whether connection occurred. / Community-based participatory practice: Involving youth and community partners in decisions throughout a project, not only at launch.
C. Community asset mapping: Mapping existing youth programs and trusted community networks before planning a new service. / Community-based participatory practice: Involving youth and community partners in decisions throughout a project, not only at launch.
D. Community asset mapping: Mapping existing youth programs and trusted community networks before planning a new service. / Community-based participatory practice: Agreeing on a measurable concern, trying one support, and reconvening to evaluate it.

0425. A trainee must distinguish how Shared care plan and Warm referral guide practice. Which comparison is accurate?

A. Shared care plan: Documenting who will take each agreed next step and when progress will be reviewed. / Warm referral: Reviewing attendance or wellbeing data together and adjusting supports with permission.
B. Shared care plan: Helping the family make contact with a community service and checking whether connection occurred. / Warm referral: Documenting who will take each agreed next step and when progress will be reviewed.
C. Shared care plan: Agreeing on roles and communication with school and community partners, subject to permission. / Warm referral: Helping the family make contact with a community service and checking whether connection occurred.
D. Shared care plan: Documenting who will take each agreed next step and when progress will be reviewed. / Warm referral: Helping the family make contact with a community service and checking whether connection occurred.

0426. A case discussion concerns a student aged 17 and a school-based clinician in the outpatient clinic. The practitioner is considering translating needs across systems without taking over another partner's responsibilities. Which principle is involved?

A. Community-based participatory practice
B. Community asset mapping
C. Collaborative problem solving
D. Boundary spanning

0427. In the behavior-support review, a consulting counselor describes the most appropriate support for a student aged 9 as mapping existing youth programs and trusted community networks before planning a new service. Which framework is being applied?

A. Community asset mapping
B. Shared care plan
C. Outcome feedback loop
D. Interprofessional collaboration

0428. A trainee must explain Shared care plan. Which answer is accurate?

A. A coordinated, mutually understood set of goals, responsibilities, and follow-up steps across helpers.
B. Connecting organizations or professional groups while respecting each role's authority and accountability.
C. Regular use of shared outcome information to adapt coordinated services.
D. Explicit agreement about each partner's responsibilities, authority, and limits.

0429. Choose the practice comparison that best separates Collaborative problem solving from Outcome feedback loop.

A. Collaborative problem solving: Reviewing attendance or wellbeing data together and adjusting supports with permission. / Outcome feedback loop: Agreeing on a measurable concern, trying one support, and reconvening to evaluate it.
B. Collaborative problem solving: Agreeing on a measurable concern, trying one support, and reconvening to evaluate it. / Outcome feedback loop: Helping the family make contact with a community service and checking whether connection occurred.
C. Collaborative problem solving: Agreeing on a measurable concern, trying one support, and reconvening to evaluate it. / Outcome feedback loop: Reviewing attendance or wellbeing data together and adjusting supports with permission.
D. Collaborative problem solving: Mapping existing youth programs and trusted community networks before planning a new service. / Outcome feedback loop: Reviewing attendance or wellbeing data together and adjusting supports with permission.

0430. Which course concept is defined as follows: Exchange of relevant information under valid permission and applicable privacy requirements.

A. Boundary spanning
B. Community asset mapping
C. Outcome feedback loop
D. Consent-based information sharing

0431. Which statement accurately contrasts the course concepts Shared care plan and Warm referral?

A. Shared care plan: An active, supported connection from one service to another that reduces barriers to follow-through. / Warm referral: A coordinated, mutually understood set of goals, responsibilities, and follow-up steps across helpers.
B. Shared care plan: A coordinated, mutually understood set of goals, responsibilities, and follow-up steps across helpers. / Warm referral: An active, supported connection from one service to another that reduces barriers to follow-through.
C. Shared care plan: A coordinated, mutually understood set of goals, responsibilities, and follow-up steps across helpers. / Warm referral: Regular use of shared outcome information to adapt coordinated services.
D. Shared care plan: Coordinated work among professionals who contribute distinct expertise toward shared client goals. / Warm referral: An active, supported connection from one service to another that reduces barriers to follow-through.

0432. In school-community collaboration, a case conference asks for a distinction between Interprofessional collaboration and Boundary spanning. Which answer is sound?

A. Interprofessional collaboration: Coordinated work among professionals who contribute distinct expertise toward shared client goals. / Boundary spanning: Exchange of relevant information under valid permission and applicable privacy requirements.
B. Interprofessional collaboration: Connecting organizations or professional groups while respecting each role's authority and accountability. / Boundary spanning: Coordinated work among professionals who contribute distinct expertise toward shared client goals.
C. Interprofessional collaboration: Coordinated work among professionals who contribute distinct expertise toward shared client goals. / Boundary spanning: Connecting organizations or professional groups while respecting each role's authority and accountability.
D. Interprofessional collaboration: A coordinated, mutually understood set of goals, responsibilities, and follow-up steps across helpers. / Boundary spanning: Connecting organizations or professional groups while respecting each role's authority and accountability.

0433. A therapist describes an intervention for a high-school student in the counseling practicum, centered on helping the family make contact with a community service and checking whether connection occurred. Which named idea is most relevant?

A. Community asset mapping
B. Warm referral
C. Interprofessional collaboration
D. Boundary spanning

0434. In school-community collaboration, a student confuses Interprofessional collaboration with Community asset mapping. Which explanation most accurately separates them?

A. Interprofessional collaboration: Identification of local strengths, organizations, relationships, and resources relevant to community goals. / Community asset mapping: Coordinated work among professionals who contribute distinct expertise toward shared client goals.
B. Interprofessional collaboration: Coordinated work among professionals who contribute distinct expertise toward shared client goals. / Community asset mapping: Connecting organizations or professional groups while respecting each role's authority and accountability.
C. Interprofessional collaboration: A coordinated, mutually understood set of goals, responsibilities, and follow-up steps across helpers. / Community asset mapping: Identification of local strengths, organizations, relationships, and resources relevant to community goals.
D. Interprofessional collaboration: Coordinated work among professionals who contribute distinct expertise toward shared client goals. / Community asset mapping: Identification of local strengths, organizations, relationships, and resources relevant to community goals.

0435. A case conference reviews a program coordinator's work with a child aged 7 in the parent meeting: clarifying who contacts caregivers and who monitors a school support. Which principle is central?

A. Shared care plan
B. Role clarification
C. Interprofessional collaboration
D. Boundary spanning

0436. Which applied comparison correctly identifies what belongs to Shared care plan versus Collaborative problem solving?

A. Shared care plan: Involving youth and community partners in decisions throughout a project, not only at launch. / Collaborative problem solving: Agreeing on a measurable concern, trying one support, and reconvening to evaluate it.
B. Shared care plan: Documenting who will take each agreed next step and when progress will be reviewed. / Collaborative problem solving: Agreeing on a measurable concern, trying one support, and reconvening to evaluate it.
C. Shared care plan: Documenting who will take each agreed next step and when progress will be reviewed. / Collaborative problem solving: Reviewing attendance or wellbeing data together and adjusting supports with permission.
D. Shared care plan: Agreeing on a measurable concern, trying one support, and reconvening to evaluate it. / Collaborative problem solving: Documenting who will take each agreed next step and when progress will be reviewed.

0437. Select the best explanation of Outcome feedback loop.

A. Regular use of shared outcome information to adapt coordinated services.
B. An active, supported connection from one service to another that reduces barriers to follow-through.
C. A partnership in which community members share influence in defining questions, actions, and interpretation.
D. Identification of local strengths, organizations, relationships, and resources relevant to community goals.

0438. In a supervision quiz, how should Shared care plan be distinguished from Community asset mapping?

A. Shared care plan: A coordinated, mutually understood set of goals, responsibilities, and follow-up steps across helpers. / Community asset mapping: Explicit agreement about each partner's responsibilities, authority, and limits.
B. Shared care plan: A coordinated, mutually understood set of goals, responsibilities, and follow-up steps across helpers. / Community asset mapping: Identification of local strengths, organizations, relationships, and resources relevant to community goals.
C. Shared care plan: Identification of local strengths, organizations, relationships, and resources relevant to community goals. / Community asset mapping: A coordinated, mutually understood set of goals, responsibilities, and follow-up steps across helpers.
D. Shared care plan: Exchange of relevant information under valid permission and applicable privacy requirements. / Community asset mapping: Identification of local strengths, organizations, relationships, and resources relevant to community goals.

0439. Which statement most accurately defines Community asset mapping?

A. A structured process in which partners define a concern, generate options, test a plan, and review outcomes.
B. A partnership in which community members share influence in defining questions, actions, and interpretation.
C. Identification of local strengths, organizations, relationships, and resources relevant to community goals.
D. A coordinated, mutually understood set of goals, responsibilities, and follow-up steps across helpers.

0440. A young person aged 16 and a assessment clinician are reviewing goals in the school consultation. The agreed action is documenting who will take each agreed next step and when progress will be reviewed. Which principle best accounts for it?

A. Community-based participatory practice
B. Shared care plan
C. Community asset mapping
D. Boundary spanning

0441. Which comparison correctly distinguishes Warm referral from Boundary spanning?

A. Warm referral: An active, supported connection from one service to another that reduces barriers to follow-through. / Boundary spanning: Connecting organizations or professional groups while respecting each role's authority and accountability.
B. Warm referral: An active, supported connection from one service to another that reduces barriers to follow-through. / Boundary spanning: Coordinated work among professionals who contribute distinct expertise toward shared client goals.
C. Warm referral: Connecting organizations or professional groups while respecting each role's authority and accountability. / Boundary spanning: An active, supported connection from one service to another that reduces barriers to follow-through.
D. Warm referral: A structured process in which partners define a concern, generate options, test a plan, and review outcomes. / Boundary spanning: Connecting organizations or professional groups while respecting each role's authority and accountability.

0442. In a professional consultation about a young person aged 10, the assessment clinician describes this response in the school-based service: clarifying who contacts caregivers and who monitors a school support. Which term is most apt?

A. Shared care plan
B. Role clarification
C. Collaborative problem solving
D. Warm referral

0443. In school-community collaboration, which paired example correctly applies Interprofessional collaboration first and Warm referral second?

A. Interprofessional collaboration: Agreeing on roles and communication with school and community partners, subject to permission. / Warm referral: Mapping existing youth programs and trusted community networks before planning a new service.
B. Interprofessional collaboration: Agreeing on roles and communication with school and community partners, subject to permission. / Warm referral: Helping the family make contact with a community service and checking whether connection occurred.
C. Interprofessional collaboration: Involving youth and community partners in decisions throughout a project, not only at launch. / Warm referral: Helping the family make contact with a community service and checking whether connection occurred.
D. Interprofessional collaboration: Helping the family make contact with a community service and checking whether connection occurred. / Warm referral: Agreeing on roles and communication with school and community partners, subject to permission.

0444. A consultant prepares for a session in the supervision meeting with a client in early adolescence. The intended approach is documenting who will take each agreed next step and when progress will be reviewed. Which concept is most relevant?

A. Warm referral
B. Boundary spanning
C. Consent-based information sharing
D. Shared care plan

0445. A support meeting for a young person aged 16 includes a clinical supervisor in the clinical planning session. The practice under consideration is reviewing attendance or wellbeing data together and adjusting supports with permission. Which concept guides it?

A. Outcome feedback loop
B. Community-based participatory practice
C. Consent-based information sharing
D. Interprofessional collaboration

0446. Which named construct is captured by this account? Regular use of shared outcome information to adapt coordinated services.

A. Boundary spanning
B. Collaborative problem solving
C. Community asset mapping
D. Outcome feedback loop

0447. Which course concept is defined as follows: Identification of local strengths, organizations, relationships, and resources relevant to community goals.

A. Interprofessional collaboration
B. Collaborative problem solving
C. Outcome feedback loop
D. Community asset mapping

0448. A trainee must distinguish how Shared care plan and Boundary spanning guide practice. Which comparison is accurate?

A. Shared care plan: Documenting who will take each agreed next step and when progress will be reviewed. / Boundary spanning: Clarifying who contacts caregivers and who monitors a school support.
B. Shared care plan: Translating needs across systems without taking over another partner's responsibilities. / Boundary spanning: Documenting who will take each agreed next step and when progress will be reviewed.
C. Shared care plan: Documenting who will take each agreed next step and when progress will be reviewed. / Boundary spanning: Translating needs across systems without taking over another partner's responsibilities.
D. Shared care plan: Agreeing on roles and communication with school and community partners, subject to permission. / Boundary spanning: Translating needs across systems without taking over another partner's responsibilities.

0449. In a professional consultation about a adolescent student, the mental-health professional describes this response in the youth advocacy program: helping the family make contact with a community service and checking whether connection occurred. Which term is most apt?

A. Warm referral
B. Boundary spanning
C. Collaborative problem solving
D. Interprofessional collaboration

0450. A child aged 6's service team meets in the caregiver consultation. The school-based clinician recommends a change involving involving youth and community partners in decisions throughout a project, not only at launch. Which idea best explains it?

A. Boundary spanning
B. Collaborative problem solving
C. Interprofessional collaboration
D. Community-based participatory practice

0451. Which choice aligns each practice with the correct idea, Warm referral or Outcome feedback loop?

A. Warm referral: Reviewing attendance or wellbeing data together and adjusting supports with permission. / Outcome feedback loop: Helping the family make contact with a community service and checking whether connection occurred.
B. Warm referral: Confirming authorization and sharing only information needed for coordinated support. / Outcome feedback loop: Reviewing attendance or wellbeing data together and adjusting supports with permission.
C. Warm referral: Helping the family make contact with a community service and checking whether connection occurred. / Outcome feedback loop: Reviewing attendance or wellbeing data together and adjusting supports with permission.
D. Warm referral: Helping the family make contact with a community service and checking whether connection occurred. / Outcome feedback loop: Translating needs across systems without taking over another partner's responsibilities.

0452. Which applied comparison correctly identifies what belongs to Warm referral versus Outcome feedback loop?

A. Warm referral: Reviewing attendance or wellbeing data together and adjusting supports with permission. / Outcome feedback loop: Helping the family make contact with a community service and checking whether connection occurred.
B. Warm referral: Helping the family make contact with a community service and checking whether connection occurred. / Outcome feedback loop: Reviewing attendance or wellbeing data together and adjusting supports with permission.
C. Warm referral: Confirming authorization and sharing only information needed for coordinated support. / Outcome feedback loop: Reviewing attendance or wellbeing data together and adjusting supports with permission.
D. Warm referral: Helping the family make contact with a community service and checking whether connection occurred. / Outcome feedback loop: Translating needs across systems without taking over another partner's responsibilities.

0453. In school-community collaboration, a service team discusses a student aged 17 in the caregiver consultation. Their proposed next step is agreeing on roles and communication with school and community partners, subject to permission. Which course concept supports it?

A. Interprofessional collaboration
B. Warm referral
C. Consent-based information sharing
D. Collaborative problem solving

0454. A trainee must explain Collaborative problem solving. Which answer is accurate?

A. A coordinated, mutually understood set of goals, responsibilities, and follow-up steps across helpers.
B. Exchange of relevant information under valid permission and applicable privacy requirements.
C. A partnership in which community members share influence in defining questions, actions, and interpretation.
D. A structured process in which partners define a concern, generate options, test a plan, and review outcomes.

0455. A service navigator is asked what should shape a young person’s support in the child guidance clinic. The proposed focus is reviewing attendance or wellbeing data together and adjusting supports with permission. Which principle does it represent?

A. Interprofessional collaboration
B. Outcome feedback loop
C. Collaborative problem solving
D. Community asset mapping

0456. Which statement accurately contrasts the course concepts Shared care plan and Community-based participatory practice?

A. Shared care plan: An active, supported connection from one service to another that reduces barriers to follow-through. / Community-based participatory practice: A partnership in which community members share influence in defining questions, actions, and interpretation.
B. Shared care plan: A partnership in which community members share influence in defining questions, actions, and interpretation. / Community-based participatory practice: A coordinated, mutually understood set of goals, responsibilities, and follow-up steps across helpers.
C. Shared care plan: A coordinated, mutually understood set of goals, responsibilities, and follow-up steps across helpers. / Community-based participatory practice: A structured process in which partners define a concern, generate options, test a plan, and review outcomes.
D. Shared care plan: A coordinated, mutually understood set of goals, responsibilities, and follow-up steps across helpers. / Community-based participatory practice: A partnership in which community members share influence in defining questions, actions, and interpretation.

0457. How should a practitioner distinguish the applications of Shared care plan and Role clarification?

A. Shared care plan: Documenting who will take each agreed next step and when progress will be reviewed. / Role clarification: Mapping existing youth programs and trusted community networks before planning a new service.
B. Shared care plan: Documenting who will take each agreed next step and when progress will be reviewed. / Role clarification: Clarifying who contacts caregivers and who monitors a school support.
C. Shared care plan: Clarifying who contacts caregivers and who monitors a school support. / Role clarification: Documenting who will take each agreed next step and when progress will be reviewed.
D. Shared care plan: Translating needs across systems without taking over another partner’s responsibilities. / Role clarification: Clarifying who contacts caregivers and who monitors a school support.

0458. Which statement accurately contrasts the course concepts Community-based participatory practice and Outcome feedback loop?

A. Community-based participatory practice: A structured process in which partners define a concern, generate options, test a plan, and review outcomes. / Outcome feedback loop: Regular use of shared outcome information to adapt coordinated services.
B. Community-based participatory practice: Regular use of shared outcome information to adapt coordinated services. / Outcome feedback loop: A partnership in which community members share influence in defining questions, actions, and interpretation.
C. Community-based participatory practice: A partnership in which community members share influence in defining questions, actions, and interpretation. / Outcome feedback loop: Coordinated work among professionals who contribute distinct expertise toward shared client goals.
D. Community-based participatory practice: A partnership in which community members share influence in defining questions, actions, and interpretation. / Outcome feedback loop: Regular use of shared outcome information to adapt coordinated services.

0459. Which option preserves the correct meaning of both Role clarification and Warm referral?

A. Role clarification: Explicit agreement about each partner’s responsibilities, authority, and limits. / Warm referral: An active, supported connection from one service to another that reduces barriers to follow-through.
B. Role clarification: A structured process in which partners define a concern, generate options, test a plan, and review outcomes. / Warm referral: An active, supported connection from one service to another that reduces barriers to follow-through.
C. Role clarification: Explicit agreement about each partner’s responsibilities, authority, and limits. / Warm referral: Identification of local strengths, organizations, relationships, and resources relevant to community goals.
D. Role clarification: An active, supported connection from one service to another that reduces barriers to follow-through. / Warm referral: Explicit agreement about each partner’s responsibilities, authority, and limits.

0460. Which comparison would correct a trainee’s misunderstanding of Community-based participatory practice versus Boundary spanning?

A. Community-based participatory practice: Exchange of relevant information under valid permission and applicable privacy requirements. / Boundary spanning: Connecting organizations or professional groups while respecting each role’s authority and accountability.
B. Community-based participatory practice: A partnership in which community members share influence in defining questions, actions, and interpretation. / Boundary spanning: Coordinated work among professionals who contribute distinct expertise toward shared client goals.
C. Community-based participatory practice: A partnership in which community members share influence in defining questions, actions, and interpretation. / Boundary spanning: Connecting organizations or professional groups while respecting each role’s authority and accountability.
D. Community-based participatory practice: Connecting organizations or professional groups while respecting each role’s authority and accountability. / Boundary spanning: A partnership in which community members share influence in defining questions, actions, and interpretation.

0461. A consultant and a child aged 6 are discussing support in the school counseling office. The selected practice is clarifying who contacts caregivers and who monitors a school support. Which concept does this demonstrate?

A. Collaborative problem solving
B. Outcome feedback loop
C. Role clarification
D. Warm referral

0462. During work in the counseling practicum, a teacher and counselor identifies this need: agreeing on a measurable concern, trying one support, and reconvening to evaluate it. Which idea should guide the response?

A. Outcome feedback loop
B. Community asset mapping
C. Interprofessional collaboration
D. Collaborative problem solving

0463. A student aged 15 and a member of a clinical team are reviewing goals in the school counseling office. The agreed action is translating needs across systems without taking over another partner’s responsibilities. Which principle best accounts for it?

A. Collaborative problem solving
B. Boundary spanning
C. Community-based participatory practice
D. Consent-based information sharing

0464. Identify the most precise label for this idea: Identification of local strengths, organizations, relationships, and resources relevant to community goals.

A. Outcome feedback loop
B. Community asset mapping
C. Role clarification
D. Consent-based information sharing

0465. Which description belongs with the term Community asset mapping?

A. A coordinated, mutually understood set of goals, responsibilities, and follow-up steps across helpers.
B. Exchange of relevant information under valid permission and applicable privacy requirements.
C. Identification of local strengths, organizations, relationships, and resources relevant to community goals.
D. An active, supported connection from one service to another that reduces barriers to follow-through.

0466. A student aged 9’s service team meets in the school-based service. The family therapist recommends a change involving reviewing attendance or wellbeing data together and adjusting supports with permission. Which idea best explains it?

A. Outcome feedback loop
B. Community-based participatory practice
C. Interprofessional collaboration
D. Community asset mapping

0467. In the classroom support meeting, the agreed focus for a service navigator working with a client in early adolescence is mapping existing youth programs and trusted community networks before planning a new service. Which concept names this focus?

A. Role clarification
B. Consent-based information sharing
C. Community-based participatory practice
D. Community asset mapping

0468. For a client in early adolescence in the outpatient clinic, a play therapist makes this practice the immediate priority: confirming authorization and sharing only information needed for coordinated support. Which concept fits best?

A. Shared care plan
B. Consent-based information sharing
C. Role clarification
D. Collaborative problem solving

0469. Which applied comparison correctly identifies what belongs to Community asset mapping versus Warm referral?

A. Community asset mapping: Mapping existing youth programs and trusted community networks before planning a new service. / Warm referral: Agreeing on a measurable concern, trying one support, and reconvening to evaluate it.
B. Community asset mapping: Mapping existing youth programs and trusted community networks before planning a new service. / Warm referral: Helping the family make contact with a community service and checking whether connection occurred.
C. Community asset mapping: Helping the family make contact with a community service and checking whether connection occurred. / Warm referral: Mapping existing youth programs and trusted community networks before planning a new service.
D. Community asset mapping: Confirming authorization and sharing only information needed for coordinated support. / Warm referral: Helping the family make contact with a community service and checking whether connection occurred.

0470. A supervised trainee is preparing a follow-up plan for a preadolescent child in the after-school program. The plan calls for reviewing attendance or wellbeing data together and adjusting supports with permission. Which concept names this approach?

A. Interprofessional collaboration
B. Outcome feedback loop
C. Boundary spanning
D. Role clarification

0471. At the outpatient clinic, a behavior specialist meets with a young adolescent client. The practice priority is: reviewing attendance or wellbeing data together and adjusting supports with permission. Which concept best captures that priority?

A. Outcome feedback loop
B. Consent-based information sharing
C. Collaborative problem solving
D. Interprofessional collaboration

0472. Which choice aligns each practice with the correct idea, Shared care plan or Role clarification?

A. Shared care plan: Translating needs across systems without taking over another partner’s responsibilities. / Role clarification: Clarifying who contacts caregivers and who monitors a school support.
B. Shared care plan: Documenting who will take each agreed next step and when progress will be reviewed. / Role clarification: Mapping existing youth programs and trusted community networks before planning a new service.
C. Shared care plan: Documenting who will take each agreed next step and when progress will be reviewed. / Role clarification: Clarifying who contacts caregivers and who monitors a school support.
D. Shared care plan: Clarifying who contacts caregivers and who monitors a school support. / Role clarification: Documenting who will take each agreed next step and when progress will be reviewed.

0473. Choose the term that matches this definition: An active, supported connection from one service to another that reduces barriers to follow-through.

A. Boundary spanning
B. Warm referral
C. Collaborative problem solving
D. Interprofessional collaboration

0474. A consulting counselor is explaining a choice to a child of elementary-school age and caregiver in the clinical planning session. The choice centers on agreeing on a measurable concern, trying one support, and reconvening to evaluate it. Which idea is illustrated?

A. Consent-based information sharing
B. Warm referral
C. Boundary spanning
D. Collaborative problem solving

0475. In school-community collaboration, how should a practitioner distinguish the applications of Interprofessional collaboration and Shared care plan?

A. Interprofessional collaboration: Clarifying who contacts caregivers and who monitors a school support. / Shared care plan: Documenting who will take each agreed next step and when progress will be reviewed.
B. Interprofessional collaboration: Documenting who will take each agreed next step and when progress will be reviewed. / Shared care plan: Agreeing on roles and communication with school and community partners, subject to permission.
C. Interprofessional collaboration: Agreeing on roles and communication with school and community partners, subject to permission. / Shared care plan: Documenting who will take each agreed next step and when progress will be reviewed.
D. Interprofessional collaboration: Agreeing on roles and communication with school and community partners, subject to permission. / Shared care plan: Confirming authorization and sharing only information needed for coordinated support.

0476. In school-community collaboration, while supporting a adolescent student in the parent meeting, a parent educator adopts this practice: agreeing on roles and communication with school and community partners, subject to permission. Which concept best explains the choice?

A. Interprofessional collaboration
B. Warm referral
C. Boundary spanning
D. Role clarification

0477. During service review in the family session, a service navigator describes clarifying who contacts caregivers and who monitors a school support. for a middle-school student. Which course idea is most applicable?

A. Warm referral
B. Community asset mapping
C. Consent-based information sharing
D. Role clarification

0478. In school-community collaboration, which professional action most closely applies Interprofessional collaboration?

A. Reviewing attendance or wellbeing data together and adjusting supports with permission.
B. Confirming authorization and sharing only information needed for coordinated support.
C. Agreeing on roles and communication with school and community partners, subject to permission.
D. Helping the family make contact with a community service and checking whether connection occurred.

0479. In school-community collaboration, a therapist is asked what should shape a student aged 17’s support in the caregiver consultation. The proposed focus is agreeing on roles and communication with school and community partners, subject to permission. Which principle does it represent?

A. Role clarification
B. Warm referral
C. Interprofessional collaboration
D. Shared care plan

0480. A student confuses Community asset mapping with Consent-based information sharing. Which explanation most accurately separates them?

A. Community asset mapping: Identification of local strengths, organizations, relationships, and resources relevant to community goals. / Consent-based information sharing: Exchange of relevant information under valid permission and applicable privacy requirements.
B. Community asset mapping: A coordinated, mutually understood set of goals, responsibilities, and follow-up steps across helpers. / Consent-based information sharing: Exchange of relevant information under valid permission and applicable privacy requirements.
C. Community asset mapping: Exchange of relevant information under valid permission and applicable privacy requirements. / Consent-based information sharing: Identification of local strengths, organizations, relationships, and resources relevant to community goals.
D. Community asset mapping: Identification of local strengths, organizations, relationships, and resources relevant to community goals. / Consent-based information sharing: A partnership in which community members share influence in defining questions, actions, and interpretation.

0481. A team must select a support approach for a student aged 17 at the outpatient clinic. The school-based clinician recommends translating needs across systems without taking over another partner’s responsibilities. Which idea is most relevant?

A. Collaborative problem solving
B. Role clarification
C. Consent-based information sharing
D. Boundary spanning

0482. Which comparison correctly distinguishes Role clarification from Community-based participatory practice?

A. Role clarification: Connecting organizations or professional groups while respecting each role’s authority and accountability. / Community-based participatory practice: A partnership in which community members share influence in defining questions, actions, and interpretation.
B. Role clarification: Explicit agreement about each partner’s responsibilities, authority, and limits. / Community-based participatory practice: A partnership in which community members share influence in defining questions, actions, and interpretation.
C. Role clarification: A partnership in which community members share influence in defining questions, actions, and interpretation. / Community-based participatory practice: Explicit agreement about each partner’s responsibilities, authority, and limits.
D. Role clarification: Explicit agreement about each partner’s responsibilities, authority, and limits. / Community-based participatory practice: Coordinated work among professionals who contribute distinct expertise toward shared client goals.

0483. Choose the response that best puts Warm referral into practice.

A. Helping the family make contact with a community service and checking whether connection occurred.
B. Clarifying who contacts caregivers and who monitors a school support.
C. Translating needs across systems without taking over another partner’s responsibilities.
D. Involving youth and community partners in decisions throughout a project, not only at launch.

0484. In school-community collaboration, in the after-school program, a case coordinator is considering this approach for a young adolescent client: agreeing on roles and communication with school and community partners, subject to permission. Which framework does it represent?

A. Outcome feedback loop
B. Shared care plan
C. Community asset mapping
D. Interprofessional collaboration

0485. Select the best explanation of Role clarification.

A. A partnership in which community members share influence in defining questions, actions, and interpretation.
B. Explicit agreement about each partner’s responsibilities, authority, and limits.
C. Regular use of shared outcome information to adapt coordinated services.
D. Coordinated work among professionals who contribute distinct expertise toward shared client goals.

0486. In school-community collaboration, in a supervision quiz, how should Interprofessional collaboration be distinguished from Shared care plan?

A. Interprofessional collaboration: Coordinated work among professionals who contribute distinct expertise toward shared client goals. / Shared care plan: Exchange of relevant information under valid permission and applicable privacy requirements.
B. Interprofessional collaboration: Explicit agreement about each partner's responsibilities, authority, and limits. / Shared care plan: A coordinated, mutually understood set of goals, responsibilities, and follow-up steps across helpers.
C. Interprofessional collaboration: Coordinated work among professionals who contribute distinct expertise toward shared client goals. / Shared care plan: A coordinated, mutually understood set of goals, responsibilities, and follow-up steps across helpers.
D. Interprofessional collaboration: A coordinated, mutually understood set of goals, responsibilities, and follow-up steps across helpers. / Shared care plan: Coordinated work among professionals who contribute distinct expertise toward shared client goals.

0487. Which option correctly matches each concept to its practice focus: Shared care plan and Consent-based information sharing?

A. Shared care plan: Documenting who will take each agreed next step and when progress will be reviewed. / Consent-based information sharing: Reviewing attendance or wellbeing data together and adjusting supports with permission.
B. Shared care plan: Documenting who will take each agreed next step and when progress will be reviewed. / Consent-based information sharing: Confirming authorization and sharing only information needed for coordinated support.
C. Shared care plan: Agreeing on a measurable concern, trying one support, and reconvening to evaluate it. / Consent-based information sharing: Confirming authorization and sharing only information needed for coordinated support.
D. Shared care plan: Confirming authorization and sharing only information needed for coordinated support. / Consent-based information sharing: Documenting who will take each agreed next step and when progress will be reviewed.

0488. A case conference reviews a service navigator's work with a child aged 14 in the youth group: helping the family make contact with a community service and checking whether connection occurred. Which principle is central?

A. Warm referral
B. Shared care plan
C. Boundary spanning
D. Community asset mapping

0489. An interdisciplinary team reviews a child of elementary-school age's case at the after-school program. The school support specialist recommends documenting who will take each agreed next step and when progress will be reviewed. Which course concept best fits?

A. Community-based participatory practice
B. Boundary spanning
C. Interprofessional collaboration
D. Shared care plan

0490. Choose the practice comparison that best separates Role clarification from Community-based participatory practice.

A. Role clarification: Clarifying who contacts caregivers and who monitors a school support. / Community-based participatory practice: Agreeing on roles and communication with school and community partners, subject to permission.
B. Role clarification: Translating needs across systems without taking over another partner's responsibilities. / Community-based participatory practice: Involving youth and community partners in decisions throughout a project, not only at launch.
C. Role clarification: Clarifying who contacts caregivers and who monitors a school support. / Community-based participatory practice: Involving youth and community partners in decisions throughout a project, not only at launch.
D. Role clarification: Involving youth and community partners in decisions throughout a project, not only at launch. / Community-based participatory practice: Clarifying who contacts caregivers and who monitors a school support.

0491. In school-community collaboration, which comparison would correct a trainee's misunderstanding of Interprofessional collaboration versus Warm referral?

A. Interprofessional collaboration: Coordinated work among professionals who contribute distinct expertise toward shared client goals. / Warm referral: An active, supported connection from one service to another that reduces barriers to follow-through.
B. Interprofessional collaboration: An active, supported connection from one service to another that reduces barriers to follow-through. / Warm referral: Coordinated work among professionals who contribute distinct expertise toward shared client goals.
C. Interprofessional collaboration: A partnership in which community members share influence in defining questions, actions, and interpretation. / Warm referral: An active, supported connection from one service to another that reduces barriers to follow-through.
D. Interprofessional collaboration: Coordinated work among professionals who contribute distinct expertise toward shared client goals. / Warm referral: Identification of local strengths, organizations, relationships, and resources relevant to community goals.

0492. Consider a client in early adolescence receiving help in the child guidance clinic. The school counselor focuses on translating needs across systems without taking over another partner's responsibilities. Which term best describes the guiding idea?

A. Community asset mapping
B. Community-based participatory practice
C. Boundary spanning
D. Shared care plan

0493. Which pair of actions illustrates Consent-based information sharing and Warm referral, respectively?

A. Consent-based information sharing: Confirming authorization and sharing only information needed for coordinated support. / Warm referral: Involving youth and community partners in decisions throughout a project, not only at launch.
B. Consent-based information sharing: Translating needs across systems without taking over another partner's responsibilities. / Warm referral: Helping the family make contact with a community service and checking whether connection occurred.
C. Consent-based information sharing: Confirming authorization and sharing only information needed for coordinated support. / Warm referral: Helping the family make contact with a community service and checking whether connection occurred.
D. Consent-based information sharing: Helping the family make contact with a community service and checking whether connection occurred. / Warm referral: Confirming authorization and sharing only information needed for coordinated support.

0494. A mental-health professional is preparing a follow-up plan for a student aged 15 in the learning-support meeting. The plan calls for clarifying who contacts caregivers and who monitors a school support. Which concept names this approach?

A. Outcome feedback loop
B. Community-based participatory practice
C. Collaborative problem solving
D. Role clarification

0495. A clinical supervisor reviews a plan for a young person aged 18 in the school consultation. The plan emphasizes translating needs across systems without taking over another partner's responsibilities. Which course idea does this reflect?

A. Warm referral
B. Boundary spanning
C. Collaborative problem solving
D. Interprofessional collaboration

0496. A student confuses Consent-based information sharing with Warm referral. Which explanation most accurately separates them?

A. Consent-based information sharing: An active, supported connection from one service to another that reduces barriers to follow-through. / Warm referral: Exchange of relevant information under valid permission and applicable privacy requirements.
B. Consent-based information sharing: Connecting organizations or professional groups while respecting each role's authority and accountability. / Warm referral: An active, supported connection from one service to another that reduces barriers to follow-through.
C. Consent-based information sharing: Exchange of relevant information under valid permission and applicable privacy requirements. / Warm referral: A partnership in which community members share influence in defining questions, actions, and interpretation.
D. Consent-based information sharing: Exchange of relevant information under valid permission and applicable privacy requirements. / Warm referral: An active, supported connection from one service to another that reduces barriers to follow-through.

0497. During service review in the school counseling office, a community practitioner describes mapping existing youth programs and trusted community networks before planning a new service. for a young person aged 16. Which course idea is most applicable?

A. Boundary spanning
B. Consent-based information sharing
C. Shared care plan
D. Community asset mapping

0498. What is the central meaning of Shared care plan?

A. A partnership in which community members share influence in defining questions, actions, and interpretation.
B. Coordinated work among professionals who contribute distinct expertise toward shared client goals.
C. A coordinated, mutually understood set of goals, responsibilities, and follow-up steps across helpers.
D. Exchange of relevant information under valid permission and applicable privacy requirements.

0499. In school-community collaboration, a caregiver working with a counselor presents a support plan for a client in early adolescence at the behavior-support review. Its central feature is agreeing on roles and communication with school and community partners, subject to permission. Which concept should be named?

A. Interprofessional collaboration
B. Boundary spanning
C. Consent-based information sharing
D. Community asset mapping

0500. Which comparison correctly distinguishes Community asset mapping from Warm referral?

A. Community asset mapping: Identification of local strengths, organizations, relationships, and resources relevant to community goals. / Warm referral: A structured process in which partners define a concern, generate options, test a plan, and review outcomes.
B. Community asset mapping: Exchange of relevant information under valid permission and applicable privacy requirements. / Warm referral: An active, supported connection from one service to another that reduces barriers to follow-through.
C. Community asset mapping: An active, supported connection from one service to another that reduces barriers to follow-through. / Warm referral: Identification of local strengths, organizations, relationships, and resources relevant to community goals.
D. Community asset mapping: Identification of local strengths, organizations, relationships, and resources relevant to community goals. / Warm referral: An active, supported connection from one service to another that reduces barriers to follow-through.

0501. A teacher and counselor is asked to justify a plan for a child aged 11 in the community service agency. It calls for translating needs across systems without taking over another partner's responsibilities. Which concept provides the rationale?

A. Role clarification
B. Interprofessional collaboration
C. Collaborative problem solving
D. Boundary spanning

0502. In school-community collaboration, how are Interprofessional collaboration and Warm referral most accurately differentiated in this curriculum?

A. Interprofessional collaboration: Coordinated work among professionals who contribute distinct expertise toward shared client goals. / Warm referral: An active, supported connection from one service to another that reduces barriers to follow-through.
B. Interprofessional collaboration: Coordinated work among professionals who contribute distinct expertise toward shared client goals. / Warm referral: Identification of local strengths, organizations, relationships, and resources relevant to community goals.
C. Interprofessional collaboration: A partnership in which community members share influence in defining questions, actions, and interpretation. / Warm referral: An active, supported connection from one service to another that reduces barriers to follow-through.
D. Interprofessional collaboration: An active, supported connection from one service to another that reduces barriers to follow-through. / Warm referral: Coordinated work among professionals who contribute distinct expertise toward shared client goals.

0503. Choose the definition pair that correctly explains Consent-based information sharing first and Warm referral second.

A. Consent-based information sharing: Connecting organizations or professional groups while respecting each role's authority and accountability. / Warm referral: An active, supported connection from one service to another that reduces barriers to follow-through.
B. Consent-based information sharing: Exchange of relevant information under valid permission and applicable privacy requirements. / Warm referral: A partnership in which community members share influence in defining questions, actions, and interpretation.
C. Consent-based information sharing: An active, supported connection from one service to another that reduces barriers to follow-through. / Warm referral: Exchange of relevant information under valid permission and applicable privacy requirements.
D. Consent-based information sharing: Exchange of relevant information under valid permission and applicable privacy requirements. / Warm referral: An active, supported connection from one service to another that reduces barriers to follow-through.

0504. Which option is the clearest practical expression of Outcome feedback loop?

A. Reviewing attendance or wellbeing data together and adjusting supports with permission.
B. Clarifying who contacts caregivers and who monitors a school support.
C. Confirming authorization and sharing only information needed for coordinated support.
D. Involving youth and community partners in decisions throughout a project, not only at launch.

0505. Which professional action most closely applies Community-based participatory practice?

A. Agreeing on roles and communication with school and community partners, subject to permission.
B. Helping the family make contact with a community service and checking whether connection occurred.
C. Translating needs across systems without taking over another partner’s responsibilities.
D. Involving youth and community partners in decisions throughout a project, not only at launch.

0506. Which statement accurately contrasts the course concepts Shared care plan and Consent-based information sharing?

A. Shared care plan: Exchange of relevant information under valid permission and applicable privacy requirements. / Consent-based information sharing: A coordinated, mutually understood set of goals, responsibilities, and follow-up steps across helpers.
B. Shared care plan: A coordinated, mutually understood set of goals, responsibilities, and follow-up steps across helpers. / Consent-based information sharing: Exchange of relevant information under valid permission and applicable privacy requirements.
C. Shared care plan: A coordinated, mutually understood set of goals, responsibilities, and follow-up steps across helpers. / Consent-based information sharing: Regular use of shared outcome information to adapt coordinated services.
D. Shared care plan: A structured process in which partners define a concern, generate options, test a plan, and review outcomes. / Consent-based information sharing: Exchange of relevant information under valid permission and applicable privacy requirements.

0507. Which description belongs with the term Consent-based information sharing?

A. Identification of local strengths, organizations, relationships, and resources relevant to community goals.
B. Exchange of relevant information under valid permission and applicable privacy requirements.
C. Regular use of shared outcome information to adapt coordinated services.
D. Connecting organizations or professional groups while respecting each role’s authority and accountability.

0508. Which option correctly matches each concept to its practice focus: Consent-based information sharing and Warm referral?

A. Consent-based information sharing: Confirming authorization and sharing only information needed for coordinated support. / Warm referral: Helping the family make contact with a community service and checking whether connection occurred.
B. Consent-based information sharing: Helping the family make contact with a community service and checking whether connection occurred. / Warm referral: Confirming authorization and sharing only information needed for coordinated support.
C. Consent-based information sharing: Confirming authorization and sharing only information needed for coordinated support. / Warm referral: Involving youth and community partners in decisions throughout a project, not only at launch.
D. Consent-based information sharing: Translating needs across systems without taking over another partner’s responsibilities. / Warm referral: Helping the family make contact with a community service and checking whether connection occurred.

0509. Choose the response that best puts Consent-based information sharing into practice.

A. Clarifying who contacts caregivers and who monitors a school support.
B. Confirming authorization and sharing only information needed for coordinated support.
C. Helping the family make contact with a community service and checking whether connection occurred.
D. Translating needs across systems without taking over another partner’s responsibilities.

0510. Which statement most accurately defines Community-based participatory practice?

A. Exchange of relevant information under valid permission and applicable privacy requirements.
B. Connecting organizations or professional groups while respecting each role’s authority and accountability.
C. A partnership in which community members share influence in defining questions, actions, and interpretation.
D. Explicit agreement about each partner’s responsibilities, authority, and limits.

0511. For a student aged 15 in the community mental-health service, a counselor makes this practice the immediate priority: helping the family make contact with a community service and checking whether connection occurred. Which concept fits best?

A. Boundary spanning
B. Warm referral
C. Consent-based information sharing
D. Role clarification

0512. In the clinical planning session, the agreed focus for a community practitioner working with a teenage client is helping the family make contact with a community service and checking whether connection occurred. Which concept names this focus?

A. Outcome feedback loop
B. Warm referral
C. Community-based participatory practice
D. Role clarification

0513. During work in the telehealth session, a youth worker identifies this need: documenting who will take each agreed next step and when progress will be reviewed. Which idea should guide the response?

A. Consent-based information sharing
B. Shared care plan
C. Interprofessional collaboration
D. Collaborative problem solving

0514. While consulting in the school-based service, a assessment clinician supports a young person aged 10 by using this approach: clarifying who contacts caregivers and who monitors a school support. Which concept is being applied?

A. Collaborative problem solving
B. Warm referral
C. Role clarification
D. Interprofessional collaboration

0515. In a professional consultation about a client in late adolescence, the consultant describes this response in the community mental-health service: reviewing attendance or wellbeing data together and adjusting supports with permission. Which term is most apt?

A. Warm referral
B. Community-based participatory practice
C. Interprofessional collaboration
D. Outcome feedback loop

0516. A student confuses Role clarification with Community-based participatory practice. Which explanation most accurately separates them?

A. Role clarification: A partnership in which community members share influence in defining questions, actions, and interpretation. / Community-based participatory practice: Explicit agreement about each partner's responsibilities, authority, and limits.
B. Role clarification: Explicit agreement about each partner's responsibilities, authority, and limits. / Community-based participatory practice: A partnership in which community members share influence in defining questions, actions, and interpretation.
C. Role clarification: Explicit agreement about each partner's responsibilities, authority, and limits. / Community-based participatory practice: Coordinated work among professionals who contribute distinct expertise toward shared client goals.
D. Role clarification: Connecting organizations or professional groups while respecting each role's authority and accountability. / Community-based participatory practice: A partnership in which community members share influence in defining questions, actions, and interpretation.

0517. In school-community collaboration, a young adolescent client's service team meets in the after-school program. The case coordinator recommends a change involving agreeing on roles and communication with school and community partners, subject to permission. Which idea best explains it?

A. Warm referral
B. Shared care plan
C. Interprofessional collaboration
D. Outcome feedback loop

0518. Which comparison correctly distinguishes Community asset mapping from Role clarification?

A. Community asset mapping: Identification of local strengths, organizations, relationships, and resources relevant to community goals. / Role clarification: Regular use of shared outcome information to adapt coordinated services.
B. Community asset mapping: Identification of local strengths, organizations, relationships, and resources relevant to community goals. / Role clarification: Explicit agreement about each partner's responsibilities, authority, and limits.
C. Community asset mapping: Explicit agreement about each partner's responsibilities, authority, and limits. / Role clarification: Identification of local strengths, organizations, relationships, and resources relevant to community goals.
D. Community asset mapping: A structured process in which partners define a concern, generate options, test a plan, and review outcomes. / Role clarification: Explicit agreement about each partner's responsibilities, authority, and limits.

0519. Which comparison would correct a trainee's misunderstanding of Shared care plan versus Collaborative problem solving?

A. Shared care plan: A structured process in which partners define a concern, generate options, test a plan, and review outcomes. / Collaborative problem solving: A coordinated, mutually understood set of goals, responsibilities, and follow-up steps across helpers.
B. Shared care plan: A coordinated, mutually understood set of goals, responsibilities, and follow-up steps across helpers. / Collaborative problem solving: Regular use of shared outcome information to adapt coordinated services.
C. Shared care plan: A partnership in which community members share influence in defining questions, actions, and interpretation. / Collaborative problem solving: A structured process in which partners define a concern, generate options, test a plan, and review outcomes.
D. Shared care plan: A coordinated, mutually understood set of goals, responsibilities, and follow-up steps across helpers. / Collaborative problem solving: A structured process in which partners define a concern, generate options, test a plan, and review outcomes.

0520. In a case note about a child aged 14, a consultant working in the child guidance clinic records this priority: agreeing on a measurable concern, trying one support, and reconvening to evaluate it. What principle is reflected?

A. Warm referral
B. Collaborative problem solving
C. Consent-based information sharing
D. Outcome feedback loop

0521. A student confuses Consent-based information sharing with Collaborative problem solving. Which explanation most accurately separates them?

A. Consent-based information sharing: Exchange of relevant information under valid permission and applicable privacy requirements. / Collaborative problem solving: An active, supported connection from one service to another that reduces barriers to follow-through.
B. Consent-based information sharing: A structured process in which partners define a concern, generate options, test a plan, and review outcomes. / Collaborative problem solving: Exchange of relevant information under valid permission and applicable privacy requirements.
C. Consent-based information sharing: Regular use of shared outcome information to adapt coordinated services. / Collaborative problem solving: A structured process in which partners define a concern, generate options, test a plan, and review outcomes.
D. Consent-based information sharing: Exchange of relevant information under valid permission and applicable privacy requirements. / Collaborative problem solving: A structured process in which partners define a concern, generate options, test a plan, and review outcomes.

0522. A case conference reviews a therapist's work with a child aged 11 in the learning-support meeting: mapping existing youth programs and trusted community networks before planning a new service. Which principle is central?

A. Community-based participatory practice
B. Interprofessional collaboration
C. Collaborative problem solving
D. Community asset mapping

0523. A case conference asks for a distinction between Consent-based information sharing and Boundary spanning. Which answer is sound?

A. Consent-based information sharing: Coordinated work among professionals who contribute distinct expertise toward shared client goals. / Boundary spanning: Connecting organizations or professional groups while respecting each role's authority and accountability.
B. Consent-based information sharing: Connecting organizations or professional groups while respecting each role's authority and accountability. / Boundary spanning: Exchange of relevant information under valid permission and applicable privacy requirements.
C. Consent-based information sharing: Exchange of relevant information under valid permission and applicable privacy requirements. / Boundary spanning: A coordinated, mutually understood set of goals, responsibilities, and follow-up steps across helpers.
D. Consent-based information sharing: Exchange of relevant information under valid permission and applicable privacy requirements. / Boundary spanning: Connecting organizations or professional groups while respecting each role's authority and accountability.

0524. A school counselor is explaining a choice to a older adolescent client and caregiver in the classroom support meeting. The choice centers on documenting who will take each agreed next step and when progress will be reviewed. Which idea is illustrated?

A. Outcome feedback loop
B. Shared care plan
C. Consent-based information sharing
D. Collaborative problem solving

0525. Which statement shows a sound practice-level distinction between Role clarification and Outcome feedback loop?

A. Role clarification: Clarifying who contacts caregivers and who monitors a school support. / Outcome feedback loop: Reviewing attendance or wellbeing data together and adjusting supports with permission.
B. Role clarification: Agreeing on roles and communication with school and community partners, subject to permission. / Outcome feedback loop: Reviewing attendance or wellbeing data together and adjusting supports with permission.
C. Role clarification: Reviewing attendance or wellbeing data together and adjusting supports with permission. / Outcome feedback loop: Clarifying who contacts caregivers and who monitors a school support.
D. Role clarification: Clarifying who contacts caregivers and who monitors a school support. / Outcome feedback loop: Translating needs across systems without taking over another partner's responsibilities.

0526. A child aged 8 and a consultant are reviewing goals in the clinical planning session. The agreed action is involving youth and community partners in decisions throughout a project, not only at launch. Which principle best accounts for it?

A. Community-based participatory practice
B. Boundary spanning
C. Collaborative problem solving
D. Outcome feedback loop

0527. A trainee must choose a practice that exemplifies Community-based participatory practice. Which action is the best fit?

A. Clarifying who contacts caregivers and who monitors a school support.
B. Confirming authorization and sharing only information needed for coordinated support.
C. Involving youth and community partners in decisions throughout a project, not only at launch.
D. Reviewing attendance or wellbeing data together and adjusting supports with permission.

0528. A service team discusses a middle-school student in the community mental-health service. Their proposed next step is translating needs across systems without taking over another partner's responsibilities. Which course concept supports it?

A. Interprofessional collaboration
B. Boundary spanning
C. Consent-based information sharing
D. Role clarification

0529. Which named construct is captured by this account? An active, supported connection from one service to another that reduces barriers to follow-through.

A. Interprofessional collaboration
B. Outcome feedback loop
C. Warm referral
D. Collaborative problem solving

0530. Which description belongs with the term Outcome feedback loop?

A. An active, supported connection from one service to another that reduces barriers to follow-through.
B. Regular use of shared outcome information to adapt coordinated services.
C. Identification of local strengths, organizations, relationships, and resources relevant to community goals.
D. A coordinated, mutually understood set of goals, responsibilities, and follow-up steps across helpers.

0531. In school-community collaboration, a student aged 9 and a supervised trainee are reviewing goals in the community youth program. The agreed action is agreeing on roles and communication with school and community partners, subject to permission. Which principle best accounts for it?

A. Community-based participatory practice
B. Interprofessional collaboration
C. Warm referral
D. Outcome feedback loop

0532. A trainee must distinguish how Consent-based information sharing and Boundary spanning guide practice. Which comparison is accurate?

A. Consent-based information sharing: Confirming authorization and sharing only information needed for coordinated support. / Boundary spanning: Documenting who will take each agreed next step and when progress will be reviewed.
B. Consent-based information sharing: Agreeing on roles and communication with school and community partners, subject to permission. / Boundary spanning: Translating needs across systems without taking over another partner's responsibilities.
C. Consent-based information sharing: Confirming authorization and sharing only information needed for coordinated support. / Boundary spanning: Translating needs across systems without taking over another partner's responsibilities.
D. Consent-based information sharing: Translating needs across systems without taking over another partner's responsibilities. / Boundary spanning: Confirming authorization and sharing only information needed for coordinated support.

0533. A case conference asks for a distinction between Community asset mapping and Role clarification. Which answer is sound?

A. Community asset mapping: A structured process in which partners define a concern, generate options, test a plan, and review outcomes. / Role clarification: Explicit agreement about each partner's responsibilities, authority, and limits.
B. Community asset mapping: Identification of local strengths, organizations, relationships, and resources relevant to community goals. / Role clarification: Explicit agreement about each partner's responsibilities, authority, and limits.
C. Community asset mapping: Explicit agreement about each partner's responsibilities, authority, and limits. / Role clarification: Identification of local strengths, organizations, relationships, and resources relevant to community goals.
D. Community asset mapping: Identification of local strengths, organizations, relationships, and resources relevant to community goals. / Role clarification: Regular use of shared outcome information to adapt coordinated services.

0534. How should a practitioner distinguish the applications of Role clarification and Outcome feedback loop?

A. Role clarification: Clarifying who contacts caregivers and who monitors a school support. / Outcome feedback loop: Translating needs across systems without taking over another partner's responsibilities.
B. Role clarification: Clarifying who contacts caregivers and who monitors a school support. / Outcome feedback loop: Reviewing attendance or wellbeing data together and adjusting supports with permission.
C. Role clarification: Agreeing on roles and communication with school and community partners, subject to permission. / Outcome feedback loop: Reviewing attendance or wellbeing data together and adjusting supports with permission.
D. Role clarification: Reviewing attendance or wellbeing data together and adjusting supports with permission. / Outcome feedback loop: Clarifying who contacts caregivers and who monitors a school support.

0535. Which statement most accurately defines Boundary spanning?

A. Identification of local strengths, organizations, relationships, and resources relevant to community goals.
B. A coordinated, mutually understood set of goals, responsibilities, and follow-up steps across helpers.
C. Coordinated work among professionals who contribute distinct expertise toward shared client goals.
D. Connecting organizations or professional groups while respecting each role's authority and accountability.

0536. A case conference asks for a distinction between Shared care plan and Outcome feedback loop. Which answer is sound?

A. Shared care plan: A coordinated, mutually understood set of goals, responsibilities, and follow-up steps across helpers. / Outcome feedback loop: Regular use of shared outcome information to adapt coordinated services.
B. Shared care plan: A coordinated, mutually understood set of goals, responsibilities, and follow-up steps across helpers. / Outcome feedback loop: Identification of local strengths, organizations, relationships, and resources relevant to community goals.
C. Shared care plan: Regular use of shared outcome information to adapt coordinated services. / Outcome feedback loop: A coordinated, mutually understood set of goals, responsibilities, and follow-up steps across helpers.
D. Shared care plan: Explicit agreement about each partner's responsibilities, authority, and limits. / Outcome feedback loop: Regular use of shared outcome information to adapt coordinated services.

0537. When reviewing a teenage client's plan in the classroom support meeting, the parent educator notes that the next step is reviewing attendance or wellbeing data together and adjusting supports with permission. Which concept guides this step?

A. Interprofessional collaboration
B. Collaborative problem solving
C. Outcome feedback loop
D. Warm referral

0538. In school-community collaboration, which description belongs with the term Interprofessional collaboration?

A. An active, supported connection from one service to another that reduces barriers to follow-through.
B. Regular use of shared outcome information to adapt coordinated services.
C. Coordinated work among professionals who contribute distinct expertise toward shared client goals.
D. Explicit agreement about each partner's responsibilities, authority, and limits.

0539. Which statement accurately contrasts the course concepts Consent-based information sharing and Boundary spanning?

A. Consent-based information sharing: Connecting organizations or professional groups while respecting each role's authority and accountability. / Boundary spanning: Exchange of relevant information under valid permission and applicable privacy requirements.
B. Consent-based information sharing: Coordinated work among professionals who contribute distinct expertise toward shared client goals. / Boundary spanning: Connecting organizations or professional groups while respecting each role's authority and accountability.
C. Consent-based information sharing: Exchange of relevant information under valid permission and applicable privacy requirements. / Boundary spanning: Connecting organizations or professional groups while respecting each role's authority and accountability.
D. Consent-based information sharing: Exchange of relevant information under valid permission and applicable privacy requirements. / Boundary spanning: A coordinated, mutually understood set of goals, responsibilities, and follow-up steps across helpers.

0540. Which option correctly matches each concept to its practice focus: Consent-based information sharing and Outcome feedback loop?

A. Consent-based information sharing: Involving youth and community partners in decisions throughout a project, not only at launch. / Outcome feedback loop: Reviewing attendance or wellbeing data together and adjusting supports with permission.
B. Consent-based information sharing: Confirming authorization and sharing only information needed for coordinated support. / Outcome feedback loop: Reviewing attendance or wellbeing data together and adjusting supports with permission.
C. Consent-based information sharing: Reviewing attendance or wellbeing data together and adjusting supports with permission. / Outcome feedback loop: Confirming authorization and sharing only information needed for coordinated support.
D. Consent-based information sharing: Confirming authorization and sharing only information needed for coordinated support. / Outcome feedback loop: Documenting who will take each agreed next step and when progress will be reviewed.

0541. A student confuses Collaborative problem solving with Outcome feedback loop. Which explanation most accurately separates them?

A. Collaborative problem solving: A structured process in which partners define a concern, generate options, test a plan, and review outcomes. / Outcome feedback loop: Regular use of shared outcome information to adapt coordinated services.
B. Collaborative problem solving: A structured process in which partners define a concern, generate options, test a plan, and review outcomes. / Outcome feedback loop: An active, supported connection from one service to another that reduces barriers to follow-through.
C. Collaborative problem solving: Regular use of shared outcome information to adapt coordinated services. / Outcome feedback loop: A structured process in which partners define a concern, generate options, test a plan, and review outcomes.
D. Collaborative problem solving: Identification of local strengths, organizations, relationships, and resources relevant to community goals. / Outcome feedback loop: Regular use of shared outcome information to adapt coordinated services.

0542. A supervisor asks for an applied contrast between Community asset mapping and Collaborative problem solving. Which option fits?

A. Community asset mapping: Mapping existing youth programs and trusted community networks before planning a new service. / Collaborative problem solving: Agreeing on a measurable concern, trying one support, and reconvening to evaluate it.
B. Community asset mapping: Reviewing attendance or wellbeing data together and adjusting supports with permission. / Collaborative problem solving: Agreeing on a measurable concern, trying one support, and reconvening to evaluate it.
C. Community asset mapping: Mapping existing youth programs and trusted community networks before planning a new service. / Collaborative problem solving: Helping the family make contact with a community service and checking whether connection occurred.
D. Community asset mapping: Agreeing on a measurable concern, trying one support, and reconvening to evaluate it. / Collaborative problem solving: Mapping existing youth programs and trusted community networks before planning a new service.

0543. In school-community collaboration, which option is the clearest practical expression of Interprofessional collaboration?

A. Reviewing attendance or wellbeing data together and adjusting supports with permission.
B. Helping the family make contact with a community service and checking whether connection occurred.
C. Documenting who will take each agreed next step and when progress will be reviewed.
D. Agreeing on roles and communication with school and community partners, subject to permission.

0544. Choose the practice comparison that best separates Collaborative problem solving from Boundary spanning.

A. Collaborative problem solving: Translating needs across systems without taking over another partner's responsibilities. / Boundary spanning: Agreeing on a measurable concern, trying one support, and reconvening to evaluate it.
B. Collaborative problem solving: Documenting who will take each agreed next step and when progress will be reviewed. / Boundary spanning: Translating needs across systems without taking over another partner's responsibilities.
C. Collaborative problem solving: Agreeing on a measurable concern, trying one support, and reconvening to evaluate it. / Boundary spanning: Reviewing attendance or wellbeing data together and adjusting supports with permission.
D. Collaborative problem solving: Agreeing on a measurable concern, trying one support, and reconvening to evaluate it. / Boundary spanning: Translating needs across systems without taking over another partner's responsibilities.

0545. For a child aged 7 seen in the family session, the therapist recommends a plan built around translating needs across systems without taking over another partner’s responsibilities. Which concept is reflected?

A. Community-based participatory practice
B. Collaborative problem solving
C. Consent-based information sharing
D. Boundary spanning

0546. Which course concept is defined as follows: Explicit agreement about each partner’s responsibilities, authority, and limits.

A. Outcome feedback loop
B. Role clarification
C. Consent-based information sharing
D. Community-based participatory practice

0547. Which named construct is captured by this account? A partnership in which community members share influence in defining questions, actions, and interpretation.

A. Community-based participatory practice
B. Community asset mapping
C. Consent-based information sharing
D. Interprofessional collaboration

0548. Which pair of actions illustrates Warm referral and Outcome feedback loop, respectively?

A. Warm referral: Confirming authorization and sharing only information needed for coordinated support. / Outcome feedback loop: Reviewing attendance or wellbeing data together and adjusting supports with permission.
B. Warm referral: Helping the family make contact with a community service and checking whether connection occurred. / Outcome feedback loop: Reviewing attendance or wellbeing data together and adjusting supports with permission.
C. Warm referral: Reviewing attendance or wellbeing data together and adjusting supports with permission. / Outcome feedback loop: Helping the family make contact with a community service and checking whether connection occurred.
D. Warm referral: Helping the family make contact with a community service and checking whether connection occurred. / Outcome feedback loop: Translating needs across systems without taking over another partner’s responsibilities.

0549. While supporting a client in late adolescence in the youth group, a family therapist adopts this practice: clarifying who contacts caregivers and who monitors a school support. Which concept best explains the choice?

A. Interprofessional collaboration
B. Shared care plan
C. Role clarification
D. Boundary spanning

0550. A student confuses Warm referral with Boundary spanning. Which explanation most accurately separates them?

A. Warm referral: An active, supported connection from one service to another that reduces barriers to follow-through. / Boundary spanning: Coordinated work among professionals who contribute distinct expertise toward shared client goals.
B. Warm referral: A structured process in which partners define a concern, generate options, test a plan, and review outcomes. / Boundary spanning: Connecting organizations or professional groups while respecting each role’s authority and accountability.
C. Warm referral: Connecting organizations or professional groups while respecting each role’s authority and accountability. / Boundary spanning: An active, supported connection from one service to another that reduces barriers to follow-through.
D. Warm referral: An active, supported connection from one service to another that reduces barriers to follow-through. / Boundary spanning: Connecting organizations or professional groups while respecting each role’s authority and accountability.

0551. Which statement accurately contrasts the course concepts Consent-based information sharing and Collaborative problem solving?

A. Consent-based information sharing: Exchange of relevant information under valid permission and applicable privacy requirements. / Collaborative problem solving: A structured process in which partners define a concern, generate options, test a plan, and review outcomes.
B. Consent-based information sharing: Regular use of shared outcome information to adapt coordinated services. / Collaborative problem solving: A structured process in which partners define a concern, generate options, test a plan, and review outcomes.
C. Consent-based information sharing: A structured process in which partners define a concern, generate options, test a plan, and review outcomes. / Collaborative problem solving: Exchange of relevant information under valid permission and applicable privacy requirements.
D. Consent-based information sharing: Exchange of relevant information under valid permission and applicable privacy requirements. / Collaborative problem solving: An active, supported connection from one service to another that reduces barriers to follow-through.

0552. A community practitioner describes an intervention for a young person aged 10 in the child guidance clinic, centered on confirming authorization and sharing only information needed for coordinated support. Which named idea is most relevant?

A. Collaborative problem solving
B. Outcome feedback loop
C. Community-based participatory practice
D. Consent-based information sharing

0553. A student confuses Warm referral with Outcome feedback loop. Which explanation most accurately separates them?

A. Warm referral: An active, supported connection from one service to another that reduces barriers to follow-through. / Outcome feedback loop: Connecting organizations or professional groups while respecting each role’s authority and accountability.
B. Warm referral: Regular use of shared outcome information to adapt coordinated services. / Outcome feedback loop: An active, supported connection from one service to another that reduces barriers to follow-through.
C. Warm referral: Exchange of relevant information under valid permission and applicable privacy requirements. / Outcome feedback loop: Regular use of shared outcome information to adapt coordinated services.
D. Warm referral: An active, supported connection from one service to another that reduces barriers to follow-through. / Outcome feedback loop: Regular use of shared outcome information to adapt coordinated services.

0554. Which comparison would correct a trainee’s misunderstanding of Collaborative problem solving versus Warm referral?

A. Collaborative problem solving: A structured process in which partners define a concern, generate options, test a plan, and review outcomes. / Warm referral: A coordinated, mutually understood set of goals, responsibilities, and follow-up steps across helpers.
B. Collaborative problem solving: A structured process in which partners define a concern, generate options, test a plan, and review outcomes. / Warm referral: An active, supported connection from one service to another that reduces barriers to follow-through.
C. Collaborative problem solving: An active, supported connection from one service to another that reduces barriers to follow-through. / Warm referral: A structured process in which partners define a concern, generate options, test a plan, and review outcomes.
D. Collaborative problem solving: Coordinated work among professionals who contribute distinct expertise toward shared client goals. / Warm referral: An active, supported connection from one service to another that reduces barriers to follow-through.

0555. In school-community collaboration, which pair of actions illustrates Interprofessional collaboration and Outcome feedback loop, respectively?
A. Interprofessional collaboration: Helping the family make contact with a community service and checking whether connection occurred. / Outcome feedback loop: Reviewing attendance or wellbeing data together and adjusting supports with permission.
B. Interprofessional collaboration: Agreeing on roles and communication with school and community partners, subject to permission. / Outcome feedback loop: Reviewing attendance or wellbeing data together and adjusting supports with permission.
C. Interprofessional collaboration: Agreeing on roles and communication with school and community partners, subject to permission. / Outcome feedback loop: Clarifying who contacts caregivers and who monitors a school support.
D. Interprofessional collaboration: Reviewing attendance or wellbeing data together and adjusting supports with permission. / Outcome feedback loop: Agreeing on roles and communication with school and community partners, subject to permission.

0556. During service review in the school-based service, a community practitioner describes involving youth and community partners in decisions throughout a project, not only at launch. for a client in early adolescence. Which course idea is most applicable?
A. Consent-based information sharing
B. Boundary spanning
C. Community-based participatory practice
D. Community asset mapping

0557. A support meeting for a client in late adolescence includes a behavior specialist in the family resource center. The practice under consideration is involving youth and community partners in decisions throughout a project, not only at launch. Which concept guides it?
A. Outcome feedback loop
B. Community-based participatory practice
C. Shared care plan
D. Consent-based information sharing

0558. A team must select a support approach for a young person aged 10 at the youth advocacy program. The parent educator recommends involving youth and community partners in decisions throughout a project, not only at launch. Which idea is most relevant?
A. Collaborative problem solving
B. Community-based participatory practice
C. Community asset mapping
D. Shared care plan

0559. In school-community collaboration, choose the response that best puts Interprofessional collaboration into practice.
A. Confirming authorization and sharing only information needed for coordinated support.
B. Clarifying who contacts caregivers and who monitors a school support.
C. Agreeing on roles and communication with school and community partners, subject to permission.
D. Involving youth and community partners in decisions throughout a project, not only at launch.

0560. Which professional action most closely applies Warm referral?
A. Helping the family make contact with a community service and checking whether connection occurred.
B. Translating needs across systems without taking over another partner’s responsibilities.
C. Clarifying who contacts caregivers and who monitors a school support.
D. Mapping existing youth programs and trusted community networks before planning a new service.

0561. Which statement most accurately defines Outcome feedback loop?
A. Regular use of shared outcome information to adapt coordinated services.
B. Exchange of relevant information under valid permission and applicable privacy requirements.
C. An active, supported connection from one service to another that reduces barriers to follow-through.
D. A coordinated, mutually understood set of goals, responsibilities, and follow-up steps across helpers.

0562. Which option correctly matches each concept to its practice focus: Role clarification and Consent-based information sharing?
A. Role clarification: Confirming authorization and sharing only information needed for coordinated support. / Consent-based information sharing: Clarifying who contacts caregivers and who monitors a school support.
B. Role clarification: Clarifying who contacts caregivers and who monitors a school support. / Consent-based information sharing: Helping the family make contact with a community service and checking whether connection occurred.
C. Role clarification: Reviewing attendance or wellbeing data together and adjusting supports with permission. / Consent-based information sharing: Confirming authorization and sharing only information needed for coordinated support.
D. Role clarification: Clarifying who contacts caregivers and who monitors a school support. / Consent-based information sharing: Confirming authorization and sharing only information needed for coordinated support.

0563. In the counseling practicum, a teacher and counselor explains why a child aged 6 would benefit from agreeing on a measurable concern, trying one support, and reconvening to evaluate it. Which course concept underpins the explanation?
A. Interprofessional collaboration
B. Community-based participatory practice
C. Community asset mapping
D. Collaborative problem solving

0564. In a supervision quiz, how should Consent-based information sharing be distinguished from Collaborative problem solving?
A. Consent-based information sharing: A structured process in which partners define a concern, generate options, test a plan, and review outcomes. / Collaborative problem solving: Exchange of relevant information under valid permission and applicable privacy requirements.
B. Consent-based information sharing: Regular use of shared outcome information to adapt coordinated services. / Collaborative problem solving: A structured process in which partners define a concern, generate options, test a plan, and review outcomes.
C. Consent-based information sharing: Exchange of relevant information under valid permission and applicable privacy requirements. / Collaborative problem solving: An active, supported connection from one service to another that reduces barriers to follow-through.
D. Consent-based information sharing: Exchange of relevant information under valid permission and applicable privacy requirements. / Collaborative problem solving: A structured process in which partners define a concern, generate options, test a plan, and review outcomes.

0565. A counselor reviews a plan for a student aged 12 in the community youth program. The plan emphasizes involving youth and community partners in decisions throughout a project, not only at launch. Which course idea does this reflect?
A. Shared care plan
B. Role clarification
C. Community-based participatory practice
D. Collaborative problem solving

0566. Which statement most accurately defines Consent-based information sharing?

A. A coordinated, mutually understood set of goals, responsibilities, and follow-up steps across helpers.
B. Exchange of relevant information under valid permission and applicable privacy requirements.
C. Explicit agreement about each partner's responsibilities, authority, and limits.
D. Identification of local strengths, organizations, relationships, and resources relevant to community goals.

0567. In the telehealth session, a youth worker explains why a student aged 17 would benefit from documenting who will take each agreed next step and when progress will be reviewed. Which course concept underpins the explanation?

A. Outcome feedback loop
B. Interprofessional collaboration
C. Collaborative problem solving
D. Shared care plan

0568. In the clinical planning session, a caregiver working with a counselor is considering this approach for a student aged 17: clarifying who contacts caregivers and who monitors a school support. Which framework does it represent?

A. Role clarification
B. Community-based participatory practice
C. Community asset mapping
D. Shared care plan

0569. A supervisor asks how Outcome feedback loop would appear in practice. Which choice should be selected?

A. Documenting who will take each agreed next step and when progress will be reviewed.
B. Involving youth and community partners in decisions throughout a project, not only at launch.
C. Reviewing attendance or wellbeing data together and adjusting supports with permission.
D. Translating needs across systems without taking over another partner's responsibilities.

0570. Choose the definition pair that correctly explains Community asset mapping first and Community-based participatory practice second.

A. Community asset mapping: Identification of local strengths, organizations, relationships, and resources relevant to community goals. / Community-based participatory practice: A partnership in which community members share influence in defining questions, actions, and interpretation.
B. Community asset mapping: Identification of local strengths, organizations, relationships, and resources relevant to community goals. / Community-based participatory practice: A structured process in which partners define a concern, generate options, test a plan, and review outcomes.
C. Community asset mapping: An active, supported connection from one service to another that reduces barriers to follow-through. / Community-based participatory practice: A partnership in which community members share influence in defining questions, actions, and interpretation.
D. Community asset mapping: A partnership in which community members share influence in defining questions, actions, and interpretation. / Community-based participatory practice: Identification of local strengths, organizations, relationships, and resources relevant to community goals.

0571. Which comparison correctly distinguishes Community asset mapping from Consent-based information sharing?

A. Community asset mapping: A coordinated, mutually understood set of goals, responsibilities, and follow-up steps across helpers. / Consent-based information sharing: Exchange of relevant information under valid permission and applicable privacy requirements.
B. Community asset mapping: Exchange of relevant information under valid permission and applicable privacy requirements. / Consent-based information sharing: Identification of local strengths, organizations, relationships, and resources relevant to community goals.
C. Community asset mapping: Identification of local strengths, organizations, relationships, and resources relevant to community goals. / Consent-based information sharing: A partnership in which community members share influence in defining questions, actions, and interpretation.
D. Community asset mapping: Identification of local strengths, organizations, relationships, and resources relevant to community goals. / Consent-based information sharing: Exchange of relevant information under valid permission and applicable privacy requirements.

0572. A supervisor asks how Consent-based information sharing would appear in practice. Which choice should be selected?

A. Translating needs across systems without taking over another partner's responsibilities.
B. Mapping existing youth programs and trusted community networks before planning a new service.
C. Confirming authorization and sharing only information needed for coordinated support.
D. Agreeing on a measurable concern, trying one support, and reconvening to evaluate it.

0573. In school-community collaboration, which statement accurately contrasts the course concepts Interprofessional collaboration and Shared care plan?

A. Interprofessional collaboration: Coordinated work among professionals who contribute distinct expertise toward shared client goals. / Shared care plan: Exchange of relevant information under valid permission and applicable privacy requirements.
B. Interprofessional collaboration: Coordinated work among professionals who contribute distinct expertise toward shared client goals. / Shared care plan: A coordinated, mutually understood set of goals, responsibilities, and follow-up steps across helpers.
C. Interprofessional collaboration: Explicit agreement about each partner's responsibilities, authority, and limits. / Shared care plan: A coordinated, mutually understood set of goals, responsibilities, and follow-up steps across helpers.
D. Interprofessional collaboration: A coordinated, mutually understood set of goals, responsibilities, and follow-up steps across helpers. / Shared care plan: Coordinated work among professionals who contribute distinct expertise toward shared client goals.

0574. In school-community collaboration, which applied comparison correctly identifies what belongs to Interprofessional collaboration versus Role clarification?

A. Interprofessional collaboration: Clarifying who contacts caregivers and who monitors a school support. / Role clarification: Agreeing on roles and communication with school and community partners, subject to permission.
B. Interprofessional collaboration: Agreeing on roles and communication with school and community partners, subject to permission. / Role clarification: Clarifying who contacts caregivers and who monitors a school support.
C. Interprofessional collaboration: Translating needs across systems without taking over another partner's responsibilities. / Role clarification: Clarifying who contacts caregivers and who monitors a school support.
D. Interprofessional collaboration: Agreeing on roles and communication with school and community partners, subject to permission. / Role clarification: Helping the family make contact with a community service and checking whether connection occurred.

0575. A planning meeting about a young adolescent client includes a counselor. The proposed practice in the clinical planning session is confirming authorization and sharing only information needed for coordinated support. Which idea underlies it?

A. Interprofessional collaboration
B. Consent-based information sharing
C. Collaborative problem solving
D. Warm referral

0576. Which option preserves the correct meaning of both Collaborative problem solving and Boundary spanning?

A. Collaborative problem solving: Connecting organizations or professional groups while respecting each role's authority and accountability. / Boundary spanning: A structured process in which partners define a concern, generate options, test a plan, and review outcomes.
B. Collaborative problem solving: A structured process in which partners define a concern, generate options, test a plan, and review outcomes. / Boundary spanning: Connecting organizations or professional groups while respecting each role's authority and accountability.
C. Collaborative problem solving: A coordinated, mutually understood set of goals, responsibilities, and follow-up steps across helpers. / Boundary spanning: Connecting organizations or professional groups while respecting each role's authority and accountability.
D. Collaborative problem solving: A structured process in which partners define a concern, generate options, test a plan, and review outcomes. / Boundary spanning: Regular use of shared outcome information to adapt coordinated services.

0577. Which comparison correctly distinguishes Role clarification from Outcome feedback loop?

A. Role clarification: Explicit agreement about each partner's responsibilities, authority, and limits. / Outcome feedback loop: Connecting organizations or professional groups while respecting each role's authority and accountability.
B. Role clarification: Coordinated work among professionals who contribute distinct expertise toward shared client goals. / Outcome feedback loop: Regular use of shared outcome information to adapt coordinated services.
C. Role clarification: Regular use of shared outcome information to adapt coordinated services. / Outcome feedback loop: Explicit agreement about each partner's responsibilities, authority, and limits.
D. Role clarification: Explicit agreement about each partner's responsibilities, authority, and limits. / Outcome feedback loop: Regular use of shared outcome information to adapt coordinated services.

0578. In the community mental-health service, a group facilitator explains why a high-school student would benefit from mapping existing youth programs and trusted community networks before planning a new service. Which course concept underpins the explanation?

A. Shared care plan
B. Consent-based information sharing
C. Community asset mapping
D. Boundary spanning

0579. In school-community collaboration, which pair of actions illustrates Interprofessional collaboration and Boundary spanning, respectively?

A. Interprofessional collaboration: Agreeing on roles and communication with school and community partners, subject to permission. / Boundary spanning: Confirming authorization and sharing only information needed for coordinated support.
B. Interprofessional collaboration: Agreeing on roles and communication with school and community partners, subject to permission. / Boundary spanning: Translating needs across systems without taking over another partner's responsibilities.
C. Interprofessional collaboration: Translating needs across systems without taking over another partner's responsibilities. / Boundary spanning: Agreeing on roles and communication with school and community partners, subject to permission.
D. Interprofessional collaboration: Documenting who will take each agreed next step and when progress will be reviewed. / Boundary spanning: Translating needs across systems without taking over another partner's responsibilities.

0580. For a student aged 12 in the community service agency, a clinical supervisor makes this practice the immediate priority: mapping existing youth programs and trusted community networks before planning a new service. Which concept fits best?

A. Community asset mapping
B. Community-based participatory practice
C. Collaborative problem solving
D. Warm referral

0581. In school-community collaboration, a play therapist is asked to evaluate a proposed service for a young person aged 13 in the telehealth session. The defining feature is agreeing on roles and communication with school and community partners, subject to permission. Which concept fits?

A. Shared care plan
B. Consent-based information sharing
C. Interprofessional collaboration
D. Community-based participatory practice

0582. In a supervision quiz, how should Community asset mapping be distinguished from Boundary spanning?

A. Community asset mapping: Identification of local strengths, organizations, relationships, and resources relevant to community goals. / Boundary spanning: A coordinated, mutually understood set of goals, responsibilities, and follow-up steps across helpers.
B. Community asset mapping: Identification of local strengths, organizations, relationships, and resources relevant to community goals. / Boundary spanning: Connecting organizations or professional groups while respecting each role's authority and accountability.
C. Community asset mapping: Connecting organizations or professional groups while respecting each role's authority and accountability. / Boundary spanning: Identification of local strengths, organizations, relationships, and resources relevant to community goals.
D. Community asset mapping: A structured process in which partners define a concern, generate options, test a plan, and review outcomes. / Boundary spanning: Connecting organizations or professional groups while respecting each role's authority and accountability.

0583. What is the central meaning of Role clarification?

A. A structured process in which partners define a concern, generate options, test a plan, and review outcomes.
B. Regular use of shared outcome information to adapt coordinated services.
C. Coordinated work among professionals who contribute distinct expertise toward shared client goals.
D. Explicit agreement about each partner's responsibilities, authority, and limits.

0584. Which comparison would correct a trainee's misunderstanding of Role clarification versus Warm referral?

A. Role clarification: Explicit agreement about each partner's responsibilities, authority, and limits. / Warm referral: An active, supported connection from one service to another that reduces barriers to follow-through.
B. Role clarification: Explicit agreement about each partner's responsibilities, authority, and limits. / Warm referral: Identification of local strengths, organizations, relationships, and resources relevant to community goals.
C. Role clarification: An active, supported connection from one service to another that reduces barriers to follow-through. / Warm referral: Explicit agreement about each partner's responsibilities, authority, and limits.
D. Role clarification: A structured process in which partners define a concern, generate options, test a plan, and review outcomes. / Warm referral: An active, supported connection from one service to another that reduces barriers to follow-through.

0585. A family therapist presents a support plan for a child aged 7 at the child guidance clinic. Its central feature is helping the family make contact with a community service and checking whether connection occurred. Which concept should be named?

A. Collaborative problem solving
B. Community-based participatory practice
C. Warm referral
D. Shared care plan

0586. Which statement shows a sound practice-level distinction between Community asset mapping and Collaborative problem solving?

A. Community asset mapping: Agreeing on a measurable concern, trying one support, and reconvening to evaluate it. / Collaborative problem solving: Mapping existing youth programs and trusted community networks before planning a new service.
B. Community asset mapping: Reviewing attendance or wellbeing data together and adjusting supports with permission. / Collaborative problem solving: Agreeing on a measurable concern, trying one support, and reconvening to evaluate it.
C. Community asset mapping: Mapping existing youth programs and trusted community networks before planning a new service. / Collaborative problem solving: Helping the family make contact with a community service and checking whether connection occurred.
D. Community asset mapping: Mapping existing youth programs and trusted community networks before planning a new service. / Collaborative problem solving: Agreeing on a measurable concern, trying one support, and reconvening to evaluate it.

0587. In school-community collaboration, a consulting counselor is explaining a choice to a student aged 15 and caregiver in the youth group. The choice centers on agreeing on roles and communication with school and community partners, subject to permission. Which idea is illustrated?

A. Community-based participatory practice
B. Role clarification
C. Warm referral
D. Interprofessional collaboration

0588. Which choice aligns each practice with the correct idea, Shared care plan or Collaborative problem solving?

A. Shared care plan: Documenting who will take each agreed next step and when progress will be reviewed. / Collaborative problem solving: Agreeing on a measurable concern, trying one support, and reconvening to evaluate it.
B. Shared care plan: Documenting who will take each agreed next step and when progress will be reviewed. / Collaborative problem solving: Reviewing attendance or wellbeing data together and adjusting supports with permission.
C. Shared care plan: Agreeing on a measurable concern, trying one support, and reconvening to evaluate it. / Collaborative problem solving: Documenting who will take each agreed next step and when progress will be reviewed.
D. Shared care plan: Involving youth and community partners in decisions throughout a project, not only at launch. / Collaborative problem solving: Agreeing on a measurable concern, trying one support, and reconvening to evaluate it.

0589. Which option pairs the definitions of Consent-based information sharing and Collaborative problem solving correctly, in that order?

A. Consent-based information sharing: Regular use of shared outcome information to adapt coordinated services. / Collaborative problem solving: A structured process in which partners define a concern, generate options, test a plan, and review outcomes.
B. Consent-based information sharing: Exchange of relevant information under valid permission and applicable privacy requirements. / Collaborative problem solving: An active, supported connection from one service to another that reduces barriers to follow-through.
C. Consent-based information sharing: A structured process in which partners define a concern, generate options, test a plan, and review outcomes. / Collaborative problem solving: Exchange of relevant information under valid permission and applicable privacy requirements.
D. Consent-based information sharing: Exchange of relevant information under valid permission and applicable privacy requirements. / Collaborative problem solving: A structured process in which partners define a concern, generate options, test a plan, and review outcomes.

0590. Which option preserves the correct meaning of both Community asset mapping and Consent-based information sharing?

A. Community asset mapping: Identification of local strengths, organizations, relationships, and resources relevant to community goals. / Consent-based information sharing: Exchange of relevant information under valid permission and applicable privacy requirements.
B. Community asset mapping: A coordinated, mutually understood set of goals, responsibilities, and follow-up steps across helpers. / Consent-based information sharing: Exchange of relevant information under valid permission and applicable privacy requirements.
C. Community asset mapping: Identification of local strengths, organizations, relationships, and resources relevant to community goals. / Consent-based information sharing: A partnership in which community members share influence in defining questions, actions, and interpretation.
D. Community asset mapping: Exchange of relevant information under valid permission and applicable privacy requirements. / Consent-based information sharing: Identification of local strengths, organizations, relationships, and resources relevant to community goals.

0591. A family therapist presents a support plan for a child aged 8 at the community service agency. Its central feature is documenting who will take each agreed next step and when progress will be reviewed. Which concept should be named?

A. Collaborative problem solving
B. Warm referral
C. Interprofessional collaboration
D. Shared care plan

0592. In school-community collaboration, a trainee must distinguish how Interprofessional collaboration and Consent-based information sharing guide practice. Which comparison is accurate?

A. Interprofessional collaboration: Mapping existing youth programs and trusted community networks before planning a new service. / Consent-based information sharing: Confirming authorization and sharing only information needed for coordinated support.
B. Interprofessional collaboration: Agreeing on roles and communication with school and community partners, subject to permission. / Consent-based information sharing: Confirming authorization and sharing only information needed for coordinated support.
C. Interprofessional collaboration: Agreeing on roles and communication with school and community partners, subject to permission. / Consent-based information sharing: Clarifying who contacts caregivers and who monitors a school support.
D. Interprofessional collaboration: Confirming authorization and sharing only information needed for coordinated support. / Consent-based information sharing: Agreeing on roles and communication with school and community partners, subject to permission.

0593. A parent educator presents a support plan for a older adolescent client at the outpatient clinic. Its central feature is clarifying who contacts caregivers and who monitors a school support. Which concept should be named?

A. Role clarification
B. Warm referral
C. Collaborative problem solving
D. Community-based participatory practice

0594. While consulting in the telehealth session, a assessment clinician supports a child aged 6 by using this approach: translating needs across systems without taking over another partner's responsibilities. Which concept is being applied?

A. Consent-based information sharing
B. Community-based participatory practice
C. Boundary spanning
D. Interprofessional collaboration

0595. Which comparison correctly distinguishes Collaborative problem solving from Boundary spanning?

A. Collaborative problem solving: A structured process in which partners define a concern, generate options, test a plan, and review outcomes. / Boundary spanning: Regular use of shared outcome information to adapt coordinated services.
B. Collaborative problem solving: A structured process in which partners define a concern, generate options, test a plan, and review outcomes. / Boundary spanning: Connecting organizations or professional groups while respecting each role's authority and accountability.
C. Collaborative problem solving: Connecting organizations or professional groups while respecting each role's authority and accountability. / Boundary spanning: A structured process in which partners define a concern, generate options, test a plan, and review outcomes.
D. Collaborative problem solving: A coordinated, mutually understood set of goals, responsibilities, and follow-up steps across helpers. / Boundary spanning: Connecting organizations or professional groups while respecting each role's authority and accountability.

0596. In the student-support meeting, the agreed focus for a program coordinator working with a child of elementary-school age is reviewing attendance or wellbeing data together and adjusting supports with permission. Which concept names this focus?

A. Outcome feedback loop
B. Community asset mapping
C. Warm referral
D. Boundary spanning

0597. How are Shared care plan and Outcome feedback loop most accurately differentiated in this curriculum?

A. Shared care plan: A coordinated, mutually understood set of goals, responsibilities, and follow-up steps across helpers. / Outcome feedback loop: Regular use of shared outcome information to adapt coordinated services.
B. Shared care plan: Explicit agreement about each partner's responsibilities, authority, and limits. / Outcome feedback loop: Regular use of shared outcome information to adapt coordinated services.
C. Shared care plan: Regular use of shared outcome information to adapt coordinated services. / Outcome feedback loop: A coordinated, mutually understood set of goals, responsibilities, and follow-up steps across helpers.
D. Shared care plan: A coordinated, mutually understood set of goals, responsibilities, and follow-up steps across helpers. / Outcome feedback loop: Identification of local strengths, organizations, relationships, and resources relevant to community goals.

0598. In school-community collaboration, identify the most precise label for this idea: Coordinated work among professionals who contribute distinct expertise toward shared client goals.

A. Outcome feedback loop
B. Shared care plan
C. Collaborative problem solving
D. Interprofessional collaboration

0599. In school-community collaboration, which option pairs the definitions of Interprofessional collaboration and Community asset mapping correctly, in that order?

A. Interprofessional collaboration: Coordinated work among professionals who contribute distinct expertise toward shared client goals. / Community asset mapping: Connecting organizations or professional groups while respecting each role's authority and accountability.
B. Interprofessional collaboration: A coordinated, mutually understood set of goals, responsibilities, and follow-up steps across helpers. / Community asset mapping: Identification of local strengths, organizations, relationships, and resources relevant to community goals.
C. Interprofessional collaboration: Identification of local strengths, organizations, relationships, and resources relevant to community goals. / Community asset mapping: Coordinated work among professionals who contribute distinct expertise toward shared client goals.
D. Interprofessional collaboration: Coordinated work among professionals who contribute distinct expertise toward shared client goals. / Community asset mapping: Identification of local strengths, organizations, relationships, and resources relevant to community goals.

0600. Which option preserves the correct meaning of both Collaborative problem solving and Community-based participatory practice?

A. Collaborative problem solving: A partnership in which community members share influence in defining questions, actions, and interpretation. / Community-based participatory practice: A structured process in which partners define a concern, generate options, test a plan, and review outcomes.
B. Collaborative problem solving: Coordinated work among professionals who contribute distinct expertise toward shared client goals. / Community-based participatory practice: A partnership in which community members share influence in defining questions, actions, and interpretation.
C. Collaborative problem solving: A structured process in which partners define a concern, generate options, test a plan, and review outcomes. / Community-based participatory practice: A partnership in which community members share influence in defining questions, actions, and interpretation.
D. Collaborative problem solving: A structured process in which partners define a concern, generate options, test a plan, and review outcomes. / Community-based participatory practice: An active, supported connection from one service to another that reduces barriers to follow-through.

0601. In a supervision quiz, how should Warm referral be distinguished from Outcome feedback loop?

A. Warm referral: An active, supported connection from one service to another that reduces barriers to follow-through. / Outcome feedback loop: Regular use of shared outcome information to adapt coordinated services.
B. Warm referral: An active, supported connection from one service to another that reduces barriers to follow-through. / Outcome feedback loop: Connecting organizations or professional groups while respecting each role's authority and accountability.
C. Warm referral: Regular use of shared outcome information to adapt coordinated services. / Outcome feedback loop: An active, supported connection from one service to another that reduces barriers to follow-through.
D. Warm referral: Exchange of relevant information under valid permission and applicable privacy requirements. / Outcome feedback loop: Regular use of shared outcome information to adapt coordinated services.

0602. In the child guidance clinic, a school counselor describes the most appropriate support for a client in early adolescence as translating needs across systems without taking over another partner's responsibilities. Which framework is being applied?

A. Boundary spanning
B. Community-based participatory practice
C. Warm referral
D. Consent-based information sharing

0603. In school-community collaboration, which statement accurately contrasts the course concepts Interprofessional collaboration and Collaborative problem solving?

A. Interprofessional collaboration: A structured process in which partners define a concern, generate options, test a plan, and review outcomes. / Collaborative problem solving: Coordinated work among professionals who contribute distinct expertise toward shared client goals.
B. Interprofessional collaboration: Coordinated work among professionals who contribute distinct expertise toward shared client goals. / Collaborative problem solving: A coordinated, mutually understood set of goals, responsibilities, and follow-up steps across helpers.
C. Interprofessional collaboration: Regular use of shared outcome information to adapt coordinated services. / Collaborative problem solving: A structured process in which partners define a concern, generate options, test a plan, and review outcomes.
D. Interprofessional collaboration: Coordinated work among professionals who contribute distinct expertise toward shared client goals. / Collaborative problem solving: A structured process in which partners define a concern, generate options, test a plan, and review outcomes.

0604. Choose the term that matches this definition: A structured process in which partners define a concern, generate options, test a plan, and review outcomes.

A. Community asset mapping
B. Role clarification
C. Outcome feedback loop
D. Collaborative problem solving

0605. In school-community collaboration, which statement shows a sound practice-level distinction between Interprofessional collaboration and Community-based participatory practice?

A. Interprofessional collaboration: Documenting who will take each agreed next step and when progress will be reviewed. / Community-based participatory practice: Involving youth and community partners in decisions throughout a project, not only at launch.
B. Interprofessional collaboration: Agreeing on roles and communication with school and community partners, subject to permission. / Community-based participatory practice: Involving youth and community partners in decisions throughout a project, not only at launch.
C. Interprofessional collaboration: Agreeing on roles and communication with school and community partners, subject to permission. / Community-based participatory practice: Agreeing on a measurable concern, trying one support, and reconvening to evaluate it.
D. Interprofessional collaboration: Involving youth and community partners in decisions throughout a project, not only at launch. / Community-based participatory practice: Agreeing on roles and communication with school and community partners, subject to permission.

0606. Select the best explanation of Boundary spanning.

A. Identification of local strengths, organizations, relationships, and resources relevant to community goals.
B. Connecting organizations or professional groups while respecting each role's authority and accountability.
C. Coordinated work among professionals who contribute distinct expertise toward shared client goals.
D. Regular use of shared outcome information to adapt coordinated services.

0607. While consulting in the behavior-support review, a consultant supports a student aged 17 by using this approach: confirming authorization and sharing only information needed for coordinated support. Which concept is being applied?

A. Shared care plan
B. Consent-based information sharing
C. Boundary spanning
D. Interprofessional collaboration

0608. How are Community asset mapping and Collaborative problem solving most accurately differentiated in this curriculum?

A. Community asset mapping: Identification of local strengths, organizations, relationships, and resources relevant to community goals. / Collaborative problem solving: A structured process in which partners define a concern, generate options, test a plan, and review outcomes.
B. Community asset mapping: A structured process in which partners define a concern, generate options, test a plan, and review outcomes. / Collaborative problem solving: Identification of local strengths, organizations, relationships, and resources relevant to community goals.
C. Community asset mapping: Identification of local strengths, organizations, relationships, and resources relevant to community goals. / Collaborative problem solving: An active, supported connection from one service to another that reduces barriers to follow-through.
D. Community asset mapping: Regular use of shared outcome information to adapt coordinated services. / Collaborative problem solving: A structured process in which partners define a concern, generate options, test a plan, and review outcomes.

0609. A high-school student's service team meets in the school counseling office. The family therapist recommends a change involving confirming authorization and sharing only information needed for coordinated support. Which idea best explains it?

A. Outcome feedback loop
B. Community asset mapping
C. Boundary spanning
D. Consent-based information sharing

0610. Which course concept is defined as follows: A coordinated, mutually understood set of goals, responsibilities, and follow-up steps across helpers.

A. Shared care plan
B. Community asset mapping
C. Warm referral
D. Consent-based information sharing

0611. A case conference reviews a program coordinator's work with a school-age child in the after-school program: translating needs across systems without taking over another partner's responsibilities. Which principle is central?

A. Community-based participatory practice
B. Consent-based information sharing
C. Role clarification
D. Boundary spanning

0612. Which option correctly matches each concept to its practice focus: Consent-based information sharing and Community-based participatory practice?

A. Consent-based information sharing: Mapping existing youth programs and trusted community networks before planning a new service. / Community-based participatory practice: Involving youth and community partners in decisions throughout a project, not only at launch.
B. Consent-based information sharing: Involving youth and community partners in decisions throughout a project, not only at launch. / Community-based participatory practice: Confirming authorization and sharing only information needed for coordinated support.
C. Consent-based information sharing: Confirming authorization and sharing only information needed for coordinated support. / Community-based participatory practice: Involving youth and community partners in decisions throughout a project, not only at launch.
D. Consent-based information sharing: Confirming authorization and sharing only information needed for coordinated support. / Community-based participatory practice: Translating needs across systems without taking over another partner's responsibilities.

0613. Which course concept is defined as follows: Regular use of shared outcome information to adapt coordinated services.

A. Community asset mapping
B. Interprofessional collaboration
C. Shared care plan
D. Outcome feedback loop

0614. A trainee must choose a practice that exemplifies Consent-based information sharing. Which action is the best fit?

A. Helping the family make contact with a community service and checking whether connection occurred.
B. Confirming authorization and sharing only information needed for coordinated support.
C. Reviewing attendance or wellbeing data together and adjusting supports with permission.
D. Involving youth and community partners in decisions throughout a project, not only at launch.

0615. In school-community collaboration, which statement shows a sound practice-level distinction between Interprofessional collaboration and Boundary spanning?

A. Interprofessional collaboration: Agreeing on roles and communication with school and community partners, subject to permission. / Boundary spanning: Translating needs across systems without taking over another partner's responsibilities.
B. Interprofessional collaboration: Translating needs across systems without taking over another partner's responsibilities. / Boundary spanning: Agreeing on roles and communication with school and community partners, subject to permission.
C. Interprofessional collaboration: Agreeing on roles and communication with school and community partners, subject to permission. / Boundary spanning: Confirming authorization and sharing only information needed for coordinated support.
D. Interprofessional collaboration: Documenting who will take each agreed next step and when progress will be reviewed. / Boundary spanning: Translating needs across systems without taking over another partner's responsibilities.

0616. Which paired example correctly applies Community asset mapping first and Outcome feedback loop second?

A. Community asset mapping: Translating needs across systems without taking over another partner's responsibilities. / Outcome feedback loop: Reviewing attendance or wellbeing data together and adjusting supports with permission.
B. Community asset mapping: Mapping existing youth programs and trusted community networks before planning a new service. / Outcome feedback loop: Helping the family make contact with a community service and checking whether connection occurred.
C. Community asset mapping: Reviewing attendance or wellbeing data together and adjusting supports with permission. / Outcome feedback loop: Mapping existing youth programs and trusted community networks before planning a new service.
D. Community asset mapping: Mapping existing youth programs and trusted community networks before planning a new service. / Outcome feedback loop: Reviewing attendance or wellbeing data together and adjusting supports with permission.

0617. While supporting a young person aged 13 in the community youth program, a school-based clinician adopts this practice: documenting who will take each agreed next step and when progress will be reviewed. Which concept best explains the choice?

A. Collaborative problem solving
B. Community asset mapping
C. Shared care plan
D. Outcome feedback loop

0618. In school-community collaboration, choose the practice comparison that best separates Interprofessional collaboration from Boundary spanning.

A. Interprofessional collaboration: Agreeing on roles and communication with school and community partners, subject to permission. / Boundary spanning: Confirming authorization and sharing only information needed for coordinated support.
B. Interprofessional collaboration: Translating needs across systems without taking over another partner's responsibilities. / Boundary spanning: Agreeing on roles and communication with school and community partners, subject to permission.
C. Interprofessional collaboration: Agreeing on roles and communication with school and community partners, subject to permission. / Boundary spanning: Translating needs across systems without taking over another partner's responsibilities.
D. Interprofessional collaboration: Documenting who will take each agreed next step and when progress will be reviewed. / Boundary spanning: Translating needs across systems without taking over another partner's responsibilities.

0619. In school-community collaboration, which comparison correctly distinguishes Interprofessional collaboration from Boundary spanning?

A. Interprofessional collaboration: Coordinated work among professionals who contribute distinct expertise toward shared client goals. / Boundary spanning: Connecting organizations or professional groups while respecting each role's authority and accountability.
B. Interprofessional collaboration: Coordinated work among professionals who contribute distinct expertise toward shared client goals. / Boundary spanning: Exchange of relevant information under valid permission and applicable privacy requirements.
C. Interprofessional collaboration: A coordinated, mutually understood set of goals, responsibilities, and follow-up steps across helpers. / Boundary spanning: Connecting organizations or professional groups while respecting each role's authority and accountability.
D. Interprofessional collaboration: Connecting organizations or professional groups while respecting each role's authority and accountability. / Boundary spanning: Coordinated work among professionals who contribute distinct expertise toward shared client goals.

0620. In school-community collaboration, at the school counseling office, a counselor meets with a child aged 8. The practice priority is: agreeing on roles and communication with school and community partners, subject to permission. Which concept best captures that priority?

A. Boundary spanning
B. Collaborative problem solving
C. Interprofessional collaboration
D. Community asset mapping

0621. A case conference reviews a research trainee's work with a child of elementary-school age in the community youth program: confirming authorization and sharing only information needed for coordinated support. Which principle is central?

A. Collaborative problem solving
B. Consent-based information sharing
C. Outcome feedback loop
D. Warm referral

0622. A case conference asks for a distinction between Shared care plan and Warm referral. Which answer is sound?

A. Shared care plan: Coordinated work among professionals who contribute distinct expertise toward shared client goals. / Warm referral: An active, supported connection from one service to another that reduces barriers to follow-through.
B. Shared care plan: A coordinated, mutually understood set of goals, responsibilities, and follow-up steps across helpers. / Warm referral: Regular use of shared outcome information to adapt coordinated services.
C. Shared care plan: An active, supported connection from one service to another that reduces barriers to follow-through. / Warm referral: A coordinated, mutually understood set of goals, responsibilities, and follow-up steps across helpers.
D. Shared care plan: A coordinated, mutually understood set of goals, responsibilities, and follow-up steps across helpers. / Warm referral: An active, supported connection from one service to another that reduces barriers to follow-through.

0623. For a child aged 8 in the telehealth session, a behavior specialist makes this practice the immediate priority: agreeing on a measurable concern, trying one support, and reconvening to evaluate it. Which concept fits best?

A. Warm referral
B. Shared care plan
C. Boundary spanning
D. Collaborative problem solving

0624. Which option pairs the definitions of Consent-based information sharing and Warm referral correctly, in that order?

A. Consent-based information sharing: Exchange of relevant information under valid permission and applicable privacy requirements. / Warm referral: A partnership in which community members share influence in defining questions, actions, and interpretation.
B. Consent-based information sharing: An active, supported connection from one service to another that reduces barriers to follow-through. / Warm referral: Exchange of relevant information under valid permission and applicable privacy requirements.
C. Consent-based information sharing: Connecting organizations or professional groups while respecting each role's authority and accountability. / Warm referral: An active, supported connection from one service to another that reduces barriers to follow-through.
D. Consent-based information sharing: Exchange of relevant information under valid permission and applicable privacy requirements. / Warm referral: An active, supported connection from one service to another that reduces barriers to follow-through.

0625. At the school-based service, a counselor meets with a child aged 7. The practice priority is: agreeing on a measurable concern, trying one support, and reconvening to evaluate it. Which concept best captures that priority?

A. Consent-based information sharing
B. Collaborative problem solving
C. Interprofessional collaboration
D. Boundary spanning

0626. In school-community collaboration, how are Interprofessional collaboration and Community-based participatory practice most accurately differentiated in this curriculum?

A. Interprofessional collaboration: Coordinated work among professionals who contribute distinct expertise toward shared client goals. / Community-based participatory practice: A partnership in which community members share influence in defining questions, actions, and interpretation.
B. Interprofessional collaboration: A coordinated, mutually understood set of goals, responsibilities, and follow-up steps across helpers. / Community-based participatory practice: A partnership in which community members share influence in defining questions, actions, and interpretation.
C. Interprofessional collaboration: A partnership in which community members share influence in defining questions, actions, and interpretation. / Community-based participatory practice: Coordinated work among professionals who contribute distinct expertise toward shared client goals.
D. Interprofessional collaboration: Coordinated work among professionals who contribute distinct expertise toward shared client goals. / Community-based participatory practice: A structured process in which partners define a concern, generate options, test a plan, and review outcomes.

0627. A program coordinator is asked what should shape a high-school student's support in the multidisciplinary case conference. The proposed focus is documenting who will take each agreed next step and when progress will be reviewed. Which principle does it represent?

A. Collaborative problem solving
B. Shared care plan
C. Warm referral
D. Interprofessional collaboration

0628. Which applied comparison correctly identifies what belongs to Community-based participatory practice versus Boundary spanning?

A. Community-based participatory practice: Confirming authorization and sharing only information needed for coordinated support. / Boundary spanning: Translating needs across systems without taking over another partner's responsibilities.
B. Community-based participatory practice: Translating needs across systems without taking over another partner's responsibilities. / Boundary spanning: Involving youth and community partners in decisions throughout a project, not only at launch.
C. Community-based participatory practice: Involving youth and community partners in decisions throughout a project, not only at launch. / Boundary spanning: Translating needs across systems without taking over another partner's responsibilities.
D. Community-based participatory practice: Involving youth and community partners in decisions throughout a project, not only at launch. / Boundary spanning: Agreeing on roles and communication with school and community partners, subject to permission.

0629. Consider a child aged 8 receiving help in the supervision meeting. The teacher and counselor focuses on reviewing attendance or wellbeing data together and adjusting supports with permission. Which term best describes the guiding idea?

A. Warm referral
B. Interprofessional collaboration
C. Consent-based information sharing
D. Outcome feedback loop

0630. Choose the response that best puts Community asset mapping into practice.

A. Translating needs across systems without taking over another partner's responsibilities.
B. Mapping existing youth programs and trusted community networks before planning a new service.
C. Clarifying who contacts caregivers and who monitors a school support.
D. Agreeing on roles and communication with school and community partners, subject to permission.

0631. Consider a middle-school student receiving help in the youth advocacy program. The teacher and counselor focuses on confirming authorization and sharing only information needed for coordinated support. Which term best describes the guiding idea?

A. Warm referral
B. Collaborative problem solving
C. Role clarification
D. Consent-based information sharing

0632. Which comparison correctly distinguishes Shared care plan from Role clarification?

A. Shared care plan: Connecting organizations or professional groups while respecting each role's authority and accountability. / Role clarification: Explicit agreement about each partner's responsibilities, authority, and limits.
B. Shared care plan: Explicit agreement about each partner's responsibilities, authority, and limits. / Role clarification: A coordinated, mutually understood set of goals, responsibilities, and follow-up steps across helpers.
C. Shared care plan: A coordinated, mutually understood set of goals, responsibilities, and follow-up steps across helpers. / Role clarification: Identification of local strengths, organizations, relationships, and resources relevant to community goals.
D. Shared care plan: A coordinated, mutually understood set of goals, responsibilities, and follow-up steps across helpers. / Role clarification: Explicit agreement about each partner's responsibilities, authority, and limits.

0633. A doctoral student reads the following description. Which concept does it define? Explicit agreement about each partner's responsibilities, authority, and limits.

A. Community-based participatory practice
B. Role clarification
C. Collaborative problem solving
D. Warm referral

0634. A doctoral student reads the following description. Which concept does it define? Exchange of relevant information under valid permission and applicable privacy requirements.

A. Role clarification
B. Consent-based information sharing
C. Community-based participatory practice
D. Shared care plan

0635. When reviewing a older adolescent client's plan in the youth group, the case coordinator notes that the next step is translating needs across systems without taking over another partner's responsibilities. Which concept guides this step?

A. Collaborative problem solving
B. Boundary spanning
C. Interprofessional collaboration
D. Role clarification

0636. In school-community collaboration, which pair of actions illustrates Interprofessional collaboration and Community asset mapping, respectively?

A. Interprofessional collaboration: Agreeing on roles and communication with school and community partners, subject to permission. / Community asset mapping: Mapping existing youth programs and trusted community networks before planning a new service.
B. Interprofessional collaboration: Agreeing on roles and communication with school and community partners, subject to permission. / Community asset mapping: Translating needs across systems without taking over another partner's responsibilities.
C. Interprofessional collaboration: Mapping existing youth programs and trusted community networks before planning a new service. / Community asset mapping: Agreeing on roles and communication with school and community partners, subject to permission.
D. Interprofessional collaboration: Documenting who will take each agreed next step and when progress will be reviewed. / Community asset mapping: Mapping existing youth programs and trusted community networks before planning a new service.

0637. Which comparison would correct a trainee's misunderstanding of Shared care plan versus Outcome feedback loop?

A. Shared care plan: A coordinated, mutually understood set of goals, responsibilities, and follow-up steps across helpers. / Outcome feedback loop: Regular use of shared outcome information to adapt coordinated services.
B. Shared care plan: Explicit agreement about each partner's responsibilities, authority, and limits. / Outcome feedback loop: Regular use of shared outcome information to adapt coordinated services.
C. Shared care plan: Regular use of shared outcome information to adapt coordinated services. / Outcome feedback loop: A coordinated, mutually understood set of goals, responsibilities, and follow-up steps across helpers.
D. Shared care plan: A coordinated, mutually understood set of goals, responsibilities, and follow-up steps across helpers. / Outcome feedback loop: Identification of local strengths, organizations, relationships, and resources relevant to community goals.

0638. Identify the most precise label for this idea: Regular use of shared outcome information to adapt coordinated services.

A. Consent-based information sharing
B. Boundary spanning
C. Outcome feedback loop
D. Shared care plan

0639. A trainee must distinguish how Role clarification and Consent-based information sharing guide practice. Which comparison is accurate?

A. Role clarification: Reviewing attendance or wellbeing data together and adjusting supports with permission. / Consent-based information sharing: Confirming authorization and sharing only information needed for coordinated support.
B. Role clarification: Clarifying who contacts caregivers and who monitors a school support. / Consent-based information sharing: Confirming authorization and sharing only information needed for coordinated support.
C. Role clarification: Clarifying who contacts caregivers and who monitors a school support. / Consent-based information sharing: Helping the family make contact with a community service and checking whether connection occurred.
D. Role clarification: Confirming authorization and sharing only information needed for coordinated support. / Consent-based information sharing: Clarifying who contacts caregivers and who monitors a school support.

0640. Which applied comparison correctly identifies what belongs to Consent-based information sharing versus Collaborative problem solving?

A. Consent-based information sharing: Confirming authorization and sharing only information needed for coordinated support. / Collaborative problem solving: Agreeing on a measurable concern, trying one support, and reconvening to evaluate it.
B. Consent-based information sharing: Reviewing attendance or wellbeing data together and adjusting supports with permission. / Collaborative problem solving: Agreeing on a measurable concern, trying one support, and reconvening to evaluate it.
C. Consent-based information sharing: Agreeing on a measurable concern, trying one support, and reconvening to evaluate it. / Collaborative problem solving: Confirming authorization and sharing only information needed for coordinated support.
D. Consent-based information sharing: Confirming authorization and sharing only information needed for coordinated support. / Collaborative problem solving: Helping the family make contact with a community service and checking whether connection occurred.

0641. In school-community collaboration, how are Interprofessional collaboration and Outcome feedback loop most accurately differentiated in this curriculum?

A. Interprofessional collaboration: An active, supported connection from one service to another that reduces barriers to follow-through. / Outcome feedback loop: Regular use of shared outcome information to adapt coordinated services.
B. Interprofessional collaboration: Coordinated work among professionals who contribute distinct expertise toward shared client goals. / Outcome feedback loop: Explicit agreement about each partner's responsibilities, authority, and limits.
C. Interprofessional collaboration: Coordinated work among professionals who contribute distinct expertise toward shared client goals. / Outcome feedback loop: Regular use of shared outcome information to adapt coordinated services.
D. Interprofessional collaboration: Regular use of shared outcome information to adapt coordinated services. / Outcome feedback loop: Coordinated work among professionals who contribute distinct expertise toward shared client goals.

0642. In school-community collaboration, which applied comparison correctly identifies what belongs to Interprofessional collaboration versus Shared care plan?

A. Interprofessional collaboration: Clarifying who contacts caregivers and who monitors a school support. / Shared care plan: Documenting who will take each agreed next step and when progress will be reviewed.
B. Interprofessional collaboration: Agreeing on roles and communication with school and community partners, subject to permission. / Shared care plan: Confirming authorization and sharing only information needed for coordinated support.
C. Interprofessional collaboration: Documenting who will take each agreed next step and when progress will be reviewed. / Shared care plan: Agreeing on roles and communication with school and community partners, subject to permission.
D. Interprofessional collaboration: Agreeing on roles and communication with school and community partners, subject to permission. / Shared care plan: Documenting who will take each agreed next step and when progress will be reviewed.

0643. In school-community collaboration, which applied comparison correctly identifies what belongs to Interprofessional collaboration versus Consent-based information sharing?

A. Interprofessional collaboration: Mapping existing youth programs and trusted community networks before planning a new service. / Consent-based information sharing: Confirming authorization and sharing only information needed for coordinated support.
B. Interprofessional collaboration: Agreeing on roles and communication with school and community partners, subject to permission. / Consent-based information sharing: Confirming authorization and sharing only information needed for coordinated support.
C. Interprofessional collaboration: Agreeing on roles and communication with school and community partners, subject to permission. / Consent-based information sharing: Clarifying who contacts caregivers and who monitors a school support.
D. Interprofessional collaboration: Confirming authorization and sharing only information needed for coordinated support. / Consent-based information sharing: Agreeing on roles and communication with school and community partners, subject to permission.

0644. Which comparison would correct a trainee's misunderstanding of Consent-based information sharing versus Boundary spanning?

A. Consent-based information sharing: Coordinated work among professionals who contribute distinct expertise toward shared client goals. / Boundary spanning: Connecting organizations or professional groups while respecting each role's authority and accountability.
B. Consent-based information sharing: Exchange of relevant information under valid permission and applicable privacy requirements. / Boundary spanning: A coordinated, mutually understood set of goals, responsibilities, and follow-up steps across helpers.
C. Consent-based information sharing: Connecting organizations or professional groups while respecting each role's authority and accountability. / Boundary spanning: Exchange of relevant information under valid permission and applicable privacy requirements.
D. Consent-based information sharing: Exchange of relevant information under valid permission and applicable privacy requirements. / Boundary spanning: Connecting organizations or professional groups while respecting each role's authority and accountability.

0645. Which description belongs with the term Boundary spanning?

A. A coordinated, mutually understood set of goals, responsibilities, and follow-up steps across helpers.
B. Connecting organizations or professional groups while respecting each role's authority and accountability.
C. Explicit agreement about each partner's responsibilities, authority, and limits.
D. Exchange of relevant information under valid permission and applicable privacy requirements.

0646. In a supervision quiz, how should Consent-based information sharing be distinguished from Warm referral?

A. Consent-based information sharing: Connecting organizations or professional groups while respecting each role's authority and accountability. / Warm referral: An active, supported connection from one service to another that reduces barriers to follow-through.
B. Consent-based information sharing: Exchange of relevant information under valid permission and applicable privacy requirements. / Warm referral: A partnership in which community members share influence in defining questions, actions, and interpretation.
C. Consent-based information sharing: Exchange of relevant information under valid permission and applicable privacy requirements. / Warm referral: An active, supported connection from one service to another that reduces barriers to follow-through.
D. Consent-based information sharing: An active, supported connection from one service to another that reduces barriers to follow-through. / Warm referral: Exchange of relevant information under valid permission and applicable privacy requirements.

0647. During service review in the caregiver consultation, a program coordinator describes agreeing on a measurable concern, trying one support, and reconvening to evaluate it. for a student aged 12. Which course idea is most applicable?

A. Collaborative problem solving
B. Community asset mapping
C. Shared care plan
D. Role clarification

0648. Which comparison would correct a trainee's misunderstanding of Boundary spanning versus Outcome feedback loop?

A. Boundary spanning: Coordinated work among professionals who contribute distinct expertise toward shared client goals. / Outcome feedback loop: Regular use of shared outcome information to adapt coordinated services.
B. Boundary spanning: Connecting organizations or professional groups while respecting each role's authority and accountability. / Outcome feedback loop: Regular use of shared outcome information to adapt coordinated services.
C. Boundary spanning: Regular use of shared outcome information to adapt coordinated services. / Outcome feedback loop: Connecting organizations or professional groups while respecting each role's authority and accountability.
D. Boundary spanning: Connecting organizations or professional groups while respecting each role's authority and accountability. / Outcome feedback loop: Exchange of relevant information under valid permission and applicable privacy requirements.

0649. Which option correctly matches each concept to its practice focus: Community asset mapping and Community-based participatory practice?

A. Community asset mapping: Mapping existing youth programs and trusted community networks before planning a new service. / Community-based participatory practice: Agreeing on a measurable concern, trying one support, and reconvening to evaluate it.
B. Community asset mapping: Helping the family make contact with a community service and checking whether connection occurred. / Community-based participatory practice: Involving youth and community partners in decisions throughout a project, not only at launch.
C. Community asset mapping: Mapping existing youth programs and trusted community networks before planning a new service. / Community-based participatory practice: Involving youth and community partners in decisions throughout a project, not only at launch.
D. Community asset mapping: Involving youth and community partners in decisions throughout a project, not only at launch. / Community-based participatory practice: Mapping existing youth programs and trusted community networks before planning a new service.

0650. Which paired example correctly applies Collaborative problem solving first and Boundary spanning second?

A. Collaborative problem solving: Documenting who will take each agreed next step and when progress will be reviewed. / Boundary spanning: Translating needs across systems without taking over another partner's responsibilities.
B. Collaborative problem solving: Agreeing on a measurable concern, trying one support, and reconvening to evaluate it. / Boundary spanning: Translating needs across systems without taking over another partner's responsibilities.
C. Collaborative problem solving: Agreeing on a measurable concern, trying one support, and reconvening to evaluate it. / Boundary spanning: Reviewing attendance or wellbeing data together and adjusting supports with permission.
D. Collaborative problem solving: Translating needs across systems without taking over another partner's responsibilities. / Boundary spanning: Agreeing on a measurable concern, trying one support, and reconvening to evaluate it.

0651. A supervised trainee and a adolescent student are discussing support in the student wellness team. The selected practice is documenting who will take each agreed next step and when progress will be reviewed. Which concept does this demonstrate?

A. Consent-based information sharing
B. Outcome feedback loop
C. Shared care plan
D. Warm referral

0652. In school-community collaboration, select the best explanation of Interprofessional collaboration.

A. Exchange of relevant information under valid permission and applicable privacy requirements.
B. Regular use of shared outcome information to adapt coordinated services.
C. Coordinated work among professionals who contribute distinct expertise toward shared client goals.
D. A structured process in which partners define a concern, generate options, test a plan, and review outcomes.

0653. Which paired example correctly applies Shared care plan first and Outcome feedback loop second?

A. Shared care plan: Documenting who will take each agreed next step and when progress will be reviewed. / Outcome feedback loop: Reviewing attendance or wellbeing data together and adjusting supports with permission.
B. Shared care plan: Reviewing attendance or wellbeing data together and adjusting supports with permission. / Outcome feedback loop: Documenting who will take each agreed next step and when progress will be reviewed.
C. Shared care plan: Documenting who will take each agreed next step and when progress will be reviewed. / Outcome feedback loop: Mapping existing youth programs and trusted community networks before planning a new service.
D. Shared care plan: Clarifying who contacts caregivers and who monitors a school support. / Outcome feedback loop: Reviewing attendance or wellbeing data together and adjusting supports with permission.

0654. Which statement shows a sound practice-level distinction between Collaborative problem solving and Community-based participatory practice?

A. Collaborative problem solving: Involving youth and community partners in decisions throughout a project, not only at launch. / Community-based participatory practice: Agreeing on a measurable concern, trying one support, and reconvening to evaluate it.
B. Collaborative problem solving: Agreeing on a measurable concern, trying one support, and reconvening to evaluate it. / Community-based participatory practice: Involving youth and community partners in decisions throughout a project, not only at launch.
C. Collaborative problem solving: Agreeing on a measurable concern, trying one support, and reconvening to evaluate it. / Community-based participatory practice: Helping the family make contact with a community service and checking whether connection occurred.
D. Collaborative problem solving: Agreeing on roles and communication with school and community partners, subject to permission. / Community-based participatory practice: Involving youth and community partners in decisions throughout a project, not only at launch.

0655. Which statement accurately contrasts the course concepts Community asset mapping and Outcome feedback loop?

A. Community asset mapping: Connecting organizations or professional groups while respecting each role's authority and accountability. / Outcome feedback loop: Regular use of shared outcome information to adapt coordinated services.
B. Community asset mapping: Identification of local strengths, organizations, relationships, and resources relevant to community goals. / Outcome feedback loop: An active, supported connection from one service to another that reduces barriers to follow-through.
C. Community asset mapping: Identification of local strengths, organizations, relationships, and resources relevant to community goals. / Outcome feedback loop: Regular use of shared outcome information to adapt coordinated services.
D. Community asset mapping: Regular use of shared outcome information to adapt coordinated services. / Outcome feedback loop: Identification of local strengths, organizations, relationships, and resources relevant to community goals.

0656. Choose the practice comparison that best separates Shared care plan from Outcome feedback loop.

A. Shared care plan: Clarifying who contacts caregivers and who monitors a school support. / Outcome feedback loop: Reviewing attendance or wellbeing data together and adjusting supports with permission.
B. Shared care plan: Documenting who will take each agreed next step and when progress will be reviewed. / Outcome feedback loop: Mapping existing youth programs and trusted community networks before planning a new service.
C. Shared care plan: Documenting who will take each agreed next step and when progress will be reviewed. / Outcome feedback loop: Reviewing attendance or wellbeing data together and adjusting supports with permission.
D. Shared care plan: Reviewing attendance or wellbeing data together and adjusting supports with permission. / Outcome feedback loop: Documenting who will take each agreed next step and when progress will be reviewed.

0657. In school-community collaboration, which applied comparison correctly identifies what belongs to Interprofessional collaboration versus Collaborative problem solving?

A. Interprofessional collaboration: Reviewing attendance or wellbeing data together and adjusting supports with permission. / Collaborative problem solving: Agreeing on a measurable concern, trying one support, and reconvening to evaluate it.
B. Interprofessional collaboration: Agreeing on a measurable concern, trying one support, and reconvening to evaluate it. / Collaborative problem solving: Agreeing on roles and communication with school and community partners, subject to permission.
C. Interprofessional collaboration: Agreeing on roles and communication with school and community partners, subject to permission. / Collaborative problem solving: Documenting who will take each agreed next step and when progress will be reviewed.
D. Interprofessional collaboration: Agreeing on roles and communication with school and community partners, subject to permission. / Collaborative problem solving: Agreeing on a measurable concern, trying one support, and reconvening to evaluate it.

0658. A trainee must distinguish how Collaborative problem solving and Community-based participatory practice guide practice. Which comparison is accurate?

A. Collaborative problem solving: Involving youth and community partners in decisions throughout a project, not only at launch. / Community-based participatory practice: Agreeing on a measurable concern, trying one support, and reconvening to evaluate it.
B. Collaborative problem solving: Agreeing on roles and communication with school and community partners, subject to permission. / Community-based participatory practice: Involving youth and community partners in decisions throughout a project, not only at launch.
C. Collaborative problem solving: Agreeing on a measurable concern, trying one support, and reconvening to evaluate it. / Community-based participatory practice: Helping the family make contact with a community service and checking whether connection occurred.
D. Collaborative problem solving: Agreeing on a measurable concern, trying one support, and reconvening to evaluate it. / Community-based participatory practice: Involving youth and community partners in decisions throughout a project, not only at launch.

0659. A case discussion concerns a school-age child and a case coordinator in the community service agency. The practitioner is considering helping the family make contact with a community service and checking whether connection occurred. Which principle is involved?

A. Outcome feedback loop
B. Shared care plan
C. Warm referral
D. Community-based participatory practice

0660. A supervised trainee is supporting a young person aged 18 in the family resource center. The key practice is agreeing on a measurable concern, trying one support, and reconvening to evaluate it. Which course concept is most relevant?

A. Outcome feedback loop
B. Collaborative problem solving
C. Shared care plan
D. Community asset mapping

0661. How should a practitioner distinguish the applications of Community asset mapping and Warm referral?

A. Community asset mapping: Mapping existing youth programs and trusted community networks before planning a new service. / Warm referral: Helping the family make contact with a community service and checking whether connection occurred.
B. Community asset mapping: Confirming authorization and sharing only information needed for coordinated support. / Warm referral: Helping the family make contact with a community service and checking whether connection occurred.
C. Community asset mapping: Helping the family make contact with a community service and checking whether connection occurred. / Warm referral: Mapping existing youth programs and trusted community networks before planning a new service.
D. Community asset mapping: Mapping existing youth programs and trusted community networks before planning a new service. / Warm referral: Agreeing on a measurable concern, trying one support, and reconvening to evaluate it.

0662. Which comparison would correct a trainee's misunderstanding of Collaborative problem solving versus Community-based participatory practice?

A. Collaborative problem solving: Coordinated work among professionals who contribute distinct expertise toward shared client goals. / Community-based participatory practice: A partnership in which community members share influence in defining questions, actions, and interpretation.
B. Collaborative problem solving: A partnership in which community members share influence in defining questions, actions, and interpretation. / Community-based participatory practice: A structured process in which partners define a concern, generate options, test a plan, and review outcomes.
C. Collaborative problem solving: A structured process in which partners define a concern, generate options, test a plan, and review outcomes. / Community-based participatory practice: A partnership in which community members share influence in defining questions, actions, and interpretation.
D. Collaborative problem solving: A structured process in which partners define a concern, generate options, test a plan, and review outcomes. / Community-based participatory practice: An active, supported connection from one service to another that reduces barriers to follow-through.

0663. How are Role clarification and Boundary spanning most accurately differentiated in this curriculum?

A. Role clarification: Explicit agreement about each partner's responsibilities, authority, and limits. / Boundary spanning: Exchange of relevant information under valid permission and applicable privacy requirements.
B. Role clarification: A structured process in which partners define a concern, generate options, test a plan, and review outcomes. / Boundary spanning: Connecting organizations or professional groups while respecting each role's authority and accountability.
C. Role clarification: Connecting organizations or professional groups while respecting each role's authority and accountability. / Boundary spanning: Explicit agreement about each partner's responsibilities, authority, and limits.
D. Role clarification: Explicit agreement about each partner's responsibilities, authority, and limits. / Boundary spanning: Connecting organizations or professional groups while respecting each role's authority and accountability.

0664. In a case note about a child of elementary-school age, a supervised trainee working in the telehealth session records this priority: clarifying who contacts caregivers and who monitors a school support. What principle is reflected?

A. Shared care plan
B. Role clarification
C. Outcome feedback loop
D. Consent-based information sharing

0665. A supervisor asks for an applied contrast between Shared care plan and Role clarification. Which option fits?

A. Shared care plan: Translating needs across systems without taking over another partner's responsibilities. / Role clarification: Clarifying who contacts caregivers and who monitors a school support.
B. Shared care plan: Documenting who will take each agreed next step and when progress will be reviewed. / Role clarification: Mapping existing youth programs and trusted community networks before planning a new service.
C. Shared care plan: Clarifying who contacts caregivers and who monitors a school support. / Role clarification: Documenting who will take each agreed next step and when progress will be reviewed.
D. Shared care plan: Documenting who will take each agreed next step and when progress will be reviewed. / Role clarification: Clarifying who contacts caregivers and who monitors a school support.

0666. How should a practitioner distinguish the applications of Community-based participatory practice and Boundary spanning?

A. Community-based participatory practice: Confirming authorization and sharing only information needed for coordinated support. / Boundary spanning: Translating needs across systems without taking over another partner's responsibilities.
B. Community-based participatory practice: Involving youth and community partners in decisions throughout a project, not only at launch. / Boundary spanning: Agreeing on roles and communication with school and community partners, subject to permission.
C. Community-based participatory practice: Involving youth and community partners in decisions throughout a project, not only at launch. / Boundary spanning: Translating needs across systems without taking over another partner's responsibilities.
D. Community-based participatory practice: Translating needs across systems without taking over another partner's responsibilities. / Boundary spanning: Involving youth and community partners in decisions throughout a project, not only at launch.

0667. A trainee must distinguish how Shared care plan and Collaborative problem solving guide practice. Which comparison is accurate?

A. Shared care plan: Documenting who will take each agreed next step and when progress will be reviewed. / Collaborative problem solving: Agreeing on a measurable concern, trying one support, and reconvening to evaluate it.
B. Shared care plan: Documenting who will take each agreed next step and when progress will be reviewed. / Collaborative problem solving: Reviewing attendance or wellbeing data together and adjusting supports with permission.
C. Shared care plan: Agreeing on a measurable concern, trying one support, and reconvening to evaluate it. / Collaborative problem solving: Documenting who will take each agreed next step and when progress will be reviewed.
D. Shared care plan: Involving youth and community partners in decisions throughout a project, not only at launch. / Collaborative problem solving: Agreeing on a measurable concern, trying one support, and reconvening to evaluate it.

0668. Which option pairs the definitions of Collaborative problem solving and Outcome feedback loop correctly, in that order?

A. Collaborative problem solving: A structured process in which partners define a concern, generate options, test a plan, and review outcomes. / Outcome feedback loop: Regular use of shared outcome information to adapt coordinated services.
B. Collaborative problem solving: A structured process in which partners define a concern, generate options, test a plan, and review outcomes. / Outcome feedback loop: An active, supported connection from one service to another that reduces barriers to follow-through.
C. Collaborative problem solving: Regular use of shared outcome information to adapt coordinated services. / Outcome feedback loop: A structured process in which partners define a concern, generate options, test a plan, and review outcomes.
D. Collaborative problem solving: Identification of local strengths, organizations, relationships, and resources relevant to community goals. / Outcome feedback loop: Regular use of shared outcome information to adapt coordinated services.

0669. In a supervision review, a family therapist describes work with a student aged 15 in the school consultation: involving youth and community partners in decisions throughout a project, not only at launch. What concept is illustrated?

A. Collaborative problem solving
B. Community asset mapping
C. Community-based participatory practice
D. Interprofessional collaboration

0670. Choose the definition pair that correctly explains Role clarification first and Consent-based information sharing second.

A. Role clarification: Regular use of shared outcome information to adapt coordinated services. / Consent-based information sharing: Exchange of relevant information under valid permission and applicable privacy requirements.
B. Role clarification: Exchange of relevant information under valid permission and applicable privacy requirements. / Consent-based information sharing: Explicit agreement about each partner's responsibilities, authority, and limits.
C. Role clarification: Explicit agreement about each partner's responsibilities, authority, and limits. / Consent-based information sharing: Exchange of relevant information under valid permission and applicable privacy requirements.
D. Role clarification: Explicit agreement about each partner's responsibilities, authority, and limits. / Consent-based information sharing: An active, supported connection from one service to another that reduces barriers to follow-through.

0671. In school-community collaboration, a assessment clinician is preparing a follow-up plan for a young person aged 18 in the child guidance clinic. The plan calls for agreeing on roles and communication with school and community partners, subject to permission. Which concept names this approach?

A. Interprofessional collaboration
B. Shared care plan
C. Community asset mapping
D. Collaborative problem solving

0672. A case conference asks for a distinction between Collaborative problem solving and Warm referral. Which answer is sound?

A. Collaborative problem solving: A structured process in which partners define a concern, generate options, test a plan, and review outcomes. / Warm referral: An active, supported connection from one service to another that reduces barriers to follow-through.
B. Collaborative problem solving: A structured process in which partners define a concern, generate options, test a plan, and review outcomes. / Warm referral: A coordinated, mutually understood set of goals, responsibilities, and follow-up steps across helpers.
C. Collaborative problem solving: Coordinated work among professionals who contribute distinct expertise toward shared client goals. / Warm referral: An active, supported connection from one service to another that reduces barriers to follow-through.
D. Collaborative problem solving: An active, supported connection from one service to another that reduces barriers to follow-through. / Warm referral: A structured process in which partners define a concern, generate options, test a plan, and review outcomes.

0673. Which option preserves the correct meaning of both Collaborative problem solving and Outcome feedback loop?

A. Collaborative problem solving: Identification of local strengths, organizations, relationships, and resources relevant to community goals. / Outcome feedback loop: Regular use of shared outcome information to adapt coordinated services.
B. Collaborative problem solving: Regular use of shared outcome information to adapt coordinated services. / Outcome feedback loop: A structured process in which partners define a concern, generate options, test a plan, and review outcomes.
C. Collaborative problem solving: A structured process in which partners define a concern, generate options, test a plan, and review outcomes. / Outcome feedback loop: An active, supported connection from one service to another that reduces barriers to follow-through.
D. Collaborative problem solving: A structured process in which partners define a concern, generate options, test a plan, and review outcomes. / Outcome feedback loop: Regular use of shared outcome information to adapt coordinated services.

0674. In school-community collaboration, a doctoral student reads the following description. Which concept does it define? Coordinated work among professionals who contribute distinct expertise toward shared client goals.

A. Warm referral
B. Role clarification
C. Interprofessional collaboration
D. Community-based participatory practice

0675. What is the central meaning of Boundary spanning?

A. Regular use of shared outcome information to adapt coordinated services.
B. Coordinated work among professionals who contribute distinct expertise toward shared client goals.
C. An active, supported connection from one service to another that reduces barriers to follow-through.
D. Connecting organizations or professional groups while respecting each role's authority and accountability.

0676. Which option is the clearest practical expression of Warm referral?

A. Confirming authorization and sharing only information needed for coordinated support.
B. Helping the family make contact with a community service and checking whether connection occurred.
C. Documenting who will take each agreed next step and when progress will be reviewed.
D. Translating needs across systems without taking over another partner's responsibilities.

0677. Which option preserves the correct meaning of both Role clarification and Collaborative problem solving?

A. Role clarification: Explicit agreement about each partner's responsibilities, authority, and limits. / Collaborative problem solving: A coordinated, mutually understood set of goals, responsibilities, and follow-up steps across helpers.
B. Role clarification: An active, supported connection from one service to another that reduces barriers to follow-through. / Collaborative problem solving: A structured process in which partners define a concern, generate options, test a plan, and review outcomes.
C. Role clarification: A structured process in which partners define a concern, generate options, test a plan, and review outcomes. / Collaborative problem solving: Explicit agreement about each partner's responsibilities, authority, and limits.
D. Role clarification: Explicit agreement about each partner's responsibilities, authority, and limits. / Collaborative problem solving: A structured process in which partners define a concern, generate options, test a plan, and review outcomes.

0678. In school-community collaboration, a student confuses Interprofessional collaboration with Boundary spanning. Which explanation most accurately separates them?

A. Interprofessional collaboration: A coordinated, mutually understood set of goals, responsibilities, and follow-up steps across helpers. / Boundary spanning: Connecting organizations or professional groups while respecting each role's authority and accountability.
B. Interprofessional collaboration: Coordinated work among professionals who contribute distinct expertise toward shared client goals. / Boundary spanning: Connecting organizations or professional groups while respecting each role's authority and accountability.
C. Interprofessional collaboration: Connecting organizations or professional groups while respecting each role's authority and accountability. / Boundary spanning: Coordinated work among professionals who contribute distinct expertise toward shared client goals.
D. Interprofessional collaboration: Coordinated work among professionals who contribute distinct expertise toward shared client goals. / Boundary spanning: Exchange of relevant information under valid permission and applicable privacy requirements.

0679. A service navigator is asked what should shape a child aged 6’s support in the community service agency. The proposed focus is confirming authorization and sharing only information needed for coordinated support. Which principle does it represent?

A. Consent-based information sharing
B. Outcome feedback loop
C. Role clarification
D. Warm referral

0680. Choose the practice comparison that best separates Shared care plan from Community-based participatory practice.

A. Shared care plan: Involving youth and community partners in decisions throughout a project, not only at launch. / Community-based participatory practice: Documenting who will take each agreed next step and when progress will be reviewed.
B. Shared care plan: Documenting who will take each agreed next step and when progress will be reviewed. / Community-based participatory practice: Agreeing on a measurable concern, trying one support, and reconvening to evaluate it.
C. Shared care plan: Helping the family make contact with a community service and checking whether connection occurred. / Community-based participatory practice: Involving youth and community partners in decisions throughout a project, not only at launch.
D. Shared care plan: Documenting who will take each agreed next step and when progress will be reviewed. / Community-based participatory practice: Involving youth and community partners in decisions throughout a project, not only at launch.

0681. A support meeting for a adolescent student includes a clinical supervisor in the youth group. The practice under consideration is confirming authorization and sharing only information needed for coordinated support. Which concept guides it?

A. Consent-based information sharing
B. Boundary spanning
C. Outcome feedback loop
D. Interprofessional collaboration

0682. In school-community collaboration, a mental-health professional and a high-school student are discussing support in the family resource center. The selected practice is agreeing on roles and communication with school and community partners, subject to permission. Which concept does this demonstrate?

A. Interprofessional collaboration
B. Collaborative problem solving
C. Community asset mapping
D. Community-based participatory practice

0683. A child aged 11 is receiving support in the family resource center. The youth worker is guided by this practice: clarifying who contacts caregivers and who monitors a school support. Which principle best fits?

A. Community-based participatory practice
B. Collaborative problem solving
C. Role clarification
D. Consent-based information sharing

0684. A supervised trainee and a young person aged 16 are discussing support in the caregiver consultation. The selected practice is helping the family make contact with a community service and checking whether connection occurred. Which concept does this demonstrate?

A. Community asset mapping
B. Shared care plan
C. Warm referral
D. Collaborative problem solving

0685. Which option correctly matches each concept to its practice focus: Community asset mapping and Outcome feedback loop?

A. Community asset mapping: Mapping existing youth programs and trusted community networks before planning a new service. / Outcome feedback loop: Reviewing attendance or wellbeing data together and adjusting supports with permission.
B. Community asset mapping: Reviewing attendance or wellbeing data together and adjusting supports with permission. / Outcome feedback loop: Mapping existing youth programs and trusted community networks before planning a new service.
C. Community asset mapping: Mapping existing youth programs and trusted community networks before planning a new service. / Outcome feedback loop: Helping the family make contact with a community service and checking whether connection occurred.
D. Community asset mapping: Translating needs across systems without taking over another partner’s responsibilities. / Outcome feedback loop: Reviewing attendance or wellbeing data together and adjusting supports with permission.

0686. In the student wellness team, the agreed focus for a research trainee working with a older adolescent client is agreeing on a measurable concern, trying one support, and reconvening to evaluate it. Which concept names this focus?

A. Warm referral
B. Outcome feedback loop
C. Collaborative problem solving
D. Shared care plan

0687. In a case note about a student aged 17, a assessment clinician working in the parent meeting records this priority: reviewing attendance or wellbeing data together and adjusting supports with permission. What principle is reflected?

A. Outcome feedback loop
B. Interprofessional collaboration
C. Community asset mapping
D. Warm referral

0688. A service team discusses a young person aged 16 in the telehealth session. Their proposed next step is involving youth and community partners in decisions throughout a project, not only at launch. Which course concept supports it?

A. Collaborative problem solving
B. Community asset mapping
C. Boundary spanning
D. Community-based participatory practice

0689. Which statement most accurately defines Warm referral?

A. A coordinated, mutually understood set of goals, responsibilities, and follow-up steps across helpers.
B. Connecting organizations or professional groups while respecting each role’s authority and accountability.
C. A structured process in which partners define a concern, generate options, test a plan, and review outcomes.
D. An active, supported connection from one service to another that reduces barriers to follow-through.

0690. Choose the practice comparison that best separates Community asset mapping from Consent-based information sharing.

A. Community asset mapping: Documenting who will take each agreed next step and when progress will be reviewed. / Consent-based information sharing: Confirming authorization and sharing only information needed for coordinated support.
B. Community asset mapping: Mapping existing youth programs and trusted community networks before planning a new service. / Consent-based information sharing: Involving youth and community partners in decisions throughout a project, not only at launch.
C. Community asset mapping: Confirming authorization and sharing only information needed for coordinated support. / Consent-based information sharing: Mapping existing youth programs and trusted community networks before planning a new service.
D. Community asset mapping: Mapping existing youth programs and trusted community networks before planning a new service. / Consent-based information sharing: Confirming authorization and sharing only information needed for coordinated support.

0691. A supervisor asks how Role clarification would appear in practice. Which choice should be selected?

A. Clarifying who contacts caregivers and who monitors a school support.
B. Agreeing on roles and communication with school and community partners, subject to permission.
C. Involving youth and community partners in decisions throughout a project, not only at launch.
D. Reviewing attendance or wellbeing data together and adjusting supports with permission.

0692. Choose the term that matches this definition: Exchange of relevant information under valid permission and applicable privacy requirements.

A. Shared care plan
B. Role clarification
C. Consent-based information sharing
D. Boundary spanning

0693. A program coordinator describes an intervention for a adolescent student in the learning-support meeting, centered on involving youth and community partners in decisions throughout a project, not only at launch. Which named idea is most relevant?

A. Boundary spanning
B. Interprofessional collaboration
C. Collaborative problem solving
D. Community-based participatory practice

0694. In the family resource center, a team asks how a group facilitator can support a adolescent student. One proposed action is translating needs across systems without taking over another partner’s responsibilities. Which idea does it represent?

A. Warm referral
B. Community asset mapping
C. Role clarification
D. Boundary spanning

0695. A supervisor asks for an applied contrast between Warm referral and Community-based participatory practice. Which option fits?

A. Warm referral: Clarifying who contacts caregivers and who monitors a school support. / Community-based participatory practice: Involving youth and community partners in decisions throughout a project, not only at launch.
B. Warm referral: Involving youth and community partners in decisions throughout a project, not only at launch. / Community-based participatory practice: Helping the family make contact with a community service and checking whether connection occurred.
C. Warm referral: Helping the family make contact with a community service and checking whether connection occurred. / Community-based participatory practice: Involving youth and community partners in decisions throughout a project, not only at launch.
D. Warm referral: Helping the family make contact with a community service and checking whether connection occurred. / Community-based participatory practice: Agreeing on roles and communication with school and community partners, subject to permission.

0696. When reviewing a student aged 15’s plan in the school consultation, the family therapist notes that the next step is involving youth and community partners in decisions throughout a project, not only at launch. Which concept guides this step?

A. Community asset mapping
B. Collaborative problem solving
C. Outcome feedback loop
D. Community-based participatory practice

0697. Which statement most accurately defines Shared care plan?

A. A structured process in which partners define a concern, generate options, test a plan, and review outcomes.
B. An active, supported connection from one service to another that reduces barriers to follow-through.
C. A coordinated, mutually understood set of goals, responsibilities, and follow-up steps across helpers.
D. Exchange of relevant information under valid permission and applicable privacy requirements.

0698. In a supervision review, a case coordinator describes work with a older adolescent client in the youth group: translating needs across systems without taking over another partner’s responsibilities. What concept is illustrated?

A. Outcome feedback loop
B. Boundary spanning
C. Role clarification
D. Warm referral

0699. In school-community collaboration, a trainee must distinguish how Interprofessional collaboration and Warm referral guide practice. Which comparison is accurate?

A. Interprofessional collaboration: Involving youth and community partners in decisions throughout a project, not only at launch. / Warm referral: Helping the family make contact with a community service and checking whether connection occurred.
B. Interprofessional collaboration: Agreeing on roles and communication with school and community partners, subject to permission. / Warm referral: Helping the family make contact with a community service and checking whether connection occurred.
C. Interprofessional collaboration: Helping the family make contact with a community service and checking whether connection occurred. / Warm referral: Agreeing on roles and communication with school and community partners, subject to permission.
D. Interprofessional collaboration: Agreeing on roles and communication with school and community partners, subject to permission. / Warm referral: Mapping existing youth programs and trusted community networks before planning a new service.

0700. A team must select a support approach for a child of elementary-school age at the caregiver consultation. The parent educator recommends mapping existing youth programs and trusted community networks before planning a new service. Which idea is most relevant?

A. Interprofessional collaboration
B. Role clarification
C. Community-based participatory practice
D. Community asset mapping

0701. During service review in the multidisciplinary case conference, a research trainee describes helping the family make contact with a community service and checking whether connection occurred. for a young person aged 18. Which course idea is most applicable?

A. Role clarification
B. Warm referral
C. Shared care plan
D. Consent-based information sharing

0702. In school-community collaboration, in a supervision review, a school-based clinician describes work with a young person aged 16 in the community mental-health service: agreeing on roles and communication with school and community partners, subject to permission. What concept is illustrated?

A. Shared care plan
B. Community-based participatory practice
C. Consent-based information sharing
D. Interprofessional collaboration

0703. A school-age child is receiving support in the caregiver consultation. The group facilitator is guided by this practice: reviewing attendance or wellbeing data together and adjusting supports with permission. Which principle best fits?

A. Outcome feedback loop
B. Consent-based information sharing
C. Community-based participatory practice
D. Collaborative problem solving

0704. A support meeting for a young person aged 10 includes a play therapist in the parent meeting. The practice under consideration is documenting who will take each agreed next step and when progress will be reviewed. Which concept guides it?

A. Shared care plan
B. Community-based participatory practice
C. Outcome feedback loop
D. Warm referral

0705. In school-community collaboration, which option correctly matches each concept to its practice focus: Interprofessional collaboration and Consent-based information sharing?

A. Interprofessional collaboration: Mapping existing youth programs and trusted community networks before planning a new service. / Consent-based information sharing: Confirming authorization and sharing only information needed for coordinated support.
B. Interprofessional collaboration: Confirming authorization and sharing only information needed for coordinated support. / Consent-based information sharing: Agreeing on roles and communication with school and community partners, subject to permission.
C. Interprofessional collaboration: Agreeing on roles and communication with school and community partners, subject to permission. / Consent-based information sharing: Confirming authorization and sharing only information needed for coordinated support.
D. Interprofessional collaboration: Agreeing on roles and communication with school and community partners, subject to permission. / Consent-based information sharing: Clarifying who contacts caregivers and who monitors a school support.

0706. A young adolescent client is receiving support in the student-support meeting. The youth worker is guided by this practice: translating needs across systems without taking over another partner’s responsibilities. Which principle best fits?

A. Role clarification
B. Boundary spanning
C. Consent-based information sharing
D. Warm referral

0707. How should a practitioner distinguish the applications of Shared care plan and Consent-based information sharing?

A. Shared care plan: Confirming authorization and sharing only information needed for coordinated support. / Consent-based information sharing: Documenting who will take each agreed next step and when progress will be reviewed.
B. Shared care plan: Documenting who will take each agreed next step and when progress will be reviewed. / Consent-based information sharing: Reviewing attendance or wellbeing data together and adjusting supports with permission.
C. Shared care plan: Agreeing on a measurable concern, trying one support, and reconvening to evaluate it. / Consent-based information sharing: Confirming authorization and sharing only information needed for coordinated support.
D. Shared care plan: Documenting who will take each agreed next step and when progress will be reviewed. / Consent-based information sharing: Confirming authorization and sharing only information needed for coordinated support.

0708. A student confuses Role clarification with Boundary spanning. Which explanation most accurately separates them?

A. Role clarification: A structured process in which partners define a concern, generate options, test a plan, and review outcomes. / Boundary spanning: Connecting organizations or professional groups while respecting each role’s authority and accountability.
B. Role clarification: Explicit agreement about each partner’s responsibilities, authority, and limits. / Boundary spanning: Exchange of relevant information under valid permission and applicable privacy requirements.
C. Role clarification: Connecting organizations or professional groups while respecting each role’s authority and accountability. / Boundary spanning: Explicit agreement about each partner’s responsibilities, authority, and limits.
D. Role clarification: Explicit agreement about each partner’s responsibilities, authority, and limits. / Boundary spanning: Connecting organizations or professional groups while respecting each role’s authority and accountability.

0709. A support meeting for a student aged 9 includes a counselor in the student wellness team. The practice under consideration is translating needs across systems without taking over another partner’s responsibilities. Which concept guides it?

A. Warm referral
B. Boundary spanning
C. Shared care plan
D. Community asset mapping

0710. Which choice aligns each practice with the correct idea, Shared care plan or Community asset mapping?

A. Shared care plan: Confirming authorization and sharing only information needed for coordinated support. / Community asset mapping: Mapping existing youth programs and trusted community networks before planning a new service.
B. Shared care plan: Documenting who will take each agreed next step and when progress will be reviewed. / Community asset mapping: Clarifying who contacts caregivers and who monitors a school support.
C. Shared care plan: Mapping existing youth programs and trusted community networks before planning a new service. / Community asset mapping: Documenting who will take each agreed next step and when progress will be reviewed.
D. Shared care plan: Documenting who will take each agreed next step and when progress will be reviewed. / Community asset mapping: Mapping existing youth programs and trusted community networks before planning a new service.

0711. A case conference asks for a distinction between Role clarification and Community-based participatory practice. Which answer is sound?

A. Role clarification: Connecting organizations or professional groups while respecting each role's authority and accountability. / Community-based participatory practice: A partnership in which community members share influence in defining questions, actions, and interpretation.
B. Role clarification: Explicit agreement about each partner's responsibilities, authority, and limits. / Community-based participatory practice: Coordinated work among professionals who contribute distinct expertise toward shared client goals.
C. Role clarification: A partnership in which community members share influence in defining questions, actions, and interpretation. / Community-based participatory practice: Explicit agreement about each partner's responsibilities, authority, and limits.
D. Role clarification: Explicit agreement about each partner's responsibilities, authority, and limits. / Community-based participatory practice: A partnership in which community members share influence in defining questions, actions, and interpretation.

0712. A supervisor asks for an applied contrast between Warm referral and Boundary spanning. Which option fits?

A. Warm referral: Agreeing on a measurable concern, trying one support, and reconvening to evaluate it. / Boundary spanning: Translating needs across systems without taking over another partner's responsibilities.
B. Warm referral: Translating needs across systems without taking over another partner's responsibilities. / Boundary spanning: Helping the family make contact with a community service and checking whether connection occurred.
C. Warm referral: Helping the family make contact with a community service and checking whether connection occurred. / Boundary spanning: Agreeing on roles and communication with school and community partners, subject to permission.
D. Warm referral: Helping the family make contact with a community service and checking whether connection occurred. / Boundary spanning: Translating needs across systems without taking over another partner's responsibilities.

0713. How should a practitioner distinguish the applications of Community asset mapping and Boundary spanning?

A. Community asset mapping: Mapping existing youth programs and trusted community networks before planning a new service. / Boundary spanning: Documenting who will take each agreed next step and when progress will be reviewed.
B. Community asset mapping: Mapping existing youth programs and trusted community networks before planning a new service. / Boundary spanning: Translating needs across systems without taking over another partner's responsibilities.
C. Community asset mapping: Agreeing on a measurable concern, trying one support, and reconvening to evaluate it. / Boundary spanning: Translating needs across systems without taking over another partner's responsibilities.
D. Community asset mapping: Translating needs across systems without taking over another partner's responsibilities. / Boundary spanning: Mapping existing youth programs and trusted community networks before planning a new service.

0714. At the counseling practicum, a service navigator reviews whether a plan for a teenage client is appropriate. The relevant practice is documenting who will take each agreed next step and when progress will be reviewed. Which concept is tested?

A. Shared care plan
B. Interprofessional collaboration
C. Community asset mapping
D. Outcome feedback loop

0715. A student confuses Role clarification with Outcome feedback loop. Which explanation most accurately separates them?

A. Role clarification: Explicit agreement about each partner's responsibilities, authority, and limits. / Outcome feedback loop: Connecting organizations or professional groups while respecting each role's authority and accountability.
B. Role clarification: Explicit agreement about each partner's responsibilities, authority, and limits. / Outcome feedback loop: Regular use of shared outcome information to adapt coordinated services.
C. Role clarification: Coordinated work among professionals who contribute distinct expertise toward shared client goals. / Outcome feedback loop: Regular use of shared outcome information to adapt coordinated services.
D. Role clarification: Regular use of shared outcome information to adapt coordinated services. / Outcome feedback loop: Explicit agreement about each partner's responsibilities, authority, and limits.

0716. Which statement accurately contrasts the course concepts Community-based participatory practice and Boundary spanning?

A. Community-based participatory practice: A partnership in which community members share influence in defining questions, actions, and interpretation. / Boundary spanning: Connecting organizations or professional groups while respecting each role's authority and accountability.
B. Community-based participatory practice: A partnership in which community members share influence in defining questions, actions, and interpretation. / Boundary spanning: Coordinated work among professionals who contribute distinct expertise toward shared client goals.
C. Community-based participatory practice: Exchange of relevant information under valid permission and applicable privacy requirements. / Boundary spanning: Connecting organizations or professional groups while respecting each role's authority and accountability.
D. Community-based participatory practice: Connecting organizations or professional groups while respecting each role's authority and accountability. / Boundary spanning: A partnership in which community members share influence in defining questions, actions, and interpretation.

0717. For a young person aged 18 seen in the youth group, the community practitioner recommends a plan built around documenting who will take each agreed next step and when progress will be reviewed. Which concept is reflected?

A. Shared care plan
B. Boundary spanning
C. Community-based participatory practice
D. Consent-based information sharing

0718. Which named construct is captured by this account? A coordinated, mutually understood set of goals, responsibilities, and follow-up steps across helpers.

A. Shared care plan
B. Outcome feedback loop
C. Warm referral
D. Collaborative problem solving

0719. A supervisor asks for an applied contrast between Role clarification and Outcome feedback loop. Which option fits?

A. Role clarification: Clarifying who contacts caregivers and who monitors a school support. / Outcome feedback loop: Reviewing attendance or wellbeing data together and adjusting supports with permission.
B. Role clarification: Reviewing attendance or wellbeing data together and adjusting supports with permission. / Outcome feedback loop: Clarifying who contacts caregivers and who monitors a school support.
C. Role clarification: Clarifying who contacts caregivers and who monitors a school support. / Outcome feedback loop: Translating needs across systems without taking over another partner's responsibilities.
D. Role clarification: Agreeing on roles and communication with school and community partners, subject to permission. / Outcome feedback loop: Reviewing attendance or wellbeing data together and adjusting supports with permission.

0720. How should a practitioner distinguish the applications of Warm referral and Outcome feedback loop?

A. Warm referral: Helping the family make contact with a community service and checking whether connection occurred. / Outcome feedback loop: Translating needs across systems without taking over another partner's responsibilities.
B. Warm referral: Reviewing attendance or wellbeing data together and adjusting supports with permission. / Outcome feedback loop: Helping the family make contact with a community service and checking whether connection occurred.
C. Warm referral: Helping the family make contact with a community service and checking whether connection occurred. / Outcome feedback loop: Reviewing attendance or wellbeing data together and adjusting supports with permission.
D. Warm referral: Confirming authorization and sharing only information needed for coordinated support. / Outcome feedback loop: Reviewing attendance or wellbeing data together and adjusting supports with permission.

0721. Which option pairs the definitions of Community asset mapping and Consent-based information sharing correctly, in that order?

A. Community asset mapping: Identification of local strengths, organizations, relationships, and resources relevant to community goals. / Consent-based information sharing: Exchange of relevant information under valid permission and applicable privacy requirements.
B. Community asset mapping: Exchange of relevant information under valid permission and applicable privacy requirements. / Consent-based information sharing: Identification of local strengths, organizations, relationships, and resources relevant to community goals.
C. Community asset mapping: Identification of local strengths, organizations, relationships, and resources relevant to community goals. / Consent-based information sharing: A partnership in which community members share influence in defining questions, actions, and interpretation.
D. Community asset mapping: A coordinated, mutually understood set of goals, responsibilities, and follow-up steps across helpers. / Consent-based information sharing: Exchange of relevant information under valid permission and applicable privacy requirements.

0722. A trainee must explain Warm referral. Which answer is accurate?

A. An active, supported connection from one service to another that reduces barriers to follow-through.
B. Coordinated work among professionals who contribute distinct expertise toward shared client goals.
C. Exchange of relevant information under valid permission and applicable privacy requirements.
D. A coordinated, mutually understood set of goals, responsibilities, and follow-up steps across helpers.

0723. While supporting a student aged 12 in the clinical planning session, a family therapist adopts this practice: translating needs across systems without taking over another partner's responsibilities. Which concept best explains the choice?

A. Boundary spanning
B. Collaborative problem solving
C. Interprofessional collaboration
D. Outcome feedback loop

0724. Which option is the clearest practical expression of Boundary spanning?

A. Confirming authorization and sharing only information needed for coordinated support.
B. Helping the family make contact with a community service and checking whether connection occurred.
C. Clarifying who contacts caregivers and who monitors a school support.
D. Translating needs across systems without taking over another partner's responsibilities.

0725. A supervisor asks for an applied contrast between Consent-based information sharing and Collaborative problem solving. Which option fits?

A. Consent-based information sharing: Reviewing attendance or wellbeing data together and adjusting supports with permission. / Collaborative problem solving: Agreeing on a measurable concern, trying one support, and reconvening to evaluate it.
B. Consent-based information sharing: Agreeing on a measurable concern, trying one support, and reconvening to evaluate it. / Collaborative problem solving: Confirming authorization and sharing only information needed for coordinated support.
C. Consent-based information sharing: Confirming authorization and sharing only information needed for coordinated support. / Collaborative problem solving: Helping the family make contact with a community service and checking whether connection occurred.
D. Consent-based information sharing: Confirming authorization and sharing only information needed for coordinated support. / Collaborative problem solving: Agreeing on a measurable concern, trying one support, and reconvening to evaluate it.

0726. Which paired example correctly applies Role clarification first and Consent-based information sharing second?

A. Role clarification: Reviewing attendance or wellbeing data together and adjusting supports with permission. / Consent-based information sharing: Confirming authorization and sharing only information needed for coordinated support.
B. Role clarification: Clarifying who contacts caregivers and who monitors a school support. / Consent-based information sharing: Helping the family make contact with a community service and checking whether connection occurred.
C. Role clarification: Confirming authorization and sharing only information needed for coordinated support. / Consent-based information sharing: Clarifying who contacts caregivers and who monitors a school support.
D. Role clarification: Clarifying who contacts caregivers and who monitors a school support. / Consent-based information sharing: Confirming authorization and sharing only information needed for coordinated support.

0727. Which choice aligns each practice with the correct idea, Warm referral or Community-based participatory practice?

A. Warm referral: Clarifying who contacts caregivers and who monitors a school support. / Community-based participatory practice: Involving youth and community partners in decisions throughout a project, not only at launch.
B. Warm referral: Helping the family make contact with a community service and checking whether connection occurred. / Community-based participatory practice: Involving youth and community partners in decisions throughout a project, not only at launch.
C. Warm referral: Helping the family make contact with a community service and checking whether connection occurred. / Community-based participatory practice: Agreeing on roles and communication with school and community partners, subject to permission.
D. Warm referral: Involving youth and community partners in decisions throughout a project, not only at launch. / Community-based participatory practice: Helping the family make contact with a community service and checking whether connection occurred.

0728. In the school-based service, a group facilitator describes the most appropriate support for a client in late adolescence as documenting who will take each agreed next step and when progress will be reviewed. Which framework is being applied?

A. Outcome feedback loop
B. Shared care plan
C. Interprofessional collaboration
D. Boundary spanning

0729. A service team discusses a adolescent student in the school-based service. Their proposed next step is mapping existing youth programs and trusted community networks before planning a new service. Which course concept supports it?

A. Boundary spanning
B. Community-based participatory practice
C. Community asset mapping
D. Outcome feedback loop

0730. Identify the most precise label for this idea: Exchange of relevant information under valid permission and applicable privacy requirements.
A. Interprofessional collaboration
B. Warm referral
C. Boundary spanning
D. Consent-based information sharing

0731. A member of a clinical team prepares for a session in the youth group with a child aged 7. The intended approach is involving youth and community partners in decisions throughout a project, not only at launch. Which concept is most relevant?
A. Boundary spanning
B. Community-based participatory practice
C. Warm referral
D. Outcome feedback loop

0732. Consider a young person receiving help in the outpatient clinic. The youth worker focuses on agreeing on a measurable concern, trying one support, and reconvening to evaluate it. Which term best describes the guiding idea?
A. Outcome feedback loop
B. Collaborative problem solving
C. Warm referral
D. Boundary spanning

0733. An interdisciplinary team reviews a preadolescent child's case at the family resource center. The play therapist recommends mapping existing youth programs and trusted community networks before planning a new service. Which course concept best fits?
A. Consent-based information sharing
B. Boundary spanning
C. Collaborative problem solving
D. Community asset mapping

0734. Which paired example correctly applies Consent-based information sharing first and Outcome feedback loop second?
A. Consent-based information sharing: Involving youth and community partners in decisions throughout a project, not only at launch. / Outcome feedback loop: Reviewing attendance or wellbeing data together and adjusting supports with permission.
B. Consent-based information sharing: Confirming authorization and sharing only information needed for coordinated support. / Outcome feedback loop: Reviewing attendance or wellbeing data together and adjusting supports with permission.
C. Consent-based information sharing: Confirming authorization and sharing only information needed for coordinated support. / Outcome feedback loop: Documenting who will take each agreed next step and when progress will be reviewed.
D. Consent-based information sharing: Reviewing attendance or wellbeing data together and adjusting supports with permission. / Outcome feedback loop: Confirming authorization and sharing only information needed for coordinated support.

0735. A student confuses Community asset mapping with Community-based participatory practice. Which explanation most accurately separates them?
A. Community asset mapping: An active, supported connection from one service to another that reduces barriers to follow-through. / Community-based participatory practice: A partnership in which community members share influence in defining questions, actions, and interpretation.
B. Community asset mapping: Identification of local strengths, organizations, relationships, and resources relevant to community goals. / Community-based participatory practice: A partnership in which community members share influence in defining questions, actions, and interpretation.
C. Community asset mapping: Identification of local strengths, organizations, relationships, and resources relevant to community goals. / Community-based participatory practice: A structured process in which partners define a concern, generate options, test a plan, and review outcomes.
D. Community asset mapping: A partnership in which community members share influence in defining questions, actions, and interpretation. / Community-based participatory practice: Identification of local strengths, organizations, relationships, and resources relevant to community goals.

0736. A supervised trainee prepares for a session in the after-school program with a preadolescent child. The intended approach is reviewing attendance or wellbeing data together and adjusting supports with permission. Which concept is most relevant?
A. Interprofessional collaboration
B. Outcome feedback loop
C. Consent-based information sharing
D. Shared care plan

0737. Which comparison would correct a trainee's misunderstanding of Community asset mapping versus Outcome feedback loop?
A. Community asset mapping: Connecting organizations or professional groups while respecting each role's authority and accountability. / Outcome feedback loop: Regular use of shared outcome information to adapt coordinated services.
B. Community asset mapping: Regular use of shared outcome information to adapt coordinated services. / Outcome feedback loop: Identification of local strengths, organizations, relationships, and resources relevant to community goals.
C. Community asset mapping: Identification of local strengths, organizations, relationships, and resources relevant to community goals. / Outcome feedback loop: An active, supported connection from one service to another that reduces barriers to follow-through.
D. Community asset mapping: Identification of local strengths, organizations, relationships, and resources relevant to community goals. / Outcome feedback loop: Regular use of shared outcome information to adapt coordinated services.

0738. Which statement shows a sound practice-level distinction between Warm referral and Community-based participatory practice?
A. Warm referral: Helping the family make contact with a community service and checking whether connection occurred. / Community-based participatory practice: Agreeing on roles and communication with school and community partners, subject to permission.
B. Warm referral: Helping the family make contact with a community service and checking whether connection occurred. / Community-based participatory practice: Involving youth and community partners in decisions throughout a project, not only at launch.
C. Warm referral: Involving youth and community partners in decisions throughout a project, not only at launch. / Community-based participatory practice: Helping the family make contact with a community service and checking whether connection occurred.
D. Warm referral: Clarifying who contacts caregivers and who monitors a school support. / Community-based participatory practice: Involving youth and community partners in decisions throughout a project, not only at launch.

0739. For a child aged 11 seen in the school counseling office, the service navigator recommends a plan built around involving youth and community partners in decisions throughout a project, not only at launch. Which concept is reflected?
A. Warm referral
B. Role clarification
C. Community-based participatory practice
D. Community asset mapping

0740. Which pair of actions illustrates Community asset mapping and Consent-based information sharing, respectively?

A. Community asset mapping: Mapping existing youth programs and trusted community networks before planning a new service. / Consent-based information sharing: Involving youth and community partners in decisions throughout a project, not only at launch.
B. Community asset mapping: Documenting who will take each agreed next step and when progress will be reviewed. / Consent-based information sharing: Confirming authorization and sharing only information needed for coordinated support.
C. Community asset mapping: Mapping existing youth programs and trusted community networks before planning a new service. / Consent-based information sharing: Confirming authorization and sharing only information needed for coordinated support.
D. Community asset mapping: Confirming authorization and sharing only information needed for coordinated support. / Consent-based information sharing: Mapping existing youth programs and trusted community networks before planning a new service.

0741. In school-community collaboration, which choice aligns each practice with the correct idea, Interprofessional collaboration or Community asset mapping?

A. Interprofessional collaboration: Agreeing on roles and communication with school and community partners, subject to permission. / Community asset mapping: Translating needs across systems without taking over another partner's responsibilities.
B. Interprofessional collaboration: Mapping existing youth programs and trusted community networks before planning a new service. / Community asset mapping: Agreeing on roles and communication with school and community partners, subject to permission.
C. Interprofessional collaboration: Agreeing on roles and communication with school and community partners, subject to permission. / Community asset mapping: Mapping existing youth programs and trusted community networks before planning a new service.
D. Interprofessional collaboration: Documenting who will take each agreed next step and when progress will be reviewed. / Community asset mapping: Mapping existing youth programs and trusted community networks before planning a new service.

0742. A supervisor asks for an applied contrast between Shared care plan and Outcome feedback loop. Which option fits?

A. Shared care plan: Documenting who will take each agreed next step and when progress will be reviewed. / Outcome feedback loop: Mapping existing youth programs and trusted community networks before planning a new service.
B. Shared care plan: Clarifying who contacts caregivers and who monitors a school support. / Outcome feedback loop: Reviewing attendance or wellbeing data together and adjusting supports with permission.
C. Shared care plan: Reviewing attendance or wellbeing data together and adjusting supports with permission. / Outcome feedback loop: Documenting who will take each agreed next step and when progress will be reviewed.
D. Shared care plan: Documenting who will take each agreed next step and when progress will be reviewed. / Outcome feedback loop: Reviewing attendance or wellbeing data together and adjusting supports with permission.

0743. When reviewing a young person's plan in the supervision meeting, the family therapist notes that the next step is mapping existing youth programs and trusted community networks before planning a new service. Which concept guides this step?

A. Community asset mapping
B. Role clarification
C. Community-based participatory practice
D. Outcome feedback loop

0744. In school-community collaboration, which option correctly matches each concept to its practice focus: Interprofessional collaboration and Collaborative problem solving?

A. Interprofessional collaboration: Agreeing on roles and communication with school and community partners, subject to permission. / Collaborative problem solving: Documenting who will take each agreed next step and when progress will be reviewed.
B. Interprofessional collaboration: Agreeing on a measurable concern, trying one support, and reconvening to evaluate it. / Collaborative problem solving: Agreeing on roles and communication with school and community partners, subject to permission.
C. Interprofessional collaboration: Agreeing on roles and communication with school and community partners, subject to permission. / Collaborative problem solving: Agreeing on a measurable concern, trying one support, and reconvening to evaluate it.
D. Interprofessional collaboration: Reviewing attendance or wellbeing data together and adjusting supports with permission. / Collaborative problem solving: Agreeing on a measurable concern, trying one support, and reconvening to evaluate it.

0745. In school-community collaboration, at the supervision meeting, a community practitioner reviews whether a plan for a older adolescent client is appropriate. The relevant practice is agreeing on roles and communication with school and community partners, subject to permission. Which concept is tested?

A. Collaborative problem solving
B. Warm referral
C. Interprofessional collaboration
D. Boundary spanning

0746. In a supervision review, a case coordinator describes work with a student aged 12 in the counseling practicum: clarifying who contacts caregivers and who monitors a school support. What concept is illustrated?

A. Consent-based information sharing
B. Role clarification
C. Outcome feedback loop
D. Interprofessional collaboration

0747. A group facilitator is explaining a choice to a school-age child and caregiver in the caregiver consultation. The choice centers on reviewing attendance or wellbeing data together and adjusting supports with permission. Which idea is illustrated?

A. Warm referral
B. Consent-based information sharing
C. Community-based participatory practice
D. Outcome feedback loop

0748. In school-community collaboration, which option preserves the correct meaning of both Interprofessional collaboration and Collaborative problem solving?

A. Interprofessional collaboration: Coordinated work among professionals who contribute distinct expertise toward shared client goals. / Collaborative problem solving: A structured process in which partners define a concern, generate options, test a plan, and review outcomes.
B. Interprofessional collaboration: Coordinated work among professionals who contribute distinct expertise toward shared client goals. / Collaborative problem solving: A coordinated, mutually understood set of goals, responsibilities, and follow-up steps across helpers.
C. Interprofessional collaboration: Regular use of shared outcome information to adapt coordinated services. / Collaborative problem solving: A structured process in which partners define a concern, generate options, test a plan, and review outcomes.
D. Interprofessional collaboration: A structured process in which partners define a concern, generate options, test a plan, and review outcomes. / Collaborative problem solving: Coordinated work among professionals who contribute distinct expertise toward shared client goals.

0749. A youth worker is explaining a choice to a young adolescent client and caregiver in the student-support meeting. The choice centers on translating needs across systems without taking over another partner's responsibilities. Which idea is illustrated?

A. Boundary spanning
B. Community-based participatory practice
C. Outcome feedback loop
D. Shared care plan

0750. A support meeting for a student aged 17 includes a behavior specialist in the community youth program. The practice under consideration is mapping existing youth programs and trusted community networks before planning a new service. Which concept guides it?

A. Role clarification
B. Community-based participatory practice
C. Community asset mapping
D. Collaborative problem solving

0751. In school-community collaboration, which applied comparison correctly identifies what belongs to Interprofessional collaboration versus Community asset mapping?

A. Interprofessional collaboration: Mapping existing youth programs and trusted community networks before planning a new service. / Community asset mapping: Agreeing on roles and communication with school and community partners, subject to permission.
B. Interprofessional collaboration: Agreeing on roles and communication with school and community partners, subject to permission. / Community asset mapping: Translating needs across systems without taking over another partner's responsibilities.
C. Interprofessional collaboration: Agreeing on roles and communication with school and community partners, subject to permission. / Community asset mapping: Mapping existing youth programs and trusted community networks before planning a new service.
D. Interprofessional collaboration: Documenting who will take each agreed next step and when progress will be reviewed. / Community asset mapping: Mapping existing youth programs and trusted community networks before planning a new service.

0752. Which choice aligns each practice with the correct idea, Warm referral or Boundary spanning?

A. Warm referral: Translating needs across systems without taking over another partner's responsibilities. / Boundary spanning: Helping the family make contact with a community service and checking whether connection occurred.
B. Warm referral: Helping the family make contact with a community service and checking whether connection occurred. / Boundary spanning: Translating needs across systems without taking over another partner's responsibilities.
C. Warm referral: Helping the family make contact with a community service and checking whether connection occurred. / Boundary spanning: Agreeing on roles and communication with school and community partners, subject to permission.
D. Warm referral: Agreeing on a measurable concern, trying one support, and reconvening to evaluate it. / Boundary spanning: Translating needs across systems without taking over another partner's responsibilities.

0753. A consultant is preparing a follow-up plan for a child aged 11 in the school consultation. The plan calls for helping the family make contact with a community service and checking whether connection occurred. Which concept names this approach?

A. Outcome feedback loop
B. Boundary spanning
C. Warm referral
D. Interprofessional collaboration

0754. A assessment clinician is supporting a client in early adolescence in the student wellness team. The key practice is helping the family make contact with a community service and checking whether connection occurred. Which course concept is most relevant?

A. Consent-based information sharing
B. Interprofessional collaboration
C. Warm referral
D. Boundary spanning

0755. A consulting counselor is asked to justify a plan for a student aged 12 in the school counseling office. It calls for documenting who will take each agreed next step and when progress will be reviewed. Which concept provides the rationale?

A. Role clarification
B. Outcome feedback loop
C. Community asset mapping
D. Shared care plan

0756. Which statement accurately contrasts the course concepts Consent-based information sharing and Outcome feedback loop?

A. Consent-based information sharing: Exchange of relevant information under valid permission and applicable privacy requirements. / Outcome feedback loop: Regular use of shared outcome information to adapt coordinated services.
B. Consent-based information sharing: A partnership in which community members share influence in defining questions, actions, and interpretation. / Outcome feedback loop: Regular use of shared outcome information to adapt coordinated services.
C. Consent-based information sharing: Regular use of shared outcome information to adapt coordinated services. / Outcome feedback loop: Exchange of relevant information under valid permission and applicable privacy requirements.
D. Consent-based information sharing: Exchange of relevant information under valid permission and applicable privacy requirements. / Outcome feedback loop: A coordinated, mutually understood set of goals, responsibilities, and follow-up steps across helpers.

0757. At the learning-support meeting, a therapist reviews whether a plan for a child aged 11 is appropriate. The relevant practice is mapping existing youth programs and trusted community networks before planning a new service. Which concept is tested?

A. Warm referral
B. Boundary spanning
C. Community asset mapping
D. Role clarification

0758. At the student-support meeting, a school support specialist meets with a older adolescent client. The practice priority is: mapping existing youth programs and trusted community networks before planning a new service. Which concept best captures that priority?

A. Community asset mapping
B. Role clarification
C. Outcome feedback loop
D. Interprofessional collaboration

0759. In a professional consultation about a high-school student, the member of a clinical team describes this response in the community service agency: agreeing on a measurable concern, trying one support, and reconvening to evaluate it. Which term is most apt?

A. Shared care plan
B. Outcome feedback loop
C. Role clarification
D. Collaborative problem solving

0760. In school-community collaboration, which comparison correctly distinguishes Interprofessional collaboration from Community-based participatory practice?

A. Interprofessional collaboration: A partnership in which community members share influence in defining questions, actions, and interpretation. / Community-based participatory practice: Coordinated work among professionals who contribute distinct expertise toward shared client goals.
B. Interprofessional collaboration: A coordinated, mutually understood set of goals, responsibilities, and follow-up steps across helpers. / Community-based participatory practice: A partnership in which community members share influence in defining questions, actions, and interpretation.
C. Interprofessional collaboration: Coordinated work among professionals who contribute distinct expertise toward shared client goals. / Community-based participatory practice: A structured process in which partners define a concern, generate options, test a plan, and review outcomes.
D. Interprofessional collaboration: Coordinated work among professionals who contribute distinct expertise toward shared client goals. / Community-based participatory practice: A partnership in which community members share influence in defining questions, actions, and interpretation.

0761. In the telehealth session, a group facilitator describes the most appropriate support for a student aged 12 as helping the family make contact with a community service and checking whether connection occurred. Which framework is being applied?

A. Consent-based information sharing
B. Community asset mapping
C. Community-based participatory practice
D. Warm referral

0762. Which professional action most closely applies Collaborative problem solving?

A. Helping the family make contact with a community service and checking whether connection occurred.
B. Translating needs across systems without taking over another partner's responsibilities.
C. Documenting who will take each agreed next step and when progress will be reviewed.
D. Agreeing on a measurable concern, trying one support, and reconvening to evaluate it.

0763. A school counselor is asked to justify a plan for a teenage client in the behavior-support review. It calls for involving youth and community partners in decisions throughout a project, not only at launch. Which concept provides the rationale?

A. Shared care plan
B. Community-based participatory practice
C. Community asset mapping
D. Consent-based information sharing

0764. A school support specialist reviews a plan for a client in early adolescence in the youth group. The plan emphasizes reviewing attendance or wellbeing data together and adjusting supports with permission. Which course idea does this reflect?

A. Outcome feedback loop
B. Community-based participatory practice
C. Consent-based information sharing
D. Community asset mapping

0765. Which option pairs the definitions of Shared care plan and Community asset mapping correctly, in that order?

A. Shared care plan: A coordinated, mutually understood set of goals, responsibilities, and follow-up steps across helpers. / Community asset mapping: Explicit agreement about each partner's responsibilities, authority, and limits.
B. Shared care plan: Identification of local strengths, organizations, relationships, and resources relevant to community goals. / Community asset mapping: A coordinated, mutually understood set of goals, responsibilities, and follow-up steps across helpers.
C. Shared care plan: Exchange of relevant information under valid permission and applicable privacy requirements. / Community asset mapping: Identification of local strengths, organizations, relationships, and resources relevant to community goals.
D. Shared care plan: A coordinated, mutually understood set of goals, responsibilities, and follow-up steps across helpers. / Community asset mapping: Identification of local strengths, organizations, relationships, and resources relevant to community goals.

0766. A student confuses Warm referral with Community-based participatory practice. Which explanation most accurately separates them?

A. Warm referral: A partnership in which community members share influence in defining questions, actions, and interpretation. / Community-based participatory practice: An active, supported connection from one service to another that reduces barriers to follow-through.
B. Warm referral: An active, supported connection from one service to another that reduces barriers to follow-through. / Community-based participatory practice: A partnership in which community members share influence in defining questions, actions, and interpretation.
C. Warm referral: An active, supported connection from one service to another that reduces barriers to follow-through. / Community-based participatory practice: Coordinated work among professionals who contribute distinct expertise toward shared client goals.
D. Warm referral: Explicit agreement about each partner's responsibilities, authority, and limits. / Community-based participatory practice: A partnership in which community members share influence in defining questions, actions, and interpretation.

0767. In school-community collaboration, which comparison correctly distinguishes Interprofessional collaboration from Shared care plan?

A. Interprofessional collaboration: Coordinated work among professionals who contribute distinct expertise toward shared client goals. / Shared care plan: A coordinated, mutually understood set of goals, responsibilities, and follow-up steps across helpers.
B. Interprofessional collaboration: A coordinated, mutually understood set of goals, responsibilities, and follow-up steps across helpers. / Shared care plan: Coordinated work among professionals who contribute distinct expertise toward shared client goals.
C. Interprofessional collaboration: Explicit agreement about each partner's responsibilities, authority, and limits. / Shared care plan: A coordinated, mutually understood set of goals, responsibilities, and follow-up steps across helpers.
D. Interprofessional collaboration: Coordinated work among professionals who contribute distinct expertise toward shared client goals. / Shared care plan: Exchange of relevant information under valid permission and applicable privacy requirements.

0768. A doctoral student reads the following description. Which concept does it define? A structured process in which partners define a concern, generate options, test a plan, and review outcomes.

A. Collaborative problem solving
B. Warm referral
C. Community-based participatory practice
D. Interprofessional collaboration

0769. Which paired example correctly applies Role clarification first and Collaborative problem solving second?

A. Role clarification: Clarifying who contacts caregivers and who monitors a school support. / Collaborative problem solving: Documenting who will take each agreed next step and when progress will be reviewed.
B. Role clarification: Agreeing on a measurable concern, trying one support, and reconvening to evaluate it. / Collaborative problem solving: Clarifying who contacts caregivers and who monitors a school support.
C. Role clarification: Clarifying who contacts caregivers and who monitors a school support. / Collaborative problem solving: Agreeing on a measurable concern, trying one support, and reconvening to evaluate it.
D. Role clarification: Helping the family make contact with a community service and checking whether connection occurred. / Collaborative problem solving: Agreeing on a measurable concern, trying one support, and reconvening to evaluate it.

0770. In school-community collaboration, while consulting in the student-support meeting, a member of a clinical team supports a child aged 14 by using this approach: agreeing on roles and communication with school and community partners, subject to permission. Which concept is being applied?

A. Community asset mapping
B. Interprofessional collaboration
C. Boundary spanning
D. Warm referral

0771. A student confuses Collaborative problem solving with Boundary spanning. Which explanation most accurately separates them?

A. Collaborative problem solving: A coordinated, mutually understood set of goals, responsibilities, and follow-up steps across helpers. / Boundary spanning: Connecting organizations or professional groups while respecting each role's authority and accountability.
B. Collaborative problem solving: A structured process in which partners define a concern, generate options, test a plan, and review outcomes. / Boundary spanning: Connecting organizations or professional groups while respecting each role's authority and accountability.
C. Collaborative problem solving: A structured process in which partners define a concern, generate options, test a plan, and review outcomes. / Boundary spanning: Regular use of shared outcome information to adapt coordinated services.
D. Collaborative problem solving: Connecting organizations or professional groups while respecting each role's authority and accountability. / Boundary spanning: A structured process in which partners define a concern, generate options, test a plan, and review outcomes.

0772. Which pair of actions illustrates Shared care plan and Consent-based information sharing, respectively?

A. Shared care plan: Documenting who will take each agreed next step and when progress will be reviewed. / Consent-based information sharing: Reviewing attendance or wellbeing data together and adjusting supports with permission.
B. Shared care plan: Confirming authorization and sharing only information needed for coordinated support. / Consent-based information sharing: Documenting who will take each agreed next step and when progress will be reviewed.
C. Shared care plan: Agreeing on a measurable concern, trying one support, and reconvening to evaluate it. / Consent-based information sharing: Confirming authorization and sharing only information needed for coordinated support.
D. Shared care plan: Documenting who will take each agreed next step and when progress will be reviewed. / Consent-based information sharing: Confirming authorization and sharing only information needed for coordinated support.

0773. Which choice aligns each practice with the correct idea, Shared care plan or Consent-based information sharing?

A. Shared care plan: Confirming authorization and sharing only information needed for coordinated support. / Consent-based information sharing: Documenting who will take each agreed next step and when progress will be reviewed.
B. Shared care plan: Agreeing on a measurable concern, trying one support, and reconvening to evaluate it. / Consent-based information sharing: Confirming authorization and sharing only information needed for coordinated support.
C. Shared care plan: Documenting who will take each agreed next step and when progress will be reviewed. / Consent-based information sharing: Confirming authorization and sharing only information needed for coordinated support.
D. Shared care plan: Documenting who will take each agreed next step and when progress will be reviewed. / Consent-based information sharing: Reviewing attendance or wellbeing data together and adjusting supports with permission.

0774. In a supervision review, a caregiver working with a counselor describes work with a middle-school student in the child guidance clinic: documenting who will take each agreed next step and when progress will be reviewed. What concept is illustrated?

A. Boundary spanning
B. Community asset mapping
C. Shared care plan
D. Interprofessional collaboration

0775. For a child aged 8 seen in the after-school program, the therapist recommends a plan built around clarifying who contacts caregivers and who monitors a school support. Which concept is reflected?

A. Warm referral
B. Consent-based information sharing
C. Interprofessional collaboration
D. Role clarification

0776. Which option preserves the correct meaning of both Shared care plan and Community-based participatory practice?

A. Shared care plan: A coordinated, mutually understood set of goals, responsibilities, and follow-up steps across helpers. / Community-based participatory practice: A structured process in which partners define a concern, generate options, test a plan, and review outcomes.
B. Shared care plan: A partnership in which community members share influence in defining questions, actions, and interpretation. / Community-based participatory practice: A coordinated, mutually understood set of goals, responsibilities, and follow-up steps across helpers.
C. Shared care plan: A coordinated, mutually understood set of goals, responsibilities, and follow-up steps across helpers. / Community-based participatory practice: A partnership in which community members share influence in defining questions, actions, and interpretation.
D. Shared care plan: An active, supported connection from one service to another that reduces barriers to follow-through. / Community-based participatory practice: A partnership in which community members share influence in defining questions, actions, and interpretation.

0777. Select the best explanation of Shared care plan.

A. Connecting organizations or professional groups while respecting each role's authority and accountability.
B. A partnership in which community members share influence in defining questions, actions, and interpretation.
C. Explicit agreement about each partner's responsibilities, authority, and limits.
D. A coordinated, mutually understood set of goals, responsibilities, and follow-up steps across helpers.

0778. At the community service agency, a school support specialist meets with a preadolescent child. The practice priority is: involving youth and community partners in decisions throughout a project, not only at launch. Which concept best captures that priority?

A. Collaborative problem solving
B. Interprofessional collaboration
C. Community-based participatory practice
D. Warm referral

0779. A trainee must distinguish how Community-based participatory practice and Boundary spanning guide practice. Which comparison is accurate?

A. Community-based participatory practice: Confirming authorization and sharing only information needed for coordinated support. / Boundary spanning: Translating needs across systems without taking over another partner's responsibilities.
B. Community-based participatory practice: Involving youth and community partners in decisions throughout a project, not only at launch. / Boundary spanning: Agreeing on roles and communication with school and community partners, subject to permission.
C. Community-based participatory practice: Translating needs across systems without taking over another partner's responsibilities. / Boundary spanning: Involving youth and community partners in decisions throughout a project, not only at launch.
D. Community-based participatory practice: Involving youth and community partners in decisions throughout a project, not only at launch. / Boundary spanning: Translating needs across systems without taking over another partner's responsibilities.

0780. In school-community collaboration, an interdisciplinary team reviews a child aged 7's case at the classroom support meeting. The clinical supervisor recommends agreeing on roles and communication with school and community partners, subject to permission. Which course concept best fits?

A. Community-based participatory practice
B. Outcome feedback loop
C. Interprofessional collaboration
D. Shared care plan

0781. In the community service agency, a school counselor describes the most appropriate support for a young person aged 16 as clarifying who contacts caregivers and who monitors a school support. Which framework is being applied?

A. Role clarification
B. Warm referral
C. Boundary spanning
D. Collaborative problem solving

0782. At a case-planning meeting, the clinical supervisor proposes documenting who will take each agreed next step and when progress will be reviewed. for a student aged 15 seen in the family session. Which concept does this illustrate?

A. Warm referral
B. Shared care plan
C. Community asset mapping
D. Role clarification

0783. In school-community collaboration, which statement accurately contrasts the course concepts Interprofessional collaboration and Community asset mapping?

A. Interprofessional collaboration: Coordinated work among professionals who contribute distinct expertise toward shared client goals. / Community asset mapping: Identification of local strengths, organizations, relationships, and resources relevant to community goals.
B. Interprofessional collaboration: Identification of local strengths, organizations, relationships, and resources relevant to community goals. / Community asset mapping: Coordinated work among professionals who contribute distinct expertise toward shared client goals.
C. Interprofessional collaboration: A coordinated, mutually understood set of goals, responsibilities, and follow-up steps across helpers. / Community asset mapping: Identification of local strengths, organizations, relationships, and resources relevant to community goals.
D. Interprofessional collaboration: Coordinated work among professionals who contribute distinct expertise toward shared client goals. / Community asset mapping: Connecting organizations or professional groups while respecting each role's authority and accountability.

0784. Choose the definition pair that correctly explains Community-based participatory practice first and Outcome feedback loop second.

A. Community-based participatory practice: A partnership in which community members share influence in defining questions, actions, and interpretation. / Outcome feedback loop: Regular use of shared outcome information to adapt coordinated services.
B. Community-based participatory practice: Regular use of shared outcome information to adapt coordinated services. / Outcome feedback loop: A partnership in which community members share influence in defining questions, actions, and interpretation.
C. Community-based participatory practice: A partnership in which community members share influence in defining questions, actions, and interpretation. / Outcome feedback loop: Coordinated work among professionals who contribute distinct expertise toward shared client goals.
D. Community-based participatory practice: A structured process in which partners define a concern, generate options, test a plan, and review outcomes. / Outcome feedback loop: Regular use of shared outcome information to adapt coordinated services.

0785. Choose the practice comparison that best separates Community asset mapping from Role clarification.

A. Community asset mapping: Mapping existing youth programs and trusted community networks before planning a new service. / Role clarification: Clarifying who contacts caregivers and who monitors a school support.
B. Community asset mapping: Agreeing on a measurable concern, trying one support, and reconvening to evaluate it. / Role clarification: Clarifying who contacts caregivers and who monitors a school support.
C. Community asset mapping: Mapping existing youth programs and trusted community networks before planning a new service. / Role clarification: Reviewing attendance or wellbeing data together and adjusting supports with permission.
D. Community asset mapping: Clarifying who contacts caregivers and who monitors a school support. / Role clarification: Mapping existing youth programs and trusted community networks before planning a new service.

0786. In school-community collaboration, which paired example correctly applies Interprofessional collaboration first and Collaborative problem solving second?

A. Interprofessional collaboration: Agreeing on roles and communication with school and community partners, subject to permission. / Collaborative problem solving: Agreeing on a measurable concern, trying one support, and reconvening to evaluate it.
B. Interprofessional collaboration: Reviewing attendance or wellbeing data together and adjusting supports with permission. / Collaborative problem solving: Agreeing on a measurable concern, trying one support, and reconvening to evaluate it.
C. Interprofessional collaboration: Agreeing on roles and communication with school and community partners, subject to permission. / Collaborative problem solving: Documenting who will take each agreed next step and when progress will be reviewed.
D. Interprofessional collaboration: Agreeing on a measurable concern, trying one support, and reconvening to evaluate it. / Collaborative problem solving: Agreeing on roles and communication with school and community partners, subject to permission.

0787. Choose the definition pair that correctly explains Shared care plan first and Boundary spanning second.

A. Shared care plan: Connecting organizations or professional groups while respecting each role's authority and accountability. / Boundary spanning: A coordinated, mutually understood set of goals, responsibilities, and follow-up steps across helpers.
B. Shared care plan: A coordinated, mutually understood set of goals, responsibilities, and follow-up steps across helpers. / Boundary spanning: Connecting organizations or professional groups while respecting each role's authority and accountability.
C. Shared care plan: Coordinated work among professionals who contribute distinct expertise toward shared client goals. / Boundary spanning: Connecting organizations or professional groups while respecting each role's authority and accountability.
D. Shared care plan: A coordinated, mutually understood set of goals, responsibilities, and follow-up steps across helpers. / Boundary spanning: Explicit agreement about each partner's responsibilities, authority, and limits.

0788. A case conference reviews a community practitioner’s work with a preadolescent child in the school consultation: agreeing on a measurable concern, trying one support, and reconvening to evaluate it. Which principle is central?

A. Warm referral
B. Collaborative problem solving
C. Community-based participatory practice
D. Outcome feedback loop

0789. Which pair of actions illustrates Collaborative problem solving and Outcome feedback loop, respectively?

A. Collaborative problem solving: Reviewing attendance or wellbeing data together and adjusting supports with permission. / Outcome feedback loop: Agreeing on a measurable concern, trying one support, and reconvening to evaluate it.
B. Collaborative problem solving: Agreeing on a measurable concern, trying one support, and reconvening to evaluate it. / Outcome feedback loop: Helping the family make contact with a community service and checking whether connection occurred.
C. Collaborative problem solving: Agreeing on a measurable concern, trying one support, and reconvening to evaluate it. / Outcome feedback loop: Reviewing attendance or wellbeing data together and adjusting supports with permission.
D. Collaborative problem solving: Mapping existing youth programs and trusted community networks before planning a new service. / Outcome feedback loop: Reviewing attendance or wellbeing data together and adjusting supports with permission.

0790. Which course concept is defined as follows: A partnership in which community members share influence in defining questions, actions, and interpretation.

A. Shared care plan
B. Interprofessional collaboration
C. Community-based participatory practice
D. Collaborative problem solving

0791. In a supervision quiz, how should Community asset mapping be distinguished from Outcome feedback loop?

A. Community asset mapping: Regular use of shared outcome information to adapt coordinated services. / Outcome feedback loop: Identification of local strengths, organizations, relationships, and resources relevant to community goals.
B. Community asset mapping: Identification of local strengths, organizations, relationships, and resources relevant to community goals. / Outcome feedback loop: An active, supported connection from one service to another that reduces barriers to follow-through.
C. Community asset mapping: Connecting organizations or professional groups while respecting each role’s authority and accountability. / Outcome feedback loop: Regular use of shared outcome information to adapt coordinated services.
D. Community asset mapping: Identification of local strengths, organizations, relationships, and resources relevant to community goals. / Outcome feedback loop: Regular use of shared outcome information to adapt coordinated services.

0792. Which option preserves the correct meaning of both Shared care plan and Outcome feedback loop?

A. Shared care plan: A coordinated, mutually understood set of goals, responsibilities, and follow-up steps across helpers. / Outcome feedback loop: Regular use of shared outcome information to adapt coordinated services.
B. Shared care plan: A coordinated, mutually understood set of goals, responsibilities, and follow-up steps across helpers. / Outcome feedback loop: Identification of local strengths, organizations, relationships, and resources relevant to community goals.
C. Shared care plan: Regular use of shared outcome information to adapt coordinated services. / Outcome feedback loop: A coordinated, mutually understood set of goals, responsibilities, and follow-up steps across helpers.
D. Shared care plan: Explicit agreement about each partner’s responsibilities, authority, and limits. / Outcome feedback loop: Regular use of shared outcome information to adapt coordinated services.

0793. Which pair of actions illustrates Consent-based information sharing and Collaborative problem solving, respectively?

A. Consent-based information sharing: Confirming authorization and sharing only information needed for coordinated support. / Collaborative problem solving: Agreeing on a measurable concern, trying one support, and reconvening to evaluate it.
B. Consent-based information sharing: Agreeing on a measurable concern, trying one support, and reconvening to evaluate it. / Collaborative problem solving: Confirming authorization and sharing only information needed for coordinated support.
C. Consent-based information sharing: Reviewing attendance or wellbeing data together and adjusting supports with permission. / Collaborative problem solving: Agreeing on a measurable concern, trying one support, and reconvening to evaluate it.
D. Consent-based information sharing: Confirming authorization and sharing only information needed for coordinated support. / Collaborative problem solving: Helping the family make contact with a community service and checking whether connection occurred.

0794. A doctoral student reads the following description. Which concept does it define? An active, supported connection from one service to another that reduces barriers to follow-through.

A. Community asset mapping
B. Role clarification
C. Boundary spanning
D. Warm referral

0795. Choose the practice comparison that best separates Collaborative problem solving from Warm referral.

A. Collaborative problem solving: Helping the family make contact with a community service and checking whether connection occurred. / Warm referral: Agreeing on a measurable concern, trying one support, and reconvening to evaluate it.
B. Collaborative problem solving: Agreeing on a measurable concern, trying one support, and reconvening to evaluate it. / Warm referral: Helping the family make contact with a community service and checking whether connection occurred.
C. Collaborative problem solving: Agreeing on a measurable concern, trying one support, and reconvening to evaluate it. / Warm referral: Documenting who will take each agreed next step and when progress will be reviewed.
D. Collaborative problem solving: Agreeing on roles and communication with school and community partners, subject to permission. / Warm referral: Helping the family make contact with a community service and checking whether connection occurred.

0796. Which comparison would correct a trainee’s misunderstanding of Consent-based information sharing versus Outcome feedback loop?

A. Consent-based information sharing: Regular use of shared outcome information to adapt coordinated services. / Outcome feedback loop: Exchange of relevant information under valid permission and applicable privacy requirements.
B. Consent-based information sharing: Exchange of relevant information under valid permission and applicable privacy requirements. / Outcome feedback loop: A coordinated, mutually understood set of goals, responsibilities, and follow-up steps across helpers.
C. Consent-based information sharing: A partnership in which community members share influence in defining questions, actions, and interpretation. / Outcome feedback loop: Regular use of shared outcome information to adapt coordinated services.
D. Consent-based information sharing: Exchange of relevant information under valid permission and applicable privacy requirements. / Outcome feedback loop: Regular use of shared outcome information to adapt coordinated services.

0797. A clinical supervisor is asked to evaluate a proposed service for a student aged 9 in the supervision meeting. The defining feature is clarifying who contacts caregivers and who monitors a school support. Which concept fits?

A. Shared care plan
B. Role clarification
C. Community asset mapping
D. Boundary spanning

0798. A teacher and counselor is explaining a choice to a teenage client and caregiver in the after-school program. The choice centers on mapping existing youth programs and trusted community networks before planning a new service. Which idea is illustrated?

A. Warm referral
B. Boundary spanning
C. Consent-based information sharing
D. Community asset mapping

0799. A counselor reviews a plan for a client in late adolescence in the child guidance clinic. The plan emphasizes mapping existing youth programs and trusted community networks before planning a new service. Which course idea does this reflect?

A. Consent-based information sharing
B. Community asset mapping
C. Collaborative problem solving
D. Interprofessional collaboration

0800. Which option correctly matches each concept to its practice focus: Shared care plan and Community-based participatory practice?

A. Shared care plan: Documenting who will take each agreed next step and when progress will be reviewed. / Community-based participatory practice: Agreeing on a measurable concern, trying one support, and reconvening to evaluate it.
B. Shared care plan: Involving youth and community partners in decisions throughout a project, not only at launch. / Community-based participatory practice: Documenting who will take each agreed next step and when progress will be reviewed.
C. Shared care plan: Documenting who will take each agreed next step and when progress will be reviewed. / Community-based participatory practice: Involving youth and community partners in decisions throughout a project, not only at launch.
D. Shared care plan: Helping the family make contact with a community service and checking whether connection occurred. / Community-based participatory practice: Involving youth and community partners in decisions throughout a project, not only at launch.

0801. A group facilitator is explaining a choice to a child aged 7 and caregiver in the student wellness team. The choice centers on confirming authorization and sharing only information needed for coordinated support. Which idea is illustrated?

A. Community-based participatory practice
B. Role clarification
C. Consent-based information sharing
D. Boundary spanning

0802. A school support specialist reviews a plan for a young person aged 16 in the counseling practicum. The plan emphasizes confirming authorization and sharing only information needed for coordinated support. Which course idea does this reflect?

A. Warm referral
B. Shared care plan
C. Community asset mapping
D. Consent-based information sharing

0803. At the youth group, a service navigator reviews whether a plan for a child aged 14 is appropriate. The relevant practice is helping the family make contact with a community service and checking whether connection occurred. Which concept is tested?

A. Community-based participatory practice
B. Warm referral
C. Role clarification
D. Outcome feedback loop

0804. In school-community collaboration, a supervised trainee is supporting a student aged 9 in the community youth program. The key practice is agreeing on roles and communication with school and community partners, subject to permission. Which course concept is most relevant?

A. Interprofessional collaboration
B. Boundary spanning
C. Warm referral
D. Collaborative problem solving

0805. In school-community collaboration, what is the central meaning of Interprofessional collaboration?

A. Coordinated work among professionals who contribute distinct expertise toward shared client goals.
B. A partnership in which community members share influence in defining questions, actions, and interpretation.
C. Identification of local strengths, organizations, relationships, and resources relevant to community goals.
D. Connecting organizations or professional groups while respecting each role’s authority and accountability.

0806. Which option preserves the correct meaning of both Consent-based information sharing and Outcome feedback loop?

A. Consent-based information sharing: Exchange of relevant information under valid permission and applicable privacy requirements. / Outcome feedback loop: A coordinated, mutually understood set of goals, responsibilities, and follow-up steps across helpers.
B. Consent-based information sharing: Exchange of relevant information under valid permission and applicable privacy requirements. / Outcome feedback loop: Regular use of shared outcome information to adapt coordinated services.
C. Consent-based information sharing: A partnership in which community members share influence in defining questions, actions, and interpretation. / Outcome feedback loop: Regular use of shared outcome information to adapt coordinated services.
D. Consent-based information sharing: Regular use of shared outcome information to adapt coordinated services. / Outcome feedback loop: Exchange of relevant information under valid permission and applicable privacy requirements.

0807. In school-community collaboration, during work in the outpatient clinic, a teacher and counselor identifies this need: agreeing on roles and communication with school and community partners, subject to permission. Which idea should guide the response?

A. Consent-based information sharing
B. Collaborative problem solving
C. Shared care plan
D. Interprofessional collaboration

0808. In the supervision meeting, a teacher and counselor describes the most appropriate support for a child aged 8 as reviewing attendance or wellbeing data together and adjusting supports with permission. Which framework is being applied?

A. Collaborative problem solving
B. Outcome feedback loop
C. Boundary spanning
D. Interprofessional collaboration

0809. In school-community collaboration, choose the term that matches this definition: Coordinated work among professionals who contribute distinct expertise toward shared client goals.

A. Boundary spanning
B. Interprofessional collaboration
C. Collaborative problem solving
D. Community-based participatory practice

0810. Which comparison would correct a trainee's misunderstanding of Shared care plan versus Community-based participatory practice?

A. Shared care plan: A partnership in which community members share influence in defining questions, actions, and interpretation. / Community-based participatory practice: A coordinated, mutually understood set of goals, responsibilities, and follow-up steps across helpers.
B. Shared care plan: A coordinated, mutually understood set of goals, responsibilities, and follow-up steps across helpers. / Community-based participatory practice: A partnership in which community members share influence in defining questions, actions, and interpretation.
C. Shared care plan: An active, supported connection from one service to another that reduces barriers to follow-through. / Community-based participatory practice: A partnership in which community members share influence in defining questions, actions, and interpretation.
D. Shared care plan: A coordinated, mutually understood set of goals, responsibilities, and follow-up steps across helpers. / Community-based participatory practice: A structured process in which partners define a concern, generate options, test a plan, and review outcomes.

0811. A school-based clinician presents a support plan for a teenage client at the telehealth session. Its central feature is confirming authorization and sharing only information needed for coordinated support. Which concept should be named?

A. Warm referral
B. Community asset mapping
C. Consent-based information sharing
D. Shared care plan

0812. While supporting a student aged 9 in the classroom support meeting, a case coordinator adopts this practice: confirming authorization and sharing only information needed for coordinated support. Which concept best explains the choice?

A. Consent-based information sharing
B. Community asset mapping
C. Role clarification
D. Outcome feedback loop

0813. In school-community collaboration, which choice aligns each practice with the correct idea, Interprofessional collaboration or Shared care plan?

A. Interprofessional collaboration: Clarifying who contacts caregivers and who monitors a school support. / Shared care plan: Documenting who will take each agreed next step and when progress will be reviewed.
B. Interprofessional collaboration: Agreeing on roles and communication with school and community partners, subject to permission. / Shared care plan: Documenting who will take each agreed next step and when progress will be reviewed.
C. Interprofessional collaboration: Agreeing on roles and communication with school and community partners, subject to permission. / Shared care plan: Confirming authorization and sharing only information needed for coordinated support.
D. Interprofessional collaboration: Documenting who will take each agreed next step and when progress will be reviewed. / Shared care plan: Agreeing on roles and communication with school and community partners, subject to permission.

0814. A supervisor asks for an applied contrast between Role clarification and Boundary spanning. Which option fits?

A. Role clarification: Translating needs across systems without taking over another partner's responsibilities. / Boundary spanning: Clarifying who contacts caregivers and who monitors a school support.
B. Role clarification: Agreeing on a measurable concern, trying one support, and reconvening to evaluate it. / Boundary spanning: Translating needs across systems without taking over another partner's responsibilities.
C. Role clarification: Clarifying who contacts caregivers and who monitors a school support. / Boundary spanning: Translating needs across systems without taking over another partner's responsibilities.
D. Role clarification: Clarifying who contacts caregivers and who monitors a school support. / Boundary spanning: Confirming authorization and sharing only information needed for coordinated support.

0815. Choose the definition pair that correctly explains Consent-based information sharing first and Community-based participatory practice second.

A. Consent-based information sharing: A partnership in which community members share influence in defining questions, actions, and interpretation. / Community-based participatory practice: Exchange of relevant information under valid permission and applicable privacy requirements.
B. Consent-based information sharing: Identification of local strengths, organizations, relationships, and resources relevant to community goals. / Community-based participatory practice: A partnership in which community members share influence in defining questions, actions, and interpretation.
C. Consent-based information sharing: Exchange of relevant information under valid permission and applicable privacy requirements. / Community-based participatory practice: A partnership in which community members share influence in defining questions, actions, and interpretation.
D. Consent-based information sharing: Exchange of relevant information under valid permission and applicable privacy requirements. / Community-based participatory practice: Connecting organizations or professional groups while respecting each role's authority and accountability.

0816. Which option pairs the definitions of Shared care plan and Role clarification correctly, in that order?

A. Shared care plan: Connecting organizations or professional groups while respecting each role's authority and accountability. / Role clarification: Explicit agreement about each partner's responsibilities, authority, and limits.
B. Shared care plan: Explicit agreement about each partner's responsibilities, authority, and limits. / Role clarification: A coordinated, mutually understood set of goals, responsibilities, and follow-up steps across helpers.
C. Shared care plan: A coordinated, mutually understood set of goals, responsibilities, and follow-up steps across helpers. / Role clarification: Explicit agreement about each partner's responsibilities, authority, and limits.
D. Shared care plan: A coordinated, mutually understood set of goals, responsibilities, and follow-up steps across helpers. / Role clarification: Identification of local strengths, organizations, relationships, and resources relevant to community goals.

0817. Which statement accurately contrasts the course concepts Shared care plan and Collaborative problem solving?

A. Shared care plan: A coordinated, mutually understood set of goals, responsibilities, and follow-up steps across helpers. / Collaborative problem solving: Regular use of shared outcome information to adapt coordinated services.
B. Shared care plan: A structured process in which partners define a concern, generate options, test a plan, and review outcomes. / Collaborative problem solving: A coordinated, mutually understood set of goals, responsibilities, and follow-up steps across helpers.
C. Shared care plan: A coordinated, mutually understood set of goals, responsibilities, and follow-up steps across helpers. / Collaborative problem solving: A structured process in which partners define a concern, generate options, test a plan, and review outcomes.
D. Shared care plan: A partnership in which community members share influence in defining questions, actions, and interpretation. / Collaborative problem solving: A structured process in which partners define a concern, generate options, test a plan, and review outcomes.

0818. Which option preserves the correct meaning of both Role clarification and Boundary spanning?

A. Role clarification: Explicit agreement about each partner's responsibilities, authority, and limits. / Boundary spanning: Connecting organizations or professional groups while respecting each role's authority and accountability.
B. Role clarification: Connecting organizations or professional groups while respecting each role's authority and accountability. / Boundary spanning: Explicit agreement about each partner's responsibilities, authority, and limits.
C. Role clarification: Explicit agreement about each partner's responsibilities, authority, and limits. / Boundary spanning: Exchange of relevant information under valid permission and applicable privacy requirements.
D. Role clarification: A structured process in which partners define a concern, generate options, test a plan, and review outcomes. / Boundary spanning: Connecting organizations or professional groups while respecting each role's authority and accountability.

0819. Which pair of actions illustrates Community asset mapping and Warm referral, respectively?

A. Community asset mapping: Mapping existing youth programs and trusted community networks before planning a new service. / Warm referral: Agreeing on a measurable concern, trying one support, and reconvening to evaluate it.
B. Community asset mapping: Confirming authorization and sharing only information needed for coordinated support. / Warm referral: Helping the family make contact with a community service and checking whether connection occurred.
C. Community asset mapping: Mapping existing youth programs and trusted community networks before planning a new service. / Warm referral: Helping the family make contact with a community service and checking whether connection occurred.
D. Community asset mapping: Helping the family make contact with a community service and checking whether connection occurred. / Warm referral: Mapping existing youth programs and trusted community networks before planning a new service.

0820. A trainee must distinguish how Role clarification and Warm referral guide practice. Which comparison is accurate?

A. Role clarification: Clarifying who contacts caregivers and who monitors a school support. / Warm referral: Helping the family make contact with a community service and checking whether connection occurred.
B. Role clarification: Agreeing on a measurable concern, trying one support, and reconvening to evaluate it. / Warm referral: Helping the family make contact with a community service and checking whether connection occurred.
C. Role clarification: Helping the family make contact with a community service and checking whether connection occurred. / Warm referral: Clarifying who contacts caregivers and who monitors a school support.
D. Role clarification: Clarifying who contacts caregivers and who monitors a school support. / Warm referral: Mapping existing youth programs and trusted community networks before planning a new service.

0821. A trainee must choose a practice that exemplifies Boundary spanning. Which action is the best fit?

A. Documenting who will take each agreed next step and when progress will be reviewed.
B. Mapping existing youth programs and trusted community networks before planning a new service.
C. Translating needs across systems without taking over another partner's responsibilities.
D. Clarifying who contacts caregivers and who monitors a school support.

0822. In the learning-support meeting, a team asks how a teacher and counselor can support a preadolescent child. One proposed action is documenting who will take each agreed next step and when progress will be reviewed. Which idea does it represent?

A. Shared care plan
B. Interprofessional collaboration
C. Community asset mapping
D. Consent-based information sharing

0823. A child of elementary-school age is receiving support in the clinical planning session. The consulting counselor is guided by this practice: agreeing on a measurable concern, trying one support, and reconvening to evaluate it. Which principle best fits?

A. Warm referral
B. Role clarification
C. Community asset mapping
D. Collaborative problem solving

0824. How are Warm referral and Community-based participatory practice most accurately differentiated in this curriculum?

A. Warm referral: Explicit agreement about each partner's responsibilities, authority, and limits. / Community-based participatory practice: A partnership in which community members share influence in defining questions, actions, and interpretation.
B. Warm referral: An active, supported connection from one service to another that reduces barriers to follow-through. / Community-based participatory practice: Coordinated work among professionals who contribute distinct expertise toward shared client goals.
C. Warm referral: A partnership in which community members share influence in defining questions, actions, and interpretation. / Community-based participatory practice: An active, supported connection from one service to another that reduces barriers to follow-through.
D. Warm referral: An active, supported connection from one service to another that reduces barriers to follow-through. / Community-based participatory practice: A partnership in which community members share influence in defining questions, actions, and interpretation.

0825. In the student-support meeting, a parent educator is considering this approach for a young person aged 13: helping the family make contact with a community service and checking whether connection occurred. Which framework does it represent?

A. Boundary spanning
B. Consent-based information sharing
C. Outcome feedback loop
D. Warm referral

0826. Which choice aligns each practice with the correct idea, Consent-based information sharing or Community-based participatory practice?

A. Consent-based information sharing: Mapping existing youth programs and trusted community networks before planning a new service. / Community-based participatory practice: Involving youth and community partners in decisions throughout a project, not only at launch.
B. Consent-based information sharing: Confirming authorization and sharing only information needed for coordinated support. / Community-based participatory practice: Involving youth and community partners in decisions throughout a project, not only at launch.
C. Consent-based information sharing: Confirming authorization and sharing only information needed for coordinated support. / Community-based participatory practice: Translating needs across systems without taking over another partner's responsibilities.
D. Consent-based information sharing: Involving youth and community partners in decisions throughout a project, not only at launch. / Community-based participatory practice: Confirming authorization and sharing only information needed for coordinated support.

0827. In a case note about a preadolescent child, a assessment clinician working in the community mental-health service records this priority: confirming authorization and sharing only information needed for coordinated support. What principle is reflected?

A. Consent-based information sharing
B. Role clarification
C. Collaborative problem solving
D. Shared care plan

0828. Which comparison correctly distinguishes Role clarification from Boundary spanning?

A. Role clarification: A structured process in which partners define a concern, generate options, test a plan, and review outcomes. / Boundary spanning: Connecting organizations or professional groups while respecting each role's authority and accountability.
B. Role clarification: Connecting organizations or professional groups while respecting each role's authority and accountability. / Boundary spanning: Explicit agreement about each partner's responsibilities, authority, and limits.
C. Role clarification: Explicit agreement about each partner's responsibilities, authority, and limits. / Boundary spanning: Exchange of relevant information under valid permission and applicable privacy requirements.
D. Role clarification: Explicit agreement about each partner's responsibilities, authority, and limits. / Boundary spanning: Connecting organizations or professional groups while respecting each role's authority and accountability.

0829. During service review in the clinical planning session, a research trainee describes documenting who will take each agreed next step and when progress will be reviewed. for a student aged 9. Which course idea is most applicable?

A. Community-based participatory practice
B. Boundary spanning
C. Consent-based information sharing
D. Shared care plan

0830. A planning meeting about a school-age child includes a clinical supervisor. The proposed practice in the school counseling office is agreeing on a measurable concern, trying one support, and reconvening to evaluate it. Which idea underlies it?

A. Collaborative problem solving
B. Outcome feedback loop
C. Boundary spanning
D. Consent-based information sharing

0831. A youth worker is asked to justify a plan for a child aged 8 in the caregiver consultation. It calls for confirming authorization and sharing only information needed for coordinated support. Which concept provides the rationale?

A. Consent-based information sharing
B. Role clarification
C. Boundary spanning
D. Collaborative problem solving

0832. Choose the practice comparison that best separates Role clarification from Consent-based information sharing.

A. Role clarification: Clarifying who contacts caregivers and who monitors a school support. / Consent-based information sharing: Helping the family make contact with a community service and checking whether connection occurred.
B. Role clarification: Reviewing attendance or wellbeing data together and adjusting supports with permission. / Consent-based information sharing: Confirming authorization and sharing only information needed for coordinated support.
C. Role clarification: Clarifying who contacts caregivers and who monitors a school support. / Consent-based information sharing: Confirming authorization and sharing only information needed for coordinated support.
D. Role clarification: Confirming authorization and sharing only information needed for coordinated support. / Consent-based information sharing: Clarifying who contacts caregivers and who monitors a school support.

0833. In a professional consultation about a student aged 17, the consultant describes this response in the behavior-support review: confirming authorization and sharing only information needed for coordinated support. Which term is most apt?

A. Role clarification
B. Consent-based information sharing
C. Community asset mapping
D. Community-based participatory practice

0834. A supervisor asks for an applied contrast between Community asset mapping and Role clarification. Which option fits?

A. Community asset mapping: Mapping existing youth programs and trusted community networks before planning a new service. / Role clarification: Reviewing attendance or wellbeing data together and adjusting supports with permission.
B. Community asset mapping: Clarifying who contacts caregivers and who monitors a school support. / Role clarification: Mapping existing youth programs and trusted community networks before planning a new service.
C. Community asset mapping: Mapping existing youth programs and trusted community networks before planning a new service. / Role clarification: Clarifying who contacts caregivers and who monitors a school support.
D. Community asset mapping: Agreeing on a measurable concern, trying one support, and reconvening to evaluate it. / Role clarification: Clarifying who contacts caregivers and who monitors a school support.

0835. While supporting a young person aged 16 in the after-school program, a parent educator adopts this practice: agreeing on a measurable concern, trying one support, and reconvening to evaluate it. Which concept best explains the choice?

A. Boundary spanning
B. Warm referral
C. Community asset mapping
D. Collaborative problem solving

0836. Which statement accurately contrasts the course concepts Community asset mapping and Warm referral?

A. Community asset mapping: Exchange of relevant information under valid permission and applicable privacy requirements. / Warm referral: An active, supported connection from one service to another that reduces barriers to follow-through.
B. Community asset mapping: Identification of local strengths, organizations, relationships, and resources relevant to community goals. / Warm referral: A structured process in which partners define a concern, generate options, test a plan, and review outcomes.
C. Community asset mapping: Identification of local strengths, organizations, relationships, and resources relevant to community goals. / Warm referral: An active, supported connection from one service to another that reduces barriers to follow-through.
D. Community asset mapping: An active, supported connection from one service to another that reduces barriers to follow-through. / Warm referral: Identification of local strengths, organizations, relationships, and resources relevant to community goals.

0837. Choose the definition pair that correctly explains Collaborative problem solving first and Warm referral second.

A. Collaborative problem solving: A structured process in which partners define a concern, generate options, test a plan, and review outcomes. / Warm referral: An active, supported connection from one service to another that reduces barriers to follow-through.
B. Collaborative problem solving: A structured process in which partners define a concern, generate options, test a plan, and review outcomes. / Warm referral: A coordinated, mutually understood set of goals, responsibilities, and follow-up steps across helpers.
C. Collaborative problem solving: Coordinated work among professionals who contribute distinct expertise toward shared client goals. / Warm referral: An active, supported connection from one service to another that reduces barriers to follow-through.
D. Collaborative problem solving: An active, supported connection from one service to another that reduces barriers to follow-through. / Warm referral: A structured process in which partners define a concern, generate options, test a plan, and review outcomes.

0838. A teacher and counselor is explaining a choice to a child aged 14 and caregiver in the family session. The choice centers on involving youth and community partners in decisions throughout a project, not only at launch. Which idea is illustrated?

A. Community-based participatory practice
B. Community asset mapping
C. Consent-based information sharing
D. Boundary spanning

0839. Which applied comparison correctly identifies what belongs to Shared care plan versus Community-based participatory practice?

A. Shared care plan: Documenting who will take each agreed next step and when progress will be reviewed. / Community-based participatory practice: Agreeing on a measurable concern, trying one support, and reconvening to evaluate it.
B. Shared care plan: Helping the family make contact with a community service and checking whether connection occurred. / Community-based participatory practice: Involving youth and community partners in decisions throughout a project, not only at launch.
C. Shared care plan: Involving youth and community partners in decisions throughout a project, not only at launch. / Community-based participatory practice: Documenting who will take each agreed next step and when progress will be reviewed.
D. Shared care plan: Documenting who will take each agreed next step and when progress will be reviewed. / Community-based participatory practice: Involving youth and community partners in decisions throughout a project, not only at launch.

0840. A planning meeting about a preadolescent child includes a play therapist. The proposed practice in the family resource center is mapping existing youth programs and trusted community networks before planning a new service. Which idea underlies it?

A. Warm referral
B. Shared care plan
C. Consent-based information sharing
D. Community asset mapping

0841. Which comparison would correct a trainee’s misunderstanding of Shared care plan versus Boundary spanning?

A. Shared care plan: Connecting organizations or professional groups while respecting each role’s authority and accountability. / Boundary spanning: A coordinated, mutually understood set of goals, responsibilities, and follow-up steps across helpers.
B. Shared care plan: A coordinated, mutually understood set of goals, responsibilities, and follow-up steps across helpers. / Boundary spanning: Explicit agreement about each partner’s responsibilities, authority, and limits.
C. Shared care plan: A coordinated, mutually understood set of goals, responsibilities, and follow-up steps across helpers. / Boundary spanning: Connecting organizations or professional groups while respecting each role’s authority and accountability.
D. Shared care plan: Coordinated work among professionals who contribute distinct expertise toward shared client goals. / Boundary spanning: Connecting organizations or professional groups while respecting each role’s authority and accountability.

0842. Which statement accurately contrasts the course concepts Community asset mapping and Boundary spanning?

A. Community asset mapping: Connecting organizations or professional groups while respecting each role’s authority and accountability. / Boundary spanning: Identification of local strengths, organizations, relationships, and resources relevant to community goals.
B. Community asset mapping: Identification of local strengths, organizations, relationships, and resources relevant to community goals. / Boundary spanning: A coordinated, mutually understood set of goals, responsibilities, and follow-up steps across helpers.
C. Community asset mapping: Identification of local strengths, organizations, relationships, and resources relevant to community goals. / Boundary spanning: Connecting organizations or professional groups while respecting each role’s authority and accountability.
D. Community asset mapping: A structured process in which partners define a concern, generate options, test a plan, and review outcomes. / Boundary spanning: Connecting organizations or professional groups while respecting each role’s authority and accountability.

0843. Which option correctly matches each concept to its practice focus: Shared care plan and Collaborative problem solving?

A. Shared care plan: Documenting who will take each agreed next step and when progress will be reviewed. / Collaborative problem solving: Reviewing attendance or wellbeing data together and adjusting supports with permission.
B. Shared care plan: Involving youth and community partners in decisions throughout a project, not only at launch. / Collaborative problem solving: Agreeing on a measurable concern, trying one support, and reconvening to evaluate it.
C. Shared care plan: Documenting who will take each agreed next step and when progress will be reviewed. / Collaborative problem solving: Agreeing on a measurable concern, trying one support, and reconvening to evaluate it.
D. Shared care plan: Agreeing on a measurable concern, trying one support, and reconvening to evaluate it. / Collaborative problem solving: Documenting who will take each agreed next step and when progress will be reviewed.

0844. Consider a student aged 12 receiving help in the telehealth session. The group facilitator focuses on helping the family make contact with a community service and checking whether connection occurred. Which term best describes the guiding idea?

A. Warm referral
B. Consent-based information sharing
C. Community asset mapping
D. Shared care plan

0845. A school counselor is explaining a choice to a preadolescent child and caregiver in the school counseling office. The choice centers on helping the family make contact with a community service and checking whether connection occurred. Which idea is illustrated?

A. Warm referral
B. Consent-based information sharing
C. Collaborative problem solving
D. Shared care plan

0846. In school-community collaboration, a case conference asks for a distinction between Interprofessional collaboration and Collaborative problem solving. Which answer is sound?

A. Interprofessional collaboration: Coordinated work among professionals who contribute distinct expertise toward shared client goals. / Collaborative problem solving: A structured process in which partners define a concern, generate options, test a plan, and review outcomes.
B. Interprofessional collaboration: A structured process in which partners define a concern, generate options, test a plan, and review outcomes. / Collaborative problem solving: Coordinated work among professionals who contribute distinct expertise toward shared client goals.
C. Interprofessional collaboration: Regular use of shared outcome information to adapt coordinated services. / Collaborative problem solving: A structured process in which partners define a concern, generate options, test a plan, and review outcomes.
D. Interprofessional collaboration: Coordinated work among professionals who contribute distinct expertise toward shared client goals. / Collaborative problem solving: A coordinated, mutually understood set of goals, responsibilities, and follow-up steps across helpers.

0847. A member of a clinical team is preparing a follow-up plan for a child aged 8 in the counseling practicum. The plan calls for mapping existing youth programs and trusted community networks before planning a new service. Which concept names this approach?

A. Warm referral
B. Boundary spanning
C. Community asset mapping
D. Consent-based information sharing

0848. A mental-health professional prepares for a session in the classroom support meeting with a child of elementary-school age. The intended approach is translating needs across systems without taking over another partner's responsibilities. Which concept is most relevant?

A. Boundary spanning
B. Collaborative problem solving
C. Shared care plan
D. Community-based participatory practice

0849. Which paired example correctly applies Collaborative problem solving first and Community-based participatory practice second?

A. Collaborative problem solving: Agreeing on a measurable concern, trying one support, and reconvening to evaluate it. / Community-based participatory practice: Helping the family make contact with a community service and checking whether connection occurred.
B. Collaborative problem solving: Involving youth and community partners in decisions throughout a project, not only at launch. / Community-based participatory practice: Agreeing on a measurable concern, trying one support, and reconvening to evaluate it.
C. Collaborative problem solving: Agreeing on a measurable concern, trying one support, and reconvening to evaluate it. / Community-based participatory practice: Involving youth and community partners in decisions throughout a project, not only at launch.
D. Collaborative problem solving: Agreeing on roles and communication with school and community partners, subject to permission. / Community-based participatory practice: Involving youth and community partners in decisions throughout a project, not only at launch.

0850. Choose the term that matches this definition: A coordinated, mutually understood set of goals, responsibilities, and follow-up steps across helpers.

A. Shared care plan
B. Community-based participatory practice
C. Consent-based information sharing
D. Collaborative problem solving

0851. In school-community collaboration, in a supervision quiz, how should Interprofessional collaboration be distinguished from Role clarification?

A. Interprofessional collaboration: Connecting organizations or professional groups while respecting each role's authority and accountability. / Role clarification: Explicit agreement about each partner's responsibilities, authority, and limits.
B. Interprofessional collaboration: Coordinated work among professionals who contribute distinct expertise toward shared client goals. / Role clarification: An active, supported connection from one service to another that reduces barriers to follow-through.
C. Interprofessional collaboration: Coordinated work among professionals who contribute distinct expertise toward shared client goals. / Role clarification: Explicit agreement about each partner's responsibilities, authority, and limits.
D. Interprofessional collaboration: Explicit agreement about each partner's responsibilities, authority, and limits. / Role clarification: Coordinated work among professionals who contribute distinct expertise toward shared client goals.

0852. A supervisor asks for an applied contrast between Role clarification and Warm referral. Which option fits?

A. Role clarification: Clarifying who contacts caregivers and who monitors a school support. / Warm referral: Mapping existing youth programs and trusted community networks before planning a new service.
B. Role clarification: Agreeing on a measurable concern, trying one support, and reconvening to evaluate it. / Warm referral: Helping the family make contact with a community service and checking whether connection occurred.
C. Role clarification: Helping the family make contact with a community service and checking whether connection occurred. / Warm referral: Clarifying who contacts caregivers and who monitors a school support.
D. Role clarification: Clarifying who contacts caregivers and who monitors a school support. / Warm referral: Helping the family make contact with a community service and checking whether connection occurred.

0853. A team must select a support approach for a high-school student at the telehealth session. The caregiver working with a counselor recommends reviewing attendance or wellbeing data together and adjusting supports with permission. Which idea is most relevant?

A. Boundary spanning
B. Outcome feedback loop
C. Interprofessional collaboration
D. Collaborative problem solving

0854. In school-community collaboration, a group facilitator is asked to justify a plan for a young person in the clinical planning session. It calls for agreeing on roles and communication with school and community partners, subject to permission. Which concept provides the rationale?

A. Collaborative problem solving
B. Warm referral
C. Outcome feedback loop
D. Interprofessional collaboration

0855. A research trainee is asked what should shape a young person aged 16’s support in the telehealth session. The proposed focus is involving youth and community partners in decisions throughout a project, not only at launch. Which principle does it represent?

A. Role clarification
B. Interprofessional collaboration
C. Consent-based information sharing
D. Community-based participatory practice

0856. In school-community collaboration, a case conference asks for a distinction between Interprofessional collaboration and Community-based participatory practice. Which answer is sound?

A. Interprofessional collaboration: Coordinated work among professionals who contribute distinct expertise toward shared client goals. / Community-based participatory practice: A partnership in which community members share influence in defining questions, actions, and interpretation.
B. Interprofessional collaboration: A coordinated, mutually understood set of goals, responsibilities, and follow-up steps across helpers. / Community-based participatory practice: A partnership in which community members share influence in defining questions, actions, and interpretation.
C. Interprofessional collaboration: A partnership in which community members share influence in defining questions, actions, and interpretation. / Community-based participatory practice: Coordinated work among professionals who contribute distinct expertise toward shared client goals.
D. Interprofessional collaboration: Coordinated work among professionals who contribute distinct expertise toward shared client goals. / Community-based participatory practice: A structured process in which partners define a concern, generate options, test a plan, and review outcomes.

0857. Which pair of actions illustrates Role clarification and Boundary spanning, respectively?

A. Role clarification: Clarifying who contacts caregivers and who monitors a school support. / Boundary spanning: Translating needs across systems without taking over another partner’s responsibilities.
B. Role clarification: Translating needs across systems without taking over another partner’s responsibilities. / Boundary spanning: Clarifying who contacts caregivers and who monitors a school support.
C. Role clarification: Clarifying who contacts caregivers and who monitors a school support. / Boundary spanning: Confirming authorization and sharing only information needed for coordinated support.
D. Role clarification: Agreeing on a measurable concern, trying one support, and reconvening to evaluate it. / Boundary spanning: Translating needs across systems without taking over another partner’s responsibilities.

0858. In school-community collaboration, a supervisor asks how Interprofessional collaboration would appear in practice. Which choice should be selected?

A. Agreeing on roles and communication with school and community partners, subject to permission.
B. Documenting who will take each agreed next step and when progress will be reviewed.
C. Helping the family make contact with a community service and checking whether connection occurred.
D. Involving youth and community partners in decisions throughout a project, not only at launch.

0859. Which option pairs the definitions of Shared care plan and Collaborative problem solving correctly, in that order?

A. Shared care plan: A partnership in which community members share influence in defining questions, actions, and interpretation. / Collaborative problem solving: A structured process in which partners define a concern, generate options, test a plan, and review outcomes.
B. Shared care plan: A coordinated, mutually understood set of goals, responsibilities, and follow-up steps across helpers. / Collaborative problem solving: A structured process in which partners define a concern, generate options, test a plan, and review outcomes.
C. Shared care plan: A structured process in which partners define a concern, generate options, test a plan, and review outcomes. / Collaborative problem solving: A coordinated, mutually understood set of goals, responsibilities, and follow-up steps across helpers.
D. Shared care plan: A coordinated, mutually understood set of goals, responsibilities, and follow-up steps across helpers. / Collaborative problem solving: Regular use of shared outcome information to adapt coordinated services.

0860. How should a practitioner distinguish the applications of Consent-based information sharing and Collaborative problem solving?

A. Consent-based information sharing: Confirming authorization and sharing only information needed for coordinated support. / Collaborative problem solving: Helping the family make contact with a community service and checking whether connection occurred.
B. Consent-based information sharing: Agreeing on a measurable concern, trying one support, and reconvening to evaluate it. / Collaborative problem solving: Confirming authorization and sharing only information needed for coordinated support.
C. Consent-based information sharing: Reviewing attendance or wellbeing data together and adjusting supports with permission. / Collaborative problem solving: Agreeing on a measurable concern, trying one support, and reconvening to evaluate it.
D. Consent-based information sharing: Confirming authorization and sharing only information needed for coordinated support. / Collaborative problem solving: Agreeing on a measurable concern, trying one support, and reconvening to evaluate it.

0861. During service review in the community service agency, a therapist describes reviewing attendance or wellbeing data together and adjusting supports with permission. for a student aged 15. Which course idea is most applicable?

A. Collaborative problem solving
B. Consent-based information sharing
C. Outcome feedback loop
D. Interprofessional collaboration

0862. In school-community collaboration, in a professional consultation about a child aged 14, the member of a clinical team describes this response in the student-support meeting: agreeing on roles and communication with school and community partners, subject to permission. Which term is most apt?

A. Community-based participatory practice
B. Boundary spanning
C. Interprofessional collaboration
D. Collaborative problem solving

0863. A service team discusses a young person in the child guidance clinic. Their proposed next step is reviewing attendance or wellbeing data together and adjusting supports with permission. Which course concept supports it?

A. Collaborative problem solving
B. Outcome feedback loop
C. Consent-based information sharing
D. Shared care plan

0864. In school-community collaboration, a planning meeting about a child aged 7 includes a clinical supervisor. The proposed practice in the classroom support meeting is agreeing on roles and communication with school and community partners, subject to permission. Which idea underlies it?

A. Consent-based information sharing
B. Interprofessional collaboration
C. Community-based participatory practice
D. Outcome feedback loop

0865. Which choice aligns each practice with the correct idea, Community asset mapping or Community-based participatory practice?

A. Community asset mapping: Mapping existing youth programs and trusted community networks before planning a new service. / Community-based participatory practice: Agreeing on a measurable concern, trying one support, and reconvening to evaluate it.
B. Community asset mapping: Mapping existing youth programs and trusted community networks before planning a new service. / Community-based participatory practice: Involving youth and community partners in decisions throughout a project, not only at launch.
C. Community asset mapping: Helping the family make contact with a community service and checking whether connection occurred. / Community-based participatory practice: Involving youth and community partners in decisions throughout a project, not only at launch.
D. Community asset mapping: Involving youth and community partners in decisions throughout a project, not only at launch. / Community-based participatory practice: Mapping existing youth programs and trusted community networks before planning a new service.

0866. In the parent meeting, a team asks how a youth worker can support a child aged 14. One proposed action is mapping existing youth programs and trusted community networks before planning a new service. Which idea does it represent?

A. Outcome feedback loop
B. Role clarification
C. Boundary spanning
D. Community asset mapping

0867. A behavior specialist reviews a plan for a young person in the parent meeting. The plan emphasizes helping the family make contact with a community service and checking whether connection occurred. Which course idea does this reflect?

A. Interprofessional collaboration
B. Warm referral
C. Boundary spanning
D. Consent-based information sharing

0868. In school-community collaboration, which statement shows a sound practice-level distinction between Interprofessional collaboration and Warm referral?

A. Interprofessional collaboration: Agreeing on roles and communication with school and community partners, subject to permission. / Warm referral: Helping the family make contact with a community service and checking whether connection occurred.
B. Interprofessional collaboration: Helping the family make contact with a community service and checking whether connection occurred. / Warm referral: Agreeing on roles and communication with school and community partners, subject to permission.
C. Interprofessional collaboration: Involving youth and community partners in decisions throughout a project, not only at launch. / Warm referral: Helping the family make contact with a community service and checking whether connection occurred.
D. Interprofessional collaboration: Agreeing on roles and communication with school and community partners, subject to permission. / Warm referral: Mapping existing youth programs and trusted community networks before planning a new service.

0869. In a supervision quiz, how should Shared care plan be distinguished from Collaborative problem solving?

A. Shared care plan: A coordinated, mutually understood set of goals, responsibilities, and follow-up steps across helpers. / Collaborative problem solving: A structured process in which partners define a concern, generate options, test a plan, and review outcomes.
B. Shared care plan: A structured process in which partners define a concern, generate options, test a plan, and review outcomes. / Collaborative problem solving: A coordinated, mutually understood set of goals, responsibilities, and follow-up steps across helpers.
C. Shared care plan: A coordinated, mutually understood set of goals, responsibilities, and follow-up steps across helpers. / Collaborative problem solving: Regular use of shared outcome information to adapt coordinated services.
D. Shared care plan: A partnership in which community members share influence in defining questions, actions, and interpretation. / Collaborative problem solving: A structured process in which partners define a concern, generate options, test a plan, and review outcomes.

0870. In a supervision quiz, how should Consent-based information sharing be distinguished from Boundary spanning?

A. Consent-based information sharing: Coordinated work among professionals who contribute distinct expertise toward shared client goals. / Boundary spanning: Connecting organizations or professional groups while respecting each role's authority and accountability.
B. Consent-based information sharing: Exchange of relevant information under valid permission and applicable privacy requirements. / Boundary spanning: Connecting organizations or professional groups while respecting each role's authority and accountability.
C. Consent-based information sharing: Connecting organizations or professional groups while respecting each role's authority and accountability. / Boundary spanning: Exchange of relevant information under valid permission and applicable privacy requirements.
D. Consent-based information sharing: Exchange of relevant information under valid permission and applicable privacy requirements. / Boundary spanning: A coordinated, mutually understood set of goals, responsibilities, and follow-up steps across helpers.

0871. A member of a clinical team is supporting a student aged 15 in the school counseling office. The key practice is translating needs across systems without taking over another partner's responsibilities. Which course concept is most relevant?

A. Boundary spanning
B. Warm referral
C. Community-based participatory practice
D. Role clarification

0872. During work in the child guidance clinic, a consulting counselor identifies this need: clarifying who contacts caregivers and who monitors a school support. Which idea should guide the response?

A. Community-based participatory practice
B. Outcome feedback loop
C. Interprofessional collaboration
D. Role clarification

0873. Which pair of actions illustrates Community asset mapping and Collaborative problem solving, respectively?

A. Community asset mapping: Agreeing on a measurable concern, trying one support, and reconvening to evaluate it. / Collaborative problem solving: Mapping existing youth programs and trusted community networks before planning a new service.
B. Community asset mapping: Reviewing attendance or wellbeing data together and adjusting supports with permission. / Collaborative problem solving: Agreeing on a measurable concern, trying one support, and reconvening to evaluate it.
C. Community asset mapping: Mapping existing youth programs and trusted community networks before planning a new service. / Collaborative problem solving: Helping the family make contact with a community service and checking whether connection occurred.
D. Community asset mapping: Mapping existing youth programs and trusted community networks before planning a new service. / Collaborative problem solving: Agreeing on a measurable concern, trying one support, and reconvening to evaluate it.

0874. Which choice aligns each practice with the correct idea, Shared care plan or Warm referral?

A. Shared care plan: Helping the family make contact with a community service and checking whether connection occurred. / Warm referral: Documenting who will take each agreed next step and when progress will be reviewed.
B. Shared care plan: Agreeing on roles and communication with school and community partners, subject to permission. / Warm referral: Helping the family make contact with a community service and checking whether connection occurred.
C. Shared care plan: Documenting who will take each agreed next step and when progress will be reviewed. / Warm referral: Helping the family make contact with a community service and checking whether connection occurred.
D. Shared care plan: Documenting who will take each agreed next step and when progress will be reviewed. / Warm referral: Reviewing attendance or wellbeing data together and adjusting supports with permission.

0875. A mental-health professional and a student aged 9 are discussing support in the student-support meeting. The selected practice is agreeing on a measurable concern, trying one support, and reconvening to evaluate it. Which concept does this demonstrate?

A. Consent-based information sharing
B. Warm referral
C. Outcome feedback loop
D. Collaborative problem solving

0876. How should a practitioner distinguish the applications of Community asset mapping and Collaborative problem solving?

A. Community asset mapping: Mapping existing youth programs and trusted community networks before planning a new service. / Collaborative problem solving: Helping the family make contact with a community service and checking whether connection occurred.
B. Community asset mapping: Reviewing attendance or wellbeing data together and adjusting supports with permission. / Collaborative problem solving: Agreeing on a measurable concern, trying one support, and reconvening to evaluate it.
C. Community asset mapping: Mapping existing youth programs and trusted community networks before planning a new service. / Collaborative problem solving: Agreeing on a measurable concern, trying one support, and reconvening to evaluate it.
D. Community asset mapping: Agreeing on a measurable concern, trying one support, and reconvening to evaluate it. / Collaborative problem solving: Mapping existing youth programs and trusted community networks before planning a new service.

0877. Choose the definition pair that correctly explains Shared care plan first and Collaborative problem solving second.

A. Shared care plan: A structured process in which partners define a concern, generate options, test a plan, and review outcomes. / Collaborative problem solving: A coordinated, mutually understood set of goals, responsibilities, and follow-up steps across helpers.
B. Shared care plan: A partnership in which community members share influence in defining questions, actions, and interpretation. / Collaborative problem solving: A structured process in which partners define a concern, generate options, test a plan, and review outcomes.
C. Shared care plan: A coordinated, mutually understood set of goals, responsibilities, and follow-up steps across helpers. / Collaborative problem solving: A structured process in which partners define a concern, generate options, test a plan, and review outcomes.
D. Shared care plan: A coordinated, mutually understood set of goals, responsibilities, and follow-up steps across helpers. / Collaborative problem solving: Regular use of shared outcome information to adapt coordinated services.

0878. While supporting a young person aged 18 in the school counseling office, a case coordinator adopts this practice: reviewing attendance or wellbeing data together and adjusting supports with permission. Which concept best explains the choice?

A. Interprofessional collaboration
B. Outcome feedback loop
C. Role clarification
D. Boundary spanning

0879. A trainee must choose a practice that exemplifies Community asset mapping. Which action is the best fit?

A. Reviewing attendance or wellbeing data together and adjusting supports with permission.
B. Agreeing on a measurable concern, trying one support, and reconvening to evaluate it.
C. Agreeing on roles and communication with school and community partners, subject to permission.
D. Mapping existing youth programs and trusted community networks before planning a new service.

0880. A team must select a support approach for a school-age child at the community service agency. The case coordinator recommends helping the family make contact with a community service and checking whether connection occurred. Which idea is most relevant?

A. Community asset mapping
B. Role clarification
C. Warm referral
D. Boundary spanning

0881. Which choice aligns each practice with the correct idea, Consent-based information sharing or Collaborative problem solving?

A. Consent-based information sharing: Reviewing attendance or wellbeing data together and adjusting supports with permission. / Collaborative problem solving: Agreeing on a measurable concern, trying one support, and reconvening to evaluate it.
B. Consent-based information sharing: Confirming authorization and sharing only information needed for coordinated support. / Collaborative problem solving: Agreeing on a measurable concern, trying one support, and reconvening to evaluate it.
C. Consent-based information sharing: Confirming authorization and sharing only information needed for coordinated support. / Collaborative problem solving: Helping the family make contact with a community service and checking whether connection occurred.
D. Consent-based information sharing: Agreeing on a measurable concern, trying one support, and reconvening to evaluate it. / Collaborative problem solving: Confirming authorization and sharing only information needed for coordinated support.

0882. Which choice aligns each practice with the correct idea, Role clarification or Outcome feedback loop?

A. Role clarification: Reviewing attendance or wellbeing data together and adjusting supports with permission. / Outcome feedback loop: Clarifying who contacts caregivers and who monitors a school support.
B. Role clarification: Agreeing on roles and communication with school and community partners, subject to permission. / Outcome feedback loop: Reviewing attendance or wellbeing data together and adjusting supports with permission.
C. Role clarification: Clarifying who contacts caregivers and who monitors a school support. / Outcome feedback loop: Reviewing attendance or wellbeing data together and adjusting supports with permission.
D. Role clarification: Clarifying who contacts caregivers and who monitors a school support. / Outcome feedback loop: Translating needs across systems without taking over another partner’s responsibilities.

0883. Which comparison correctly distinguishes Warm referral from Community-based participatory practice?

A. Warm referral: A partnership in which community members share influence in defining questions, actions, and interpretation. / Community-based participatory practice: An active, supported connection from one service to another that reduces barriers to follow-through.
B. Warm referral: An active, supported connection from one service to another that reduces barriers to follow-through. / Community-based participatory practice: Coordinated work among professionals who contribute distinct expertise toward shared client goals.
C. Warm referral: Explicit agreement about each partner’s responsibilities, authority, and limits. / Community-based participatory practice: A partnership in which community members share influence in defining questions, actions, and interpretation.
D. Warm referral: An active, supported connection from one service to another that reduces barriers to follow-through. / Community-based participatory practice: A partnership in which community members share influence in defining questions, actions, and interpretation.

0884. In school-community collaboration, which comparison would correct a trainee’s misunderstanding of Interprofessional collaboration versus Role clarification?

A. Interprofessional collaboration: Connecting organizations or professional groups while respecting each role’s authority and accountability. / Role clarification: Explicit agreement about each partner’s responsibilities, authority, and limits.
B. Interprofessional collaboration: Coordinated work among professionals who contribute distinct expertise toward shared client goals. / Role clarification: Explicit agreement about each partner’s responsibilities, authority, and limits.
C. Interprofessional collaboration: Coordinated work among professionals who contribute distinct expertise toward shared client goals. / Role clarification: An active, supported connection from one service to another that reduces barriers to follow-through.
D. Interprofessional collaboration: Explicit agreement about each partner’s responsibilities, authority, and limits. / Role clarification: Coordinated work among professionals who contribute distinct expertise toward shared client goals.

0885. Identify the most precise label for this idea: An active, supported connection from one service to another that reduces barriers to follow-through.

A. Interprofessional collaboration
B. Warm referral
C. Community-based participatory practice
D. Boundary spanning

0886. Which description belongs with the term Role clarification?

A. Regular use of shared outcome information to adapt coordinated services.
B. A partnership in which community members share influence in defining questions, actions, and interpretation.
C. Explicit agreement about each partner’s responsibilities, authority, and limits.
D. Coordinated work among professionals who contribute distinct expertise toward shared client goals.

0887. In school-community collaboration, a trainee must explain Interprofessional collaboration. Which answer is accurate?

A. Exchange of relevant information under valid permission and applicable privacy requirements.
B. Regular use of shared outcome information to adapt coordinated services.
C. An active, supported connection from one service to another that reduces barriers to follow-through.
D. Coordinated work among professionals who contribute distinct expertise toward shared client goals.

0888. In school-community collaboration, which option correctly matches each concept to its practice focus: Interprofessional collaboration and Warm referral?

A. Interprofessional collaboration: Agreeing on roles and communication with school and community partners, subject to permission. / Warm referral: Mapping existing youth programs and trusted community networks before planning a new service.
B. Interprofessional collaboration: Helping the family make contact with a community service and checking whether connection occurred. / Warm referral: Agreeing on roles and communication with school and community partners, subject to permission.
C. Interprofessional collaboration: Involving youth and community partners in decisions throughout a project, not only at launch. / Warm referral: Helping the family make contact with a community service and checking whether connection occurred.
D. Interprofessional collaboration: Agreeing on roles and communication with school and community partners, subject to permission. / Warm referral: Helping the family make contact with a community service and checking whether connection occurred.

0889. A supervisor asks how Community-based participatory practice would appear in practice. Which choice should be selected?

A. Involving youth and community partners in decisions throughout a project, not only at launch.
B. Agreeing on a measurable concern, trying one support, and reconvening to evaluate it.
C. Confirming authorization and sharing only information needed for coordinated support.
D. Agreeing on roles and communication with school and community partners, subject to permission.

0890. A community practitioner describes an intervention for a child aged 6 in the community youth program, centered on reviewing attendance or wellbeing data together and adjusting supports with permission. Which named idea is most relevant?

A. Consent-based information sharing
B. Boundary spanning
C. Interprofessional collaboration
D. Outcome feedback loop

0891. A child aged 7 is receiving support in the student wellness team. The group facilitator is guided by this practice: confirming authorization and sharing only information needed for coordinated support. Which principle best fits?

A. Warm referral
B. Boundary spanning
C. Outcome feedback loop
D. Consent-based information sharing

0892. A trainee must choose a practice that exemplifies Shared care plan. Which action is the best fit?

A. Confirming authorization and sharing only information needed for coordinated support.
B. Involving youth and community partners in decisions throughout a project, not only at launch.
C. Documenting who will take each agreed next step and when progress will be reviewed.
D. Reviewing attendance or wellbeing data together and adjusting supports with permission.

0893. Which option preserves the correct meaning of both Shared care plan and Boundary spanning?

A. Shared care plan: A coordinated, mutually understood set of goals, responsibilities, and follow-up steps across helpers. / Boundary spanning: Connecting organizations or professional groups while respecting each role's authority and accountability.
B. Shared care plan: Connecting organizations or professional groups while respecting each role's authority and accountability. / Boundary spanning: A coordinated, mutually understood set of goals, responsibilities, and follow-up steps across helpers.
C. Shared care plan: A coordinated, mutually understood set of goals, responsibilities, and follow-up steps across helpers. / Boundary spanning: Explicit agreement about each partner's responsibilities, authority, and limits.
D. Shared care plan: Coordinated work among professionals who contribute distinct expertise toward shared client goals. / Boundary spanning: Connecting organizations or professional groups while respecting each role's authority and accountability.

0894. A consulting counselor is asked to justify a plan for a older adolescent client in the school-based service. It calls for helping the family make contact with a community service and checking whether connection occurred. Which concept provides the rationale?

A. Role clarification
B. Boundary spanning
C. Community asset mapping
D. Warm referral

0895. In school-community collaboration, a service navigator describes an intervention for a preadolescent child in the youth advocacy program, centered on agreeing on roles and communication with school and community partners, subject to permission. Which named idea is most relevant?

A. Consent-based information sharing
B. Collaborative problem solving
C. Boundary spanning
D. Interprofessional collaboration

0896. Which option correctly matches each concept to its practice focus: Community-based participatory practice and Outcome feedback loop?

A. Community-based participatory practice: Involving youth and community partners in decisions throughout a project, not only at launch. / Outcome feedback loop: Reviewing attendance or wellbeing data together and adjusting supports with permission.
B. Community-based participatory practice: Involving youth and community partners in decisions throughout a project, not only at launch. / Outcome feedback loop: Agreeing on roles and communication with school and community partners, subject to permission.
C. Community-based participatory practice: Agreeing on a measurable concern, trying one support, and reconvening to evaluate it. / Outcome feedback loop: Reviewing attendance or wellbeing data together and adjusting supports with permission.
D. Community-based participatory practice: Reviewing attendance or wellbeing data together and adjusting supports with permission. / Outcome feedback loop: Involving youth and community partners in decisions throughout a project, not only at launch.

0897. Choose the definition pair that correctly explains Shared care plan first and Community-based participatory practice second.

A. Shared care plan: A partnership in which community members share influence in defining questions, actions, and interpretation. / Community-based participatory practice: A coordinated, mutually understood set of goals, responsibilities, and follow-up steps across helpers.
B. Shared care plan: An active, supported connection from one service to another that reduces barriers to follow-through. / Community-based participatory practice: A partnership in which community members share influence in defining questions, actions, and interpretation.
C. Shared care plan: A coordinated, mutually understood set of goals, responsibilities, and follow-up steps across helpers. / Community-based participatory practice: A structured process in which partners define a concern, generate options, test a plan, and review outcomes.
D. Shared care plan: A coordinated, mutually understood set of goals, responsibilities, and follow-up steps across helpers. / Community-based participatory practice: A partnership in which community members share influence in defining questions, actions, and interpretation.

0898. In the multidisciplinary case conference, a caregiver working with a counselor is considering this approach for a client in late adolescence: translating needs across systems without taking over another partner's responsibilities. Which framework does it represent?

A. Boundary spanning
B. Role clarification
C. Shared care plan
D. Consent-based information sharing

0899. How are Collaborative problem solving and Warm referral most accurately differentiated in this curriculum?

A. Collaborative problem solving: An active, supported connection from one service to another that reduces barriers to follow-through. / Warm referral: A structured process in which partners define a concern, generate options, test a plan, and review outcomes.
B. Collaborative problem solving: A structured process in which partners define a concern, generate options, test a plan, and review outcomes. / Warm referral: A coordinated, mutually understood set of goals, responsibilities, and follow-up steps across helpers.
C. Collaborative problem solving: Coordinated work among professionals who contribute distinct expertise toward shared client goals. / Warm referral: An active, supported connection from one service to another that reduces barriers to follow-through.
D. Collaborative problem solving: A structured process in which partners define a concern, generate options, test a plan, and review outcomes. / Warm referral: An active, supported connection from one service to another that reduces barriers to follow-through.

0900. A school support specialist is asked to evaluate a proposed service for a client in early adolescence in the youth group. The defining feature is reviewing attendance or wellbeing data together and adjusting supports with permission. Which concept fits?

A. Interprofessional collaboration
B. Role clarification
C. Outcome feedback loop
D. Collaborative problem solving

0901. A community practitioner is asked what should shape a young person aged 13's support in the behavior-support review. The proposed focus is clarifying who contacts caregivers and who monitors a school support. Which principle does it represent?

A. Interprofessional collaboration
B. Boundary spanning
C. Role clarification
D. Community asset mapping

0902. How should a practitioner distinguish the applications of Community asset mapping and Consent-based information sharing?

A. Community asset mapping: Confirming authorization and sharing only information needed for coordinated support. / Consent-based information sharing: Mapping existing youth programs and trusted community networks before planning a new service.
B. Community asset mapping: Documenting who will take each agreed next step and when progress will be reviewed. / Consent-based information sharing: Confirming authorization and sharing only information needed for coordinated support.
C. Community asset mapping: Mapping existing youth programs and trusted community networks before planning a new service. / Consent-based information sharing: Involving youth and community partners in decisions throughout a project, not only at launch.
D. Community asset mapping: Mapping existing youth programs and trusted community networks before planning a new service. / Consent-based information sharing: Confirming authorization and sharing only information needed for coordinated support.

0903. Select the best explanation of Warm referral.

A. An active, supported connection from one service to another that reduces barriers to follow-through.
B. A partnership in which community members share influence in defining questions, actions, and interpretation.
C. Connecting organizations or professional groups while respecting each role's authority and accountability.
D. Coordinated work among professionals who contribute distinct expertise toward shared client goals.

0904. In a supervision review, a parent educator describes work with a teenage client in the classroom support meeting: reviewing attendance or wellbeing data together and adjusting supports with permission. What concept is illustrated?

A. Role clarification
B. Consent-based information sharing
C. Outcome feedback loop
D. Warm referral

0905. Which named construct is captured by this account? A structured process in which partners define a concern, generate options, test a plan, and review outcomes.

A. Community-based participatory practice
B. Interprofessional collaboration
C. Collaborative problem solving
D. Outcome feedback loop

0906. In school-community collaboration, a trainee must distinguish how Interprofessional collaboration and Role clarification guide practice. Which comparison is accurate?

A. Interprofessional collaboration: Translating needs across systems without taking over another partner's responsibilities. / Role clarification: Clarifying who contacts caregivers and who monitors a school support.
B. Interprofessional collaboration: Agreeing on roles and communication with school and community partners, subject to permission. / Role clarification: Clarifying who contacts caregivers and who monitors a school support.
C. Interprofessional collaboration: Clarifying who contacts caregivers and who monitors a school support. / Role clarification: Agreeing on roles and communication with school and community partners, subject to permission.
D. Interprofessional collaboration: Agreeing on roles and communication with school and community partners, subject to permission. / Role clarification: Helping the family make contact with a community service and checking whether connection occurred.

0907. Choose the practice comparison that best separates Collaborative problem solving from Community-based participatory practice.

A. Collaborative problem solving: Agreeing on a measurable concern, trying one support, and reconvening to evaluate it. / Community-based participatory practice: Involving youth and community partners in decisions throughout a project, not only at launch.
B. Collaborative problem solving: Involving youth and community partners in decisions throughout a project, not only at launch. / Community-based participatory practice: Agreeing on a measurable concern, trying one support, and reconvening to evaluate it.
C. Collaborative problem solving: Agreeing on a measurable concern, trying one support, and reconvening to evaluate it. / Community-based participatory practice: Helping the family make contact with a community service and checking whether connection occurred.
D. Collaborative problem solving: Agreeing on roles and communication with school and community partners, subject to permission. / Community-based participatory practice: Involving youth and community partners in decisions throughout a project, not only at launch.

0908. A member of a clinical team and a student aged 12 are discussing support in the behavior-support review. The selected practice is reviewing attendance or wellbeing data together and adjusting supports with permission. Which concept does this demonstrate?

A. Boundary spanning
B. Consent-based information sharing
C. Outcome feedback loop
D. Community-based participatory practice

0909. A team must select a support approach for a child aged 7 at the student-support meeting. The case coordinator recommends documenting who will take each agreed next step and when progress will be reviewed. Which idea is most relevant?

A. Community asset mapping
B. Collaborative problem solving
C. Boundary spanning
D. Shared care plan

0910. In school-community collaboration, which comparison would correct a trainee's misunderstanding of Interprofessional collaboration versus Community-based participatory practice?

A. Interprofessional collaboration: A coordinated, mutually understood set of goals, responsibilities, and follow-up steps across helpers. / Community-based participatory practice: A partnership in which community members share influence in defining questions, actions, and interpretation.
B. Interprofessional collaboration: A partnership in which community members share influence in defining questions, actions, and interpretation. / Community-based participatory practice: Coordinated work among professionals who contribute distinct expertise toward shared client goals.
C. Interprofessional collaboration: Coordinated work among professionals who contribute distinct expertise toward shared client goals. / Community-based participatory practice: A partnership in which community members share influence in defining questions, actions, and interpretation.
D. Interprofessional collaboration: Coordinated work among professionals who contribute distinct expertise toward shared client goals. / Community-based participatory practice: A structured process in which partners define a concern, generate options, test a plan, and review outcomes.

0911. While supporting a young person in the student wellness team, a caregiver working with a counselor adopts this practice: involving youth and community partners in decisions throughout a project, not only at launch. Which concept best explains the choice?

A. Shared care plan
B. Collaborative problem solving
C. Community-based participatory practice
D. Boundary spanning

0912. A trainee must distinguish how Community-based participatory practice and Outcome feedback loop guide practice. Which comparison is accurate?

A. Community-based participatory practice: Involving youth and community partners in decisions throughout a project, not only at launch. / Outcome feedback loop: Agreeing on roles and communication with school and community partners, subject to permission.
B. Community-based participatory practice: Agreeing on a measurable concern, trying one support, and reconvening to evaluate it. / Outcome feedback loop: Reviewing attendance or wellbeing data together and adjusting supports with permission.
C. Community-based participatory practice: Involving youth and community partners in decisions throughout a project, not only at launch. / Outcome feedback loop: Reviewing attendance or wellbeing data together and adjusting supports with permission.
D. Community-based participatory practice: Reviewing attendance or wellbeing data together and adjusting supports with permission. / Outcome feedback loop: Involving youth and community partners in decisions throughout a project, not only at launch.

0913. Identify the most precise label for this idea: A coordinated, mutually understood set of goals, responsibilities, and follow-up steps across helpers.

A. Shared care plan
B. Collaborative problem solving
C. Community-based participatory practice
D. Warm referral

0914. A research trainee is asked what should shape a adolescent student's support in the school-based service. The proposed focus is mapping existing youth programs and trusted community networks before planning a new service. Which principle does it represent?

A. Outcome feedback loop
B. Shared care plan
C. Warm referral
D. Community asset mapping

0915. Which statement accurately contrasts the course concepts Warm referral and Boundary spanning?

A. Warm referral: An active, supported connection from one service to another that reduces barriers to follow-through. / Boundary spanning: Coordinated work among professionals who contribute distinct expertise toward shared client goals.
B. Warm referral: A structured process in which partners define a concern, generate options, test a plan, and review outcomes. / Boundary spanning: Connecting organizations or professional groups while respecting each role's authority and accountability.
C. Warm referral: Connecting organizations or professional groups while respecting each role's authority and accountability. / Boundary spanning: An active, supported connection from one service to another that reduces barriers to follow-through.
D. Warm referral: An active, supported connection from one service to another that reduces barriers to follow-through. / Boundary spanning: Connecting organizations or professional groups while respecting each role's authority and accountability.

0916. A planning meeting about a child of elementary-school age includes a school support specialist. The proposed practice in the after-school program is documenting who will take each agreed next step and when progress will be reviewed. Which idea underlies it?

A. Community-based participatory practice
B. Shared care plan
C. Consent-based information sharing
D. Interprofessional collaboration

0917. In school-community collaboration, which paired example correctly applies Interprofessional collaboration first and Consent-based information sharing second?

A. Interprofessional collaboration: Confirming authorization and sharing only information needed for coordinated support. / Consent-based information sharing: Agreeing on roles and communication with school and community partners, subject to permission.
B. Interprofessional collaboration: Agreeing on roles and communication with school and community partners, subject to permission. / Consent-based information sharing: Confirming authorization and sharing only information needed for coordinated support.
C. Interprofessional collaboration: Mapping existing youth programs and trusted community networks before planning a new service. / Consent-based information sharing: Confirming authorization and sharing only information needed for coordinated support.
D. Interprofessional collaboration: Agreeing on roles and communication with school and community partners, subject to permission. / Consent-based information sharing: Clarifying who contacts caregivers and who monitors a school support.

0918. Select the best explanation of Community-based participatory practice.

A. Explicit agreement about each partner's responsibilities, authority, and limits.
B. Coordinated work among professionals who contribute distinct expertise toward shared client goals.
C. A coordinated, mutually understood set of goals, responsibilities, and follow-up steps across helpers.
D. A partnership in which community members share influence in defining questions, actions, and interpretation.

0919. A assessment clinician and a young person aged 13 are discussing support in the clinical planning session. The selected practice is mapping existing youth programs and trusted community networks before planning a new service. Which concept does this demonstrate?

A. Role clarification
B. Boundary spanning
C. Collaborative problem solving
D. Community asset mapping

0920. A trainee must distinguish how Collaborative problem solving and Warm referral guide practice. Which comparison is accurate?

A. Collaborative problem solving: Helping the family make contact with a community service and checking whether connection occurred. / Warm referral: Agreeing on a measurable concern, trying one support, and reconvening to evaluate it.
B. Collaborative problem solving: Agreeing on a measurable concern, trying one support, and reconvening to evaluate it. / Warm referral: Helping the family make contact with a community service and checking whether connection occurred.
C. Collaborative problem solving: Agreeing on roles and communication with school and community partners, subject to permission. / Warm referral: Helping the family make contact with a community service and checking whether connection occurred.
D. Collaborative problem solving: Agreeing on a measurable concern, trying one support, and reconvening to evaluate it. / Warm referral: Documenting who will take each agreed next step and when progress will be reviewed.

0921. A mental-health professional is preparing a follow-up plan for a child of elementary-school age in the classroom support meeting. The plan calls for translating needs across systems without taking over another partner's responsibilities. Which concept names this approach?

A. Role clarification
B. Boundary spanning
C. Community-based participatory practice
D. Shared care plan

0922. In a supervision quiz, how should Consent-based information sharing be distinguished from Community-based participatory practice?

A. Consent-based information sharing: Exchange of relevant information under valid permission and applicable privacy requirements. / Community-based participatory practice: Connecting organizations or professional groups while respecting each role's authority and accountability.
B. Consent-based information sharing: A partnership in which community members share influence in defining questions, actions, and interpretation. / Community-based participatory practice: Exchange of relevant information under valid permission and applicable privacy requirements.
C. Consent-based information sharing: Identification of local strengths, organizations, relationships, and resources relevant to community goals. / Community-based participatory practice: A partnership in which community members share influence in defining questions, actions, and interpretation.
D. Consent-based information sharing: Exchange of relevant information under valid permission and applicable privacy requirements. / Community-based participatory practice: A partnership in which community members share influence in defining questions, actions, and interpretation.

0923. In school-community collaboration, which option pairs the definitions of Interprofessional collaboration and Shared care plan correctly, in that order?

A. Interprofessional collaboration: A coordinated, mutually understood set of goals, responsibilities, and follow-up steps across helpers. / Shared care plan: Coordinated work among professionals who contribute distinct expertise toward shared client goals.
B. Interprofessional collaboration: Explicit agreement about each partner's responsibilities, authority, and limits. / Shared care plan: A coordinated, mutually understood set of goals, responsibilities, and follow-up steps across helpers.
C. Interprofessional collaboration: Coordinated work among professionals who contribute distinct expertise toward shared client goals. / Shared care plan: A coordinated, mutually understood set of goals, responsibilities, and follow-up steps across helpers.
D. Interprofessional collaboration: Coordinated work among professionals who contribute distinct expertise toward shared client goals. / Shared care plan: Exchange of relevant information under valid permission and applicable privacy requirements.

0924. Choose the practice comparison that best separates Role clarification from Boundary spanning.

A. Role clarification: Agreeing on a measurable concern, trying one support, and reconvening to evaluate it. / Boundary spanning: Translating needs across systems without taking over another partner's responsibilities.
B. Role clarification: Clarifying who contacts caregivers and who monitors a school support. / Boundary spanning: Translating needs across systems without taking over another partner's responsibilities.
C. Role clarification: Translating needs across systems without taking over another partner's responsibilities. / Boundary spanning: Clarifying who contacts caregivers and who monitors a school support.
D. Role clarification: Clarifying who contacts caregivers and who monitors a school support. / Boundary spanning: Confirming authorization and sharing only information needed for coordinated support.

0925. A parent educator presents a support plan for a preadolescent child at the counseling practicum. Its central feature is translating needs across systems without taking over another partner's responsibilities. Which concept should be named?

A. Outcome feedback loop
B. Community-based participatory practice
C. Warm referral
D. Boundary spanning

0926. Choose the practice comparison that best separates Boundary spanning from Outcome feedback loop.

A. Boundary spanning: Agreeing on roles and communication with school and community partners, subject to permission. / Outcome feedback loop: Reviewing attendance or wellbeing data together and adjusting supports with permission.
B. Boundary spanning: Reviewing attendance or wellbeing data together and adjusting supports with permission. / Outcome feedback loop: Translating needs across systems without taking over another partner's responsibilities.
C. Boundary spanning: Translating needs across systems without taking over another partner's responsibilities. / Outcome feedback loop: Confirming authorization and sharing only information needed for coordinated support.
D. Boundary spanning: Translating needs across systems without taking over another partner's responsibilities. / Outcome feedback loop: Reviewing attendance or wellbeing data together and adjusting supports with permission.

0927. Which option preserves the correct meaning of both Boundary spanning and Outcome feedback loop?

A. Boundary spanning: Connecting organizations or professional groups while respecting each role's authority and accountability. / Outcome feedback loop: Regular use of shared outcome information to adapt coordinated services.
B. Boundary spanning: Regular use of shared outcome information to adapt coordinated services. / Outcome feedback loop: Connecting organizations or professional groups while respecting each role's authority and accountability.
C. Boundary spanning: Coordinated work among professionals who contribute distinct expertise toward shared client goals. / Outcome feedback loop: Regular use of shared outcome information to adapt coordinated services.
D. Boundary spanning: Connecting organizations or professional groups while respecting each role's authority and accountability. / Outcome feedback loop: Exchange of relevant information under valid permission and applicable privacy requirements.

0928. Which paired example correctly applies Shared care plan first and Community-based participatory practice second?

A. Shared care plan: Involving youth and community partners in decisions throughout a project, not only at launch. / Community-based participatory practice: Documenting who will take each agreed next step and when progress will be reviewed.
B. Shared care plan: Documenting who will take each agreed next step and when progress will be reviewed. / Community-based participatory practice: Agreeing on a measurable concern, trying one support, and reconvening to evaluate it.
C. Shared care plan: Helping the family make contact with a community service and checking whether connection occurred. / Community-based participatory practice: Involving youth and community partners in decisions throughout a project, not only at launch.
D. Shared care plan: Documenting who will take each agreed next step and when progress will be reviewed. / Community-based participatory practice: Involving youth and community partners in decisions throughout a project, not only at launch.

0929. A student confuses Community asset mapping with Role clarification. Which explanation most accurately separates them?

A. Community asset mapping: Identification of local strengths, organizations, relationships, and resources relevant to community goals. / Role clarification: Explicit agreement about each partner's responsibilities, authority, and limits.
B. Community asset mapping: Explicit agreement about each partner's responsibilities, authority, and limits. / Role clarification: Identification of local strengths, organizations, relationships, and resources relevant to community goals.
C. Community asset mapping: Identification of local strengths, organizations, relationships, and resources relevant to community goals. / Role clarification: Regular use of shared outcome information to adapt coordinated services.
D. Community asset mapping: A structured process in which partners define a concern, generate options, test a plan, and review outcomes. / Role clarification: Explicit agreement about each partner's responsibilities, authority, and limits.

0930. For a teenage client seen in the clinical planning session, the community practitioner recommends a plan built around helping the family make contact with a community service and checking whether connection occurred. Which concept is reflected?

A. Warm referral
B. Collaborative problem solving
C. Interprofessional collaboration
D. Boundary spanning

0931. Which option correctly matches each concept to its practice focus: Shared care plan and Boundary spanning?

A. Shared care plan: Documenting who will take each agreed next step and when progress will be reviewed. / Boundary spanning: Clarifying who contacts caregivers and who monitors a school support.
B. Shared care plan: Agreeing on roles and communication with school and community partners, subject to permission. / Boundary spanning: Translating needs across systems without taking over another partner's responsibilities.
C. Shared care plan: Documenting who will take each agreed next step and when progress will be reviewed. / Boundary spanning: Translating needs across systems without taking over another partner's responsibilities.
D. Shared care plan: Translating needs across systems without taking over another partner's responsibilities. / Boundary spanning: Documenting who will take each agreed next step and when progress will be reviewed.

0932. Which option pairs the definitions of Consent-based information sharing and Community-based participatory practice correctly, in that order?

A. Consent-based information sharing: A partnership in which community members share influence in defining questions, actions, and interpretation. / Community-based participatory practice: Exchange of relevant information under valid permission and applicable privacy requirements.
B. Consent-based information sharing: Exchange of relevant information under valid permission and applicable privacy requirements. / Community-based participatory practice: Connecting organizations or professional groups while respecting each role's authority and accountability.
C. Consent-based information sharing: Identification of local strengths, organizations, relationships, and resources relevant to community goals. / Community-based participatory practice: A partnership in which community members share influence in defining questions, actions, and interpretation.
D. Consent-based information sharing: Exchange of relevant information under valid permission and applicable privacy requirements. / Community-based participatory practice: A partnership in which community members share influence in defining questions, actions, and interpretation.

0933. In school-community collaboration, which statement accurately contrasts the course concepts Interprofessional collaboration and Role clarification?

A. Interprofessional collaboration: Explicit agreement about each partner's responsibilities, authority, and limits. / Role clarification: Coordinated work among professionals who contribute distinct expertise toward shared client goals.
B. Interprofessional collaboration: Coordinated work among professionals who contribute distinct expertise toward shared client goals. / Role clarification: Explicit agreement about each partner's responsibilities, authority, and limits.
C. Interprofessional collaboration: Connecting organizations or professional groups while respecting each role's authority and accountability. / Role clarification: Explicit agreement about each partner's responsibilities, authority, and limits.
D. Interprofessional collaboration: Coordinated work among professionals who contribute distinct expertise toward shared client goals. / Role clarification: An active, supported connection from one service to another that reduces barriers to follow-through.

0934. A doctoral student reads the following description. Which concept does it define? A partnership in which community members share influence in defining questions, actions, and interpretation.

A. Warm referral
B. Community-based participatory practice
C. Boundary spanning
D. Role clarification

0935. In school-community collaboration, a team must select a support approach for a child aged 11 at the family session. The family therapist recommends agreeing on roles and communication with school and community partners, subject to permission. Which idea is most relevant?

A. Community-based participatory practice
B. Interprofessional collaboration
C. Consent-based information sharing
D. Boundary spanning

0936. During work in the community mental-health service, a group facilitator identifies this need: mapping existing youth programs and trusted community networks before planning a new service. Which idea should guide the response?

A. Community asset mapping
B. Shared care plan
C. Warm referral
D. Role clarification

0937. In school-community collaboration, which statement shows a sound practice-level distinction between Interprofessional collaboration and Outcome feedback loop?

A. Interprofessional collaboration: Reviewing attendance or wellbeing data together and adjusting supports with permission. / Outcome feedback loop: Agreeing on roles and communication with school and community partners, subject to permission.
B. Interprofessional collaboration: Agreeing on roles and communication with school and community partners, subject to permission. / Outcome feedback loop: Clarifying who contacts caregivers and who monitors a school support.
C. Interprofessional collaboration: Agreeing on roles and communication with school and community partners, subject to permission. / Outcome feedback loop: Reviewing attendance or wellbeing data together and adjusting supports with permission.
D. Interprofessional collaboration: Helping the family make contact with a community service and checking whether connection occurred. / Outcome feedback loop: Reviewing attendance or wellbeing data together and adjusting supports with permission.

0938. How are Shared care plan and Boundary spanning most accurately differentiated in this curriculum?

A. Shared care plan: A coordinated, mutually understood set of goals, responsibilities, and follow-up steps across helpers. / Boundary spanning: Explicit agreement about each partner's responsibilities, authority, and limits.
B. Shared care plan: Coordinated work among professionals who contribute distinct expertise toward shared client goals. / Boundary spanning: Connecting organizations or professional groups while respecting each role's authority and accountability.
C. Shared care plan: Connecting organizations or professional groups while respecting each role's authority and accountability. / Boundary spanning: A coordinated, mutually understood set of goals, responsibilities, and follow-up steps across helpers.
D. Shared care plan: A coordinated, mutually understood set of goals, responsibilities, and follow-up steps across helpers. / Boundary spanning: Connecting organizations or professional groups while respecting each role's authority and accountability.

0939. Which applied comparison correctly identifies what belongs to Role clarification versus Consent-based information sharing?

A. Role clarification: Reviewing attendance or wellbeing data together and adjusting supports with permission. / Consent-based information sharing: Confirming authorization and sharing only information needed for coordinated support.
B. Role clarification: Clarifying who contacts caregivers and who monitors a school support. / Consent-based information sharing: Confirming authorization and sharing only information needed for coordinated support.
C. Role clarification: Clarifying who contacts caregivers and who monitors a school support. / Consent-based information sharing: Helping the family make contact with a community service and checking whether connection occurred.
D. Role clarification: Confirming authorization and sharing only information needed for coordinated support. / Consent-based information sharing: Clarifying who contacts caregivers and who monitors a school support.

0940. Which option is the clearest practical expression of Role clarification?

A. Reviewing attendance or wellbeing data together and adjusting supports with permission.
B. Clarifying who contacts caregivers and who monitors a school support.
C. Documenting who will take each agreed next step and when progress will be reviewed.
D. Confirming authorization and sharing only information needed for coordinated support.

0941. During service review in the behavior-support review, a service navigator describes translating needs across systems without taking over another partner's responsibilities. for a child aged 8. Which course idea is most applicable?

A. Warm referral
B. Interprofessional collaboration
C. Role clarification
D. Boundary spanning

0942. For a student aged 15 seen in the family resource center, the program coordinator recommends a plan built around confirming authorization and sharing only information needed for coordinated support. Which concept is reflected?

A. Boundary spanning
B. Consent-based information sharing
C. Community-based participatory practice
D. Shared care plan

0943. Which course concept is defined as follows: Connecting organizations or professional groups while respecting each role's authority and accountability.

A. Interprofessional collaboration
B. Boundary spanning
C. Collaborative problem solving
D. Community-based participatory practice

0944. In school-community collaboration, which statement accurately contrasts the course concepts Interprofessional collaboration and Consent-based information sharing?

A. Interprofessional collaboration: Coordinated work among professionals who contribute distinct expertise toward shared client goals. / Consent-based information sharing: Explicit agreement about each partner's responsibilities, authority, and limits.
B. Interprofessional collaboration: Exchange of relevant information under valid permission and applicable privacy requirements. / Consent-based information sharing: Coordinated work among professionals who contribute distinct expertise toward shared client goals.
C. Interprofessional collaboration: Identification of local strengths, organizations, relationships, and resources relevant to community goals. / Consent-based information sharing: Exchange of relevant information under valid permission and applicable privacy requirements.
D. Interprofessional collaboration: Coordinated work among professionals who contribute distinct expertise toward shared client goals. / Consent-based information sharing: Exchange of relevant information under valid permission and applicable privacy requirements.

0945. In a case note about a young adolescent client, a member of a clinical team working in the supervision meeting records this priority: helping the family make contact with a community service and checking whether connection occurred. What principle is reflected?

A. Role clarification
B. Warm referral
C. Community-based participatory practice
D. Outcome feedback loop

0946. What is the central meaning of Warm referral?

A. Identification of local strengths, organizations, relationships, and resources relevant to community goals.
B. An active, supported connection from one service to another that reduces barriers to follow-through.
C. Coordinated work among professionals who contribute distinct expertise toward shared client goals.
D. Connecting organizations or professional groups while respecting each role's authority and accountability.

0947. At a case-planning meeting, the clinical supervisor proposes helping the family make contact with a community service and checking whether connection occurred. for a child of elementary-school age seen in the behavior-support review. Which concept does this illustrate?

A. Consent-based information sharing
B. Warm referral
C. Collaborative problem solving
D. Interprofessional collaboration

0948. Choose the definition pair that correctly explains Community asset mapping first and Boundary spanning second.

A. Community asset mapping: A structured process in which partners define a concern, generate options, test a plan, and review outcomes. / Boundary spanning: Connecting organizations or professional groups while respecting each role's authority and accountability.
B. Community asset mapping: Connecting organizations or professional groups while respecting each role's authority and accountability. / Boundary spanning: Identification of local strengths, organizations, relationships, and resources relevant to community goals.
C. Community asset mapping: Identification of local strengths, organizations, relationships, and resources relevant to community goals. / Boundary spanning: A coordinated, mutually understood set of goals, responsibilities, and follow-up steps across helpers.
D. Community asset mapping: Identification of local strengths, organizations, relationships, and resources relevant to community goals. / Boundary spanning: Connecting organizations or professional groups while respecting each role's authority and accountability.

0949. A student confuses Shared care plan with Role clarification. Which explanation most accurately separates them?

A. Shared care plan: Connecting organizations or professional groups while respecting each role's authority and accountability. / Role clarification: Explicit agreement about each partner's responsibilities, authority, and limits.
B. Shared care plan: Explicit agreement about each partner's responsibilities, authority, and limits. / Role clarification: A coordinated, mutually understood set of goals, responsibilities, and follow-up steps across helpers.
C. Shared care plan: A coordinated, mutually understood set of goals, responsibilities, and follow-up steps across helpers. / Role clarification: Explicit agreement about each partner's responsibilities, authority, and limits.
D. Shared care plan: A coordinated, mutually understood set of goals, responsibilities, and follow-up steps across helpers. / Role clarification: Identification of local strengths, organizations, relationships, and resources relevant to community goals.

0950. Which statement shows a sound practice-level distinction between Shared care plan and Boundary spanning?

A. Shared care plan: Translating needs across systems without taking over another partner’s responsibilities. / Boundary spanning: Documenting who will take each agreed next step and when progress will be reviewed.
B. Shared care plan: Documenting who will take each agreed next step and when progress will be reviewed. / Boundary spanning: Translating needs across systems without taking over another partner’s responsibilities.
C. Shared care plan: Agreeing on roles and communication with school and community partners, subject to permission. / Boundary spanning: Translating needs across systems without taking over another partner’s responsibilities.
D. Shared care plan: Documenting who will take each agreed next step and when progress will be reviewed. / Boundary spanning: Clarifying who contacts caregivers and who monitors a school support.

0951. At the community youth program, a research trainee reviews whether a plan for a child of elementary-school age is appropriate. The relevant practice is confirming authorization and sharing only information needed for coordinated support. Which concept is tested?

A. Consent-based information sharing
B. Shared care plan
C. Community asset mapping
D. Role clarification

0952. A planning meeting about a young person aged 10 includes a school support specialist. The proposed practice in the family session is helping the family make contact with a community service and checking whether connection occurred. Which idea underlies it?

A. Shared care plan
B. Warm referral
C. Outcome feedback loop
D. Consent-based information sharing

0953. Which named construct is captured by this account? Connecting organizations or professional groups while respecting each role’s authority and accountability.

A. Community-based participatory practice
B. Community asset mapping
C. Collaborative problem solving
D. Boundary spanning

0954. At the after-school program, a program coordinator reviews whether a plan for a school-age child is appropriate. The relevant practice is translating needs across systems without taking over another partner’s responsibilities. Which concept is tested?

A. Shared care plan
B. Outcome feedback loop
C. Boundary spanning
D. Community asset mapping

0955. How are Role clarification and Warm referral most accurately differentiated in this curriculum?

A. Role clarification: Explicit agreement about each partner’s responsibilities, authority, and limits. / Warm referral: Identification of local strengths, organizations, relationships, and resources relevant to community goals.
B. Role clarification: Explicit agreement about each partner’s responsibilities, authority, and limits. / Warm referral: An active, supported connection from one service to another that reduces barriers to follow-through.
C. Role clarification: A structured process in which partners define a concern, generate options, test a plan, and review outcomes. / Warm referral: An active, supported connection from one service to another that reduces barriers to follow-through.
D. Role clarification: An active, supported connection from one service to another that reduces barriers to follow-through. / Warm referral: Explicit agreement about each partner’s responsibilities, authority, and limits.

0956. Which statement shows a sound practice-level distinction between Community asset mapping and Role clarification?

A. Community asset mapping: Mapping existing youth programs and trusted community networks before planning a new service. / Role clarification: Clarifying who contacts caregivers and who monitors a school support.
B. Community asset mapping: Agreeing on a measurable concern, trying one support, and reconvening to evaluate it. / Role clarification: Clarifying who contacts caregivers and who monitors a school support.
C. Community asset mapping: Mapping existing youth programs and trusted community networks before planning a new service. / Role clarification: Reviewing attendance or wellbeing data together and adjusting supports with permission.
D. Community asset mapping: Clarifying who contacts caregivers and who monitors a school support. / Role clarification: Mapping existing youth programs and trusted community networks before planning a new service.

0957. Select the best explanation of Consent-based information sharing.

A. Connecting organizations or professional groups while respecting each role’s authority and accountability.
B. A structured process in which partners define a concern, generate options, test a plan, and review outcomes.
C. Exchange of relevant information under valid permission and applicable privacy requirements.
D. A partnership in which community members share influence in defining questions, actions, and interpretation.

0958. How are Collaborative problem solving and Boundary spanning most accurately differentiated in this curriculum?

A. Collaborative problem solving: A coordinated, mutually understood set of goals, responsibilities, and follow-up steps across helpers. / Boundary spanning: Connecting organizations or professional groups while respecting each role’s authority and accountability.
B. Collaborative problem solving: A structured process in which partners define a concern, generate options, test a plan, and review outcomes. / Boundary spanning: Connecting organizations or professional groups while respecting each role’s authority and accountability.
C. Collaborative problem solving: Connecting organizations or professional groups while respecting each role’s authority and accountability. / Boundary spanning: A structured process in which partners define a concern, generate options, test a plan, and review outcomes.
D. Collaborative problem solving: A structured process in which partners define a concern, generate options, test a plan, and review outcomes. / Boundary spanning: Regular use of shared outcome information to adapt coordinated services.

0959. In school-community collaboration, consider a child aged 6 receiving help in the multidisciplinary case conference. The youth worker focuses on agreeing on roles and communication with school and community partners, subject to permission. Which term best describes the guiding idea?

A. Role clarification
B. Interprofessional collaboration
C. Community-based participatory practice
D. Community asset mapping

0960. Which professional action most closely applies Role clarification?

A. Involving youth and community partners in decisions throughout a project, not only at launch.
B. Agreeing on roles and communication with school and community partners, subject to permission.
C. Clarifying who contacts caregivers and who monitors a school support.
D. Agreeing on a measurable concern, trying one support, and reconvening to evaluate it.

0961. Which option correctly matches each concept to its practice focus: Collaborative problem solving and Warm referral?

A. Collaborative problem solving: Agreeing on a measurable concern, trying one support, and reconvening to evaluate it. / Warm referral: Helping the family make contact with a community service and checking whether connection occurred.
B. Collaborative problem solving: Agreeing on roles and communication with school and community partners, subject to permission. / Warm referral: Helping the family make contact with a community service and checking whether connection occurred.
C. Collaborative problem solving: Agreeing on a measurable concern, trying one support, and reconvening to evaluate it. / Warm referral: Documenting who will take each agreed next step and when progress will be reviewed.
D. Collaborative problem solving: Helping the family make contact with a community service and checking whether connection occurred. / Warm referral: Agreeing on a measurable concern, trying one support, and reconvening to evaluate it.

0962. A older adolescent client and a mental-health professional are reviewing goals in the family session. The agreed action is reviewing attendance or wellbeing data together and adjusting supports with permission. Which principle best accounts for it?

A. Outcome feedback loop
B. Interprofessional collaboration
C. Boundary spanning
D. Shared care plan

0963. A middle-school student and a consultant are reviewing goals in the youth group. The agreed action is mapping existing youth programs and trusted community networks before planning a new service. Which principle best accounts for it?

A. Outcome feedback loop
B. Community-based participatory practice
C. Interprofessional collaboration
D. Community asset mapping

0964. At the family resource center, a research trainee reviews whether a plan for a young person aged 10 is appropriate. The relevant practice is reviewing attendance or wellbeing data together and adjusting supports with permission. Which concept is tested?

A. Outcome feedback loop
B. Community asset mapping
C. Interprofessional collaboration
D. Collaborative problem solving

0965. A preadolescent child is receiving support in the school counseling office. The school counselor is guided by this practice: helping the family make contact with a community service and checking whether connection occurred. Which principle best fits?

A. Community asset mapping
B. Interprofessional collaboration
C. Role clarification
D. Warm referral

0966. Which paired example correctly applies Community-based participatory practice first and Outcome feedback loop second?

A. Community-based participatory practice: Reviewing attendance or wellbeing data together and adjusting supports with permission. / Outcome feedback loop: Involving youth and community partners in decisions throughout a project, not only at launch.
B. Community-based participatory practice: Involving youth and community partners in decisions throughout a project, not only at launch. / Outcome feedback loop: Reviewing attendance or wellbeing data together and adjusting supports with permission.
C. Community-based participatory practice: Involving youth and community partners in decisions throughout a project, not only at launch. / Outcome feedback loop: Agreeing on roles and communication with school and community partners, subject to permission.
D. Community-based participatory practice: Agreeing on a measurable concern, trying one support, and reconvening to evaluate it. / Outcome feedback loop: Reviewing attendance or wellbeing data together and adjusting supports with permission.

0967. Choose the term that matches this definition: Connecting organizations or professional groups while respecting each role's authority and accountability.

A. Boundary spanning
B. Warm referral
C. Consent-based information sharing
D. Interprofessional collaboration

0968. In a professional consultation about a school-age child, the supervised trainee describes this response in the multidisciplinary case conference: mapping existing youth programs and trusted community networks before planning a new service. Which term is most apt?

A. Community-based participatory practice
B. Community asset mapping
C. Collaborative problem solving
D. Interprofessional collaboration

0969. In school-community collaboration, in the school consultation, the agreed focus for a research trainee working with a student aged 12 is agreeing on roles and communication with school and community partners, subject to permission. Which concept names this focus?

A. Shared care plan
B. Interprofessional collaboration
C. Outcome feedback loop
D. Community-based participatory practice

0970. At a case-planning meeting, the school support specialist proposes involving youth and community partners in decisions throughout a project, not only at launch. for a preadolescent child seen in the community service agency. Which concept does this illustrate?

A. Boundary spanning
B. Interprofessional collaboration
C. Community-based participatory practice
D. Role clarification

0971. A supervisor asks for an applied contrast between Shared care plan and Community asset mapping. Which option fits?

A. Shared care plan: Documenting who will take each agreed next step and when progress will be reviewed. / Community asset mapping: Mapping existing youth programs and trusted community networks before planning a new service.
B. Shared care plan: Mapping existing youth programs and trusted community networks before planning a new service. / Community asset mapping: Documenting who will take each agreed next step and when progress will be reviewed.
C. Shared care plan: Documenting who will take each agreed next step and when progress will be reviewed. / Community asset mapping: Clarifying who contacts caregivers and who monitors a school support.
D. Shared care plan: Confirming authorization and sharing only information needed for coordinated support. / Community asset mapping: Mapping existing youth programs and trusted community networks before planning a new service.

0972. Which option pairs the definitions of Shared care plan and Consent-based information sharing correctly, in that order?

A. Shared care plan: A coordinated, mutually understood set of goals, responsibilities, and follow-up steps across helpers. / Consent-based information sharing: Regular use of shared outcome information to adapt coordinated services.
B. Shared care plan: A coordinated, mutually understood set of goals, responsibilities, and follow-up steps across helpers. / Consent-based information sharing: Exchange of relevant information under valid permission and applicable privacy requirements.
C. Shared care plan: Exchange of relevant information under valid permission and applicable privacy requirements. / Consent-based information sharing: A coordinated, mutually understood set of goals, responsibilities, and follow-up steps across helpers.
D. Shared care plan: A structured process in which partners define a concern, generate options, test a plan, and review outcomes. / Consent-based information sharing: Exchange of relevant information under valid permission and applicable privacy requirements.

0973. A behavior specialist is asked to evaluate a proposed service for a child aged 6 in the community mental-health service. The defining feature is documenting who will take each agreed next step and when progress will be reviewed. Which concept fits?

A. Interprofessional collaboration
B. Consent-based information sharing
C. Boundary spanning
D. Shared care plan

0974. A play therapist reviews a plan for a middle-school student in the learning-support meeting. The plan emphasizes agreeing on a measurable concern, trying one support, and reconvening to evaluate it. Which course idea does this reflect?

A. Collaborative problem solving
B. Role clarification
C. Warm referral
D. Consent-based information sharing

0975. In the caregiver consultation, a school-based clinician is considering this approach for a child aged 6: involving youth and community partners in decisions throughout a project, not only at launch. Which framework does it represent?

A. Community asset mapping
B. Interprofessional collaboration
C. Boundary spanning
D. Community-based participatory practice

0976. A service team discusses a student aged 9 in the outpatient clinic. Their proposed next step is helping the family make contact with a community service and checking whether connection occurred. Which course concept supports it?

A. Warm referral
B. Community-based participatory practice
C. Consent-based information sharing
D. Shared care plan

0977. Which option pairs the definitions of Role clarification and Outcome feedback loop correctly, in that order?

A. Role clarification: Explicit agreement about each partner's responsibilities, authority, and limits. / Outcome feedback loop: Connecting organizations or professional groups while respecting each role's authority and accountability.
B. Role clarification: Coordinated work among professionals who contribute distinct expertise toward shared client goals. / Outcome feedback loop: Regular use of shared outcome information to adapt coordinated services.
C. Role clarification: Explicit agreement about each partner's responsibilities, authority, and limits. / Outcome feedback loop: Regular use of shared outcome information to adapt coordinated services.
D. Role clarification: Regular use of shared outcome information to adapt coordinated services. / Outcome feedback loop: Explicit agreement about each partner's responsibilities, authority, and limits.

0978. In the child guidance clinic, a consulting counselor explains why a adolescent student would benefit from clarifying who contacts caregivers and who monitors a school support. Which course concept underpins the explanation?

A. Consent-based information sharing
B. Outcome feedback loop
C. Role clarification
D. Collaborative problem solving

0979. At the parent meeting, a program coordinator reviews whether a plan for a child aged 7 is appropriate. The relevant practice is clarifying who contacts caregivers and who monitors a school support. Which concept is tested?

A. Consent-based information sharing
B. Role clarification
C. Warm referral
D. Boundary spanning

0980. Which option is the clearest practical expression of Consent-based information sharing?

A. Confirming authorization and sharing only information needed for coordinated support.
B. Reviewing attendance or wellbeing data together and adjusting supports with permission.
C. Agreeing on a measurable concern, trying one support, and reconvening to evaluate it.
D. Involving youth and community partners in decisions throughout a project, not only at launch.

0981. In school-community collaboration, a trainee must choose a practice that exemplifies Interprofessional collaboration. Which action is the best fit?

A. Translating needs across systems without taking over another partner's responsibilities.
B. Agreeing on a measurable concern, trying one support, and reconvening to evaluate it.
C. Agreeing on roles and communication with school and community partners, subject to permission.
D. Reviewing attendance or wellbeing data together and adjusting supports with permission.

0982. A case discussion concerns a child aged 14 and a caregiver working with a counselor in the school-based service. The practitioner is considering confirming authorization and sharing only information needed for coordinated support. Which principle is involved?

A. Warm referral
B. Consent-based information sharing
C. Outcome feedback loop
D. Shared care plan

0983. A teacher and counselor is asked to justify a plan for a client in early adolescence in the student-support meeting. It calls for clarifying who contacts caregivers and who monitors a school support. Which concept provides the rationale?

A. Interprofessional collaboration
B. Community asset mapping
C. Role clarification
D. Consent-based information sharing

0984. A member of a clinical team prepares for a session in the counseling practicum with a child aged 8. The intended approach is mapping existing youth programs and trusted community networks before planning a new service. Which concept is most relevant?

A. Community asset mapping
B. Shared care plan
C. Community-based participatory practice
D. Outcome feedback loop

0985. A team must select a support approach for a child aged 14 at the school-based service. The caregiver working with a counselor recommends confirming authorization and sharing only information needed for coordinated support. Which idea is most relevant?

A. Community asset mapping
B. Consent-based information sharing
C. Community-based participatory practice
D. Interprofessional collaboration

0986. Choose the definition pair that correctly explains Consent-based information sharing first and Outcome feedback loop second.

A. Consent-based information sharing: Exchange of relevant information under valid permission and applicable privacy requirements. / Outcome feedback loop: Regular use of shared outcome information to adapt coordinated services.
B. Consent-based information sharing: A partnership in which community members share influence in defining questions, actions, and interpretation. / Outcome feedback loop: Regular use of shared outcome information to adapt coordinated services.
C. Consent-based information sharing: Exchange of relevant information under valid permission and applicable privacy requirements. / Outcome feedback loop: A coordinated, mutually understood set of goals, responsibilities, and follow-up steps across helpers.
D. Consent-based information sharing: Regular use of shared outcome information to adapt coordinated services. / Outcome feedback loop: Exchange of relevant information under valid permission and applicable privacy requirements.

0987. Which choice aligns each practice with the correct idea, Community asset mapping or Warm referral?

A. Community asset mapping: Confirming authorization and sharing only information needed for coordinated support. / Warm referral: Helping the family make contact with a community service and checking whether connection occurred.
B. Community asset mapping: Mapping existing youth programs and trusted community networks before planning a new service. / Warm referral: Helping the family make contact with a community service and checking whether connection occurred.
C. Community asset mapping: Helping the family make contact with a community service and checking whether connection occurred. / Warm referral: Mapping existing youth programs and trusted community networks before planning a new service.
D. Community asset mapping: Mapping existing youth programs and trusted community networks before planning a new service. / Warm referral: Agreeing on a measurable concern, trying one support, and reconvening to evaluate it.

0988. During work in the supervision meeting, a school counselor identifies this need: confirming authorization and sharing only information needed for coordinated support. Which idea should guide the response?

A. Consent-based information sharing
B. Shared care plan
C. Role clarification
D. Community asset mapping

0989. While consulting in the multidisciplinary case conference, a supervised trainee supports a school-age child by using this approach: mapping existing youth programs and trusted community networks before planning a new service. Which concept is being applied?

A. Role clarification
B. Collaborative problem solving
C. Community-based participatory practice
D. Community asset mapping

0990. A school-based clinician presents a support plan for a child aged 14 at the learning-support meeting. Its central feature is reviewing attendance or wellbeing data together and adjusting supports with permission. Which concept should be named?

A. Outcome feedback loop
B. Consent-based information sharing
C. Interprofessional collaboration
D. Boundary spanning

0991. Which description belongs with the term Collaborative problem solving?

A. A coordinated, mutually understood set of goals, responsibilities, and follow-up steps across helpers.
B. Exchange of relevant information under valid permission and applicable privacy requirements.
C. A structured process in which partners define a concern, generate options, test a plan, and review outcomes.
D. Connecting organizations or professional groups while respecting each role's authority and accountability.

0992. At the classroom support meeting, a therapist reviews whether a plan for a young adolescent client is appropriate. The relevant practice is involving youth and community partners in decisions throughout a project, not only at launch. Which concept is tested?

A. Collaborative problem solving
B. Boundary spanning
C. Community-based participatory practice
D. Consent-based information sharing

0993. Choose the term that matches this definition: Explicit agreement about each partner’s responsibilities, authority, and limits.

A. Boundary spanning
B. Community asset mapping
C. Warm referral
D. Role clarification

0994. A planning meeting about a adolescent student includes a counselor. The proposed practice in the multidisciplinary case conference is reviewing attendance or wellbeing data together and adjusting supports with permission. Which idea underlies it?

A. Outcome feedback loop
B. Collaborative problem solving
C. Interprofessional collaboration
D. Shared care plan

0995. Which option pairs the definitions of Community asset mapping and Boundary spanning correctly, in that order?

A. Community asset mapping: Connecting organizations or professional groups while respecting each role’s authority and accountability. / Boundary spanning: Identification of local strengths, organizations, relationships, and resources relevant to community goals.
B. Community asset mapping: A structured process in which partners define a concern, generate options, test a plan, and review outcomes. / Boundary spanning: Connecting organizations or professional groups while respecting each role’s authority and accountability.
C. Community asset mapping: Identification of local strengths, organizations, relationships, and resources relevant to community goals. / Boundary spanning: A coordinated, mutually understood set of goals, responsibilities, and follow-up steps across helpers.
D. Community asset mapping: Identification of local strengths, organizations, relationships, and resources relevant to community goals. / Boundary spanning: Connecting organizations or professional groups while respecting each role’s authority and accountability.

0996. In school-community collaboration, which option pairs the definitions of Interprofessional collaboration and Outcome feedback loop correctly, in that order?

A. Interprofessional collaboration: Coordinated work among professionals who contribute distinct expertise toward shared client goals. / Outcome feedback loop: Regular use of shared outcome information to adapt coordinated services.
B. Interprofessional collaboration: Regular use of shared outcome information to adapt coordinated services. / Outcome feedback loop: Coordinated work among professionals who contribute distinct expertise toward shared client goals.
C. Interprofessional collaboration: Coordinated work among professionals who contribute distinct expertise toward shared client goals. / Outcome feedback loop: Explicit agreement about each partner’s responsibilities, authority, and limits.
D. Interprofessional collaboration: An active, supported connection from one service to another that reduces barriers to follow-through. / Outcome feedback loop: Regular use of shared outcome information to adapt coordinated services.

0997. A planning meeting about a high-school student includes a behavior specialist. The proposed practice in the caregiver consultation is translating needs across systems without taking over another partner’s responsibilities. Which idea underlies it?

A. Shared care plan
B. Boundary spanning
C. Collaborative problem solving
D. Community asset mapping

0998. A supervisor asks how Collaborative problem solving would appear in practice. Which choice should be selected?

A. Agreeing on roles and communication with school and community partners, subject to permission.
B. Involving youth and community partners in decisions throughout a project, not only at launch.
C. Agreeing on a measurable concern, trying one support, and reconvening to evaluate it.
D. Confirming authorization and sharing only information needed for coordinated support.

0999. In school-community collaboration, a case conference reviews a community practitioner’s work with a older adolescent client in the supervision meeting: agreeing on roles and communication with school and community partners, subject to permission. Which principle is central?

A. Boundary spanning
B. Community asset mapping
C. Interprofessional collaboration
D. Consent-based information sharing

1000. A assessment clinician and a middle-school student are discussing support in the multidisciplinary case conference. The selected practice is involving youth and community partners in decisions throughout a project, not only at launch. Which concept does this demonstrate?

A. Community asset mapping
B. Collaborative problem solving
C. Community-based participatory practice
D. Consent-based information sharing

CAC.928 | Advanced Techniques in Family Therapy

QUESTION BANK | 1,000 ITEMS | ANSWERS AT THE END

0001. In advanced family therapy, choose the definition pair that correctly explains Circular questioning first and Joining second.

A. Circular questioning: Questions that explore differences in perceptions and reciprocal interaction among family members. / Joining: Offering an alternative meaning for a behavior or interaction to support a less blaming and more useful understanding.
B. Circular questioning: A tentative explanation linking a concern to interactional patterns, to be collaboratively tested and revised. / Joining: A therapist's process of building rapport and adapting to a family's communication style while maintaining clinical purpose.
C. Circular questioning: A therapist's process of building rapport and adapting to a family's communication style while maintaining clinical purpose. / Joining: Questions that explore differences in perceptions and reciprocal interaction among family members.
D. Circular questioning: Questions that explore differences in perceptions and reciprocal interaction among family members. / Joining: A therapist's process of building rapport and adapting to a family's communication style while maintaining clinical purpose.

0002. In advanced family therapy, which applied comparison correctly identifies what belongs to Enactment versus Circular questioning?

A. Enactment: Describing a behavior's possible protective intent while still addressing its impact. / Circular questioning: Asking one person how another reacts when a third person withdraws.
B. Enactment: Asking family members to discuss a current issue directly while the therapist observes interaction. / Circular questioning: Asking one person how another reacts when a third person withdraws.
C. Enactment: Asking family members to discuss a current issue directly while the therapist observes interaction. / Circular questioning: Inviting voluntary spatial representation of closeness or distance and processing members' meanings.
D. Enactment: Asking one person how another reacts when a third person withdraws. / Circular questioning: Asking family members to discuss a current issue directly while the therapist observes interaction.

0003. A case conference asks for a distinction between Reframing and Exception seeking. Which answer is sound?

A. Reframing: Identifying times a problem is absent or less influential to discover resources and conditions for change. / Exception seeking: Offering an alternative meaning for a behavior or interaction to support a less blaming and more useful understanding.
B. Reframing: Offering an alternative meaning for a behavior or interaction to support a less blaming and more useful understanding. / Exception seeking: Identifying times a problem is absent or less influential to discover resources and conditions for change.
C. Reframing: Offering an alternative meaning for a behavior or interaction to support a less blaming and more useful understanding. / Exception seeking: A tentative explanation linking a concern to interactional patterns, to be collaboratively tested and revised.
D. Reframing: A therapist's process of building rapport and adapting to a family's communication style while maintaining clinical purpose. / Exception seeking: Identifying times a problem is absent or less influential to discover resources and conditions for change.

0004. A client in early adolescence and a assessment clinician are reviewing goals in the student wellness team. The agreed action is asking when the family concern is less intense and what is different at those times. Which principle best accounts for it?

A. Joining
B. Exception seeking
C. Systemic hypothesis
D. Enactment

0005. In advanced family therapy, which option pairs the definitions of Circular questioning and Systemic hypothesis correctly, in that order?

A. Circular questioning: A tentative explanation linking a concern to interactional patterns, to be collaboratively tested and revised. / Systemic hypothesis: Questions that explore differences in perceptions and reciprocal interaction among family members.
B. Circular questioning: An experiential technique in which members arrange positions or posture to represent relational experience. / Systemic hypothesis: A tentative explanation linking a concern to interactional patterns, to be collaboratively tested and revised.
C. Circular questioning: Questions that explore differences in perceptions and reciprocal interaction among family members. / Systemic hypothesis: Offering an alternative meaning for a behavior or interaction to support a less blaming and more useful understanding.
D. Circular questioning: Questions that explore differences in perceptions and reciprocal interaction among family members. / Systemic hypothesis: A tentative explanation linking a concern to interactional patterns, to be collaboratively tested and revised.

0006. Which description belongs with the term Restructuring?

A. A structural family therapy technique inviting family members to interact in session so patterns can be observed.
B. Reducing a pattern in which a third person is drawn into tension between two others.
C. Therapeutic interventions intended to alter interaction patterns, boundaries, or family organization.
D. A diagram of family relationships and patterns across generations.

0007. A family therapist presents a support plan for a child aged 8 at the community service agency. Its central feature is describing a behavior's possible protective intent while still addressing its impact. Which concept should be named?

A. Reframing
B. Circular questioning
C. Enactment
D. De-triangulation

0008. Which option correctly matches each concept to its practice focus: Reframing and Family sculpting?

A. Reframing: Inviting voluntary spatial representation of closeness or distance and processing members' meanings. / Family sculpting: Describing a behavior's possible protective intent while still addressing its impact.
B. Reframing: Describing a behavior's possible protective intent while still addressing its impact. / Family sculpting: Asking when the family concern is less intense and what is different at those times.
C. Reframing: Asking family members to discuss a current issue directly while the therapist observes interaction. / Family sculpting: Inviting voluntary spatial representation of closeness or distance and processing members' meanings.
D. Reframing: Describing a behavior's possible protective intent while still addressing its impact. / Family sculpting: Inviting voluntary spatial representation of closeness or distance and processing members' meanings.

0009. What is the central meaning of Systemic hypothesis?

A. Questions that explore differences in perceptions and reciprocal interaction among family members.
B. An experiential technique in which members arrange positions or posture to represent relational experience.
C. Therapeutic interventions intended to alter interaction patterns, boundaries, or family organization.
D. A tentative explanation linking a concern to interactional patterns, to be collaboratively tested and revised.

0010. A trainee must choose a practice that exemplifies Enactment. Which action is the best fit?

A. Describing a behavior's possible protective intent while still addressing its impact.
B. Asking family members to discuss a current issue directly while the therapist observes interaction.
C. Asking one person how another reacts when a third person withdraws.
D. Supporting a caregiver subsystem to take a clearer leadership role during a family interaction.

0011. A assessment clinician is preparing a follow-up plan for a young person aged 18 in the child guidance clinic. The plan calls for asking family members to discuss a current issue directly while the therapist observes interaction. Which concept names this approach?

A. Family sculpting
B. Circular questioning
C. Enactment
D. Reframing

0012. A doctoral student reads the following description. Which concept does it define? A structural family therapy technique inviting family members to interact in session so patterns can be observed.

A. Systemic hypothesis
B. Restructuring
C. Family sculpting
D. Enactment

0013. Identify the most precise label for this idea: Therapeutic interventions intended to alter interaction patterns, boundaries, or family organization.

A. Exception seeking
B. Enactment
C. Systemic hypothesis
D. Restructuring

0014. Which description belongs with the term Enactment?

A. Offering an alternative meaning for a behavior or interaction to support a less blaming and more useful understanding.
B. A structural family therapy technique inviting family members to interact in session so patterns can be observed.
C. Therapeutic interventions intended to alter interaction patterns, boundaries, or family organization.
D. Questions that explore differences in perceptions and reciprocal interaction among family members.

0015. At the school-based service, a counselor meets with a child aged 7. The practice priority is: supporting a caregiver subsystem to take a clearer leadership role during a family interaction. Which concept best captures that priority?

A. Restructuring
B. Exception seeking
C. Circular questioning
D. Reframing

0016. A program coordinator describes an intervention for a adolescent student in the learning-support meeting, centered on helping caregivers address their disagreement directly rather than recruiting the child as messenger. Which named idea is most relevant?

A. Reframing
B. Joining
C. Circular questioning
D. De-triangulation

0017. Consider a client in early adolescence receiving help in the child guidance clinic. The school counselor focuses on inviting voluntary spatial representation of closeness or distance and processing members' meanings. Which term best describes the guiding idea?

A. Enactment
B. De-triangulation
C. Family sculpting
D. Reframing

0018. A supervisor asks for an applied contrast between Exception seeking and Family sculpting. Which option fits?

A. Exception seeking: Asking when the family concern is less intense and what is different at those times. / Family sculpting: Inviting voluntary spatial representation of closeness or distance and processing members' meanings.
B. Exception seeking: Inviting voluntary spatial representation of closeness or distance and processing members' meanings. / Family sculpting: Asking when the family concern is less intense and what is different at those times.
C. Exception seeking: Asking family members to discuss a current issue directly while the therapist observes interaction. / Family sculpting: Inviting voluntary spatial representation of closeness or distance and processing members' meanings.
D. Exception seeking: Asking when the family concern is less intense and what is different at those times. / Family sculpting: Describing a behavior's possible protective intent while still addressing its impact.

0019. Choose the practice comparison that best separates Enactment from Restructuring.

A. Enactment: Asking family members to discuss a current issue directly while the therapist observes interaction. / Restructuring: Supporting a caregiver subsystem to take a clearer leadership role during a family interaction.
B. Enactment: Supporting a caregiver subsystem to take a clearer leadership role during a family interaction. / Restructuring: Asking family members to discuss a current issue directly while the therapist observes interaction.
C. Enactment: Describing a behavior's possible protective intent while still addressing its impact. / Restructuring: Supporting a caregiver subsystem to take a clearer leadership role during a family interaction.
D. Enactment: Asking family members to discuss a current issue directly while the therapist observes interaction. / Restructuring: Asking when the family concern is less intense and what is different at those times.

0020. Which comparison correctly distinguishes Restructuring from Systemic hypothesis?

A. Restructuring: A tentative explanation linking a concern to interactional patterns, to be collaboratively tested and revised. / Systemic hypothesis: Therapeutic interventions intended to alter interaction patterns, boundaries, or family organization.
B. Restructuring: An experiential technique in which members arrange positions or posture to represent relational experience. / Systemic hypothesis: A tentative explanation linking a concern to interactional patterns, to be collaboratively tested and revised.
C. Restructuring: Therapeutic interventions intended to alter interaction patterns, boundaries, or family organization. / Systemic hypothesis: A tentative explanation linking a concern to interactional patterns, to be collaboratively tested and revised.
D. Restructuring: Therapeutic interventions intended to alter interaction patterns, boundaries, or family organization. / Systemic hypothesis: Reducing a pattern in which a third person is drawn into tension between two others.

0021. In advanced family therapy, while consulting in the school-based service, a assessment clinician supports a young person aged 10 by using this approach: asking one person how another reacts when a third person withdraws. Which concept is being applied?

A. Enactment
B. Reframing
C. Circular questioning
D. Joining

0022. Identify the most precise label for this idea: Offering an alternative meaning for a behavior or interaction to support a less blaming and more useful understanding.

A. Genogram
B. Restructuring
C. Reframing
D. Family sculpting

0023. How should a practitioner distinguish the applications of Restructuring and Systemic hypothesis?

A. Restructuring: Supporting a caregiver subsystem to take a clearer leadership role during a family interaction. / Systemic hypothesis: Helping caregivers address their disagreement directly rather than recruiting the child as messenger.
B. Restructuring: Supporting a caregiver subsystem to take a clearer leadership role during a family interaction. / Systemic hypothesis: Offering a provisional relational hypothesis and checking whether family members find it useful.
C. Restructuring: Offering a provisional relational hypothesis and checking whether family members find it useful. / Systemic hypothesis: Supporting a caregiver subsystem to take a clearer leadership role during a family interaction.
D. Restructuring: Inviting voluntary spatial representation of closeness or distance and processing members' meanings. / Systemic hypothesis: Offering a provisional relational hypothesis and checking whether family members find it useful.

0024. In advanced family therapy, choose the practice comparison that best separates Circular questioning from Family sculpting.

A. Circular questioning: Helping caregivers address their disagreement directly rather than recruiting the child as messenger. / Family sculpting: Inviting voluntary spatial representation of closeness or distance and processing members' meanings.
B. Circular questioning: Inviting voluntary spatial representation of closeness or distance and processing members' meanings. / Family sculpting: Asking one person how another reacts when a third person withdraws.
C. Circular questioning: Asking one person how another reacts when a third person withdraws. / Family sculpting: Inviting voluntary spatial representation of closeness or distance and processing members' meanings.
D. Circular questioning: Asking one person how another reacts when a third person withdraws. / Family sculpting: Offering a provisional relational hypothesis and checking whether family members find it useful.

0025. Which option preserves the correct meaning of both Enactment and Exception seeking?

A. Enactment: Reducing a pattern in which a third person is drawn into tension between two others. / Exception seeking: Identifying times a problem is absent or less influential to discover resources and conditions for change.
B. Enactment: A structural family therapy technique inviting family members to interact in session so patterns can be observed. / Exception seeking: Identifying times a problem is absent or less influential to discover resources and conditions for change.
C. Enactment: A structural family therapy technique inviting family members to interact in session so patterns can be observed. / Exception seeking: An experiential technique in which members arrange positions or posture to represent relational experience.
D. Enactment: Identifying times a problem is absent or less influential to discover resources and conditions for change. / Exception seeking: A structural family therapy technique inviting family members to interact in session so patterns can be observed.

0026. Which option correctly matches each concept to its practice focus: Reframing and Exception seeking?

A. Reframing: Describing a behavior's possible protective intent while still addressing its impact. / Exception seeking: Asking when the family concern is less intense and what is different at those times.
B. Reframing: Asking when the family concern is less intense and what is different at those times. / Exception seeking: Describing a behavior's possible protective intent while still addressing its impact.
C. Reframing: Respectfully matching a family's pace and language to build a working alliance. / Exception seeking: Asking when the family concern is less intense and what is different at those times.
D. Reframing: Describing a behavior's possible protective intent while still addressing its impact. / Exception seeking: Offering a provisional relational hypothesis and checking whether family members find it useful.

0027. In the school consultation, the agreed focus for a research trainee working with a student aged 12 is asking family members to discuss a current issue directly while the therapist observes interaction. Which concept names this focus?

A. Circular questioning
B. Joining
C. Restructuring
D. Enactment

0028. Which applied comparison correctly identifies what belongs to Enactment versus Restructuring?

A. Enactment: Supporting a caregiver subsystem to take a clearer leadership role during a family interaction. / Restructuring: Asking family members to discuss a current issue directly while the therapist observes interaction.
B. Enactment: Describing a behavior's possible protective intent while still addressing its impact. / Restructuring: Supporting a caregiver subsystem to take a clearer leadership role during a family interaction.
C. Enactment: Asking family members to discuss a current issue directly while the therapist observes interaction. / Restructuring: Asking when the family concern is less intense and what is different at those times.
D. Enactment: Asking family members to discuss a current issue directly while the therapist observes interaction. / Restructuring: Supporting a caregiver subsystem to take a clearer leadership role during a family interaction.

0029. A student confuses Restructuring with Family sculpting. Which explanation most accurately separates them?

A. Restructuring: Identifying times a problem is absent or less influential to discover resources and conditions for change. / Family sculpting: An experiential technique in which members arrange positions or posture to represent relational experience.
B. Restructuring: An experiential technique in which members arrange positions or posture to represent relational experience. / Family sculpting: Therapeutic interventions intended to alter interaction patterns, boundaries, or family organization.
C. Restructuring: Therapeutic interventions intended to alter interaction patterns, boundaries, or family organization. / Family sculpting: A structural family therapy technique inviting family members to interact in session so patterns can be observed.
D. Restructuring: Therapeutic interventions intended to alter interaction patterns, boundaries, or family organization. / Family sculpting: An experiential technique in which members arrange positions or posture to represent relational experience.

0030. How should a practitioner distinguish the applications of Joining and De-triangulation?

A. Joining: Helping caregivers address their disagreement directly rather than recruiting the child as messenger. / De-triangulation: Respectfully matching a family's pace and language to build a working alliance.
B. Joining: Asking family members to discuss a current issue directly while the therapist observes interaction. / De-triangulation: Helping caregivers address their disagreement directly rather than recruiting the child as messenger.
C. Joining: Respectfully matching a family's pace and language to build a working alliance. / De-triangulation: Helping caregivers address their disagreement directly rather than recruiting the child as messenger.
D. Joining: Respectfully matching a family's pace and language to build a working alliance. / De-triangulation: Asking when the family concern is less intense and what is different at those times.

0031. Which statement accurately contrasts the course concepts Enactment and Restructuring?

A. Enactment: A structural family therapy technique inviting family members to interact in session so patterns can be observed. / Restructuring: Identifying times a problem is absent or less influential to discover resources and conditions for change.
B. Enactment: Therapeutic interventions intended to alter interaction patterns, boundaries, or family organization. / Restructuring: A structural family therapy technique inviting family members to interact in session so patterns can be observed.
C. Enactment: Offering an alternative meaning for a behavior or interaction to support a less blaming and more useful understanding. / Restructuring: Therapeutic interventions intended to alter interaction patterns, boundaries, or family organization.
D. Enactment: A structural family therapy technique inviting family members to interact in session so patterns can be observed. / Restructuring: Therapeutic interventions intended to alter interaction patterns, boundaries, or family organization.

0032. A child aged 14 is receiving support in the family session. The teacher and counselor is guided by this practice: helping caregivers address their disagreement directly rather than recruiting the child as messenger. Which principle best fits?

A. Genogram
B. De-triangulation
C. Systemic hypothesis
D. Restructuring

0033. In advanced family therapy, a trainee must distinguish how Circular questioning and Exception seeking guide practice. Which comparison is accurate?

A. Circular questioning: Asking when the family concern is less intense and what is different at those times. / Exception seeking: Asking one person how another reacts when a third person withdraws.
B. Circular questioning: Asking one person how another reacts when a third person withdraws. / Exception seeking: Asking when the family concern is less intense and what is different at those times.
C. Circular questioning: Inviting voluntary spatial representation of closeness or distance and processing members' meanings. / Exception seeking: Asking when the family concern is less intense and what is different at those times.
D. Circular questioning: Asking one person how another reacts when a third person withdraws. / Exception seeking: Helping caregivers address their disagreement directly rather than recruiting the child as messenger.

0034. In advanced family therapy, how should a practitioner distinguish the applications of Circular questioning and Family sculpting?

A. Circular questioning: Helping caregivers address their disagreement directly rather than recruiting the child as messenger. / Family sculpting: Inviting voluntary spatial representation of closeness or distance and processing members' meanings.
B. Circular questioning: Asking one person how another reacts when a third person withdraws. / Family sculpting: Inviting voluntary spatial representation of closeness or distance and processing members' meanings.
C. Circular questioning: Asking one person how another reacts when a third person withdraws. / Family sculpting: Offering a provisional relational hypothesis and checking whether family members find it useful.
D. Circular questioning: Inviting voluntary spatial representation of closeness or distance and processing members' meanings. / Family sculpting: Asking one person how another reacts when a third person withdraws.

0035. In a professional consultation about a high-school student, the member of a clinical team describes this response in the community service agency: supporting a caregiver subsystem to take a clearer leadership role during a family interaction. Which term is most apt?

A. Genogram
B. Systemic hypothesis
C. Restructuring
D. Reframing

0036. In a supervision review, a family therapist describes work with a student aged 15 in the school consultation: helping caregivers address their disagreement directly rather than recruiting the child as messenger. What concept is illustrated?

A. Restructuring
B. De-triangulation
C. Reframing
D. Genogram

0037. Which choice aligns each practice with the correct idea, Enactment or Joining?

A. Enactment: Helping caregivers address their disagreement directly rather than recruiting the child as messenger. / Joining: Respectfully matching a family's pace and language to build a working alliance.
B. Enactment: Asking family members to discuss a current issue directly while the therapist observes interaction. / Joining: Inviting voluntary spatial representation of closeness or distance and processing members' meanings.
C. Enactment: Respectfully matching a family's pace and language to build a working alliance. / Joining: Asking family members to discuss a current issue directly while the therapist observes interaction.
D. Enactment: Asking family members to discuss a current issue directly while the therapist observes interaction. / Joining: Respectfully matching a family's pace and language to build a working alliance.

0038. At a case-planning meeting, the counselor proposes asking family members to discuss a current issue directly while the therapist observes interaction. for a child aged 8 seen in the school counseling office. Which concept does this illustrate?

A. Systemic hypothesis
B. Joining
C. Enactment
D. Circular questioning

0039. An interdisciplinary team reviews a high-school student’s case at the caregiver consultation. The behavior specialist recommends inviting voluntary spatial representation of closeness or distance and processing members’ meanings. Which course concept best fits?

A. Family sculpting
B. Joining
C. De-triangulation
D. Restructuring

0040. Select the best explanation of Enactment.

A. Identifying times a problem is absent or less influential to discover resources and conditions for change.
B. A structural family therapy technique inviting family members to interact in session so patterns can be observed.
C. An experiential technique in which members arrange positions or posture to represent relational experience.
D. Therapeutic interventions intended to alter interaction patterns, boundaries, or family organization.

0041. Choose the definition pair that correctly explains Joining first and Family sculpting second.

A. Joining: Offering an alternative meaning for a behavior or interaction to support a less blaming and more useful understanding. / Family sculpting: An experiential technique in which members arrange positions or posture to represent relational experience.
B. Joining: A therapist’s process of building rapport and adapting to a family’s communication style while maintaining clinical purpose. / Family sculpting: A structural family therapy technique inviting family members to interact in session so patterns can be observed.
C. Joining: An experiential technique in which members arrange positions or posture to represent relational experience. / Family sculpting: A therapist’s process of building rapport and adapting to a family’s communication style while maintaining clinical purpose.
D. Joining: A therapist’s process of building rapport and adapting to a family’s communication style while maintaining clinical purpose. / Family sculpting: An experiential technique in which members arrange positions or posture to represent relational experience.

0042. In a case note about a child aged 11, a member of a clinical team working in the youth advocacy program records this priority: describing a behavior’s possible protective intent while still addressing its impact. What principle is reflected?

A. Joining
B. Reframing
C. Exception seeking
D. Restructuring

0043. A trainee must explain Genogram. Which answer is accurate?

A. A diagram of family relationships and patterns across generations.
B. Identifying times a problem is absent or less influential to discover resources and conditions for change.
C. Therapeutic interventions intended to alter interaction patterns, boundaries, or family organization.
D. Questions that explore differences in perceptions and reciprocal interaction among family members.

0044. A mental-health professional prepares for a session in the classroom support meeting with a child of elementary-school age. The intended approach is inviting voluntary spatial representation of closeness or distance and processing members’ meanings. Which concept is most relevant?

A. Circular questioning
B. Exception seeking
C. Reframing
D. Family sculpting

0045. Choose the definition pair that correctly explains Family sculpting first and Systemic hypothesis second.

A. Family sculpting: An experiential technique in which members arrange positions or posture to represent relational experience. / Systemic hypothesis: A tentative explanation linking a concern to interactional patterns, to be collaboratively tested and revised.
B. Family sculpting: A tentative explanation linking a concern to interactional patterns, to be collaboratively tested and revised. / Systemic hypothesis: An experiential technique in which members arrange positions or posture to represent relational experience.
C. Family sculpting: An experiential technique in which members arrange positions or posture to represent relational experience. / Systemic hypothesis: Reducing a pattern in which a third person is drawn into tension between two others.
D. Family sculpting: A therapist’s process of building rapport and adapting to a family’s communication style while maintaining clinical purpose. / Systemic hypothesis: A tentative explanation linking a concern to interactional patterns, to be collaboratively tested and revised.

0046. A doctoral student reads the following description. Which concept does it define? A diagram of family relationships and patterns across generations.

A. Joining
B. Genogram
C. De-triangulation
D. Circular questioning

0047. A consulting counselor is explaining a choice to a student aged 15 and caregiver in the youth group. The choice centers on asking family members to discuss a current issue directly while the therapist observes interaction. Which idea is illustrated?

A. Restructuring
B. Enactment
C. Joining
D. Genogram

0048. At a case-planning meeting, the behavior specialist proposes offering a provisional relational hypothesis and checking whether family members find it useful. for a young adolescent client seen in the outpatient clinic. Which concept does this illustrate?

A. Enactment
B. Exception seeking
C. De-triangulation
D. Systemic hypothesis

0049. A case discussion concerns a school-age child and a case coordinator in the community service agency. The practitioner is considering asking when the family concern is less intense and what is different at those times. Which principle is involved?

A. Circular questioning
B. Exception seeking
C. Reframing
D. Enactment

0050. A behavior specialist reviews a plan for a young person in the parent meeting. The plan emphasizes asking when the family concern is less intense and what is different at those times. Which course idea does this reflect?

A. Genogram
B. Exception seeking
C. De-triangulation
D. Circular questioning

0051. In advanced family therapy, which comparison would correct a trainee's misunderstanding of Circular questioning versus Exception seeking?

A. Circular questioning: An experiential technique in which members arrange positions or posture to represent relational experience. / Exception seeking: Identifying times a problem is absent or less influential to discover resources and conditions for change.
B. Circular questioning: Questions that explore differences in perceptions and reciprocal interaction among family members. / Exception seeking: Identifying times a problem is absent or less influential to discover resources and conditions for change.
C. Circular questioning: Questions that explore differences in perceptions and reciprocal interaction among family members. / Exception seeking: Reducing a pattern in which a third person is drawn into tension between two others.
D. Circular questioning: Identifying times a problem is absent or less influential to discover resources and conditions for change. / Exception seeking: Questions that explore differences in perceptions and reciprocal interaction among family members.

0052. A teacher and counselor is explaining a choice to a teenage client and caregiver in the after-school program. The choice centers on mapping relationships and recurring patterns across multiple generations. Which idea is illustrated?

A. Restructuring
B. Genogram
C. Systemic hypothesis
D. Exception seeking

0053. In a supervision quiz, how should De-triangulation be distinguished from Systemic hypothesis?

A. De-triangulation: Reducing a pattern in which a third person is drawn into tension between two others. / Systemic hypothesis: A tentative explanation linking a concern to interactional patterns, to be collaboratively tested and revised.
B. De-triangulation: A therapist's process of building rapport and adapting to a family's communication style while maintaining clinical purpose. / Systemic hypothesis: A tentative explanation linking a concern to interactional patterns, to be collaboratively tested and revised.
C. De-triangulation: Reducing a pattern in which a third person is drawn into tension between two others. / Systemic hypothesis: An experiential technique in which members arrange positions or posture to represent relational experience.
D. De-triangulation: A tentative explanation linking a concern to interactional patterns, to be collaboratively tested and revised. / Systemic hypothesis: Reducing a pattern in which a third person is drawn into tension between two others.

0054. A mental-health professional is supporting a student aged 12 in the after-school program. The key practice is respectfully matching a family's pace and language to build a working alliance. Which course concept is most relevant?

A. Joining
B. Restructuring
C. Exception seeking
D. Systemic hypothesis

0055. In the school consultation, a team asks how a consulting counselor can support a school-age child. One proposed action is respectfully matching a family's pace and language to build a working alliance. Which idea does it represent?

A. Genogram
B. Joining
C. Systemic hypothesis
D. Reframing

0056. Choose the response that best puts Restructuring into practice.

A. Respectfully matching a family's pace and language to build a working alliance.
B. Supporting a caregiver subsystem to take a clearer leadership role during a family interaction.
C. Asking family members to discuss a current issue directly while the therapist observes interaction.
D. Helping caregivers address their disagreement directly rather than recruiting the child as messenger.

0057. Which choice aligns each practice with the correct idea, Enactment or Reframing?

A. Enactment: Inviting voluntary spatial representation of closeness or distance and processing members' meanings. / Reframing: Describing a behavior's possible protective intent while still addressing its impact.
B. Enactment: Describing a behavior's possible protective intent while still addressing its impact. / Reframing: Asking family members to discuss a current issue directly while the therapist observes interaction.
C. Enactment: Asking family members to discuss a current issue directly while the therapist observes interaction. / Reframing: Mapping relationships and recurring patterns across multiple generations.
D. Enactment: Asking family members to discuss a current issue directly while the therapist observes interaction. / Reframing: Describing a behavior's possible protective intent while still addressing its impact.

0058. In advanced family therapy, a team must select a support approach for a preadolescent child at the multidisciplinary case conference. The school-based clinician recommends asking one person how another reacts when a third person withdraws. Which idea is most relevant?

A. Restructuring
B. Reframing
C. De-triangulation
D. Circular questioning

0059. In advanced family therapy, a case discussion concerns a preadolescent child and a school-based clinician in the multidisciplinary case conference. The practitioner is considering asking one person how another reacts when a third person withdraws. Which principle is involved?

A. Family sculpting
B. Exception seeking
C. Joining
D. Circular questioning

0060. How are Enactment and De-triangulation most accurately differentiated in this curriculum?

A. Enactment: Questions that explore differences in perceptions and reciprocal interaction among family members. / De-triangulation: Reducing a pattern in which a third person is drawn into tension between two others.
B. Enactment: A structural family therapy technique inviting family members to interact in session so patterns can be observed. / De-triangulation: Reducing a pattern in which a third person is drawn into tension between two others.
C. Enactment: A structural family therapy technique inviting family members to interact in session so patterns can be observed. / De-triangulation: An experiential technique in which members arrange positions or posture to represent relational experience.
D. Enactment: Reducing a pattern in which a third person is drawn into tension between two others. / De-triangulation: A structural family therapy technique inviting family members to interact in session so patterns can be observed.

0061. Which statement shows a sound practice-level distinction between Genogram and Joining?

A. Genogram: Mapping relationships and recurring patterns across multiple generations. / Joining: Describing a behavior's possible protective intent while still addressing its impact.
B. Genogram: Mapping relationships and recurring patterns across multiple generations. / Joining: Respectfully matching a family's pace and language to build a working alliance.
C. Genogram: Respectfully matching a family's pace and language to build a working alliance. / Joining: Mapping relationships and recurring patterns across multiple generations.
D. Genogram: Inviting voluntary spatial representation of closeness or distance and processing members' meanings. / Joining: Respectfully matching a family's pace and language to build a working alliance.

0062. In the student-support meeting, a parent educator is considering this approach for a young person aged 13: asking when the family concern is less intense and what is different at those times. Which framework does it represent?

A. Genogram
B. Exception seeking
C. Enactment
D. Reframing

0063. Consider a student aged 9 receiving help in the behavior-support review. The consulting counselor focuses on mapping relationships and recurring patterns across multiple generations. Which term best describes the guiding idea?

A. Joining
B. Reframing
C. Genogram
D. Enactment

0064. Which choice aligns each practice with the correct idea, Exception seeking or Systemic hypothesis?

A. Exception seeking: Asking when the family concern is less intense and what is different at those times. / Systemic hypothesis: Offering a provisional relational hypothesis and checking whether family members find it useful.
B. Exception seeking: Offering a provisional relational hypothesis and checking whether family members find it useful. / Systemic hypothesis: Asking when the family concern is less intense and what is different at those times.
C. Exception seeking: Asking when the family concern is less intense and what is different at those times. / Systemic hypothesis: Supporting a caregiver subsystem to take a clearer leadership role during a family interaction.
D. Exception seeking: Helping caregivers address their disagreement directly rather than recruiting the child as messenger. / Systemic hypothesis: Offering a provisional relational hypothesis and checking whether family members find it useful.

0065. A student confuses Exception seeking with De-triangulation. Which explanation most accurately separates them?

A. Exception seeking: An experiential technique in which members arrange positions or posture to represent relational experience. / De-triangulation: Reducing a pattern in which a third person is drawn into tension between two others.
B. Exception seeking: Identifying times a problem is absent or less influential to discover resources and conditions for change. / De-triangulation: A therapist's process of building rapport and adapting to a family's communication style while maintaining clinical purpose.
C. Exception seeking: Identifying times a problem is absent or less influential to discover resources and conditions for change. / De-triangulation: Reducing a pattern in which a third person is drawn into tension between two others.
D. Exception seeking: Reducing a pattern in which a third person is drawn into tension between two others. / De-triangulation: Identifying times a problem is absent or less influential to discover resources and conditions for change.

0066. A trainee must explain Enactment. Which answer is accurate?

A. A structural family therapy technique inviting family members to interact in session so patterns can be observed.
B. Identifying times a problem is absent or less influential to discover resources and conditions for change.
C. Therapeutic interventions intended to alter interaction patterns, boundaries, or family organization.
D. An experiential technique in which members arrange positions or posture to represent relational experience.

0067. A middle-school student and a consultant are reviewing goals in the youth group. The agreed action is mapping relationships and recurring patterns across multiple generations. Which principle best accounts for it?

A. Genogram
B. Systemic hypothesis
C. De-triangulation
D. Enactment

0068. In a supervision quiz, how should Genogram be distinguished from De-triangulation?

A. Genogram: Reducing a pattern in which a third person is drawn into tension between two others. / De-triangulation: A diagram of family relationships and patterns across generations.
B. Genogram: Offering an alternative meaning for a behavior or interaction to support a less blaming and more useful understanding. / De-triangulation: Reducing a pattern in which a third person is drawn into tension between two others.
C. Genogram: A diagram of family relationships and patterns across generations. / De-triangulation: Reducing a pattern in which a third person is drawn into tension between two others.
D. Genogram: A diagram of family relationships and patterns across generations. / De-triangulation: A tentative explanation linking a concern to interactional patterns, to be collaboratively tested and revised.

0069. Which option correctly matches each concept to its practice focus: Enactment and Exception seeking?

A. Enactment: Helping caregivers address their disagreement directly rather than recruiting the child as messenger. / Exception seeking: Asking when the family concern is less intense and what is different at those times.
B. Enactment: Asking family members to discuss a current issue directly while the therapist observes interaction. / Exception seeking: Asking when the family concern is less intense and what is different at those times.
C. Enactment: Asking family members to discuss a current issue directly while the therapist observes interaction. / Exception seeking: Inviting voluntary spatial representation of closeness or distance and processing members' meanings.
D. Enactment: Asking when the family concern is less intense and what is different at those times. / Exception seeking: Asking family members to discuss a current issue directly while the therapist observes interaction.

0070. A case conference asks for a distinction between Reframing and Family sculpting. Which answer is sound?

A. Reframing: An experiential technique in which members arrange positions or posture to represent relational experience. / Family sculpting: Offering an alternative meaning for a behavior or interaction to support a less blaming and more useful understanding.
B. Reframing: A structural family therapy technique inviting family members to interact in session so patterns can be observed. / Family sculpting: An experiential technique in which members arrange positions or posture to represent relational experience.
C. Reframing: Offering an alternative meaning for a behavior or interaction to support a less blaming and more useful understanding. / Family sculpting: An experiential technique in which members arrange positions or posture to represent relational experience.
D. Reframing: Offering an alternative meaning for a behavior or interaction to support a less blaming and more useful understanding. / Family sculpting: Identifying times a problem is absent or less influential to discover resources and conditions for change.

0071. A older adolescent client is receiving support in the classroom support meeting. The school counselor is guided by this practice: describing a behavior's possible protective intent while still addressing its impact. Which principle best fits?

A. Genogram
B. Reframing
C. Exception seeking
D. Circular questioning

0072. For a child aged 11 seen in the school counseling office, the service navigator recommends a plan built around helping caregivers address their disagreement directly rather than recruiting the child as messenger. Which concept is reflected?

A. Systemic hypothesis
B. Family sculpting
C. Genogram
D. De-triangulation

0073. In the outpatient clinic, a youth worker describes the most appropriate support for a young person as supporting a caregiver subsystem to take a clearer leadership role during a family interaction. Which framework is being applied?

A. Restructuring
B. Enactment
C. De-triangulation
D. Genogram

0074. A support meeting for a client in late adolescence includes a behavior specialist in the family resource center. The practice under consideration is helping caregivers address their disagreement directly rather than recruiting the child as messenger. Which concept guides it?

A. Restructuring
B. Genogram
C. Systemic hypothesis
D. De-triangulation

0075. A trainee must distinguish how Joining and De-triangulation guide practice. Which comparison is accurate?

A. Joining: Respectfully matching a family's pace and language to build a working alliance. / De-triangulation: Helping caregivers address their disagreement directly rather than recruiting the child as messenger.
B. Joining: Respectfully matching a family's pace and language to build a working alliance. / De-triangulation: Asking when the family concern is less intense and what is different at those times.
C. Joining: Helping caregivers address their disagreement directly rather than recruiting the child as messenger. / De-triangulation: Respectfully matching a family's pace and language to build a working alliance.
D. Joining: Asking family members to discuss a current issue directly while the therapist observes interaction. / De-triangulation: Helping caregivers address their disagreement directly rather than recruiting the child as messenger.

0076. A supervisor asks how Exception seeking would appear in practice. Which choice should be selected?

A. Inviting voluntary spatial representation of closeness or distance and processing members' meanings.
B. Asking when the family concern is less intense and what is different at those times.
C. Helping caregivers address their disagreement directly rather than recruiting the child as messenger.
D. Respectfully matching a family's pace and language to build a working alliance.

0077. In the classroom support meeting, the agreed focus for a service navigator working with a client in early adolescence is mapping relationships and recurring patterns across multiple generations. Which concept names this focus?

A. Exception seeking
B. Genogram
C. Restructuring
D. Joining

0078. A trainee must explain Exception seeking. Which answer is accurate?

A. Identifying times a problem is absent or less influential to discover resources and conditions for change.
B. A structural family therapy technique inviting family members to interact in session so patterns can be observed.
C. Questions that explore differences in perceptions and reciprocal interaction among family members.
D. Reducing a pattern in which a third person is drawn into tension between two others.

0079. Which comparison correctly distinguishes Genogram from Exception seeking?

A. Genogram: A diagram of family relationships and patterns across generations. / Exception seeking: Reducing a pattern in which a third person is drawn into tension between two others.
B. Genogram: Identifying times a problem is absent or less influential to discover resources and conditions for change. / Exception seeking: A diagram of family relationships and patterns across generations.
C. Genogram: Offering an alternative meaning for a behavior or interaction to support a less blaming and more useful understanding. / Exception seeking: Identifying times a problem is absent or less influential to discover resources and conditions for change.
D. Genogram: A diagram of family relationships and patterns across generations. / Exception seeking: Identifying times a problem is absent or less influential to discover resources and conditions for change.

0080. In advanced family therapy, in a case note about a child of elementary-school age, a supervised trainee working in the telehealth session records this priority: asking one person how another reacts when a third person withdraws. What principle is reflected?

A. Restructuring
B. Circular questioning
C. Family sculpting
D. Exception seeking

0081. Which option is the clearest practical expression of Systemic hypothesis?

A. Supporting a caregiver subsystem to take a clearer leadership role during a family interaction.
B. Mapping relationships and recurring patterns across multiple generations.
C. Offering a provisional relational hypothesis and checking whether family members find it useful.
D. Asking family members to discuss a current issue directly while the therapist observes interaction.

0082. While consulting in the outpatient clinic, a supervised trainee supports a young person aged 13 by using this approach: helping caregivers address their disagreement directly rather than recruiting the child as messenger. Which concept is being applied?

A. Joining
B. De-triangulation
C. Circular questioning
D. Reframing

0083. Which professional action most closely applies Family sculpting?

A. Asking one person how another reacts when a third person withdraws.
B. Describing a behavior’s possible protective intent while still addressing its impact.
C. Inviting voluntary spatial representation of closeness or distance and processing members’ meanings.
D. Offering a provisional relational hypothesis and checking whether family members find it useful.

0084. Which option pairs the definitions of Joining and De-triangulation correctly, in that order?

A. Joining: Reducing a pattern in which a third person is drawn into tension between two others. / De-triangulation: A therapist’s process of building rapport and adapting to a family’s communication style while maintaining clinical purpose.
B. Joining: A therapist’s process of building rapport and adapting to a family’s communication style while maintaining clinical purpose. / De-triangulation: Reducing a pattern in which a third person is drawn into tension between two others.
C. Joining: A therapist’s process of building rapport and adapting to a family’s communication style while maintaining clinical purpose. / De-triangulation: Identifying times a problem is absent or less influential to discover resources and conditions for change.
D. Joining: A structural family therapy technique inviting family members to interact in session so patterns can be observed. / De-triangulation: Reducing a pattern in which a third person is drawn into tension between two others.

0085. In a supervision quiz, how should Joining be distinguished from De-triangulation?

A. Joining: A therapist’s process of building rapport and adapting to a family’s communication style while maintaining clinical purpose. / De-triangulation: Identifying times a problem is absent or less influential to discover resources and conditions for change.
B. Joining: A therapist’s process of building rapport and adapting to a family’s communication style while maintaining clinical purpose. / De-triangulation: Reducing a pattern in which a third person is drawn into tension between two others.
C. Joining: A structural family therapy technique inviting family members to interact in session so patterns can be observed. / De-triangulation: Reducing a pattern in which a third person is drawn into tension between two others.
D. Joining: Reducing a pattern in which a third person is drawn into tension between two others. / De-triangulation: A therapist’s process of building rapport and adapting to a family’s communication style while maintaining clinical purpose.

0086. A supervisor asks how Enactment would appear in practice. Which choice should be selected?

A. Describing a behavior’s possible protective intent while still addressing its impact.
B. Inviting voluntary spatial representation of closeness or distance and processing members’ meanings.
C. Respectfully matching a family’s pace and language to build a working alliance.
D. Asking family members to discuss a current issue directly while the therapist observes interaction.

0087. In advanced family therapy, which statement shows a sound practice-level distinction between Circular questioning and De-triangulation?

A. Circular questioning: Helping caregivers address their disagreement directly rather than recruiting the child as messenger. / De-triangulation: Asking one person how another reacts when a third person withdraws.
B. Circular questioning: Asking one person how another reacts when a third person withdraws. / De-triangulation: Helping caregivers address their disagreement directly rather than recruiting the child as messenger.
C. Circular questioning: Asking one person how another reacts when a third person withdraws. / De-triangulation: Offering a provisional relational hypothesis and checking whether family members find it useful.
D. Circular questioning: Respectfully matching a family’s pace and language to build a working alliance. / De-triangulation: Helping caregivers address their disagreement directly rather than recruiting the child as messenger.

0088. A supervisor asks how De-triangulation would appear in practice. Which choice should be selected?

A. Inviting voluntary spatial representation of closeness or distance and processing members’ meanings.
B. Respectfully matching a family’s pace and language to build a working alliance.
C. Helping caregivers address their disagreement directly rather than recruiting the child as messenger.
D. Asking when the family concern is less intense and what is different at those times.

0089. Which paired example correctly applies Enactment first and Joining second?

A. Enactment: Asking family members to discuss a current issue directly while the therapist observes interaction. / Joining: Inviting voluntary spatial representation of closeness or distance and processing members' meanings.
B. Enactment: Helping caregivers address their disagreement directly rather than recruiting the child as messenger. / Joining: Respectfully matching a family's pace and language to build a working alliance.
C. Enactment: Respectfully matching a family's pace and language to build a working alliance. / Joining: Asking family members to discuss a current issue directly while the therapist observes interaction.
D. Enactment: Asking family members to discuss a current issue directly while the therapist observes interaction. / Joining: Respectfully matching a family's pace and language to build a working alliance.

0090. A case conference asks for a distinction between Family sculpting and Systemic hypothesis. Which answer is sound?

A. Family sculpting: An experiential technique in which members arrange positions or posture to represent relational experience. / Systemic hypothesis: A tentative explanation linking a concern to interactional patterns, to be collaboratively tested and revised.
B. Family sculpting: A therapist's process of building rapport and adapting to a family's communication style while maintaining clinical purpose. / Systemic hypothesis: A tentative explanation linking a concern to interactional patterns, to be collaboratively tested and revised.
C. Family sculpting: A tentative explanation linking a concern to interactional patterns, to be collaboratively tested and revised. / Systemic hypothesis: An experiential technique in which members arrange positions or posture to represent relational experience.
D. Family sculpting: An experiential technique in which members arrange positions or posture to represent relational experience. / Systemic hypothesis: Reducing a pattern in which a third person is drawn into tension between two others.

0091. A planning meeting about a child aged 7 includes a clinical supervisor. The proposed practice in the classroom support meeting is asking family members to discuss a current issue directly while the therapist observes interaction. Which idea underlies it?

A. Enactment
B. Joining
C. Systemic hypothesis
D. Reframing

0092. Which comparison correctly distinguishes Joining from Restructuring?

A. Joining: Therapeutic interventions intended to alter interaction patterns, boundaries, or family organization. / Restructuring: A therapist's process of building rapport and adapting to a family's communication style while maintaining clinical purpose.
B. Joining: Identifying times a problem is absent or less influential to discover resources and conditions for change. / Restructuring: Therapeutic interventions intended to alter interaction patterns, boundaries, or family organization.
C. Joining: A therapist's process of building rapport and adapting to a family's communication style while maintaining clinical purpose. / Restructuring: Therapeutic interventions intended to alter interaction patterns, boundaries, or family organization.
D. Joining: A therapist's process of building rapport and adapting to a family's communication style while maintaining clinical purpose. / Restructuring: An experiential technique in which members arrange positions or posture to represent relational experience.

0093. How are Restructuring and Exception seeking most accurately differentiated in this curriculum?

A. Restructuring: Therapeutic interventions intended to alter interaction patterns, boundaries, or family organization. / Exception seeking: Reducing a pattern in which a third person is drawn into tension between two others.
B. Restructuring: An experiential technique in which members arrange positions or posture to represent relational experience. / Exception seeking: Identifying times a problem is absent or less influential to discover resources and conditions for change.
C. Restructuring: Therapeutic interventions intended to alter interaction patterns, boundaries, or family organization. / Exception seeking: Identifying times a problem is absent or less influential to discover resources and conditions for change.
D. Restructuring: Identifying times a problem is absent or less influential to discover resources and conditions for change. / Exception seeking: Therapeutic interventions intended to alter interaction patterns, boundaries, or family organization.

0094. A adolescent student's service team meets in the family session. The case coordinator recommends a change involving supporting a caregiver subsystem to take a clearer leadership role during a family interaction. Which idea best explains it?

A. Systemic hypothesis
B. Restructuring
C. Exception seeking
D. Circular questioning

0095. In the school-based service, a group facilitator describes the most appropriate support for a client in late adolescence as describing a behavior's possible protective intent while still addressing its impact. Which framework is being applied?

A. Reframing
B. Systemic hypothesis
C. Circular questioning
D. Restructuring

0096. A school support specialist is asked to evaluate a proposed service for a young person aged 16 in the counseling practicum. The defining feature is respectfully matching a family's pace and language to build a working alliance. Which concept fits?

A. Joining
B. De-triangulation
C. Enactment
D. Family sculpting

0097. Which option pairs the definitions of Enactment and Systemic hypothesis correctly, in that order?

A. Enactment: A structural family therapy technique inviting family members to interact in session so patterns can be observed. / Systemic hypothesis: A tentative explanation linking a concern to interactional patterns, to be collaboratively tested and revised.
B. Enactment: A tentative explanation linking a concern to interactional patterns, to be collaboratively tested and revised. / Systemic hypothesis: A structural family therapy technique inviting family members to interact in session so patterns can be observed.
C. Enactment: Therapeutic interventions intended to alter interaction patterns, boundaries, or family organization. / Systemic hypothesis: A tentative explanation linking a concern to interactional patterns, to be collaboratively tested and revised.
D. Enactment: A structural family therapy technique inviting family members to interact in session so patterns can be observed. / Systemic hypothesis: Questions that explore differences in perceptions and reciprocal interaction among family members.

0098. In advanced family therapy, consider a young person aged 16 receiving help in the community service agency. The school counselor focuses on asking one person how another reacts when a third person withdraws. Which term best describes the guiding idea?

A. Systemic hypothesis
B. Reframing
C. Circular questioning
D. Genogram

0099. A team must select a support approach for a young adolescent client at the behavior-support review. The family therapist recommends supporting a caregiver subsystem to take a clearer leadership role during a family interaction. Which idea is most relevant?

A. Systemic hypothesis
B. Circular questioning
C. Enactment
D. Restructuring

0100. In advanced family therapy, select the best explanation of Circular questioning.

A. Identifying times a problem is absent or less influential to discover resources and conditions for change.
B. Offering an alternative meaning for a behavior or interaction to support a less blaming and more useful understanding.
C. Therapeutic interventions intended to alter interaction patterns, boundaries, or family organization.
D. Questions that explore differences in perceptions and reciprocal interaction among family members.

0101. A member of a clinical team is preparing a follow-up plan for a child aged 8 in the counseling practicum. The plan calls for mapping relationships and recurring patterns across multiple generations. Which concept names this approach?

A. Genogram
B. De-triangulation
C. Joining
D. Systemic hypothesis

0102. Which paired example correctly applies Enactment first and Restructuring second?

A. Enactment: Asking family members to discuss a current issue directly while the therapist observes interaction. / Restructuring: Supporting a caregiver subsystem to take a clearer leadership role during a family interaction.
B. Enactment: Describing a behavior's possible protective intent while still addressing its impact. / Restructuring: Supporting a caregiver subsystem to take a clearer leadership role during a family interaction.
C. Enactment: Supporting a caregiver subsystem to take a clearer leadership role during a family interaction. / Restructuring: Asking family members to discuss a current issue directly while the therapist observes interaction.
D. Enactment: Asking family members to discuss a current issue directly while the therapist observes interaction. / Restructuring: Asking when the family concern is less intense and what is different at those times.

0103. A supervised trainee is supporting a student aged 9 in the community youth program. The key practice is asking family members to discuss a current issue directly while the therapist observes interaction. Which course concept is most relevant?

A. Exception seeking
B. Circular questioning
C. Family sculpting
D. Enactment

0104. What is the central meaning of Joining?

A. Therapeutic interventions intended to alter interaction patterns, boundaries, or family organization.
B. A tentative explanation linking a concern to interactional patterns, to be collaboratively tested and revised.
C. Identifying times a problem is absent or less influential to discover resources and conditions for change.
D. A therapist's process of building rapport and adapting to a family's communication style while maintaining clinical purpose.

0105. When reviewing a older adolescent client's plan in the youth group, the case coordinator notes that the next step is inviting voluntary spatial representation of closeness or distance and processing members' meanings. Which concept guides this step?

A. Systemic hypothesis
B. Genogram
C. Family sculpting
D. De-triangulation

0106. A service team discusses a student aged 17 in the caregiver consultation. Their proposed next step is asking family members to discuss a current issue directly while the therapist observes interaction. Which course concept supports it?

A. De-triangulation
B. Enactment
C. Joining
D. Exception seeking

0107. Which pair of actions illustrates Genogram and Joining, respectively?

A. Genogram: Mapping relationships and recurring patterns across multiple generations. / Joining: Describing a behavior's possible protective intent while still addressing its impact.
B. Genogram: Inviting voluntary spatial representation of closeness or distance and processing members' meanings. / Joining: Respectfully matching a family's pace and language to build a working alliance.
C. Genogram: Respectfully matching a family's pace and language to build a working alliance. / Joining: Mapping relationships and recurring patterns across multiple generations.
D. Genogram: Mapping relationships and recurring patterns across multiple generations. / Joining: Respectfully matching a family's pace and language to build a working alliance.

0108. At the school counseling office, a counselor meets with a child aged 8. The practice priority is: asking family members to discuss a current issue directly while the therapist observes interaction. Which concept best captures that priority?

A. Restructuring
B. De-triangulation
C. Joining
D. Enactment

0109. Which statement accurately contrasts the course concepts Enactment and Joining?

A. Enactment: A structural family therapy technique inviting family members to interact in session so patterns can be observed. / Joining: A therapist's process of building rapport and adapting to a family's communication style while maintaining clinical purpose.
B. Enactment: Reducing a pattern in which a third person is drawn into tension between two others. / Joining: A therapist's process of building rapport and adapting to a family's communication style while maintaining clinical purpose.
C. Enactment: A therapist's process of building rapport and adapting to a family's communication style while maintaining clinical purpose. / Joining: A structural family therapy technique inviting family members to interact in session so patterns can be observed.
D. Enactment: A structural family therapy technique inviting family members to interact in session so patterns can be observed. / Joining: An experiential technique in which members arrange positions or posture to represent relational experience.

0110. At a case-planning meeting, the clinical supervisor proposes asking when the family concern is less intense and what is different at those times. for a child of elementary-school age seen in the behavior-support review. Which concept does this illustrate?

A. Exception seeking
B. Restructuring
C. Family sculpting
D. Circular questioning

0111. A team must select a support approach for a high-school student at the telehealth session. The caregiver working with a counselor recommends offering a provisional relational hypothesis and checking whether family members find it useful. Which idea is most relevant?

A. Restructuring
B. Joining
C. Exception seeking
D. Systemic hypothesis

0112. A youth worker is asked to justify a plan for a child aged 8 in the caregiver consultation. It calls for respectfully matching a family's pace and language to build a working alliance. Which concept provides the rationale?

A. Systemic hypothesis
B. Reframing
C. Joining
D. Exception seeking

0113. During work in the community mental-health service, a group facilitator identifies this need: mapping relationships and recurring patterns across multiple generations. Which idea should guide the response?

A. Genogram
B. Enactment
C. Joining
D. De-triangulation

0114. In advanced family therapy, which applied comparison correctly identifies what belongs to Reframing versus Circular questioning?

A. Reframing: Helping caregivers address their disagreement directly rather than recruiting the child as messenger. / Circular questioning: Asking one person how another reacts when a third person withdraws.
B. Reframing: Describing a behavior's possible protective intent while still addressing its impact. / Circular questioning: Asking one person how another reacts when a third person withdraws.
C. Reframing: Describing a behavior's possible protective intent while still addressing its impact. / Circular questioning: Supporting a caregiver subsystem to take a clearer leadership role during a family interaction.
D. Reframing: Asking one person how another reacts when a third person withdraws. / Circular questioning: Describing a behavior's possible protective intent while still addressing its impact.

0115. Select the best explanation of Exception seeking.

A. A diagram of family relationships and patterns across generations.
B. A therapist's process of building rapport and adapting to a family's communication style while maintaining clinical purpose.
C. An experiential technique in which members arrange positions or posture to represent relational experience.
D. Identifying times a problem is absent or less influential to discover resources and conditions for change.

0116. In a supervision quiz, how should Enactment be distinguished from Reframing?

A. Enactment: Offering an alternative meaning for a behavior or interaction to support a less blaming and more useful understanding. / Reframing: A structural family therapy technique inviting family members to interact in session so patterns can be observed.
B. Enactment: A structural family therapy technique inviting family members to interact in session so patterns can be observed. / Reframing: Offering an alternative meaning for a behavior or interaction to support a less blaming and more useful understanding.
C. Enactment: An experiential technique in which members arrange positions or posture to represent relational experience. / Reframing: Offering an alternative meaning for a behavior or interaction to support a less blaming and more useful understanding.
D. Enactment: A structural family therapy technique inviting family members to interact in session so patterns can be observed. / Reframing: A diagram of family relationships and patterns across generations.

0117. During work in the parent meeting, a group facilitator identifies this need: helping caregivers address their disagreement directly rather than recruiting the child as messenger. Which idea should guide the response?

A. Circular questioning
B. De-triangulation
C. Genogram
D. Joining

0118. A support meeting for a young person aged 10 includes a play therapist in the parent meeting. The practice under consideration is describing a behavior's possible protective intent while still addressing its impact. Which concept guides it?

A. Enactment
B. Reframing
C. Family sculpting
D. Joining

0119. A school support specialist is asked to evaluate a proposed service for a client in early adolescence in the youth group. The defining feature is offering a provisional relational hypothesis and checking whether family members find it useful. Which concept fits?

A. Reframing
B. Restructuring
C. Circular questioning
D. Systemic hypothesis

0120. Which pair of actions illustrates Enactment and Reframing, respectively?

A. Enactment: Inviting voluntary spatial representation of closeness or distance and processing members' meanings. / Reframing: Describing a behavior's possible protective intent while still addressing its impact.
B. Enactment: Asking family members to discuss a current issue directly while the therapist observes interaction. / Reframing: Describing a behavior's possible protective intent while still addressing its impact.
C. Enactment: Describing a behavior's possible protective intent while still addressing its impact. / Reframing: Asking family members to discuss a current issue directly while the therapist observes interaction.
D. Enactment: Asking family members to discuss a current issue directly while the therapist observes interaction. / Reframing: Mapping relationships and recurring patterns across multiple generations.

0121. A supervisor asks for an applied contrast between Reframing and Systemic hypothesis. Which option fits?

A. Reframing: Asking when the family concern is less intense and what is different at those times. / Systemic hypothesis: Offering a provisional relational hypothesis and checking whether family members find it useful.
B. Reframing: Describing a behavior's possible protective intent while still addressing its impact. / Systemic hypothesis: Helping caregivers address their disagreement directly rather than recruiting the child as messenger.
C. Reframing: Describing a behavior's possible protective intent while still addressing its impact. / Systemic hypothesis: Offering a provisional relational hypothesis and checking whether family members find it useful.
D. Reframing: Offering a provisional relational hypothesis and checking whether family members find it useful. / Systemic hypothesis: Describing a behavior's possible protective intent while still addressing its impact.

0122. A planning meeting about a adolescent student includes a counselor. The proposed practice in the multidisciplinary case conference is offering a provisional relational hypothesis and checking whether family members find it useful. Which idea underlies it?

A. Exception seeking
B. Joining
C. Restructuring
D. Systemic hypothesis

0123. A student aged 12 and a mental-health professional are reviewing goals in the after-school program. The agreed action is respectfully matching a family's pace and language to build a working alliance. Which principle best accounts for it?

A. Restructuring
B. Joining
C. Enactment
D. Reframing

0124. Which comparison correctly distinguishes Genogram from Joining?

A. Genogram: A therapist's process of building rapport and adapting to a family's communication style while maintaining clinical purpose. / Joining: A diagram of family relationships and patterns across generations.
B. Genogram: A diagram of family relationships and patterns across generations. / Joining: Offering an alternative meaning for a behavior or interaction to support a less blaming and more useful understanding.
C. Genogram: An experiential technique in which members arrange positions or posture to represent relational experience. / Joining: A therapist's process of building rapport and adapting to a family's communication style while maintaining clinical purpose.
D. Genogram: A diagram of family relationships and patterns across generations. / Joining: A therapist's process of building rapport and adapting to a family's communication style while maintaining clinical purpose.

0125. Consider a child aged 8 receiving help in the supervision meeting. The teacher and counselor focuses on offering a provisional relational hypothesis and checking whether family members find it useful. Which term best describes the guiding idea?

A. De-triangulation
B. Systemic hypothesis
C. Enactment
D. Genogram

0126. In a supervision quiz, how should Enactment be distinguished from Joining?

A. Enactment: Reducing a pattern in which a third person is drawn into tension between two others. / Joining: A therapist's process of building rapport and adapting to a family's communication style while maintaining clinical purpose.
B. Enactment: A structural family therapy technique inviting family members to interact in session so patterns can be observed. / Joining: A therapist's process of building rapport and adapting to a family's communication style while maintaining clinical purpose.
C. Enactment: A therapist's process of building rapport and adapting to a family's communication style while maintaining clinical purpose. / Joining: A structural family therapy technique inviting family members to interact in session so patterns can be observed.
D. Enactment: A structural family therapy technique inviting family members to interact in session so patterns can be observed. / Joining: An experiential technique in which members arrange positions or posture to represent relational experience.

0127. Which option correctly matches each concept to its practice focus: Enactment and Restructuring?

A. Enactment: Supporting a caregiver subsystem to take a clearer leadership role during a family interaction. / Restructuring: Asking family members to discuss a current issue directly while the therapist observes interaction.
B. Enactment: Describing a behavior's possible protective intent while still addressing its impact. / Restructuring: Supporting a caregiver subsystem to take a clearer leadership role during a family interaction.
C. Enactment: Asking family members to discuss a current issue directly while the therapist observes interaction. / Restructuring: Supporting a caregiver subsystem to take a clearer leadership role during a family interaction.
D. Enactment: Asking family members to discuss a current issue directly while the therapist observes interaction. / Restructuring: Asking when the family concern is less intense and what is different at those times.

0128. Choose the term that matches this definition: Therapeutic interventions intended to alter interaction patterns, boundaries, or family organization.

A. Family sculpting
B. Restructuring
C. Circular questioning
D. Exception seeking

0129. In the family resource center, a team asks how a group facilitator can support a adolescent student. One proposed action is inviting voluntary spatial representation of closeness or distance and processing members' meanings. Which idea does it represent?

A. Family sculpting
B. Restructuring
C. Genogram
D. Reframing

0130. Which statement accurately contrasts the course concepts Joining and Restructuring?

A. Joining: A therapist's process of building rapport and adapting to a family's communication style while maintaining clinical purpose. / Restructuring: An experiential technique in which members arrange positions or posture to represent relational experience.
B. Joining: Therapeutic interventions intended to alter interaction patterns, boundaries, or family organization. / Restructuring: A therapist's process of building rapport and adapting to a family's communication style while maintaining clinical purpose.
C. Joining: Identifying times a problem is absent or less influential to discover resources and conditions for change. / Restructuring: Therapeutic interventions intended to alter interaction patterns, boundaries, or family organization.
D. Joining: A therapist's process of building rapport and adapting to a family's communication style while maintaining clinical purpose. / Restructuring: Therapeutic interventions intended to alter interaction patterns, boundaries, or family organization.

0131. Which option preserves the correct meaning of both Restructuring and Systemic hypothesis?

A. Restructuring: Therapeutic interventions intended to alter interaction patterns, boundaries, or family organization. / Systemic hypothesis: Reducing a pattern in which a third person is drawn into tension between two others.
B. Restructuring: Therapeutic interventions intended to alter interaction patterns, boundaries, or family organization. / Systemic hypothesis: A tentative explanation linking a concern to interactional patterns, to be collaboratively tested and revised.
C. Restructuring: An experiential technique in which members arrange positions or posture to represent relational experience. / Systemic hypothesis: A tentative explanation linking a concern to interactional patterns, to be collaboratively tested and revised.
D. Restructuring: A tentative explanation linking a concern to interactional patterns, to be collaboratively tested and revised. / Systemic hypothesis: Therapeutic interventions intended to alter interaction patterns, boundaries, or family organization.

0132. A assessment clinician is preparing a follow-up plan for a teenage client in the community youth program. The plan calls for supporting a caregiver subsystem to take a clearer leadership role during a family interaction. Which concept names this approach?

A. Systemic hypothesis
B. Circular questioning
C. Restructuring
D. Genogram

0133. In advanced family therapy, which comparison correctly distinguishes Circular questioning from Systemic hypothesis?

A. Circular questioning: An experiential technique in which members arrange positions or posture to represent relational experience. / Systemic hypothesis: A tentative explanation linking a concern to interactional patterns, to be collaboratively tested and revised.
B. Circular questioning: Questions that explore differences in perceptions and reciprocal interaction among family members. / Systemic hypothesis: Offering an alternative meaning for a behavior or interaction to support a less blaming and more useful understanding.
C. Circular questioning: A tentative explanation linking a concern to interactional patterns, to be collaboratively tested and revised. / Systemic hypothesis: Questions that explore differences in perceptions and reciprocal interaction among family members.
D. Circular questioning: Questions that explore differences in perceptions and reciprocal interaction among family members. / Systemic hypothesis: A tentative explanation linking a concern to interactional patterns, to be collaboratively tested and revised.

0134. A trainee must choose a practice that exemplifies De-triangulation. Which action is the best fit?

A. Helping caregivers address their disagreement directly rather than recruiting the child as messenger.
B. Supporting a caregiver subsystem to take a clearer leadership role during a family interaction.
C. Asking when the family concern is less intense and what is different at those times.
D. Asking family members to discuss a current issue directly while the therapist observes interaction.

0135. Which named construct is captured by this account? A therapist's process of building rapport and adapting to a family's communication style while maintaining clinical purpose.

A. Joining
B. Reframing
C. De-triangulation
D. Exception seeking

0136. Which pair of actions illustrates Joining and Exception seeking, respectively?

A. Joining: Respectfully matching a family's pace and language to build a working alliance. / Exception seeking: Inviting voluntary spatial representation of closeness or distance and processing members' meanings.
B. Joining: Asking when the family concern is less intense and what is different at those times. / Exception seeking: Respectfully matching a family's pace and language to build a working alliance.
C. Joining: Respectfully matching a family's pace and language to build a working alliance. / Exception seeking: Asking when the family concern is less intense and what is different at those times.
D. Joining: Asking family members to discuss a current issue directly while the therapist observes interaction. / Exception seeking: Asking when the family concern is less intense and what is different at those times.

0137. Which pair of actions illustrates Enactment and Family sculpting, respectively?

A. Enactment: Asking family members to discuss a current issue directly while the therapist observes interaction. / Family sculpting: Inviting voluntary spatial representation of closeness or distance and processing members' meanings.
B. Enactment: Asking family members to discuss a current issue directly while the therapist observes interaction. / Family sculpting: Offering a provisional relational hypothesis and checking whether family members find it useful.
C. Enactment: Inviting voluntary spatial representation of closeness or distance and processing members' meanings. / Family sculpting: Asking family members to discuss a current issue directly while the therapist observes interaction.
D. Enactment: Asking when the family concern is less intense and what is different at those times. / Family sculpting: Inviting voluntary spatial representation of closeness or distance and processing members' meanings.

0138. Which option pairs the definitions of Enactment and Reframing correctly, in that order?

A. Enactment: An experiential technique in which members arrange positions or posture to represent relational experience. / Reframing: Offering an alternative meaning for a behavior or interaction to support a less blaming and more useful understanding.
B. Enactment: A structural family therapy technique inviting family members to interact in session so patterns can be observed. / Reframing: A diagram of family relationships and patterns across generations.
C. Enactment: Offering an alternative meaning for a behavior or interaction to support a less blaming and more useful understanding. / Reframing: A structural family therapy technique inviting family members to interact in session so patterns can be observed.
D. Enactment: A structural family therapy technique inviting family members to interact in session so patterns can be observed. / Reframing: Offering an alternative meaning for a behavior or interaction to support a less blaming and more useful understanding.

0139. A clinical supervisor is asked to evaluate a proposed service for a young person aged 18 in the school consultation. The defining feature is inviting voluntary spatial representation of closeness or distance and processing members' meanings. Which concept fits?

A. Genogram
B. Circular questioning
C. Family sculpting
D. Exception seeking

0140. Which option is the clearest practical expression of Genogram?

A. Asking when the family concern is less intense and what is different at those times.
B. Describing a behavior's possible protective intent while still addressing its impact.
C. Mapping relationships and recurring patterns across multiple generations.
D. Asking family members to discuss a current issue directly while the therapist observes interaction.

0141. In advanced family therapy, in a supervision quiz, how should Circular questioning be distinguished from Systemic hypothesis?

A. Circular questioning: Questions that explore differences in perceptions and reciprocal interaction among family members. / Systemic hypothesis: Offering an alternative meaning for a behavior or interaction to support a less blaming and more useful understanding.
B. Circular questioning: A tentative explanation linking a concern to interactional patterns, to be collaboratively tested and revised. / Systemic hypothesis: Questions that explore differences in perceptions and reciprocal interaction among family members.
C. Circular questioning: An experiential technique in which members arrange positions or posture to represent relational experience. / Systemic hypothesis: A tentative explanation linking a concern to interactional patterns, to be collaboratively tested and revised.
D. Circular questioning: Questions that explore differences in perceptions and reciprocal interaction among family members. / Systemic hypothesis: A tentative explanation linking a concern to interactional patterns, to be collaboratively tested and revised.

0142. Which option correctly matches each concept to its practice focus: Genogram and Systemic hypothesis?

A. Genogram: Mapping relationships and recurring patterns across multiple generations. / Systemic hypothesis: Offering a provisional relational hypothesis and checking whether family members find it useful.
B. Genogram: Asking when the family concern is less intense and what is different at those times. / Systemic hypothesis: Offering a provisional relational hypothesis and checking whether family members find it useful.
C. Genogram: Mapping relationships and recurring patterns across multiple generations. / Systemic hypothesis: Helping caregivers address their disagreement directly rather than recruiting the child as messenger.
D. Genogram: Offering a provisional relational hypothesis and checking whether family members find it useful. / Systemic hypothesis: Mapping relationships and recurring patterns across multiple generations.

0143. Which course concept is defined as follows: Therapeutic interventions intended to alter interaction patterns, boundaries, or family organization.

A. Genogram
B. Exception seeking
C. De-triangulation
D. Restructuring

0144. In the supervision meeting, a school counselor explains why a young person aged 13 would benefit from respectfully matching a family's pace and language to build a working alliance. Which course concept underpins the explanation?

A. Enactment
B. Systemic hypothesis
C. Joining
D. Circular questioning

0145. A young person aged 18 and a supervised trainee are reviewing goals in the family resource center. The agreed action is supporting a caregiver subsystem to take a clearer leadership role during a family interaction. Which principle best accounts for it?

A. Systemic hypothesis
B. Restructuring
C. Joining
D. Genogram

0146. In the after-school program, a case coordinator is considering this approach for a young adolescent client: asking family members to discuss a current issue directly while the therapist observes interaction. Which framework does it represent?

A. Enactment
B. Genogram
C. Systemic hypothesis
D. Reframing

0147. In a case note about a teenage client, a consultant working in the community service agency records this priority: asking family members to discuss a current issue directly while the therapist observes interaction. What principle is reflected?

A. Restructuring
B. Joining
C. Enactment
D. Family sculpting

0148. Which paired example correctly applies Restructuring first and Family sculpting second?

A. Restructuring: Asking when the family concern is less intense and what is different at those times. / Family sculpting: Inviting voluntary spatial representation of closeness or distance and processing members' meanings.
B. Restructuring: Inviting voluntary spatial representation of closeness or distance and processing members' meanings. / Family sculpting: Supporting a caregiver subsystem to take a clearer leadership role during a family interaction.
C. Restructuring: Supporting a caregiver subsystem to take a clearer leadership role during a family interaction. / Family sculpting: Inviting voluntary spatial representation of closeness or distance and processing members' meanings.
D. Restructuring: Supporting a caregiver subsystem to take a clearer leadership role during a family interaction. / Family sculpting: Asking family members to discuss a current issue directly while the therapist observes interaction.

0149. In advanced family therapy, how should a practitioner distinguish the applications of Circular questioning and Systemic hypothesis?

A. Circular questioning: Asking one person how another reacts when a third person withdraws. / Systemic hypothesis: Offering a provisional relational hypothesis and checking whether family members find it useful.
B. Circular questioning: Offering a provisional relational hypothesis and checking whether family members find it useful. / Systemic hypothesis: Asking one person how another reacts when a third person withdraws.
C. Circular questioning: Inviting voluntary spatial representation of closeness or distance and processing members' meanings. / Systemic hypothesis: Offering a provisional relational hypothesis and checking whether family members find it useful.
D. Circular questioning: Asking one person how another reacts when a third person withdraws. / Systemic hypothesis: Describing a behavior's possible protective intent while still addressing its impact.

0150. For a student aged 15 seen in the family resource center, the program coordinator recommends a plan built around respectfully matching a family's pace and language to build a working alliance. Which concept is reflected?

A. Enactment
B. Joining
C. Reframing
D. Circular questioning

0151. In advanced family therapy, how are Circular questioning and Systemic hypothesis most accurately differentiated in this curriculum?

A. Circular questioning: A tentative explanation linking a concern to interactional patterns, to be collaboratively tested and revised. / Systemic hypothesis: Questions that explore differences in perceptions and reciprocal interaction among family members.
B. Circular questioning: Questions that explore differences in perceptions and reciprocal interaction among family members. / Systemic hypothesis: Offering an alternative meaning for a behavior or interaction to support a less blaming and more useful understanding.
C. Circular questioning: An experiential technique in which members arrange positions or posture to represent relational experience. / Systemic hypothesis: A tentative explanation linking a concern to interactional patterns, to be collaboratively tested and revised.
D. Circular questioning: Questions that explore differences in perceptions and reciprocal interaction among family members. / Systemic hypothesis: A tentative explanation linking a concern to interactional patterns, to be collaboratively tested and revised.

0152. In the after-school program, a team asks how a youth worker can support a high-school student. One proposed action is helping caregivers address their disagreement directly rather than recruiting the child as messenger. Which idea does it represent?

A. Joining
B. Enactment
C. De-triangulation
D. Restructuring

0153. A trainee must distinguish how Reframing and Family sculpting guide practice. Which comparison is accurate?

A. Reframing: Describing a behavior's possible protective intent while still addressing its impact. / Family sculpting: Inviting voluntary spatial representation of closeness or distance and processing members' meanings.
B. Reframing: Asking family members to discuss a current issue directly while the therapist observes interaction. / Family sculpting: Inviting voluntary spatial representation of closeness or distance and processing members' meanings.
C. Reframing: Describing a behavior's possible protective intent while still addressing its impact. / Family sculpting: Asking when the family concern is less intense and what is different at those times.
D. Reframing: Inviting voluntary spatial representation of closeness or distance and processing members' meanings. / Family sculpting: Describing a behavior's possible protective intent while still addressing its impact.

0154. Which applied comparison correctly identifies what belongs to Enactment versus Reframing?

A. Enactment: Describing a behavior's possible protective intent while still addressing its impact. / Reframing: Asking family members to discuss a current issue directly while the therapist observes interaction.
B. Enactment: Asking family members to discuss a current issue directly while the therapist observes interaction. / Reframing: Mapping relationships and recurring patterns across multiple generations.
C. Enactment: Inviting voluntary spatial representation of closeness or distance and processing members' meanings. / Reframing: Describing a behavior's possible protective intent while still addressing its impact.
D. Enactment: Asking family members to discuss a current issue directly while the therapist observes interaction. / Reframing: Describing a behavior's possible protective intent while still addressing its impact.

0155. A student aged 15 and a member of a clinical team are reviewing goals in the school counseling office. The agreed action is inviting voluntary spatial representation of closeness or distance and processing members' meanings. Which principle best accounts for it?

A. Family sculpting
B. Circular questioning
C. Genogram
D. Reframing

0156. Choose the response that best puts Enactment into practice.

A. Offering a provisional relational hypothesis and checking whether family members find it useful.
B. Asking family members to discuss a current issue directly while the therapist observes interaction.
C. Helping caregivers address their disagreement directly rather than recruiting the child as messenger.
D. Asking one person how another reacts when a third person withdraws.

0157. Identify the most precise label for this idea: A therapist's process of building rapport and adapting to a family's communication style while maintaining clinical purpose.

A. Systemic hypothesis
B. Genogram
C. Circular questioning
D. Joining

0158. Choose the practice comparison that best separates Restructuring from Exception seeking.

A. Restructuring: Asking when the family concern is less intense and what is different at those times. / Exception seeking: Supporting a caregiver subsystem to take a clearer leadership role during a family interaction.
B. Restructuring: Supporting a caregiver subsystem to take a clearer leadership role during a family interaction. / Exception seeking: Helping caregivers address their disagreement directly rather than recruiting the child as messenger.
C. Restructuring: Inviting voluntary spatial representation of closeness or distance and processing members' meanings. / Exception seeking: Asking when the family concern is less intense and what is different at those times.
D. Restructuring: Supporting a caregiver subsystem to take a clearer leadership role during a family interaction. / Exception seeking: Asking when the family concern is less intense and what is different at those times.

0159. A case discussion concerns a high-school student and a caregiver working with a counselor in the telehealth session. The practitioner is considering offering a provisional relational hypothesis and checking whether family members find it useful. Which principle is involved?

A. Systemic hypothesis
B. Reframing
C. Restructuring
D. De-triangulation

0160. A trainee must choose a practice that exemplifies Joining. Which action is the best fit?

A. Respectfully matching a family's pace and language to build a working alliance.
B. Describing a behavior's possible protective intent while still addressing its impact.
C. Asking family members to discuss a current issue directly while the therapist observes interaction.
D. Asking when the family concern is less intense and what is different at those times.

0161. A consultant is preparing a follow-up plan for a client in early adolescence in the supervision meeting. The plan calls for describing a behavior's possible protective intent while still addressing its impact. Which concept names this approach?

A. Reframing
B. Exception seeking
C. Restructuring
D. Systemic hypothesis

0162. Which comparison would correct a trainee's misunderstanding of Enactment versus De-triangulation?

A. Enactment: A structural family therapy technique inviting family members to interact in session so patterns can be observed. / De-triangulation: An experiential technique in which members arrange positions or posture to represent relational experience.
B. Enactment: Reducing a pattern in which a third person is drawn into tension between two others. / De-triangulation: A structural family therapy technique inviting family members to interact in session so patterns can be observed.
C. Enactment: A structural family therapy technique inviting family members to interact in session so patterns can be observed. / De-triangulation: Reducing a pattern in which a third person is drawn into tension between two others.
D. Enactment: Questions that explore differences in perceptions and reciprocal interaction among family members. / De-triangulation: Reducing a pattern in which a third person is drawn into tension between two others.

0163. In advanced family therapy, choose the practice comparison that best separates Circular questioning from Joining.

A. Circular questioning: Asking one person how another reacts when a third person withdraws. / Joining: Describing a behavior's possible protective intent while still addressing its impact.
B. Circular questioning: Offering a provisional relational hypothesis and checking whether family members find it useful. / Joining: Respectfully matching a family's pace and language to build a working alliance.
C. Circular questioning: Respectfully matching a family's pace and language to build a working alliance. / Joining: Asking one person how another reacts when a third person withdraws.
D. Circular questioning: Asking one person how another reacts when a third person withdraws. / Joining: Respectfully matching a family's pace and language to build a working alliance.

0164. Which choice aligns each practice with the correct idea, Reframing or Joining?

A. Reframing: Describing a behavior's possible protective intent while still addressing its impact. / Joining: Respectfully matching a family's pace and language to build a working alliance.
B. Reframing: Describing a behavior's possible protective intent while still addressing its impact. / Joining: Asking family members to discuss a current issue directly while the therapist observes interaction.
C. Reframing: Respectfully matching a family's pace and language to build a working alliance. / Joining: Describing a behavior's possible protective intent while still addressing its impact.
D. Reframing: Asking one person how another reacts when a third person withdraws. / Joining: Respectfully matching a family's pace and language to build a working alliance.

0165. Identify the most precise label for this idea: Identifying times a problem is absent or less influential to discover resources and conditions for change.

A. De-triangulation
B. Genogram
C. Exception seeking
D. Circular questioning

0166. Choose the definition pair that correctly explains Restructuring first and Exception seeking second.

A. Restructuring: Identifying times a problem is absent or less influential to discover resources and conditions for change. / Exception seeking: Therapeutic interventions intended to alter interaction patterns, boundaries, or family organization.
B. Restructuring: Therapeutic interventions intended to alter interaction patterns, boundaries, or family organization. / Exception seeking: Identifying times a problem is absent or less influential to discover resources and conditions for change.
C. Restructuring: Therapeutic interventions intended to alter interaction patterns, boundaries, or family organization. / Exception seeking: Reducing a pattern in which a third person is drawn into tension between two others.
D. Restructuring: An experiential technique in which members arrange positions or posture to represent relational experience. / Exception seeking: Identifying times a problem is absent or less influential to discover resources and conditions for change.

0167. In advanced family therapy, a student confuses Circular questioning with Family sculpting. Which explanation most accurately separates them?

A. Circular questioning: Reducing a pattern in which a third person is drawn into tension between two others. / Family sculpting: An experiential technique in which members arrange positions or posture to represent relational experience.
B. Circular questioning: An experiential technique in which members arrange positions or posture to represent relational experience. / Family sculpting: Questions that explore differences in perceptions and reciprocal interaction among family members.
C. Circular questioning: Questions that explore differences in perceptions and reciprocal interaction among family members. / Family sculpting: A tentative explanation linking a concern to interactional patterns, to be collaboratively tested and revised.
D. Circular questioning: Questions that explore differences in perceptions and reciprocal interaction among family members. / Family sculpting: An experiential technique in which members arrange positions or posture to represent relational experience.

0168. In advanced family therapy, choose the definition pair that correctly explains Enactment first and Circular questioning second.

A. Enactment: Questions that explore differences in perceptions and reciprocal interaction among family members. / Circular questioning: A structural family therapy technique inviting family members to interact in session so patterns can be observed.
B. Enactment: A structural family therapy technique inviting family members to interact in session so patterns can be observed. / Circular questioning: An experiential technique in which members arrange positions or posture to represent relational experience.
C. Enactment: A structural family therapy technique inviting family members to interact in session so patterns can be observed. / Circular questioning: Questions that explore differences in perceptions and reciprocal interaction among family members.
D. Enactment: Offering an alternative meaning for a behavior or interaction to support a less blaming and more useful understanding. / Circular questioning: Questions that explore differences in perceptions and reciprocal interaction among family members.

0169. Which option pairs the definitions of Joining and Restructuring correctly, in that order?

A. Joining: A therapist's process of building rapport and adapting to a family's communication style while maintaining clinical purpose. / Restructuring: An experiential technique in which members arrange positions or posture to represent relational experience.
B. Joining: Therapeutic interventions intended to alter interaction patterns, boundaries, or family organization. / Restructuring: A therapist's process of building rapport and adapting to a family's communication style while maintaining clinical purpose.
C. Joining: A therapist's process of building rapport and adapting to a family's communication style while maintaining clinical purpose. / Restructuring: Therapeutic interventions intended to alter interaction patterns, boundaries, or family organization.
D. Joining: Identifying times a problem is absent or less influential to discover resources and conditions for change. / Restructuring: Therapeutic interventions intended to alter interaction patterns, boundaries, or family organization.

0170. Which applied comparison correctly identifies what belongs to Joining versus De-triangulation?

A. Joining: Helping caregivers address their disagreement directly rather than recruiting the child as messenger. / De-triangulation: Respectfully matching a family's pace and language to build a working alliance.
B. Joining: Respectfully matching a family's pace and language to build a working alliance. / De-triangulation: Helping caregivers address their disagreement directly rather than recruiting the child as messenger.
C. Joining: Asking family members to discuss a current issue directly while the therapist observes interaction. / De-triangulation: Helping caregivers address their disagreement directly rather than recruiting the child as messenger.
D. Joining: Respectfully matching a family's pace and language to build a working alliance. / De-triangulation: Asking when the family concern is less intense and what is different at those times.

0171. A play therapist is asked to evaluate a proposed service for a middle-school student in the learning-support meeting. The defining feature is supporting a caregiver subsystem to take a clearer leadership role during a family interaction. Which concept fits?

A. Joining
B. Restructuring
C. Systemic hypothesis
D. Circular questioning

0172. A supervisor asks for an applied contrast between Joining and Restructuring. Which option fits?

A. Joining: Asking when the family concern is less intense and what is different at those times. / Restructuring: Supporting a caregiver subsystem to take a clearer leadership role during a family interaction.
B. Joining: Respectfully matching a family's pace and language to build a working alliance. / Restructuring: Supporting a caregiver subsystem to take a clearer leadership role during a family interaction.
C. Joining: Respectfully matching a family's pace and language to build a working alliance. / Restructuring: Inviting voluntary spatial representation of closeness or distance and processing members' meanings.
D. Joining: Supporting a caregiver subsystem to take a clearer leadership role during a family interaction. / Restructuring: Respectfully matching a family's pace and language to build a working alliance.

0173. In advanced family therapy, which option preserves the correct meaning of both Circular questioning and Exception seeking?

A. Circular questioning: Identifying times a problem is absent or less influential to discover resources and conditions for change. / Exception seeking: Questions that explore differences in perceptions and reciprocal interaction among family members.
B. Circular questioning: An experiential technique in which members arrange positions or posture to represent relational experience. / Exception seeking: Identifying times a problem is absent or less influential to discover resources and conditions for change.
C. Circular questioning: Questions that explore differences in perceptions and reciprocal interaction among family members. / Exception seeking: Identifying times a problem is absent or less influential to discover resources and conditions for change.
D. Circular questioning: Questions that explore differences in perceptions and reciprocal interaction among family members. / Exception seeking: Reducing a pattern in which a third person is drawn into tension between two others.

0174. A caregiver working with a counselor presents a support plan for a client in early adolescence at the behavior-support review. Its central feature is asking family members to discuss a current issue directly while the therapist observes interaction. Which concept should be named?

A. Enactment
B. Exception seeking
C. Reframing
D. Systemic hypothesis

0175. In advanced family therapy, which paired example correctly applies Circular questioning first and De-triangulation second?

A. Circular questioning: Helping caregivers address their disagreement directly rather than recruiting the child as messenger. / De-triangulation: Asking one person how another reacts when a third person withdraws.
B. Circular questioning: Asking one person how another reacts when a third person withdraws. / De-triangulation: Offering a provisional relational hypothesis and checking whether family members find it useful.
C. Circular questioning: Respectfully matching a family's pace and language to build a working alliance. / De-triangulation: Helping caregivers address their disagreement directly rather than recruiting the child as messenger.
D. Circular questioning: Asking one person how another reacts when a third person withdraws. / De-triangulation: Helping caregivers address their disagreement directly rather than recruiting the child as messenger.

0176. Which statement accurately contrasts the course concepts Enactment and Reframing?

A. Enactment: A structural family therapy technique inviting family members to interact in session so patterns can be observed. / Reframing: A diagram of family relationships and patterns across generations.
B. Enactment: A structural family therapy technique inviting family members to interact in session so patterns can be observed. / Reframing: Offering an alternative meaning for a behavior or interaction to support a less blaming and more useful understanding.
C. Enactment: Offering an alternative meaning for a behavior or interaction to support a less blaming and more useful understanding. / Reframing: A structural family therapy technique inviting family members to interact in session so patterns can be observed.
D. Enactment: An experiential technique in which members arrange positions or posture to represent relational experience. / Reframing: Offering an alternative meaning for a behavior or interaction to support a less blaming and more useful understanding.

0177. In advanced family therapy, how should a practitioner distinguish the applications of Reframing and Circular questioning?

A. Reframing: Describing a behavior's possible protective intent while still addressing its impact. / Circular questioning: Supporting a caregiver subsystem to take a clearer leadership role during a family interaction.
B. Reframing: Describing a behavior's possible protective intent while still addressing its impact. / Circular questioning: Asking one person how another reacts when a third person withdraws.
C. Reframing: Helping caregivers address their disagreement directly rather than recruiting the child as messenger. / Circular questioning: Asking one person how another reacts when a third person withdraws.
D. Reframing: Asking one person how another reacts when a third person withdraws. / Circular questioning: Describing a behavior's possible protective intent while still addressing its impact.

0178. Choose the response that best puts Systemic hypothesis into practice.

A. Supporting a caregiver subsystem to take a clearer leadership role during a family interaction.
B. Asking when the family concern is less intense and what is different at those times.
C. Helping caregivers address their disagreement directly rather than recruiting the child as messenger.
D. Offering a provisional relational hypothesis and checking whether family members find it useful.

0179. Which statement accurately contrasts the course concepts Joining and Systemic hypothesis?

A. Joining: A therapist's process of building rapport and adapting to a family's communication style while maintaining clinical purpose. / Systemic hypothesis: Identifying times a problem is absent or less influential to discover resources and conditions for change.
B. Joining: A diagram of family relationships and patterns across generations. / Systemic hypothesis: A tentative explanation linking a concern to interactional patterns, to be collaboratively tested and revised.
C. Joining: A tentative explanation linking a concern to interactional patterns, to be collaboratively tested and revised. / Systemic hypothesis: A therapist's process of building rapport and adapting to a family's communication style while maintaining clinical purpose.
D. Joining: A therapist's process of building rapport and adapting to a family's communication style while maintaining clinical purpose. / Systemic hypothesis: A tentative explanation linking a concern to interactional patterns, to be collaboratively tested and revised.

0180. Which paired example correctly applies Reframing first and Systemic hypothesis second?

A. Reframing: Asking when the family concern is less intense and what is different at those times. / Systemic hypothesis: Offering a provisional relational hypothesis and checking whether family members find it useful.
B. Reframing: Describing a behavior's possible protective intent while still addressing its impact. / Systemic hypothesis: Helping caregivers address their disagreement directly rather than recruiting the child as messenger.
C. Reframing: Offering a provisional relational hypothesis and checking whether family members find it useful. / Systemic hypothesis: Describing a behavior's possible protective intent while still addressing its impact.
D. Reframing: Describing a behavior's possible protective intent while still addressing its impact. / Systemic hypothesis: Offering a provisional relational hypothesis and checking whether family members find it useful.

0181. Which statement accurately contrasts the course concepts Reframing and Restructuring?

A. Reframing: Offering an alternative meaning for a behavior or interaction to support a less blaming and more useful understanding. / Restructuring: Therapeutic interventions intended to alter interaction patterns, boundaries, or family organization.
B. Reframing: A structural family therapy technique inviting family members to interact in session so patterns can be observed. / Restructuring: Therapeutic interventions intended to alter interaction patterns, boundaries, or family organization.
C. Reframing: Offering an alternative meaning for a behavior or interaction to support a less blaming and more useful understanding. / Restructuring: A tentative explanation linking a concern to interactional patterns, to be collaboratively tested and revised.
D. Reframing: Therapeutic interventions intended to alter interaction patterns, boundaries, or family organization. / Restructuring: Offering an alternative meaning for a behavior or interaction to support a less blaming and more useful understanding.

0182. A student confuses Exception seeking with Family sculpting. Which explanation most accurately separates them?

A. Exception seeking: A structural family therapy technique inviting family members to interact in session so patterns can be observed. / Family sculpting: An experiential technique in which members arrange positions or posture to represent relational experience.
B. Exception seeking: An experiential technique in which members arrange positions or posture to represent relational experience. / Family sculpting: Identifying times a problem is absent or less influential to discover resources and conditions for change.
C. Exception seeking: Identifying times a problem is absent or less influential to discover resources and conditions for change. / Family sculpting: An experiential technique in which members arrange positions or posture to represent relational experience.
D. Exception seeking: Identifying times a problem is absent or less influential to discover resources and conditions for change. / Family sculpting: Offering an alternative meaning for a behavior or interaction to support a less blaming and more useful understanding.

0183. A support meeting for a child aged 6 includes a play therapist in the after-school program. The practice under consideration is asking when the family concern is less intense and what is different at those times. Which concept guides it?

A. Family sculpting
B. Joining
C. Exception seeking
D. De-triangulation

0184. Which paired example correctly applies Reframing first and Family sculpting second?

A. Reframing: Describing a behavior's possible protective intent while still addressing its impact. / Family sculpting: Inviting voluntary spatial representation of closeness or distance and processing members' meanings.
B. Reframing: Inviting voluntary spatial representation of closeness or distance and processing members' meanings. / Family sculpting: Describing a behavior's possible protective intent while still addressing its impact.
C. Reframing: Describing a behavior's possible protective intent while still addressing its impact. / Family sculpting: Asking when the family concern is less intense and what is different at those times.
D. Reframing: Asking family members to discuss a current issue directly while the therapist observes interaction. / Family sculpting: Inviting voluntary spatial representation of closeness or distance and processing members' meanings.

0185. In a supervision quiz, how should Reframing be distinguished from Exception seeking?

A. Reframing: Offering an alternative meaning for a behavior or interaction to support a less blaming and more useful understanding. / Exception seeking: A tentative explanation linking a concern to interactional patterns, to be collaboratively tested and revised.
B. Reframing: Offering an alternative meaning for a behavior or interaction to support a less blaming and more useful understanding. / Exception seeking: Identifying times a problem is absent or less influential to discover resources and conditions for change.
C. Reframing: A therapist's process of building rapport and adapting to a family's communication style while maintaining clinical purpose. / Exception seeking: Identifying times a problem is absent or less influential to discover resources and conditions for change.
D. Reframing: Identifying times a problem is absent or less influential to discover resources and conditions for change. / Exception seeking: Offering an alternative meaning for a behavior or interaction to support a less blaming and more useful understanding.

0186. While consulting in the caregiver consultation, a mental-health professional supports a young adolescent client by using this approach: describing a behavior's possible protective intent while still addressing its impact. Which concept is being applied?

A. Reframing
B. Joining
C. Enactment
D. Family sculpting

0187. A program coordinator is asked what should shape a student aged 9's support in the outpatient clinic. The proposed focus is asking when the family concern is less intense and what is different at those times. Which principle does it represent?

A. Enactment
B. Family sculpting
C. Exception seeking
D. Joining

0188. A mental-health professional and a student aged 9 are discussing support in the student-support meeting. The selected practice is supporting a caregiver subsystem to take a clearer leadership role during a family interaction. Which concept does this demonstrate?

A. Restructuring
B. Exception seeking
C. Enactment
D. Systemic hypothesis

0189. A supervisor asks for an applied contrast between Restructuring and Family sculpting. Which option fits?

A. Restructuring: Asking when the family concern is less intense and what is different at those times. / Family sculpting: Inviting voluntary spatial representation of closeness or distance and processing members' meanings.
B. Restructuring: Inviting voluntary spatial representation of closeness or distance and processing members' meanings. / Family sculpting: Supporting a caregiver subsystem to take a clearer leadership role during a family interaction.
C. Restructuring: Supporting a caregiver subsystem to take a clearer leadership role during a family interaction. / Family sculpting: Asking family members to discuss a current issue directly while the therapist observes interaction.
D. Restructuring: Supporting a caregiver subsystem to take a clearer leadership role during a family interaction. / Family sculpting: Inviting voluntary spatial representation of closeness or distance and processing members' meanings.

0190. A supervisor asks for an applied contrast between Enactment and De-triangulation. Which option fits?

A. Enactment: Asking one person how another reacts when a third person withdraws. / De-triangulation: Helping caregivers address their disagreement directly rather than recruiting the child as messenger.
B. Enactment: Asking family members to discuss a current issue directly while the therapist observes interaction. / De-triangulation: Helping caregivers address their disagreement directly rather than recruiting the child as messenger.
C. Enactment: Asking family members to discuss a current issue directly while the therapist observes interaction. / De-triangulation: Inviting voluntary spatial representation of closeness or distance and processing members' meanings.
D. Enactment: Helping caregivers address their disagreement directly rather than recruiting the child as messenger. / De-triangulation: Asking family members to discuss a current issue directly while the therapist observes interaction.

0191. A supervised trainee prepares for a session in the after-school program with a preadolescent child. The intended approach is offering a provisional relational hypothesis and checking whether family members find it useful. Which concept is most relevant?

A. Genogram
B. Reframing
C. Family sculpting
D. Systemic hypothesis

0192. In advanced family therapy, for a child aged 8 seen in the after-school program, the therapist recommends a plan built around asking one person how another reacts when a third person withdraws. Which concept is reflected?

A. Genogram
B. Restructuring
C. Exception seeking
D. Circular questioning

0193. In advanced family therapy, how should a practitioner distinguish the applications of Enactment and Circular questioning?

A. Enactment: Asking family members to discuss a current issue directly while the therapist observes interaction. / Circular questioning: Asking one person how another reacts when a third person withdraws.
B. Enactment: Asking family members to discuss a current issue directly while the therapist observes interaction. / Circular questioning: Inviting voluntary spatial representation of closeness or distance and processing members' meanings.
C. Enactment: Asking one person how another reacts when a third person withdraws. / Circular questioning: Asking family members to discuss a current issue directly while the therapist observes interaction.
D. Enactment: Describing a behavior's possible protective intent while still addressing its impact. / Circular questioning: Asking one person how another reacts when a third person withdraws.

0194. Which option pairs the definitions of Genogram and Family sculpting correctly, in that order?

A. Genogram: A diagram of family relationships and patterns across generations. / Family sculpting: A tentative explanation linking a concern to interactional patterns, to be collaboratively tested and revised.
B. Genogram: A diagram of family relationships and patterns across generations. / Family sculpting: An experiential technique in which members arrange positions or posture to represent relational experience.
C. Genogram: An experiential technique in which members arrange positions or posture to represent relational experience. / Family sculpting: A diagram of family relationships and patterns across generations.
D. Genogram: A structural family therapy technique inviting family members to interact in session so patterns can be observed. / Family sculpting: An experiential technique in which members arrange positions or posture to represent relational experience.

0195. Choose the practice comparison that best separates Family sculpting from Systemic hypothesis.

A. Family sculpting: Inviting voluntary spatial representation of closeness or distance and processing members' meanings. / Systemic hypothesis: Offering a provisional relational hypothesis and checking whether family members find it useful.
B. Family sculpting: Offering a provisional relational hypothesis and checking whether family members find it useful. / Systemic hypothesis: Inviting voluntary spatial representation of closeness or distance and processing members' meanings.
C. Family sculpting: Inviting voluntary spatial representation of closeness or distance and processing members' meanings. / Systemic hypothesis: Helping caregivers address their disagreement directly rather than recruiting the child as messenger.
D. Family sculpting: Respectfully matching a family's pace and language to build a working alliance. / Systemic hypothesis: Offering a provisional relational hypothesis and checking whether family members find it useful.

0196. Which statement shows a sound practice-level distinction between Restructuring and Exception seeking?

A. Restructuring: Inviting voluntary spatial representation of closeness or distance and processing members' meanings. / Exception seeking: Asking when the family concern is less intense and what is different at those times.
B. Restructuring: Supporting a caregiver subsystem to take a clearer leadership role during a family interaction. / Exception seeking: Asking when the family concern is less intense and what is different at those times.
C. Restructuring: Supporting a caregiver subsystem to take a clearer leadership role during a family interaction. / Exception seeking: Helping caregivers address their disagreement directly rather than recruiting the child as messenger.
D. Restructuring: Asking when the family concern is less intense and what is different at those times. / Exception seeking: Supporting a caregiver subsystem to take a clearer leadership role during a family interaction.

0197. In the parent meeting, a group facilitator explains why a student aged 9 would benefit from helping caregivers address their disagreement directly rather than recruiting the child as messenger. Which course concept underpins the explanation?

A. De-triangulation
B. Reframing
C. Family sculpting
D. Circular questioning

0198. For a student aged 15 in the community mental-health service, a counselor makes this practice the immediate priority: asking when the family concern is less intense and what is different at those times. Which concept fits best?

A. De-triangulation
B. Exception seeking
C. Systemic hypothesis
D. Joining

0199. Identify the most precise label for this idea: An experiential technique in which members arrange positions or posture to represent relational experience.

A. De-triangulation
B. Reframing
C. Family sculpting
D. Enactment

0200. In the family resource center, a parent educator is considering this approach for a school-age child: describing a behavior's possible protective intent while still addressing its impact. Which framework does it represent?

A. Systemic hypothesis
B. Exception seeking
C. Enactment
D. Reframing

0201. How should a practitioner distinguish the applications of Reframing and Genogram?

A. Reframing: Mapping relationships and recurring patterns across multiple generations. / Genogram: Describing a behavior's possible protective intent while still addressing its impact.
B. Reframing: Describing a behavior's possible protective intent while still addressing its impact. / Genogram: Asking when the family concern is less intense and what is different at those times.
C. Reframing: Asking family members to discuss a current issue directly while the therapist observes interaction. / Genogram: Mapping relationships and recurring patterns across multiple generations.
D. Reframing: Describing a behavior's possible protective intent while still addressing its impact. / Genogram: Mapping relationships and recurring patterns across multiple generations.

0202. In advanced family therapy, a student aged 17's service team meets in the clinical planning session. The caregiver working with a counselor recommends a change involving asking one person how another reacts when a third person withdraws. Which idea best explains it?

A. Systemic hypothesis
B. Joining
C. Circular questioning
D. Exception seeking

0203. A case discussion concerns a young person aged 10 and a parent educator in the youth advocacy program. The practitioner is considering helping caregivers address their disagreement directly rather than recruiting the child as messenger. Which principle is involved?

A. De-triangulation
B. Exception seeking
C. Reframing
D. Joining

0204. Identify the most precise label for this idea: A tentative explanation linking a concern to interactional patterns, to be collaboratively tested and revised.

A. Joining
B. Systemic hypothesis
C. Genogram
D. Family sculpting

0205. Choose the definition pair that correctly explains Joining first and Exception seeking second.

A. Joining: A therapist's process of building rapport and adapting to a family's communication style while maintaining clinical purpose. / Exception seeking: Identifying times a problem is absent or less influential to discover resources and conditions for change.
B. Joining: Identifying times a problem is absent or less influential to discover resources and conditions for change. / Exception seeking: A therapist's process of building rapport and adapting to a family's communication style while maintaining clinical purpose.
C. Joining: A structural family therapy technique inviting family members to interact in session so patterns can be observed. / Exception seeking: Identifying times a problem is absent or less influential to discover resources and conditions for change.
D. Joining: A therapist's process of building rapport and adapting to a family's communication style while maintaining clinical purpose. / Exception seeking: An experiential technique in which members arrange positions or posture to represent relational experience.

0206. While consulting in the youth advocacy program, a mental-health professional supports a adolescent student by using this approach: asking when the family concern is less intense and what is different at those times. Which concept is being applied?

A. Restructuring
B. Enactment
C. De-triangulation
D. Exception seeking

0207. How should a practitioner distinguish the applications of Joining and Exception seeking?

A. Joining: Asking family members to discuss a current issue directly while the therapist observes interaction. / Exception seeking: Asking when the family concern is less intense and what is different at those times.
B. Joining: Asking when the family concern is less intense and what is different at those times. / Exception seeking: Respectfully matching a family's pace and language to build a working alliance.
C. Joining: Respectfully matching a family's pace and language to build a working alliance. / Exception seeking: Inviting voluntary spatial representation of closeness or distance and processing members' meanings.
D. Joining: Respectfully matching a family's pace and language to build a working alliance. / Exception seeking: Asking when the family concern is less intense and what is different at those times.

0208. In advanced family therapy, which comparison correctly distinguishes Circular questioning from Family sculpting?

A. Circular questioning: Questions that explore differences in perceptions and reciprocal interaction among family members. / Family sculpting: A tentative explanation linking a concern to interactional patterns, to be collaboratively tested and revised.
B. Circular questioning: An experiential technique in which members arrange positions or posture to represent relational experience. / Family sculpting: Questions that explore differences in perceptions and reciprocal interaction among family members.
C. Circular questioning: Questions that explore differences in perceptions and reciprocal interaction among family members. / Family sculpting: An experiential technique in which members arrange positions or posture to represent relational experience.
D. Circular questioning: Reducing a pattern in which a third person is drawn into tension between two others. / Family sculpting: An experiential technique in which members arrange positions or posture to represent relational experience.

0209. A doctoral student reads the following description. Which concept does it define? A tentative explanation linking a concern to interactional patterns, to be collaboratively tested and revised.

A. Systemic hypothesis
B. Joining
C. Genogram
D. Circular questioning

0210. While supporting a young person aged 13 in the community youth program, a school-based clinician adopts this practice: describing a behavior's possible protective intent while still addressing its impact. Which concept best explains the choice?

A. Enactment
B. Systemic hypothesis
C. Exception seeking
D. Reframing

0211. Which statement accurately contrasts the course concepts Exception seeking and Systemic hypothesis?

A. Exception seeking: Reducing a pattern in which a third person is drawn into tension between two others. / Systemic hypothesis: A tentative explanation linking a concern to interactional patterns, to be collaboratively tested and revised.
B. Exception seeking: Identifying times a problem is absent or less influential to discover resources and conditions for change. / Systemic hypothesis: Therapeutic interventions intended to alter interaction patterns, boundaries, or family organization.
C. Exception seeking: Identifying times a problem is absent or less influential to discover resources and conditions for change. / Systemic hypothesis: A tentative explanation linking a concern to interactional patterns, to be collaboratively tested and revised.
D. Exception seeking: A tentative explanation linking a concern to interactional patterns, to be collaboratively tested and revised. / Systemic hypothesis: Identifying times a problem is absent or less influential to discover resources and conditions for change.

0212. A service navigator is asked what should shape a young person's support in the child guidance clinic. The proposed focus is offering a provisional relational hypothesis and checking whether family members find it useful. Which principle does it represent?

A. De-triangulation
B. Systemic hypothesis
C. Restructuring
D. Circular questioning

0213. Choose the definition pair that correctly explains Reframing first and De-triangulation second.

A. Reframing: Reducing a pattern in which a third person is drawn into tension between two others. / De-triangulation: Offering an alternative meaning for a behavior or interaction to support a less blaming and more useful understanding.
B. Reframing: Offering an alternative meaning for a behavior or interaction to support a less blaming and more useful understanding. / De-triangulation: Reducing a pattern in which a third person is drawn into tension between two others.
C. Reframing: An experiential technique in which members arrange positions or posture to represent relational experience. / De-triangulation: Reducing a pattern in which a third person is drawn into tension between two others.
D. Reframing: Offering an alternative meaning for a behavior or interaction to support a less blaming and more useful understanding. / De-triangulation: Therapeutic interventions intended to alter interaction patterns, boundaries, or family organization.

0214. For a child aged 11 in the counseling practicum, a play therapist makes this practice the immediate priority: offering a provisional relational hypothesis and checking whether family members find it useful. Which concept fits best?

A. Circular questioning
B. Joining
C. Enactment
D. Systemic hypothesis

0215. A family therapist presents a support plan for a child aged 7 at the child guidance clinic. Its central feature is asking when the family concern is less intense and what is different at those times. Which concept should be named?

A. Reframing
B. Genogram
C. Exception seeking
D. Enactment

0216. In the classroom support meeting, a team asks how a teacher and counselor can support a student aged 17. One proposed action is asking when the family concern is less intense and what is different at those times. Which idea does it represent?

A. Exception seeking
B. Family sculpting
C. Restructuring
D. Enactment

0217. In advanced family therapy, a member of a clinical team is supporting a young person in the classroom support meeting. The key practice is asking one person how another reacts when a third person withdraws. Which course concept is most relevant?

A. Circular questioning
B. De-triangulation
C. Exception seeking
D. Joining

0218. Which comparison correctly distinguishes Exception seeking from Family sculpting?

A. Exception seeking: Identifying times a problem is absent or less influential to discover resources and conditions for change. / Family sculpting: Offering an alternative meaning for a behavior or interaction to support a less blaming and more useful understanding.
B. Exception seeking: A structural family therapy technique inviting family members to interact in session so patterns can be observed. / Family sculpting: An experiential technique in which members arrange positions or posture to represent relational experience.
C. Exception seeking: An experiential technique in which members arrange positions or posture to represent relational experience. / Family sculpting: Identifying times a problem is absent or less influential to discover resources and conditions for change.
D. Exception seeking: Identifying times a problem is absent or less influential to discover resources and conditions for change. / Family sculpting: An experiential technique in which members arrange positions or posture to represent relational experience.

0219. A case conference reviews a research trainee's work with a child of elementary-school age in the community youth program: respectfully matching a family's pace and language to build a working alliance. Which principle is central?

A. Joining
B. Genogram
C. Restructuring
D. Enactment

0220. At the family session, a clinical supervisor meets with a student aged 15. The practice priority is: describing a behavior's possible protective intent while still addressing its impact. Which concept best captures that priority?

A. De-triangulation
B. Circular questioning
C. Reframing
D. Systemic hypothesis

0221. In a supervision review, a family therapist describes work with a young person in the supervision meeting: mapping relationships and recurring patterns across multiple generations. What concept is illustrated?

A. Systemic hypothesis
B. Reframing
C. Restructuring
D. Genogram

0222. A student aged 15 is receiving support in the youth group. The consulting counselor is guided by this practice: asking family members to discuss a current issue directly while the therapist observes interaction. Which principle best fits?

A. Circular questioning
B. Systemic hypothesis
C. Enactment
D. Genogram

0223. In advanced family therapy, which paired example correctly applies Genogram first and Circular questioning second?

A. Genogram: Offering a provisional relational hypothesis and checking whether family members find it useful. / Circular questioning: Asking one person how another reacts when a third person withdraws.
B. Genogram: Mapping relationships and recurring patterns across multiple generations. / Circular questioning: Describing a behavior's possible protective intent while still addressing its impact.
C. Genogram: Mapping relationships and recurring patterns across multiple generations. / Circular questioning: Asking one person how another reacts when a third person withdraws.
D. Genogram: Asking one person how another reacts when a third person withdraws. / Circular questioning: Mapping relationships and recurring patterns across multiple generations.

0224. A supervised trainee and a young person aged 16 are discussing support in the caregiver consultation. The selected practice is asking when the family concern is less intense and what is different at those times. Which concept does this demonstrate?

A. Restructuring
B. Joining
C. Genogram
D. Exception seeking

0225. In advanced family therapy, a teacher and counselor is asked to justify a plan for a client in early adolescence in the student-support meeting. It calls for asking one person how another reacts when a third person withdraws. Which concept provides the rationale?

A. Exception seeking
B. Circular questioning
C. Joining
D. Enactment

0226. In advanced family therapy, a service team discusses a young person aged 13 in the behavior-support review. Their proposed next step is asking one person how another reacts when a third person withdraws. Which course concept supports it?

A. Exception seeking
B. Circular questioning
C. Systemic hypothesis
D. Enactment

0227. Consider a young person aged 18 receiving help in the community mental-health service. The consulting counselor focuses on helping caregivers address their disagreement directly rather than recruiting the child as messenger. Which term best describes the guiding idea?

A. Restructuring
B. Exception seeking
C. De-triangulation
D. Enactment

0228. In the community youth program, a consulting counselor explains why a young person aged 16 would benefit from inviting voluntary spatial representation of closeness or distance and processing members' meanings. Which course concept underpins the explanation?

A. Exception seeking
B. Joining
C. Reframing
D. Family sculpting

0229. In advanced family therapy, a supervisor asks for an applied contrast between Genogram and Circular questioning. Which option fits?

A. Genogram: Mapping relationships and recurring patterns across multiple generations. / Circular questioning: Asking one person how another reacts when a third person withdraws.
B. Genogram: Mapping relationships and recurring patterns across multiple generations. / Circular questioning: Describing a behavior's possible protective intent while still addressing its impact.
C. Genogram: Offering a provisional relational hypothesis and checking whether family members find it useful. / Circular questioning: Asking one person how another reacts when a third person withdraws.
D. Genogram: Asking one person how another reacts when a third person withdraws. / Circular questioning: Mapping relationships and recurring patterns across multiple generations.

0230. In advanced family therapy, which option preserves the correct meaning of both Genogram and Circular questioning?

A. Genogram: Questions that explore differences in perceptions and reciprocal interaction among family members. / Circular questioning: A diagram of family relationships and patterns across generations.
B. Genogram: A diagram of family relationships and patterns across generations. / Circular questioning: Questions that explore differences in perceptions and reciprocal interaction among family members.
C. Genogram: A tentative explanation linking a concern to interactional patterns, to be collaboratively tested and revised. / Circular questioning: Questions that explore differences in perceptions and reciprocal interaction among family members.
D. Genogram: A diagram of family relationships and patterns across generations. / Circular questioning: Offering an alternative meaning for a behavior or interaction to support a less blaming and more useful understanding.

0231. In advanced family therapy, which comparison correctly distinguishes Reframing from Circular questioning?

A. Reframing: Offering an alternative meaning for a behavior or interaction to support a less blaming and more useful understanding. / Circular questioning: Therapeutic interventions intended to alter interaction patterns, boundaries, or family organization.
B. Reframing: Offering an alternative meaning for a behavior or interaction to support a less blaming and more useful understanding. / Circular questioning: Questions that explore differences in perceptions and reciprocal interaction among family members.
C. Reframing: Reducing a pattern in which a third person is drawn into tension between two others. / Circular questioning: Questions that explore differences in perceptions and reciprocal interaction among family members.
D. Reframing: Questions that explore differences in perceptions and reciprocal interaction among family members. / Circular questioning: Offering an alternative meaning for a behavior or interaction to support a less blaming and more useful understanding.

0232. A service navigator describes an intervention for a student aged 17 in the supervision meeting, centered on supporting a caregiver subsystem to take a clearer leadership role during a family interaction. Which named idea is most relevant?

A. Systemic hypothesis
B. Reframing
C. Joining
D. Restructuring

0233. Which professional action most closely applies Reframing?

A. Asking when the family concern is less intense and what is different at those times.
B. Supporting a caregiver subsystem to take a clearer leadership role during a family interaction.
C. Describing a behavior's possible protective intent while still addressing its impact.
D. Respectfully matching a family's pace and language to build a working alliance.

0234. In advanced family therapy, choose the practice comparison that best separates Circular questioning from Exception seeking.

A. Circular questioning: Asking one person how another reacts when a third person withdraws. / Exception seeking: Asking when the family concern is less intense and what is different at those times.
B. Circular questioning: Asking when the family concern is less intense and what is different at those times. / Exception seeking: Asking one person how another reacts when a third person withdraws.
C. Circular questioning: Inviting voluntary spatial representation of closeness or distance and processing members' meanings. / Exception seeking: Asking when the family concern is less intense and what is different at those times.
D. Circular questioning: Asking one person how another reacts when a third person withdraws. / Exception seeking: Helping caregivers address their disagreement directly rather than recruiting the child as messenger.

0235. A trainee must distinguish how Restructuring and De-triangulation guide practice. Which comparison is accurate?

A. Restructuring: Helping caregivers address their disagreement directly rather than recruiting the child as messenger. / De-triangulation: Supporting a caregiver subsystem to take a clearer leadership role during a family interaction.
B. Restructuring: Supporting a caregiver subsystem to take a clearer leadership role during a family interaction. / De-triangulation: Helping caregivers address their disagreement directly rather than recruiting the child as messenger.
C. Restructuring: Describing a behavior's possible protective intent while still addressing its impact. / De-triangulation: Helping caregivers address their disagreement directly rather than recruiting the child as messenger.
D. Restructuring: Supporting a caregiver subsystem to take a clearer leadership role during a family interaction. / De-triangulation: Offering a provisional relational hypothesis and checking whether family members find it useful.

0236. Which applied comparison correctly identifies what belongs to Exception seeking versus Family sculpting?

A. Exception seeking: Asking when the family concern is less intense and what is different at those times. / Family sculpting: Inviting voluntary spatial representation of closeness or distance and processing members' meanings.
B. Exception seeking: Inviting voluntary spatial representation of closeness or distance and processing members' meanings. / Family sculpting: Asking when the family concern is less intense and what is different at those times.
C. Exception seeking: Asking family members to discuss a current issue directly while the therapist observes interaction. / Family sculpting: Inviting voluntary spatial representation of closeness or distance and processing members' meanings.
D. Exception seeking: Asking when the family concern is less intense and what is different at those times. / Family sculpting: Describing a behavior's possible protective intent while still addressing its impact.

0237. A trainee must choose a practice that exemplifies Reframing. Which action is the best fit?

A. Describing a behavior's possible protective intent while still addressing its impact.
B. Respectfully matching a family's pace and language to build a working alliance.
C. Offering a provisional relational hypothesis and checking whether family members find it useful.
D. Asking one person how another reacts when a third person withdraws.

0238. At a case-planning meeting, the clinical supervisor proposes describing a behavior's possible protective intent while still addressing its impact. for a student aged 15 seen in the family session. Which concept does this illustrate?

A. Genogram
B. Family sculpting
C. Reframing
D. Restructuring

0239. A teacher and counselor is explaining a choice to a child aged 14 and caregiver in the family session. The choice centers on helping caregivers address their disagreement directly rather than recruiting the child as messenger. Which idea is illustrated?

A. Family sculpting
B. Enactment
C. De-triangulation
D. Joining

0240. Which option correctly matches each concept to its practice focus: Genogram and Family sculpting?

A. Genogram: Mapping relationships and recurring patterns across multiple generations. / Family sculpting: Inviting voluntary spatial representation of closeness or distance and processing members' meanings.
B. Genogram: Asking family members to discuss a current issue directly while the therapist observes interaction. / Family sculpting: Inviting voluntary spatial representation of closeness or distance and processing members' meanings.
C. Genogram: Inviting voluntary spatial representation of closeness or distance and processing members' meanings. / Family sculpting: Mapping relationships and recurring patterns across multiple generations.
D. Genogram: Mapping relationships and recurring patterns across multiple generations. / Family sculpting: Offering a provisional relational hypothesis and checking whether family members find it useful.

0241. In advanced family therapy, a student confuses Reframing with Circular questioning. Which explanation most accurately separates them?

A. Reframing: Reducing a pattern in which a third person is drawn into tension between two others. / Circular questioning: Questions that explore differences in perceptions and reciprocal interaction among family members.
B. Reframing: Questions that explore differences in perceptions and reciprocal interaction among family members. / Circular questioning: Offering an alternative meaning for a behavior or interaction to support a less blaming and more useful understanding.
C. Reframing: Offering an alternative meaning for a behavior or interaction to support a less blaming and more useful understanding. / Circular questioning: Questions that explore differences in perceptions and reciprocal interaction among family members.
D. Reframing: Offering an alternative meaning for a behavior or interaction to support a less blaming and more useful understanding. / Circular questioning: Therapeutic interventions intended to alter interaction patterns, boundaries, or family organization.

0242. During service review in the caregiver consultation, a program coordinator describes supporting a caregiver subsystem to take a clearer leadership role during a family interaction. for a student aged 12. Which course idea is most applicable?

A. Enactment
B. Reframing
C. Restructuring
D. Circular questioning

0243. A behavior specialist reviews a plan for a child aged 6 in the community mental-health service. The plan emphasizes describing a behavior's possible protective intent while still addressing its impact. Which course idea does this reflect?

A. Exception seeking
B. Restructuring
C. Reframing
D. De-triangulation

0244. Which comparison would correct a trainee's misunderstanding of Family sculpting versus Systemic hypothesis?

A. Family sculpting: A therapist's process of building rapport and adapting to a family's communication style while maintaining clinical purpose. / Systemic hypothesis: A tentative explanation linking a concern to interactional patterns, to be collaboratively tested and revised.
B. Family sculpting: An experiential technique in which members arrange positions or posture to represent relational experience. / Systemic hypothesis: A tentative explanation linking a concern to interactional patterns, to be collaboratively tested and revised.
C. Family sculpting: An experiential technique in which members arrange positions or posture to represent relational experience. / Systemic hypothesis: Reducing a pattern in which a third person is drawn into tension between two others.
D. Family sculpting: A tentative explanation linking a concern to interactional patterns, to be collaboratively tested and revised. / Systemic hypothesis: An experiential technique in which members arrange positions or posture to represent relational experience.

0245. Which option pairs the definitions of Genogram and Joining correctly, in that order?

A. Genogram: A diagram of family relationships and patterns across generations. / Joining: Offering an alternative meaning for a behavior or interaction to support a less blaming and more useful understanding.
B. Genogram: A diagram of family relationships and patterns across generations. / Joining: A therapist's process of building rapport and adapting to a family's communication style while maintaining clinical purpose.
C. Genogram: An experiential technique in which members arrange positions or posture to represent relational experience. / Joining: A therapist's process of building rapport and adapting to a family's communication style while maintaining clinical purpose.
D. Genogram: A therapist's process of building rapport and adapting to a family's communication style while maintaining clinical purpose. / Joining: A diagram of family relationships and patterns across generations.

0246. Which option preserves the correct meaning of both Reframing and De-triangulation?

A. Reframing: Offering an alternative meaning for a behavior or interaction to support a less blaming and more useful understanding. / De-triangulation: Reducing a pattern in which a third person is drawn into tension between two others.
B. Reframing: Offering an alternative meaning for a behavior or interaction to support a less blaming and more useful understanding. / De-triangulation: Therapeutic interventions intended to alter interaction patterns, boundaries, or family organization.
C. Reframing: Reducing a pattern in which a third person is drawn into tension between two others. / De-triangulation: Offering an alternative meaning for a behavior or interaction to support a less blaming and more useful understanding.
D. Reframing: An experiential technique in which members arrange positions or posture to represent relational experience. / De-triangulation: Reducing a pattern in which a third person is drawn into tension between two others.

0247. A trainee must choose a practice that exemplifies Restructuring. Which action is the best fit?

A. Supporting a caregiver subsystem to take a clearer leadership role during a family interaction.
B. Helping caregivers address their disagreement directly rather than recruiting the child as messenger.
C. Respectfully matching a family's pace and language to build a working alliance.
D. Asking when the family concern is less intense and what is different at those times.

0248. Choose the term that matches this definition: Reducing a pattern in which a third person is drawn into tension between two others.

A. Restructuring
B. De-triangulation
C. Family sculpting
D. Exception seeking

0249. In a supervision quiz, how should Genogram be distinguished from Restructuring?

A. Genogram: Therapeutic interventions intended to alter interaction patterns, boundaries, or family organization. / Restructuring: A diagram of family relationships and patterns across generations.
B. Genogram: A diagram of family relationships and patterns across generations. / Restructuring: Therapeutic interventions intended to alter interaction patterns, boundaries, or family organization.
C. Genogram: A diagram of family relationships and patterns across generations. / Restructuring: A tentative explanation linking a concern to interactional patterns, to be collaboratively tested and revised.
D. Genogram: Questions that explore differences in perceptions and reciprocal interaction among family members. / Restructuring: Therapeutic interventions intended to alter interaction patterns, boundaries, or family organization.

0250. In a supervision quiz, how should Joining be distinguished from Restructuring?

A. Joining: Identifying times a problem is absent or less influential to discover resources and conditions for change. / Restructuring: Therapeutic interventions intended to alter interaction patterns, boundaries, or family organization.
B. Joining: A therapist's process of building rapport and adapting to a family's communication style while maintaining clinical purpose. / Restructuring: An experiential technique in which members arrange positions or posture to represent relational experience.
C. Joining: Therapeutic interventions intended to alter interaction patterns, boundaries, or family organization. / Restructuring: A therapist's process of building rapport and adapting to a family's communication style while maintaining clinical purpose.
D. Joining: A therapist's process of building rapport and adapting to a family's communication style while maintaining clinical purpose. / Restructuring: Therapeutic interventions intended to alter interaction patterns, boundaries, or family organization.

0251. A play therapist reviews a plan for a young person aged 13 in the telehealth session. The plan emphasizes asking family members to discuss a current issue directly while the therapist observes interaction. Which course idea does this reflect?

A. Enactment
B. De-triangulation
C. Family sculpting
D. Systemic hypothesis

0252. A student confuses Restructuring with Systemic hypothesis. Which explanation most accurately separates them?

A. Restructuring: A tentative explanation linking a concern to interactional patterns, to be collaboratively tested and revised. / Systemic hypothesis: Therapeutic interventions intended to alter interaction patterns, boundaries, or family organization.
B. Restructuring: Therapeutic interventions intended to alter interaction patterns, boundaries, or family organization. / Systemic hypothesis: A tentative explanation linking a concern to interactional patterns, to be collaboratively tested and revised.
C. Restructuring: Therapeutic interventions intended to alter interaction patterns, boundaries, or family organization. / Systemic hypothesis: Reducing a pattern in which a third person is drawn into tension between two others.
D. Restructuring: An experiential technique in which members arrange positions or posture to represent relational experience. / Systemic hypothesis: A tentative explanation linking a concern to interactional patterns, to be collaboratively tested and revised.

0253. In a professional consultation about a adolescent student, the mental-health professional describes this response in the youth advocacy program: asking when the family concern is less intense and what is different at those times. Which term is most apt?

A. Exception seeking
B. Joining
C. De-triangulation
D. Enactment

0254. At the counseling practicum, a service navigator reviews whether a plan for a teenage client is appropriate. The relevant practice is describing a behavior's possible protective intent while still addressing its impact. Which concept is tested?

A. Family sculpting
B. Systemic hypothesis
C. Joining
D. Reframing

0255. A consultant is supporting a child aged 8 in the clinical planning session. The key practice is helping caregivers address their disagreement directly rather than recruiting the child as messenger. Which course concept is most relevant?

A. De-triangulation
B. Restructuring
C. Systemic hypothesis
D. Reframing

0256. Which option preserves the correct meaning of both Enactment and Systemic hypothesis?

A. Enactment: A structural family therapy technique inviting family members to interact in session so patterns can be observed. / Systemic hypothesis: A tentative explanation linking a concern to interactional patterns, to be collaboratively tested and revised.
B. Enactment: A structural family therapy technique inviting family members to interact in session so patterns can be observed. / Systemic hypothesis: Questions that explore differences in perceptions and reciprocal interaction among family members.
C. Enactment: Therapeutic interventions intended to alter interaction patterns, boundaries, or family organization. / Systemic hypothesis: A tentative explanation linking a concern to interactional patterns, to be collaboratively tested and revised.
D. Enactment: A tentative explanation linking a concern to interactional patterns, to be collaboratively tested and revised. / Systemic hypothesis: A structural family therapy technique inviting family members to interact in session so patterns can be observed.

0257. Which description belongs with the term Reframing?

A. A therapist's process of building rapport and adapting to a family's communication style while maintaining clinical purpose.
B. Identifying times a problem is absent or less influential to discover resources and conditions for change.
C. Offering an alternative meaning for a behavior or interaction to support a less blaming and more useful understanding.
D. A tentative explanation linking a concern to interactional patterns, to be collaboratively tested and revised.

0258. In a supervision quiz, how should Genogram be distinguished from Family sculpting?

A. Genogram: A diagram of family relationships and patterns across generations. / Family sculpting: A tentative explanation linking a concern to interactional patterns, to be collaboratively tested and revised.
B. Genogram: A diagram of family relationships and patterns across generations. / Family sculpting: An experiential technique in which members arrange positions or posture to represent relational experience.
C. Genogram: A structural family therapy technique inviting family members to interact in session so patterns can be observed. / Family sculpting: An experiential technique in which members arrange positions or posture to represent relational experience.
D. Genogram: An experiential technique in which members arrange positions or posture to represent relational experience. / Family sculpting: A diagram of family relationships and patterns across generations.

0259. In advanced family therapy, what is the central meaning of Circular questioning?

A. Reducing a pattern in which a third person is drawn into tension between two others.
B. An experiential technique in which members arrange positions or posture to represent relational experience.
C. Questions that explore differences in perceptions and reciprocal interaction among family members.
D. A structural family therapy technique inviting family members to interact in session so patterns can be observed.

0260. In advanced family therapy, during work in the child guidance clinic, a consulting counselor identifies this need: asking one person how another reacts when a third person withdraws. Which idea should guide the response?

A. Circular questioning
B. De-triangulation
C. Restructuring
D. Exception seeking

0261. A doctoral student reads the following description. Which concept does it define? An experiential technique in which members arrange positions or posture to represent relational experience.

A. Genogram
B. Systemic hypothesis
C. Enactment
D. Family sculpting

0262. In a case note about a school-age child, a mental-health professional working in the counseling practicum records this priority: helping caregivers address their disagreement directly rather than recruiting the child as messenger. What principle is reflected?

A. Circular questioning
B. De-triangulation
C. Genogram
D. Family sculpting

0263. Which pair of actions illustrates Genogram and Exception seeking, respectively?

A. Genogram: Asking when the family concern is less intense and what is different at those times. / Exception seeking: Mapping relationships and recurring patterns across multiple generations.
B. Genogram: Describing a behavior's possible protective intent while still addressing its impact. / Exception seeking: Asking when the family concern is less intense and what is different at those times.
C. Genogram: Mapping relationships and recurring patterns across multiple generations. / Exception seeking: Helping caregivers address their disagreement directly rather than recruiting the child as messenger.
D. Genogram: Mapping relationships and recurring patterns across multiple generations. / Exception seeking: Asking when the family concern is less intense and what is different at those times.

0264. A supervisor asks for an applied contrast between Enactment and Systemic hypothesis. Which option fits?

A. Enactment: Offering a provisional relational hypothesis and checking whether family members find it useful. / Systemic hypothesis: Asking family members to discuss a current issue directly while the therapist observes interaction.
B. Enactment: Asking family members to discuss a current issue directly while the therapist observes interaction. / Systemic hypothesis: Offering a provisional relational hypothesis and checking whether family members find it useful.
C. Enactment: Asking family members to discuss a current issue directly while the therapist observes interaction. / Systemic hypothesis: Asking one person how another reacts when a third person withdraws.
D. Enactment: Supporting a caregiver subsystem to take a clearer leadership role during a family interaction. / Systemic hypothesis: Offering a provisional relational hypothesis and checking whether family members find it useful.

0265. A case conference asks for a distinction between Enactment and Joining. Which answer is sound?

A. Enactment: A structural family therapy technique inviting family members to interact in session so patterns can be observed. / Joining: A therapist's process of building rapport and adapting to a family's communication style while maintaining clinical purpose.
B. Enactment: Reducing a pattern in which a third person is drawn into tension between two others. / Joining: A therapist's process of building rapport and adapting to a family's communication style while maintaining clinical purpose.
C. Enactment: A therapist's process of building rapport and adapting to a family's communication style while maintaining clinical purpose. / Joining: A structural family therapy technique inviting family members to interact in session so patterns can be observed.
D. Enactment: A structural family therapy technique inviting family members to interact in session so patterns can be observed. / Joining: An experiential technique in which members arrange positions or posture to represent relational experience.

0266. Which pair of actions illustrates Restructuring and Family sculpting, respectively?

A. Restructuring: Supporting a caregiver subsystem to take a clearer leadership role during a family interaction. / Family sculpting: Inviting voluntary spatial representation of closeness or distance and processing members' meanings.
B. Restructuring: Asking when the family concern is less intense and what is different at those times. / Family sculpting: Inviting voluntary spatial representation of closeness or distance and processing members' meanings.
C. Restructuring: Inviting voluntary spatial representation of closeness or distance and processing members' meanings. / Family sculpting: Supporting a caregiver subsystem to take a clearer leadership role during a family interaction.
D. Restructuring: Supporting a caregiver subsystem to take a clearer leadership role during a family interaction. / Family sculpting: Asking family members to discuss a current issue directly while the therapist observes interaction.

0267. In the supervision meeting, a teacher and counselor describes the most appropriate support for a child aged 8 as offering a provisional relational hypothesis and checking whether family members find it useful. Which framework is being applied?

A. Exception seeking
B. Family sculpting
C. Systemic hypothesis
D. Genogram

0268. Which applied comparison correctly identifies what belongs to Joining versus Exception seeking?

A. Joining: Asking family members to discuss a current issue directly while the therapist observes interaction. / Exception seeking: Asking when the family concern is less intense and what is different at those times.
B. Joining: Asking when the family concern is less intense and what is different at those times. / Exception seeking: Respectfully matching a family's pace and language to build a working alliance.
C. Joining: Respectfully matching a family's pace and language to build a working alliance. / Exception seeking: Asking when the family concern is less intense and what is different at those times.
D. Joining: Respectfully matching a family's pace and language to build a working alliance. / Exception seeking: Inviting voluntary spatial representation of closeness or distance and processing members' meanings.

0269. Which statement most accurately defines Systemic hypothesis?

A. A tentative explanation linking a concern to interactional patterns, to be collaboratively tested and revised.
B. Identifying times a problem is absent or less influential to discover resources and conditions for change.
C. A diagram of family relationships and patterns across generations.
D. Questions that explore differences in perceptions and reciprocal interaction among family members.

0270. During work in the counseling practicum, a teacher and counselor identifies this need: supporting a caregiver subsystem to take a clearer leadership role during a family interaction. Which idea should guide the response?

A. Systemic hypothesis
B. Restructuring
C. De-triangulation
D. Reframing

0271. Which statement shows a sound practice-level distinction between Enactment and Family sculpting?

A. Enactment: Asking family members to discuss a current issue directly while the therapist observes interaction. / Family sculpting: Inviting voluntary spatial representation of closeness or distance and processing members' meanings.
B. Enactment: Asking family members to discuss a current issue directly while the therapist observes interaction. / Family sculpting: Offering a provisional relational hypothesis and checking whether family members find it useful.
C. Enactment: Asking when the family concern is less intense and what is different at those times. / Family sculpting: Inviting voluntary spatial representation of closeness or distance and processing members' meanings.
D. Enactment: Inviting voluntary spatial representation of closeness or distance and processing members' meanings. / Family sculpting: Asking family members to discuss a current issue directly while the therapist observes interaction.

0272. Which pair of actions illustrates Enactment and Systemic hypothesis, respectively?

A. Enactment: Asking family members to discuss a current issue directly while the therapist observes interaction. / Systemic hypothesis: Offering a provisional relational hypothesis and checking whether family members find it useful.
B. Enactment: Asking family members to discuss a current issue directly while the therapist observes interaction. / Systemic hypothesis: Asking one person how another reacts when a third person withdraws.
C. Enactment: Offering a provisional relational hypothesis and checking whether family members find it useful. / Systemic hypothesis: Asking family members to discuss a current issue directly while the therapist observes interaction.
D. Enactment: Supporting a caregiver subsystem to take a clearer leadership role during a family interaction. / Systemic hypothesis: Offering a provisional relational hypothesis and checking whether family members find it useful.

0273. In the school consultation, a school counselor explains why a middle-school student would benefit from offering a provisional relational hypothesis and checking whether family members find it useful. Which course concept underpins the explanation?

A. Systemic hypothesis
B. Exception seeking
C. Enactment
D. Genogram

0274. A team must select a support approach for a child of elementary-school age at the caregiver consultation. The parent educator recommends mapping relationships and recurring patterns across multiple generations. Which idea is most relevant?

A. Genogram
B. Restructuring
C. Enactment
D. De-triangulation

0275. In advanced family therapy, a community practitioner is asked what should shape a young person aged 13's support in the behavior-support review. The proposed focus is asking one person how another reacts when a third person withdraws. Which principle does it represent?

A. De-triangulation
B. Genogram
C. Family sculpting
D. Circular questioning

0276. Which option correctly matches each concept to its practice focus: Family sculpting and Systemic hypothesis?

A. Family sculpting: Offering a provisional relational hypothesis and checking whether family members find it useful. / Systemic hypothesis: Inviting voluntary spatial representation of closeness or distance and processing members' meanings.
B. Family sculpting: Inviting voluntary spatial representation of closeness or distance and processing members' meanings. / Systemic hypothesis: Offering a provisional relational hypothesis and checking whether family members find it useful.
C. Family sculpting: Respectfully matching a family's pace and language to build a working alliance. / Systemic hypothesis: Offering a provisional relational hypothesis and checking whether family members find it useful.
D. Family sculpting: Inviting voluntary spatial representation of closeness or distance and processing members' meanings. / Systemic hypothesis: Helping caregivers address their disagreement directly rather than recruiting the child as messenger.

0277. Which statement most accurately defines Exception seeking?

A. Reducing a pattern in which a third person is drawn into tension between two others.
B. A tentative explanation linking a concern to interactional patterns, to be collaboratively tested and revised.
C. A structural family therapy technique inviting family members to interact in session so patterns can be observed.
D. Identifying times a problem is absent or less influential to discover resources and conditions for change.

0278. A caregiver working with a counselor presents a support plan for a child aged 11 at the community mental-health service. Its central feature is supporting a caregiver subsystem to take a clearer leadership role during a family interaction. Which concept should be named?

A. Joining
B. Reframing
C. Restructuring
D. Exception seeking

0279. In the school counseling office, a family therapist is considering this approach for a high-school student: respectfully matching a family's pace and language to build a working alliance. Which framework does it represent?

A. Joining
B. Genogram
C. Systemic hypothesis
D. Restructuring

0280. How are Restructuring and Systemic hypothesis most accurately differentiated in this curriculum?

A. Restructuring: Therapeutic interventions intended to alter interaction patterns, boundaries, or family organization. / Systemic hypothesis: Reducing a pattern in which a third person is drawn into tension between two others.
B. Restructuring: Therapeutic interventions intended to alter interaction patterns, boundaries, or family organization. / Systemic hypothesis: A tentative explanation linking a concern to interactional patterns, to be collaboratively tested and revised.
C. Restructuring: A tentative explanation linking a concern to interactional patterns, to be collaboratively tested and revised. / Systemic hypothesis: Therapeutic interventions intended to alter interaction patterns, boundaries, or family organization.
D. Restructuring: An experiential technique in which members arrange positions or posture to represent relational experience. / Systemic hypothesis: A tentative explanation linking a concern to interactional patterns, to be collaboratively tested and revised.

0281. In advanced family therapy, which statement accurately contrasts the course concepts Reframing and Circular questioning?

A. Reframing: Questions that explore differences in perceptions and reciprocal interaction among family members. / Circular questioning: Offering an alternative meaning for a behavior or interaction to support a less blaming and more useful understanding.
B. Reframing: Offering an alternative meaning for a behavior or interaction to support a less blaming and more useful understanding. / Circular questioning: Therapeutic interventions intended to alter interaction patterns, boundaries, or family organization.
C. Reframing: Offering an alternative meaning for a behavior or interaction to support a less blaming and more useful understanding. / Circular questioning: Questions that explore differences in perceptions and reciprocal interaction among family members.
D. Reframing: Reducing a pattern in which a third person is drawn into tension between two others. / Circular questioning: Questions that explore differences in perceptions and reciprocal interaction among family members.

0282. A trainee must distinguish how De-triangulation and Systemic hypothesis guide practice. Which comparison is accurate?

A. De-triangulation: Respectfully matching a family's pace and language to build a working alliance. / Systemic hypothesis: Offering a provisional relational hypothesis and checking whether family members find it useful.
B. De-triangulation: Helping caregivers address their disagreement directly rather than recruiting the child as messenger. / Systemic hypothesis: Offering a provisional relational hypothesis and checking whether family members find it useful.
C. De-triangulation: Offering a provisional relational hypothesis and checking whether family members find it useful. / Systemic hypothesis: Helping caregivers address their disagreement directly rather than recruiting the child as messenger.
D. De-triangulation: Helping caregivers address their disagreement directly rather than recruiting the child as messenger. / Systemic hypothesis: Inviting voluntary spatial representation of closeness or distance and processing members' meanings.

0283. In advanced family therapy, a trainee must distinguish how Circular questioning and Joining guide practice. Which comparison is accurate?

A. Circular questioning: Offering a provisional relational hypothesis and checking whether family members find it useful. / Joining: Respectfully matching a family's pace and language to build a working alliance.
B. Circular questioning: Asking one person how another reacts when a third person withdraws. / Joining: Respectfully matching a family's pace and language to build a working alliance.
C. Circular questioning: Asking one person how another reacts when a third person withdraws. / Joining: Describing a behavior's possible protective intent while still addressing its impact.
D. Circular questioning: Respectfully matching a family's pace and language to build a working alliance. / Joining: Asking one person how another reacts when a third person withdraws.

0284. For a child aged 8 in the telehealth session, a behavior specialist makes this practice the immediate priority: supporting a caregiver subsystem to take a clearer leadership role during a family interaction. Which concept fits best?

A. Joining
B. Genogram
C. Restructuring
D. Exception seeking

0285. While consulting in the community service agency, a member of a clinical team supports a high-school student by using this approach: supporting a caregiver subsystem to take a clearer leadership role during a family interaction. Which concept is being applied?

A. De-triangulation
B. Reframing
C. Family sculpting
D. Restructuring

0286. Which applied comparison correctly identifies what belongs to Exception seeking versus Systemic hypothesis?

A. Exception seeking: Asking when the family concern is less intense and what is different at those times. / Systemic hypothesis: Supporting a caregiver subsystem to take a clearer leadership role during a family interaction.
B. Exception seeking: Offering a provisional relational hypothesis and checking whether family members find it useful. / Systemic hypothesis: Asking when the family concern is less intense and what is different at those times.
C. Exception seeking: Asking when the family concern is less intense and what is different at those times. / Systemic hypothesis: Offering a provisional relational hypothesis and checking whether family members find it useful.
D. Exception seeking: Helping caregivers address their disagreement directly rather than recruiting the child as messenger. / Systemic hypothesis: Offering a provisional relational hypothesis and checking whether family members find it useful.

0287. Which course concept is defined as follows: Offering an alternative meaning for a behavior or interaction to support a less blaming and more useful understanding.

A. Circular questioning
B. Joining
C. Reframing
D. Systemic hypothesis

0288. In advanced family therapy, at the caregiver consultation, a play therapist meets with a teenage client. The practice priority is: asking one person how another reacts when a third person withdraws. Which concept best captures that priority?

A. De-triangulation
B. Circular questioning
C. Systemic hypothesis
D. Genogram

0289. Consider a child aged 6 receiving help in the multidisciplinary case conference. The youth worker focuses on asking family members to discuss a current issue directly while the therapist observes interaction. Which term best describes the guiding idea?

A. Exception seeking
B. Family sculpting
C. Enactment
D. Restructuring

0290. While supporting a young person aged 16 in the after-school program, a parent educator adopts this practice: supporting a caregiver subsystem to take a clearer leadership role during a family interaction. Which concept best explains the choice?

A. Genogram
B. Family sculpting
C. Restructuring
D. Reframing

0291. A team must select a support approach for a student aged 17 at the outpatient clinic. The school-based clinician recommends inviting voluntary spatial representation of closeness or distance and processing members' meanings. Which idea is most relevant?

A. Systemic hypothesis
B. Genogram
C. De-triangulation
D. Family sculpting

0292. Which comparison would correct a trainee’s misunderstanding of Joining versus Family sculpting?

A. Joining: An experiential technique in which members arrange positions or posture to represent relational experience. / Family sculpting: A therapist’s process of building rapport and adapting to a family’s communication style while maintaining clinical purpose.
B. Joining: A therapist’s process of building rapport and adapting to a family’s communication style while maintaining clinical purpose. / Family sculpting: An experiential technique in which members arrange positions or posture to represent relational experience.
C. Joining: Offering an alternative meaning for a behavior or interaction to support a less blaming and more useful understanding. / Family sculpting: An experiential technique in which members arrange positions or posture to represent relational experience.
D. Joining: A therapist’s process of building rapport and adapting to a family’s communication style while maintaining clinical purpose. / Family sculpting: A structural family therapy technique inviting family members to interact in session so patterns can be observed.

0293. Which applied comparison correctly identifies what belongs to Joining versus Family sculpting?

A. Joining: Respectfully matching a family’s pace and language to build a working alliance. / Family sculpting: Inviting voluntary spatial representation of closeness or distance and processing members’ meanings.
B. Joining: Inviting voluntary spatial representation of closeness or distance and processing members’ meanings. / Family sculpting: Respectfully matching a family’s pace and language to build a working alliance.
C. Joining: Describing a behavior’s possible protective intent while still addressing its impact. / Family sculpting: Inviting voluntary spatial representation of closeness or distance and processing members’ meanings.
D. Joining: Respectfully matching a family’s pace and language to build a working alliance. / Family sculpting: Asking family members to discuss a current issue directly while the therapist observes interaction.

0294. In advanced family therapy, a case conference reviews a program coordinator’s work with a child aged 7 in the parent meeting: asking one person how another reacts when a third person withdraws. Which principle is central?

A. Reframing
B. Genogram
C. Circular questioning
D. Family sculpting

0295. Consider a client in late adolescence receiving help in the school-based service. The group facilitator focuses on describing a behavior’s possible protective intent while still addressing its impact. Which term best describes the guiding idea?

A. Reframing
B. Joining
C. Circular questioning
D. Family sculpting

0296. A youth worker is asked to justify a plan for a child aged 7 in the youth advocacy program. It calls for offering a provisional relational hypothesis and checking whether family members find it useful. Which concept provides the rationale?

A. Systemic hypothesis
B. Exception seeking
C. Enactment
D. Family sculpting

0297. Which description belongs with the term De-triangulation?

A. Questions that explore differences in perceptions and reciprocal interaction among family members.
B. Reducing a pattern in which a third person is drawn into tension between two others.
C. A therapist’s process of building rapport and adapting to a family’s communication style while maintaining clinical purpose.
D. Therapeutic interventions intended to alter interaction patterns, boundaries, or family organization.

0298. In a supervision review, a case coordinator describes work with a older adolescent client in the youth group: inviting voluntary spatial representation of closeness or distance and processing members’ meanings. What concept is illustrated?

A. Reframing
B. Exception seeking
C. Enactment
D. Family sculpting

0299. In the school-based service, a family therapist is considering this approach for a student aged 9: offering a provisional relational hypothesis and checking whether family members find it useful. Which framework does it represent?

A. Systemic hypothesis
B. Family sculpting
C. Circular questioning
D. Enactment

0300. For a middle-school student in the school-based service, a behavior specialist makes this practice the immediate priority: asking family members to discuss a current issue directly while the therapist observes interaction. Which concept fits best?

A. Enactment
B. De-triangulation
C. Systemic hypothesis
D. Circular questioning

0301. In the family resource center, the agreed focus for a program coordinator working with a student aged 15 is respectfully matching a family’s pace and language to build a working alliance. Which concept names this focus?

A. Circular questioning
B. Joining
C. Restructuring
D. Reframing

0302. In advanced family therapy, which statement accurately contrasts the course concepts Enactment and Circular questioning?

A. Enactment: Offering an alternative meaning for a behavior or interaction to support a less blaming and more useful understanding. / Circular questioning: Questions that explore differences in perceptions and reciprocal interaction among family members.
B. Enactment: A structural family therapy technique inviting family members to interact in session so patterns can be observed. / Circular questioning: An experiential technique in which members arrange positions or posture to represent relational experience.
C. Enactment: Questions that explore differences in perceptions and reciprocal interaction among family members. / Circular questioning: A structural family therapy technique inviting family members to interact in session so patterns can be observed.
D. Enactment: A structural family therapy technique inviting family members to interact in session so patterns can be observed. / Circular questioning: Questions that explore differences in perceptions and reciprocal interaction among family members.

0303. Which option pairs the definitions of Reframing and Joining correctly, in that order?

A. Reframing: Offering an alternative meaning for a behavior or interaction to support a less blaming and more useful understanding. / Joining: A therapist's process of building rapport and adapting to a family's communication style while maintaining clinical purpose.
B. Reframing: Questions that explore differences in perceptions and reciprocal interaction among family members. / Joining: A therapist's process of building rapport and adapting to a family's communication style while maintaining clinical purpose.
C. Reframing: Offering an alternative meaning for a behavior or interaction to support a less blaming and more useful understanding. / Joining: A structural family therapy technique inviting family members to interact in session so patterns can be observed.
D. Reframing: A therapist's process of building rapport and adapting to a family's communication style while maintaining clinical purpose. / Joining: Offering an alternative meaning for a behavior or interaction to support a less blaming and more useful understanding.

0304. At a case-planning meeting, the school support specialist proposes helping caregivers address their disagreement directly rather than recruiting the child as messenger. for a preadolescent child seen in the community service agency. Which concept does this illustrate?

A. Genogram
B. Systemic hypothesis
C. De-triangulation
D. Circular questioning

0305. Which statement shows a sound practice-level distinction between Restructuring and De-triangulation?

A. Restructuring: Describing a behavior's possible protective intent while still addressing its impact. / De-triangulation: Helping caregivers address their disagreement directly rather than recruiting the child as messenger.
B. Restructuring: Supporting a caregiver subsystem to take a clearer leadership role during a family interaction. / De-triangulation: Helping caregivers address their disagreement directly rather than recruiting the child as messenger.
C. Restructuring: Helping caregivers address their disagreement directly rather than recruiting the child as messenger. / De-triangulation: Supporting a caregiver subsystem to take a clearer leadership role during a family interaction.
D. Restructuring: Supporting a caregiver subsystem to take a clearer leadership role during a family interaction. / De-triangulation: Offering a provisional relational hypothesis and checking whether family members find it useful.

0306. A community practitioner is asked what should shape a middle-school student's support in the community mental-health service. The proposed focus is inviting voluntary spatial representation of closeness or distance and processing members' meanings. Which principle does it represent?

A. Enactment
B. Family sculpting
C. Reframing
D. Restructuring

0307. Which option pairs the definitions of Reframing and Genogram correctly, in that order?

A. Reframing: Offering an alternative meaning for a behavior or interaction to support a less blaming and more useful understanding. / Genogram: A diagram of family relationships and patterns across generations.
B. Reframing: A diagram of family relationships and patterns across generations. / Genogram: Offering an alternative meaning for a behavior or interaction to support a less blaming and more useful understanding.
C. Reframing: Offering an alternative meaning for a behavior or interaction to support a less blaming and more useful understanding. / Genogram: Identifying times a problem is absent or less influential to discover resources and conditions for change.
D. Reframing: A structural family therapy technique inviting family members to interact in session so patterns can be observed. / Genogram: A diagram of family relationships and patterns across generations.

0308. In a professional consultation about a student aged 17, the consultant describes this response in the behavior-support review: respectfully matching a family's pace and language to build a working alliance. Which term is most apt?

A. Joining
B. Family sculpting
C. Exception seeking
D. Circular questioning

0309. In the youth group, the agreed focus for a community practitioner working with a young person aged 18 is describing a behavior's possible protective intent while still addressing its impact. Which concept names this focus?

A. Joining
B. Systemic hypothesis
C. Reframing
D. Restructuring

0310. While supporting a young person in the student wellness team, a caregiver working with a counselor adopts this practice: helping caregivers address their disagreement directly rather than recruiting the child as messenger. Which concept best explains the choice?

A. Exception seeking
B. Genogram
C. De-triangulation
D. Systemic hypothesis

0311. For a student aged 12 in the community service agency, a clinical supervisor makes this practice the immediate priority: mapping relationships and recurring patterns across multiple generations. Which concept fits best?

A. Genogram
B. Exception seeking
C. Circular questioning
D. Reframing

0312. In advanced family therapy, which statement accurately contrasts the course concepts Circular questioning and Joining?

A. Circular questioning: Questions that explore differences in perceptions and reciprocal interaction among family members. / Joining: A therapist's process of building rapport and adapting to a family's communication style while maintaining clinical purpose.
B. Circular questioning: Questions that explore differences in perceptions and reciprocal interaction among family members. / Joining: Offering an alternative meaning for a behavior or interaction to support a less blaming and more useful understanding.
C. Circular questioning: A therapist's process of building rapport and adapting to a family's communication style while maintaining clinical purpose. / Joining: Questions that explore differences in perceptions and reciprocal interaction among family members.
D. Circular questioning: A tentative explanation linking a concern to interactional patterns, to be collaboratively tested and revised. / Joining: A therapist's process of building rapport and adapting to a family's communication style while maintaining clinical purpose.

0313. In advanced family therapy, choose the practice comparison that best separates Genogram from Circular questioning.

A. Genogram: Mapping relationships and recurring patterns across multiple generations. / Circular questioning: Asking one person how another reacts when a third person withdraws.
B. Genogram: Mapping relationships and recurring patterns across multiple generations. / Circular questioning: Describing a behavior's possible protective intent while still addressing its impact.
C. Genogram: Offering a provisional relational hypothesis and checking whether family members find it useful. / Circular questioning: Asking one person how another reacts when a third person withdraws.
D. Genogram: Asking one person how another reacts when a third person withdraws. / Circular questioning: Mapping relationships and recurring patterns across multiple generations.

0314. Choose the practice comparison that best separates Restructuring from Family sculpting.

A. Restructuring: Supporting a caregiver subsystem to take a clearer leadership role during a family interaction. / Family sculpting: Inviting voluntary spatial representation of closeness or distance and processing members' meanings.
B. Restructuring: Asking when the family concern is less intense and what is different at those times. / Family sculpting: Inviting voluntary spatial representation of closeness or distance and processing members' meanings.
C. Restructuring: Supporting a caregiver subsystem to take a clearer leadership role during a family interaction. / Family sculpting: Asking family members to discuss a current issue directly while the therapist observes interaction.
D. Restructuring: Inviting voluntary spatial representation of closeness or distance and processing members' meanings. / Family sculpting: Supporting a caregiver subsystem to take a clearer leadership role during a family interaction.

0315. Choose the response that best puts Joining into practice.

A. Inviting voluntary spatial representation of closeness or distance and processing members' meanings.
B. Mapping relationships and recurring patterns across multiple generations.
C. Respectfully matching a family's pace and language to build a working alliance.
D. Asking one person how another reacts when a third person withdraws.

0316. Which pair of actions illustrates Reframing and Genogram, respectively?

A. Reframing: Describing a behavior's possible protective intent while still addressing its impact. / Genogram: Mapping relationships and recurring patterns across multiple generations.
B. Reframing: Mapping relationships and recurring patterns across multiple generations. / Genogram: Describing a behavior's possible protective intent while still addressing its impact.
C. Reframing: Describing a behavior's possible protective intent while still addressing its impact. / Genogram: Asking when the family concern is less intense and what is different at those times.
D. Reframing: Asking family members to discuss a current issue directly while the therapist observes interaction. / Genogram: Mapping relationships and recurring patterns across multiple generations.

0317. In advanced family therapy, a case conference asks for a distinction between Circular questioning and Exception seeking. Which answer is sound?

A. Circular questioning: Questions that explore differences in perceptions and reciprocal interaction among family members. / Exception seeking: Identifying times a problem is absent or less influential to discover resources and conditions for change.
B. Circular questioning: An experiential technique in which members arrange positions or posture to represent relational experience. / Exception seeking: Identifying times a problem is absent or less influential to discover resources and conditions for change.
C. Circular questioning: Identifying times a problem is absent or less influential to discover resources and conditions for change. / Exception seeking: Questions that explore differences in perceptions and reciprocal interaction among family members.
D. Circular questioning: Questions that explore differences in perceptions and reciprocal interaction among family members. / Exception seeking: Reducing a pattern in which a third person is drawn into tension between two others.

0318. A service team discusses a student aged 9 in the outpatient clinic. Their proposed next step is asking when the family concern is less intense and what is different at those times. Which course concept supports it?

A. Reframing
B. Circular questioning
C. Exception seeking
D. De-triangulation

0319. What is the central meaning of Exception seeking?

A. Offering an alternative meaning for a behavior or interaction to support a less blaming and more useful understanding.
B. A therapist's process of building rapport and adapting to a family's communication style while maintaining clinical purpose.
C. A structural family therapy technique inviting family members to interact in session so patterns can be observed.
D. Identifying times a problem is absent or less influential to discover resources and conditions for change.

0320. For a older adolescent client in the child guidance clinic, a clinical supervisor makes this practice the immediate priority: helping caregivers address their disagreement directly rather than recruiting the child as messenger. Which concept fits best?

A. Circular questioning
B. De-triangulation
C. Joining
D. Enactment

0321. Which choice aligns each practice with the correct idea, Reframing or Restructuring?

A. Reframing: Describing a behavior's possible protective intent while still addressing its impact. / Restructuring: Offering a provisional relational hypothesis and checking whether family members find it useful.
B. Reframing: Asking family members to discuss a current issue directly while the therapist observes interaction. / Restructuring: Supporting a caregiver subsystem to take a clearer leadership role during a family interaction.
C. Reframing: Describing a behavior's possible protective intent while still addressing its impact. / Restructuring: Supporting a caregiver subsystem to take a clearer leadership role during a family interaction.
D. Reframing: Supporting a caregiver subsystem to take a clearer leadership role during a family interaction. / Restructuring: Describing a behavior's possible protective intent while still addressing its impact.

0322. In advanced family therapy, a case conference asks for a distinction between Circular questioning and Restructuring. Which answer is sound?

A. Circular questioning: Questions that explore differences in perceptions and reciprocal interaction among family members. / Restructuring: Therapeutic interventions intended to alter interaction patterns, boundaries, or family organization.
B. Circular questioning: A tentative explanation linking a concern to interactional patterns, to be collaboratively tested and revised. / Restructuring: Therapeutic interventions intended to alter interaction patterns, boundaries, or family organization.
C. Circular questioning: Questions that explore differences in perceptions and reciprocal interaction among family members. / Restructuring: A therapist's process of building rapport and adapting to a family's communication style while maintaining clinical purpose.
D. Circular questioning: Therapeutic interventions intended to alter interaction patterns, boundaries, or family organization. / Restructuring: Questions that explore differences in perceptions and reciprocal interaction among family members.

0323. In advanced family therapy, choose the practice comparison that best separates Circular questioning from De-triangulation.

A. Circular questioning: Asking one person how another reacts when a third person withdraws. / De-triangulation: Offering a provisional relational hypothesis and checking whether family members find it useful.
B. Circular questioning: Asking one person how another reacts when a third person withdraws. / De-triangulation: Helping caregivers address their disagreement directly rather than recruiting the child as messenger.
C. Circular questioning: Respectfully matching a family's pace and language to build a working alliance. / De-triangulation: Helping caregivers address their disagreement directly rather than recruiting the child as messenger.
D. Circular questioning: Helping caregivers address their disagreement directly rather than recruiting the child as messenger. / De-triangulation: Asking one person how another reacts when a third person withdraws.

0324. Which choice aligns each practice with the correct idea, Enactment or Genogram?

A. Enactment: Mapping relationships and recurring patterns across multiple generations. / Genogram: Asking family members to discuss a current issue directly while the therapist observes interaction.
B. Enactment: Describing a behavior's possible protective intent while still addressing its impact. / Genogram: Mapping relationships and recurring patterns across multiple generations.
C. Enactment: Asking family members to discuss a current issue directly while the therapist observes interaction. / Genogram: Asking when the family concern is less intense and what is different at those times.
D. Enactment: Asking family members to discuss a current issue directly while the therapist observes interaction. / Genogram: Mapping relationships and recurring patterns across multiple generations.

0325. How should a practitioner distinguish the applications of Exception seeking and Systemic hypothesis?

A. Exception seeking: Helping caregivers address their disagreement directly rather than recruiting the child as messenger. / Systemic hypothesis: Offering a provisional relational hypothesis and checking whether family members find it useful.
B. Exception seeking: Offering a provisional relational hypothesis and checking whether family members find it useful. / Systemic hypothesis: Asking when the family concern is less intense and what is different at those times.
C. Exception seeking: Asking when the family concern is less intense and what is different at those times. / Systemic hypothesis: Offering a provisional relational hypothesis and checking whether family members find it useful.
D. Exception seeking: Asking when the family concern is less intense and what is different at those times. / Systemic hypothesis: Supporting a caregiver subsystem to take a clearer leadership role during a family interaction.

0326. Which option preserves the correct meaning of both Reframing and Systemic hypothesis?

A. Reframing: Identifying times a problem is absent or less influential to discover resources and conditions for change. / Systemic hypothesis: A tentative explanation linking a concern to interactional patterns, to be collaboratively tested and revised.
B. Reframing: Offering an alternative meaning for a behavior or interaction to support a less blaming and more useful understanding. / Systemic hypothesis: Reducing a pattern in which a third person is drawn into tension between two others.
C. Reframing: Offering an alternative meaning for a behavior or interaction to support a less blaming and more useful understanding. / Systemic hypothesis: A tentative explanation linking a concern to interactional patterns, to be collaboratively tested and revised.
D. Reframing: A tentative explanation linking a concern to interactional patterns, to be collaboratively tested and revised. / Systemic hypothesis: Offering an alternative meaning for a behavior or interaction to support a less blaming and more useful understanding.

0327. Which paired example correctly applies De-triangulation first and Systemic hypothesis second?

A. De-triangulation: Helping caregivers address their disagreement directly rather than recruiting the child as messenger. / Systemic hypothesis: Inviting voluntary spatial representation of closeness or distance and processing members' meanings.
B. De-triangulation: Respectfully matching a family's pace and language to build a working alliance. / Systemic hypothesis: Offering a provisional relational hypothesis and checking whether family members find it useful.
C. De-triangulation: Helping caregivers address their disagreement directly rather than recruiting the child as messenger. / Systemic hypothesis: Offering a provisional relational hypothesis and checking whether family members find it useful.
D. De-triangulation: Offering a provisional relational hypothesis and checking whether family members find it useful. / Systemic hypothesis: Helping caregivers address their disagreement directly rather than recruiting the child as messenger.

0328. An interdisciplinary team reviews a young adolescent client's case at the clinical planning session. The counselor recommends respectfully matching a family's pace and language to build a working alliance. Which course concept best fits?

A. Reframing
B. De-triangulation
C. Enactment
D. Joining

0329. A case conference asks for a distinction between Enactment and Family sculpting. Which answer is sound?

A. Enactment: Identifying times a problem is absent or less influential to discover resources and conditions for change. / Family sculpting: An experiential technique in which members arrange positions or posture to represent relational experience.
B. Enactment: A structural family therapy technique inviting family members to interact in session so patterns can be observed. / Family sculpting: A tentative explanation linking a concern to interactional patterns, to be collaboratively tested and revised.
C. Enactment: A structural family therapy technique inviting family members to interact in session so patterns can be observed. / Family sculpting: An experiential technique in which members arrange positions or posture to represent relational experience.
D. Enactment: An experiential technique in which members arrange positions or posture to represent relational experience. / Family sculpting: A structural family therapy technique inviting family members to interact in session so patterns can be observed.

0330. In advanced family therapy, choose the practice comparison that best separates Circular questioning from Restructuring.

A. Circular questioning: Asking one person how another reacts when a third person withdraws. / Restructuring: Respectfully matching a family's pace and language to build a working alliance.
B. Circular questioning: Asking one person how another reacts when a third person withdraws. / Restructuring: Supporting a caregiver subsystem to take a clearer leadership role during a family interaction.
C. Circular questioning: Supporting a caregiver subsystem to take a clearer leadership role during a family interaction. / Restructuring: Asking one person how another reacts when a third person withdraws.
D. Circular questioning: Offering a provisional relational hypothesis and checking whether family members find it useful. / Restructuring: Supporting a caregiver subsystem to take a clearer leadership role during a family interaction.

0331. Choose the response that best puts Reframing into practice.

A. Asking one person how another reacts when a third person withdraws.
B. Describing a behavior's possible protective intent while still addressing its impact.
C. Asking when the family concern is less intense and what is different at those times.
D. Inviting voluntary spatial representation of closeness or distance and processing members' meanings.

0332. In advanced family therapy, in a supervision quiz, how should Enactment be distinguished from Circular questioning?

A. Enactment: Offering an alternative meaning for a behavior or interaction to support a less blaming and more useful understanding. / Circular questioning: Questions that explore differences in perceptions and reciprocal interaction among family members.
B. Enactment: Questions that explore differences in perceptions and reciprocal interaction among family members. / Circular questioning: A structural family therapy technique inviting family members to interact in session so patterns can be observed.
C. Enactment: A structural family therapy technique inviting family members to interact in session so patterns can be observed. / Circular questioning: Questions that explore differences in perceptions and reciprocal interaction among family members.
D. Enactment: A structural family therapy technique inviting family members to interact in session so patterns can be observed. / Circular questioning: An experiential technique in which members arrange positions or posture to represent relational experience.

0333. Which comparison would correct a trainee's misunderstanding of Genogram versus Systemic hypothesis?

A. Genogram: Identifying times a problem is absent or less influential to discover resources and conditions for change. / Systemic hypothesis: A tentative explanation linking a concern to interactional patterns, to be collaboratively tested and revised.
B. Genogram: A diagram of family relationships and patterns across generations. / Systemic hypothesis: A tentative explanation linking a concern to interactional patterns, to be collaboratively tested and revised.
C. Genogram: A diagram of family relationships and patterns across generations. / Systemic hypothesis: Reducing a pattern in which a third person is drawn into tension between two others.
D. Genogram: A tentative explanation linking a concern to interactional patterns, to be collaboratively tested and revised. / Systemic hypothesis: A diagram of family relationships and patterns across generations.

0334. A community practitioner describes an intervention for a young person aged 10 in the child guidance clinic, centered on respectfully matching a family's pace and language to build a working alliance. Which named idea is most relevant?

A. Genogram
B. Joining
C. Restructuring
D. Circular questioning

0335. Which option correctly matches each concept to its practice focus: Enactment and Joining?

A. Enactment: Asking family members to discuss a current issue directly while the therapist observes interaction. / Joining: Inviting voluntary spatial representation of closeness or distance and processing members' meanings.
B. Enactment: Helping caregivers address their disagreement directly rather than recruiting the child as messenger. / Joining: Respectfully matching a family's pace and language to build a working alliance.
C. Enactment: Asking family members to discuss a current issue directly while the therapist observes interaction. / Joining: Respectfully matching a family's pace and language to build a working alliance.
D. Enactment: Respectfully matching a family's pace and language to build a working alliance. / Joining: Asking family members to discuss a current issue directly while the therapist observes interaction.

0336. Consider a student aged 12 receiving help in the telehealth session. The group facilitator focuses on asking when the family concern is less intense and what is different at those times. Which term best describes the guiding idea?

A. Genogram
B. Circular questioning
C. Family sculpting
D. Exception seeking

0337. In advanced family therapy, in a supervision review, a case coordinator describes work with a student aged 12 in the counseling practicum: asking one person how another reacts when a third person withdraws. What concept is illustrated?

A. Circular questioning
B. Reframing
C. De-triangulation
D. Family sculpting

0338. In advanced family therapy, which comparison correctly distinguishes Genogram from Circular questioning?

A. Genogram: A tentative explanation linking a concern to interactional patterns, to be collaboratively tested and revised. / Circular questioning: Questions that explore differences in perceptions and reciprocal interaction among family members.
B. Genogram: Questions that explore differences in perceptions and reciprocal interaction among family members. / Circular questioning: A diagram of family relationships and patterns across generations.
C. Genogram: A diagram of family relationships and patterns across generations. / Circular questioning: Questions that explore differences in perceptions and reciprocal interaction among family members.
D. Genogram: A diagram of family relationships and patterns across generations. / Circular questioning: Offering an alternative meaning for a behavior or interaction to support a less blaming and more useful understanding.

0339. A case conference asks for a distinction between Joining and Systemic hypothesis. Which answer is sound?

A. Joining: A tentative explanation linking a concern to interactional patterns, to be collaboratively tested and revised. / Systemic hypothesis: A therapist's process of building rapport and adapting to a family's communication style while maintaining clinical purpose.
B. Joining: A therapist's process of building rapport and adapting to a family's communication style while maintaining clinical purpose. / Systemic hypothesis: Identifying times a problem is absent or less influential to discover resources and conditions for change.
C. Joining: A therapist's process of building rapport and adapting to a family's communication style while maintaining clinical purpose. / Systemic hypothesis: A tentative explanation linking a concern to interactional patterns, to be collaboratively tested and revised.
D. Joining: A diagram of family relationships and patterns across generations. / Systemic hypothesis: A tentative explanation linking a concern to interactional patterns, to be collaboratively tested and revised.

0340. In a case note about a student aged 17, a assessment clinician working in the parent meeting records this priority: offering a provisional relational hypothesis and checking whether family members find it useful. What principle is reflected?

A. Restructuring
B. Systemic hypothesis
C. Joining
D. Enactment

0341. An interdisciplinary team reviews a child of elementary-school age's case at the after-school program. The school support specialist recommends describing a behavior's possible protective intent while still addressing its impact. Which course concept best fits?

A. Family sculpting
B. Systemic hypothesis
C. De-triangulation
D. Reframing

0342. When reviewing a middle-school student's plan in the child guidance clinic, the caregiver working with a counselor notes that the next step is describing a behavior's possible protective intent while still addressing its impact. Which concept guides this step?

A. Circular questioning
B. Genogram
C. Reframing
D. Systemic hypothesis

0343. When reviewing a young person aged 18's plan in the learning-support meeting, the parent educator notes that the next step is respectfully matching a family's pace and language to build a working alliance. Which concept guides this step?

A. Family sculpting
B. Enactment
C. Joining
D. Circular questioning

0344. A support meeting for a student aged 9 includes a counselor in the student wellness team. The practice under consideration is inviting voluntary spatial representation of closeness or distance and processing members' meanings. Which concept guides it?

A. Joining
B. Circular questioning
C. Enactment
D. Family sculpting

0345. Which course concept is defined as follows: A tentative explanation linking a concern to interactional patterns, to be collaboratively tested and revised.

A. Systemic hypothesis
B. De-triangulation
C. Reframing
D. Enactment

0346. How are Restructuring and De-triangulation most accurately differentiated in this curriculum?

A. Restructuring: Therapeutic interventions intended to alter interaction patterns, boundaries, or family organization. / De-triangulation: Reducing a pattern in which a third person is drawn into tension between two others.
B. Restructuring: Offering an alternative meaning for a behavior or interaction to support a less blaming and more useful understanding. / De-triangulation: Reducing a pattern in which a third person is drawn into tension between two others.
C. Restructuring: Reducing a pattern in which a third person is drawn into tension between two others. / De-triangulation: Therapeutic interventions intended to alter interaction patterns, boundaries, or family organization.
D. Restructuring: Therapeutic interventions intended to alter interaction patterns, boundaries, or family organization. / De-triangulation: A tentative explanation linking a concern to interactional patterns, to be collaboratively tested and revised.

0347. Select the best explanation of Joining.

A. A therapist's process of building rapport and adapting to a family's communication style while maintaining clinical purpose.
B. Offering an alternative meaning for a behavior or interaction to support a less blaming and more useful understanding.
C. Questions that explore differences in perceptions and reciprocal interaction among family members.
D. A structural family therapy technique inviting family members to interact in session so patterns can be observed.

0348. A planning meeting about a child of elementary-school age includes a school support specialist. The proposed practice in the after-school program is describing a behavior's possible protective intent while still addressing its impact. Which idea underlies it?

A. Restructuring
B. De-triangulation
C. Exception seeking
D. Reframing

0349. For a client in early adolescence seen in the classroom support meeting, the service navigator recommends a plan built around mapping relationships and recurring patterns across multiple generations. Which concept is reflected?

A. Genogram
B. De-triangulation
C. Joining
D. Restructuring

0350. Which statement accurately contrasts the course concepts Exception seeking and Family sculpting?

A. Exception seeking: An experiential technique in which members arrange positions or posture to represent relational experience. / Family sculpting: Identifying times a problem is absent or less influential to discover resources and conditions for change.
B. Exception seeking: A structural family therapy technique inviting family members to interact in session so patterns can be observed. / Family sculpting: An experiential technique in which members arrange positions or posture to represent relational experience.
C. Exception seeking: Identifying times a problem is absent or less influential to discover resources and conditions for change. / Family sculpting: Offering an alternative meaning for a behavior or interaction to support a less blaming and more useful understanding.
D. Exception seeking: Identifying times a problem is absent or less influential to discover resources and conditions for change. / Family sculpting: An experiential technique in which members arrange positions or posture to represent relational experience.

0351. During service review in the multidisciplinary case conference, a research trainee describes asking when the family concern is less intense and what is different at those times. for a young person aged 18. Which course idea is most applicable?

A. Exception seeking
B. Family sculpting
C. Reframing
D. Systemic hypothesis

0352. Choose the term that matches this definition: A structural family therapy technique inviting family members to interact in session so patterns can be observed.

A. Genogram
B. Reframing
C. Restructuring
D. Enactment

0353. A case conference reviews a service navigator's work with a child aged 14 in the youth group: asking when the family concern is less intense and what is different at those times. Which principle is central?

A. Exception seeking
B. De-triangulation
C. Systemic hypothesis
D. Reframing

0354. Which option correctly matches each concept to its practice focus: Joining and Systemic hypothesis?

A. Joining: Offering a provisional relational hypothesis and checking whether family members find it useful. / Systemic hypothesis: Respectfully matching a family's pace and language to build a working alliance.
B. Joining: Respectfully matching a family's pace and language to build a working alliance. / Systemic hypothesis: Offering a provisional relational hypothesis and checking whether family members find it useful.
C. Joining: Mapping relationships and recurring patterns across multiple generations. / Systemic hypothesis: Offering a provisional relational hypothesis and checking whether family members find it useful.
D. Joining: Respectfully matching a family's pace and language to build a working alliance. / Systemic hypothesis: Asking when the family concern is less intense and what is different at those times.

0355. A counselor is asked to evaluate a proposed service for a student aged 12 in the community youth program. The defining feature is helping caregivers address their disagreement directly rather than recruiting the child as messenger. Which concept fits?

A. De-triangulation
B. Reframing
C. Circular questioning
D. Restructuring

0356. A case discussion concerns a student aged 17 and a school-based clinician in the outpatient clinic. The practitioner is considering inviting voluntary spatial representation of closeness or distance and processing members' meanings. Which principle is involved?

A. Enactment
B. Genogram
C. De-triangulation
D. Family sculpting

0357. In a supervision quiz, how should Joining be distinguished from Family sculpting?

A. Joining: A therapist's process of building rapport and adapting to a family's communication style while maintaining clinical purpose. / Family sculpting: A structural family therapy technique inviting family members to interact in session so patterns can be observed.
B. Joining: A therapist's process of building rapport and adapting to a family's communication style while maintaining clinical purpose. / Family sculpting: An experiential technique in which members arrange positions or posture to represent relational experience.
C. Joining: An experiential technique in which members arrange positions or posture to represent relational experience. / Family sculpting: A therapist's process of building rapport and adapting to a family's communication style while maintaining clinical purpose.
D. Joining: Offering an alternative meaning for a behavior or interaction to support a less blaming and more useful understanding. / Family sculpting: An experiential technique in which members arrange positions or posture to represent relational experience.

0358. In advanced family therapy, a supervisor asks how Circular questioning would appear in practice. Which choice should be selected?
