0830. B - Directive play therapy: Choosing and structuring a play activity to practice a specified coping or communication skill. / Tracking: Saying what the child is doing in play without adding an unsupported interpretation. [Concept: Directive play therapy and Tracking]

0831. D - Symbolic play: Use of objects, actions, or characters to represent ideas and experiences beyond their literal form. / Caregiver involvement: Planned collaboration with caregivers that supports the child's goals while preserving appropriate therapeutic boundaries. [Concept: Symbolic play and Caregiver involvement]

CAC.909 | Play Therapy Techniques

QUESTION | CORRECT OPTION AND CONCEPT

0832. A - Therapeutic play: Following the child's symbolic play as a communication channel while maintaining therapeutic purpose. / Reflecting feelings: Offering a tentative feeling reflection and allowing the child to correct it. [Concept: Therapeutic play and Reflecting feelings]

0833. C - Tracking [Concept: Tracking]

0834. B - Playroom safety [Concept: Playroom safety]

0835. B - Playroom safety [Concept: Playroom safety]

0836. D - Therapeutic play: Purposeful use of play within a helping relationship to support expression, exploration, and development. / Child-centered play therapy: A non-directive approach emphasizing acceptance, empathy, tracking, and the child's lead within safe limits. [Concept: Therapeutic play and Child-centered play therapy]

0837. C - Child-centered play therapy: A non-directive approach emphasizing acceptance, empathy, tracking, and the child's lead within safe limits. / Symbolic play: Use of objects, actions, or characters to represent ideas and experiences beyond their literal form. [Concept: Child-centered play therapy and Symbolic play]

0838. D - Tracking: Describing a child's observable play actions in a clear, nonjudgmental way. / Reflecting feelings: Naming or tentatively reflecting the emotional meaning conveyed through a child's words or play. [Concept: Tracking and Reflecting feelings]

0839. C - Directive play therapy: Choosing and structuring a play activity to practice a specified coping or communication skill. / Therapeutic limit setting: Stating the limit, acknowledging the feeling, and identifying a safe alternative action. [Concept: Directive play therapy and Therapeutic limit setting]

0840. B - Child-centered play therapy: Reflecting a child's play and feelings rather than taking over the play narrative. / Symbolic play: Remaining curious about a toy character's role instead of assuming its play meaning. [Concept: Child-centered play therapy and Symbolic play]

0841. A - Child-centered play therapy [Concept: Child-centered play therapy]

0842. C - Tracking [Concept: Tracking]

0843. C - Reflecting feelings [Concept: Reflecting feelings]

0844. D - Tracking [Concept: Tracking]

0845. B - Symbolic play [Concept: Symbolic play]

0846. C - Playroom safety [Concept: Playroom safety]

0847. C - Symbolic play: Remaining curious about a toy character's role instead of assuming its play meaning. / Playroom safety: Choosing materials and rules that allow agency without foreseeable harm. [Concept: Symbolic play and Playroom safety]

0848. A - Playroom safety [Concept: Playroom safety]

0849. A - Play therapy documentation [Concept: Play therapy documentation]

0850. D - Therapeutic limit setting [Concept: Therapeutic limit setting]

0851. B - Symbolic play [Concept: Symbolic play]

0852. A - Child-centered play therapy: Reflecting a child's play and feelings rather than taking over the play narrative. / Caregiver involvement: Sharing general progress and practical support strategies with caregivers under the consent and privacy plan. [Concept: Child-centered play therapy and Caregiver involvement]

0853. B - Tracking: Saying what the child is doing in play without adding an unsupported interpretation. / Caregiver involvement: Sharing general progress and practical support strategies with caregivers under the consent and privacy plan. [Concept: Tracking and Caregiver involvement]

0854. B - Tracking [Concept: Tracking]

0855. D - Tracking: Describing a child's observable play actions in a clear, nonjudgmental way. / Caregiver involvement: Planned collaboration with caregivers that supports the child's goals while preserving appropriate therapeutic boundaries. [Concept: Tracking and Caregiver involvement]

0856. D - Therapeutic play: Purposeful use of play within a helping relationship to support expression, exploration, and development. / Therapeutic limit setting: A clear, empathic boundary that protects people or property while offering acceptable alternatives. [Concept: Therapeutic play and Therapeutic limit setting]

0857. A - Therapeutic play: Following the child's symbolic play as a communication channel while maintaining therapeutic purpose. / Tracking: Saying what the child is doing in play without adding an unsupported interpretation. [Concept: Therapeutic play and Tracking]

0858. A - Therapeutic play: Following the child's symbolic play as a communication channel while maintaining therapeutic purpose. / Symbolic play: Remaining curious about a toy character's role instead of assuming its play meaning. [Concept: Therapeutic play and Symbolic play]

0859. D - Therapeutic play: Following the child's symbolic play as a communication channel while maintaining therapeutic purpose. / Play therapy documentation: Documenting what occurred and separating directly observed behavior from interpretation. [Concept: Therapeutic play and Play therapy documentation]

0860. C - Caregiver involvement [Concept: Caregiver involvement]

0861. A - Playroom safety: Thoughtful arrangement and selection of materials that permit expression while protecting physical and emotional safety. / Caregiver involvement: Planned collaboration with caregivers that supports the child's goals while preserving appropriate therapeutic boundaries. [Concept: Playroom safety and Caregiver involvement]

0862. B - Therapeutic play: Purposeful use of play within a helping relationship to support expression, exploration, and development. / Tracking: Describing a child's observable play actions in a clear, nonjudgmental way. [Concept: Therapeutic play and Tracking]

0863. D - Planned collaboration with caregivers that supports the child's goals while preserving appropriate therapeutic boundaries. [Concept: Caregiver involvement]

0864. D - Directive play therapy: A therapist-guided use of play activities selected to address identified therapeutic goals. / Symbolic play: Use of objects, actions, or characters to represent ideas and experiences beyond their literal form. [Concept: Directive play therapy and Symbolic play]

0865. D - Symbolic play [Concept: Symbolic play]

0866. A - Child-centered play therapy: A non-directive approach emphasizing acceptance, empathy, tracking, and the child's lead within safe limits. / Symbolic play: Use of objects, actions, or characters to represent ideas and experiences beyond their literal form. [Concept: Child-centered play therapy and Symbolic play]

0867. D - Directive play therapy: A therapist-guided use of play activities selected to address identified therapeutic goals. / Therapeutic limit setting: A clear, empathic boundary that protects people or property while offering acceptable alternatives. [Concept: Directive play therapy and Therapeutic limit setting]

0868. A - Reflecting feelings [Concept: Reflecting feelings]

0869. D - Symbolic play: Remaining curious about a toy character's role instead of assuming its play meaning. / Playroom safety: Choosing materials and rules that allow agency without foreseeable harm. [Concept: Symbolic play and Playroom safety]

0870. D - Symbolic play: Remaining curious about a toy character's role instead of assuming its play meaning. / Caregiver involvement: Sharing general progress and practical support strategies with caregivers under the consent and privacy plan. [Concept: Symbolic play and Caregiver involvement]

0871. A - Therapeutic limit setting: Stating the limit, acknowledging the feeling, and identifying a safe alternative action. / Play therapy documentation: Documenting what occurred and separating directly observed behavior from interpretation. [Concept: Therapeutic limit setting and Play therapy documentation]

0872. D - Playroom safety [Concept: Playroom safety]

0873. B - Child-centered play therapy [Concept: Child-centered play therapy]

0874. D - Planned collaboration with caregivers that supports the child's goals while preserving appropriate therapeutic boundaries. [Concept: Caregiver involvement]

0875. A - Symbolic play: Remaining curious about a toy character's role instead of assuming its play meaning. / Playroom safety: Choosing materials and rules that allow agency without foreseeable harm. [Concept: Symbolic play and Playroom safety]

0876. C - Directive play therapy: Choosing and structuring a play activity to practice a specified coping or communication skill. / Symbolic play: Remaining curious about a toy character's role instead of assuming its play meaning. [Concept: Directive play therapy and Symbolic play]

0877. D - Tracking [Concept: Tracking]

0878. A - Child-centered play therapy [Concept: Child-centered play therapy]

0879. D - Use of objects, actions, or characters to represent ideas and experiences beyond their literal form. [Concept: Symbolic play]

0880. C - Caregiver involvement [Concept: Caregiver involvement]

0881. A - Purposeful use of play within a helping relationship to support expression, exploration, and development. [Concept: Therapeutic play]

0882. B - Therapeutic limit setting [Concept: Therapeutic limit setting]

0883. C - Child-centered play therapy: Reflecting a child's play and feelings rather than taking over the play narrative. / Playroom safety: Choosing materials and rules that allow agency without foreseeable harm. [Concept: Child-centered play therapy and Playroom safety]

0884. C - Child-centered play therapy: Reflecting a child's play and feelings rather than taking over the play narrative. / Playroom safety: Choosing materials and rules that allow agency without foreseeable harm. [Concept: Child-centered play therapy and Playroom safety]

0885. A - Therapeutic limit setting [Concept: Therapeutic limit setting]

0886. A - Therapeutic play: Purposeful use of play within a helping relationship to support expression, exploration, and development. / Reflecting feelings: Naming or tentatively reflecting the emotional meaning conveyed through a child's words or play. [Concept: Therapeutic play and Reflecting feelings]

0887. B - Play therapy documentation [Concept: Play therapy documentation]

0888. B - Symbolic play [Concept: Symbolic play]

0889. B - Child-centered play therapy: A non-directive approach emphasizing acceptance, empathy, tracking, and the child's lead within safe limits. / Playroom safety: Thoughtful arrangement and selection of materials that permit expression while protecting physical and emotional safety. [Concept: Child-centered play therapy and Playroom safety]

CAC.910 | Cognitive Behavioral Therapy for Children

QUESTION | CORRECT OPTION AND CONCEPT

0001. C - Cognitive triangle [Concept: Cognitive triangle]

0002. C - Cognitive restructuring: Examining evidence and generating a realistic alternative thought with the child. / Collaborative empiricism: Treating a belief as a testable hypothesis and reviewing what the child observes. [Concept: Cognitive restructuring and Collaborative empiricism]

0003. A - Skills rehearsal [Concept: Skills rehearsal]

0004. B - Behavioral activation: Scheduling a manageable valued activity and reviewing its effect on mood and functioning. / Collaborative empiricism: Treating a belief as a testable hypothesis and reviewing what the child observes. [Concept: Behavioral activation and Collaborative empiricism]

0005. C - Exposure [Concept: Exposure]

0006. C - Cognitive triangle: A teaching model linking thoughts, feelings, and behaviors as mutually influential components of experience. / Cognitive restructuring: Collaboratively evaluating and developing more balanced or useful interpretations rather than imposing positive thinking. [Concept: Cognitive triangle and Cognitive restructuring]

0007. C - Cognitive restructuring [Concept: Cognitive restructuring]

0008. B - Cognitive triangle [Concept: Cognitive triangle]

0009. C - Cognitive restructuring: Collaboratively evaluating and developing more balanced or useful interpretations rather than imposing positive thinking. / Behavioral activation: Planned engagement in meaningful or rewarding activities to increase contact with positive reinforcement. [Concept: Cognitive restructuring and Behavioral activation]

0010. A - Cognitive triangle [Concept: Cognitive triangle]

0011. C - Behavioral activation [Concept: Behavioral activation]

0012. B - Behavioral activation: Planned engagement in meaningful or rewarding activities to increase contact with positive reinforcement. / Exposure: Gradual, planned approach to feared situations or cues to support new learning, with appropriate assessment and consent. [Concept: Behavioral activation and Exposure]

0013. C - Skills rehearsal: Practicing a targeted behavior in session, often with modeling, feedback, and repetition. / Collaborative empiricism: A CBT stance in which client and therapist jointly test ideas against evidence and experience. [Concept: Skills rehearsal and Collaborative empiricism]

0014. B - Relapse prevention [Concept: Relapse prevention]

0015. A - Behavioral activation: Scheduling a manageable valued activity and reviewing its effect on mood and functioning. / Thought record: Using a child-friendly record to examine what happened and what the child thought at that moment. [Concept: Behavioral activation and Thought record]

0016. B - Cognitive restructuring: Collaboratively evaluating and developing more balanced or useful interpretations rather than imposing positive thinking. / Behavioral activation: Planned engagement in meaningful or rewarding activities to increase contact with positive reinforcement. [Concept: Cognitive restructuring and Behavioral activation]

0017. C - Exposure: Building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation. / Collaborative empiricism: Treating a belief as a testable hypothesis and reviewing what the child observes. [Concept: Exposure and Collaborative empiricism]

0018. B - Cognitive restructuring [Concept: Cognitive restructuring]

0019. C - Behavioral activation: Planned engagement in meaningful or rewarding activities to increase contact with positive reinforcement. / Coping self-talk: Practice of helpful, realistic statements that support coping and task engagement. [Concept: Behavioral activation and Coping self-talk]

0020. A - Cognitive restructuring: Collaboratively evaluating and developing more balanced or useful interpretations rather than imposing positive thinking. / Coping self-talk: Practice of helpful, realistic statements that support coping and task engagement. [Concept: Cognitive restructuring and Coping self-talk]

0021. D - Developmental adaptation in CBT: Using drawings or concrete examples when abstract cognitive language is not yet accessible. / Relapse prevention: Identifying likely setbacks and rehearsing which coping steps the child can use. [Concept: Developmental adaptation in CBT and Relapse prevention]

0022. C - Cognitive restructuring [Concept: Cognitive restructuring]

0023. D - Cognitive triangle: Helping a child map how a thought, feeling, and action relate in a particular situation. / Thought record: Using a child-friendly record to examine what happened and what the child thought at that moment. [Concept: Cognitive triangle and Thought record]

0024. A - Exposure: Building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation. / Skills rehearsal: Role-playing an assertive request and providing supportive, specific feedback. [Concept: Exposure and Skills rehearsal]

0025. C - Exposure [Concept: Exposure]

0026. C - Behavioral activation [Concept: Behavioral activation]

0027. A - Developmental adaptation in CBT [Concept: Developmental adaptation in CBT]

0028. D - Cognitive restructuring [Concept: Cognitive restructuring]

0029. A - Cognitive triangle: Helping a child map how a thought, feeling, and action relate in a particular situation. / Behavioral activation: Scheduling a manageable valued activity and reviewing its effect on mood and functioning. [Concept: Cognitive triangle and Behavioral activation]

0030. C - Collaborative empiricism [Concept: Collaborative empiricism]

0031. A - Examining evidence and generating a realistic alternative thought with the child. [Concept: Cognitive restructuring]

0032. C - Cognitive restructuring: Collaboratively evaluating and developing more balanced or useful interpretations rather than imposing positive thinking. / Developmental adaptation in CBT: Adjusting CBT language, materials, pacing, and caregiver involvement to the child's developmental capacity. [Concept: Cognitive restructuring and Developmental adaptation in CBT]

0033. C - Collaborative empiricism [Concept: Collaborative empiricism]

0034. C - Relapse prevention [Concept: Relapse prevention]

0035. B - Exposure: Building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation. / Thought record: Using a child-friendly record to examine what happened and what the child thought at that moment. [Concept: Exposure and Thought record]

0036. C - Cognitive restructuring [Concept: Cognitive restructuring]

0037. B - Developmental adaptation in CBT [Concept: Developmental adaptation in CBT]

0038. C - Cognitive restructuring [Concept: Cognitive restructuring]

0039. A - Behavioral activation: Scheduling a manageable valued activity and reviewing its effect on mood and functioning. / Developmental adaptation in CBT: Using drawings or concrete examples when abstract cognitive language is not yet accessible. [Concept: Behavioral activation and Developmental adaptation in CBT]

0040. C - Cognitive restructuring [Concept: Cognitive restructuring]

0041. D - Cognitive triangle: Helping a child map how a thought, feeling, and action relate in a particular situation. / Exposure: Building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation. [Concept: Cognitive triangle and Exposure]

0042. D - Behavioral activation [Concept: Behavioral activation]

0043. B - Coping self-talk [Concept: Coping self-talk]

0044. A - Behavioral activation: Planned engagement in meaningful or rewarding activities to increase contact with positive reinforcement. / Collaborative empiricism: A CBT stance in which client and therapist jointly test ideas against evidence and experience. [Concept: Behavioral activation and Collaborative empiricism]

0045. A - Collaborative empiricism: A CBT stance in which client and therapist jointly test ideas against evidence and experience. / Developmental adaptation in CBT: Adjusting CBT language, materials, pacing, and caregiver involvement to the child's developmental capacity. [Concept: Collaborative empiricism and Developmental adaptation in CBT]

0046. C - Cognitive triangle [Concept: Cognitive triangle]

0047. A - Coping self-talk [Concept: Coping self-talk]

0048. B - Thought record: A structured aid for noticing a situation, automatic thought, emotion, evidence, and alternative perspective. / Coping self-talk: Practice of helpful, realistic statements that support coping and task engagement. [Concept: Thought record and Coping self-talk]

0049. B - Thought record: Using a child-friendly record to examine what happened and what the child thought at that moment. / Relapse prevention: Identifying likely setbacks and rehearsing which coping steps the child can use. [Concept: Thought record and Relapse prevention]

0050. A - Exposure: Building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation. / Thought record: Using a child-friendly record to examine what happened and what the child thought at that moment. [Concept: Exposure and Thought record]

0051. D - Exposure: Building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation. / Collaborative empiricism: Treating a belief as a testable hypothesis and reviewing what the child observes. [Concept: Exposure and Collaborative empiricism]

0052. A - Cognitive restructuring: Examining evidence and generating a realistic alternative thought with the child. / Developmental adaptation in CBT: Using drawings or concrete examples when abstract cognitive language is not yet accessible. [Concept: Cognitive restructuring and Developmental adaptation in CBT]

0053. D - Cognitive triangle: A teaching model linking thoughts, feelings, and behaviors as mutually influential components of experience. / Cognitive restructuring: Collaboratively evaluating and developing more balanced or useful interpretations rather than imposing positive thinking. [Concept: Cognitive triangle and Cognitive restructuring]

0054. A - Skills rehearsal [Concept: Skills rehearsal]

0055. D - Thought record: A structured aid for noticing a situation, automatic thought, emotion, evidence, and alternative perspective. / Collaborative empiricism: A CBT stance in which client and therapist jointly test ideas against evidence and experience. [Concept: Thought record and Collaborative empiricism]

CAC.910 | Cognitive Behavioral Therapy for Children

QUESTION | CORRECT OPTION AND CONCEPT

0056. C - Exposure: Gradual, planned approach to feared situations or cues to support new learning, with appropriate assessment and consent. / Collaborative empiricism: A CBT stance in which client and therapist jointly test ideas against evidence and experience. [Concept: Exposure and Collaborative empiricism]

0057. A - Cognitive triangle [Concept: Cognitive triangle]

0058. D - Exposure [Concept: Exposure]

0059. [Concept: Behavioral activation and Exposure]

0220. A - Behavioral activation [Concept: Behavioral activation]

0221. C - Behavioral activation: Scheduling a manageable valued activity and reviewing its effect on mood and functioning. / Exposure: Building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation. [Concept: Behavioral activation and Exposure]

CAC.910 | Cognitive Behavioral Therapy for Children

QUESTION | CORRECT OPTION AND CONCEPT

0222. D - Cognitive restructuring: Collaboratively evaluating and developing more balanced or useful interpretations rather than imposing positive thinking. / Developmental adaptation in CBT: Adjusting CBT language, materials, pacing, and caregiver involvement to the child's developmental capacity. [Concept: Cognitive restructuring and Developmental adaptation in CBT]

0223. C - Thought record [Concept: Thought record]

0224. B - Cognitive restructuring: Examining evidence and generating a realistic alternative thought with the child. / Coping self-talk: Rehearsing a believable coping phrase a child can use during a challenging moment. [Concept: Cognitive restructuring and Coping self-talk]

0225. D - Exposure: Gradual, planned approach to feared situations or cues to support new learning, with appropriate assessment and consent. / Developmental adaptation in CBT: Adjusting CBT language, materials, pacing, and caregiver involvement to the child's developmental capacity. [Concept: Exposure and Developmental adaptation in CBT]

0226. C - Behavioral activation: Planned engagement in meaningful or rewarding activities to increase contact with positive reinforcement. / Developmental adaptation in CBT: Adjusting CBT language, materials, pacing, and caregiver involvement to the child's developmental capacity. [Concept: Behavioral activation and Developmental adaptation in CBT]

0227. D - Behavioral activation [Concept: Behavioral activation]

0228. C - Planning for future triggers, early warning signs, and continued use of skills after improvement. [Concept: Relapse prevention]

0229. C - Coping self-talk: Rehearsing a believable coping phrase a child can use during a challenging moment. / Collaborative empiricism: Treating a belief as a testable hypothesis and reviewing what the child observes. [Concept: Coping self-talk and Collaborative empiricism]

0230. D - Adjusting CBT language, materials, pacing, and caregiver involvement to the child's developmental capacity. [Concept: Developmental adaptation in CBT]

0231. C - Skills rehearsal [Concept: Skills rehearsal]

0232. A - Cognitive triangle: Helping a child map how a thought, feeling, and action relate in a particular situation. / Developmental adaptation in CBT: Using drawings or concrete examples when abstract cognitive language is not yet accessible. [Concept: Cognitive triangle and Developmental adaptation in CBT]

0233. D - Collaborative empiricism [Concept: Collaborative empiricism]

0234. C - Cognitive triangle [Concept: Cognitive triangle]

0235. D - Coping self-talk [Concept: Coping self-talk]

0236. D - Cognitive restructuring: Examining evidence and generating a realistic alternative thought with the child. / Collaborative empiricism: Treating a belief as a testable hypothesis and reviewing what the child observes. [Concept: Cognitive restructuring and Collaborative empiricism]

0237. C - Coping self-talk [Concept: Coping self-talk]

0238. B - Gradual, planned approach to feared situations or cues to support new learning, with appropriate assessment and consent. [Concept: Exposure]

0239. B - Cognitive restructuring: Collaboratively evaluating and developing more balanced or useful interpretations rather than imposing positive thinking. / Exposure: Gradual, planned approach to feared situations or cues to support new learning, with appropriate assessment and consent. [Concept: Cognitive restructuring and Exposure]

0240. C - Cognitive restructuring [Concept: Cognitive restructuring]

0241. B - Cognitive triangle [Concept: Cognitive triangle]

0242. B - Planning for future triggers, early warning signs, and continued use of skills after improvement. [Concept: Relapse prevention]

0243. A - Cognitive triangle [Concept: Cognitive triangle]

0244. B - Thought record [Concept: Thought record]

0245. B - Skills rehearsal: Practicing a targeted behavior in session, often with modeling, feedback, and repetition. / Collaborative empiricism: A CBT stance in which client and therapist jointly test ideas against evidence and experience. [Concept: Skills rehearsal and Collaborative empiricism]

0246. A - Coping self-talk [Concept: Coping self-talk]

0247. A - Thought record: Using a child-friendly record to examine what happened and what the child thought at that moment. / Skills rehearsal: Role-playing an assertive request and providing supportive, specific feedback. [Concept: Thought record and Skills rehearsal]

0248. A - Exposure [Concept: Exposure]

0249. C - Behavioral activation: Planned engagement in meaningful or rewarding activities to increase contact with positive reinforcement. / Relapse prevention: Planning for future triggers, early warning signs, and continued use of skills after improvement. [Concept: Behavioral activation and Relapse prevention]

0250. A - Skills rehearsal [Concept: Skills rehearsal]

0251. A - Skills rehearsal [Concept: Skills rehearsal]

0252. C - Exposure: Building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation. / Relapse prevention: Identifying likely setbacks and rehearsing which coping steps the child can use. [Concept: Exposure and Relapse prevention]

0253. C - Relapse prevention [Concept: Relapse prevention]

0254. B - Behavioral activation [Concept: Behavioral activation]

0255. C - Skills rehearsal: Role-playing an assertive request and providing supportive, specific feedback. / Collaborative empiricism: Treating a belief as a testable hypothesis and reviewing what the child observes. [Concept: Skills rehearsal and Collaborative empiricism]

0256. A - Behavioral activation: Scheduling a manageable valued activity and reviewing its effect on mood and functioning. / Relapse prevention: Identifying likely setbacks and rehearsing which coping steps the child can use. [Concept: Behavioral activation and Relapse prevention]

0257. D - Coping self-talk: Practice of helpful, realistic statements that support coping and task engagement. / Skills rehearsal: Practicing a targeted behavior in session, often with modeling, feedback, and repetition. [Concept: Coping self-talk and Skills rehearsal]

0258. B - Skills rehearsal: Practicing a targeted behavior in session, often with modeling, feedback, and repetition. / Developmental adaptation in CBT: Adjusting CBT language, materials, pacing, and caregiver involvement to the child's developmental capacity. [Concept: Skills rehearsal and Developmental adaptation in CBT]

0259. A - Behavioral activation: Planned engagement in meaningful or rewarding activities to increase contact with positive reinforcement. / Skills rehearsal: Practicing a targeted behavior in session, often with modeling, feedback, and repetition. [Concept: Behavioral activation and Skills rehearsal]

0260. D - Collaborative empiricism [Concept: Collaborative empiricism]

0261. D - Rehearsing a believable coping phrase a child can use during a challenging moment. [Concept: Coping self-talk]

0262. D - Collaborative empiricism [Concept: Collaborative empiricism]

0263. D - Cognitive restructuring: Collaboratively evaluating and developing more balanced or useful interpretations rather than imposing positive thinking. / Collaborative empiricism: A CBT stance in which client and therapist jointly test ideas against evidence and experience. [Concept: Cognitive restructuring and Collaborative empiricism]

0264. D - Cognitive restructuring: Examining evidence and generating a realistic alternative thought with the child. / Skills rehearsal: Role-playing an assertive request and providing supportive, specific feedback. [Concept: Cognitive restructuring and Skills rehearsal]

0265. C - Cognitive restructuring [Concept: Cognitive restructuring]

0266. C - Cognitive restructuring: Collaboratively evaluating and developing more balanced or useful interpretations rather than imposing positive thinking. / Developmental adaptation in CBT: Adjusting CBT language, materials, pacing, and caregiver involvement to the child's developmental capacity. [Concept: Cognitive restructuring and Developmental adaptation in CBT]

0267. A - Exposure [Concept: Exposure]

0268. A - Relapse prevention [Concept: Relapse prevention]

0269. A - Exposure: Gradual, planned approach to feared situations or cues to support new learning, with appropriate assessment and consent. / Thought record: A structured aid for noticing a situation, automatic thought, emotion, evidence, and alternative perspective. [Concept: Exposure and Thought record]

0270. A - Exposure [Concept: Exposure]

0271. D - Coping self-talk: Practice of helpful, realistic statements that support coping and task engagement. / Relapse prevention: Planning for future triggers, early warning signs, and continued use of skills after improvement. [Concept: Coping self-talk and Relapse prevention]

0272. D - Behavioral activation [Concept: Behavioral activation]

0273. C - Cognitive triangle [Concept: Cognitive triangle]

0274. B - Thought record [Concept: Thought record]

0275. D - Thought record: A structured aid for noticing a situation, automatic thought, emotion, evidence, and alternative perspective. / Relapse prevention: Planning for future triggers, early warning signs, and continued use of skills after improvement. 0425. D - Cognitive triangle: Helping a child map how a thought, feeling, and action relate in a particular situation. / Collaborative empiricism: Treating a belief as a testable hypothesis and reviewing what the child observes. [Concept: Cognitive triangle and Collaborative empiricism]

0426. A - Helping a child map how a thought, feeling, and action relate in a particular situation. [Concept: Cognitive triangle]

0427. D - Relapse prevention [Concept: Relapse prevention]

0428. A - Exposure: Gradual, planned approach to feared situations or cues to support new learning, with appropriate assessment and consent. / Developmental adaptation in CBT: Adjusting CBT language, materials, pacing, and caregiver involvement to the child's developmental capacity. [Concept: Exposure and Developmental adaptation in CBT]

0429. D - Skills rehearsal [Concept: Skills rehearsal]

0430. D - Cognitive triangle: Helping a child map how a thought, feeling, and action relate in a particular situation. / Skills rehearsal: Role-playing an assertive request and providing supportive, specific feedback. [Concept: Cognitive triangle and Skills rehearsal]

0431. C - Behavioral activation: Scheduling a manageable valued activity and reviewing its effect on mood and functioning. / Exposure: Building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation. [Concept: Behavioral activation and Exposure]

0432. A - Behavioral activation [Concept: Behavioral activation]

0433. B - Cognitive triangle: Helping a child map how a thought, feeling, and action relate in a particular situation. / Exposure: Building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation. [Concept: Cognitive triangle and Exposure]

0434. B - Skills rehearsal [Concept: Skills rehearsal]

0435. D - Cognitive triangle: Helping a child map how a thought, feeling, and action relate in a particular situation. / Collaborative empiricism: Treating a belief as a testable hypothesis and reviewing what the child observes. [Concept: Cognitive triangle and Collaborative empiricism]

0436. D - Planning for future triggers, early warning signs, and continued use of skills after improvement. [Concept: Relapse prevention]

0437. C - Behavioral activation: Planned engagement in meaningful or rewarding activities to increase contact with positive reinforcement. / Thought record: A structured aid for noticing a situation, automatic thought, emotion, evidence, and alternative perspective. [Concept: Behavioral activation and Thought record]

0438. C - Cognitive triangle: Helping a child map how a thought, feeling, and action relate in a particular situation. / Collaborative empiricism: Treating a belief as a testable hypothesis and reviewing what the child observes. [Concept: Cognitive triangle and Collaborative empiricism]

0439. D - Identifying likely setbacks and rehearsing which coping steps the child can use. [Concept: Relapse prevention]

0440. A - Behavioral activation: Scheduling a manageable valued activity and reviewing its effect on mood and functioning. / Collaborative empiricism: Treating a belief as a testable hypothesis and reviewing what the child observes. [Concept: Behavioral activation and Collaborative empiricism]

0441. D - Thought record [Concept: Thought record]

0442. D - Thought record: A structured aid for noticing a situation, automatic thought, emotion, evidence, and alternative perspective. / Coping self-talk: Practice of helpful, realistic statements that support coping and task engagement. [Concept: Thought record and Coping self-talk]

0443. B - Collaborative empiricism [Concept: Collaborative empiricism]

0444. A - A structured aid for noticing a situation, automatic thought, emotion, evidence, and alternative perspective. [Concept: Thought record]

0445. A - Developmental adaptation in CBT [Concept: Developmental adaptation in CBT]

0446. A - Developmental adaptation in CBT [Concept: Developmental adaptation in CBT]

0447. A - Using a child-friendly record to examine what happened and what the child thought at that moment. [Concept: Thought record]

0448. B - Exposure [Concept: Exposure]

0449. B - Cognitive triangle: A teaching model linking thoughts, feelings, and behaviors as mutually influential components of experience. / Exposure: Gradual, planned approach to feared situations or cues to support new learning, with appropriate assessment and consent. [Concept: Cognitive triangle and Exposure]

0450. A - Cognitive restructuring: Collaboratively evaluating and developing more balanced or useful interpretations rather than imposing positive thinking. / Collaborative empiricism: A CBT stance in which client and therapist jointly test ideas against evidence and experience. [Concept: Cognitive restructuring and Collaborative empiricism]

0451. D - Skills rehearsal: Practicing a targeted behavior in session, often with modeling, feedback, and repetition. / Developmental adaptation in CBT: Adjusting CBT language, materials, pacing, and caregiver involvement to the child's developmental capacity. [Concept: Skills rehearsal and Developmental adaptation in CBT]

0452. B - Role-playing an assertive request and providing supportive, specific feedback. [Concept: Skills rehearsal]

QUESTION | CORRECT OPTION AND CONCEPT

0632. D - Cognitive triangle: A teaching model linking thoughts, feelings, and behaviors as mutually influential components of experience. / Collaborative empiricism: A CBT stance in which client and therapist jointly test ideas against evidence and experience. [Concept: Cognitive triangle and Collaborative empiricism]

0633. B - Thought record [Concept: Thought record]

0634. B - Exposure: Building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation. / Thought record: Using a child-friendly record to examine what happened and what the child thought at that moment. [Concept: Exposure and Thought record]

0635. B - Cognitive triangle: Helping a child map how a thought, feeling, and action relate in a particular situation. / Behavioral activation: Scheduling a manageable valued activity and reviewing its effect on mood and functioning. [Concept: Cognitive triangle and Behavioral activation]

0636. D - Thought record [Concept: Thought record]

0637. B - Cognitive triangle [Concept: Cognitive triangle]

0638. D - Cognitive triangle: A teaching model linking thoughts, feelings, and behaviors as mutually influential components of experience. / Relapse prevention: Planning for future triggers, early warning signs, and continued use of skills after improvement. [Concept: Cognitive triangle and Relapse prevention]

0639. B - Behavioral activation: Planned engagement in meaningful or rewarding activities to increase contact with positive reinforcement. / Thought record: A structured aid for noticing a situation, automatic thought, emotion, evidence, and alternative perspective. [Concept: Behavioral activation and Thought record]

0640. D - Coping self-talk [Concept: Coping self-talk]

0641. D - Exposure: Gradual, planned approach to feared situations or cues to support new learning, with appropriate assessment and consent. / Collaborative empiricism: A CBT stance in which client and therapist jointly test ideas against evidence and experience. [Concept: Exposure and Collaborative empiricism]

0642. D - Collaborative empiricism [Concept: Collaborative empiricism]

0643. B - Thought record: Using a child-friendly record to examine what happened and what the child thought at that moment. / Collaborative empiricism: Treating a belief as a testable hypothesis and reviewing what the child observes. [Concept: Thought record and Collaborative empiricism]

0644. D - Thought record: A structured aid for noticing a situation, automatic thought, emotion, evidence, and alternative perspective. / Skills rehearsal: Practicing a targeted behavior in session, often with modeling, feedback, and repetition. [Concept: Thought record and Skills rehearsal]

0645. C - Behavioral activation: Scheduling a manageable valued activity and reviewing its effect on mood and functioning. / Exposure: Building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation. [Concept: Behavioral activation and Exposure]

0646. D - Thought record [Concept: Thought record]

0647. C - Thought record [Concept: Thought record]

0648. B - Cognitive triangle: Helping a child map how a thought, feeling, and action relate in a particular situation. / Cognitive restructuring: Examining evidence and generating a realistic alternative thought with the child. [Concept: Cognitive triangle and Cognitive restructuring]

0649. A - Cognitive restructuring: Collaboratively evaluating and developing more balanced or useful interpretations rather than imposing positive thinking. / Skills rehearsal: Practicing a targeted behavior in session, often with modeling, feedback, and repetition. [Concept: Cognitive restructuring and Skills rehearsal]

0650. C - Behavioral activation: Scheduling a manageable valued activity and reviewing its effect on mood and functioning. / Exposure: Building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation. [Concept: Behavioral activation and Exposure]

0651. B - Collaboratively evaluating and developing more balanced or useful interpretations rather than imposing positive thinking. [Concept: Cognitive restructuring]

0652. C - A teaching model linking thoughts, feelings, and behaviors as mutually influential components of experience. [Concept: Cognitive triangle]

0653. C - Developmental adaptation in CBT [Concept: Developmental adaptation in CBT]

0654. C - Cognitive restructuring [Concept: Cognitive restructuring]

0655. B - Behavioral activation: Scheduling a manageable valued activity and reviewing its effect on mood and functioning. / Skills rehearsal: Role-playing an assertive request and providing supportive, specific feedback. [Concept: Behavioral activation and Skills rehearsal]

0656. B - Thought record: A structured aid for noticing a situation, automatic thought, emotion, evidence, and alternative perspective. / Relapse prevention: Planning for future triggers, early warning signs, and continued use of skills after improvement. [Concept: Thought record and Relapse prevention]

0657. C - Thought record: Using a child-friendly record to examine what happened and what the child thought at that moment. / Skills rehearsal: Role-playing an assertive request and providing supportive, specific feedback. [Concept: Thought record and Skills rehearsal]

0658. B - Cognitive triangle: A teaching model linking thoughts, feelings, and behaviors as mutually influential components of experience. / Thought record: A structured aid for noticing a situation, automatic thought, emotion, evidence, and alternative perspective. [Concept: Cognitive triangle and Thought record]

0659. D - Skills rehearsal [Concept: Skills rehearsal]

0660. C - Scheduling a manageable valued activity and reviewing its effect on mood and functioning. [Concept: Behavioral activation]

0661. C - Thought record: Using a child-friendly record to examine what happened and what the child thought at that moment. / Collaborative empiricism: Treating a belief as a testable hypothesis and reviewing what the child observes. [Concept: Thought record and Collaborative empiricism]

0662. B - Behavioral activation [Concept: Behavioral activation]

0663. A - Developmental adaptation in CBT [Concept: Developmental adaptation in CBT]

0664. A - Examining evidence and generating a realistic alternative thought with the child. [Concept: Cognitive restructuring]

0665. D - Cognitive restructuring [Concept: Cognitive restructuring]

0666. D - Behavioral activation: Scheduling a manageable valued activity and reviewing its effect on mood and functioning. / Skills rehearsal: Role-playing an assertive request and providing supportive, specific feedback. [Concept: Behavioral activation and Skills rehearsal]

0667. D - Cognitive triangle: A teaching model linking thoughts, feelings, and behaviors as mutually influential components of experience. / Behavioral activation: Planned engagement in meaningful or rewarding activities to increase contact with positive reinforcement. [Concept: Cognitive triangle and Behavioral activation]

0668. B - Coping self-talk: Practice of helpful, realistic statements that support coping and task engagement. / Developmental adaptation in CBT: Adjusting CBT language, materials, pacing, and caregiver involvement to the child's developmental capacity. [Concept: Coping self-talk and Developmental adaptation in CBT]

0669. A - Cognitive triangle: Helping a child map how a thought, feeling, and action relate in a particular situation. / Thought record: Using a child-friendly record to examine what happened and what the child thought at that moment. [Concept: Cognitive triangle and Thought record]

0670. C - Behavioral activation: Scheduling a manageable valued activity and reviewing its effect on mood and functioning. / Developmental adaptation in CBT: Using drawings or concrete examples when abstract cognitive language is not yet accessible. [Concept: Behavioral activation and Developmental adaptation in CBT]

0671. C - Planning for future triggers, early warning signs, and continued use of skills after improvement. [Concept: Relapse prevention]

0672. D - Thought record [Concept: Thought record]

0673. C - Cognitive restructuring [Concept: Cognitive restructuring]

0674. A - Collaborative empiricism [Concept: Collaborative empiricism]

0675. B - Scheduling a manageable valued activity and reviewing its effect on mood and functioning. [Concept: Behavioral activation]

0676. C - Skills rehearsal [Concept: Skills rehearsal]

0677. A - Thought record: A structured aid for noticing a situation, automatic thought, emotion, evidence, and alternative perspective. / Developmental adaptation in CBT: Adjusting CBT language, materials, pacing, and caregiver involvement to the child's developmental capacity. [Concept: Thought record and Developmental adaptation in CBT]

0678. C - Thought record: A structured aid for noticing a situation, automatic thought, emotion, evidence, and alternative perspective. / Skills rehearsal: Practicing a targeted behavior in session, often with modeling, feedback, and repetition. [Concept: Thought record and Skills rehearsal]

0679. B - A CBT stance in which client and therapist jointly test ideas against evidence and experience. [Concept: Collaborative empiricism]

0680. B - Cognitive restructuring [Concept: Cognitive restructuring]

0681. D - Cognitive triangle: A teaching model linking thoughts, feelings, and behaviors as mutually influential components of experience. / Thought record: A structured aid for noticing a situation, automatic thought, emotion, evidence, and alternative perspective. [Concept: Cognitive triangle and Thought record]

0682. A - Cognitive restructuring [Concept: Cognitive restructuring]

0683. B - Cognitive restructuring: Collaboratively evaluating and developing more balanced or useful interpretations rather than imposing positive thinking. / Skills rehearsal: Practicing a targeted behavior in session, often with modeling, feedback, and repetition. [Concept: Cognitive restructuring and Skills rehearsal]

0684. B - Cognitive restructuring: Examining evidence and generating a realistic alternative thought with the child. / Exposure: Building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation. [Concept: Cognitive restructuring and Exposure]

0685. C - Behavioral activation [Concept: Behavioral activation]

0686. A - Thought record [Concept: Thought record]

CAC.910 | Cognitive Behavioral Therapy for Children

QUESTION | CORRECT OPTION AND CONCEPT

0687. B - Coping self-talk: Rehearsing a believable coping phrase a child can use during a challenging moment. / Collaborative empiricism: Treating a belief as a testable hypothesis and reviewing what the child observes. [Concept: Coping self-talk and Collaborative empiricism]

0688. C - Collaborative empiricism: Treating a belief as a testable hypothesis and reviewing what the child observes. / Developmental adaptation in CBT: Using drawings or concrete examples when abstract cognitive language is not yet accessible. [Concept: Collaborative empiricism and Developmental adaptation in CBT]

0689. A - Collaborative empiricism [Concept: Collaborative empiricism]

0690. C - Cognitive restructuring [Concept: Cognitive restructuring]

0691. D - Skills rehearsal [Concept: Skills rehearsal]

0692. B - Exposure [Concept: Exposure]

0693. D - Thought record [Concept: Thought record]

0694. A - Relapse prevention [Concept: Relapse prevention]

0695. B - Exposure [Concept: Exposure]

0696. C - Examining evidence and generating a realistic alternative thought with the child. [Concept: Cognitive restructuring]

0697. A - Skills rehearsal [Concept: Skills rehearsal]

0698. C - Cognitive triangle [Concept: Cognitive triangle]

0699. D - Coping self-talk: Rehearsing a believable coping phrase a child can use during a challenging moment. / Developmental adaptation in CBT: Using drawings or concrete examples when abstract cognitive language is not yet accessible. [Concept: Coping self-talk and Developmental adaptation in CBT]

0700. C - Behavioral activation [Concept: Behavioral activation]

0701. C - Cognitive triangle: A teaching model linking thoughts, feelings, and behaviors as mutually influential components of experience. / Coping self-talk: Practice of helpful, realistic statements that support coping and task engagement. [Concept: Cognitive triangle and Coping self-talk]

0702. A - Relapse prevention [Concept: Relapse prevention]

0703. C - Skills rehearsal: Role-playing an assertive request and providing supportive, specific feedback. / Developmental adaptation in CBT: Using drawings or concrete examples when abstract cognitive language is not yet accessible. [Concept: Skills rehearsal and Developmental adaptation in CBT]

0704. C - Exposure [Concept: Exposure]

0705. C - Relapse prevention [Concept: Relapse prevention]

0706. A - Relapse prevention [Concept: Relapse prevention]

0707. C - Cognitive triangle: A teaching model linking thoughts, feelings, and behaviors as mutually influential components of experience. / Coping self-talk: Practice of helpful, realistic statements that support coping and task engagement. [Concept: Cognitive triangle and Coping self-talk]

0708. D - Skills rehearsal [Concept: Skills rehearsal]

0709. A - A teaching model linking thoughts, feelings, and behaviors as mutually influential components of experience. [Concept: Cognitive triangle]

0710. C - Role-playing an assertive request and providing supportive, specific feedback. [Concept: Skills rehearsal]

0711. D - Cognitive triangle [Concept: Cognitive triangle]

0712. B - Skills rehearsal [Concept: Skills rehearsal]

0713. A - Behavioral activation [Concept: Behavioral activation]

0714. A - Relapse prevention [Concept: Relapse prevention]

0715. C - Exposure [Concept: Exposure]

0716. A - Exposure: Building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation. / Coping self-talk: Rehearsing a believable coping phrase a child can use during a challenging moment. [Concept: Exposure and Coping self-talk]

0717. D - Thought record [Concept: Thought record]

0718. D - Examining evidence and generating a realistic alternative thought with the child. [Concept: Cognitive restructuring]

0719. A - Cognitive triangle [Concept: Cognitive triangle]

0720. B - Cognitive restructuring: Collaboratively evaluating and developing more balanced or useful interpretations rather than imposing positive thinking. / Thought record: A structured aid for noticing a situation, automatic thought, emotion, evidence, and alternative perspective. [Concept: Cognitive restructuring and Thought record]

0721. A - Behavioral activation: Planned engagement in meaningful or rewarding activities to increase contact with positive reinforcement. / Thought record: A structured aid for noticing a situation, automatic thought, emotion, evidence, and alternative perspective. [Concept: Behavioral activation and Thought record]

0722. A - Behavioral activation: Planned engagement in meaningful or rewarding activities to increase contact with positive reinforcement. / Collaborative empiricism: A CBT stance in which client and therapist jointly test ideas against evidence and experience. [Concept: Behavioral activation and Collaborative empiricism]

0723. A - Developmental adaptation in CBT [Concept: Developmental adaptation in CBT]

0724. C - Cognitive triangle: A teaching model linking thoughts, feelings, and behaviors as mutually influential components of experience. / Exposure: Gradual, planned approach to feared situations or cues to support new learning, with appropriate assessment and consent. [Concept: Cognitive triangle and Exposure]

0725. A - Using drawings or concrete examples when abstract cognitive language is not yet accessible. [Concept: Developmental adaptation in CBT]

0726. B - Skills rehearsal: Practicing a targeted behavior in session, often with modeling, feedback, and repetition. / Relapse prevention: Planning for future triggers, early warning signs, and continued use of skills after improvement. [Concept: Skills rehearsal and Relapse prevention]

0727. B - Developmental adaptation in CBT: Adjusting CBT language, materials, pacing, and caregiver involvement to the child's developmental capacity. / Relapse prevention: Planning for future triggers, early warning signs, and continued use of skills after improvement. [Concept: Developmental adaptation in CBT and Relapse prevention]

0728. C - Cognitive triangle: A teaching model linking thoughts, feelings, and behaviors as mutually influential components of experience. / Collaborative empiricism: A CBT stance in which client and therapist jointly test ideas against evidence and experience. [Concept: Cognitive triangle and Collaborative empiricism]

0729. A - Behavioral activation [Concept: Behavioral activation]

0730. D - Collaborative empiricism: A CBT stance in which client and therapist jointly test ideas against evidence and experience. / Relapse prevention: Planning for future triggers, early warning signs, and continued use of skills after improvement. [Concept: Collaborative empiricism and Relapse prevention]

0731. D - Collaborative empiricism [Concept: Collaborative empiricism]

0732. B - Exposure: Building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation. / Coping self-talk: Rehearsing a believable coping phrase a child can use during a challenging moment. [Concept: Exposure and Coping self-talk]

0733. C - Behavioral activation [Concept: Behavioral activation]

0734. A - Skills rehearsal: Practicing a targeted behavior in session, often with modeling, feedback, and repetition. / Relapse prevention: Planning for future triggers, early warning signs, and continued use of skills after improvement. [Concept: Skills rehearsal and Relapse prevention]

0735. D - Thought record: A structured aid for noticing a situation, automatic thought, emotion, evidence, and alternative perspective. / Collaborative empiricism: A CBT stance in which client and therapist jointly test ideas against evidence and experience. [Concept: Thought record and Collaborative empiricism]

0736. C - Coping self-talk: Practice of helpful, realistic statements that support coping and task engagement. / Relapse prevention: Planning for future triggers, early warning signs, and continued use of skills after improvement. [Concept: Coping self-talk and Relapse prevention]

0737. C - Cognitive restructuring: Examining evidence and generating a realistic alternative thought with the child. / Relapse prevention: Identifying likely setbacks and rehearsing which coping steps the child can use. [Concept: Cognitive restructuring and Relapse prevention]

0738. B - Identifying likely setbacks and rehearsing which coping steps the child can use. [Concept: Relapse prevention]

0739. C - Cognitive restructuring [Concept: Cognitive restructuring]

0740. C - Cognitive triangle: A teaching model linking thoughts, feelings, and behaviors as mutually influential components of experience. / Skills rehearsal: Practicing a targeted behavior in session, often with modeling, feedback, and repetition. [Concept: Cognitive triangle and Skills rehearsal]

0741. B - Behavioral activation: Planned engagement in meaningful or rewarding activities to increase contact with positive reinforcement. / Relapse prevention: Planning for future triggers, early warning signs, and continued use of skills after improvement. [Concept: Behavioral activation and Relapse prevention]

0742. B - Developmental adaptation in CBT: Adjusting CBT language, materials, pacing, and caregiver involvement to the child's developmental capacity. / Relapse prevention: Planning for future triggers, early warning signs, and continued use of skills after improvement. [Concept: Developmental adaptation in CBT and Relapse prevention]

0743. D - Cognitive triangle: Helping a child map how a thought, feeling, and action relate in a particular situation. / Skills rehearsal: Role-playing an assertive request and providing supportive, specific feedback. [Concept: Cognitive triangle and Skills rehearsal]

0744. D - Skills rehearsal [Concept: Skills rehearsal]

0745. C - Cognitive restructuring [Concept: Cognitive restructuring]

0746. D - Developmental adaptation in CBT [Concept: Developmental adaptation in CBT]

0747. D - Cognitive triangle: Helping a child map how a thought, feeling, and action relate in a particular situation. / Cognitive restructuring: Examining evidence and generating a realistic alternative thought with the child. [Concept: Cognitive triangle and Cognitive restructuring]

CAC.910 | Cognitive Behavioral Therapy for Children

QUESTION | CORRECT OPTION AND CONCEPT

0748. B - Identifying likely setbacks and rehearsing which coping steps the child can use. [Concept: Relapse prevention]

0749. B - Cognitive restructuring: Examining evidence and generating a realistic alternative thought with the child. / Coping self-talk: Rehearsing a believable coping phrase a child can use during a challenging moment. [Concept: Cognitive restructuring and Coping self-talk]

0840. C - Thought record [Concept: Thought record]

0841. A - Behavioral activation: Scheduling a manageable valued activity and reviewing its effect on mood and functioning. / Relapse prevention: Identifying likely setbacks and rehearsing which coping steps the child can use. [Concept: Behavioral activation and Relapse prevention]

0842. A - Thought record: Using a child-friendly record to examine what happened and what the child thought at that moment. / Collaborative empiricism: Treating a belief as a testable hypothesis and reviewing what the child observes. [Concept: Thought record and Collaborative empiricism]

0843. A - Coping self-talk [Concept: Coping self-talk]

0844. A - Cognitive restructuring: Examining evidence and generating a realistic alternative thought with the child. / Collaborative empiricism: Treating a belief as a testable hypothesis and reviewing what the child observes. [Concept: Cognitive restructuring and Collaborative empiricism]

0845. A - Exposure: Gradual, planned approach to feared situations or cues to support new learning, with appropriate assessment and consent. / Developmental adaptation in CBT: Adjusting CBT language, materials, pacing, and caregiver involvement to the child's developmental capacity. [Concept: Exposure and Developmental adaptation in CBT]

0846. C - Behavioral activation: Planned engagement in meaningful or rewarding activities to increase contact with positive reinforcement. / Relapse prevention: Planning for future triggers, early warning signs, and continued use of skills after improvement. [Concept: Behavioral activation and Relapse prevention]

0847. D - Cognitive restructuring [Concept: Cognitive restructuring]

0848. A - Exposure: Gradual, planned approach to feared situations or cues to support new learning, with appropriate assessment and consent. / Collaborative empiricism: A CBT stance in which client and therapist jointly test ideas against evidence and experience. [Concept: Exposure and Collaborative empiricism]

0849. A - Cognitive triangle: A teaching model linking thoughts, feelings, and behaviors as mutually influential components of experience. / Relapse prevention: Planning for future triggers, early warning signs, and continued use of skills after improvement. [Concept: Cognitive triangle and Relapse prevention]

0850. B - Cognitive triangle: Helping a child map how a thought, feeling, and action relate in a particular situation. / Cognitive restructuring: Examining evidence and generating a realistic alternative thought with the child. [Concept: Cognitive triangle and Cognitive restructuring]

0851. D - Using drawings or concrete examples when abstract cognitive language is not yet accessible. [Concept: Developmental adaptation in CBT]

0852. D - Skills rehearsal [Concept: Skills rehearsal]

0853. C - Building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation. [Concept: Exposure]

0854. B - Skills rehearsal [Concept: Skills rehearsal]

0855. A - Skills rehearsal [Concept: Skills rehearsal]

0856. D - Thought record [Concept: Thought record]

0857. B - Thought record: Using a child-friendly record to examine what happened and what the child thought at that moment. / Skills rehearsal: Role-playing an assertive request and providing supportive, specific feedback. [Concept: Thought record and Skills rehearsal]

0858. A - Cognitive restructuring: Collaboratively evaluating and developing more balanced or useful interpretations rather than imposing positive thinking. / Skills rehearsal: Practicing a targeted behavior in session, often with modeling, feedback, and repetition. [Concept: Cognitive restructuring and Skills rehearsal]

0859. D - Collaborative empiricism [Concept: Collaborative empiricism]

0860. A - Exposure [Concept: Exposure]

0861. D - Developmental adaptation in CBT [Concept: Developmental adaptation in CBT]

0862. D - Collaborative empiricism [Concept: Collaborative empiricism]

0863. D - Gradual, planned approach to feared situations or cues to support new learning, with appropriate assessment and consent. [Concept: Exposure]

0864. A - Thought record [Concept: Thought record]

0865. A - Coping self-talk [Concept: Coping self-talk]

0866. A - Adjusting CBT language, materials, pacing, and caregiver involvement to the child's developmental capacity. [Concept: Developmental adaptation in CBT]

0867. D - Behavioral activation: Planned engagement in meaningful or rewarding activities to increase contact with positive reinforcement. / Collaborative empiricism: A CBT stance in which client and therapist jointly test ideas against evidence and experience. [Concept: Behavioral activation and Collaborative empiricism]

CAC.911 | Crisis Intervention Strategies

QUESTION | CORRECT OPTION AND CONCEPT

0001. D - Risk formulation: Integrating current statements, context, access, supports, and changes rather than relying on one score. / Crisis triage: Determining which situation requires immediate emergency action and which can be safely managed with timely follow-up. [Concept: Risk formulation and Crisis triage]

0002. D - Risk formulation: A contextual, ongoing synthesis of risk and protective factors, current intent, access, history, and foreseeable changes. / Warm handoff: A coordinated transfer in which the current helper actively connects the person to the next service. [Concept: Risk formulation and Warm handoff]

0003. D - Crisis assessment [Concept: Crisis assessment]

0004. B - A collaborative, individualized plan identifying warning signs, coping steps, supportive contacts, and emergency resources. [Concept: Safety planning]

0005. C - Crisis assessment [Concept: Crisis assessment]

0006. B - Risk formulation: Integrating current statements, context, access, supports, and changes rather than relying on one score. / Warm handoff: Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number. [Concept: Risk formulation and Warm handoff]

0007. B - Safety planning: A collaborative, individualized plan identifying warning signs, coping steps, supportive contacts, and emergency resources. / Least restrictive response: The safest effective intervention that imposes the fewest necessary restrictions, consistent with law and policy. [Concept: Safety planning and Least restrictive response]

0008. A - Crisis triage: Prioritizing urgency and level of response based on immediate danger, need, and available resources. / Warm handoff: A coordinated transfer in which the current helper actively connects the person to the next service. [Concept: Crisis triage and Warm handoff]

0009. D - De-escalation: Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety. / Post-crisis follow-up: Planned reassessment and continuity contact after acute stabilization to review safety and connect ongoing care. [Concept: De-escalation and Post-crisis follow-up]

0010. C - Crisis assessment [Concept: Crisis assessment]

0011. A - De-escalation [Concept: De-escalation]

0012. C - Psychological first aid [Concept: Psychological first aid]

0013. D - Risk formulation [Concept: Risk formulation]

0014. B - Safety planning: A collaborative, individualized plan identifying warning signs, coping steps, supportive contacts, and emergency resources. / Psychological first aid: A humane, practical, early response that promotes safety, stabilization, connection, and access to support. [Concept: Safety planning and Psychological first aid]

0015. B - Crisis triage [Concept: Crisis triage]

0016. D - Post-crisis follow-up [Concept: Post-crisis follow-up]

0017. D - Risk formulation [Concept: Risk formulation]

0018. C - Crisis assessment: Clarifying immediate danger and available supports before moving to longer-term goals. / Psychological first aid: Offering practical assistance and connection without pressuring a person to recount traumatic details. [Concept: Crisis assessment and Psychological first aid]

0019. B - Protective factors [Concept: Protective factors]

0020. C - Warm handoff [Concept: Warm handoff]

0021. A - Protective factors [Concept: Protective factors]

0022. A - Post-crisis follow-up [Concept: Post-crisis follow-up]

0023. B - Protective factors: Personal, relational, and contextual resources that may reduce risk or support coping and recovery. / Warm handoff: A coordinated transfer in which the current helper actively connects the person to the next service. [Concept: Protective factors and Warm handoff]

0024. B - Crisis triage [Concept: Crisis triage]

0025. B - Least restrictive response [Concept: Least restrictive response]

0026. A - Least restrictive response: Selecting a proportionate response and reassessing whether restrictions remain necessary. / Warm handoff: Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number. [Concept: Least restrictive response and Warm handoff]

0027. B - Safety planning [Concept: Safety planning]

0028. D - Protective factors: Personal, relational, and contextual resources that may reduce risk or support coping and recovery. / Psychological first aid: A humane, practical, early response that promotes safety, stabilization, connection, and access to support. [Concept: Protective factors and Psychological first aid]

0029. B - Post-crisis follow-up [Concept: Post-crisis follow-up]

0030. B - Risk formulation [Concept: Risk formulation]

0031. C - Clarifying immediate danger and available supports before moving to longer-term goals. [Concept: Crisis assessment]

0032. D - Crisis triage [Concept: Crisis triage]

0033. B - De-escalation: Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety. / Post-crisis follow-up: Planned reassessment and continuity contact after acute stabilization to review safety and connect ongoing care. [Concept: De-escalation and Post-crisis follow-up]

0034. C - Safety planning [Concept: Safety planning]

0035. C - De-escalation [Concept: De-escalation]

0036. C - Checking whether the plan worked and whether additional services are needed after the immediate crisis. [Concept: Post-crisis follow-up]

0037. A - De-escalation: Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety. / Warm handoff: A coordinated transfer in which the current helper actively connects the person to the next service. [Concept: De-escalation and Warm handoff]

0038. C - Safety planning: Creating specific steps with the youth and caregivers for what to do if risk increases. / De-escalation: Using calm, respectful language, space, and choices rather than confrontation. [Concept: Safety planning and De-escalation]

0039. A - Protective factors: Personal, relational, and contextual resources that may reduce risk or support coping and recovery. / Crisis triage: Prioritizing urgency and level of response based on immediate danger, need, and available resources. [Concept: Protective factors and Crisis triage]

0040. B - Warm handoff [Concept: Warm handoff]

0041. A - A contextual, ongoing synthesis of risk and protective factors, current intent, access, history, and foreseeable changes. [Concept: Risk formulation]

0042. D - Protective factors: Personal, relational, and contextual resources that may reduce risk or support coping and recovery. / Psychological first aid: A humane, practical, early response that promotes safety, stabilization, connection, and access to support. [Concept: Protective factors and Psychological first aid]

0043. B - Risk formulation: Integrating current statements, context, access, supports, and changes rather than relying on one score. / Post-crisis follow-up: Checking whether the plan worked and whether additional services are needed after the immediate crisis. [Concept: Risk formulation and Post-crisis follow-up]

0044. C - Crisis assessment: Rapid, focused appraisal of immediate safety, precipitating events, supports, functioning, and urgent needs. / Crisis triage: Prioritizing urgency and level of response based on immediate danger, need, and available resources. [Concept: Crisis assessment and Crisis triage]

0045. B - Risk formulation [Concept: Risk formulation]

0046. A - Least restrictive response [Concept: Least restrictive response]

0047. D - Least restrictive response [Concept: Least restrictive response]

0048. D - Safety planning [Concept: Safety planning]

0049. C - Psychological first aid [Concept: Psychological first aid]

0050. C - Risk formulation: Integrating current statements, context, access, supports, and changes rather than relying on one score. / Psychological first aid: Offering practical assistance and connection without pressuring a person to recount traumatic details. [Concept: Risk formulation and Psychological first aid]

0051. C - Warm handoff [Concept: Warm handoff]

0052. D - Safety planning: Creating specific steps with the youth and caregivers for what to do if risk increases. / Protective factors: Identifying trusted adults and practical supports that can be activated now. [Concept: Safety planning and Protective factors]

0053. D - De-escalation [Concept: De-escalation]

0054. A - Prioritizing urgency and level of response based on immediate danger, need, and available resources. [Concept: Crisis triage]

0055. C - Risk formulation: A contextual, ongoing synthesis of risk and protective factors, current intent, access, history, and foreseeable changes. / Protective factors: Personal, relational, and contextual resources that may reduce risk or support coping and recovery. [Concept: Risk formulation and Protective factors]

0056. B - Safety planning [Concept: Safety planning]

0057. D - Rapid, focused appraisal of immediate safety, precipitating events, supports, functioning, and urgent needs. [Concept: Crisis assessment]

0058. C - Protective factors: Personal, relational, and contextual resources that may reduce risk or support coping and recovery. / Warm handoff: A coordinated transfer in which the current helper actively connects the person to the next service. [Concept: Protective factors and Warm handoff]

0059. B - Protective factors: Identifying trusted adults and practical supports that can be activated now. / Psychological first aid: Offering practical assistance and connection without pressuring a person to recount traumatic details. [Concept: Protective factors and Psychological first aid]

0060. D - Risk formulation [Concept: Risk formulation]

0061. C - Post-crisis follow-up [Concept: Post-crisis follow-up]

0062. C - Least restrictive response [Concept: Least restrictive response]

0063. D - Risk formulation [Concept: Risk formulation]

0064. C - Risk formulation: A contextual, ongoing synthesis of risk and protective factors, current intent, access, history, and foreseeable changes. / Psychological first aid: A humane, practical, early response that promotes safety, stabilization, connection, and access to support. [Concept: Risk formulation and Psychological first aid]

0065. C - Risk formulation: Integrating current statements, context, access, supports, and changes rather than relying on one score. / Post-crisis follow-up: Checking whether the plan worked and whether additional services are needed after the immediate crisis. [Concept: Risk formulation and Post-crisis follow-up]

CAC.911 | Crisis Intervention Strategies

QUESTION | CORRECT OPTION AND CONCEPT

0066. D - Psychological first aid: A humane, practical, early response that promotes safety, stabilization, connection, and access to support. / Post-crisis follow-up: Planned reassessment and continuity contact after acute stabilization to review safety and connect ongoing care. [Concept: Psychological first aid and Post-crisis follow-up]

0067. A - Crisis triage: Determining which situation requires immediate emergency action and which can be safely managed with timely follow-up. / Warm handoff: Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number. [Concept: Crisis triage and Warm handoff]

0068. C - Risk formulation: Integrating current statements, context, access, supports, and changes rather than relying on one score. / Warm handoff: Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number. [Concept: Risk formulation and Warm handoff]

0069. D - De-escalation: Using calm, respectful language, space, and choices rather than confrontation. / Least restrictive response: Selecting a proportionate response and reassessing whether restrictions remain necessary. [Concept: De-escalation and Least restrictive response]

0070. C - Safety planning: Creating specific steps with the youth and caregivers for what to do if risk increases. / Crisis triage: Determining which situation requires immediate emergency action and which can be safely managed with timely follow-up. [Concept: Safety planning and Crisis triage]

0071. B - Least restrictive response: The safest effective intervention that imposes the fewest necessary restrictions, consistent with law and policy. / Crisis triage: Prioritizing urgency and level of response based on immediate danger, need, and available resources. [Concept: Least restrictive response and Crisis triage]

0072. C - Using calm, respectful language, space, and choices rather than confrontation. [Concept: De-escalation]

0073. C - Protective factors [Concept: Protective factors]

0074. A - De-escalation: Using calm, respectful language, space, and choices rather than confrontation. / Risk formulation: Integrating current statements, context, access, supports, and changes rather than relying on one score. [Concept: De-escalation and Risk formulation]

0075. C - Crisis triage [Concept: Crisis triage]

0076. D - Crisis assessment [Concept: Crisis assessment]

0077. C - Risk formulation [Concept: Risk formulation]

0078. C - Protective factors: Personal, relational, and contextual resources that may reduce risk or support coping and recovery. / Least restrictive response: The safest effective intervention that imposes the fewest necessary restrictions, consistent with law and policy. [Concept: Protective factors and Least restrictive response]

0079. B - Least restrictive response [Concept: Least restrictive response]

0080. C - Warm handoff [Concept: Warm handoff]

0081. B - Crisis assessment: Clarifying immediate danger and available supports before moving to longer-term goals. / De-escalation: Using calm, respectful language, space, and choices rather than confrontation. [Concept: Crisis assessment and De-escalation]

0082. B - Crisis assessment: Rapid, focused appraisal of immediate safety, precipitating events, supports, functioning, and urgent needs. / De-escalation: Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety. [Concept: Crisis assessment and De-escalation]

0083. C - Protective factors: Identifying trusted adults and practical supports that can be activated now. / Post-crisis follow-up: Checking whether the plan worked and whether additional services are needed after the immediate crisis. [Concept: Protective factors and Post-crisis follow-up]

0084. C - Risk formulation: A contextual, ongoing synthesis of risk and protective factors, current intent, access, history, and foreseeable changes. / Psychological first aid: A humane, practical, early response that promotes safety, stabilization, connection, and access to support. [Concept: Risk formulation and Psychological first aid]

0085. A - Least restrictive response [Concept: Least restrictive response]

0086. D - Personal, relational, and contextual resources that may reduce risk or support coping and recovery. [Concept: Protective factors]

0087. C - Selecting a proportionate response and reassessing whether restrictions remain necessary. [Concept: Least restrictive response]

0088. A - Least restrictive response [Concept: Least restrictive response]

0089. C - Safety planning: Creating specific steps with the youth and caregivers for what to do if risk increases. / Least restrictive response: Selecting a proportionate response and reassessing whether restrictions remain necessary. [Concept: Safety planning and Least restrictive response]

0090. A - De-escalation [Concept: De-escalation]

0091. D - Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety. [Concept: De-escalation]

0092. D - Determining which situation requires immediate emergency action and which can be safely managed with timely follow-up. [Concept: Crisis triage]

0093. A - Protective factors [Concept: Protective factors]

0094. A - Selecting a proportionate response and reassessing whether restrictions remain necessary. [Concept: Least restrictive response]

0095. D - A contextual, ongoing synthesis of risk and protective factors, current intent, access, history, and foreseeable changes. [Concept: Risk formulation]

0096. A - Crisis assessment: Rapid, focused appraisal of immediate safety, precipitating events, supports, functioning, and urgent needs. / Psychological first aid: A humane, practical, early response that promotes safety, stabilization, connection, and access to support. [Concept: Crisis assessment and Psychological first aid]

0097. A - Psychological first aid: Offering practical assistance and connection without pressuring a person to recount traumatic details. / Warm handoff: Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number. [Concept: Psychological first aid and Warm handoff]

0098. B - Protective factors [Concept: Protective factors]

0099. D - Warm handoff [Concept: Warm handoff]

0100. D - Psychological first aid [Concept: Psychological first aid]

0101. B - De-escalation: Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety. / Protective factors: Personal, relational, and contextual resources that may reduce risk or support coping and recovery. [Concept: De-escalation and Protective factors]

0102. A - Crisis assessment: Clarifying immediate danger and available supports before moving to longer-term goals. / Psychological first aid: Offering practical assistance and connection without pressuring a person to recount traumatic details. [Concept: Crisis assessment and Psychological first aid]

0103. C - Crisis assessment [Concept: Crisis assessment]

0104. B - Warm handoff [Concept: Warm handoff]

0105. A - Psychological first aid: A humane, practical, early response that promotes safety, stabilization, connection, and access to support. / Warm handoff: A coordinated transfer in which the current helper actively connects the person to the next service. [Concept: Psychological first aid and Warm handoff]

0106. C - Safety planning: A collaborative, individualized plan identifying warning signs, coping steps, supportive contacts, and emergency resources. / Crisis triage: Prioritizing urgency and level of response based on immediate danger, need, and available resources. [Concept: Safety planning and Crisis triage]

0107. B - Least restrictive response [Concept: Least restrictive response]

0108. A - Protective factors: Personal, relational, and contextual resources that may reduce risk or support coping and recovery. / Least restrictive response: The safest effective intervention that imposes the fewest necessary restrictions, consistent with law and policy. [Concept: Protective factors and Least restrictive response]

0109. A - Crisis assessment [Concept: Crisis assessment]

0110. A - Safety planning: Creating specific steps with the youth and caregivers for what to do if risk increases. / De-escalation: Using calm, respectful language, space, and choices rather than confrontation. [Concept: Safety planning and De-escalation]

0111. D - Safety planning [Concept: Safety planning]

0112. C - Risk formulation [Concept: Risk formulation]

0113. B - Safety planning [Concept: Safety planning]

0114. C - Psychological first aid [Concept: Psychological first aid]

0115. D - Crisis assessment [Concept: Crisis assessment]

0116. C - Psychological first aid: A humane, practical, early response that promotes safety, stabilization, connection, and access to support. / Warm handoff: A coordinated transfer in which the current helper actively connects the person to the next service. [Concept: Psychological first aid and Warm handoff]

0117. A - Crisis assessment [Concept: Crisis assessment]

0118. D - Risk formulation: A contextual, ongoing synthesis of risk and protective factors, current intent, access, history, and foreseeable changes. / Warm handoff: A coordinated transfer in which the current helper actively connects the person to the next service. [Concept: Risk formulation and Warm handoff]

0119. B - Psychological first aid: A humane, practical, early response that promotes safety, stabilization, connection, and access to support. / Crisis triage: Prioritizing urgency and level of response based on immediate danger, need, and available resources. [Concept: Psychological first aid and Crisis triage]

0120. A - Protective factors [Concept: Protective factors]

0121. A - Least restrictive response: The safest effective intervention that imposes the fewest necessary restrictions, consistent with law and policy. / Crisis triage: Prioritizing urgency and level of response based on immediate danger, need, and available resources. [Concept: Least restrictive response and Crisis triage]

0122. C - Psychological first aid [Concept: Psychological first aid]

0123. A - Risk formulation [Concept: Risk formulation]

0124. C - Protective factors: Personal, relational, and contextual resources that may reduce risk or support coping and recovery. / Post-crisis follow-up: Planned reassessment and continuity contact after acute stabilization to review safety and connect ongoing care. [Concept: Protective factors and Post-crisis follow-up]

0125. D - De-escalation [Concept: De-escalation]

0126. B - Determining which situation requires immediate emergency action and which can be safely managed with timely follow-up. [Concept: Crisis triage]

CAC.911 | Crisis Intervention Strategies

QUESTION | CORRECT OPTION AND CONCEPT

0127. 0237. B - Crisis triage [Concept: Crisis triage]

0238. C - A humane, practical, early response that promotes safety, stabilization, connection, and access to support. [Concept: Psychological first aid]

0239. D - Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety. [Concept: De-escalation]

0240. C - Warm handoff [Concept: Warm handoff]

0241. D - Protective factors [Concept: Protective factors]

0242. C - Risk formulation [Concept: Risk formulation]

0243. C - Post-crisis follow-up [Concept: Post-crisis follow-up]

0244. A - Safety planning: Creating specific steps with the youth and caregivers for what to do if risk increases. / Warm handoff: Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number. [Concept: Safety planning and Warm handoff]

0245. C - Crisis assessment: Clarifying immediate danger and available supports before moving to longer-term goals. / De-escalation: Using calm, respectful language, space, and choices rather than confrontation. [Concept: Crisis assessment and De-escalation]

0246. B - Crisis triage [Concept: Crisis triage]

0247. D - Psychological first aid [Concept: Psychological first aid]

0248. B - Least restrictive response [Concept: Least restrictive response]

0249. D - Least restrictive response [Concept: Least restrictive response]

0250. C - Safety planning [Concept: Safety planning]

0251. C - Crisis triage: Determining which situation requires immediate emergency action and which can be safely managed with timely follow-up. / Warm handoff: Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number. [Concept: Crisis triage and Warm handoff]

0252. A - Least restrictive response [Concept: Least restrictive response]

0253. A - Risk formulation [Concept: Risk formulation]

0254. D - De-escalation [Concept: De-escalation]

0255. B - De-escalation [Concept: De-escalation]

CAC.911 | Crisis Intervention Strategies

QUESTION | CORRECT OPTION AND CONCEPT

0256. D - Safety planning: A collaborative, individualized plan identifying warning signs, coping steps, supportive contacts, and emergency resources. / Psychological first aid: A humane, practical, early response that promotes safety, stabilization, connection, and access to support. [Concept: Safety planning and Psychological first aid]

0257. B - Crisis triage: Determining which situation requires immediate emergency action and which can be safely managed with timely follow-up. / Post-crisis follow-up: Checking whether the plan worked and whether additional services are needed after the immediate crisis. [Concept: Crisis triage and Post-crisis follow-up]

0258. D - Least restrictive response: Selecting a proportionate response and reassessing whether restrictions remain necessary. / Warm handoff: Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number. [Concept: Least restrictive response and Warm handoff]

0259. A - Warm handoff [Concept: Warm handoff]

0260. C - Protective factors [Concept: Protective factors]

0261. A - Crisis triage [Concept: Crisis triage]

0262. B - Crisis assessment [Concept: Crisis assessment]

0263. A - Least restrictive response: The safest effective intervention that imposes the fewest necessary restrictions, consistent with law and policy. / Psychological first aid: A humane, practical, early response that promotes safety, stabilization, connection, and access to support. [Concept: Least restrictive response and Psychological first aid]

0264. D - Safety planning: A collaborative, individualized plan identifying warning signs, coping steps, supportive contacts, and emergency resources. / De-escalation: Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety. [Concept: Safety planning and De-escalation]

0265. C - Warm handoff [Concept: Warm handoff]

0266. B - Protective factors: Identifying trusted adults and practical supports that can be activated now. / Least restrictive response: Selecting a proportionate response and reassessing whether restrictions remain necessary. [Concept: Protective factors and Least restrictive response]

0267. D - Warm handoff [Concept: Warm handoff]

0268. A - Safety planning: Creating specific steps with the youth and caregivers for what to do if risk increases. / Crisis triage: Determining which situation requires immediate emergency action and which can be safely managed with timely follow-up. [Concept: Safety planning and Crisis triage]

0269. B - Risk formulation: Integrating current statements, context, access, supports, and changes rather than relying on one score. / Crisis triage: Determining which situation requires immediate emergency action and which can be safely managed with timely follow-up. [Concept: Risk formulation and Crisis triage]

0270. D - Crisis assessment: Rapid, focused appraisal of immediate safety, precipitating events, supports, functioning, and urgent needs. / Safety planning: A collaborative, individualized plan identifying warning signs, coping steps, supportive contacts, and emergency resources. [Concept: Crisis assessment and Safety planning]

0271. C - Crisis assessment: Rapid, focused appraisal of immediate safety, precipitating events, supports, functioning, and urgent needs. / Safety planning: A collaborative, individualized plan identifying warning signs, coping steps, supportive contacts, and emergency resources. [Concept: Crisis assessment and Safety planning]

0272. B - De-escalation [Concept: De-escalation]

0273. D - Safety planning: Creating specific steps with the youth and caregivers for what to do if risk increases. / Protective factors: Identifying trusted adults and practical supports that can be activated now. [Concept: Safety planning and Protective factors]

0274. B - Post-crisis follow-up [Concept: Post-crisis follow-up]

0275. C - Psychological first aid [Concept: Psychological first aid]

0276. C - Crisis assessment: Clarifying immediate danger and available supports before moving to longer-term goals. / Protective factors: Identifying trusted adults and practical supports that can be activated now. [Concept: Crisis assessment and Protective factors]

0277. B - De-escalation: Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety. / Post-crisis follow-up: Planned reassessment and continuity contact after acute stabilization to review safety and connect ongoing care. [Concept: De-escalation and Post-crisis follow-up]

0278. D - Least restrictive response: The safest effective intervention that imposes the fewest necessary restrictions, consistent with law and policy. / Warm handoff: A coordinated transfer in which the current helper actively connects the person to the next service. [Concept: Least restrictive response and Warm handoff]

0279. C - Crisis assessment [Concept: Crisis assessment]

0280. C - Safety planning: Creating specific steps with the youth and caregivers for what to do if risk increases. / Least restrictive response: Selecting a proportionate response and reassessing whether restrictions remain necessary. [Concept: Safety planning and Least restrictive response]

0281. C - Protective factors [Concept: Protective factors]

0282. A - Safety planning: A collaborative, individualized plan identifying warning signs, coping steps, supportive contacts, and emergency resources. / Warm handoff: A coordinated transfer in which the current helper actively connects the person to the next service. [Concept: Safety planning and Warm handoff]

0283. A - Risk formulation: A contextual, ongoing synthesis of risk and protective factors, current intent, access, history, and foreseeable changes. / Least restrictive response: The safest effective intervention that imposes the fewest necessary restrictions, consistent with law and policy. [Concept: Risk formulation and Least restrictive response]

0284. B - Least restrictive response [Concept: Least restrictive response]

0285. A - Least restrictive response: Selecting a proportionate response and reassessing whether restrictions remain necessary. / Crisis triage: Determining which situation requires immediate emergency action and which can be safely managed with timely follow-up. [Concept: Least restrictive response and Crisis triage]

0286. C - Crisis assessment [Concept: Crisis assessment]

0287. D - De-escalation: Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety. / Least restrictive response: The safest effective intervention that imposes the fewest necessary restrictions, consistent with law and policy. [Concept: De-escalation and Least restrictive response]

0288. D - Crisis assessment: Clarifying immediate danger and available supports before moving to longer-term goals. / Risk formulation: Integrating current statements, context, access, supports, and changes rather than relying on one score. [Concept: Crisis assessment and Risk formulation]

0289. D - A humane, practical, early response that promotes safety, stabilization, connection, and access to support. [Concept: Psychological first aid]

0290. C - De-escalation: Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety. / Warm handoff: A coordinated transfer in which the current helper actively connects the person to the next service. [Concept: De-escalation and Warm handoff]

0291. A - Psychological first aid: Offering practical assistance and connection without pressuring a person to recount traumatic details. / Warm handoff: Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number. [Concept: Psychological first aid and Warm handoff]

0292. B - Warm handoff [Concept: Warm handoff]

0293. B - De-escalation: Using calm, respectful language, space, and choices rather than confrontation. / Warm handoff: Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number. [Concept: De-escalation and Warm handoff]

0294. D - Least restrictive response [Concept: Least restrictive response]

0295. B - Safety planning [Concept: Safety planning]

0296. B - Psychological first aid [Concept: Psychological first aid]

0297. A - Risk formulation [Concept: Risk formulation]

0298. B - Warm handoff: A coordinated transfer in which the current helper actively connects the person to the next service. / Post-crisis follow-up: Planned reassessment and continuity contact after acute stabilization to review safety and connect ongoing care. [Concept: Warm handoff and Post-crisis follow-up]

0299. A - Protective factors: Identifying trusted adults and practical supports that can be activated now. / Post-crisis follow-up: Checking whether the plan worked and whether additional services are needed after the immediate crisis. [Concept: Protective factors and Post-crisis follow-up]

0300. B - Safety planning: Creating specific steps with the youth and caregivers for what to do if risk increases. / Post-crisis follow-up: Checking whether the plan worked and whether additional services are needed after the immediate crisis. [Concept: Safety planning and Post-crisis follow-up]

0301. A - Psychological first aid: A humane, practical, early response that promotes safety, stabilization, connection, and access to support. / Crisis triage: Prioritizing urgency and level of response based on immediate danger, need, and available resources. [Concept: Psychological first aid and Crisis triage]

0302. C - De-escalation [Concept: De-escalation]

0303. A - Safety planning [Concept: Safety planning]

0304. A - Crisis assessment [Concept: Crisis assessment]

0427. C - De-escalation: Using calm, respectful language, space, and choices rather than confrontation. / Least restrictive response: Selecting a proportionate response and reassessing whether restrictions remain necessary. [Concept: De-escalation and Least restrictive response]

0428. B - Least restrictive response: The safest effective intervention that imposes the fewest necessary restrictions, consistent with law and policy. / Warm handoff: A coordinated transfer in which the current helper actively connects the person to the next service. [Concept: Least restrictive response and Warm handoff]

0429. A - Safety planning: A collaborative, individualized plan identifying warning signs, coping steps, supportive contacts, and emergency resources. / Risk formulation: A contextual, ongoing synthesis of risk and protective factors, current intent, access, history, and foreseeable changes. [Concept: Safety planning and Risk formulation]

0430. D - Least restrictive response [Concept: Least restrictive response]

0431. A - Risk formulation: Integrating current statements, context, access, supports, and changes rather than relying on one score. / Crisis triage: Determining which situation requires immediate emergency action and which can be safely managed with timely follow-up. [Concept: Risk formulation and Crisis triage]

0432. A - Post-crisis follow-up [Concept: Post-crisis follow-up]

0433. B - Post-crisis follow-up [Concept: Post-crisis follow-up]

0434. A - Least restrictive response: The safest effective intervention that imposes the fewest necessary restrictions, consistent with law and policy. / Crisis triage: Prioritizing urgency and level of response based on immediate danger, need, and available resources. [Concept: Least restrictive response and Crisis triage]

0435. A - Protective factors: Personal, relational, and contextual resources that may reduce risk or support coping and recovery. / Crisis triage: Prioritizing urgency and level of response based on immediate danger, need, and available resources. [Concept: Protective factors and Crisis triage]

0436. A - Crisis assessment: Clarifying immediate danger and available supports before moving to longer-term goals. / Least restrictive response: Selecting a proportionate response and reassessing whether restrictions remain necessary. [Concept: Crisis assessment and Least restrictive response]

0437. A - De-escalation [Concept: De-escalation]

0438. A - Checking whether the plan worked and whether additional services are needed after the immediate crisis. [Concept: Post-crisis follow-up]

0439. D - Creating specific steps with the youth and caregivers for what to do if risk increases. [Concept: Safety planning]

0440. A - Crisis triage [Concept: Crisis triage]

0441. A - De-escalation: Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety. / Protective factors: Personal, relational, and contextual resources that may reduce risk or support coping and recovery. [Concept: De-escalation and Protective factors]

0442. C - Risk formulation: Integrating current statements, context, access, supports, and changes rather than relying on one score. / Least restrictive response: Selecting a proportionate response and reassessing whether restrictions remain necessary. [Concept: Risk formulation and Least restrictive response]

0443. D - Crisis triage: Prioritizing urgency and level of response based on immediate danger, need, and available resources. / Warm handoff: A coordinated transfer in which the current helper actively connects the person to the next service. [Concept: Crisis triage and Warm handoff]

0444. D - De-escalation: Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety. / Warm handoff: A coordinated transfer in which the current helper actively connects the person to the next service. [Concept: De-escalation and Warm handoff]

0445. D - Protective factors [Concept: Protective factors]

0446. D - Crisis triage [Concept: Crisis triage]

0447. B - Safety planning [Concept: Safety planning]

0448. D - Psychological first aid [Concept: Psychological first aid]

0449. C - A contextual, ongoing synthesis of risk and protective factors, current intent, access, history, and foreseeable changes. [Concept: Risk formulation]

0450. C - Safety planning [Concept: Safety planning]

0451. D - De-escalation [Concept: De-escalation]

0452. A - Least restrictive response [Concept: Least restrictive response]

0453. D - Least restrictive response: The safest effective intervention that imposes the fewest necessary restrictions, consistent with law and policy. / Warm handoff: A coordinated transfer in which the current helper actively connects the person to the next service. [Concept: Least restrictive response and Warm handoff]

0454. A - De-escalation [Concept: De-escalation]

0455. C - Planned reassessment and continuity contact after acute stabilization to review safety and connect ongoing care. [Concept: Post-crisis follow-up]

0456. A - Crisis assessment: Rapid, focused appraisal of immediate safety, precipitating events, supports, functioning, and urgent needs. / Post-crisis follow-up: Planned reassessment and continuity contact after acute stabilization to review safety and connect ongoing care. [Concept: Crisis assessment and Post-crisis follow-up]

0457. D - Safety planning [Concept: Safety planning]

0458. C - Safety planning [Concept: Safety planning]

0459. A - Creating specific steps with the youth and caregivers for what to do if risk increases. [Concept: Safety planning]

0460. D - Crisis assessment: Rapid, focused appraisal of immediate safety, precipitating events, supports, functioning, and urgent needs. / Post-crisis follow-up: Planned reassessment and continuity contact after acute stabilization to review safety and connect ongoing care. [Concept: Crisis assessment and Post-crisis follow-up]

0461. D - Safety planning: A collaborative, individualized plan identifying warning signs, coping steps, supportive contacts, and emergency resources. / Post-crisis follow-up: Planned reassessment and continuity contact after acute stabilization to review safety and connect ongoing care. [Concept: Safety planning and Post-crisis follow-up]

0462. C - Least restrictive response: The safest effective intervention that imposes the fewest necessary restrictions, consistent with law and policy. / Psychological first aid: A humane, practical, early response that promotes safety, stabilization, connection, and access to support. [Concept: Least restrictive response and Psychological first aid]

0463. A - Psychological first aid: Offering practical assistance and connection without pressuring a person to recount traumatic details. / Post-crisis follow-up: Checking whether the plan worked and whether additional services are needed after the immediate crisis. [Concept: Psychological first aid and Post-crisis follow-up]

0464. D - Crisis assessment: Clarifying immediate danger and available supports before moving to longer-term goals. / De-escalation: Using calm, respectful language, space, and choices rather than confrontation. [Concept: Crisis assessment and De-escalation]

0465. C - Crisis assessment [Concept: Crisis assessment]

0466. C - Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number. [Concept: Warm handoff]

0467. A - Safety planning: A collaborative, individualized plan identifying warning signs, coping steps, supportive contacts, and emergency resources. / Post-crisis follow-up: Planned reassessment and continuity contact after acute stabilization to review safety and connect ongoing care. [Concept: Safety planning and Post-crisis follow-up]

0468. D - Safety planning: A collaborative, individualized plan identifying warning signs, coping steps, supportive contacts, and emergency resources. / Least restrictive response: The safest effective intervention that imposes the fewest necessary restrictions, consistent with law and policy. [Concept: Safety planning and Least restrictive response]

0469. A - Psychological first aid [Concept: Psychological first aid]

0470. A - De-escalation: Using calm, respectful language, space, and choices rather than confrontation. / Least restrictive response: Selecting a proportionate response and reassessing whether restrictions remain necessary. [Concept: De-escalation and Least restrictive response]

0471. D - Least restrictive response [Concept: Least restrictive response]

0472. D - Crisis assessment: Rapid, focused appraisal of immediate safety, precipitating events, supports, functioning, and urgent needs. / De-escalation: Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety. [Concept: Crisis assessment and De-escalation]

0473. D - Crisis assessment: Rapid, focused appraisal of immediate safety, precipitating events, supports, functioning, and urgent needs. / Psychological first aid: A humane, practical, early response that promotes safety, stabilization, connection, and access to support. [Concept: Crisis assessment and Psychological first aid]

0474. A - Safety planning: Creating specific steps with the youth and caregivers for what to do if risk increases. / Psychological first aid: Offering practical assistance and connection without pressuring a person to recount traumatic details. [Concept: Safety planning and Psychological first aid]

0475. B - Post-crisis follow-up [Concept: Post-crisis follow-up]

0476. B - Crisis triage [Concept: Crisis triage]

0477. A - Protective factors [Concept: Protective factors]

0478. C - Crisis assessment [Concept: Crisis assessment]

0479. B - Safety planning: Creating specific steps with the youth and caregivers for what to do if risk increases. / Least restrictive response: Selecting a proportionate response and reassessing whether restrictions remain necessary. [Concept: Safety planning and Least restrictive response]

0480. D - Protective factors [Concept: Protective factors]

0481. A - Crisis triage [Concept: Crisis triage]

0482. B - De-escalation: Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety. / Protective factors: Personal, relational, and contextual resources that may reduce risk or support coping and recovery. [Concept: De-escalation and Protective factors]

0483. A - Identifying trusted adults and practical supports that can be activated now. [Concept: Protective factors]

0484. B - De-escalation: Using calm, respectful language, space, and choices rather than confrontation. / Warm handoff: Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number. [Concept: De-escalation and Warm handoff]

A - Least restrictive response: Selecting a proportionate response and reassessing whether restrictions remain necessary. / Post-crisis follow-up: Checking whether the plan worked and whether additional services are needed after the immediate crisis. [Concept: Least restrictive response and Post-crisis follow-up]

0616. A - Crisis assessment: Clarifying immediate danger and available supports before moving to longer-term goals. / Crisis triage: Determining which situation requires immediate emergency action and which can be safely managed with timely follow-up. [Concept: Crisis assessment and Crisis triage]

0617. C - Crisis triage: Determining which situation requires immediate emergency action and which can be safely managed with timely follow-up. / Warm handoff: Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number. [Concept: Crisis triage and Warm handoff]

0618. A - Creating specific steps with the youth and caregivers for what to do if risk increases. [Concept: Safety planning]

0619. C - Crisis assessment: Clarifying immediate danger and available supports before moving to longer-term goals. / Protective factors: Identifying trusted adults and practical supports that can be activated now. [Concept: Crisis assessment and Protective factors]

0620. A - A coordinated transfer in which the current helper actively connects the person to the next service. [Concept: Warm handoff]

0621. D - Crisis assessment: Clarifying immediate danger and available supports before moving to longer-term goals. / Post-crisis follow-up: Checking whether the plan worked and whether additional services are needed after the immediate crisis. [Concept: Crisis assessment and Post-crisis follow-up]

0622. A - Crisis assessment: Clarifying immediate danger and available supports before moving to longer-term goals. / Warm handoff: Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number. [Concept: Crisis assessment and Warm handoff]

0623. A - Crisis assessment: Rapid, focused appraisal of immediate safety, precipitating events, supports, functioning, and urgent needs. / De-escalation: Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety. [Concept: Crisis assessment and De-escalation]

0624. C - Offering practical assistance and connection without pressuring a person to recount traumatic details. [Concept: Psychological first aid]

0625. C - Using calm, respectful language, space, and choices rather than confrontation. [Concept: De-escalation]

0626. B - Warm handoff [Concept: Warm handoff]

0627. B - Psychological first aid: A humane, practical, early response that promotes safety, stabilization, connection, and access to support. / Post-crisis follow-up: Planned reassessment and continuity contact after acute stabilization to review safety and connect ongoing care. [Concept: Psychological first aid and Post-crisis follow-up]

0628. D - Crisis triage [Concept: Crisis triage]

0629. D - Selecting a proportionate response and reassessing whether restrictions remain necessary. [Concept: Least restrictive response]

0630. B - Crisis assessment [Concept: Crisis assessment]

0631. A - Planned reassessment and continuity contact after acute stabilization to review safety and connect ongoing care. [Concept: Post-crisis follow-up]

0632. D - Crisis assessment: Clarifying immediate danger and available supports before moving to longer-term goals. / Psychological first aid: Offering practical assistance and connection without pressuring a person to recount traumatic details. [Concept: Crisis assessment and Psychological first aid]

0633. A - Least restrictive response [Concept: Least restrictive response]

0634. B - Crisis assessment: Clarifying immediate danger and available supports before moving to longer-term goals. / Post-crisis follow-up: Checking whether the plan worked and whether additional services are needed after the immediate crisis. [Concept: Crisis assessment and Post-crisis follow-up]

0635. C - De-escalation: Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety. / Risk formulation: A contextual, ongoing synthesis of risk and protective factors, current intent, access, history, and foreseeable changes. [Concept: De-escalation and Risk formulation]

0636. C - Checking whether the plan worked and whether additional services are needed after the immediate crisis. [Concept: Post-crisis follow-up]

0637. C - De-escalation: Using calm, respectful language, space, and choices rather than confrontation. / Least restrictive response: Selecting a proportionate response and reassessing whether restrictions remain necessary. [Concept: De-escalation and Least restrictive response]

0638. A - Crisis assessment [Concept: Crisis assessment]

0639. B - De-escalation: Using calm, respectful language, space, and choices rather than confrontation. / Crisis triage: Determining which situation requires immediate emergency action and which can be safely managed with timely follow-up. [Concept: De-escalation and Crisis triage]

0640. B - Protective factors: Personal, relational, and contextual resources that may reduce risk or support coping and recovery. / Post-crisis follow-up: Planned reassessment and continuity contact after acute stabilization to review safety and connect ongoing care. [Concept: Protective factors and Post-crisis follow-up]

0641. B - The safest effective intervention that imposes the fewest necessary restrictions, consistent with law and policy. [Concept: Least restrictive response]

0642. C - Warm handoff [Concept: Warm handoff]

0643. B - Safety planning: Creating specific steps with the youth and caregivers for what to do if risk increases. / Post-crisis follow-up: Checking whether the plan worked and whether additional services are needed after the immediate crisis. [Concept: Safety planning and Post-crisis follow-up]

0644. A - Safety planning [Concept: Safety planning]

0645. D - Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number. [Concept: Warm handoff]

0646. B - Psychological first aid [Concept: Psychological first aid]

0647. D - Protective factors [Concept: Protective factors]

0648. B - Warm handoff [Concept: Warm handoff]

0649. D - Protective factors [Concept: Protective factors]

0650. A - Post-crisis follow-up [Concept: Post-crisis follow-up]

0651. D - Risk formulation: Integrating current statements, context, access, supports, and changes rather than relying on one score. / Crisis triage: Determining which situation requires immediate emergency action and which can be safely managed with timely follow-up. [Concept: Risk formulation and Crisis triage]

0652. C - Integrating current statements, context, access, supports, and changes rather than relying on one score. [Concept: Risk formulation]

0653. A - De-escalation [Concept: De-escalation]

0654. B - A coordinated transfer in which the current helper actively connects the person to the next service. [Concept: Warm handoff]

0655. D - Protective factors [Concept: Protective factors]

0656. D - De-escalation: Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety. / Least restrictive response: The safest effective intervention that imposes the fewest necessary restrictions, consistent with law and policy. [Concept: De-escalation and Least restrictive response]

0657. B - Safety planning [Concept: Safety planning]

0658. C - De-escalation: Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety. / Warm handoff: A coordinated transfer in which the current helper actively connects the person to the next service. [Concept: De-escalation and Warm handoff]

CAC.911 | Crisis Intervention Strategies

QUESTION | CORRECT OPTION AND CONCEPT

0659. 0814. A - Least restrictive response [Concept: Least restrictive response]

0815. D - De-escalation: Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety. / Crisis triage: Prioritizing urgency and level of response based on immediate danger, need, and available resources. [Concept: De-escalation and Crisis triage]

0816. A - De-escalation: Using calm, respectful language, space, and choices rather than confrontation. / Psychological first aid: Offering practical assistance and connection without pressuring a person to recount traumatic details. [Concept: De-escalation and Psychological first aid]

0817. A - Post-crisis follow-up [Concept: Post-crisis follow-up]

0818. A - De-escalation: Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety. / Psychological first aid: A humane, practical, early response that promotes safety, stabilization, connection, and access to support. [Concept: De-escalation and Psychological first aid]

0819. D - De-escalation [Concept: De-escalation]

0820. B - De-escalation: Using calm, respectful language, space, and choices rather than confrontation. / Least restrictive response: Selecting a proportionate response and reassessing whether restrictions remain necessary. [Concept: De-escalation and Least restrictive response]

0821. B - Warm handoff [Concept: Warm handoff]

0822. B - Safety planning: A collaborative, individualized plan identifying warning signs, coping steps, supportive contacts, and emergency resources. / Warm handoff: A coordinated transfer in which the current helper actively connects the person to the next service. [Concept: Safety planning and Warm handoff]

0823. D - Risk formulation: A contextual, ongoing synthesis of risk and protective factors, current intent, access, history, and foreseeable changes. / Least restrictive response: The safest effective intervention that imposes the fewest necessary restrictions, consistent with law and policy. [Concept: Risk formulation and Least restrictive response]

0824. D - Safety planning: A collaborative, individualized plan identifying warning signs, coping steps, supportive contacts, and emergency resources. / Psychological first aid: A humane, practical, early response that promotes safety, stabilization, connection, and access to support. [Concept: Safety planning and Psychological first aid]

0825. D - Safety planning [Concept: Safety planning]

0826. B - Warm handoff [Concept: Warm handoff]

0827. D - Protective factors: Personal, relational, and contextual resources that may reduce risk or support coping and recovery. / Crisis triage: Prioritizing urgency and level of response based on immediate danger, need, and available resources. [Concept: Protective factors and Crisis triage]

0828. D - Crisis triage [Concept: Crisis triage]

0829. C - Protective factors [Concept: Protective factors]

0830. A - Warm handoff [Concept: Warm handoff]

0831. B - Risk formulation: A contextual, ongoing synthesis of risk and protective factors, current intent, access, history, and foreseeable changes. / Warm handoff: A coordinated transfer in which the current helper actively connects the person to the next service. [Concept: Risk formulation and Warm handoff]

0832. C - Risk formulation [Concept: Risk formulation]

0833. B - Protective factors [Concept: Protective factors]

0834. D - Least restrictive response [Concept: Least restrictive response]

0835. D - Risk formulation: Integrating current statements, context, access, supports, and changes rather than relying on one score. / Post-crisis follow-up: Checking whether the plan worked and whether additional services are needed after the immediate crisis. [Concept: Risk formulation and Post-crisis follow-up]

0836. B - Crisis triage: Determining which situation requires immediate emergency action and which can be safely managed with timely follow-up. / Warm handoff: Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number. [Concept: Crisis triage and Warm handoff]

0837. A - Safety planning: A collaborative, individualized plan identifying warning signs, coping steps, supportive contacts, and emergency resources. / De-escalation: Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety. [Concept: Safety planning and De-escalation]

0838. A - Crisis assessment: Rapid, focused appraisal of immediate safety, precipitating events, supports, functioning, and urgent needs. / Warm handoff: A coordinated transfer in which the current helper actively connects the person to the next service. [Concept: Crisis assessment and Warm handoff]

0839. D - De-escalation [Concept: De-escalation]

0840. B - Post-crisis follow-up [Concept: Post-crisis follow-up]

0841. D - Post-crisis follow-up [Concept: Post-crisis follow-up]

CAC.911 | Crisis Intervention Strategies

QUESTION | CORRECT OPTION AND CONCEPT

0842. D - De-escalation: Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety. / Post-crisis follow-up: Planned reassessment and continuity contact after acute stabilization to review safety and connect ongoing care. [Concept: De-escalation and Post-crisis follow-up]

0843. A - Warm handoff [Concept: Warm handoff]

0844. A - Crisis triage: Prioritizing urgency and level of response based on immediate danger, need, and available resources. / Post-crisis follow-up: Planned reassessment and continuity contact after acute stabilization to review safety and connect ongoing care. 0993. D - Risk formulation: A contextual, ongoing synthesis of risk and protective factors, current intent, access, history, and foreseeable changes. / Psychological first aid: A humane, practical, early response that promotes safety, stabilization, connection, and access to support. [Concept: Risk formulation and Psychological first aid]

0994. A - Post-crisis follow-up [Concept: Post-crisis follow-up]

0995. D - Warm handoff [Concept: Warm handoff]

0996. D - Crisis triage [Concept: Crisis triage]

0997. D - Protective factors: Personal, relational, and contextual resources that may reduce risk or support coping and recovery. / Warm handoff: A coordinated transfer in which the current helper actively connects the person to the next service. [Concept: Protective factors and Warm handoff]

0998. B - De-escalation [Concept: De-escalation]

0999. A - Safety planning: Creating specific steps with the youth and caregivers for what to do if risk increases. / Crisis triage: Determining which situation requires immediate emergency action and which can be safely managed with timely follow-up. [Concept: Safety planning and Crisis triage]

1000. A - Psychological first aid [Concept: Psychological first aid]

CAC.912 | Research Methods in Child Psychology

QUESTION | CORRECT OPTION AND CONCEPT

0001. C - Preregistration [Concept: Preregistration]

0002. B - Cross-sectional design [Concept: Cross-sectional design]

0003. D - External validity: The extent to which findings may apply across populations, settings, measures, and conditions beyond the study. / Preregistration: Publicly documenting hypotheses, methods, and analysis plans before examining outcome data. [Concept: External validity and Preregistration]

0004. D - Cross-sectional design: Comparing age groups during one data-collection period while recognizing age and cohort are confounded. / Internal validity: Evaluating whether rival explanations for a treatment effect have been addressed. [Concept: Cross-sectional design and Internal validity]

0005. B - External validity [Concept: External validity]

0006. C - Cross-sectional design [Concept: Cross-sectional design]

0007. A - Cross-sectional design: A design that compares different individuals or groups at one time point. / Confounding variable: A factor associated with both a presumed cause and outcome that can offer an alternative explanation. [Concept: Cross-sectional design and Confounding variable]

0008. B - Random assignment: Using a chance procedure to allocate enrolled participants to treatment conditions. / Child assent in research: Explaining a study to a child in accessible language and respecting dissent under applicable safeguards. [Concept: Random assignment and Child assent in research]

0009. B - Voluntary authorization to participate based on adequate disclosure, provided by an authorized adult when required. [Concept: Informed research consent]

0010. C - Random assignment: Using a chance procedure to allocate enrolled participants to treatment conditions. / Child assent in research: Explaining a study to a child in accessible language and respecting dissent under applicable safeguards. [Concept: Random assignment and Child assent in research]

0011. C - A design that compares different individuals or groups at one time point. [Concept: Cross-sectional design]

0012. C - Internal validity [Concept: Internal validity]

0013. C - Considering whether a sample and setting resemble the populations to which results are generalized. [Concept: External validity]

0014. C - Longitudinal design: Following the same children over time to study within-person change. / Child assent in research: Explaining a study to a child in accessible language and respecting dissent under applicable safeguards. [Concept: Longitudinal design and Child assent in research]

0015. D - Operational definition: A precise specification of how a construct or variable is observed, measured, or manipulated. / Random assignment: Allocation of participants to study conditions by chance to support baseline comparability. [Concept: Operational definition and Random assignment]

0016. A - Longitudinal design: A design that measures the same individuals or units across multiple time points. / Cross-sectional design: A design that compares different individuals or groups at one time point. [Concept: Longitudinal design and Cross-sectional design]

0017. B - Random assignment [Concept: Random assignment]

0018. A - Allocation of participants to study conditions by chance to support baseline comparability. [Concept: Random assignment]

0019. A - External validity [Concept: External validity]

0020. D - Informed research consent: Explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult. / Child assent in research: Explaining a study to a child in accessible language and respecting dissent under applicable safeguards. [Concept: Informed research consent and Child assent in research]

0021. D - Random assignment: Using a chance procedure to allocate enrolled participants to treatment conditions. / Cross-sectional design: Comparing age groups during one data-collection period while recognizing age and cohort are confounded. [Concept: Random assignment and Cross-sectional design]

0022. C - Child assent in research [Concept: Child assent in research]

0023. A - Random assignment [Concept: Random assignment]

0024. C - Internal validity: The strength of evidence that a study’s manipulation or exposure, rather than alternatives, explains the observed effect. / Child assent in research: A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission. [Concept: Internal validity and Child assent in research]

0025. B - Operational definition: Defining observable criteria for a study variable before collecting data. / Longitudinal design: Following the same children over time to study within-person change. [Concept: Operational definition and Longitudinal design]

0026. A - Cross-sectional design: A design that compares different individuals or groups at one time point. / Confounding variable: A factor associated with both a presumed cause and outcome that can offer an alternative explanation. [Concept: Cross-sectional design and Confounding variable]

0027. B - Explaining a study to a child in accessible language and respecting dissent under applicable safeguards. [Concept: Child assent in research]

0028. A - Longitudinal design [Concept: Longitudinal design]

0029. A - Cross-sectional design: A design that compares different individuals or groups at one time point. / External validity: The extent to which findings may apply across populations, settings, measures, and conditions beyond the study. [Concept: Cross-sectional design and External validity]

0030. C - Child assent in research [Concept: Child assent in research]

0031. D - Informed research consent [Concept: Informed research consent]

0032. B - Child assent in research: Explaining a study to a child in accessible language and respecting dissent under applicable safeguards. / Preregistration: Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work. [Concept: Child assent in research and Preregistration]

0033. B - Cross-sectional design [Concept: Cross-sectional design]

0034. B - Confounding variable: Identifying a third factor that may account for an observed association between exposure and outcome. / Informed research consent: Explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult. [Concept: Confounding variable and Informed research consent]

0035. D - Longitudinal design [Concept: Longitudinal design]

0036. D - Cross-sectional design: Comparing age groups during one data-collection period while recognizing age and cohort are confounded. / External validity: Considering whether a sample and setting resemble the populations to which results are generalized. [Concept: Cross-sectional design and External validity]

0037. D - Informed research consent [Concept: Informed research consent]

0038. A - Random assignment [Concept: Random assignment]

0039. C - Confounding variable: Identifying a third factor that may account for an observed association between exposure and outcome. / Child assent in research: Explaining a study to a child in accessible language and respecting dissent under applicable safeguards. [Concept: Confounding variable and Child assent in research]

0040. C - Random assignment [Concept: Random assignment]

0041. C - Internal validity [Concept: Internal validity]

0042. B - Operational definition [Concept: Operational definition]

0043. B - Confounding variable: A factor associated with both a presumed cause and outcome that can offer an alternative explanation. / Internal validity: The strength of evidence that a study’s manipulation or exposure, rather than alternatives, explains the observed effect. [Concept: Confounding variable and Internal validity]

0044. B - Operational definition: A precise specification of how a construct or variable is observed, measured, or manipulated. / Longitudinal design: A design that measures the same individuals or units across multiple time points. [Concept: Operational definition and Longitudinal design]

0045. B - Random assignment [Concept: Random assignment]

0046. D - Operational definition: A precise specification of how a construct or variable is observed, measured, or manipulated. / Child assent in research: A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission. [Concept: Operational definition and Child assent in research]

0047. B - Operational definition: Defining observable criteria for a study variable before collecting data. / Child assent in research: Explaining a study to a child in accessible language and respecting dissent under applicable safeguards. [Concept: Operational definition and Child assent in research]

0048. C - Child assent in research [Concept: Child assent in research]

0049. A - Internal validity: Evaluating whether rival explanations for a treatment effect have been addressed. / Child assent in research: Explaining a study to a child in accessible language and respecting dissent under applicable safeguards. [Concept: Internal validity and Child assent in research]

0050. D - Longitudinal design: Following the same children over time to study within-person change. / Informed research consent: Explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult. [Concept: Longitudinal design and Informed research consent]

0051. C - Confounding variable: A factor associated with both a presumed cause and outcome that can offer an alternative explanation. / Child assent in research: A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission. [Concept: Confounding variable and Child assent in research]

0052. B - Random assignment: Using a chance procedure to allocate enrolled participants to treatment conditions. / Internal validity: Evaluating whether rival explanations for a treatment effect have been addressed. [Concept: Random assignment and Internal validity]

0053. A - External validity: Considering whether a sample and setting resemble the populations to which results are generalized. / Preregistration: Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work. [Concept: External validity and Preregistration]

0054. C - Using a chance procedure to allocate enrolled participants to treatment conditions. [Concept: Random assignment]

0055. B - Preregistration [Concept: Preregistration]

0056. D - Operational definition: Defining observable criteria for a study variable before collecting data. / Cross-sectional design: Comparing age groups during one data-collection period while recognizing age and cohort are confounded. [Concept: Operational definition and Cross-sectional design]

A - Confounding variable: Identifying a third factor that may account for an observed association between exposure and outcome. / Informed research consent: Explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult. [Concept: Confounding variable and Informed research consent]

0194. D - Operational definition: A precise specification of how a construct or variable is observed, measured, or manipulated. / Preregistration: Publicly documenting hypotheses, methods, and analysis plans before examining outcome data. [Concept: Operational definition and Preregistration]

0195. D - Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work. [Concept: Preregistration]

0196. D - A precise specification of how a construct or variable is observed, measured, or manipulated. [Concept: Operational definition]

0197. B - Longitudinal design: Following the same children over time to study within-person change. / Internal validity: Evaluating whether rival explanations for a treatment effect have been addressed. [Concept: Longitudinal design and Internal validity]

0198. C - Confounding variable: A factor associated with both a presumed cause and outcome that can offer an alternative explanation. / Internal validity: The strength of evidence that a study’s manipulation or exposure, rather than alternatives, explains the observed effect. [Concept: Confounding variable and Internal validity]

0199. D - Cross-sectional design [Concept: Cross-sectional design]

0200. C - Confounding variable [Concept: Confounding variable]

0201. A - Random assignment: Using a chance procedure to allocate enrolled participants to treatment conditions. / Longitudinal design: Following the same children over time to study within-person change. [Concept: Random assignment and Longitudinal design]

0202. D - Confounding variable: Identifying a third factor that may account for an observed association between exposure and outcome. / Internal validity: Evaluating whether rival explanations for a treatment effect have been addressed. [Concept: Confounding variable and Internal validity]

0203. B - Operational definition [Concept: Operational definition]

0204. B - Child assent in research [Concept: Child assent in research]

0205. A - Confounding variable: Identifying a third factor that may account for an observed association between exposure and outcome. / Internal validity: Evaluating whether rival explanations for a treatment effect have been addressed. [Concept: Confounding variable and Internal validity]

0206. B - Cross-sectional design: A design that compares different individuals or groups at one time point. / Informed research consent: Voluntary authorization to participate based on adequate disclosure, provided by an authorized adult when required. [Concept: Cross-sectional design and Informed research consent]

0207. D - Operational definition: Defining observable criteria for a study variable before collecting data. / External validity: Considering whether a sample and setting resemble the populations to which results are generalized. [Concept: Operational definition and External validity]

0208. C - Random assignment: Allocation of participants to study conditions by chance to support baseline comparability. / Confounding variable: A factor associated with both a presumed cause and outcome that can offer an alternative explanation. [Concept: Random assignment and Confounding variable]

0209. B - Longitudinal design [Concept: Longitudinal design]

0210. A - Child assent in research [Concept: Child assent in research]

0211. B - Random assignment: Allocation of participants to study conditions by chance to support baseline comparability. / External validity: The extent to which findings may apply across populations, settings, measures, and conditions beyond the study. [Concept: Random assignment and External validity]

0212. D - Child assent in research [Concept: Child assent in research]

0213. C - Operational definition [Concept: Operational definition]

0214. C - Identifying a third factor that may account for an observed association between exposure and outcome. [Concept: Confounding variable]

0215. D - External validity [Concept: External validity]

0216. A - Cross-sectional design: Comparing age groups during one data-collection period while recognizing age and cohort are confounded. / Informed research consent: Explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult. [Concept: Cross-sectional design and Informed research consent]

0217. A - External validity [Concept: External validity]

0218. B - Operational definition: A precise specification of how a construct or variable is observed, measured, or manipulated. / Longitudinal design: A design that measures the same individuals or units across multiple time points. [Concept: Operational definition and Longitudinal design]

0219. B - Random assignment: Using a chance procedure to allocate enrolled participants to treatment conditions. / Informed research consent: Explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult. [Concept: Random assignment and Informed research consent]

0220. A - External validity: The extent to which findings may apply across populations, settings, measures, and conditions beyond the study. / Informed research consent: Voluntary authorization to participate based on adequate disclosure, provided by an authorized adult when required. [Concept: External validity and Informed research consent]

0221. B - Random assignment: Allocation of participants to study conditions by chance to support baseline comparability. / Confounding variable: A factor associated with both a presumed cause and outcome that can offer an alternative explanation. [Concept: Random assignment and Confounding variable]

0222. C - Random assignment [Concept: Random assignment]

0223. C - Cross-sectional design: Comparing age groups during one data-collection period while recognizing age and cohort are confounded. / Internal validity: Evaluating whether rival explanations for a treatment effect have been addressed. [Concept: Cross-sectional design and Internal validity]

0224. A - Longitudinal design [Concept: Longitudinal design]

0225. A - Random assignment [Concept: Random assignment]

0226. C - Operational definition: Defining observable criteria for a study variable before collecting data. / Random assignment: Using a chance procedure to allocate enrolled participants to treatment conditions. [Concept: Operational definition and Random assignment]

0227. A - Random assignment: Using a chance procedure to allocate enrolled participants to treatment conditions. / Internal validity: Evaluating whether rival explanations for a treatment effect have been addressed. [Concept: Random assignment and Internal validity]

0228. D - Random assignment: Using a chance procedure to allocate enrolled participants to treatment conditions. / External validity: Considering whether a sample and setting resemble the populations to which results are generalized. [Concept: Random assignment and External validity]

0229. D - Random assignment [Concept: Random assignment]

0230. B - Child assent in research: Explaining a study to a child in accessible language and respecting dissent under applicable safeguards. / Preregistration: Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work. [Concept: Child assent in research and Preregistration]

0231. A - Longitudinal design [Concept: Longitudinal design]

0232. A - External validity [Concept: External validity]

0233. A - Random assignment [Concept: Random assignment]

0234. D - Operational definition: Defining observable criteria for a study variable before collecting data. / Preregistration: Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work. [Concept: Operational definition and Preregistration]

CAC.912 | Research Methods in Child Psychology

QUESTION | CORRECT OPTION AND CONCEPT

0235. C - Confounding variable: A factor associated with both a presumed cause and outcome that can offer an alternative explanation. / Preregistration: Publicly documenting hypotheses, methods, and analysis plans before examining outcome data. [Concept: Confounding variable and Preregistration]

0236. C - External validity: The extent to which findings may apply across populations, settings, measures, and conditions beyond the study. / Child assent in research: A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission. [Concept: External validity and Child assent in research]

0237. B - Confounding variable: A factor associated with both a presumed cause and outcome that can offer an alternative explanation. / Internal validity: The strength of evidence that a study's manipulation or exposure, rather than alternatives, explains the observed effect. [Concept: Confounding variable and Internal validity]

0238. A - Cross-sectional design: A design that compares different individuals or groups at one time point. / External validity: The extent to which findings may apply across populations, settings, measures, and conditions beyond the study. [Concept: Cross-sectional design and External validity]

0239. A - External validity [Concept: External validity]

0240. C - Confounding variable [Concept: Confounding variable]

0241. D - Preregistration [Concept: Preregistration]

0242. B - Confounding variable: A factor associated with both a presumed cause and outcome that can offer an alternative explanation. / External validity: The extent to which findings may apply across populations, settings, measures, and conditions beyond the study. [Concept: Confounding variable and External validity]

0243. C - Operational definition [Concept: Operational definition]

0244. A - External validity: The extent to which findings may apply across populations, settings, measures, and conditions beyond the study. / Informed research consent: Voluntary authorization to participate based on adequate disclosure, provided by an authorized adult when required. [Concept: External validity and Informed research consent]

0245. C - External validity: Considering whether a sample and setting resemble the populations to which results are generalized. / Child assent in research: Explaining a study to a child in accessible language and respecting dissent under applicable safeguards. [Concept: External validity and Child assent in research]

0246. C - Preregistration [Concept: Preregistration]

0247. C - Operational definition: A precise specification of how a construct or variable is observed, measured, or manipulated. / Longitudinal design: A design that measures the same individuals or units across multiple time points. [Concept: Operational definition and Longitudinal design]

0248. B - Cross-sectional design [Concept: Cross-sectional design]

0249. B - Preregistration [Concept: Preregistration]

0250. B - Informed research consent: Explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult. / Preregistration: Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work. [Concept: Informed research consent and Preregistration]

0251. A - Longitudinal design: A design that measures the same individuals or units across multiple time points. / Confounding variable: A factor associated with both a presumed cause and outcome that can offer an alternative explanation. [Concept: Longitudinal design and Confounding variable]

0252. A - Cross-sectional design [Concept: Cross-sectional design]

0253. A - Internal validity [Concept: Internal validity]

0254. C - Longitudinal design [Concept: Longitudinal design]

0255. A - Longitudinal design [Concept: Longitudinal design]

0256. A - Cross-sectional design: Comparing age groups during one data-collection period while recognizing age and cohort are confounded. / Internal validity: Evaluating whether rival explanations for a treatment effect have been addressed. [Concept: Cross-sectional design and Internal validity]

0257. D - Confounding variable: A factor associated with both a presumed cause and outcome that can offer an alternative explanation. / External validity: The extent to which findings may apply across populations, settings, measures, and conditions beyond the study. [Concept: Confounding variable and External validity]

0258. C - Allocation of participants to study conditions by chance to support baseline comparability. [Concept: Random assignment]

0259. A - The extent to which findings may apply across populations, settings, measures, and conditions beyond the study. [Concept: External validity]

0260. D - Longitudinal design [Concept: Longitudinal design]

0261. B - Internal validity: The strength of evidence that a study's manipulation or exposure, rather than alternatives, explains the observed effect. / External validity: The extent to which findings may apply across populations, settings, measures, and conditions beyond the study. [Concept: Internal validity and External validity]

0262. C - Child assent in research [Concept: Child assent in research]

0263. A - Random assignment [Concept: Random assignment]

0264. D - Internal validity [Concept: Internal validity]

0265. A - Longitudinal design [Concept: Longitudinal design]

0266. B - Random assignment [Concept: Random assignment]

0267. C - External validity: Considering whether a sample and setting resemble the populations to which results are generalized. / Preregistration: Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work. [Concept: External validity and Preregistration]

0268. A - Cross-sectional design [Concept: Cross-sectional design]

0269. B - Internal validity [Concept: Internal validity]

0396. B - A factor associated with both a presumed cause and outcome that can offer an alternative explanation. [Concept: Confounding variable]

0397. D - Confounding variable: Identifying a third factor that may account for an observed association between exposure and outcome. / Preregistration: Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work. [Concept: Confounding variable and Preregistration]

0398. B - Internal validity: Evaluating whether rival explanations for a treatment effect have been addressed. / Child assent in research: Explaining a study to a child in accessible language and respecting dissent under applicable safeguards. [Concept: Internal validity and Child assent in research]

0399. C - Informed research consent [Concept: Informed research consent]

0400. B - Confounding variable [Concept: Confounding variable]

0401. B - Informed research consent [Concept: Informed research consent]

0402. C - A design that measures the same individuals or units across multiple time points. [Concept: Longitudinal design]

0403. D - Operational definition [Concept: Operational definition]

0404. C - Random assignment: Allocation of participants to study conditions by chance to support baseline comparability. / Internal validity: The strength of evidence that a study's manipulation or exposure, rather than alternatives, explains the observed effect. [Concept: Random assignment and Internal validity]

0405. A - A factor associated with both a presumed cause and outcome that can offer an alternative explanation. [Concept: Confounding variable]

0406. B - Confounding variable: A factor associated with both a presumed cause and outcome that can offer an alternative explanation. / Internal validity: The strength of evidence that a study's manipulation or exposure, rather than alternatives, explains the observed effect. [Concept: Confounding variable and Internal validity]

0407. D - Explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult. [Concept: Informed research consent]

0408. A - Longitudinal design: A design that measures the same individuals or units across multiple time points. / Informed research consent: Voluntary authorization to participate based on adequate disclosure, provided by an authorized adult when required. [Concept: Longitudinal design and Informed research consent]

0409. D - Preregistration [Concept: Preregistration]

0410. B - Allocation of participants to study conditions by chance to support baseline comparability. [Concept: Random assignment]

0411. A - Confounding variable [Concept: Confounding variable]

0412. D - Allocation of participants to study conditions by chance to support baseline comparability. [Concept: Random assignment]

0413. A - Operational definition: A precise specification of how a construct or variable is observed, measured, or manipulated. / Confounding variable: A factor associated with both a presumed cause and outcome that can offer an alternative explanation. [Concept: Operational definition and Confounding variable]

0414. B - Confounding variable [Concept: Confounding variable]

0415. A - External validity [Concept: External validity]

0416. C - Random assignment: Allocation of participants to study conditions by chance to support baseline comparability. / Confounding variable: A factor associated with both a presumed cause and outcome that can offer an alternative explanation. [Concept: Random assignment and Confounding variable]

0417. B - External validity [Concept: External validity]

0418. A - Informed research consent [Concept: Informed research consent]

0419. B - A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission. [Concept: Child assent in research]

CAC.912 | Research Methods in Child Psychology

QUESTION | CORRECT OPTION AND CONCEPT

0420. C - Random assignment: Allocation of participants to study conditions by chance to support baseline comparability. / Cross-sectional design: A design that compares different individuals or groups at one time point. [Concept: Random assignment and Cross-sectional design]

0421. A - Confounding variable: A factor associated with both a presumed cause and outcome that can offer an alternative explanation. / Preregistration: Publicly documenting hypotheses, methods, and analysis plans before examining outcome data. [Concept: Confounding variable and Preregistration]

0422. B - Internal validity: Evaluating whether rival explanations for a treatment effect have been addressed. / External validity: Considering whether a sample and setting resemble the populations to which results are generalized. [Concept: Internal validity and External validity]

0423. B - Internal validity: Evaluating whether rival explanations for a treatment effect have been addressed. / Preregistration: Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work. [Concept: Internal validity and Preregistration]

0424. A - Longitudinal design: Following the same children over time to study within-person change. / Preregistration: Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work. [Concept: Longitudinal design and Preregistration]

0425. A - Operational definition: Defining observable criteria for a study variable before collecting data. / Random assignment: Using a chance procedure to allocate enrolled participants to treatment conditions. [Concept: Operational definition and Random assignment]

0426. B - Evaluating whether rival explanations for a treatment effect have been addressed. [Concept: Internal validity]

0427. D - Confounding variable [Concept: Confounding variable]

0428. D - Informed research consent [Concept: Informed research consent]

0429. B - Confounding variable [Concept: Confounding variable]

0430. B - Child assent in research [Concept: Child assent in research]

0431. B - Longitudinal design [Concept: Longitudinal design]

0432. C - Child assent in research [Concept: Child assent in research]

0433. A - Operational definition [Concept: Operational definition]

0434. A - Explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult. [Concept: Informed research consent]

0435. C - Preregistration [Concept: Preregistration]

0436. B - Longitudinal design: A design that measures the same individuals or units across multiple time points. / Cross-sectional design: A design that compares different individuals or groups at one time point. [Concept: Longitudinal design and Cross-sectional design]

0437. B - Confounding variable [Concept: Confounding variable]

0438. A - Random assignment: Allocation of participants to study conditions by chance to support baseline comparability. / Preregistration: Publicly documenting hypotheses, methods, and analysis plans before examining outcome data. [Concept: Random assignment and Preregistration]

0439. A - Operational definition [Concept: Operational definition]

0440. D - Preregistration [Concept: Preregistration]

0441. B - Child assent in research [Concept: Child assent in research]

0442. C - Cross-sectional design: A design that compares different individuals or groups at one time point. / External validity: The extent to which findings may apply across populations, settings, measures, and conditions beyond the study. [Concept: Cross-sectional design and External validity]

0443. B - A precise specification of how a construct or variable is observed, measured, or manipulated. [Concept: Operational definition]

0444. A - Confounding variable: Identifying a third factor that may account for an observed association between exposure and outcome. / External validity: Considering whether a sample and setting resemble the populations to which results are generalized. [Concept: Confounding variable and External validity]

0445. C - Operational definition: A precise specification of how a construct or variable is observed, measured, or manipulated. / Child assent in research: A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission. [Concept: Operational definition and Child assent in research]

0446. D - Informed research consent [Concept: Informed research consent]

0447. B - Informed research consent: Explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult. / Child assent in research: Explaining a study to a child in accessible language and respecting dissent under applicable safeguards. [Concept: Informed research consent and Child assent in research]

0448. C - Longitudinal design [Concept: Longitudinal design]

0449. C - Random assignment: Allocation of participants to study conditions by chance to support baseline comparability. / Informed research consent: Voluntary authorization to participate based on adequate disclosure, provided by an authorized adult when required. [Concept: Random assignment and Informed research consent]

0450. B - Informed research consent [Concept: Informed research consent]

0451. D - Random assignment [Concept: Random assignment]

0452. D - Child assent in research [Concept: Child assent in research]

0453. C - Operational definition: Defining observable criteria for a study variable before collecting data. / Confounding variable: Identifying a third factor that may account for an observed association between exposure and outcome. [Concept: Operational definition and Confounding variable]

0454. D - Operational definition [Concept: Operational definition]

0455. A - Random assignment: Using a chance procedure to allocate enrolled participants to treatment conditions. / Cross-sectional design: Comparing age groups during one data-collection period while recognizing age and cohort are confounded. [Concept: Random assignment and Cross-sectional design]

0456. C - Cross-sectional design: Comparing age groups during one data-collection period while recognizing age and cohort are confounded. / Child assent in research: Explaining a study to a child in accessible language and respecting dissent under applicable safeguards. [Concept: Cross-sectional design and Child assent in research]

0457. D - Internal validity: Evaluating whether rival explanations for a treatment effect have been addressed. / Informed research consent: Explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult. [Concept: Internal validity and Informed research consent]

0458. D - Random assignment [Concept: Random assignment]

0459. C - Voluntary authorization to participate based on adequate disclosure, provided by an authorized adult when required. [Concept: Informed research consent]

0460. A - Longitudinal design [Concept: Longitudinal design]

0461. C - Operational definition [Concept: Operational definition]

0462. D - Internal validity: Evaluating whether rival explanations for a treatment effect have been addressed. / Informed research consent: Explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult. [Concept: Internal validity and Informed research consent]

0463. A - Random assignment: Allocation of participants to study conditions by chance to support baseline comparability. / Preregistration: Publicly documenting hypotheses, methods, and analysis plans before examining outcome data. [Concept: Random assignment and Preregistration]

0464. A - Random assignment: Allocation of participants to study conditions by chance to support baseline comparability. / Preregistration: Publicly documenting hypotheses, methods, and analysis plans before examining outcome data. [Concept: Random assignment and Preregistration]

0465. B - Cross-sectional design [Concept: Cross-sectional design]

0466. A - Confounding variable: A factor associated with both a presumed cause and outcome that can offer an alternative explanation. / Preregistration: Publicly documenting hypotheses, methods, and analysis plans before examining outcome data. [Concept: Confounding variable and Preregistration]

0467. B - Confounding variable: Identifying a third factor that may account for an observed association between exposure and outcome. / Internal validity: Evaluating whether rival explanations for a treatment effect have been addressed. [Concept: Confounding variable and Internal validity]

0468. B - Operational definition [Concept: Operational definition]

0469. D - Informed research consent [Concept: Informed research consent]

0470. C - Cross-sectional design: Comparing age groups during one data-collection period while recognizing age and cohort are confounded. / Preregistration: Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work. [Concept: Cross-sectional design and Preregistration]

0471. C - Internal validity [Concept: Internal validity]

0472. B - Cross-sectional design [Concept: Cross-sectional design]

0473. D - Confounding variable [Concept: Confounding variable]

0474. A - Comparing age groups during one data-collection period while recognizing age and cohort are confounded. [Concept: Cross-sectional design]

0475. A - Random assignment: Allocation of participants to study conditions by chance to support baseline comparability. / Longitudinal design: A design that measures the same individuals or units across multiple time points. [Concept: Random assignment and Longitudinal design]

0476. D - Random assignment: Allocation of participants to study conditions by chance to support baseline comparability. / Longitudinal design: A design that measures the same individuals or units across multiple time points. [Concept: Random assignment and Longitudinal design]

0477. C - Longitudinal design: A design that measures the same individuals or units across multiple time points. / Preregistration: Publicly documenting hypotheses, methods, and analysis plans before examining outcome data. [Concept: Longitudinal design and Preregistration]

0478. D - Cross-sectional design [Concept: Cross-sectional design]

0479. A - Cross-sectional design: A design that compares different individuals or groups at one time point. / Confounding variable: A factor associated with both a presumed cause and outcome that can offer an alternative explanation. [Concept: Cross-sectional design and Confounding variable]

CAC.912 | Research Methods in Child Psychology

QUESTION | CORRECT OPTION AND CONCEPT

0480. A - Longitudinal design: Following the same children over time to study within-person change. / Preregistration: Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work. [Concept: Longitudinal design and Preregistration]

0481. A - Informed research consent [Concept: Informed research consent]

0594. B - Longitudinal design: Following the same children over time to study within-person change. / Cross-sectional design: Comparing age groups during one data-collection period while recognizing age and cohort are confounded. [Concept: Longitudinal design and Cross-sectional design]

0595. B - Random assignment: Using a chance procedure to allocate enrolled participants to treatment conditions. / Preregistration: Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work. [Concept: Random assignment and Preregistration]

0596. D - Longitudinal design: Following the same children over time to study within-person change. / Confounding variable: Identifying a third factor that may account for an observed association between exposure and outcome. [Concept: Longitudinal design and Confounding variable]

0597. C - Longitudinal design: Following the same children over time to study within-person change. / Internal validity: Evaluating whether rival explanations for a treatment effect have been addressed. [Concept: Longitudinal design and Internal validity]

0598. A - Cross-sectional design: A design that compares different individuals or groups at one time point. / Confounding variable: A factor associated with both a presumed cause and outcome that can offer an alternative explanation. [Concept: Cross-sectional design and Confounding variable]

0599. A - Longitudinal design [Concept: Longitudinal design]

0600. C - Operational definition: Defining observable criteria for a study variable before collecting data. / Informed research consent: Explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult. [Concept: Operational definition and Informed research consent]

0601. B - Confounding variable [Concept: Confounding variable]

0602. C - Operational definition: Defining observable criteria for a study variable before collecting data. / Preregistration: Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work. [Concept: Operational definition and Preregistration]

0603. B - Confounding variable [Concept: Confounding variable]

0604. B - External validity: Considering whether a sample and setting resemble the populations to which results are generalized. / Informed research consent: Explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult. [Concept: External validity and Informed research consent]

0605. B - Confounding variable: A factor associated with both a presumed cause and outcome that can offer an alternative explanation. / Internal validity: The strength of evidence that a study's manipulation or exposure, rather than alternatives, explains the observed effect. [Concept: Confounding variable and Internal validity]

0606. C - Evaluating whether rival explanations for a treatment effect have been addressed. [Concept: Internal validity]

0607. A - Operational definition: Defining observable criteria for a study variable before collecting data. / External validity: Considering whether a sample and setting resemble the populations to which results are generalized. [Concept: Operational definition and External validity]

0608. C - Following the same children over time to study within-person change. [Concept: Longitudinal design]

0609. D - Longitudinal design [Concept: Longitudinal design]

0610. B - Operational definition: A precise specification of how a construct or variable is observed, measured, or manipulated. / Longitudinal design: A design that measures the same individuals or units across multiple time points. [Concept: Operational definition and Longitudinal design]

0611. A - Cross-sectional design: Comparing age groups during one data-collection period while recognizing age and cohort are confounded. / Confounding variable: Identifying a third factor that may account for an observed association between exposure and outcome. [Concept: Cross-sectional design and Confounding variable]

0612. D - Random assignment [Concept: Random assignment]

0613. D - Confounding variable [Concept: Confounding variable]

0614. C - Random assignment: Using a chance procedure to allocate enrolled participants to treatment conditions. / Internal validity: Evaluating whether rival explanations for a treatment effect have been addressed. [Concept: Random assignment and Internal validity]

0615. B - Operational definition [Concept: Operational definition]

0616. A - Cross-sectional design [Concept: Cross-sectional design]

0617. B - Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work. [Concept: Preregistration]

0618. C - Internal validity: The strength of evidence that a study's manipulation or exposure, rather than alternatives, explains the observed effect. / Informed research consent: Voluntary authorization to participate based on adequate disclosure, provided by an authorized adult when required. [Concept: Internal validity and Informed research consent]

0619. C - Operational definition: Defining observable criteria for a study variable before collecting data. / Informed research consent: Explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult. [Concept: Operational definition and Informed research consent]

0620. D - Operational definition: A precise specification of how a construct or variable is observed, measured, or manipulated. / External validity: The extent to which findings may apply across populations, settings, measures, and conditions beyond the study. [Concept: Operational definition and External validity]

0621. C - Operational definition: Defining observable criteria for a study variable before collecting data. / Internal validity: Evaluating whether rival explanations for a treatment effect have been addressed. [Concept: Operational definition and Internal validity]

0622. B - Cross-sectional design: A design that compares different individuals or groups at one time point. / Internal validity: The strength of evidence that a study's manipulation or exposure, rather than alternatives, explains the observed effect. [Concept: Cross-sectional design and Internal validity]

0623. C - Defining observable criteria for a study variable before collecting data. [Concept: Operational definition]

0624. B - Longitudinal design: Following the same children over time to study within-person change. / Informed research consent: Explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult. [Concept: Longitudinal design and Informed research consent]

0625. B - Random assignment: Using a chance procedure to allocate enrolled participants to treatment conditions. / Internal validity: Evaluating whether rival explanations for a treatment effect have been addressed. [Concept: Random assignment and Internal validity]

0626. A - Confounding variable [Concept: Confounding variable]

0627. C - Operational definition [Concept: Operational definition]

0628. D - Informed research consent [Concept: Informed research consent]

0629. A - Operational definition [Concept: Operational definition]

0630. A - Cross-sectional design: A design that compares different individuals or groups at one time point. / Internal validity: The strength of evidence that a study's manipulation or exposure, rather than alternatives, explains the observed effect. [Concept: Cross-sectional design and Internal validity]

0631. C - Random assignment: Allocation of participants to study conditions by chance to support baseline comparability. / Child assent in research: A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission. [Concept: Random assignment and Child assent in research]

0632. D - Defining observable criteria for a study variable before collecting data. [Concept: Operational definition]

0633. C - A design that measures the same individuals or units across multiple time points. [Concept: Longitudinal design]

0634. A - Cross-sectional design [Concept: Cross-sectional design]

0635. B - Operational definition [Concept: Operational definition]

0636. C - External validity [Concept: External validity]

0637. A - Operational definition: A precise specification of how a construct or variable is observed, measured, or manipulated. / Preregistration: Publicly documenting hypotheses, methods, and analysis plans before examining outcome data. [Concept: Operational definition and Preregistration]

0638. C - External validity: Considering whether a sample and setting resemble the populations to which results are generalized. / Child assent in research: Explaining a study to a child in accessible language and respecting dissent under applicable safeguards. [Concept: External validity and Child assent in research]

0639. C - Cross-sectional design: Comparing age groups during one data-collection period while recognizing age and cohort are confounded. / Child assent in research: Explaining a study to a child in accessible language and respecting dissent under applicable safeguards. [Concept: Cross-sectional design and Child assent in research]

0640. B - Random assignment [Concept: Random assignment]

0641. C - Child assent in research [Concept: Child assent in research]

0642. D - Longitudinal design: Following the same children over time to study within-person change. / External validity: Considering whether a sample and setting resemble the populations to which results are generalized. [Concept: Longitudinal design and External validity]

0643. A - Operational definition [Concept: Operational definition]

0644. C - Random assignment [Concept: Random assignment]

0645. A - Informed research consent [Concept: Informed research consent]

0646. D - Internal validity [Concept: Internal validity]

0647. C - Confounding variable [Concept: Confounding variable]

0648. D - Confounding variable: Identifying a third factor that may account for an observed association between exposure and outcome. / External validity: Considering whether a sample and setting resemble the populations to which results are generalized. [Concept: Confounding variable and External validity]

0649. B - Longitudinal design: Following the same children over time to study within-person change. / External validity: Considering whether a sample and setting resemble the populations to which results are generalized. [Concept: Longitudinal design and External validity]

CAC.912 | Research Methods in Child Psychology

QUESTION | CORRECT OPTION AND CONCEPT

0650. D - Operational definition: A precise specification of how a construct or variable is observed, measured, or manipulated. / Random assignment: Allocation of participants to study conditions by chance to support baseline comparability. [Concept: Operational definition and Random assignment]

0651. A - Voluntary authorization to participate based on adequate disclosure, provided by an authorized adult when required. [Concept: Informed research consent]

0652. D - Operational definition [Concept: Operational definition]

0653. C - Informed research consent [Concept: Informed research consent]

0654. B - Operational definition: A precise specification of how a construct or variable is observed, measured, or manipulated. / Child assent in research: A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission. [Concept: Operational definition and Child assent in research]

0655. A - External validity: Considering whether a sample and setting resemble the populations to which results are generalized. / Preregistration: Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work. [Concept: External validity and Preregistration]

0656. C - External validity [Concept: External validity]

0657. D - Longitudinal design: A design that measures the same individuals or units across multiple time points. / Internal validity: The strength of evidence that a study's manipulation or exposure, rather than alternatives, explains the observed effect. [Concept: Longitudinal design and Internal validity]

0658. A - Operational definition: A precise specification of how a construct or variable is observed, measured, or manipulated. / Informed research consent: Voluntary authorization to participate based on adequate disclosure, provided by an authorized adult when required. [Concept: Operational definition and Informed research consent]

0659. B - External validity [Concept: External validity]

0660. B - Evaluating whether rival explanations for a treatment effect have been addressed. [Concept: Internal validity]

0661. B - Explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult. [Concept: Informed research consent]

0662. D - External validity: Considering whether a sample and setting resemble the populations to which results are generalized. / Informed research consent: Explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult. [Concept: External validity and Informed research consent]

0663. B - Operational definition [Concept: Operational definition]

0664. A - Longitudinal design: Following the same children over time to study within-person change. / Cross-sectional design: Comparing age groups during one data-collection period while recognizing age and cohort are confounded. [Concept: Longitudinal design and Cross-sectional design]

0665. B - Informed research consent: Voluntary authorization to participate based on adequate disclosure, provided by an authorized adult when required. / Child assent in research: A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission. [Concept: Informed research consent and Child assent in research]

0666. C - Confounding variable [Concept: Confounding variable]

0667. B - Random assignment: Allocation of participants to study conditions by chance to support baseline comparability. / Longitudinal design: A design that measures the same individuals or units across multiple time points. [Concept: Random assignment and Longitudinal design]

0668. C - Operational definition: Defining observable criteria for a study variable before collecting data. / External validity: Considering whether a sample and setting resemble the populations to which results are generalized. [Concept: Operational definition and External validity]

0669. B - Defining observable criteria for a study variable before collecting data. [Concept: Operational definition]

0670. C - Confounding variable: A factor associated with both a presumed cause and outcome that can offer an alternative explanation. / Child assent in research: A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission. 0788. B - Confounding variable [Concept: Confounding variable]

0789. C - Longitudinal design [Concept: Longitudinal design]

0790. B - Cross-sectional design [Concept: Cross-sectional design]

0791. A - External validity: Considering whether a sample and setting resemble the populations to which results are generalized. / Informed research consent: Explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult. [Concept: External validity and Informed research consent]

0792. D - External validity [Concept: External validity]

0793. D - Internal validity [Concept: Internal validity]

0794. A - Longitudinal design: A design that measures the same individuals or units across multiple time points. / Confounding variable: A factor associated with both a presumed cause and outcome that can offer an alternative explanation. [Concept: Longitudinal design and Confounding variable]

0795. C - Preregistration [Concept: Preregistration]

0796. A - Longitudinal design: Following the same children over time to study within-person change. / Preregistration: Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work. [Concept: Longitudinal design and Preregistration]

0797. D - Preregistration [Concept: Preregistration]

0798. B - The strength of evidence that a study's manipulation or exposure, rather than alternatives, explains the observed effect. [Concept: Internal validity]

0799. A - Child assent in research [Concept: Child assent in research]

0800. B - External validity [Concept: External validity]

0801. D - A factor associated with both a presumed cause and outcome that can offer an alternative explanation. [Concept: Confounding variable]

0802. C - Preregistration [Concept: Preregistration]

0803. D - Confounding variable: Identifying a third factor that may account for an observed association between exposure and outcome. / External validity: Considering whether a sample and setting resemble the populations to which results are generalized. [Concept: Confounding variable and External validity]

0804. C - Confounding variable: A factor associated with both a presumed cause and outcome that can offer an alternative explanation. / Informed research consent: Voluntary authorization to participate based on adequate disclosure, provided by an authorized adult when required. [Concept: Confounding variable and Informed research consent]

0805. C - Informed research consent [Concept: Informed research consent]

0806. D - Publicly documenting hypotheses, methods, and analysis plans before examining outcome data. [Concept: Preregistration]

0807. B - The extent to which findings may apply across populations, settings, measures, and conditions beyond the study. [Concept: External validity]

0808. D - Random assignment [Concept: Random assignment]

0809. A - Random assignment [Concept: Random assignment]

0810. D - Comparing age groups during one data-collection period while recognizing age and cohort are confounded. [Concept: Cross-sectional design]

0811. D - Random assignment: Allocation of participants to study conditions by chance to support baseline comparability. / Child assent in research: A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission. [Concept: Random assignment and Child assent in research]

0812. B - Random assignment [Concept: Random assignment]

0813. B - External validity: The extent to which findings may apply across populations, settings, measures, and conditions beyond the study. / Child assent in research: A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission. [Concept: External validity and Child assent in research]

0814. D - Confounding variable [Concept: Confounding variable]

0815. C - Internal validity [Concept: Internal validity]

0816. D - Random assignment [Concept: Random assignment]

0817. C - External validity: Considering whether a sample and setting resemble the populations to which results are generalized. / Informed research consent: Explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult. [Concept: External validity and Informed research consent]

0818. C - Longitudinal design [Concept: Longitudinal design]

0819. B - Confounding variable [Concept: Confounding variable]

0820. B - Internal validity [Concept: Internal validity]

0821. A - Informed research consent: Voluntary authorization to participate based on adequate disclosure, provided by an authorized adult when required. / Preregistration: Publicly documenting hypotheses, methods, and analysis plans before examining outcome data. [Concept: Informed research consent and Preregistration]

0822. D - Informed research consent: Explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult. / Child assent in research: Explaining a study to a child in accessible language and respecting dissent under applicable safeguards. [Concept: Informed research consent and Child assent in research]

0823. D - Cross-sectional design: Comparing age groups during one data-collection period while recognizing age and cohort are confounded. / Preregistration: Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work. [Concept: Cross-sectional design and Preregistration]

0824. B - Using a chance procedure to allocate enrolled participants to treatment conditions. [Concept: Random assignment]

0825. B - External validity [Concept: External validity]

0826. B - Longitudinal design: Following the same children over time to study within-person change. / External validity: Considering whether a sample and setting resemble the populations to which results are generalized. [Concept: Longitudinal design and External validity]

0827. A - Using a chance procedure to allocate enrolled participants to treatment conditions. [Concept: Random assignment]

CAC.912 | Research Methods in Child Psychology

QUESTION | CORRECT OPTION AND CONCEPT

0828. B - Random assignment: Allocation of participants to study conditions by chance to support baseline comparability. / Cross-sectional design: A design that compares different individuals or groups at one time point. [Concept: Random assignment and Cross-sectional design]

0829. C - Internal validity: Evaluating whether rival explanations for a treatment effect have been addressed. / Child assent in research: Explaining a study to a child in accessible language and respecting dissent under applicable safeguards. [Concept: Internal validity and Child assent in research]

0830. A - Random assignment: Using a chance procedure to allocate enrolled participants to treatment conditions. / Internal validity: Evaluating whether rival explanations for a treatment effect have been addressed. [Concept: Random assignment and Internal validity]

0831. A - External validity [Concept: External validity]

0832. A - Random assignment: Using a chance procedure to allocate enrolled participants to treatment conditions. / Longitudinal design: Following the same children over time to study within-person change. [Concept: Random assignment and Longitudinal design]

0833. B - Longitudinal design: Following the same children over time to study within-person change. / Preregistration: Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work. [Concept: Longitudinal design and Preregistration]

0834. A - Child assent in research [Concept: Child assent in research]

0835. D - Random assignment [Concept: Random assignment]

0836. B - Random assignment: Using a chance procedure to allocate enrolled participants to treatment conditions. / External validity: Considering whether a sample and setting resemble the populations to which results are generalized. [Concept: Random assignment and External validity]

0837. A - Operational definition [Concept: Operational definition]

0838. A - Confounding variable: Identifying a third factor that may account for an observed association between exposure and outcome. / Internal validity: Evaluating whether rival explanations for a treatment effect have been addressed. [Concept: Confounding variable and Internal validity]

0839. C - External validity: The extent to which findings may apply across populations, settings, measures, and conditions beyond the study. / Child assent in research: A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission. [Concept: External validity and Child assent in research]

0840. D - Longitudinal design: A design that measures the same individuals or units across multiple time points. / External validity: The extent to which findings may apply across populations, settings, measures, and conditions beyond the study. [Concept: Longitudinal design and External validity]

0841. B - Longitudinal design [Concept: Longitudinal design]

0842. D - Internal validity: Evaluating whether rival explanations for a treatment effect have been addressed. / Preregistration: Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work. [Concept: Internal validity and Preregistration]

0843. B - Operational definition: A precise specification of how a construct or variable is observed, measured, or manipulated. / Informed research consent: Voluntary authorization to participate based on adequate disclosure, provided by an authorized adult when required. [Concept: Operational definition and Informed research consent]

0844. C - Cross-sectional design [Concept: Cross-sectional design]

0845. A - Operational definition: Defining observable criteria for a study variable before collecting data. / Confounding variable: Identifying a third factor that may account for an observed association between exposure and outcome. [Concept: Operational definition and Confounding variable]

0846. B - Informed research consent [Concept: Informed research consent]

0847. D - Longitudinal design: A design that measures the same individuals or units across multiple time points. / Confounding variable: A factor associated with both a presumed cause and outcome that can offer an alternative explanation. [Concept: Longitudinal design and Confounding variable]

0848. B - Longitudinal design: Following the same children over time to study within-person change. / Confounding variable: Identifying a third factor that may account for an observed association between exposure and outcome. [Concept: Longitudinal design and Confounding variable]

0849. B - Cross-sectional design [Concept: Cross-sectional design]

0850. D - Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work. [Concept: Preregistration]

0851. D - Internal validity [Concept: Internal validity]

0852. B - External validity: Considering whether a sample and setting resemble the populations to which results are generalized. / Child assent in research: Explaining a study to a child in accessible language and respecting dissent under applicable safeguards. [Concept: External validity and Child assent in research]

0853. B - Longitudinal design: Following the same children over time to study within-person change. / External validity: Considering whether a sample and setting resemble the populations to which results are generalized. [Concept: Longitudinal design and External validity]

0854. B - Operational definition: Defining observable criteria for a study variable before collecting data. / Internal validity: Evaluating whether rival explanations for a treatment effect have been addressed. [Concept: Operational definition and Internal validity]

0855. C - Child assent in research [Concept: Child assent in research]

0856. C - Informed research consent: Explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult. / Preregistration: Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work. [Concept: Informed research consent and Preregistration]

0857. D - Child assent in research [Concept: Child assent in research]

0858. D - Child assent in research [Concept: Child assent in research]

0859. A - Longitudinal design: A design that measures the same individuals or units across multiple time points. / Cross-sectional design: A design that compares different individuals or groups at one time point. [Concept: Longitudinal design and Cross-sectional design]

0860. B - Random assignment: Using a chance procedure to allocate enrolled participants to treatment conditions. / Longitudinal design: Following the same children over time to study within-person change. [Concept: Random assignment and Longitudinal design]

0861. C - Operational definition [Concept: Operational definition]

0862. A - Operational definition: Defining observable criteria for a study variable before collecting data. / Internal validity: Evaluating whether rival explanations for a treatment effect have been addressed. [Concept: Operational definition and Internal validity]

0863. A - Confounding variable [Concept: Confounding variable]

0864. A - Operational definition [Concept: Operational definition]

0865. A - Random assignment [Concept: Random assignment]

0866. D - Preregistration [Concept: Preregistration]

0867. C - Operational definition: A precise specification of how a construct or variable is observed, measured, or manipulated. / External validity: The extent to which findings may apply across populations, settings, measures, and conditions beyond the study. [Concept: Operational definition and External validity]

0868. A - Child assent in research [Concept: Child assent in research]

0869. B - Cross-sectional design: Comparing age groups during one data-collection period while recognizing age and cohort are confounded. / Internal validity: Evaluating whether rival explanations for a treatment effect have been addressed. [Concept: Cross-sectional design and Internal validity]

0870. A - Confounding variable: Identifying a third factor that may account for an observed association between exposure and outcome. / Child assent in research: Explaining a study to a child in accessible language and respecting dissent under applicable safeguards. [Concept: Confounding variable and Child assent in research]

0871. A - Preregistration [Concept: Preregistration]

0872. D - Longitudinal design: A design that measures the same individuals or units across multiple time points. / Preregistration: Publicly documenting hypotheses, methods, and analysis plans before examining outcome data. [Concept: Longitudinal design and Preregistration]

0873. D - Longitudinal design: A design that measures the same individuals or units across multiple time points. / Child assent in research: A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission. [Concept: Longitudinal design and Child assent in research]

0874. A - Child assent in research: A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission. / Preregistration: Publicly documenting hypotheses, methods, and analysis plans before examining outcome data. [Concept: Child assent in research and Preregistration]

0875. D - A factor associated with both a presumed cause and outcome that can offer an alternative explanation. [Concept: Confounding variable]

0876. B - Internal validity [Concept: Internal validity]

0877. D - Informed research consent [Concept: Informed research consent]

0878. C - External validity [Concept: External validity]

0879. A - Random assignment: Allocation of participants to study conditions by chance to support baseline comparability. / Internal validity: The strength of evidence that a study's manipulation or exposure, rather than alternatives, explains the observed effect. 0992. B - Longitudinal design [Concept: Longitudinal design]

0993. D - Informed research consent: Voluntary authorization to participate based on adequate disclosure, provided by an authorized adult when required. / Child assent in research: A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission. [Concept: Informed research consent and Child assent in research]

0994. A - Operational definition: A precise specification of how a construct or variable is observed, measured, or manipulated. / Confounding variable: A factor associated with both a presumed cause and outcome that can offer an alternative explanation. [Concept: Operational definition and Confounding variable]

0995. B - Random assignment: Allocation of participants to study conditions by chance to support baseline comparability. / Cross-sectional design: A design that compares different individuals or groups at one time point. [Concept: Random assignment and Cross-sectional design]

0996. B - Longitudinal design [Concept: Longitudinal design]

0997. D - Operational definition: A precise specification of how a construct or variable is observed, measured, or manipulated. / Cross-sectional design: A design that compares different individuals or groups at one time point. [Concept: Operational definition and Cross-sectional design]

0998. B - Longitudinal design: A design that measures the same individuals or units across multiple time points. / Preregistration: Publicly documenting hypotheses, methods, and analysis plans before examining outcome data. [Concept: Longitudinal design and Preregistration]

0999. B - Operational definition: Defining observable criteria for a study variable before collecting data. / Cross-sectional design: Comparing age groups during one data-collection period while recognizing age and cohort are confounded. [Concept: Operational definition and Cross-sectional design]

1000. A - External validity [Concept: External validity]

CAC.913 | Neurodevelopmental Disorders

QUESTION | CORRECT OPTION AND CONCEPT

0001. B - Autism spectrum condition [Concept: Autism spectrum condition]

0002. D - Specific learning disorder [Concept: Specific learning disorder]

0003. C - Neurodevelopmental condition [Concept: Neurodevelopmental condition]

0004. D - ADHD executive-function profile: A pattern of developmentally inappropriate inattention and/or hyperactivity-impulsivity with impairment across relevant contexts. / Neurodiversity-affirming practice: An approach that respects neurological variation, avoids unnecessary normalization, and focuses on access and meaningful support. [Concept: ADHD executive-function profile and Neurodiversity-affirming practice]

0005. A - Autism spectrum condition: Describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation. / Reasonable accommodation: Identifying practical adjustments that permit meaningful participation and checking governing requirements. [Concept: Autism spectrum condition and Reasonable accommodation]

0006. B - Autism spectrum condition: Describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation. / Adaptive functioning: Evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone. [Concept: Autism spectrum condition and Adaptive functioning]

0007. D - Neurodevelopmental condition [Concept: Neurodevelopmental condition]

0008. A - Autism spectrum condition [Concept: Autism spectrum condition]

0009. D - Comorbidity [Concept: Comorbidity]

0010. C - Reasonable accommodation [Concept: Reasonable accommodation]

0011. A - Considering developmental history and functional impact rather than inferring a condition from one isolated behavior. [Concept: Neurodevelopmental condition]

0012. B - Specific learning disorder: Examining skill history, instruction, and targeted assessment when academic difficulty persists. / Sensory processing differences: Asking which sensory environments support or hinder participation and adjusting the setting where feasible. [Concept: Specific learning disorder and Sensory processing differences]

0013. A - ADHD executive-function profile: Gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions. / Autism spectrum condition: Describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation. [Concept: ADHD executive-function profile and Autism spectrum condition]

0014. B - Neurodiversity-affirming practice [Concept: Neurodiversity-affirming practice]

0015. C - Intellectual disability: A condition characterized by limitations in intellectual functioning and adaptive functioning with developmental onset. / Adaptive functioning: Conceptual, social, and practical skills used to meet everyday demands across settings. [Concept: Intellectual disability and Adaptive functioning]

0016. B - ADHD executive-function profile: Gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions. / Sensory processing differences: Asking which sensory environments support or hinder participation and adjusting the setting where feasible. [Concept: ADHD executive-function profile and Sensory processing differences]

0017. B - Neurodevelopmental condition [Concept: Neurodevelopmental condition]

0018. B - ADHD executive-function profile: Gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions. / Neurodiversity-affirming practice: Building accommodations around the person's needs and goals rather than treating difference itself as a defect. [Concept: ADHD executive-function profile and Neurodiversity-affirming practice]

0019. A - Intellectual disability: Assessing adaptive skills and developmental history alongside intellectual functioning. / Neurodiversity-affirming practice: Building accommodations around the person's needs and goals rather than treating difference itself as a defect. [Concept: Intellectual disability and Neurodiversity-affirming practice]

0020. C - Autism spectrum condition [Concept: Autism spectrum condition]

0021. B - Comorbidity [Concept: Comorbidity]

0022. A - Specific learning disorder [Concept: Specific learning disorder]

0023. B - ADHD executive-function profile: Gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions. / Intellectual disability: Assessing adaptive skills and developmental history alongside intellectual functioning. [Concept: ADHD executive-function profile and Intellectual disability]

0024. B - Autism spectrum condition [Concept: Autism spectrum condition]

0025. D - Specific learning disorder: Examining skill history, instruction, and targeted assessment when academic difficulty persists. / Neurodiversity-affirming practice: Building accommodations around the person's needs and goals rather than treating difference itself as a defect. [Concept: Specific learning disorder and Neurodiversity-affirming practice]

0026. A - Intellectual disability [Concept: Intellectual disability]

0027. B - Adaptive functioning: Conceptual, social, and practical skills used to meet everyday demands across settings. / Reasonable accommodation: A modification to environment, instruction, or procedure that supports equitable access under applicable rules. [Concept: Adaptive functioning and Reasonable accommodation]

0028. D - Sensory processing differences [Concept: Sensory processing differences]

0029. A - ADHD executive-function profile [Concept: ADHD executive-function profile]

0030. B - ADHD executive-function profile: A pattern of developmentally inappropriate inattention and/or hyperactivity-impulsivity with impairment across relevant contexts. / Autism spectrum condition: A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs. [Concept: ADHD executive-function profile and Autism spectrum condition]

0031. D - Neurodiversity-affirming practice [Concept: Neurodiversity-affirming practice]

0032. B - Evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone. [Concept: Adaptive functioning]

0033. B - Specific learning disorder [Concept: Specific learning disorder]

0034. A - Neurodiversity-affirming practice [Concept: Neurodiversity-affirming practice]

0035. A - Specific learning disorder: Examining skill history, instruction, and targeted assessment when academic difficulty persists. / Comorbidity: Assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty. [Concept: Specific learning disorder and Comorbidity]

0036. A - Describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation. [Concept: Autism spectrum condition]

0037. A - Intellectual disability [Concept: Intellectual disability]

0038. A - Conceptual, social, and practical skills used to meet everyday demands across settings. [Concept: Adaptive functioning]

0039. D - Intellectual disability: Assessing adaptive skills and developmental history alongside intellectual functioning. / Reasonable accommodation: Identifying practical adjustments that permit meaningful participation and checking governing requirements. [Concept: Intellectual disability and Reasonable accommodation]

0040. A - Neurodiversity-affirming practice [Concept: Neurodiversity-affirming practice]

0041. B - Neurodevelopmental condition: Considering developmental history and functional impact rather than inferring a condition from one isolated behavior. / Autism spectrum condition: Describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation. [Concept: Neurodevelopmental condition and Autism spectrum condition]

0042. A - Conceptual, social, and practical skills used to meet everyday demands across settings. [Concept: Adaptive functioning]

0043. B - Reasonable accommodation [Concept: Reasonable accommodation]

0044. A - Assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty. [Concept: Comorbidity]

0045. B - Intellectual disability [Concept: Intellectual disability]

0046. B - Autism spectrum condition: A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs. / Specific learning disorder: Persistent difficulty learning or using academic skills despite appropriate support, evaluated in relation to developmental and educational context. [Concept: Autism spectrum condition and Specific learning disorder]

0047. D - ADHD executive-function profile [Concept: ADHD executive-function profile]

0048. D - ADHD executive-function profile: Gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions. / Autism spectrum condition: Describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation. [Concept: ADHD executive-function profile and Autism spectrum condition]

0049. B - Autism spectrum condition [Concept: Autism spectrum condition]

0050. B - Neurodiversity-affirming practice [Concept: Neurodiversity-affirming practice]

0051. D - Neurodiversity-affirming practice [Concept: Neurodiversity-affirming practice]

0052. A - A modification to environment, instruction, or procedure that supports equitable access under applicable rules. [Concept: Reasonable accommodation]

0053. B - Neurodevelopmental condition: Considering developmental history and functional impact rather than inferring a condition from one isolated behavior. / ADHD executive-function profile: Gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions. [Concept: Neurodevelopmental condition and ADHD executive-function profile]

0054. C - Neurodiversity-affirming practice [Concept: Neurodiversity-affirming practice]

0055. A - Intellectual disability [Concept: Intellectual disability]

0056. A - ADHD executive-function profile: A pattern of developmentally inappropriate inattention and/or hyperactivity-impulsivity with impairment across relevant contexts. / Neurodiversity-affirming practice: An approach that respects neurological variation, avoids unnecessary normalization, and focuses on access and meaningful support. [Concept: ADHD executive-function profile and Neurodiversity-affirming practice]

0057. D - ADHD executive-function profile: A pattern of developmentally inappropriate inattention and/or hyperactivity-impulsivity with impairment across relevant contexts. / Intellectual disability: A condition characterized by limitations in intellectual functioning and adaptive functioning with developmental onset. [Concept: ADHD executive-function profile and Intellectual disability]

0058. B - Intellectual disability: Assessing adaptive skills and developmental history alongside intellectual functioning. / Neurodiversity-affirming practice: Building accommodations around the person's needs and goals rather than treating difference itself as a defect. [Concept: Intellectual disability and Neurodiversity-affirming practice]

[Concept: Autism spectrum condition and Comorbidity]

0189. A - Neurodiversity-affirming practice [Concept: Neurodiversity-affirming practice]

0190. B - Sensory processing differences [Concept: Sensory processing differences]

0191. B - Reasonable accommodation [Concept: Reasonable accommodation]

0192. B - Autism spectrum condition [Concept: Autism spectrum condition]

0193. A - Adaptive functioning [Concept: Adaptive functioning]

0194. C - Neurodiversity-affirming practice [Concept: Neurodiversity-affirming practice]

0195. C - Adaptive functioning: Evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone. / Reasonable accommodation: Identifying practical adjustments that permit meaningful participation and checking governing requirements. [Concept: Adaptive functioning and Reasonable accommodation]

0196. C - Comorbidity [Concept: Comorbidity]

0197. A - Autism spectrum condition: A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs. / Comorbidity: Co-occurrence of two or more conditions or clinically significant problems in one person. [Concept: Autism spectrum condition and Comorbidity]

0198. C - Sensory processing differences [Concept: Sensory processing differences]

0199. D - ADHD executive-function profile [Concept: ADHD executive-function profile]

0200. A - Neurodevelopmental condition: A group of conditions with developmental onset that affect functioning in areas such as learning, communication, or behavior. / Comorbidity: Co-occurrence of two or more conditions or clinically significant problems in one person. [Concept: Neurodevelopmental condition and Comorbidity]

0201. C - ADHD executive-function profile [Concept: ADHD executive-function profile]

0202. A - ADHD executive-function profile [Concept: ADHD executive-function profile]

0203. C - ADHD executive-function profile: Gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions. / Reasonable accommodation: Identifying practical adjustments that permit meaningful participation and checking governing requirements. [Concept: ADHD executive-function profile and Reasonable accommodation]

0204. D - Comorbidity [Concept: Comorbidity]

0205. D - Sensory processing differences [Concept: Sensory processing differences]

0206. D - Reasonable accommodation [Concept: Reasonable accommodation]

0207. C - Intellectual disability: A condition characterized by limitations in intellectual functioning and adaptive functioning with developmental onset. / Adaptive functioning: Conceptual, social, and practical skills used to meet everyday demands across settings. [Concept: Intellectual disability and Adaptive functioning]

0208. A - Gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions. [Concept: ADHD executive-function profile]

0209. D - Neurodevelopmental condition: A group of conditions with developmental onset that affect functioning in areas such as learning, communication, or behavior. / Autism spectrum condition: A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs. [Concept: Neurodevelopmental condition and Autism spectrum condition]

0210. D - Intellectual disability [Concept: Intellectual disability]

0211. C - ADHD executive-function profile [Concept: ADHD executive-function profile]

0212. C - Co-occurrence of two or more conditions or clinically significant problems in one person. [Concept: Comorbidity]

0213. D - Adaptive functioning: Evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone. / Comorbidity: Assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty. [Concept: Adaptive functioning and Comorbidity]

0214. C - Neurodiversity-affirming practice [Concept: Neurodiversity-affirming practice]

0215. A - Specific learning disorder [Concept: Specific learning disorder]

0216. D - Comorbidity: Co-occurrence of two or more conditions or clinically significant problems in one person. / Reasonable accommodation: A modification to environment, instruction, or procedure that supports equitable access under applicable rules. [Concept: Comorbidity and Reasonable accommodation]

0217. A - Intellectual disability [Concept: Intellectual disability]

0218. B - Neurodevelopmental condition: A group of conditions with developmental onset that affect functioning in areas such as learning, communication, or behavior. / Intellectual disability: A condition characterized by limitations in intellectual functioning and adaptive functioning with developmental onset. [Concept: Neurodevelopmental condition and Intellectual disability]

0219. C - Neurodiversity-affirming practice [Concept: Neurodiversity-affirming practice]

0220. D - Neurodiversity-affirming practice [Concept: Neurodiversity-affirming practice]

0221. C - Autism spectrum condition [Concept: Autism spectrum condition]

0222. C - Comorbidity [Concept: Comorbidity]

0223. B - Autism spectrum condition: Describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation. / Intellectual disability: Assessing adaptive skills and developmental history alongside intellectual functioning. [Concept: Autism spectrum condition and Intellectual disability]

0224. D - Autism spectrum condition: Describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation. / Neurodiversity-affirming practice: Building accommodations around the person's needs and goals rather than treating difference itself as a defect. [Concept: Autism spectrum condition and Neurodiversity-affirming practice]

0225. D - A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs. [Concept: Autism spectrum condition]

0226. C - Intellectual disability [Concept: Intellectual disability]

0227. D - ADHD executive-function profile: Gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions. / Adaptive functioning: Evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone. [Concept: ADHD executive-function profile and Adaptive functioning]

0228. A - Autism spectrum condition [Concept: Autism spectrum condition]

0229. A - Neurodevelopmental condition: Considering developmental history and functional impact rather than inferring a condition from one isolated behavior. / Reasonable accommodation: Identifying practical adjustments that permit meaningful participation and checking governing requirements. [Concept: Neurodevelopmental condition and Reasonable accommodation]

0230. D - Building accommodations around the person's needs and goals rather than treating difference itself as a defect. [Concept: Neurodiversity-affirming practice]

0231. B - Intellectual disability: Assessing adaptive skills and developmental history alongside intellectual functioning. / Sensory processing differences: Asking which sensory environments support or hinder participation and adjusting the setting where feasible. [Concept: Intellectual disability and Sensory processing differences]

CAC.913 | Neurodevelopmental Disorders

QUESTION | CORRECT OPTION AND CONCEPT

0232. A - Intellectual disability: Assessing adaptive skills and developmental history alongside intellectual functioning. / Neurodiversity-affirming practice: Building accommodations around the person's needs and goals rather than treating difference itself as a defect. [Concept: Intellectual disability and Neurodiversity-affirming practice]

0233. D - Persistent difficulty learning or using academic skills despite appropriate support, evaluated in relation to developmental and educational context. [Concept: Specific learning disorder]

0234. D - Sensory processing differences: Differences in responding to sensory input that may affect comfort, attention, or participation. / Neurodiversity-affirming practice: An approach that respects neurological variation, avoids unnecessary normalization, and focuses on access and meaningful support. [Concept: Sensory processing differences and Neurodiversity-affirming practice]

0235. D - Intellectual disability: Assessing adaptive skills and developmental history alongside intellectual functioning. / Sensory processing differences: Asking which sensory environments support or hinder participation and adjusting the setting where feasible. [Concept: Intellectual disability and Sensory processing differences]

0236. C - Specific learning disorder [Concept: Specific learning disorder]

0237. B - Comorbidity [Concept: Comorbidity]

0238. C - Autism spectrum condition: Describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation. / Specific learning disorder: Examining skill history, instruction, and targeted assessment when academic difficulty persists. [Concept: Autism spectrum condition and Specific learning disorder]

0239. B - Neurodevelopmental condition: Considering developmental history and functional impact rather than inferring a condition from one isolated behavior. / Intellectual disability: Assessing adaptive skills and developmental history alongside intellectual functioning. [Concept: Neurodevelopmental condition and Intellectual disability]

0240. A - Intellectual disability [Concept: Intellectual disability]

0241. C - A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs. [Concept: Autism spectrum condition]

0242. B - Autism spectrum condition: A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs. / Sensory processing differences: Differences in responding to sensory input that may affect comfort, attention, or participation. [Concept: Autism spectrum condition and Sensory processing differences]

0243. D - Neurodevelopmental condition [Concept: Neurodevelopmental condition]

0244. B - ADHD executive-function profile: A pattern of developmentally inappropriate inattention and/or hyperactivity-impulsivity with impairment across relevant contexts. / Intellectual disability: A condition characterized by limitations in intellectual functioning and adaptive functioning with developmental onset. [Concept: ADHD executive-function profile and Intellectual disability]

0245. C - Neurodiversity-affirming practice [Concept: Neurodiversity-affirming practice]

0246. C - ADHD executive-function profile [Concept: ADHD executive-function profile]

0247. B - Adaptive functioning [Concept: Adaptive functioning]

0248. B - Neurodevelopmental condition: Considering developmental history and functional impact rather than inferring a condition from one isolated behavior. / ADHD executive-function profile: Gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions. [Concept: Neurodevelopmental condition and ADHD executive-function profile]

0249. B - Specific learning disorder [Concept: Specific learning disorder]

0250. A - Describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation. [Concept: Autism spectrum condition]

0251. A - Neurodiversity-affirming practice [Concept: Neurodiversity-affirming practice]

0252. D - Sensory processing differences: Differences in responding to sensory input that may affect comfort, attention, or participation. / Reasonable accommodation: A modification to environment, instruction, or procedure that supports equitable access under applicable rules. [Concept: Sensory processing differences and Reasonable accommodation]

0253. C - Sensory processing differences: Asking which sensory environments support or hinder participation and adjusting the setting where feasible. / Reasonable accommodation: Identifying practical adjustments that permit meaningful participation and checking governing requirements. [Concept: Sensory processing differences and Reasonable accommodation]

0254. A - Neurodiversity-affirming practice: Building accommodations around the person's needs and goals rather than treating difference itself as a defect. / Reasonable accommodation: Identifying practical adjustments that permit meaningful participation and checking governing requirements. [Concept: Neurodiversity-affirming practice and Reasonable accommodation]

0255. D - Asking which sensory environments support or hinder participation and adjusting the setting where feasible. [Concept: Sensory processing differences]

0256. B - Specific learning disorder [Concept: Specific learning disorder]

0257. D - Autism spectrum condition [Concept: Autism spectrum condition]

0258. D - Comorbidity [Concept: Comorbidity]

0259. D - Autism spectrum condition [Concept: Autism spectrum condition]

0260. D - Neurodevelopmental condition: A group of conditions with developmental onset that affect functioning in areas such as learning, communication, or behavior. / Neurodiversity-affirming practice: An approach that respects neurological variation, avoids unnecessary normalization, and focuses on access and meaningful support. [Concept: Neurodevelopmental condition and Neurodiversity-affirming practice]

0261. B - ADHD executive-function profile: Gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions. / Autism spectrum condition: Describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation. [Concept: ADHD executive-function profile and Autism spectrum condition]

0262. A - Reasonable accommodation [Concept: Reasonable accommodation]

0263. C - Autism spectrum condition [Concept: Autism spectrum condition]

0264. A - Adaptive functioning: Evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone. / Sensory processing differences: Asking which sensory environments support or hinder participation and adjusting the setting where feasible. [Concept: Adaptive functioning and Sensory processing differences]

0265. C - ADHD executive-function profile: Gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions. / Specific learning disorder: Examining skill history, instruction, and targeted assessment when academic difficulty persists. [Concept: ADHD executive-function profile and Specific learning disorder]

0266. A - ADHD executive-function profile [Concept: ADHD executive-function profile]

0267. B - Intellectual disability [Concept: Intellectual disability]

0268. C - Neurodevelopmental condition: Considering developmental history and functional impact rather than inferring a condition from one isolated behavior. / Specific learning disorder: Examining skill history, instruction, and targeted assessment when academic difficulty persists. [Concept: Neurodevelopmental condition and Specific learning disorder]

0269. C - Intellectual disability [Concept: Intellectual disability]

0270. C - ADHD executive-function profile [Concept: ADHD executive-function profile]

0271. C - Specific learning disorder: Examining skill history, instruction, and targeted assessment when academic difficulty persists. / Adaptive functioning: Evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone. [Concept: Specific learning disorder and Adaptive functioning]

0272. A - Neurodevelopmental condition [Concept: Neurodevelopmental condition]

0273. B - Evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone. [Concept: Adaptive functioning]

0274. C - ADHD executive-function profile: A pattern of developmentally inappropriate inattention and/or hyperactivity-impulsivity with impairment across relevant contexts. / Intellectual disability: A condition characterized by limitations in intellectual functioning and adaptive functioning with developmental onset. [Concept: ADHD executive-function profile and Intellectual disability]

0275. A - Intellectual disability: A condition characterized by limitations in intellectual functioning and adaptive functioning with developmental onset. / Reasonable accommodation: A modification to environment, instruction, or procedure that supports equitable access under applicable rules. [Concept: Intellectual disability and Reasonable accommodation]

0276. D - ADHD executive-function profile: Gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions. / Reasonable accommodation: Identifying practical adjustments that permit meaningful participation and checking governing requirements. [Concept: ADHD executive-function profile and Reasonable accommodation]

0277. A - Assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty. [Concept: Comorbidity]

0278. A - Specific learning disorder: Persistent difficulty learning or using academic skills despite appropriate support, evaluated in relation to developmental and educational context. / Adaptive functioning: Conceptual, social, and practical skills used to meet everyday demands across settings. [Concept: Specific learning disorder and Adaptive functioning]

0279. D - ADHD executive-function profile: Gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions. / Sensory processing differences: Asking which sensory environments support or hinder participation and adjusting the setting where feasible. [Concept: ADHD executive-function profile and Sensory processing differences]

0280. C - Autism spectrum condition [Concept: Autism spectrum condition]

0281. A - Sensory processing differences [Concept: Sensory processing differences]

0282. A - Neurodiversity-affirming practice [Concept: Neurodiversity-affirming practice]

0283. B - Reasonable accommodation [Concept: Reasonable accommodation]

0284. A - Neurodevelopmental condition: A group of conditions with developmental onset that affect functioning in areas such as learning, communication, or behavior. / Comorbidity: Co-occurrence of two or more conditions or clinically significant problems in one person. [Concept: Sensory processing differences and Comorbidity]

0375. B - Neurodevelopmental condition: A group of conditions with developmental onset that affect functioning in areas such as learning, communication, or behavior. / Comorbidity: Co-occurrence of two or more conditions or clinically significant problems in one person. [Concept: Neurodevelopmental condition and Comorbidity]

0376. D - Intellectual disability: A condition characterized by limitations in intellectual functioning and adaptive functioning with developmental onset. / Sensory processing differences: Differences in responding to sensory input that may affect comfort, attention, or participation. [Concept: Intellectual disability and Sensory processing differences]

0377. B - Autism spectrum condition [Concept: Autism spectrum condition]

0378. D - Autism spectrum condition: A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs. / Adaptive functioning: Conceptual, social, and practical skills used to meet everyday demands across settings. [Concept: Autism spectrum condition and Adaptive functioning]

0379. A - ADHD executive-function profile: Gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions. / Sensory processing differences: Asking which sensory environments support or hinder participation and adjusting the setting where feasible. [Concept: ADHD executive-function profile and Sensory processing differences]

0380. A - Sensory processing differences [Concept: Sensory processing differences]

0381. B - Comorbidity [Concept: Comorbidity]

0382. B - Adaptive functioning: Evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone. / Neurodiversity-affirming practice: Building accommodations around the person's needs and goals rather than treating difference itself as a defect. [Concept: Adaptive functioning and Neurodiversity-affirming practice]

0383. A - Assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty. [Concept: Comorbidity]

0384. C - Specific learning disorder: Persistent difficulty learning or using academic skills despite appropriate support, evaluated in relation to developmental and educational context. / Reasonable accommodation: A modification to environment, instruction, or procedure that supports equitable access under applicable rules. [Concept: Specific learning disorder and Reasonable accommodation]

0385. D - Neurodevelopmental condition [Concept: Neurodevelopmental condition]

0386. B - ADHD executive-function profile: A pattern of developmentally inappropriate inattention and/or hyperactivity-impulsivity with impairment across relevant contexts. / Specific learning disorder: Persistent difficulty learning or using academic skills despite appropriate support, evaluated in relation to developmental and educational context. [Concept: ADHD executive-function profile and Specific learning disorder]

0387. B - Sensory processing differences [Concept: Sensory processing differences]

0388. A - Autism spectrum condition: A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs. / Adaptive functioning: Conceptual, social, and practical skills used to meet everyday demands across settings. [Concept: Autism spectrum condition and Adaptive functioning]

0389. D - Asking which sensory environments support or hinder participation and adjusting the setting where feasible. [Concept: Sensory processing differences]

0390. A - Sensory processing differences [Concept: Sensory processing differences]

CAC.913 | Neurodevelopmental Disorders

QUESTION | CORRECT OPTION AND CONCEPT

0391. A - Autism spectrum condition: A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs. / Neurodiversity-affirming practice: An approach that respects neurological variation, avoids unnecessary normalization, and focuses on access and meaningful support. [Concept: Autism spectrum condition and Neurodiversity-affirming practice]

0392. A - ADHD executive-function profile: Gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions. / Intellectual disability: Assessing adaptive skills and developmental history alongside intellectual functioning. [Concept: ADHD executive-function profile and Intellectual disability]

0393. A - Sensory processing differences: Differences in responding to sensory input that may affect comfort, attention, or participation. / Comorbidity: Co-occurrence of two or more conditions or clinically significant problems in one person. [Concept: Sensory processing differences and Comorbidity]

0394. D - Neurodevelopmental condition: A group of conditions with developmental onset that affect functioning in areas such as learning, communication, or behavior. / Intellectual disability: A condition characterized by limitations in intellectual functioning and adaptive functioning with developmental onset. [Concept: Neurodevelopmental condition and Intellectual disability]

0395. C - Asking which sensory environments support or hinder participation and adjusting the setting where feasible. [Concept: Sensory processing differences]

0396. B - Sensory processing differences [Concept: Sensory processing differences]

0397. D - Intellectual disability: A condition characterized by limitations in intellectual functioning and adaptive functioning with developmental onset. / Sensory processing differences: Differences in responding to sensory input that may affect comfort, attention, or participation. [Concept: Intellectual disability and Sensory processing differences]

0398. C - Comorbidity [Concept: Comorbidity]

0399. C - Intellectual disability: Assessing adaptive skills and developmental history alongside intellectual functioning. / Adaptive functioning: Evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone. [Concept: Intellectual disability and Adaptive functioning]

0400. D - Specific learning disorder: Examining skill history, instruction, and targeted assessment when academic difficulty persists. / Sensory processing differences: Asking which sensory environments support or hinder participation and adjusting the setting where feasible. [Concept: Specific learning disorder and Sensory processing differences]

0401. A - A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs. [Concept: Autism spectrum condition]

0402. A - Building accommodations around the person’s needs and goals rather than treating difference itself as a defect. [Concept: Neurodiversity-affirming practice]

0403. B - Autism spectrum condition: Describing an individual’s strengths, communication profile, sensory needs, and support needs rather than assuming one presentation. / Specific learning disorder: Examining skill history, instruction, and targeted assessment when academic difficulty persists. [Concept: Autism spectrum condition and Specific learning disorder]

0404. A - Autism spectrum condition: Describing an individual’s strengths, communication profile, sensory needs, and support needs rather than assuming one presentation. / Adaptive functioning: Evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone. [Concept: Autism spectrum condition and Adaptive functioning]

0405. D - Sensory processing differences [Concept: Sensory processing differences]

0406. C - Comorbidity: Assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty. / Reasonable accommodation: Identifying practical adjustments that permit meaningful participation and checking governing requirements. [Concept: Comorbidity and Reasonable accommodation]

0407. C - Adaptive functioning: Conceptual, social, and practical skills used to meet everyday demands across settings. / Neurodiversity-affirming practice: An approach that respects neurological variation, avoids unnecessary normalization, and focuses on access and meaningful support. [Concept: Adaptive functioning and Neurodiversity-affirming practice]

0408. C - Specific learning disorder: Persistent difficulty learning or using academic skills despite appropriate support, evaluated in relation to developmental and educational context. / Comorbidity: Co-occurrence of two or more conditions or clinically significant problems in one person. [Concept: Specific learning disorder and Comorbidity]

0409. C - Autism spectrum condition [Concept: Autism spectrum condition]

0410. D - Comorbidity [Concept: Comorbidity]

0411. C - Neurodiversity-affirming practice [Concept: Neurodiversity-affirming practice]

0412. B - Identifying practical adjustments that permit meaningful participation and checking governing requirements. [Concept: Reasonable accommodation]

0413. C - Neurodiversity-affirming practice [Concept: Neurodiversity-affirming practice]

0414. B - ADHD executive-function profile [Concept: ADHD executive-function profile]

0415. B - ADHD executive-function profile: A pattern of developmentally inappropriate inattention and/or hyperactivity-impulsivity with impairment across relevant contexts. / Specific learning disorder: Persistent difficulty learning or using academic skills despite appropriate support, evaluated in relation to developmental and educational context. [Concept: ADHD executive-function profile and Specific learning disorder]

0416. D - Neurodiversity-affirming practice [Concept: Neurodiversity-affirming practice]

0417. A - ADHD executive-function profile: Gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions. / Adaptive functioning: Evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone. [Concept: ADHD executive-function profile and Adaptive functioning]

0418. C - Neurodevelopmental condition [Concept: Neurodevelopmental condition]

0419. A - ADHD executive-function profile: A pattern of developmentally inappropriate inattention and/or hyperactivity-impulsivity with impairment across relevant contexts. / Comorbidity: Co-occurrence of two or more conditions or clinically significant problems in one person. [Concept: ADHD executive-function profile and Comorbidity]

0420. C - ADHD executive-function profile: A pattern of developmentally inappropriate inattention and/or hyperactivity-impulsivity with impairment across relevant contexts. / Adaptive functioning: Conceptual, social, and practical skills used to meet everyday demands across settings. [Concept: ADHD executive-function profile and Adaptive functioning]

0421. D - ADHD executive-function profile [Concept: ADHD executive-function profile]

0422. D - Intellectual disability: A condition characterized by limitations in intellectual functioning and adaptive functioning with developmental onset. / Neurodiversity-affirming practice: An approach that respects neurological variation, avoids unnecessary normalization, and focuses on access and meaningful support. [Concept: Intellectual disability and Neurodiversity-affirming practice]

0423. B - Assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty. [Concept: Comorbidity]

0424. C - Autism spectrum condition [Concept: Autism spectrum condition]

0425. B - ADHD executive-function profile: A pattern of developmentally inappropriate inattention and/or hyperactivity-impulsivity with impairment across relevant contexts. / Comorbidity: Co-occurrence of two or more conditions or clinically significant problems in one person. [Concept: ADHD executive-function profile and Comorbidity]

0426. D - Comorbidity [Concept: Comorbidity]

0427. D - Neurodevelopmental condition [Concept: Neurodevelopmental condition]

0428. B - Sensory processing differences: Differences in responding to sensory input that may affect comfort, attention, or participation. / Reasonable accommodation: A modification to environment, instruction, or procedure that supports equitable access under applicable rules. [Concept: Sensory processing differences and Reasonable accommodation]

0429. C - A group of conditions with developmental onset that affect functioning in areas such as learning, communication, or behavior. [Concept: Neurodevelopmental condition]

0430. B - Comorbidity [Concept: Comorbidity]

0431. C - Neurodiversity-affirming practice [Concept: Neurodiversity-affirming practice]

0432. A - Autism spectrum condition: Describing an individual’s strengths, communication profile, sensory needs, and support needs rather than assuming one presentation. / Sensory processing differences: Asking which sensory environments support or hinder participation and adjusting the setting where feasible. [Concept: Autism spectrum condition and Sensory processing differences]

0433. A - Specific learning disorder: Examining skill history, instruction, and targeted assessment when academic difficulty persists. / Reasonable accommodation: Identifying practical adjustments that permit meaningful participation and checking governing requirements. [Concept: Specific learning disorder and Reasonable accommodation]

0434. A - Intellectual disability: Assessing adaptive skills and developmental history alongside intellectual functioning. / Sensory processing differences: Asking which sensory environments support or hinder participation and adjusting the setting where feasible. [Concept: Intellectual disability and Sensory processing differences]

0435. C - ADHD executive-function profile: A pattern of developmentally inappropriate inattention and/or hyperactivity-impulsivity with impairment across relevant contexts. / Sensory processing differences: Differences in responding to sensory input that may affect comfort, attention, or participation. [Concept: ADHD executive-function profile and Sensory processing differences]

0436. D - Neurodiversity-affirming practice [Concept: Neurodiversity-affirming practice]

0437. C - Neurodiversity-affirming practice: An approach that respects neurological variation, avoids unnecessary normalization, and focuses on access and meaningful support. / Comorbidity: Co-occurrence of two or more conditions or clinically significant problems in one person. [Concept: Neurodiversity-affirming practice and Comorbidity]

0438. D - ADHD executive-function profile: A pattern of developmentally inappropriate inattention and/or hyperactivity-impulsivity with impairment across relevant contexts. / Reasonable accommodation: A modification to environment, instruction, or procedure that supports equitable access under applicable rules. [Concept: ADHD executive-function profile and Reasonable accommodation]

CAC.913 | Neurodevelopmental Disorders

QUESTION | CORRECT OPTION AND CONCEPT

0439. C - Considering developmental history and functional impact rather than inferring a condition from one isolated behavior. [Concept: Neurodevelopmental condition]

0440. D - Intellectual disability: Assessing adaptive skills and developmental history alongside intellectual functioning. / Sensory processing differences: Asking which sensory environments support or hinder participation and adjusting the setting where feasible. [Concept: Intellectual disability and Sensory processing differences]

0441. A - Intellectual disability: Assessing adaptive skills and developmental history alongside intellectual functioning. / Reasonable accommodation: Identifying practical adjustments that permit meaningful participation and checking governing requirements. 0557. B - Sensory processing differences [Concept: Sensory processing differences]

0558. A - Neurodevelopmental condition: A group of conditions with developmental onset that affect functioning in areas such as learning, communication, or behavior. / Intellectual disability: A condition characterized by limitations in intellectual functioning and adaptive functioning with developmental onset. [Concept: Neurodevelopmental condition and Intellectual disability]

0559. A - Autism spectrum condition [Concept: Autism spectrum condition]

0560. C - Neurodevelopmental condition [Concept: Neurodevelopmental condition]

0561. A - Neurodevelopmental condition: A group of conditions with developmental onset that affect functioning in areas such as learning, communication, or behavior. / Neurodiversity-affirming practice: An approach that respects neurological variation, avoids unnecessary normalization, and focuses on access and meaningful support. [Concept: Neurodevelopmental condition and Neurodiversity-affirming practice]

0562. C - Intellectual disability: Assessing adaptive skills and developmental history alongside intellectual functioning. / Reasonable accommodation: Identifying practical adjustments that permit meaningful participation and checking governing requirements. [Concept: Intellectual disability and Reasonable accommodation]

0563. A - Comorbidity [Concept: Comorbidity]

0564. B - Neurodevelopmental condition: Considering developmental history and functional impact rather than inferring a condition from one isolated behavior. / Reasonable accommodation: Identifying practical adjustments that permit meaningful participation and checking governing requirements. [Concept: Neurodevelopmental condition and Reasonable accommodation]

0565. B - Comorbidity [Concept: Comorbidity]

0566. A - Neurodevelopmental condition: A group of conditions with developmental onset that affect functioning in areas such as learning, communication, or behavior. / Autism spectrum condition: A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs. [Concept: Neurodevelopmental condition and Autism spectrum condition]

0567. D - Neurodevelopmental condition: A group of conditions with developmental onset that affect functioning in areas such as learning, communication, or behavior. / Autism spectrum condition: A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs. [Concept: Neurodevelopmental condition and Autism spectrum condition]

0568. B - ADHD executive-function profile [Concept: ADHD executive-function profile]

0569. A - ADHD executive-function profile [Concept: ADHD executive-function profile]

0570. C - Reasonable accommodation [Concept: Reasonable accommodation]

0571. C - Neurodevelopmental condition: Considering developmental history and functional impact rather than inferring a condition from one isolated behavior. / Intellectual disability: Assessing adaptive skills and developmental history alongside intellectual functioning. [Concept: Neurodevelopmental condition and Intellectual disability]

0572. D - ADHD executive-function profile: A pattern of developmentally inappropriate inattention and/or hyperactivity-impulsivity with impairment across relevant contexts. / Reasonable accommodation: A modification to environment, instruction, or procedure that supports equitable access under applicable rules. [Concept: ADHD executive-function profile and Reasonable accommodation]

0573. D - Reasonable accommodation [Concept: Reasonable accommodation]

0574. B - Specific learning disorder: Examining skill history, instruction, and targeted assessment when academic difficulty persists. / Adaptive functioning: Evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone. [Concept: Specific learning disorder and Adaptive functioning]

0575. D - A group of conditions with developmental onset that affect functioning in areas such as learning, communication, or behavior. [Concept: Neurodevelopmental condition]

0576. A - Intellectual disability [Concept: Intellectual disability]

0577. B - Autism spectrum condition: Describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation. / Neurodiversity-affirming practice: Building accommodations around the person's needs and goals rather than treating difference itself as a defect. [Concept: Autism spectrum condition and Neurodiversity-affirming practice]

0578. D - Autism spectrum condition [Concept: Autism spectrum condition]

0579. B - ADHD executive-function profile [Concept: ADHD executive-function profile]

0580. B - Neurodevelopmental condition: A group of conditions with developmental onset that affect functioning in areas such as learning, communication, or behavior. / Reasonable accommodation: A modification to environment, instruction, or procedure that supports equitable access under applicable rules. [Concept: Neurodevelopmental condition and Reasonable accommodation]

0581. D - Neurodevelopmental condition: Considering developmental history and functional impact rather than inferring a condition from one isolated behavior. / Reasonable accommodation: Identifying practical adjustments that permit meaningful participation and checking governing requirements. [Concept: Neurodevelopmental condition and Reasonable accommodation]

0582. A - Neurodevelopmental condition: A group of conditions with developmental onset that affect functioning in areas such as learning, communication, or behavior. / ADHD executive-function profile: A pattern of developmentally inappropriate inattention and/or hyperactivity-impulsivity with impairment across relevant contexts. [Concept: Neurodevelopmental condition and ADHD executive-function profile]

0583. D - Neurodevelopmental condition: A group of conditions with developmental onset that affect functioning in areas such as learning, communication, or behavior. / Neurodiversity-affirming practice: An approach that respects neurological variation, avoids unnecessary normalization, and focuses on access and meaningful support. [Concept: Neurodevelopmental condition and Neurodiversity-affirming practice]

0584. A - ADHD executive-function profile: Gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions. / Comorbidity: Assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty. [Concept: ADHD executive-function profile and Comorbidity]

0585. A - Neurodevelopmental condition: Considering developmental history and functional impact rather than inferring a condition from one isolated behavior. / Neurodiversity-affirming practice: Building accommodations around the person's needs and goals rather than treating difference itself as a defect. [Concept: Neurodevelopmental condition and Neurodiversity-affirming practice]

0586. C - Adaptive functioning: Conceptual, social, and practical skills used to meet everyday demands across settings. / Comorbidity: Co-occurrence of two or more conditions or clinically significant problems in one person. [Concept: Adaptive functioning and Comorbidity]

0587. B - Autism spectrum condition [Concept: Autism spectrum condition]

0588. A - Co-occurrence of two or more conditions or clinically significant problems in one person. [Concept: Comorbidity]

0589. D - Autism spectrum condition: Describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation. / Sensory processing differences: Asking which sensory environments support or hinder participation and adjusting the setting where feasible. [Concept: Autism spectrum condition and Sensory processing differences]

CAC.913 | Neurodevelopmental Disorders

[Concept: Adaptive functioning and Reasonable accommodation]

0731. D - Neurodiversity-affirming practice: Building accommodations around the person's needs and goals rather than treating difference itself as a defect. / Comorbidity: Assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty. [Concept: Neurodiversity-affirming practice and Comorbidity]

0732. C - Autism spectrum condition [Concept: Autism spectrum condition]

0733. B - Specific learning disorder [Concept: Specific learning disorder]

0734. D - ADHD executive-function profile [Concept: ADHD executive-function profile]

0735. D - Intellectual disability: A condition characterized by limitations in intellectual functioning and adaptive functioning with developmental onset. / Neurodiversity-affirming practice: An approach that respects neurological variation, avoids unnecessary normalization, and focuses on access and meaningful support. [Concept: Intellectual disability and Neurodiversity-affirming practice]

0736. D - Sensory processing differences [Concept: Sensory processing differences]

0737. C - ADHD executive-function profile [Concept: ADHD executive-function profile]

0738. A - Specific learning disorder: Persistent difficulty learning or using academic skills despite appropriate support, evaluated in relation to developmental and educational context. / Neurodiversity-affirming practice: An approach that respects neurological variation, avoids unnecessary normalization, and focuses on access and meaningful support. [Concept: Specific learning disorder and Neurodiversity-affirming practice]

0739. A - Reasonable accommodation [Concept: Reasonable accommodation]

CAC.913 | Neurodevelopmental Disorders

QUESTION | CORRECT OPTION AND CONCEPT

0740. D - Neurodevelopmental condition: Considering developmental history and functional impact rather than inferring a condition from one isolated behavior. / Adaptive functioning: Evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone. [Concept: Neurodevelopmental condition and Adaptive functioning]

0741. B - Adaptive functioning: Conceptual, social, and practical skills used to meet everyday demands across settings. / Reasonable accommodation: A modification to environment, instruction, or procedure that supports equitable access under applicable rules. [Concept: Adaptive functioning and Reasonable accommodation]

0742. D - Specific learning disorder: Examining skill history, instruction, and targeted assessment when academic difficulty persists. / Intellectual disability: Assessing adaptive skills and developmental history alongside intellectual functioning. [Concept: Specific learning disorder and Intellectual disability]

0743. D - Comorbidity [Concept: Comorbidity]

0744. B - Neurodevelopmental condition: A group of conditions with developmental onset that affect functioning in areas such as learning, communication, or behavior. / Adaptive functioning: Conceptual, social, and practical skills used to meet everyday demands across settings. [Concept: Neurodevelopmental condition and Adaptive functioning]

0745. C - Comorbidity [Concept: Comorbidity]

0746. C - Sensory processing differences [Concept: Sensory processing differences]

0747. B - Neurodiversity-affirming practice [Concept: Neurodiversity-affirming practice]

0748. C - Specific learning disorder [Concept: Specific learning disorder]

0749. A - ADHD executive-function profile: Gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions. / Comorbidity: Assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty. [Concept: ADHD executive-function profile and Comorbidity]

0750. B - ADHD executive-function profile [Concept: ADHD executive-function profile]

0751. A - Sensory processing differences: Asking which sensory environments support or hinder participation and adjusting the setting where feasible. / Reasonable accommodation: Identifying practical adjustments that permit meaningful participation and checking governing requirements. [Concept: Sensory processing differences and Reasonable accommodation]

0752. C - Describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation. [Concept: Autism spectrum condition]

0753. B - Adaptive functioning: Conceptual, social, and practical skills used to meet everyday demands across settings. / Reasonable accommodation: A modification to environment, instruction, or procedure that supports equitable access under applicable rules. [Concept: Adaptive functioning and Reasonable accommodation]

0754. A - Sensory processing differences [Concept: Sensory processing differences]

0755. C - Intellectual disability [Concept: Intellectual disability]

0756. C - Comorbidity [Concept: Comorbidity]

0757. A - Reasonable accommodation [Concept: Reasonable accommodation]

0758. C - Intellectual disability: A condition characterized by limitations in intellectual functioning and adaptive functioning with developmental onset. / Sensory processing differences: Differences in responding to sensory input that may affect comfort, attention, or participation. [Concept: Intellectual disability and Sensory processing differences]

0759. D - Adaptive functioning [Concept: Adaptive functioning]

0760. C - ADHD executive-function profile: A pattern of developmentally inappropriate inattention and/or hyperactivity-impulsivity with impairment across relevant contexts. / Autism spectrum condition: A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs. [Concept: ADHD executive-function profile and Autism spectrum condition]

0761. B - Specific learning disorder: Persistent difficulty learning or using academic skills despite appropriate support, evaluated in relation to developmental and educational context. / Sensory processing differences: Differences in responding to sensory input that may affect comfort, attention, or participation. [Concept: Specific learning disorder and Sensory processing differences]

0762. B - Sensory processing differences: Asking which sensory environments support or hinder participation and adjusting the setting where feasible. / Reasonable accommodation: Identifying practical adjustments that permit meaningful participation and checking governing requirements. [Concept: Sensory processing differences and Reasonable accommodation]

0763. B - Neurodiversity-affirming practice [Concept: Neurodiversity-affirming practice]

0764. D - Specific learning disorder: Examining skill history, instruction, and targeted assessment when academic difficulty persists. / Reasonable accommodation: Identifying practical adjustments that permit meaningful participation and checking governing requirements. [Concept: Specific learning disorder and Reasonable accommodation]

0765. A - Sensory processing differences [Concept: Sensory processing differences]

0766. D - Intellectual disability: Assessing adaptive skills and developmental history alongside intellectual functioning. / Comorbidity: Assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty. [Concept: Intellectual disability and Comorbidity]

0767. D - Comorbidity [Concept: Comorbidity]

0768. C - Intellectual disability: Assessing adaptive skills and developmental history alongside intellectual functioning. / Adaptive functioning: Evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone. [Concept: Intellectual disability and Adaptive functioning]

0769. D - Intellectual disability [Concept: Intellectual disability]

0770. D - Intellectual disability [Concept: Intellectual disability]

0771. B - A pattern of developmentally inappropriate inattention and/or hyperactivity-impulsivity with impairment across relevant contexts. [Concept: ADHD executive-function profile]

0772. C - Neurodevelopmental condition: Considering developmental history and functional impact rather than inferring a condition from one isolated behavior. / Specific learning disorder: Examining skill history, instruction, and targeted assessment when academic difficulty persists. C - Specific learning disorder: Examining skill history, instruction, and targeted assessment when academic difficulty persists. / Sensory processing differences: Asking which sensory environments support or hinder participation and adjusting the setting where feasible. [Concept: Specific learning disorder and Sensory processing differences]

0916. A - Intellectual disability: Assessing adaptive skills and developmental history alongside intellectual functioning. / Comorbidity: Assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty. [Concept: Intellectual disability and Comorbidity]

0917. D - Autism spectrum condition: Describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation. / Specific learning disorder: Examining skill history, instruction, and targeted assessment when academic difficulty persists. [Concept: Autism spectrum condition and Specific learning disorder]

0918. A - Comorbidity: Assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty. / Reasonable accommodation: Identifying practical adjustments that permit meaningful participation and checking governing requirements. [Concept: Comorbidity and Reasonable accommodation]

0919. C - Specific learning disorder: Examining skill history, instruction, and targeted assessment when academic difficulty persists. / Reasonable accommodation: Identifying practical adjustments that permit meaningful participation and checking governing requirements. [Concept: Specific learning disorder and Reasonable accommodation]

0920. B - Autism spectrum condition [Concept: Autism spectrum condition]

0921. C - Specific learning disorder: Examining skill history, instruction, and targeted assessment when academic difficulty persists. / Reasonable accommodation: Identifying practical adjustments that permit meaningful participation and checking governing requirements. [Concept: Specific learning disorder and Reasonable accommodation]

0922. D - ADHD executive-function profile: Gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions. / Adaptive functioning: Evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone. [Concept: ADHD executive-function profile and Adaptive functioning]

0923. D - Neurodevelopmental condition: Considering developmental history and functional impact rather than inferring a condition from one isolated behavior. / Specific learning disorder: Examining skill history, instruction, and targeted assessment when academic difficulty persists. [Concept: Neurodevelopmental condition and Specific learning disorder]

0924. D - Adaptive functioning: Evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone. / Comorbidity: Assessing overlapping needs and avoiding an assumption that one diagnosis explains every difficulty. [Concept: Adaptive functioning and Comorbidity]

0925. C - ADHD executive-function profile: A pattern of developmentally inappropriate inattention and/or hyperactivity-impulsivity with impairment across relevant contexts. / Autism spectrum condition: A neurodevelopmental condition involving social-communication differences and restricted or repetitive patterns, with varied support needs. [Concept: ADHD executive-function profile and Autism spectrum condition]

0926. A - Sensory processing differences [Concept: Sensory processing differences]

0927. A - Intellectual disability [Concept: Intellectual disability]

0928. A - Sensory processing differences [Concept: Sensory processing differences]

0929. B - Neurodiversity-affirming practice [Concept: Neurodiversity-affirming practice]

0930. D - Gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions. [Concept: ADHD executive-function profile]

0931. A - Neurodevelopmental condition [Concept: Neurodevelopmental condition]

0932. D - ADHD executive-function profile: Gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions. / Sensory processing differences: Asking which sensory environments support or hinder participation and adjusting the setting where feasible. [Concept: ADHD executive-function profile and Sensory processing differences]

0933. B - Adaptive functioning: Evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone. / Sensory processing differences: Asking which sensory environments support or hinder participation and adjusting the setting where feasible. [Concept: Adaptive functioning and Sensory processing differences]

0934. C - Specific learning disorder [Concept: Specific learning disorder]

0935. B - ADHD executive-function profile: Gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions. / Specific learning disorder: Examining skill history, instruction, and targeted assessment when academic difficulty persists. [Concept: ADHD executive-function profile and Specific learning disorder]

0936. C - Intellectual disability [Concept: Intellectual disability]

0937. D - Neurodevelopmental condition: A group of conditions with developmental onset that affect functioning in areas such as learning, communication, or behavior. / Specific learning disorder: Persistent difficulty learning or using academic skills despite appropriate support, evaluated in relation to developmental and educational context. [Concept: Neurodevelopmental condition and Specific learning disorder]

0938. D - Neurodevelopmental condition [Concept: Neurodevelopmental condition]

0939. B - Autism spectrum condition [Concept: Autism spectrum condition]

0940. B - Neurodiversity-affirming practice [Concept: Neurodiversity-affirming practice]

0941. B - Neurodevelopmental condition: A group of conditions with developmental onset that affect functioning in areas such as learning, communication, or behavior. / Adaptive functioning: Conceptual, social, and practical skills used to meet everyday demands across settings. [Concept: Neurodevelopmental condition and Adaptive functioning]

0942. C - Comorbidity [Concept: Comorbidity]

0943. C - Neurodiversity-affirming practice [Concept: Neurodiversity-affirming practice]

0944. D - Reasonable accommodation [Concept: Reasonable accommodation]

0945. A - Autism spectrum condition [Concept: Autism spectrum condition]

0946. D - Autism spectrum condition [Concept: Autism spectrum condition]

0947. A - Specific learning disorder [Concept: Specific learning disorder]

0948. B - Autism spectrum condition [Concept: Autism spectrum condition]

CAC.913 | Neurodevelopmental Disorders

QUESTION | CORRECT OPTION AND CONCEPT

0949. B - Autism spectrum condition [Concept: Autism spectrum condition]

0950. C - Adaptive functioning [Concept: Adaptive functioning]

0951. C - Sensory processing differences [Concept: Sensory processing differences]

0952. B - A condition characterized by limitations in intellectual functioning and adaptive functioning with developmental onset. [Concept: Intellectual disability]

0953. A - Specific learning disorder: Examining skill history, instruction, and targeted assessment when academic difficulty persists. / Sensory processing differences: Asking which sensory environments support or hinder participation and adjusting the setting where feasible. [Concept: Specific learning disorder and Sensory processing differences]

0954. C - Adaptive functioning: Conceptual, social, and practical skills used to meet everyday demands across settings. / Sensory processing differences: Differences in responding to sensory input that may affect comfort, attention, or participation. [Concept: Adaptive functioning and Sensory processing differences]

0955. D - Specific learning disorder [Concept: Specific learning disorder]

0956. B - Neurodevelopmental condition: A group of conditions with developmental onset that affect functioning in areas such as learning, communication, or behavior. / Adaptive functioning: Conceptual, social, and practical skills used to meet everyday demands across settings. [Concept: Neurodevelopmental condition and Adaptive functioning]

0957. B - Reasonable accommodation [Concept: Reasonable accommodation]

0958. B - Sensory processing differences [Concept: Sensory processing differences]

0959. B - Examining skill history, instruction, and targeted assessment when academic difficulty persists. [Concept: Specific learning disorder]

0960. B - Neurodiversity-affirming practice: An approach that respects neurological variation, avoids unnecessary normalization, and focuses on access and meaningful support. / Reasonable accommodation: A modification to environment, instruction, or procedure that supports equitable access under applicable rules. [Concept: Neurodiversity-affirming practice and Reasonable accommodation]

0961. B - Intellectual disability [Concept: Intellectual disability]

0962. A - Neurodevelopmental condition: Considering developmental history and functional impact rather than inferring a condition from one isolated behavior. / Autism spectrum condition: Describing an individual's strengths, communication profile, sensory needs, and support needs rather than assuming one presentation. [Concept: Neurodevelopmental condition and Autism spectrum condition]

0963. D - Reasonable accommodation [Concept: Reasonable accommodation]

0964. A - Neurodevelopmental condition: Considering developmental history and functional impact rather than inferring a condition from one isolated behavior. / Intellectual disability: Assessing adaptive skills and developmental history alongside intellectual functioning. [Concept: Neurodevelopmental condition and Intellectual disability]

0965. A - Adaptive functioning [Concept: Adaptive functioning]

0966. B - Reasonable accommodation [Concept: Reasonable accommodation]

0967. B - Intellectual disability: Assessing adaptive skills and developmental history alongside intellectual functioning. / Adaptive functioning: Evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone. [Concept: Intellectual disability and Adaptive functioning]

0968. B - Intellectual disability: A condition characterized by limitations in intellectual functioning and adaptive functioning with developmental onset. / Sensory processing differences: Differences in responding to sensory input that may affect comfort, attention, or participation. 0997. C - Neurodevelopmental condition [Concept: Neurodevelopmental condition]

0998. C - Intellectual disability [Concept: Intellectual disability]

0999. D - Specific learning disorder: Examining skill history, instruction, and targeted assessment when academic difficulty persists. / Adaptive functioning: Evaluating daily living, communication, and social skills in real contexts, not relying on IQ alone. [Concept: Specific learning disorder and Adaptive functioning]

1000. B - Gathering developmental, multi-setting evidence and assessing impairment before drawing diagnostic conclusions. [Concept: ADHD executive-function profile]

CAC.914 | Substance Abuse Counseling for Adolescents

QUESTION | CORRECT OPTION AND CONCEPT

0001. D - Harm reduction [Concept: Harm reduction]

0002. D - Protective factor assessment: Asking about supportive adults, activities, strengths, and settings that can reinforce safer choices. / Relapse prevention: Identifying triggers and rehearsal of a response plan without framing a lapse as total failure. [Concept: Protective factor assessment and Relapse prevention]

0003. A - Motivational enhancement: Eliciting the adolescent's reasons for and against change and reinforcing autonomy. / Recovery capital: Mapping supportive relationships, practical resources, and meaningful roles that can aid recovery. [Concept: Motivational enhancement and Recovery capital]

0004. C - Adolescent substance-use screening [Concept: Adolescent substance-use screening]

0005. C - Co-occurring conditions: Assessing anxiety, mood, trauma, and substance use together while coordinating appropriate care. / Recovery capital: Mapping supportive relationships, practical resources, and meaningful roles that can aid recovery. [Concept: Co-occurring conditions and Recovery capital]

0006. B - Protective factor assessment: Asking about supportive adults, activities, strengths, and settings that can reinforce safer choices. / Developmental framing: Exploring peer influence and emerging independence without assuming all adolescent use has the same meaning. [Concept: Protective factor assessment and Developmental framing]

0007. D - Developmental framing [Concept: Developmental framing]

0008. B - Harm reduction [Concept: Harm reduction]

0009. C - Adolescent substance-use screening: Using a validated youth-appropriate screen as an entry point rather than treating it as a diagnosis. / SBIRT: Linking screening results to a brief conversation and appropriate referral when indicated. [Concept: Adolescent substance-use screening and SBIRT]

0010. A - Co-occurring conditions: Assessing anxiety, mood, trauma, and substance use together while coordinating appropriate care. / Recovery capital: Mapping supportive relationships, practical resources, and meaningful roles that can aid recovery. [Concept: Co-occurring conditions and Recovery capital]

0011. B - SBIRT [Concept: SBIRT]

0012. C - Harm reduction: Practical strategies intended to reduce substance-related risks without requiring immediate abstinence as a precondition for care. / Recovery capital: Personal, social, and community resources that can support recovery and sustained change. [Concept: Harm reduction and Recovery capital]

0013. A - Recovery capital: Personal, social, and community resources that can support recovery and sustained change. / Developmental framing: Understanding substance use in relation to adolescent development, peer context, access, and changing autonomy. [Concept: Recovery capital and Developmental framing]

0014. C - Co-occurring conditions [Concept: Co-occurring conditions]

0015. C - Substance-related concerns that occur alongside mental-health or other health conditions. [Concept: Co-occurring conditions]

0016. A - Discussing realistic safety steps while continuing to support the adolescent's goals and options. [Concept: Harm reduction]

0017. A - Developmental framing [Concept: Developmental framing]

0018. D - Adolescent substance-use screening: A brief, age-appropriate process to identify possible substance-related risk and need for fuller assessment. / Motivational enhancement: A collaborative strategy that strengthens a person's own motivation and commitment to change. [Concept: Adolescent substance-use screening and Motivational enhancement]

0019. A - Adolescent substance-use screening: A brief, age-appropriate process to identify possible substance-related risk and need for fuller assessment. / Co-occurring conditions: Substance-related concerns that occur alongside mental-health or other health conditions. [Concept: Adolescent substance-use screening and Co-occurring conditions]

0020. D - Motivational enhancement: Eliciting the adolescent's reasons for and against change and reinforcing autonomy. / Recovery capital: Mapping supportive relationships, practical resources, and meaningful roles that can aid recovery. [Concept: Motivational enhancement and Recovery capital]

0021. A - Adolescent substance-use screening: A brief, age-appropriate process to identify possible substance-related risk and need for fuller assessment. / Co-occurring conditions: Substance-related concerns that occur alongside mental-health or other health conditions. [Concept: Adolescent substance-use screening and Co-occurring conditions]

0022. D - Confidentiality and substance care [Concept: Confidentiality and substance care]

0023. A - Protective factor assessment: Asking about supportive adults, activities, strengths, and settings that can reinforce safer choices. / Recovery capital: Mapping supportive relationships, practical resources, and meaningful roles that can aid recovery. [Concept: Protective factor assessment and Recovery capital]

0024. D - Confidentiality and substance care [Concept: Confidentiality and substance care]

0025. A - Confidentiality and substance care: Privacy rules for adolescent substance services that depend on jurisdiction, consent, and service context. / Developmental framing: Understanding substance use in relation to adolescent development, peer context, access, and changing autonomy. [Concept: Confidentiality and substance care and Developmental framing]

0026. D - Identification of resources and conditions that support reduced use, safety, and healthy development. [Concept: Protective factor assessment]

0027. B - Adolescent substance-use screening [Concept: Adolescent substance-use screening]

0028. D - Protective factor assessment: Identification of resources and conditions that support reduced use, safety, and healthy development. / Developmental framing: Understanding substance use in relation to adolescent development, peer context, access, and changing autonomy. [Concept: Protective factor assessment and Developmental framing]

0029. A - Motivational enhancement: Eliciting the adolescent's reasons for and against change and reinforcing autonomy. / Harm reduction: Discussing realistic safety steps while continuing to support the adolescent's goals and options. [Concept: Motivational enhancement and Harm reduction]

0030. D - Protective factor assessment: Identification of resources and conditions that support reduced use, safety, and healthy development. / Co-occurring conditions: Substance-related concerns that occur alongside mental-health or other health conditions. [Concept: Protective factor assessment and Co-occurring conditions]

0031. D - Adolescent substance-use screening: Using a validated youth-appropriate screen as an entry point rather than treating it as a diagnosis. / Developmental framing: Exploring peer influence and emerging independence without assuming all adolescent use has the same meaning. [Concept: Adolescent substance-use screening and Developmental framing]

0032. C - SBIRT: Screening, brief intervention, and referral to treatment, a structured pathway for responding to substance-use risk. / Co-occurring conditions: Substance-related concerns that occur alongside mental-health or other health conditions. [Concept: SBIRT and Co-occurring conditions]

0033. C - Protective factor assessment [Concept: Protective factor assessment]

0034. C - A collaborative strategy that strengthens a person's own motivation and commitment to change. [Concept: Motivational enhancement]

0035. C - Linking screening results to a brief conversation and appropriate referral when indicated. [Concept: SBIRT]

0036. D - Relapse prevention: Planning for high-risk situations, cravings, coping responses, and support following a return to use or lapse. / Developmental framing: Understanding substance use in relation to adolescent development, peer context, access, and changing autonomy. [Concept: Relapse prevention and Developmental framing]

0037. D - Harm reduction [Concept: Harm reduction]

0038. D - Co-occurring conditions [Concept: Co-occurring conditions]

0039. B - Adolescent substance-use screening: A brief, age-appropriate process to identify possible substance-related risk and need for fuller assessment. / Protective factor assessment: Identification of resources and conditions that support reduced use, safety, and healthy development. 0011. B - Authoritative parenting: A style combining warmth and responsiveness with clear expectations and developmentally appropriate limits. / Family routines: Predictable repeated activities that can organize care, connection, and expectations in family life. [Concept: Authoritative parenting and Family routines]

0012. A - Parenting stress: Caregiver strain arising from demands, resources, relationships, and child or environmental factors. / Family routines: Predictable repeated activities that can organize care, connection, and expectations in family life. [Concept: Parenting stress and Family routines]

0013. D - Authoritative parenting: Pairing emotional support with consistent, age-appropriate boundaries. / Permissive parenting: Supporting caregivers to pair warmth with predictable, developmentally suitable boundaries. [Concept: Authoritative parenting and Permissive parenting]

0014. A - Social learning: Considering what a child observes adults and peers doing and what consequences follow. / Family routines: Co-designing a feasible bedtime or homework routine with caregivers and child. [Concept: Social learning and Family routines]

0015. B - Family routines [Concept: Family routines]

0016. B - A style characterized by high responsiveness with relatively few consistent limits or demands. [Concept: Permissive parenting]

0017. C - Authoritative parenting [Concept: Authoritative parenting]

0018. D - Authoritative parenting: A style combining warmth and responsiveness with clear expectations and developmentally appropriate limits. / Social learning: Learning through observing and imitating others, especially when modeled behavior appears rewarded. [Concept: Authoritative parenting and Social learning]

0019. A - Co-regulation: Using calm, predictable support to help a distressed child regain regulation. / Social learning: Considering what a child observes adults and peers doing and what consequences follow. [Concept: Co-regulation and Social learning]

0020. A - Co-regulation: An adult's supportive presence and regulation that helps a child manage arousal before independent regulation is established. / Attachment-sensitive caregiving: Caregiving that is responsive, predictable, and emotionally available while supporting exploration. [Concept: Co-regulation and Attachment-sensitive caregiving]

0021. C - Authoritative parenting: Pairing emotional support with consistent, age-appropriate boundaries. / Authoritarian parenting: Recognizing high control and low responsiveness without treating a single behavior as definitive. [Concept: Authoritative parenting and Authoritarian parenting]

0022. B - Authoritative parenting: Pairing emotional support with consistent, age-appropriate boundaries. / Parenting stress: Assessing caregiver support and practical pressures rather than attributing all difficulty to parenting skill. [Concept: Authoritative parenting and Parenting stress]

0023. B - Positive reinforcement: Delivering specific praise after a child uses a desired skill so the behavior is more likely to recur. / Developmental expectations: Checking whether a behavior expectation fits the child's developmental capacity and context. [Concept: Positive reinforcement and Developmental expectations]

0024. D - Developmental expectations: Age- and context-sensitive expectations informed by typical variation and an individual child's abilities. / Parenting stress: Caregiver strain arising from demands, resources, relationships, and child or environmental factors. [Concept: Developmental expectations and Parenting stress]

0025. B - Developmental expectations [Concept: Developmental expectations]

0026. D - Developmental expectations: Checking whether a behavior expectation fits the child's developmental capacity and context. / Parenting stress: Assessing caregiver support and practical pressures rather than attributing all difficulty to parenting skill. [Concept: Developmental expectations and Parenting stress]

0027. C - Authoritative parenting [Concept: Authoritative parenting]

0028. C - Co-regulation: An adult's supportive presence and regulation that helps a child manage arousal before independent regulation is established. / Developmental expectations: Age- and context-sensitive expectations informed by typical variation and an individual child's abilities. [Concept: Co-regulation and Developmental expectations]

0029. B - Permissive parenting: Supporting caregivers to pair warmth with predictable, developmentally suitable boundaries. / Attachment-sensitive caregiving: Noticing and responding consistently to a child's signals while encouraging age-appropriate exploration. [Concept: Permissive parenting and Attachment-sensitive caregiving]

0030. B - Authoritative parenting: A style combining warmth and responsiveness with clear expectations and developmentally appropriate limits. / Co-regulation: An adult's supportive presence and regulation that helps a child manage arousal before independent regulation is established. [Concept: Authoritative parenting and Co-regulation]

0031. B - Parenting stress: Assessing caregiver support and practical pressures rather than attributing all difficulty to parenting skill. / Family routines: Co-designing a feasible bedtime or homework routine with caregivers and child. [Concept: Parenting stress and Family routines]

0032. D - Social learning [Concept: Social learning]

0033. C - Co-regulation [Concept: Co-regulation]

0034. A - Increasing a behavior's future likelihood by following it with a valued consequence. [Concept: Positive reinforcement]

0035. A - Co-regulation: Using calm, predictable support to help a distressed child regain regulation. / Attachment-sensitive caregiving: Noticing and responding consistently to a child's signals while encouraging age-appropriate exploration. [Concept: Co-regulation and Attachment-sensitive caregiving]

0036. D - Parenting stress [Concept: Parenting stress]

0037. B - Developmental expectations: Checking whether a behavior expectation fits the child's developmental capacity and context. / Social learning: Considering what a child observes adults and peers doing and what consequences follow. [Concept: Developmental expectations and Social learning]

0038. C - Co-regulation: An adult's supportive presence and regulation that helps a child manage arousal before independent regulation is established. / Attachment-sensitive caregiving: Caregiving that is responsive, predictable, and emotionally available while supporting exploration. [Concept: Co-regulation and Attachment-sensitive caregiving]

0039. C - Checking whether a behavior expectation fits the child's developmental capacity and context. [Concept: Developmental expectations]

0040. C - Social learning [Concept: Social learning]

0041. C - Authoritarian parenting: Recognizing high control and low responsiveness without treating a single behavior as definitive. / Family routines: Co-designing a feasible bedtime or homework routine with caregivers and child. [Concept: Authoritarian parenting and Family routines]

0042. A - Caregiver strain arising from demands, resources, relationships, and child or environmental factors. [Concept: Parenting stress]

0043. B - Attachment-sensitive caregiving [Concept: Attachment-sensitive caregiving]

0044. A - Co-regulation: An adult's supportive presence and regulation that helps a child manage arousal before independent regulation is established. / Family routines: Predictable repeated activities that can organize care, connection, and expectations in family life. [Concept: Co-regulation and Family routines]

0045. D - Family routines [Concept: Family routines]

0046. D - Positive reinforcement: Increasing a behavior's future likelihood by following it with a valued consequence. / Parenting stress: Caregiver strain arising from demands, resources, relationships, and child or environmental factors. [Concept: Positive reinforcement and Parenting stress]

0047. D - Authoritarian parenting: Recognizing high control and low responsiveness without treating a single behavior as definitive. / Co-regulation: Using calm, predictable support to help a distressed child regain regulation. [Concept: Authoritarian parenting and Co-regulation]

0048. D - Developmental expectations [Concept: Developmental expectations]

0049. C - Parenting stress [Concept: Parenting stress]

0050. C - Positive reinforcement [Concept: Positive reinforcement]

0051. A - Authoritarian parenting [Concept: Authoritarian parenting]

0052. B - Authoritative parenting [Concept: Authoritative parenting]

0053. B - Co-regulation: An adult's supportive presence and regulation that helps a child manage arousal before independent regulation is established. / Developmental expectations: Age- and context-sensitive expectations informed by typical variation and an individual child's abilities. [Concept: Co-regulation and Developmental expectations]

0054. D - Social learning [Concept: Social learning]

CAC.916 | Parenting and Child Development

QUESTION | CORRECT OPTION AND CONCEPT

0055. D - Co-regulation: An adult's supportive presence and regulation that helps a child manage arousal before independent regulation is established. / Social learning: Learning through observing and imitating others, especially when modeled behavior appears rewarded. [Concept: Co-regulation and Social learning]

0056. B - Social learning [Concept: Social learning]

0057. C - Caregiver strain arising from demands, resources, relationships, and child or environmental factors. [Concept: Parenting stress]

0058. B - Attachment-sensitive caregiving: Caregiving that is responsive, predictable, and emotionally available while supporting exploration. / Social learning: Learning through observing and imitating others, especially when modeled behavior appears rewarded. [Concept: Attachment-sensitive caregiving and Social learning]

0059. A - Authoritative parenting: A style combining warmth and responsiveness with clear expectations and developmentally appropriate limits. / Social learning: Learning through observing and imitating others, especially when modeled behavior appears rewarded. [Concept: Authoritative parenting and Social learning]

0060. C - Delivering specific praise after a child uses a desired skill so the behavior is more likely to recur. [Concept: Positive reinforcement]

0061. B - Social learning [Concept: Social learning]

0062. D - Permissive parenting: A style characterized by high responsiveness with relatively few consistent limits or demands. / Positive reinforcement: Increasing a behavior's future likelihood by following it with a valued consequence. [Concept: Permissive parenting and Positive reinforcement]

0063. D - Authoritative parenting: A style combining warmth and responsiveness with clear expectations and developmentally appropriate limits. / Co-regulation: An adult's supportive presence and regulation that helps a child manage arousal before independent regulation is established. [Concept: Authoritative parenting and Co-regulation]

0064. D - Family routines [Concept: Family routines]

0065. A - Positive reinforcement: Increasing a behavior's future likelihood by following it with a valued consequence. / Co-regulation: An adult's supportive presence and regulation that helps a child manage arousal before independent regulation is established. [Concept: Positive reinforcement and Co-regulation]

0066. A - Parenting stress: Assessing caregiver support and practical pressures rather than attributing all difficulty to parenting skill. / Attachment-sensitive caregiving: Noticing and responding consistently to a child's signals while encouraging age-appropriate exploration. [Concept: Parenting stress and Attachment-sensitive caregiving]

0067. C - Permissive parenting: A style characterized by high responsiveness with relatively few consistent limits or demands. / Social learning: Learning through observing and imitating others, especially when modeled behavior appears rewarded. [Concept: Permissive parenting and Social learning]

0068. A - Authoritarian parenting: A style emphasizing obedience and control with comparatively limited responsiveness or collaborative explanation. / Co-regulation: An adult's supportive presence and regulation that helps a child manage arousal before independent regulation is established. [Concept: Authoritarian parenting and Co-regulation]

0069. C - Authoritative parenting: A style combining warmth and responsiveness with clear expectations and developmentally appropriate limits. / Parenting stress: Caregiver strain arising from demands, resources, relationships, and child or environmental factors. [Concept: Authoritative parenting and Parenting stress]

0070. C - Developmental expectations: Checking whether a behavior expectation fits the child's developmental capacity and context. / Social learning: Considering what a child observes adults and peers doing and what consequences follow. [Concept: Developmental expectations and Social learning]

0071. C - Positive reinforcement: Delivering specific praise after a child uses a desired skill so the behavior is more likely to recur. / Family routines: Co-designing a feasible bedtime or homework routine with caregivers and child. [Concept: Positive reinforcement and Family routines]

0072. D - Developmental expectations [Concept: Developmental expectations]

0073. C - Permissive parenting: A style characterized by high responsiveness with relatively few consistent limits or demands. / Co-regulation: An adult's supportive presence and regulation that helps a child manage arousal before independent regulation is established. [Concept: Permissive parenting and Co-regulation]

0074. B - Co-regulation [Concept: Co-regulation]

0075. C - Authoritarian parenting [Concept: Authoritarian parenting]

0076. B - Permissive parenting: Supporting caregivers to pair warmth with predictable, developmentally suitable boundaries. / Parenting stress: Assessing caregiver support and practical pressures rather than attributing all difficulty to parenting skill. [Concept: Permissive parenting and Parenting stress]

0077. B - Positive reinforcement: Delivering specific praise after a child uses a desired skill so the behavior is more likely to recur. / Attachment-sensitive caregiving: Noticing and responding consistently to a child's signals while encouraging age-appropriate exploration. [Concept: Positive reinforcement and Attachment-sensitive caregiving]

0078. A - Developmental expectations: Checking whether a behavior expectation fits the child's developmental capacity and context. / Parenting stress: Assessing caregiver support and practical pressures rather than attributing all difficulty to parenting skill. [Concept: Developmental expectations and Parenting stress]

0079. C - Authoritarian parenting: A style emphasizing obedience and control with comparatively limited responsiveness or collaborative explanation. / Positive reinforcement: Increasing a behavior's future likelihood by following it with a valued consequence. [Concept: Authoritarian parenting and Positive reinforcement]

0080. B - Authoritative parenting: A style combining warmth and responsiveness with clear expectations and developmentally appropriate limits. / Social learning: Learning through observing and imitating others, especially when modeled behavior appears rewarded. [Concept: Authoritative parenting and Social learning]

0081. C - Co-regulation: An adult's supportive presence and regulation that helps a child manage arousal before independent regulation is established. / Attachment-sensitive caregiving: Caregiving that is responsive, predictable, and emotionally available while supporting exploration. [Concept: Co-regulation and Attachment-sensitive caregiving]

0082. C - Positive reinforcement: Delivering specific praise after a child uses a desired skill so the behavior is more likely to recur. / Parenting stress: Assessing caregiver support and practical pressures rather than attributing all difficulty to parenting skill. [Concept: Positive reinforcement and Parenting stress]

0083. B - Permissive parenting [Concept: Permissive parenting]

0084. D - Developmental expectations [Concept: Developmental expectations]

0085. C - Checking whether a behavior expectation fits the child's developmental capacity and context. [Concept: Developmental expectations]

0086. C - Authoritative parenting [Concept: Authoritative parenting]

0087. D - Attachment-sensitive caregiving [Concept: Attachment-sensitive caregiving]

0088. A - Authoritative parenting: Pairing emotional support with consistent, age-appropriate boundaries. / Authoritarian parenting: Recognizing high control and low responsiveness without treating a single behavior as definitive. [Concept: Authoritative parenting and Authoritarian parenting]

0089. B - Developmental expectations: Age- and context-sensitive expectations informed by typical variation and an individual child's abilities. / Social learning: Learning through observing and imitating others, especially when modeled behavior appears rewarded. [Concept: Developmental expectations and Social learning]

0090. A - Positive reinforcement [Concept: Positive reinforcement]

0091. A - Family routines [Concept: Family routines]

0092. D - Parenting stress [Concept: Parenting stress]

0093. C - Attachment-sensitive caregiving: Noticing and responding consistently to a child's signals while encouraging age-appropriate exploration. / Social learning: Considering what a child observes adults and peers doing and what consequences follow. [Concept: Attachment-sensitive caregiving and Social learning]

0094. C - Permissive parenting: Supporting caregivers to pair warmth with predictable, developmentally suitable boundaries. / Parenting stress: Assessing caregiver support and practical pressures rather than attributing all difficulty to parenting skill. [Concept: Permissive parenting and Parenting stress]

0095. C - Co-regulation: An adult's supportive presence and regulation that helps a child manage arousal before independent regulation is established. / Attachment-sensitive caregiving: Caregiving that is responsive, predictable, and emotionally available while supporting exploration. [Concept: Co-regulation and Attachment-sensitive caregiving]

0096. B - Authoritarian parenting [Concept: Authoritarian parenting]

0097. C - Authoritarian parenting: Recognizing high control and low responsiveness without treating a single behavior as definitive. / Co-regulation: Using calm, predictable support to help a distressed child regain regulation. [Concept: Authoritarian parenting and Co-regulation]

0098. B - Positive reinforcement [Concept: Positive reinforcement]

0099. C - Authoritarian parenting: Recognizing high control and low responsiveness without treating a single behavior as definitive. / Positive reinforcement: Delivering specific praise after a child uses a desired skill so the behavior is more likely to recur. [Concept: Authoritarian parenting and Positive reinforcement]

0100. B - Developmental expectations: Checking whether a behavior expectation fits the child's developmental capacity and context. / Attachment-sensitive caregiving: Noticing and responding consistently to a child's signals while encouraging age-appropriate exploration. [Concept: Developmental expectations and Attachment-sensitive caregiving]

0101. D - Developmental expectations [Concept: Developmental expectations]

0102. A - Age- and context-sensitive expectations informed by typical variation and an individual child's abilities. [Concept: Developmental expectations]

0103. B - Authoritative parenting: A style combining warmth and responsiveness with clear expectations and developmentally appropriate limits. / Parenting stress: Caregiver strain arising from demands, resources, relationships, and child or environmental factors. [Concept: Authoritative parenting and Parenting stress]

0104. D - Social learning [Concept: Social learning]

0105. A - Developmental expectations [Concept: Developmental expectations]

0106. B - Authoritative parenting: Pairing emotional support with consistent, age-appropriate boundaries. / Attachment-sensitive caregiving: Noticing and responding consistently to a child's signals while encouraging age-appropriate exploration. [Concept: Authoritative parenting and Attachment-sensitive caregiving]

0209. D - Attachment-sensitive caregiving: Noticing and responding consistently to a child's signals while encouraging age-appropriate exploration. / Family routines: Co-designing a feasible bedtime or homework routine with caregivers and child. [Concept: Attachment-sensitive caregiving and Family routines]

0210. A - Permissive parenting [Concept: Permissive parenting]

0211. A - Authoritative parenting: A style combining warmth and responsiveness with clear expectations and developmentally appropriate limits. / Permissive parenting: A style characterized by high responsiveness with relatively few consistent limits or demands. [Concept: Authoritative parenting and Permissive parenting]

0212. A - Assessing caregiver support and practical pressures rather than attributing all difficulty to parenting skill. [Concept: Parenting stress]

0213. D - Positive reinforcement: Increasing a behavior's future likelihood by following it with a valued consequence. / Co-regulation: An adult's supportive presence and regulation that helps a child manage arousal before independent regulation is established. [Concept: Positive reinforcement and Co-regulation]

0214. C - Developmental expectations [Concept: Developmental expectations]

0215. A - Co-regulation: Using calm, predictable support to help a distressed child regain regulation. / Developmental expectations: Checking whether a behavior expectation fits the child's developmental capacity and context. [Concept: Co-regulation and Developmental expectations]

0216. B - Developmental expectations: Checking whether a behavior expectation fits the child's developmental capacity and context. / Family routines: Co-designing a feasible bedtime or homework routine with caregivers and child. [Concept: Developmental expectations and Family routines]

0217. B - Pairing emotional support with consistent, age-appropriate boundaries. [Concept: Authoritative parenting]

0218. B - Authoritarian parenting [Concept: Authoritarian parenting]

0219. C - Parenting stress [Concept: Parenting stress]

0220. B - Authoritarian parenting: Recognizing high control and low responsiveness without treating a single behavior as definitive. / Positive reinforcement: Delivering specific praise after a child uses a desired skill so the behavior is more likely to recur. [Concept: Authoritarian parenting and Positive reinforcement]

0221. B - Permissive parenting [Concept: Permissive parenting]

0222. B - Attachment-sensitive caregiving [Concept: Attachment-sensitive caregiving]

0223. D - Supporting caregivers to pair warmth with predictable, developmentally suitable boundaries. [Concept: Permissive parenting]

0224. B - Permissive parenting: A style characterized by high responsiveness with relatively few consistent limits or demands. / Social learning: Learning through observing and imitating others, especially when modeled behavior appears rewarded. [Concept: Permissive parenting and Social learning]

0225. A - Authoritarian parenting: A style emphasizing obedience and control with comparatively limited responsiveness or collaborative explanation. / Co-regulation: An adult's supportive presence and regulation that helps a child manage arousal before independent regulation is established. [Concept: Authoritarian parenting and Co-regulation]

0226. A - Social learning [Concept: Social learning]

0227. C - Parenting stress [Concept: Parenting stress]

0228. C - Permissive parenting [Concept: Permissive parenting]

0229. C - Co-regulation: An adult's supportive presence and regulation that helps a child manage arousal before independent regulation is established. / Social learning: Learning through observing and imitating others, especially when modeled behavior appears rewarded. [Concept: Co-regulation and Social learning]

0230. D - Positive reinforcement: Increasing a behavior's future likelihood by following it with a valued consequence. / Co-regulation: An adult's supportive presence and regulation that helps a child manage arousal before independent regulation is established. [Concept: Positive reinforcement and Co-regulation]

0231. A - Authoritative parenting [Concept: Authoritative parenting]

0407. B - Positive reinforcement [Concept: Positive reinforcement]

0408. A - Authoritative parenting: Pairing emotional support with consistent, age-appropriate boundaries. / Family routines: Co-designing a feasible bedtime or homework routine with caregivers and child. [Concept: Authoritative parenting and Family routines]

0409. D - Positive reinforcement: Increasing a behavior's future likelihood by following it with a valued consequence. / Family routines: Predictable repeated activities that can organize care, connection, and expectations in family life. [Concept: Positive reinforcement and Family routines]

0410. C - Attachment-sensitive caregiving [Concept: Attachment-sensitive caregiving]

0411. D - Social learning [Concept: Social learning]

0412. D - Co-regulation: Using calm, predictable support to help a distressed child regain regulation. / Family routines: Co-designing a feasible bedtime or homework routine with caregivers and child. [Concept: Co-regulation and Family routines]

0413. C - Parenting stress: Assessing caregiver support and practical pressures rather than attributing all difficulty to parenting skill. / Attachment-sensitive caregiving: Noticing and responding consistently to a child's signals while encouraging age-appropriate exploration. [Concept: Parenting stress and Attachment-sensitive caregiving]

0414. C - Authoritarian parenting: A style emphasizing obedience and control with comparatively limited responsiveness or collaborative explanation. / Family routines: Predictable repeated activities that can organize care, connection, and expectations in family life. [Concept: Authoritarian parenting and Family routines]

0415. C - Permissive parenting [Concept: Permissive parenting]

0416. D - Predictable repeated activities that can organize care, connection, and expectations in family life. [Concept: Family routines]

0417. C - Permissive parenting: Supporting caregivers to pair warmth with predictable, developmentally suitable boundaries. / Family routines: Co-designing a feasible bedtime or homework routine with caregivers and child. [Concept: Permissive parenting and Family routines]

0418. D - Positive reinforcement: Increasing a behavior's future likelihood by following it with a valued consequence. / Social learning: Learning through observing and imitating others, especially when modeled behavior appears rewarded. [Concept: Positive reinforcement and Social learning]

0419. B - A style emphasizing obedience and control with comparatively limited responsiveness or collaborative explanation. [Concept: Authoritarian parenting]

0420. A - Authoritarian parenting [Concept: Authoritarian parenting]

0421. D - Authoritarian parenting: Recognizing high control and low responsiveness without treating a single behavior as definitive. / Family routines: Co-designing a feasible bedtime or homework routine with caregivers and child. [Concept: Authoritarian parenting and Family routines]

0422. D - Authoritative parenting [Concept: Authoritative parenting]

0423. A - Authoritative parenting: A style combining warmth and responsiveness with clear expectations and developmentally appropriate limits. / Permissive parenting: A style characterized by high responsiveness with relatively few consistent limits or demands. [Concept: Authoritative parenting and Permissive parenting]

0424. B - Parenting stress [Concept: Parenting stress]

0425. A - Social learning [Concept: Social learning]

0426. C - Positive reinforcement: Increasing a behavior's future likelihood by following it with a valued consequence. / Family routines: Predictable repeated activities that can organize care, connection, and expectations in family life. [Concept: Positive reinforcement and Family routines]

0427. B - Authoritative parenting: Pairing emotional support with consistent, age-appropriate boundaries. / Developmental expectations: Checking whether a behavior expectation fits the child's developmental capacity and context. [Concept: Authoritative parenting and Developmental expectations]

0428. A - Co-regulation: Using calm, predictable support to help a distressed child regain regulation. / Social learning: Considering what a child observes adults and peers doing and what consequences follow. [Concept: Co-regulation and Social learning]

0429. C - Authoritarian parenting [Concept: Authoritarian parenting]

0430. D - Attachment-sensitive caregiving: Caregiving that is responsive, predictable, and emotionally available while supporting exploration. / Social learning: Learning through observing and imitating others, especially when modeled behavior appears rewarded. [Concept: Attachment-sensitive caregiving and Social learning]

0431. A - Authoritative parenting: A style combining warmth and responsiveness with clear expectations and developmentally appropriate limits. / Permissive parenting: A style characterized by high responsiveness with relatively few consistent limits or demands. [Concept: Authoritative parenting and Permissive parenting]

0432. B - Developmental expectations [Concept: Developmental expectations]

0433. C - Positive reinforcement [Concept: Positive reinforcement]

0434. B - Authoritarian parenting: A style emphasizing obedience and control with comparatively limited responsiveness or collaborative explanation. / Permissive parenting: A style characterized by high responsiveness with relatively few consistent limits or demands. [Concept: Authoritarian parenting and Permissive parenting]

0435. B - Permissive parenting: A style characterized by high responsiveness with relatively few consistent limits or demands. / Positive reinforcement: Increasing a behavior's future likelihood by following it with a valued consequence. [Concept: Permissive parenting and Positive reinforcement]

0436. C - Developmental expectations: Age- and context-sensitive expectations informed by typical variation and an individual child's abilities. / Social learning: Learning through observing and imitating others, especially when modeled behavior appears rewarded. [Concept: Developmental expectations and Social learning]

0437. B - Parenting stress [Concept: Parenting stress]

0438. B - A style combining warmth and responsiveness with clear expectations and developmentally appropriate limits. [Concept: Authoritative parenting]

0439. B - Positive reinforcement [Concept: Positive reinforcement]

0440. B - Positive reinforcement [Concept: Positive reinforcement]

0441. A - Authoritative parenting: A style combining warmth and responsiveness with clear expectations and developmentally appropriate limits. / Attachment-sensitive caregiving: Caregiving that is responsive, predictable, and emotionally available while supporting exploration. [Concept: Authoritative parenting and Attachment-sensitive caregiving]

0442. D - Attachment-sensitive caregiving [Concept: Attachment-sensitive caregiving]

0443. C - Authoritative parenting: A style combining warmth and responsiveness with clear expectations and developmentally appropriate limits. / Family routines: Predictable repeated activities that can organize care, connection, and expectations in family life. [Concept: Authoritative parenting and Family routines]

0444. A - Parenting stress [Concept: Parenting stress]

0445. D - Family routines [Concept: Family routines]

0446. D - Permissive parenting: Supporting caregivers to pair warmth with predictable, developmentally suitable boundaries. / Attachment-sensitive caregiving: Noticing and responding consistently to a child's signals while encouraging age-appropriate exploration. [Concept: Permissive parenting and Attachment-sensitive caregiving]

0447. C - Authoritative parenting [Concept: Authoritative parenting]

0448. B - Parenting stress: Assessing caregiver support and practical pressures rather than attributing all difficulty to parenting skill. / Attachment-sensitive caregiving: Noticing and responding consistently to a child's signals while encouraging age-appropriate exploration. [Concept: Parenting stress and Attachment-sensitive caregiving]

0449. A - Social learning: Considering what a child observes adults and peers doing and what consequences follow. / Family routines: Co-designing a feasible bedtime or homework routine with caregivers and child. [Concept: Social learning and Family routines]

0450. C - Attachment-sensitive caregiving [Concept: Attachment-sensitive caregiving]

0451. C - Social learning [Concept: Social learning]

0452. A - Authoritarian parenting: A style emphasizing obedience and control with comparatively limited responsiveness or collaborative explanation. / Social learning: Learning through observing and imitating others, especially when modeled behavior appears rewarded. [Concept: Authoritarian parenting and Social learning]

0453. C - Positive reinforcement: Increasing a behavior's future likelihood by following it with a valued consequence. / Developmental expectations: Age- and context-sensitive expectations informed by typical variation and an individual child's abilities. 0605. D - Parenting stress [Concept: Parenting stress]

0606. A - Authoritarian parenting: A style emphasizing obedience and control with comparatively limited responsiveness or collaborative explanation. / Permissive parenting: A style characterized by high responsiveness with relatively few consistent limits or demands. [Concept: Authoritarian parenting and Permissive parenting]

0607. A - Positive reinforcement: Increasing a behavior's future likelihood by following it with a valued consequence. / Developmental expectations: Age- and context-sensitive expectations informed by typical variation and an individual child's abilities. [Concept: Positive reinforcement and Developmental expectations]

0608. D - Authoritarian parenting [Concept: Authoritarian parenting]

0609. A - Caregiver strain arising from demands, resources, relationships, and child or environmental factors. [Concept: Parenting stress]

0610. D - Family routines [Concept: Family routines]

0611. A - Social learning [Concept: Social learning]

0612. A - Authoritarian parenting: Recognizing high control and low responsiveness without treating a single behavior as definitive. / Permissive parenting: Supporting caregivers to pair warmth with predictable, developmentally suitable boundaries. [Concept: Authoritarian parenting and Permissive parenting]

0613. A - Parenting stress [Concept: Parenting stress]

0614. B - Positive reinforcement: Increasing a behavior's future likelihood by following it with a valued consequence. / Parenting stress: Caregiver strain arising from demands, resources, relationships, and child or environmental factors. [Concept: Positive reinforcement and Parenting stress]

0615. B - Attachment-sensitive caregiving [Concept: Attachment-sensitive caregiving]

0616. A - Authoritative parenting: Pairing emotional support with consistent, age-appropriate boundaries. / Attachment-sensitive caregiving: Noticing and responding consistently to a child's signals while encouraging age-appropriate exploration. [Concept: Authoritative parenting and Attachment-sensitive caregiving]

0617. C - Permissive parenting [Concept: Permissive parenting]

0618. B - Parenting stress [Concept: Parenting stress]

0619. A - Social learning: Considering what a child observes adults and peers doing and what consequences follow. / Family routines: Co-designing a feasible bedtime or homework routine with caregivers and child. [Concept: Social learning and Family routines]

0620. B - Co-regulation: An adult's supportive presence and regulation that helps a child manage arousal before independent regulation is established. / Parenting stress: Caregiver strain arising from demands, resources, relationships, and child or environmental factors. [Concept: Co-regulation and Parenting stress]

0621. B - Developmental expectations [Concept: Developmental expectations]

0622. B - Attachment-sensitive caregiving: Noticing and responding consistently to a child's signals while encouraging age-appropriate exploration. / Family routines: Co-designing a feasible bedtime or homework routine with caregivers and child. [Concept: Attachment-sensitive caregiving and Family routines]

0623. D - Social learning [Concept: Social learning]

0624. B - Developmental expectations: Age- and context-sensitive expectations informed by typical variation and an individual child's abilities. / Attachment-sensitive caregiving: Caregiving that is responsive, predictable, and emotionally available while supporting exploration. [Concept: Developmental expectations and Attachment-sensitive caregiving]

0625. C - Positive reinforcement [Concept: Positive reinforcement]

0626. B - Family routines [Concept: Family routines]

0627. C - Assessing caregiver support and practical pressures rather than attributing all difficulty to parenting skill. [Concept: Parenting stress]

0628. B - Co-regulation: Using calm, predictable support to help a distressed child regain regulation. / Attachment-sensitive caregiving: Noticing and responding consistently to a child's signals while encouraging age-appropriate exploration. [Concept: Co-regulation and Attachment-sensitive caregiving]

0629. A - Authoritarian parenting: Recognizing high control and low responsiveness without treating a single behavior as definitive. / Permissive parenting: Supporting caregivers to pair warmth with predictable, developmentally suitable boundaries. [Concept: Authoritarian parenting and Permissive parenting]

0630. A - A style emphasizing obedience and control with comparatively limited responsiveness or collaborative explanation. [Concept: Authoritarian parenting]

0631. C - Permissive parenting: A style characterized by high responsiveness with relatively few consistent limits or demands. / Social learning: Learning through observing and imitating others, especially when modeled behavior appears rewarded. [Concept: Permissive parenting and Social learning]

0632. B - Delivering specific praise after a child uses a desired skill so the behavior is more likely to recur. [Concept: Positive reinforcement]

0633. A - Co-regulation: An adult's supportive presence and regulation that helps a child manage arousal before independent regulation is established. / Parenting stress: Caregiver strain arising from demands, resources, relationships, and child or environmental factors. [Concept: Co-regulation and Parenting stress]

0634. D - Developmental expectations [Concept: Developmental expectations]

CAC.916 | Parenting and Child Development

QUESTION | CORRECT OPTION AND CONCEPT

0635. A - Developmental expectations [Concept: Developmental expectations]

0636. [Concept: Authoritarian parenting and Family routines]

0821. D - Permissive parenting: Supporting caregivers to pair warmth with predictable, developmentally suitable boundaries. / Developmental expectations: Checking whether a behavior expectation fits the child's developmental capacity and context. [Concept: Permissive parenting and Developmental expectations]

0822. A - Developmental expectations: Checking whether a behavior expectation fits the child's developmental capacity and context. / Attachment-sensitive caregiving: Noticing and responding consistently to a child's signals while encouraging age-appropriate exploration. [Concept: Developmental expectations and Attachment-sensitive caregiving]

CAC.916 | Parenting and Child Development

QUESTION | CORRECT OPTION AND CONCEPT

0823. C - Family routines [Concept: Family routines]

0824. D - Developmental expectations: Checking whether a behavior expectation fits the child's developmental capacity and context. / Parenting stress: Assessing caregiver support and practical pressures rather than attributing all difficulty to parenting skill. [Concept: Developmental expectations and Parenting stress]

0825. C - Recognizing high control and low responsiveness without treating a single behavior as definitive. [Concept: Authoritarian parenting]

0826. A - Authoritarian parenting [Concept: Authoritarian parenting]

0827. D - Co-regulation: Using calm, predictable support to help a distressed child regain regulation. / Developmental expectations: Checking whether a behavior expectation fits the child's developmental capacity and context. [Concept: Co-regulation and Developmental expectations]

0828. C - Permissive parenting [Concept: Permissive parenting]

0829. B - Authoritative parenting [Concept: Authoritative parenting]

0830. B - Developmental expectations [Concept: Developmental expectations]

0831. A - Authoritative parenting: A style combining warmth and responsiveness with clear expectations and developmentally appropriate limits. / Positive reinforcement: Increasing a behavior's future likelihood by following it with a valued consequence. [Concept: Authoritative parenting and Positive reinforcement]

0832. A - Authoritative parenting: Pairing emotional support with consistent, age-appropriate boundaries. / Developmental expectations: Checking whether a behavior expectation fits the child's developmental capacity and context. [Concept: Authoritative parenting and Developmental expectations]

0833. A - Supporting caregivers to pair warmth with predictable, developmentally suitable boundaries. [Concept: Permissive parenting]

0834. C - Permissive parenting [Concept: Permissive parenting]

0835. C - Recognizing high control and low responsiveness without treating a single behavior as definitive. [Concept: Authoritarian parenting]

0836. B - Authoritarian parenting: Recognizing high control and low responsiveness without treating a single behavior as definitive. / Permissive parenting: Supporting caregivers to pair warmth with predictable, developmentally suitable boundaries. [Concept: Authoritarian parenting and Permissive parenting]

0837. A - Co-regulation: An adult's supportive presence and regulation that helps a child manage arousal before independent regulation is established. / Social learning: Learning through observing and imitating others, especially when modeled behavior appears rewarded. [Concept: Co-regulation and Social learning]

0838. D - Co-regulation: Using calm, predictable support to help a distressed child regain regulation. / Social learning: Considering what a child observes adults and peers doing and what consequences follow. [Concept: Co-regulation and Social learning]

0839. D - Permissive parenting: Supporting caregivers to pair warmth with predictable, developmentally suitable boundaries. / Co-regulation: Using calm, predictable support to help a distressed child regain regulation. [Concept: Permissive parenting and Co-regulation]

0840. C - Positive reinforcement [Concept: Positive reinforcement]

0841. A - Parenting stress: Assessing caregiver support and practical pressures rather than attributing all difficulty to parenting skill. / Family routines: Co-designing a feasible bedtime or homework routine with caregivers and child. [Concept: Parenting stress and Family routines]

0842. C - Co-regulation [Concept: Co-regulation]

0843. C - Positive reinforcement: Delivering specific praise after a child uses a desired skill so the behavior is more likely to recur. / Attachment-sensitive caregiving: Noticing and responding consistently to a child's signals while encouraging age-appropriate exploration. [Concept: Positive reinforcement and Attachment-sensitive caregiving]

0844. B - Learning through observing and imitating others, especially when modeled behavior appears rewarded. [Concept: Social learning]

0845. B - Co-regulation [Concept: Co-regulation]

0846. D - Positive reinforcement: Delivering specific praise after a child uses a desired skill so the behavior is more likely to recur. / Social learning: Considering what a child observes adults and peers doing and what consequences follow. [Concept: Positive reinforcement and Social learning]

0847. A - Permissive parenting [Concept: Permissive parenting]

0848. C - Developmental expectations [Concept: Developmental expectations]

0849. C - Positive reinforcement [Concept: Positive reinforcement]

0850. A - Developmental expectations [Concept: Developmental expectations]

0851. A - Attachment-sensitive caregiving: Caregiving that is responsive, predictable, and emotionally available while supporting exploration. / Family routines: Predictable repeated activities that can organize care, connection, and expectations in family life. [Concept: Attachment-sensitive caregiving and Family routines]

0852. B - Co-regulation [Concept: Co-regulation]

0853. B - Parenting stress: Caregiver strain arising from demands, resources, relationships, and child or environmental factors. / Social learning: Learning through observing and imitating others, especially when modeled behavior appears rewarded. [Concept: Parenting stress and Social learning]

0854. D - Social learning: Learning through observing and imitating others, especially when modeled behavior appears rewarded. / Family routines: Predictable repeated activities that can organize care, connection, and expectations in family life. [Concept: Social learning and Family routines]

0855. B - Authoritarian parenting: A style emphasizing obedience and control with comparatively limited responsiveness or collaborative explanation. / Attachment-sensitive caregiving: Caregiving that is responsive, predictable, and emotionally available while supporting exploration. [Concept: Authoritarian parenting and Attachment-sensitive caregiving]

0856. D - Attachment-sensitive caregiving [Concept: Attachment-sensitive caregiving]

0857. B - Authoritative parenting: A style combining warmth and responsiveness with clear expectations and developmentally appropriate limits. / Positive reinforcement: Increasing a behavior's future likelihood by following it with a valued consequence. [Concept: Authoritative parenting and Positive reinforcement]

0858. C - Positive reinforcement: Increasing a behavior's future likelihood by following it with a valued consequence. / Parenting stress: Caregiver strain arising from demands, resources, relationships, and child or environmental factors. [Concept: Positive reinforcement and Parenting stress]

0859. B - Co-regulation: Using calm, predictable support to help a distressed child regain regulation. / Parenting stress: Assessing caregiver support and practical pressures rather than attributing all difficulty to parenting skill. [Concept: Co-regulation and Parenting stress]

0860. C - Attachment-sensitive caregiving [Concept: Attachment-sensitive caregiving]

0861. A - Pairing emotional support with consistent, age-appropriate boundaries. [Concept: Authoritative parenting]

0862. C - Social learning: Learning through observing and imitating others, especially when modeled behavior appears rewarded. / Family routines: Predictable repeated activities that can organize care, connection, and expectations in family life. [Concept: Social learning and Family routines]

0863. B - Co-regulation: Using calm, predictable support to help a distressed child regain regulation. / Social learning: Considering what a child observes adults and peers doing and what consequences follow. [Concept: Co-regulation and Social learning]

0864. B - Co-regulation [Concept: Co-regulation]

0865. C - Family routines [Concept: Family routines]

0866. A - A style characterized by high responsiveness with relatively few consistent limits or demands. [Concept: Permissive parenting]

0867. D - Authoritative parenting: Pairing emotional support with consistent, age-appropriate boundaries. / Authoritarian parenting: Recognizing high control and low responsiveness without treating a single behavior as definitive. [Concept: Authoritative parenting and Authoritarian parenting]

0868. B - Developmental expectations: Checking whether a behavior expectation fits the child's developmental capacity and context. / Parenting stress: Assessing caregiver support and practical pressures rather than attributing all difficulty to parenting skill. [Concept: Developmental expectations and Parenting stress]

0869. C - Developmental expectations: Age- and context-sensitive expectations informed by typical variation and an individual child's abilities. / Attachment-sensitive caregiving: Caregiving that is responsive, predictable, and emotionally available while supporting exploration. [Concept: Developmental expectations and Attachment-sensitive caregiving]

0870. C - Developmental expectations: Age- and context-sensitive expectations informed by typical variation and an individual child's abilities. / Family routines: Predictable repeated activities that can organize care, connection, and expectations in family life. [Concept: Developmental expectations and Family routines]

0871. C - Attachment-sensitive caregiving: Caregiving that is responsive, predictable, and emotionally available while supporting exploration. / Social learning: Learning through observing and imitating others, especially when modeled behavior appears rewarded. [Concept: Attachment-sensitive caregiving and Social learning]

0872. A - Positive reinforcement: Increasing a behavior's future likelihood by following it with a valued consequence. / Social learning: Learning through observing and imitating others, especially when modeled behavior appears rewarded. [Concept: Positive reinforcement and Social learning]

0873. C - Attachment-sensitive caregiving [Concept: Attachment-sensitive caregiving]

0874. B - Authoritarian parenting: Recognizing high control and low responsiveness without treating a single behavior as definitive. / Attachment-sensitive caregiving: Noticing and responding consistently to a child's signals while encouraging age-appropriate exploration. [Concept: Authoritarian parenting and Attachment-sensitive caregiving]

0875. A - Attachment-sensitive caregiving [Concept: Attachment-sensitive caregiving]

0876. B - Developmental expectations [Concept: Developmental expectations]

0877. D - Authoritative parenting [Concept: Authoritative parenting]

0878. B - Family routines [Concept: Family routines]

0879. D - Co-regulation: Using calm, predictable support to help a distressed child regain regulation. / Developmental expectations: Checking whether a behavior expectation fits the child's developmental capacity and context. [Concept: Co-regulation and Developmental expectations]

CAC.916 | Parenting and Child Development

QUESTION | CORRECT OPTION AND CONCEPT

0880. C - Permissive parenting: Supporting caregivers to pair warmth with predictable, developmentally suitable boundaries. / Social learning: Considering what a child observes adults and peers doing and what consequences follow. [Concept: Permissive parenting and Social learning]

0881. B - Authoritative parenting [Concept: Authoritative parenting]

0966. C - Pairing emotional support with consistent, age-appropriate boundaries. [Concept: Authoritative parenting]

0967. D - Authoritative parenting: Pairing emotional support with consistent, age-appropriate boundaries. / Positive reinforcement: Delivering specific praise after a child uses a desired skill so the behavior is more likely to recur. [Concept: Authoritative parenting and Positive reinforcement]

0968. B - Authoritarian parenting [Concept: Authoritarian parenting]

0969. C - Positive reinforcement: Delivering specific praise after a child uses a desired skill so the behavior is more likely to recur. / Parenting stress: Assessing caregiver support and practical pressures rather than attributing all difficulty to parenting skill. [Concept: Positive reinforcement and Parenting stress]

0970. B - Permissive parenting [Concept: Permissive parenting]

0971. B - Authoritarian parenting [Concept: Authoritarian parenting]

0972. C - Authoritarian parenting: A style emphasizing obedience and control with comparatively limited responsiveness or collaborative explanation. / Permissive parenting: A style characterized by high responsiveness with relatively few consistent limits or demands. [Concept: Authoritarian parenting and Permissive parenting]

0973. D - Authoritative parenting: A style combining warmth and responsiveness with clear expectations and developmentally appropriate limits. / Authoritarian parenting: A style emphasizing obedience and control with comparatively limited responsiveness or collaborative explanation. [Concept: Authoritative parenting and Authoritarian parenting]

0974. A - Positive reinforcement [Concept: Positive reinforcement]

0975. D - Developmental expectations [Concept: Developmental expectations]

0976. D - Social learning [Concept: Social learning]

0977. B - Positive reinforcement: Delivering specific praise after a child uses a desired skill so the behavior is more likely to recur. / Co-regulation: Using calm, predictable support to help a distressed child regain regulation. [Concept: Positive reinforcement and Co-regulation]

0978. B - Authoritative parenting: Pairing emotional support with consistent, age-appropriate boundaries. / Positive reinforcement: Delivering specific praise after a child uses a desired skill so the behavior is more likely to recur. [Concept: Authoritative parenting and Positive reinforcement]

0979. D - Authoritarian parenting: Recognizing high control and low responsiveness without treating a single behavior as definitive. / Developmental expectations: Checking whether a behavior expectation fits the child's developmental capacity and context. [Concept: Authoritarian parenting and Developmental expectations]

0980. A - Authoritative parenting: A style combining warmth and responsiveness with clear expectations and developmentally appropriate limits. / Positive reinforcement: Increasing a behavior's future likelihood by following it with a valued consequence. [Concept: Authoritative parenting and Positive reinforcement]

0981. C - Social learning [Concept: Social learning]

0982. B - Authoritarian parenting [Concept: Authoritarian parenting]

0983. C - Authoritarian parenting [Concept: Authoritarian parenting]

0984. C - Delivering specific praise after a child uses a desired skill so the behavior is more likely to recur. [Concept: Positive reinforcement]

0985. D - Attachment-sensitive caregiving [Concept: Attachment-sensitive caregiving]

0986. A - Parenting stress [Concept: Parenting stress]

0987. B - Parenting stress [Concept: Parenting stress]

0988. B - Noticing and responding consistently to a child's signals while encouraging age-appropriate exploration. [Concept: Attachment-sensitive caregiving]

0989. B - A style characterized by high responsiveness with relatively few consistent limits or demands. [Concept: Permissive parenting]

0990. A - Assessing caregiver support and practical pressures rather than attributing all difficulty to parenting skill. [Concept: Parenting stress]

0991. C - Authoritarian parenting [Concept: Authoritarian parenting]

0992. A - Attachment-sensitive caregiving [Concept: Attachment-sensitive caregiving]

0993. D - Authoritarian parenting [Concept: Authoritarian parenting]

0994. D - Developmental expectations [Concept: Developmental expectations]

0995. D - Co-regulation: An adult's supportive presence and regulation that helps a child manage arousal before independent regulation is established. / Parenting stress: Caregiver strain arising from demands, resources, relationships, and child or environmental factors. [Concept: Co-regulation and Parenting stress]

0996. C - Developmental expectations: Age- and context-sensitive expectations informed by typical variation and an individual child's abilities. / Social learning: Learning through observing and imitating others, especially when modeled behavior appears rewarded. [Concept: Developmental expectations and Social learning]

0997. A - Co-regulation: Using calm, predictable support to help a distressed child regain regulation. / Attachment-sensitive caregiving: Noticing and responding consistently to a child's signals while encouraging age-appropriate exploration. [Concept: Co-regulation and Attachment-sensitive caregiving]

0998. D - Attachment-sensitive caregiving [Concept: Attachment-sensitive caregiving]

0999. D - Increasing a behavior's future likelihood by following it with a valued consequence. [Concept: Positive reinforcement]

1000. A - Authoritarian parenting [Concept: Authoritarian parenting]

CAC.917 | Psychopharmacology for Counselors

QUESTION | CORRECT OPTION AND CONCEPT

0001. C - Scope of practice: Referring medication decisions to a qualified prescriber rather than recommending a dose change. / Pharmacokinetics: Understanding that age, metabolism, and other factors can affect medication concentration over time. [Concept: Scope of practice and Pharmacokinetics]

0002. D - Medication reconciliation [Concept: Medication reconciliation]

0003. A - Side-effect monitoring [Concept: Side-effect monitoring]

0004. C - The legal and professional boundaries defining services a practitioner is authorized and competent to provide. [Concept: Scope of practice]

0005. B - Scope of practice: Referring medication decisions to a qualified prescriber rather than recommending a dose change. / Side-effect monitoring: Documenting the client's report and facilitating prompt prescriber contact when concerns arise. [Concept: Scope of practice and Side-effect monitoring]

0006. B - Scope of practice [Concept: Scope of practice]

0007. B - Placebo response [Concept: Placebo response]

0008. B - Scope of practice: Referring medication decisions to a qualified prescriber rather than recommending a dose change. / Medication reconciliation: Encouraging an accurate current medication list during care transitions. [Concept: Scope of practice and Medication reconciliation]

0009. B - Side-effect monitoring [Concept: Side-effect monitoring]

0010. B - Shared decision-making [Concept: Shared decision-making]

0011. B - Medication adherence [Concept: Medication adherence]

0012. A - Change following treatment context and expectation that is not necessarily attributable to the active medication ingredient alone. [Concept: Placebo response]

0013. B - Distinguishing a medication's action and effects from how the body processes it. [Concept: Pharmacodynamics]

0014. A - Medication reconciliation [Concept: Medication reconciliation]

0015. A - Placebo response: Interpreting a reported improvement in light of expectations and other treatment-context effects. / Pharmacodynamics: Distinguishing a medication's action and effects from how the body processes it. [Concept: Placebo response and Pharmacodynamics]

0016. C - Side-effect monitoring [Concept: Side-effect monitoring]

0017. D - Black box warning [Concept: Black box warning]

0018. A - Shared decision-making [Concept: Shared decision-making]

0019. A - Side-effect monitoring [Concept: Side-effect monitoring]

0020. D - Side-effect monitoring: Documenting the client's report and facilitating prompt prescriber contact when concerns arise. / Black box warning: Directing questions about a serious labeled risk to the prescriber and supporting informed discussion. [Concept: Side-effect monitoring and Black box warning]

0021. A - Side-effect monitoring: Documenting the client's report and facilitating prompt prescriber contact when concerns arise. / Black box warning: Directing questions about a serious labeled risk to the prescriber and supporting informed discussion. [Concept: Side-effect monitoring and Black box warning]

0022. B - Interprofessional collaboration [Concept: Interprofessional collaboration]

0023. D - Medication adherence [Concept: Medication adherence]

0024. D - Medication reconciliation [Concept: Medication reconciliation]

0025. C - Side-effect monitoring [Concept: Side-effect monitoring]

0026. C - Medication adherence: Asking about barriers, preferences, and experiences instead of labeling a client noncompliant. / Medication reconciliation: Encouraging an accurate current medication list during care transitions. [Concept: Medication adherence and Medication reconciliation]

0027. B - Pharmacodynamics [Concept: Pharmacodynamics]

0028. A - Interprofessional collaboration [Concept: Interprofessional collaboration]

0029. C - Pharmacodynamics: How a medication affects the body, including mechanisms and relationships between concentration and effects. / Interprofessional collaboration: Coordinated communication among professionals with distinct roles to support safe, coherent care. [Concept: Pharmacodynamics and Interprofessional collaboration]

0030. B - Interprofessional collaboration [Concept: Interprofessional collaboration]

0031. B - Interprofessional collaboration [Concept: Interprofessional collaboration]

0032. D - Black box warning [Concept: Black box warning]

0033. C - Placebo response: Change following treatment context and expectation that is not necessarily attributable to the active medication ingredient alone. / Black box warning: A prominent regulator-required warning for serious medication risks, whose relevance should be discussed with the prescriber. [Concept: Placebo response and Black box warning]

0034. A - Scope of practice: The legal and professional boundaries defining services a practitioner is authorized and competent to provide. / Pharmacodynamics: How a medication affects the body, including mechanisms and relationships between concentration and effects. [Concept: Scope of practice and Pharmacodynamics]

0035. D - Placebo response: Interpreting a reported improvement in light of expectations and other treatment-context effects. / Interprofessional collaboration: Sharing relevant observations with the prescriber with appropriate permission and clear role boundaries. [Concept: Placebo response and Interprofessional collaboration]

0036. C - Pharmacodynamics: How a medication affects the body, including mechanisms and relationships between concentration and effects. / Interprofessional collaboration: Coordinated communication among professionals with distinct roles to support safe, coherent care. [Concept: Pharmacodynamics and Interprofessional collaboration]

0037. C - Placebo response [Concept: Placebo response]

0038. B - Placebo response: Change following treatment context and expectation that is not necessarily attributable to the active medication ingredient alone. / Black box warning: A prominent regulator-required warning for serious medication risks, whose relevance should be discussed with the prescriber. [Concept: Placebo response and Black box warning]

0039. C - Black box warning: Directing questions about a serious labeled risk to the prescriber and supporting informed discussion. / Interprofessional collaboration: Sharing relevant observations with the prescriber with appropriate permission and clear role boundaries. [Concept: Black box warning and Interprofessional collaboration]

0040. D - Placebo response [Concept: Placebo response]

0041. A - Shared decision-making: Supporting the family to discuss benefits, risks, and preferences with the prescribing clinician. / Interprofessional collaboration: Sharing relevant observations with the prescriber with appropriate permission and clear role boundaries. [Concept: Shared decision-making and Interprofessional collaboration]

0042. B - Side-effect monitoring: Documenting the client's report and facilitating prompt prescriber contact when concerns arise. / Shared decision-making: Supporting the family to discuss benefits, risks, and preferences with the prescribing clinician. [Concept: Side-effect monitoring and Shared decision-making]

0043. A - Shared decision-making [Concept: Shared decision-making]

0044. D - Placebo response [Concept: Placebo response]

0045. B - Medication adherence: Asking about barriers, preferences, and experiences instead of labeling a client noncompliant. / Shared decision-making: Supporting the family to discuss benefits, risks, and preferences with the prescribing clinician. [Concept: Medication adherence and Shared decision-making]

0046. D - Pharmacokinetics [Concept: Pharmacokinetics]

0047. B - Placebo response [Concept: Placebo response]

0048. B - Medication adherence: The extent to which medication use corresponds with an agreed treatment plan, best explored without blame. / Side-effect monitoring: Systematic attention to unwanted or unexpected effects and communication with the prescriber. [Concept: Medication adherence and Side-effect monitoring]

0049. A - Shared decision-making: A collaborative process integrating clinical evidence and the client's informed preferences and values. / Placebo response: Change following treatment context and expectation that is not necessarily attributable to the active medication ingredient alone. [Concept: Shared decision-making and Placebo response]

0050. D - Interprofessional collaboration [Concept: Interprofessional collaboration]

0051. C - Scope of practice: The legal and professional boundaries defining services a practitioner is authorized and competent to provide. / Pharmacodynamics: How a medication affects the body, including mechanisms and relationships between concentration and effects. [Concept: Scope of practice and Pharmacodynamics]

0052. B - Shared decision-making [Concept: Shared decision-making]

0053. B - Placebo response [Concept: Placebo response]

0054. C - Medication reconciliation [Concept: Medication reconciliation]

0055. C - Pharmacokinetics [Concept: Pharmacokinetics]

0056. A - Scope of practice: Referring medication decisions to a qualified prescriber rather than recommending a dose change. / Side-effect monitoring: Documenting the client's report and facilitating prompt prescriber contact when concerns arise. [Concept: Scope of practice and Side-effect monitoring]

0057. C - Shared decision-making [Concept: Shared decision-making]

0058. A - Pharmacokinetics: How the body absorbs, distributes, metabolizes, and eliminates a medication. / Pharmacodynamics: How a medication affects the body, including mechanisms and relationships between concentration and effects. [Concept: Pharmacokinetics and Pharmacodynamics]

0059. D - Black box warning [Concept: Black box warning]

0060. C - Medication reconciliation: Reviewing a person's current medications and supplements to identify what is actually being used. / Placebo response: Change following treatment context and expectation that is not necessarily attributable to the active medication ingredient alone. [Concept: Medication reconciliation and Placebo response]

0061. D - Shared decision-making: Supporting the family to discuss benefits, risks, and preferences with the prescribing clinician. / Black box warning: Directing questions about a serious labeled risk to the prescriber and supporting informed discussion. [Concept: Shared decision-making and Black box warning]

CAC.917 | Psychopharmacology for Counselors

QUESTION | CORRECT OPTION AND CONCEPT

0062. B - Medication reconciliation: Encouraging an accurate current medication list during care transitions. / Interprofessional collaboration: Sharing relevant observations with the prescriber with appropriate permission and clear role boundaries. [Concept: Medication reconciliation and Interprofessional collaboration]

0063. D - Side-effect monitoring: Systematic attention to unwanted or unexpected effects and communication with the prescriber. / Placebo response: Change following treatment context and expectation that is not necessarily attributable to the active medication ingredient alone. [Concept: Side-effect monitoring and Placebo response]

0219. D - Shared decision-making: Supporting the family to discuss benefits, risks, and preferences with the prescribing clinician. / Medication reconciliation: Encouraging an accurate current medication list during care transitions. [Concept: Shared decision-making and Medication reconciliation]

0220. A - Medication adherence: The extent to which medication use corresponds with an agreed treatment plan, best explored without blame. / Black box warning: A prominent regulator-required warning for serious medication risks, whose relevance should be discussed with the prescriber. [Concept: Medication adherence and Black box warning]

0221. D - Side-effect monitoring [Concept: Side-effect monitoring]

0222. A - Black box warning [Concept: Black box warning]

0223. A - How the body absorbs, distributes, metabolizes, and eliminates a medication. [Concept: Pharmacokinetics]

0224. A - Scope of practice: The legal and professional boundaries defining services a practitioner is authorized and competent to provide. / Black box warning: A prominent regulator-required warning for serious medication risks, whose relevance should be discussed with the prescriber. [Concept: Scope of practice and Black box warning]

0225. D - Medication reconciliation [Concept: Medication reconciliation]

0226. D - Side-effect monitoring [Concept: Side-effect monitoring]

0227. A - Medication adherence [Concept: Medication adherence]

0228. C - Shared decision-making [Concept: Shared decision-making]

0229. D - Medication adherence: The extent to which medication use corresponds with an agreed treatment plan, best explored without blame. / Pharmacodynamics: How a medication affects the body, including mechanisms and relationships between concentration and effects. [Concept: Medication adherence and Pharmacodynamics]

0230. B - Scope of practice [Concept: Scope of practice]

0231. D - Scope of practice [Concept: Scope of practice]

0232. B - Medication adherence [Concept: Medication adherence]

CAC.917 | Psychopharmacology for Counselors

QUESTION | CORRECT OPTION AND CONCEPT

0233. C - Scope of practice: Referring medication decisions to a qualified prescriber rather than recommending a dose change. / Medication adherence: Asking about barriers, preferences, and experiences instead of labeling a client noncompliant. [Concept: Scope of practice and Medication adherence]

0234. A - Interprofessional collaboration [Concept: Interprofessional collaboration]

0235. D - Scope of practice [Concept: Scope of practice]

0236. A - Pharmacodynamics: Distinguishing a medication's action and effects from how the body processes it. / Black box warning: Directing questions about a serious labeled risk to the prescriber and supporting informed discussion. [Concept: Pharmacodynamics and Black box warning]

0237. D - Placebo response: Change following treatment context and expectation that is not necessarily attributable to the active medication ingredient alone. / Black box warning: A prominent regulator-required warning for serious medication risks, whose relevance should be discussed with the prescriber. [Concept: Placebo response and Black box warning]

0238. C - Medication adherence: The extent to which medication use corresponds with an agreed treatment plan, best explored without blame. / Shared decision-making: A collaborative process integrating clinical evidence and the client's informed preferences and values. [Concept: Medication adherence and Shared decision-making]

0239. C - Interprofessional collaboration [Concept: Interprofessional collaboration]

0240. C - Pharmacodynamics [Concept: Pharmacodynamics]

0241. B - Scope of practice: The legal and professional boundaries defining services a practitioner is authorized and competent to provide. / Medication adherence: The extent to which medication use corresponds with an agreed treatment plan, best explored without blame. 0417. B - Pharmacodynamics [Concept: Pharmacodynamics]

0418. C - Scope of practice: Referring medication decisions to a qualified prescriber rather than recommending a dose change. / Pharmacodynamics: Distinguishing a medication's action and effects from how the body processes it. [Concept: Scope of practice and Pharmacodynamics]

0419. B - Medication adherence [Concept: Medication adherence]

0420. B - Scope of practice [Concept: Scope of practice]

0421. A - Medication adherence [Concept: Medication adherence]

0422. A - Medication adherence: The extent to which medication use corresponds with an agreed treatment plan, best explored without blame. / Shared decision-making: A collaborative process integrating clinical evidence and the client's informed preferences and values. [Concept: Medication adherence and Shared decision-making]

0423. D - Black box warning [Concept: Black box warning]

0424. B - Scope of practice: Referring medication decisions to a qualified prescriber rather than recommending a dose change. / Pharmacodynamics: Distinguishing a medication's action and effects from how the body processes it. [Concept: Scope of practice and Pharmacodynamics]

0425. A - Scope of practice: The legal and professional boundaries defining services a practitioner is authorized and competent to provide. / Medication reconciliation: Reviewing a person's current medications and supplements to identify what is actually being used. [Concept: Scope of practice and Medication reconciliation]

0426. D - Shared decision-making [Concept: Shared decision-making]

0427. C - Black box warning [Concept: Black box warning]

0428. A - Pharmacokinetics [Concept: Pharmacokinetics]

0429. D - Medication reconciliation: Reviewing a person's current medications and supplements to identify what is actually being used. / Black box warning: A prominent regulator-required warning for serious medication risks, whose relevance should be discussed with the prescriber. [Concept: Medication reconciliation and Black box warning]

0430. B - Documenting the client's report and facilitating prompt prescriber contact when concerns arise. [Concept: Side-effect monitoring]

0431. C - Medication reconciliation: Encouraging an accurate current medication list during care transitions. / Interprofessional collaboration: Sharing relevant observations with the prescriber with appropriate permission and clear role boundaries. [Concept: Medication reconciliation and Interprofessional collaboration]

0432. D - Side-effect monitoring [Concept: Side-effect monitoring]

0433. C - Medication adherence [Concept: Medication adherence]

0434. A - Pharmacodynamics: How a medication affects the body, including mechanisms and relationships between concentration and effects. / Interprofessional collaboration: Coordinated communication among professionals with distinct roles to support safe, coherent care. [Concept: Pharmacodynamics and Interprofessional collaboration]

0435. A - Medication adherence: The extent to which medication use corresponds with an agreed treatment plan, best explored without blame. / Side-effect monitoring: Systematic attention to unwanted or unexpected effects and communication with the prescriber. [Concept: Medication adherence and Side-effect monitoring]

0436. B - Placebo response: Change following treatment context and expectation that is not necessarily attributable to the active medication ingredient alone. / Interprofessional collaboration: Coordinated communication among professionals with distinct roles to support safe, coherent care. [Concept: Placebo response and Interprofessional collaboration]

0437. D - Side-effect monitoring [Concept: Side-effect monitoring]

0438. B - Medication reconciliation [Concept: Medication reconciliation]

0439. B - Reviewing a person's current medications and supplements to identify what is actually being used. [Concept: Medication reconciliation]

0440. C - Medication adherence: The extent to which medication use corresponds with an agreed treatment plan, best explored without blame. / Interprofessional collaboration: Coordinated communication among professionals with distinct roles to support safe, coherent care. [Concept: Medication adherence and Interprofessional collaboration]

0441. C - Understanding that age, metabolism, and other factors can affect medication concentration over time. [Concept: Pharmacokinetics]

0442. D - Medication adherence [Concept: Medication adherence]

0443. B - Pharmacokinetics: How the body absorbs, distributes, metabolizes, and eliminates a medication. / Pharmacodynamics: How a medication affects the body, including mechanisms and relationships between concentration and effects. [Concept: Pharmacokinetics and Pharmacodynamics]

0444. A - Shared decision-making [Concept: Shared decision-making]

0445. A - Interprofessional collaboration [Concept: Interprofessional collaboration]

0446. A - Pharmacodynamics: Distinguishing a medication's action and effects from how the body processes it. / Interprofessional collaboration: Sharing relevant observations with the prescriber with appropriate permission and clear role boundaries. [Concept: Pharmacodynamics and Interprofessional collaboration]

0447. C - Side-effect monitoring [Concept: Side-effect monitoring]

0448. C - Scope of practice: Referring medication decisions to a qualified prescriber rather than recommending a dose change. / Medication reconciliation: Encouraging an accurate current medication list during care transitions. [Concept: Scope of practice and Medication reconciliation]

0449. A - Pharmacokinetics: How the body absorbs, distributes, metabolizes, and eliminates a medication. / Pharmacodynamics: How a medication affects the body, including mechanisms and relationships between concentration and effects. [Concept: Pharmacokinetics and Pharmacodynamics]

0450. A - Medication adherence: The extent to which medication use corresponds with an agreed treatment plan, best explored without blame. / Black box warning: A prominent regulator-required warning for serious medication risks, whose relevance should be discussed with the prescriber. [Concept: Medication adherence and Black box warning]

0451. A - Placebo response [Concept: Placebo response]

0452. C - Shared decision-making: A collaborative process integrating clinical evidence and the client's informed preferences and values. / Pharmacodynamics: How a medication affects the body, including mechanisms and relationships between concentration and effects. [Concept: Shared decision-making and Pharmacodynamics]

0453. B - Medication adherence [Concept: Medication adherence]

0454. A - Pharmacokinetics: Understanding that age, metabolism, and other factors can affect medication concentration over time. / Black box warning: Directing questions about a serious labeled risk to the prescriber and supporting informed discussion. [Concept: Pharmacokinetics and Black box warning]

0455. A - Black box warning [Concept: Black box warning]

0456. A - Scope of practice: Referring medication decisions to a qualified prescriber rather than recommending a dose change. / Interprofessional collaboration: Sharing relevant observations with the prescriber with appropriate permission and clear role boundaries. [Concept: Scope of practice and Interprofessional collaboration]

0457. A - Medication adherence [Concept: Medication adherence]

0458. A - Medication reconciliation: Reviewing a person's current medications and supplements to identify what is actually being used. / Interprofessional collaboration: Coordinated communication among professionals with distinct roles to support safe, coherent care. [Concept: Medication reconciliation and Interprofessional collaboration]

0459. A - Supporting the family to discuss benefits, risks, and preferences with the prescribing clinician. [Concept: Shared decision-making]

0460. A - Interprofessional collaboration [Concept: Interprofessional collaboration]

0616. C - Pharmacokinetics [Concept: Pharmacokinetics]

0617. B - Medication adherence: The extent to which medication use corresponds with an agreed treatment plan, best explored without blame. / Pharmacodynamics: How a medication affects the body, including mechanisms and relationships between concentration and effects. [Concept: Medication adherence and Pharmacodynamics]

0618. B - Medication adherence: Asking about barriers, preferences, and experiences instead of labeling a client noncompliant. / Placebo response: Interpreting a reported improvement in light of expectations and other treatment-context effects. [Concept: Medication adherence and Placebo response]

0619. D - Shared decision-making: Supporting the family to discuss benefits, risks, and preferences with the prescribing clinician. / Pharmacodynamics: Distinguishing a medication's action and effects from how the body processes it. [Concept: Shared decision-making and Pharmacodynamics]

0620. B - Interprofessional collaboration [Concept: Interprofessional collaboration]

0621. B - Interprofessional collaboration [Concept: Interprofessional collaboration]

0622. D - Medication adherence: Asking about barriers, preferences, and experiences instead of labeling a client noncompliant. / Medication reconciliation: Encouraging an accurate current medication list during care transitions. [Concept: Medication adherence and Medication reconciliation]

0623. A - Placebo response [Concept: Placebo response]

0624. B - Medication adherence [Concept: Medication adherence]

0625. D - Placebo response [Concept: Placebo response]

0626. D - Medication adherence: Asking about barriers, preferences, and experiences instead of labeling a client noncompliant. / Side-effect monitoring: Documenting the client's report and facilitating prompt prescriber contact when concerns arise. [Concept: Medication adherence and Side-effect monitoring]

0627. B - Pharmacokinetics [Concept: Pharmacokinetics]

0628. B - Shared decision-making: Supporting the family to discuss benefits, risks, and preferences with the prescribing clinician. / Pharmacodynamics: Distinguishing a medication's action and effects from how the body processes it. [Concept: Shared decision-making and Pharmacodynamics]

0629. D - Medication reconciliation: Reviewing a person's current medications and supplements to identify what is actually being used. / Pharmacodynamics: How a medication affects the body, including mechanisms and relationships between concentration and effects. [Concept: Medication reconciliation and Pharmacodynamics]

0630. B - Placebo response: Interpreting a reported improvement in light of expectations and other treatment-context effects. / Pharmacokinetics: Understanding that age, metabolism, and other factors can affect medication concentration over time. [Concept: Placebo response and Pharmacokinetics]

0631. D - Shared decision-making: A collaborative process integrating clinical evidence and the client's informed preferences and values. / Pharmacokinetics: How the body absorbs, distributes, metabolizes, and eliminates a medication. [Concept: Shared decision-making and Pharmacokinetics]

0632. D - Pharmacokinetics: Understanding that age, metabolism, and other factors can affect medication concentration over time. / Interprofessional collaboration: Sharing relevant observations with the prescriber with appropriate permission and clear role boundaries. [Concept: Pharmacokinetics and Interprofessional collaboration]

0633. D - Medication reconciliation: Encouraging an accurate current medication list during care transitions. / Pharmacokinetics: Understanding that age, metabolism, and other factors can affect medication concentration over time. [Concept: Medication reconciliation and Pharmacokinetics]

CAC.917 | Psychopharmacology for Counselors

QUESTION | CORRECT OPTION AND CONCEPT

0634. A - Shared decision-making: A collaborative process integrating clinical evidence and the client's informed preferences and values. / Placebo response: Change following treatment context and expectation that is not necessarily attributable to the active medication ingredient alone. [Concept: Shared decision-making and Placebo response]

0635. B - Referring medication decisions to a qualified prescriber rather than recommending a dose change. [Concept: Scope of practice]

0636. A - Documenting the client's report and facilitating prompt prescriber contact when concerns arise. [Concept: Side-effect monitoring]

0637. A - Medication reconciliation: Encouraging an accurate current medication list during care transitions. / Pharmacodynamics: Distinguishing a medication's action and effects from how the body processes it. [Concept: Medication reconciliation and Pharmacodynamics]

0638. C - Medication reconciliation [Concept: Medication reconciliation]

0639. B - Scope of practice [Concept: Scope of practice]

0640. B - Medication reconciliation [Concept: Medication reconciliation]

0641. B - Referring medication decisions to a qualified prescriber rather than recommending a dose change. [Concept: Scope of practice]

0642. C - Medication reconciliation: Encouraging an accurate current medication list during care transitions. / Pharmacokinetics: Understanding that age, metabolism, and other factors can affect medication concentration over time. [Concept: Medication reconciliation and Pharmacokinetics]

0643. D - Shared decision-making: A collaborative process integrating clinical evidence and the client's informed preferences and values. / Interprofessional collaboration: Coordinated communication among professionals with distinct roles to support safe, coherent care. [Concept: Shared decision-making and Interprofessional collaboration]

0644. A - Black box warning: Directing questions about a serious labeled risk to the prescriber and supporting informed discussion. / Interprofessional collaboration: Sharing relevant observations with the prescriber with appropriate permission and clear role boundaries. [Concept: Black box warning and Interprofessional collaboration]

0645. A - Medication adherence [Concept: Medication adherence]

0646. B - Medication reconciliation: Reviewing a person's current medications and supplements to identify what is actually being used. / Interprofessional collaboration: Coordinated communication among professionals with distinct roles to support safe, coherent care. [Concept: Medication reconciliation and Interprofessional collaboration]

0647. C - How a medication affects the body, including mechanisms and relationships between concentration and effects. [Concept: Pharmacodynamics]

0648. A - Side-effect monitoring: Systematic attention to unwanted or unexpected effects and communication with the prescriber. / Shared decision-making: A collaborative process integrating clinical evidence and the client's informed preferences and values. [Concept: Side-effect monitoring and Shared decision-making]

0649. C - Placebo response: Change following treatment context and expectation that is not necessarily attributable to the active medication ingredient alone. / Pharmacokinetics: How the body absorbs, distributes, metabolizes, and eliminates a medication. [Concept: Placebo response and Pharmacokinetics]

0650. B - Pharmacodynamics [Concept: Pharmacodynamics]

0651. C - Medication adherence: Asking about barriers, preferences, and experiences instead of labeling a client noncompliant. / Medication reconciliation: Encouraging an accurate current medication list during care transitions. [Concept: Medication adherence and Medication reconciliation]

0652. A - Pharmacodynamics [Concept: Pharmacodynamics]

0653. A - Side-effect monitoring: Documenting the client's report and facilitating prompt prescriber contact when concerns arise. / Pharmacokinetics: Understanding that age, metabolism, and other factors can affect medication concentration over time. [Concept: Side-effect monitoring and Pharmacokinetics]

0654. D - Black box warning [Concept: Black box warning]

0655. B - Pharmacokinetics: How the body absorbs, distributes, metabolizes, and eliminates a medication. / Interprofessional collaboration: Coordinated communication among professionals with distinct roles to support safe, coherent care. [Concept: Pharmacokinetics and Interprofessional collaboration]

0656. B - Medication adherence [Concept: Medication adherence]

0657. B - Side-effect monitoring: Systematic attention to unwanted or unexpected effects and communication with the prescriber. / Pharmacokinetics: How the body absorbs, distributes, metabolizes, and eliminates a medication. [Concept: Side-effect monitoring and Pharmacokinetics]

0658. D - Medication reconciliation: Reviewing a person's current medications and supplements to identify what is actually being used. / Interprofessional collaboration: Coordinated communication among professionals with distinct roles to support safe, coherent care. [Concept: Medication reconciliation and Interprofessional collaboration]

0659. A - Medication adherence: The extent to which medication use corresponds with an agreed treatment plan, best explored without blame. / Pharmacodynamics: How a medication affects the body, including mechanisms and relationships between concentration and effects. [Concept: Medication adherence and Pharmacodynamics]

0660. D - Medication reconciliation: Reviewing a person's current medications and supplements to identify what is actually being used. / Black box warning: A prominent regulator-required warning for serious medication risks, whose relevance should be discussed with the prescriber. [Concept: Medication reconciliation and Black box warning]

0661. C - Interprofessional collaboration [Concept: Interprofessional collaboration]

0662. A - Medication adherence [Concept: Medication adherence]

0663. C - Pharmacokinetics [Concept: Pharmacokinetics]

0664. D - Black box warning [Concept: Black box warning]

0665. A - Pharmacodynamics [Concept: Pharmacodynamics]

0666. A - Medication reconciliation: Encouraging an accurate current medication list during care transitions. / Black box warning: Directing questions about a serious labeled risk to the prescriber and supporting informed discussion. [Concept: Medication reconciliation and Black box warning]

0667. B - Side-effect monitoring: Documenting the client's report and facilitating prompt prescriber contact when concerns arise. / Medication reconciliation: Encouraging an accurate current medication list during care transitions. [Concept: Side-effect monitoring and Medication reconciliation]

0668. D - Interprofessional collaboration [Concept: Interprofessional collaboration]

0669. D - The legal and professional boundaries defining services a practitioner is authorized and competent to provide. [Concept: Scope of practice]

0670. B - Side-effect monitoring: Documenting the client's report and facilitating prompt prescriber contact when concerns arise. / Shared decision-making: Supporting the family to discuss benefits, risks, and preferences with the prescribing clinician. [Concept: Side-effect monitoring and Shared decision-making]

0671. A - Scope of practice [Concept: Scope of practice]

0672. C - Shared decision-making: Supporting the family to discuss benefits, risks, and preferences with the prescribing clinician. / Black box warning: Directing questions about a serious labeled risk to the prescriber and supporting informed discussion. [Concept: Shared decision-making and Black box warning]

0673. B - Scope of practice: The legal and professional boundaries defining services a practitioner is authorized and competent to provide. / Shared decision-making: A collaborative process integrating clinical evidence and the client's informed preferences and values. 0807. A - Pharmacokinetics [Concept: Pharmacokinetics]

0808. B - Black box warning [Concept: Black box warning]

0809. C - Side-effect monitoring [Concept: Side-effect monitoring]

0810. A - Shared decision-making [Concept: Shared decision-making]

0811. A - Interpreting a reported improvement in light of expectations and other treatment-context effects. [Concept: Placebo response]

0812. B - Scope of practice: Referring medication decisions to a qualified prescriber rather than recommending a dose change. / Medication reconciliation: Encouraging an accurate current medication list during care transitions. [Concept: Scope of practice and Medication reconciliation]

0813. A - Scope of practice: Referring medication decisions to a qualified prescriber rather than recommending a dose change. / Medication reconciliation: Encouraging an accurate current medication list during care transitions. [Concept: Scope of practice and Medication reconciliation]

0814. C - Scope of practice: The legal and professional boundaries defining services a practitioner is authorized and competent to provide. / Shared decision-making: A collaborative process integrating clinical evidence and the client's informed preferences and values. [Concept: Scope of practice and Shared decision-making]

0815. D - Pharmacodynamics [Concept: Pharmacodynamics]

0816. D - Placebo response [Concept: Placebo response]

0817. C - Placebo response: Interpreting a reported improvement in light of expectations and other treatment-context effects. / Pharmacokinetics: Understanding that age, metabolism, and other factors can affect medication concentration over time. [Concept: Placebo response and Pharmacokinetics]

0818. D - Scope of practice: Referring medication decisions to a qualified prescriber rather than recommending a dose change. / Black box warning: Directing questions about a serious labeled risk to the prescriber and supporting informed discussion. [Concept: Scope of practice and Black box warning]

0819. C - Scope of practice [Concept: Scope of practice]

0820. A - Medication reconciliation [Concept: Medication reconciliation]

0821. D - Pharmacokinetics: How the body absorbs, distributes, metabolizes, and eliminates a medication. / Black box warning: A prominent regulator-required warning for serious medication risks, whose relevance should be discussed with the prescriber. [Concept: Pharmacokinetics and Black box warning]

0822. B - Shared decision-making: A collaborative process integrating clinical evidence and the client's informed preferences and values. / Interprofessional collaboration: Coordinated communication among professionals with distinct roles to support safe, coherent care. [Concept: Shared decision-making and Interprofessional collaboration]

0823. A - Scope of practice: The legal and professional boundaries defining services a practitioner is authorized and competent to provide. / Medication adherence: The extent to which medication use corresponds with an agreed treatment plan, best explored without blame. [Concept: Scope of practice and Medication adherence]

0824. C - Scope of practice: The legal and professional boundaries defining services a practitioner is authorized and competent to provide. / Interprofessional collaboration: Coordinated communication among professionals with distinct roles to support safe, coherent care. [Concept: Scope of practice and Interprofessional collaboration]

0825. A - Asking about barriers, preferences, and experiences instead of labeling a client noncompliant. [Concept: Medication adherence]

0826. D - Scope of practice: The legal and professional boundaries defining services a practitioner is authorized and competent to provide. / Pharmacokinetics: How the body absorbs, distributes, metabolizes, and eliminates a medication. [Concept: Scope of practice and Pharmacokinetics]

0827. D - Scope of practice: Referring medication decisions to a qualified prescriber rather than recommending a dose change. / Pharmacokinetics: Understanding that age, metabolism, and other factors can affect medication concentration over time. [Concept: Scope of practice and Pharmacokinetics]

0828. B - Scope of practice: The legal and professional boundaries defining services a practitioner is authorized and competent to provide. / Medication adherence: The extent to which medication use corresponds with an agreed treatment plan, best explored without blame. [Concept: Scope of practice and Medication adherence]

0829. C - Pharmacodynamics [Concept: Pharmacodynamics]

0830. B - Medication reconciliation: Reviewing a person's current medications and supplements to identify what is actually being used. / Pharmacodynamics: How a medication affects the body, including mechanisms and relationships between concentration and effects. [Concept: Medication reconciliation and Pharmacodynamics]

0831. B - Black box warning [Concept: Black box warning]

0832. C - Medication adherence [Concept: Medication adherence]

0833. D - Scope of practice [Concept: Scope of practice]

0834. A - Black box warning [Concept: Black box warning]

0835. D - Medication adherence [Concept: Medication adherence]

0836. C - Medication reconciliation: Encouraging an accurate current medication list during care transitions. / Placebo response: Interpreting a reported improvement in light of expectations and other treatment-context effects. [Concept: Medication reconciliation and Placebo response]

0837. A - Interprofessional collaboration [Concept: Interprofessional collaboration]

0838. B - A collaborative process integrating clinical evidence and the client's informed preferences and values. [Concept: Shared decision-making]

0839. C - Scope of practice: The legal and professional boundaries defining services a practitioner is authorized and competent to provide. / Medication adherence: The extent to which medication use corresponds with an agreed treatment plan, best explored without blame. [Concept: Scope of practice and Medication adherence]

0840. C - Placebo response: Interpreting a reported improvement in light of expectations and other treatment-context effects. / Pharmacokinetics: Understanding that age, metabolism, and other factors can affect medication concentration over time. [Concept: Placebo response and Pharmacokinetics]

0841. B - Reviewing a person's current medications and supplements to identify what is actually being used. [Concept: Medication reconciliation]

0842. A - Medication adherence [Concept: Medication adherence]

0843. A - Placebo response: Interpreting a reported improvement in light of expectations and other treatment-context effects. / Pharmacodynamics: Distinguishing a medication's action and effects from how the body processes it. [Concept: Placebo response and Pharmacodynamics]

0844. C - Scope of practice [Concept: Scope of practice]

0845. B - Medication adherence: The extent to which medication use corresponds with an agreed treatment plan, best explored without blame. / Pharmacodynamics: How a medication affects the body, including mechanisms and relationships between concentration and effects. [Concept: Medication adherence and Pharmacodynamics]

0846. C - Scope of practice [Concept: Scope of practice]

0847. A - Interprofessional collaboration [Concept: Interprofessional collaboration]

0848. A - Systematic attention to unwanted or unexpected effects and communication with the prescriber. [Concept: Side-effect monitoring]

0849. B - Interprofessional collaboration [Concept: Interprofessional collaboration]

0850. C - Scope of practice: Referring medication decisions to a qualified prescriber rather than recommending a dose change. / Side-effect monitoring: Documenting the client's report and facilitating prompt prescriber contact when concerns arise. [Concept: Scope of practice and Side-effect monitoring]

0851. A - Medication adherence: The extent to which medication use corresponds with an agreed treatment plan, best explored without blame. / Black box warning: A prominent regulator-required warning for serious medication risks, whose relevance should be discussed with the prescriber. [Concept: Medication adherence and Black box warning]

0852. C - Scope of practice: The legal and professional boundaries defining services a practitioner is authorized and competent to provide. / Pharmacokinetics: How the body absorbs, distributes, metabolizes, and eliminates a medication. [Concept: Scope of practice and Pharmacokinetics]

0853. B - Shared decision-making: A collaborative process integrating clinical evidence and the client's informed preferences and values. / Medication reconciliation: Reviewing a person's current medications and supplements to identify what is actually being used. [Concept: Shared decision-making and Medication reconciliation]

0854. A - Pharmacokinetics: Understanding that age, metabolism, and other factors can affect medication concentration over time. / Interprofessional collaboration: Sharing relevant observations with the prescriber with appropriate permission and clear role boundaries. [Concept: Pharmacokinetics and Interprofessional collaboration]

0855. A - Pharmacokinetics: How the body absorbs, distributes, metabolizes, and eliminates a medication. / Pharmacodynamics: How a medication affects the body, including mechanisms and relationships between concentration and effects. [Concept: Pharmacokinetics and Pharmacodynamics]

0856. A - Interprofessional collaboration [Concept: Interprofessional collaboration]

0857. D - Directing questions about a serious labeled risk to the prescriber and supporting informed discussion. [Concept: Black box warning]

0858. B - Side-effect monitoring: Documenting the client's report and facilitating prompt prescriber contact when concerns arise. / Pharmacokinetics: Understanding that age, metabolism, and other factors can affect medication concentration over time. [Concept: Side-effect monitoring and Pharmacokinetics]

0859. C - Shared decision-making: Supporting the family to discuss benefits, risks, and preferences with the prescribing clinician. / Placebo response: Interpreting a reported improvement in light of expectations and other treatment-context effects. [Concept: Shared decision-making and Placebo response]

CAC.917 | Psychopharmacology for Counselors

QUESTION | CORRECT OPTION AND CONCEPT

0860. D - Pharmacokinetics: How the body absorbs, distributes, metabolizes, and eliminates a medication. / Black box warning: A prominent regulator-required warning for serious medication risks, whose relevance should be discussed with the prescriber. [Concept: Pharmacokinetics and Black box warning]

0861. A - Side-effect monitoring: Systematic attention to unwanted or unexpected effects and communication with the prescriber. / Black box warning: A prominent regulator-required warning for serious medication risks, whose relevance should be discussed with the prescriber. [Concept: Side-effect monitoring and Black box warning]

0862. D - Placebo response: Change following treatment context and expectation that is not necessarily attributable to the active medication ingredient alone. / Interprofessional collaboration: Coordinated communication among professionals with distinct roles to support safe, coherent care. [Concept: Placebo response and Interprofessional collaboration]

0863. C - Scope of practice [Concept: Scope of practice]

0864. A - Pharmacodynamics [Concept: Pharmacodynamics]

0865. A - Pharmacokinetics: Understanding that age, metabolism, and other factors can affect medication concentration over time. / Pharmacodynamics: Distinguishing a medication's action and effects from how the body processes it. [Concept: Pharmacokinetics and Pharmacodynamics]

0866. C - Medication reconciliation [Concept: Medication reconciliation]

0867. D - Shared decision-making: A collaborative process integrating clinical evidence and the client's informed preferences and values. / Pharmacodynamics: How a medication affects the body, including mechanisms and relationships between concentration and effects. [Concept: Shared decision-making and Pharmacodynamics]

CAC.918 | Special Topics in Adolescent Mental Health

QUESTION | CORRECT OPTION AND CONCEPT

0001. A - Developmental psychopathology [Concept: Developmental psychopathology]

0002. B - Sleep hygiene: Behaviors and environmental practices that support regular, restorative sleep. / Eating-disorder warning signs: Behavioral, cognitive, and physical indicators that warrant careful assessment and referral to qualified care. [Concept: Sleep hygiene and Eating-disorder warning signs]

0003. D - Sleep hygiene: Exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions. / Body image: Exploring body-related distress and social pressures without reinforcing appearance-based judgments. [Concept: Sleep hygiene and Body image]

0004. D - Peer contagion consideration [Concept: Peer contagion consideration]

0005. D - Developmental psychopathology [Concept: Developmental psychopathology]

0006. B - Adolescent identity development [Concept: Adolescent identity development]

0007. A - Digital wellbeing: Exploring how online activities affect this adolescent's sleep, connection, mood, and goals. / Developmental psychopathology: Examining pathways and turning points rather than treating a current symptom as fixed destiny. [Concept: Digital wellbeing and Developmental psychopathology]

0008. A - A framework studying how typical and atypical developmental processes interact across time and context. [Concept: Developmental psychopathology]

0009. C - Peer contagion consideration: Using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior. / Developmental psychopathology: Examining pathways and turning points rather than treating a current symptom as fixed destiny. [Concept: Peer contagion consideration and Developmental psychopathology]

0010. C - Peer contagion consideration [Concept: Peer contagion consideration]

0011. B - Suicide protective factors [Concept: Suicide protective factors]

0012. A - Personal and contextual supports that can reduce risk or strengthen reasons and pathways for safety. [Concept: Suicide protective factors]

0013. D - Nonsuicidal self-injury: Intentional self-inflicted injury without stated intent to die, requiring compassionate assessment and safety planning. / Developmental psychopathology: A framework studying how typical and atypical developmental processes interact across time and context. [Concept: Nonsuicidal self-injury and Developmental psychopathology]

0014. B - Adolescent identity development: An evolving process of exploring and integrating personal, social, and cultural understandings of self. / Eating-disorder warning signs: Behavioral, cognitive, and physical indicators that warrant careful assessment and referral to qualified care. [Concept: Adolescent identity development and Eating-disorder warning signs]

0015. B - Body image: Exploring body-related distress and social pressures without reinforcing appearance-based judgments. / Gender-affirming support: Using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity. [Concept: Body image and Gender-affirming support]

0016. B - Adolescent identity development: An evolving process of exploring and integrating personal, social, and cultural understandings of self. / Developmental psychopathology: A framework studying how typical and atypical developmental processes interact across time and context. [Concept: Adolescent identity development and Developmental psychopathology]

0017. C - Adolescent identity development: Providing respectful space for exploration without forcing a fixed label or timeline. / Developmental psychopathology: Examining pathways and turning points rather than treating a current symptom as fixed destiny. [Concept: Adolescent identity development and Developmental psychopathology]

0018. A - Digital wellbeing [Concept: Digital wellbeing]

0019. B - Gender-affirming support [Concept: Gender-affirming support]

0020. C - An evolving process of exploring and integrating personal, social, and cultural understandings of self. [Concept: Adolescent identity development]

0021. D - Eating-disorder warning signs [Concept: Eating-disorder warning signs]

0022. A - Adolescent identity development [Concept: Adolescent identity development]

0023. D - Digital wellbeing [Concept: Digital wellbeing]

0024. C - Peer contagion consideration: The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices. / Developmental psychopathology: A framework studying how typical and atypical developmental processes interact across time and context. [Concept: Peer contagion consideration and Developmental psychopathology]

0025. C - Nonsuicidal self-injury: Asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either. / Suicide protective factors: Identifying trusted relationships, coping resources, and accessible support that can be activated. [Concept: Nonsuicidal self-injury and Suicide protective factors]

0026. C - Nonsuicidal self-injury [Concept: Nonsuicidal self-injury]

0027. B - Adolescent identity development: An evolving process of exploring and integrating personal, social, and cultural understandings of self. / Nonsuicidal self-injury: Intentional self-inflicted injury without stated intent to die, requiring compassionate assessment and safety planning. [Concept: Adolescent identity development and Nonsuicidal self-injury]

0028. D - Body image [Concept: Body image]

0029. D - Nonsuicidal self-injury: Asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either. / Peer contagion consideration: Using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior. [Concept: Nonsuicidal self-injury and Peer contagion consideration]

0030. C - Adolescent identity development: An evolving process of exploring and integrating personal, social, and cultural understandings of self. / Sleep hygiene: Behaviors and environmental practices that support regular, restorative sleep. [Concept: Adolescent identity development and Sleep hygiene]

0031. A - Suicide protective factors: Identifying trusted relationships, coping resources, and accessible support that can be activated. / Eating-disorder warning signs: Responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation. [Concept: Suicide protective factors and Eating-disorder warning signs]

0032. A - Eating-disorder warning signs: Responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation. / Peer contagion consideration: Using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior. [Concept: Eating-disorder warning signs and Peer contagion consideration]

0033. D - Body image [Concept: Body image]

0034. D - Adolescent identity development: An evolving process of exploring and integrating personal, social, and cultural understandings of self. / Gender-affirming support: Respectful support that recognizes a young person's expressed gender and attends to safety, dignity, and context. [Concept: Adolescent identity development and Gender-affirming support]

0035. D - Sleep hygiene: Exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions. / Body image: Exploring body-related distress and social pressures without reinforcing appearance-based judgments. [Concept: Sleep hygiene and Body image]

0036. A - Adolescent identity development: Providing respectful space for exploration without forcing a fixed label or timeline. / Developmental psychopathology: Examining pathways and turning points rather than treating a current symptom as fixed destiny. [Concept: Adolescent identity development and Developmental psychopathology]

0037. B - Eating-disorder warning signs [Concept: Eating-disorder warning signs]

0038. A - Suicide protective factors: Personal and contextual supports that can reduce risk or strengthen reasons and pathways for safety. / Body image: Thoughts, feelings, and perceptions concerning one's body, shaped by personal and social influences. [Concept: Suicide protective factors and Body image]

0039. D - Digital wellbeing: Exploring how online activities affect this adolescent's sleep, connection, mood, and goals. / Developmental psychopathology: Examining pathways and turning points rather than treating a current symptom as fixed destiny. [Concept: Digital wellbeing and Developmental psychopathology]

0040. D - Developmental psychopathology [Concept: Developmental psychopathology]

0041. C - Sleep hygiene: Behaviors and environmental practices that support regular, restorative sleep. / Digital wellbeing: The balance between digital engagement and health, relationships, sleep, and functioning as experienced by the individual. [Concept: Sleep hygiene and Digital wellbeing]

0042. B - Adolescent identity development: An evolving process of exploring and integrating personal, social, and cultural understandings of self. / Sleep hygiene: Behaviors and environmental practices that support regular, restorative sleep. [Concept: Adolescent identity development and Sleep hygiene]

0043. A - Suicide protective factors: Personal and contextual supports that can reduce risk or strengthen reasons and pathways for safety. / Peer contagion consideration: The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices. 0752. C - Personal and contextual supports that can reduce risk or strengthen reasons and pathways for safety. [Concept: Suicide protective factors]

0753. D - Digital wellbeing: The balance between digital engagement and health, relationships, sleep, and functioning as experienced by the individual. / Developmental psychopathology: A framework studying how typical and atypical developmental processes interact across time and context. [Concept: Digital wellbeing and Developmental psychopathology]

0754. D - Nonsuicidal self-injury [Concept: Nonsuicidal self-injury]

0755. D - Nonsuicidal self-injury [Concept: Nonsuicidal self-injury]

0756. A - Adolescent identity development: An evolving process of exploring and integrating personal, social, and cultural understandings of self. / Body image: Thoughts, feelings, and perceptions concerning one's body, shaped by personal and social influences. [Concept: Adolescent identity development and Body image]

0757. D - Digital wellbeing: The balance between digital engagement and health, relationships, sleep, and functioning as experienced by the individual. / Eating-disorder warning signs: Behavioral, cognitive, and physical indicators that warrant careful assessment and referral to qualified care. [Concept: Digital wellbeing and Eating-disorder warning signs]

0758. D - Adolescent identity development: Providing respectful space for exploration without forcing a fixed label or timeline. / Body image: Exploring body-related distress and social pressures without reinforcing appearance-based judgments. [Concept: Adolescent identity development and Body image]

0759. C - Body image [Concept: Body image]

0760. D - Adolescent identity development [Concept: Adolescent identity development]

0761. D - Nonsuicidal self-injury [Concept: Nonsuicidal self-injury]

0762. D - Adolescent identity development: Providing respectful space for exploration without forcing a fixed label or timeline. / Digital wellbeing: Exploring how online activities affect this adolescent's sleep, connection, mood, and goals. [Concept: Adolescent identity development and Digital wellbeing]

0763. C - Nonsuicidal self-injury: Intentional self-inflicted injury without stated intent to die, requiring compassionate assessment and safety planning. / Digital wellbeing: The balance between digital engagement and health, relationships, sleep, and functioning as experienced by the individual. [Concept: Nonsuicidal self-injury and Digital wellbeing]

0764. A - Developmental psychopathology [Concept: Developmental psychopathology]

0765. B - Eating-disorder warning signs: Behavioral, cognitive, and physical indicators that warrant careful assessment and referral to qualified care. / Gender-affirming support: Respectful support that recognizes a young person's expressed gender and attends to safety, dignity, and context. [Concept: Eating-disorder warning signs and Gender-affirming support]

0766. D - Nonsuicidal self-injury: Intentional self-inflicted injury without stated intent to die, requiring compassionate assessment and safety planning. / Gender-affirming support: Respectful support that recognizes a young person's expressed gender and attends to safety, dignity, and context. [Concept: Nonsuicidal self-injury and Gender-affirming support]

0767. A - Suicide protective factors [Concept: Suicide protective factors]

0768. D - Digital wellbeing: The balance between digital engagement and health, relationships, sleep, and functioning as experienced by the individual. / Body image: Thoughts, feelings, and perceptions concerning one's body, shaped by personal and social influences. [Concept: Digital wellbeing and Body image]

0769. C - Developmental psychopathology [Concept: Developmental psychopathology]

0770. A - Suicide protective factors: Personal and contextual supports that can reduce risk or strengthen reasons and pathways for safety. / Eating-disorder warning signs: Behavioral, cognitive, and physical indicators that warrant careful assessment and referral to qualified care. [Concept: Suicide protective factors and Eating-disorder warning signs]

0771. D - Suicide protective factors [Concept: Suicide protective factors]

0772. C - Peer contagion consideration: The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices. / Developmental psychopathology: A framework studying how typical and atypical developmental processes interact across time and context. [Concept: Peer contagion consideration and Developmental psychopathology]

0773. A - Suicide protective factors: Personal and contextual supports that can reduce risk or strengthen reasons and pathways for safety. / Digital wellbeing: The balance between digital engagement and health, relationships, sleep, and functioning as experienced by the individual. [Concept: Suicide protective factors and Digital wellbeing]

0774. B - Nonsuicidal self-injury [Concept: Nonsuicidal self-injury]

0775. C - Peer contagion consideration [Concept: Peer contagion consideration]

0776. D - Peer contagion consideration [Concept: Peer contagion consideration]

0777. C - Eating-disorder warning signs: Responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation. / Peer contagion consideration: Using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior. [Concept: Eating-disorder warning signs and Peer contagion consideration]

0778. D - Adolescent identity development: An evolving process of exploring and integrating personal, social, and cultural understandings of self. / Digital wellbeing: The balance between digital engagement and health, relationships, sleep, and functioning as experienced by the individual. [Concept: Adolescent identity development and Digital wellbeing]

0779. B - Adolescent identity development: An evolving process of exploring and integrating personal, social, and cultural understandings of self. / Digital wellbeing: The balance between digital engagement and health, relationships, sleep, and functioning as experienced by the individual. [Concept: Adolescent identity development and Digital wellbeing]

0780. A - Nonsuicidal self-injury: Asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either. / Eating-disorder warning signs: Responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation. [Concept: Nonsuicidal self-injury and Eating-disorder warning signs]

0781. B - Adolescent identity development: An evolving process of exploring and integrating personal, social, and cultural understandings of self. / Digital wellbeing: The balance between digital engagement and health, relationships, sleep, and functioning as experienced by the individual. [Concept: Adolescent identity development and Digital wellbeing]

0782. D - Adolescent identity development: Providing respectful space for exploration without forcing a fixed label or timeline. / Peer contagion consideration: Using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior. [Concept: Adolescent identity development and Peer contagion consideration]

0783. D - Gender-affirming support [Concept: Gender-affirming support]

0784. C - Adolescent identity development: An evolving process of exploring and integrating personal, social, and cultural understandings of self. / Nonsuicidal self-injury: Intentional self-inflicted injury without stated intent to die, requiring compassionate assessment and safety planning. [Concept: Adolescent identity development and Nonsuicidal self-injury]

0785. A - Gender-affirming support [Concept: Gender-affirming support]

0786. B - Examining pathways and turning points rather than treating a current symptom as fixed destiny. [Concept: Developmental psychopathology]

0787. D - Eating-disorder warning signs [Concept: Eating-disorder warning signs]

CAC.918 | Special Topics in Adolescent Mental Health

QUESTION | CORRECT OPTION AND CONCEPT

0788. C - Suicide protective factors [Concept: Suicide protective factors]

0789. C - Eating-disorder warning signs [Concept: Eating-disorder warning signs]

0790. B - Gender-affirming support: Using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity. / Peer contagion consideration: Using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior. [Concept: Gender-affirming support and Peer contagion consideration]

0791. D - Using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior. [Concept: Peer contagion consideration]

0792. B - Gender-affirming support: Respectful support that recognizes a young person's expressed gender and attends to safety, dignity, and context. / Developmental psychopathology: A framework studying how typical and atypical developmental processes interact across time and context. [Concept: Sleep hygiene and Developmental psychopathology]

0923. C - Adolescent identity development: Providing respectful space for exploration without forcing a fixed label or timeline. / Gender-affirming support: Using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity. [Concept: Adolescent identity development and Gender-affirming support]

0924. B - Adolescent identity development [Concept: Adolescent identity development]

0925. B - Sleep hygiene: Exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions. / Gender-affirming support: Using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity. [Concept: Sleep hygiene and Gender-affirming support]

0926. A - Gender-affirming support [Concept: Gender-affirming support]

0927. A - Adolescent identity development: An evolving process of exploring and integrating personal, social, and cultural understandings of self. / Body image: Thoughts, feelings, and perceptions concerning one's body, shaped by personal and social influences. [Concept: Adolescent identity development and Body image]

0928. B - Intentional self-inflicted injury without stated intent to die, requiring compassionate assessment and safety planning. [Concept: Nonsuicidal self-injury]

0929. D - Nonsuicidal self-injury [Concept: Nonsuicidal self-injury]

0930. B - Providing respectful space for exploration without forcing a fixed label or timeline. [Concept: Adolescent identity development]

0931. D - Body image: Thoughts, feelings, and perceptions concerning one's body, shaped by personal and social influences. / Developmental psychopathology: A framework studying how typical and atypical developmental processes interact across time and context. [Concept: Body image and Developmental psychopathology]

0932. A - Nonsuicidal self-injury: Intentional self-inflicted injury without stated intent to die, requiring compassionate assessment and safety planning. / Body image: Thoughts, feelings, and perceptions concerning one's body, shaped by personal and social influences. [Concept: Nonsuicidal self-injury and Body image]

0933. C - Suicide protective factors: Identifying trusted relationships, coping resources, and accessible support that can be activated. / Developmental psychopathology: Examining pathways and turning points rather than treating a current symptom as fixed destiny. [Concept: Suicide protective factors and Developmental psychopathology]

0934. A - Personal and contextual supports that can reduce risk or strengthen reasons and pathways for safety. [Concept: Suicide protective factors]

0935. C - Nonsuicidal self-injury: Asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either. / Peer contagion consideration: Using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior. [Concept: Nonsuicidal self-injury and Peer contagion consideration]

0936. C - Sleep hygiene: Behaviors and environmental practices that support regular, restorative sleep. / Eating-disorder warning signs: Behavioral, cognitive, and physical indicators that warrant careful assessment and referral to qualified care. [Concept: Sleep hygiene and Eating-disorder warning signs]

0937. D - Digital wellbeing: Exploring how online activities affect this adolescent's sleep, connection, mood, and goals. / Peer contagion consideration: Using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior. [Concept: Digital wellbeing and Peer contagion consideration]

0938. B - Adolescent identity development [Concept: Adolescent identity development]

0939. D - Adolescent identity development [Concept: Adolescent identity development]

0940. D - Adolescent identity development: Providing respectful space for exploration without forcing a fixed label or timeline. / Sleep hygiene: Exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions. [Concept: Adolescent identity development and Sleep hygiene]

0941. D - Nonsuicidal self-injury: Asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either. / Gender-affirming support: Using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity. [Concept: Nonsuicidal self-injury and Gender-affirming support]

QUESTION | CORRECT OPTION AND CONCEPT

0718. C - Individual advocacy: Supporting a family to navigate a referral barrier with the young person's informed involvement. / Systems advocacy: Using documented access barriers to recommend a service-system change. [Concept: Individual advocacy and Systems advocacy]

0719. B - Coalition building: Agreeing on a common goal, roles, and communication practices across partner organizations. / Advocacy ethics: Obtaining permission and discussing foreseeable benefits and risks before speaking on a client's behalf. [Concept: Coalition building and Advocacy ethics]

0720. B - Individual advocacy [Concept: Individual advocacy]

0721. A - Coalition building [Concept: Coalition building]

0722. A - Coalition building: Organizing collaboration among people and groups with aligned interests to pursue shared change. / Service navigation: Practical assistance that helps people identify, access, and coordinate appropriate services. [Concept: Coalition building and Service navigation]

0723. C - Asset-based community development: Mapping community skills and networks before designing an outside-led program. / Youth voice: Creating safe, accessible ways for youth input to shape a program. [Concept: Asset-based community development and Youth voice]

0724. B - Policy brief [Concept: Policy brief]

0725. B - Policy brief: A concise evidence-informed document that defines a policy issue and presents feasible options or recommendations. / Youth voice: Meaningful inclusion of young people's perspectives and influence in services and decisions affecting them. [Concept: Policy brief and Youth voice]

0726. A - Policy brief: Summarizing a service gap and actionable recommendations for decision makers. / Advocacy ethics: Obtaining permission and discussing foreseeable benefits and risks before speaking on a client's behalf. [Concept: Policy brief and Advocacy ethics]

0727. A - Coalition building [Concept: Coalition building]

0728. A - Advocacy ethics [Concept: Advocacy ethics]

0729. C - Asset-based community development [Concept: Asset-based community development]

0730. B - Youth voice [Concept: Youth voice]

0731. B - Self-advocacy: Helping a youth prepare to state a support need in a meeting. / Service navigation: Clarifying eligibility, referral steps, and follow-up barriers with a family. [Concept: Self-advocacy and Service navigation]

0732. C - Self-advocacy: A person's ability and opportunity to communicate needs, preferences, and rights and participate in decisions. / Advocacy ethics: Balancing empowerment, consent, role boundaries, confidentiality, and potential consequences when advocating. [Concept: Self-advocacy and Advocacy ethics]

0733. B - Systems advocacy: Efforts to change policies, practices, or resource arrangements that affect groups of people. / Service navigation: Practical assistance that helps people identify, access, and coordinate appropriate services. [Concept: Systems advocacy and Service navigation]

0734. C - Systems advocacy [Concept: Systems advocacy]

0735. D - Clarifying eligibility, referral steps, and follow-up barriers with a family. [Concept: Service navigation]

0736. B - Self-advocacy [Concept: Self-advocacy]

0737. A - Using documented access barriers to recommend a service-system change. [Concept: Systems advocacy]

0738. A - Service navigation [Concept: Service navigation]

0739. D - Helping a youth prepare to state a support need in a meeting. [Concept: Self-advocacy]

0740. A - Individual advocacy [Concept: Individual advocacy]

0741. A - Agreeing on a common goal, roles, and communication practices across partner organizations. [Concept: Coalition building]

0742. A - Individual advocacy: Supporting a family to navigate a referral barrier with the young person's informed involvement. / Coalition building: Agreeing on a common goal, roles, and communication practices across partner organizations. [Concept: Individual advocacy and Coalition building]

0743. B - Policy brief [Concept: Policy brief]

0744. A - Asset-based community development: Mapping community skills and networks before designing an outside-led program. / Service navigation: Clarifying eligibility, referral steps, and follow-up barriers with a family. [Concept: Asset-based community development and Service navigation]

0745. D - Asset-based community development [Concept: Asset-based community development]

0746. C - Systems advocacy [Concept: Systems advocacy]

0747. D - Youth voice [Concept: Youth voice]

0748. C - Self-advocacy: Helping a youth prepare to state a support need in a meeting. / Advocacy ethics: Obtaining permission and discussing foreseeable benefits and risks before speaking on a client's behalf. [Concept: Self-advocacy and Advocacy ethics]

0749. A - Systems advocacy: Using documented access barriers to recommend a service-system change. / Service navigation: Clarifying eligibility, referral steps, and follow-up barriers with a family. [Concept: Systems advocacy and Service navigation]

0750. B - Self-advocacy: A person's ability and opportunity to communicate needs, preferences, and rights and participate in decisions. / Youth voice: Meaningful inclusion of young people's perspectives and influence in services and decisions affecting them. [Concept: Self-advocacy and Youth voice]

0751. B - Creating safe, accessible ways for youth input to shape a program. [Concept: Youth voice]

0752. D - Action taken with or on behalf of a person to secure access, rights, or needed services. [Concept: Individual advocacy]

0753. C - Participatory decision-making [Concept: Participatory decision-making]

0754. A - Participatory decision-making: Seeking youth input early and showing how it influenced a service decision. / Coalition building: Agreeing on a common goal, roles, and communication practices across partner organizations. [Concept: Participatory decision-making and Coalition building]

0755. C - Systems advocacy: Using documented access barriers to recommend a service-system change. / Advocacy ethics: Obtaining permission and discussing foreseeable benefits and risks before speaking on a client's behalf. [Concept: Systems advocacy and Advocacy ethics]

0756. D - Systems advocacy [Concept: Systems advocacy]

0757. A - Participatory decision-making [Concept: Participatory decision-making]

0758. B - Individual advocacy: Supporting a family to navigate a referral barrier with the young person's informed involvement. / Advocacy ethics: Obtaining permission and discussing foreseeable benefits and risks before speaking on a client's behalf. [Concept: Individual advocacy and Advocacy ethics]

0759. B - Mapping community skills and networks before designing an outside-led program. [Concept: Asset-based community development]

0760. C - Self-advocacy: Helping a youth prepare to state a support need in a meeting. / Youth voice: Creating safe, accessible ways for youth input to shape a program. [Concept: Self-advocacy and Youth voice]

0761. D - Service navigation [Concept: Service navigation]

0762. C - Individual advocacy: Supporting a family to navigate a referral barrier with the young person's informed involvement. / Participatory decision-making: Seeking youth input early and showing how it influenced a service decision. [Concept: Individual advocacy and Participatory decision-making]

0763. D - Using documented access barriers to recommend a service-system change. [Concept: Systems advocacy]

0764. C - Service navigation [Concept: Service navigation]

0765. A - Individual advocacy: Action taken with or on behalf of a person to secure access, rights, or needed services. / Service navigation: Practical assistance that helps people identify, access, and coordinate appropriate services. [Concept: Individual advocacy and Service navigation]

0766. A - Participatory decision-making: Including affected young people and families meaningfully in decisions that shape services. / Policy brief: A concise evidence-informed document that defines a policy issue and presents feasible options or recommendations. [Concept: Participatory decision-making and Policy brief]

0767. D - Advocacy ethics [Concept: Advocacy ethics]

0768. D - Coalition building [Concept: Coalition building]

0769. C - Individual advocacy [Concept: Individual advocacy]

0770. A - Asset-based community development [Concept: Asset-based community development]

0771. A - Systems advocacy: Efforts to change policies, practices, or resource arrangements that affect groups of people. / Participatory decision-making: Including affected young people and families meaningfully in decisions that shape services. [Concept: Systems advocacy and Participatory decision-making]
