0222. A team must select a support approach for a child aged 14 at the school-based service. The caregiver working with a counselor recommends offering a tentative feeling reflection and allowing the child to correct it. Which idea is most relevant?

A. Caregiver involvement
B. Play therapy documentation
C. Symbolic play
D. Reflecting feelings

0223. Which applied comparison correctly identifies what belongs to Directive play therapy versus Playroom safety?

A. Directive play therapy: Choosing and structuring a play activity to practice a specified coping or communication skill. / Playroom safety: Choosing materials and rules that allow agency without foreseeable harm.
B. Directive play therapy: Choosing materials and rules that allow agency without foreseeable harm. / Playroom safety: Choosing and structuring a play activity to practice a specified coping or communication skill.
C. Directive play therapy: Choosing and structuring a play activity to practice a specified coping or communication skill. / Playroom safety: Offering a tentative feeling reflection and allowing the child to correct it.
D. Directive play therapy: Sharing general progress and practical support strategies with caregivers under the consent and privacy plan. / Playroom safety: Choosing materials and rules that allow agency without foreseeable harm.

0224. When reviewing a teenage client's plan in the classroom support meeting, the parent educator notes that the next step is documenting what occurred and separating directly observed behavior from interpretation. Which concept guides this step?

A. Caregiver involvement
B. Directive play therapy
C. Tracking
D. Play therapy documentation

0225. For a student aged 12 seen in the school consultation, the research trainee recommends a plan built around following the child's symbolic play as a communication channel while maintaining therapeutic purpose. Which concept is reflected?

A. Play therapy documentation
B. Therapeutic play
C. Tracking
D. Symbolic play

0226. Which comparison correctly distinguishes Therapeutic play from Child-centered play therapy?

A. Therapeutic play: Naming or tentatively reflecting the emotional meaning conveyed through a child's words or play. / Child-centered play therapy: A non-directive approach emphasizing acceptance, empathy, tracking, and the child's lead within safe limits.
B. Therapeutic play: A non-directive approach emphasizing acceptance, empathy, tracking, and the child's lead within safe limits. / Child-centered play therapy: Purposeful use of play within a helping relationship to support expression, exploration, and development.
C. Therapeutic play: Purposeful use of play within a helping relationship to support expression, exploration, and development. / Child-centered play therapy: Recording observable play, interventions, response, and clinical rationale while distinguishing observation from inference.
D. Therapeutic play: Purposeful use of play within a helping relationship to support expression, exploration, and development. / Child-centered play therapy: A non-directive approach emphasizing acceptance, empathy, tracking, and the child's lead within safe limits.

0227. A case conference reviews a research trainee's work with a child of elementary-school age in the community youth program: offering a tentative feeling reflection and allowing the child to correct it. Which principle is central?

A. Caregiver involvement
B. Reflecting feelings
C. Directive play therapy
D. Symbolic play

0228. Which statement most accurately defines Tracking?

A. A clear, empathic boundary that protects people or property while offering acceptable alternatives.
B. A therapist-guided use of play activities selected to address identified therapeutic goals.
C. Naming or tentatively reflecting the emotional meaning conveyed through a child's words or play.
D. Describing a child's observable play actions in a clear, nonjudgmental way.

0229. For a student aged 15 seen in the family resource center, the program coordinator recommends a plan built around offering a tentative feeling reflection and allowing the child to correct it. Which concept is reflected?

A. Directive play therapy
B. Therapeutic play
C. Child-centered play therapy
D. Reflecting feelings

0230. In a supervision quiz, how should Symbolic play be distinguished from Caregiver involvement?

A. Symbolic play: Use of objects, actions, or characters to represent ideas and experiences beyond their literal form. / Caregiver involvement: Purposeful use of play within a helping relationship to support expression, exploration, and development.
B. Symbolic play: Use of objects, actions, or characters to represent ideas and experiences beyond their literal form. / Caregiver involvement: Planned collaboration with caregivers that supports the child's goals while preserving appropriate therapeutic boundaries.
C. Symbolic play: Describing a child's observable play actions in a clear, nonjudgmental way. / Caregiver involvement: Planned collaboration with caregivers that supports the child's goals while preserving appropriate therapeutic boundaries.
D. Symbolic play: Planned collaboration with caregivers that supports the child's goals while preserving appropriate therapeutic boundaries. / Caregiver involvement: Use of objects, actions, or characters to represent ideas and experiences beyond their literal form.

0231. Choose the definition pair that correctly explains Reflecting feelings first and Play therapy documentation second.

A. Reflecting feelings: Recording observable play, interventions, response, and clinical rationale while distinguishing observation from inference. / Play therapy documentation: Naming or tentatively reflecting the emotional meaning conveyed through a child's words or play.
B. Reflecting feelings: Naming or tentatively reflecting the emotional meaning conveyed through a child's words or play. / Play therapy documentation: Describing a child's observable play actions in a clear, nonjudgmental way.
C. Reflecting feelings: Naming or tentatively reflecting the emotional meaning conveyed through a child's words or play. / Play therapy documentation: Recording observable play, interventions, response, and clinical rationale while distinguishing observation from inference.
D. Reflecting feelings: A clear, empathic boundary that protects people or property while offering acceptable alternatives. / Play therapy documentation: Recording observable play, interventions, response, and clinical rationale while distinguishing observation from inference.

0232. In the school consultation, a school counselor explains why a middle-school student would benefit from documenting what occurred and separating directly observed behavior from interpretation. Which course concept underpins the explanation?

A. Play therapy documentation
B. Directive play therapy
C. Playroom safety
D. Tracking

0233. A school support specialist is asked to evaluate a proposed service for a client in early adolescence in the youth group. The defining feature is documenting what occurred and separating directly observed behavior from interpretation. Which concept fits?

A. Child-centered play therapy
B. Symbolic play
C. Caregiver involvement
D. Play therapy documentation

0234. A client in early adolescence and a assessment clinician are reviewing goals in the student wellness team. The agreed action is remaining curious about a toy character's role instead of assuming its play meaning. Which principle best accounts for it?

A. Therapeutic limit setting
B. Playroom safety
C. Play therapy documentation
D. Symbolic play

0235. Which applied comparison correctly identifies what belongs to Child-centered play therapy versus Tracking?

A. Child-centered play therapy: Reflecting a child's play and feelings rather than taking over the play narrative. / Tracking: Saying what the child is doing in play without adding an unsupported interpretation.
B. Child-centered play therapy: Saying what the child is doing in play without adding an unsupported interpretation. / Tracking: Reflecting a child's play and feelings rather than taking over the play narrative.
C. Child-centered play therapy: Choosing materials and rules that allow agency without foreseeable harm. / Tracking: Saying what the child is doing in play without adding an unsupported interpretation.
D. Child-centered play therapy: Reflecting a child's play and feelings rather than taking over the play narrative. / Tracking: Offering a tentative feeling reflection and allowing the child to correct it.

0236. A trainee must distinguish how Reflecting feelings and Playroom safety guide practice. Which comparison is accurate?

A. Reflecting feelings: Offering a tentative feeling reflection and allowing the child to correct it. / Playroom safety: Stating the limit, acknowledging the feeling, and identifying a safe alternative action.
B. Reflecting feelings: Choosing materials and rules that allow agency without foreseeable harm. / Playroom safety: Offering a tentative feeling reflection and allowing the child to correct it.
C. Reflecting feelings: Reflecting a child's play and feelings rather than taking over the play narrative. / Playroom safety: Choosing materials and rules that allow agency without foreseeable harm.
D. Reflecting feelings: Offering a tentative feeling reflection and allowing the child to correct it. / Playroom safety: Choosing materials and rules that allow agency without foreseeable harm.

0237. For a young person in the behavior-support review, a counselor makes this practice the immediate priority: reflecting a child's play and feelings rather than taking over the play narrative. Which concept fits best?

A. Directive play therapy
B. Child-centered play therapy
C. Caregiver involvement
D. Tracking

0238. In a supervision review, a family therapist describes work with a student aged 15 in the school consultation: choosing materials and rules that allow agency without foreseeable harm. What concept is illustrated?

A. Therapeutic limit setting
B. Caregiver involvement
C. Playroom safety
D. Reflecting feelings

0239. Which option is the clearest practical expression of Symbolic play?

A. Following the child's symbolic play as a communication channel while maintaining therapeutic purpose.
B. Documenting what occurred and separating directly observed behavior from interpretation.
C. Choosing and structuring a play activity to practice a specified coping or communication skill.
D. Remaining curious about a toy character's role instead of assuming its play meaning.

0240. A supervisor asks for an applied contrast between Therapeutic play and Playroom safety. Which option fits?

A. Therapeutic play: Following the child's symbolic play as a communication channel while maintaining therapeutic purpose. / Playroom safety: Choosing materials and rules that allow agency without foreseeable harm.
B. Therapeutic play: Choosing materials and rules that allow agency without foreseeable harm. / Playroom safety: Following the child's symbolic play as a communication channel while maintaining therapeutic purpose.
C. Therapeutic play: Offering a tentative feeling reflection and allowing the child to correct it. / Playroom safety: Choosing materials and rules that allow agency without foreseeable harm.
D. Therapeutic play: Following the child's symbolic play as a communication channel while maintaining therapeutic purpose. / Playroom safety: Choosing and structuring a play activity to practice a specified coping or communication skill.

0241. An interdisciplinary team reviews a young person aged 10's case at the family session. The school support specialist recommends remaining curious about a toy character's role instead of assuming its play meaning. Which course concept best fits?

A. Play therapy documentation
B. Therapeutic limit setting
C. Symbolic play
D. Directive play therapy

0242. Which option pairs the definitions of Child-centered play therapy and Directive play therapy correctly, in that order?

A. Child-centered play therapy: A non-directive approach emphasizing acceptance, empathy, tracking, and the child's lead within safe limits. / Directive play therapy: Planned collaboration with caregivers that supports the child's goals while preserving appropriate therapeutic boundaries.
B. Child-centered play therapy: A non-directive approach emphasizing acceptance, empathy, tracking, and the child's lead within safe limits. / Directive play therapy: A therapist-guided use of play activities selected to address identified therapeutic goals.
C. Child-centered play therapy: Purposeful use of play within a helping relationship to support expression, exploration, and development. / Directive play therapy: A therapist-guided use of play activities selected to address identified therapeutic goals.
D. Child-centered play therapy: A therapist-guided use of play activities selected to address identified therapeutic goals. / Directive play therapy: A non-directive approach emphasizing acceptance, empathy, tracking, and the child's lead within safe limits.

0243. In the school counseling office, the agreed focus for a service navigator working with a child aged 11 is choosing materials and rules that allow agency without foreseeable harm. Which concept names this focus?

A. Symbolic play
B. Play therapy documentation
C. Playroom safety
D. Therapeutic play

0244. Choose the practice comparison that best separates Reflecting feelings from Play therapy documentation.

A. Reflecting feelings: Offering a tentative feeling reflection and allowing the child to correct it. / Play therapy documentation: Saying what the child is doing in play without adding an unsupported interpretation.
B. Reflecting feelings: Documenting what occurred and separating directly observed behavior from interpretation. / Play therapy documentation: Offering a tentative feeling reflection and allowing the child to correct it.
C. Reflecting feelings: Offering a tentative feeling reflection and allowing the child to correct it. / Play therapy documentation: Documenting what occurred and separating directly observed behavior from interpretation.
D. Reflecting feelings: Stating the limit, acknowledging the feeling, and identifying a safe alternative action. / Play therapy documentation: Documenting what occurred and separating directly observed behavior from interpretation.

0245. In the student wellness team, a school-based clinician is considering this approach for a young person aged 10: choosing and structuring a play activity to practice a specified coping or communication skill. Which framework does it represent?

A. Directive play therapy
B. Play therapy documentation
C. Child-centered play therapy
D. Symbolic play

0246. During work in the telehealth session, a youth worker identifies this need: reflecting a child's play and feelings rather than taking over the play narrative. Which idea should guide the response?

A. Symbolic play
B. Therapeutic limit setting
C. Caregiver involvement
D. Child-centered play therapy

0247. A service team discusses a student aged 17 in the caregiver consultation. Their proposed next step is following the child's symbolic play as a communication channel while maintaining therapeutic purpose. Which course concept supports it?

A. Directive play therapy
B. Therapeutic play
C. Play therapy documentation
D. Child-centered play therapy

0248. How are Tracking and Play therapy documentation most accurately differentiated in this curriculum?

A. Tracking: Recording observable play, interventions, response, and clinical rationale while distinguishing observation from inference. / Play therapy documentation: Describing a child's observable play actions in a clear, nonjudgmental way.
B. Tracking: A non-directive approach emphasizing acceptance, empathy, tracking, and the child's lead within safe limits. / Play therapy documentation: Recording observable play, interventions, response, and clinical rationale while distinguishing observation from inference.
C. Tracking: Describing a child's observable play actions in a clear, nonjudgmental way. / Play therapy documentation: Recording observable play, interventions, response, and clinical rationale while distinguishing observation from inference.
D. Tracking: Describing a child's observable play actions in a clear, nonjudgmental way. / Play therapy documentation: Planned collaboration with caregivers that supports the child's goals while preserving appropriate therapeutic boundaries.

0249. Which option correctly matches each concept to its practice focus: Therapeutic play and Directive play therapy?

A. Therapeutic play: Following the child's symbolic play as a communication channel while maintaining therapeutic purpose. / Directive play therapy: Choosing and structuring a play activity to practice a specified coping or communication skill.
B. Therapeutic play: Following the child's symbolic play as a communication channel while maintaining therapeutic purpose. / Directive play therapy: Remaining curious about a toy character's role instead of assuming its play meaning.
C. Therapeutic play: Choosing and structuring a play activity to practice a specified coping or communication skill. / Directive play therapy: Following the child's symbolic play as a communication channel while maintaining therapeutic purpose.
D. Therapeutic play: Documenting what occurred and separating directly observed behavior from interpretation. / Directive play therapy: Choosing and structuring a play activity to practice a specified coping or communication skill.

0250. In the caregiver consultation, a school-based clinician is considering this approach for a child aged 6: choosing materials and rules that allow agency without foreseeable harm. Which framework does it represent?

A. Child-centered play therapy
B. Reflecting feelings
C. Therapeutic play
D. Playroom safety

0251. A planning meeting about a school-age child includes a clinical supervisor. The proposed practice in the school counseling office is stating the limit, acknowledging the feeling, and identifying a safe alternative action. Which idea underlies it?

A. Child-centered play therapy
B. Therapeutic limit setting
C. Playroom safety
D. Caregiver involvement

0252. A service team discusses a middle-school student in the community mental-health service. Their proposed next step is sharing general progress and practical support strategies with caregivers under the consent and privacy plan. Which course concept supports it?

A. Symbolic play
B. Child-centered play therapy
C. Caregiver involvement
D. Therapeutic limit setting

0253. Which statement accurately contrasts the course concepts Child-centered play therapy and Reflecting feelings?

A. Child-centered play therapy: A non-directive approach emphasizing acceptance, empathy, tracking, and the child's lead within safe limits. / Reflecting feelings: Naming or tentatively reflecting the emotional meaning conveyed through a child's words or play.
B. Child-centered play therapy: Naming or tentatively reflecting the emotional meaning conveyed through a child's words or play. / Reflecting feelings: A non-directive approach emphasizing acceptance, empathy, tracking, and the child's lead within safe limits.
C. Child-centered play therapy: Thoughtful arrangement and selection of materials that permit expression while protecting physical and emotional safety. / Reflecting feelings: Naming or tentatively reflecting the emotional meaning conveyed through a child's words or play.
D. Child-centered play therapy: A non-directive approach emphasizing acceptance, empathy, tracking, and the child's lead within safe limits. / Reflecting feelings: Planned collaboration with caregivers that supports the child's goals while preserving appropriate therapeutic boundaries.

0254. Which description belongs with the term Directive play therapy?

A. Planned collaboration with caregivers that supports the child's goals while preserving appropriate therapeutic boundaries.
B. A therapist-guided use of play activities selected to address identified therapeutic goals.
C. A clear, empathic boundary that protects people or property while offering acceptable alternatives.
D. Recording observable play, interventions, response, and clinical rationale while distinguishing observation from inference.

0255. Which choice aligns each practice with the correct idea, Playroom safety or Caregiver involvement?

A. Playroom safety: Stating the limit, acknowledging the feeling, and identifying a safe alternative action. / Caregiver involvement: Sharing general progress and practical support strategies with caregivers under the consent and privacy plan.
B. Playroom safety: Choosing materials and rules that allow agency without foreseeable harm. / Caregiver involvement: Sharing general progress and practical support strategies with caregivers under the consent and privacy plan.
C. Playroom safety: Choosing materials and rules that allow agency without foreseeable harm. / Caregiver involvement: Documenting what occurred and separating directly observed behavior from interpretation.
D. Playroom safety: Sharing general progress and practical support strategies with caregivers under the consent and privacy plan. / Caregiver involvement: Choosing materials and rules that allow agency without foreseeable harm.

0256. In a supervision review, a case coordinator describes work with a student aged 12 in the counseling practicum: saying what the child is doing in play without adding an unsupported interpretation. What concept is illustrated?

A. Reflecting feelings
B. Child-centered play therapy
C. Directive play therapy
D. Tracking

0257. A play therapist is asked to evaluate a proposed service for a young person aged 13 in the telehealth session. The defining feature is following the child's symbolic play as a communication channel while maintaining therapeutic purpose. Which concept fits?

A. Play therapy documentation
B. Reflecting feelings
C. Tracking
D. Therapeutic play

0258. A consultant is supporting a middle-school student in the youth group. The key practice is choosing and structuring a play activity to practice a specified coping or communication skill. Which course concept is most relevant?

A. Symbolic play
B. Directive play therapy
C. Therapeutic play
D. Therapeutic limit setting

0259. At the counseling practicum, a service navigator reviews whether a plan for a teenage client is appropriate. The relevant practice is reflecting a child's play and feelings rather than taking over the play narrative. Which concept is tested?

A. Reflecting feelings
B. Child-centered play therapy
C. Caregiver involvement
D. Therapeutic limit setting

0260. A service team discusses a young person aged 16 in the telehealth session. Their proposed next step is choosing materials and rules that allow agency without foreseeable harm. Which course concept supports it?

A. Child-centered play therapy
B. Caregiver involvement
C. Playroom safety
D. Symbolic play

0261. In the telehealth session, a youth worker explains why a student aged 17 would benefit from reflecting a child's play and feelings rather than taking over the play narrative. Which course concept underpins the explanation?

A. Caregiver involvement
B. Child-centered play therapy
C. Play therapy documentation
D. Reflecting feelings

0262. A trainee must distinguish how Therapeutic play and Reflecting feelings guide practice. Which comparison is accurate?

A. Therapeutic play: Offering a tentative feeling reflection and allowing the child to correct it. / Reflecting feelings: Following the child's symbolic play as a communication channel while maintaining therapeutic purpose.
B. Therapeutic play: Reflecting a child's play and feelings rather than taking over the play narrative. / Reflecting feelings: Offering a tentative feeling reflection and allowing the child to correct it.
C. Therapeutic play: Following the child's symbolic play as a communication channel while maintaining therapeutic purpose. / Reflecting feelings: Documenting what occurred and separating directly observed behavior from interpretation.
D. Therapeutic play: Following the child's symbolic play as a communication channel while maintaining therapeutic purpose. / Reflecting feelings: Offering a tentative feeling reflection and allowing the child to correct it.

0263. A trainee must explain Reflecting feelings. Which answer is accurate?

A. A therapist-guided use of play activities selected to address identified therapeutic goals.
B. Recording observable play, interventions, response, and clinical rationale while distinguishing observation from inference.
C. Naming or tentatively reflecting the emotional meaning conveyed through a child's words or play.
D. Thoughtful arrangement and selection of materials that permit expression while protecting physical and emotional safety.

0264. A clinical supervisor is asked to evaluate a proposed service for a student aged 9 in the supervision meeting. The defining feature is saying what the child is doing in play without adding an unsupported interpretation. Which concept fits?

A. Tracking
B. Child-centered play therapy
C. Playroom safety
D. Therapeutic play

0265. In the clinical planning session, the agreed focus for a community practitioner working with a teenage client is remaining curious about a toy character's role instead of assuming its play meaning. Which concept names this focus?

A. Directive play therapy
B. Symbolic play
C. Therapeutic limit setting
D. Play therapy documentation

0266. At a case-planning meeting, the behavior specialist proposes offering a tentative feeling reflection and allowing the child to correct it. for a child aged 11 seen in the multidisciplinary case conference. Which concept does this illustrate?

A. Directive play therapy
B. Playroom safety
C. Therapeutic limit setting
D. Reflecting feelings

0267. In a supervision quiz, how should Playroom safety be distinguished from Caregiver involvement?

A. Playroom safety: Planned collaboration with caregivers that supports the child's goals while preserving appropriate therapeutic boundaries. / Caregiver involvement: Thoughtful arrangement and selection of materials that permit expression while protecting physical and emotional safety.
B. Playroom safety: A clear, empathic boundary that protects people or property while offering acceptable alternatives. / Caregiver involvement: Planned collaboration with caregivers that supports the child's goals while preserving appropriate therapeutic boundaries.
C. Playroom safety: Thoughtful arrangement and selection of materials that permit expression while protecting physical and emotional safety. / Caregiver involvement: Recording observable play, interventions, response, and clinical rationale while distinguishing observation from inference.
D. Playroom safety: Thoughtful arrangement and selection of materials that permit expression while protecting physical and emotional safety. / Caregiver involvement: Planned collaboration with caregivers that supports the child's goals while preserving appropriate therapeutic boundaries.

0268. A child of elementary-school age is receiving support in the clinical planning session. The consulting counselor is guided by this practice: stating the limit, acknowledging the feeling, and identifying a safe alternative action. Which principle best fits?

A. Directive play therapy
B. Child-centered play therapy
C. Therapeutic play
D. Therapeutic limit setting

0269. In a supervision quiz, how should Therapeutic play be distinguished from Child-centered play therapy?

A. Therapeutic play: A non-directive approach emphasizing acceptance, empathy, tracking, and the child's lead within safe limits. / Child-centered play therapy: Purposeful use of play within a helping relationship to support expression, exploration, and development.
B. Therapeutic play: Purposeful use of play within a helping relationship to support expression, exploration, and development. / Child-centered play therapy: A non-directive approach emphasizing acceptance, empathy, tracking, and the child's lead within safe limits.
C. Therapeutic play: Naming or tentatively reflecting the emotional meaning conveyed through a child's words or play. / Child-centered play therapy: A non-directive approach emphasizing acceptance, empathy, tracking, and the child's lead within safe limits.
D. Therapeutic play: Purposeful use of play within a helping relationship to support expression, exploration, and development. / Child-centered play therapy: Recording observable play, interventions, response, and clinical rationale while distinguishing observation from inference.

0270. Which statement shows a sound practice-level distinction between Child-centered play therapy and Play therapy documentation?

A. Child-centered play therapy: Choosing and structuring a play activity to practice a specified coping or communication skill. / Play therapy documentation: Documenting what occurred and separating directly observed behavior from interpretation.
B. Child-centered play therapy: Reflecting a child's play and feelings rather than taking over the play narrative. / Play therapy documentation: Sharing general progress and practical support strategies with caregivers under the consent and privacy plan.
C. Child-centered play therapy: Documenting what occurred and separating directly observed behavior from interpretation. / Play therapy documentation: Reflecting a child's play and feelings rather than taking over the play narrative.
D. Child-centered play therapy: Reflecting a child's play and feelings rather than taking over the play narrative. / Play therapy documentation: Documenting what occurred and separating directly observed behavior from interpretation.

0271. A young person aged 16 and a assessment clinician are reviewing goals in the school consultation. The agreed action is reflecting a child's play and feelings rather than taking over the play narrative. Which principle best accounts for it?

A. Caregiver involvement
B. Child-centered play therapy
C. Directive play therapy
D. Therapeutic play

0272. A trainee must explain Therapeutic limit setting. Which answer is accurate?

A. A clear, empathic boundary that protects people or property while offering acceptable alternatives.
B. Describing a child's observable play actions in a clear, nonjudgmental way.
C. Thoughtful arrangement and selection of materials that permit expression while protecting physical and emotional safety.
D. Recording observable play, interventions, response, and clinical rationale while distinguishing observation from inference.

0273. Select the best explanation of Therapeutic limit setting.

A. Thoughtful arrangement and selection of materials that permit expression while protecting physical and emotional safety.
B. Planned collaboration with caregivers that supports the child's goals while preserving appropriate therapeutic boundaries.
C. A clear, empathic boundary that protects people or property while offering acceptable alternatives.
D. Recording observable play, interventions, response, and clinical rationale while distinguishing observation from inference.

0274. A trainee must choose a practice that exemplifies Therapeutic limit setting. Which action is the best fit?

A. Stating the limit, acknowledging the feeling, and identifying a safe alternative action.
B. Sharing general progress and practical support strategies with caregivers under the consent and privacy plan.
C. Choosing and structuring a play activity to practice a specified coping or communication skill.
D. Remaining curious about a toy character's role instead of assuming its play meaning.

0275. Which choice aligns each practice with the correct idea, Directive play therapy or Therapeutic limit setting?

A. Directive play therapy: Choosing and structuring a play activity to practice a specified coping or communication skill. / Therapeutic limit setting: Offering a tentative feeling reflection and allowing the child to correct it.
B. Directive play therapy: Following the child's symbolic play as a communication channel while maintaining therapeutic purpose. / Therapeutic limit setting: Stating the limit, acknowledging the feeling, and identifying a safe alternative action.
C. Directive play therapy: Choosing and structuring a play activity to practice a specified coping or communication skill. / Therapeutic limit setting: Stating the limit, acknowledging the feeling, and identifying a safe alternative action.
D. Directive play therapy: Stating the limit, acknowledging the feeling, and identifying a safe alternative action. / Therapeutic limit setting: Choosing and structuring a play activity to practice a specified coping or communication skill.

0276. A service team discusses a adolescent student in the school-based service. Their proposed next step is choosing and structuring a play activity to practice a specified coping or communication skill. Which course concept supports it?

A. Directive play therapy
B. Child-centered play therapy
C. Caregiver involvement
D. Therapeutic limit setting

0277. Choose the response that best puts Therapeutic play into practice.

A. Reflecting a child's play and feelings rather than taking over the play narrative.
B. Following the child's symbolic play as a communication channel while maintaining therapeutic purpose.
C. Offering a tentative feeling reflection and allowing the child to correct it.
D. Choosing and structuring a play activity to practice a specified coping or communication skill.

0278. How should a practitioner distinguish the applications of Tracking and Caregiver involvement?

A. Tracking: Sharing general progress and practical support strategies with caregivers under the consent and privacy plan. / Caregiver involvement: Saying what the child is doing in play without adding an unsupported interpretation.
B. Tracking: Stating the limit, acknowledging the feeling, and identifying a safe alternative action. / Caregiver involvement: Sharing general progress and practical support strategies with caregivers under the consent and privacy plan.
C. Tracking: Saying what the child is doing in play without adding an unsupported interpretation. / Caregiver involvement: Reflecting a child's play and feelings rather than taking over the play narrative.
D. Tracking: Saying what the child is doing in play without adding an unsupported interpretation. / Caregiver involvement: Sharing general progress and practical support strategies with caregivers under the consent and privacy plan.

0279. A team must select a support approach for a child aged 7 at the student-support meeting. The case coordinator recommends reflecting a child's play and feelings rather than taking over the play narrative. Which idea is most relevant?

A. Child-centered play therapy
B. Caregiver involvement
C. Directive play therapy
D. Therapeutic limit setting

0280. A community practitioner describes an intervention for a young person aged 10 in the child guidance clinic, centered on offering a tentative feeling reflection and allowing the child to correct it. Which named idea is most relevant?

A. Play therapy documentation
B. Child-centered play therapy
C. Reflecting feelings
D. Tracking

0281. A supervisor asks how Playroom safety would appear in practice. Which choice should be selected?

A. Reflecting a child's play and feelings rather than taking over the play narrative.
B. Offering a tentative feeling reflection and allowing the child to correct it.
C. Sharing general progress and practical support strategies with caregivers under the consent and privacy plan.
D. Choosing materials and rules that allow agency without foreseeable harm.

0282. Which option preserves the correct meaning of both Therapeutic play and Therapeutic limit setting?

A. Therapeutic play: Purposeful use of play within a helping relationship to support expression, exploration, and development. / Therapeutic limit setting: A clear, empathic boundary that protects people or property while offering acceptable alternatives.
B. Therapeutic play: Use of objects, actions, or characters to represent ideas and experiences beyond their literal form. / Therapeutic limit setting: A clear, empathic boundary that protects people or property while offering acceptable alternatives.
C. Therapeutic play: A clear, empathic boundary that protects people or property while offering acceptable alternatives. / Therapeutic limit setting: Purposeful use of play within a helping relationship to support expression, exploration, and development.
D. Therapeutic play: Purposeful use of play within a helping relationship to support expression, exploration, and development. / Therapeutic limit setting: Describing a child's observable play actions in a clear, nonjudgmental way.

0283. A student confuses Directive play therapy with Reflecting feelings. Which explanation most accurately separates them?

A. Directive play therapy: A therapist-guided use of play activities selected to address identified therapeutic goals. / Reflecting feelings: Planned collaboration with caregivers that supports the child's goals while preserving appropriate therapeutic boundaries.
B. Directive play therapy: A therapist-guided use of play activities selected to address identified therapeutic goals. / Reflecting feelings: Naming or tentatively reflecting the emotional meaning conveyed through a child's words or play.
C. Directive play therapy: Use of objects, actions, or characters to represent ideas and experiences beyond their literal form. / Reflecting feelings: Naming or tentatively reflecting the emotional meaning conveyed through a child's words or play.
D. Directive play therapy: Naming or tentatively reflecting the emotional meaning conveyed through a child's words or play. / Reflecting feelings: A therapist-guided use of play activities selected to address identified therapeutic goals.

0284. Which option preserves the correct meaning of both Directive play therapy and Reflecting feelings?

A. Directive play therapy: A therapist-guided use of play activities selected to address identified therapeutic goals. / Reflecting feelings: Naming or tentatively reflecting the emotional meaning conveyed through a child's words or play.
B. Directive play therapy: A therapist-guided use of play activities selected to address identified therapeutic goals. / Reflecting feelings: Planned collaboration with caregivers that supports the child's goals while preserving appropriate therapeutic boundaries.
C. Directive play therapy: Use of objects, actions, or characters to represent ideas and experiences beyond their literal form. / Reflecting feelings: Naming or tentatively reflecting the emotional meaning conveyed through a child's words or play.
D. Directive play therapy: Naming or tentatively reflecting the emotional meaning conveyed through a child's words or play. / Reflecting feelings: A therapist-guided use of play activities selected to address identified therapeutic goals.

0285. Select the best explanation of Symbolic play.

A. Use of objects, actions, or characters to represent ideas and experiences beyond their literal form.
B. A clear, empathic boundary that protects people or property while offering acceptable alternatives.
C. Naming or tentatively reflecting the emotional meaning conveyed through a child's words or play.
D. Purposeful use of play within a helping relationship to support expression, exploration, and development.

0286. Which option correctly matches each concept to its practice focus: Directive play therapy and Play therapy documentation?

A. Directive play therapy: Choosing and structuring a play activity to practice a specified coping or communication skill. / Play therapy documentation: Documenting what occurred and separating directly observed behavior from interpretation.
B. Directive play therapy: Offering a tentative feeling reflection and allowing the child to correct it. / Play therapy documentation: Documenting what occurred and separating directly observed behavior from interpretation.
C. Directive play therapy: Choosing and structuring a play activity to practice a specified coping or communication skill. / Play therapy documentation: Following the child's symbolic play as a communication channel while maintaining therapeutic purpose.
D. Directive play therapy: Documenting what occurred and separating directly observed behavior from interpretation. / Play therapy documentation: Choosing and structuring a play activity to practice a specified coping or communication skill.

0287. Which option is the clearest practical expression of Directive play therapy?

A. Saying what the child is doing in play without adding an unsupported interpretation.
B. Documenting what occurred and separating directly observed behavior from interpretation.
C. Following the child's symbolic play as a communication channel while maintaining therapeutic purpose.
D. Choosing and structuring a play activity to practice a specified coping or communication skill.

0288. Which course concept is defined as follows: Use of objects, actions, or characters to represent ideas and experiences beyond their literal form.

A. Reflecting feelings
B. Therapeutic play
C. Symbolic play
D. Play therapy documentation

0289. An interdisciplinary team reviews a child aged 7's case at the classroom support meeting. The clinical supervisor recommends following the child's symbolic play as a communication channel while maintaining therapeutic purpose. Which course concept best fits?

A. Caregiver involvement
B. Symbolic play
C. Directive play therapy
D. Therapeutic play

0290. Which statement accurately contrasts the course concepts Directive play therapy and Play therapy documentation?

A. Directive play therapy: Recording observable play, interventions, response, and clinical rationale while distinguishing observation from inference. / Play therapy documentation: A therapist-guided use of play activities selected to address identified therapeutic goals.
B. Directive play therapy: Naming or tentatively reflecting the emotional meaning conveyed through a child's words or play. / Play therapy documentation: Recording observable play, interventions, response, and clinical rationale while distinguishing observation from inference.
C. Directive play therapy: A therapist-guided use of play activities selected to address identified therapeutic goals. / Play therapy documentation: Recording observable play, interventions, response, and clinical rationale while distinguishing observation from inference.
D. Directive play therapy: A therapist-guided use of play activities selected to address identified therapeutic goals. / Play therapy documentation: Purposeful use of play within a helping relationship to support expression, exploration, and development.

0291. How should a practitioner distinguish the applications of Therapeutic play and Tracking?

A. Therapeutic play: Following the child's symbolic play as a communication channel while maintaining therapeutic purpose. / Tracking: Saying what the child is doing in play without adding an unsupported interpretation.
B. Therapeutic play: Saying what the child is doing in play without adding an unsupported interpretation. / Tracking: Following the child's symbolic play as a communication channel while maintaining therapeutic purpose.
C. Therapeutic play: Documenting what occurred and separating directly observed behavior from interpretation. / Tracking: Saying what the child is doing in play without adding an unsupported interpretation.
D. Therapeutic play: Following the child's symbolic play as a communication channel while maintaining therapeutic purpose. / Tracking: Offering a tentative feeling reflection and allowing the child to correct it.

0292. Which option pairs the definitions of Playroom safety and Caregiver involvement correctly, in that order?

A. Playroom safety: A clear, empathic boundary that protects people or property while offering acceptable alternatives. / Caregiver involvement: Planned collaboration with caregivers that supports the child's goals while preserving appropriate therapeutic boundaries.
B. Playroom safety: Planned collaboration with caregivers that supports the child's goals while preserving appropriate therapeutic boundaries. / Caregiver involvement: Thoughtful arrangement and selection of materials that permit expression while protecting physical and emotional safety.
C. Playroom safety: Thoughtful arrangement and selection of materials that permit expression while protecting physical and emotional safety. / Caregiver involvement: Planned collaboration with caregivers that supports the child's goals while preserving appropriate therapeutic boundaries.
D. Playroom safety: Thoughtful arrangement and selection of materials that permit expression while protecting physical and emotional safety. / Caregiver involvement: Recording observable play, interventions, response, and clinical rationale while distinguishing observation from inference.

0293. A supervisor asks how Child-centered play therapy would appear in practice. Which choice should be selected?

A. Remaining curious about a toy character's role instead of assuming its play meaning.
B. Documenting what occurred and separating directly observed behavior from interpretation.
C. Saying what the child is doing in play without adding an unsupported interpretation.
D. Reflecting a child's play and feelings rather than taking over the play narrative.

0294. Which paired example correctly applies Tracking first and Playroom safety second?

A. Tracking: Choosing and structuring a play activity to practice a specified coping or communication skill. / Playroom safety: Choosing materials and rules that allow agency without foreseeable harm.
B. Tracking: Saying what the child is doing in play without adding an unsupported interpretation. / Playroom safety: Choosing materials and rules that allow agency without foreseeable harm.
C. Tracking: Saying what the child is doing in play without adding an unsupported interpretation. / Playroom safety: Offering a tentative feeling reflection and allowing the child to correct it.
D. Tracking: Choosing materials and rules that allow agency without foreseeable harm. / Playroom safety: Saying what the child is doing in play without adding an unsupported interpretation.

0295. Which pair of actions illustrates Tracking and Play therapy documentation, respectively?

A. Tracking: Saying what the child is doing in play without adding an unsupported interpretation. / Play therapy documentation: Sharing general progress and practical support strategies with caregivers under the consent and privacy plan.
B. Tracking: Reflecting a child's play and feelings rather than taking over the play narrative. / Play therapy documentation: Documenting what occurred and separating directly observed behavior from interpretation.
C. Tracking: Saying what the child is doing in play without adding an unsupported interpretation. / Play therapy documentation: Documenting what occurred and separating directly observed behavior from interpretation.
D. Tracking: Documenting what occurred and separating directly observed behavior from interpretation. / Play therapy documentation: Saying what the child is doing in play without adding an unsupported interpretation.

0296. A student confuses Therapeutic limit setting with Caregiver involvement. Which explanation most accurately separates them?

A. Therapeutic limit setting: Planned collaboration with caregivers that supports the child's goals while preserving appropriate therapeutic boundaries. / Caregiver involvement: A clear, empathic boundary that protects people or property while offering acceptable alternatives.
B. Therapeutic limit setting: A clear, empathic boundary that protects people or property while offering acceptable alternatives. / Caregiver involvement: Planned collaboration with caregivers that supports the child's goals while preserving appropriate therapeutic boundaries.
C. Therapeutic limit setting: Purposeful use of play within a helping relationship to support expression, exploration, and development. / Caregiver involvement: Planned collaboration with caregivers that supports the child's goals while preserving appropriate therapeutic boundaries.
D. Therapeutic limit setting: A clear, empathic boundary that protects people or property while offering acceptable alternatives. / Caregiver involvement: Recording observable play, interventions, response, and clinical rationale while distinguishing observation from inference.

0297. A supervisor asks how Reflecting feelings would appear in practice. Which choice should be selected?

A. Saying what the child is doing in play without adding an unsupported interpretation.
B. Choosing and structuring a play activity to practice a specified coping or communication skill.
C. Offering a tentative feeling reflection and allowing the child to correct it.
D. Remaining curious about a toy character's role instead of assuming its play meaning.

0298. How should a practitioner distinguish the applications of Therapeutic play and Child-centered play therapy?

A. Therapeutic play: Following the child's symbolic play as a communication channel while maintaining therapeutic purpose. / Child-centered play therapy: Reflecting a child's play and feelings rather than taking over the play narrative.
B. Therapeutic play: Following the child's symbolic play as a communication channel while maintaining therapeutic purpose. / Child-centered play therapy: Documenting what occurred and separating directly observed behavior from interpretation.
C. Therapeutic play: Offering a tentative feeling reflection and allowing the child to correct it. / Child-centered play therapy: Reflecting a child's play and feelings rather than taking over the play narrative.
D. Therapeutic play: Reflecting a child's play and feelings rather than taking over the play narrative. / Child-centered play therapy: Following the child's symbolic play as a communication channel while maintaining therapeutic purpose.

0299. Which paired example correctly applies Therapeutic play first and Symbolic play second?

A. Therapeutic play: Sharing general progress and practical support strategies with caregivers under the consent and privacy plan. / Symbolic play: Remaining curious about a toy character's role instead of assuming its play meaning.
B. Therapeutic play: Remaining curious about a toy character's role instead of assuming its play meaning. / Symbolic play: Following the child's symbolic play as a communication channel while maintaining therapeutic purpose.
C. Therapeutic play: Following the child's symbolic play as a communication channel while maintaining therapeutic purpose. / Symbolic play: Stating the limit, acknowledging the feeling, and identifying a safe alternative action.
D. Therapeutic play: Following the child's symbolic play as a communication channel while maintaining therapeutic purpose. / Symbolic play: Remaining curious about a toy character's role instead of assuming its play meaning.

0300. A planning meeting about a preadolescent child includes a play therapist. The proposed practice in the family resource center is choosing and structuring a play activity to practice a specified coping or communication skill. Which idea underlies it?

A. Play therapy documentation
B. Directive play therapy
C. Caregiver involvement
D. Therapeutic play

0301. Which choice aligns each practice with the correct idea, Playroom safety or Play therapy documentation?

A. Playroom safety: Choosing materials and rules that allow agency without foreseeable harm. / Play therapy documentation: Documenting what occurred and separating directly observed behavior from interpretation.
B. Playroom safety: Documenting what occurred and separating directly observed behavior from interpretation. / Play therapy documentation: Choosing materials and rules that allow agency without foreseeable harm.
C. Playroom safety: Choosing materials and rules that allow agency without foreseeable harm. / Play therapy documentation: Following the child's symbolic play as a communication channel while maintaining therapeutic purpose.
D. Playroom safety: Stating the limit, acknowledging the feeling, and identifying a safe alternative action. / Play therapy documentation: Documenting what occurred and separating directly observed behavior from interpretation.

0302. At a case-planning meeting, the clinical supervisor proposes reflecting a child's play and feelings rather than taking over the play narrative. for a student aged 15 seen in the family session. Which concept does this illustrate?

A. Tracking
B. Symbolic play
C. Child-centered play therapy
D. Therapeutic limit setting

0303. Identify the most precise label for this idea: Describing a child's observable play actions in a clear, nonjudgmental way.

A. Therapeutic play
B. Playroom safety
C. Reflecting feelings
D. Tracking

0304. Choose the term that matches this definition: A therapist-guided use of play activities selected to address identified therapeutic goals.

A. Child-centered play therapy
B. Directive play therapy
C. Symbolic play
D. Caregiver involvement

0305. A student confuses Child-centered play therapy with Directive play therapy. Which explanation most accurately separates them?

A. Child-centered play therapy: A therapist-guided use of play activities selected to address identified therapeutic goals. / Directive play therapy: A non-directive approach emphasizing acceptance, empathy, tracking, and the child's lead within safe limits.
B. Child-centered play therapy: A non-directive approach emphasizing acceptance, empathy, tracking, and the child's lead within safe limits. / Directive play therapy: Planned collaboration with caregivers that supports the child's goals while preserving appropriate therapeutic boundaries.
C. Child-centered play therapy: A non-directive approach emphasizing acceptance, empathy, tracking, and the child's lead within safe limits. / Directive play therapy: A therapist-guided use of play activities selected to address identified therapeutic goals.
D. Child-centered play therapy: Purposeful use of play within a helping relationship to support expression, exploration, and development. / Directive play therapy: A therapist-guided use of play activities selected to address identified therapeutic goals.

0306. In the outpatient clinic, a youth worker describes the most appropriate support for a young person as stating the limit, acknowledging the feeling, and identifying a safe alternative action. Which framework is being applied?

A. Caregiver involvement
B. Therapeutic limit setting
C. Child-centered play therapy
D. Reflecting feelings

0307. Which option preserves the correct meaning of both Therapeutic limit setting and Symbolic play?

A. Therapeutic limit setting: Use of objects, actions, or characters to represent ideas and experiences beyond their literal form. / Symbolic play: A clear, empathic boundary that protects people or property while offering acceptable alternatives.
B. Therapeutic limit setting: A clear, empathic boundary that protects people or property while offering acceptable alternatives. / Symbolic play: Thoughtful arrangement and selection of materials that permit expression while protecting physical and emotional safety.
C. Therapeutic limit setting: Planned collaboration with caregivers that supports the child's goals while preserving appropriate therapeutic boundaries. / Symbolic play: Use of objects, actions, or characters to represent ideas and experiences beyond their literal form.
D. Therapeutic limit setting: A clear, empathic boundary that protects people or property while offering acceptable alternatives. / Symbolic play: Use of objects, actions, or characters to represent ideas and experiences beyond their literal form.

0308. Which option pairs the definitions of Tracking and Play therapy documentation correctly, in that order?

A. Tracking: Describing a child's observable play actions in a clear, nonjudgmental way. / Play therapy documentation: Recording observable play, interventions, response, and clinical rationale while distinguishing observation from inference.
B. Tracking: Recording observable play, interventions, response, and clinical rationale while distinguishing observation from inference. / Play therapy documentation: Describing a child's observable play actions in a clear, nonjudgmental way.
C. Tracking: Describing a child's observable play actions in a clear, nonjudgmental way. / Play therapy documentation: Planned collaboration with caregivers that supports the child's goals while preserving appropriate therapeutic boundaries.
D. Tracking: A non-directive approach emphasizing acceptance, empathy, tracking, and the child's lead within safe limits. / Play therapy documentation: Recording observable play, interventions, response, and clinical rationale while distinguishing observation from inference.

0309. Which comparison would correct a trainee's misunderstanding of Child-centered play therapy versus Play therapy documentation?

A. Child-centered play therapy: A non-directive approach emphasizing acceptance, empathy, tracking, and the child's lead within safe limits. / Play therapy documentation: Recording observable play, interventions, response, and clinical rationale while distinguishing observation from inference.
B. Child-centered play therapy: A therapist-guided use of play activities selected to address identified therapeutic goals. / Play therapy documentation: Recording observable play, interventions, response, and clinical rationale while distinguishing observation from inference.
C. Child-centered play therapy: Recording observable play, interventions, response, and clinical rationale while distinguishing observation from inference. / Play therapy documentation: A non-directive approach emphasizing acceptance, empathy, tracking, and the child's lead within safe limits.
D. Child-centered play therapy: A non-directive approach emphasizing acceptance, empathy, tracking, and the child's lead within safe limits. / Play therapy documentation: Planned collaboration with caregivers that supports the child's goals while preserving appropriate therapeutic boundaries.

0310. Which comparison would correct a trainee's misunderstanding of Caregiver involvement versus Play therapy documentation?

A. Caregiver involvement: A therapist-guided use of play activities selected to address identified therapeutic goals. / Play therapy documentation: Recording observable play, interventions, response, and clinical rationale while distinguishing observation from inference.
B. Caregiver involvement: Planned collaboration with caregivers that supports the child's goals while preserving appropriate therapeutic boundaries. / Play therapy documentation: Thoughtful arrangement and selection of materials that permit expression while protecting physical and emotional safety.
C. Caregiver involvement: Planned collaboration with caregivers that supports the child's goals while preserving appropriate therapeutic boundaries. / Play therapy documentation: Recording observable play, interventions, response, and clinical rationale while distinguishing observation from inference.
D. Caregiver involvement: Recording observable play, interventions, response, and clinical rationale while distinguishing observation from inference. / Play therapy documentation: Planned collaboration with caregivers that supports the child's goals while preserving appropriate therapeutic boundaries.

0311. In a professional consultation about a young adolescent client, the mental-health professional describes this response in the caregiver consultation: reflecting a child's play and feelings rather than taking over the play narrative. Which term is most apt?

A. Tracking
B. Therapeutic limit setting
C. Directive play therapy
D. Child-centered play therapy

0312. In the family session, a case coordinator is considering this approach for a adolescent student: stating the limit, acknowledging the feeling, and identifying a safe alternative action. Which framework does it represent?

A. Child-centered play therapy
B. Reflecting feelings
C. Therapeutic limit setting
D. Therapeutic play

0313. Which applied comparison correctly identifies what belongs to Reflecting feelings versus Playroom safety?

A. Reflecting feelings: Offering a tentative feeling reflection and allowing the child to correct it. / Playroom safety: Stating the limit, acknowledging the feeling, and identifying a safe alternative action.
B. Reflecting feelings: Choosing materials and rules that allow agency without foreseeable harm. / Playroom safety: Offering a tentative feeling reflection and allowing the child to correct it.
C. Reflecting feelings: Offering a tentative feeling reflection and allowing the child to correct it. / Playroom safety: Choosing materials and rules that allow agency without foreseeable harm.
D. Reflecting feelings: Reflecting a child's play and feelings rather than taking over the play narrative. / Playroom safety: Choosing materials and rules that allow agency without foreseeable harm.

0314. How should a practitioner distinguish the applications of Reflecting feelings and Playroom safety?

A. Reflecting feelings: Reflecting a child's play and feelings rather than taking over the play narrative. / Playroom safety: Choosing materials and rules that allow agency without foreseeable harm.
B. Reflecting feelings: Choosing materials and rules that allow agency without foreseeable harm. / Playroom safety: Offering a tentative feeling reflection and allowing the child to correct it.
C. Reflecting feelings: Offering a tentative feeling reflection and allowing the child to correct it. / Playroom safety: Choosing materials and rules that allow agency without foreseeable harm.
D. Reflecting feelings: Offering a tentative feeling reflection and allowing the child to correct it. / Playroom safety: Stating the limit, acknowledging the feeling, and identifying a safe alternative action.

0315. Which option preserves the correct meaning of both Reflecting feelings and Play therapy documentation?

A. Reflecting feelings: Naming or tentatively reflecting the emotional meaning conveyed through a child's words or play. / Play therapy documentation: Describing a child's observable play actions in a clear, nonjudgmental way.
B. Reflecting feelings: Naming or tentatively reflecting the emotional meaning conveyed through a child's words or play. / Play therapy documentation: Recording observable play, interventions, response, and clinical rationale while distinguishing observation from inference.
C. Reflecting feelings: Recording observable play, interventions, response, and clinical rationale while distinguishing observation from inference. / Play therapy documentation: Naming or tentatively reflecting the emotional meaning conveyed through a child's words or play.
D. Reflecting feelings: A clear, empathic boundary that protects people or property while offering acceptable alternatives. / Play therapy documentation: Recording observable play, interventions, response, and clinical rationale while distinguishing observation from inference.

0316. Choose the definition pair that correctly explains Therapeutic limit setting first and Symbolic play second.

A. Therapeutic limit setting: Planned collaboration with caregivers that supports the child's goals while preserving appropriate therapeutic boundaries. / Symbolic play: Use of objects, actions, or characters to represent ideas and experiences beyond their literal form.
B. Therapeutic limit setting: A clear, empathic boundary that protects people or property while offering acceptable alternatives. / Symbolic play: Thoughtful arrangement and selection of materials that permit expression while protecting physical and emotional safety.
C. Therapeutic limit setting: A clear, empathic boundary that protects people or property while offering acceptable alternatives. / Symbolic play: Use of objects, actions, or characters to represent ideas and experiences beyond their literal form.
D. Therapeutic limit setting: Use of objects, actions, or characters to represent ideas and experiences beyond their literal form. / Symbolic play: A clear, empathic boundary that protects people or property while offering acceptable alternatives.

0317. Which statement shows a sound practice-level distinction between Tracking and Playroom safety?

A. Tracking: Saying what the child is doing in play without adding an unsupported interpretation. / Playroom safety: Offering a tentative feeling reflection and allowing the child to correct it.
B. Tracking: Choosing and structuring a play activity to practice a specified coping or communication skill. / Playroom safety: Choosing materials and rules that allow agency without foreseeable harm.
C. Tracking: Choosing materials and rules that allow agency without foreseeable harm. / Playroom safety: Saying what the child is doing in play without adding an unsupported interpretation.
D. Tracking: Saying what the child is doing in play without adding an unsupported interpretation. / Playroom safety: Choosing materials and rules that allow agency without foreseeable harm.

0318. At a case-planning meeting, the counselor proposes stating the limit, acknowledging the feeling, and identifying a safe alternative action. for a child aged 7 seen in the school-based service. Which concept does this illustrate?

A. Therapeutic limit setting
B. Play therapy documentation
C. Reflecting feelings
D. Therapeutic play

0319. Which statement accurately contrasts the course concepts Reflecting feelings and Play therapy documentation?

A. Reflecting feelings: A clear, empathic boundary that protects people or property while offering acceptable alternatives. / Play therapy documentation: Recording observable play, interventions, response, and clinical rationale while distinguishing observation from inference.
B. Reflecting feelings: Recording observable play, interventions, response, and clinical rationale while distinguishing observation from inference. / Play therapy documentation: Naming or tentatively reflecting the emotional meaning conveyed through a child's words or play.
C. Reflecting feelings: Naming or tentatively reflecting the emotional meaning conveyed through a child's words or play. / Play therapy documentation: Describing a child's observable play actions in a clear, nonjudgmental way.
D. Reflecting feelings: Naming or tentatively reflecting the emotional meaning conveyed through a child's words or play. / Play therapy documentation: Recording observable play, interventions, response, and clinical rationale while distinguishing observation from inference.

0320. Which option preserves the correct meaning of both Caregiver involvement and Play therapy documentation?

A. Caregiver involvement: Planned collaboration with caregivers that supports the child's goals while preserving appropriate therapeutic boundaries. / Play therapy documentation: Thoughtful arrangement and selection of materials that permit expression while protecting physical and emotional safety.
B. Caregiver involvement: Planned collaboration with caregivers that supports the child's goals while preserving appropriate therapeutic boundaries. / Play therapy documentation: Recording observable play, interventions, response, and clinical rationale while distinguishing observation from inference.
C. Caregiver involvement: Recording observable play, interventions, response, and clinical rationale while distinguishing observation from inference. / Play therapy documentation: Planned collaboration with caregivers that supports the child's goals while preserving appropriate therapeutic boundaries.
D. Caregiver involvement: A therapist-guided use of play activities selected to address identified therapeutic goals. / Play therapy documentation: Recording observable play, interventions, response, and clinical rationale while distinguishing observation from inference.

0321. A supervised trainee and a young person aged 16 are discussing support in the caregiver consultation. The selected practice is remaining curious about a toy character's role instead of assuming its play meaning. Which concept does this demonstrate?

A. Tracking
B. Directive play therapy
C. Symbolic play
D. Reflecting feelings

0322. A mental-health professional prepares for a session in the learning-support meeting with a student aged 15. The intended approach is saying what the child is doing in play without adding an unsupported interpretation. Which concept is most relevant?

A. Tracking
B. Therapeutic play
C. Reflecting feelings
D. Playroom safety

0323. At the youth advocacy program, a play therapist meets with a child aged 14. The practice priority is: sharing general progress and practical support strategies with caregivers under the consent and privacy plan. Which concept best captures that priority?

A. Child-centered play therapy
B. Therapeutic play
C. Therapeutic limit setting
D. Caregiver involvement

0324. While supporting a young person aged 16 in the after-school program, a parent educator adopts this practice: stating the limit, acknowledging the feeling, and identifying a safe alternative action. Which concept best explains the choice?

A. Reflecting feelings
B. Therapeutic play
C. Playroom safety
D. Therapeutic limit setting

0325. In a case note about a child aged 14, a consultant working in the child guidance clinic records this priority: stating the limit, acknowledging the feeling, and identifying a safe alternative action. What principle is reflected?

A. Caregiver involvement
B. Tracking
C. Therapeutic limit setting
D. Therapeutic play

0326. In a case note about a young person aged 10, a supervised trainee working in the learning-support meeting records this priority: sharing general progress and practical support strategies with caregivers under the consent and privacy plan. What principle is reflected?

A. Directive play therapy
B. Caregiver involvement
C. Play therapy documentation
D. Playroom safety

0327. A community practitioner is asked what should shape a middle-school student's support in the community mental-health service. The proposed focus is sharing general progress and practical support strategies with caregivers under the consent and privacy plan. Which principle does it represent?

A. Caregiver involvement
B. Playroom safety
C. Reflecting feelings
D. Therapeutic play

0328. For a young person aged 18 seen in the youth group, the community practitioner recommends a plan built around reflecting a child's play and feelings rather than taking over the play narrative. Which concept is reflected?

A. Therapeutic limit setting
B. Tracking
C. Play therapy documentation
D. Child-centered play therapy

0329. How should a practitioner distinguish the applications of Tracking and Play therapy documentation?

A. Tracking: Reflecting a child's play and feelings rather than taking over the play narrative. / Play therapy documentation: Documenting what occurred and separating directly observed behavior from interpretation.
B. Tracking: Saying what the child is doing in play without adding an unsupported interpretation. / Play therapy documentation: Sharing general progress and practical support strategies with caregivers under the consent and privacy plan.
C. Tracking: Documenting what occurred and separating directly observed behavior from interpretation. / Play therapy documentation: Saying what the child is doing in play without adding an unsupported interpretation.
D. Tracking: Saying what the child is doing in play without adding an unsupported interpretation. / Play therapy documentation: Documenting what occurred and separating directly observed behavior from interpretation.

0330. A supervisor asks how Therapeutic play would appear in practice. Which choice should be selected?

A. Sharing general progress and practical support strategies with caregivers under the consent and privacy plan.
B. Saying what the child is doing in play without adding an unsupported interpretation.
C. Remaining curious about a toy character's role instead of assuming its play meaning.
D. Following the child's symbolic play as a communication channel while maintaining therapeutic purpose.

0331. Choose the response that best puts Playroom safety into practice.

A. Reflecting a child's play and feelings rather than taking over the play narrative.
B. Choosing and structuring a play activity to practice a specified coping or communication skill.
C. Stating the limit, acknowledging the feeling, and identifying a safe alternative action.
D. Choosing materials and rules that allow agency without foreseeable harm.

0332. In a supervision quiz, how should Reflecting feelings be distinguished from Therapeutic limit setting?

A. Reflecting feelings: Describing a child's observable play actions in a clear, nonjudgmental way. / Therapeutic limit setting: A clear, empathic boundary that protects people or property while offering acceptable alternatives.
B. Reflecting feelings: A clear, empathic boundary that protects people or property while offering acceptable alternatives. / Therapeutic limit setting: Naming or tentatively reflecting the emotional meaning conveyed through a child's words or play.
C. Reflecting feelings: Naming or tentatively reflecting the emotional meaning conveyed through a child's words or play. / Therapeutic limit setting: Recording observable play, interventions, response, and clinical rationale while distinguishing observation from inference.
D. Reflecting feelings: Naming or tentatively reflecting the emotional meaning conveyed through a child's words or play. / Therapeutic limit setting: A clear, empathic boundary that protects people or property while offering acceptable alternatives.

0333. A preadolescent child is receiving support in the school counseling office. The school counselor is guided by this practice: remaining curious about a toy character's role instead of assuming its play meaning. Which principle best fits?

A. Symbolic play
B. Child-centered play therapy
C. Directive play therapy
D. Therapeutic play

0334. Choose the practice comparison that best separates Therapeutic play from Symbolic play.

A. Therapeutic play: Remaining curious about a toy character's role instead of assuming its play meaning. / Symbolic play: Following the child's symbolic play as a communication channel while maintaining therapeutic purpose.
B. Therapeutic play: Following the child's symbolic play as a communication channel while maintaining therapeutic purpose. / Symbolic play: Stating the limit, acknowledging the feeling, and identifying a safe alternative action.
C. Therapeutic play: Sharing general progress and practical support strategies with caregivers under the consent and privacy plan. / Symbolic play: Remaining curious about a toy character's role instead of assuming its play meaning.
D. Therapeutic play: Following the child's symbolic play as a communication channel while maintaining therapeutic purpose. / Symbolic play: Remaining curious about a toy character's role instead of assuming its play meaning.

0335. Which option correctly matches each concept to its practice focus: Therapeutic play and Symbolic play?

A. Therapeutic play: Sharing general progress and practical support strategies with caregivers under the consent and privacy plan. / Symbolic play: Remaining curious about a toy character's role instead of assuming its play meaning.
B. Therapeutic play: Following the child's symbolic play as a communication channel while maintaining therapeutic purpose. / Symbolic play: Stating the limit, acknowledging the feeling, and identifying a safe alternative action.
C. Therapeutic play: Following the child's symbolic play as a communication channel while maintaining therapeutic purpose. / Symbolic play: Remaining curious about a toy character's role instead of assuming its play meaning.
D. Therapeutic play: Remaining curious about a toy character's role instead of assuming its play meaning. / Symbolic play: Following the child's symbolic play as a communication channel while maintaining therapeutic purpose.

0336. Which course concept is defined as follows: A clear, empathic boundary that protects people or property while offering acceptable alternatives.

A. Child-centered play therapy
B. Play therapy documentation
C. Therapeutic play
D. Therapeutic limit setting

0337. A consulting counselor is explaining a choice to a student aged 15 and caregiver in the youth group. The choice centers on following the child's symbolic play as a communication channel while maintaining therapeutic purpose. Which idea is illustrated?

A. Therapeutic play
B. Tracking
C. Caregiver involvement
D. Reflecting feelings

0338. When reviewing a young person's plan in the supervision meeting, the family therapist notes that the next step is choosing and structuring a play activity to practice a specified coping or communication skill. Which concept guides this step?

A. Tracking
B. Play therapy documentation
C. Child-centered play therapy
D. Directive play therapy

0339. Which statement shows a sound practice-level distinction between Directive play therapy and Tracking?

A. Directive play therapy: Choosing and structuring a play activity to practice a specified coping or communication skill. / Tracking: Saying what the child is doing in play without adding an unsupported interpretation.
B. Directive play therapy: Saying what the child is doing in play without adding an unsupported interpretation. / Tracking: Choosing and structuring a play activity to practice a specified coping or communication skill.
C. Directive play therapy: Choosing and structuring a play activity to practice a specified coping or communication skill. / Tracking: Offering a tentative feeling reflection and allowing the child to correct it.
D. Directive play therapy: Sharing general progress and practical support strategies with caregivers under the consent and privacy plan. / Tracking: Saying what the child is doing in play without adding an unsupported interpretation.

0340. Which applied comparison correctly identifies what belongs to Child-centered play therapy versus Reflecting feelings?

A. Child-centered play therapy: Reflecting a child's play and feelings rather than taking over the play narrative. / Reflecting feelings: Offering a tentative feeling reflection and allowing the child to correct it.
B. Child-centered play therapy: Choosing materials and rules that allow agency without foreseeable harm. / Reflecting feelings: Offering a tentative feeling reflection and allowing the child to correct it.
C. Child-centered play therapy: Offering a tentative feeling reflection and allowing the child to correct it. / Reflecting feelings: Reflecting a child's play and feelings rather than taking over the play narrative.
D. Child-centered play therapy: Reflecting a child's play and feelings rather than taking over the play narrative. / Reflecting feelings: Sharing general progress and practical support strategies with caregivers under the consent and privacy plan.

0341. A case coordinator presents a support plan for a child of elementary-school age at the supervision meeting. Its central feature is choosing materials and rules that allow agency without foreseeable harm. Which concept should be named?

A. Caregiver involvement
B. Playroom safety
C. Reflecting feelings
D. Therapeutic play

0342. In a supervision quiz, how should Therapeutic play be distinguished from Reflecting feelings?

A. Therapeutic play: Purposeful use of play within a helping relationship to support expression, exploration, and development. / Reflecting feelings: Naming or tentatively reflecting the emotional meaning conveyed through a child's words or play.
B. Therapeutic play: Naming or tentatively reflecting the emotional meaning conveyed through a child's words or play. / Reflecting feelings: Purposeful use of play within a helping relationship to support expression, exploration, and development.
C. Therapeutic play: A non-directive approach emphasizing acceptance, empathy, tracking, and the child's lead within safe limits. / Reflecting feelings: Naming or tentatively reflecting the emotional meaning conveyed through a child's words or play.
D. Therapeutic play: Purposeful use of play within a helping relationship to support expression, exploration, and development. / Reflecting feelings: Recording observable play, interventions, response, and clinical rationale while distinguishing observation from inference.

0343. A trainee must distinguish how Directive play therapy and Play therapy documentation guide practice. Which comparison is accurate?

A. Directive play therapy: Documenting what occurred and separating directly observed behavior from interpretation. / Play therapy documentation: Choosing and structuring a play activity to practice a specified coping or communication skill.
B. Directive play therapy: Choosing and structuring a play activity to practice a specified coping or communication skill. / Play therapy documentation: Documenting what occurred and separating directly observed behavior from interpretation.
C. Directive play therapy: Choosing and structuring a play activity to practice a specified coping or communication skill. / Play therapy documentation: Following the child's symbolic play as a communication channel while maintaining therapeutic purpose.
D. Directive play therapy: Offering a tentative feeling reflection and allowing the child to correct it. / Play therapy documentation: Documenting what occurred and separating directly observed behavior from interpretation.

0344. How are Therapeutic play and Symbolic play most accurately differentiated in this curriculum?

A. Therapeutic play: Purposeful use of play within a helping relationship to support expression, exploration, and development. / Symbolic play: Use of objects, actions, or characters to represent ideas and experiences beyond their literal form.
B. Therapeutic play: Use of objects, actions, or characters to represent ideas and experiences beyond their literal form. / Symbolic play: Purposeful use of play within a helping relationship to support expression, exploration, and development.
C. Therapeutic play: Purposeful use of play within a helping relationship to support expression, exploration, and development. / Symbolic play: A clear, empathic boundary that protects people or property while offering acceptable alternatives.
D. Therapeutic play: Planned collaboration with caregivers that supports the child's goals while preserving appropriate therapeutic boundaries. / Symbolic play: Use of objects, actions, or characters to represent ideas and experiences beyond their literal form.

0345. A case discussion concerns a child of elementary-school age and a parent educator in the caregiver consultation. The practitioner is considering choosing and structuring a play activity to practice a specified coping or communication skill. Which principle is involved?

A. Caregiver involvement
B. Symbolic play
C. Tracking
D. Directive play therapy

0346. Choose the definition pair that correctly explains Child-centered play therapy first and Reflecting feelings second.

A. Child-centered play therapy: A non-directive approach emphasizing acceptance, empathy, tracking, and the child's lead within safe limits. / Reflecting feelings: Planned collaboration with caregivers that supports the child's goals while preserving appropriate therapeutic boundaries.
B. Child-centered play therapy: Naming or tentatively reflecting the emotional meaning conveyed through a child's words or play. / Reflecting feelings: A non-directive approach emphasizing acceptance, empathy, tracking, and the child's lead within safe limits.
C. Child-centered play therapy: A non-directive approach emphasizing acceptance, empathy, tracking, and the child's lead within safe limits. / Reflecting feelings: Naming or tentatively reflecting the emotional meaning conveyed through a child's words or play.
D. Child-centered play therapy: Thoughtful arrangement and selection of materials that permit expression while protecting physical and emotional safety. / Reflecting feelings: Naming or tentatively reflecting the emotional meaning conveyed through a child's words or play.

0347. Which option is the clearest practical expression of Child-centered play therapy?

A. Reflecting a child's play and feelings rather than taking over the play narrative.
B. Stating the limit, acknowledging the feeling, and identifying a safe alternative action.
C. Remaining curious about a toy character's role instead of assuming its play meaning.
D. Offering a tentative feeling reflection and allowing the child to correct it.

0348. In a supervision quiz, how should Directive play therapy be distinguished from Caregiver involvement?

A. Directive play therapy: A therapist-guided use of play activities selected to address identified therapeutic goals. / Caregiver involvement: Planned collaboration with caregivers that supports the child's goals while preserving appropriate therapeutic boundaries.
B. Directive play therapy: A non-directive approach emphasizing acceptance, empathy, tracking, and the child's lead within safe limits. / Caregiver involvement: Planned collaboration with caregivers that supports the child's goals while preserving appropriate therapeutic boundaries.
C. Directive play therapy: Planned collaboration with caregivers that supports the child's goals while preserving appropriate therapeutic boundaries. / Caregiver involvement: A therapist-guided use of play activities selected to address identified therapeutic goals.
D. Directive play therapy: A therapist-guided use of play activities selected to address identified therapeutic goals. / Caregiver involvement: A clear, empathic boundary that protects people or property while offering acceptable alternatives.

0349. For a teenage client in the supervision meeting, a school support specialist makes this practice the immediate priority: sharing general progress and practical support strategies with caregivers under the consent and privacy plan. Which concept fits best?

A. Symbolic play
B. Child-centered play therapy
C. Caregiver involvement
D. Therapeutic play

0350. Choose the term that matches this definition: Use of objects, actions, or characters to represent ideas and experiences beyond their literal form.

A. Directive play therapy
B. Caregiver involvement
C. Symbolic play
D. Therapeutic play

0351. In the community youth program, a team asks how a group facilitator can support a young adolescent client. One proposed action is saying what the child is doing in play without adding an unsupported interpretation. Which idea does it represent?

A. Caregiver involvement
B. Tracking
C. Child-centered play therapy
D. Play therapy documentation

0352. In the counseling practicum, a team asks how a school counselor can support a child of elementary-school age. One proposed action is following the child's symbolic play as a communication channel while maintaining therapeutic purpose. Which idea does it represent?

A. Therapeutic play
B. Symbolic play
C. Therapeutic limit setting
D. Playroom safety

0353. Choose the practice comparison that best separates Therapeutic play from Caregiver involvement.

A. Therapeutic play: Sharing general progress and practical support strategies with caregivers under the consent and privacy plan. / Caregiver involvement: Following the child's symbolic play as a communication channel while maintaining therapeutic purpose.
B. Therapeutic play: Following the child's symbolic play as a communication channel while maintaining therapeutic purpose. / Caregiver involvement: Sharing general progress and practical support strategies with caregivers under the consent and privacy plan.
C. Therapeutic play: Following the child's symbolic play as a communication channel while maintaining therapeutic purpose. / Caregiver involvement: Saying what the child is doing in play without adding an unsupported interpretation.
D. Therapeutic play: Offering a tentative feeling reflection and allowing the child to correct it. / Caregiver involvement: Sharing general progress and practical support strategies with caregivers under the consent and privacy plan.

0354. A supervisor asks for an applied contrast between Directive play therapy and Symbolic play. Which option fits?

A. Directive play therapy: Remaining curious about a toy character's role instead of assuming its play meaning. / Symbolic play: Choosing and structuring a play activity to practice a specified coping or communication skill.
B. Directive play therapy: Choosing and structuring a play activity to practice a specified coping or communication skill. / Symbolic play: Documenting what occurred and separating directly observed behavior from interpretation.
C. Directive play therapy: Choosing and structuring a play activity to practice a specified coping or communication skill. / Symbolic play: Remaining curious about a toy character's role instead of assuming its play meaning.
D. Directive play therapy: Saying what the child is doing in play without adding an unsupported interpretation. / Symbolic play: Remaining curious about a toy character's role instead of assuming its play meaning.

0355. Choose the definition pair that correctly explains Playroom safety first and Caregiver involvement second.

A. Playroom safety: A clear, empathic boundary that protects people or property while offering acceptable alternatives. / Caregiver involvement: Planned collaboration with caregivers that supports the child's goals while preserving appropriate therapeutic boundaries.
B. Playroom safety: Planned collaboration with caregivers that supports the child's goals while preserving appropriate therapeutic boundaries. / Caregiver involvement: Thoughtful arrangement and selection of materials that permit expression while protecting physical and emotional safety.
C. Playroom safety: Thoughtful arrangement and selection of materials that permit expression while protecting physical and emotional safety. / Caregiver involvement: Planned collaboration with caregivers that supports the child's goals while preserving appropriate therapeutic boundaries.
D. Playroom safety: Thoughtful arrangement and selection of materials that permit expression while protecting physical and emotional safety. / Caregiver involvement: Recording observable play, interventions, response, and clinical rationale while distinguishing observation from inference.

0356. For a child aged 8 in the telehealth session, a behavior specialist makes this practice the immediate priority: stating the limit, acknowledging the feeling, and identifying a safe alternative action. Which concept fits best?

A. Directive play therapy
B. Tracking
C. Therapeutic limit setting
D. Symbolic play

0357. How should a practitioner distinguish the applications of Directive play therapy and Caregiver involvement?

A. Directive play therapy: Reflecting a child's play and feelings rather than taking over the play narrative. / Caregiver involvement: Sharing general progress and practical support strategies with caregivers under the consent and privacy plan.
B. Directive play therapy: Choosing and structuring a play activity to practice a specified coping or communication skill. / Caregiver involvement: Stating the limit, acknowledging the feeling, and identifying a safe alternative action.
C. Directive play therapy: Sharing general progress and practical support strategies with caregivers under the consent and privacy plan. / Caregiver involvement: Choosing and structuring a play activity to practice a specified coping or communication skill.
D. Directive play therapy: Choosing and structuring a play activity to practice a specified coping or communication skill. / Caregiver involvement: Sharing general progress and practical support strategies with caregivers under the consent and privacy plan.

0358. Which statement accurately contrasts the course concepts Reflecting feelings and Caregiver involvement?

A. Reflecting feelings: Planned collaboration with caregivers that supports the child's goals while preserving appropriate therapeutic boundaries. / Caregiver involvement: Naming or tentatively reflecting the emotional meaning conveyed through a child's words or play.
B. Reflecting feelings: Naming or tentatively reflecting the emotional meaning conveyed through a child's words or play. / Caregiver involvement: Recording observable play, interventions, response, and clinical rationale while distinguishing observation from inference.
C. Reflecting feelings: Use of objects, actions, or characters to represent ideas and experiences beyond their literal form. / Caregiver involvement: Planned collaboration with caregivers that supports the child's goals while preserving appropriate therapeutic boundaries.
D. Reflecting feelings: Naming or tentatively reflecting the emotional meaning conveyed through a child's words or play. / Caregiver involvement: Planned collaboration with caregivers that supports the child's goals while preserving appropriate therapeutic boundaries.

0359. Choose the term that matches this definition: A clear, empathic boundary that protects people or property while offering acceptable alternatives.

A. Therapeutic limit setting
B. Play therapy documentation
C. Directive play therapy
D. Child-centered play therapy

0360. Choose the definition pair that correctly explains Symbolic play first and Play therapy documentation second.

A. Symbolic play: Use of objects, actions, or characters to represent ideas and experiences beyond their literal form. / Play therapy documentation: Recording observable play, interventions, response, and clinical rationale while distinguishing observation from inference.
B. Symbolic play: Use of objects, actions, or characters to represent ideas and experiences beyond their literal form. / Play therapy documentation: Thoughtful arrangement and selection of materials that permit expression while protecting physical and emotional safety.
C. Symbolic play: Recording observable play, interventions, response, and clinical rationale while distinguishing observation from inference. / Play therapy documentation: Use of objects, actions, or characters to represent ideas and experiences beyond their literal form.
D. Symbolic play: A therapist-guided use of play activities selected to address identified therapeutic goals. / Play therapy documentation: Recording observable play, interventions, response, and clinical rationale while distinguishing observation from inference.

0361. A supervised trainee is preparing a follow-up plan for a older adolescent client in the parent meeting. The plan calls for offering a tentative feeling reflection and allowing the child to correct it. Which concept names this approach?

A. Playroom safety
B. Child-centered play therapy
C. Tracking
D. Reflecting feelings

0362. A doctoral student reads the following description. Which concept does it define? Describing a child’s observable play actions in a clear, nonjudgmental way.

A. Playroom safety
B. Caregiver involvement
C. Therapeutic play
D. Tracking

0363. Which comparison would correct a trainee’s misunderstanding of Tracking versus Therapeutic limit setting?

A. Tracking: Describing a child’s observable play actions in a clear, nonjudgmental way. / Therapeutic limit setting: A therapist-guided use of play activities selected to address identified therapeutic goals.
B. Tracking: Describing a child’s observable play actions in a clear, nonjudgmental way. / Therapeutic limit setting: A clear, empathic boundary that protects people or property while offering acceptable alternatives.
C. Tracking: Purposeful use of play within a helping relationship to support expression, exploration, and development. / Therapeutic limit setting: A clear, empathic boundary that protects people or property while offering acceptable alternatives.
D. Tracking: A clear, empathic boundary that protects people or property while offering acceptable alternatives. / Therapeutic limit setting: Describing a child’s observable play actions in a clear, nonjudgmental way.

0364. A member of a clinical team and a client in late adolescence are discussing support in the family session. The selected practice is offering a tentative feeling reflection and allowing the child to correct it. Which concept does this demonstrate?

A. Reflecting feelings
B. Playroom safety
C. Tracking
D. Play therapy documentation

0365. How are Tracking and Therapeutic limit setting most accurately differentiated in this curriculum?

A. Tracking: Describing a child’s observable play actions in a clear, nonjudgmental way. / Therapeutic limit setting: A clear, empathic boundary that protects people or property while offering acceptable alternatives.
B. Tracking: Purposeful use of play within a helping relationship to support expression, exploration, and development. / Therapeutic limit setting: A clear, empathic boundary that protects people or property while offering acceptable alternatives.
C. Tracking: Describing a child’s observable play actions in a clear, nonjudgmental way. / Therapeutic limit setting: A therapist-guided use of play activities selected to address identified therapeutic goals.
D. Tracking: A clear, empathic boundary that protects people or property while offering acceptable alternatives. / Therapeutic limit setting: Describing a child’s observable play actions in a clear, nonjudgmental way.

0366. In the clinical planning session, a caregiver working with a counselor is considering this approach for a student aged 17: saying what the child is doing in play without adding an unsupported interpretation. Which framework does it represent?

A. Tracking
B. Reflecting feelings
C. Caregiver involvement
D. Play therapy documentation

0367. At the parent meeting, a program coordinator reviews whether a plan for a child aged 7 is appropriate. The relevant practice is saying what the child is doing in play without adding an unsupported interpretation. Which concept is tested?

A. Symbolic play
B. Therapeutic limit setting
C. Tracking
D. Caregiver involvement

0368. A community practitioner describes an intervention for a child aged 6 in the community youth program, centered on documenting what occurred and separating directly observed behavior from interpretation. Which named idea is most relevant?

A. Caregiver involvement
B. Child-centered play therapy
C. Playroom safety
D. Play therapy documentation

0369. A case discussion concerns a high-school student and a caregiver working with a counselor in the telehealth session. The practitioner is considering documenting what occurred and separating directly observed behavior from interpretation. Which principle is involved?

A. Play therapy documentation
B. Therapeutic play
C. Caregiver involvement
D. Directive play therapy

0370. In the family resource center, a parent educator is considering this approach for a school-age child: reflecting a child’s play and feelings rather than taking over the play narrative. Which framework does it represent?

A. Playroom safety
B. Child-centered play therapy
C. Directive play therapy
D. Therapeutic play

0371. During work in the community mental-health service, a group facilitator identifies this need: choosing and structuring a play activity to practice a specified coping or communication skill. Which idea should guide the response?

A. Directive play therapy
B. Reflecting feelings
C. Play therapy documentation
D. Therapeutic limit setting

0372. A planning meeting about a child aged 7 includes a clinical supervisor. The proposed practice in the classroom support meeting is following the child’s symbolic play as a communication channel while maintaining therapeutic purpose. Which idea underlies it?

A. Directive play therapy
B. Therapeutic play
C. Reflecting feelings
D. Tracking

0373. Choose the practice comparison that best separates Therapeutic play from Playroom safety.

A. Therapeutic play: Following the child's symbolic play as a communication channel while maintaining therapeutic purpose. / Playroom safety: Choosing and structuring a play activity to practice a specified coping or communication skill.
B. Therapeutic play: Choosing materials and rules that allow agency without foreseeable harm. / Playroom safety: Following the child's symbolic play as a communication channel while maintaining therapeutic purpose.
C. Therapeutic play: Following the child's symbolic play as a communication channel while maintaining therapeutic purpose. / Playroom safety: Choosing materials and rules that allow agency without foreseeable harm.
D. Therapeutic play: Offering a tentative feeling reflection and allowing the child to correct it. / Playroom safety: Choosing materials and rules that allow agency without foreseeable harm.

0374. A behavior specialist reviews a plan for a child aged 6 in the community mental-health service. The plan emphasizes reflecting a child's play and feelings rather than taking over the play narrative. Which course idea does this reflect?

A. Directive play therapy
B. Tracking
C. Therapeutic limit setting
D. Child-centered play therapy

0375. Which option correctly matches each concept to its practice focus: Playroom safety and Play therapy documentation?

A. Playroom safety: Choosing materials and rules that allow agency without foreseeable harm. / Play therapy documentation: Documenting what occurred and separating directly observed behavior from interpretation.
B. Playroom safety: Choosing materials and rules that allow agency without foreseeable harm. / Play therapy documentation: Following the child's symbolic play as a communication channel while maintaining therapeutic purpose.
C. Playroom safety: Documenting what occurred and separating directly observed behavior from interpretation. / Play therapy documentation: Choosing materials and rules that allow agency without foreseeable harm.
D. Playroom safety: Stating the limit, acknowledging the feeling, and identifying a safe alternative action. / Play therapy documentation: Documenting what occurred and separating directly observed behavior from interpretation.

0376. A play therapist reviews a plan for a middle-school student in the learning-support meeting. The plan emphasizes stating the limit, acknowledging the feeling, and identifying a safe alternative action. Which course idea does this reflect?

A. Caregiver involvement
B. Child-centered play therapy
C. Therapeutic limit setting
D. Directive play therapy

0377. At the family session, a clinical supervisor meets with a student aged 15. The practice priority is: reflecting a child's play and feelings rather than taking over the play narrative. Which concept best captures that priority?

A. Reflecting feelings
B. Therapeutic play
C. Child-centered play therapy
D. Tracking

0378. Which statement most accurately defines Symbolic play?

A. Use of objects, actions, or characters to represent ideas and experiences beyond their literal form.
B. A non-directive approach emphasizing acceptance, empathy, tracking, and the child's lead within safe limits.
C. Thoughtful arrangement and selection of materials that permit expression while protecting physical and emotional safety.
D. Planned collaboration with caregivers that supports the child's goals while preserving appropriate therapeutic boundaries.

0379. Consider a student aged 9 receiving help in the behavior-support review. The consulting counselor focuses on choosing and structuring a play activity to practice a specified coping or communication skill. Which term best describes the guiding idea?

A. Playroom safety
B. Therapeutic play
C. Directive play therapy
D. Symbolic play

0380. A trainee must distinguish how Therapeutic play and Symbolic play guide practice. Which comparison is accurate?

A. Therapeutic play: Remaining curious about a toy character's role instead of assuming its play meaning. / Symbolic play: Following the child's symbolic play as a communication channel while maintaining therapeutic purpose.
B. Therapeutic play: Sharing general progress and practical support strategies with caregivers under the consent and privacy plan. / Symbolic play: Remaining curious about a toy character's role instead of assuming its play meaning.
C. Therapeutic play: Following the child's symbolic play as a communication channel while maintaining therapeutic purpose. / Symbolic play: Stating the limit, acknowledging the feeling, and identifying a safe alternative action.
D. Therapeutic play: Following the child's symbolic play as a communication channel while maintaining therapeutic purpose. / Symbolic play: Remaining curious about a toy character's role instead of assuming its play meaning.

0381. Which statement shows a sound practice-level distinction between Child-centered play therapy and Caregiver involvement?

A. Child-centered play therapy: Reflecting a child's play and feelings rather than taking over the play narrative. / Caregiver involvement: Stating the limit, acknowledging the feeling, and identifying a safe alternative action.
B. Child-centered play therapy: Reflecting a child's play and feelings rather than taking over the play narrative. / Caregiver involvement: Sharing general progress and practical support strategies with caregivers under the consent and privacy plan.
C. Child-centered play therapy: Documenting what occurred and separating directly observed behavior from interpretation. / Caregiver involvement: Sharing general progress and practical support strategies with caregivers under the consent and privacy plan.
D. Child-centered play therapy: Sharing general progress and practical support strategies with caregivers under the consent and privacy plan. / Caregiver involvement: Reflecting a child's play and feelings rather than taking over the play narrative.

0382. What is the central meaning of Child-centered play therapy?

A. Thoughtful arrangement and selection of materials that permit expression while protecting physical and emotional safety.
B. A non-directive approach emphasizing acceptance, empathy, tracking, and the child's lead within safe limits.
C. Describing a child's observable play actions in a clear, nonjudgmental way.
D. A therapist-guided use of play activities selected to address identified therapeutic goals.

0383. A play therapist reviews a plan for a young person aged 13 in the telehealth session. The plan emphasizes following the child's symbolic play as a communication channel while maintaining therapeutic purpose. Which course idea does this reflect?

A. Child-centered play therapy
B. Caregiver involvement
C. Therapeutic play
D. Therapeutic limit setting

0384. A supervisor asks how Symbolic play would appear in practice. Which choice should be selected?

A. Documenting what occurred and separating directly observed behavior from interpretation.
B. Reflecting a child's play and feelings rather than taking over the play narrative.
C. Remaining curious about a toy character's role instead of assuming its play meaning.
D. Following the child's symbolic play as a communication channel while maintaining therapeutic purpose.

0385. During service review in the multidisciplinary case conference, a research trainee describes remaining curious about a toy character's role instead of assuming its play meaning. for a young person aged 18. Which course idea is most applicable?

A. Play therapy documentation
B. Child-centered play therapy
C. Reflecting feelings
D. Symbolic play

0386. In the after-school program, a case coordinator is considering this approach for a young adolescent client: following the child's symbolic play as a communication channel while maintaining therapeutic purpose. Which framework does it represent?

A. Symbolic play
B. Therapeutic play
C. Reflecting feelings
D. Tracking

0387. Which pair of actions illustrates Child-centered play therapy and Reflecting feelings, respectively?

A. Child-centered play therapy: Offering a tentative feeling reflection and allowing the child to correct it. / Reflecting feelings: Reflecting a child's play and feelings rather than taking over the play narrative.
B. Child-centered play therapy: Choosing materials and rules that allow agency without foreseeable harm. / Reflecting feelings: Offering a tentative feeling reflection and allowing the child to correct it.
C. Child-centered play therapy: Reflecting a child's play and feelings rather than taking over the play narrative. / Reflecting feelings: Offering a tentative feeling reflection and allowing the child to correct it.
D. Child-centered play therapy: Reflecting a child's play and feelings rather than taking over the play narrative. / Reflecting feelings: Sharing general progress and practical support strategies with caregivers under the consent and privacy plan.

0388. Which choice aligns each practice with the correct idea, Therapeutic play or Directive play therapy?

A. Therapeutic play: Following the child's symbolic play as a communication channel while maintaining therapeutic purpose. / Directive play therapy: Choosing and structuring a play activity to practice a specified coping or communication skill.
B. Therapeutic play: Choosing and structuring a play activity to practice a specified coping or communication skill. / Directive play therapy: Following the child's symbolic play as a communication channel while maintaining therapeutic purpose.
C. Therapeutic play: Documenting what occurred and separating directly observed behavior from interpretation. / Directive play therapy: Choosing and structuring a play activity to practice a specified coping or communication skill.
D. Therapeutic play: Following the child's symbolic play as a communication channel while maintaining therapeutic purpose. / Directive play therapy: Remaining curious about a toy character's role instead of assuming its play meaning.

0389. How are Child-centered play therapy and Caregiver involvement most accurately differentiated in this curriculum?

A. Child-centered play therapy: A non-directive approach emphasizing acceptance, empathy, tracking, and the child's lead within safe limits. / Caregiver involvement: Planned collaboration with caregivers that supports the child's goals while preserving appropriate therapeutic boundaries.
B. Child-centered play therapy: A non-directive approach emphasizing acceptance, empathy, tracking, and the child's lead within safe limits. / Caregiver involvement: A clear, empathic boundary that protects people or property while offering acceptable alternatives.
C. Child-centered play therapy: Recording observable play, interventions, response, and clinical rationale while distinguishing observation from inference. / Caregiver involvement: Planned collaboration with caregivers that supports the child's goals while preserving appropriate therapeutic boundaries.
D. Child-centered play therapy: Planned collaboration with caregivers that supports the child's goals while preserving appropriate therapeutic boundaries. / Caregiver involvement: A non-directive approach emphasizing acceptance, empathy, tracking, and the child's lead within safe limits.

0390. A case conference reviews a therapist's work with a young adolescent client in the classroom support meeting: choosing materials and rules that allow agency without foreseeable harm. Which principle is central?

A. Tracking
B. Caregiver involvement
C. Playroom safety
D. Reflecting feelings

0391. At a case-planning meeting, the clinical supervisor proposes remaining curious about a toy character's role instead of assuming its play meaning. for a child of elementary-school age seen in the behavior-support review. Which concept does this illustrate?

A. Symbolic play
B. Caregiver involvement
C. Tracking
D. Therapeutic limit setting

0392. Choose the definition pair that correctly explains Directive play therapy first and Caregiver involvement second.

A. Directive play therapy: A therapist-guided use of play activities selected to address identified therapeutic goals. / Caregiver involvement: Planned collaboration with caregivers that supports the child's goals while preserving appropriate therapeutic boundaries.
B. Directive play therapy: A therapist-guided use of play activities selected to address identified therapeutic goals. / Caregiver involvement: A clear, empathic boundary that protects people or property while offering acceptable alternatives.
C. Directive play therapy: A non-directive approach emphasizing acceptance, empathy, tracking, and the child's lead within safe limits. / Caregiver involvement: Planned collaboration with caregivers that supports the child's goals while preserving appropriate therapeutic boundaries.
D. Directive play therapy: Planned collaboration with caregivers that supports the child's goals while preserving appropriate therapeutic boundaries. / Caregiver involvement: A therapist-guided use of play activities selected to address identified therapeutic goals.

0393. Which comparison would correct a trainee’s misunderstanding of Playroom safety versus Play therapy documentation?

A. Playroom safety: Recording observable play, interventions, response, and clinical rationale while distinguishing observation from inference. / Play therapy documentation: Thoughtful arrangement and selection of materials that permit expression while protecting physical and emotional safety.
B. Playroom safety: A clear, empathic boundary that protects people or property while offering acceptable alternatives. / Play therapy documentation: Recording observable play, interventions, response, and clinical rationale while distinguishing observation from inference.
C. Playroom safety: Thoughtful arrangement and selection of materials that permit expression while protecting physical and emotional safety. / Play therapy documentation: Recording observable play, interventions, response, and clinical rationale while distinguishing observation from inference.
D. Playroom safety: Thoughtful arrangement and selection of materials that permit expression while protecting physical and emotional safety. / Play therapy documentation: Purposeful use of play within a helping relationship to support expression, exploration, and development.

0394. An interdisciplinary team reviews a high-school student’s case at the caregiver consultation. The behavior specialist recommends sharing general progress and practical support strategies with caregivers under the consent and privacy plan. Which course concept best fits?

A. Playroom safety
B. Caregiver involvement
C. Play therapy documentation
D. Therapeutic play

0395. A supervisor asks how Directive play therapy would appear in practice. Which choice should be selected?

A. Stating the limit, acknowledging the feeling, and identifying a safe alternative action.
B. Offering a tentative feeling reflection and allowing the child to correct it.
C. Choosing and structuring a play activity to practice a specified coping or communication skill.
D. Documenting what occurred and separating directly observed behavior from interpretation.

0396. A school support specialist reviews a plan for a client in early adolescence in the youth group. The plan emphasizes documenting what occurred and separating directly observed behavior from interpretation. Which course idea does this reflect?

A. Directive play therapy
B. Child-centered play therapy
C. Play therapy documentation
D. Therapeutic play

0397. Which statement accurately contrasts the course concepts Child-centered play therapy and Tracking?

A. Child-centered play therapy: A non-directive approach emphasizing acceptance, empathy, tracking, and the child’s lead within safe limits. / Tracking: Describing a child’s observable play actions in a clear, nonjudgmental way.
B. Child-centered play therapy: Describing a child’s observable play actions in a clear, nonjudgmental way. / Tracking: A non-directive approach emphasizing acceptance, empathy, tracking, and the child’s lead within safe limits.
C. Child-centered play therapy: Thoughtful arrangement and selection of materials that permit expression while protecting physical and emotional safety. / Tracking: Describing a child’s observable play actions in a clear, nonjudgmental way.
D. Child-centered play therapy: A non-directive approach emphasizing acceptance, empathy, tracking, and the child’s lead within safe limits. / Tracking: Naming or tentatively reflecting the emotional meaning conveyed through a child’s words or play.

0398. Which option correctly matches each concept to its practice focus: Directive play therapy and Caregiver involvement?

A. Directive play therapy: Reflecting a child’s play and feelings rather than taking over the play narrative. / Caregiver involvement: Sharing general progress and practical support strategies with caregivers under the consent and privacy plan.
B. Directive play therapy: Sharing general progress and practical support strategies with caregivers under the consent and privacy plan. / Caregiver involvement: Choosing and structuring a play activity to practice a specified coping or communication skill.
C. Directive play therapy: Choosing and structuring a play activity to practice a specified coping or communication skill. / Caregiver involvement: Stating the limit, acknowledging the feeling, and identifying a safe alternative action.
D. Directive play therapy: Choosing and structuring a play activity to practice a specified coping or communication skill. / Caregiver involvement: Sharing general progress and practical support strategies with caregivers under the consent and privacy plan.

0399. Which course concept is defined as follows: Recording observable play, interventions, response, and clinical rationale while distinguishing observation from inference.

A. Child-centered play therapy
B. Play therapy documentation
C. Playroom safety
D. Symbolic play

0400. Which paired example correctly applies Reflecting feelings first and Caregiver involvement second?

A. Reflecting feelings: Offering a tentative feeling reflection and allowing the child to correct it. / Caregiver involvement: Documenting what occurred and separating directly observed behavior from interpretation.
B. Reflecting feelings: Remaining curious about a toy character’s role instead of assuming its play meaning. / Caregiver involvement: Sharing general progress and practical support strategies with caregivers under the consent and privacy plan.
C. Reflecting feelings: Sharing general progress and practical support strategies with caregivers under the consent and privacy plan. / Caregiver involvement: Offering a tentative feeling reflection and allowing the child to correct it.
D. Reflecting feelings: Offering a tentative feeling reflection and allowing the child to correct it. / Caregiver involvement: Sharing general progress and practical support strategies with caregivers under the consent and privacy plan.

0401. A therapist is asked what should shape a client in late adolescence’s support in the youth advocacy program. The proposed focus is stating the limit, acknowledging the feeling, and identifying a safe alternative action. Which principle does it represent?

A. Caregiver involvement
B. Therapeutic limit setting
C. Directive play therapy
D. Therapeutic play

0402. Which course concept is defined as follows: Planned collaboration with caregivers that supports the child’s goals while preserving appropriate therapeutic boundaries.

A. Directive play therapy
B. Child-centered play therapy
C. Caregiver involvement
D. Playroom safety

0403. Which applied comparison correctly identifies what belongs to Therapeutic play versus Directive play therapy?

A. Therapeutic play: Documenting what occurred and separating directly observed behavior from interpretation. / Directive play therapy: Choosing and structuring a play activity to practice a specified coping or communication skill.
B. Therapeutic play: Following the child's symbolic play as a communication channel while maintaining therapeutic purpose. / Directive play therapy: Choosing and structuring a play activity to practice a specified coping or communication skill.
C. Therapeutic play: Following the child's symbolic play as a communication channel while maintaining therapeutic purpose. / Directive play therapy: Remaining curious about a toy character's role instead of assuming its play meaning.
D. Therapeutic play: Choosing and structuring a play activity to practice a specified coping or communication skill. / Directive play therapy: Following the child's symbolic play as a communication channel while maintaining therapeutic purpose.

0404. While consulting in the behavior-support review, a consultant supports a student aged 17 by using this approach: offering a tentative feeling reflection and allowing the child to correct it. Which concept is being applied?

A. Therapeutic play
B. Reflecting feelings
C. Directive play therapy
D. Symbolic play

0405. At the student-support meeting, a school support specialist meets with a older adolescent client. The practice priority is: choosing and structuring a play activity to practice a specified coping or communication skill. Which concept best captures that priority?

A. Symbolic play
B. Directive play therapy
C. Caregiver involvement
D. Reflecting feelings

0406. A supervisor asks for an applied contrast between Directive play therapy and Tracking. Which option fits?

A. Directive play therapy: Choosing and structuring a play activity to practice a specified coping or communication skill. / Tracking: Offering a tentative feeling reflection and allowing the child to correct it.
B. Directive play therapy: Saying what the child is doing in play without adding an unsupported interpretation. / Tracking: Choosing and structuring a play activity to practice a specified coping or communication skill.
C. Directive play therapy: Choosing and structuring a play activity to practice a specified coping or communication skill. / Tracking: Saying what the child is doing in play without adding an unsupported interpretation.
D. Directive play therapy: Sharing general progress and practical support strategies with caregivers under the consent and privacy plan. / Tracking: Saying what the child is doing in play without adding an unsupported interpretation.

0407. Which applied comparison correctly identifies what belongs to Child-centered play therapy versus Therapeutic limit setting?

A. Child-centered play therapy: Reflecting a child's play and feelings rather than taking over the play narrative. / Therapeutic limit setting: Stating the limit, acknowledging the feeling, and identifying a safe alternative action.
B. Child-centered play therapy: Stating the limit, acknowledging the feeling, and identifying a safe alternative action. / Therapeutic limit setting: Reflecting a child's play and feelings rather than taking over the play narrative.
C. Child-centered play therapy: Following the child's symbolic play as a communication channel while maintaining therapeutic purpose. / Therapeutic limit setting: Stating the limit, acknowledging the feeling, and identifying a safe alternative action.
D. Child-centered play therapy: Reflecting a child's play and feelings rather than taking over the play narrative. / Therapeutic limit setting: Choosing materials and rules that allow agency without foreseeable harm.

0408. Choose the practice comparison that best separates Therapeutic play from Therapeutic limit setting.

A. Therapeutic play: Stating the limit, acknowledging the feeling, and identifying a safe alternative action. / Therapeutic limit setting: Following the child's symbolic play as a communication channel while maintaining therapeutic purpose.
B. Therapeutic play: Following the child's symbolic play as a communication channel while maintaining therapeutic purpose. / Therapeutic limit setting: Saying what the child is doing in play without adding an unsupported interpretation.
C. Therapeutic play: Following the child's symbolic play as a communication channel while maintaining therapeutic purpose. / Therapeutic limit setting: Stating the limit, acknowledging the feeling, and identifying a safe alternative action.
D. Therapeutic play: Remaining curious about a toy character's role instead of assuming its play meaning. / Therapeutic limit setting: Stating the limit, acknowledging the feeling, and identifying a safe alternative action.

0409. When reviewing a young person aged 18's plan in the learning-support meeting, the parent educator notes that the next step is offering a tentative feeling reflection and allowing the child to correct it. Which concept guides this step?

A. Reflecting feelings
B. Directive play therapy
C. Therapeutic play
D. Playroom safety

0410. Which comparison correctly distinguishes Symbolic play from Caregiver involvement?

A. Symbolic play: Describing a child's observable play actions in a clear, nonjudgmental way. / Caregiver involvement: Planned collaboration with caregivers that supports the child's goals while preserving appropriate therapeutic boundaries.
B. Symbolic play: Planned collaboration with caregivers that supports the child's goals while preserving appropriate therapeutic boundaries. / Caregiver involvement: Use of objects, actions, or characters to represent ideas and experiences beyond their literal form.
C. Symbolic play: Use of objects, actions, or characters to represent ideas and experiences beyond their literal form. / Caregiver involvement: Planned collaboration with caregivers that supports the child's goals while preserving appropriate therapeutic boundaries.
D. Symbolic play: Use of objects, actions, or characters to represent ideas and experiences beyond their literal form. / Caregiver involvement: Purposeful use of play within a helping relationship to support expression, exploration, and development.

0411. In the community mental-health service, a group facilitator explains why a high-school student would benefit from choosing and structuring a play activity to practice a specified coping or communication skill. Which course concept underpins the explanation?

A. Therapeutic limit setting
B. Caregiver involvement
C. Therapeutic play
D. Directive play therapy

0412. Which named construct is captured by this account? A clear, empathic boundary that protects people or property while offering acceptable alternatives.

A. Therapeutic limit setting
B. Therapeutic play
C. Symbolic play
D. Directive play therapy

0413. A service team discusses a young person aged 13 in the behavior-support review. Their proposed next step is saying what the child is doing in play without adding an unsupported interpretation. Which course concept supports it?

A. Therapeutic play
B. Tracking
C. Directive play therapy
D. Reflecting feelings

0414. A consulting counselor is asked to justify a plan for a student aged 12 in the school counseling office. It calls for reflecting a child's play and feelings rather than taking over the play narrative. Which concept provides the rationale?

A. Directive play therapy
B. Child-centered play therapy
C. Caregiver involvement
D. Tracking

0415. At the school counseling office, a counselor meets with a child aged 8. The practice priority is: following the child's symbolic play as a communication channel while maintaining therapeutic purpose. Which concept best captures that priority?

A. Symbolic play
B. Directive play therapy
C. Caregiver involvement
D. Therapeutic play

0416. Which option pairs the definitions of Reflecting feelings and Playroom safety correctly, in that order?

A. Reflecting feelings: Naming or tentatively reflecting the emotional meaning conveyed through a child's words or play. / Playroom safety: A clear, empathic boundary that protects people or property while offering acceptable alternatives.
B. Reflecting feelings: Naming or tentatively reflecting the emotional meaning conveyed through a child's words or play. / Playroom safety: Thoughtful arrangement and selection of materials that permit expression while protecting physical and emotional safety.
C. Reflecting feelings: A non-directive approach emphasizing acceptance, empathy, tracking, and the child's lead within safe limits. / Playroom safety: Thoughtful arrangement and selection of materials that permit expression while protecting physical and emotional safety.
D. Reflecting feelings: Thoughtful arrangement and selection of materials that permit expression while protecting physical and emotional safety. / Playroom safety: Naming or tentatively reflecting the emotional meaning conveyed through a child's words or play.

0417. A assessment clinician prepares for a session in the child guidance clinic with a young person aged 18. The intended approach is following the child's symbolic play as a communication channel while maintaining therapeutic purpose. Which concept is most relevant?

A. Reflecting feelings
B. Play therapy documentation
C. Therapeutic play
D. Caregiver involvement

0418. Which comparison correctly distinguishes Child-centered play therapy from Play therapy documentation?

A. Child-centered play therapy: A non-directive approach emphasizing acceptance, empathy, tracking, and the child's lead within safe limits. / Play therapy documentation: Recording observable play, interventions, response, and clinical rationale while distinguishing observation from inference.
B. Child-centered play therapy: A non-directive approach emphasizing acceptance, empathy, tracking, and the child's lead within safe limits. / Play therapy documentation: Planned collaboration with caregivers that supports the child's goals while preserving appropriate therapeutic boundaries.
C. Child-centered play therapy: Recording observable play, interventions, response, and clinical rationale while distinguishing observation from inference. / Play therapy documentation: A non-directive approach emphasizing acceptance, empathy, tracking, and the child's lead within safe limits.
D. Child-centered play therapy: A therapist-guided use of play activities selected to address identified therapeutic goals. / Play therapy documentation: Recording observable play, interventions, response, and clinical rationale while distinguishing observation from inference.

0419. How should a practitioner distinguish the applications of Reflecting feelings and Symbolic play?

A. Reflecting feelings: Offering a tentative feeling reflection and allowing the child to correct it. / Symbolic play: Documenting what occurred and separating directly observed behavior from interpretation.
B. Reflecting feelings: Remaining curious about a toy character's role instead of assuming its play meaning. / Symbolic play: Offering a tentative feeling reflection and allowing the child to correct it.
C. Reflecting feelings: Saying what the child is doing in play without adding an unsupported interpretation. / Symbolic play: Remaining curious about a toy character's role instead of assuming its play meaning.
D. Reflecting feelings: Offering a tentative feeling reflection and allowing the child to correct it. / Symbolic play: Remaining curious about a toy character's role instead of assuming its play meaning.

0420. Which statement accurately contrasts the course concepts Symbolic play and Play therapy documentation?

A. Symbolic play: Use of objects, actions, or characters to represent ideas and experiences beyond their literal form. / Play therapy documentation: Thoughtful arrangement and selection of materials that permit expression while protecting physical and emotional safety.
B. Symbolic play: Use of objects, actions, or characters to represent ideas and experiences beyond their literal form. / Play therapy documentation: Recording observable play, interventions, response, and clinical rationale while distinguishing observation from inference.
C. Symbolic play: Recording observable play, interventions, response, and clinical rationale while distinguishing observation from inference. / Play therapy documentation: Use of objects, actions, or characters to represent ideas and experiences beyond their literal form.
D. Symbolic play: A therapist-guided use of play activities selected to address identified therapeutic goals. / Play therapy documentation: Recording observable play, interventions, response, and clinical rationale while distinguishing observation from inference.

0421. A trainee must distinguish how Therapeutic play and Playroom safety guide practice. Which comparison is accurate?

A. Therapeutic play: Following the child's symbolic play as a communication channel while maintaining therapeutic purpose. / Playroom safety: Choosing and structuring a play activity to practice a specified coping or communication skill.
B. Therapeutic play: Offering a tentative feeling reflection and allowing the child to correct it. / Playroom safety: Choosing materials and rules that allow agency without foreseeable harm.
C. Therapeutic play: Choosing materials and rules that allow agency without foreseeable harm. / Playroom safety: Following the child's symbolic play as a communication channel while maintaining therapeutic purpose.
D. Therapeutic play: Following the child's symbolic play as a communication channel while maintaining therapeutic purpose. / Playroom safety: Choosing materials and rules that allow agency without foreseeable harm.

0422. A service team discusses a high-school student in the multidisciplinary case conference. Their proposed next step is reflecting a child's play and feelings rather than taking over the play narrative. Which course concept supports it?

A. Tracking
B. Therapeutic limit setting
C. Child-centered play therapy
D. Caregiver involvement

0423. Which pair of actions illustrates Child-centered play therapy and Tracking, respectively?

A. Child-centered play therapy: Choosing materials and rules that allow agency without foreseeable harm. / Tracking: Saying what the child is doing in play without adding an unsupported interpretation.
B. Child-centered play therapy: Saying what the child is doing in play without adding an unsupported interpretation. / Tracking: Reflecting a child's play and feelings rather than taking over the play narrative.
C. Child-centered play therapy: Reflecting a child's play and feelings rather than taking over the play narrative. / Tracking: Offering a tentative feeling reflection and allowing the child to correct it.
D. Child-centered play therapy: Reflecting a child's play and feelings rather than taking over the play narrative. / Tracking: Saying what the child is doing in play without adding an unsupported interpretation.

0424. Choose the response that best puts Symbolic play into practice.

A. Documenting what occurred and separating directly observed behavior from interpretation.
B. Sharing general progress and practical support strategies with caregivers under the consent and privacy plan.
C. Remaining curious about a toy character's role instead of assuming its play meaning.
D. Choosing materials and rules that allow agency without foreseeable harm.

0425. A trainee must explain Therapeutic play. Which answer is accurate?

A. Naming or tentatively reflecting the emotional meaning conveyed through a child's words or play.
B. Purposeful use of play within a helping relationship to support expression, exploration, and development.
C. Describing a child's observable play actions in a clear, nonjudgmental way.
D. Thoughtful arrangement and selection of materials that permit expression while protecting physical and emotional safety.

0426. A high-school student's service team meets in the school counseling office. The family therapist recommends a change involving offering a tentative feeling reflection and allowing the child to correct it. Which idea best explains it?

A. Play therapy documentation
B. Child-centered play therapy
C. Symbolic play
D. Reflecting feelings

0427. In a professional consultation about a client in late adolescence, the consultant describes this response in the community mental-health service: documenting what occurred and separating directly observed behavior from interpretation. Which term is most apt?

A. Symbolic play
B. Reflecting feelings
C. Play therapy documentation
D. Tracking

0428. How should a practitioner distinguish the applications of Playroom safety and Caregiver involvement?

A. Playroom safety: Choosing materials and rules that allow agency without foreseeable harm. / Caregiver involvement: Sharing general progress and practical support strategies with caregivers under the consent and privacy plan.
B. Playroom safety: Choosing materials and rules that allow agency without foreseeable harm. / Caregiver involvement: Documenting what occurred and separating directly observed behavior from interpretation.
C. Playroom safety: Stating the limit, acknowledging the feeling, and identifying a safe alternative action. / Caregiver involvement: Sharing general progress and practical support strategies with caregivers under the consent and privacy plan.
D. Playroom safety: Sharing general progress and practical support strategies with caregivers under the consent and privacy plan. / Caregiver involvement: Choosing materials and rules that allow agency without foreseeable harm.

0429. Which comparison correctly distinguishes Therapeutic play from Play therapy documentation?

A. Therapeutic play: Thoughtful arrangement and selection of materials that permit expression while protecting physical and emotional safety. / Play therapy documentation: Recording observable play, interventions, response, and clinical rationale while distinguishing observation from inference.
B. Therapeutic play: Purposeful use of play within a helping relationship to support expression, exploration, and development. / Play therapy documentation: Recording observable play, interventions, response, and clinical rationale while distinguishing observation from inference.
C. Therapeutic play: Purposeful use of play within a helping relationship to support expression, exploration, and development. / Play therapy documentation: A non-directive approach emphasizing acceptance, empathy, tracking, and the child's lead within safe limits.
D. Therapeutic play: Recording observable play, interventions, response, and clinical rationale while distinguishing observation from inference. / Play therapy documentation: Purposeful use of play within a helping relationship to support expression, exploration, and development.

0430. A case conference asks for a distinction between Child-centered play therapy and Caregiver involvement. Which answer is sound?

A. Child-centered play therapy: Planned collaboration with caregivers that supports the child's goals while preserving appropriate therapeutic boundaries. / Caregiver involvement: A non-directive approach emphasizing acceptance, empathy, tracking, and the child's lead within safe limits.
B. Child-centered play therapy: A non-directive approach emphasizing acceptance, empathy, tracking, and the child's lead within safe limits. / Caregiver involvement: Planned collaboration with caregivers that supports the child's goals while preserving appropriate therapeutic boundaries.
C. Child-centered play therapy: Recording observable play, interventions, response, and clinical rationale while distinguishing observation from inference. / Caregiver involvement: Planned collaboration with caregivers that supports the child's goals while preserving appropriate therapeutic boundaries.
D. Child-centered play therapy: A non-directive approach emphasizing acceptance, empathy, tracking, and the child's lead within safe limits. / Caregiver involvement: A clear, empathic boundary that protects people or property while offering acceptable alternatives.

0431. A member of a clinical team is preparing a follow-up plan for a child aged 8 in the counseling practicum. The plan calls for choosing and structuring a play activity to practice a specified coping or communication skill. Which concept names this approach?

A. Caregiver involvement
B. Child-centered play therapy
C. Therapeutic play
D. Directive play therapy

0432. Which option pairs the definitions of Therapeutic play and Tracking correctly, in that order?

A. Therapeutic play: Purposeful use of play within a helping relationship to support expression, exploration, and development. / Tracking: Describing a child's observable play actions in a clear, nonjudgmental way.
B. Therapeutic play: Recording observable play, interventions, response, and clinical rationale while distinguishing observation from inference. / Tracking: Describing a child's observable play actions in a clear, nonjudgmental way.
C. Therapeutic play: Purposeful use of play within a helping relationship to support expression, exploration, and development. / Tracking: Naming or tentatively reflecting the emotional meaning conveyed through a child's words or play.
D. Therapeutic play: Describing a child's observable play actions in a clear, nonjudgmental way. / Tracking: Purposeful use of play within a helping relationship to support expression, exploration, and development.

0433. Which comparison would correct a trainee's misunderstanding of Directive play therapy versus Play therapy documentation?

A. Directive play therapy: Naming or tentatively reflecting the emotional meaning conveyed through a child's words or play. / Play therapy documentation: Recording observable play, interventions, response, and clinical rationale while distinguishing observation from inference.
B. Directive play therapy: Recording observable play, interventions, response, and clinical rationale while distinguishing observation from inference. / Play therapy documentation: A therapist-guided use of play activities selected to address identified therapeutic goals.
C. Directive play therapy: A therapist-guided use of play activities selected to address identified therapeutic goals. / Play therapy documentation: Recording observable play, interventions, response, and clinical rationale while distinguishing observation from inference.
D. Directive play therapy: A therapist-guided use of play activities selected to address identified therapeutic goals. / Play therapy documentation: Purposeful use of play within a helping relationship to support expression, exploration, and development.

0434. Which option pairs the definitions of Child-centered play therapy and Tracking correctly, in that order?

A. Child-centered play therapy: A non-directive approach emphasizing acceptance, empathy, tracking, and the child's lead within safe limits. / Tracking: Naming or tentatively reflecting the emotional meaning conveyed through a child's words or play.
B. Child-centered play therapy: Describing a child's observable play actions in a clear, nonjudgmental way. / Tracking: A non-directive approach emphasizing acceptance, empathy, tracking, and the child's lead within safe limits.
C. Child-centered play therapy: A non-directive approach emphasizing acceptance, empathy, tracking, and the child's lead within safe limits. / Tracking: Describing a child's observable play actions in a clear, nonjudgmental way.
D. Child-centered play therapy: Thoughtful arrangement and selection of materials that permit expression while protecting physical and emotional safety. / Tracking: Describing a child's observable play actions in a clear, nonjudgmental way.

0435. Which comparison correctly distinguishes Tracking from Play therapy documentation?

A. Tracking: Describing a child's observable play actions in a clear, nonjudgmental way. / Play therapy documentation: Planned collaboration with caregivers that supports the child's goals while preserving appropriate therapeutic boundaries.
B. Tracking: Describing a child's observable play actions in a clear, nonjudgmental way. / Play therapy documentation: Recording observable play, interventions, response, and clinical rationale while distinguishing observation from inference.
C. Tracking: A non-directive approach emphasizing acceptance, empathy, tracking, and the child's lead within safe limits. / Play therapy documentation: Recording observable play, interventions, response, and clinical rationale while distinguishing observation from inference.
D. Tracking: Recording observable play, interventions, response, and clinical rationale while distinguishing observation from inference. / Play therapy documentation: Describing a child's observable play actions in a clear, nonjudgmental way.

0436. Which pair of actions illustrates Reflecting feelings and Therapeutic limit setting, respectively?

A. Reflecting feelings: Offering a tentative feeling reflection and allowing the child to correct it. / Therapeutic limit setting: Stating the limit, acknowledging the feeling, and identifying a safe alternative action.
B. Reflecting feelings: Saying what the child is doing in play without adding an unsupported interpretation. / Therapeutic limit setting: Stating the limit, acknowledging the feeling, and identifying a safe alternative action.
C. Reflecting feelings: Offering a tentative feeling reflection and allowing the child to correct it. / Therapeutic limit setting: Documenting what occurred and separating directly observed behavior from interpretation.
D. Reflecting feelings: Stating the limit, acknowledging the feeling, and identifying a safe alternative action. / Therapeutic limit setting: Offering a tentative feeling reflection and allowing the child to correct it.

0437. A student aged 15 and a member of a clinical team are reviewing goals in the school counseling office. The agreed action is sharing general progress and practical support strategies with caregivers under the consent and privacy plan. Which principle best accounts for it?

A. Therapeutic limit setting
B. Child-centered play therapy
C. Caregiver involvement
D. Symbolic play

0438. How are Therapeutic limit setting and Play therapy documentation most accurately differentiated in this curriculum?

A. Therapeutic limit setting: A clear, empathic boundary that protects people or property while offering acceptable alternatives. / Play therapy documentation: A non-directive approach emphasizing acceptance, empathy, tracking, and the child's lead within safe limits.
B. Therapeutic limit setting: Naming or tentatively reflecting the emotional meaning conveyed through a child's words or play. / Play therapy documentation: Recording observable play, interventions, response, and clinical rationale while distinguishing observation from inference.
C. Therapeutic limit setting: Recording observable play, interventions, response, and clinical rationale while distinguishing observation from inference. / Play therapy documentation: A clear, empathic boundary that protects people or property while offering acceptable alternatives.
D. Therapeutic limit setting: A clear, empathic boundary that protects people or property while offering acceptable alternatives. / Play therapy documentation: Recording observable play, interventions, response, and clinical rationale while distinguishing observation from inference.

0439. In a supervision review, a caregiver working with a counselor describes work with a middle-school student in the child guidance clinic: reflecting a child's play and feelings rather than taking over the play narrative. What concept is illustrated?

A. Child-centered play therapy
B. Reflecting feelings
C. Caregiver involvement
D. Therapeutic limit setting

0440. When reviewing a child aged 8’s plan in the community youth program, the caregiver working with a counselor notes that the next step is remaining curious about a toy character’s role instead of assuming its play meaning. Which concept guides this step?

A. Play therapy documentation
B. Therapeutic limit setting
C. Symbolic play
D. Reflecting feelings

0441. A case conference reviews a service navigator’s work with a child aged 14 in the youth group: remaining curious about a toy character’s role instead of assuming its play meaning. Which principle is central?

A. Caregiver involvement
B. Symbolic play
C. Playroom safety
D. Therapeutic play

0442. What is the central meaning of Therapeutic play?

A. Thoughtful arrangement and selection of materials that permit expression while protecting physical and emotional safety.
B. Purposeful use of play within a helping relationship to support expression, exploration, and development.
C. A clear, empathic boundary that protects people or property while offering acceptable alternatives.
D. Naming or tentatively reflecting the emotional meaning conveyed through a child’s words or play.

0443. Which choice aligns each practice with the correct idea, Child-centered play therapy or Reflecting feelings?

A. Child-centered play therapy: Reflecting a child’s play and feelings rather than taking over the play narrative. / Reflecting feelings: Sharing general progress and practical support strategies with caregivers under the consent and privacy plan.
B. Child-centered play therapy: Choosing materials and rules that allow agency without foreseeable harm. / Reflecting feelings: Offering a tentative feeling reflection and allowing the child to correct it.
C. Child-centered play therapy: Reflecting a child’s play and feelings rather than taking over the play narrative. / Reflecting feelings: Offering a tentative feeling reflection and allowing the child to correct it.
D. Child-centered play therapy: Offering a tentative feeling reflection and allowing the child to correct it. / Reflecting feelings: Reflecting a child’s play and feelings rather than taking over the play narrative.

0444. Which applied comparison correctly identifies what belongs to Tracking versus Reflecting feelings?

A. Tracking: Offering a tentative feeling reflection and allowing the child to correct it. / Reflecting feelings: Saying what the child is doing in play without adding an unsupported interpretation.
B. Tracking: Saying what the child is doing in play without adding an unsupported interpretation. / Reflecting feelings: Offering a tentative feeling reflection and allowing the child to correct it.
C. Tracking: Saying what the child is doing in play without adding an unsupported interpretation. / Reflecting feelings: Choosing materials and rules that allow agency without foreseeable harm.
D. Tracking: Following the child’s symbolic play as a communication channel while maintaining therapeutic purpose. / Reflecting feelings: Offering a tentative feeling reflection and allowing the child to correct it.

0445. Which comparison correctly distinguishes Therapeutic play from Playroom safety?

A. Therapeutic play: Purposeful use of play within a helping relationship to support expression, exploration, and development. / Playroom safety: A therapist-guided use of play activities selected to address identified therapeutic goals.
B. Therapeutic play: Purposeful use of play within a helping relationship to support expression, exploration, and development. / Playroom safety: Thoughtful arrangement and selection of materials that permit expression while protecting physical and emotional safety.
C. Therapeutic play: Naming or tentatively reflecting the emotional meaning conveyed through a child’s words or play. / Playroom safety: Thoughtful arrangement and selection of materials that permit expression while protecting physical and emotional safety.
D. Therapeutic play: Thoughtful arrangement and selection of materials that permit expression while protecting physical and emotional safety. / Playroom safety: Purposeful use of play within a helping relationship to support expression, exploration, and development.

0446. Which comparison would correct a trainee’s misunderstanding of Therapeutic limit setting versus Symbolic play?

A. Therapeutic limit setting: Planned collaboration with caregivers that supports the child’s goals while preserving appropriate therapeutic boundaries. / Symbolic play: Use of objects, actions, or characters to represent ideas and experiences beyond their literal form.
B. Therapeutic limit setting: A clear, empathic boundary that protects people or property while offering acceptable alternatives. / Symbolic play: Use of objects, actions, or characters to represent ideas and experiences beyond their literal form.
C. Therapeutic limit setting: A clear, empathic boundary that protects people or property while offering acceptable alternatives. / Symbolic play: Thoughtful arrangement and selection of materials that permit expression while protecting physical and emotional safety.
D. Therapeutic limit setting: Use of objects, actions, or characters to represent ideas and experiences beyond their literal form. / Symbolic play: A clear, empathic boundary that protects people or property while offering acceptable alternatives.

0447. A program coordinator describes an intervention for a adolescent student in the learning-support meeting, centered on choosing materials and rules that allow agency without foreseeable harm. Which named idea is most relevant?

A. Caregiver involvement
B. Tracking
C. Play therapy documentation
D. Playroom safety

0448. An interdisciplinary team reviews a child aged 14’s case at the student wellness team. The behavior specialist recommends saying what the child is doing in play without adding an unsupported interpretation. Which course concept best fits?

A. Therapeutic play
B. Tracking
C. Reflecting feelings
D. Child-centered play therapy

0449. Which paired example correctly applies Therapeutic play first and Therapeutic limit setting second?

A. Therapeutic play: Remaining curious about a toy character’s role instead of assuming its play meaning. / Therapeutic limit setting: Stating the limit, acknowledging the feeling, and identifying a safe alternative action.
B. Therapeutic play: Following the child’s symbolic play as a communication channel while maintaining therapeutic purpose. / Therapeutic limit setting: Saying what the child is doing in play without adding an unsupported interpretation.
C. Therapeutic play: Stating the limit, acknowledging the feeling, and identifying a safe alternative action. / Therapeutic limit setting: Following the child’s symbolic play as a communication channel while maintaining therapeutic purpose.
D. Therapeutic play: Following the child’s symbolic play as a communication channel while maintaining therapeutic purpose. / Therapeutic limit setting: Stating the limit, acknowledging the feeling, and identifying a safe alternative action.

0450. A mental-health professional and a student aged 9 are discussing support in the student-support meeting. The selected practice is stating the limit, acknowledging the feeling, and identifying a safe alternative action. Which concept does this demonstrate?

A. Therapeutic limit setting
B. Playroom safety
C. Caregiver involvement
D. Reflecting feelings

0451. A service team discusses a child aged 6 in the community service agency. Their proposed next step is offering a tentative feeling reflection and allowing the child to correct it. Which course concept supports it?

A. Reflecting feelings
B. Therapeutic play
C. Playroom safety
D. Caregiver involvement

0452. A supervisor asks for an applied contrast between Symbolic play and Caregiver involvement. Which option fits?

A. Symbolic play: Saying what the child is doing in play without adding an unsupported interpretation. / Caregiver involvement: Sharing general progress and practical support strategies with caregivers under the consent and privacy plan.
B. Symbolic play: Remaining curious about a toy character's role instead of assuming its play meaning. / Caregiver involvement: Sharing general progress and practical support strategies with caregivers under the consent and privacy plan.
C. Symbolic play: Remaining curious about a toy character's role instead of assuming its play meaning. / Caregiver involvement: Following the child's symbolic play as a communication channel while maintaining therapeutic purpose.
D. Symbolic play: Sharing general progress and practical support strategies with caregivers under the consent and privacy plan. / Caregiver involvement: Remaining curious about a toy character's role instead of assuming its play meaning.

0453. In a supervision quiz, how should Therapeutic play be distinguished from Tracking?

A. Therapeutic play: Recording observable play, interventions, response, and clinical rationale while distinguishing observation from inference. / Tracking: Describing a child's observable play actions in a clear, nonjudgmental way.
B. Therapeutic play: Purposeful use of play within a helping relationship to support expression, exploration, and development. / Tracking: Describing a child's observable play actions in a clear, nonjudgmental way.
C. Therapeutic play: Describing a child's observable play actions in a clear, nonjudgmental way. / Tracking: Purposeful use of play within a helping relationship to support expression, exploration, and development.
D. Therapeutic play: Purposeful use of play within a helping relationship to support expression, exploration, and development. / Tracking: Naming or tentatively reflecting the emotional meaning conveyed through a child's words or play.

0454. How are Therapeutic limit setting and Symbolic play most accurately differentiated in this curriculum?

A. Therapeutic limit setting: Use of objects, actions, or characters to represent ideas and experiences beyond their literal form. / Symbolic play: A clear, empathic boundary that protects people or property while offering acceptable alternatives.
B. Therapeutic limit setting: Planned collaboration with caregivers that supports the child's goals while preserving appropriate therapeutic boundaries. / Symbolic play: Use of objects, actions, or characters to represent ideas and experiences beyond their literal form.
C. Therapeutic limit setting: A clear, empathic boundary that protects people or property while offering acceptable alternatives. / Symbolic play: Use of objects, actions, or characters to represent ideas and experiences beyond their literal form.
D. Therapeutic limit setting: A clear, empathic boundary that protects people or property while offering acceptable alternatives. / Symbolic play: Thoughtful arrangement and selection of materials that permit expression while protecting physical and emotional safety.

0455. Which option pairs the definitions of Directive play therapy and Symbolic play correctly, in that order?

A. Directive play therapy: A therapist-guided use of play activities selected to address identified therapeutic goals. / Symbolic play: Use of objects, actions, or characters to represent ideas and experiences beyond their literal form.
B. Directive play therapy: Use of objects, actions, or characters to represent ideas and experiences beyond their literal form. / Symbolic play: A therapist-guided use of play activities selected to address identified therapeutic goals.
C. Directive play therapy: A therapist-guided use of play activities selected to address identified therapeutic goals. / Symbolic play: Recording observable play, interventions, response, and clinical rationale while distinguishing observation from inference.
D. Directive play therapy: Describing a child's observable play actions in a clear, nonjudgmental way. / Symbolic play: Use of objects, actions, or characters to represent ideas and experiences beyond their literal form.

0456. A teacher and counselor is asked to justify a plan for a child aged 11 in the community service agency. It calls for sharing general progress and practical support strategies with caregivers under the consent and privacy plan. Which concept provides the rationale?

A. Play therapy documentation
B. Caregiver involvement
C. Playroom safety
D. Reflecting feelings

0457. While supporting a child aged 6 in the school consultation, a caregiver working with a counselor adopts this practice: choosing and structuring a play activity to practice a specified coping or communication skill. Which concept best explains the choice?

A. Tracking
B. Play therapy documentation
C. Symbolic play
D. Directive play therapy

0458. Choose the definition pair that correctly explains Tracking first and Reflecting feelings second.

A. Tracking: Purposeful use of play within a helping relationship to support expression, exploration, and development. / Reflecting feelings: Naming or tentatively reflecting the emotional meaning conveyed through a child's words or play.
B. Tracking: Describing a child's observable play actions in a clear, nonjudgmental way. / Reflecting feelings: Thoughtful arrangement and selection of materials that permit expression while protecting physical and emotional safety.
C. Tracking: Naming or tentatively reflecting the emotional meaning conveyed through a child's words or play. / Reflecting feelings: Describing a child's observable play actions in a clear, nonjudgmental way.
D. Tracking: Describing a child's observable play actions in a clear, nonjudgmental way. / Reflecting feelings: Naming or tentatively reflecting the emotional meaning conveyed through a child's words or play.

0459. A student confuses Child-centered play therapy with Reflecting feelings. Which explanation most accurately separates them?

A. Child-centered play therapy: Thoughtful arrangement and selection of materials that permit expression while protecting physical and emotional safety. / Reflecting feelings: Naming or tentatively reflecting the emotional meaning conveyed through a child's words or play.
B. Child-centered play therapy: A non-directive approach emphasizing acceptance, empathy, tracking, and the child's lead within safe limits. / Reflecting feelings: Planned collaboration with caregivers that supports the child's goals while preserving appropriate therapeutic boundaries.
C. Child-centered play therapy: Naming or tentatively reflecting the emotional meaning conveyed through a child's words or play. / Reflecting feelings: A non-directive approach emphasizing acceptance, empathy, tracking, and the child's lead within safe limits.
D. Child-centered play therapy: A non-directive approach emphasizing acceptance, empathy, tracking, and the child's lead within safe limits. / Reflecting feelings: Naming or tentatively reflecting the emotional meaning conveyed through a child's words or play.

0460. A school counselor is asked to justify a plan for a teenage client in the behavior-support review. It calls for choosing materials and rules that allow agency without foreseeable harm. Which concept provides the rationale?

A. Therapeutic play
B. Therapeutic limit setting
C. Playroom safety
D. Child-centered play therapy

0461. A planning meeting about a child of elementary-school age includes a school support specialist. The proposed practice in the after-school program is reflecting a child's play and feelings rather than taking over the play narrative. Which idea underlies it?

A. Play therapy documentation
B. Symbolic play
C. Tracking
D. Child-centered play therapy

0462. Which statement accurately contrasts the course concepts Reflecting feelings and Therapeutic limit setting?

A. Reflecting feelings: A clear, empathic boundary that protects people or property while offering acceptable alternatives. / Therapeutic limit setting: Naming or tentatively reflecting the emotional meaning conveyed through a child's words or play.
B. Reflecting feelings: Naming or tentatively reflecting the emotional meaning conveyed through a child's words or play. / Therapeutic limit setting: Recording observable play, interventions, response, and clinical rationale while distinguishing observation from inference.
C. Reflecting feelings: Describing a child's observable play actions in a clear, nonjudgmental way. / Therapeutic limit setting: A clear, empathic boundary that protects people or property while offering acceptable alternatives.
D. Reflecting feelings: Naming or tentatively reflecting the emotional meaning conveyed through a child's words or play. / Therapeutic limit setting: A clear, empathic boundary that protects people or property while offering acceptable alternatives.

0463. Which statement accurately contrasts the course concepts Caregiver involvement and Play therapy documentation?

A. Caregiver involvement: Planned collaboration with caregivers that supports the child's goals while preserving appropriate therapeutic boundaries. / Play therapy documentation: Recording observable play, interventions, response, and clinical rationale while distinguishing observation from inference.
B. Caregiver involvement: Planned collaboration with caregivers that supports the child's goals while preserving appropriate therapeutic boundaries. / Play therapy documentation: Thoughtful arrangement and selection of materials that permit expression while protecting physical and emotional safety.
C. Caregiver involvement: A therapist-guided use of play activities selected to address identified therapeutic goals. / Play therapy documentation: Recording observable play, interventions, response, and clinical rationale while distinguishing observation from inference.
D. Caregiver involvement: Recording observable play, interventions, response, and clinical rationale while distinguishing observation from inference. / Play therapy documentation: Planned collaboration with caregivers that supports the child's goals while preserving appropriate therapeutic boundaries.

0464. How are Therapeutic limit setting and Caregiver involvement most accurately differentiated in this curriculum?

A. Therapeutic limit setting: Purposeful use of play within a helping relationship to support expression, exploration, and development. / Caregiver involvement: Planned collaboration with caregivers that supports the child's goals while preserving appropriate therapeutic boundaries.
B. Therapeutic limit setting: A clear, empathic boundary that protects people or property while offering acceptable alternatives. / Caregiver involvement: Recording observable play, interventions, response, and clinical rationale while distinguishing observation from inference.
C. Therapeutic limit setting: Planned collaboration with caregivers that supports the child's goals while preserving appropriate therapeutic boundaries. / Caregiver involvement: A clear, empathic boundary that protects people or property while offering acceptable alternatives.
D. Therapeutic limit setting: A clear, empathic boundary that protects people or property while offering acceptable alternatives. / Caregiver involvement: Planned collaboration with caregivers that supports the child's goals while preserving appropriate therapeutic boundaries.

0465. How are Tracking and Symbolic play most accurately differentiated in this curriculum?

A. Tracking: Describing a child's observable play actions in a clear, nonjudgmental way. / Symbolic play: Use of objects, actions, or characters to represent ideas and experiences beyond their literal form.
B. Tracking: A therapist-guided use of play activities selected to address identified therapeutic goals. / Symbolic play: Use of objects, actions, or characters to represent ideas and experiences beyond their literal form.
C. Tracking: Describing a child's observable play actions in a clear, nonjudgmental way. / Symbolic play: Recording observable play, interventions, response, and clinical rationale while distinguishing observation from inference.
D. Tracking: Use of objects, actions, or characters to represent ideas and experiences beyond their literal form. / Symbolic play: Describing a child's observable play actions in a clear, nonjudgmental way.

0466. Which applied comparison correctly identifies what belongs to Child-centered play therapy versus Symbolic play?

A. Child-centered play therapy: Reflecting a child's play and feelings rather than taking over the play narrative. / Symbolic play: Documenting what occurred and separating directly observed behavior from interpretation.
B. Child-centered play therapy: Following the child's symbolic play as a communication channel while maintaining therapeutic purpose. / Symbolic play: Remaining curious about a toy character's role instead of assuming its play meaning.
C. Child-centered play therapy: Reflecting a child's play and feelings rather than taking over the play narrative. / Symbolic play: Remaining curious about a toy character's role instead of assuming its play meaning.
D. Child-centered play therapy: Remaining curious about a toy character's role instead of assuming its play meaning. / Symbolic play: Reflecting a child's play and feelings rather than taking over the play narrative.

0467. Which paired example correctly applies Therapeutic limit setting first and Symbolic play second?

A. Therapeutic limit setting: Sharing general progress and practical support strategies with caregivers under the consent and privacy plan. / Symbolic play: Remaining curious about a toy character's role instead of assuming its play meaning.
B. Therapeutic limit setting: Remaining curious about a toy character's role instead of assuming its play meaning. / Symbolic play: Stating the limit, acknowledging the feeling, and identifying a safe alternative action.
C. Therapeutic limit setting: Stating the limit, acknowledging the feeling, and identifying a safe alternative action. / Symbolic play: Choosing materials and rules that allow agency without foreseeable harm.
D. Therapeutic limit setting: Stating the limit, acknowledging the feeling, and identifying a safe alternative action. / Symbolic play: Remaining curious about a toy character's role instead of assuming its play meaning.

0468. A team must select a support approach for a child of elementary-school age at the caregiver consultation. The parent educator recommends choosing and structuring a play activity to practice a specified coping or communication skill. Which idea is most relevant?

A. Play therapy documentation
B. Therapeutic limit setting
C. Directive play therapy
D. Reflecting feelings

0469. Which comparison correctly distinguishes Therapeutic limit setting from Caregiver involvement?

A. Therapeutic limit setting: Planned collaboration with caregivers that supports the child's goals while preserving appropriate therapeutic boundaries. / Caregiver involvement: A clear, empathic boundary that protects people or property while offering acceptable alternatives.
B. Therapeutic limit setting: Purposeful use of play within a helping relationship to support expression, exploration, and development. / Caregiver involvement: Planned collaboration with caregivers that supports the child's goals while preserving appropriate therapeutic boundaries.
C. Therapeutic limit setting: A clear, empathic boundary that protects people or property while offering acceptable alternatives. / Caregiver involvement: Recording observable play, interventions, response, and clinical rationale while distinguishing observation from inference.
D. Therapeutic limit setting: A clear, empathic boundary that protects people or property while offering acceptable alternatives. / Caregiver involvement: Planned collaboration with caregivers that supports the child's goals while preserving appropriate therapeutic boundaries.

0470. A mental-health professional and a high-school student are discussing support in the family resource center. The selected practice is following the child's symbolic play as a communication channel while maintaining therapeutic purpose. Which concept does this demonstrate?

A. Therapeutic play
B. Symbolic play
C. Tracking
D. Play therapy documentation

0471. Which named construct is captured by this account? Recording observable play, interventions, response, and clinical rationale while distinguishing observation from inference.

A. Caregiver involvement
B. Therapeutic limit setting
C. Play therapy documentation
D. Tracking

0472. How are Directive play therapy and Tracking most accurately differentiated in this curriculum?

A. Directive play therapy: A therapist-guided use of play activities selected to address identified therapeutic goals. / Tracking: Describing a child's observable play actions in a clear, nonjudgmental way.
B. Directive play therapy: Planned collaboration with caregivers that supports the child's goals while preserving appropriate therapeutic boundaries. / Tracking: Describing a child's observable play actions in a clear, nonjudgmental way.
C. Directive play therapy: Describing a child's observable play actions in a clear, nonjudgmental way. / Tracking: A therapist-guided use of play activities selected to address identified therapeutic goals.
D. Directive play therapy: A therapist-guided use of play activities selected to address identified therapeutic goals. / Tracking: Naming or tentatively reflecting the emotional meaning conveyed through a child's words or play.

0473. In a supervision quiz, how should Child-centered play therapy be distinguished from Symbolic play?

A. Child-centered play therapy: Use of objects, actions, or characters to represent ideas and experiences beyond their literal form. / Symbolic play: A non-directive approach emphasizing acceptance, empathy, tracking, and the child's lead within safe limits.
B. Child-centered play therapy: A non-directive approach emphasizing acceptance, empathy, tracking, and the child's lead within safe limits. / Symbolic play: Recording observable play, interventions, response, and clinical rationale while distinguishing observation from inference.
C. Child-centered play therapy: Purposeful use of play within a helping relationship to support expression, exploration, and development. / Symbolic play: Use of objects, actions, or characters to represent ideas and experiences beyond their literal form.
D. Child-centered play therapy: A non-directive approach emphasizing acceptance, empathy, tracking, and the child's lead within safe limits. / Symbolic play: Use of objects, actions, or characters to represent ideas and experiences beyond their literal form.

0474. A supervisor asks for an applied contrast between Therapeutic limit setting and Caregiver involvement. Which option fits?

A. Therapeutic limit setting: Following the child's symbolic play as a communication channel while maintaining therapeutic purpose. / Caregiver involvement: Sharing general progress and practical support strategies with caregivers under the consent and privacy plan.
B. Therapeutic limit setting: Stating the limit, acknowledging the feeling, and identifying a safe alternative action. / Caregiver involvement: Documenting what occurred and separating directly observed behavior from interpretation.
C. Therapeutic limit setting: Sharing general progress and practical support strategies with caregivers under the consent and privacy plan. / Caregiver involvement: Stating the limit, acknowledging the feeling, and identifying a safe alternative action.
D. Therapeutic limit setting: Stating the limit, acknowledging the feeling, and identifying a safe alternative action. / Caregiver involvement: Sharing general progress and practical support strategies with caregivers under the consent and privacy plan.

0475. Which paired example correctly applies Child-centered play therapy first and Caregiver involvement second?

A. Child-centered play therapy: Sharing general progress and practical support strategies with caregivers under the consent and privacy plan. / Caregiver involvement: Reflecting a child's play and feelings rather than taking over the play narrative.
B. Child-centered play therapy: Reflecting a child's play and feelings rather than taking over the play narrative. / Caregiver involvement: Sharing general progress and practical support strategies with caregivers under the consent and privacy plan.
C. Child-centered play therapy: Reflecting a child's play and feelings rather than taking over the play narrative. / Caregiver involvement: Stating the limit, acknowledging the feeling, and identifying a safe alternative action.
D. Child-centered play therapy: Documenting what occurred and separating directly observed behavior from interpretation. / Caregiver involvement: Sharing general progress and practical support strategies with caregivers under the consent and privacy plan.

0476. A consultant is preparing a follow-up plan for a child aged 11 in the school consultation. The plan calls for remaining curious about a toy character's role instead of assuming its play meaning. Which concept names this approach?

A. Caregiver involvement
B. Symbolic play
C. Child-centered play therapy
D. Directive play therapy

0477. Which statement shows a sound practice-level distinction between Tracking and Symbolic play?

A. Tracking: Choosing and structuring a play activity to practice a specified coping or communication skill. / Symbolic play: Remaining curious about a toy character's role instead of assuming its play meaning.
B. Tracking: Saying what the child is doing in play without adding an unsupported interpretation. / Symbolic play: Documenting what occurred and separating directly observed behavior from interpretation.
C. Tracking: Saying what the child is doing in play without adding an unsupported interpretation. / Symbolic play: Remaining curious about a toy character's role instead of assuming its play meaning.
D. Tracking: Remaining curious about a toy character's role instead of assuming its play meaning. / Symbolic play: Saying what the child is doing in play without adding an unsupported interpretation.

0478. Which comparison correctly distinguishes Therapeutic limit setting from Play therapy documentation?

A. Therapeutic limit setting: Naming or tentatively reflecting the emotional meaning conveyed through a child's words or play. / Play therapy documentation: Recording observable play, interventions, response, and clinical rationale while distinguishing observation from inference.
B. Therapeutic limit setting: A clear, empathic boundary that protects people or property while offering acceptable alternatives. / Play therapy documentation: Recording observable play, interventions, response, and clinical rationale while distinguishing observation from inference.
C. Therapeutic limit setting: A clear, empathic boundary that protects people or property while offering acceptable alternatives. / Play therapy documentation: A non-directive approach emphasizing acceptance, empathy, tracking, and the child's lead within safe limits.
D. Therapeutic limit setting: Recording observable play, interventions, response, and clinical rationale while distinguishing observation from inference. / Play therapy documentation: A clear, empathic boundary that protects people or property while offering acceptable alternatives.

0479. A student confuses Therapeutic limit setting with Play therapy documentation. Which explanation most accurately separates them?

A. Therapeutic limit setting: A clear, empathic boundary that protects people or property while offering acceptable alternatives. / Play therapy documentation: A non-directive approach emphasizing acceptance, empathy, tracking, and the child's lead within safe limits.
B. Therapeutic limit setting: Naming or tentatively reflecting the emotional meaning conveyed through a child's words or play. / Play therapy documentation: Recording observable play, interventions, response, and clinical rationale while distinguishing observation from inference.
C. Therapeutic limit setting: A clear, empathic boundary that protects people or property while offering acceptable alternatives. / Play therapy documentation: Recording observable play, interventions, response, and clinical rationale while distinguishing observation from inference.
D. Therapeutic limit setting: Recording observable play, interventions, response, and clinical rationale while distinguishing observation from inference. / Play therapy documentation: A clear, empathic boundary that protects people or property while offering acceptable alternatives.

0480. Which comparison correctly distinguishes Tracking from Caregiver involvement?

A. Tracking: Describing a child's observable play actions in a clear, nonjudgmental way. / Caregiver involvement: A non-directive approach emphasizing acceptance, empathy, tracking, and the child's lead within safe limits.
B. Tracking: Planned collaboration with caregivers that supports the child's goals while preserving appropriate therapeutic boundaries. / Caregiver involvement: Describing a child's observable play actions in a clear, nonjudgmental way.
C. Tracking: A clear, empathic boundary that protects people or property while offering acceptable alternatives. / Caregiver involvement: Planned collaboration with caregivers that supports the child's goals while preserving appropriate therapeutic boundaries.
D. Tracking: Describing a child's observable play actions in a clear, nonjudgmental way. / Caregiver involvement: Planned collaboration with caregivers that supports the child's goals while preserving appropriate therapeutic boundaries.

0481. In the telehealth session, a group facilitator describes the most appropriate support for a student aged 12 as remaining curious about a toy character's role instead of assuming its play meaning. Which framework is being applied?

A. Therapeutic limit setting
B. Play therapy documentation
C. Directive play therapy
D. Symbolic play

0482. A case conference asks for a distinction between Therapeutic play and Playroom safety. Which answer is sound?

A. Therapeutic play: Naming or tentatively reflecting the emotional meaning conveyed through a child's words or play. / Playroom safety: Thoughtful arrangement and selection of materials that permit expression while protecting physical and emotional safety.
B. Therapeutic play: Purposeful use of play within a helping relationship to support expression, exploration, and development. / Playroom safety: A therapist-guided use of play activities selected to address identified therapeutic goals.
C. Therapeutic play: Purposeful use of play within a helping relationship to support expression, exploration, and development. / Playroom safety: Thoughtful arrangement and selection of materials that permit expression while protecting physical and emotional safety.
D. Therapeutic play: Thoughtful arrangement and selection of materials that permit expression while protecting physical and emotional safety. / Playroom safety: Purposeful use of play within a helping relationship to support expression, exploration, and development.

0483. During work in the learning-support meeting, a youth worker identifies this need: remaining curious about a toy character's role instead of assuming its play meaning. Which idea should guide the response?

A. Symbolic play
B. Playroom safety
C. Reflecting feelings
D. Tracking

0484. A member of a clinical team prepares for a session in the counseling practicum with a child aged 8. The intended approach is choosing and structuring a play activity to practice a specified coping or communication skill. Which concept is most relevant?

A. Child-centered play therapy
B. Tracking
C. Directive play therapy
D. Symbolic play

0485. A doctoral student reads the following description. Which concept does it define? A therapist-guided use of play activities selected to address identified therapeutic goals.

A. Play therapy documentation
B. Therapeutic limit setting
C. Symbolic play
D. Directive play therapy

0486. Choose the practice comparison that best separates Therapeutic limit setting from Caregiver involvement.

A. Therapeutic limit setting: Sharing general progress and practical support strategies with caregivers under the consent and privacy plan. / Caregiver involvement: Stating the limit, acknowledging the feeling, and identifying a safe alternative action.
B. Therapeutic limit setting: Stating the limit, acknowledging the feeling, and identifying a safe alternative action. / Caregiver involvement: Documenting what occurred and separating directly observed behavior from interpretation.
C. Therapeutic limit setting: Stating the limit, acknowledging the feeling, and identifying a safe alternative action. / Caregiver involvement: Sharing general progress and practical support strategies with caregivers under the consent and privacy plan.
D. Therapeutic limit setting: Following the child's symbolic play as a communication channel while maintaining therapeutic purpose. / Caregiver involvement: Sharing general progress and practical support strategies with caregivers under the consent and privacy plan.

0487. Which pair of actions illustrates Therapeutic play and Caregiver involvement, respectively?

A. Therapeutic play: Following the child's symbolic play as a communication channel while maintaining therapeutic purpose. / Caregiver involvement: Saying what the child is doing in play without adding an unsupported interpretation.
B. Therapeutic play: Following the child's symbolic play as a communication channel while maintaining therapeutic purpose. / Caregiver involvement: Sharing general progress and practical support strategies with caregivers under the consent and privacy plan.
C. Therapeutic play: Offering a tentative feeling reflection and allowing the child to correct it. / Caregiver involvement: Sharing general progress and practical support strategies with caregivers under the consent and privacy plan.
D. Therapeutic play: Sharing general progress and practical support strategies with caregivers under the consent and privacy plan. / Caregiver involvement: Following the child's symbolic play as a communication channel while maintaining therapeutic purpose.

0488. A older adolescent client and a mental-health professional are reviewing goals in the family session. The agreed action is documenting what occurred and separating directly observed behavior from interpretation. Which principle best accounts for it?

A. Tracking
B. Directive play therapy
C. Play therapy documentation
D. Therapeutic limit setting

0489. Which comparison would correct a trainee's misunderstanding of Child-centered play therapy versus Therapeutic limit setting?

A. Child-centered play therapy: Purposeful use of play within a helping relationship to support expression, exploration, and development. / Therapeutic limit setting: A clear, empathic boundary that protects people or property while offering acceptable alternatives.
B. Child-centered play therapy: A clear, empathic boundary that protects people or property while offering acceptable alternatives. / Therapeutic limit setting: A non-directive approach emphasizing acceptance, empathy, tracking, and the child's lead within safe limits.
C. Child-centered play therapy: A non-directive approach emphasizing acceptance, empathy, tracking, and the child's lead within safe limits. / Therapeutic limit setting: A clear, empathic boundary that protects people or property while offering acceptable alternatives.
D. Child-centered play therapy: A non-directive approach emphasizing acceptance, empathy, tracking, and the child's lead within safe limits. / Therapeutic limit setting: Thoughtful arrangement and selection of materials that permit expression while protecting physical and emotional safety.

0490. Choose the definition pair that correctly explains Reflecting feelings first and Symbolic play second.

A. Reflecting feelings: Describing a child's observable play actions in a clear, nonjudgmental way. / Symbolic play: Use of objects, actions, or characters to represent ideas and experiences beyond their literal form.
B. Reflecting feelings: Naming or tentatively reflecting the emotional meaning conveyed through a child's words or play. / Symbolic play: Recording observable play, interventions, response, and clinical rationale while distinguishing observation from inference.
C. Reflecting feelings: Naming or tentatively reflecting the emotional meaning conveyed through a child's words or play. / Symbolic play: Use of objects, actions, or characters to represent ideas and experiences beyond their literal form.
D. Reflecting feelings: Use of objects, actions, or characters to represent ideas and experiences beyond their literal form. / Symbolic play: Naming or tentatively reflecting the emotional meaning conveyed through a child's words or play.

0491. During work in the school consultation, a school counselor identifies this need: documenting what occurred and separating directly observed behavior from interpretation. Which idea should guide the response?

A. Symbolic play
B. Play therapy documentation
C. Tracking
D. Caregiver involvement

0492. While supporting a client in late adolescence in the youth group, a family therapist adopts this practice: saying what the child is doing in play without adding an unsupported interpretation. Which concept best explains the choice?

A. Play therapy documentation
B. Therapeutic play
C. Symbolic play
D. Tracking

0493. A case conference asks for a distinction between Child-centered play therapy and Playroom safety. Which answer is sound?

A. Child-centered play therapy: A non-directive approach emphasizing acceptance, empathy, tracking, and the child's lead within safe limits. / Playroom safety: Use of objects, actions, or characters to represent ideas and experiences beyond their literal form.
B. Child-centered play therapy: Thoughtful arrangement and selection of materials that permit expression while protecting physical and emotional safety. / Playroom safety: A non-directive approach emphasizing acceptance, empathy, tracking, and the child's lead within safe limits.
C. Child-centered play therapy: A non-directive approach emphasizing acceptance, empathy, tracking, and the child's lead within safe limits. / Playroom safety: Thoughtful arrangement and selection of materials that permit expression while protecting physical and emotional safety.
D. Child-centered play therapy: Naming or tentatively reflecting the emotional meaning conveyed through a child's words or play. / Playroom safety: Thoughtful arrangement and selection of materials that permit expression while protecting physical and emotional safety.

0494. How should a practitioner distinguish the applications of Therapeutic play and Directive play therapy?

A. Therapeutic play: Documenting what occurred and separating directly observed behavior from interpretation. / Directive play therapy: Choosing and structuring a play activity to practice a specified coping or communication skill.
B. Therapeutic play: Choosing and structuring a play activity to practice a specified coping or communication skill. / Directive play therapy: Following the child's symbolic play as a communication channel while maintaining therapeutic purpose.
C. Therapeutic play: Following the child's symbolic play as a communication channel while maintaining therapeutic purpose. / Directive play therapy: Remaining curious about a toy character's role instead of assuming its play meaning.
D. Therapeutic play: Following the child's symbolic play as a communication channel while maintaining therapeutic purpose. / Directive play therapy: Choosing and structuring a play activity to practice a specified coping or communication skill.

0495. A supervisor asks for an applied contrast between Directive play therapy and Reflecting feelings. Which option fits?

A. Directive play therapy: Offering a tentative feeling reflection and allowing the child to correct it. / Reflecting feelings: Choosing and structuring a play activity to practice a specified coping or communication skill.
B. Directive play therapy: Remaining curious about a toy character's role instead of assuming its play meaning. / Reflecting feelings: Offering a tentative feeling reflection and allowing the child to correct it.
C. Directive play therapy: Choosing and structuring a play activity to practice a specified coping or communication skill. / Reflecting feelings: Offering a tentative feeling reflection and allowing the child to correct it.
D. Directive play therapy: Choosing and structuring a play activity to practice a specified coping or communication skill. / Reflecting feelings: Sharing general progress and practical support strategies with caregivers under the consent and privacy plan.

0496. A case conference reviews a program coordinator's work with a school-age child in the after-school program: sharing general progress and practical support strategies with caregivers under the consent and privacy plan. Which principle is central?

A. Symbolic play
B. Caregiver involvement
C. Child-centered play therapy
D. Therapeutic limit setting

0497. Which applied comparison correctly identifies what belongs to Reflecting feelings versus Symbolic play?

A. Reflecting feelings: Saying what the child is doing in play without adding an unsupported interpretation. / Symbolic play: Remaining curious about a toy character's role instead of assuming its play meaning.
B. Reflecting feelings: Remaining curious about a toy character's role instead of assuming its play meaning. / Symbolic play: Offering a tentative feeling reflection and allowing the child to correct it.
C. Reflecting feelings: Offering a tentative feeling reflection and allowing the child to correct it. / Symbolic play: Remaining curious about a toy character's role instead of assuming its play meaning.
D. Reflecting feelings: Offering a tentative feeling reflection and allowing the child to correct it. / Symbolic play: Documenting what occurred and separating directly observed behavior from interpretation.

0498. Which professional action most closely applies Child-centered play therapy?

A. Reflecting a child's play and feelings rather than taking over the play narrative.
B. Documenting what occurred and separating directly observed behavior from interpretation.
C. Remaining curious about a toy character's role instead of assuming its play meaning.
D. Offering a tentative feeling reflection and allowing the child to correct it.

0499. Which option preserves the correct meaning of both Therapeutic play and Playroom safety?

A. Therapeutic play: Purposeful use of play within a helping relationship to support expression, exploration, and development. / Playroom safety: A therapist-guided use of play activities selected to address identified therapeutic goals.
B. Therapeutic play: Naming or tentatively reflecting the emotional meaning conveyed through a child's words or play. / Playroom safety: Thoughtful arrangement and selection of materials that permit expression while protecting physical and emotional safety.
C. Therapeutic play: Purposeful use of play within a helping relationship to support expression, exploration, and development. / Playroom safety: Thoughtful arrangement and selection of materials that permit expression while protecting physical and emotional safety.
D. Therapeutic play: Thoughtful arrangement and selection of materials that permit expression while protecting physical and emotional safety. / Playroom safety: Purposeful use of play within a helping relationship to support expression, exploration, and development.

0500. Choose the practice comparison that best separates Therapeutic limit setting from Symbolic play.

A. Therapeutic limit setting: Sharing general progress and practical support strategies with caregivers under the consent and privacy plan. / Symbolic play: Remaining curious about a toy character's role instead of assuming its play meaning.
B. Therapeutic limit setting: Stating the limit, acknowledging the feeling, and identifying a safe alternative action. / Symbolic play: Remaining curious about a toy character's role instead of assuming its play meaning.
C. Therapeutic limit setting: Remaining curious about a toy character's role instead of assuming its play meaning. / Symbolic play: Stating the limit, acknowledging the feeling, and identifying a safe alternative action.
D. Therapeutic limit setting: Stating the limit, acknowledging the feeling, and identifying a safe alternative action. / Symbolic play: Choosing materials and rules that allow agency without foreseeable harm.

0501. In a supervision quiz, how should Reflecting feelings be distinguished from Caregiver involvement?

A. Reflecting feelings: Planned collaboration with caregivers that supports the child's goals while preserving appropriate therapeutic boundaries. / Caregiver involvement: Naming or tentatively reflecting the emotional meaning conveyed through a child's words or play.
B. Reflecting feelings: Use of objects, actions, or characters to represent ideas and experiences beyond their literal form. / Caregiver involvement: Planned collaboration with caregivers that supports the child's goals while preserving appropriate therapeutic boundaries.
C. Reflecting feelings: Naming or tentatively reflecting the emotional meaning conveyed through a child's words or play. / Caregiver involvement: Recording observable play, interventions, response, and clinical rationale while distinguishing observation from inference.
D. Reflecting feelings: Naming or tentatively reflecting the emotional meaning conveyed through a child's words or play. / Caregiver involvement: Planned collaboration with caregivers that supports the child's goals while preserving appropriate therapeutic boundaries.

0502. Which applied comparison correctly identifies what belongs to Caregiver involvement versus Play therapy documentation?

A. Caregiver involvement: Choosing and structuring a play activity to practice a specified coping or communication skill. / Play therapy documentation: Documenting what occurred and separating directly observed behavior from interpretation.
B. Caregiver involvement: Sharing general progress and practical support strategies with caregivers under the consent and privacy plan. / Play therapy documentation: Documenting what occurred and separating directly observed behavior from interpretation.
C. Caregiver involvement: Sharing general progress and practical support strategies with caregivers under the consent and privacy plan. / Play therapy documentation: Choosing materials and rules that allow agency without foreseeable harm.
D. Caregiver involvement: Documenting what occurred and separating directly observed behavior from interpretation. / Play therapy documentation: Sharing general progress and practical support strategies with caregivers under the consent and privacy plan.

0503. Which pair of actions illustrates Therapeutic play and Directive play therapy, respectively?

A. Therapeutic play: Choosing and structuring a play activity to practice a specified coping or communication skill. / Directive play therapy: Following the child's symbolic play as a communication channel while maintaining therapeutic purpose.
B. Therapeutic play: Following the child's symbolic play as a communication channel while maintaining therapeutic purpose. / Directive play therapy: Choosing and structuring a play activity to practice a specified coping or communication skill.
C. Therapeutic play: Documenting what occurred and separating directly observed behavior from interpretation. / Directive play therapy: Choosing and structuring a play activity to practice a specified coping or communication skill.
D. Therapeutic play: Following the child's symbolic play as a communication channel while maintaining therapeutic purpose. / Directive play therapy: Remaining curious about a toy character's role instead of assuming its play meaning.

0504. At a case-planning meeting, the school support specialist proposes choosing materials and rules that allow agency without foreseeable harm. for a preadolescent child seen in the community service agency. Which concept does this illustrate?

A. Reflecting feelings
B. Play therapy documentation
C. Caregiver involvement
D. Playroom safety

0505. Select the best explanation of Play therapy documentation.

A. Naming or tentatively reflecting the emotional meaning conveyed through a child's words or play.
B. A non-directive approach emphasizing acceptance, empathy, tracking, and the child's lead within safe limits.
C. Recording observable play, interventions, response, and clinical rationale while distinguishing observation from inference.
D. A clear, empathic boundary that protects people or property while offering acceptable alternatives.

0506. A doctoral student reads the following description. Which concept does it define? Use of objects, actions, or characters to represent ideas and experiences beyond their literal form.

A. Reflecting feelings
B. Symbolic play
C. Tracking
D. Child-centered play therapy

0507. A group facilitator is explaining a choice to a child aged 7 and caregiver in the student wellness team. The choice centers on offering a tentative feeling reflection and allowing the child to correct it. Which idea is illustrated?

A. Reflecting feelings
B. Therapeutic play
C. Tracking
D. Directive play therapy

0508. While supporting a adolescent student in the parent meeting, a parent educator adopts this practice: following the child's symbolic play as a communication channel while maintaining therapeutic purpose. Which concept best explains the choice?

A. Symbolic play
B. Therapeutic play
C. Caregiver involvement
D. Therapeutic limit setting

0509. Which option is the clearest practical expression of Caregiver involvement?

A. Reflecting a child's play and feelings rather than taking over the play narrative.
B. Documenting what occurred and separating directly observed behavior from interpretation.
C. Sharing general progress and practical support strategies with caregivers under the consent and privacy plan.
D. Remaining curious about a toy character's role instead of assuming its play meaning.

0510. In a professional consultation about a young person aged 13, the supervised trainee describes this response in the outpatient clinic: choosing materials and rules that allow agency without foreseeable harm. Which term is most apt?

A. Playroom safety
B. Play therapy documentation
C. Symbolic play
D. Child-centered play therapy

0511. A student confuses Tracking with Playroom safety. Which explanation most accurately separates them?

A. Tracking: Describing a child's observable play actions in a clear, nonjudgmental way. / Playroom safety: Naming or tentatively reflecting the emotional meaning conveyed through a child's words or play.
B. Tracking: Thoughtful arrangement and selection of materials that permit expression while protecting physical and emotional safety. / Playroom safety: Describing a child's observable play actions in a clear, nonjudgmental way.
C. Tracking: Describing a child's observable play actions in a clear, nonjudgmental way. / Playroom safety: Thoughtful arrangement and selection of materials that permit expression while protecting physical and emotional safety.
D. Tracking: A therapist-guided use of play activities selected to address identified therapeutic goals. / Playroom safety: Thoughtful arrangement and selection of materials that permit expression while protecting physical and emotional safety.

0512. An interdisciplinary team reviews a school-age child's case at the school counseling office. The clinical supervisor recommends stating the limit, acknowledging the feeling, and identifying a safe alternative action. Which course concept best fits?

A. Caregiver involvement
B. Playroom safety
C. Play therapy documentation
D. Therapeutic limit setting

0513. A supervisor asks for an applied contrast between Child-centered play therapy and Tracking. Which option fits?

A. Child-centered play therapy: Reflecting a child's play and feelings rather than taking over the play narrative. / Tracking: Saying what the child is doing in play without adding an unsupported interpretation.
B. Child-centered play therapy: Saying what the child is doing in play without adding an unsupported interpretation. / Tracking: Reflecting a child's play and feelings rather than taking over the play narrative.
C. Child-centered play therapy: Choosing materials and rules that allow agency without foreseeable harm. / Tracking: Saying what the child is doing in play without adding an unsupported interpretation.
D. Child-centered play therapy: Reflecting a child's play and feelings rather than taking over the play narrative. / Tracking: Offering a tentative feeling reflection and allowing the child to correct it.

0514. A school counselor is explaining a choice to a older adolescent client and caregiver in the classroom support meeting. The choice centers on reflecting a child's play and feelings rather than taking over the play narrative. Which idea is illustrated?

A. Therapeutic limit setting
B. Play therapy documentation
C. Child-centered play therapy
D. Tracking

0515. Choose the definition pair that correctly explains Therapeutic play first and Tracking second.

A. Therapeutic play: Purposeful use of play within a helping relationship to support expression, exploration, and development. / Tracking: Naming or tentatively reflecting the emotional meaning conveyed through a child's words or play.
B. Therapeutic play: Purposeful use of play within a helping relationship to support expression, exploration, and development. / Tracking: Describing a child's observable play actions in a clear, nonjudgmental way.
C. Therapeutic play: Recording observable play, interventions, response, and clinical rationale while distinguishing observation from inference. / Tracking: Describing a child's observable play actions in a clear, nonjudgmental way.
D. Therapeutic play: Describing a child's observable play actions in a clear, nonjudgmental way. / Tracking: Purposeful use of play within a helping relationship to support expression, exploration, and development.

0516. For a child aged 11 in the counseling practicum, a play therapist makes this practice the immediate priority: documenting what occurred and separating directly observed behavior from interpretation. Which concept fits best?

A. Playroom safety
B. Reflecting feelings
C. Play therapy documentation
D. Child-centered play therapy

0517. Which choice aligns each practice with the correct idea, Child-centered play therapy or Symbolic play?

A. Child-centered play therapy: Following the child's symbolic play as a communication channel while maintaining therapeutic purpose. / Symbolic play: Remaining curious about a toy character's role instead of assuming its play meaning.
B. Child-centered play therapy: Reflecting a child's play and feelings rather than taking over the play narrative. / Symbolic play: Remaining curious about a toy character's role instead of assuming its play meaning.
C. Child-centered play therapy: Reflecting a child's play and feelings rather than taking over the play narrative. / Symbolic play: Documenting what occurred and separating directly observed behavior from interpretation.
D. Child-centered play therapy: Remaining curious about a toy character's role instead of assuming its play meaning. / Symbolic play: Reflecting a child's play and feelings rather than taking over the play narrative.

0518. In a case note about a teenage client, a consultant working in the community service agency records this priority: following the child's symbolic play as a communication channel while maintaining therapeutic purpose. What principle is reflected?

A. Play therapy documentation
B. Therapeutic play
C. Tracking
D. Therapeutic limit setting

0519. While consulting in the telehealth session, a assessment clinician supports a child aged 6 by using this approach: sharing general progress and practical support strategies with caregivers under the consent and privacy plan. Which concept is being applied?

A. Tracking
B. Therapeutic limit setting
C. Caregiver involvement
D. Symbolic play

0520. Identify the most precise label for this idea: Naming or tentatively reflecting the emotional meaning conveyed through a child's words or play.

A. Therapeutic limit setting
B. Caregiver involvement
C. Play therapy documentation
D. Reflecting feelings

0521. In a supervision quiz, how should Reflecting feelings be distinguished from Playroom safety?

A. Reflecting feelings: Naming or tentatively reflecting the emotional meaning conveyed through a child's words or play. / Playroom safety: Thoughtful arrangement and selection of materials that permit expression while protecting physical and emotional safety.
B. Reflecting feelings: A non-directive approach emphasizing acceptance, empathy, tracking, and the child's lead within safe limits. / Playroom safety: Thoughtful arrangement and selection of materials that permit expression while protecting physical and emotional safety.
C. Reflecting feelings: Thoughtful arrangement and selection of materials that permit expression while protecting physical and emotional safety. / Playroom safety: Naming or tentatively reflecting the emotional meaning conveyed through a child's words or play.
D. Reflecting feelings: Naming or tentatively reflecting the emotional meaning conveyed through a child's words or play. / Playroom safety: A clear, empathic boundary that protects people or property while offering acceptable alternatives.

0522. Consider a child aged 6 receiving help in the multidisciplinary case conference. The youth worker focuses on following the child's symbolic play as a communication channel while maintaining therapeutic purpose. Which term best describes the guiding idea?

A. Therapeutic play
B. Play therapy documentation
C. Reflecting feelings
D. Playroom safety

0523. Choose the response that best puts Reflecting feelings into practice.

A. Choosing materials and rules that allow agency without foreseeable harm.
B. Choosing and structuring a play activity to practice a specified coping or communication skill.
C. Reflecting a child's play and feelings rather than taking over the play narrative.
D. Offering a tentative feeling reflection and allowing the child to correct it.

0524. Which applied comparison correctly identifies what belongs to Symbolic play versus Play therapy documentation?

A. Symbolic play: Remaining curious about a toy character's role instead of assuming its play meaning. / Play therapy documentation: Documenting what occurred and separating directly observed behavior from interpretation.
B. Symbolic play: Remaining curious about a toy character's role instead of assuming its play meaning. / Play therapy documentation: Choosing materials and rules that allow agency without foreseeable harm.
C. Symbolic play: Documenting what occurred and separating directly observed behavior from interpretation. / Play therapy documentation: Remaining curious about a toy character's role instead of assuming its play meaning.
D. Symbolic play: Choosing and structuring a play activity to practice a specified coping or communication skill. / Play therapy documentation: Documenting what occurred and separating directly observed behavior from interpretation.

0525. A trainee must distinguish how Tracking and Symbolic play guide practice. Which comparison is accurate?

A. Tracking: Saying what the child is doing in play without adding an unsupported interpretation. / Symbolic play: Remaining curious about a toy character's role instead of assuming its play meaning.
B. Tracking: Remaining curious about a toy character's role instead of assuming its play meaning. / Symbolic play: Saying what the child is doing in play without adding an unsupported interpretation.
C. Tracking: Saying what the child is doing in play without adding an unsupported interpretation. / Symbolic play: Documenting what occurred and separating directly observed behavior from interpretation.
D. Tracking: Choosing and structuring a play activity to practice a specified coping or communication skill. / Symbolic play: Remaining curious about a toy character's role instead of assuming its play meaning.

0526. A student confuses Reflecting feelings with Symbolic play. Which explanation most accurately separates them?

A. Reflecting feelings: Use of objects, actions, or characters to represent ideas and experiences beyond their literal form. / Symbolic play: Naming or tentatively reflecting the emotional meaning conveyed through a child's words or play.
B. Reflecting feelings: Describing a child's observable play actions in a clear, nonjudgmental way. / Symbolic play: Use of objects, actions, or characters to represent ideas and experiences beyond their literal form.
C. Reflecting feelings: Naming or tentatively reflecting the emotional meaning conveyed through a child's words or play. / Symbolic play: Use of objects, actions, or characters to represent ideas and experiences beyond their literal form.
D. Reflecting feelings: Naming or tentatively reflecting the emotional meaning conveyed through a child's words or play. / Symbolic play: Recording observable play, interventions, response, and clinical rationale while distinguishing observation from inference.

0527. A supervised trainee is supporting a student aged 9 in the community youth program. The key practice is following the child's symbolic play as a communication channel while maintaining therapeutic purpose. Which course concept is most relevant?

A. Playroom safety
B. Tracking
C. Play therapy documentation
D. Therapeutic play

0528. A therapist is asked what should shape a student aged 17's support in the caregiver consultation. The proposed focus is following the child's symbolic play as a communication channel while maintaining therapeutic purpose. Which principle does it represent?

A. Therapeutic play
B. Reflecting feelings
C. Symbolic play
D. Playroom safety

0529. Choose the practice comparison that best separates Tracking from Symbolic play.

A. Tracking: Remaining curious about a toy character's role instead of assuming its play meaning. / Symbolic play: Saying what the child is doing in play without adding an unsupported interpretation.
B. Tracking: Saying what the child is doing in play without adding an unsupported interpretation. / Symbolic play: Documenting what occurred and separating directly observed behavior from interpretation.
C. Tracking: Saying what the child is doing in play without adding an unsupported interpretation. / Symbolic play: Remaining curious about a toy character's role instead of assuming its play meaning.
D. Tracking: Choosing and structuring a play activity to practice a specified coping or communication skill. / Symbolic play: Remaining curious about a toy character's role instead of assuming its play meaning.

0530. In the outpatient clinic, a teacher and counselor explains why a young person aged 10 would benefit from following the child's symbolic play as a communication channel while maintaining therapeutic purpose. Which course concept underpins the explanation?

A. Child-centered play therapy
B. Reflecting feelings
C. Directive play therapy
D. Therapeutic play

0531. Which named construct is captured by this account? Naming or tentatively reflecting the emotional meaning conveyed through a child's words or play.

A. Therapeutic play
B. Reflecting feelings
C. Play therapy documentation
D. Tracking

0532. Which statement accurately contrasts the course concepts Directive play therapy and Playroom safety?

A. Directive play therapy: A therapist-guided use of play activities selected to address identified therapeutic goals. / Playroom safety: Naming or tentatively reflecting the emotional meaning conveyed through a child's words or play.
B. Directive play therapy: Planned collaboration with caregivers that supports the child's goals while preserving appropriate therapeutic boundaries. / Playroom safety: Thoughtful arrangement and selection of materials that permit expression while protecting physical and emotional safety.
C. Directive play therapy: Thoughtful arrangement and selection of materials that permit expression while protecting physical and emotional safety. / Playroom safety: A therapist-guided use of play activities selected to address identified therapeutic goals.
D. Directive play therapy: A therapist-guided use of play activities selected to address identified therapeutic goals. / Playroom safety: Thoughtful arrangement and selection of materials that permit expression while protecting physical and emotional safety.

0533. A student confuses Directive play therapy with Playroom safety. Which explanation most accurately separates them?

A. Directive play therapy: A therapist-guided use of play activities selected to address identified therapeutic goals. / Playroom safety: Thoughtful arrangement and selection of materials that permit expression while protecting physical and emotional safety.
B. Directive play therapy: Thoughtful arrangement and selection of materials that permit expression while protecting physical and emotional safety. / Playroom safety: A therapist-guided use of play activities selected to address identified therapeutic goals.
C. Directive play therapy: A therapist-guided use of play activities selected to address identified therapeutic goals. / Playroom safety: Naming or tentatively reflecting the emotional meaning conveyed through a child's words or play.
D. Directive play therapy: Planned collaboration with caregivers that supports the child's goals while preserving appropriate therapeutic boundaries. / Playroom safety: Thoughtful arrangement and selection of materials that permit expression while protecting physical and emotional safety.

0534. Consider a client in early adolescence receiving help in the child guidance clinic. The school counselor focuses on sharing general progress and practical support strategies with caregivers under the consent and privacy plan. Which term best describes the guiding idea?

A. Caregiver involvement
B. Tracking
C. Playroom safety
D. Symbolic play

0535. Which option correctly matches each concept to its practice focus: Therapeutic play and Therapeutic limit setting?

A. Therapeutic play: Remaining curious about a toy character's role instead of assuming its play meaning. / Therapeutic limit setting: Stating the limit, acknowledging the feeling, and identifying a safe alternative action.
B. Therapeutic play: Stating the limit, acknowledging the feeling, and identifying a safe alternative action. / Therapeutic limit setting: Following the child's symbolic play as a communication channel while maintaining therapeutic purpose.
C. Therapeutic play: Following the child's symbolic play as a communication channel while maintaining therapeutic purpose. / Therapeutic limit setting: Stating the limit, acknowledging the feeling, and identifying a safe alternative action.
D. Therapeutic play: Following the child's symbolic play as a communication channel while maintaining therapeutic purpose. / Therapeutic limit setting: Saying what the child is doing in play without adding an unsupported interpretation.

0536. Which statement accurately contrasts the course concepts Symbolic play and Caregiver involvement?

A. Symbolic play: Use of objects, actions, or characters to represent ideas and experiences beyond their literal form. / Caregiver involvement: Planned collaboration with caregivers that supports the child's goals while preserving appropriate therapeutic boundaries.
B. Symbolic play: Use of objects, actions, or characters to represent ideas and experiences beyond their literal form. / Caregiver involvement: Purposeful use of play within a helping relationship to support expression, exploration, and development.
C. Symbolic play: Planned collaboration with caregivers that supports the child's goals while preserving appropriate therapeutic boundaries. / Caregiver involvement: Use of objects, actions, or characters to represent ideas and experiences beyond their literal form.
D. Symbolic play: Describing a child's observable play actions in a clear, nonjudgmental way. / Caregiver involvement: Planned collaboration with caregivers that supports the child's goals while preserving appropriate therapeutic boundaries.

0537. Which statement shows a sound practice-level distinction between Tracking and Therapeutic limit setting?

A. Tracking: Following the child's symbolic play as a communication channel while maintaining therapeutic purpose. / Therapeutic limit setting: Stating the limit, acknowledging the feeling, and identifying a safe alternative action.
B. Tracking: Saying what the child is doing in play without adding an unsupported interpretation. / Therapeutic limit setting: Choosing and structuring a play activity to practice a specified coping or communication skill.
C. Tracking: Saying what the child is doing in play without adding an unsupported interpretation. / Therapeutic limit setting: Stating the limit, acknowledging the feeling, and identifying a safe alternative action.
D. Tracking: Stating the limit, acknowledging the feeling, and identifying a safe alternative action. / Therapeutic limit setting: Saying what the child is doing in play without adding an unsupported interpretation.

0538. A supervisor asks for an applied contrast between Tracking and Playroom safety. Which option fits?

A. Tracking: Choosing and structuring a play activity to practice a specified coping or communication skill. / Playroom safety: Choosing materials and rules that allow agency without foreseeable harm.
B. Tracking: Saying what the child is doing in play without adding an unsupported interpretation. / Playroom safety: Offering a tentative feeling reflection and allowing the child to correct it.
C. Tracking: Saying what the child is doing in play without adding an unsupported interpretation. / Playroom safety: Choosing materials and rules that allow agency without foreseeable harm.
D. Tracking: Choosing materials and rules that allow agency without foreseeable harm. / Playroom safety: Saying what the child is doing in play without adding an unsupported interpretation.

0539. In the learning-support meeting, a youth worker explains why a client in late adolescence would benefit from remaining curious about a toy character's role instead of assuming its play meaning. Which course concept underpins the explanation?

A. Therapeutic play
B. Therapeutic limit setting
C. Child-centered play therapy
D. Symbolic play

0540. Which paired example correctly applies Child-centered play therapy first and Playroom safety second?

A. Child-centered play therapy: Reflecting a child's play and feelings rather than taking over the play narrative. / Playroom safety: Choosing materials and rules that allow agency without foreseeable harm.
B. Child-centered play therapy: Choosing materials and rules that allow agency without foreseeable harm. / Playroom safety: Reflecting a child's play and feelings rather than taking over the play narrative.
C. Child-centered play therapy: Reflecting a child's play and feelings rather than taking over the play narrative. / Playroom safety: Remaining curious about a toy character's role instead of assuming its play meaning.
D. Child-centered play therapy: Offering a tentative feeling reflection and allowing the child to correct it. / Playroom safety: Choosing materials and rules that allow agency without foreseeable harm.

0541. A family therapist presents a support plan for a child aged 7 at the child guidance clinic. Its central feature is remaining curious about a toy character's role instead of assuming its play meaning. Which concept should be named?

A. Playroom safety
B. Symbolic play
C. Caregiver involvement
D. Directive play therapy

0542. A support meeting for a young person aged 10 includes a play therapist in the parent meeting. The practice under consideration is reflecting a child's play and feelings rather than taking over the play narrative. Which concept guides it?

A. Child-centered play therapy
B. Playroom safety
C. Therapeutic play
D. Tracking

0543. A case discussion concerns a child aged 14 and a caregiver working with a counselor in the school-based service. The practitioner is considering offering a tentative feeling reflection and allowing the child to correct it. Which principle is involved?

A. Caregiver involvement
B. Therapeutic play
C. Reflecting feelings
D. Playroom safety

0544. Which option pairs the definitions of Directive play therapy and Playroom safety correctly, in that order?

A. Directive play therapy: Planned collaboration with caregivers that supports the child's goals while preserving appropriate therapeutic boundaries. / Playroom safety: Thoughtful arrangement and selection of materials that permit expression while protecting physical and emotional safety.
B. Directive play therapy: Thoughtful arrangement and selection of materials that permit expression while protecting physical and emotional safety. / Playroom safety: A therapist-guided use of play activities selected to address identified therapeutic goals.
C. Directive play therapy: A therapist-guided use of play activities selected to address identified therapeutic goals. / Playroom safety: Naming or tentatively reflecting the emotional meaning conveyed through a child's words or play.
D. Directive play therapy: A therapist-guided use of play activities selected to address identified therapeutic goals. / Playroom safety: Thoughtful arrangement and selection of materials that permit expression while protecting physical and emotional safety.

0545. Which course concept is defined as follows: Purposeful use of play within a helping relationship to support expression, exploration, and development.

A. Therapeutic play
B. Tracking
C. Play therapy documentation
D. Therapeutic limit setting

0546. Which option is the clearest practical expression of Playroom safety?

A. Reflecting a child's play and feelings rather than taking over the play narrative.
B. Choosing materials and rules that allow agency without foreseeable harm.
C. Saying what the child is doing in play without adding an unsupported interpretation.
D. Following the child's symbolic play as a communication channel while maintaining therapeutic purpose.

0547. In a supervision quiz, how should Child-centered play therapy be distinguished from Therapeutic limit setting?

A. Child-centered play therapy: Purposeful use of play within a helping relationship to support expression, exploration, and development. / Therapeutic limit setting: A clear, empathic boundary that protects people or property while offering acceptable alternatives.
B. Child-centered play therapy: A non-directive approach emphasizing acceptance, empathy, tracking, and the child's lead within safe limits. / Therapeutic limit setting: A clear, empathic boundary that protects people or property while offering acceptable alternatives.
C. Child-centered play therapy: A non-directive approach emphasizing acceptance, empathy, tracking, and the child's lead within safe limits. / Therapeutic limit setting: Thoughtful arrangement and selection of materials that permit expression while protecting physical and emotional safety.
D. Child-centered play therapy: A clear, empathic boundary that protects people or property while offering acceptable alternatives. / Therapeutic limit setting: A non-directive approach emphasizing acceptance, empathy, tracking, and the child's lead within safe limits.

0548. In a professional consultation about a adolescent student, the mental-health professional describes this response in the youth advocacy program: remaining curious about a toy character's role instead of assuming its play meaning. Which term is most apt?

A. Tracking
B. Playroom safety
C. Symbolic play
D. Caregiver involvement

0549. A doctoral student reads the following description. Which concept does it define? A clear, empathic boundary that protects people or property while offering acceptable alternatives.

A. Play therapy documentation
B. Therapeutic play
C. Therapeutic limit setting
D. Child-centered play therapy

0550. In the counseling practicum, a teacher and counselor explains why a child aged 6 would benefit from stating the limit, acknowledging the feeling, and identifying a safe alternative action. Which course concept underpins the explanation?

A. Tracking
B. Directive play therapy
C. Symbolic play
D. Therapeutic limit setting

0551. At the after-school program, a program coordinator reviews whether a plan for a school-age child is appropriate. The relevant practice is sharing general progress and practical support strategies with caregivers under the consent and privacy plan. Which concept is tested?

A. Caregiver involvement
B. Playroom safety
C. Therapeutic limit setting
D. Therapeutic play

0552. Which comparison correctly distinguishes Therapeutic limit setting from Playroom safety?

A. Therapeutic limit setting: Thoughtful arrangement and selection of materials that permit expression while protecting physical and emotional safety. / Playroom safety: A clear, empathic boundary that protects people or property while offering acceptable alternatives.
B. Therapeutic limit setting: A non-directive approach emphasizing acceptance, empathy, tracking, and the child's lead within safe limits. / Playroom safety: Thoughtful arrangement and selection of materials that permit expression while protecting physical and emotional safety.
C. Therapeutic limit setting: A clear, empathic boundary that protects people or property while offering acceptable alternatives. / Playroom safety: A therapist-guided use of play activities selected to address identified therapeutic goals.
D. Therapeutic limit setting: A clear, empathic boundary that protects people or property while offering acceptable alternatives. / Playroom safety: Thoughtful arrangement and selection of materials that permit expression while protecting physical and emotional safety.

0553. A support meeting for a high-school student includes a counselor in the school consultation. The practice under consideration is saying what the child is doing in play without adding an unsupported interpretation. Which concept guides it?

A. Playroom safety
B. Reflecting feelings
C. Tracking
D. Play therapy documentation

0554. A case conference asks for a distinction between Therapeutic play and Therapeutic limit setting. Which answer is sound?

A. Therapeutic play: Use of objects, actions, or characters to represent ideas and experiences beyond their literal form. / Therapeutic limit setting: A clear, empathic boundary that protects people or property while offering acceptable alternatives.
B. Therapeutic play: A clear, empathic boundary that protects people or property while offering acceptable alternatives. / Therapeutic limit setting: Purposeful use of play within a helping relationship to support expression, exploration, and development.
C. Therapeutic play: Purposeful use of play within a helping relationship to support expression, exploration, and development. / Therapeutic limit setting: Describing a child's observable play actions in a clear, nonjudgmental way.
D. Therapeutic play: Purposeful use of play within a helping relationship to support expression, exploration, and development. / Therapeutic limit setting: A clear, empathic boundary that protects people or property while offering acceptable alternatives.

0555. Which comparison correctly distinguishes Child-centered play therapy from Tracking?

A. Child-centered play therapy: A non-directive approach emphasizing acceptance, empathy, tracking, and the child's lead within safe limits. / Tracking: Describing a child's observable play actions in a clear, nonjudgmental way.
B. Child-centered play therapy: Describing a child's observable play actions in a clear, nonjudgmental way. / Tracking: A non-directive approach emphasizing acceptance, empathy, tracking, and the child's lead within safe limits.
C. Child-centered play therapy: A non-directive approach emphasizing acceptance, empathy, tracking, and the child's lead within safe limits. / Tracking: Naming or tentatively reflecting the emotional meaning conveyed through a child's words or play.
D. Child-centered play therapy: Thoughtful arrangement and selection of materials that permit expression while protecting physical and emotional safety. / Tracking: Describing a child's observable play actions in a clear, nonjudgmental way.

0556. A child aged 8 and a consultant are reviewing goals in the clinical planning session. The agreed action is choosing materials and rules that allow agency without foreseeable harm. Which principle best accounts for it?

A. Tracking
B. Playroom safety
C. Therapeutic play
D. Therapeutic limit setting

0557. In a case note about a school-age child, a mental-health professional working in the counseling practicum records this priority: choosing materials and rules that allow agency without foreseeable harm. What principle is reflected?

A. Playroom safety
B. Therapeutic limit setting
C. Symbolic play
D. Play therapy documentation

0558. Which option correctly matches each concept to its practice focus: Child-centered play therapy and Reflecting feelings?

A. Child-centered play therapy: Reflecting a child's play and feelings rather than taking over the play narrative. / Reflecting feelings: Offering a tentative feeling reflection and allowing the child to correct it.
B. Child-centered play therapy: Offering a tentative feeling reflection and allowing the child to correct it. / Reflecting feelings: Reflecting a child's play and feelings rather than taking over the play narrative.
C. Child-centered play therapy: Reflecting a child's play and feelings rather than taking over the play narrative. / Reflecting feelings: Sharing general progress and practical support strategies with caregivers under the consent and privacy plan.
D. Child-centered play therapy: Choosing materials and rules that allow agency without foreseeable harm. / Reflecting feelings: Offering a tentative feeling reflection and allowing the child to correct it.

0559. Which option correctly matches each concept to its practice focus: Directive play therapy and Playroom safety?

A. Directive play therapy: Sharing general progress and practical support strategies with caregivers under the consent and privacy plan. / Playroom safety: Choosing materials and rules that allow agency without foreseeable harm.
B. Directive play therapy: Choosing and structuring a play activity to practice a specified coping or communication skill. / Playroom safety: Choosing materials and rules that allow agency without foreseeable harm.
C. Directive play therapy: Choosing and structuring a play activity to practice a specified coping or communication skill. / Playroom safety: Offering a tentative feeling reflection and allowing the child to correct it.
D. Directive play therapy: Choosing materials and rules that allow agency without foreseeable harm. / Playroom safety: Choosing and structuring a play activity to practice a specified coping or communication skill.

0560. In the community mental-health service, a consulting counselor describes the most appropriate support for a young person aged 18 as choosing materials and rules that allow agency without foreseeable harm. Which framework is being applied?

A. Therapeutic limit setting
B. Symbolic play
C. Playroom safety
D. Reflecting feelings

0561. A consultant and a child aged 6 are discussing support in the school counseling office. The selected practice is saying what the child is doing in play without adding an unsupported interpretation. Which concept does this demonstrate?

A. Caregiver involvement
B. Symbolic play
C. Tracking
D. Play therapy documentation

0562. During service review in the school counseling office, a community practitioner describes choosing and structuring a play activity to practice a specified coping or communication skill. for a young person aged 16. Which course idea is most applicable?

A. Directive play therapy
B. Play therapy documentation
C. Playroom safety
D. Reflecting feelings

0563. When reviewing a older adolescent client's plan in the youth group, the case coordinator notes that the next step is sharing general progress and practical support strategies with caregivers under the consent and privacy plan. Which concept guides this step?

A. Child-centered play therapy
B. Therapeutic limit setting
C. Play therapy documentation
D. Caregiver involvement

0564. A case conference asks for a distinction between Caregiver involvement and Play therapy documentation. Which answer is sound?

A. Caregiver involvement: Planned collaboration with caregivers that supports the child's goals while preserving appropriate therapeutic boundaries. / Play therapy documentation: Thoughtful arrangement and selection of materials that permit expression while protecting physical and emotional safety.
B. Caregiver involvement: Planned collaboration with caregivers that supports the child's goals while preserving appropriate therapeutic boundaries. / Play therapy documentation: Recording observable play, interventions, response, and clinical rationale while distinguishing observation from inference.
C. Caregiver involvement: Recording observable play, interventions, response, and clinical rationale while distinguishing observation from inference. / Play therapy documentation: Planned collaboration with caregivers that supports the child's goals while preserving appropriate therapeutic boundaries.
D. Caregiver involvement: A therapist-guided use of play activities selected to address identified therapeutic goals. / Play therapy documentation: Recording observable play, interventions, response, and clinical rationale while distinguishing observation from inference.

0565. A supervisor asks for an applied contrast between Child-centered play therapy and Directive play therapy. Which option fits?

A. Child-centered play therapy: Reflecting a child's play and feelings rather than taking over the play narrative. / Directive play therapy: Choosing and structuring a play activity to practice a specified coping or communication skill.
B. Child-centered play therapy: Choosing and structuring a play activity to practice a specified coping or communication skill. / Directive play therapy: Reflecting a child's play and feelings rather than taking over the play narrative.
C. Child-centered play therapy: Reflecting a child's play and feelings rather than taking over the play narrative. / Directive play therapy: Sharing general progress and practical support strategies with caregivers under the consent and privacy plan.
D. Child-centered play therapy: Following the child's symbolic play as a communication channel while maintaining therapeutic purpose. / Directive play therapy: Choosing and structuring a play activity to practice a specified coping or communication skill.

0566. Which choice aligns each practice with the correct idea, Symbolic play or Caregiver involvement?

A. Symbolic play: Sharing general progress and practical support strategies with caregivers under the consent and privacy plan. / Caregiver involvement: Remaining curious about a toy character's role instead of assuming its play meaning.
B. Symbolic play: Saying what the child is doing in play without adding an unsupported interpretation. / Caregiver involvement: Sharing general progress and practical support strategies with caregivers under the consent and privacy plan.
C. Symbolic play: Remaining curious about a toy character's role instead of assuming its play meaning. / Caregiver involvement: Following the child's symbolic play as a communication channel while maintaining therapeutic purpose.
D. Symbolic play: Remaining curious about a toy character's role instead of assuming its play meaning. / Caregiver involvement: Sharing general progress and practical support strategies with caregivers under the consent and privacy plan.

0567. While consulting in the community service agency, a member of a clinical team supports a high-school student by using this approach: stating the limit, acknowledging the feeling, and identifying a safe alternative action. Which concept is being applied?

A. Caregiver involvement
B. Therapeutic play
C. Directive play therapy
D. Therapeutic limit setting

0568. A school counselor is explaining a choice to a preadolescent child and caregiver in the school counseling office. The choice centers on remaining curious about a toy character's role instead of assuming its play meaning. Which idea is illustrated?

A. Caregiver involvement
B. Symbolic play
C. Play therapy documentation
D. Therapeutic play

0569. Which statement shows a sound practice-level distinction between Tracking and Caregiver involvement?

A. Tracking: Saying what the child is doing in play without adding an unsupported interpretation. / Caregiver involvement: Reflecting a child's play and feelings rather than taking over the play narrative.
B. Tracking: Saying what the child is doing in play without adding an unsupported interpretation. / Caregiver involvement: Sharing general progress and practical support strategies with caregivers under the consent and privacy plan.
C. Tracking: Sharing general progress and practical support strategies with caregivers under the consent and privacy plan. / Caregiver involvement: Saying what the child is doing in play without adding an unsupported interpretation.
D. Tracking: Stating the limit, acknowledging the feeling, and identifying a safe alternative action. / Caregiver involvement: Sharing general progress and practical support strategies with caregivers under the consent and privacy plan.

0570. When reviewing a middle-school student's plan in the child guidance clinic, the caregiver working with a counselor notes that the next step is reflecting a child's play and feelings rather than taking over the play narrative. Which concept guides this step?

A. Play therapy documentation
B. Child-centered play therapy
C. Therapeutic play
D. Therapeutic limit setting

0571. Which statement most accurately defines Therapeutic play?

A. Purposeful use of play within a helping relationship to support expression, exploration, and development.
B. Use of objects, actions, or characters to represent ideas and experiences beyond their literal form.
C. Recording observable play, interventions, response, and clinical rationale while distinguishing observation from inference.
D. A clear, empathic boundary that protects people or property while offering acceptable alternatives.

0572. Which paired example correctly applies Therapeutic play first and Caregiver involvement second?

A. Therapeutic play: Sharing general progress and practical support strategies with caregivers under the consent and privacy plan. / Caregiver involvement: Following the child's symbolic play as a communication channel while maintaining therapeutic purpose.
B. Therapeutic play: Following the child's symbolic play as a communication channel while maintaining therapeutic purpose. / Caregiver involvement: Saying what the child is doing in play without adding an unsupported interpretation.
C. Therapeutic play: Offering a tentative feeling reflection and allowing the child to correct it. / Caregiver involvement: Sharing general progress and practical support strategies with caregivers under the consent and privacy plan.
D. Therapeutic play: Following the child's symbolic play as a communication channel while maintaining therapeutic purpose. / Caregiver involvement: Sharing general progress and practical support strategies with caregivers under the consent and privacy plan.

0573. Which statement shows a sound practice-level distinction between Child-centered play therapy and Directive play therapy?

A. Child-centered play therapy: Choosing and structuring a play activity to practice a specified coping or communication skill. / Directive play therapy: Reflecting a child's play and feelings rather than taking over the play narrative.
B. Child-centered play therapy: Following the child's symbolic play as a communication channel while maintaining therapeutic purpose. / Directive play therapy: Choosing and structuring a play activity to practice a specified coping or communication skill.
C. Child-centered play therapy: Reflecting a child's play and feelings rather than taking over the play narrative. / Directive play therapy: Choosing and structuring a play activity to practice a specified coping or communication skill.
D. Child-centered play therapy: Reflecting a child's play and feelings rather than taking over the play narrative. / Directive play therapy: Sharing general progress and practical support strategies with caregivers under the consent and privacy plan.

0574. Which paired example correctly applies Caregiver involvement first and Play therapy documentation second?

A. Caregiver involvement: Documenting what occurred and separating directly observed behavior from interpretation. / Play therapy documentation: Sharing general progress and practical support strategies with caregivers under the consent and privacy plan.
B. Caregiver involvement: Sharing general progress and practical support strategies with caregivers under the consent and privacy plan. / Play therapy documentation: Documenting what occurred and separating directly observed behavior from interpretation.
C. Caregiver involvement: Sharing general progress and practical support strategies with caregivers under the consent and privacy plan. / Play therapy documentation: Choosing materials and rules that allow agency without foreseeable harm.
D. Caregiver involvement: Choosing and structuring a play activity to practice a specified coping or communication skill. / Play therapy documentation: Documenting what occurred and separating directly observed behavior from interpretation.

0575. For a client in early adolescence seen in the classroom support meeting, the service navigator recommends a plan built around choosing and structuring a play activity to practice a specified coping or communication skill. Which concept is reflected?

A. Caregiver involvement
B. Directive play therapy
C. Symbolic play
D. Therapeutic limit setting

0576. Consider a client in late adolescence receiving help in the school-based service. The group facilitator focuses on reflecting a child's play and feelings rather than taking over the play narrative. Which term best describes the guiding idea?

A. Therapeutic play
B. Symbolic play
C. Directive play therapy
D. Child-centered play therapy

0577. An interdisciplinary team reviews a student aged 17's case at the student-support meeting. The play therapist recommends choosing materials and rules that allow agency without foreseeable harm. Which course concept best fits?

A. Reflecting feelings
B. Therapeutic play
C. Child-centered play therapy
D. Playroom safety

0578. Which option pairs the definitions of Therapeutic play and Child-centered play therapy correctly, in that order?

A. Therapeutic play: Purposeful use of play within a helping relationship to support expression, exploration, and development. / Child-centered play therapy: A non-directive approach emphasizing acceptance, empathy, tracking, and the child's lead within safe limits.
B. Therapeutic play: Purposeful use of play within a helping relationship to support expression, exploration, and development. / Child-centered play therapy: Recording observable play, interventions, response, and clinical rationale while distinguishing observation from inference.
C. Therapeutic play: Naming or tentatively reflecting the emotional meaning conveyed through a child's words or play. / Child-centered play therapy: A non-directive approach emphasizing acceptance, empathy, tracking, and the child's lead within safe limits.
D. Therapeutic play: A non-directive approach emphasizing acceptance, empathy, tracking, and the child's lead within safe limits. / Child-centered play therapy: Purposeful use of play within a helping relationship to support expression, exploration, and development.

0579. Which comparison would correct a trainee's misunderstanding of Reflecting feelings versus Play therapy documentation?

A. Reflecting feelings: Naming or tentatively reflecting the emotional meaning conveyed through a child's words or play. / Play therapy documentation: Recording observable play, interventions, response, and clinical rationale while distinguishing observation from inference.
B. Reflecting feelings: Recording observable play, interventions, response, and clinical rationale while distinguishing observation from inference. / Play therapy documentation: Naming or tentatively reflecting the emotional meaning conveyed through a child's words or play.
C. Reflecting feelings: A clear, empathic boundary that protects people or property while offering acceptable alternatives. / Play therapy documentation: Recording observable play, interventions, response, and clinical rationale while distinguishing observation from inference.
D. Reflecting feelings: Naming or tentatively reflecting the emotional meaning conveyed through a child's words or play. / Play therapy documentation: Describing a child's observable play actions in a clear, nonjudgmental way.

0580. While consulting in the multidisciplinary case conference, a supervised trainee supports a school-age child by using this approach: choosing and structuring a play activity to practice a specified coping or communication skill. Which concept is being applied?

A. Directive play therapy
B. Caregiver involvement
C. Symbolic play
D. Child-centered play therapy

0581. Choose the response that best puts Tracking into practice.

A. Saying what the child is doing in play without adding an unsupported interpretation.
B. Choosing materials and rules that allow agency without foreseeable harm.
C. Documenting what occurred and separating directly observed behavior from interpretation.
D. Choosing and structuring a play activity to practice a specified coping or communication skill.

0582. How should a practitioner distinguish the applications of Child-centered play therapy and Directive play therapy?

A. Child-centered play therapy: Reflecting a child's play and feelings rather than taking over the play narrative. / Directive play therapy: Sharing general progress and practical support strategies with caregivers under the consent and privacy plan.
B. Child-centered play therapy: Following the child's symbolic play as a communication channel while maintaining therapeutic purpose. / Directive play therapy: Choosing and structuring a play activity to practice a specified coping or communication skill.
C. Child-centered play therapy: Reflecting a child's play and feelings rather than taking over the play narrative. / Directive play therapy: Choosing and structuring a play activity to practice a specified coping or communication skill.
D. Child-centered play therapy: Choosing and structuring a play activity to practice a specified coping or communication skill. / Directive play therapy: Reflecting a child's play and feelings rather than taking over the play narrative.

0583. Which comparison would correct a trainee’s misunderstanding of Therapeutic play versus Tracking?

A. Therapeutic play: Recording observable play, interventions, response, and clinical rationale while distinguishing observation from inference. / Tracking: Describing a child’s observable play actions in a clear, nonjudgmental way.
B. Therapeutic play: Purposeful use of play within a helping relationship to support expression, exploration, and development. / Tracking: Describing a child’s observable play actions in a clear, nonjudgmental way.
C. Therapeutic play: Purposeful use of play within a helping relationship to support expression, exploration, and development. / Tracking: Naming or tentatively reflecting the emotional meaning conveyed through a child’s words or play.
D. Therapeutic play: Describing a child’s observable play actions in a clear, nonjudgmental way. / Tracking: Purposeful use of play within a helping relationship to support expression, exploration, and development.

0584. A support meeting for a student aged 17 includes a behavior specialist in the community youth program. The practice under consideration is choosing and structuring a play activity to practice a specified coping or communication skill. Which concept guides it?

A. Directive play therapy
B. Tracking
C. Caregiver involvement
D. Symbolic play

0585. Select the best explanation of Playroom safety.

A. Use of objects, actions, or characters to represent ideas and experiences beyond their literal form.
B. A therapist-guided use of play activities selected to address identified therapeutic goals.
C. Thoughtful arrangement and selection of materials that permit expression while protecting physical and emotional safety.
D. Naming or tentatively reflecting the emotional meaning conveyed through a child’s words or play.

0586. Which statement accurately contrasts the course concepts Child-centered play therapy and Symbolic play?

A. Child-centered play therapy: A non-directive approach emphasizing acceptance, empathy, tracking, and the child’s lead within safe limits. / Symbolic play: Use of objects, actions, or characters to represent ideas and experiences beyond their literal form.
B. Child-centered play therapy: Purposeful use of play within a helping relationship to support expression, exploration, and development. / Symbolic play: Use of objects, actions, or characters to represent ideas and experiences beyond their literal form.
C. Child-centered play therapy: Use of objects, actions, or characters to represent ideas and experiences beyond their literal form. / Symbolic play: A non-directive approach emphasizing acceptance, empathy, tracking, and the child’s lead within safe limits.
D. Child-centered play therapy: A non-directive approach emphasizing acceptance, empathy, tracking, and the child’s lead within safe limits. / Symbolic play: Recording observable play, interventions, response, and clinical rationale while distinguishing observation from inference.

0587. Which option pairs the definitions of Child-centered play therapy and Therapeutic limit setting correctly, in that order?

A. Child-centered play therapy: A non-directive approach emphasizing acceptance, empathy, tracking, and the child’s lead within safe limits. / Therapeutic limit setting: Thoughtful arrangement and selection of materials that permit expression while protecting physical and emotional safety.
B. Child-centered play therapy: A clear, empathic boundary that protects people or property while offering acceptable alternatives. / Therapeutic limit setting: A non-directive approach emphasizing acceptance, empathy, tracking, and the child’s lead within safe limits.
C. Child-centered play therapy: A non-directive approach emphasizing acceptance, empathy, tracking, and the child’s lead within safe limits. / Therapeutic limit setting: A clear, empathic boundary that protects people or property while offering acceptable alternatives.
D. Child-centered play therapy: Purposeful use of play within a helping relationship to support expression, exploration, and development. / Therapeutic limit setting: A clear, empathic boundary that protects people or property while offering acceptable alternatives.

0588. For a child aged 8 seen in the after-school program, the therapist recommends a plan built around saying what the child is doing in play without adding an unsupported interpretation. Which concept is reflected?

A. Tracking
B. Playroom safety
C. Caregiver involvement
D. Play therapy documentation

0589. A trainee must distinguish how Child-centered play therapy and Play therapy documentation guide practice. Which comparison is accurate?

A. Child-centered play therapy: Choosing and structuring a play activity to practice a specified coping or communication skill. / Play therapy documentation: Documenting what occurred and separating directly observed behavior from interpretation.
B. Child-centered play therapy: Documenting what occurred and separating directly observed behavior from interpretation. / Play therapy documentation: Reflecting a child’s play and feelings rather than taking over the play narrative.
C. Child-centered play therapy: Reflecting a child’s play and feelings rather than taking over the play narrative. / Play therapy documentation: Sharing general progress and practical support strategies with caregivers under the consent and privacy plan.
D. Child-centered play therapy: Reflecting a child’s play and feelings rather than taking over the play narrative. / Play therapy documentation: Documenting what occurred and separating directly observed behavior from interpretation.

0590. A clinical supervisor reviews a plan for a student aged 9 in the supervision meeting. The plan emphasizes saying what the child is doing in play without adding an unsupported interpretation. Which course idea does this reflect?

A. Tracking
B. Caregiver involvement
C. Play therapy documentation
D. Child-centered play therapy

0591. How should a practitioner distinguish the applications of Symbolic play and Playroom safety?

A. Symbolic play: Choosing materials and rules that allow agency without foreseeable harm. / Playroom safety: Remaining curious about a toy character’s role instead of assuming its play meaning.
B. Symbolic play: Remaining curious about a toy character’s role instead of assuming its play meaning. / Playroom safety: Choosing materials and rules that allow agency without foreseeable harm.
C. Symbolic play: Documenting what occurred and separating directly observed behavior from interpretation. / Playroom safety: Choosing materials and rules that allow agency without foreseeable harm.
D. Symbolic play: Remaining curious about a toy character’s role instead of assuming its play meaning. / Playroom safety: Choosing and structuring a play activity to practice a specified coping or communication skill.

0592. Which option preserves the correct meaning of both Child-centered play therapy and Play therapy documentation?

A. Child-centered play therapy: A non-directive approach emphasizing acceptance, empathy, tracking, and the child's lead within safe limits. / Play therapy documentation: Planned collaboration with caregivers that supports the child's goals while preserving appropriate therapeutic boundaries.
B. Child-centered play therapy: A non-directive approach emphasizing acceptance, empathy, tracking, and the child's lead within safe limits. / Play therapy documentation: Recording observable play, interventions, response, and clinical rationale while distinguishing observation from inference.
C. Child-centered play therapy: Recording observable play, interventions, response, and clinical rationale while distinguishing observation from inference. / Play therapy documentation: A non-directive approach emphasizing acceptance, empathy, tracking, and the child's lead within safe limits.
D. Child-centered play therapy: A therapist-guided use of play activities selected to address identified therapeutic goals. / Play therapy documentation: Recording observable play, interventions, response, and clinical rationale while distinguishing observation from inference.

0593. A trainee must distinguish how Caregiver involvement and Play therapy documentation guide practice. Which comparison is accurate?

A. Caregiver involvement: Choosing and structuring a play activity to practice a specified coping or communication skill. / Play therapy documentation: Documenting what occurred and separating directly observed behavior from interpretation.
B. Caregiver involvement: Documenting what occurred and separating directly observed behavior from interpretation. / Play therapy documentation: Sharing general progress and practical support strategies with caregivers under the consent and privacy plan.
C. Caregiver involvement: Sharing general progress and practical support strategies with caregivers under the consent and privacy plan. / Play therapy documentation: Documenting what occurred and separating directly observed behavior from interpretation.
D. Caregiver involvement: Sharing general progress and practical support strategies with caregivers under the consent and privacy plan. / Play therapy documentation: Choosing materials and rules that allow agency without foreseeable harm.

0594. Which professional action most closely applies Directive play therapy?

A. Choosing and structuring a play activity to practice a specified coping or communication skill.
B. Documenting what occurred and separating directly observed behavior from interpretation.
C. Offering a tentative feeling reflection and allowing the child to correct it.
D. Remaining curious about a toy character's role instead of assuming its play meaning.

0595. A student confuses Symbolic play with Playroom safety. Which explanation most accurately separates them?

A. Symbolic play: Thoughtful arrangement and selection of materials that permit expression while protecting physical and emotional safety. / Playroom safety: Use of objects, actions, or characters to represent ideas and experiences beyond their literal form.
B. Symbolic play: Use of objects, actions, or characters to represent ideas and experiences beyond their literal form. / Playroom safety: A therapist-guided use of play activities selected to address identified therapeutic goals.
C. Symbolic play: Recording observable play, interventions, response, and clinical rationale while distinguishing observation from inference. / Playroom safety: Thoughtful arrangement and selection of materials that permit expression while protecting physical and emotional safety.
D. Symbolic play: Use of objects, actions, or characters to represent ideas and experiences beyond their literal form. / Playroom safety: Thoughtful arrangement and selection of materials that permit expression while protecting physical and emotional safety.

0596. In a supervision quiz, how should Therapeutic play be distinguished from Directive play therapy?

A. Therapeutic play: Purposeful use of play within a helping relationship to support expression, exploration, and development. / Directive play therapy: A therapist-guided use of play activities selected to address identified therapeutic goals.
B. Therapeutic play: A therapist-guided use of play activities selected to address identified therapeutic goals. / Directive play therapy: Purposeful use of play within a helping relationship to support expression, exploration, and development.
C. Therapeutic play: Purposeful use of play within a helping relationship to support expression, exploration, and development. / Directive play therapy: Use of objects, actions, or characters to represent ideas and experiences beyond their literal form.
D. Therapeutic play: Recording observable play, interventions, response, and clinical rationale while distinguishing observation from inference. / Directive play therapy: A therapist-guided use of play activities selected to address identified therapeutic goals.

0597. For a child of elementary-school age seen in the student-support meeting, the program coordinator recommends a plan built around documenting what occurred and separating directly observed behavior from interpretation. Which concept is reflected?

A. Play therapy documentation
B. Child-centered play therapy
C. Reflecting feelings
D. Playroom safety

0598. At the family resource center, a research trainee reviews whether a plan for a young person aged 10 is appropriate. The relevant practice is documenting what occurred and separating directly observed behavior from interpretation. Which concept is tested?

A. Therapeutic limit setting
B. Directive play therapy
C. Play therapy documentation
D. Child-centered play therapy

0599. In a professional consultation about a school-age child, the supervised trainee describes this response in the multidisciplinary case conference: choosing and structuring a play activity to practice a specified coping or communication skill. Which term is most apt?

A. Play therapy documentation
B. Tracking
C. Directive play therapy
D. Playroom safety

0600. In the school-based service, a family therapist is considering this approach for a student aged 9: documenting what occurred and separating directly observed behavior from interpretation. Which framework does it represent?

A. Reflecting feelings
B. Directive play therapy
C. Symbolic play
D. Play therapy documentation

0601. Choose the response that best puts Caregiver involvement into practice.

A. Following the child's symbolic play as a communication channel while maintaining therapeutic purpose.
B. Choosing and structuring a play activity to practice a specified coping or communication skill.
C. Reflecting a child's play and feelings rather than taking over the play narrative.
D. Sharing general progress and practical support strategies with caregivers under the consent and privacy plan.

0602. Which comparison correctly distinguishes Directive play therapy from Reflecting feelings?

A. Directive play therapy: Naming or tentatively reflecting the emotional meaning conveyed through a child's words or play. / Reflecting feelings: A therapist-guided use of play activities selected to address identified therapeutic goals.
B. Directive play therapy: Use of objects, actions, or characters to represent ideas and experiences beyond their literal form. / Reflecting feelings: Naming or tentatively reflecting the emotional meaning conveyed through a child's words or play.
C. Directive play therapy: A therapist-guided use of play activities selected to address identified therapeutic goals. / Reflecting feelings: Naming or tentatively reflecting the emotional meaning conveyed through a child's words or play.
D. Directive play therapy: A therapist-guided use of play activities selected to address identified therapeutic goals. / Reflecting feelings: Planned collaboration with caregivers that supports the child's goals while preserving appropriate therapeutic boundaries.

0603. Which paired example correctly applies Playroom safety first and Play therapy documentation second?

A. Playroom safety: Stating the limit, acknowledging the feeling, and identifying a safe alternative action. / Play therapy documentation: Documenting what occurred and separating directly observed behavior from interpretation.
B. Playroom safety: Choosing materials and rules that allow agency without foreseeable harm. / Play therapy documentation: Following the child's symbolic play as a communication channel while maintaining therapeutic purpose.
C. Playroom safety: Choosing materials and rules that allow agency without foreseeable harm. / Play therapy documentation: Documenting what occurred and separating directly observed behavior from interpretation.
D. Playroom safety: Documenting what occurred and separating directly observed behavior from interpretation. / Play therapy documentation: Choosing materials and rules that allow agency without foreseeable harm.

0604. Which choice aligns each practice with the correct idea, Therapeutic play or Reflecting feelings?

A. Therapeutic play: Following the child's symbolic play as a communication channel while maintaining therapeutic purpose. / Reflecting feelings: Documenting what occurred and separating directly observed behavior from interpretation.
B. Therapeutic play: Reflecting a child's play and feelings rather than taking over the play narrative. / Reflecting feelings: Offering a tentative feeling reflection and allowing the child to correct it.
C. Therapeutic play: Offering a tentative feeling reflection and allowing the child to correct it. / Reflecting feelings: Following the child's symbolic play as a communication channel while maintaining therapeutic purpose.
D. Therapeutic play: Following the child's symbolic play as a communication channel while maintaining therapeutic purpose. / Reflecting feelings: Offering a tentative feeling reflection and allowing the child to correct it.

0605. In the youth group, the agreed focus for a community practitioner working with a young person aged 18 is reflecting a child's play and feelings rather than taking over the play narrative. Which concept names this focus?

A. Child-centered play therapy
B. Play therapy documentation
C. Tracking
D. Symbolic play

0606. Choose the definition pair that correctly explains Child-centered play therapy first and Playroom safety second.

A. Child-centered play therapy: A non-directive approach emphasizing acceptance, empathy, tracking, and the child's lead within safe limits. / Playroom safety: Thoughtful arrangement and selection of materials that permit expression while protecting physical and emotional safety.
B. Child-centered play therapy: A non-directive approach emphasizing acceptance, empathy, tracking, and the child's lead within safe limits. / Playroom safety: Use of objects, actions, or characters to represent ideas and experiences beyond their literal form.
C. Child-centered play therapy: Thoughtful arrangement and selection of materials that permit expression while protecting physical and emotional safety. / Playroom safety: A non-directive approach emphasizing acceptance, empathy, tracking, and the child's lead within safe limits.
D. Child-centered play therapy: Naming or tentatively reflecting the emotional meaning conveyed through a child's words or play. / Playroom safety: Thoughtful arrangement and selection of materials that permit expression while protecting physical and emotional safety.

0607. At a case-planning meeting, the play therapist proposes saying what the child is doing in play without adding an unsupported interpretation. for a teenage client seen in the caregiver consultation. Which concept does this illustrate?

A. Symbolic play
B. Play therapy documentation
C. Tracking
D. Caregiver involvement

0608. At the community youth program, a research trainee reviews whether a plan for a child of elementary-school age is appropriate. The relevant practice is offering a tentative feeling reflection and allowing the child to correct it. Which concept is tested?

A. Reflecting feelings
B. Therapeutic limit setting
C. Child-centered play therapy
D. Symbolic play

0609. Which pair of actions illustrates Directive play therapy and Therapeutic limit setting, respectively?

A. Directive play therapy: Choosing and structuring a play activity to practice a specified coping or communication skill. / Therapeutic limit setting: Stating the limit, acknowledging the feeling, and identifying a safe alternative action.
B. Directive play therapy: Stating the limit, acknowledging the feeling, and identifying a safe alternative action. / Therapeutic limit setting: Choosing and structuring a play activity to practice a specified coping or communication skill.
C. Directive play therapy: Choosing and structuring a play activity to practice a specified coping or communication skill. / Therapeutic limit setting: Offering a tentative feeling reflection and allowing the child to correct it.
D. Directive play therapy: Following the child's symbolic play as a communication channel while maintaining therapeutic purpose. / Therapeutic limit setting: Stating the limit, acknowledging the feeling, and identifying a safe alternative action.

0610. A support meeting for a child aged 6 includes a play therapist in the after-school program. The practice under consideration is remaining curious about a toy character's role instead of assuming its play meaning. Which concept guides it?

A. Caregiver involvement
B. Symbolic play
C. Therapeutic limit setting
D. Directive play therapy

0611. A youth worker is asked to justify a plan for a child aged 7 in the youth advocacy program. It calls for documenting what occurred and separating directly observed behavior from interpretation. Which concept provides the rationale?

A. Therapeutic play
B. Play therapy documentation
C. Child-centered play therapy
D. Directive play therapy

0612. Which statement shows a sound practice-level distinction between Therapeutic limit setting and Play therapy documentation?

A. Therapeutic limit setting: Documenting what occurred and separating directly observed behavior from interpretation. / Play therapy documentation: Stating the limit, acknowledging the feeling, and identifying a safe alternative action.
B. Therapeutic limit setting: Offering a tentative feeling reflection and allowing the child to correct it. / Play therapy documentation: Documenting what occurred and separating directly observed behavior from interpretation.
C. Therapeutic limit setting: Stating the limit, acknowledging the feeling, and identifying a safe alternative action. / Play therapy documentation: Documenting what occurred and separating directly observed behavior from interpretation.
D. Therapeutic limit setting: Stating the limit, acknowledging the feeling, and identifying a safe alternative action. / Play therapy documentation: Reflecting a child's play and feelings rather than taking over the play narrative.

0613. How are Child-centered play therapy and Directive play therapy most accurately differentiated in this curriculum?

A. Child-centered play therapy: A non-directive approach emphasizing acceptance, empathy, tracking, and the child's lead within safe limits. / Directive play therapy: A therapist-guided use of play activities selected to address identified therapeutic goals.
B. Child-centered play therapy: A therapist-guided use of play activities selected to address identified therapeutic goals. / Directive play therapy: A non-directive approach emphasizing acceptance, empathy, tracking, and the child's lead within safe limits.
C. Child-centered play therapy: A non-directive approach emphasizing acceptance, empathy, tracking, and the child's lead within safe limits. / Directive play therapy: Planned collaboration with caregivers that supports the child's goals while preserving appropriate therapeutic boundaries.
D. Child-centered play therapy: Purposeful use of play within a helping relationship to support expression, exploration, and development. / Directive play therapy: A therapist-guided use of play activities selected to address identified therapeutic goals.

0614. A counselor reviews a plan for a client in late adolescence in the child guidance clinic. The plan emphasizes choosing and structuring a play activity to practice a specified coping or communication skill. Which course idea does this reflect?

A. Directive play therapy
B. Caregiver involvement
C. Symbolic play
D. Playroom safety

0615. A research trainee is asked what should shape a adolescent student's support in the school-based service. The proposed focus is choosing and structuring a play activity to practice a specified coping or communication skill. Which principle does it represent?

A. Therapeutic limit setting
B. Directive play therapy
C. Therapeutic play
D. Reflecting feelings

0616. How are Directive play therapy and Reflecting feelings most accurately differentiated in this curriculum?

A. Directive play therapy: Use of objects, actions, or characters to represent ideas and experiences beyond their literal form. / Reflecting feelings: Naming or tentatively reflecting the emotional meaning conveyed through a child's words or play.
B. Directive play therapy: A therapist-guided use of play activities selected to address identified therapeutic goals. / Reflecting feelings: Naming or tentatively reflecting the emotional meaning conveyed through a child's words or play.
C. Directive play therapy: A therapist-guided use of play activities selected to address identified therapeutic goals. / Reflecting feelings: Planned collaboration with caregivers that supports the child's goals while preserving appropriate therapeutic boundaries.
D. Directive play therapy: Naming or tentatively reflecting the emotional meaning conveyed through a child's words or play. / Reflecting feelings: A therapist-guided use of play activities selected to address identified therapeutic goals.

0617. How should a practitioner distinguish the applications of Child-centered play therapy and Reflecting feelings?

A. Child-centered play therapy: Reflecting a child's play and feelings rather than taking over the play narrative. / Reflecting feelings: Offering a tentative feeling reflection and allowing the child to correct it.
B. Child-centered play therapy: Offering a tentative feeling reflection and allowing the child to correct it. / Reflecting feelings: Reflecting a child's play and feelings rather than taking over the play narrative.
C. Child-centered play therapy: Choosing materials and rules that allow agency without foreseeable harm. / Reflecting feelings: Offering a tentative feeling reflection and allowing the child to correct it.
D. Child-centered play therapy: Reflecting a child's play and feelings rather than taking over the play narrative. / Reflecting feelings: Sharing general progress and practical support strategies with caregivers under the consent and privacy plan.

0618. In the parent meeting, a group facilitator explains why a student aged 9 would benefit from choosing materials and rules that allow agency without foreseeable harm. Which course concept underpins the explanation?

A. Child-centered play therapy
B. Playroom safety
C. Play therapy documentation
D. Directive play therapy

0619. A mental-health professional is supporting a student aged 12 in the after-school program. The key practice is offering a tentative feeling reflection and allowing the child to correct it. Which course concept is most relevant?

A. Caregiver involvement
B. Reflecting feelings
C. Therapeutic play
D. Symbolic play

0620. A planning meeting about a child aged 14 includes a behavior specialist. The proposed practice in the student wellness team is saying what the child is doing in play without adding an unsupported interpretation. Which idea underlies it?

A. Child-centered play therapy
B. Therapeutic limit setting
C. Tracking
D. Symbolic play

0621. Which course concept is defined as follows: A therapist-guided use of play activities selected to address identified therapeutic goals.

A. Directive play therapy
B. Therapeutic play
C. Caregiver involvement
D. Playroom safety

0622. How are Therapeutic play and Playroom safety most accurately differentiated in this curriculum?

A. Therapeutic play: Naming or tentatively reflecting the emotional meaning conveyed through a child's words or play. / Playroom safety: Thoughtful arrangement and selection of materials that permit expression while protecting physical and emotional safety.
B. Therapeutic play: Purposeful use of play within a helping relationship to support expression, exploration, and development. / Playroom safety: A therapist-guided use of play activities selected to address identified therapeutic goals.
C. Therapeutic play: Thoughtful arrangement and selection of materials that permit expression while protecting physical and emotional safety. / Playroom safety: Purposeful use of play within a helping relationship to support expression, exploration, and development.
D. Therapeutic play: Purposeful use of play within a helping relationship to support expression, exploration, and development. / Playroom safety: Thoughtful arrangement and selection of materials that permit expression while protecting physical and emotional safety.

0623. Which option pairs the definitions of Directive play therapy and Therapeutic limit setting correctly, in that order?

A. Directive play therapy: Purposeful use of play within a helping relationship to support expression, exploration, and development. / Therapeutic limit setting: A clear, empathic boundary that protects people or property while offering acceptable alternatives.
B. Directive play therapy: A therapist-guided use of play activities selected to address identified therapeutic goals. / Therapeutic limit setting: Naming or tentatively reflecting the emotional meaning conveyed through a child's words or play.
C. Directive play therapy: A clear, empathic boundary that protects people or property while offering acceptable alternatives. / Therapeutic limit setting: A therapist-guided use of play activities selected to address identified therapeutic goals.
D. Directive play therapy: A therapist-guided use of play activities selected to address identified therapeutic goals. / Therapeutic limit setting: A clear, empathic boundary that protects people or property while offering acceptable alternatives.

0624. At the youth group, a service navigator reviews whether a plan for a child aged 14 is appropriate. The relevant practice is remaining curious about a toy character's role instead of assuming its play meaning. Which concept is tested?

A. Therapeutic play
B. Reflecting feelings
C. Caregiver involvement
D. Symbolic play

0625. Which comparison would correct a trainee's misunderstanding of Therapeutic play versus Therapeutic limit setting?

A. Therapeutic play: Purposeful use of play within a helping relationship to support expression, exploration, and development. / Therapeutic limit setting: Describing a child's observable play actions in a clear, nonjudgmental way.
B. Therapeutic play: Use of objects, actions, or characters to represent ideas and experiences beyond their literal form. / Therapeutic limit setting: A clear, empathic boundary that protects people or property while offering acceptable alternatives.
C. Therapeutic play: A clear, empathic boundary that protects people or property while offering acceptable alternatives. / Therapeutic limit setting: Purposeful use of play within a helping relationship to support expression, exploration, and development.
D. Therapeutic play: Purposeful use of play within a helping relationship to support expression, exploration, and development. / Therapeutic limit setting: A clear, empathic boundary that protects people or property while offering acceptable alternatives.

0626. A supervised trainee and a adolescent student are discussing support in the student wellness team. The selected practice is reflecting a child's play and feelings rather than taking over the play narrative. Which concept does this demonstrate?

A. Therapeutic limit setting
B. Child-centered play therapy
C. Directive play therapy
D. Tracking

0627. Which option correctly matches each concept to its practice focus: Reflecting feelings and Playroom safety?

A. Reflecting feelings: Reflecting a child's play and feelings rather than taking over the play narrative. / Playroom safety: Choosing materials and rules that allow agency without foreseeable harm.
B. Reflecting feelings: Offering a tentative feeling reflection and allowing the child to correct it. / Playroom safety: Stating the limit, acknowledging the feeling, and identifying a safe alternative action.
C. Reflecting feelings: Choosing materials and rules that allow agency without foreseeable harm. / Playroom safety: Offering a tentative feeling reflection and allowing the child to correct it.
D. Reflecting feelings: Offering a tentative feeling reflection and allowing the child to correct it. / Playroom safety: Choosing materials and rules that allow agency without foreseeable harm.

0628. Which statement shows a sound practice-level distinction between Therapeutic limit setting and Caregiver involvement?

A. Therapeutic limit setting: Following the child's symbolic play as a communication channel while maintaining therapeutic purpose. / Caregiver involvement: Sharing general progress and practical support strategies with caregivers under the consent and privacy plan.
B. Therapeutic limit setting: Stating the limit, acknowledging the feeling, and identifying a safe alternative action. / Caregiver involvement: Sharing general progress and practical support strategies with caregivers under the consent and privacy plan.
C. Therapeutic limit setting: Stating the limit, acknowledging the feeling, and identifying a safe alternative action. / Caregiver involvement: Documenting what occurred and separating directly observed behavior from interpretation.
D. Therapeutic limit setting: Sharing general progress and practical support strategies with caregivers under the consent and privacy plan. / Caregiver involvement: Stating the limit, acknowledging the feeling, and identifying a safe alternative action.

0629. Which statement accurately contrasts the course concepts Reflecting feelings and Playroom safety?

A. Reflecting feelings: Naming or tentatively reflecting the emotional meaning conveyed through a child's words or play. / Playroom safety: A clear, empathic boundary that protects people or property while offering acceptable alternatives.
B. Reflecting feelings: A non-directive approach emphasizing acceptance, empathy, tracking, and the child's lead within safe limits. / Playroom safety: Thoughtful arrangement and selection of materials that permit expression while protecting physical and emotional safety.
C. Reflecting feelings: Naming or tentatively reflecting the emotional meaning conveyed through a child's words or play. / Playroom safety: Thoughtful arrangement and selection of materials that permit expression while protecting physical and emotional safety.
D. Reflecting feelings: Thoughtful arrangement and selection of materials that permit expression while protecting physical and emotional safety. / Playroom safety: Naming or tentatively reflecting the emotional meaning conveyed through a child's words or play.

0630. Which applied comparison correctly identifies what belongs to Reflecting feelings versus Therapeutic limit setting?

A. Reflecting feelings: Saying what the child is doing in play without adding an unsupported interpretation. / Therapeutic limit setting: Stating the limit, acknowledging the feeling, and identifying a safe alternative action.
B. Reflecting feelings: Offering a tentative feeling reflection and allowing the child to correct it. / Therapeutic limit setting: Stating the limit, acknowledging the feeling, and identifying a safe alternative action.
C. Reflecting feelings: Stating the limit, acknowledging the feeling, and identifying a safe alternative action. / Therapeutic limit setting: Offering a tentative feeling reflection and allowing the child to correct it.
D. Reflecting feelings: Offering a tentative feeling reflection and allowing the child to correct it. / Therapeutic limit setting: Documenting what occurred and separating directly observed behavior from interpretation.

0631. A school counselor is asked to justify a plan for a young person aged 18 in the family session. It calls for choosing and structuring a play activity to practice a specified coping or communication skill. Which concept provides the rationale?

A. Directive play therapy
B. Therapeutic play
C. Reflecting feelings
D. Caregiver involvement

0632. Which option pairs the definitions of Directive play therapy and Caregiver involvement correctly, in that order?

A. Directive play therapy: A non-directive approach emphasizing acceptance, empathy, tracking, and the child's lead within safe limits. / Caregiver involvement: Planned collaboration with caregivers that supports the child's goals while preserving appropriate therapeutic boundaries.
B. Directive play therapy: Planned collaboration with caregivers that supports the child's goals while preserving appropriate therapeutic boundaries. / Caregiver involvement: A therapist-guided use of play activities selected to address identified therapeutic goals.
C. Directive play therapy: A therapist-guided use of play activities selected to address identified therapeutic goals. / Caregiver involvement: Planned collaboration with caregivers that supports the child's goals while preserving appropriate therapeutic boundaries.
D. Directive play therapy: A therapist-guided use of play activities selected to address identified therapeutic goals. / Caregiver involvement: A clear, empathic boundary that protects people or property while offering acceptable alternatives.

0633. What is the central meaning of Therapeutic limit setting?

A. A therapist-guided use of play activities selected to address identified therapeutic goals.
B. Thoughtful arrangement and selection of materials that permit expression while protecting physical and emotional safety.
C. A non-directive approach emphasizing acceptance, empathy, tracking, and the child's lead within safe limits.
D. A clear, empathic boundary that protects people or property while offering acceptable alternatives.

0634. Which comparison correctly distinguishes Symbolic play from Playroom safety?

A. Symbolic play: Use of objects, actions, or characters to represent ideas and experiences beyond their literal form. / Playroom safety: Thoughtful arrangement and selection of materials that permit expression while protecting physical and emotional safety.
B. Symbolic play: Recording observable play, interventions, response, and clinical rationale while distinguishing observation from inference. / Playroom safety: Thoughtful arrangement and selection of materials that permit expression while protecting physical and emotional safety.
C. Symbolic play: Use of objects, actions, or characters to represent ideas and experiences beyond their literal form. / Playroom safety: A therapist-guided use of play activities selected to address identified therapeutic goals.
D. Symbolic play: Thoughtful arrangement and selection of materials that permit expression while protecting physical and emotional safety. / Playroom safety: Use of objects, actions, or characters to represent ideas and experiences beyond their literal form.

0635. During work in the community youth program, a consulting counselor identifies this need: sharing general progress and practical support strategies with caregivers under the consent and privacy plan. Which idea should guide the response?

A. Caregiver involvement
B. Directive play therapy
C. Therapeutic play
D. Child-centered play therapy

0636. Which choice aligns each practice with the correct idea, Reflecting feelings or Therapeutic limit setting?

A. Reflecting feelings: Stating the limit, acknowledging the feeling, and identifying a safe alternative action. / Therapeutic limit setting: Offering a tentative feeling reflection and allowing the child to correct it.
B. Reflecting feelings: Offering a tentative feeling reflection and allowing the child to correct it. / Therapeutic limit setting: Documenting what occurred and separating directly observed behavior from interpretation.
C. Reflecting feelings: Offering a tentative feeling reflection and allowing the child to correct it. / Therapeutic limit setting: Stating the limit, acknowledging the feeling, and identifying a safe alternative action.
D. Reflecting feelings: Saying what the child is doing in play without adding an unsupported interpretation. / Therapeutic limit setting: Stating the limit, acknowledging the feeling, and identifying a safe alternative action.

0637. How are Therapeutic limit setting and Playroom safety most accurately differentiated in this curriculum?

A. Therapeutic limit setting: A clear, empathic boundary that protects people or property while offering acceptable alternatives. / Playroom safety: Thoughtful arrangement and selection of materials that permit expression while protecting physical and emotional safety.
B. Therapeutic limit setting: A non-directive approach emphasizing acceptance, empathy, tracking, and the child's lead within safe limits. / Playroom safety: Thoughtful arrangement and selection of materials that permit expression while protecting physical and emotional safety.
C. Therapeutic limit setting: Thoughtful arrangement and selection of materials that permit expression while protecting physical and emotional safety. / Playroom safety: A clear, empathic boundary that protects people or property while offering acceptable alternatives.
D. Therapeutic limit setting: A clear, empathic boundary that protects people or property while offering acceptable alternatives. / Playroom safety: A therapist-guided use of play activities selected to address identified therapeutic goals.

0638. A team must select a support approach for a school-age child at the community service agency. The case coordinator recommends remaining curious about a toy character's role instead of assuming its play meaning. Which idea is most relevant?

A. Child-centered play therapy
B. Directive play therapy
C. Playroom safety
D. Symbolic play

0639. A case discussion concerns a young adolescent client and a family therapist in the behavior-support review. The practitioner is considering stating the limit, acknowledging the feeling, and identifying a safe alternative action. Which principle is involved?

A. Therapeutic play
B. Therapeutic limit setting
C. Playroom safety
D. Child-centered play therapy

0640. A child aged 14 is receiving support in the family session. The teacher and counselor is guided by this practice: choosing materials and rules that allow agency without foreseeable harm. Which principle best fits?

A. Playroom safety
B. Child-centered play therapy
C. Therapeutic play
D. Play therapy documentation

0641. Which option preserves the correct meaning of both Child-centered play therapy and Caregiver involvement?

A. Child-centered play therapy: A non-directive approach emphasizing acceptance, empathy, tracking, and the child's lead within safe limits. / Caregiver involvement: A clear, empathic boundary that protects people or property while offering acceptable alternatives.
B. Child-centered play therapy: Planned collaboration with caregivers that supports the child's goals while preserving appropriate therapeutic boundaries. / Caregiver involvement: A non-directive approach emphasizing acceptance, empathy, tracking, and the child's lead within safe limits.
C. Child-centered play therapy: A non-directive approach emphasizing acceptance, empathy, tracking, and the child's lead within safe limits. / Caregiver involvement: Planned collaboration with caregivers that supports the child's goals while preserving appropriate therapeutic boundaries.
D. Child-centered play therapy: Recording observable play, interventions, response, and clinical rationale while distinguishing observation from inference. / Caregiver involvement: Planned collaboration with caregivers that supports the child's goals while preserving appropriate therapeutic boundaries.

0642. Which option pairs the definitions of Symbolic play and Caregiver involvement correctly, in that order?

A. Symbolic play: Planned collaboration with caregivers that supports the child's goals while preserving appropriate therapeutic boundaries. / Caregiver involvement: Use of objects, actions, or characters to represent ideas and experiences beyond their literal form.
B. Symbolic play: Use of objects, actions, or characters to represent ideas and experiences beyond their literal form. / Caregiver involvement: Purposeful use of play within a helping relationship to support expression, exploration, and development.
C. Symbolic play: Use of objects, actions, or characters to represent ideas and experiences beyond their literal form. / Caregiver involvement: Planned collaboration with caregivers that supports the child's goals while preserving appropriate therapeutic boundaries.
D. Symbolic play: Describing a child's observable play actions in a clear, nonjudgmental way. / Caregiver involvement: Planned collaboration with caregivers that supports the child's goals while preserving appropriate therapeutic boundaries.

0643. A older adolescent client is receiving support in the classroom support meeting. The school counselor is guided by this practice: reflecting a child's play and feelings rather than taking over the play narrative. Which principle best fits?

A. Child-centered play therapy
B. Play therapy documentation
C. Reflecting feelings
D. Symbolic play

0644. A service team discusses a student aged 9 in the outpatient clinic. Their proposed next step is remaining curious about a toy character's role instead of assuming its play meaning. Which course concept supports it?

A. Symbolic play
B. Reflecting feelings
C. Play therapy documentation
D. Therapeutic limit setting

0645. Select the best explanation of Child-centered play therapy.

A. Describing a child's observable play actions in a clear, nonjudgmental way.
B. Planned collaboration with caregivers that supports the child's goals while preserving appropriate therapeutic boundaries.
C. A non-directive approach emphasizing acceptance, empathy, tracking, and the child's lead within safe limits.
D. Recording observable play, interventions, response, and clinical rationale while distinguishing observation from inference.

0646. While supporting a young person aged 13 in the community youth program, a school-based clinician adopts this practice: reflecting a child's play and feelings rather than taking over the play narrative. Which concept best explains the choice?

A. Tracking
B. Therapeutic play
C. Play therapy documentation
D. Child-centered play therapy

0647. A team must select a support approach for a preadolescent child at the multidisciplinary case conference. The school-based clinician recommends saying what the child is doing in play without adding an unsupported interpretation. Which idea is most relevant?

A. Reflecting feelings
B. Playroom safety
C. Therapeutic play
D. Tracking

0648. Which pair of actions illustrates Therapeutic limit setting and Play therapy documentation, respectively?

A. Therapeutic limit setting: Offering a tentative feeling reflection and allowing the child to correct it. / Play therapy documentation: Documenting what occurred and separating directly observed behavior from interpretation.
B. Therapeutic limit setting: Stating the limit, acknowledging the feeling, and identifying a safe alternative action. / Play therapy documentation: Reflecting a child's play and feelings rather than taking over the play narrative.
C. Therapeutic limit setting: Documenting what occurred and separating directly observed behavior from interpretation. / Play therapy documentation: Stating the limit, acknowledging the feeling, and identifying a safe alternative action.
D. Therapeutic limit setting: Stating the limit, acknowledging the feeling, and identifying a safe alternative action. / Play therapy documentation: Documenting what occurred and separating directly observed behavior from interpretation.

0649. Which option pairs the definitions of Directive play therapy and Reflecting feelings correctly, in that order?

A. Directive play therapy: Naming or tentatively reflecting the emotional meaning conveyed through a child's words or play. / Reflecting feelings: A therapist-guided use of play activities selected to address identified therapeutic goals.
B. Directive play therapy: A therapist-guided use of play activities selected to address identified therapeutic goals. / Reflecting feelings: Planned collaboration with caregivers that supports the child's goals while preserving appropriate therapeutic boundaries.
C. Directive play therapy: A therapist-guided use of play activities selected to address identified therapeutic goals. / Reflecting feelings: Naming or tentatively reflecting the emotional meaning conveyed through a child's words or play.
D. Directive play therapy: Use of objects, actions, or characters to represent ideas and experiences beyond their literal form. / Reflecting feelings: Naming or tentatively reflecting the emotional meaning conveyed through a child's words or play.

0650. How are Therapeutic play and Play therapy documentation most accurately differentiated in this curriculum?

A. Therapeutic play: Thoughtful arrangement and selection of materials that permit expression while protecting physical and emotional safety. / Play therapy documentation: Recording observable play, interventions, response, and clinical rationale while distinguishing observation from inference.
B. Therapeutic play: Recording observable play, interventions, response, and clinical rationale while distinguishing observation from inference. / Play therapy documentation: Purposeful use of play within a helping relationship to support expression, exploration, and development.
C. Therapeutic play: Purposeful use of play within a helping relationship to support expression, exploration, and development. / Play therapy documentation: Recording observable play, interventions, response, and clinical rationale while distinguishing observation from inference.
D. Therapeutic play: Purposeful use of play within a helping relationship to support expression, exploration, and development. / Play therapy documentation: A non-directive approach emphasizing acceptance, empathy, tracking, and the child's lead within safe limits.

0651. A trainee must distinguish how Playroom safety and Play therapy documentation guide practice. Which comparison is accurate?

A. Playroom safety: Choosing materials and rules that allow agency without foreseeable harm. / Play therapy documentation: Documenting what occurred and separating directly observed behavior from interpretation.
B. Playroom safety: Documenting what occurred and separating directly observed behavior from interpretation. / Play therapy documentation: Choosing materials and rules that allow agency without foreseeable harm.
C. Playroom safety: Choosing materials and rules that allow agency without foreseeable harm. / Play therapy documentation: Following the child's symbolic play as a communication channel while maintaining therapeutic purpose.
D. Playroom safety: Stating the limit, acknowledging the feeling, and identifying a safe alternative action. / Play therapy documentation: Documenting what occurred and separating directly observed behavior from interpretation.

0652. In the community service agency, a school counselor describes the most appropriate support for a young person aged 16 as saying what the child is doing in play without adding an unsupported interpretation. Which framework is being applied?

A. Tracking
B. Therapeutic play
C. Child-centered play therapy
D. Play therapy documentation

0653. Which statement most accurately defines Directive play therapy?

A. Thoughtful arrangement and selection of materials that permit expression while protecting physical and emotional safety.
B. Describing a child's observable play actions in a clear, nonjudgmental way.
C. Use of objects, actions, or characters to represent ideas and experiences beyond their literal form.
D. A therapist-guided use of play activities selected to address identified therapeutic goals.

0654. Choose the practice comparison that best separates Caregiver involvement from Play therapy documentation.

A. Caregiver involvement: Sharing general progress and practical support strategies with caregivers under the consent and privacy plan. / Play therapy documentation: Documenting what occurred and separating directly observed behavior from interpretation.
B. Caregiver involvement: Choosing and structuring a play activity to practice a specified coping or communication skill. / Play therapy documentation: Documenting what occurred and separating directly observed behavior from interpretation.
C. Caregiver involvement: Documenting what occurred and separating directly observed behavior from interpretation. / Play therapy documentation: Sharing general progress and practical support strategies with caregivers under the consent and privacy plan.
D. Caregiver involvement: Sharing general progress and practical support strategies with caregivers under the consent and privacy plan. / Play therapy documentation: Choosing materials and rules that allow agency without foreseeable harm.

0655. Choose the practice comparison that best separates Tracking from Reflecting feelings.

A. Tracking: Saying what the child is doing in play without adding an unsupported interpretation. / Reflecting feelings: Choosing materials and rules that allow agency without foreseeable harm.
B. Tracking: Saying what the child is doing in play without adding an unsupported interpretation. / Reflecting feelings: Offering a tentative feeling reflection and allowing the child to correct it.
C. Tracking: Offering a tentative feeling reflection and allowing the child to correct it. / Reflecting feelings: Saying what the child is doing in play without adding an unsupported interpretation.
D. Tracking: Following the child's symbolic play as a communication channel while maintaining therapeutic purpose. / Reflecting feelings: Offering a tentative feeling reflection and allowing the child to correct it.

0656. A consultant is supporting a child aged 8 in the clinical planning session. The key practice is choosing materials and rules that allow agency without foreseeable harm. Which course concept is most relevant?

A. Play therapy documentation
B. Playroom safety
C. Reflecting feelings
D. Caregiver involvement

0657. Which option pairs the definitions of Child-centered play therapy and Reflecting feelings correctly, in that order?

A. Child-centered play therapy: A non-directive approach emphasizing acceptance, empathy, tracking, and the child's lead within safe limits. / Reflecting feelings: Naming or tentatively reflecting the emotional meaning conveyed through a child's words or play.
B. Child-centered play therapy: Thoughtful arrangement and selection of materials that permit expression while protecting physical and emotional safety. / Reflecting feelings: Naming or tentatively reflecting the emotional meaning conveyed through a child's words or play.
C. Child-centered play therapy: A non-directive approach emphasizing acceptance, empathy, tracking, and the child's lead within safe limits. / Reflecting feelings: Planned collaboration with caregivers that supports the child's goals while preserving appropriate therapeutic boundaries.
D. Child-centered play therapy: Naming or tentatively reflecting the emotional meaning conveyed through a child's words or play. / Reflecting feelings: A non-directive approach emphasizing acceptance, empathy, tracking, and the child's lead within safe limits.

0658. Choose the definition pair that correctly explains Child-centered play therapy first and Caregiver involvement second.

A. Child-centered play therapy: A non-directive approach emphasizing acceptance, empathy, tracking, and the child's lead within safe limits. / Caregiver involvement: Planned collaboration with caregivers that supports the child's goals while preserving appropriate therapeutic boundaries.
B. Child-centered play therapy: Planned collaboration with caregivers that supports the child's goals while preserving appropriate therapeutic boundaries. / Caregiver involvement: A non-directive approach emphasizing acceptance, empathy, tracking, and the child's lead within safe limits.
C. Child-centered play therapy: A non-directive approach emphasizing acceptance, empathy, tracking, and the child's lead within safe limits. / Caregiver involvement: A clear, empathic boundary that protects people or property while offering acceptable alternatives.
D. Child-centered play therapy: Recording observable play, interventions, response, and clinical rationale while distinguishing observation from inference. / Caregiver involvement: Planned collaboration with caregivers that supports the child's goals while preserving appropriate therapeutic boundaries.

0659. Which description belongs with the term Tracking?

A. Purposeful use of play within a helping relationship to support expression, exploration, and development.
B. Planned collaboration with caregivers that supports the child's goals while preserving appropriate therapeutic boundaries.
C. Describing a child's observable play actions in a clear, nonjudgmental way.
D. A non-directive approach emphasizing acceptance, empathy, tracking, and the child's lead within safe limits.

0660. A planning meeting about a student aged 17 includes a play therapist. The proposed practice in the student-support meeting is choosing materials and rules that allow agency without foreseeable harm. Which idea underlies it?

A. Therapeutic play
B. Playroom safety
C. Tracking
D. Symbolic play

0661. A student confuses Directive play therapy with Symbolic play. Which explanation most accurately separates them?

A. Directive play therapy: A therapist-guided use of play activities selected to address identified therapeutic goals. / Symbolic play: Recording observable play, interventions, response, and clinical rationale while distinguishing observation from inference.
B. Directive play therapy: Use of objects, actions, or characters to represent ideas and experiences beyond their literal form. / Symbolic play: A therapist-guided use of play activities selected to address identified therapeutic goals.
C. Directive play therapy: Describing a child's observable play actions in a clear, nonjudgmental way. / Symbolic play: Use of objects, actions, or characters to represent ideas and experiences beyond their literal form.
D. Directive play therapy: A therapist-guided use of play activities selected to address identified therapeutic goals. / Symbolic play: Use of objects, actions, or characters to represent ideas and experiences beyond their literal form.

0662. Which option preserves the correct meaning of both Tracking and Playroom safety?

A. Tracking: Describing a child's observable play actions in a clear, nonjudgmental way. / Playroom safety: Thoughtful arrangement and selection of materials that permit expression while protecting physical and emotional safety.
B. Tracking: Describing a child's observable play actions in a clear, nonjudgmental way. / Playroom safety: Naming or tentatively reflecting the emotional meaning conveyed through a child's words or play.
C. Tracking: A therapist-guided use of play activities selected to address identified therapeutic goals. / Playroom safety: Thoughtful arrangement and selection of materials that permit expression while protecting physical and emotional safety.
D. Tracking: Thoughtful arrangement and selection of materials that permit expression while protecting physical and emotional safety. / Playroom safety: Describing a child's observable play actions in a clear, nonjudgmental way.

0663. A team must select a support approach for a child aged 11 at the family session. The family therapist recommends following the child's symbolic play as a communication channel while maintaining therapeutic purpose. Which idea is most relevant?

A. Play therapy documentation
B. Playroom safety
C. Therapeutic play
D. Symbolic play

0664. At the classroom support meeting, a therapist reviews whether a plan for a young adolescent client is appropriate. The relevant practice is choosing materials and rules that allow agency without foreseeable harm. Which concept is tested?

A. Therapeutic limit setting
B. Directive play therapy
C. Reflecting feelings
D. Playroom safety

0665. A caregiver working with a counselor presents a support plan for a child aged 11 at the community mental-health service. Its central feature is stating the limit, acknowledging the feeling, and identifying a safe alternative action. Which concept should be named?

A. Play therapy documentation
B. Therapeutic limit setting
C. Reflecting feelings
D. Therapeutic play

0666. In the classroom support meeting, the agreed focus for a service navigator working with a client in early adolescence is choosing and structuring a play activity to practice a specified coping or communication skill. Which concept names this focus?

A. Directive play therapy
B. Reflecting feelings
C. Caregiver involvement
D. Playroom safety

0667. A case conference asks for a distinction between Therapeutic play and Reflecting feelings. Which answer is sound?

A. Therapeutic play: Purposeful use of play within a helping relationship to support expression, exploration, and development. / Reflecting feelings: Recording observable play, interventions, response, and clinical rationale while distinguishing observation from inference.
B. Therapeutic play: Naming or tentatively reflecting the emotional meaning conveyed through a child's words or play. / Reflecting feelings: Purposeful use of play within a helping relationship to support expression, exploration, and development.
C. Therapeutic play: Purposeful use of play within a helping relationship to support expression, exploration, and development. / Reflecting feelings: Naming or tentatively reflecting the emotional meaning conveyed through a child's words or play.
D. Therapeutic play: A non-directive approach emphasizing acceptance, empathy, tracking, and the child's lead within safe limits. / Reflecting feelings: Naming or tentatively reflecting the emotional meaning conveyed through a child's words or play.

0668. A consultant is preparing a follow-up plan for a client in early adolescence in the supervision meeting. The plan calls for reflecting a child's play and feelings rather than taking over the play narrative. Which concept names this approach?

A. Tracking
B. Symbolic play
C. Child-centered play therapy
D. Therapeutic limit setting

0669. Which statement accurately contrasts the course concepts Directive play therapy and Caregiver involvement?

A. Directive play therapy: A non-directive approach emphasizing acceptance, empathy, tracking, and the child's lead within safe limits. / Caregiver involvement: Planned collaboration with caregivers that supports the child's goals while preserving appropriate therapeutic boundaries.
B. Directive play therapy: A therapist-guided use of play activities selected to address identified therapeutic goals. / Caregiver involvement: A clear, empathic boundary that protects people or property while offering acceptable alternatives.
C. Directive play therapy: Planned collaboration with caregivers that supports the child's goals while preserving appropriate therapeutic boundaries. / Caregiver involvement: A therapist-guided use of play activities selected to address identified therapeutic goals.
D. Directive play therapy: A therapist-guided use of play activities selected to address identified therapeutic goals. / Caregiver involvement: Planned collaboration with caregivers that supports the child's goals while preserving appropriate therapeutic boundaries.

0670. A trainee must distinguish how Tracking and Reflecting feelings guide practice. Which comparison is accurate?

A. Tracking: Following the child's symbolic play as a communication channel while maintaining therapeutic purpose. / Reflecting feelings: Offering a tentative feeling reflection and allowing the child to correct it.
B. Tracking: Saying what the child is doing in play without adding an unsupported interpretation. / Reflecting feelings: Choosing materials and rules that allow agency without foreseeable harm.
C. Tracking: Saying what the child is doing in play without adding an unsupported interpretation. / Reflecting feelings: Offering a tentative feeling reflection and allowing the child to correct it.
D. Tracking: Offering a tentative feeling reflection and allowing the child to correct it. / Reflecting feelings: Saying what the child is doing in play without adding an unsupported interpretation.

0671. In the after-school program, a team asks how a youth worker can support a high-school student. One proposed action is choosing materials and rules that allow agency without foreseeable harm. Which idea does it represent?

A. Playroom safety
B. Directive play therapy
C. Symbolic play
D. Play therapy documentation

0672. A trainee must choose a practice that exemplifies Child-centered play therapy. Which action is the best fit?

A. Reflecting a child's play and feelings rather than taking over the play narrative.
B. Remaining curious about a toy character's role instead of assuming its play meaning.
C. Documenting what occurred and separating directly observed behavior from interpretation.
D. Following the child's symbolic play as a communication channel while maintaining therapeutic purpose.

0673. Which option pairs the definitions of Therapeutic limit setting and Play therapy documentation correctly, in that order?

A. Therapeutic limit setting: A clear, empathic boundary that protects people or property while offering acceptable alternatives. / Play therapy documentation: Recording observable play, interventions, response, and clinical rationale while distinguishing observation from inference.
B. Therapeutic limit setting: A clear, empathic boundary that protects people or property while offering acceptable alternatives. / Play therapy documentation: A non-directive approach emphasizing acceptance, empathy, tracking, and the child's lead within safe limits.
C. Therapeutic limit setting: Naming or tentatively reflecting the emotional meaning conveyed through a child's words or play. / Play therapy documentation: Recording observable play, interventions, response, and clinical rationale while distinguishing observation from inference.
D. Therapeutic limit setting: Recording observable play, interventions, response, and clinical rationale while distinguishing observation from inference. / Play therapy documentation: A clear, empathic boundary that protects people or property while offering acceptable alternatives.

0674. A trainee must choose a practice that exemplifies Directive play therapy. Which action is the best fit?

A. Choosing and structuring a play activity to practice a specified coping or communication skill.
B. Choosing materials and rules that allow agency without foreseeable harm.
C. Stating the limit, acknowledging the feeling, and identifying a safe alternative action.
D. Remaining curious about a toy character's role instead of assuming its play meaning.

0675. While supporting a middle-school student in the family resource center, a school-based clinician adopts this practice: remaining curious about a toy character's role instead of assuming its play meaning. Which concept best explains the choice?

A. Reflecting feelings
B. Therapeutic play
C. Symbolic play
D. Play therapy documentation

0676. A student aged 12 and a mental-health professional are reviewing goals in the after-school program. The agreed action is offering a tentative feeling reflection and allowing the child to correct it. Which principle best accounts for it?

A. Tracking
B. Directive play therapy
C. Symbolic play
D. Reflecting feelings

0677. Which statement most accurately defines Child-centered play therapy?

A. Naming or tentatively reflecting the emotional meaning conveyed through a child's words or play.
B. A non-directive approach emphasizing acceptance, empathy, tracking, and the child's lead within safe limits.
C. Purposeful use of play within a helping relationship to support expression, exploration, and development.
D. Recording observable play, interventions, response, and clinical rationale while distinguishing observation from inference.

0678. A youth worker is asked to justify a plan for a child aged 8 in the caregiver consultation. It calls for offering a tentative feeling reflection and allowing the child to correct it. Which concept provides the rationale?

A. Reflecting feelings
B. Therapeutic play
C. Play therapy documentation
D. Caregiver involvement

0679. At the community service agency, a school support specialist meets with a preadolescent child. The practice priority is: choosing materials and rules that allow agency without foreseeable harm. Which concept best captures that priority?

A. Reflecting feelings
B. Tracking
C. Playroom safety
D. Play therapy documentation

0680. Which option pairs the definitions of Therapeutic play and Directive play therapy correctly, in that order?

A. Therapeutic play: A therapist-guided use of play activities selected to address identified therapeutic goals. / Directive play therapy: Purposeful use of play within a helping relationship to support expression, exploration, and development.
B. Therapeutic play: Purposeful use of play within a helping relationship to support expression, exploration, and development. / Directive play therapy: Use of objects, actions, or characters to represent ideas and experiences beyond their literal form.
C. Therapeutic play: Recording observable play, interventions, response, and clinical rationale while distinguishing observation from inference. / Directive play therapy: A therapist-guided use of play activities selected to address identified therapeutic goals.
D. Therapeutic play: Purposeful use of play within a helping relationship to support expression, exploration, and development. / Directive play therapy: A therapist-guided use of play activities selected to address identified therapeutic goals.

0681. A assessment clinician and a middle-school student are discussing support in the multidisciplinary case conference. The selected practice is choosing materials and rules that allow agency without foreseeable harm. Which concept does this demonstrate?

A. Therapeutic play
B. Playroom safety
C. Tracking
D. Play therapy documentation

0682. An interdisciplinary team reviews a adolescent student's case at the multidisciplinary case conference. The counselor recommends documenting what occurred and separating directly observed behavior from interpretation. Which course concept best fits?

A. Playroom safety
B. Child-centered play therapy
C. Play therapy documentation
D. Therapeutic limit setting

0683. A student confuses Tracking with Caregiver involvement. Which explanation most accurately separates them?

A. Tracking: Describing a child's observable play actions in a clear, nonjudgmental way. / Caregiver involvement: Planned collaboration with caregivers that supports the child's goals while preserving appropriate therapeutic boundaries.
B. Tracking: Describing a child's observable play actions in a clear, nonjudgmental way. / Caregiver involvement: A non-directive approach emphasizing acceptance, empathy, tracking, and the child's lead within safe limits.
C. Tracking: Planned collaboration with caregivers that supports the child's goals while preserving appropriate therapeutic boundaries. / Caregiver involvement: Describing a child's observable play actions in a clear, nonjudgmental way.
D. Tracking: A clear, empathic boundary that protects people or property while offering acceptable alternatives. / Caregiver involvement: Planned collaboration with caregivers that supports the child's goals while preserving appropriate therapeutic boundaries.

0684. A student aged 9's service team meets in the school-based service. The family therapist recommends a change involving documenting what occurred and separating directly observed behavior from interpretation. Which idea best explains it?

A. Symbolic play
B. Play therapy documentation
C. Child-centered play therapy
D. Directive play therapy

0685. Choose the term that matches this definition: Naming or tentatively reflecting the emotional meaning conveyed through a child's words or play.

A. Therapeutic limit setting
B. Therapeutic play
C. Reflecting feelings
D. Playroom safety

0686. Which professional action most closely applies Playroom safety?

A. Sharing general progress and practical support strategies with caregivers under the consent and privacy plan.
B. Following the child's symbolic play as a communication channel while maintaining therapeutic purpose.
C. Choosing materials and rules that allow agency without foreseeable harm.
D. Documenting what occurred and separating directly observed behavior from interpretation.

0687. A play therapist is asked to evaluate a proposed service for a middle-school student in the learning-support meeting. The defining feature is stating the limit, acknowledging the feeling, and identifying a safe alternative action. Which concept fits?

A. Therapeutic limit setting
B. Directive play therapy
C. Therapeutic play
D. Reflecting feelings

0688. A trainee must choose a practice that exemplifies Tracking. Which action is the best fit?

A. Sharing general progress and practical support strategies with caregivers under the consent and privacy plan.
B. Choosing materials and rules that allow agency without foreseeable harm.
C. Remaining curious about a toy character's role instead of assuming its play meaning.
D. Saying what the child is doing in play without adding an unsupported interpretation.

0689. In the child guidance clinic, a consulting counselor explains why a adolescent student would benefit from saying what the child is doing in play without adding an unsupported interpretation. Which course concept underpins the explanation?

A. Therapeutic limit setting
B. Tracking
C. Playroom safety
D. Caregiver involvement

0690. A planning meeting about a adolescent student includes a counselor. The proposed practice in the multidisciplinary case conference is documenting what occurred and separating directly observed behavior from interpretation. Which idea underlies it?

A. Symbolic play
B. Play therapy documentation
C. Child-centered play therapy
D. Caregiver involvement

0691. Which choice aligns each practice with the correct idea, Therapeutic play or Tracking?

A. Therapeutic play: Following the child's symbolic play as a communication channel while maintaining therapeutic purpose. / Tracking: Offering a tentative feeling reflection and allowing the child to correct it.
B. Therapeutic play: Following the child's symbolic play as a communication channel while maintaining therapeutic purpose. / Tracking: Saying what the child is doing in play without adding an unsupported interpretation.
C. Therapeutic play: Documenting what occurred and separating directly observed behavior from interpretation. / Tracking: Saying what the child is doing in play without adding an unsupported interpretation.
D. Therapeutic play: Saying what the child is doing in play without adding an unsupported interpretation. / Tracking: Following the child's symbolic play as a communication channel while maintaining therapeutic purpose.

0692. Choose the response that best puts Child-centered play therapy into practice.

A. Stating the limit, acknowledging the feeling, and identifying a safe alternative action.
B. Documenting what occurred and separating directly observed behavior from interpretation.
C. Remaining curious about a toy character's role instead of assuming its play meaning.
D. Reflecting a child's play and feelings rather than taking over the play narrative.

0693. For a young person aged 18 in the youth advocacy program, a school support specialist makes this practice the immediate priority: saying what the child is doing in play without adding an unsupported interpretation. Which concept fits best?

A. Tracking
B. Playroom safety
C. Therapeutic play
D. Directive play therapy

0694. Which choice aligns each practice with the correct idea, Directive play therapy or Play therapy documentation?

A. Directive play therapy: Choosing and structuring a play activity to practice a specified coping or communication skill. / Play therapy documentation: Following the child's symbolic play as a communication channel while maintaining therapeutic purpose.
B. Directive play therapy: Choosing and structuring a play activity to practice a specified coping or communication skill. / Play therapy documentation: Documenting what occurred and separating directly observed behavior from interpretation.
C. Directive play therapy: Documenting what occurred and separating directly observed behavior from interpretation. / Play therapy documentation: Choosing and structuring a play activity to practice a specified coping or communication skill.
D. Directive play therapy: Offering a tentative feeling reflection and allowing the child to correct it. / Play therapy documentation: Documenting what occurred and separating directly observed behavior from interpretation.

0695. A therapist describes an intervention for a high-school student in the counseling practicum, centered on remaining curious about a toy character's role instead of assuming its play meaning. Which named idea is most relevant?

A. Directive play therapy
B. Reflecting feelings
C. Symbolic play
D. Therapeutic limit setting

0696. A member of a clinical team and a student aged 12 are discussing support in the behavior-support review. The selected practice is documenting what occurred and separating directly observed behavior from interpretation. Which concept does this demonstrate?

A. Play therapy documentation
B. Reflecting feelings
C. Therapeutic limit setting
D. Caregiver involvement

0697. A teacher and counselor is explaining a choice to a teenage client and caregiver in the after-school program. The choice centers on choosing and structuring a play activity to practice a specified coping or communication skill. Which idea is illustrated?

A. Tracking
B. Directive play therapy
C. Playroom safety
D. Child-centered play therapy

0698. Which comparison correctly distinguishes Reflecting feelings from Therapeutic limit setting?

A. Reflecting feelings: A clear, empathic boundary that protects people or property while offering acceptable alternatives. / Therapeutic limit setting: Naming or tentatively reflecting the emotional meaning conveyed through a child's words or play.
B. Reflecting feelings: Naming or tentatively reflecting the emotional meaning conveyed through a child's words or play. / Therapeutic limit setting: Recording observable play, interventions, response, and clinical rationale while distinguishing observation from inference.
C. Reflecting feelings: Describing a child's observable play actions in a clear, nonjudgmental way. / Therapeutic limit setting: A clear, empathic boundary that protects people or property while offering acceptable alternatives.
D. Reflecting feelings: Naming or tentatively reflecting the emotional meaning conveyed through a child's words or play. / Therapeutic limit setting: A clear, empathic boundary that protects people or property while offering acceptable alternatives.

0699. A mental-health professional is preparing a follow-up plan for a student aged 15 in the learning-support meeting. The plan calls for saying what the child is doing in play without adding an unsupported interpretation. Which concept names this approach?

A. Playroom safety
B. Therapeutic play
C. Directive play therapy
D. Tracking

0700. Which description belongs with the term Symbolic play?

A. Use of objects, actions, or characters to represent ideas and experiences beyond their literal form.
B. Recording observable play, interventions, response, and clinical rationale while distinguishing observation from inference.
C. Describing a child's observable play actions in a clear, nonjudgmental way.
D. Planned collaboration with caregivers that supports the child's goals while preserving appropriate therapeutic boundaries.

0701. A case conference asks for a distinction between Therapeutic limit setting and Playroom safety. Which answer is sound?

A. Therapeutic limit setting: A non-directive approach emphasizing acceptance, empathy, tracking, and the child's lead within safe limits. / Playroom safety: Thoughtful arrangement and selection of materials that permit expression while protecting physical and emotional safety.
B. Therapeutic limit setting: A clear, empathic boundary that protects people or property while offering acceptable alternatives. / Playroom safety: A therapist-guided use of play activities selected to address identified therapeutic goals.
C. Therapeutic limit setting: A clear, empathic boundary that protects people or property while offering acceptable alternatives. / Playroom safety: Thoughtful arrangement and selection of materials that permit expression while protecting physical and emotional safety.
D. Therapeutic limit setting: Thoughtful arrangement and selection of materials that permit expression while protecting physical and emotional safety. / Playroom safety: A clear, empathic boundary that protects people or property while offering acceptable alternatives.

0702. A trainee must distinguish how Child-centered play therapy and Therapeutic limit setting guide practice. Which comparison is accurate?

A. Child-centered play therapy: Stating the limit, acknowledging the feeling, and identifying a safe alternative action. / Therapeutic limit setting: Reflecting a child's play and feelings rather than taking over the play narrative.
B. Child-centered play therapy: Reflecting a child's play and feelings rather than taking over the play narrative. / Therapeutic limit setting: Choosing materials and rules that allow agency without foreseeable harm.
C. Child-centered play therapy: Following the child's symbolic play as a communication channel while maintaining therapeutic purpose. / Therapeutic limit setting: Stating the limit, acknowledging the feeling, and identifying a safe alternative action.
D. Child-centered play therapy: Reflecting a child's play and feelings rather than taking over the play narrative. / Therapeutic limit setting: Stating the limit, acknowledging the feeling, and identifying a safe alternative action.

0703. A case conference reviews a community practitioner's work with a older adolescent client in the supervision meeting: following the child's symbolic play as a communication channel while maintaining therapeutic purpose. Which principle is central?

A. Therapeutic play
B. Child-centered play therapy
C. Therapeutic limit setting
D. Caregiver involvement

0704. Which comparison would correct a trainee's misunderstanding of Therapeutic play versus Symbolic play?

A. Therapeutic play: Planned collaboration with caregivers that supports the child's goals while preserving appropriate therapeutic boundaries. / Symbolic play: Use of objects, actions, or characters to represent ideas and experiences beyond their literal form.
B. Therapeutic play: Purposeful use of play within a helping relationship to support expression, exploration, and development. / Symbolic play: Use of objects, actions, or characters to represent ideas and experiences beyond their literal form.
C. Therapeutic play: Use of objects, actions, or characters to represent ideas and experiences beyond their literal form. / Symbolic play: Purposeful use of play within a helping relationship to support expression, exploration, and development.
D. Therapeutic play: Purposeful use of play within a helping relationship to support expression, exploration, and development. / Symbolic play: A clear, empathic boundary that protects people or property while offering acceptable alternatives.

0705. A consulting counselor is asked to justify a plan for a older adolescent client in the school-based service. It calls for remaining curious about a toy character's role instead of assuming its play meaning. Which concept provides the rationale?

A. Playroom safety
B. Symbolic play
C. Therapeutic play
D. Tracking

0706. A supervisor asks how Caregiver involvement would appear in practice. Which choice should be selected?

A. Choosing and structuring a play activity to practice a specified coping or communication skill.
B. Following the child's symbolic play as a communication channel while maintaining therapeutic purpose.
C. Sharing general progress and practical support strategies with caregivers under the consent and privacy plan.
D. Remaining curious about a toy character's role instead of assuming its play meaning.

0707. Which description belongs with the term Child-centered play therapy?

A. Planned collaboration with caregivers that supports the child's goals while preserving appropriate therapeutic boundaries.
B. Use of objects, actions, or characters to represent ideas and experiences beyond their literal form.
C. A non-directive approach emphasizing acceptance, empathy, tracking, and the child's lead within safe limits.
D. Purposeful use of play within a helping relationship to support expression, exploration, and development.

0708. A supervised trainee prepares for a session in the parent meeting with a older adolescent client. The intended approach is offering a tentative feeling reflection and allowing the child to correct it. Which concept is most relevant?

A. Reflecting feelings
B. Child-centered play therapy
C. Tracking
D. Therapeutic limit setting

0709. A trainee must choose a practice that exemplifies Symbolic play. Which action is the best fit?

A. Sharing general progress and practical support strategies with caregivers under the consent and privacy plan.
B. Choosing and structuring a play activity to practice a specified coping or communication skill.
C. Documenting what occurred and separating directly observed behavior from interpretation.
D. Remaining curious about a toy character's role instead of assuming its play meaning.

0710. A student confuses Directive play therapy with Therapeutic limit setting. Which explanation most accurately separates them?

A. Directive play therapy: A clear, empathic boundary that protects people or property while offering acceptable alternatives. / Therapeutic limit setting: A therapist-guided use of play activities selected to address identified therapeutic goals.
B. Directive play therapy: A therapist-guided use of play activities selected to address identified therapeutic goals. / Therapeutic limit setting: Naming or tentatively reflecting the emotional meaning conveyed through a child's words or play.
C. Directive play therapy: Purposeful use of play within a helping relationship to support expression, exploration, and development. / Therapeutic limit setting: A clear, empathic boundary that protects people or property while offering acceptable alternatives.
D. Directive play therapy: A therapist-guided use of play activities selected to address identified therapeutic goals. / Therapeutic limit setting: A clear, empathic boundary that protects people or property while offering acceptable alternatives.

0711. Which comparison correctly distinguishes Tracking from Symbolic play?

A. Tracking: A therapist-guided use of play activities selected to address identified therapeutic goals. / Symbolic play: Use of objects, actions, or characters to represent ideas and experiences beyond their literal form.
B. Tracking: Describing a child's observable play actions in a clear, nonjudgmental way. / Symbolic play: Recording observable play, interventions, response, and clinical rationale while distinguishing observation from inference.
C. Tracking: Describing a child's observable play actions in a clear, nonjudgmental way. / Symbolic play: Use of objects, actions, or characters to represent ideas and experiences beyond their literal form.
D. Tracking: Use of objects, actions, or characters to represent ideas and experiences beyond their literal form. / Symbolic play: Describing a child's observable play actions in a clear, nonjudgmental way.

0712. Which paired example correctly applies Therapeutic play first and Reflecting feelings second?

A. Therapeutic play: Offering a tentative feeling reflection and allowing the child to correct it. / Reflecting feelings: Following the child's symbolic play as a communication channel while maintaining therapeutic purpose.
B. Therapeutic play: Following the child's symbolic play as a communication channel while maintaining therapeutic purpose. / Reflecting feelings: Offering a tentative feeling reflection and allowing the child to correct it.
C. Therapeutic play: Reflecting a child's play and feelings rather than taking over the play narrative. / Reflecting feelings: Offering a tentative feeling reflection and allowing the child to correct it.
D. Therapeutic play: Following the child's symbolic play as a communication channel while maintaining therapeutic purpose. / Reflecting feelings: Documenting what occurred and separating directly observed behavior from interpretation.

0713. Which statement most accurately defines Caregiver involvement?

A. Planned collaboration with caregivers that supports the child's goals while preserving appropriate therapeutic boundaries.
B. A clear, empathic boundary that protects people or property while offering acceptable alternatives.
C. Purposeful use of play within a helping relationship to support expression, exploration, and development.
D. Describing a child's observable play actions in a clear, nonjudgmental way.

0714. During work in the outpatient clinic, a teacher and counselor identifies this need: following the child's symbolic play as a communication channel while maintaining therapeutic purpose. Which idea should guide the response?

A. Directive play therapy
B. Therapeutic limit setting
C. Therapeutic play
D. Child-centered play therapy

0715. While supporting a young person in the student wellness team, a caregiver working with a counselor adopts this practice: choosing materials and rules that allow agency without foreseeable harm. Which concept best explains the choice?

A. Therapeutic limit setting
B. Playroom safety
C. Tracking
D. Caregiver involvement

0716. A student aged 9 and a supervised trainee are reviewing goals in the community youth program. The agreed action is following the child's symbolic play as a communication channel while maintaining therapeutic purpose. Which principle best accounts for it?

A. Play therapy documentation
B. Child-centered play therapy
C. Therapeutic play
D. Directive play therapy

0717. Which comparison correctly distinguishes Directive play therapy from Tracking?

A. Directive play therapy: A therapist-guided use of play activities selected to address identified therapeutic goals. / Tracking: Describing a child's observable play actions in a clear, nonjudgmental way.
B. Directive play therapy: Describing a child's observable play actions in a clear, nonjudgmental way. / Tracking: A therapist-guided use of play activities selected to address identified therapeutic goals.
C. Directive play therapy: A therapist-guided use of play activities selected to address identified therapeutic goals. / Tracking: Naming or tentatively reflecting the emotional meaning conveyed through a child's words or play.
D. Directive play therapy: Planned collaboration with caregivers that supports the child's goals while preserving appropriate therapeutic boundaries. / Tracking: Describing a child's observable play actions in a clear, nonjudgmental way.

0718. A case discussion concerns a child aged 11 and a family therapist in the family session. The practitioner is considering following the child's symbolic play as a communication channel while maintaining therapeutic purpose. Which principle is involved?

A. Therapeutic play
B. Play therapy documentation
C. Directive play therapy
D. Reflecting feelings

0719. Which paired example correctly applies Tracking first and Reflecting feelings second?

A. Tracking: Offering a tentative feeling reflection and allowing the child to correct it. / Reflecting feelings: Saying what the child is doing in play without adding an unsupported interpretation.
B. Tracking: Saying what the child is doing in play without adding an unsupported interpretation. / Reflecting feelings: Choosing materials and rules that allow agency without foreseeable harm.
C. Tracking: Following the child's symbolic play as a communication channel while maintaining therapeutic purpose. / Reflecting feelings: Offering a tentative feeling reflection and allowing the child to correct it.
D. Tracking: Saying what the child is doing in play without adding an unsupported interpretation. / Reflecting feelings: Offering a tentative feeling reflection and allowing the child to correct it.

0720. A assessment clinician is preparing a follow-up plan for a teenage client in the community youth program. The plan calls for stating the limit, acknowledging the feeling, and identifying a safe alternative action. Which concept names this approach?

A. Caregiver involvement
B. Therapeutic play
C. Therapeutic limit setting
D. Playroom safety

0721. A case conference asks for a distinction between Therapeutic limit setting and Caregiver involvement. Which answer is sound?

A. Therapeutic limit setting: A clear, empathic boundary that protects people or property while offering acceptable alternatives. / Caregiver involvement: Planned collaboration with caregivers that supports the child's goals while preserving appropriate therapeutic boundaries.
B. Therapeutic limit setting: Purposeful use of play within a helping relationship to support expression, exploration, and development. / Caregiver involvement: Planned collaboration with caregivers that supports the child's goals while preserving appropriate therapeutic boundaries.
C. Therapeutic limit setting: Planned collaboration with caregivers that supports the child's goals while preserving appropriate therapeutic boundaries. / Caregiver involvement: A clear, empathic boundary that protects people or property while offering acceptable alternatives.
D. Therapeutic limit setting: A clear, empathic boundary that protects people or property while offering acceptable alternatives. / Caregiver involvement: Recording observable play, interventions, response, and clinical rationale while distinguishing observation from inference.

0722. A student confuses Child-centered play therapy with Tracking. Which explanation most accurately separates them?

A. Child-centered play therapy: A non-directive approach emphasizing acceptance, empathy, tracking, and the child's lead within safe limits. / Tracking: Naming or tentatively reflecting the emotional meaning conveyed through a child's words or play.
B. Child-centered play therapy: A non-directive approach emphasizing acceptance, empathy, tracking, and the child's lead within safe limits. / Tracking: Describing a child's observable play actions in a clear, nonjudgmental way.
C. Child-centered play therapy: Thoughtful arrangement and selection of materials that permit expression while protecting physical and emotional safety. / Tracking: Describing a child's observable play actions in a clear, nonjudgmental way.
D. Child-centered play therapy: Describing a child's observable play actions in a clear, nonjudgmental way. / Tracking: A non-directive approach emphasizing acceptance, empathy, tracking, and the child's lead within safe limits.

0723. Identify the most precise label for this idea: Purposeful use of play within a helping relationship to support expression, exploration, and development.

A. Tracking
B. Playroom safety
C. Therapeutic play
D. Therapeutic limit setting

0724. Which statement accurately contrasts the course concepts Therapeutic play and Directive play therapy?

A. Therapeutic play: Purposeful use of play within a helping relationship to support expression, exploration, and development. / Directive play therapy: Use of objects, actions, or characters to represent ideas and experiences beyond their literal form.
B. Therapeutic play: Purposeful use of play within a helping relationship to support expression, exploration, and development. / Directive play therapy: A therapist-guided use of play activities selected to address identified therapeutic goals.
C. Therapeutic play: Recording observable play, interventions, response, and clinical rationale while distinguishing observation from inference. / Directive play therapy: A therapist-guided use of play activities selected to address identified therapeutic goals.
D. Therapeutic play: A therapist-guided use of play activities selected to address identified therapeutic goals. / Directive play therapy: Purposeful use of play within a helping relationship to support expression, exploration, and development.

0725. Which course concept is defined as follows: Describing a child's observable play actions in a clear, nonjudgmental way.

A. Symbolic play
B. Directive play therapy
C. Playroom safety
D. Tracking

0726. In the student wellness team, a team asks how a consulting counselor can support a young person aged 13. One proposed action is documenting what occurred and separating directly observed behavior from interpretation. Which idea does it represent?

A. Child-centered play therapy
B. Playroom safety
C. Symbolic play
D. Play therapy documentation

0727. During service review in the school-based service, a community practitioner describes choosing materials and rules that allow agency without foreseeable harm. for a client in early adolescence. Which course idea is most applicable?

A. Caregiver involvement
B. Playroom safety
C. Play therapy documentation
D. Tracking

0728. A supervised trainee is preparing a follow-up plan for a preadolescent child in the after-school program. The plan calls for documenting what occurred and separating directly observed behavior from interpretation. Which concept names this approach?

A. Therapeutic play
B. Child-centered play therapy
C. Play therapy documentation
D. Directive play therapy

0729. A teenage client is receiving support in the after-school program. The teacher and counselor is guided by this practice: choosing and structuring a play activity to practice a specified coping or communication skill. Which principle best fits?

A. Tracking
B. Directive play therapy
C. Therapeutic play
D. Caregiver involvement

0730. Which professional action most closely applies Tracking?

A. Offering a tentative feeling reflection and allowing the child to correct it.
B. Saying what the child is doing in play without adding an unsupported interpretation.
C. Stating the limit, acknowledging the feeling, and identifying a safe alternative action.
D. Documenting what occurred and separating directly observed behavior from interpretation.

0731. Which option correctly matches each concept to its practice focus: Therapeutic play and Tracking?

A. Therapeutic play: Saying what the child is doing in play without adding an unsupported interpretation. / Tracking: Following the child's symbolic play as a communication channel while maintaining therapeutic purpose.
B. Therapeutic play: Following the child's symbolic play as a communication channel while maintaining therapeutic purpose. / Tracking: Offering a tentative feeling reflection and allowing the child to correct it.
C. Therapeutic play: Following the child's symbolic play as a communication channel while maintaining therapeutic purpose. / Tracking: Saying what the child is doing in play without adding an unsupported interpretation.
D. Therapeutic play: Documenting what occurred and separating directly observed behavior from interpretation. / Tracking: Saying what the child is doing in play without adding an unsupported interpretation.

0732. Which option is the clearest practical expression of Play therapy documentation?

A. Saying what the child is doing in play without adding an unsupported interpretation.
B. Sharing general progress and practical support strategies with caregivers under the consent and privacy plan.
C. Documenting what occurred and separating directly observed behavior from interpretation.
D. Stating the limit, acknowledging the feeling, and identifying a safe alternative action.

0733. Which pair of actions illustrates Directive play therapy and Playroom safety, respectively?

A. Directive play therapy: Choosing and structuring a play activity to practice a specified coping or communication skill. / Playroom safety: Choosing materials and rules that allow agency without foreseeable harm.
B. Directive play therapy: Choosing and structuring a play activity to practice a specified coping or communication skill. / Playroom safety: Offering a tentative feeling reflection and allowing the child to correct it.
C. Directive play therapy: Choosing materials and rules that allow agency without foreseeable harm. / Playroom safety: Choosing and structuring a play activity to practice a specified coping or communication skill.
D. Directive play therapy: Sharing general progress and practical support strategies with caregivers under the consent and privacy plan. / Playroom safety: Choosing materials and rules that allow agency without foreseeable harm.

0734. Consider a young person receiving help in the outpatient clinic. The youth worker focuses on stating the limit, acknowledging the feeling, and identifying a safe alternative action. Which term best describes the guiding idea?

A. Play therapy documentation
B. Tracking
C. Therapeutic limit setting
D. Therapeutic play

0735. A group facilitator is asked to justify a plan for a young person in the clinical planning session. It calls for following the child's symbolic play as a communication channel while maintaining therapeutic purpose. Which concept provides the rationale?

A. Therapeutic play
B. Child-centered play therapy
C. Directive play therapy
D. Play therapy documentation

0736. In a case note about a young adolescent client, a member of a clinical team working in the supervision meeting records this priority: remaining curious about a toy character's role instead of assuming its play meaning. What principle is reflected?

A. Tracking
B. Playroom safety
C. Symbolic play
D. Caregiver involvement

0737. A team must select a support approach for a young person aged 10 at the youth advocacy program. The parent educator recommends choosing materials and rules that allow agency without foreseeable harm. Which idea is most relevant?

A. Directive play therapy
B. Playroom safety
C. Symbolic play
D. Therapeutic play

0738. A case coordinator presents a support plan for a student aged 15 at the youth advocacy program. Its central feature is choosing and structuring a play activity to practice a specified coping or communication skill. Which concept should be named?

A. Symbolic play
B. Directive play therapy
C. Therapeutic limit setting
D. Tracking

0739. A trainee must distinguish how Therapeutic play and Therapeutic limit setting guide practice. Which comparison is accurate?

A. Therapeutic play: Following the child's symbolic play as a communication channel while maintaining therapeutic purpose. / Therapeutic limit setting: Stating the limit, acknowledging the feeling, and identifying a safe alternative action.
B. Therapeutic play: Stating the limit, acknowledging the feeling, and identifying a safe alternative action. / Therapeutic limit setting: Following the child's symbolic play as a communication channel while maintaining therapeutic purpose.
C. Therapeutic play: Remaining curious about a toy character's role instead of assuming its play meaning. / Therapeutic limit setting: Stating the limit, acknowledging the feeling, and identifying a safe alternative action.
D. Therapeutic play: Following the child's symbolic play as a communication channel while maintaining therapeutic purpose. / Therapeutic limit setting: Saying what the child is doing in play without adding an unsupported interpretation.

0740. In the child guidance clinic, a school counselor describes the most appropriate support for a client in early adolescence as sharing general progress and practical support strategies with caregivers under the consent and privacy plan. Which framework is being applied?

A. Playroom safety
B. Therapeutic limit setting
C. Play therapy documentation
D. Caregiver involvement

0741. During service review in the caregiver consultation, a program coordinator describes stating the limit, acknowledging the feeling, and identifying a safe alternative action. for a student aged 12. Which course idea is most applicable?

A. Therapeutic limit setting
B. Symbolic play
C. Child-centered play therapy
D. Therapeutic play

0742. Which pair of actions illustrates Tracking and Caregiver involvement, respectively?

A. Tracking: Stating the limit, acknowledging the feeling, and identifying a safe alternative action. / Caregiver involvement: Sharing general progress and practical support strategies with caregivers under the consent and privacy plan.
B. Tracking: Sharing general progress and practical support strategies with caregivers under the consent and privacy plan. / Caregiver involvement: Saying what the child is doing in play without adding an unsupported interpretation.
C. Tracking: Saying what the child is doing in play without adding an unsupported interpretation. / Caregiver involvement: Sharing general progress and practical support strategies with caregivers under the consent and privacy plan.
D. Tracking: Saying what the child is doing in play without adding an unsupported interpretation. / Caregiver involvement: Reflecting a child's play and feelings rather than taking over the play narrative.

0743. Choose the practice comparison that best separates Directive play therapy from Reflecting feelings.

A. Directive play therapy: Choosing and structuring a play activity to practice a specified coping or communication skill. / Reflecting feelings: Offering a tentative feeling reflection and allowing the child to correct it.
B. Directive play therapy: Remaining curious about a toy character's role instead of assuming its play meaning. / Reflecting feelings: Offering a tentative feeling reflection and allowing the child to correct it.
C. Directive play therapy: Offering a tentative feeling reflection and allowing the child to correct it. / Reflecting feelings: Choosing and structuring a play activity to practice a specified coping or communication skill.
D. Directive play therapy: Choosing and structuring a play activity to practice a specified coping or communication skill. / Reflecting feelings: Sharing general progress and practical support strategies with caregivers under the consent and privacy plan.

0744. In the family resource center, the agreed focus for a program coordinator working with a student aged 15 is offering a tentative feeling reflection and allowing the child to correct it. Which concept names this focus?

A. Playroom safety
B. Play therapy documentation
C. Tracking
D. Reflecting feelings

0745. How are Tracking and Playroom safety most accurately differentiated in this curriculum?

A. Tracking: Describing a child's observable play actions in a clear, nonjudgmental way. / Playroom safety: Naming or tentatively reflecting the emotional meaning conveyed through a child's words or play.
B. Tracking: Describing a child's observable play actions in a clear, nonjudgmental way. / Playroom safety: Thoughtful arrangement and selection of materials that permit expression while protecting physical and emotional safety.
C. Tracking: A therapist-guided use of play activities selected to address identified therapeutic goals. / Playroom safety: Thoughtful arrangement and selection of materials that permit expression while protecting physical and emotional safety.
D. Tracking: Thoughtful arrangement and selection of materials that permit expression while protecting physical and emotional safety. / Playroom safety: Describing a child's observable play actions in a clear, nonjudgmental way.

0746. How should a practitioner distinguish the applications of Directive play therapy and Reflecting feelings?

A. Directive play therapy: Choosing and structuring a play activity to practice a specified coping or communication skill. / Reflecting feelings: Offering a tentative feeling reflection and allowing the child to correct it.
B. Directive play therapy: Offering a tentative feeling reflection and allowing the child to correct it. / Reflecting feelings: Choosing and structuring a play activity to practice a specified coping or communication skill.
C. Directive play therapy: Choosing and structuring a play activity to practice a specified coping or communication skill. / Reflecting feelings: Sharing general progress and practical support strategies with caregivers under the consent and privacy plan.
D. Directive play therapy: Remaining curious about a toy character's role instead of assuming its play meaning. / Reflecting feelings: Offering a tentative feeling reflection and allowing the child to correct it.

0747. Which choice aligns each practice with the correct idea, Child-centered play therapy or Directive play therapy?

A. Child-centered play therapy: Following the child's symbolic play as a communication channel while maintaining therapeutic purpose. / Directive play therapy: Choosing and structuring a play activity to practice a specified coping or communication skill.
B. Child-centered play therapy: Reflecting a child's play and feelings rather than taking over the play narrative. / Directive play therapy: Choosing and structuring a play activity to practice a specified coping or communication skill.
C. Child-centered play therapy: Reflecting a child's play and feelings rather than taking over the play narrative. / Directive play therapy: Sharing general progress and practical support strategies with caregivers under the consent and privacy plan.
D. Child-centered play therapy: Choosing and structuring a play activity to practice a specified coping or communication skill. / Directive play therapy: Reflecting a child's play and feelings rather than taking over the play narrative.

0748. Choose the response that best puts Play therapy documentation into practice.

A. Sharing general progress and practical support strategies with caregivers under the consent and privacy plan.
B. Documenting what occurred and separating directly observed behavior from interpretation.
C. Stating the limit, acknowledging the feeling, and identifying a safe alternative action.
D. Choosing and structuring a play activity to practice a specified coping or communication skill.

0749. When reviewing a student aged 15's plan in the school consultation, the family therapist notes that the next step is choosing materials and rules that allow agency without foreseeable harm. Which concept guides this step?

A. Tracking
B. Reflecting feelings
C. Symbolic play
D. Playroom safety

0750. While supporting a student aged 12 in the clinical planning session, a family therapist adopts this practice: sharing general progress and practical support strategies with caregivers under the consent and privacy plan. Which concept best explains the choice?

A. Caregiver involvement
B. Therapeutic play
C. Child-centered play therapy
D. Tracking

0751. A planning meeting about a young adolescent client includes a counselor. The proposed practice in the clinical planning session is offering a tentative feeling reflection and allowing the child to correct it. Which idea underlies it?

A. Tracking
B. Reflecting feelings
C. Symbolic play
D. Therapeutic limit setting

0752. Identify the most precise label for this idea: Recording observable play, interventions, response, and clinical rationale while distinguishing observation from inference.

A. Therapeutic play
B. Therapeutic limit setting
C. Symbolic play
D. Play therapy documentation

0753. A support meeting for a student aged 9 includes a counselor in the student wellness team. The practice under consideration is sharing general progress and practical support strategies with caregivers under the consent and privacy plan. Which concept guides it?

A. Caregiver involvement
B. Child-centered play therapy
C. Play therapy documentation
D. Therapeutic play

0754. A service team discusses a young person in the child guidance clinic. Their proposed next step is documenting what occurred and separating directly observed behavior from interpretation. Which course concept supports it?

A. Child-centered play therapy
B. Playroom safety
C. Play therapy documentation
D. Symbolic play

0755. Choose the definition pair that correctly explains Therapeutic play first and Symbolic play second.

A. Therapeutic play: Purposeful use of play within a helping relationship to support expression, exploration, and development. / Symbolic play: Use of objects, actions, or characters to represent ideas and experiences beyond their literal form.
B. Therapeutic play: Purposeful use of play within a helping relationship to support expression, exploration, and development. / Symbolic play: A clear, empathic boundary that protects people or property while offering acceptable alternatives.
C. Therapeutic play: Use of objects, actions, or characters to represent ideas and experiences beyond their literal form. / Symbolic play: Purposeful use of play within a helping relationship to support expression, exploration, and development.
D. Therapeutic play: Planned collaboration with caregivers that supports the child's goals while preserving appropriate therapeutic boundaries. / Symbolic play: Use of objects, actions, or characters to represent ideas and experiences beyond their literal form.

0756. A assessment clinician is preparing a follow-up plan for a young person aged 18 in the child guidance clinic. The plan calls for following the child's symbolic play as a communication channel while maintaining therapeutic purpose. Which concept names this approach?

A. Therapeutic play
B. Symbolic play
C. Play therapy documentation
D. Child-centered play therapy

0757. Which option preserves the correct meaning of both Tracking and Therapeutic limit setting?

A. Tracking: A clear, empathic boundary that protects people or property while offering acceptable alternatives. / Therapeutic limit setting: Describing a child's observable play actions in a clear, nonjudgmental way.
B. Tracking: Purposeful use of play within a helping relationship to support expression, exploration, and development. / Therapeutic limit setting: A clear, empathic boundary that protects people or property while offering acceptable alternatives.
C. Tracking: Describing a child's observable play actions in a clear, nonjudgmental way. / Therapeutic limit setting: A clear, empathic boundary that protects people or property while offering acceptable alternatives.
D. Tracking: Describing a child's observable play actions in a clear, nonjudgmental way. / Therapeutic limit setting: A therapist-guided use of play activities selected to address identified therapeutic goals.

0758. Which statement shows a sound practice-level distinction between Therapeutic limit setting and Playroom safety?

A. Therapeutic limit setting: Stating the limit, acknowledging the feeling, and identifying a safe alternative action. / Playroom safety: Choosing materials and rules that allow agency without foreseeable harm.
B. Therapeutic limit setting: Choosing materials and rules that allow agency without foreseeable harm. / Playroom safety: Stating the limit, acknowledging the feeling, and identifying a safe alternative action.
C. Therapeutic limit setting: Reflecting a child's play and feelings rather than taking over the play narrative. / Playroom safety: Choosing materials and rules that allow agency without foreseeable harm.
D. Therapeutic limit setting: Stating the limit, acknowledging the feeling, and identifying a safe alternative action. / Playroom safety: Choosing and structuring a play activity to practice a specified coping or communication skill.

0759. Which statement accurately contrasts the course concepts Playroom safety and Play therapy documentation?

A. Playroom safety: Recording observable play, interventions, response, and clinical rationale while distinguishing observation from inference. / Play therapy documentation: Thoughtful arrangement and selection of materials that permit expression while protecting physical and emotional safety.
B. Playroom safety: Thoughtful arrangement and selection of materials that permit expression while protecting physical and emotional safety. / Play therapy documentation: Purposeful use of play within a helping relationship to support expression, exploration, and development.
C. Playroom safety: A clear, empathic boundary that protects people or property while offering acceptable alternatives. / Play therapy documentation: Recording observable play, interventions, response, and clinical rationale while distinguishing observation from inference.
D. Playroom safety: Thoughtful arrangement and selection of materials that permit expression while protecting physical and emotional safety. / Play therapy documentation: Recording observable play, interventions, response, and clinical rationale while distinguishing observation from inference.

0760. When reviewing a young person aged 16's plan in the community mental-health service, the school-based clinician notes that the next step is following the child's symbolic play as a communication channel while maintaining therapeutic purpose. Which concept guides this step?

A. Child-centered play therapy
B. Caregiver involvement
C. Therapeutic limit setting
D. Therapeutic play

0761. During service review in the student-support meeting, a therapist describes offering a tentative feeling reflection and allowing the child to correct it. for a young person. Which course idea is most applicable?

A. Therapeutic limit setting
B. Tracking
C. Reflecting feelings
D. Directive play therapy

0762. In the school consultation, the agreed focus for a research trainee working with a student aged 12 is following the child's symbolic play as a communication channel while maintaining therapeutic purpose. Which concept names this focus?

A. Therapeutic play
B. Play therapy documentation
C. Therapeutic limit setting
D. Tracking

0763. A child aged 7 is receiving support in the student wellness team. The group facilitator is guided by this practice: offering a tentative feeling reflection and allowing the child to correct it. Which principle best fits?

A. Child-centered play therapy
B. Playroom safety
C. Reflecting feelings
D. Caregiver involvement

0764. Which pair of actions illustrates Therapeutic play and Play therapy documentation, respectively?

A. Therapeutic play: Following the child's symbolic play as a communication channel while maintaining therapeutic purpose. / Play therapy documentation: Reflecting a child's play and feelings rather than taking over the play narrative.
B. Therapeutic play: Choosing materials and rules that allow agency without foreseeable harm. / Play therapy documentation: Documenting what occurred and separating directly observed behavior from interpretation.
C. Therapeutic play: Documenting what occurred and separating directly observed behavior from interpretation. / Play therapy documentation: Following the child's symbolic play as a communication channel while maintaining therapeutic purpose.
D. Therapeutic play: Following the child's symbolic play as a communication channel while maintaining therapeutic purpose. / Play therapy documentation: Documenting what occurred and separating directly observed behavior from interpretation.

0765. Which applied comparison correctly identifies what belongs to Therapeutic play versus Therapeutic limit setting?

A. Therapeutic play: Following the child's symbolic play as a communication channel while maintaining therapeutic purpose. / Therapeutic limit setting: Saying what the child is doing in play without adding an unsupported interpretation.
B. Therapeutic play: Stating the limit, acknowledging the feeling, and identifying a safe alternative action. / Therapeutic limit setting: Following the child's symbolic play as a communication channel while maintaining therapeutic purpose.
C. Therapeutic play: Remaining curious about a toy character's role instead of assuming its play meaning. / Therapeutic limit setting: Stating the limit, acknowledging the feeling, and identifying a safe alternative action.
D. Therapeutic play: Following the child's symbolic play as a communication channel while maintaining therapeutic purpose. / Therapeutic limit setting: Stating the limit, acknowledging the feeling, and identifying a safe alternative action.

0766. A support meeting for a client in late adolescence includes a behavior specialist in the family resource center. The practice under consideration is choosing materials and rules that allow agency without foreseeable harm. Which concept guides it?

A. Playroom safety
B. Caregiver involvement
C. Tracking
D. Directive play therapy

0767. A young adolescent client's service team meets in the after-school program. The case coordinator recommends a change involving following the child's symbolic play as a communication channel while maintaining therapeutic purpose. Which idea best explains it?

A. Reflecting feelings
B. Caregiver involvement
C. Directive play therapy
D. Therapeutic play

0768. A trainee must choose a practice that exemplifies Caregiver involvement. Which action is the best fit?

A. Stating the limit, acknowledging the feeling, and identifying a safe alternative action.
B. Sharing general progress and practical support strategies with caregivers under the consent and privacy plan.
C. Choosing materials and rules that allow agency without foreseeable harm.
D. Following the child's symbolic play as a communication channel while maintaining therapeutic purpose.

0769. In a case note about a preadolescent child, a assessment clinician working in the community mental-health service records this priority: offering a tentative feeling reflection and allowing the child to correct it. What principle is reflected?

A. Therapeutic play
B. Symbolic play
C. Reflecting feelings
D. Play therapy documentation

0770. While consulting in the youth advocacy program, a mental-health professional supports a adolescent student by using this approach: remaining curious about a toy character's role instead of assuming its play meaning. Which concept is being applied?

A. Therapeutic limit setting
B. Play therapy documentation
C. Reflecting feelings
D. Symbolic play

0771. Which pair of actions illustrates Therapeutic limit setting and Caregiver involvement, respectively?

A. Therapeutic limit setting: Sharing general progress and practical support strategies with caregivers under the consent and privacy plan. / Caregiver involvement: Stating the limit, acknowledging the feeling, and identifying a safe alternative action.
B. Therapeutic limit setting: Stating the limit, acknowledging the feeling, and identifying a safe alternative action. / Caregiver involvement: Sharing general progress and practical support strategies with caregivers under the consent and privacy plan.
C. Therapeutic limit setting: Following the child's symbolic play as a communication channel while maintaining therapeutic purpose. / Caregiver involvement: Sharing general progress and practical support strategies with caregivers under the consent and privacy plan.
D. Therapeutic limit setting: Stating the limit, acknowledging the feeling, and identifying a safe alternative action. / Caregiver involvement: Documenting what occurred and separating directly observed behavior from interpretation.

0772. While consulting in the caregiver consultation, a mental-health professional supports a young adolescent client by using this approach: reflecting a child's play and feelings rather than taking over the play narrative. Which concept is being applied?

A. Directive play therapy
B. Child-centered play therapy
C. Caregiver involvement
D. Playroom safety

0773. Choose the definition pair that correctly explains Directive play therapy first and Playroom safety second.

A. Directive play therapy: A therapist-guided use of play activities selected to address identified therapeutic goals. / Playroom safety: Thoughtful arrangement and selection of materials that permit expression while protecting physical and emotional safety.
B. Directive play therapy: A therapist-guided use of play activities selected to address identified therapeutic goals. / Playroom safety: Naming or tentatively reflecting the emotional meaning conveyed through a child's words or play.
C. Directive play therapy: Planned collaboration with caregivers that supports the child's goals while preserving appropriate therapeutic boundaries. / Playroom safety: Thoughtful arrangement and selection of materials that permit expression while protecting physical and emotional safety.
D. Directive play therapy: Thoughtful arrangement and selection of materials that permit expression while protecting physical and emotional safety. / Playroom safety: A therapist-guided use of play activities selected to address identified therapeutic goals.

0774. A program coordinator is asked what should shape a high-school student's support in the multidisciplinary case conference. The proposed focus is reflecting a child's play and feelings rather than taking over the play narrative. Which principle does it represent?

A. Therapeutic limit setting
B. Reflecting feelings
C. Child-centered play therapy
D. Therapeutic play

0775. Which statement most accurately defines Reflecting feelings?

A. A clear, empathic boundary that protects people or property while offering acceptable alternatives.
B. Recording observable play, interventions, response, and clinical rationale while distinguishing observation from inference.
C. Naming or tentatively reflecting the emotional meaning conveyed through a child's words or play.
D. A non-directive approach emphasizing acceptance, empathy, tracking, and the child's lead within safe limits.

0776. A research trainee is asked what should shape a young person aged 16's support in the telehealth session. The proposed focus is choosing materials and rules that allow agency without foreseeable harm. Which principle does it represent?

A. Tracking
B. Play therapy documentation
C. Playroom safety
D. Caregiver involvement

0777. In the youth advocacy program, a teacher and counselor describes the most appropriate support for a middle-school student as offering a tentative feeling reflection and allowing the child to correct it. Which framework is being applied?

A. Caregiver involvement
B. Reflecting feelings
C. Directive play therapy
D. Playroom safety

0778. In a supervision quiz, how should Symbolic play be distinguished from Playroom safety?

A. Symbolic play: Recording observable play, interventions, response, and clinical rationale while distinguishing observation from inference. / Playroom safety: Thoughtful arrangement and selection of materials that permit expression while protecting physical and emotional safety.
B. Symbolic play: Use of objects, actions, or characters to represent ideas and experiences beyond their literal form. / Playroom safety: Thoughtful arrangement and selection of materials that permit expression while protecting physical and emotional safety.
C. Symbolic play: Use of objects, actions, or characters to represent ideas and experiences beyond their literal form. / Playroom safety: A therapist-guided use of play activities selected to address identified therapeutic goals.
D. Symbolic play: Thoughtful arrangement and selection of materials that permit expression while protecting physical and emotional safety. / Playroom safety: Use of objects, actions, or characters to represent ideas and experiences beyond their literal form.

0779. Choose the term that matches this definition: Purposeful use of play within a helping relationship to support expression, exploration, and development.

A. Symbolic play
B. Caregiver involvement
C. Tracking
D. Therapeutic play

0780. How should a practitioner distinguish the applications of Directive play therapy and Playroom safety?

A. Directive play therapy: Choosing materials and rules that allow agency without foreseeable harm. / Playroom safety: Choosing and structuring a play activity to practice a specified coping or communication skill.
B. Directive play therapy: Sharing general progress and practical support strategies with caregivers under the consent and privacy plan. / Playroom safety: Choosing materials and rules that allow agency without foreseeable harm.
C. Directive play therapy: Choosing and structuring a play activity to practice a specified coping or communication skill. / Playroom safety: Offering a tentative feeling reflection and allowing the child to correct it.
D. Directive play therapy: Choosing and structuring a play activity to practice a specified coping or communication skill. / Playroom safety: Choosing materials and rules that allow agency without foreseeable harm.

0781. Choose the practice comparison that best separates Therapeutic play from Play therapy documentation.

A. Therapeutic play: Following the child's symbolic play as a communication channel while maintaining therapeutic purpose. / Play therapy documentation: Documenting what occurred and separating directly observed behavior from interpretation.
B. Therapeutic play: Documenting what occurred and separating directly observed behavior from interpretation. / Play therapy documentation: Following the child's symbolic play as a communication channel while maintaining therapeutic purpose.
C. Therapeutic play: Following the child's symbolic play as a communication channel while maintaining therapeutic purpose. / Play therapy documentation: Reflecting a child's play and feelings rather than taking over the play narrative.
D. Therapeutic play: Choosing materials and rules that allow agency without foreseeable harm. / Play therapy documentation: Documenting what occurred and separating directly observed behavior from interpretation.

0782. A case conference reviews a community practitioner's work with a preadolescent child in the school consultation: stating the limit, acknowledging the feeling, and identifying a safe alternative action. Which principle is central?

A. Playroom safety
B. Therapeutic play
C. Therapeutic limit setting
D. Reflecting feelings

0783. A program coordinator describes an intervention for a young adolescent client in the telehealth session, centered on choosing and structuring a play activity to practice a specified coping or communication skill. Which named idea is most relevant?

A. Directive play therapy
B. Tracking
C. Symbolic play
D. Therapeutic limit setting

0784. While supporting a young person aged 18 in the school counseling office, a case coordinator adopts this practice: documenting what occurred and separating directly observed behavior from interpretation. Which concept best explains the choice?

A. Reflecting feelings
B. Tracking
C. Therapeutic limit setting
D. Play therapy documentation

0785. Which course concept is defined as follows: A non-directive approach emphasizing acceptance, empathy, tracking, and the child's lead within safe limits.

A. Caregiver involvement
B. Child-centered play therapy
C. Play therapy documentation
D. Directive play therapy

0786. A case conference asks for a distinction between Child-centered play therapy and Symbolic play. Which answer is sound?

A. Child-centered play therapy: A non-directive approach emphasizing acceptance, empathy, tracking, and the child's lead within safe limits. / Symbolic play: Recording observable play, interventions, response, and clinical rationale while distinguishing observation from inference.
B. Child-centered play therapy: Purposeful use of play within a helping relationship to support expression, exploration, and development. / Symbolic play: Use of objects, actions, or characters to represent ideas and experiences beyond their literal form.
C. Child-centered play therapy: A non-directive approach emphasizing acceptance, empathy, tracking, and the child's lead within safe limits. / Symbolic play: Use of objects, actions, or characters to represent ideas and experiences beyond their literal form.
D. Child-centered play therapy: Use of objects, actions, or characters to represent ideas and experiences beyond their literal form. / Symbolic play: A non-directive approach emphasizing acceptance, empathy, tracking, and the child's lead within safe limits.

0787. Which named construct is captured by this account? Purposeful use of play within a helping relationship to support expression, exploration, and development.

A. Child-centered play therapy
B. Therapeutic play
C. Reflecting feelings
D. Directive play therapy

0788. A member of a clinical team is supporting a student aged 15 in the school counseling office. The key practice is sharing general progress and practical support strategies with caregivers under the consent and privacy plan. Which course concept is most relevant?

A. Therapeutic play
B. Playroom safety
C. Tracking
D. Caregiver involvement

0789. In a supervision review, a parent educator describes work with a teenage client in the classroom support meeting: documenting what occurred and separating directly observed behavior from interpretation. What concept is illustrated?

A. Reflecting feelings
B. Play therapy documentation
C. Caregiver involvement
D. Directive play therapy

0790. Which named construct is captured by this account? Describing a child's observable play actions in a clear, nonjudgmental way.

A. Symbolic play
B. Tracking
C. Therapeutic play
D. Play therapy documentation

0791. Which paired example correctly applies Therapeutic play first and Playroom safety second?

A. Therapeutic play: Offering a tentative feeling reflection and allowing the child to correct it. / Playroom safety: Choosing materials and rules that allow agency without foreseeable harm.
B. Therapeutic play: Following the child's symbolic play as a communication channel while maintaining therapeutic purpose. / Playroom safety: Choosing and structuring a play activity to practice a specified coping or communication skill.
C. Therapeutic play: Following the child's symbolic play as a communication channel while maintaining therapeutic purpose. / Playroom safety: Choosing materials and rules that allow agency without foreseeable harm.
D. Therapeutic play: Choosing materials and rules that allow agency without foreseeable harm. / Playroom safety: Following the child's symbolic play as a communication channel while maintaining therapeutic purpose.

0792. In a supervision quiz, how should Tracking be distinguished from Play therapy documentation?

A. Tracking: Describing a child's observable play actions in a clear, nonjudgmental way. / Play therapy documentation: Planned collaboration with caregivers that supports the child's goals while preserving appropriate therapeutic boundaries.
B. Tracking: A non-directive approach emphasizing acceptance, empathy, tracking, and the child's lead within safe limits. / Play therapy documentation: Recording observable play, interventions, response, and clinical rationale while distinguishing observation from inference.
C. Tracking: Recording observable play, interventions, response, and clinical rationale while distinguishing observation from inference. / Play therapy documentation: Describing a child's observable play actions in a clear, nonjudgmental way.
D. Tracking: Describing a child's observable play actions in a clear, nonjudgmental way. / Play therapy documentation: Recording observable play, interventions, response, and clinical rationale while distinguishing observation from inference.

0793. A team must select a support approach for a high-school student at the telehealth session. The caregiver working with a counselor recommends documenting what occurred and separating directly observed behavior from interpretation. Which idea is most relevant?

A. Play therapy documentation
B. Directive play therapy
C. Child-centered play therapy
D. Playroom safety

0794. Which choice aligns each practice with the correct idea, Child-centered play therapy or Tracking?

A. Child-centered play therapy: Reflecting a child's play and feelings rather than taking over the play narrative. / Tracking: Offering a tentative feeling reflection and allowing the child to correct it.
B. Child-centered play therapy: Saying what the child is doing in play without adding an unsupported interpretation. / Tracking: Reflecting a child's play and feelings rather than taking over the play narrative.
C. Child-centered play therapy: Choosing materials and rules that allow agency without foreseeable harm. / Tracking: Saying what the child is doing in play without adding an unsupported interpretation.
D. Child-centered play therapy: Reflecting a child's play and feelings rather than taking over the play narrative. / Tracking: Saying what the child is doing in play without adding an unsupported interpretation.

0795. Which pair of actions illustrates Therapeutic play and Child-centered play therapy, respectively?

A. Therapeutic play: Following the child's symbolic play as a communication channel while maintaining therapeutic purpose. / Child-centered play therapy: Reflecting a child's play and feelings rather than taking over the play narrative.
B. Therapeutic play: Following the child's symbolic play as a communication channel while maintaining therapeutic purpose. / Child-centered play therapy: Documenting what occurred and separating directly observed behavior from interpretation.
C. Therapeutic play: Offering a tentative feeling reflection and allowing the child to correct it. / Child-centered play therapy: Reflecting a child's play and feelings rather than taking over the play narrative.
D. Therapeutic play: Reflecting a child's play and feelings rather than taking over the play narrative. / Child-centered play therapy: Following the child's symbolic play as a communication channel while maintaining therapeutic purpose.

0796. A case conference asks for a distinction between Directive play therapy and Play therapy documentation. Which answer is sound?

A. Directive play therapy: Recording observable play, interventions, response, and clinical rationale while distinguishing observation from inference. / Play therapy documentation: A therapist-guided use of play activities selected to address identified therapeutic goals.
B. Directive play therapy: A therapist-guided use of play activities selected to address identified therapeutic goals. / Play therapy documentation: Recording observable play, interventions, response, and clinical rationale while distinguishing observation from inference.
C. Directive play therapy: Naming or tentatively reflecting the emotional meaning conveyed through a child's words or play. / Play therapy documentation: Recording observable play, interventions, response, and clinical rationale while distinguishing observation from inference.
D. Directive play therapy: A therapist-guided use of play activities selected to address identified therapeutic goals. / Play therapy documentation: Purposeful use of play within a helping relationship to support expression, exploration, and development.

0797. Which statement accurately contrasts the course concepts Therapeutic play and Therapeutic limit setting?

A. Therapeutic play: A clear, empathic boundary that protects people or property while offering acceptable alternatives. / Therapeutic limit setting: Purposeful use of play within a helping relationship to support expression, exploration, and development.
B. Therapeutic play: Purposeful use of play within a helping relationship to support expression, exploration, and development. / Therapeutic limit setting: A clear, empathic boundary that protects people or property while offering acceptable alternatives.
C. Therapeutic play: Use of objects, actions, or characters to represent ideas and experiences beyond their literal form. / Therapeutic limit setting: A clear, empathic boundary that protects people or property while offering acceptable alternatives.
D. Therapeutic play: Purposeful use of play within a helping relationship to support expression, exploration, and development. / Therapeutic limit setting: Describing a child's observable play actions in a clear, nonjudgmental way.

0798. In a supervision review, a school-based clinician describes work with a client in early adolescence in the parent meeting: stating the limit, acknowledging the feeling, and identifying a safe alternative action. What concept is illustrated?

A. Directive play therapy
B. Therapeutic limit setting
C. Tracking
D. Playroom safety

0799. Which comparison correctly distinguishes Directive play therapy from Therapeutic limit setting?

A. Directive play therapy: A therapist-guided use of play activities selected to address identified therapeutic goals. / Therapeutic limit setting: A clear, empathic boundary that protects people or property while offering acceptable alternatives.
B. Directive play therapy: Purposeful use of play within a helping relationship to support expression, exploration, and development. / Therapeutic limit setting: A clear, empathic boundary that protects people or property while offering acceptable alternatives.
C. Directive play therapy: A therapist-guided use of play activities selected to address identified therapeutic goals. / Therapeutic limit setting: Naming or tentatively reflecting the emotional meaning conveyed through a child's words or play.
D. Directive play therapy: A clear, empathic boundary that protects people or property while offering acceptable alternatives. / Therapeutic limit setting: A therapist-guided use of play activities selected to address identified therapeutic goals.

0800. Which option preserves the correct meaning of both Tracking and Caregiver involvement?

A. Tracking: Describing a child's observable play actions in a clear, nonjudgmental way. / Caregiver involvement: A non-directive approach emphasizing acceptance, empathy, tracking, and the child's lead within safe limits.
B. Tracking: A clear, empathic boundary that protects people or property while offering acceptable alternatives. / Caregiver involvement: Planned collaboration with caregivers that supports the child's goals while preserving appropriate therapeutic boundaries.
C. Tracking: Describing a child's observable play actions in a clear, nonjudgmental way. / Caregiver involvement: Planned collaboration with caregivers that supports the child's goals while preserving appropriate therapeutic boundaries.
D. Tracking: Planned collaboration with caregivers that supports the child's goals while preserving appropriate therapeutic boundaries. / Caregiver involvement: Describing a child's observable play actions in a clear, nonjudgmental way.

0801. Choose the response that best puts Directive play therapy into practice.

A. Saying what the child is doing in play without adding an unsupported interpretation.
B. Sharing general progress and practical support strategies with caregivers under the consent and privacy plan.
C. Choosing and structuring a play activity to practice a specified coping or communication skill.
D. Reflecting a child's play and feelings rather than taking over the play narrative.

0802. A school-age child is receiving support in the caregiver consultation. The group facilitator is guided by this practice: documenting what occurred and separating directly observed behavior from interpretation. Which principle best fits?

A. Play therapy documentation
B. Directive play therapy
C. Therapeutic play
D. Reflecting feelings

0803. Which professional action most closely applies Therapeutic play?

A. Following the child's symbolic play as a communication channel while maintaining therapeutic purpose.
B. Remaining curious about a toy character's role instead of assuming its play meaning.
C. Offering a tentative feeling reflection and allowing the child to correct it.
D. Documenting what occurred and separating directly observed behavior from interpretation.

0804. Which option correctly matches each concept to its practice focus: Child-centered play therapy and Therapeutic limit setting?

A. Child-centered play therapy: Reflecting a child's play and feelings rather than taking over the play narrative. / Therapeutic limit setting: Choosing materials and rules that allow agency without foreseeable harm.
B. Child-centered play therapy: Stating the limit, acknowledging the feeling, and identifying a safe alternative action. / Therapeutic limit setting: Reflecting a child's play and feelings rather than taking over the play narrative.
C. Child-centered play therapy: Following the child's symbolic play as a communication channel while maintaining therapeutic purpose. / Therapeutic limit setting: Stating the limit, acknowledging the feeling, and identifying a safe alternative action.
D. Child-centered play therapy: Reflecting a child's play and feelings rather than taking over the play narrative. / Therapeutic limit setting: Stating the limit, acknowledging the feeling, and identifying a safe alternative action.

0805. Choose the response that best puts Therapeutic limit setting into practice.

A. Stating the limit, acknowledging the feeling, and identifying a safe alternative action.
B. Choosing materials and rules that allow agency without foreseeable harm.
C. Saying what the child is doing in play without adding an unsupported interpretation.
D. Offering a tentative feeling reflection and allowing the child to correct it.

0806. In the supervision meeting, a teacher and counselor describes the most appropriate support for a child aged 8 as documenting what occurred and separating directly observed behavior from interpretation. Which framework is being applied?

A. Play therapy documentation
B. Playroom safety
C. Symbolic play
D. Reflecting feelings

0807. How should a practitioner distinguish the applications of Reflecting feelings and Therapeutic limit setting?

A. Reflecting feelings: Saying what the child is doing in play without adding an unsupported interpretation. / Therapeutic limit setting: Stating the limit, acknowledging the feeling, and identifying a safe alternative action.
B. Reflecting feelings: Stating the limit, acknowledging the feeling, and identifying a safe alternative action. / Therapeutic limit setting: Offering a tentative feeling reflection and allowing the child to correct it.
C. Reflecting feelings: Offering a tentative feeling reflection and allowing the child to correct it. / Therapeutic limit setting: Stating the limit, acknowledging the feeling, and identifying a safe alternative action.
D. Reflecting feelings: Offering a tentative feeling reflection and allowing the child to correct it. / Therapeutic limit setting: Documenting what occurred and separating directly observed behavior from interpretation.

0808. Which choice aligns each practice with the correct idea, Directive play therapy or Symbolic play?

A. Directive play therapy: Choosing and structuring a play activity to practice a specified coping or communication skill. / Symbolic play: Remaining curious about a toy character's role instead of assuming its play meaning.
B. Directive play therapy: Choosing and structuring a play activity to practice a specified coping or communication skill. / Symbolic play: Documenting what occurred and separating directly observed behavior from interpretation.
C. Directive play therapy: Remaining curious about a toy character's role instead of assuming its play meaning. / Symbolic play: Choosing and structuring a play activity to practice a specified coping or communication skill.
D. Directive play therapy: Saying what the child is doing in play without adding an unsupported interpretation. / Symbolic play: Remaining curious about a toy character's role instead of assuming its play meaning.

0809. A trainee must choose a practice that exemplifies Reflecting feelings. Which action is the best fit?

A. Remaining curious about a toy character's role instead of assuming its play meaning.
B. Documenting what occurred and separating directly observed behavior from interpretation.
C. Choosing materials and rules that allow agency without foreseeable harm.
D. Offering a tentative feeling reflection and allowing the child to correct it.

0810. A school-age child's service team meets in the family resource center. The parent educator recommends a change involving reflecting a child's play and feelings rather than taking over the play narrative. Which idea best explains it?

A. Tracking
B. Symbolic play
C. Child-centered play therapy
D. Reflecting feelings

0811. A case conference asks for a distinction between Reflecting feelings and Caregiver involvement. Which answer is sound?

A. Reflecting feelings: Naming or tentatively reflecting the emotional meaning conveyed through a child's words or play. / Caregiver involvement: Recording observable play, interventions, response, and clinical rationale while distinguishing observation from inference.
B. Reflecting feelings: Naming or tentatively reflecting the emotional meaning conveyed through a child's words or play. / Caregiver involvement: Planned collaboration with caregivers that supports the child's goals while preserving appropriate therapeutic boundaries.
C. Reflecting feelings: Planned collaboration with caregivers that supports the child's goals while preserving appropriate therapeutic boundaries. / Caregiver involvement: Naming or tentatively reflecting the emotional meaning conveyed through a child's words or play.
D. Reflecting feelings: Use of objects, actions, or characters to represent ideas and experiences beyond their literal form. / Caregiver involvement: Planned collaboration with caregivers that supports the child's goals while preserving appropriate therapeutic boundaries.

0812. Which pair of actions illustrates Directive play therapy and Tracking, respectively?

A. Directive play therapy: Saying what the child is doing in play without adding an unsupported interpretation. / Tracking: Choosing and structuring a play activity to practice a specified coping or communication skill.
B. Directive play therapy: Choosing and structuring a play activity to practice a specified coping or communication skill. / Tracking: Saying what the child is doing in play without adding an unsupported interpretation.
C. Directive play therapy: Choosing and structuring a play activity to practice a specified coping or communication skill. / Tracking: Offering a tentative feeling reflection and allowing the child to correct it.
D. Directive play therapy: Sharing general progress and practical support strategies with caregivers under the consent and privacy plan. / Tracking: Saying what the child is doing in play without adding an unsupported interpretation.

0813. Choose the definition pair that correctly explains Child-centered play therapy first and Therapeutic limit setting second.

A. Child-centered play therapy: A non-directive approach emphasizing acceptance, empathy, tracking, and the child's lead within safe limits. / Therapeutic limit setting: A clear, empathic boundary that protects people or property while offering acceptable alternatives.
B. Child-centered play therapy: A non-directive approach emphasizing acceptance, empathy, tracking, and the child's lead within safe limits. / Therapeutic limit setting: Thoughtful arrangement and selection of materials that permit expression while protecting physical and emotional safety.
C. Child-centered play therapy: A clear, empathic boundary that protects people or property while offering acceptable alternatives. / Therapeutic limit setting: A non-directive approach emphasizing acceptance, empathy, tracking, and the child's lead within safe limits.
D. Child-centered play therapy: Purposeful use of play within a helping relationship to support expression, exploration, and development. / Therapeutic limit setting: A clear, empathic boundary that protects people or property while offering acceptable alternatives.

0814. In a supervision review, a case coordinator describes work with a older adolescent client in the youth group: sharing general progress and practical support strategies with caregivers under the consent and privacy plan. What concept is illustrated?

A. Play therapy documentation
B. Caregiver involvement
C. Tracking
D. Symbolic play

0815. How are Child-centered play therapy and Play therapy documentation most accurately differentiated in this curriculum?

A. Child-centered play therapy: A non-directive approach emphasizing acceptance, empathy, tracking, and the child's lead within safe limits. / Play therapy documentation: Planned collaboration with caregivers that supports the child's goals while preserving appropriate therapeutic boundaries.
B. Child-centered play therapy: Recording observable play, interventions, response, and clinical rationale while distinguishing observation from inference. / Play therapy documentation: A non-directive approach emphasizing acceptance, empathy, tracking, and the child's lead within safe limits.
C. Child-centered play therapy: A non-directive approach emphasizing acceptance, empathy, tracking, and the child's lead within safe limits. / Play therapy documentation: Recording observable play, interventions, response, and clinical rationale while distinguishing observation from inference.
D. Child-centered play therapy: A therapist-guided use of play activities selected to address identified therapeutic goals. / Play therapy documentation: Recording observable play, interventions, response, and clinical rationale while distinguishing observation from inference.

0816. Which choice aligns each practice with the correct idea, Child-centered play therapy or Therapeutic limit setting?

A. Child-centered play therapy: Following the child's symbolic play as a communication channel while maintaining therapeutic purpose. / Therapeutic limit setting: Stating the limit, acknowledging the feeling, and identifying a safe alternative action.
B. Child-centered play therapy: Reflecting a child's play and feelings rather than taking over the play narrative. / Therapeutic limit setting: Choosing materials and rules that allow agency without foreseeable harm.
C. Child-centered play therapy: Reflecting a child's play and feelings rather than taking over the play narrative. / Therapeutic limit setting: Stating the limit, acknowledging the feeling, and identifying a safe alternative action.
D. Child-centered play therapy: Stating the limit, acknowledging the feeling, and identifying a safe alternative action. / Therapeutic limit setting: Reflecting a child's play and feelings rather than taking over the play narrative.

0817. Which description belongs with the term Therapeutic limit setting?

A. Use of objects, actions, or characters to represent ideas and experiences beyond their literal form.
B. Describing a child's observable play actions in a clear, nonjudgmental way.
C. A non-directive approach emphasizing acceptance, empathy, tracking, and the child's lead within safe limits.
D. A clear, empathic boundary that protects people or property while offering acceptable alternatives.

0818. Which comparison would correct a trainee's misunderstanding of Tracking versus Reflecting feelings?

A. Tracking: Describing a child's observable play actions in a clear, nonjudgmental way. / Reflecting feelings: Naming or tentatively reflecting the emotional meaning conveyed through a child's words or play.
B. Tracking: Naming or tentatively reflecting the emotional meaning conveyed through a child's words or play. / Reflecting feelings: Describing a child's observable play actions in a clear, nonjudgmental way.
C. Tracking: Describing a child's observable play actions in a clear, nonjudgmental way. / Reflecting feelings: Thoughtful arrangement and selection of materials that permit expression while protecting physical and emotional safety.
D. Tracking: Purposeful use of play within a helping relationship to support expression, exploration, and development. / Reflecting feelings: Naming or tentatively reflecting the emotional meaning conveyed through a child's words or play.

0819. A clinical supervisor is asked to evaluate a proposed service for a young person aged 18 in the school consultation. The defining feature is sharing general progress and practical support strategies with caregivers under the consent and privacy plan. Which concept fits?

A. Caregiver involvement
B. Reflecting feelings
C. Therapeutic play
D. Child-centered play therapy

0820. Select the best explanation of Tracking.

A. Planned collaboration with caregivers that supports the child's goals while preserving appropriate therapeutic boundaries.
B. Describing a child's observable play actions in a clear, nonjudgmental way.
C. A clear, empathic boundary that protects people or property while offering acceptable alternatives.
D. Recording observable play, interventions, response, and clinical rationale while distinguishing observation from inference.

0821. Which statement shows a sound practice-level distinction between Therapeutic limit setting and Symbolic play?

A. Therapeutic limit setting: Stating the limit, acknowledging the feeling, and identifying a safe alternative action. / Symbolic play: Choosing materials and rules that allow agency without foreseeable harm.
B. Therapeutic limit setting: Sharing general progress and practical support strategies with caregivers under the consent and privacy plan. / Symbolic play: Remaining curious about a toy character's role instead of assuming its play meaning.
C. Therapeutic limit setting: Remaining curious about a toy character's role instead of assuming its play meaning. / Symbolic play: Stating the limit, acknowledging the feeling, and identifying a safe alternative action.
D. Therapeutic limit setting: Stating the limit, acknowledging the feeling, and identifying a safe alternative action. / Symbolic play: Remaining curious about a toy character's role instead of assuming its play meaning.

0822. Which comparison would correct a trainee's misunderstanding of Tracking versus Symbolic play?

A. Tracking: A therapist-guided use of play activities selected to address identified therapeutic goals. / Symbolic play: Use of objects, actions, or characters to represent ideas and experiences beyond their literal form.
B. Tracking: Describing a child's observable play actions in a clear, nonjudgmental way. / Symbolic play: Recording observable play, interventions, response, and clinical rationale while distinguishing observation from inference.
C. Tracking: Describing a child's observable play actions in a clear, nonjudgmental way. / Symbolic play: Use of objects, actions, or characters to represent ideas and experiences beyond their literal form.
D. Tracking: Use of objects, actions, or characters to represent ideas and experiences beyond their literal form. / Symbolic play: Describing a child's observable play actions in a clear, nonjudgmental way.

0823. A case discussion concerns a student aged 17 and a school-based clinician in the outpatient clinic. The practitioner is considering sharing general progress and practical support strategies with caregivers under the consent and privacy plan. Which principle is involved?

A. Therapeutic limit setting
B. Playroom safety
C. Caregiver involvement
D. Reflecting feelings

0824. A case conference asks for a distinction between Therapeutic play and Symbolic play. Which answer is sound?

A. Therapeutic play: Purposeful use of play within a helping relationship to support expression, exploration, and development. / Symbolic play: A clear, empathic boundary that protects people or property while offering acceptable alternatives.
B. Therapeutic play: Use of objects, actions, or characters to represent ideas and experiences beyond their literal form. / Symbolic play: Purposeful use of play within a helping relationship to support expression, exploration, and development.
C. Therapeutic play: Planned collaboration with caregivers that supports the child's goals while preserving appropriate therapeutic boundaries. / Symbolic play: Use of objects, actions, or characters to represent ideas and experiences beyond their literal form.
D. Therapeutic play: Purposeful use of play within a helping relationship to support expression, exploration, and development. / Symbolic play: Use of objects, actions, or characters to represent ideas and experiences beyond their literal form.

0825. For a child aged 7 seen in the family session, the therapist recommends a plan built around sharing general progress and practical support strategies with caregivers under the consent and privacy plan. Which concept is reflected?

A. Therapeutic limit setting
B. Caregiver involvement
C. Reflecting feelings
D. Play therapy documentation

0826. During service review in the student wellness team, a program coordinator describes following the child's symbolic play as a communication channel while maintaining therapeutic purpose. for a client in late adolescence. Which course idea is most applicable?

A. Caregiver involvement
B. Therapeutic play
C. Tracking
D. Playroom safety

0827. A trainee must explain Symbolic play. Which answer is accurate?

A. Use of objects, actions, or characters to represent ideas and experiences beyond their literal form.
B. Planned collaboration with caregivers that supports the child's goals while preserving appropriate therapeutic boundaries.
C. Thoughtful arrangement and selection of materials that permit expression while protecting physical and emotional safety.
D. A non-directive approach emphasizing acceptance, empathy, tracking, and the child's lead within safe limits.

0828. Which description belongs with the term Playroom safety?

A. Thoughtful arrangement and selection of materials that permit expression while protecting physical and emotional safety.
B. Planned collaboration with caregivers that supports the child's goals while preserving appropriate therapeutic boundaries.
C. A non-directive approach emphasizing acceptance, empathy, tracking, and the child's lead within safe limits.
D. A clear, empathic boundary that protects people or property while offering acceptable alternatives.

0829. An interdisciplinary team reviews a young adolescent client's case at the clinical planning session. The counselor recommends offering a tentative feeling reflection and allowing the child to correct it. Which course concept best fits?

A. Therapeutic limit setting
B. Reflecting feelings
C. Symbolic play
D. Caregiver involvement

0830. Which paired example correctly applies Directive play therapy first and Tracking second?

A. Directive play therapy: Saying what the child is doing in play without adding an unsupported interpretation. / Tracking: Choosing and structuring a play activity to practice a specified coping or communication skill.
B. Directive play therapy: Choosing and structuring a play activity to practice a specified coping or communication skill. / Tracking: Saying what the child is doing in play without adding an unsupported interpretation.
C. Directive play therapy: Choosing and structuring a play activity to practice a specified coping or communication skill. / Tracking: Offering a tentative feeling reflection and allowing the child to correct it.
D. Directive play therapy: Sharing general progress and practical support strategies with caregivers under the consent and privacy plan. / Tracking: Saying what the child is doing in play without adding an unsupported interpretation.

0831. A student confuses Symbolic play with Caregiver involvement. Which explanation most accurately separates them?

A. Symbolic play: Use of objects, actions, or characters to represent ideas and experiences beyond their literal form. / Caregiver involvement: Purposeful use of play within a helping relationship to support expression, exploration, and development.
B. Symbolic play: Describing a child's observable play actions in a clear, nonjudgmental way. / Caregiver involvement: Planned collaboration with caregivers that supports the child's goals while preserving appropriate therapeutic boundaries.
C. Symbolic play: Planned collaboration with caregivers that supports the child's goals while preserving appropriate therapeutic boundaries. / Caregiver involvement: Use of objects, actions, or characters to represent ideas and experiences beyond their literal form.
D. Symbolic play: Use of objects, actions, or characters to represent ideas and experiences beyond their literal form. / Caregiver involvement: Planned collaboration with caregivers that supports the child's goals while preserving appropriate therapeutic boundaries.

0832. Which option correctly matches each concept to its practice focus: Therapeutic play and Reflecting feelings?

A. Therapeutic play: Following the child's symbolic play as a communication channel while maintaining therapeutic purpose. / Reflecting feelings: Offering a tentative feeling reflection and allowing the child to correct it.
B. Therapeutic play: Offering a tentative feeling reflection and allowing the child to correct it. / Reflecting feelings: Following the child's symbolic play as a communication channel while maintaining therapeutic purpose.
C. Therapeutic play: Following the child's symbolic play as a communication channel while maintaining therapeutic purpose. / Reflecting feelings: Documenting what occurred and separating directly observed behavior from interpretation.
D. Therapeutic play: Reflecting a child's play and feelings rather than taking over the play narrative. / Reflecting feelings: Offering a tentative feeling reflection and allowing the child to correct it.

0833. A child aged 11 is receiving support in the family resource center. The youth worker is guided by this practice: saying what the child is doing in play without adding an unsupported interpretation. Which principle best fits?

A. Play therapy documentation
B. Therapeutic play
C. Tracking
D. Child-centered play therapy

0834. A member of a clinical team prepares for a session in the youth group with a child aged 7. The intended approach is choosing materials and rules that allow agency without foreseeable harm. Which concept is most relevant?

A. Play therapy documentation
B. Playroom safety
C. Caregiver involvement
D. Tracking

0835. Which named construct is captured by this account? Thoughtful arrangement and selection of materials that permit expression while protecting physical and emotional safety.

A. Symbolic play
B. Playroom safety
C. Directive play therapy
D. Reflecting feelings

0836. A student confuses Therapeutic play with Child-centered play therapy. Which explanation most accurately separates them?

A. Therapeutic play: Naming or tentatively reflecting the emotional meaning conveyed through a child's words or play. / Child-centered play therapy: A non-directive approach emphasizing acceptance, empathy, tracking, and the child's lead within safe limits.
B. Therapeutic play: Purposeful use of play within a helping relationship to support expression, exploration, and development. / Child-centered play therapy: Recording observable play, interventions, response, and clinical rationale while distinguishing observation from inference.
C. Therapeutic play: A non-directive approach emphasizing acceptance, empathy, tracking, and the child's lead within safe limits. / Child-centered play therapy: Purposeful use of play within a helping relationship to support expression, exploration, and development.
D. Therapeutic play: Purposeful use of play within a helping relationship to support expression, exploration, and development. / Child-centered play therapy: A non-directive approach emphasizing acceptance, empathy, tracking, and the child's lead within safe limits.

0837. Choose the definition pair that correctly explains Child-centered play therapy first and Symbolic play second.

A. Child-centered play therapy: A non-directive approach emphasizing acceptance, empathy, tracking, and the child's lead within safe limits. / Symbolic play: Recording observable play, interventions, response, and clinical rationale while distinguishing observation from inference.
B. Child-centered play therapy: Use of objects, actions, or characters to represent ideas and experiences beyond their literal form. / Symbolic play: A non-directive approach emphasizing acceptance, empathy, tracking, and the child's lead within safe limits.
C. Child-centered play therapy: A non-directive approach emphasizing acceptance, empathy, tracking, and the child's lead within safe limits. / Symbolic play: Use of objects, actions, or characters to represent ideas and experiences beyond their literal form.
D. Child-centered play therapy: Purposeful use of play within a helping relationship to support expression, exploration, and development. / Symbolic play: Use of objects, actions, or characters to represent ideas and experiences beyond their literal form.

0838. Which statement accurately contrasts the course concepts Tracking and Reflecting feelings?

A. Tracking: Naming or tentatively reflecting the emotional meaning conveyed through a child's words or play. / Reflecting feelings: Describing a child's observable play actions in a clear, nonjudgmental way.
B. Tracking: Describing a child's observable play actions in a clear, nonjudgmental way. / Reflecting feelings: Thoughtful arrangement and selection of materials that permit expression while protecting physical and emotional safety.
C. Tracking: Purposeful use of play within a helping relationship to support expression, exploration, and development. / Reflecting feelings: Naming or tentatively reflecting the emotional meaning conveyed through a child's words or play.
D. Tracking: Describing a child's observable play actions in a clear, nonjudgmental way. / Reflecting feelings: Naming or tentatively reflecting the emotional meaning conveyed through a child's words or play.

0839. Which statement shows a sound practice-level distinction between Directive play therapy and Therapeutic limit setting?

A. Directive play therapy: Stating the limit, acknowledging the feeling, and identifying a safe alternative action. / Therapeutic limit setting: Choosing and structuring a play activity to practice a specified coping or communication skill.
B. Directive play therapy: Choosing and structuring a play activity to practice a specified coping or communication skill. / Therapeutic limit setting: Offering a tentative feeling reflection and allowing the child to correct it.
C. Directive play therapy: Choosing and structuring a play activity to practice a specified coping or communication skill. / Therapeutic limit setting: Stating the limit, acknowledging the feeling, and identifying a safe alternative action.
D. Directive play therapy: Following the child's symbolic play as a communication channel while maintaining therapeutic purpose. / Therapeutic limit setting: Stating the limit, acknowledging the feeling, and identifying a safe alternative action.

0840. Which option correctly matches each concept to its practice focus: Child-centered play therapy and Symbolic play?

A. Child-centered play therapy: Following the child's symbolic play as a communication channel while maintaining therapeutic purpose. / Symbolic play: Remaining curious about a toy character's role instead of assuming its play meaning.
B. Child-centered play therapy: Reflecting a child's play and feelings rather than taking over the play narrative. / Symbolic play: Remaining curious about a toy character's role instead of assuming its play meaning.
C. Child-centered play therapy: Reflecting a child's play and feelings rather than taking over the play narrative. / Symbolic play: Documenting what occurred and separating directly observed behavior from interpretation.
D. Child-centered play therapy: Remaining curious about a toy character's role instead of assuming its play meaning. / Symbolic play: Reflecting a child's play and feelings rather than taking over the play narrative.

0841. During service review in the clinical planning session, a research trainee describes reflecting a child's play and feelings rather than taking over the play narrative. for a student aged 9. Which course idea is most applicable?

A. Child-centered play therapy
B. Directive play therapy
C. Caregiver involvement
D. Therapeutic limit setting

0842. In the after-school program, the agreed focus for a therapist working with a child aged 8 is saying what the child is doing in play without adding an unsupported interpretation. Which concept names this focus?

A. Reflecting feelings
B. Caregiver involvement
C. Tracking
D. Therapeutic play

0843. In a professional consultation about a student aged 17, the consultant describes this response in the behavior-support review: offering a tentative feeling reflection and allowing the child to correct it. Which term is most apt?

A. Directive play therapy
B. Play therapy documentation
C. Reflecting feelings
D. Caregiver involvement

0844. A research trainee describes an intervention for a school-age child in the community mental-health service, centered on saying what the child is doing in play without adding an unsupported interpretation. Which named idea is most relevant?

A. Therapeutic play
B. Reflecting feelings
C. Child-centered play therapy
D. Tracking

0845. For a student aged 15 in the community mental-health service, a counselor makes this practice the immediate priority: remaining curious about a toy character's role instead of assuming its play meaning. Which concept fits best?

A. Play therapy documentation
B. Symbolic play
C. Reflecting feelings
D. Directive play therapy

0846. A doctoral student reads the following description. Which concept does it define? Thoughtful arrangement and selection of materials that permit expression while protecting physical and emotional safety.

A. Directive play therapy
B. Therapeutic limit setting
C. Playroom safety
D. Therapeutic play

0847. Which choice aligns each practice with the correct idea, Symbolic play or Playroom safety?

A. Symbolic play: Documenting what occurred and separating directly observed behavior from interpretation. / Playroom safety: Choosing materials and rules that allow agency without foreseeable harm.
B. Symbolic play: Choosing materials and rules that allow agency without foreseeable harm. / Playroom safety: Remaining curious about a toy character's role instead of assuming its play meaning.
C. Symbolic play: Remaining curious about a toy character's role instead of assuming its play meaning. / Playroom safety: Choosing materials and rules that allow agency without foreseeable harm.
D. Symbolic play: Remaining curious about a toy character's role instead of assuming its play meaning. / Playroom safety: Choosing and structuring a play activity to practice a specified coping or communication skill.

0848. For a child aged 11 seen in the school counseling office, the service navigator recommends a plan built around choosing materials and rules that allow agency without foreseeable harm. Which concept is reflected?

A. Playroom safety
B. Reflecting feelings
C. Tracking
D. Therapeutic play

0849. A case conference reviews a research trainee’s work with a young person aged 10 in the family resource center: documenting what occurred and separating directly observed behavior from interpretation. Which principle is central?

A. Play therapy documentation
B. Therapeutic play
C. Child-centered play therapy
D. Caregiver involvement

0850. A young person aged 18 and a supervised trainee are reviewing goals in the family resource center. The agreed action is stating the limit, acknowledging the feeling, and identifying a safe alternative action. Which principle best accounts for it?

A. Tracking
B. Symbolic play
C. Therapeutic play
D. Therapeutic limit setting

0851. A behavior specialist reviews a plan for a young person in the parent meeting. The plan emphasizes remaining curious about a toy character’s role instead of assuming its play meaning. Which course idea does this reflect?

A. Directive play therapy
B. Symbolic play
C. Tracking
D. Therapeutic limit setting

0852. Choose the practice comparison that best separates Child-centered play therapy from Caregiver involvement.

A. Child-centered play therapy: Reflecting a child’s play and feelings rather than taking over the play narrative. / Caregiver involvement: Sharing general progress and practical support strategies with caregivers under the consent and privacy plan.
B. Child-centered play therapy: Sharing general progress and practical support strategies with caregivers under the consent and privacy plan. / Caregiver involvement: Reflecting a child’s play and feelings rather than taking over the play narrative.
C. Child-centered play therapy: Documenting what occurred and separating directly observed behavior from interpretation. / Caregiver involvement: Sharing general progress and practical support strategies with caregivers under the consent and privacy plan.
D. Child-centered play therapy: Reflecting a child’s play and feelings rather than taking over the play narrative. / Caregiver involvement: Stating the limit, acknowledging the feeling, and identifying a safe alternative action.

0853. A supervisor asks for an applied contrast between Tracking and Caregiver involvement. Which option fits?

A. Tracking: Saying what the child is doing in play without adding an unsupported interpretation. / Caregiver involvement: Reflecting a child’s play and feelings rather than taking over the play narrative.
B. Tracking: Saying what the child is doing in play without adding an unsupported interpretation. / Caregiver involvement: Sharing general progress and practical support strategies with caregivers under the consent and privacy plan.
C. Tracking: Stating the limit, acknowledging the feeling, and identifying a safe alternative action. / Caregiver involvement: Sharing general progress and practical support strategies with caregivers under the consent and privacy plan.
D. Tracking: Sharing general progress and practical support strategies with caregivers under the consent and privacy plan. / Caregiver involvement: Saying what the child is doing in play without adding an unsupported interpretation.

0854. A parent educator presents a support plan for a older adolescent client at the outpatient clinic. Its central feature is saying what the child is doing in play without adding an unsupported interpretation. Which concept should be named?

A. Child-centered play therapy
B. Tracking
C. Caregiver involvement
D. Reflecting feelings

0855. How are Tracking and Caregiver involvement most accurately differentiated in this curriculum?

A. Tracking: Planned collaboration with caregivers that supports the child’s goals while preserving appropriate therapeutic boundaries. / Caregiver involvement: Describing a child’s observable play actions in a clear, nonjudgmental way.
B. Tracking: Describing a child’s observable play actions in a clear, nonjudgmental way. / Caregiver involvement: A non-directive approach emphasizing acceptance, empathy, tracking, and the child’s lead within safe limits.
C. Tracking: A clear, empathic boundary that protects people or property while offering acceptable alternatives. / Caregiver involvement: Planned collaboration with caregivers that supports the child’s goals while preserving appropriate therapeutic boundaries.
D. Tracking: Describing a child’s observable play actions in a clear, nonjudgmental way. / Caregiver involvement: Planned collaboration with caregivers that supports the child’s goals while preserving appropriate therapeutic boundaries.

0856. Choose the definition pair that correctly explains Therapeutic play first and Therapeutic limit setting second.

A. Therapeutic play: A clear, empathic boundary that protects people or property while offering acceptable alternatives. / Therapeutic limit setting: Purposeful use of play within a helping relationship to support expression, exploration, and development.
B. Therapeutic play: Use of objects, actions, or characters to represent ideas and experiences beyond their literal form. / Therapeutic limit setting: A clear, empathic boundary that protects people or property while offering acceptable alternatives.
C. Therapeutic play: Purposeful use of play within a helping relationship to support expression, exploration, and development. / Therapeutic limit setting: Describing a child’s observable play actions in a clear, nonjudgmental way.
D. Therapeutic play: Purposeful use of play within a helping relationship to support expression, exploration, and development. / Therapeutic limit setting: A clear, empathic boundary that protects people or property while offering acceptable alternatives.

0857. Which applied comparison correctly identifies what belongs to Therapeutic play versus Tracking?

A. Therapeutic play: Following the child’s symbolic play as a communication channel while maintaining therapeutic purpose. / Tracking: Saying what the child is doing in play without adding an unsupported interpretation.
B. Therapeutic play: Saying what the child is doing in play without adding an unsupported interpretation. / Tracking: Following the child’s symbolic play as a communication channel while maintaining therapeutic purpose.
C. Therapeutic play: Documenting what occurred and separating directly observed behavior from interpretation. / Tracking: Saying what the child is doing in play without adding an unsupported interpretation.
D. Therapeutic play: Following the child’s symbolic play as a communication channel while maintaining therapeutic purpose. / Tracking: Offering a tentative feeling reflection and allowing the child to correct it.

0858. Which statement shows a sound practice-level distinction between Therapeutic play and Symbolic play?

A. Therapeutic play: Following the child's symbolic play as a communication channel while maintaining therapeutic purpose. / Symbolic play: Remaining curious about a toy character's role instead of assuming its play meaning.
B. Therapeutic play: Remaining curious about a toy character's role instead of assuming its play meaning. / Symbolic play: Following the child's symbolic play as a communication channel while maintaining therapeutic purpose.
C. Therapeutic play: Following the child's symbolic play as a communication channel while maintaining therapeutic purpose. / Symbolic play: Stating the limit, acknowledging the feeling, and identifying a safe alternative action.
D. Therapeutic play: Sharing general progress and practical support strategies with caregivers under the consent and privacy plan. / Symbolic play: Remaining curious about a toy character's role instead of assuming its play meaning.

0859. Which statement shows a sound practice-level distinction between Therapeutic play and Play therapy documentation?

A. Therapeutic play: Following the child's symbolic play as a communication channel while maintaining therapeutic purpose. / Play therapy documentation: Reflecting a child's play and feelings rather than taking over the play narrative.
B. Therapeutic play: Documenting what occurred and separating directly observed behavior from interpretation. / Play therapy documentation: Following the child's symbolic play as a communication channel while maintaining therapeutic purpose.
C. Therapeutic play: Choosing materials and rules that allow agency without foreseeable harm. / Play therapy documentation: Documenting what occurred and separating directly observed behavior from interpretation.
D. Therapeutic play: Following the child's symbolic play as a communication channel while maintaining therapeutic purpose. / Play therapy documentation: Documenting what occurred and separating directly observed behavior from interpretation.

0860. A client in late adolescence's service team meets in the multidisciplinary case conference. The caregiver working with a counselor recommends a change involving sharing general progress and practical support strategies with caregivers under the consent and privacy plan. Which idea best explains it?

A. Tracking
B. Symbolic play
C. Caregiver involvement
D. Reflecting feelings

0861. Which comparison would correct a trainee's misunderstanding of Playroom safety versus Caregiver involvement?

A. Playroom safety: Thoughtful arrangement and selection of materials that permit expression while protecting physical and emotional safety. / Caregiver involvement: Planned collaboration with caregivers that supports the child's goals while preserving appropriate therapeutic boundaries.
B. Playroom safety: Thoughtful arrangement and selection of materials that permit expression while protecting physical and emotional safety. / Caregiver involvement: Recording observable play, interventions, response, and clinical rationale while distinguishing observation from inference.
C. Playroom safety: A clear, empathic boundary that protects people or property while offering acceptable alternatives. / Caregiver involvement: Planned collaboration with caregivers that supports the child's goals while preserving appropriate therapeutic boundaries.
D. Playroom safety: Planned collaboration with caregivers that supports the child's goals while preserving appropriate therapeutic boundaries. / Caregiver involvement: Thoughtful arrangement and selection of materials that permit expression while protecting physical and emotional safety.

0862. Which statement accurately contrasts the course concepts Therapeutic play and Tracking?

A. Therapeutic play: Purposeful use of play within a helping relationship to support expression, exploration, and development. / Tracking: Naming or tentatively reflecting the emotional meaning conveyed through a child's words or play.
B. Therapeutic play: Purposeful use of play within a helping relationship to support expression, exploration, and development. / Tracking: Describing a child's observable play actions in a clear, nonjudgmental way.
C. Therapeutic play: Describing a child's observable play actions in a clear, nonjudgmental way. / Tracking: Purposeful use of play within a helping relationship to support expression, exploration, and development.
D. Therapeutic play: Recording observable play, interventions, response, and clinical rationale while distinguishing observation from inference. / Tracking: Describing a child's observable play actions in a clear, nonjudgmental way.

0863. What is the central meaning of Caregiver involvement?

A. A clear, empathic boundary that protects people or property while offering acceptable alternatives.
B. Naming or tentatively reflecting the emotional meaning conveyed through a child's words or play.
C. A non-directive approach emphasizing acceptance, empathy, tracking, and the child's lead within safe limits.
D. Planned collaboration with caregivers that supports the child's goals while preserving appropriate therapeutic boundaries.

0864. Which comparison correctly distinguishes Directive play therapy from Symbolic play?

A. Directive play therapy: Use of objects, actions, or characters to represent ideas and experiences beyond their literal form. / Symbolic play: A therapist-guided use of play activities selected to address identified therapeutic goals.
B. Directive play therapy: A therapist-guided use of play activities selected to address identified therapeutic goals. / Symbolic play: Recording observable play, interventions, response, and clinical rationale while distinguishing observation from inference.
C. Directive play therapy: Describing a child's observable play actions in a clear, nonjudgmental way. / Symbolic play: Use of objects, actions, or characters to represent ideas and experiences beyond their literal form.
D. Directive play therapy: A therapist-guided use of play activities selected to address identified therapeutic goals. / Symbolic play: Use of objects, actions, or characters to represent ideas and experiences beyond their literal form.

0865. At the behavior-support review, a clinical supervisor meets with a child of elementary-school age. The practice priority is: remaining curious about a toy character's role instead of assuming its play meaning. Which concept best captures that priority?

A. Directive play therapy
B. Caregiver involvement
C. Therapeutic limit setting
D. Symbolic play

0866. Which comparison would correct a trainee's misunderstanding of Child-centered play therapy versus Symbolic play?

A. Child-centered play therapy: A non-directive approach emphasizing acceptance, empathy, tracking, and the child's lead within safe limits. / Symbolic play: Use of objects, actions, or characters to represent ideas and experiences beyond their literal form.
B. Child-centered play therapy: Purposeful use of play within a helping relationship to support expression, exploration, and development. / Symbolic play: Use of objects, actions, or characters to represent ideas and experiences beyond their literal form.
C. Child-centered play therapy: A non-directive approach emphasizing acceptance, empathy, tracking, and the child's lead within safe limits. / Symbolic play: Recording observable play, interventions, response, and clinical rationale while distinguishing observation from inference.
D. Child-centered play therapy: Use of objects, actions, or characters to represent ideas and experiences beyond their literal form. / Symbolic play: A non-directive approach emphasizing acceptance, empathy, tracking, and the child's lead within safe limits.

0867. How are Directive play therapy and Therapeutic limit setting most accurately differentiated in this curriculum?

A. Directive play therapy: A therapist-guided use of play activities selected to address identified therapeutic goals. / Therapeutic limit setting: Naming or tentatively reflecting the emotional meaning conveyed through a child's words or play.
B. Directive play therapy: A clear, empathic boundary that protects people or property while offering acceptable alternatives. / Therapeutic limit setting: A therapist-guided use of play activities selected to address identified therapeutic goals.
C. Directive play therapy: Purposeful use of play within a helping relationship to support expression, exploration, and development. / Therapeutic limit setting: A clear, empathic boundary that protects people or property while offering acceptable alternatives.
D. Directive play therapy: A therapist-guided use of play activities selected to address identified therapeutic goals. / Therapeutic limit setting: A clear, empathic boundary that protects people or property while offering acceptable alternatives.

0868. During work in the supervision meeting, a school counselor identifies this need: offering a tentative feeling reflection and allowing the child to correct it. Which idea should guide the response?

A. Reflecting feelings
B. Therapeutic play
C. Child-centered play therapy
D. Symbolic play

0869. Which pair of actions illustrates Symbolic play and Playroom safety, respectively?

A. Symbolic play: Documenting what occurred and separating directly observed behavior from interpretation. / Playroom safety: Choosing materials and rules that allow agency without foreseeable harm.
B. Symbolic play: Choosing materials and rules that allow agency without foreseeable harm. / Playroom safety: Remaining curious about a toy character's role instead of assuming its play meaning.
C. Symbolic play: Remaining curious about a toy character's role instead of assuming its play meaning. / Playroom safety: Choosing and structuring a play activity to practice a specified coping or communication skill.
D. Symbolic play: Remaining curious about a toy character's role instead of assuming its play meaning. / Playroom safety: Choosing materials and rules that allow agency without foreseeable harm.

0870. How should a practitioner distinguish the applications of Symbolic play and Caregiver involvement?

A. Symbolic play: Saying what the child is doing in play without adding an unsupported interpretation. / Caregiver involvement: Sharing general progress and practical support strategies with caregivers under the consent and privacy plan.
B. Symbolic play: Sharing general progress and practical support strategies with caregivers under the consent and privacy plan. / Caregiver involvement: Remaining curious about a toy character's role instead of assuming its play meaning.
C. Symbolic play: Remaining curious about a toy character's role instead of assuming its play meaning. / Caregiver involvement: Following the child's symbolic play as a communication channel while maintaining therapeutic purpose.
D. Symbolic play: Remaining curious about a toy character's role instead of assuming its play meaning. / Caregiver involvement: Sharing general progress and practical support strategies with caregivers under the consent and privacy plan.

0871. Choose the practice comparison that best separates Therapeutic limit setting from Play therapy documentation.

A. Therapeutic limit setting: Stating the limit, acknowledging the feeling, and identifying a safe alternative action. / Play therapy documentation: Documenting what occurred and separating directly observed behavior from interpretation.
B. Therapeutic limit setting: Stating the limit, acknowledging the feeling, and identifying a safe alternative action. / Play therapy documentation: Reflecting a child's play and feelings rather than taking over the play narrative.
C. Therapeutic limit setting: Documenting what occurred and separating directly observed behavior from interpretation. / Play therapy documentation: Stating the limit, acknowledging the feeling, and identifying a safe alternative action.
D. Therapeutic limit setting: Offering a tentative feeling reflection and allowing the child to correct it. / Play therapy documentation: Documenting what occurred and separating directly observed behavior from interpretation.

0872. Consider a young person aged 18 receiving help in the community mental-health service. The consulting counselor focuses on choosing materials and rules that allow agency without foreseeable harm. Which term best describes the guiding idea?

A. Therapeutic limit setting
B. Directive play therapy
C. Therapeutic play
D. Playroom safety

0873. A family therapist presents a support plan for a child aged 8 at the community service agency. Its central feature is reflecting a child's play and feelings rather than taking over the play narrative. Which concept should be named?

A. Therapeutic play
B. Child-centered play therapy
C. Therapeutic limit setting
D. Caregiver involvement

0874. Which description belongs with the term Caregiver involvement?

A. A clear, empathic boundary that protects people or property while offering acceptable alternatives.
B. Use of objects, actions, or characters to represent ideas and experiences beyond their literal form.
C. A therapist-guided use of play activities selected to address identified therapeutic goals.
D. Planned collaboration with caregivers that supports the child's goals while preserving appropriate therapeutic boundaries.

0875. Which statement shows a sound practice-level distinction between Symbolic play and Playroom safety?

A. Symbolic play: Remaining curious about a toy character's role instead of assuming its play meaning. / Playroom safety: Choosing materials and rules that allow agency without foreseeable harm.
B. Symbolic play: Remaining curious about a toy character's role instead of assuming its play meaning. / Playroom safety: Choosing and structuring a play activity to practice a specified coping or communication skill.
C. Symbolic play: Choosing materials and rules that allow agency without foreseeable harm. / Playroom safety: Remaining curious about a toy character's role instead of assuming its play meaning.
D. Symbolic play: Documenting what occurred and separating directly observed behavior from interpretation. / Playroom safety: Choosing materials and rules that allow agency without foreseeable harm.

0876. How should a practitioner distinguish the applications of Directive play therapy and Symbolic play?

A. Directive play therapy: Saying what the child is doing in play without adding an unsupported interpretation. / Symbolic play: Remaining curious about a toy character's role instead of assuming its play meaning.
B. Directive play therapy: Choosing and structuring a play activity to practice a specified coping or communication skill. / Symbolic play: Documenting what occurred and separating directly observed behavior from interpretation.
C. Directive play therapy: Choosing and structuring a play activity to practice a specified coping or communication skill. / Symbolic play: Remaining curious about a toy character's role instead of assuming its play meaning.
D. Directive play therapy: Remaining curious about a toy character's role instead of assuming its play meaning. / Symbolic play: Choosing and structuring a play activity to practice a specified coping or communication skill.

0877. Consider a young person aged 16 receiving help in the community service agency. The school counselor focuses on saying what the child is doing in play without adding an unsupported interpretation. Which term best describes the guiding idea?

A. Play therapy documentation
B. Directive play therapy
C. Therapeutic limit setting
D. Tracking

0878. A consultant prepares for a session in the supervision meeting with a client in early adolescence. The intended approach is reflecting a child's play and feelings rather than taking over the play narrative. Which concept is most relevant?

A. Child-centered play therapy
B. Reflecting feelings
C. Directive play therapy
D. Caregiver involvement

0879. What is the central meaning of Symbolic play?

A. A non-directive approach emphasizing acceptance, empathy, tracking, and the child's lead within safe limits.
B. Purposeful use of play within a helping relationship to support expression, exploration, and development.
C. Naming or tentatively reflecting the emotional meaning conveyed through a child's words or play.
D. Use of objects, actions, or characters to represent ideas and experiences beyond their literal form.

0880. In a professional consultation about a child aged 6, the assessment clinician describes this response in the telehealth session: sharing general progress and practical support strategies with caregivers under the consent and privacy plan. Which term is most apt?

A. Child-centered play therapy
B. Therapeutic limit setting
C. Caregiver involvement
D. Tracking

0881. Which description belongs with the term Therapeutic play?

A. Purposeful use of play within a helping relationship to support expression, exploration, and development.
B. A clear, empathic boundary that protects people or property while offering acceptable alternatives.
C. Naming or tentatively reflecting the emotional meaning conveyed through a child's words or play.
D. Use of objects, actions, or characters to represent ideas and experiences beyond their literal form.

0882. For a older adolescent client seen in the student wellness team, the research trainee recommends a plan built around stating the limit, acknowledging the feeling, and identifying a safe alternative action. Which concept is reflected?

A. Directive play therapy
B. Therapeutic limit setting
C. Tracking
D. Child-centered play therapy

0883. Choose the practice comparison that best separates Child-centered play therapy from Playroom safety.

A. Child-centered play therapy: Offering a tentative feeling reflection and allowing the child to correct it. / Playroom safety: Choosing materials and rules that allow agency without foreseeable harm.
B. Child-centered play therapy: Choosing materials and rules that allow agency without foreseeable harm. / Playroom safety: Reflecting a child's play and feelings rather than taking over the play narrative.
C. Child-centered play therapy: Reflecting a child's play and feelings rather than taking over the play narrative. / Playroom safety: Choosing materials and rules that allow agency without foreseeable harm.
D. Child-centered play therapy: Reflecting a child's play and feelings rather than taking over the play narrative. / Playroom safety: Remaining curious about a toy character's role instead of assuming its play meaning.

0884. Which option correctly matches each concept to its practice focus: Child-centered play therapy and Playroom safety?

A. Child-centered play therapy: Reflecting a child's play and feelings rather than taking over the play narrative. / Playroom safety: Remaining curious about a toy character's role instead of assuming its play meaning.
B. Child-centered play therapy: Choosing materials and rules that allow agency without foreseeable harm. / Playroom safety: Reflecting a child's play and feelings rather than taking over the play narrative.
C. Child-centered play therapy: Reflecting a child's play and feelings rather than taking over the play narrative. / Playroom safety: Choosing materials and rules that allow agency without foreseeable harm.
D. Child-centered play therapy: Offering a tentative feeling reflection and allowing the child to correct it. / Playroom safety: Choosing materials and rules that allow agency without foreseeable harm.

0885. At the school-based service, a counselor meets with a child aged 7. The practice priority is: stating the limit, acknowledging the feeling, and identifying a safe alternative action. Which concept best captures that priority?

A. Therapeutic limit setting
B. Tracking
C. Symbolic play
D. Therapeutic play

0886. Which statement accurately contrasts the course concepts Therapeutic play and Reflecting feelings?

A. Therapeutic play: Purposeful use of play within a helping relationship to support expression, exploration, and development. / Reflecting feelings: Naming or tentatively reflecting the emotional meaning conveyed through a child's words or play.
B. Therapeutic play: Naming or tentatively reflecting the emotional meaning conveyed through a child's words or play. / Reflecting feelings: Purposeful use of play within a helping relationship to support expression, exploration, and development.
C. Therapeutic play: A non-directive approach emphasizing acceptance, empathy, tracking, and the child's lead within safe limits. / Reflecting feelings: Naming or tentatively reflecting the emotional meaning conveyed through a child's words or play.
D. Therapeutic play: Purposeful use of play within a helping relationship to support expression, exploration, and development. / Reflecting feelings: Recording observable play, interventions, response, and clinical rationale while distinguishing observation from inference.

0887. While consulting in the community mental-health service, a consultant supports a client in late adolescence by using this approach: documenting what occurred and separating directly observed behavior from interpretation. Which concept is being applied?

A. Directive play therapy
B. Play therapy documentation
C. Caregiver involvement
D. Child-centered play therapy

0888. In a supervision review, a caregiver working with a counselor describes work with a child aged 8 in the community youth program: remaining curious about a toy character's role instead of assuming its play meaning. What concept is illustrated?

A. Tracking
B. Symbolic play
C. Reflecting feelings
D. Caregiver involvement

0889. Which comparison would correct a trainee's misunderstanding of Child-centered play therapy versus Playroom safety?

A. Child-centered play therapy: A non-directive approach emphasizing acceptance, empathy, tracking, and the child's lead within safe limits. / Playroom safety: Use of objects, actions, or characters to represent ideas and experiences beyond their literal form.
B. Child-centered play therapy: A non-directive approach emphasizing acceptance, empathy, tracking, and the child's lead within safe limits. / Playroom safety: Thoughtful arrangement and selection of materials that permit expression while protecting physical and emotional safety.
C. Child-centered play therapy: Naming or tentatively reflecting the emotional meaning conveyed through a child's words or play. / Playroom safety: Thoughtful arrangement and selection of materials that permit expression while protecting physical and emotional safety.
D. Child-centered play therapy: Thoughtful arrangement and selection of materials that permit expression while protecting physical and emotional safety. / Playroom safety: A non-directive approach emphasizing acceptance, empathy, tracking, and the child's lead within safe limits.

0890. A trainee must distinguish how Therapeutic play and Tracking guide practice. Which comparison is accurate?

A. Therapeutic play: Following the child's symbolic play as a communication channel while maintaining therapeutic purpose. / Tracking: Offering a tentative feeling reflection and allowing the child to correct it.
B. Therapeutic play: Documenting what occurred and separating directly observed behavior from interpretation. / Tracking: Saying what the child is doing in play without adding an unsupported interpretation.
C. Therapeutic play: Saying what the child is doing in play without adding an unsupported interpretation. / Tracking: Following the child's symbolic play as a communication channel while maintaining therapeutic purpose.
D. Therapeutic play: Following the child's symbolic play as a communication channel while maintaining therapeutic purpose. / Tracking: Saying what the child is doing in play without adding an unsupported interpretation.

0891. In the classroom support meeting, a team asks how a teacher and counselor can support a student aged 17. One proposed action is remaining curious about a toy character's role instead of assuming its play meaning. Which idea does it represent?

A. Symbolic play
B. Directive play therapy
C. Playroom safety
D. Play therapy documentation

0892. A member of a clinical team is supporting a young person in the classroom support meeting. The key practice is saying what the child is doing in play without adding an unsupported interpretation. Which course concept is most relevant?

A. Directive play therapy
B. Playroom safety
C. Tracking
D. Caregiver involvement

0893. Which option is the clearest practical expression of Therapeutic play?

A. Following the child's symbolic play as a communication channel while maintaining therapeutic purpose.
B. Saying what the child is doing in play without adding an unsupported interpretation.
C. Choosing and structuring a play activity to practice a specified coping or communication skill.
D. Sharing general progress and practical support strategies with caregivers under the consent and privacy plan.

0894. Which comparison would correct a trainee's misunderstanding of Therapeutic play versus Reflecting feelings?

A. Therapeutic play: A non-directive approach emphasizing acceptance, empathy, tracking, and the child's lead within safe limits. / Reflecting feelings: Naming or tentatively reflecting the emotional meaning conveyed through a child's words or play.
B. Therapeutic play: Purposeful use of play within a helping relationship to support expression, exploration, and development. / Reflecting feelings: Naming or tentatively reflecting the emotional meaning conveyed through a child's words or play.
C. Therapeutic play: Naming or tentatively reflecting the emotional meaning conveyed through a child's words or play. / Reflecting feelings: Purposeful use of play within a helping relationship to support expression, exploration, and development.
D. Therapeutic play: Purposeful use of play within a helping relationship to support expression, exploration, and development. / Reflecting feelings: Recording observable play, interventions, response, and clinical rationale while distinguishing observation from inference.

0895. A case discussion concerns a school-age child and a case coordinator in the community service agency. The practitioner is considering remaining curious about a toy character's role instead of assuming its play meaning. Which principle is involved?

A. Symbolic play
B. Child-centered play therapy
C. Playroom safety
D. Therapeutic play

0896. Which named construct is captured by this account? A therapist-guided use of play activities selected to address identified therapeutic goals.

A. Caregiver involvement
B. Child-centered play therapy
C. Symbolic play
D. Directive play therapy

0897. A caregiver working with a counselor presents a support plan for a client in early adolescence at the behavior-support review. Its central feature is following the child's symbolic play as a communication channel while maintaining therapeutic purpose. Which concept should be named?

A. Playroom safety
B. Therapeutic play
C. Directive play therapy
D. Tracking

0898. Which option preserves the correct meaning of both Therapeutic limit setting and Playroom safety?

A. Therapeutic limit setting: A clear, empathic boundary that protects people or property while offering acceptable alternatives. / Playroom safety: Thoughtful arrangement and selection of materials that permit expression while protecting physical and emotional safety.
B. Therapeutic limit setting: A non-directive approach emphasizing acceptance, empathy, tracking, and the child's lead within safe limits. / Playroom safety: Thoughtful arrangement and selection of materials that permit expression while protecting physical and emotional safety.
C. Therapeutic limit setting: Thoughtful arrangement and selection of materials that permit expression while protecting physical and emotional safety. / Playroom safety: A clear, empathic boundary that protects people or property while offering acceptable alternatives.
D. Therapeutic limit setting: A clear, empathic boundary that protects people or property while offering acceptable alternatives. / Playroom safety: A therapist-guided use of play activities selected to address identified therapeutic goals.

0899. In a supervision review, a school-based clinician describes work with a young person aged 16 in the community mental-health service: following the child's symbolic play as a communication channel while maintaining therapeutic purpose. What concept is illustrated?

A. Tracking
B. Therapeutic play
C. Play therapy documentation
D. Child-centered play therapy

0900. At a case-planning meeting, the counselor proposes following the child's symbolic play as a communication channel while maintaining therapeutic purpose. for a child aged 8 seen in the school counseling office. Which concept does this illustrate?

A. Therapeutic limit setting
B. Tracking
C. Therapeutic play
D. Caregiver involvement

0901. Which statement accurately contrasts the course concepts Playroom safety and Caregiver involvement?

A. Playroom safety: Thoughtful arrangement and selection of materials that permit expression while protecting physical and emotional safety. / Caregiver involvement: Recording observable play, interventions, response, and clinical rationale while distinguishing observation from inference.
B. Playroom safety: Planned collaboration with caregivers that supports the child's goals while preserving appropriate therapeutic boundaries. / Caregiver involvement: Thoughtful arrangement and selection of materials that permit expression while protecting physical and emotional safety.
C. Playroom safety: Thoughtful arrangement and selection of materials that permit expression while protecting physical and emotional safety. / Caregiver involvement: Planned collaboration with caregivers that supports the child's goals while preserving appropriate therapeutic boundaries.
D. Playroom safety: A clear, empathic boundary that protects people or property while offering acceptable alternatives. / Caregiver involvement: Planned collaboration with caregivers that supports the child's goals while preserving appropriate therapeutic boundaries.

0902. Identify the most precise label for this idea: A non-directive approach emphasizing acceptance, empathy, tracking, and the child's lead within safe limits.

A. Playroom safety
B. Child-centered play therapy
C. Reflecting feelings
D. Caregiver involvement

0903. A child aged 6's service team meets in the caregiver consultation. The school-based clinician recommends a change involving choosing materials and rules that allow agency without foreseeable harm. Which idea best explains it?

A. Playroom safety
B. Directive play therapy
C. Play therapy documentation
D. Symbolic play

0904. Which statement accurately contrasts the course concepts Child-centered play therapy and Playroom safety?

A. Child-centered play therapy: Naming or tentatively reflecting the emotional meaning conveyed through a child's words or play. / Playroom safety: Thoughtful arrangement and selection of materials that permit expression while protecting physical and emotional safety.
B. Child-centered play therapy: A non-directive approach emphasizing acceptance, empathy, tracking, and the child's lead within safe limits. / Playroom safety: Use of objects, actions, or characters to represent ideas and experiences beyond their literal form.
C. Child-centered play therapy: A non-directive approach emphasizing acceptance, empathy, tracking, and the child's lead within safe limits. / Playroom safety: Thoughtful arrangement and selection of materials that permit expression while protecting physical and emotional safety.
D. Child-centered play therapy: Thoughtful arrangement and selection of materials that permit expression while protecting physical and emotional safety. / Playroom safety: A non-directive approach emphasizing acceptance, empathy, tracking, and the child's lead within safe limits.

0905. In a professional consultation about a high-school student, the member of a clinical team describes this response in the community service agency: stating the limit, acknowledging the feeling, and identifying a safe alternative action. Which term is most apt?

A. Caregiver involvement
B. Therapeutic limit setting
C. Tracking
D. Play therapy documentation

0906. Choose the definition pair that correctly explains Caregiver involvement first and Play therapy documentation second.

A. Caregiver involvement: A therapist-guided use of play activities selected to address identified therapeutic goals. / Play therapy documentation: Recording observable play, interventions, response, and clinical rationale while distinguishing observation from inference.
B. Caregiver involvement: Planned collaboration with caregivers that supports the child's goals while preserving appropriate therapeutic boundaries. / Play therapy documentation: Thoughtful arrangement and selection of materials that permit expression while protecting physical and emotional safety.
C. Caregiver involvement: Recording observable play, interventions, response, and clinical rationale while distinguishing observation from inference. / Play therapy documentation: Planned collaboration with caregivers that supports the child's goals while preserving appropriate therapeutic boundaries.
D. Caregiver involvement: Planned collaboration with caregivers that supports the child's goals while preserving appropriate therapeutic boundaries. / Play therapy documentation: Recording observable play, interventions, response, and clinical rationale while distinguishing observation from inference.

0907. A student confuses Reflecting feelings with Therapeutic limit setting. Which explanation most accurately separates them?

A. Reflecting feelings: Naming or tentatively reflecting the emotional meaning conveyed through a child's words or play. / Therapeutic limit setting: Recording observable play, interventions, response, and clinical rationale while distinguishing observation from inference.
B. Reflecting feelings: A clear, empathic boundary that protects people or property while offering acceptable alternatives. / Therapeutic limit setting: Naming or tentatively reflecting the emotional meaning conveyed through a child's words or play.
C. Reflecting feelings: Describing a child's observable play actions in a clear, nonjudgmental way. / Therapeutic limit setting: A clear, empathic boundary that protects people or property while offering acceptable alternatives.
D. Reflecting feelings: Naming or tentatively reflecting the emotional meaning conveyed through a child's words or play. / Therapeutic limit setting: A clear, empathic boundary that protects people or property while offering acceptable alternatives.

0908. A trainee must explain Directive play therapy. Which answer is accurate?

A. Planned collaboration with caregivers that supports the child's goals while preserving appropriate therapeutic boundaries.
B. A therapist-guided use of play activities selected to address identified therapeutic goals.
C. Recording observable play, interventions, response, and clinical rationale while distinguishing observation from inference.
D. Use of objects, actions, or characters to represent ideas and experiences beyond their literal form.

0909. Choose the definition pair that correctly explains Playroom safety first and Play therapy documentation second.

A. Playroom safety: Thoughtful arrangement and selection of materials that permit expression while protecting physical and emotional safety. / Play therapy documentation: Purposeful use of play within a helping relationship to support expression, exploration, and development.
B. Playroom safety: A clear, empathic boundary that protects people or property while offering acceptable alternatives. / Play therapy documentation: Recording observable play, interventions, response, and clinical rationale while distinguishing observation from inference.
C. Playroom safety: Recording observable play, interventions, response, and clinical rationale while distinguishing observation from inference. / Play therapy documentation: Thoughtful arrangement and selection of materials that permit expression while protecting physical and emotional safety.
D. Playroom safety: Thoughtful arrangement and selection of materials that permit expression while protecting physical and emotional safety. / Play therapy documentation: Recording observable play, interventions, response, and clinical rationale while distinguishing observation from inference.

0910. Which named construct is captured by this account? Planned collaboration with caregivers that supports the child's goals while preserving appropriate therapeutic boundaries.

A. Reflecting feelings
B. Play therapy documentation
C. Caregiver involvement
D. Playroom safety

0911. A trainee must explain Caregiver involvement. Which answer is accurate?

A. Naming or tentatively reflecting the emotional meaning conveyed through a child's words or play.
B. A non-directive approach emphasizing acceptance, empathy, tracking, and the child's lead within safe limits.
C. Purposeful use of play within a helping relationship to support expression, exploration, and development.
D. Planned collaboration with caregivers that supports the child's goals while preserving appropriate therapeutic boundaries.

0912. Which professional action most closely applies Reflecting feelings?

A. Stating the limit, acknowledging the feeling, and identifying a safe alternative action.
B. Sharing general progress and practical support strategies with caregivers under the consent and privacy plan.
C. Offering a tentative feeling reflection and allowing the child to correct it.
D. Choosing and structuring a play activity to practice a specified coping or communication skill.

0913. A student confuses Tracking with Play therapy documentation. Which explanation most accurately separates them?

A. Tracking: Describing a child's observable play actions in a clear, nonjudgmental way. / Play therapy documentation: Planned collaboration with caregivers that supports the child's goals while preserving appropriate therapeutic boundaries.
B. Tracking: Describing a child's observable play actions in a clear, nonjudgmental way. / Play therapy documentation: Recording observable play, interventions, response, and clinical rationale while distinguishing observation from inference.
C. Tracking: Recording observable play, interventions, response, and clinical rationale while distinguishing observation from inference. / Play therapy documentation: Describing a child's observable play actions in a clear, nonjudgmental way.
D. Tracking: A non-directive approach emphasizing acceptance, empathy, tracking, and the child's lead within safe limits. / Play therapy documentation: Recording observable play, interventions, response, and clinical rationale while distinguishing observation from inference.

0914. When reviewing a client in early adolescence's plan in the parent meeting, the school-based clinician notes that the next step is stating the limit, acknowledging the feeling, and identifying a safe alternative action. Which concept guides this step?

A. Play therapy documentation
B. Therapeutic limit setting
C. Therapeutic play
D. Caregiver involvement

0915. Which paired example correctly applies Child-centered play therapy first and Play therapy documentation second?

A. Child-centered play therapy: Reflecting a child's play and feelings rather than taking over the play narrative. / Play therapy documentation: Sharing general progress and practical support strategies with caregivers under the consent and privacy plan.
B. Child-centered play therapy: Reflecting a child's play and feelings rather than taking over the play narrative. / Play therapy documentation: Documenting what occurred and separating directly observed behavior from interpretation.
C. Child-centered play therapy: Choosing and structuring a play activity to practice a specified coping or communication skill. / Play therapy documentation: Documenting what occurred and separating directly observed behavior from interpretation.
D. Child-centered play therapy: Documenting what occurred and separating directly observed behavior from interpretation. / Play therapy documentation: Reflecting a child's play and feelings rather than taking over the play narrative.

0916. For a client in early adolescence in the outpatient clinic, a play therapist makes this practice the immediate priority: offering a tentative feeling reflection and allowing the child to correct it. Which concept fits best?

A. Therapeutic play
B. Caregiver involvement
C. Playroom safety
D. Reflecting feelings

0917. In a supervision review, a family therapist describes work with a young person in the supervision meeting: choosing and structuring a play activity to practice a specified coping or communication skill. What concept is illustrated?

A. Directive play therapy
B. Child-centered play therapy
C. Play therapy documentation
D. Caregiver involvement

0918. A community practitioner is asked what should shape a young person aged 13's support in the behavior-support review. The proposed focus is saying what the child is doing in play without adding an unsupported interpretation. Which principle does it represent?

A. Therapeutic limit setting
B. Child-centered play therapy
C. Directive play therapy
D. Tracking

0919. Which statement most accurately defines Play therapy documentation?

A. Recording observable play, interventions, response, and clinical rationale while distinguishing observation from inference.
B. Thoughtful arrangement and selection of materials that permit expression while protecting physical and emotional safety.
C. Use of objects, actions, or characters to represent ideas and experiences beyond their literal form.
D. A therapist-guided use of play activities selected to address identified therapeutic goals.

0920. Identify the most precise label for this idea: Thoughtful arrangement and selection of materials that permit expression while protecting physical and emotional safety.

A. Directive play therapy
B. Play therapy documentation
C. Playroom safety
D. Symbolic play

0921. Choose the term that matches this definition: Planned collaboration with caregivers that supports the child's goals while preserving appropriate therapeutic boundaries.

A. Symbolic play
B. Playroom safety
C. Therapeutic play
D. Caregiver involvement

0922. A supervisor asks for an applied contrast between Tracking and Play therapy documentation. Which option fits?

A. Tracking: Saying what the child is doing in play without adding an unsupported interpretation. / Play therapy documentation: Documenting what occurred and separating directly observed behavior from interpretation.
B. Tracking: Documenting what occurred and separating directly observed behavior from interpretation. / Play therapy documentation: Saying what the child is doing in play without adding an unsupported interpretation.
C. Tracking: Saying what the child is doing in play without adding an unsupported interpretation. / Play therapy documentation: Sharing general progress and practical support strategies with caregivers under the consent and privacy plan.
D. Tracking: Reflecting a child's play and feelings rather than taking over the play narrative. / Play therapy documentation: Documenting what occurred and separating directly observed behavior from interpretation.

0923. A member of a clinical team is preparing a follow-up plan for a child aged 7 in the youth group. The plan calls for choosing materials and rules that allow agency without foreseeable harm. Which concept names this approach?

A. Therapeutic play
B. Tracking
C. Reflecting feelings
D. Playroom safety

0924. A supervisor asks how Tracking would appear in practice. Which choice should be selected?

A. Documenting what occurred and separating directly observed behavior from interpretation.
B. Choosing materials and rules that allow agency without foreseeable harm.
C. Reflecting a child's play and feelings rather than taking over the play narrative.
D. Saying what the child is doing in play without adding an unsupported interpretation.

0925. Which option correctly matches each concept to its practice focus: Tracking and Reflecting feelings?

A. Tracking: Offering a tentative feeling reflection and allowing the child to correct it. / Reflecting feelings: Saying what the child is doing in play without adding an unsupported interpretation.
B. Tracking: Following the child's symbolic play as a communication channel while maintaining therapeutic purpose. / Reflecting feelings: Offering a tentative feeling reflection and allowing the child to correct it.
C. Tracking: Saying what the child is doing in play without adding an unsupported interpretation. / Reflecting feelings: Offering a tentative feeling reflection and allowing the child to correct it.
D. Tracking: Saying what the child is doing in play without adding an unsupported interpretation. / Reflecting feelings: Choosing materials and rules that allow agency without foreseeable harm.

0926. At a case-planning meeting, the school support specialist proposes choosing and structuring a play activity to practice a specified coping or communication skill. for a older adolescent client seen in the student-support meeting. Which concept does this illustrate?

A. Directive play therapy
B. Child-centered play therapy
C. Therapeutic play
D. Reflecting feelings

0927. Which option preserves the correct meaning of both Child-centered play therapy and Playroom safety?

A. Child-centered play therapy: A non-directive approach emphasizing acceptance, empathy, tracking, and the child's lead within safe limits. / Playroom safety: Use of objects, actions, or characters to represent ideas and experiences beyond their literal form.
B. Child-centered play therapy: Thoughtful arrangement and selection of materials that permit expression while protecting physical and emotional safety. / Playroom safety: A non-directive approach emphasizing acceptance, empathy, tracking, and the child's lead within safe limits.
C. Child-centered play therapy: A non-directive approach emphasizing acceptance, empathy, tracking, and the child's lead within safe limits. / Playroom safety: Thoughtful arrangement and selection of materials that permit expression while protecting physical and emotional safety.
D. Child-centered play therapy: Naming or tentatively reflecting the emotional meaning conveyed through a child's words or play. / Playroom safety: Thoughtful arrangement and selection of materials that permit expression while protecting physical and emotional safety.

0928. Which statement accurately contrasts the course concepts Reflecting feelings and Symbolic play?

A. Reflecting feelings: Describing a child's observable play actions in a clear, nonjudgmental way. / Symbolic play: Use of objects, actions, or characters to represent ideas and experiences beyond their literal form.
B. Reflecting feelings: Use of objects, actions, or characters to represent ideas and experiences beyond their literal form. / Symbolic play: Naming or tentatively reflecting the emotional meaning conveyed through a child's words or play.
C. Reflecting feelings: Naming or tentatively reflecting the emotional meaning conveyed through a child's words or play. / Symbolic play: Recording observable play, interventions, response, and clinical rationale while distinguishing observation from inference.
D. Reflecting feelings: Naming or tentatively reflecting the emotional meaning conveyed through a child's words or play. / Symbolic play: Use of objects, actions, or characters to represent ideas and experiences beyond their literal form.

0929. What is the central meaning of Tracking?

A. Describing a child's observable play actions in a clear, nonjudgmental way.
B. Purposeful use of play within a helping relationship to support expression, exploration, and development.
C. Planned collaboration with caregivers that supports the child's goals while preserving appropriate therapeutic boundaries.
D. Naming or tentatively reflecting the emotional meaning conveyed through a child's words or play.

0930. Which choice aligns each practice with the correct idea, Tracking or Play therapy documentation?

A. Tracking: Reflecting a child's play and feelings rather than taking over the play narrative. / Play therapy documentation: Documenting what occurred and separating directly observed behavior from interpretation.
B. Tracking: Saying what the child is doing in play without adding an unsupported interpretation. / Play therapy documentation: Documenting what occurred and separating directly observed behavior from interpretation.
C. Tracking: Documenting what occurred and separating directly observed behavior from interpretation. / Play therapy documentation: Saying what the child is doing in play without adding an unsupported interpretation.
D. Tracking: Saying what the child is doing in play without adding an unsupported interpretation. / Play therapy documentation: Sharing general progress and practical support strategies with caregivers under the consent and privacy plan.

0931. Which option correctly matches each concept to its practice focus: Reflecting feelings and Caregiver involvement?

A. Reflecting feelings: Offering a tentative feeling reflection and allowing the child to correct it. / Caregiver involvement: Documenting what occurred and separating directly observed behavior from interpretation.
B. Reflecting feelings: Offering a tentative feeling reflection and allowing the child to correct it. / Caregiver involvement: Sharing general progress and practical support strategies with caregivers under the consent and privacy plan.
C. Reflecting feelings: Sharing general progress and practical support strategies with caregivers under the consent and privacy plan. / Caregiver involvement: Offering a tentative feeling reflection and allowing the child to correct it.
D. Reflecting feelings: Remaining curious about a toy character's role instead of assuming its play meaning. / Caregiver involvement: Sharing general progress and practical support strategies with caregivers under the consent and privacy plan.

0932. Select the best explanation of Reflecting feelings.

A. A clear, empathic boundary that protects people or property while offering acceptable alternatives.
B. Naming or tentatively reflecting the emotional meaning conveyed through a child's words or play.
C. Use of objects, actions, or characters to represent ideas and experiences beyond their literal form.
D. Planned collaboration with caregivers that supports the child's goals while preserving appropriate therapeutic boundaries.

0933. A doctoral student reads the following description. Which concept does it define? A non-directive approach emphasizing acceptance, empathy, tracking, and the child's lead within safe limits.

A. Child-centered play therapy
B. Play therapy documentation
C. Caregiver involvement
D. Therapeutic play

0934. Choose the practice comparison that best separates Directive play therapy from Tracking.

A. Directive play therapy: Saying what the child is doing in play without adding an unsupported interpretation. / Tracking: Choosing and structuring a play activity to practice a specified coping or communication skill.
B. Directive play therapy: Choosing and structuring a play activity to practice a specified coping or communication skill. / Tracking: Offering a tentative feeling reflection and allowing the child to correct it.
C. Directive play therapy: Sharing general progress and practical support strategies with caregivers under the consent and privacy plan. / Tracking: Saying what the child is doing in play without adding an unsupported interpretation.
D. Directive play therapy: Choosing and structuring a play activity to practice a specified coping or communication skill. / Tracking: Saying what the child is doing in play without adding an unsupported interpretation.

0935. Which option pairs the definitions of Therapeutic play and Play therapy documentation correctly, in that order?

A. Therapeutic play: Thoughtful arrangement and selection of materials that permit expression while protecting physical and emotional safety. / Play therapy documentation: Recording observable play, interventions, response, and clinical rationale while distinguishing observation from inference.
B. Therapeutic play: Purposeful use of play within a helping relationship to support expression, exploration, and development. / Play therapy documentation: A non-directive approach emphasizing acceptance, empathy, tracking, and the child's lead within safe limits.
C. Therapeutic play: Recording observable play, interventions, response, and clinical rationale while distinguishing observation from inference. / Play therapy documentation: Purposeful use of play within a helping relationship to support expression, exploration, and development.
D. Therapeutic play: Purposeful use of play within a helping relationship to support expression, exploration, and development. / Play therapy documentation: Recording observable play, interventions, response, and clinical rationale while distinguishing observation from inference.

0936. In a supervision quiz, how should Directive play therapy be distinguished from Play therapy documentation?

A. Directive play therapy: A therapist-guided use of play activities selected to address identified therapeutic goals. / Play therapy documentation: Purposeful use of play within a helping relationship to support expression, exploration, and development.
B. Directive play therapy: A therapist-guided use of play activities selected to address identified therapeutic goals. / Play therapy documentation: Recording observable play, interventions, response, and clinical rationale while distinguishing observation from inference.
C. Directive play therapy: Recording observable play, interventions, response, and clinical rationale while distinguishing observation from inference. / Play therapy documentation: A therapist-guided use of play activities selected to address identified therapeutic goals.
D. Directive play therapy: Naming or tentatively reflecting the emotional meaning conveyed through a child's words or play. / Play therapy documentation: Recording observable play, interventions, response, and clinical rationale while distinguishing observation from inference.

0937. What is the central meaning of Play therapy documentation?

A. Planned collaboration with caregivers that supports the child's goals while preserving appropriate therapeutic boundaries.
B. Recording observable play, interventions, response, and clinical rationale while distinguishing observation from inference.
C. A therapist-guided use of play activities selected to address identified therapeutic goals.
D. Use of objects, actions, or characters to represent ideas and experiences beyond their literal form.

0938. Consider a student aged 12 receiving help in the telehealth session. The group facilitator focuses on remaining curious about a toy character's role instead of assuming its play meaning. Which term best describes the guiding idea?

A. Reflecting feelings
B. Therapeutic limit setting
C. Child-centered play therapy
D. Symbolic play

0939. In a supervision quiz, how should Directive play therapy be distinguished from Symbolic play?

A. Directive play therapy: Use of objects, actions, or characters to represent ideas and experiences beyond their literal form. / Symbolic play: A therapist-guided use of play activities selected to address identified therapeutic goals.
B. Directive play therapy: A therapist-guided use of play activities selected to address identified therapeutic goals. / Symbolic play: Use of objects, actions, or characters to represent ideas and experiences beyond their literal form.
C. Directive play therapy: A therapist-guided use of play activities selected to address identified therapeutic goals. / Symbolic play: Recording observable play, interventions, response, and clinical rationale while distinguishing observation from inference.
D. Directive play therapy: Describing a child's observable play actions in a clear, nonjudgmental way. / Symbolic play: Use of objects, actions, or characters to represent ideas and experiences beyond their literal form.

0940. A student confuses Directive play therapy with Tracking. Which explanation most accurately separates them?

A. Directive play therapy: A therapist-guided use of play activities selected to address identified therapeutic goals. / Tracking: Naming or tentatively reflecting the emotional meaning conveyed through a child's words or play.
B. Directive play therapy: A therapist-guided use of play activities selected to address identified therapeutic goals. / Tracking: Describing a child's observable play actions in a clear, nonjudgmental way.
C. Directive play therapy: Describing a child's observable play actions in a clear, nonjudgmental way. / Tracking: A therapist-guided use of play activities selected to address identified therapeutic goals.
D. Directive play therapy: Planned collaboration with caregivers that supports the child's goals while preserving appropriate therapeutic boundaries. / Tracking: Describing a child's observable play actions in a clear, nonjudgmental way.

0941. A trainee must distinguish how Therapeutic limit setting and Playroom safety guide practice. Which comparison is accurate?

A. Therapeutic limit setting: Stating the limit, acknowledging the feeling, and identifying a safe alternative action. / Playroom safety: Choosing materials and rules that allow agency without foreseeable harm.
B. Therapeutic limit setting: Reflecting a child's play and feelings rather than taking over the play narrative. / Playroom safety: Choosing materials and rules that allow agency without foreseeable harm.
C. Therapeutic limit setting: Choosing materials and rules that allow agency without foreseeable harm. / Playroom safety: Stating the limit, acknowledging the feeling, and identifying a safe alternative action.
D. Therapeutic limit setting: Stating the limit, acknowledging the feeling, and identifying a safe alternative action. / Playroom safety: Choosing and structuring a play activity to practice a specified coping or communication skill.

0942. A supervisor asks for an applied contrast between Tracking and Symbolic play. Which option fits?

A. Tracking: Choosing and structuring a play activity to practice a specified coping or communication skill. / Symbolic play: Remaining curious about a toy character's role instead of assuming its play meaning.
B. Tracking: Saying what the child is doing in play without adding an unsupported interpretation. / Symbolic play: Remaining curious about a toy character's role instead of assuming its play meaning.
C. Tracking: Remaining curious about a toy character's role instead of assuming its play meaning. / Symbolic play: Saying what the child is doing in play without adding an unsupported interpretation.
D. Tracking: Saying what the child is doing in play without adding an unsupported interpretation. / Symbolic play: Documenting what occurred and separating directly observed behavior from interpretation.

0943. A trainee must choose a practice that exemplifies Therapeutic play. Which action is the best fit?

A. Following the child's symbolic play as a communication channel while maintaining therapeutic purpose.
B. Reflecting a child's play and feelings rather than taking over the play narrative.
C. Choosing materials and rules that allow agency without foreseeable harm.
D. Documenting what occurred and separating directly observed behavior from interpretation.

0944. Which paired example correctly applies Tracking first and Symbolic play second?

A. Tracking: Saying what the child is doing in play without adding an unsupported interpretation. / Symbolic play: Documenting what occurred and separating directly observed behavior from interpretation.
B. Tracking: Saying what the child is doing in play without adding an unsupported interpretation. / Symbolic play: Remaining curious about a toy character's role instead of assuming its play meaning.
C. Tracking: Remaining curious about a toy character's role instead of assuming its play meaning. / Symbolic play: Saying what the child is doing in play without adding an unsupported interpretation.
D. Tracking: Choosing and structuring a play activity to practice a specified coping or communication skill. / Symbolic play: Remaining curious about a toy character's role instead of assuming its play meaning.

0945. Which statement accurately contrasts the course concepts Therapeutic play and Child-centered play therapy?

A. Therapeutic play: A non-directive approach emphasizing acceptance, empathy, tracking, and the child's lead within safe limits. / Child-centered play therapy: Purposeful use of play within a helping relationship to support expression, exploration, and development.
B. Therapeutic play: Naming or tentatively reflecting the emotional meaning conveyed through a child's words or play. / Child-centered play therapy: A non-directive approach emphasizing acceptance, empathy, tracking, and the child's lead within safe limits.
C. Therapeutic play: Purposeful use of play within a helping relationship to support expression, exploration, and development. / Child-centered play therapy: Recording observable play, interventions, response, and clinical rationale while distinguishing observation from inference.
D. Therapeutic play: Purposeful use of play within a helping relationship to support expression, exploration, and development. / Child-centered play therapy: A non-directive approach emphasizing acceptance, empathy, tracking, and the child's lead within safe limits.

0946. A teacher and counselor is asked to justify a plan for a client in early adolescence in the student-support meeting. It calls for saying what the child is doing in play without adding an unsupported interpretation. Which concept provides the rationale?

A. Directive play therapy
B. Tracking
C. Reflecting feelings
D. Playroom safety

0947. A trainee must distinguish how Reflecting feelings and Play therapy documentation guide practice. Which comparison is accurate?

A. Reflecting feelings: Offering a tentative feeling reflection and allowing the child to correct it. / Play therapy documentation: Saying what the child is doing in play without adding an unsupported interpretation.
B. Reflecting feelings: Offering a tentative feeling reflection and allowing the child to correct it. / Play therapy documentation: Documenting what occurred and separating directly observed behavior from interpretation.
C. Reflecting feelings: Documenting what occurred and separating directly observed behavior from interpretation. / Play therapy documentation: Offering a tentative feeling reflection and allowing the child to correct it.
D. Reflecting feelings: Stating the limit, acknowledging the feeling, and identifying a safe alternative action. / Play therapy documentation: Documenting what occurred and separating directly observed behavior from interpretation.

0948. A parent educator presents a support plan for a preadolescent child at the counseling practicum. Its central feature is sharing general progress and practical support strategies with caregivers under the consent and privacy plan. Which concept should be named?

A. Symbolic play
B. Tracking
C. Reflecting feelings
D. Caregiver involvement

0949. Choose the practice comparison that best separates Tracking from Therapeutic limit setting.

A. Tracking: Saying what the child is doing in play without adding an unsupported interpretation. / Therapeutic limit setting: Choosing and structuring a play activity to practice a specified coping or communication skill.
B. Tracking: Stating the limit, acknowledging the feeling, and identifying a safe alternative action. / Therapeutic limit setting: Saying what the child is doing in play without adding an unsupported interpretation.
C. Tracking: Saying what the child is doing in play without adding an unsupported interpretation. / Therapeutic limit setting: Stating the limit, acknowledging the feeling, and identifying a safe alternative action.
D. Tracking: Following the child's symbolic play as a communication channel while maintaining therapeutic purpose. / Therapeutic limit setting: Stating the limit, acknowledging the feeling, and identifying a safe alternative action.

0950. Which option preserves the correct meaning of both Therapeutic play and Caregiver involvement?

A. Therapeutic play: Planned collaboration with caregivers that supports the child's goals while preserving appropriate therapeutic boundaries. / Caregiver involvement: Purposeful use of play within a helping relationship to support expression, exploration, and development.
B. Therapeutic play: Purposeful use of play within a helping relationship to support expression, exploration, and development. / Caregiver involvement: Planned collaboration with caregivers that supports the child's goals while preserving appropriate therapeutic boundaries.
C. Therapeutic play: Purposeful use of play within a helping relationship to support expression, exploration, and development. / Caregiver involvement: Describing a child's observable play actions in a clear, nonjudgmental way.
D. Therapeutic play: Naming or tentatively reflecting the emotional meaning conveyed through a child's words or play. / Caregiver involvement: Planned collaboration with caregivers that supports the child's goals while preserving appropriate therapeutic boundaries.

0951. Which description belongs with the term Play therapy documentation?

A. Purposeful use of play within a helping relationship to support expression, exploration, and development.
B. Planned collaboration with caregivers that supports the child's goals while preserving appropriate therapeutic boundaries.
C. Thoughtful arrangement and selection of materials that permit expression while protecting physical and emotional safety.
D. Recording observable play, interventions, response, and clinical rationale while distinguishing observation from inference.

0952. An interdisciplinary team reviews a preadolescent child's case at the family resource center. The play therapist recommends choosing and structuring a play activity to practice a specified coping or communication skill. Which course concept best fits?

A. Therapeutic play
B. Child-centered play therapy
C. Directive play therapy
D. Play therapy documentation

0953. A student confuses Symbolic play with Play therapy documentation. Which explanation most accurately separates them?

A. Symbolic play: Use of objects, actions, or characters to represent ideas and experiences beyond their literal form. / Play therapy documentation: Thoughtful arrangement and selection of materials that permit expression while protecting physical and emotional safety.
B. Symbolic play: Recording observable play, interventions, response, and clinical rationale while distinguishing observation from inference. / Play therapy documentation: Use of objects, actions, or characters to represent ideas and experiences beyond their literal form.
C. Symbolic play: A therapist-guided use of play activities selected to address identified therapeutic goals. / Play therapy documentation: Recording observable play, interventions, response, and clinical rationale while distinguishing observation from inference.
D. Symbolic play: Use of objects, actions, or characters to represent ideas and experiences beyond their literal form. / Play therapy documentation: Recording observable play, interventions, response, and clinical rationale while distinguishing observation from inference.

0954. A trainee must distinguish how Child-centered play therapy and Caregiver involvement guide practice. Which comparison is accurate?

A. Child-centered play therapy: Reflecting a child's play and feelings rather than taking over the play narrative. / Caregiver involvement: Stating the limit, acknowledging the feeling, and identifying a safe alternative action.
B. Child-centered play therapy: Documenting what occurred and separating directly observed behavior from interpretation. / Caregiver involvement: Sharing general progress and practical support strategies with caregivers under the consent and privacy plan.
C. Child-centered play therapy: Sharing general progress and practical support strategies with caregivers under the consent and privacy plan. / Caregiver involvement: Reflecting a child's play and feelings rather than taking over the play narrative.
D. Child-centered play therapy: Reflecting a child's play and feelings rather than taking over the play narrative. / Caregiver involvement: Sharing general progress and practical support strategies with caregivers under the consent and privacy plan.

0955. A young person aged 13's service team meets in the student-support meeting. The parent educator recommends a change involving remaining curious about a toy character's role instead of assuming its play meaning. Which idea best explains it?

A. Tracking
B. Reflecting feelings
C. Symbolic play
D. Therapeutic play

0956. A trainee must explain Playroom safety. Which answer is accurate?

A. Thoughtful arrangement and selection of materials that permit expression while protecting physical and emotional safety.
B. A non-directive approach emphasizing acceptance, empathy, tracking, and the child's lead within safe limits.
C. Recording observable play, interventions, response, and clinical rationale while distinguishing observation from inference.
D. Purposeful use of play within a helping relationship to support expression, exploration, and development.

0957. A support meeting for a young person aged 16 includes a clinical supervisor in the clinical planning session. The practice under consideration is documenting what occurred and separating directly observed behavior from interpretation. Which concept guides it?

A. Reflecting feelings
B. Therapeutic limit setting
C. Play therapy documentation
D. Directive play therapy

0958. At the supervision meeting, a community practitioner reviews whether a plan for a older adolescent client is appropriate. The relevant practice is following the child's symbolic play as a communication channel while maintaining therapeutic purpose. Which concept is tested?

A. Symbolic play
B. Therapeutic play
C. Playroom safety
D. Directive play therapy

0959. Which comparison correctly distinguishes Child-centered play therapy from Directive play therapy?

A. Child-centered play therapy: Purposeful use of play within a helping relationship to support expression, exploration, and development. / Directive play therapy: A therapist-guided use of play activities selected to address identified therapeutic goals.
B. Child-centered play therapy: A non-directive approach emphasizing acceptance, empathy, tracking, and the child's lead within safe limits. / Directive play therapy: A therapist-guided use of play activities selected to address identified therapeutic goals.
C. Child-centered play therapy: A non-directive approach emphasizing acceptance, empathy, tracking, and the child's lead within safe limits. / Directive play therapy: Planned collaboration with caregivers that supports the child's goals while preserving appropriate therapeutic boundaries.
D. Child-centered play therapy: A therapist-guided use of play activities selected to address identified therapeutic goals. / Directive play therapy: A non-directive approach emphasizing acceptance, empathy, tracking, and the child's lead within safe limits.

0960. Identify the most precise label for this idea: A clear, empathic boundary that protects people or property while offering acceptable alternatives.

A. Tracking
B. Caregiver involvement
C. Symbolic play
D. Therapeutic limit setting

0961. Which option preserves the correct meaning of both Therapeutic play and Symbolic play?

A. Therapeutic play: Purposeful use of play within a helping relationship to support expression, exploration, and development. / Symbolic play: Use of objects, actions, or characters to represent ideas and experiences beyond their literal form.
B. Therapeutic play: Use of objects, actions, or characters to represent ideas and experiences beyond their literal form. / Symbolic play: Purposeful use of play within a helping relationship to support expression, exploration, and development.
C. Therapeutic play: Planned collaboration with caregivers that supports the child's goals while preserving appropriate therapeutic boundaries. / Symbolic play: Use of objects, actions, or characters to represent ideas and experiences beyond their literal form.
D. Therapeutic play: Purposeful use of play within a helping relationship to support expression, exploration, and development. / Symbolic play: A clear, empathic boundary that protects people or property while offering acceptable alternatives.

0962. A trainee must choose a practice that exemplifies Play therapy documentation. Which action is the best fit?

A. Sharing general progress and practical support strategies with caregivers under the consent and privacy plan.
B. Documenting what occurred and separating directly observed behavior from interpretation.
C. Stating the limit, acknowledging the feeling, and identifying a safe alternative action.
D. Choosing materials and rules that allow agency without foreseeable harm.

0963. At a case-planning meeting, the play therapist proposes sharing general progress and practical support strategies with caregivers under the consent and privacy plan. for a child aged 14 seen in the youth advocacy program. Which concept does this illustrate?

A. Child-centered play therapy
B. Directive play therapy
C. Caregiver involvement
D. Play therapy documentation

0964. A trainee must explain Child-centered play therapy. Which answer is accurate?

A. A clear, empathic boundary that protects people or property while offering acceptable alternatives.
B. A non-directive approach emphasizing acceptance, empathy, tracking, and the child's lead within safe limits.
C. A therapist-guided use of play activities selected to address identified therapeutic goals.
D. Describing a child's observable play actions in a clear, nonjudgmental way.

0965. A case conference asks for a distinction between Therapeutic play and Caregiver involvement. Which answer is sound?

A. Therapeutic play: Naming or tentatively reflecting the emotional meaning conveyed through a child's words or play. / Caregiver involvement: Planned collaboration with caregivers that supports the child's goals while preserving appropriate therapeutic boundaries.
B. Therapeutic play: Planned collaboration with caregivers that supports the child's goals while preserving appropriate therapeutic boundaries. / Caregiver involvement: Purposeful use of play within a helping relationship to support expression, exploration, and development.
C. Therapeutic play: Purposeful use of play within a helping relationship to support expression, exploration, and development. / Caregiver involvement: Planned collaboration with caregivers that supports the child's goals while preserving appropriate therapeutic boundaries.
D. Therapeutic play: Purposeful use of play within a helping relationship to support expression, exploration, and development. / Caregiver involvement: Describing a child's observable play actions in a clear, nonjudgmental way.

0966. What is the central meaning of Directive play therapy?

A. Use of objects, actions, or characters to represent ideas and experiences beyond their literal form.
B. Describing a child's observable play actions in a clear, nonjudgmental way.
C. A therapist-guided use of play activities selected to address identified therapeutic goals.
D. Planned collaboration with caregivers that supports the child's goals while preserving appropriate therapeutic boundaries.

0967. Which option correctly matches each concept to its practice focus: Tracking and Therapeutic limit setting?

A. Tracking: Following the child's symbolic play as a communication channel while maintaining therapeutic purpose. / Therapeutic limit setting: Stating the limit, acknowledging the feeling, and identifying a safe alternative action.
B. Tracking: Saying what the child is doing in play without adding an unsupported interpretation. / Therapeutic limit setting: Choosing and structuring a play activity to practice a specified coping or communication skill.
C. Tracking: Saying what the child is doing in play without adding an unsupported interpretation. / Therapeutic limit setting: Stating the limit, acknowledging the feeling, and identifying a safe alternative action.
D. Tracking: Stating the limit, acknowledging the feeling, and identifying a safe alternative action. / Therapeutic limit setting: Saying what the child is doing in play without adding an unsupported interpretation.

0968. In a case note about a child aged 7, a mental-health professional working in the outpatient clinic records this priority: choosing and structuring a play activity to practice a specified coping or communication skill. What principle is reflected?

A. Playroom safety
B. Therapeutic play
C. Directive play therapy
D. Child-centered play therapy

0969. A mental-health professional is supporting a older adolescent client in the family session. The key practice is documenting what occurred and separating directly observed behavior from interpretation. Which course concept is most relevant?

A. Directive play therapy
B. Child-centered play therapy
C. Play therapy documentation
D. Therapeutic play

0970. A trainee must distinguish how Directive play therapy and Caregiver involvement guide practice. Which comparison is accurate?

A. Directive play therapy: Choosing and structuring a play activity to practice a specified coping or communication skill. / Caregiver involvement: Sharing general progress and practical support strategies with caregivers under the consent and privacy plan.
B. Directive play therapy: Reflecting a child's play and feelings rather than taking over the play narrative. / Caregiver involvement: Sharing general progress and practical support strategies with caregivers under the consent and privacy plan.
C. Directive play therapy: Sharing general progress and practical support strategies with caregivers under the consent and privacy plan. / Caregiver involvement: Choosing and structuring a play activity to practice a specified coping or communication skill.
D. Directive play therapy: Choosing and structuring a play activity to practice a specified coping or communication skill. / Caregiver involvement: Stating the limit, acknowledging the feeling, and identifying a safe alternative action.

0971. Which option correctly matches each concept to its practice focus: Reflecting feelings and Play therapy documentation?

A. Reflecting feelings: Offering a tentative feeling reflection and allowing the child to correct it. / Play therapy documentation: Saying what the child is doing in play without adding an unsupported interpretation.
B. Reflecting feelings: Offering a tentative feeling reflection and allowing the child to correct it. / Play therapy documentation: Documenting what occurred and separating directly observed behavior from interpretation.
C. Reflecting feelings: Documenting what occurred and separating directly observed behavior from interpretation. / Play therapy documentation: Offering a tentative feeling reflection and allowing the child to correct it.
D. Reflecting feelings: Stating the limit, acknowledging the feeling, and identifying a safe alternative action. / Play therapy documentation: Documenting what occurred and separating directly observed behavior from interpretation.

0972. For a older adolescent client in the child guidance clinic, a clinical supervisor makes this practice the immediate priority: choosing materials and rules that allow agency without foreseeable harm. Which concept fits best?

A. Reflecting feelings
B. Therapeutic limit setting
C. Playroom safety
D. Caregiver involvement

0973. Which paired example correctly applies Directive play therapy first and Play therapy documentation second?

A. Directive play therapy: Choosing and structuring a play activity to practice a specified coping or communication skill. / Play therapy documentation: Following the child's symbolic play as a communication channel while maintaining therapeutic purpose.
B. Directive play therapy: Offering a tentative feeling reflection and allowing the child to correct it. / Play therapy documentation: Documenting what occurred and separating directly observed behavior from interpretation.
C. Directive play therapy: Documenting what occurred and separating directly observed behavior from interpretation. / Play therapy documentation: Choosing and structuring a play activity to practice a specified coping or communication skill.
D. Directive play therapy: Choosing and structuring a play activity to practice a specified coping or communication skill. / Play therapy documentation: Documenting what occurred and separating directly observed behavior from interpretation.

0974. A trainee must distinguish how Therapeutic limit setting and Symbolic play guide practice. Which comparison is accurate?

A. Therapeutic limit setting: Sharing general progress and practical support strategies with caregivers under the consent and privacy plan. / Symbolic play: Remaining curious about a toy character's role instead of assuming its play meaning.
B. Therapeutic limit setting: Stating the limit, acknowledging the feeling, and identifying a safe alternative action. / Symbolic play: Remaining curious about a toy character's role instead of assuming its play meaning.
C. Therapeutic limit setting: Remaining curious about a toy character's role instead of assuming its play meaning. / Symbolic play: Stating the limit, acknowledging the feeling, and identifying a safe alternative action.
D. Therapeutic limit setting: Stating the limit, acknowledging the feeling, and identifying a safe alternative action. / Symbolic play: Choosing materials and rules that allow agency without foreseeable harm.

0975. A case discussion concerns a child aged 7 and a case coordinator in the student-support meeting. The practitioner is considering reflecting a child's play and feelings rather than taking over the play narrative. Which principle is involved?

A. Child-centered play therapy
B. Symbolic play
C. Playroom safety
D. Reflecting feelings

0976. Choose the definition pair that correctly explains Reflecting feelings first and Playroom safety second.

A. Reflecting feelings: A non-directive approach emphasizing acceptance, empathy, tracking, and the child's lead within safe limits. / Playroom safety: Thoughtful arrangement and selection of materials that permit expression while protecting physical and emotional safety.
B. Reflecting feelings: Naming or tentatively reflecting the emotional meaning conveyed through a child's words or play. / Playroom safety: Thoughtful arrangement and selection of materials that permit expression while protecting physical and emotional safety.
C. Reflecting feelings: Naming or tentatively reflecting the emotional meaning conveyed through a child's words or play. / Playroom safety: A clear, empathic boundary that protects people or property while offering acceptable alternatives.
D. Reflecting feelings: Thoughtful arrangement and selection of materials that permit expression while protecting physical and emotional safety. / Playroom safety: Naming or tentatively reflecting the emotional meaning conveyed through a child's words or play.

0977. Which option pairs the definitions of Symbolic play and Playroom safety correctly, in that order?

A. Symbolic play: Use of objects, actions, or characters to represent ideas and experiences beyond their literal form. / Playroom safety: Thoughtful arrangement and selection of materials that permit expression while protecting physical and emotional safety.
B. Symbolic play: Recording observable play, interventions, response, and clinical rationale while distinguishing observation from inference. / Playroom safety: Thoughtful arrangement and selection of materials that permit expression while protecting physical and emotional safety.
C. Symbolic play: Thoughtful arrangement and selection of materials that permit expression while protecting physical and emotional safety. / Playroom safety: Use of objects, actions, or characters to represent ideas and experiences beyond their literal form.
D. Symbolic play: Use of objects, actions, or characters to represent ideas and experiences beyond their literal form. / Playroom safety: A therapist-guided use of play activities selected to address identified therapeutic goals.

0978. Choose the definition pair that correctly explains Tracking first and Therapeutic limit setting second.

A. Tracking: A clear, empathic boundary that protects people or property while offering acceptable alternatives. / Therapeutic limit setting: Describing a child's observable play actions in a clear, nonjudgmental way.
B. Tracking: Describing a child's observable play actions in a clear, nonjudgmental way. / Therapeutic limit setting: A therapist-guided use of play activities selected to address identified therapeutic goals.
C. Tracking: Describing a child's observable play actions in a clear, nonjudgmental way. / Therapeutic limit setting: A clear, empathic boundary that protects people or property while offering acceptable alternatives.
D. Tracking: Purposeful use of play within a helping relationship to support expression, exploration, and development. / Therapeutic limit setting: A clear, empathic boundary that protects people or property while offering acceptable alternatives.

0979. In a supervision quiz, how should Reflecting feelings be distinguished from Symbolic play?

A. Reflecting feelings: Describing a child's observable play actions in a clear, nonjudgmental way. / Symbolic play: Use of objects, actions, or characters to represent ideas and experiences beyond their literal form.
B. Reflecting feelings: Naming or tentatively reflecting the emotional meaning conveyed through a child's words or play. / Symbolic play: Recording observable play, interventions, response, and clinical rationale while distinguishing observation from inference.
C. Reflecting feelings: Naming or tentatively reflecting the emotional meaning conveyed through a child's words or play. / Symbolic play: Use of objects, actions, or characters to represent ideas and experiences beyond their literal form.
D. Reflecting feelings: Use of objects, actions, or characters to represent ideas and experiences beyond their literal form. / Symbolic play: Naming or tentatively reflecting the emotional meaning conveyed through a child's words or play.

0980. How are Symbolic play and Playroom safety most accurately differentiated in this curriculum?

A. Symbolic play: Use of objects, actions, or characters to represent ideas and experiences beyond their literal form. / Playroom safety: Thoughtful arrangement and selection of materials that permit expression while protecting physical and emotional safety.
B. Symbolic play: Use of objects, actions, or characters to represent ideas and experiences beyond their literal form. / Playroom safety: A therapist-guided use of play activities selected to address identified therapeutic goals.
C. Symbolic play: Recording observable play, interventions, response, and clinical rationale while distinguishing observation from inference. / Playroom safety: Thoughtful arrangement and selection of materials that permit expression while protecting physical and emotional safety.
D. Symbolic play: Thoughtful arrangement and selection of materials that permit expression while protecting physical and emotional safety. / Playroom safety: Use of objects, actions, or characters to represent ideas and experiences beyond their literal form.

0981. A trainee must choose a practice that exemplifies Playroom safety. Which action is the best fit?

A. Choosing materials and rules that allow agency without foreseeable harm.
B. Sharing general progress and practical support strategies with caregivers under the consent and privacy plan.
C. Following the child's symbolic play as a communication channel while maintaining therapeutic purpose.
D. Remaining curious about a toy character's role instead of assuming its play meaning.

0982. Identify the most precise label for this idea: Planned collaboration with caregivers that supports the child's goals while preserving appropriate therapeutic boundaries.

A. Therapeutic play
B. Symbolic play
C. Reflecting feelings
D. Caregiver involvement

0983. In a professional consultation about a child aged 14, the member of a clinical team describes this response in the student-support meeting: following the child's symbolic play as a communication channel while maintaining therapeutic purpose. Which term is most apt?

A. Therapeutic play
B. Reflecting feelings
C. Therapeutic limit setting
D. Child-centered play therapy

0984. Which applied comparison correctly identifies what belongs to Directive play therapy versus Play therapy documentation?

A. Directive play therapy: Offering a tentative feeling reflection and allowing the child to correct it. / Play therapy documentation: Documenting what occurred and separating directly observed behavior from interpretation.
B. Directive play therapy: Choosing and structuring a play activity to practice a specified coping or communication skill. / Play therapy documentation: Following the child's symbolic play as a communication channel while maintaining therapeutic purpose.
C. Directive play therapy: Choosing and structuring a play activity to practice a specified coping or communication skill. / Play therapy documentation: Documenting what occurred and separating directly observed behavior from interpretation.
D. Directive play therapy: Documenting what occurred and separating directly observed behavior from interpretation. / Play therapy documentation: Choosing and structuring a play activity to practice a specified coping or communication skill.

0985. For a middle-school student in the school-based service, a behavior specialist makes this practice the immediate priority: following the child's symbolic play as a communication channel while maintaining therapeutic purpose. Which concept fits best?

A. Therapeutic play
B. Directive play therapy
C. Play therapy documentation
D. Caregiver involvement

0986. Which comparison would correct a trainee's misunderstanding of Therapeutic limit setting versus Playroom safety?

A. Therapeutic limit setting: A clear, empathic boundary that protects people or property while offering acceptable alternatives. / Playroom safety: A therapist-guided use of play activities selected to address identified therapeutic goals.
B. Therapeutic limit setting: A clear, empathic boundary that protects people or property while offering acceptable alternatives. / Playroom safety: Thoughtful arrangement and selection of materials that permit expression while protecting physical and emotional safety.
C. Therapeutic limit setting: Thoughtful arrangement and selection of materials that permit expression while protecting physical and emotional safety. / Playroom safety: A clear, empathic boundary that protects people or property while offering acceptable alternatives.
D. Therapeutic limit setting: A non-directive approach emphasizing acceptance, empathy, tracking, and the child's lead within safe limits. / Playroom safety: Thoughtful arrangement and selection of materials that permit expression while protecting physical and emotional safety.

0987. A supervisor asks for an applied contrast between Therapeutic play and Play therapy documentation. Which option fits?

A. Therapeutic play: Documenting what occurred and separating directly observed behavior from interpretation. / Play therapy documentation: Following the child's symbolic play as a communication channel while maintaining therapeutic purpose.
B. Therapeutic play: Following the child's symbolic play as a communication channel while maintaining therapeutic purpose. / Play therapy documentation: Documenting what occurred and separating directly observed behavior from interpretation.
C. Therapeutic play: Following the child's symbolic play as a communication channel while maintaining therapeutic purpose. / Play therapy documentation: Reflecting a child's play and feelings rather than taking over the play narrative.
D. Therapeutic play: Choosing materials and rules that allow agency without foreseeable harm. / Play therapy documentation: Documenting what occurred and separating directly observed behavior from interpretation.

0988. At a case-planning meeting, the behavior specialist proposes documenting what occurred and separating directly observed behavior from interpretation. for a young adolescent client seen in the outpatient clinic. Which concept does this illustrate?

A. Therapeutic play
B. Play therapy documentation
C. Therapeutic limit setting
D. Tracking

0989. A service navigator describes an intervention for a preadolescent child in the youth advocacy program, centered on following the child's symbolic play as a communication channel while maintaining therapeutic purpose. Which named idea is most relevant?

A. Playroom safety
B. Play therapy documentation
C. Therapeutic play
D. Tracking

0990. A behavior specialist is asked to evaluate a proposed service for a young person in the parent meeting. The defining feature is remaining curious about a toy character's role instead of assuming its play meaning. Which concept fits?

A. Reflecting feelings
B. Therapeutic limit setting
C. Symbolic play
D. Play therapy documentation

0991. Which named construct is captured by this account? Use of objects, actions, or characters to represent ideas and experiences beyond their literal form.

A. Caregiver involvement
B. Directive play therapy
C. Symbolic play
D. Therapeutic play

0992. Which course concept is defined as follows: Naming or tentatively reflecting the emotional meaning conveyed through a child's words or play.

A. Caregiver involvement
B. Reflecting feelings
C. Directive play therapy
D. Playroom safety

0993. At the caregiver consultation, a play therapist meets with a teenage client. The practice priority is: saying what the child is doing in play without adding an unsupported interpretation. Which concept best captures that priority?

A. Tracking
B. Directive play therapy
C. Therapeutic play
D. Reflecting feelings

0994. A case conference asks for a distinction between Tracking and Playroom safety. Which answer is sound?

A. Tracking: A therapist-guided use of play activities selected to address identified therapeutic goals. / Playroom safety: Thoughtful arrangement and selection of materials that permit expression while protecting physical and emotional safety.
B. Tracking: Thoughtful arrangement and selection of materials that permit expression while protecting physical and emotional safety. / Playroom safety: Describing a child's observable play actions in a clear, nonjudgmental way.
C. Tracking: Describing a child's observable play actions in a clear, nonjudgmental way. / Playroom safety: Naming or tentatively reflecting the emotional meaning conveyed through a child's words or play.
D. Tracking: Describing a child's observable play actions in a clear, nonjudgmental way. / Playroom safety: Thoughtful arrangement and selection of materials that permit expression while protecting physical and emotional safety.

0995. Which option is the clearest practical expression of Tracking?

A. Choosing and structuring a play activity to practice a specified coping or communication skill.
B. Following the child's symbolic play as a communication channel while maintaining therapeutic purpose.
C. Saying what the child is doing in play without adding an unsupported interpretation.
D. Stating the limit, acknowledging the feeling, and identifying a safe alternative action.

0996. In a case note about a student aged 17, a assessment clinician working in the parent meeting records this priority: documenting what occurred and separating directly observed behavior from interpretation. What principle is reflected?

A. Tracking
B. Play therapy documentation
C. Therapeutic limit setting
D. Directive play therapy

0997. A trainee must distinguish how Child-centered play therapy and Symbolic play guide practice. Which comparison is accurate?

A. Child-centered play therapy: Reflecting a child's play and feelings rather than taking over the play narrative. / Symbolic play: Documenting what occurred and separating directly observed behavior from interpretation.
B. Child-centered play therapy: Reflecting a child's play and feelings rather than taking over the play narrative. / Symbolic play: Remaining curious about a toy character's role instead of assuming its play meaning.
C. Child-centered play therapy: Following the child's symbolic play as a communication channel while maintaining therapeutic purpose. / Symbolic play: Remaining curious about a toy character's role instead of assuming its play meaning.
D. Child-centered play therapy: Remaining curious about a toy character's role instead of assuming its play meaning. / Symbolic play: Reflecting a child's play and feelings rather than taking over the play narrative.

0998. In a supervision quiz, how should Child-centered play therapy be distinguished from Reflecting feelings?

A. Child-centered play therapy: A non-directive approach emphasizing acceptance, empathy, tracking, and the child's lead within safe limits. / Reflecting feelings: Planned collaboration with caregivers that supports the child's goals while preserving appropriate therapeutic boundaries.
B. Child-centered play therapy: Naming or tentatively reflecting the emotional meaning conveyed through a child's words or play. / Reflecting feelings: A non-directive approach emphasizing acceptance, empathy, tracking, and the child's lead within safe limits.
C. Child-centered play therapy: Thoughtful arrangement and selection of materials that permit expression while protecting physical and emotional safety. / Reflecting feelings: Naming or tentatively reflecting the emotional meaning conveyed through a child's words or play.
D. Child-centered play therapy: A non-directive approach emphasizing acceptance, empathy, tracking, and the child's lead within safe limits. / Reflecting feelings: Naming or tentatively reflecting the emotional meaning conveyed through a child's words or play.

0999. A young person and a member of a clinical team are reviewing goals in the classroom support meeting. The agreed action is saying what the child is doing in play without adding an unsupported interpretation. Which principle best accounts for it?

A. Playroom safety
B. Directive play therapy
C. Tracking
D. Child-centered play therapy

1000. Which option pairs the definitions of Reflecting feelings and Therapeutic limit setting correctly, in that order?

A. Reflecting feelings: Describing a child's observable play actions in a clear, nonjudgmental way. / Therapeutic limit setting: A clear, empathic boundary that protects people or property while offering acceptable alternatives.
B. Reflecting feelings: Naming or tentatively reflecting the emotional meaning conveyed through a child's words or play. / Therapeutic limit setting: Recording observable play, interventions, response, and clinical rationale while distinguishing observation from inference.
C. Reflecting feelings: A clear, empathic boundary that protects people or property while offering acceptable alternatives. / Therapeutic limit setting: Naming or tentatively reflecting the emotional meaning conveyed through a child's words or play.
D. Reflecting feelings: Naming or tentatively reflecting the emotional meaning conveyed through a child's words or play. / Therapeutic limit setting: A clear, empathic boundary that protects people or property while offering acceptable alternatives.

CAC.910 | Cognitive Behavioral Therapy for Children

QUESTION BANK | 1,000 ITEMS | ANSWERS AT THE END

0001. During work in the outpatient clinic, a teacher and counselor identifies this need: helping a child map how a thought, feeling, and action relate in a particular situation. Which idea should guide the response?

A. Relapse prevention
B. Thought record
C. Cognitive triangle
D. Developmental adaptation in CBT

0002. Which paired example correctly applies Cognitive restructuring first and Collaborative empiricism second?

A. Cognitive restructuring: Examining evidence and generating a realistic alternative thought with the child. / Collaborative empiricism: Scheduling a manageable valued activity and reviewing its effect on mood and functioning.
B. Cognitive restructuring: Using drawings or concrete examples when abstract cognitive language is not yet accessible. / Collaborative empiricism: Treating a belief as a testable hypothesis and reviewing what the child observes.
C. Cognitive restructuring: Examining evidence and generating a realistic alternative thought with the child. / Collaborative empiricism: Treating a belief as a testable hypothesis and reviewing what the child observes.
D. Cognitive restructuring: Treating a belief as a testable hypothesis and reviewing what the child observes. / Collaborative empiricism: Examining evidence and generating a realistic alternative thought with the child.

0003. While supporting a middle-school student in the family resource center, a school-based clinician adopts this practice: role-playing an assertive request and providing supportive, specific feedback. Which concept best explains the choice?

A. Skills rehearsal
B. Cognitive triangle
C. Behavioral activation
D. Coping self-talk

0004. Which option correctly matches each concept to its practice focus: Behavioral activation and Collaborative empiricism?

A. Behavioral activation: Scheduling a manageable valued activity and reviewing its effect on mood and functioning. / Collaborative empiricism: Using a child-friendly record to examine what happened and what the child thought at that moment.
B. Behavioral activation: Scheduling a manageable valued activity and reviewing its effect on mood and functioning. / Collaborative empiricism: Treating a belief as a testable hypothesis and reviewing what the child observes.
C. Behavioral activation: Identifying likely setbacks and rehearsing which coping steps the child can use. / Collaborative empiricism: Treating a belief as a testable hypothesis and reviewing what the child observes.
D. Behavioral activation: Treating a belief as a testable hypothesis and reviewing what the child observes. / Collaborative empiricism: Scheduling a manageable valued activity and reviewing its effect on mood and functioning.

0005. A doctoral student reads the following description. Which concept does it define? Gradual, planned approach to feared situations or cues to support new learning, with appropriate assessment and consent.

A. Behavioral activation
B. Skills rehearsal
C. Exposure
D. Cognitive triangle

0006. A student confuses Cognitive triangle with Cognitive restructuring. Which explanation most accurately separates them?

A. Cognitive triangle: Collaboratively evaluating and developing more balanced or useful interpretations rather than imposing positive thinking. / Cognitive restructuring: A teaching model linking thoughts, feelings, and behaviors as mutually influential components of experience.
B. Cognitive triangle: A teaching model linking thoughts, feelings, and behaviors as mutually influential components of experience. / Cognitive restructuring: A structured aid for noticing a situation, automatic thought, emotion, evidence, and alternative perspective.
C. Cognitive triangle: A teaching model linking thoughts, feelings, and behaviors as mutually influential components of experience. / Cognitive restructuring: Collaboratively evaluating and developing more balanced or useful interpretations rather than imposing positive thinking.
D. Cognitive triangle: Practice of helpful, realistic statements that support coping and task engagement. / Cognitive restructuring: Collaboratively evaluating and developing more balanced or useful interpretations rather than imposing positive thinking.

0007. A doctoral student reads the following description. Which concept does it define? Collaboratively evaluating and developing more balanced or useful interpretations rather than imposing positive thinking.

A. Relapse prevention
B. Cognitive triangle
C. Cognitive restructuring
D. Behavioral activation

0008. A caregiver working with a counselor presents a support plan for a client in early adolescence at the behavior-support review. Its central feature is helping a child map how a thought, feeling, and action relate in a particular situation. Which concept should be named?

A. Relapse prevention
B. Cognitive triangle
C. Exposure
D. Collaborative empiricism

0009. Which option pairs the definitions of Cognitive restructuring and Behavioral activation correctly, in that order?

A. Cognitive restructuring: Planned engagement in meaningful or rewarding activities to increase contact with positive reinforcement. / Behavioral activation: Collaboratively evaluating and developing more balanced or useful interpretations rather than imposing positive thinking.
B. Cognitive restructuring: Collaboratively evaluating and developing more balanced or useful interpretations rather than imposing positive thinking. / Behavioral activation: Adjusting CBT language, materials, pacing, and caregiver involvement to the child's developmental capacity.
C. Cognitive restructuring: Collaboratively evaluating and developing more balanced or useful interpretations rather than imposing positive thinking. / Behavioral activation: Planned engagement in meaningful or rewarding activities to increase contact with positive reinforcement.
D. Cognitive restructuring: Practicing a targeted behavior in session, often with modeling, feedback, and repetition. / Behavioral activation: Planned engagement in meaningful or rewarding activities to increase contact with positive reinforcement.

0010. A assessment clinician is preparing a follow-up plan for a young person aged 18 in the child guidance clinic. The plan calls for helping a child map how a thought, feeling, and action relate in a particular situation. Which concept names this approach?

A. Cognitive triangle
B. Cognitive restructuring
C. Developmental adaptation in CBT
D. Collaborative empiricism

0011. In the classroom support meeting, the agreed focus for a service navigator working with a client in early adolescence is scheduling a manageable valued activity and reviewing its effect on mood and functioning. Which concept names this focus?

A. Cognitive triangle
B. Developmental adaptation in CBT
C. Behavioral activation
D. Exposure

0012. Which comparison correctly distinguishes Behavioral activation from Exposure?

A. Behavioral activation: A structured aid for noticing a situation, automatic thought, emotion, evidence, and alternative perspective. / Exposure: Gradual, planned approach to feared situations or cues to support new learning, with appropriate assessment and consent.
B. Behavioral activation: Planned engagement in meaningful or rewarding activities to increase contact with positive reinforcement. / Exposure: Gradual, planned approach to feared situations or cues to support new learning, with appropriate assessment and consent.
C. Behavioral activation: Gradual, planned approach to feared situations or cues to support new learning, with appropriate assessment and consent. / Exposure: Planned engagement in meaningful or rewarding activities to increase contact with positive reinforcement.
D. Behavioral activation: Planned engagement in meaningful or rewarding activities to increase contact with positive reinforcement. / Exposure: A CBT stance in which client and therapist jointly test ideas against evidence and experience.

0013. Which option pairs the definitions of Skills rehearsal and Collaborative empiricism correctly, in that order?

A. Skills rehearsal: Practicing a targeted behavior in session, often with modeling, feedback, and repetition. / Collaborative empiricism: Planned engagement in meaningful or rewarding activities to increase contact with positive reinforcement.
B. Skills rehearsal: A CBT stance in which client and therapist jointly test ideas against evidence and experience. / Collaborative empiricism: Practicing a targeted behavior in session, often with modeling, feedback, and repetition.
C. Skills rehearsal: Practicing a targeted behavior in session, often with modeling, feedback, and repetition. / Collaborative empiricism: A CBT stance in which client and therapist jointly test ideas against evidence and experience.
D. Skills rehearsal: A teaching model linking thoughts, feelings, and behaviors as mutually influential components of experience. / Collaborative empiricism: A CBT stance in which client and therapist jointly test ideas against evidence and experience.

0014. In child-focused CBT, during work in the school consultation, a school counselor identifies this need: identifying likely setbacks and rehearsing which coping steps the child can use. Which idea should guide the response?

A. Coping self-talk
B. Relapse prevention
C. Behavioral activation
D. Exposure

0015. A supervisor asks for an applied contrast between Behavioral activation and Thought record. Which option fits?

A. Behavioral activation: Scheduling a manageable valued activity and reviewing its effect on mood and functioning. / Thought record: Using a child-friendly record to examine what happened and what the child thought at that moment.
B. Behavioral activation: Role-playing an assertive request and providing supportive, specific feedback. / Thought record: Using a child-friendly record to examine what happened and what the child thought at that moment.
C. Behavioral activation: Scheduling a manageable valued activity and reviewing its effect on mood and functioning. / Thought record: Building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation.
D. Behavioral activation: Using a child-friendly record to examine what happened and what the child thought at that moment. / Thought record: Scheduling a manageable valued activity and reviewing its effect on mood and functioning.

0016. How are Cognitive restructuring and Behavioral activation most accurately differentiated in this curriculum?

A. Cognitive restructuring: Planned engagement in meaningful or rewarding activities to increase contact with positive reinforcement. / Behavioral activation: Collaboratively evaluating and developing more balanced or useful interpretations rather than imposing positive thinking.
B. Cognitive restructuring: Collaboratively evaluating and developing more balanced or useful interpretations rather than imposing positive thinking. / Behavioral activation: Planned engagement in meaningful or rewarding activities to increase contact with positive reinforcement.
C. Cognitive restructuring: Collaboratively evaluating and developing more balanced or useful interpretations rather than imposing positive thinking. / Behavioral activation: Adjusting CBT language, materials, pacing, and caregiver involvement to the child's developmental capacity.
D. Cognitive restructuring: Practicing a targeted behavior in session, often with modeling, feedback, and repetition. / Behavioral activation: Planned engagement in meaningful or rewarding activities to increase contact with positive reinforcement.

0017. Which paired example correctly applies Exposure first and Collaborative empiricism second?

A. Exposure: Building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation. / Collaborative empiricism: Identifying likely setbacks and rehearsing which coping steps the child can use.
B. Exposure: Rehearsing a believable coping phrase a child can use during a challenging moment. / Collaborative empiricism: Treating a belief as a testable hypothesis and reviewing what the child observes.
C. Exposure: Building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation. / Collaborative empiricism: Treating a belief as a testable hypothesis and reviewing what the child observes.
D. Exposure: Treating a belief as a testable hypothesis and reviewing what the child observes. / Collaborative empiricism: Building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation.

0018. A planning meeting about a child of elementary-school age includes a school support specialist. The proposed practice in the after-school program is examining evidence and generating a realistic alternative thought with the child. Which idea underlies it?

A. Skills rehearsal
B. Cognitive restructuring
C. Coping self-talk
D. Exposure

0019. Which comparison correctly distinguishes Behavioral activation from Coping self-talk?

A. Behavioral activation: Collaboratively evaluating and developing more balanced or useful interpretations rather than imposing positive thinking. / Coping self-talk: Practice of helpful, realistic statements that support coping and task engagement.
B. Behavioral activation: Planned engagement in meaningful or rewarding activities to increase contact with positive reinforcement. / Coping self-talk: Planning for future triggers, early warning signs, and continued use of skills after improvement.
C. Behavioral activation: Planned engagement in meaningful or rewarding activities to increase contact with positive reinforcement. / Coping self-talk: Practice of helpful, realistic statements that support coping and task engagement.
D. Behavioral activation: Practice of helpful, realistic statements that support coping and task engagement. / Coping self-talk: Planned engagement in meaningful or rewarding activities to increase contact with positive reinforcement.

0020. Which option pairs the definitions of Cognitive restructuring and Coping self-talk correctly, in that order?

A. Cognitive restructuring: Collaboratively evaluating and developing more balanced or useful interpretations rather than imposing positive thinking. / Coping self-talk: Practice of helpful, realistic statements that support coping and task engagement.
B. Cognitive restructuring: Practice of helpful, realistic statements that support coping and task engagement. / Coping self-talk: Collaboratively evaluating and developing more balanced or useful interpretations rather than imposing positive thinking.
C. Cognitive restructuring: Practicing a targeted behavior in session, often with modeling, feedback, and repetition. / Coping self-talk: Practice of helpful, realistic statements that support coping and task engagement.
D. Cognitive restructuring: Collaboratively evaluating and developing more balanced or useful interpretations rather than imposing positive thinking. / Coping self-talk: Gradual, planned approach to feared situations or cues to support new learning, with appropriate assessment and consent.

0021. In child-focused CBT, which paired example correctly applies Developmental adaptation in CBT first and Relapse prevention second?

A. Developmental adaptation in CBT: Treating a belief as a testable hypothesis and reviewing what the child observes. / Relapse prevention: Identifying likely setbacks and rehearsing which coping steps the child can use.
B. Developmental adaptation in CBT: Using drawings or concrete examples when abstract cognitive language is not yet accessible. / Relapse prevention: Using a child-friendly record to examine what happened and what the child thought at that moment.
C. Developmental adaptation in CBT: Identifying likely setbacks and rehearsing which coping steps the child can use. / Relapse prevention: Using drawings or concrete examples when abstract cognitive language is not yet accessible.
D. Developmental adaptation in CBT: Using drawings or concrete examples when abstract cognitive language is not yet accessible. / Relapse prevention: Identifying likely setbacks and rehearsing which coping steps the child can use.

0022. When reviewing a middle-school student's plan in the child guidance clinic, the caregiver working with a counselor notes that the next step is examining evidence and generating a realistic alternative thought with the child. Which concept guides this step?

A. Developmental adaptation in CBT
B. Coping self-talk
C. Cognitive restructuring
D. Skills rehearsal

0023. A trainee must distinguish how Cognitive triangle and Thought record guide practice. Which comparison is accurate?

A. Cognitive triangle: Using a child-friendly record to examine what happened and what the child thought at that moment. / Thought record: Helping a child map how a thought, feeling, and action relate in a particular situation.
B. Cognitive triangle: Helping a child map how a thought, feeling, and action relate in a particular situation. / Thought record: Examining evidence and generating a realistic alternative thought with the child.
C. Cognitive triangle: Role-playing an assertive request and providing supportive, specific feedback. / Thought record: Using a child-friendly record to examine what happened and what the child thought at that moment.
D. Cognitive triangle: Helping a child map how a thought, feeling, and action relate in a particular situation. / Thought record: Using a child-friendly record to examine what happened and what the child thought at that moment.

0024. Choose the practice comparison that best separates Exposure from Skills rehearsal.

A. Exposure: Building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation. / Skills rehearsal: Role-playing an assertive request and providing supportive, specific feedback.
B. Exposure: Building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation. / Skills rehearsal: Examining evidence and generating a realistic alternative thought with the child.
C. Exposure: Role-playing an assertive request and providing supportive, specific feedback. / Skills rehearsal: Building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation.
D. Exposure: Treating a belief as a testable hypothesis and reviewing what the child observes. / Skills rehearsal: Role-playing an assertive request and providing supportive, specific feedback.

0025. At the parent meeting, a program coordinator reviews whether a plan for a child aged 7 is appropriate. The relevant practice is building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation. Which concept is tested?

A. Developmental adaptation in CBT
B. Cognitive triangle
C. Exposure
D. Skills rehearsal

0026. At the student-support meeting, a school support specialist meets with a older adolescent client. The practice priority is: scheduling a manageable valued activity and reviewing its effect on mood and functioning. Which concept best captures that priority?

A. Collaborative empiricism
B. Coping self-talk
C. Behavioral activation
D. Thought record

0027. Consider a client in early adolescence receiving help in the child guidance clinic. The school counselor focuses on using drawings or concrete examples when abstract cognitive language is not yet accessible. Which term best describes the guiding idea?

A. Developmental adaptation in CBT
B. Collaborative empiricism
C. Skills rehearsal
D. Thought record

0028. A case discussion concerns a child aged 7 and a case coordinator in the student-support meeting. The practitioner is considering examining evidence and generating a realistic alternative thought with the child. Which principle is involved?

A. Developmental adaptation in CBT
B. Skills rehearsal
C. Relapse prevention
D. Cognitive restructuring

0029. Which pair of actions illustrates Cognitive triangle and Behavioral activation, respectively?

A. Cognitive triangle: Helping a child map how a thought, feeling, and action relate in a particular situation. / Behavioral activation: Scheduling a manageable valued activity and reviewing its effect on mood and functioning.
B. Cognitive triangle: Scheduling a manageable valued activity and reviewing its effect on mood and functioning. / Behavioral activation: Helping a child map how a thought, feeling, and action relate in a particular situation.
C. Cognitive triangle: Helping a child map how a thought, feeling, and action relate in a particular situation. / Behavioral activation: Using drawings or concrete examples when abstract cognitive language is not yet accessible.
D. Cognitive triangle: Identifying likely setbacks and rehearsing which coping steps the child can use. / Behavioral activation: Scheduling a manageable valued activity and reviewing its effect on mood and functioning.

0030. A child aged 6's service team meets in the caregiver consultation. The school-based clinician recommends a change involving treating a belief as a testable hypothesis and reviewing what the child observes. Which idea best explains it?

A. Skills rehearsal
B. Cognitive restructuring
C. Collaborative empiricism
D. Relapse prevention

0031. Choose the response that best puts Cognitive restructuring into practice.

A. Examining evidence and generating a realistic alternative thought with the child.
B. Identifying likely setbacks and rehearsing which coping steps the child can use.
C. Building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation.
D. Role-playing an assertive request and providing supportive, specific feedback.

0032. Which option preserves the correct meaning of both Cognitive restructuring and Developmental adaptation in CBT?

A. Cognitive restructuring: A CBT stance in which client and therapist jointly test ideas against evidence and experience. / Developmental adaptation in CBT: Adjusting CBT language, materials, pacing, and caregiver involvement to the child's developmental capacity.
B. Cognitive restructuring: Collaboratively evaluating and developing more balanced or useful interpretations rather than imposing positive thinking. / Developmental adaptation in CBT: A structured aid for noticing a situation, automatic thought, emotion, evidence, and alternative perspective.
C. Cognitive restructuring: Collaboratively evaluating and developing more balanced or useful interpretations rather than imposing positive thinking. / Developmental adaptation in CBT: Adjusting CBT language, materials, pacing, and caregiver involvement to the child's developmental capacity.
D. Cognitive restructuring: Adjusting CBT language, materials, pacing, and caregiver involvement to the child's developmental capacity. / Developmental adaptation in CBT: Collaboratively evaluating and developing more balanced or useful interpretations rather than imposing positive thinking.

0033. A member of a clinical team prepares for a session in the youth group with a child aged 7. The intended approach is treating a belief as a testable hypothesis and reviewing what the child observes. Which concept is most relevant?

A. Cognitive restructuring
B. Skills rehearsal
C. Collaborative empiricism
D. Thought record

0034. In child-focused CBT, a team must select a support approach for a high-school student at the telehealth session. The caregiver working with a counselor recommends identifying likely setbacks and rehearsing which coping steps the child can use. Which idea is most relevant?

A. Behavioral activation
B. Developmental adaptation in CBT
C. Relapse prevention
D. Cognitive restructuring

0035. A trainee must distinguish how Exposure and Thought record guide practice. Which comparison is accurate?

A. Exposure: Building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation. / Thought record: Using drawings or concrete examples when abstract cognitive language is not yet accessible.
B. Exposure: Building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation. / Thought record: Using a child-friendly record to examine what happened and what the child thought at that moment.
C. Exposure: Using a child-friendly record to examine what happened and what the child thought at that moment. / Thought record: Building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation.
D. Exposure: Rehearsing a believable coping phrase a child can use during a challenging moment. / Thought record: Using a child-friendly record to examine what happened and what the child thought at that moment.

0036. In the family resource center, a parent educator is considering this approach for a school-age child: examining evidence and generating a realistic alternative thought with the child. Which framework does it represent?

A. Behavioral activation
B. Skills rehearsal
C. Cognitive restructuring
D. Collaborative empiricism

0037. Which course concept is defined as follows: Adjusting CBT language, materials, pacing, and caregiver involvement to the child's developmental capacity.

A. Relapse prevention
B. Developmental adaptation in CBT
C. Cognitive restructuring
D. Exposure

0038. In a case note about a child aged 11, a member of a clinical team working in the youth advocacy program records this priority: examining evidence and generating a realistic alternative thought with the child. What principle is reflected?

A. Exposure
B. Skills rehearsal
C. Cognitive restructuring
D. Collaborative empiricism

0039. Which option correctly matches each concept to its practice focus: Behavioral activation and Developmental adaptation in CBT?

A. Behavioral activation: Scheduling a manageable valued activity and reviewing its effect on mood and functioning. / Developmental adaptation in CBT: Using drawings or concrete examples when abstract cognitive language is not yet accessible.
B. Behavioral activation: Building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation. / Developmental adaptation in CBT: Using drawings or concrete examples when abstract cognitive language is not yet accessible.
C. Behavioral activation: Using drawings or concrete examples when abstract cognitive language is not yet accessible. / Developmental adaptation in CBT: Scheduling a manageable valued activity and reviewing its effect on mood and functioning.
D. Behavioral activation: Scheduling a manageable valued activity and reviewing its effect on mood and functioning. / Developmental adaptation in CBT: Rehearsing a believable coping phrase a child can use during a challenging moment.

0040. A family therapist presents a support plan for a child aged 8 at the community service agency. Its central feature is examining evidence and generating a realistic alternative thought with the child. Which concept should be named?

A. Behavioral activation
B. Cognitive triangle
C. Cognitive restructuring
D. Thought record

0041. Which applied comparison correctly identifies what belongs to Cognitive triangle versus Exposure?

A. Cognitive triangle: Helping a child map how a thought, feeling, and action relate in a particular situation. / Exposure: Examining evidence and generating a realistic alternative thought with the child.
B. Cognitive triangle: Building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation. / Exposure: Helping a child map how a thought, feeling, and action relate in a particular situation.
C. Cognitive triangle: Identifying likely setbacks and rehearsing which coping steps the child can use. / Exposure: Building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation.
D. Cognitive triangle: Helping a child map how a thought, feeling, and action relate in a particular situation. / Exposure: Building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation.

0042. While supporting a child aged 6 in the school consultation, a caregiver working with a counselor adopts this practice: scheduling a manageable valued activity and reviewing its effect on mood and functioning. Which concept best explains the choice?

A. Exposure
B. Cognitive restructuring
C. Developmental adaptation in CBT
D. Behavioral activation

0043. In the outpatient clinic, a youth worker describes the most appropriate support for a young person as rehearsing a believable coping phrase a child can use during a challenging moment. Which framework is being applied?

A. Skills rehearsal
B. Coping self-talk
C. Cognitive restructuring
D. Collaborative empiricism

0044. Choose the definition pair that correctly explains Behavioral activation first and Collaborative empiricism second.

A. Behavioral activation: Planned engagement in meaningful or rewarding activities to increase contact with positive reinforcement. / Collaborative empiricism: A CBT stance in which client and therapist jointly test ideas against evidence and experience.
B. Behavioral activation: Planning for future triggers, early warning signs, and continued use of skills after improvement. / Collaborative empiricism: A CBT stance in which client and therapist jointly test ideas against evidence and experience.
C. Behavioral activation: A CBT stance in which client and therapist jointly test ideas against evidence and experience. / Collaborative empiricism: Planned engagement in meaningful or rewarding activities to increase contact with positive reinforcement.
D. Behavioral activation: Planned engagement in meaningful or rewarding activities to increase contact with positive reinforcement. / Collaborative empiricism: A structured aid for noticing a situation, automatic thought, emotion, evidence, and alternative perspective.

0045. Which statement accurately contrasts the course concepts Collaborative empiricism and Developmental adaptation in CBT?

A. Collaborative empiricism: A CBT stance in which client and therapist jointly test ideas against evidence and experience. / Developmental adaptation in CBT: Adjusting CBT language, materials, pacing, and caregiver involvement to the child's developmental capacity.
B. Collaborative empiricism: A CBT stance in which client and therapist jointly test ideas against evidence and experience. / Developmental adaptation in CBT: Collaboratively evaluating and developing more balanced or useful interpretations rather than imposing positive thinking.
C. Collaborative empiricism: Adjusting CBT language, materials, pacing, and caregiver involvement to the child's developmental capacity. / Developmental adaptation in CBT: A CBT stance in which client and therapist jointly test ideas against evidence and experience.
D. Collaborative empiricism: Gradual, planned approach to feared situations or cues to support new learning, with appropriate assessment and consent. / Developmental adaptation in CBT: Adjusting CBT language, materials, pacing, and caregiver involvement to the child's developmental capacity.

0046. Choose the term that matches this definition: A teaching model linking thoughts, feelings, and behaviors as mutually influential components of experience.

A. Coping self-talk
B. Skills rehearsal
C. Cognitive triangle
D. Exposure

0047. For a older adolescent client seen in the student wellness team, the research trainee recommends a plan built around rehearsing a believable coping phrase a child can use during a challenging moment. Which concept is reflected?

A. Coping self-talk
B. Relapse prevention
C. Cognitive triangle
D. Behavioral activation

0048. Which statement accurately contrasts the course concepts Thought record and Coping self-talk?

A. Thought record: A structured aid for noticing a situation, automatic thought, emotion, evidence, and alternative perspective. / Coping self-talk: Planning for future triggers, early warning signs, and continued use of skills after improvement.
B. Thought record: A structured aid for noticing a situation, automatic thought, emotion, evidence, and alternative perspective. / Coping self-talk: Practice of helpful, realistic statements that support coping and task engagement.
C. Thought record: Practice of helpful, realistic statements that support coping and task engagement. / Coping self-talk: A structured aid for noticing a situation, automatic thought, emotion, evidence, and alternative perspective.
D. Thought record: A teaching model linking thoughts, feelings, and behaviors as mutually influential components of experience. / Coping self-talk: Practice of helpful, realistic statements that support coping and task engagement.

0049. In child-focused CBT, which paired example correctly applies Thought record first and Relapse prevention second?

A. Thought record: Using a child-friendly record to examine what happened and what the child thought at that moment. / Relapse prevention: Role-playing an assertive request and providing supportive, specific feedback.
B. Thought record: Using a child-friendly record to examine what happened and what the child thought at that moment. / Relapse prevention: Identifying likely setbacks and rehearsing which coping steps the child can use.
C. Thought record: Identifying likely setbacks and rehearsing which coping steps the child can use. / Relapse prevention: Using a child-friendly record to examine what happened and what the child thought at that moment.
D. Thought record: Scheduling a manageable valued activity and reviewing its effect on mood and functioning. / Relapse prevention: Identifying likely setbacks and rehearsing which coping steps the child can use.

0050. Choose the practice comparison that best separates Exposure from Thought record.

A. Exposure: Building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation. / Thought record: Using a child-friendly record to examine what happened and what the child thought at that moment.
B. Exposure: Rehearsing a believable coping phrase a child can use during a challenging moment. / Thought record: Using a child-friendly record to examine what happened and what the child thought at that moment.
C. Exposure: Using a child-friendly record to examine what happened and what the child thought at that moment. / Thought record: Building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation.
D. Exposure: Building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation. / Thought record: Using drawings or concrete examples when abstract cognitive language is not yet accessible.

0051. Which pair of actions illustrates Exposure and Collaborative empiricism, respectively?

A. Exposure: Treating a belief as a testable hypothesis and reviewing what the child observes. / Collaborative empiricism: Building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation.
B. Exposure: Building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation. / Collaborative empiricism: Identifying likely setbacks and rehearsing which coping steps the child can use.
C. Exposure: Rehearsing a believable coping phrase a child can use during a challenging moment. / Collaborative empiricism: Treating a belief as a testable hypothesis and reviewing what the child observes.
D. Exposure: Building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation. / Collaborative empiricism: Treating a belief as a testable hypothesis and reviewing what the child observes.

0052. Choose the practice comparison that best separates Cognitive restructuring from Developmental adaptation in CBT.

A. Cognitive restructuring: Examining evidence and generating a realistic alternative thought with the child. / Developmental adaptation in CBT: Using drawings or concrete examples when abstract cognitive language is not yet accessible.
B. Cognitive restructuring: Using drawings or concrete examples when abstract cognitive language is not yet accessible. / Developmental adaptation in CBT: Examining evidence and generating a realistic alternative thought with the child.
C. Cognitive restructuring: Treating a belief as a testable hypothesis and reviewing what the child observes. / Developmental adaptation in CBT: Using drawings or concrete examples when abstract cognitive language is not yet accessible.
D. Cognitive restructuring: Examining evidence and generating a realistic alternative thought with the child. / Developmental adaptation in CBT: Using a child-friendly record to examine what happened and what the child thought at that moment.

0053. Which option pairs the definitions of Cognitive triangle and Cognitive restructuring correctly, in that order?

A. Cognitive triangle: Collaboratively evaluating and developing more balanced or useful interpretations rather than imposing positive thinking. / Cognitive restructuring: A teaching model linking thoughts, feelings, and behaviors as mutually influential components of experience.
B. Cognitive triangle: A teaching model linking thoughts, feelings, and behaviors as mutually influential components of experience. / Cognitive restructuring: A structured aid for noticing a situation, automatic thought, emotion, evidence, and alternative perspective.
C. Cognitive triangle: Practice of helpful, realistic statements that support coping and task engagement. / Cognitive restructuring: Collaboratively evaluating and developing more balanced or useful interpretations rather than imposing positive thinking.
D. Cognitive triangle: A teaching model linking thoughts, feelings, and behaviors as mutually influential components of experience. / Cognitive restructuring: Collaboratively evaluating and developing more balanced or useful interpretations rather than imposing positive thinking.

0054. Identify the most precise label for this idea: Practicing a targeted behavior in session, often with modeling, feedback, and repetition.

A. Skills rehearsal
B. Cognitive triangle
C. Relapse prevention
D. Cognitive restructuring

0055. Which comparison would correct a trainee’s misunderstanding of Thought record versus Collaborative empiricism?

A. Thought record: Adjusting CBT language, materials, pacing, and caregiver involvement to the child’s developmental capacity. / Collaborative empiricism: A CBT stance in which client and therapist jointly test ideas against evidence and experience.
B. Thought record: A CBT stance in which client and therapist jointly test ideas against evidence and experience. / Collaborative empiricism: A structured aid for noticing a situation, automatic thought, emotion, evidence, and alternative perspective.
C. Thought record: A structured aid for noticing a situation, automatic thought, emotion, evidence, and alternative perspective. / Collaborative empiricism: A teaching model linking thoughts, feelings, and behaviors as mutually influential components of experience.
D. Thought record: A structured aid for noticing a situation, automatic thought, emotion, evidence, and alternative perspective. / Collaborative empiricism: A CBT stance in which client and therapist jointly test ideas against evidence and experience.

0056. How are Exposure and Collaborative empiricism most accurately differentiated in this curriculum?

A. Exposure: A CBT stance in which client and therapist jointly test ideas against evidence and experience. / Collaborative empiricism: Gradual, planned approach to feared situations or cues to support new learning, with appropriate assessment and consent.
B. Exposure: Gradual, planned approach to feared situations or cues to support new learning, with appropriate assessment and consent. / Collaborative empiricism: Planning for future triggers, early warning signs, and continued use of skills after improvement.
C. Exposure: Gradual, planned approach to feared situations or cues to support new learning, with appropriate assessment and consent. / Collaborative empiricism: A CBT stance in which client and therapist jointly test ideas against evidence and experience.
D. Exposure: Practice of helpful, realistic statements that support coping and task engagement. / Collaborative empiricism: A CBT stance in which client and therapist jointly test ideas against evidence and experience.

0057. Identify the most precise label for this idea: A teaching model linking thoughts, feelings, and behaviors as mutually influential components of experience.

A. Cognitive triangle
B. Exposure
C. Collaborative empiricism
D. Thought record

0058. A case discussion concerns a preadolescent child and a school-based clinician in the multidisciplinary case conference. The practitioner is considering building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation. Which principle is involved?

A. Behavioral activation
B. Thought record
C. Collaborative empiricism
D. Exposure

0059. Which statement accurately contrasts the course concepts Behavioral activation and Developmental adaptation in CBT?

A. Behavioral activation: Planned engagement in meaningful or rewarding activities to increase contact with positive reinforcement. / Developmental adaptation in CBT: Practice of helpful, realistic statements that support coping and task engagement.
B. Behavioral activation: Adjusting CBT language, materials, pacing, and caregiver involvement to the child's developmental capacity. / Developmental adaptation in CBT: Planned engagement in meaningful or rewarding activities to increase contact with positive reinforcement.
C. Behavioral activation: Gradual, planned approach to feared situations or cues to support new learning, with appropriate assessment and consent. / Developmental adaptation in CBT: Adjusting CBT language, materials, pacing, and caregiver involvement to the child's developmental capacity.
D. Behavioral activation: Planned engagement in meaningful or rewarding activities to increase contact with positive reinforcement. / Developmental adaptation in CBT: Adjusting CBT language, materials, pacing, and caregiver involvement to the child's developmental capacity.

0060. When reviewing a student aged 15's plan in the school consultation, the family therapist notes that the next step is treating a belief as a testable hypothesis and reviewing what the child observes. Which concept guides this step?

A. Skills rehearsal
B. Collaborative empiricism
C. Relapse prevention
D. Behavioral activation

0061. Which statement shows a sound practice-level distinction between Coping self-talk and Skills rehearsal?

A. Coping self-talk: Rehearsing a believable coping phrase a child can use during a challenging moment. / Skills rehearsal: Treating a belief as a testable hypothesis and reviewing what the child observes.
B. Coping self-talk: Examining evidence and generating a realistic alternative thought with the child. / Skills rehearsal: Role-playing an assertive request and providing supportive, specific feedback.
C. Coping self-talk: Role-playing an assertive request and providing supportive, specific feedback. / Skills rehearsal: Rehearsing a believable coping phrase a child can use during a challenging moment.
D. Coping self-talk: Rehearsing a believable coping phrase a child can use during a challenging moment. / Skills rehearsal: Role-playing an assertive request and providing supportive, specific feedback.

0062. A support meeting for a student aged 9 includes a counselor in the student wellness team. The practice under consideration is using drawings or concrete examples when abstract cognitive language is not yet accessible. Which concept guides it?

A. Collaborative empiricism
B. Developmental adaptation in CBT
C. Cognitive restructuring
D. Cognitive triangle

0063. A supervisor asks how Thought record would appear in practice. Which choice should be selected?

A. Using drawings or concrete examples when abstract cognitive language is not yet accessible.
B. Treating a belief as a testable hypothesis and reviewing what the child observes.
C. Scheduling a manageable valued activity and reviewing its effect on mood and functioning.
D. Using a child-friendly record to examine what happened and what the child thought at that moment.

0064. Which option correctly matches each concept to its practice focus: Cognitive restructuring and Developmental adaptation in CBT?

A. Cognitive restructuring: Examining evidence and generating a realistic alternative thought with the child. / Developmental adaptation in CBT: Using drawings or concrete examples when abstract cognitive language is not yet accessible.
B. Cognitive restructuring: Examining evidence and generating a realistic alternative thought with the child. / Developmental adaptation in CBT: Using a child-friendly record to examine what happened and what the child thought at that moment.
C. Cognitive restructuring: Treating a belief as a testable hypothesis and reviewing what the child observes. / Developmental adaptation in CBT: Using drawings or concrete examples when abstract cognitive language is not yet accessible.
D. Cognitive restructuring: Using drawings or concrete examples when abstract cognitive language is not yet accessible. / Developmental adaptation in CBT: Examining evidence and generating a realistic alternative thought with the child.

0065. In a supervision review, a case coordinator describes work with a older adolescent client in the youth group: using drawings or concrete examples when abstract cognitive language is not yet accessible. What concept is illustrated?

A. Skills rehearsal
B. Thought record
C. Developmental adaptation in CBT
D. Behavioral activation

0066. Which statement most accurately defines Cognitive triangle?

A. Planned engagement in meaningful or rewarding activities to increase contact with positive reinforcement.
B. Practicing a targeted behavior in session, often with modeling, feedback, and repetition.
C. Planning for future triggers, early warning signs, and continued use of skills after improvement.
D. A teaching model linking thoughts, feelings, and behaviors as mutually influential components of experience.

0067. A planning meeting about a young person aged 10 includes a school support specialist. The proposed practice in the family session is role-playing an assertive request and providing supportive, specific feedback. Which idea underlies it?

A. Cognitive triangle
B. Developmental adaptation in CBT
C. Skills rehearsal
D. Cognitive restructuring

0068. Which statement accurately contrasts the course concepts Cognitive triangle and Coping self-talk?

A. Cognitive triangle: A teaching model linking thoughts, feelings, and behaviors as mutually influential components of experience. / Coping self-talk: Practice of helpful, realistic statements that support coping and task engagement.
B. Cognitive triangle: A teaching model linking thoughts, feelings, and behaviors as mutually influential components of experience. / Coping self-talk: Collaboratively evaluating and developing more balanced or useful interpretations rather than imposing positive thinking.
C. Cognitive triangle: A structured aid for noticing a situation, automatic thought, emotion, evidence, and alternative perspective. / Coping self-talk: Practice of helpful, realistic statements that support coping and task engagement.
D. Cognitive triangle: Practice of helpful, realistic statements that support coping and task engagement. / Coping self-talk: A teaching model linking thoughts, feelings, and behaviors as mutually influential components of experience.

0069. A research trainee describes an intervention for a young person aged 13 in the parent meeting, centered on using drawings or concrete examples when abstract cognitive language is not yet accessible. Which named idea is most relevant?

A. Developmental adaptation in CBT
B. Collaborative empiricism
C. Cognitive triangle
D. Exposure

0070. In child-focused CBT, which option correctly matches each concept to its practice focus: Thought record and Relapse prevention?

A. Thought record: Identifying likely setbacks and rehearsing which coping steps the child can use. / Relapse prevention: Using a child-friendly record to examine what happened and what the child thought at that moment.
B. Thought record: Using a child-friendly record to examine what happened and what the child thought at that moment. / Relapse prevention: Identifying likely setbacks and rehearsing which coping steps the child can use.
C. Thought record: Using a child-friendly record to examine what happened and what the child thought at that moment. / Relapse prevention: Role-playing an assertive request and providing supportive, specific feedback.
D. Thought record: Scheduling a manageable valued activity and reviewing its effect on mood and functioning. / Relapse prevention: Identifying likely setbacks and rehearsing which coping steps the child can use.

0071. Which course concept is defined as follows: A CBT stance in which client and therapist jointly test ideas against evidence and experience.

A. Relapse prevention
B. Behavioral activation
C. Coping self-talk
D. Collaborative empiricism

0072. Choose the term that matches this definition: Practice of helpful, realistic statements that support coping and task engagement.

A. Developmental adaptation in CBT
B. Thought record
C. Behavioral activation
D. Coping self-talk

0073. In child-focused CBT, which pair of actions illustrates Exposure and Relapse prevention, respectively?

A. Exposure: Building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation. / Relapse prevention: Role-playing an assertive request and providing supportive, specific feedback.
B. Exposure: Using a child-friendly record to examine what happened and what the child thought at that moment. / Relapse prevention: Identifying likely setbacks and rehearsing which coping steps the child can use.
C. Exposure: Building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation. / Relapse prevention: Identifying likely setbacks and rehearsing which coping steps the child can use.
D. Exposure: Identifying likely setbacks and rehearsing which coping steps the child can use. / Relapse prevention: Building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation.

0074. In child-focused CBT, a supervisor asks for an applied contrast between Cognitive triangle and Relapse prevention. Which option fits?

A. Cognitive triangle: Helping a child map how a thought, feeling, and action relate in a particular situation. / Relapse prevention: Role-playing an assertive request and providing supportive, specific feedback.
B. Cognitive triangle: Helping a child map how a thought, feeling, and action relate in a particular situation. / Relapse prevention: Identifying likely setbacks and rehearsing which coping steps the child can use.
C. Cognitive triangle: Using a child-friendly record to examine what happened and what the child thought at that moment. / Relapse prevention: Identifying likely setbacks and rehearsing which coping steps the child can use.
D. Cognitive triangle: Identifying likely setbacks and rehearsing which coping steps the child can use. / Relapse prevention: Helping a child map how a thought, feeling, and action relate in a particular situation.

0075. Choose the term that matches this definition: Practicing a targeted behavior in session, often with modeling, feedback, and repetition.

A. Exposure
B. Collaborative empiricism
C. Skills rehearsal
D. Cognitive triangle

0076. In child-focused CBT, which option pairs the definitions of Skills rehearsal and Relapse prevention correctly, in that order?

A. Skills rehearsal: A CBT stance in which client and therapist jointly test ideas against evidence and experience. / Relapse prevention: Planning for future triggers, early warning signs, and continued use of skills after improvement.
B. Skills rehearsal: Practicing a targeted behavior in session, often with modeling, feedback, and repetition. / Relapse prevention: Planning for future triggers, early warning signs, and continued use of skills after improvement.
C. Skills rehearsal: Planning for future triggers, early warning signs, and continued use of skills after improvement. / Relapse prevention: Practicing a targeted behavior in session, often with modeling, feedback, and repetition.
D. Skills rehearsal: Practicing a targeted behavior in session, often with modeling, feedback, and repetition. / Relapse prevention: Gradual, planned approach to feared situations or cues to support new learning, with appropriate assessment and consent.

0077. A teenage client is receiving support in the after-school program. The teacher and counselor is guided by this practice: scheduling a manageable valued activity and reviewing its effect on mood and functioning. Which principle best fits?

A. Thought record
B. Behavioral activation
C. Cognitive restructuring
D. Collaborative empiricism

0078. A service team discusses a middle-school student in the community mental-health service. Their proposed next step is using drawings or concrete examples when abstract cognitive language is not yet accessible. Which course concept supports it?

A. Developmental adaptation in CBT
B. Cognitive triangle
C. Cognitive restructuring
D. Collaborative empiricism

0079. Choose the practice comparison that best separates Behavioral activation from Thought record.

A. Behavioral activation: Using a child-friendly record to examine what happened and what the child thought at that moment. / Thought record: Scheduling a manageable valued activity and reviewing its effect on mood and functioning.
B. Behavioral activation: Scheduling a manageable valued activity and reviewing its effect on mood and functioning. / Thought record: Building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation.
C. Behavioral activation: Role-playing an assertive request and providing supportive, specific feedback. / Thought record: Using a child-friendly record to examine what happened and what the child thought at that moment.
D. Behavioral activation: Scheduling a manageable valued activity and reviewing its effect on mood and functioning. / Thought record: Using a child-friendly record to examine what happened and what the child thought at that moment.

0080. When reviewing a young person aged 18’s plan in the learning-support meeting, the parent educator notes that the next step is using a child-friendly record to examine what happened and what the child thought at that moment. Which concept guides this step?

A. Exposure
B. Cognitive triangle
C. Thought record
D. Relapse prevention

0081. What is the central meaning of Coping self-talk?

A. Collaboratively evaluating and developing more balanced or useful interpretations rather than imposing positive thinking.
B. Adjusting CBT language, materials, pacing, and caregiver involvement to the child’s developmental capacity.
C. A structured aid for noticing a situation, automatic thought, emotion, evidence, and alternative perspective.
D. Practice of helpful, realistic statements that support coping and task engagement.

0082. Choose the definition pair that correctly explains Coping self-talk first and Skills rehearsal second.

A. Coping self-talk: Practice of helpful, realistic statements that support coping and task engagement. / Skills rehearsal: Practicing a targeted behavior in session, often with modeling, feedback, and repetition.
B. Coping self-talk: Practicing a targeted behavior in session, often with modeling, feedback, and repetition. / Skills rehearsal: Practice of helpful, realistic statements that support coping and task engagement.
C. Coping self-talk: Collaboratively evaluating and developing more balanced or useful interpretations rather than imposing positive thinking. / Skills rehearsal: Practicing a targeted behavior in session, often with modeling, feedback, and repetition.
D. Coping self-talk: Practice of helpful, realistic statements that support coping and task engagement. / Skills rehearsal: A CBT stance in which client and therapist jointly test ideas against evidence and experience.

0083. How are Behavioral activation and Coping self-talk most accurately differentiated in this curriculum?

A. Behavioral activation: Collaboratively evaluating and developing more balanced or useful interpretations rather than imposing positive thinking. / Coping self-talk: Practice of helpful, realistic statements that support coping and task engagement.
B. Behavioral activation: Planned engagement in meaningful or rewarding activities to increase contact with positive reinforcement. / Coping self-talk: Planning for future triggers, early warning signs, and continued use of skills after improvement.
C. Behavioral activation: Practice of helpful, realistic statements that support coping and task engagement. / Coping self-talk: Planned engagement in meaningful or rewarding activities to increase contact with positive reinforcement.
D. Behavioral activation: Planned engagement in meaningful or rewarding activities to increase contact with positive reinforcement. / Coping self-talk: Practice of helpful, realistic statements that support coping and task engagement.

0084. Which comparison would correct a trainee’s misunderstanding of Behavioral activation versus Developmental adaptation in CBT?

A. Behavioral activation: Planned engagement in meaningful or rewarding activities to increase contact with positive reinforcement. / Developmental adaptation in CBT: Practice of helpful, realistic statements that support coping and task engagement.
B. Behavioral activation: Planned engagement in meaningful or rewarding activities to increase contact with positive reinforcement. / Developmental adaptation in CBT: Adjusting CBT language, materials, pacing, and caregiver involvement to the child’s developmental capacity.
C. Behavioral activation: Gradual, planned approach to feared situations or cues to support new learning, with appropriate assessment and consent. / Developmental adaptation in CBT: Adjusting CBT language, materials, pacing, and caregiver involvement to the child’s developmental capacity.
D. Behavioral activation: Adjusting CBT language, materials, pacing, and caregiver involvement to the child’s developmental capacity. / Developmental adaptation in CBT: Planned engagement in meaningful or rewarding activities to increase contact with positive reinforcement.

0085. How are Coping self-talk and Collaborative empiricism most accurately differentiated in this curriculum?

A. Coping self-talk: Gradual, planned approach to feared situations or cues to support new learning, with appropriate assessment and consent. / Collaborative empiricism: A CBT stance in which client and therapist jointly test ideas against evidence and experience.
B. Coping self-talk: Practice of helpful, realistic statements that support coping and task engagement. / Collaborative empiricism: A CBT stance in which client and therapist jointly test ideas against evidence and experience.
C. Coping self-talk: A CBT stance in which client and therapist jointly test ideas against evidence and experience. / Collaborative empiricism: Practice of helpful, realistic statements that support coping and task engagement.
D. Coping self-talk: Practice of helpful, realistic statements that support coping and task engagement. / Collaborative empiricism: Planned engagement in meaningful or rewarding activities to increase contact with positive reinforcement.

0086. At the multidisciplinary case conference, a behavior specialist meets with a child aged 11. The practice priority is: using a child-friendly record to examine what happened and what the child thought at that moment. Which concept best captures that priority?

A. Relapse prevention
B. Developmental adaptation in CBT
C. Thought record
D. Cognitive triangle

0087. A student confuses Exposure with Developmental adaptation in CBT. Which explanation most accurately separates them?

A. Exposure: A CBT stance in which client and therapist jointly test ideas against evidence and experience. / Developmental adaptation in CBT: Adjusting CBT language, materials, pacing, and caregiver involvement to the child's developmental capacity.
B. Exposure: Gradual, planned approach to feared situations or cues to support new learning, with appropriate assessment and consent. / Developmental adaptation in CBT: Adjusting CBT language, materials, pacing, and caregiver involvement to the child's developmental capacity.
C. Exposure: Gradual, planned approach to feared situations or cues to support new learning, with appropriate assessment and consent. / Developmental adaptation in CBT: Practicing a targeted behavior in session, often with modeling, feedback, and repetition.
D. Exposure: Adjusting CBT language, materials, pacing, and caregiver involvement to the child's developmental capacity. / Developmental adaptation in CBT: Gradual, planned approach to feared situations or cues to support new learning, with appropriate assessment and consent.

0088. Select the best explanation of Behavioral activation.

A. A teaching model linking thoughts, feelings, and behaviors as mutually influential components of experience.
B. Practicing a targeted behavior in session, often with modeling, feedback, and repetition.
C. Gradual, planned approach to feared situations or cues to support new learning, with appropriate assessment and consent.
D. Planned engagement in meaningful or rewarding activities to increase contact with positive reinforcement.

0089. Which comparison correctly distinguishes Behavioral activation from Skills rehearsal?

A. Behavioral activation: Planned engagement in meaningful or rewarding activities to increase contact with positive reinforcement. / Skills rehearsal: Practicing a targeted behavior in session, often with modeling, feedback, and repetition.
B. Behavioral activation: Practicing a targeted behavior in session, often with modeling, feedback, and repetition. / Skills rehearsal: Planned engagement in meaningful or rewarding activities to increase contact with positive reinforcement.
C. Behavioral activation: Planned engagement in meaningful or rewarding activities to increase contact with positive reinforcement. / Skills rehearsal: Practice of helpful, realistic statements that support coping and task engagement.
D. Behavioral activation: Adjusting CBT language, materials, pacing, and caregiver involvement to the child's developmental capacity. / Skills rehearsal: Practicing a targeted behavior in session, often with modeling, feedback, and repetition.

0090. In child-focused CBT, which option correctly matches each concept to its practice focus: Collaborative empiricism and Relapse prevention?

A. Collaborative empiricism: Identifying likely setbacks and rehearsing which coping steps the child can use. / Relapse prevention: Treating a belief as a testable hypothesis and reviewing what the child observes.
B. Collaborative empiricism: Scheduling a manageable valued activity and reviewing its effect on mood and functioning. / Relapse prevention: Identifying likely setbacks and rehearsing which coping steps the child can use.
C. Collaborative empiricism: Treating a belief as a testable hypothesis and reviewing what the child observes. / Relapse prevention: Identifying likely setbacks and rehearsing which coping steps the child can use.
D. Collaborative empiricism: Treating a belief as a testable hypothesis and reviewing what the child observes. / Relapse prevention: Helping a child map how a thought, feeling, and action relate in a particular situation.

0091. In child-focused CBT, which course concept is defined as follows: Planning for future triggers, early warning signs, and continued use of skills after improvement.

A. Skills rehearsal
B. Developmental adaptation in CBT
C. Exposure
D. Relapse prevention

0092. In child-focused CBT, a doctoral student reads the following description. Which concept does it define? Planning for future triggers, early warning signs, and continued use of skills after improvement.

A. Cognitive restructuring
B. Developmental adaptation in CBT
C. Thought record
D. Relapse prevention

0093. In child-focused CBT, a student confuses Skills rehearsal with Relapse prevention. Which explanation most accurately separates them?

A. Skills rehearsal: Practicing a targeted behavior in session, often with modeling, feedback, and repetition. / Relapse prevention: Gradual, planned approach to feared situations or cues to support new learning, with appropriate assessment and consent.
B. Skills rehearsal: A CBT stance in which client and therapist jointly test ideas against evidence and experience. / Relapse prevention: Planning for future triggers, early warning signs, and continued use of skills after improvement.
C. Skills rehearsal: Practicing a targeted behavior in session, often with modeling, feedback, and repetition. / Relapse prevention: Planning for future triggers, early warning signs, and continued use of skills after improvement.
D. Skills rehearsal: Planning for future triggers, early warning signs, and continued use of skills after improvement. / Relapse prevention: Practicing a targeted behavior in session, often with modeling, feedback, and repetition.

0094. What is the central meaning of Developmental adaptation in CBT?

A. Gradual, planned approach to feared situations or cues to support new learning, with appropriate assessment and consent.
B. A teaching model linking thoughts, feelings, and behaviors as mutually influential components of experience.
C. Adjusting CBT language, materials, pacing, and caregiver involvement to the child's developmental capacity.
D. Practice of helpful, realistic statements that support coping and task engagement.

0095. A community practitioner is asked what should shape a young person aged 13’s support in the behavior-support review. The proposed focus is building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation. Which principle does it represent?

A. Behavioral activation
B. Thought record
C. Coping self-talk
D. Exposure

0096. Which option pairs the definitions of Thought record and Collaborative empiricism correctly, in that order?

A. Thought record: A CBT stance in which client and therapist jointly test ideas against evidence and experience. / Collaborative empiricism: A structured aid for noticing a situation, automatic thought, emotion, evidence, and alternative perspective.
B. Thought record: A structured aid for noticing a situation, automatic thought, emotion, evidence, and alternative perspective. / Collaborative empiricism: A CBT stance in which client and therapist jointly test ideas against evidence and experience.
C. Thought record: A structured aid for noticing a situation, automatic thought, emotion, evidence, and alternative perspective. / Collaborative empiricism: A teaching model linking thoughts, feelings, and behaviors as mutually influential components of experience.
D. Thought record: Adjusting CBT language, materials, pacing, and caregiver involvement to the child’s developmental capacity. / Collaborative empiricism: A CBT stance in which client and therapist jointly test ideas against evidence and experience.

0097. A planning meeting about a high-school student includes a behavior specialist. The proposed practice in the caregiver consultation is using drawings or concrete examples when abstract cognitive language is not yet accessible. Which idea underlies it?

A. Coping self-talk
B. Developmental adaptation in CBT
C. Skills rehearsal
D. Relapse prevention

0098. In child-focused CBT, which option pairs the definitions of Cognitive triangle and Relapse prevention correctly, in that order?

A. Cognitive triangle: A structured aid for noticing a situation, automatic thought, emotion, evidence, and alternative perspective. / Relapse prevention: Planning for future triggers, early warning signs, and continued use of skills after improvement.
B. Cognitive triangle: Planning for future triggers, early warning signs, and continued use of skills after improvement. / Relapse prevention: A teaching model linking thoughts, feelings, and behaviors as mutually influential components of experience.
C. Cognitive triangle: A teaching model linking thoughts, feelings, and behaviors as mutually influential components of experience. / Relapse prevention: Planning for future triggers, early warning signs, and continued use of skills after improvement.
D. Cognitive triangle: A teaching model linking thoughts, feelings, and behaviors as mutually influential components of experience. / Relapse prevention: Practicing a targeted behavior in session, often with modeling, feedback, and repetition.

0099. Which applied comparison correctly identifies what belongs to Behavioral activation versus Skills rehearsal?

A. Behavioral activation: Role-playing an assertive request and providing supportive, specific feedback. / Skills rehearsal: Scheduling a manageable valued activity and reviewing its effect on mood and functioning.
B. Behavioral activation: Scheduling a manageable valued activity and reviewing its effect on mood and functioning. / Skills rehearsal: Role-playing an assertive request and providing supportive, specific feedback.
C. Behavioral activation: Using drawings or concrete examples when abstract cognitive language is not yet accessible. / Skills rehearsal: Role-playing an assertive request and providing supportive, specific feedback.
D. Behavioral activation: Scheduling a manageable valued activity and reviewing its effect on mood and functioning. / Skills rehearsal: Rehearsing a believable coping phrase a child can use during a challenging moment.

0100. What is the central meaning of Collaborative empiricism?

A. Adjusting CBT language, materials, pacing, and caregiver involvement to the child’s developmental capacity.
B. A CBT stance in which client and therapist jointly test ideas against evidence and experience.
C. A structured aid for noticing a situation, automatic thought, emotion, evidence, and alternative perspective.
D. Practice of helpful, realistic statements that support coping and task engagement.

0101. How should a practitioner distinguish the applications of Behavioral activation and Collaborative empiricism?

A. Behavioral activation: Identifying likely setbacks and rehearsing which coping steps the child can use. / Collaborative empiricism: Treating a belief as a testable hypothesis and reviewing what the child observes.
B. Behavioral activation: Treating a belief as a testable hypothesis and reviewing what the child observes. / Collaborative empiricism: Scheduling a manageable valued activity and reviewing its effect on mood and functioning.
C. Behavioral activation: Scheduling a manageable valued activity and reviewing its effect on mood and functioning. / Collaborative empiricism: Treating a belief as a testable hypothesis and reviewing what the child observes.
D. Behavioral activation: Scheduling a manageable valued activity and reviewing its effect on mood and functioning. / Collaborative empiricism: Using a child-friendly record to examine what happened and what the child thought at that moment.

0102. A clinical supervisor is asked to evaluate a proposed service for a young person aged 18 in the school consultation. The defining feature is using drawings or concrete examples when abstract cognitive language is not yet accessible. Which concept fits?

A. Skills rehearsal
B. Developmental adaptation in CBT
C. Cognitive triangle
D. Thought record

0103. In child-focused CBT, which paired example correctly applies Collaborative empiricism first and Relapse prevention second?

A. Collaborative empiricism: Treating a belief as a testable hypothesis and reviewing what the child observes. / Relapse prevention: Identifying likely setbacks and rehearsing which coping steps the child can use.
B. Collaborative empiricism: Treating a belief as a testable hypothesis and reviewing what the child observes. / Relapse prevention: Helping a child map how a thought, feeling, and action relate in a particular situation.
C. Collaborative empiricism: Identifying likely setbacks and rehearsing which coping steps the child can use. / Relapse prevention: Treating a belief as a testable hypothesis and reviewing what the child observes.
D. Collaborative empiricism: Scheduling a manageable valued activity and reviewing its effect on mood and functioning. / Relapse prevention: Identifying likely setbacks and rehearsing which coping steps the child can use.

0104. In a supervision quiz, how should Skills rehearsal be distinguished from Developmental adaptation in CBT?

A. Skills rehearsal: Practicing a targeted behavior in session, often with modeling, feedback, and repetition. / Developmental adaptation in CBT: Adjusting CBT language, materials, pacing, and caregiver involvement to the child's developmental capacity.
B. Skills rehearsal: Gradual, planned approach to feared situations or cues to support new learning, with appropriate assessment and consent. / Developmental adaptation in CBT: Adjusting CBT language, materials, pacing, and caregiver involvement to the child's developmental capacity.
C. Skills rehearsal: Adjusting CBT language, materials, pacing, and caregiver involvement to the child's developmental capacity. / Developmental adaptation in CBT: Practicing a targeted behavior in session, often with modeling, feedback, and repetition.
D. Skills rehearsal: Practicing a targeted behavior in session, often with modeling, feedback, and repetition. / Developmental adaptation in CBT: Practice of helpful, realistic statements that support coping and task engagement.

0105. Which professional action most closely applies Cognitive triangle?

A. Scheduling a manageable valued activity and reviewing its effect on mood and functioning.
B. Examining evidence and generating a realistic alternative thought with the child.
C. Helping a child map how a thought, feeling, and action relate in a particular situation.
D. Building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation.

0106. Which option pairs the definitions of Cognitive restructuring and Thought record correctly, in that order?

A. Cognitive restructuring: Collaboratively evaluating and developing more balanced or useful interpretations rather than imposing positive thinking. / Thought record: Adjusting CBT language, materials, pacing, and caregiver involvement to the child's developmental capacity.
B. Cognitive restructuring: Collaboratively evaluating and developing more balanced or useful interpretations rather than imposing positive thinking. / Thought record: A structured aid for noticing a situation, automatic thought, emotion, evidence, and alternative perspective.
C. Cognitive restructuring: A structured aid for noticing a situation, automatic thought, emotion, evidence, and alternative perspective. / Thought record: Collaboratively evaluating and developing more balanced or useful interpretations rather than imposing positive thinking.
D. Cognitive restructuring: A CBT stance in which client and therapist jointly test ideas against evidence and experience. / Thought record: A structured aid for noticing a situation, automatic thought, emotion, evidence, and alternative perspective.

0107. In a professional consultation about a child aged 6, the assessment clinician describes this response in the telehealth session: using drawings or concrete examples when abstract cognitive language is not yet accessible. Which term is most apt?

A. Developmental adaptation in CBT
B. Coping self-talk
C. Collaborative empiricism
D. Thought record

0108. At a case-planning meeting, the school support specialist proposes scheduling a manageable valued activity and reviewing its effect on mood and functioning. for a older adolescent client seen in the student-support meeting. Which concept does this illustrate?

A. Coping self-talk
B. Exposure
C. Skills rehearsal
D. Behavioral activation

0109. During work in the community mental-health service, a group facilitator identifies this need: scheduling a manageable valued activity and reviewing its effect on mood and functioning. Which idea should guide the response?

A. Behavioral activation
B. Cognitive triangle
C. Developmental adaptation in CBT
D. Skills rehearsal

0110. A case conference asks for a distinction between Thought record and Developmental adaptation in CBT. Which answer is sound?

A. Thought record: Planning for future triggers, early warning signs, and continued use of skills after improvement. / Developmental adaptation in CBT: Adjusting CBT language, materials, pacing, and caregiver involvement to the child's developmental capacity.
B. Thought record: A structured aid for noticing a situation, automatic thought, emotion, evidence, and alternative perspective. / Developmental adaptation in CBT: Adjusting CBT language, materials, pacing, and caregiver involvement to the child's developmental capacity.
C. Thought record: Adjusting CBT language, materials, pacing, and caregiver involvement to the child's developmental capacity. / Developmental adaptation in CBT: A structured aid for noticing a situation, automatic thought, emotion, evidence, and alternative perspective.
D. Thought record: A structured aid for noticing a situation, automatic thought, emotion, evidence, and alternative perspective. / Developmental adaptation in CBT: Practicing a targeted behavior in session, often with modeling, feedback, and repetition.

0111. In child-focused CBT, a service team discusses a young person in the child guidance clinic. Their proposed next step is identifying likely setbacks and rehearsing which coping steps the child can use. Which course concept supports it?

A. Collaborative empiricism
B. Relapse prevention
C. Cognitive triangle
D. Cognitive restructuring

0112. Select the best explanation of Collaborative empiricism.

A. Gradual, planned approach to feared situations or cues to support new learning, with appropriate assessment and consent.
B. Collaboratively evaluating and developing more balanced or useful interpretations rather than imposing positive thinking.
C. A structured aid for noticing a situation, automatic thought, emotion, evidence, and alternative perspective.
D. A CBT stance in which client and therapist jointly test ideas against evidence and experience.

0113. For a client in early adolescence seen in the classroom support meeting, the service navigator recommends a plan built around scheduling a manageable valued activity and reviewing its effect on mood and functioning. Which concept is reflected?

A. Behavioral activation
B. Collaborative empiricism
C. Cognitive restructuring
D. Skills rehearsal

0114. A service navigator describes an intervention for a student aged 17 in the supervision meeting, centered on rehearsing a believable coping phrase a child can use during a challenging moment. Which named idea is most relevant?

A. Collaborative empiricism
B. Developmental adaptation in CBT
C. Relapse prevention
D. Coping self-talk

0115. A student aged 15 and a member of a clinical team are reviewing goals in the school counseling office. The agreed action is using drawings or concrete examples when abstract cognitive language is not yet accessible. Which principle best accounts for it?

A. Collaborative empiricism
B. Behavioral activation
C. Relapse prevention
D. Developmental adaptation in CBT

0116. In a supervision review, a family therapist describes work with a young person in the supervision meeting: scheduling a manageable valued activity and reviewing its effect on mood and functioning. What concept is illustrated?

A. Cognitive triangle
B. Coping self-talk
C. Behavioral activation
D. Collaborative empiricism

0117. A support meeting for a adolescent student includes a clinical supervisor in the youth group. The practice under consideration is using a child-friendly record to examine what happened and what the child thought at that moment. Which concept guides it?

A. Thought record
B. Behavioral activation
C. Skills rehearsal
D. Coping self-talk

0118. In child-focused CBT, choose the practice comparison that best separates Developmental adaptation in CBT from Relapse prevention.

A. Developmental adaptation in CBT: Treating a belief as a testable hypothesis and reviewing what the child observes. / Relapse prevention: Identifying likely setbacks and rehearsing which coping steps the child can use.
B. Developmental adaptation in CBT: Identifying likely setbacks and rehearsing which coping steps the child can use. / Relapse prevention: Using drawings or concrete examples when abstract cognitive language is not yet accessible.
C. Developmental adaptation in CBT: Using drawings or concrete examples when abstract cognitive language is not yet accessible. / Relapse prevention: Using a child-friendly record to examine what happened and what the child thought at that moment.
D. Developmental adaptation in CBT: Using drawings or concrete examples when abstract cognitive language is not yet accessible. / Relapse prevention: Identifying likely setbacks and rehearsing which coping steps the child can use.

0119. Which paired example correctly applies Cognitive triangle first and Developmental adaptation in CBT second?

A. Cognitive triangle: Helping a child map how a thought, feeling, and action relate in a particular situation. / Developmental adaptation in CBT: Treating a belief as a testable hypothesis and reviewing what the child observes.
B. Cognitive triangle: Helping a child map how a thought, feeling, and action relate in a particular situation. / Developmental adaptation in CBT: Using drawings or concrete examples when abstract cognitive language is not yet accessible.
C. Cognitive triangle: Using drawings or concrete examples when abstract cognitive language is not yet accessible. / Developmental adaptation in CBT: Helping a child map how a thought, feeling, and action relate in a particular situation.
D. Cognitive triangle: Examining evidence and generating a realistic alternative thought with the child. / Developmental adaptation in CBT: Using drawings or concrete examples when abstract cognitive language is not yet accessible.

0120. In child-focused CBT, which statement shows a sound practice-level distinction between Cognitive triangle and Relapse prevention?

A. Cognitive triangle: Helping a child map how a thought, feeling, and action relate in a particular situation. / Relapse prevention: Identifying likely setbacks and rehearsing which coping steps the child can use.
B. Cognitive triangle: Identifying likely setbacks and rehearsing which coping steps the child can use. / Relapse prevention: Helping a child map how a thought, feeling, and action relate in a particular situation.
C. Cognitive triangle: Helping a child map how a thought, feeling, and action relate in a particular situation. / Relapse prevention: Role-playing an assertive request and providing supportive, specific feedback.
D. Cognitive triangle: Using a child-friendly record to examine what happened and what the child thought at that moment. / Relapse prevention: Identifying likely setbacks and rehearsing which coping steps the child can use.

0121. A counselor reviews a plan for a client in late adolescence in the child guidance clinic. The plan emphasizes scheduling a manageable valued activity and reviewing its effect on mood and functioning. Which course idea does this reflect?

A. Cognitive triangle
B. Exposure
C. Behavioral activation
D. Relapse prevention

0122. Consider a young person receiving help in the outpatient clinic. The youth worker focuses on rehearsing a believable coping phrase a child can use during a challenging moment. Which term best describes the guiding idea?

A. Coping self-talk
B. Relapse prevention
C. Cognitive triangle
D. Developmental adaptation in CBT

0123. A supervisor asks for an applied contrast between Cognitive triangle and Developmental adaptation in CBT. Which option fits?

A. Cognitive triangle: Helping a child map how a thought, feeling, and action relate in a particular situation. / Developmental adaptation in CBT: Using drawings or concrete examples when abstract cognitive language is not yet accessible.
B. Cognitive triangle: Helping a child map how a thought, feeling, and action relate in a particular situation. / Developmental adaptation in CBT: Treating a belief as a testable hypothesis and reviewing what the child observes.
C. Cognitive triangle: Using drawings or concrete examples when abstract cognitive language is not yet accessible. / Developmental adaptation in CBT: Helping a child map how a thought, feeling, and action relate in a particular situation.
D. Cognitive triangle: Examining evidence and generating a realistic alternative thought with the child. / Developmental adaptation in CBT: Using drawings or concrete examples when abstract cognitive language is not yet accessible.

0124. Which choice aligns each practice with the correct idea, Cognitive restructuring or Skills rehearsal?

A. Cognitive restructuring: Examining evidence and generating a realistic alternative thought with the child. / Skills rehearsal: Treating a belief as a testable hypothesis and reviewing what the child observes.
B. Cognitive restructuring: Examining evidence and generating a realistic alternative thought with the child. / Skills rehearsal: Role-playing an assertive request and providing supportive, specific feedback.
C. Cognitive restructuring: Scheduling a manageable valued activity and reviewing its effect on mood and functioning. / Skills rehearsal: Role-playing an assertive request and providing supportive, specific feedback.
D. Cognitive restructuring: Role-playing an assertive request and providing supportive, specific feedback. / Skills rehearsal: Examining evidence and generating a realistic alternative thought with the child.

0125. Which comparison correctly distinguishes Cognitive triangle from Developmental adaptation in CBT?

A. Cognitive triangle: Collaboratively evaluating and developing more balanced or useful interpretations rather than imposing positive thinking. / Developmental adaptation in CBT: Adjusting CBT language, materials, pacing, and caregiver involvement to the child's developmental capacity.
B. Cognitive triangle: Adjusting CBT language, materials, pacing, and caregiver involvement to the child's developmental capacity. / Developmental adaptation in CBT: A teaching model linking thoughts, feelings, and behaviors as mutually influential components of experience.
C. Cognitive triangle: A teaching model linking thoughts, feelings, and behaviors as mutually influential components of experience. / Developmental adaptation in CBT: Adjusting CBT language, materials, pacing, and caregiver involvement to the child's developmental capacity.
D. Cognitive triangle: A teaching model linking thoughts, feelings, and behaviors as mutually influential components of experience. / Developmental adaptation in CBT: A CBT stance in which client and therapist jointly test ideas against evidence and experience.

0126. How should a practitioner distinguish the applications of Cognitive restructuring and Behavioral activation?

A. Cognitive restructuring: Examining evidence and generating a realistic alternative thought with the child. / Behavioral activation: Scheduling a manageable valued activity and reviewing its effect on mood and functioning.
B. Cognitive restructuring: Scheduling a manageable valued activity and reviewing its effect on mood and functioning. / Behavioral activation: Examining evidence and generating a realistic alternative thought with the child.
C. Cognitive restructuring: Examining evidence and generating a realistic alternative thought with the child. / Behavioral activation: Using drawings or concrete examples when abstract cognitive language is not yet accessible.
D. Cognitive restructuring: Role-playing an assertive request and providing supportive, specific feedback. / Behavioral activation: Scheduling a manageable valued activity and reviewing its effect on mood and functioning.

0127. In child-focused CBT, which option preserves the correct meaning of both Cognitive restructuring and Relapse prevention?

A. Cognitive restructuring: Planning for future triggers, early warning signs, and continued use of skills after improvement. / Relapse prevention: Collaboratively evaluating and developing more balanced or useful interpretations rather than imposing positive thinking.
B. Cognitive restructuring: Collaboratively evaluating and developing more balanced or useful interpretations rather than imposing positive thinking. / Relapse prevention: A teaching model linking thoughts, feelings, and behaviors as mutually influential components of experience.
C. Cognitive restructuring: Gradual, planned approach to feared situations or cues to support new learning, with appropriate assessment and consent. / Relapse prevention: Planning for future triggers, early warning signs, and continued use of skills after improvement.
D. Cognitive restructuring: Collaboratively evaluating and developing more balanced or useful interpretations rather than imposing positive thinking. / Relapse prevention: Planning for future triggers, early warning signs, and continued use of skills after improvement.

0128. For a young person aged 18 in the youth advocacy program, a school support specialist makes this practice the immediate priority: building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation. Which concept fits best?

A. Behavioral activation
B. Skills rehearsal
C. Thought record
D. Exposure

0129. In the school counseling office, the agreed focus for a service navigator working with a child aged 11 is treating a belief as a testable hypothesis and reviewing what the child observes. Which concept names this focus?

A. Collaborative empiricism
B. Cognitive triangle
C. Exposure
D. Cognitive restructuring

0130. During service review in the clinical planning session, a research trainee describes examining evidence and generating a realistic alternative thought with the child. for a student aged 9. Which course idea is most applicable?

A. Cognitive triangle
B. Coping self-talk
C. Behavioral activation
D. Cognitive restructuring

0131. A group facilitator is asked to justify a plan for a young person in the clinical planning session. It calls for helping a child map how a thought, feeling, and action relate in a particular situation. Which concept provides the rationale?

A. Relapse prevention
B. Cognitive triangle
C. Cognitive restructuring
D. Thought record

0132. In child-focused CBT, which choice aligns each practice with the correct idea, Skills rehearsal or Relapse prevention?

A. Skills rehearsal: Identifying likely setbacks and rehearsing which coping steps the child can use. / Relapse prevention: Role-playing an assertive request and providing supportive, specific feedback.
B. Skills rehearsal: Role-playing an assertive request and providing supportive, specific feedback. / Relapse prevention: Building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation.
C. Skills rehearsal: Role-playing an assertive request and providing supportive, specific feedback. / Relapse prevention: Identifying likely setbacks and rehearsing which coping steps the child can use.
D. Skills rehearsal: Treating a belief as a testable hypothesis and reviewing what the child observes. / Relapse prevention: Identifying likely setbacks and rehearsing which coping steps the child can use.

0133. Consider a young person aged 16 receiving help in the community service agency. The school counselor focuses on building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation. Which term best describes the guiding idea?

A. Behavioral activation
B. Exposure
C. Cognitive triangle
D. Collaborative empiricism

0134. A supervisor asks for an applied contrast between Behavioral activation and Coping self-talk. Which option fits?

A. Behavioral activation: Scheduling a manageable valued activity and reviewing its effect on mood and functioning. / Coping self-talk: Identifying likely setbacks and rehearsing which coping steps the child can use.
B. Behavioral activation: Rehearsing a believable coping phrase a child can use during a challenging moment. / Coping self-talk: Scheduling a manageable valued activity and reviewing its effect on mood and functioning.
C. Behavioral activation: Scheduling a manageable valued activity and reviewing its effect on mood and functioning. / Coping self-talk: Rehearsing a believable coping phrase a child can use during a challenging moment.
D. Behavioral activation: Examining evidence and generating a realistic alternative thought with the child. / Coping self-talk: Rehearsing a believable coping phrase a child can use during a challenging moment.

0135. In a supervision quiz, how should Thought record be distinguished from Skills rehearsal?

A. Thought record: A structured aid for noticing a situation, automatic thought, emotion, evidence, and alternative perspective. / Skills rehearsal: Adjusting CBT language, materials, pacing, and caregiver involvement to the child's developmental capacity.
B. Thought record: A structured aid for noticing a situation, automatic thought, emotion, evidence, and alternative perspective. / Skills rehearsal: Practicing a targeted behavior in session, often with modeling, feedback, and repetition.
C. Thought record: Practicing a targeted behavior in session, often with modeling, feedback, and repetition. / Skills rehearsal: A structured aid for noticing a situation, automatic thought, emotion, evidence, and alternative perspective.
D. Thought record: Practice of helpful, realistic statements that support coping and task engagement. / Skills rehearsal: Practicing a targeted behavior in session, often with modeling, feedback, and repetition.

0136. During service review in the family session, a service navigator describes building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation. for a middle-school student. Which course idea is most applicable?

A. Exposure
B. Behavioral activation
C. Coping self-talk
D. Relapse prevention

0137. In the learning-support meeting, a youth worker explains why a client in late adolescence would benefit from role-playing an assertive request and providing supportive, specific feedback. Which course concept underpins the explanation?

A. Thought record
B. Skills rehearsal
C. Collaborative empiricism
D. Exposure

0138. How should a practitioner distinguish the applications of Thought record and Coping self-talk?

A. Thought record: Using a child-friendly record to examine what happened and what the child thought at that moment. / Coping self-talk: Identifying likely setbacks and rehearsing which coping steps the child can use.
B. Thought record: Helping a child map how a thought, feeling, and action relate in a particular situation. / Coping self-talk: Rehearsing a believable coping phrase a child can use during a challenging moment.
C. Thought record: Using a child-friendly record to examine what happened and what the child thought at that moment. / Coping self-talk: Rehearsing a believable coping phrase a child can use during a challenging moment.
D. Thought record: Rehearsing a believable coping phrase a child can use during a challenging moment. / Coping self-talk: Using a child-friendly record to examine what happened and what the child thought at that moment.

0139. Which statement shows a sound practice-level distinction between Coping self-talk and Developmental adaptation in CBT?

A. Coping self-talk: Rehearsing a believable coping phrase a child can use during a challenging moment. / Developmental adaptation in CBT: Using drawings or concrete examples when abstract cognitive language is not yet accessible.
B. Coping self-talk: Helping a child map how a thought, feeling, and action relate in a particular situation. / Developmental adaptation in CBT: Using drawings or concrete examples when abstract cognitive language is not yet accessible.
C. Coping self-talk: Rehearsing a believable coping phrase a child can use during a challenging moment. / Developmental adaptation in CBT: Role-playing an assertive request and providing supportive, specific feedback.
D. Coping self-talk: Using drawings or concrete examples when abstract cognitive language is not yet accessible. / Developmental adaptation in CBT: Rehearsing a believable coping phrase a child can use during a challenging moment.

0140. In child-focused CBT, a trainee must distinguish how Thought record and Relapse prevention guide practice. Which comparison is accurate?

A. Thought record: Using a child-friendly record to examine what happened and what the child thought at that moment. / Relapse prevention: Identifying likely setbacks and rehearsing which coping steps the child can use.
B. Thought record: Using a child-friendly record to examine what happened and what the child thought at that moment. / Relapse prevention: Role-playing an assertive request and providing supportive, specific feedback.
C. Thought record: Identifying likely setbacks and rehearsing which coping steps the child can use. / Relapse prevention: Using a child-friendly record to examine what happened and what the child thought at that moment.
D. Thought record: Scheduling a manageable valued activity and reviewing its effect on mood and functioning. / Relapse prevention: Identifying likely setbacks and rehearsing which coping steps the child can use.

0141. In child-focused CBT, a trainee must distinguish how Developmental adaptation in CBT and Relapse prevention guide practice. Which comparison is accurate?

A. Developmental adaptation in CBT: Treating a belief as a testable hypothesis and reviewing what the child observes. / Relapse prevention: Identifying likely setbacks and rehearsing which coping steps the child can use.
B. Developmental adaptation in CBT: Identifying likely setbacks and rehearsing which coping steps the child can use. / Relapse prevention: Using drawings or concrete examples when abstract cognitive language is not yet accessible.
C. Developmental adaptation in CBT: Using drawings or concrete examples when abstract cognitive language is not yet accessible. / Relapse prevention: Using a child-friendly record to examine what happened and what the child thought at that moment.
D. Developmental adaptation in CBT: Using drawings or concrete examples when abstract cognitive language is not yet accessible. / Relapse prevention: Identifying likely setbacks and rehearsing which coping steps the child can use.

0142. For a teenage client seen in the clinical planning session, the community practitioner recommends a plan built around role-playing an assertive request and providing supportive, specific feedback. Which concept is reflected?

A. Developmental adaptation in CBT
B. Thought record
C. Coping self-talk
D. Skills rehearsal

0143. Which comparison correctly distinguishes Coping self-talk from Collaborative empiricism?

A. Coping self-talk: Practice of helpful, realistic statements that support coping and task engagement. / Collaborative empiricism: Planned engagement in meaningful or rewarding activities to increase contact with positive reinforcement.
B. Coping self-talk: Practice of helpful, realistic statements that support coping and task engagement. / Collaborative empiricism: A CBT stance in which client and therapist jointly test ideas against evidence and experience.
C. Coping self-talk: A CBT stance in which client and therapist jointly test ideas against evidence and experience. / Collaborative empiricism: Practice of helpful, realistic statements that support coping and task engagement.
D. Coping self-talk: Gradual, planned approach to feared situations or cues to support new learning, with appropriate assessment and consent. / Collaborative empiricism: A CBT stance in which client and therapist jointly test ideas against evidence and experience.

0144. How should a practitioner distinguish the applications of Cognitive restructuring and Thought record?

A. Cognitive restructuring: Examining evidence and generating a realistic alternative thought with the child. / Thought record: Using drawings or concrete examples when abstract cognitive language is not yet accessible.
B. Cognitive restructuring: Examining evidence and generating a realistic alternative thought with the child. / Thought record: Using a child-friendly record to examine what happened and what the child thought at that moment.
C. Cognitive restructuring: Using a child-friendly record to examine what happened and what the child thought at that moment. / Thought record: Examining evidence and generating a realistic alternative thought with the child.
D. Cognitive restructuring: Treating a belief as a testable hypothesis and reviewing what the child observes. / Thought record: Using a child-friendly record to examine what happened and what the child thought at that moment.

0145. Which applied comparison correctly identifies what belongs to Cognitive triangle versus Cognitive restructuring?

A. Cognitive triangle: Helping a child map how a thought, feeling, and action relate in a particular situation. / Cognitive restructuring: Examining evidence and generating a realistic alternative thought with the child.
B. Cognitive triangle: Rehearsing a believable coping phrase a child can use during a challenging moment. / Cognitive restructuring: Examining evidence and generating a realistic alternative thought with the child.
C. Cognitive triangle: Helping a child map how a thought, feeling, and action relate in a particular situation. / Cognitive restructuring: Using a child-friendly record to examine what happened and what the child thought at that moment.
D. Cognitive triangle: Examining evidence and generating a realistic alternative thought with the child. / Cognitive restructuring: Helping a child map how a thought, feeling, and action relate in a particular situation.

0146. For a student aged 15 seen in the family resource center, the program coordinator recommends a plan built around using a child-friendly record to examine what happened and what the child thought at that moment. Which concept is reflected?

A. Thought record
B. Developmental adaptation in CBT
C. Exposure
D. Skills rehearsal

0147. A team must select a support approach for a student aged 17 at the outpatient clinic. The school-based clinician recommends using drawings or concrete examples when abstract cognitive language is not yet accessible. Which idea is most relevant?

A. Cognitive triangle
B. Exposure
C. Developmental adaptation in CBT
D. Relapse prevention

0148. A school-based clinician presents a support plan for a teenage client at the telehealth session. Its central feature is using a child-friendly record to examine what happened and what the child thought at that moment. Which concept should be named?

A. Relapse prevention
B. Skills rehearsal
C. Thought record
D. Exposure

0149. Which named construct is captured by this account? Planned engagement in meaningful or rewarding activities to increase contact with positive reinforcement.

A. Developmental adaptation in CBT
B. Behavioral activation
C. Exposure
D. Cognitive triangle

0150. Which comparison correctly distinguishes Thought record from Coping self-talk?

A. Thought record: Practice of helpful, realistic statements that support coping and task engagement. / Coping self-talk: A structured aid for noticing a situation, automatic thought, emotion, evidence, and alternative perspective.
B. Thought record: A structured aid for noticing a situation, automatic thought, emotion, evidence, and alternative perspective. / Coping self-talk: Practice of helpful, realistic statements that support coping and task engagement.
C. Thought record: A structured aid for noticing a situation, automatic thought, emotion, evidence, and alternative perspective. / Coping self-talk: Planning for future triggers, early warning signs, and continued use of skills after improvement.
D. Thought record: A teaching model linking thoughts, feelings, and behaviors as mutually influential components of experience. / Coping self-talk: Practice of helpful, realistic statements that support coping and task engagement.

0151. In a supervision quiz, how should Cognitive triangle be distinguished from Thought record?

A. Cognitive triangle: A structured aid for noticing a situation, automatic thought, emotion, evidence, and alternative perspective. / Thought record: A teaching model linking thoughts, feelings, and behaviors as mutually influential components of experience.
B. Cognitive triangle: Practicing a targeted behavior in session, often with modeling, feedback, and repetition. / Thought record: A structured aid for noticing a situation, automatic thought, emotion, evidence, and alternative perspective.
C. Cognitive triangle: A teaching model linking thoughts, feelings, and behaviors as mutually influential components of experience. / Thought record: Collaboratively evaluating and developing more balanced or useful interpretations rather than imposing positive thinking.
D. Cognitive triangle: A teaching model linking thoughts, feelings, and behaviors as mutually influential components of experience. / Thought record: A structured aid for noticing a situation, automatic thought, emotion, evidence, and alternative perspective.

0152. Which option pairs the definitions of Behavioral activation and Thought record correctly, in that order?

A. Behavioral activation: Planned engagement in meaningful or rewarding activities to increase contact with positive reinforcement. / Thought record: A structured aid for noticing a situation, automatic thought, emotion, evidence, and alternative perspective.
B. Behavioral activation: A structured aid for noticing a situation, automatic thought, emotion, evidence, and alternative perspective. / Thought record: Planned engagement in meaningful or rewarding activities to increase contact with positive reinforcement.
C. Behavioral activation: Planned engagement in meaningful or rewarding activities to increase contact with positive reinforcement. / Thought record: Gradual, planned approach to feared situations or cues to support new learning, with appropriate assessment and consent.
D. Behavioral activation: Practicing a targeted behavior in session, often with modeling, feedback, and repetition. / Thought record: A structured aid for noticing a situation, automatic thought, emotion, evidence, and alternative perspective.

0153. Which comparison would correct a trainee’s misunderstanding of Exposure versus Skills rehearsal?

A. Exposure: Gradual, planned approach to feared situations or cues to support new learning, with appropriate assessment and consent. / Skills rehearsal: Collaboratively evaluating and developing more balanced or useful interpretations rather than imposing positive thinking.
B. Exposure: Gradual, planned approach to feared situations or cues to support new learning, with appropriate assessment and consent. / Skills rehearsal: Practicing a targeted behavior in session, often with modeling, feedback, and repetition.
C. Exposure: A CBT stance in which client and therapist jointly test ideas against evidence and experience. / Skills rehearsal: Practicing a targeted behavior in session, often with modeling, feedback, and repetition.
D. Exposure: Practicing a targeted behavior in session, often with modeling, feedback, and repetition. / Skills rehearsal: Gradual, planned approach to feared situations or cues to support new learning, with appropriate assessment and consent.

0154. During service review in the behavior-support review, a service navigator describes using drawings or concrete examples when abstract cognitive language is not yet accessible. for a child aged 8. Which course idea is most applicable?

A. Behavioral activation
B. Exposure
C. Cognitive triangle
D. Developmental adaptation in CBT

0155. Which option correctly matches each concept to its practice focus: Cognitive restructuring and Thought record?

A. Cognitive restructuring: Examining evidence and generating a realistic alternative thought with the child. / Thought record: Using a child-friendly record to examine what happened and what the child thought at that moment.
B. Cognitive restructuring: Treating a belief as a testable hypothesis and reviewing what the child observes. / Thought record: Using a child-friendly record to examine what happened and what the child thought at that moment.
C. Cognitive restructuring: Using a child-friendly record to examine what happened and what the child thought at that moment. / Thought record: Examining evidence and generating a realistic alternative thought with the child.
D. Cognitive restructuring: Examining evidence and generating a realistic alternative thought with the child. / Thought record: Using drawings or concrete examples when abstract cognitive language is not yet accessible.

0156. Which option is the clearest practical expression of Collaborative empiricism?

A. Using a child-friendly record to examine what happened and what the child thought at that moment.
B. Using drawings or concrete examples when abstract cognitive language is not yet accessible.
C. Helping a child map how a thought, feeling, and action relate in a particular situation.
D. Treating a belief as a testable hypothesis and reviewing what the child observes.

0157. Which option correctly matches each concept to its practice focus: Cognitive triangle and Coping self-talk?

A. Cognitive triangle: Helping a child map how a thought, feeling, and action relate in a particular situation. / Coping self-talk: Examining evidence and generating a realistic alternative thought with the child.
B. Cognitive triangle: Rehearsing a believable coping phrase a child can use during a challenging moment. / Coping self-talk: Helping a child map how a thought, feeling, and action relate in a particular situation.
C. Cognitive triangle: Helping a child map how a thought, feeling, and action relate in a particular situation. / Coping self-talk: Rehearsing a believable coping phrase a child can use during a challenging moment.
D. Cognitive triangle: Using a child-friendly record to examine what happened and what the child thought at that moment. / Coping self-talk: Rehearsing a believable coping phrase a child can use during a challenging moment.

0158. Which comparison would correct a trainee’s misunderstanding of Exposure versus Thought record?

A. Exposure: Practice of helpful, realistic statements that support coping and task engagement. / Thought record: A structured aid for noticing a situation, automatic thought, emotion, evidence, and alternative perspective.
B. Exposure: Gradual, planned approach to feared situations or cues to support new learning, with appropriate assessment and consent. / Thought record: Adjusting CBT language, materials, pacing, and caregiver involvement to the child’s developmental capacity.
C. Exposure: A structured aid for noticing a situation, automatic thought, emotion, evidence, and alternative perspective. / Thought record: Gradual, planned approach to feared situations or cues to support new learning, with appropriate assessment and consent.
D. Exposure: Gradual, planned approach to feared situations or cues to support new learning, with appropriate assessment and consent. / Thought record: A structured aid for noticing a situation, automatic thought, emotion, evidence, and alternative perspective.

0159. A consultant is supporting a middle-school student in the youth group. The key practice is scheduling a manageable valued activity and reviewing its effect on mood and functioning. Which course concept is most relevant?

A. Behavioral activation
B. Skills rehearsal
C. Exposure
D. Coping self-talk

0160. Which course concept is defined as follows: A teaching model linking thoughts, feelings, and behaviors as mutually influential components of experience.

A. Cognitive restructuring
B. Relapse prevention
C. Collaborative empiricism
D. Cognitive triangle

0161. How should a practitioner distinguish the applications of Cognitive triangle and Behavioral activation?

A. Cognitive triangle: Scheduling a manageable valued activity and reviewing its effect on mood and functioning. / Behavioral activation: Helping a child map how a thought, feeling, and action relate in a particular situation.
B. Cognitive triangle: Identifying likely setbacks and rehearsing which coping steps the child can use. / Behavioral activation: Scheduling a manageable valued activity and reviewing its effect on mood and functioning.
C. Cognitive triangle: Helping a child map how a thought, feeling, and action relate in a particular situation. / Behavioral activation: Using drawings or concrete examples when abstract cognitive language is not yet accessible.
D. Cognitive triangle: Helping a child map how a thought, feeling, and action relate in a particular situation. / Behavioral activation: Scheduling a manageable valued activity and reviewing its effect on mood and functioning.

0162. A team must select a support approach for a child aged 14 at the school-based service. The caregiver working with a counselor recommends using a child-friendly record to examine what happened and what the child thought at that moment. Which idea is most relevant?

A. Thought record
B. Collaborative empiricism
C. Skills rehearsal
D. Behavioral activation

0163. A case conference asks for a distinction between Exposure and Thought record. Which answer is sound?

A. Exposure: Practice of helpful, realistic statements that support coping and task engagement. / Thought record: A structured aid for noticing a situation, automatic thought, emotion, evidence, and alternative perspective.
B. Exposure: Gradual, planned approach to feared situations or cues to support new learning, with appropriate assessment and consent. / Thought record: A structured aid for noticing a situation, automatic thought, emotion, evidence, and alternative perspective.
C. Exposure: Gradual, planned approach to feared situations or cues to support new learning, with appropriate assessment and consent. / Thought record: Adjusting CBT language, materials, pacing, and caregiver involvement to the child's developmental capacity.
D. Exposure: A structured aid for noticing a situation, automatic thought, emotion, evidence, and alternative perspective. / Thought record: Gradual, planned approach to feared situations or cues to support new learning, with appropriate assessment and consent.

0164. In the community mental-health service, a consulting counselor describes the most appropriate support for a young person aged 18 as treating a belief as a testable hypothesis and reviewing what the child observes. Which framework is being applied?

A. Behavioral activation
B. Coping self-talk
C. Cognitive restructuring
D. Collaborative empiricism

0165. Choose the response that best puts Coping self-talk into practice.

A. Identifying likely setbacks and rehearsing which coping steps the child can use.
B. Helping a child map how a thought, feeling, and action relate in a particular situation.
C. Role-playing an assertive request and providing supportive, specific feedback.
D. Rehearsing a believable coping phrase a child can use during a challenging moment.

0166. Which pair of actions illustrates Cognitive restructuring and Behavioral activation, respectively?

A. Cognitive restructuring: Examining evidence and generating a realistic alternative thought with the child. / Behavioral activation: Using drawings or concrete examples when abstract cognitive language is not yet accessible.
B. Cognitive restructuring: Scheduling a manageable valued activity and reviewing its effect on mood and functioning. / Behavioral activation: Examining evidence and generating a realistic alternative thought with the child.
C. Cognitive restructuring: Examining evidence and generating a realistic alternative thought with the child. / Behavioral activation: Scheduling a manageable valued activity and reviewing its effect on mood and functioning.
D. Cognitive restructuring: Role-playing an assertive request and providing supportive, specific feedback. / Behavioral activation: Scheduling a manageable valued activity and reviewing its effect on mood and functioning.

0167. For a child aged 7 seen in the family session, the therapist recommends a plan built around using drawings or concrete examples when abstract cognitive language is not yet accessible. Which concept is reflected?

A. Thought record
B. Relapse prevention
C. Developmental adaptation in CBT
D. Exposure

0168. In child-focused CBT, at a case-planning meeting, the behavior specialist proposes identifying likely setbacks and rehearsing which coping steps the child can use. for a young adolescent client seen in the outpatient clinic. Which concept does this illustrate?

A. Relapse prevention
B. Cognitive restructuring
C. Developmental adaptation in CBT
D. Skills rehearsal

0169. Choose the definition pair that correctly explains Cognitive triangle first and Exposure second.

A. Cognitive triangle: A teaching model linking thoughts, feelings, and behaviors as mutually influential components of experience. / Exposure: Collaboratively evaluating and developing more balanced or useful interpretations rather than imposing positive thinking.
B. Cognitive triangle: Gradual, planned approach to feared situations or cues to support new learning, with appropriate assessment and consent. / Exposure: A teaching model linking thoughts, feelings, and behaviors as mutually influential components of experience.
C. Cognitive triangle: A teaching model linking thoughts, feelings, and behaviors as mutually influential components of experience. / Exposure: Gradual, planned approach to feared situations or cues to support new learning, with appropriate assessment and consent.
D. Cognitive triangle: Planning for future triggers, early warning signs, and continued use of skills after improvement. / Exposure: Gradual, planned approach to feared situations or cues to support new learning, with appropriate assessment and consent.

0170. Which named construct is captured by this account? Practice of helpful, realistic statements that support coping and task engagement.

A. Behavioral activation
B. Coping self-talk
C. Developmental adaptation in CBT
D. Cognitive restructuring

0171. A case conference reviews a community practitioner's work with a preadolescent child in the school consultation: rehearsing a believable coping phrase a child can use during a challenging moment. Which principle is central?

A. Cognitive triangle
B. Exposure
C. Thought record
D. Coping self-talk

0172. Which option preserves the correct meaning of both Coping self-talk and Developmental adaptation in CBT?

A. Coping self-talk: Adjusting CBT language, materials, pacing, and caregiver involvement to the child's developmental capacity. / Developmental adaptation in CBT: Practice of helpful, realistic statements that support coping and task engagement.
B. Coping self-talk: A teaching model linking thoughts, feelings, and behaviors as mutually influential components of experience. / Developmental adaptation in CBT: Adjusting CBT language, materials, pacing, and caregiver involvement to the child's developmental capacity.
C. Coping self-talk: Practice of helpful, realistic statements that support coping and task engagement. / Developmental adaptation in CBT: Practicing a targeted behavior in session, often with modeling, feedback, and repetition.
D. Coping self-talk: Practice of helpful, realistic statements that support coping and task engagement. / Developmental adaptation in CBT: Adjusting CBT language, materials, pacing, and caregiver involvement to the child's developmental capacity.

0173. A trainee must distinguish how Thought record and Developmental adaptation in CBT guide practice. Which comparison is accurate?

A. Thought record: Identifying likely setbacks and rehearsing which coping steps the child can use. / Developmental adaptation in CBT: Using drawings or concrete examples when abstract cognitive language is not yet accessible.
B. Thought record: Using a child-friendly record to examine what happened and what the child thought at that moment. / Developmental adaptation in CBT: Using drawings or concrete examples when abstract cognitive language is not yet accessible.
C. Thought record: Using drawings or concrete examples when abstract cognitive language is not yet accessible. / Developmental adaptation in CBT: Using a child-friendly record to examine what happened and what the child thought at that moment.
D. Thought record: Using a child-friendly record to examine what happened and what the child thought at that moment. / Developmental adaptation in CBT: Role-playing an assertive request and providing supportive, specific feedback.

0174. A member of a clinical team and a client in late adolescence are discussing support in the family session. The selected practice is using a child-friendly record to examine what happened and what the child thought at that moment. Which concept does this demonstrate?

A. Relapse prevention
B. Exposure
C. Thought record
D. Skills rehearsal

0175. A supervisor asks for an applied contrast between Thought record and Coping self-talk. Which option fits?

A. Thought record: Using a child-friendly record to examine what happened and what the child thought at that moment. / Coping self-talk: Rehearsing a believable coping phrase a child can use during a challenging moment.
B. Thought record: Rehearsing a believable coping phrase a child can use during a challenging moment. / Coping self-talk: Using a child-friendly record to examine what happened and what the child thought at that moment.
C. Thought record: Helping a child map how a thought, feeling, and action relate in a particular situation. / Coping self-talk: Rehearsing a believable coping phrase a child can use during a challenging moment.
D. Thought record: Using a child-friendly record to examine what happened and what the child thought at that moment. / Coping self-talk: Identifying likely setbacks and rehearsing which coping steps the child can use.

0176. In child-focused CBT, a trainee must distinguish how Collaborative empiricism and Relapse prevention guide practice. Which comparison is accurate?

A. Collaborative empiricism: Treating a belief as a testable hypothesis and reviewing what the child observes. / Relapse prevention: Helping a child map how a thought, feeling, and action relate in a particular situation.
B. Collaborative empiricism: Identifying likely setbacks and rehearsing which coping steps the child can use. / Relapse prevention: Treating a belief as a testable hypothesis and reviewing what the child observes.
C. Collaborative empiricism: Treating a belief as a testable hypothesis and reviewing what the child observes. / Relapse prevention: Identifying likely setbacks and rehearsing which coping steps the child can use.
D. Collaborative empiricism: Scheduling a manageable valued activity and reviewing its effect on mood and functioning. / Relapse prevention: Identifying likely setbacks and rehearsing which coping steps the child can use.

0177. Which paired example correctly applies Exposure first and Thought record second?

A. Exposure: Building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation. / Thought record: Using drawings or concrete examples when abstract cognitive language is not yet accessible.
B. Exposure: Rehearsing a believable coping phrase a child can use during a challenging moment. / Thought record: Using a child-friendly record to examine what happened and what the child thought at that moment.
C. Exposure: Building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation. / Thought record: Using a child-friendly record to examine what happened and what the child thought at that moment.
D. Exposure: Using a child-friendly record to examine what happened and what the child thought at that moment. / Thought record: Building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation.

0178. A service team discusses a client in late adolescence in the youth advocacy program. Their proposed next step is rehearsing a believable coping phrase a child can use during a challenging moment. Which course concept supports it?

A. Coping self-talk
B. Developmental adaptation in CBT
C. Thought record
D. Collaborative empiricism

0179. Which choice aligns each practice with the correct idea, Skills rehearsal or Collaborative empiricism?

A. Skills rehearsal: Role-playing an assertive request and providing supportive, specific feedback. / Collaborative empiricism: Treating a belief as a testable hypothesis and reviewing what the child observes.
B. Skills rehearsal: Treating a belief as a testable hypothesis and reviewing what the child observes. / Collaborative empiricism: Role-playing an assertive request and providing supportive, specific feedback.
C. Skills rehearsal: Role-playing an assertive request and providing supportive, specific feedback. / Collaborative empiricism: Scheduling a manageable valued activity and reviewing its effect on mood and functioning.
D. Skills rehearsal: Helping a child map how a thought, feeling, and action relate in a particular situation. / Collaborative empiricism: Treating a belief as a testable hypothesis and reviewing what the child observes.

0180. A play therapist is asked to evaluate a proposed service for a young person aged 13 in the telehealth session. The defining feature is helping a child map how a thought, feeling, and action relate in a particular situation. Which concept fits?

A. Exposure
B. Relapse prevention
C. Cognitive triangle
D. Behavioral activation

0181. In child-focused CBT, in a supervision review, a parent educator describes work with a teenage client in the classroom support meeting: identifying likely setbacks and rehearsing which coping steps the child can use. What concept is illustrated?

A. Coping self-talk
B. Relapse prevention
C. Collaborative empiricism
D. Exposure

0182. A consultant prepares for a session in the supervision meeting with a client in early adolescence. The intended approach is examining evidence and generating a realistic alternative thought with the child. Which concept is most relevant?

A. Coping self-talk
B. Cognitive restructuring
C. Collaborative empiricism
D. Behavioral activation

0183. In a supervision quiz, how should Cognitive restructuring be distinguished from Behavioral activation?

A. Cognitive restructuring: Planned engagement in meaningful or rewarding activities to increase contact with positive reinforcement. / Behavioral activation: Collaboratively evaluating and developing more balanced or useful interpretations rather than imposing positive thinking.
B. Cognitive restructuring: Collaboratively evaluating and developing more balanced or useful interpretations rather than imposing positive thinking. / Behavioral activation: Adjusting CBT language, materials, pacing, and caregiver involvement to the child's developmental capacity.
C. Cognitive restructuring: Collaboratively evaluating and developing more balanced or useful interpretations rather than imposing positive thinking. / Behavioral activation: Planned engagement in meaningful or rewarding activities to increase contact with positive reinforcement.
D. Cognitive restructuring: Practicing a targeted behavior in session, often with modeling, feedback, and repetition. / Behavioral activation: Planned engagement in meaningful or rewarding activities to increase contact with positive reinforcement.

0184. In child-focused CBT, which comparison correctly distinguishes Coping self-talk from Relapse prevention?

A. Coping self-talk: Practice of helpful, realistic statements that support coping and task engagement. / Relapse prevention: A structured aid for noticing a situation, automatic thought, emotion, evidence, and alternative perspective.
B. Coping self-talk: Planning for future triggers, early warning signs, and continued use of skills after improvement. / Relapse prevention: Practice of helpful, realistic statements that support coping and task engagement.
C. Coping self-talk: Practicing a targeted behavior in session, often with modeling, feedback, and repetition. / Relapse prevention: Planning for future triggers, early warning signs, and continued use of skills after improvement.
D. Coping self-talk: Practice of helpful, realistic statements that support coping and task engagement. / Relapse prevention: Planning for future triggers, early warning signs, and continued use of skills after improvement.

0185. Which paired example correctly applies Exposure first and Coping self-talk second?

A. Exposure: Building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation. / Coping self-talk: Scheduling a manageable valued activity and reviewing its effect on mood and functioning.
B. Exposure: Building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation. / Coping self-talk: Rehearsing a believable coping phrase a child can use during a challenging moment.
C. Exposure: Rehearsing a believable coping phrase a child can use during a challenging moment. / Coping self-talk: Building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation.
D. Exposure: Helping a child map how a thought, feeling, and action relate in a particular situation. / Coping self-talk: Rehearsing a believable coping phrase a child can use during a challenging moment.

0186. In child-focused CBT, a case conference asks for a distinction between Developmental adaptation in CBT and Relapse prevention. Which answer is sound?

A. Developmental adaptation in CBT: Adjusting CBT language, materials, pacing, and caregiver involvement to the child's developmental capacity. / Relapse prevention: Planning for future triggers, early warning signs, and continued use of skills after improvement.
B. Developmental adaptation in CBT: Planning for future triggers, early warning signs, and continued use of skills after improvement. / Relapse prevention: Adjusting CBT language, materials, pacing, and caregiver involvement to the child's developmental capacity.
C. Developmental adaptation in CBT: Adjusting CBT language, materials, pacing, and caregiver involvement to the child's developmental capacity. / Relapse prevention: A structured aid for noticing a situation, automatic thought, emotion, evidence, and alternative perspective.
D. Developmental adaptation in CBT: A CBT stance in which client and therapist jointly test ideas against evidence and experience. / Relapse prevention: Planning for future triggers, early warning signs, and continued use of skills after improvement.

0187. Choose the practice comparison that best separates Coping self-talk from Collaborative empiricism.

A. Coping self-talk: Building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation. / Collaborative empiricism: Treating a belief as a testable hypothesis and reviewing what the child observes.
B. Coping self-talk: Rehearsing a believable coping phrase a child can use during a challenging moment. / Collaborative empiricism: Scheduling a manageable valued activity and reviewing its effect on mood and functioning.
C. Coping self-talk: Treating a belief as a testable hypothesis and reviewing what the child observes. / Collaborative empiricism: Rehearsing a believable coping phrase a child can use during a challenging moment.
D. Coping self-talk: Rehearsing a believable coping phrase a child can use during a challenging moment. / Collaborative empiricism: Treating a belief as a testable hypothesis and reviewing what the child observes.

0188. In child-focused CBT, choose the definition pair that correctly explains Collaborative empiricism first and Relapse prevention second.

A. Collaborative empiricism: A CBT stance in which client and therapist jointly test ideas against evidence and experience. / Relapse prevention: Planning for future triggers, early warning signs, and continued use of skills after improvement.
B. Collaborative empiricism: A CBT stance in which client and therapist jointly test ideas against evidence and experience. / Relapse prevention: A teaching model linking thoughts, feelings, and behaviors as mutually influential components of experience.
C. Collaborative empiricism: Planned engagement in meaningful or rewarding activities to increase contact with positive reinforcement. / Relapse prevention: Planning for future triggers, early warning signs, and continued use of skills after improvement.
D. Collaborative empiricism: Planning for future triggers, early warning signs, and continued use of skills after improvement. / Relapse prevention: A CBT stance in which client and therapist jointly test ideas against evidence and experience.

0189. In the telehealth session, a group facilitator describes the most appropriate support for a student aged 12 as role-playing an assertive request and providing supportive, specific feedback. Which framework is being applied?

A. Relapse prevention
B. Thought record
C. Skills rehearsal
D. Coping self-talk

0190. While consulting in the student-support meeting, a member of a clinical team supports a child aged 14 by using this approach: helping a child map how a thought, feeling, and action relate in a particular situation. Which concept is being applied?

A. Skills rehearsal
B. Exposure
C. Cognitive restructuring
D. Cognitive triangle

0191. Which option correctly matches each concept to its practice focus: Cognitive restructuring and Skills rehearsal?

A. Cognitive restructuring: Examining evidence and generating a realistic alternative thought with the child. / Skills rehearsal: Role-playing an assertive request and providing supportive, specific feedback.
B. Cognitive restructuring: Examining evidence and generating a realistic alternative thought with the child. / Skills rehearsal: Treating a belief as a testable hypothesis and reviewing what the child observes.
C. Cognitive restructuring: Scheduling a manageable valued activity and reviewing its effect on mood and functioning. / Skills rehearsal: Role-playing an assertive request and providing supportive, specific feedback.
D. Cognitive restructuring: Role-playing an assertive request and providing supportive, specific feedback. / Skills rehearsal: Examining evidence and generating a realistic alternative thought with the child.

0192. Which paired example correctly applies Coping self-talk first and Skills rehearsal second?

A. Coping self-talk: Rehearsing a believable coping phrase a child can use during a challenging moment. / Skills rehearsal: Treating a belief as a testable hypothesis and reviewing what the child observes.
B. Coping self-talk: Rehearsing a believable coping phrase a child can use during a challenging moment. / Skills rehearsal: Role-playing an assertive request and providing supportive, specific feedback.
C. Coping self-talk: Role-playing an assertive request and providing supportive, specific feedback. / Skills rehearsal: Rehearsing a believable coping phrase a child can use during a challenging moment.
D. Coping self-talk: Examining evidence and generating a realistic alternative thought with the child. / Skills rehearsal: Role-playing an assertive request and providing supportive, specific feedback.

0193. A child aged 11 is receiving support in the family resource center. The youth worker is guided by this practice: building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation. Which principle best fits?

A. Cognitive triangle
B. Thought record
C. Exposure
D. Collaborative empiricism

0194. A supervised trainee is preparing a follow-up plan for a older adolescent client in the parent meeting. The plan calls for using a child-friendly record to examine what happened and what the child thought at that moment. Which concept names this approach?

A. Thought record
B. Coping self-talk
C. Developmental adaptation in CBT
D. Exposure

0195. A trainee must explain Developmental adaptation in CBT. Which answer is accurate?

A. Adjusting CBT language, materials, pacing, and caregiver involvement to the child's developmental capacity.
B. A CBT stance in which client and therapist jointly test ideas against evidence and experience.
C. Gradual, planned approach to feared situations or cues to support new learning, with appropriate assessment and consent.
D. A structured aid for noticing a situation, automatic thought, emotion, evidence, and alternative perspective.

0196. Which description belongs with the term Skills rehearsal?

A. Collaboratively evaluating and developing more balanced or useful interpretations rather than imposing positive thinking.
B. A teaching model linking thoughts, feelings, and behaviors as mutually influential components of experience.
C. A CBT stance in which client and therapist jointly test ideas against evidence and experience.
D. Practicing a targeted behavior in session, often with modeling, feedback, and repetition.

0197. Which statement shows a sound practice-level distinction between Cognitive restructuring and Behavioral activation?

A. Cognitive restructuring: Examining evidence and generating a realistic alternative thought with the child. / Behavioral activation: Using drawings or concrete examples when abstract cognitive language is not yet accessible.
B. Cognitive restructuring: Scheduling a manageable valued activity and reviewing its effect on mood and functioning. / Behavioral activation: Examining evidence and generating a realistic alternative thought with the child.
C. Cognitive restructuring: Role-playing an assertive request and providing supportive, specific feedback. / Behavioral activation: Scheduling a manageable valued activity and reviewing its effect on mood and functioning.
D. Cognitive restructuring: Examining evidence and generating a realistic alternative thought with the child. / Behavioral activation: Scheduling a manageable valued activity and reviewing its effect on mood and functioning.

0198. A case conference reviews a therapist's work with a young adolescent client in the classroom support meeting: treating a belief as a testable hypothesis and reviewing what the child observes. Which principle is central?

A. Developmental adaptation in CBT
B. Skills rehearsal
C. Collaborative empiricism
D. Behavioral activation

0199. During service review in the student wellness team, a program coordinator describes helping a child map how a thought, feeling, and action relate in a particular situation. for a client in late adolescence. Which course idea is most applicable?

A. Behavioral activation
B. Exposure
C. Cognitive restructuring
D. Cognitive triangle

0200. Consider a student aged 9 receiving help in the behavior-support review. The consulting counselor focuses on scheduling a manageable valued activity and reviewing its effect on mood and functioning. Which term best describes the guiding idea?

A. Developmental adaptation in CBT
B. Cognitive restructuring
C. Relapse prevention
D. Behavioral activation

0201. A young adolescent client's service team meets in the after-school program. The case coordinator recommends a change involving helping a child map how a thought, feeling, and action relate in a particular situation. Which idea best explains it?

A. Coping self-talk
B. Relapse prevention
C. Collaborative empiricism
D. Cognitive triangle

0202. Identify the most precise label for this idea: Adjusting CBT language, materials, pacing, and caregiver involvement to the child's developmental capacity.

A. Relapse prevention
B. Developmental adaptation in CBT
C. Cognitive triangle
D. Thought record

0203. Select the best explanation of Developmental adaptation in CBT.

A. A teaching model linking thoughts, feelings, and behaviors as mutually influential components of experience.
B. Adjusting CBT language, materials, pacing, and caregiver involvement to the child's developmental capacity.
C. Collaboratively evaluating and developing more balanced or useful interpretations rather than imposing positive thinking.
D. Gradual, planned approach to feared situations or cues to support new learning, with appropriate assessment and consent.

0204. A counselor is asked to evaluate a proposed service for a client in late adolescence in the child guidance clinic. The defining feature is scheduling a manageable valued activity and reviewing its effect on mood and functioning. Which concept fits?

A. Developmental adaptation in CBT
B. Behavioral activation
C. Skills rehearsal
D. Collaborative empiricism

0205. Which statement shows a sound practice-level distinction between Behavioral activation and Coping self-talk?

A. Behavioral activation: Examining evidence and generating a realistic alternative thought with the child. / Coping self-talk: Rehearsing a believable coping phrase a child can use during a challenging moment.
B. Behavioral activation: Scheduling a manageable valued activity and reviewing its effect on mood and functioning. / Coping self-talk: Identifying likely setbacks and rehearsing which coping steps the child can use.
C. Behavioral activation: Rehearsing a believable coping phrase a child can use during a challenging moment. / Coping self-talk: Scheduling a manageable valued activity and reviewing its effect on mood and functioning.
D. Behavioral activation: Scheduling a manageable valued activity and reviewing its effect on mood and functioning. / Coping self-talk: Rehearsing a believable coping phrase a child can use during a challenging moment.

0206. Choose the definition pair that correctly explains Exposure first and Thought record second.

A. Exposure: Gradual, planned approach to feared situations or cues to support new learning, with appropriate assessment and consent. / Thought record: A structured aid for noticing a situation, automatic thought, emotion, evidence, and alternative perspective.
B. Exposure: Practice of helpful, realistic statements that support coping and task engagement. / Thought record: A structured aid for noticing a situation, automatic thought, emotion, evidence, and alternative perspective.
C. Exposure: Gradual, planned approach to feared situations or cues to support new learning, with appropriate assessment and consent. / Thought record: Adjusting CBT language, materials, pacing, and caregiver involvement to the child's developmental capacity.
D. Exposure: A structured aid for noticing a situation, automatic thought, emotion, evidence, and alternative perspective. / Thought record: Gradual, planned approach to feared situations or cues to support new learning, with appropriate assessment and consent.

0207. In a supervision review, a school-based clinician describes work with a client in early adolescence in the parent meeting: rehearsing a believable coping phrase a child can use during a challenging moment. What concept is illustrated?

A. Coping self-talk
B. Skills rehearsal
C. Developmental adaptation in CBT
D. Cognitive triangle

0208. Which statement accurately contrasts the course concepts Cognitive triangle and Thought record?

A. Cognitive triangle: A teaching model linking thoughts, feelings, and behaviors as mutually influential components of experience. / Thought record: Collaboratively evaluating and developing more balanced or useful interpretations rather than imposing positive thinking.
B. Cognitive triangle: Practicing a targeted behavior in session, often with modeling, feedback, and repetition. / Thought record: A structured aid for noticing a situation, automatic thought, emotion, evidence, and alternative perspective.
C. Cognitive triangle: A teaching model linking thoughts, feelings, and behaviors as mutually influential components of experience. / Thought record: A structured aid for noticing a situation, automatic thought, emotion, evidence, and alternative perspective.
D. Cognitive triangle: A structured aid for noticing a situation, automatic thought, emotion, evidence, and alternative perspective. / Thought record: A teaching model linking thoughts, feelings, and behaviors as mutually influential components of experience.

0209. When reviewing a young person aged 16's plan in the community mental-health service, the school-based clinician notes that the next step is helping a child map how a thought, feeling, and action relate in a particular situation. Which concept guides this step?

A. Cognitive triangle
B. Developmental adaptation in CBT
C. Cognitive restructuring
D. Exposure

0210. A case discussion concerns a young adolescent client and a family therapist in the behavior-support review. The practitioner is considering rehearsing a believable coping phrase a child can use during a challenging moment. Which principle is involved?

A. Cognitive restructuring
B. Exposure
C. Coping self-talk
D. Developmental adaptation in CBT

0211. Which option is the clearest practical expression of Coping self-talk?

A. Treating a belief as a testable hypothesis and reviewing what the child observes.
B. Rehearsing a believable coping phrase a child can use during a challenging moment.
C. Helping a child map how a thought, feeling, and action relate in a particular situation.
D. Scheduling a manageable valued activity and reviewing its effect on mood and functioning.

0212. A case conference asks for a distinction between Coping self-talk and Collaborative empiricism. Which answer is sound?

A. Coping self-talk: Practice of helpful, realistic statements that support coping and task engagement. / Collaborative empiricism: A CBT stance in which client and therapist jointly test ideas against evidence and experience.
B. Coping self-talk: Gradual, planned approach to feared situations or cues to support new learning, with appropriate assessment and consent. / Collaborative empiricism: A CBT stance in which client and therapist jointly test ideas against evidence and experience.
C. Coping self-talk: A CBT stance in which client and therapist jointly test ideas against evidence and experience. / Collaborative empiricism: Practice of helpful, realistic statements that support coping and task engagement.
D. Coping self-talk: Practice of helpful, realistic statements that support coping and task engagement. / Collaborative empiricism: Planned engagement in meaningful or rewarding activities to increase contact with positive reinforcement.

0213. A supervisor asks for an applied contrast between Cognitive restructuring and Behavioral activation. Which option fits?

A. Cognitive restructuring: Scheduling a manageable valued activity and reviewing its effect on mood and functioning. / Behavioral activation: Examining evidence and generating a realistic alternative thought with the child.
B. Cognitive restructuring: Examining evidence and generating a realistic alternative thought with the child. / Behavioral activation: Scheduling a manageable valued activity and reviewing its effect on mood and functioning.
C. Cognitive restructuring: Examining evidence and generating a realistic alternative thought with the child. / Behavioral activation: Using drawings or concrete examples when abstract cognitive language is not yet accessible.
D. Cognitive restructuring: Role-playing an assertive request and providing supportive, specific feedback. / Behavioral activation: Scheduling a manageable valued activity and reviewing its effect on mood and functioning.

0214. A supervisor asks how Skills rehearsal would appear in practice. Which choice should be selected?

A. Rehearsing a believable coping phrase a child can use during a challenging moment.
B. Role-playing an assertive request and providing supportive, specific feedback.
C. Scheduling a manageable valued activity and reviewing its effect on mood and functioning.
D. Helping a child map how a thought, feeling, and action relate in a particular situation.

0215. Choose the definition pair that correctly explains Cognitive triangle first and Skills rehearsal second.

A. Cognitive triangle: Practicing a targeted behavior in session, often with modeling, feedback, and repetition. / Skills rehearsal: A teaching model linking thoughts, feelings, and behaviors as mutually influential components of experience.
B. Cognitive triangle: Collaboratively evaluating and developing more balanced or useful interpretations rather than imposing positive thinking. / Skills rehearsal: Practicing a targeted behavior in session, often with modeling, feedback, and repetition.
C. Cognitive triangle: A teaching model linking thoughts, feelings, and behaviors as mutually influential components of experience. / Skills rehearsal: Practicing a targeted behavior in session, often with modeling, feedback, and repetition.
D. Cognitive triangle: A teaching model linking thoughts, feelings, and behaviors as mutually influential components of experience. / Skills rehearsal: Practice of helpful, realistic statements that support coping and task engagement.

0216. Which option is the clearest practical expression of Behavioral activation?

A. Treating a belief as a testable hypothesis and reviewing what the child observes.
B. Scheduling a manageable valued activity and reviewing its effect on mood and functioning.
C. Using a child-friendly record to examine what happened and what the child thought at that moment.
D. Role-playing an assertive request and providing supportive, specific feedback.

0217. Which comparison correctly distinguishes Skills rehearsal from Collaborative empiricism?

A. Skills rehearsal: Practicing a targeted behavior in session, often with modeling, feedback, and repetition. / Collaborative empiricism: A CBT stance in which client and therapist jointly test ideas against evidence and experience.
B. Skills rehearsal: A teaching model linking thoughts, feelings, and behaviors as mutually influential components of experience. / Collaborative empiricism: A CBT stance in which client and therapist jointly test ideas against evidence and experience.
C. Skills rehearsal: A CBT stance in which client and therapist jointly test ideas against evidence and experience. / Collaborative empiricism: Practicing a targeted behavior in session, often with modeling, feedback, and repetition.
D. Skills rehearsal: Practicing a targeted behavior in session, often with modeling, feedback, and repetition. / Collaborative empiricism: Planned engagement in meaningful or rewarding activities to increase contact with positive reinforcement.

0218. How are Cognitive triangle and Skills rehearsal most accurately differentiated in this curriculum?

A. Cognitive triangle: Collaboratively evaluating and developing more balanced or useful interpretations rather than imposing positive thinking. / Skills rehearsal: Practicing a targeted behavior in session, often with modeling, feedback, and repetition.
B. Cognitive triangle: A teaching model linking thoughts, feelings, and behaviors as mutually influential components of experience. / Skills rehearsal: Practicing a targeted behavior in session, often with modeling, feedback, and repetition.
C. Cognitive triangle: Practicing a targeted behavior in session, often with modeling, feedback, and repetition. / Skills rehearsal: A teaching model linking thoughts, feelings, and behaviors as mutually influential components of experience.
D. Cognitive triangle: A teaching model linking thoughts, feelings, and behaviors as mutually influential components of experience. / Skills rehearsal: Practice of helpful, realistic statements that support coping and task engagement.

0219. Which option preserves the correct meaning of both Behavioral activation and Exposure?

A. Behavioral activation: Planned engagement in meaningful or rewarding activities to increase contact with positive reinforcement. / Exposure: A CBT stance in which client and therapist jointly test ideas against evidence and experience.
B. Behavioral activation: Planned engagement in meaningful or rewarding activities to increase contact with positive reinforcement. / Exposure: Gradual, planned approach to feared situations or cues to support new learning, with appropriate assessment and consent.
C. Behavioral activation: A structured aid for noticing a situation, automatic thought, emotion, evidence, and alternative perspective. / Exposure: Gradual, planned approach to feared situations or cues to support new learning, with appropriate assessment and consent.
D. Behavioral activation: Gradual, planned approach to feared situations or cues to support new learning, with appropriate assessment and consent. / Exposure: Planned engagement in meaningful or rewarding activities to increase contact with positive reinforcement.

0220. When reviewing a young person's plan in the supervision meeting, the family therapist notes that the next step is scheduling a manageable valued activity and reviewing its effect on mood and functioning. Which concept guides this step?

A. Behavioral activation
B. Exposure
C. Relapse prevention
D. Cognitive restructuring

0221. A supervisor asks for an applied contrast between Behavioral activation and Exposure. Which option fits?

A. Behavioral activation: Using a child-friendly record to examine what happened and what the child thought at that moment. / Exposure: Building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation.
B. Behavioral activation: Scheduling a manageable valued activity and reviewing its effect on mood and functioning. / Exposure: Treating a belief as a testable hypothesis and reviewing what the child observes.
C. Behavioral activation: Scheduling a manageable valued activity and reviewing its effect on mood and functioning. / Exposure: Building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation.
D. Behavioral activation: Building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation. / Exposure: Scheduling a manageable valued activity and reviewing its effect on mood and functioning.

0222. Which comparison would correct a trainee's misunderstanding of Cognitive restructuring versus Developmental adaptation in CBT?

A. Cognitive restructuring: Collaboratively evaluating and developing more balanced or useful interpretations rather than imposing positive thinking. / Developmental adaptation in CBT: A structured aid for noticing a situation, automatic thought, emotion, evidence, and alternative perspective.
B. Cognitive restructuring: A CBT stance in which client and therapist jointly test ideas against evidence and experience. / Developmental adaptation in CBT: Adjusting CBT language, materials, pacing, and caregiver involvement to the child's developmental capacity.
C. Cognitive restructuring: Adjusting CBT language, materials, pacing, and caregiver involvement to the child's developmental capacity. / Developmental adaptation in CBT: Collaboratively evaluating and developing more balanced or useful interpretations rather than imposing positive thinking.
D. Cognitive restructuring: Collaboratively evaluating and developing more balanced or useful interpretations rather than imposing positive thinking. / Developmental adaptation in CBT: Adjusting CBT language, materials, pacing, and caregiver involvement to the child's developmental capacity.

0223. In a professional consultation about a student aged 17, the consultant describes this response in the behavior-support review: using a child-friendly record to examine what happened and what the child thought at that moment. Which term is most apt?

A. Coping self-talk
B. Cognitive restructuring
C. Thought record
D. Developmental adaptation in CBT

0224. Which choice aligns each practice with the correct idea, Cognitive restructuring or Coping self-talk?

A. Cognitive restructuring: Rehearsing a believable coping phrase a child can use during a challenging moment. / Coping self-talk: Examining evidence and generating a realistic alternative thought with the child.
B. Cognitive restructuring: Examining evidence and generating a realistic alternative thought with the child. / Coping self-talk: Rehearsing a believable coping phrase a child can use during a challenging moment.
C. Cognitive restructuring: Examining evidence and generating a realistic alternative thought with the child. / Coping self-talk: Building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation.
D. Cognitive restructuring: Role-playing an assertive request and providing supportive, specific feedback. / Coping self-talk: Rehearsing a believable coping phrase a child can use during a challenging moment.

0225. Which comparison correctly distinguishes Exposure from Developmental adaptation in CBT?

A. Exposure: A CBT stance in which client and therapist jointly test ideas against evidence and experience. / Developmental adaptation in CBT: Adjusting CBT language, materials, pacing, and caregiver involvement to the child's developmental capacity.
B. Exposure: Adjusting CBT language, materials, pacing, and caregiver involvement to the child's developmental capacity. / Developmental adaptation in CBT: Gradual, planned approach to feared situations or cues to support new learning, with appropriate assessment and consent.
C. Exposure: Gradual, planned approach to feared situations or cues to support new learning, with appropriate assessment and consent. / Developmental adaptation in CBT: Practicing a targeted behavior in session, often with modeling, feedback, and repetition.
D. Exposure: Gradual, planned approach to feared situations or cues to support new learning, with appropriate assessment and consent. / Developmental adaptation in CBT: Adjusting CBT language, materials, pacing, and caregiver involvement to the child's developmental capacity.

0226. Choose the definition pair that correctly explains Behavioral activation first and Developmental adaptation in CBT second.

A. Behavioral activation: Gradual, planned approach to feared situations or cues to support new learning, with appropriate assessment and consent. / Developmental adaptation in CBT: Adjusting CBT language, materials, pacing, and caregiver involvement to the child's developmental capacity.
B. Behavioral activation: Adjusting CBT language, materials, pacing, and caregiver involvement to the child's developmental capacity. / Developmental adaptation in CBT: Planned engagement in meaningful or rewarding activities to increase contact with positive reinforcement.
C. Behavioral activation: Planned engagement in meaningful or rewarding activities to increase contact with positive reinforcement. / Developmental adaptation in CBT: Adjusting CBT language, materials, pacing, and caregiver involvement to the child's developmental capacity.
D. Behavioral activation: Planned engagement in meaningful or rewarding activities to increase contact with positive reinforcement. / Developmental adaptation in CBT: Practice of helpful, realistic statements that support coping and task engagement.

0227. A school counselor is asked to justify a plan for a young person aged 18 in the family session. It calls for scheduling a manageable valued activity and reviewing its effect on mood and functioning. Which concept provides the rationale?

A. Collaborative empiricism
B. Cognitive restructuring
C. Skills rehearsal
D. Behavioral activation

0228. In child-focused CBT, a trainee must explain Relapse prevention. Which answer is accurate?

A. Adjusting CBT language, materials, pacing, and caregiver involvement to the child's developmental capacity.
B. Practicing a targeted behavior in session, often with modeling, feedback, and repetition.
C. Planning for future triggers, early warning signs, and continued use of skills after improvement.
D. Planned engagement in meaningful or rewarding activities to increase contact with positive reinforcement.

0229. A supervisor asks for an applied contrast between Coping self-talk and Collaborative empiricism. Which option fits?

A. Coping self-talk: Treating a belief as a testable hypothesis and reviewing what the child observes. / Collaborative empiricism: Rehearsing a believable coping phrase a child can use during a challenging moment.
B. Coping self-talk: Rehearsing a believable coping phrase a child can use during a challenging moment. / Collaborative empiricism: Scheduling a manageable valued activity and reviewing its effect on mood and functioning.
C. Coping self-talk: Rehearsing a believable coping phrase a child can use during a challenging moment. / Collaborative empiricism: Treating a belief as a testable hypothesis and reviewing what the child observes.
D. Coping self-talk: Building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation. / Collaborative empiricism: Treating a belief as a testable hypothesis and reviewing what the child observes.

0230. Which statement most accurately defines Developmental adaptation in CBT?

A. A structured aid for noticing a situation, automatic thought, emotion, evidence, and alternative perspective.
B. A CBT stance in which client and therapist jointly test ideas against evidence and experience.
C. Practice of helpful, realistic statements that support coping and task engagement.
D. Adjusting CBT language, materials, pacing, and caregiver involvement to the child's developmental capacity.

0231. At the youth group, a service navigator reviews whether a plan for a child aged 14 is appropriate. The relevant practice is role-playing an assertive request and providing supportive, specific feedback. Which concept is tested?

A. Collaborative empiricism
B. Behavioral activation
C. Skills rehearsal
D. Thought record

0232. Which statement shows a sound practice-level distinction between Cognitive triangle and Developmental adaptation in CBT?

A. Cognitive triangle: Helping a child map how a thought, feeling, and action relate in a particular situation. / Developmental adaptation in CBT: Using drawings or concrete examples when abstract cognitive language is not yet accessible.
B. Cognitive triangle: Using drawings or concrete examples when abstract cognitive language is not yet accessible. / Developmental adaptation in CBT: Helping a child map how a thought, feeling, and action relate in a particular situation.
C. Cognitive triangle: Examining evidence and generating a realistic alternative thought with the child. / Developmental adaptation in CBT: Using drawings or concrete examples when abstract cognitive language is not yet accessible.
D. Cognitive triangle: Helping a child map how a thought, feeling, and action relate in a particular situation. / Developmental adaptation in CBT: Treating a belief as a testable hypothesis and reviewing what the child observes.

0233. Which named construct is captured by this account? A CBT stance in which client and therapist jointly test ideas against evidence and experience.

A. Relapse prevention
B. Thought record
C. Developmental adaptation in CBT
D. Collaborative empiricism

0234. In a case note about a teenage client, a consultant working in the community service agency records this priority: helping a child map how a thought, feeling, and action relate in a particular situation. What principle is reflected?

A. Developmental adaptation in CBT
B. Exposure
C. Cognitive triangle
D. Skills rehearsal

0235. An interdisciplinary team reviews a school-age child's case at the school counseling office. The clinical supervisor recommends rehearsing a believable coping phrase a child can use during a challenging moment. Which course concept best fits?

A. Cognitive triangle
B. Thought record
C. Developmental adaptation in CBT
D. Coping self-talk

0236. Which option correctly matches each concept to its practice focus: Cognitive restructuring and Collaborative empiricism?

A. Cognitive restructuring: Examining evidence and generating a realistic alternative thought with the child. / Collaborative empiricism: Scheduling a manageable valued activity and reviewing its effect on mood and functioning.
B. Cognitive restructuring: Treating a belief as a testable hypothesis and reviewing what the child observes. / Collaborative empiricism: Examining evidence and generating a realistic alternative thought with the child.
C. Cognitive restructuring: Using drawings or concrete examples when abstract cognitive language is not yet accessible. / Collaborative empiricism: Treating a belief as a testable hypothesis and reviewing what the child observes.
D. Cognitive restructuring: Examining evidence and generating a realistic alternative thought with the child. / Collaborative empiricism: Treating a belief as a testable hypothesis and reviewing what the child observes.

0237. A assessment clinician is preparing a follow-up plan for a teenage client in the community youth program. The plan calls for rehearsing a believable coping phrase a child can use during a challenging moment. Which concept names this approach?

A. Behavioral activation
B. Developmental adaptation in CBT
C. Coping self-talk
D. Exposure

0238. Which statement most accurately defines Exposure?

A. A CBT stance in which client and therapist jointly test ideas against evidence and experience.
B. Gradual, planned approach to feared situations or cues to support new learning, with appropriate assessment and consent.
C. Planned engagement in meaningful or rewarding activities to increase contact with positive reinforcement.
D. A structured aid for noticing a situation, automatic thought, emotion, evidence, and alternative perspective.

0239. Which option pairs the definitions of Cognitive restructuring and Exposure correctly, in that order?

A. Cognitive restructuring: Collaboratively evaluating and developing more balanced or useful interpretations rather than imposing positive thinking. / Exposure: A teaching model linking thoughts, feelings, and behaviors as mutually influential components of experience.
B. Cognitive restructuring: Collaboratively evaluating and developing more balanced or useful interpretations rather than imposing positive thinking. / Exposure: Gradual, planned approach to feared situations or cues to support new learning, with appropriate assessment and consent.
C. Cognitive restructuring: A structured aid for noticing a situation, automatic thought, emotion, evidence, and alternative perspective. / Exposure: Gradual, planned approach to feared situations or cues to support new learning, with appropriate assessment and consent.
D. Cognitive restructuring: Gradual, planned approach to feared situations or cues to support new learning, with appropriate assessment and consent. / Exposure: Collaboratively evaluating and developing more balanced or useful interpretations rather than imposing positive thinking.

0240. A behavior specialist reviews a plan for a child aged 6 in the community mental-health service. The plan emphasizes examining evidence and generating a realistic alternative thought with the child. Which course idea does this reflect?

A. Collaborative empiricism
B. Cognitive triangle
C. Cognitive restructuring
D. Skills rehearsal

0241. In the outpatient clinic, a teacher and counselor explains why a young person aged 10 would benefit from helping a child map how a thought, feeling, and action relate in a particular situation. Which course concept underpins the explanation?

A. Relapse prevention
B. Cognitive triangle
C. Thought record
D. Exposure

0242. In child-focused CBT, select the best explanation of Relapse prevention.

A. Collaboratively evaluating and developing more balanced or useful interpretations rather than imposing positive thinking.
B. Planning for future triggers, early warning signs, and continued use of skills after improvement.
C. Planned engagement in meaningful or rewarding activities to increase contact with positive reinforcement.
D. Gradual, planned approach to feared situations or cues to support new learning, with appropriate assessment and consent.

0243. An interdisciplinary team reviews a child aged 7's case at the classroom support meeting. The clinical supervisor recommends helping a child map how a thought, feeling, and action relate in a particular situation. Which course concept best fits?

A. Cognitive triangle
B. Coping self-talk
C. Behavioral activation
D. Relapse prevention

0244. Choose the term that matches this definition: A structured aid for noticing a situation, automatic thought, emotion, evidence, and alternative perspective.

A. Skills rehearsal
B. Thought record
C. Behavioral activation
D. Cognitive restructuring

0245. How are Skills rehearsal and Collaborative empiricism most accurately differentiated in this curriculum?

A. Skills rehearsal: Practicing a targeted behavior in session, often with modeling, feedback, and repetition. / Collaborative empiricism: Planned engagement in meaningful or rewarding activities to increase contact with positive reinforcement.
B. Skills rehearsal: Practicing a targeted behavior in session, often with modeling, feedback, and repetition. / Collaborative empiricism: A CBT stance in which client and therapist jointly test ideas against evidence and experience.
C. Skills rehearsal: A CBT stance in which client and therapist jointly test ideas against evidence and experience. / Collaborative empiricism: Practicing a targeted behavior in session, often with modeling, feedback, and repetition.
D. Skills rehearsal: A teaching model linking thoughts, feelings, and behaviors as mutually influential components of experience. / Collaborative empiricism: A CBT stance in which client and therapist jointly test ideas against evidence and experience.

0246. At the school consultation, a community practitioner reviews whether a plan for a preadolescent child is appropriate. The relevant practice is rehearsing a believable coping phrase a child can use during a challenging moment. Which concept is tested?

A. Coping self-talk
B. Skills rehearsal
C. Thought record
D. Collaborative empiricism

0247. Which pair of actions illustrates Thought record and Skills rehearsal, respectively?

A. Thought record: Using a child-friendly record to examine what happened and what the child thought at that moment. / Skills rehearsal: Role-playing an assertive request and providing supportive, specific feedback.
B. Thought record: Using a child-friendly record to examine what happened and what the child thought at that moment. / Skills rehearsal: Using drawings or concrete examples when abstract cognitive language is not yet accessible.
C. Thought record: Role-playing an assertive request and providing supportive, specific feedback. / Skills rehearsal: Using a child-friendly record to examine what happened and what the child thought at that moment.
D. Thought record: Rehearsing a believable coping phrase a child can use during a challenging moment. / Skills rehearsal: Role-playing an assertive request and providing supportive, specific feedback.

0248. In the after-school program, the agreed focus for a therapist working with a child aged 8 is building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation. Which concept names this focus?

A. Exposure
B. Thought record
C. Relapse prevention
D. Developmental adaptation in CBT

0249. In child-focused CBT, a case conference asks for a distinction between Behavioral activation and Relapse prevention. Which answer is sound?

A. Behavioral activation: Planned engagement in meaningful or rewarding activities to increase contact with positive reinforcement. / Relapse prevention: Gradual, planned approach to feared situations or cues to support new learning, with appropriate assessment and consent.
B. Behavioral activation: A teaching model linking thoughts, feelings, and behaviors as mutually influential components of experience. / Relapse prevention: Planning for future triggers, early warning signs, and continued use of skills after improvement.
C. Behavioral activation: Planned engagement in meaningful or rewarding activities to increase contact with positive reinforcement. / Relapse prevention: Planning for future triggers, early warning signs, and continued use of skills after improvement.
D. Behavioral activation: Planning for future triggers, early warning signs, and continued use of skills after improvement. / Relapse prevention: Planned engagement in meaningful or rewarding activities to increase contact with positive reinforcement.

0250. During service review in the multidisciplinary case conference, a research trainee describes role-playing an assertive request and providing supportive, specific feedback. for a young person aged 18. Which course idea is most applicable?

A. Skills rehearsal
B. Coping self-talk
C. Cognitive restructuring
D. Collaborative empiricism

0251. In a professional consultation about a adolescent student, the mental-health professional describes this response in the youth advocacy program: role-playing an assertive request and providing supportive, specific feedback. Which term is most apt?

A. Skills rehearsal
B. Exposure
C. Thought record
D. Cognitive triangle

0252. In child-focused CBT, which statement shows a sound practice-level distinction between Exposure and Relapse prevention?

A. Exposure: Using a child-friendly record to examine what happened and what the child thought at that moment. / Relapse prevention: Identifying likely setbacks and rehearsing which coping steps the child can use.
B. Exposure: Identifying likely setbacks and rehearsing which coping steps the child can use. / Relapse prevention: Building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation.
C. Exposure: Building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation. / Relapse prevention: Identifying likely setbacks and rehearsing which coping steps the child can use.
D. Exposure: Building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation. / Relapse prevention: Role-playing an assertive request and providing supportive, specific feedback.

0253. In child-focused CBT, at the outpatient clinic, a behavior specialist meets with a young adolescent client. The practice priority is: identifying likely setbacks and rehearsing which coping steps the child can use. Which concept best captures that priority?

A. Cognitive triangle
B. Coping self-talk
C. Relapse prevention
D. Skills rehearsal

0254. A planning meeting about a preadolescent child includes a play therapist. The proposed practice in the family resource center is scheduling a manageable valued activity and reviewing its effect on mood and functioning. Which idea underlies it?

A. Cognitive restructuring
B. Behavioral activation
C. Developmental adaptation in CBT
D. Relapse prevention

0255. A supervisor asks for an applied contrast between Skills rehearsal and Collaborative empiricism. Which option fits?

A. Skills rehearsal: Role-playing an assertive request and providing supportive, specific feedback. / Collaborative empiricism: Scheduling a manageable valued activity and reviewing its effect on mood and functioning.
B. Skills rehearsal: Helping a child map how a thought, feeling, and action relate in a particular situation. / Collaborative empiricism: Treating a belief as a testable hypothesis and reviewing what the child observes.
C. Skills rehearsal: Role-playing an assertive request and providing supportive, specific feedback. / Collaborative empiricism: Treating a belief as a testable hypothesis and reviewing what the child observes.
D. Skills rehearsal: Treating a belief as a testable hypothesis and reviewing what the child observes. / Collaborative empiricism: Role-playing an assertive request and providing supportive, specific feedback.

0256. In child-focused CBT, which applied comparison correctly identifies what belongs to Behavioral activation versus Relapse prevention?

A. Behavioral activation: Scheduling a manageable valued activity and reviewing its effect on mood and functioning. / Relapse prevention: Identifying likely setbacks and rehearsing which coping steps the child can use.
B. Behavioral activation: Helping a child map how a thought, feeling, and action relate in a particular situation. / Relapse prevention: Identifying likely setbacks and rehearsing which coping steps the child can use.
C. Behavioral activation: Identifying likely setbacks and rehearsing which coping steps the child can use. / Relapse prevention: Scheduling a manageable valued activity and reviewing its effect on mood and functioning.
D. Behavioral activation: Scheduling a manageable valued activity and reviewing its effect on mood and functioning. / Relapse prevention: Building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation.

0257. Which option preserves the correct meaning of both Coping self-talk and Skills rehearsal?

A. Coping self-talk: Practice of helpful, realistic statements that support coping and task engagement. / Skills rehearsal: A CBT stance in which client and therapist jointly test ideas against evidence and experience.
B. Coping self-talk: Practicing a targeted behavior in session, often with modeling, feedback, and repetition. / Skills rehearsal: Practice of helpful, realistic statements that support coping and task engagement.
C. Coping self-talk: Collaboratively evaluating and developing more balanced or useful interpretations rather than imposing positive thinking. / Skills rehearsal: Practicing a targeted behavior in session, often with modeling, feedback, and repetition.
D. Coping self-talk: Practice of helpful, realistic statements that support coping and task engagement. / Skills rehearsal: Practicing a targeted behavior in session, often with modeling, feedback, and repetition.

0258. Which comparison correctly distinguishes Skills rehearsal from Developmental adaptation in CBT?

A. Skills rehearsal: Adjusting CBT language, materials, pacing, and caregiver involvement to the child's developmental capacity. / Developmental adaptation in CBT: Practicing a targeted behavior in session, often with modeling, feedback, and repetition.
B. Skills rehearsal: Practicing a targeted behavior in session, often with modeling, feedback, and repetition. / Developmental adaptation in CBT: Adjusting CBT language, materials, pacing, and caregiver involvement to the child's developmental capacity.
C. Skills rehearsal: Gradual, planned approach to feared situations or cues to support new learning, with appropriate assessment and consent. / Developmental adaptation in CBT: Adjusting CBT language, materials, pacing, and caregiver involvement to the child's developmental capacity.
D. Skills rehearsal: Practicing a targeted behavior in session, often with modeling, feedback, and repetition. / Developmental adaptation in CBT: Practice of helpful, realistic statements that support coping and task engagement.

0259. A student confuses Behavioral activation with Skills rehearsal. Which explanation most accurately separates them?

A. Behavioral activation: Planned engagement in meaningful or rewarding activities to increase contact with positive reinforcement. / Skills rehearsal: Practicing a targeted behavior in session, often with modeling, feedback, and repetition.
B. Behavioral activation: Adjusting CBT language, materials, pacing, and caregiver involvement to the child's developmental capacity. / Skills rehearsal: Practicing a targeted behavior in session, often with modeling, feedback, and repetition.
C. Behavioral activation: Planned engagement in meaningful or rewarding activities to increase contact with positive reinforcement. / Skills rehearsal: Practice of helpful, realistic statements that support coping and task engagement.
D. Behavioral activation: Practicing a targeted behavior in session, often with modeling, feedback, and repetition. / Skills rehearsal: Planned engagement in meaningful or rewarding activities to increase contact with positive reinforcement.

0260. During service review in the school-based service, a community practitioner describes treating a belief as a testable hypothesis and reviewing what the child observes. for a client in early adolescence. Which course idea is most applicable?

A. Coping self-talk
B. Developmental adaptation in CBT
C. Thought record
D. Collaborative empiricism

0261. Which professional action most closely applies Coping self-talk?

A. Using a child-friendly record to examine what happened and what the child thought at that moment.
B. Scheduling a manageable valued activity and reviewing its effect on mood and functioning.
C. Identifying likely setbacks and rehearsing which coping steps the child can use.
D. Rehearsing a believable coping phrase a child can use during a challenging moment.

0262. A case discussion concerns a young person aged 10 and a parent educator in the youth advocacy program. The practitioner is considering treating a belief as a testable hypothesis and reviewing what the child observes. Which principle is involved?

A. Skills rehearsal
B. Relapse prevention
C. Behavioral activation
D. Collaborative empiricism

0263. Which option preserves the correct meaning of both Cognitive restructuring and Collaborative empiricism?

A. Cognitive restructuring: Collaboratively evaluating and developing more balanced or useful interpretations rather than imposing positive thinking. / Collaborative empiricism: Planned engagement in meaningful or rewarding activities to increase contact with positive reinforcement.
B. Cognitive restructuring: A CBT stance in which client and therapist jointly test ideas against evidence and experience. / Collaborative empiricism: Collaboratively evaluating and developing more balanced or useful interpretations rather than imposing positive thinking.
C. Cognitive restructuring: Adjusting CBT language, materials, pacing, and caregiver involvement to the child's developmental capacity. / Collaborative empiricism: A CBT stance in which client and therapist jointly test ideas against evidence and experience.
D. Cognitive restructuring: Collaboratively evaluating and developing more balanced or useful interpretations rather than imposing positive thinking. / Collaborative empiricism: A CBT stance in which client and therapist jointly test ideas against evidence and experience.

0264. A trainee must distinguish how Cognitive restructuring and Skills rehearsal guide practice. Which comparison is accurate?

A. Cognitive restructuring: Role-playing an assertive request and providing supportive, specific feedback. / Skills rehearsal: Examining evidence and generating a realistic alternative thought with the child.
B. Cognitive restructuring: Scheduling a manageable valued activity and reviewing its effect on mood and functioning. / Skills rehearsal: Role-playing an assertive request and providing supportive, specific feedback.
C. Cognitive restructuring: Examining evidence and generating a realistic alternative thought with the child. / Skills rehearsal: Treating a belief as a testable hypothesis and reviewing what the child observes.
D. Cognitive restructuring: Examining evidence and generating a realistic alternative thought with the child. / Skills rehearsal: Role-playing an assertive request and providing supportive, specific feedback.

0265. At a case-planning meeting, the clinical supervisor proposes examining evidence and generating a realistic alternative thought with the child. for a student aged 15 seen in the family session. Which concept does this illustrate?

A. Exposure
B. Behavioral activation
C. Cognitive restructuring
D. Collaborative empiricism

0266. How are Cognitive restructuring and Developmental adaptation in CBT most accurately differentiated in this curriculum?

A. Cognitive restructuring: A CBT stance in which client and therapist jointly test ideas against evidence and experience. / Developmental adaptation in CBT: Adjusting CBT language, materials, pacing, and caregiver involvement to the child's developmental capacity.
B. Cognitive restructuring: Adjusting CBT language, materials, pacing, and caregiver involvement to the child's developmental capacity. / Developmental adaptation in CBT: Collaboratively evaluating and developing more balanced or useful interpretations rather than imposing positive thinking.
C. Cognitive restructuring: Collaboratively evaluating and developing more balanced or useful interpretations rather than imposing positive thinking. / Developmental adaptation in CBT: Adjusting CBT language, materials, pacing, and caregiver involvement to the child's developmental capacity.
D. Cognitive restructuring: Collaboratively evaluating and developing more balanced or useful interpretations rather than imposing positive thinking. / Developmental adaptation in CBT: A structured aid for noticing a situation, automatic thought, emotion, evidence, and alternative perspective.

0267. At a case-planning meeting, the play therapist proposes building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation. for a teenage client seen in the caregiver consultation. Which concept does this illustrate?

A. Exposure
B. Collaborative empiricism
C. Coping self-talk
D. Developmental adaptation in CBT

0268. In child-focused CBT, at the family resource center, a research trainee reviews whether a plan for a young person aged 10 is appropriate. The relevant practice is identifying likely setbacks and rehearsing which coping steps the child can use. Which concept is tested?

A. Relapse prevention
B. Cognitive restructuring
C. Coping self-talk
D. Skills rehearsal

0269. Which statement accurately contrasts the course concepts Exposure and Thought record?

A. Exposure: Gradual, planned approach to feared situations or cues to support new learning, with appropriate assessment and consent. / Thought record: A structured aid for noticing a situation, automatic thought, emotion, evidence, and alternative perspective.
B. Exposure: A structured aid for noticing a situation, automatic thought, emotion, evidence, and alternative perspective. / Thought record: Gradual, planned approach to feared situations or cues to support new learning, with appropriate assessment and consent.
C. Exposure: Gradual, planned approach to feared situations or cues to support new learning, with appropriate assessment and consent. / Thought record: Adjusting CBT language, materials, pacing, and caregiver involvement to the child's developmental capacity.
D. Exposure: Practice of helpful, realistic statements that support coping and task engagement. / Thought record: A structured aid for noticing a situation, automatic thought, emotion, evidence, and alternative perspective.

0270. A young person and a member of a clinical team are reviewing goals in the classroom support meeting. The agreed action is building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation. Which principle best accounts for it?

A. Exposure
B. Cognitive restructuring
C. Developmental adaptation in CBT
D. Thought record

0271. In child-focused CBT, a student confuses Coping self-talk with Relapse prevention. Which explanation most accurately separates them?

A. Coping self-talk: Practicing a targeted behavior in session, often with modeling, feedback, and repetition. / Relapse prevention: Planning for future triggers, early warning signs, and continued use of skills after improvement.
B. Coping self-talk: Planning for future triggers, early warning signs, and continued use of skills after improvement. / Relapse prevention: Practice of helpful, realistic statements that support coping and task engagement.
C. Coping self-talk: Practice of helpful, realistic statements that support coping and task engagement. / Relapse prevention: A structured aid for noticing a situation, automatic thought, emotion, evidence, and alternative perspective.
D. Coping self-talk: Practice of helpful, realistic statements that support coping and task engagement. / Relapse prevention: Planning for future triggers, early warning signs, and continued use of skills after improvement.

0272. A member of a clinical team prepares for a session in the counseling practicum with a child aged 8. The intended approach is scheduling a manageable valued activity and reviewing its effect on mood and functioning. Which concept is most relevant?

A. Developmental adaptation in CBT
B. Collaborative empiricism
C. Cognitive restructuring
D. Behavioral activation

0273. A student aged 9 and a supervised trainee are reviewing goals in the community youth program. The agreed action is helping a child map how a thought, feeling, and action relate in a particular situation. Which principle best accounts for it?

A. Thought record
B. Behavioral activation
C. Cognitive triangle
D. Exposure

0274. In the school counseling office, a family therapist is considering this approach for a high-school student: using a child-friendly record to examine what happened and what the child thought at that moment. Which framework does it represent?

A. Cognitive restructuring
B. Thought record
C. Coping self-talk
D. Skills rehearsal

0275. In child-focused CBT, which statement accurately contrasts the course concepts Thought record and Relapse prevention?

A. Thought record: Planning for future triggers, early warning signs, and continued use of skills after improvement. / Relapse prevention: A structured aid for noticing a situation, automatic thought, emotion, evidence, and alternative perspective.
B. Thought record: A structured aid for noticing a situation, automatic thought, emotion, evidence, and alternative perspective. / Relapse prevention: Practicing a targeted behavior in session, often with modeling, feedback, and repetition.
C. Thought record: Planned engagement in meaningful or rewarding activities to increase contact with positive reinforcement. / Relapse prevention: Planning for future triggers, early warning signs, and continued use of skills after improvement.
D. Thought record: A structured aid for noticing a situation, automatic thought, emotion, evidence, and alternative perspective. / Relapse prevention: Planning for future triggers, early warning signs, and continued use of skills after improvement.

0276. Which statement shows a sound practice-level distinction between Behavioral activation and Exposure?

A. Behavioral activation: Using a child-friendly record to examine what happened and what the child thought at that moment. / Exposure: Building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation.
B. Behavioral activation: Scheduling a manageable valued activity and reviewing its effect on mood and functioning. / Exposure: Building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation.
C. Behavioral activation: Building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation. / Exposure: Scheduling a manageable valued activity and reviewing its effect on mood and functioning.
D. Behavioral activation: Scheduling a manageable valued activity and reviewing its effect on mood and functioning. / Exposure: Treating a belief as a testable hypothesis and reviewing what the child observes.

0277. In a supervision review, a family therapist describes work with a student aged 15 in the school consultation: treating a belief as a testable hypothesis and reviewing what the child observes. What concept is illustrated?

A. Coping self-talk
B. Collaborative empiricism
C. Behavioral activation
D. Cognitive restructuring

0278. A client in early adolescence and a assessment clinician are reviewing goals in the student wellness team. The agreed action is role-playing an assertive request and providing supportive, specific feedback. Which principle best accounts for it?

A. Skills rehearsal
B. Exposure
C. Relapse prevention
D. Behavioral activation

0279. A trainee must choose a practice that exemplifies Developmental adaptation in CBT. Which action is the best fit?

A. Role-playing an assertive request and providing supportive, specific feedback.
B. Rehearsing a believable coping phrase a child can use during a challenging moment.
C. Identifying likely setbacks and rehearsing which coping steps the child can use.
D. Using drawings or concrete examples when abstract cognitive language is not yet accessible.

0280. Which choice aligns each practice with the correct idea, Cognitive triangle or Cognitive restructuring?

A. Cognitive triangle: Rehearsing a believable coping phrase a child can use during a challenging moment. / Cognitive restructuring: Examining evidence and generating a realistic alternative thought with the child.
B. Cognitive triangle: Helping a child map how a thought, feeling, and action relate in a particular situation. / Cognitive restructuring: Using a child-friendly record to examine what happened and what the child thought at that moment.
C. Cognitive triangle: Examining evidence and generating a realistic alternative thought with the child. / Cognitive restructuring: Helping a child map how a thought, feeling, and action relate in a particular situation.
D. Cognitive triangle: Helping a child map how a thought, feeling, and action relate in a particular situation. / Cognitive restructuring: Examining evidence and generating a realistic alternative thought with the child.

0281. Which pair of actions illustrates Cognitive restructuring and Exposure, respectively?

A. Cognitive restructuring: Examining evidence and generating a realistic alternative thought with the child. / Exposure: Helping a child map how a thought, feeling, and action relate in a particular situation.
B. Cognitive restructuring: Examining evidence and generating a realistic alternative thought with the child. / Exposure: Building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation.
C. Cognitive restructuring: Using a child-friendly record to examine what happened and what the child thought at that moment. / Exposure: Building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation.
D. Cognitive restructuring: Building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation. / Exposure: Examining evidence and generating a realistic alternative thought with the child.

0282. In child-focused CBT, how should a practitioner distinguish the applications of Coping self-talk and Relapse prevention?

A. Coping self-talk: Rehearsing a believable coping phrase a child can use during a challenging moment. / Relapse prevention: Using a child-friendly record to examine what happened and what the child thought at that moment.
B. Coping self-talk: Role-playing an assertive request and providing supportive, specific feedback. / Relapse prevention: Identifying likely setbacks and rehearsing which coping steps the child can use.
C. Coping self-talk: Rehearsing a believable coping phrase a child can use during a challenging moment. / Relapse prevention: Identifying likely setbacks and rehearsing which coping steps the child can use.
D. Coping self-talk: Identifying likely setbacks and rehearsing which coping steps the child can use. / Relapse prevention: Rehearsing a believable coping phrase a child can use during a challenging moment.

0283. A trainee must choose a practice that exemplifies Collaborative empiricism. Which action is the best fit?

A. Using drawings or concrete examples when abstract cognitive language is not yet accessible.
B. Identifying likely setbacks and rehearsing which coping steps the child can use.
C. Using a child-friendly record to examine what happened and what the child thought at that moment.
D. Treating a belief as a testable hypothesis and reviewing what the child observes.

0284. Choose the practice comparison that best separates Cognitive triangle from Developmental adaptation in CBT.

A. Cognitive triangle: Helping a child map how a thought, feeling, and action relate in a particular situation. / Developmental adaptation in CBT: Treating a belief as a testable hypothesis and reviewing what the child observes.
B. Cognitive triangle: Examining evidence and generating a realistic alternative thought with the child. / Developmental adaptation in CBT: Using drawings or concrete examples when abstract cognitive language is not yet accessible.
C. Cognitive triangle: Helping a child map how a thought, feeling, and action relate in a particular situation. / Developmental adaptation in CBT: Using drawings or concrete examples when abstract cognitive language is not yet accessible.
D. Cognitive triangle: Using drawings or concrete examples when abstract cognitive language is not yet accessible. / Developmental adaptation in CBT: Helping a child map how a thought, feeling, and action relate in a particular situation.

0285. Which option is the clearest practical expression of Exposure?

A. Rehearsing a believable coping phrase a child can use during a challenging moment.
B. Building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation.
C. Role-playing an assertive request and providing supportive, specific feedback.
D. Identifying likely setbacks and rehearsing which coping steps the child can use.

0286. Which statement shows a sound practice-level distinction between Cognitive triangle and Skills rehearsal?

A. Cognitive triangle: Helping a child map how a thought, feeling, and action relate in a particular situation. / Skills rehearsal: Role-playing an assertive request and providing supportive, specific feedback.
B. Cognitive triangle: Helping a child map how a thought, feeling, and action relate in a particular situation. / Skills rehearsal: Rehearsing a believable coping phrase a child can use during a challenging moment.
C. Cognitive triangle: Examining evidence and generating a realistic alternative thought with the child. / Skills rehearsal: Role-playing an assertive request and providing supportive, specific feedback.
D. Cognitive triangle: Role-playing an assertive request and providing supportive, specific feedback. / Skills rehearsal: Helping a child map how a thought, feeling, and action relate in a particular situation.

0287. Which paired example correctly applies Cognitive triangle first and Coping self-talk second?

A. Cognitive triangle: Rehearsing a believable coping phrase a child can use during a challenging moment. / Coping self-talk: Helping a child map how a thought, feeling, and action relate in a particular situation.
B. Cognitive triangle: Helping a child map how a thought, feeling, and action relate in a particular situation. / Coping self-talk: Examining evidence and generating a realistic alternative thought with the child.
C. Cognitive triangle: Helping a child map how a thought, feeling, and action relate in a particular situation. / Coping self-talk: Rehearsing a believable coping phrase a child can use during a challenging moment.
D. Cognitive triangle: Using a child-friendly record to examine what happened and what the child thought at that moment. / Coping self-talk: Rehearsing a believable coping phrase a child can use during a challenging moment.

0288. Which statement accurately contrasts the course concepts Thought record and Collaborative empiricism?

A. Thought record: A structured aid for noticing a situation, automatic thought, emotion, evidence, and alternative perspective. / Collaborative empiricism: A CBT stance in which client and therapist jointly test ideas against evidence and experience.
B. Thought record: Adjusting CBT language, materials, pacing, and caregiver involvement to the child's developmental capacity. / Collaborative empiricism: A CBT stance in which client and therapist jointly test ideas against evidence and experience.
C. Thought record: A CBT stance in which client and therapist jointly test ideas against evidence and experience. / Collaborative empiricism: A structured aid for noticing a situation, automatic thought, emotion, evidence, and alternative perspective.
D. Thought record: A structured aid for noticing a situation, automatic thought, emotion, evidence, and alternative perspective. / Collaborative empiricism: A teaching model linking thoughts, feelings, and behaviors as mutually influential components of experience.

0289. Consider a student aged 12 receiving help in the telehealth session. The group facilitator focuses on role-playing an assertive request and providing supportive, specific feedback. Which term best describes the guiding idea?

A. Thought record
B. Skills rehearsal
C. Behavioral activation
D. Collaborative empiricism

0290. A mental-health professional and a high-school student are discussing support in the family resource center. The selected practice is helping a child map how a thought, feeling, and action relate in a particular situation. Which concept does this demonstrate?

A. Cognitive triangle
B. Skills rehearsal
C. Cognitive restructuring
D. Relapse prevention

0291. What is the central meaning of Skills rehearsal?

A. Planned engagement in meaningful or rewarding activities to increase contact with positive reinforcement.
B. A teaching model linking thoughts, feelings, and behaviors as mutually influential components of experience.
C. Practicing a targeted behavior in session, often with modeling, feedback, and repetition.
D. Adjusting CBT language, materials, pacing, and caregiver involvement to the child's developmental capacity.

0292. What is the central meaning of Cognitive restructuring?

A. Practicing a targeted behavior in session, often with modeling, feedback, and repetition.
B. A CBT stance in which client and therapist jointly test ideas against evidence and experience.
C. Adjusting CBT language, materials, pacing, and caregiver involvement to the child's developmental capacity.
D. Collaboratively evaluating and developing more balanced or useful interpretations rather than imposing positive thinking.

0293. In child-focused CBT, when reviewing a teenage client's plan in the classroom support meeting, the parent educator notes that the next step is identifying likely setbacks and rehearsing which coping steps the child can use. Which concept guides this step?

A. Relapse prevention
B. Skills rehearsal
C. Developmental adaptation in CBT
D. Thought record

0294. A planning meeting about a child aged 7 includes a clinical supervisor. The proposed practice in the classroom support meeting is helping a child map how a thought, feeling, and action relate in a particular situation. Which idea underlies it?

A. Cognitive triangle
B. Skills rehearsal
C. Coping self-talk
D. Cognitive restructuring

0295. For a teenage client in the supervision meeting, a school support specialist makes this practice the immediate priority: using drawings or concrete examples when abstract cognitive language is not yet accessible. Which concept fits best?

A. Cognitive restructuring
B. Developmental adaptation in CBT
C. Skills rehearsal
D. Coping self-talk

0296. A student confuses Cognitive restructuring with Behavioral activation. Which explanation most accurately separates them?

A. Cognitive restructuring: Collaboratively evaluating and developing more balanced or useful interpretations rather than imposing positive thinking. / Behavioral activation: Adjusting CBT language, materials, pacing, and caregiver involvement to the child's developmental capacity.
B. Cognitive restructuring: Planned engagement in meaningful or rewarding activities to increase contact with positive reinforcement. / Behavioral activation: Collaboratively evaluating and developing more balanced or useful interpretations rather than imposing positive thinking.
C. Cognitive restructuring: Collaboratively evaluating and developing more balanced or useful interpretations rather than imposing positive thinking. / Behavioral activation: Planned engagement in meaningful or rewarding activities to increase contact with positive reinforcement.
D. Cognitive restructuring: Practicing a targeted behavior in session, often with modeling, feedback, and repetition. / Behavioral activation: Planned engagement in meaningful or rewarding activities to increase contact with positive reinforcement.

0297. Which comparison would correct a trainee's misunderstanding of Exposure versus Coping self-talk?

A. Exposure: Gradual, planned approach to feared situations or cues to support new learning, with appropriate assessment and consent. / Coping self-talk: Practice of helpful, realistic statements that support coping and task engagement.
B. Exposure: A teaching model linking thoughts, feelings, and behaviors as mutually influential components of experience. / Coping self-talk: Practice of helpful, realistic statements that support coping and task engagement.
C. Exposure: Gradual, planned approach to feared situations or cues to support new learning, with appropriate assessment and consent. / Coping self-talk: Planned engagement in meaningful or rewarding activities to increase contact with positive reinforcement.
D. Exposure: Practice of helpful, realistic statements that support coping and task engagement. / Coping self-talk: Gradual, planned approach to feared situations or cues to support new learning, with appropriate assessment and consent.

0298. In the multidisciplinary case conference, a youth worker describes the most appropriate support for a child aged 6 as helping a child map how a thought, feeling, and action relate in a particular situation. Which framework is being applied?

A. Collaborative empiricism
B. Coping self-talk
C. Cognitive triangle
D. Developmental adaptation in CBT

0299. Which description belongs with the term Exposure?

A. Collaboratively evaluating and developing more balanced or useful interpretations rather than imposing positive thinking.
B. Planned engagement in meaningful or rewarding activities to increase contact with positive reinforcement.
C. A structured aid for noticing a situation, automatic thought, emotion, evidence, and alternative perspective.
D. Gradual, planned approach to feared situations or cues to support new learning, with appropriate assessment and consent.

0300. In child-focused CBT, while consulting in the community mental-health service, a consultant supports a client in late adolescence by using this approach: identifying likely setbacks and rehearsing which coping steps the child can use. Which concept is being applied?

A. Cognitive triangle
B. Exposure
C. Coping self-talk
D. Relapse prevention

0301. A case conference asks for a distinction between Cognitive restructuring and Developmental adaptation in CBT. Which answer is sound?

A. Cognitive restructuring: Collaboratively evaluating and developing more balanced or useful interpretations rather than imposing positive thinking. / Developmental adaptation in CBT: A structured aid for noticing a situation, automatic thought, emotion, evidence, and alternative perspective.
B. Cognitive restructuring: Collaboratively evaluating and developing more balanced or useful interpretations rather than imposing positive thinking. / Developmental adaptation in CBT: Adjusting CBT language, materials, pacing, and caregiver involvement to the child's developmental capacity.
C. Cognitive restructuring: A CBT stance in which client and therapist jointly test ideas against evidence and experience. / Developmental adaptation in CBT: Adjusting CBT language, materials, pacing, and caregiver involvement to the child's developmental capacity.
D. Cognitive restructuring: Adjusting CBT language, materials, pacing, and caregiver involvement to the child's developmental capacity. / Developmental adaptation in CBT: Collaboratively evaluating and developing more balanced or useful interpretations rather than imposing positive thinking.

0302. Which course concept is defined as follows: Practice of helpful, realistic statements that support coping and task engagement.

A. Relapse prevention
B. Cognitive restructuring
C. Collaborative empiricism
D. Coping self-talk

0303. A trainee must distinguish how Cognitive restructuring and Coping self-talk guide practice. Which comparison is accurate?

A. Cognitive restructuring: Rehearsing a believable coping phrase a child can use during a challenging moment. / Coping self-talk: Examining evidence and generating a realistic alternative thought with the child.
B. Cognitive restructuring: Examining evidence and generating a realistic alternative thought with the child. / Coping self-talk: Building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation.
C. Cognitive restructuring: Examining evidence and generating a realistic alternative thought with the child. / Coping self-talk: Rehearsing a believable coping phrase a child can use during a challenging moment.
D. Cognitive restructuring: Role-playing an assertive request and providing supportive, specific feedback. / Coping self-talk: Rehearsing a believable coping phrase a child can use during a challenging moment.

0304. Which applied comparison correctly identifies what belongs to Skills rehearsal versus Developmental adaptation in CBT?

A. Skills rehearsal: Building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation. / Developmental adaptation in CBT: Using drawings or concrete examples when abstract cognitive language is not yet accessible.
B. Skills rehearsal: Role-playing an assertive request and providing supportive, specific feedback. / Developmental adaptation in CBT: Using drawings or concrete examples when abstract cognitive language is not yet accessible.
C. Skills rehearsal: Role-playing an assertive request and providing supportive, specific feedback. / Developmental adaptation in CBT: Rehearsing a believable coping phrase a child can use during a challenging moment.
D. Skills rehearsal: Using drawings or concrete examples when abstract cognitive language is not yet accessible. / Developmental adaptation in CBT: Role-playing an assertive request and providing supportive, specific feedback.

0305. A school counselor is explaining a choice to a preadolescent child and caregiver in the school counseling office. The choice centers on role-playing an assertive request and providing supportive, specific feedback. Which idea is illustrated?

A. Coping self-talk
B. Cognitive triangle
C. Skills rehearsal
D. Developmental adaptation in CBT

0306. Which pair of actions illustrates Cognitive restructuring and Thought record, respectively?

A. Cognitive restructuring: Treating a belief as a testable hypothesis and reviewing what the child observes. / Thought record: Using a child-friendly record to examine what happened and what the child thought at that moment.
B. Cognitive restructuring: Examining evidence and generating a realistic alternative thought with the child. / Thought record: Using drawings or concrete examples when abstract cognitive language is not yet accessible.
C. Cognitive restructuring: Using a child-friendly record to examine what happened and what the child thought at that moment. / Thought record: Examining evidence and generating a realistic alternative thought with the child.
D. Cognitive restructuring: Examining evidence and generating a realistic alternative thought with the child. / Thought record: Using a child-friendly record to examine what happened and what the child thought at that moment.

0307. In child-focused CBT, which statement accurately contrasts the course concepts Developmental adaptation in CBT and Relapse prevention?

A. Developmental adaptation in CBT: A CBT stance in which client and therapist jointly test ideas against evidence and experience. / Relapse prevention: Planning for future triggers, early warning signs, and continued use of skills after improvement.
B. Developmental adaptation in CBT: Adjusting CBT language, materials, pacing, and caregiver involvement to the child's developmental capacity. / Relapse prevention: Planning for future triggers, early warning signs, and continued use of skills after improvement.
C. Developmental adaptation in CBT: Adjusting CBT language, materials, pacing, and caregiver involvement to the child's developmental capacity. / Relapse prevention: A structured aid for noticing a situation, automatic thought, emotion, evidence, and alternative perspective.
D. Developmental adaptation in CBT: Planning for future triggers, early warning signs, and continued use of skills after improvement. / Relapse prevention: Adjusting CBT language, materials, pacing, and caregiver involvement to the child's developmental capacity.

0308. A consulting counselor is explaining a choice to a student aged 15 and caregiver in the youth group. The choice centers on helping a child map how a thought, feeling, and action relate in a particular situation. Which idea is illustrated?

A. Cognitive triangle
B. Developmental adaptation in CBT
C. Skills rehearsal
D. Coping self-talk

0309. Identify the most precise label for this idea: Planned engagement in meaningful or rewarding activities to increase contact with positive reinforcement.

A. Behavioral activation
B. Relapse prevention
C. Developmental adaptation in CBT
D. Skills rehearsal

0310. Which applied comparison correctly identifies what belongs to Behavioral activation versus Developmental adaptation in CBT?

A. Behavioral activation: Building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation. / Developmental adaptation in CBT: Using drawings or concrete examples when abstract cognitive language is not yet accessible.
B. Behavioral activation: Scheduling a manageable valued activity and reviewing its effect on mood and functioning. / Developmental adaptation in CBT: Using drawings or concrete examples when abstract cognitive language is not yet accessible.
C. Behavioral activation: Using drawings or concrete examples when abstract cognitive language is not yet accessible. / Developmental adaptation in CBT: Scheduling a manageable valued activity and reviewing its effect on mood and functioning.
D. Behavioral activation: Scheduling a manageable valued activity and reviewing its effect on mood and functioning. / Developmental adaptation in CBT: Rehearsing a believable coping phrase a child can use during a challenging moment.

0311. Which comparison would correct a trainee's misunderstanding of Coping self-talk versus Collaborative empiricism?

A. Coping self-talk: A CBT stance in which client and therapist jointly test ideas against evidence and experience. / Collaborative empiricism: Practice of helpful, realistic statements that support coping and task engagement.
B. Coping self-talk: Gradual, planned approach to feared situations or cues to support new learning, with appropriate assessment and consent. / Collaborative empiricism: A CBT stance in which client and therapist jointly test ideas against evidence and experience.
C. Coping self-talk: Practice of helpful, realistic statements that support coping and task engagement. / Collaborative empiricism: A CBT stance in which client and therapist jointly test ideas against evidence and experience.
D. Coping self-talk: Practice of helpful, realistic statements that support coping and task engagement. / Collaborative empiricism: Planned engagement in meaningful or rewarding activities to increase contact with positive reinforcement.

0312. In child-focused CBT, which paired example correctly applies Cognitive restructuring first and Relapse prevention second?

A. Cognitive restructuring: Identifying likely setbacks and rehearsing which coping steps the child can use. / Relapse prevention: Examining evidence and generating a realistic alternative thought with the child.
B. Cognitive restructuring: Building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation. / Relapse prevention: Identifying likely setbacks and rehearsing which coping steps the child can use.
C. Cognitive restructuring: Examining evidence and generating a realistic alternative thought with the child. / Relapse prevention: Identifying likely setbacks and rehearsing which coping steps the child can use.
D. Cognitive restructuring: Examining evidence and generating a realistic alternative thought with the child. / Relapse prevention: Helping a child map how a thought, feeling, and action relate in a particular situation.

0313. During work in the community youth program, a consulting counselor identifies this need: using drawings or concrete examples when abstract cognitive language is not yet accessible. Which idea should guide the response?

A. Developmental adaptation in CBT
B. Thought record
C. Collaborative empiricism
D. Cognitive restructuring

0314. In the student wellness team, a school-based clinician is considering this approach for a young person aged 10: scheduling a manageable valued activity and reviewing its effect on mood and functioning. Which framework does it represent?

A. Developmental adaptation in CBT
B. Exposure
C. Behavioral activation
D. Cognitive triangle

0315. How should a practitioner distinguish the applications of Cognitive triangle and Exposure?

A. Cognitive triangle: Identifying likely setbacks and rehearsing which coping steps the child can use. / Exposure: Building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation.
B. Cognitive triangle: Helping a child map how a thought, feeling, and action relate in a particular situation. / Exposure: Examining evidence and generating a realistic alternative thought with the child.
C. Cognitive triangle: Building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation. / Exposure: Helping a child map how a thought, feeling, and action relate in a particular situation.
D. Cognitive triangle: Helping a child map how a thought, feeling, and action relate in a particular situation. / Exposure: Building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation.

0316. Which option correctly matches each concept to its practice focus: Collaborative empiricism and Developmental adaptation in CBT?

A. Collaborative empiricism: Treating a belief as a testable hypothesis and reviewing what the child observes. / Developmental adaptation in CBT: Examining evidence and generating a realistic alternative thought with the child.
B. Collaborative empiricism: Treating a belief as a testable hypothesis and reviewing what the child observes. / Developmental adaptation in CBT: Using drawings or concrete examples when abstract cognitive language is not yet accessible.
C. Collaborative empiricism: Building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation. / Developmental adaptation in CBT: Using drawings or concrete examples when abstract cognitive language is not yet accessible.
D. Collaborative empiricism: Using drawings or concrete examples when abstract cognitive language is not yet accessible. / Developmental adaptation in CBT: Treating a belief as a testable hypothesis and reviewing what the child observes.

0317. A planning meeting about a school-age child includes a clinical supervisor. The proposed practice in the school counseling office is rehearsing a believable coping phrase a child can use during a challenging moment. Which idea underlies it?

A. Coping self-talk
B. Skills rehearsal
C. Collaborative empiricism
D. Behavioral activation

0318. Which course concept is defined as follows: Gradual, planned approach to feared situations or cues to support new learning, with appropriate assessment and consent.

A. Thought record
B. Exposure
C. Skills rehearsal
D. Coping self-talk

0319. Select the best explanation of Coping self-talk.

A. Planning for future triggers, early warning signs, and continued use of skills after improvement.
B. Planned engagement in meaningful or rewarding activities to increase contact with positive reinforcement.
C. Practice of helpful, realistic statements that support coping and task engagement.
D. A CBT stance in which client and therapist jointly test ideas against evidence and experience.

0320. A member of a clinical team is supporting a young person in the classroom support meeting. The key practice is building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation. Which course concept is most relevant?

A. Relapse prevention
B. Cognitive restructuring
C. Developmental adaptation in CBT
D. Exposure

0321. In the clinical planning session, a caregiver working with a counselor is considering this approach for a student aged 17: building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation. Which framework does it represent?

A. Exposure
B. Skills rehearsal
C. Thought record
D. Collaborative empiricism

0322. In the youth group, the agreed focus for a community practitioner working with a young person aged 18 is examining evidence and generating a realistic alternative thought with the child. Which concept names this focus?

A. Cognitive restructuring
B. Developmental adaptation in CBT
C. Thought record
D. Collaborative empiricism

0323. How should a practitioner distinguish the applications of Behavioral activation and Developmental adaptation in CBT?

A. Behavioral activation: Scheduling a manageable valued activity and reviewing its effect on mood and functioning. / Developmental adaptation in CBT: Using drawings or concrete examples when abstract cognitive language is not yet accessible.
B. Behavioral activation: Building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation. / Developmental adaptation in CBT: Using drawings or concrete examples when abstract cognitive language is not yet accessible.
C. Behavioral activation: Scheduling a manageable valued activity and reviewing its effect on mood and functioning. / Developmental adaptation in CBT: Rehearsing a believable coping phrase a child can use during a challenging moment.
D. Behavioral activation: Using drawings or concrete examples when abstract cognitive language is not yet accessible. / Developmental adaptation in CBT: Scheduling a manageable valued activity and reviewing its effect on mood and functioning.

0324. Choose the definition pair that correctly explains Exposure first and Coping self-talk second.

A. Exposure: Gradual, planned approach to feared situations or cues to support new learning, with appropriate assessment and consent. / Coping self-talk: Practice of helpful, realistic statements that support coping and task engagement.
B. Exposure: A teaching model linking thoughts, feelings, and behaviors as mutually influential components of experience. / Coping self-talk: Practice of helpful, realistic statements that support coping and task engagement.
C. Exposure: Practice of helpful, realistic statements that support coping and task engagement. / Coping self-talk: Gradual, planned approach to feared situations or cues to support new learning, with appropriate assessment and consent.
D. Exposure: Gradual, planned approach to feared situations or cues to support new learning, with appropriate assessment and consent. / Coping self-talk: Planned engagement in meaningful or rewarding activities to increase contact with positive reinforcement.

0325. Which professional action most closely applies Exposure?

A. Examining evidence and generating a realistic alternative thought with the child.
B. Role-playing an assertive request and providing supportive, specific feedback.
C. Treating a belief as a testable hypothesis and reviewing what the child observes.
D. Building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation.

0326. In child-focused CBT, a mental-health professional is supporting a older adolescent client in the family session. The key practice is identifying likely setbacks and rehearsing which coping steps the child can use. Which course concept is most relevant?

A. Relapse prevention
B. Coping self-talk
C. Developmental adaptation in CBT
D. Collaborative empiricism

0327. How are Exposure and Developmental adaptation in CBT most accurately differentiated in this curriculum?

A. Exposure: A CBT stance in which client and therapist jointly test ideas against evidence and experience. / Developmental adaptation in CBT: Adjusting CBT language, materials, pacing, and caregiver involvement to the child's developmental capacity.
B. Exposure: Gradual, planned approach to feared situations or cues to support new learning, with appropriate assessment and consent. / Developmental adaptation in CBT: Adjusting CBT language, materials, pacing, and caregiver involvement to the child's developmental capacity.
C. Exposure: Adjusting CBT language, materials, pacing, and caregiver involvement to the child's developmental capacity. / Developmental adaptation in CBT: Gradual, planned approach to feared situations or cues to support new learning, with appropriate assessment and consent.
D. Exposure: Gradual, planned approach to feared situations or cues to support new learning, with appropriate assessment and consent. / Developmental adaptation in CBT: Practicing a targeted behavior in session, often with modeling, feedback, and repetition.

0328. In child-focused CBT, in a supervision quiz, how should Skills rehearsal be distinguished from Relapse prevention?

A. Skills rehearsal: A CBT stance in which client and therapist jointly test ideas against evidence and experience. / Relapse prevention: Planning for future triggers, early warning signs, and continued use of skills after improvement.
B. Skills rehearsal: Practicing a targeted behavior in session, often with modeling, feedback, and repetition. / Relapse prevention: Gradual, planned approach to feared situations or cues to support new learning, with appropriate assessment and consent.
C. Skills rehearsal: Practicing a targeted behavior in session, often with modeling, feedback, and repetition. / Relapse prevention: Planning for future triggers, early warning signs, and continued use of skills after improvement.
D. Skills rehearsal: Planning for future triggers, early warning signs, and continued use of skills after improvement. / Relapse prevention: Practicing a targeted behavior in session, often with modeling, feedback, and repetition.

0329. In child-focused CBT, which comparison correctly distinguishes Cognitive triangle from Relapse prevention?

A. Cognitive triangle: A teaching model linking thoughts, feelings, and behaviors as mutually influential components of experience. / Relapse prevention: Practicing a targeted behavior in session, often with modeling, feedback, and repetition.
B. Cognitive triangle: Planning for future triggers, early warning signs, and continued use of skills after improvement. / Relapse prevention: A teaching model linking thoughts, feelings, and behaviors as mutually influential components of experience.
C. Cognitive triangle: A structured aid for noticing a situation, automatic thought, emotion, evidence, and alternative perspective. / Relapse prevention: Planning for future triggers, early warning signs, and continued use of skills after improvement.
D. Cognitive triangle: A teaching model linking thoughts, feelings, and behaviors as mutually influential components of experience. / Relapse prevention: Planning for future triggers, early warning signs, and continued use of skills after improvement.

0330. A team must select a support approach for a school-age child at the community service agency. The case coordinator recommends role-playing an assertive request and providing supportive, specific feedback. Which idea is most relevant?

A. Thought record
B. Skills rehearsal
C. Coping self-talk
D. Cognitive restructuring

0331. In child-focused CBT, how are Exposure and Relapse prevention most accurately differentiated in this curriculum?

A. Exposure: Gradual, planned approach to feared situations or cues to support new learning, with appropriate assessment and consent. / Relapse prevention: Practicing a targeted behavior in session, often with modeling, feedback, and repetition.
B. Exposure: A structured aid for noticing a situation, automatic thought, emotion, evidence, and alternative perspective. / Relapse prevention: Planning for future triggers, early warning signs, and continued use of skills after improvement.
C. Exposure: Planning for future triggers, early warning signs, and continued use of skills after improvement. / Relapse prevention: Gradual, planned approach to feared situations or cues to support new learning, with appropriate assessment and consent.
D. Exposure: Gradual, planned approach to feared situations or cues to support new learning, with appropriate assessment and consent. / Relapse prevention: Planning for future triggers, early warning signs, and continued use of skills after improvement.

0332. In a supervision quiz, how should Cognitive restructuring be distinguished from Thought record?

A. Cognitive restructuring: A structured aid for noticing a situation, automatic thought, emotion, evidence, and alternative perspective. / Thought record: Collaboratively evaluating and developing more balanced or useful interpretations rather than imposing positive thinking.
B. Cognitive restructuring: Collaboratively evaluating and developing more balanced or useful interpretations rather than imposing positive thinking. / Thought record: A structured aid for noticing a situation, automatic thought, emotion, evidence, and alternative perspective.
C. Cognitive restructuring: A CBT stance in which client and therapist jointly test ideas against evidence and experience. / Thought record: A structured aid for noticing a situation, automatic thought, emotion, evidence, and alternative perspective.
D. Cognitive restructuring: Collaboratively evaluating and developing more balanced or useful interpretations rather than imposing positive thinking. / Thought record: Adjusting CBT language, materials, pacing, and caregiver involvement to the child's developmental capacity.

0333. Consider a middle-school student receiving help in the youth advocacy program. The teacher and counselor focuses on using a child-friendly record to examine what happened and what the child thought at that moment. Which term best describes the guiding idea?

A. Behavioral activation
B. Collaborative empiricism
C. Thought record
D. Skills rehearsal

0334. During work in the learning-support meeting, a youth worker identifies this need: role-playing an assertive request and providing supportive, specific feedback. Which idea should guide the response?

A. Skills rehearsal
B. Cognitive triangle
C. Thought record
D. Collaborative empiricism

0335. A trainee must choose a practice that exemplifies Behavioral activation. Which action is the best fit?

A. Rehearsing a believable coping phrase a child can use during a challenging moment.
B. Using a child-friendly record to examine what happened and what the child thought at that moment.
C. Treating a belief as a testable hypothesis and reviewing what the child observes.
D. Scheduling a manageable valued activity and reviewing its effect on mood and functioning.

0336. Which named construct is captured by this account? Practicing a targeted behavior in session, often with modeling, feedback, and repetition.

A. Skills rehearsal
B. Cognitive triangle
C. Behavioral activation
D. Cognitive restructuring

0337. At the school counseling office, a counselor meets with a child aged 8. The practice priority is: helping a child map how a thought, feeling, and action relate in a particular situation. Which concept best captures that priority?

A. Collaborative empiricism
B. Cognitive triangle
C. Exposure
D. Skills rehearsal

0338. In a supervision quiz, how should Behavioral activation be distinguished from Skills rehearsal?

A. Behavioral activation: Practicing a targeted behavior in session, often with modeling, feedback, and repetition. / Skills rehearsal: Planned engagement in meaningful or rewarding activities to increase contact with positive reinforcement.
B. Behavioral activation: Planned engagement in meaningful or rewarding activities to increase contact with positive reinforcement. / Skills rehearsal: Practice of helpful, realistic statements that support coping and task engagement.
C. Behavioral activation: Adjusting CBT language, materials, pacing, and caregiver involvement to the child's developmental capacity. / Skills rehearsal: Practicing a targeted behavior in session, often with modeling, feedback, and repetition.
D. Behavioral activation: Planned engagement in meaningful or rewarding activities to increase contact with positive reinforcement. / Skills rehearsal: Practicing a targeted behavior in session, often with modeling, feedback, and repetition.

0339. At the learning-support meeting, a therapist reviews whether a plan for a child aged 11 is appropriate. The relevant practice is scheduling a manageable valued activity and reviewing its effect on mood and functioning. Which concept is tested?

A. Collaborative empiricism
B. Exposure
C. Relapse prevention
D. Behavioral activation

0340. Choose the practice comparison that best separates Exposure from Collaborative empiricism.

A. Exposure: Building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation. / Collaborative empiricism: Treating a belief as a testable hypothesis and reviewing what the child observes.
B. Exposure: Treating a belief as a testable hypothesis and reviewing what the child observes. / Collaborative empiricism: Building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation.
C. Exposure: Rehearsing a believable coping phrase a child can use during a challenging moment. / Collaborative empiricism: Treating a belief as a testable hypothesis and reviewing what the child observes.
D. Exposure: Building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation. / Collaborative empiricism: Identifying likely setbacks and rehearsing which coping steps the child can use.

0341. A support meeting for a young person aged 13 includes a school support specialist in the classroom support meeting. The practice under consideration is rehearsing a believable coping phrase a child can use during a challenging moment. Which concept guides it?

A. Coping self-talk
B. Behavioral activation
C. Cognitive restructuring
D. Developmental adaptation in CBT

0342. In the parent meeting, a group facilitator explains why a student aged 9 would benefit from treating a belief as a testable hypothesis and reviewing what the child observes. Which course concept underpins the explanation?

A. Collaborative empiricism
B. Relapse prevention
C. Cognitive restructuring
D. Skills rehearsal

0343. A student aged 15 is receiving support in the youth group. The consulting counselor is guided by this practice: helping a child map how a thought, feeling, and action relate in a particular situation. Which principle best fits?

A. Cognitive triangle
B. Coping self-talk
C. Cognitive restructuring
D. Exposure

0344. A case conference reviews a program coordinator's work with a child aged 7 in the parent meeting: building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation. Which principle is central?

A. Exposure
B. Cognitive triangle
C. Behavioral activation
D. Collaborative empiricism

0345. A support meeting for a client in late adolescence includes a behavior specialist in the family resource center. The practice under consideration is treating a belief as a testable hypothesis and reviewing what the child observes. Which concept guides it?

A. Coping self-talk
B. Relapse prevention
C. Collaborative empiricism
D. Cognitive triangle

0346. A supervisor asks for an applied contrast between Cognitive restructuring and Exposure. Which option fits?

A. Cognitive restructuring: Using a child-friendly record to examine what happened and what the child thought at that moment. / Exposure: Building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation.
B. Cognitive restructuring: Building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation. / Exposure: Examining evidence and generating a realistic alternative thought with the child.
C. Cognitive restructuring: Examining evidence and generating a realistic alternative thought with the child. / Exposure: Helping a child map how a thought, feeling, and action relate in a particular situation.
D. Cognitive restructuring: Examining evidence and generating a realistic alternative thought with the child. / Exposure: Building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation.

0347. In child-focused CBT, which pair of actions illustrates Cognitive triangle and Relapse prevention, respectively?

A. Cognitive triangle: Using a child-friendly record to examine what happened and what the child thought at that moment. / Relapse prevention: Identifying likely setbacks and rehearsing which coping steps the child can use.
B. Cognitive triangle: Helping a child map how a thought, feeling, and action relate in a particular situation. / Relapse prevention: Role-playing an assertive request and providing supportive, specific feedback.
C. Cognitive triangle: Identifying likely setbacks and rehearsing which coping steps the child can use. / Relapse prevention: Helping a child map how a thought, feeling, and action relate in a particular situation.
D. Cognitive triangle: Helping a child map how a thought, feeling, and action relate in a particular situation. / Relapse prevention: Identifying likely setbacks and rehearsing which coping steps the child can use.

0348. A assessment clinician and a middle-school student are discussing support in the multidisciplinary case conference. The selected practice is treating a belief as a testable hypothesis and reviewing what the child observes. Which concept does this demonstrate?

A. Developmental adaptation in CBT
B. Cognitive triangle
C. Behavioral activation
D. Collaborative empiricism

0349. For a young person aged 18 seen in the youth group, the community practitioner recommends a plan built around examining evidence and generating a realistic alternative thought with the child. Which concept is reflected?

A. Thought record
B. Skills rehearsal
C. Cognitive restructuring
D. Relapse prevention

0350. In a supervision quiz, how should Cognitive triangle be distinguished from Behavioral activation?

A. Cognitive triangle: A teaching model linking thoughts, feelings, and behaviors as mutually influential components of experience. / Behavioral activation: Adjusting CBT language, materials, pacing, and caregiver involvement to the child's developmental capacity.
B. Cognitive triangle: Planned engagement in meaningful or rewarding activities to increase contact with positive reinforcement. / Behavioral activation: A teaching model linking thoughts, feelings, and behaviors as mutually influential components of experience.
C. Cognitive triangle: Planning for future triggers, early warning signs, and continued use of skills after improvement. / Behavioral activation: Planned engagement in meaningful or rewarding activities to increase contact with positive reinforcement.
D. Cognitive triangle: A teaching model linking thoughts, feelings, and behaviors as mutually influential components of experience. / Behavioral activation: Planned engagement in meaningful or rewarding activities to increase contact with positive reinforcement.

0351. A service team discusses a young person aged 13 in the behavior-support review. Their proposed next step is building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation. Which course concept supports it?

A. Skills rehearsal
B. Cognitive triangle
C. Exposure
D. Collaborative empiricism

0352. In child-focused CBT, in a supervision quiz, how should Exposure be distinguished from Relapse prevention?

A. Exposure: A structured aid for noticing a situation, automatic thought, emotion, evidence, and alternative perspective. / Relapse prevention: Planning for future triggers, early warning signs, and continued use of skills after improvement.
B. Exposure: Gradual, planned approach to feared situations or cues to support new learning, with appropriate assessment and consent. / Relapse prevention: Planning for future triggers, early warning signs, and continued use of skills after improvement.
C. Exposure: Gradual, planned approach to feared situations or cues to support new learning, with appropriate assessment and consent. / Relapse prevention: Practicing a targeted behavior in session, often with modeling, feedback, and repetition.
D. Exposure: Planning for future triggers, early warning signs, and continued use of skills after improvement. / Relapse prevention: Gradual, planned approach to feared situations or cues to support new learning, with appropriate assessment and consent.

0353. Which option pairs the definitions of Behavioral activation and Coping self-talk correctly, in that order?

A. Behavioral activation: Practice of helpful, realistic statements that support coping and task engagement. / Coping self-talk: Planned engagement in meaningful or rewarding activities to increase contact with positive reinforcement.
B. Behavioral activation: Planned engagement in meaningful or rewarding activities to increase contact with positive reinforcement. / Coping self-talk: Practice of helpful, realistic statements that support coping and task engagement.
C. Behavioral activation: Planned engagement in meaningful or rewarding activities to increase contact with positive reinforcement. / Coping self-talk: Planning for future triggers, early warning signs, and continued use of skills after improvement.
D. Behavioral activation: Collaboratively evaluating and developing more balanced or useful interpretations rather than imposing positive thinking. / Coping self-talk: Practice of helpful, realistic statements that support coping and task engagement.

0354. A young adolescent client is receiving support in the student-support meeting. The youth worker is guided by this practice: using drawings or concrete examples when abstract cognitive language is not yet accessible. Which principle best fits?

A. Skills rehearsal
B. Developmental adaptation in CBT
C. Relapse prevention
D. Behavioral activation

0355. Which pair of actions illustrates Cognitive triangle and Developmental adaptation in CBT, respectively?

A. Cognitive triangle: Helping a child map how a thought, feeling, and action relate in a particular situation. / Developmental adaptation in CBT: Using drawings or concrete examples when abstract cognitive language is not yet accessible.
B. Cognitive triangle: Examining evidence and generating a realistic alternative thought with the child. / Developmental adaptation in CBT: Using drawings or concrete examples when abstract cognitive language is not yet accessible.
C. Cognitive triangle: Helping a child map how a thought, feeling, and action relate in a particular situation. / Developmental adaptation in CBT: Treating a belief as a testable hypothesis and reviewing what the child observes.
D. Cognitive triangle: Using drawings or concrete examples when abstract cognitive language is not yet accessible. / Developmental adaptation in CBT: Helping a child map how a thought, feeling, and action relate in a particular situation.

0356. Which option preserves the correct meaning of both Exposure and Thought record?

A. Exposure: Gradual, planned approach to feared situations or cues to support new learning, with appropriate assessment and consent. / Thought record: Adjusting CBT language, materials, pacing, and caregiver involvement to the child's developmental capacity.
B. Exposure: Gradual, planned approach to feared situations or cues to support new learning, with appropriate assessment and consent. / Thought record: A structured aid for noticing a situation, automatic thought, emotion, evidence, and alternative perspective.
C. Exposure: Practice of helpful, realistic statements that support coping and task engagement. / Thought record: A structured aid for noticing a situation, automatic thought, emotion, evidence, and alternative perspective.
D. Exposure: A structured aid for noticing a situation, automatic thought, emotion, evidence, and alternative perspective. / Thought record: Gradual, planned approach to feared situations or cues to support new learning, with appropriate assessment and consent.

0357. A supervisor asks how Developmental adaptation in CBT would appear in practice. Which choice should be selected?

A. Identifying likely setbacks and rehearsing which coping steps the child can use.
B. Building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation.
C. Using drawings or concrete examples when abstract cognitive language is not yet accessible.
D. Role-playing an assertive request and providing supportive, specific feedback.

0358. A young person aged 10’s service team meets in the student wellness team. The school-based clinician recommends a change involving scheduling a manageable valued activity and reviewing its effect on mood and functioning. Which idea best explains it?

A. Behavioral activation
B. Developmental adaptation in CBT
C. Collaborative empiricism
D. Cognitive triangle

0359. A case discussion concerns a child of elementary-school age and a parent educator in the caregiver consultation. The practitioner is considering scheduling a manageable valued activity and reviewing its effect on mood and functioning. Which principle is involved?

A. Developmental adaptation in CBT
B. Behavioral activation
C. Skills rehearsal
D. Cognitive restructuring

0360. In child-focused CBT, choose the practice comparison that best separates Cognitive triangle from Relapse prevention.

A. Cognitive triangle: Identifying likely setbacks and rehearsing which coping steps the child can use. / Relapse prevention: Helping a child map how a thought, feeling, and action relate in a particular situation.
B. Cognitive triangle: Helping a child map how a thought, feeling, and action relate in a particular situation. / Relapse prevention: Role-playing an assertive request and providing supportive, specific feedback.
C. Cognitive triangle: Using a child-friendly record to examine what happened and what the child thought at that moment. / Relapse prevention: Identifying likely setbacks and rehearsing which coping steps the child can use.
D. Cognitive triangle: Helping a child map how a thought, feeling, and action relate in a particular situation. / Relapse prevention: Identifying likely setbacks and rehearsing which coping steps the child can use.

0361. A trainee must explain Thought record. Which answer is accurate?

A. Planning for future triggers, early warning signs, and continued use of skills after improvement.
B. Planned engagement in meaningful or rewarding activities to increase contact with positive reinforcement.
C. A teaching model linking thoughts, feelings, and behaviors as mutually influential components of experience.
D. A structured aid for noticing a situation, automatic thought, emotion, evidence, and alternative perspective.

0362. At a case-planning meeting, the school support specialist proposes treating a belief as a testable hypothesis and reviewing what the child observes. for a preadolescent child seen in the community service agency. Which concept does this illustrate?

A. Skills rehearsal
B. Cognitive restructuring
C. Behavioral activation
D. Collaborative empiricism

0363. In child-focused CBT, which option preserves the correct meaning of both Developmental adaptation in CBT and Relapse prevention?

A. Developmental adaptation in CBT: Adjusting CBT language, materials, pacing, and caregiver involvement to the child’s developmental capacity. / Relapse prevention: Planning for future triggers, early warning signs, and continued use of skills after improvement.
B. Developmental adaptation in CBT: Adjusting CBT language, materials, pacing, and caregiver involvement to the child’s developmental capacity. / Relapse prevention: A structured aid for noticing a situation, automatic thought, emotion, evidence, and alternative perspective.
C. Developmental adaptation in CBT: Planning for future triggers, early warning signs, and continued use of skills after improvement. / Relapse prevention: Adjusting CBT language, materials, pacing, and caregiver involvement to the child’s developmental capacity.
D. Developmental adaptation in CBT: A CBT stance in which client and therapist jointly test ideas against evidence and experience. / Relapse prevention: Planning for future triggers, early warning signs, and continued use of skills after improvement.

0364. Select the best explanation of Cognitive restructuring.

A. Planned engagement in meaningful or rewarding activities to increase contact with positive reinforcement.
B. Adjusting CBT language, materials, pacing, and caregiver involvement to the child’s developmental capacity.
C. Practicing a targeted behavior in session, often with modeling, feedback, and repetition.
D. Collaboratively evaluating and developing more balanced or useful interpretations rather than imposing positive thinking.

0365. A behavior specialist is asked to evaluate a proposed service for a child aged 6 in the community mental-health service. The defining feature is examining evidence and generating a realistic alternative thought with the child. Which concept fits?

A. Coping self-talk
B. Relapse prevention
C. Cognitive restructuring
D. Exposure

0366. Which option correctly matches each concept to its practice focus: Exposure and Thought record?

A. Exposure: Using a child-friendly record to examine what happened and what the child thought at that moment. / Thought record: Building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation.
B. Exposure: Building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation. / Thought record: Using a child-friendly record to examine what happened and what the child thought at that moment.
C. Exposure: Building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation. / Thought record: Using drawings or concrete examples when abstract cognitive language is not yet accessible.
D. Exposure: Rehearsing a believable coping phrase a child can use during a challenging moment. / Thought record: Using a child-friendly record to examine what happened and what the child thought at that moment.

0367. Which option preserves the correct meaning of both Exposure and Coping self-talk?

A. Exposure: A teaching model linking thoughts, feelings, and behaviors as mutually influential components of experience. / Coping self-talk: Practice of helpful, realistic statements that support coping and task engagement.
B. Exposure: Gradual, planned approach to feared situations or cues to support new learning, with appropriate assessment and consent. / Coping self-talk: Planned engagement in meaningful or rewarding activities to increase contact with positive reinforcement.
C. Exposure: Gradual, planned approach to feared situations or cues to support new learning, with appropriate assessment and consent. / Coping self-talk: Practice of helpful, realistic statements that support coping and task engagement.
D. Exposure: Practice of helpful, realistic statements that support coping and task engagement. / Coping self-talk: Gradual, planned approach to feared situations or cues to support new learning, with appropriate assessment and consent.

0368. A mental-health professional is preparing a follow-up plan for a student aged 15 in the learning-support meeting. The plan calls for building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation. Which concept names this approach?

A. Exposure
B. Behavioral activation
C. Cognitive restructuring
D. Developmental adaptation in CBT

0369. In child-focused CBT, a supervisor asks for an applied contrast between Coping self-talk and Relapse prevention. Which option fits?

A. Coping self-talk: Identifying likely setbacks and rehearsing which coping steps the child can use. / Relapse prevention: Rehearsing a believable coping phrase a child can use during a challenging moment.
B. Coping self-talk: Rehearsing a believable coping phrase a child can use during a challenging moment. / Relapse prevention: Using a child-friendly record to examine what happened and what the child thought at that moment.
C. Coping self-talk: Rehearsing a believable coping phrase a child can use during a challenging moment. / Relapse prevention: Identifying likely setbacks and rehearsing which coping steps the child can use.
D. Coping self-talk: Role-playing an assertive request and providing supportive, specific feedback. / Relapse prevention: Identifying likely setbacks and rehearsing which coping steps the child can use.

0370. Choose the response that best puts Developmental adaptation in CBT into practice.

A. Role-playing an assertive request and providing supportive, specific feedback.
B. Using drawings or concrete examples when abstract cognitive language is not yet accessible.
C. Building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation.
D. Identifying likely setbacks and rehearsing which coping steps the child can use.

0371. A service team discusses a young person aged 16 in the telehealth session. Their proposed next step is treating a belief as a testable hypothesis and reviewing what the child observes. Which course concept supports it?

A. Collaborative empiricism
B. Behavioral activation
C. Exposure
D. Skills rehearsal

0372. In a supervision review, a case coordinator describes work with a student aged 12 in the counseling practicum: building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation. What concept is illustrated?

A. Exposure
B. Coping self-talk
C. Behavioral activation
D. Relapse prevention

0373. Which applied comparison correctly identifies what belongs to Thought record versus Coping self-talk?

A. Thought record: Using a child-friendly record to examine what happened and what the child thought at that moment. / Coping self-talk: Identifying likely setbacks and rehearsing which coping steps the child can use.
B. Thought record: Rehearsing a believable coping phrase a child can use during a challenging moment. / Coping self-talk: Using a child-friendly record to examine what happened and what the child thought at that moment.
C. Thought record: Helping a child map how a thought, feeling, and action relate in a particular situation. / Coping self-talk: Rehearsing a believable coping phrase a child can use during a challenging moment.
D. Thought record: Using a child-friendly record to examine what happened and what the child thought at that moment. / Coping self-talk: Rehearsing a believable coping phrase a child can use during a challenging moment.

0374. In the community youth program, a consulting counselor explains why a young person aged 16 would benefit from using drawings or concrete examples when abstract cognitive language is not yet accessible. Which course concept underpins the explanation?

A. Skills rehearsal
B. Collaborative empiricism
C. Relapse prevention
D. Developmental adaptation in CBT

0375. Which paired example correctly applies Thought record first and Developmental adaptation in CBT second?

A. Thought record: Identifying likely setbacks and rehearsing which coping steps the child can use. / Developmental adaptation in CBT: Using drawings or concrete examples when abstract cognitive language is not yet accessible.
B. Thought record: Using a child-friendly record to examine what happened and what the child thought at that moment. / Developmental adaptation in CBT: Using drawings or concrete examples when abstract cognitive language is not yet accessible.
C. Thought record: Using drawings or concrete examples when abstract cognitive language is not yet accessible. / Developmental adaptation in CBT: Using a child-friendly record to examine what happened and what the child thought at that moment.
D. Thought record: Using a child-friendly record to examine what happened and what the child thought at that moment. / Developmental adaptation in CBT: Role-playing an assertive request and providing supportive, specific feedback.

0376. A supervisor asks for an applied contrast between Cognitive triangle and Collaborative empiricism. Which option fits?

A. Cognitive triangle: Treating a belief as a testable hypothesis and reviewing what the child observes. / Collaborative empiricism: Helping a child map how a thought, feeling, and action relate in a particular situation.
B. Cognitive triangle: Helping a child map how a thought, feeling, and action relate in a particular situation. / Collaborative empiricism: Treating a belief as a testable hypothesis and reviewing what the child observes.
C. Cognitive triangle: Helping a child map how a thought, feeling, and action relate in a particular situation. / Collaborative empiricism: Building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation.
D. Cognitive triangle: Rehearsing a believable coping phrase a child can use during a challenging moment. / Collaborative empiricism: Treating a belief as a testable hypothesis and reviewing what the child observes.

0377. In the child guidance clinic, a school counselor describes the most appropriate support for a client in early adolescence as using drawings or concrete examples when abstract cognitive language is not yet accessible. Which framework is being applied?

A. Developmental adaptation in CBT
B. Thought record
C. Cognitive triangle
D. Coping self-talk

0378. A mental-health professional prepares for a session in the classroom support meeting with a child of elementary-school age. The intended approach is using drawings or concrete examples when abstract cognitive language is not yet accessible. Which concept is most relevant?

A. Developmental adaptation in CBT
B. Collaborative empiricism
C. Cognitive triangle
D. Skills rehearsal

0379. A consulting counselor is asked to justify a plan for a older adolescent client in the school-based service. It calls for role-playing an assertive request and providing supportive, specific feedback. Which concept provides the rationale?

A. Coping self-talk
B. Collaborative empiricism
C. Skills rehearsal
D. Thought record

0380. In child-focused CBT, which choice aligns each practice with the correct idea, Collaborative empiricism or Relapse prevention?

A. Collaborative empiricism: Treating a belief as a testable hypothesis and reviewing what the child observes. / Relapse prevention: Identifying likely setbacks and rehearsing which coping steps the child can use.
B. Collaborative empiricism: Treating a belief as a testable hypothesis and reviewing what the child observes. / Relapse prevention: Helping a child map how a thought, feeling, and action relate in a particular situation.
C. Collaborative empiricism: Scheduling a manageable valued activity and reviewing its effect on mood and functioning. / Relapse prevention: Identifying likely setbacks and rehearsing which coping steps the child can use.
D. Collaborative empiricism: Identifying likely setbacks and rehearsing which coping steps the child can use. / Relapse prevention: Treating a belief as a testable hypothesis and reviewing what the child observes.

0381. Which comparison would correct a trainee's misunderstanding of Cognitive restructuring versus Collaborative empiricism?

A. Cognitive restructuring: A CBT stance in which client and therapist jointly test ideas against evidence and experience. / Collaborative empiricism: Collaboratively evaluating and developing more balanced or useful interpretations rather than imposing positive thinking.
B. Cognitive restructuring: Adjusting CBT language, materials, pacing, and caregiver involvement to the child's developmental capacity. / Collaborative empiricism: A CBT stance in which client and therapist jointly test ideas against evidence and experience.
C. Cognitive restructuring: Collaboratively evaluating and developing more balanced or useful interpretations rather than imposing positive thinking. / Collaborative empiricism: Planned engagement in meaningful or rewarding activities to increase contact with positive reinforcement.
D. Cognitive restructuring: Collaboratively evaluating and developing more balanced or useful interpretations rather than imposing positive thinking. / Collaborative empiricism: A CBT stance in which client and therapist jointly test ideas against evidence and experience.

0382. Which option pairs the definitions of Cognitive triangle and Behavioral activation correctly, in that order?

A. Cognitive triangle: A teaching model linking thoughts, feelings, and behaviors as mutually influential components of experience. / Behavioral activation: Adjusting CBT language, materials, pacing, and caregiver involvement to the child's developmental capacity.
B. Cognitive triangle: A teaching model linking thoughts, feelings, and behaviors as mutually influential components of experience. / Behavioral activation: Planned engagement in meaningful or rewarding activities to increase contact with positive reinforcement.
C. Cognitive triangle: Planned engagement in meaningful or rewarding activities to increase contact with positive reinforcement. / Behavioral activation: A teaching model linking thoughts, feelings, and behaviors as mutually influential components of experience.
D. Cognitive triangle: Planning for future triggers, early warning signs, and continued use of skills after improvement. / Behavioral activation: Planned engagement in meaningful or rewarding activities to increase contact with positive reinforcement.

0383. In child-focused CBT, a case conference asks for a distinction between Collaborative empiricism and Relapse prevention. Which answer is sound?

A. Collaborative empiricism: Planning for future triggers, early warning signs, and continued use of skills after improvement. / Relapse prevention: A CBT stance in which client and therapist jointly test ideas against evidence and experience.
B. Collaborative empiricism: Planned engagement in meaningful or rewarding activities to increase contact with positive reinforcement. / Relapse prevention: Planning for future triggers, early warning signs, and continued use of skills after improvement.
C. Collaborative empiricism: A CBT stance in which client and therapist jointly test ideas against evidence and experience. / Relapse prevention: A teaching model linking thoughts, feelings, and behaviors as mutually influential components of experience.
D. Collaborative empiricism: A CBT stance in which client and therapist jointly test ideas against evidence and experience. / Relapse prevention: Planning for future triggers, early warning signs, and continued use of skills after improvement.

0384. Which choice aligns each practice with the correct idea, Thought record or Coping self-talk?

A. Thought record: Rehearsing a believable coping phrase a child can use during a challenging moment. / Coping self-talk: Using a child-friendly record to examine what happened and what the child thought at that moment.
B. Thought record: Helping a child map how a thought, feeling, and action relate in a particular situation. / Coping self-talk: Rehearsing a believable coping phrase a child can use during a challenging moment.
C. Thought record: Using a child-friendly record to examine what happened and what the child thought at that moment. / Coping self-talk: Rehearsing a believable coping phrase a child can use during a challenging moment.
D. Thought record: Using a child-friendly record to examine what happened and what the child thought at that moment. / Coping self-talk: Identifying likely setbacks and rehearsing which coping steps the child can use.

0385. In child-focused CBT, which statement shows a sound practice-level distinction between Coping self-talk and Relapse prevention?

A. Coping self-talk: Identifying likely setbacks and rehearsing which coping steps the child can use. / Relapse prevention: Rehearsing a believable coping phrase a child can use during a challenging moment.
B. Coping self-talk: Rehearsing a believable coping phrase a child can use during a challenging moment. / Relapse prevention: Using a child-friendly record to examine what happened and what the child thought at that moment.
C. Coping self-talk: Role-playing an assertive request and providing supportive, specific feedback. / Relapse prevention: Identifying likely setbacks and rehearsing which coping steps the child can use.
D. Coping self-talk: Rehearsing a believable coping phrase a child can use during a challenging moment. / Relapse prevention: Identifying likely setbacks and rehearsing which coping steps the child can use.

0386. A consultant and a child aged 6 are discussing support in the school counseling office. The selected practice is building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation. Which concept does this demonstrate?

A. Developmental adaptation in CBT
B. Behavioral activation
C. Collaborative empiricism
D. Exposure

0387. In the family resource center, the agreed focus for a program coordinator working with a student aged 15 is using a child-friendly record to examine what happened and what the child thought at that moment. Which concept names this focus?

A. Behavioral activation
B. Cognitive triangle
C. Thought record
D. Skills rehearsal

0388. Which applied comparison correctly identifies what belongs to Thought record versus Collaborative empiricism?

A. Thought record: Using a child-friendly record to examine what happened and what the child thought at that moment. / Collaborative empiricism: Helping a child map how a thought, feeling, and action relate in a particular situation.
B. Thought record: Using a child-friendly record to examine what happened and what the child thought at that moment. / Collaborative empiricism: Treating a belief as a testable hypothesis and reviewing what the child observes.
C. Thought record: Using drawings or concrete examples when abstract cognitive language is not yet accessible. / Collaborative empiricism: Treating a belief as a testable hypothesis and reviewing what the child observes.
D. Thought record: Treating a belief as a testable hypothesis and reviewing what the child observes. / Collaborative empiricism: Using a child-friendly record to examine what happened and what the child thought at that moment.

0389. A student aged 17's service team meets in the clinical planning session. The caregiver working with a counselor recommends a change involving building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation. Which idea best explains it?

A. Skills rehearsal
B. Exposure
C. Behavioral activation
D. Collaborative empiricism

0390. Which option preserves the correct meaning of both Cognitive triangle and Skills rehearsal?

A. Cognitive triangle: Collaboratively evaluating and developing more balanced or useful interpretations rather than imposing positive thinking. / Skills rehearsal: Practicing a targeted behavior in session, often with modeling, feedback, and repetition.
B. Cognitive triangle: Practicing a targeted behavior in session, often with modeling, feedback, and repetition. / Skills rehearsal: A teaching model linking thoughts, feelings, and behaviors as mutually influential components of experience.
C. Cognitive triangle: A teaching model linking thoughts, feelings, and behaviors as mutually influential components of experience. / Skills rehearsal: Practice of helpful, realistic statements that support coping and task engagement.
D. Cognitive triangle: A teaching model linking thoughts, feelings, and behaviors as mutually influential components of experience. / Skills rehearsal: Practicing a targeted behavior in session, often with modeling, feedback, and repetition.

0391. At a case-planning meeting, the clinical supervisor proposes role-playing an assertive request and providing supportive, specific feedback. for a child of elementary-school age seen in the behavior-support review. Which concept does this illustrate?

A. Cognitive restructuring
B. Skills rehearsal
C. Coping self-talk
D. Cognitive triangle

0392. For a child aged 11 seen in the school counseling office, the service navigator recommends a plan built around treating a belief as a testable hypothesis and reviewing what the child observes. Which concept is reflected?

A. Collaborative empiricism
B. Coping self-talk
C. Thought record
D. Developmental adaptation in CBT

0393. A research trainee is asked what should shape a adolescent student's support in the school-based service. The proposed focus is scheduling a manageable valued activity and reviewing its effect on mood and functioning. Which principle does it represent?

A. Behavioral activation
B. Developmental adaptation in CBT
C. Collaborative empiricism
D. Skills rehearsal

0394. While consulting in the community service agency, a member of a clinical team supports a high-school student by using this approach: rehearsing a believable coping phrase a child can use during a challenging moment. Which concept is being applied?

A. Exposure
B. Coping self-talk
C. Cognitive restructuring
D. Skills rehearsal

0395. A supervisor asks for an applied contrast between Behavioral activation and Skills rehearsal. Which option fits?

A. Behavioral activation: Scheduling a manageable valued activity and reviewing its effect on mood and functioning. / Skills rehearsal: Rehearsing a believable coping phrase a child can use during a challenging moment.
B. Behavioral activation: Using drawings or concrete examples when abstract cognitive language is not yet accessible. / Skills rehearsal: Role-playing an assertive request and providing supportive, specific feedback.
C. Behavioral activation: Role-playing an assertive request and providing supportive, specific feedback. / Skills rehearsal: Scheduling a manageable valued activity and reviewing its effect on mood and functioning.
D. Behavioral activation: Scheduling a manageable valued activity and reviewing its effect on mood and functioning. / Skills rehearsal: Role-playing an assertive request and providing supportive, specific feedback.

0396. Choose the response that best puts Skills rehearsal into practice.

A. Rehearsing a believable coping phrase a child can use during a challenging moment.
B. Role-playing an assertive request and providing supportive, specific feedback.
C. Using drawings or concrete examples when abstract cognitive language is not yet accessible.
D. Scheduling a manageable valued activity and reviewing its effect on mood and functioning.

0397. A trainee must distinguish how Cognitive triangle and Coping self-talk guide practice. Which comparison is accurate?

A. Cognitive triangle: Helping a child map how a thought, feeling, and action relate in a particular situation. / Coping self-talk: Rehearsing a believable coping phrase a child can use during a challenging moment.
B. Cognitive triangle: Helping a child map how a thought, feeling, and action relate in a particular situation. / Coping self-talk: Examining evidence and generating a realistic alternative thought with the child.
C. Cognitive triangle: Using a child-friendly record to examine what happened and what the child thought at that moment. / Coping self-talk: Rehearsing a believable coping phrase a child can use during a challenging moment.
D. Cognitive triangle: Rehearsing a believable coping phrase a child can use during a challenging moment. / Coping self-talk: Helping a child map how a thought, feeling, and action relate in a particular situation.

0398. In the family session, a case coordinator is considering this approach for a adolescent student: rehearsing a believable coping phrase a child can use during a challenging moment. Which framework does it represent?

A. Developmental adaptation in CBT
B. Cognitive triangle
C. Exposure
D. Coping self-talk

0399. A case conference asks for a distinction between Cognitive restructuring and Skills rehearsal. Which answer is sound?

A. Cognitive restructuring: Planned engagement in meaningful or rewarding activities to increase contact with positive reinforcement. / Skills rehearsal: Practicing a targeted behavior in session, often with modeling, feedback, and repetition.
B. Cognitive restructuring: Collaboratively evaluating and developing more balanced or useful interpretations rather than imposing positive thinking. / Skills rehearsal: Practicing a targeted behavior in session, often with modeling, feedback, and repetition.
C. Cognitive restructuring: Practicing a targeted behavior in session, often with modeling, feedback, and repetition. / Skills rehearsal: Collaboratively evaluating and developing more balanced or useful interpretations rather than imposing positive thinking.
D. Cognitive restructuring: Collaboratively evaluating and developing more balanced or useful interpretations rather than imposing positive thinking. / Skills rehearsal: A CBT stance in which client and therapist jointly test ideas against evidence and experience.

0400. Which choice aligns each practice with the correct idea, Cognitive restructuring or Exposure?

A. Cognitive restructuring: Building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation. / Exposure: Examining evidence and generating a realistic alternative thought with the child.
B. Cognitive restructuring: Examining evidence and generating a realistic alternative thought with the child. / Exposure: Helping a child map how a thought, feeling, and action relate in a particular situation.
C. Cognitive restructuring: Using a child-friendly record to examine what happened and what the child thought at that moment. / Exposure: Building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation.
D. Cognitive restructuring: Examining evidence and generating a realistic alternative thought with the child. / Exposure: Building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation.

0401. In a supervision quiz, how should Collaborative empiricism be distinguished from Developmental adaptation in CBT?

A. Collaborative empiricism: Gradual, planned approach to feared situations or cues to support new learning, with appropriate assessment and consent. / Developmental adaptation in CBT: Adjusting CBT language, materials, pacing, and caregiver involvement to the child's developmental capacity.
B. Collaborative empiricism: A CBT stance in which client and therapist jointly test ideas against evidence and experience. / Developmental adaptation in CBT: Collaboratively evaluating and developing more balanced or useful interpretations rather than imposing positive thinking.
C. Collaborative empiricism: Adjusting CBT language, materials, pacing, and caregiver involvement to the child's developmental capacity. / Developmental adaptation in CBT: A CBT stance in which client and therapist jointly test ideas against evidence and experience.
D. Collaborative empiricism: A CBT stance in which client and therapist jointly test ideas against evidence and experience. / Developmental adaptation in CBT: Adjusting CBT language, materials, pacing, and caregiver involvement to the child's developmental capacity.

0402. A teacher and counselor is asked to justify a plan for a child aged 11 in the community service agency. It calls for using drawings or concrete examples when abstract cognitive language is not yet accessible. Which concept provides the rationale?

A. Cognitive restructuring
B. Exposure
C. Developmental adaptation in CBT
D. Relapse prevention

0403. In child-focused CBT, consider a child aged 8 receiving help in the supervision meeting. The teacher and counselor focuses on identifying likely setbacks and rehearsing which coping steps the child can use. Which term best describes the guiding idea?

A. Coping self-talk
B. Skills rehearsal
C. Behavioral activation
D. Relapse prevention

0404. A case conference reviews a therapist's work with a child aged 11 in the learning-support meeting: scheduling a manageable valued activity and reviewing its effect on mood and functioning. Which principle is central?

A. Developmental adaptation in CBT
B. Behavioral activation
C. Skills rehearsal
D. Exposure

0405. Which named construct is captured by this account? A structured aid for noticing a situation, automatic thought, emotion, evidence, and alternative perspective.

A. Coping self-talk
B. Cognitive triangle
C. Thought record
D. Behavioral activation

0406. A case coordinator presents a support plan for a student aged 15 at the youth advocacy program. Its central feature is scheduling a manageable valued activity and reviewing its effect on mood and functioning. Which concept should be named?

A. Behavioral activation
B. Thought record
C. Relapse prevention
D. Coping self-talk

0407. In child-focused CBT, which statement accurately contrasts the course concepts Collaborative empiricism and Relapse prevention?

A. Collaborative empiricism: A CBT stance in which client and therapist jointly test ideas against evidence and experience. / Relapse prevention: A teaching model linking thoughts, feelings, and behaviors as mutually influential components of experience.
B. Collaborative empiricism: Planning for future triggers, early warning signs, and continued use of skills after improvement. / Relapse prevention: A CBT stance in which client and therapist jointly test ideas against evidence and experience.
C. Collaborative empiricism: Planned engagement in meaningful or rewarding activities to increase contact with positive reinforcement. / Relapse prevention: Planning for future triggers, early warning signs, and continued use of skills after improvement.
D. Collaborative empiricism: A CBT stance in which client and therapist jointly test ideas against evidence and experience. / Relapse prevention: Planning for future triggers, early warning signs, and continued use of skills after improvement.

0408. In a professional consultation about a young adolescent client, the mental-health professional describes this response in the caregiver consultation: examining evidence and generating a realistic alternative thought with the child. Which term is most apt?

A. Cognitive triangle
B. Cognitive restructuring
C. Collaborative empiricism
D. Skills rehearsal

0409. Which pair of actions illustrates Coping self-talk and Developmental adaptation in CBT, respectively?

A. Coping self-talk: Rehearsing a believable coping phrase a child can use during a challenging moment. / Developmental adaptation in CBT: Using drawings or concrete examples when abstract cognitive language is not yet accessible.
B. Coping self-talk: Using drawings or concrete examples when abstract cognitive language is not yet accessible. / Developmental adaptation in CBT: Rehearsing a believable coping phrase a child can use during a challenging moment.
C. Coping self-talk: Rehearsing a believable coping phrase a child can use during a challenging moment. / Developmental adaptation in CBT: Role-playing an assertive request and providing supportive, specific feedback.
D. Coping self-talk: Helping a child map how a thought, feeling, and action relate in a particular situation. / Developmental adaptation in CBT: Using drawings or concrete examples when abstract cognitive language is not yet accessible.

0410. A student confuses Coping self-talk with Developmental adaptation in CBT. Which explanation most accurately separates them?

A. Coping self-talk: Adjusting CBT language, materials, pacing, and caregiver involvement to the child's developmental capacity. / Developmental adaptation in CBT: Practice of helpful, realistic statements that support coping and task engagement.
B. Coping self-talk: A teaching model linking thoughts, feelings, and behaviors as mutually influential components of experience. / Developmental adaptation in CBT: Adjusting CBT language, materials, pacing, and caregiver involvement to the child's developmental capacity.
C. Coping self-talk: Practice of helpful, realistic statements that support coping and task engagement. / Developmental adaptation in CBT: Adjusting CBT language, materials, pacing, and caregiver involvement to the child's developmental capacity.
D. Coping self-talk: Practice of helpful, realistic statements that support coping and task engagement. / Developmental adaptation in CBT: Practicing a targeted behavior in session, often with modeling, feedback, and repetition.

0411. In child-focused CBT, which option correctly matches each concept to its practice focus: Developmental adaptation in CBT and Relapse prevention?

A. Developmental adaptation in CBT: Using drawings or concrete examples when abstract cognitive language is not yet accessible. / Relapse prevention: Identifying likely setbacks and rehearsing which coping steps the child can use.
B. Developmental adaptation in CBT: Using drawings or concrete examples when abstract cognitive language is not yet accessible. / Relapse prevention: Using a child-friendly record to examine what happened and what the child thought at that moment.
C. Developmental adaptation in CBT: Treating a belief as a testable hypothesis and reviewing what the child observes. / Relapse prevention: Identifying likely setbacks and rehearsing which coping steps the child can use.
D. Developmental adaptation in CBT: Identifying likely setbacks and rehearsing which coping steps the child can use. / Relapse prevention: Using drawings or concrete examples when abstract cognitive language is not yet accessible.

0412. An interdisciplinary team reviews a child of elementary-school age's case at the after-school program. The school support specialist recommends examining evidence and generating a realistic alternative thought with the child. Which course concept best fits?

A. Cognitive restructuring
B. Behavioral activation
C. Collaborative empiricism
D. Exposure

0413. In a supervision review, a school-based clinician describes work with a young person aged 16 in the community mental-health service: helping a child map how a thought, feeling, and action relate in a particular situation. What concept is illustrated?

A. Cognitive triangle
B. Skills rehearsal
C. Coping self-talk
D. Developmental adaptation in CBT

0414. Which paired example correctly applies Cognitive restructuring first and Developmental adaptation in CBT second?

A. Cognitive restructuring: Using drawings or concrete examples when abstract cognitive language is not yet accessible. / Developmental adaptation in CBT: Examining evidence and generating a realistic alternative thought with the child.
B. Cognitive restructuring: Examining evidence and generating a realistic alternative thought with the child. / Developmental adaptation in CBT: Using drawings or concrete examples when abstract cognitive language is not yet accessible.
C. Cognitive restructuring: Treating a belief as a testable hypothesis and reviewing what the child observes. / Developmental adaptation in CBT: Using drawings or concrete examples when abstract cognitive language is not yet accessible.
D. Cognitive restructuring: Examining evidence and generating a realistic alternative thought with the child. / Developmental adaptation in CBT: Using a child-friendly record to examine what happened and what the child thought at that moment.

0415. In child-focused CBT, a school-based clinician presents a support plan for a child aged 14 at the learning-support meeting. Its central feature is identifying likely setbacks and rehearsing which coping steps the child can use. Which concept should be named?

A. Collaborative empiricism
B. Cognitive triangle
C. Relapse prevention
D. Thought record

0416. Which option correctly matches each concept to its practice focus: Cognitive restructuring and Coping self-talk?

A. Cognitive restructuring: Role-playing an assertive request and providing supportive, specific feedback. / Coping self-talk: Rehearsing a believable coping phrase a child can use during a challenging moment.
B. Cognitive restructuring: Rehearsing a believable coping phrase a child can use during a challenging moment. / Coping self-talk: Examining evidence and generating a realistic alternative thought with the child.
C. Cognitive restructuring: Examining evidence and generating a realistic alternative thought with the child. / Coping self-talk: Building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation.
D. Cognitive restructuring: Examining evidence and generating a realistic alternative thought with the child. / Coping self-talk: Rehearsing a believable coping phrase a child can use during a challenging moment.

0417. In child-focused CBT, a supervisor asks for an applied contrast between Cognitive restructuring and Relapse prevention. Which option fits?

A. Cognitive restructuring: Building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation. / Relapse prevention: Identifying likely setbacks and rehearsing which coping steps the child can use.
B. Cognitive restructuring: Examining evidence and generating a realistic alternative thought with the child. / Relapse prevention: Helping a child map how a thought, feeling, and action relate in a particular situation.
C. Cognitive restructuring: Examining evidence and generating a realistic alternative thought with the child. / Relapse prevention: Identifying likely setbacks and rehearsing which coping steps the child can use.
D. Cognitive restructuring: Identifying likely setbacks and rehearsing which coping steps the child can use. / Relapse prevention: Examining evidence and generating a realistic alternative thought with the child.

0418. In child-focused CBT, which comparison correctly distinguishes Exposure from Relapse prevention?

A. Exposure: Gradual, planned approach to feared situations or cues to support new learning, with appropriate assessment and consent. / Relapse prevention: Planning for future triggers, early warning signs, and continued use of skills after improvement.
B. Exposure: Gradual, planned approach to feared situations or cues to support new learning, with appropriate assessment and consent. / Relapse prevention: Practicing a targeted behavior in session, often with modeling, feedback, and repetition.
C. Exposure: A structured aid for noticing a situation, automatic thought, emotion, evidence, and alternative perspective. / Relapse prevention: Planning for future triggers, early warning signs, and continued use of skills after improvement.
D. Exposure: Planning for future triggers, early warning signs, and continued use of skills after improvement. / Relapse prevention: Gradual, planned approach to feared situations or cues to support new learning, with appropriate assessment and consent.

0419. Which pair of actions illustrates Skills rehearsal and Developmental adaptation in CBT, respectively?

A. Skills rehearsal: Building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation. / Developmental adaptation in CBT: Using drawings or concrete examples when abstract cognitive language is not yet accessible.
B. Skills rehearsal: Role-playing an assertive request and providing supportive, specific feedback. / Developmental adaptation in CBT: Using drawings or concrete examples when abstract cognitive language is not yet accessible.
C. Skills rehearsal: Role-playing an assertive request and providing supportive, specific feedback. / Developmental adaptation in CBT: Rehearsing a believable coping phrase a child can use during a challenging moment.
D. Skills rehearsal: Using drawings or concrete examples when abstract cognitive language is not yet accessible. / Developmental adaptation in CBT: Role-playing an assertive request and providing supportive, specific feedback.

0420. A preadolescent child is receiving support in the school counseling office. The school counselor is guided by this practice: role-playing an assertive request and providing supportive, specific feedback. Which principle best fits?

A. Exposure
B. Thought record
C. Behavioral activation
D. Skills rehearsal

0421. Which named construct is captured by this account? A teaching model linking thoughts, feelings, and behaviors as mutually influential components of experience.

A. Exposure
B. Cognitive restructuring
C. Thought record
D. Cognitive triangle

0422. A student aged 12 and a mental-health professional are reviewing goals in the after-school program. The agreed action is using a child-friendly record to examine what happened and what the child thought at that moment. Which principle best accounts for it?

A. Exposure
B. Cognitive restructuring
C. Behavioral activation
D. Thought record

0423. A consultant and a young person are discussing support in the school-based service. The selected practice is using drawings or concrete examples when abstract cognitive language is not yet accessible. Which concept does this demonstrate?

A. Exposure
B. Relapse prevention
C. Developmental adaptation in CBT
D. Cognitive restructuring

0424. A adolescent student’s service team meets in the family session. The case coordinator recommends a change involving rehearsing a believable coping phrase a child can use during a challenging moment. Which idea best explains it?

A. Cognitive restructuring
B. Exposure
C. Coping self-talk
D. Developmental adaptation in CBT

0425. Which statement shows a sound practice-level distinction between Cognitive triangle and Collaborative empiricism?

A. Cognitive triangle: Treating a belief as a testable hypothesis and reviewing what the child observes. / Collaborative empiricism: Helping a child map how a thought, feeling, and action relate in a particular situation.
B. Cognitive triangle: Rehearsing a believable coping phrase a child can use during a challenging moment. / Collaborative empiricism: Treating a belief as a testable hypothesis and reviewing what the child observes.
C. Cognitive triangle: Helping a child map how a thought, feeling, and action relate in a particular situation. / Collaborative empiricism: Building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation.
D. Cognitive triangle: Helping a child map how a thought, feeling, and action relate in a particular situation. / Collaborative empiricism: Treating a belief as a testable hypothesis and reviewing what the child observes.

0426. Which option is the clearest practical expression of Cognitive triangle?

A. Helping a child map how a thought, feeling, and action relate in a particular situation.
B. Examining evidence and generating a realistic alternative thought with the child.
C. Treating a belief as a testable hypothesis and reviewing what the child observes.
D. Building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation.

0427. In child-focused CBT, in the supervision meeting, a teacher and counselor describes the most appropriate support for a child aged 8 as identifying likely setbacks and rehearsing which coping steps the child can use. Which framework is being applied?

A. Behavioral activation
B. Collaborative empiricism
C. Exposure
D. Relapse prevention

0428. Which option preserves the correct meaning of both Exposure and Developmental adaptation in CBT?

A. Exposure: Gradual, planned approach to feared situations or cues to support new learning, with appropriate assessment and consent. / Developmental adaptation in CBT: Adjusting CBT language, materials, pacing, and caregiver involvement to the child's developmental capacity.
B. Exposure: Gradual, planned approach to feared situations or cues to support new learning, with appropriate assessment and consent. / Developmental adaptation in CBT: Practicing a targeted behavior in session, often with modeling, feedback, and repetition.
C. Exposure: Adjusting CBT language, materials, pacing, and caregiver involvement to the child's developmental capacity. / Developmental adaptation in CBT: Gradual, planned approach to feared situations or cues to support new learning, with appropriate assessment and consent.
D. Exposure: A CBT stance in which client and therapist jointly test ideas against evidence and experience. / Developmental adaptation in CBT: Adjusting CBT language, materials, pacing, and caregiver involvement to the child's developmental capacity.

0429. A consultant prepares for a session in the school consultation with a child aged 11. The intended approach is role-playing an assertive request and providing supportive, specific feedback. Which concept is most relevant?

A. Cognitive triangle
B. Thought record
C. Behavioral activation
D. Skills rehearsal

0430. Which option correctly matches each concept to its practice focus: Cognitive triangle and Skills rehearsal?

A. Cognitive triangle: Role-playing an assertive request and providing supportive, specific feedback. / Skills rehearsal: Helping a child map how a thought, feeling, and action relate in a particular situation.
B. Cognitive triangle: Helping a child map how a thought, feeling, and action relate in a particular situation. / Skills rehearsal: Rehearsing a believable coping phrase a child can use during a challenging moment.
C. Cognitive triangle: Examining evidence and generating a realistic alternative thought with the child. / Skills rehearsal: Role-playing an assertive request and providing supportive, specific feedback.
D. Cognitive triangle: Helping a child map how a thought, feeling, and action relate in a particular situation. / Skills rehearsal: Role-playing an assertive request and providing supportive, specific feedback.

0431. Which paired example correctly applies Behavioral activation first and Exposure second?

A. Behavioral activation: Using a child-friendly record to examine what happened and what the child thought at that moment. / Exposure: Building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation.
B. Behavioral activation: Building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation. / Exposure: Scheduling a manageable valued activity and reviewing its effect on mood and functioning.
C. Behavioral activation: Scheduling a manageable valued activity and reviewing its effect on mood and functioning. / Exposure: Building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation.
D. Behavioral activation: Scheduling a manageable valued activity and reviewing its effect on mood and functioning. / Exposure: Treating a belief as a testable hypothesis and reviewing what the child observes.

0432. A assessment clinician and a young person aged 13 are discussing support in the clinical planning session. The selected practice is scheduling a manageable valued activity and reviewing its effect on mood and functioning. Which concept does this demonstrate?

A. Behavioral activation
B. Cognitive triangle
C. Thought record
D. Developmental adaptation in CBT

0433. Which option correctly matches each concept to its practice focus: Cognitive triangle and Exposure?

A. Cognitive triangle: Identifying likely setbacks and rehearsing which coping steps the child can use. / Exposure: Building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation.
B. Cognitive triangle: Helping a child map how a thought, feeling, and action relate in a particular situation. / Exposure: Building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation.
C. Cognitive triangle: Building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation. / Exposure: Helping a child map how a thought, feeling, and action relate in a particular situation.
D. Cognitive triangle: Helping a child map how a thought, feeling, and action relate in a particular situation. / Exposure: Examining evidence and generating a realistic alternative thought with the child.

0434. A service team discusses a student aged 9 in the outpatient clinic. Their proposed next step is role-playing an assertive request and providing supportive, specific feedback. Which course concept supports it?

A. Cognitive triangle
B. Skills rehearsal
C. Cognitive restructuring
D. Coping self-talk

0435. Choose the practice comparison that best separates Cognitive triangle from Collaborative empiricism.

A. Cognitive triangle: Treating a belief as a testable hypothesis and reviewing what the child observes. / Collaborative empiricism: Helping a child map how a thought, feeling, and action relate in a particular situation.
B. Cognitive triangle: Helping a child map how a thought, feeling, and action relate in a particular situation. / Collaborative empiricism: Building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation.
C. Cognitive triangle: Rehearsing a believable coping phrase a child can use during a challenging moment. / Collaborative empiricism: Treating a belief as a testable hypothesis and reviewing what the child observes.
D. Cognitive triangle: Helping a child map how a thought, feeling, and action relate in a particular situation. / Collaborative empiricism: Treating a belief as a testable hypothesis and reviewing what the child observes.

0436. In child-focused CBT, which description belongs with the term Relapse prevention?

A. A CBT stance in which client and therapist jointly test ideas against evidence and experience.
B. Planned engagement in meaningful or rewarding activities to increase contact with positive reinforcement.
C. Adjusting CBT language, materials, pacing, and caregiver involvement to the child's developmental capacity.
D. Planning for future triggers, early warning signs, and continued use of skills after improvement.

0437. How are Behavioral activation and Thought record most accurately differentiated in this curriculum?

A. Behavioral activation: Planned engagement in meaningful or rewarding activities to increase contact with positive reinforcement. / Thought record: Gradual, planned approach to feared situations or cues to support new learning, with appropriate assessment and consent.
B. Behavioral activation: Practicing a targeted behavior in session, often with modeling, feedback, and repetition. / Thought record: A structured aid for noticing a situation, automatic thought, emotion, evidence, and alternative perspective.
C. Behavioral activation: Planned engagement in meaningful or rewarding activities to increase contact with positive reinforcement. / Thought record: A structured aid for noticing a situation, automatic thought, emotion, evidence, and alternative perspective.
D. Behavioral activation: A structured aid for noticing a situation, automatic thought, emotion, evidence, and alternative perspective. / Thought record: Planned engagement in meaningful or rewarding activities to increase contact with positive reinforcement.

0438. Which paired example correctly applies Cognitive triangle first and Collaborative empiricism second?

A. Cognitive triangle: Helping a child map how a thought, feeling, and action relate in a particular situation. / Collaborative empiricism: Building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation.
B. Cognitive triangle: Rehearsing a believable coping phrase a child can use during a challenging moment. / Collaborative empiricism: Treating a belief as a testable hypothesis and reviewing what the child observes.
C. Cognitive triangle: Helping a child map how a thought, feeling, and action relate in a particular situation. / Collaborative empiricism: Treating a belief as a testable hypothesis and reviewing what the child observes.
D. Cognitive triangle: Treating a belief as a testable hypothesis and reviewing what the child observes. / Collaborative empiricism: Helping a child map how a thought, feeling, and action relate in a particular situation.

0439. In child-focused CBT, which professional action most closely applies Relapse prevention?

A. Helping a child map how a thought, feeling, and action relate in a particular situation.
B. Examining evidence and generating a realistic alternative thought with the child.
C. Rehearsing a believable coping phrase a child can use during a challenging moment.
D. Identifying likely setbacks and rehearsing which coping steps the child can use.

0440. Which applied comparison correctly identifies what belongs to Behavioral activation versus Collaborative empiricism?

A. Behavioral activation: Scheduling a manageable valued activity and reviewing its effect on mood and functioning. / Collaborative empiricism: Treating a belief as a testable hypothesis and reviewing what the child observes.
B. Behavioral activation: Identifying likely setbacks and rehearsing which coping steps the child can use. / Collaborative empiricism: Treating a belief as a testable hypothesis and reviewing what the child observes.
C. Behavioral activation: Scheduling a manageable valued activity and reviewing its effect on mood and functioning. / Collaborative empiricism: Using a child-friendly record to examine what happened and what the child thought at that moment.
D. Behavioral activation: Treating a belief as a testable hypothesis and reviewing what the child observes. / Collaborative empiricism: Scheduling a manageable valued activity and reviewing its effect on mood and functioning.

0441. A school support specialist is asked to evaluate a proposed service for a young person aged 16 in the counseling practicum. The defining feature is using a child-friendly record to examine what happened and what the child thought at that moment. Which concept fits?

A. Relapse prevention
B. Collaborative empiricism
C. Developmental adaptation in CBT
D. Thought record

0442. In a supervision quiz, how should Thought record be distinguished from Coping self-talk?

A. Thought record: Practice of helpful, realistic statements that support coping and task engagement. / Coping self-talk: A structured aid for noticing a situation, automatic thought, emotion, evidence, and alternative perspective.
B. Thought record: A structured aid for noticing a situation, automatic thought, emotion, evidence, and alternative perspective. / Coping self-talk: Planning for future triggers, early warning signs, and continued use of skills after improvement.
C. Thought record: A teaching model linking thoughts, feelings, and behaviors as mutually influential components of experience. / Coping self-talk: Practice of helpful, realistic statements that support coping and task engagement.
D. Thought record: A structured aid for noticing a situation, automatic thought, emotion, evidence, and alternative perspective. / Coping self-talk: Practice of helpful, realistic statements that support coping and task engagement.

0443. In a case note about a school-age child, a mental-health professional working in the counseling practicum records this priority: treating a belief as a testable hypothesis and reviewing what the child observes. What principle is reflected?

A. Skills rehearsal
B. Collaborative empiricism
C. Exposure
D. Cognitive triangle

0444. Select the best explanation of Thought record.

A. A structured aid for noticing a situation, automatic thought, emotion, evidence, and alternative perspective.
B. Collaboratively evaluating and developing more balanced or useful interpretations rather than imposing positive thinking.
C. Planned engagement in meaningful or rewarding activities to increase contact with positive reinforcement.
D. Planning for future triggers, early warning signs, and continued use of skills after improvement.

0445. While consulting in the telehealth session, a assessment clinician supports a child aged 6 by using this approach: using drawings or concrete examples when abstract cognitive language is not yet accessible. Which concept is being applied?

A. Developmental adaptation in CBT
B. Skills rehearsal
C. Coping self-talk
D. Relapse prevention

0446. In the family resource center, a team asks how a group facilitator can support a adolescent student. One proposed action is using drawings or concrete examples when abstract cognitive language is not yet accessible. Which idea does it represent?

A. Developmental adaptation in CBT
B. Relapse prevention
C. Behavioral activation
D. Coping self-talk

0447. Which option is the clearest practical expression of Thought record?

A. Using a child-friendly record to examine what happened and what the child thought at that moment.
B. Treating a belief as a testable hypothesis and reviewing what the child observes.
C. Building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation.
D. Role-playing an assertive request and providing supportive, specific feedback.

0448. In a case note about a child of elementary-school age, a supervised trainee working in the telehealth session records this priority: building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation. What principle is reflected?

A. Relapse prevention
B. Exposure
C. Developmental adaptation in CBT
D. Cognitive triangle

0449. Which option pairs the definitions of Cognitive triangle and Exposure correctly, in that order?

A. Cognitive triangle: Planning for future triggers, early warning signs, and continued use of skills after improvement. / Exposure: Gradual, planned approach to feared situations or cues to support new learning, with appropriate assessment and consent.
B. Cognitive triangle: A teaching model linking thoughts, feelings, and behaviors as mutually influential components of experience. / Exposure: Gradual, planned approach to feared situations or cues to support new learning, with appropriate assessment and consent.
C. Cognitive triangle: A teaching model linking thoughts, feelings, and behaviors as mutually influential components of experience. / Exposure: Collaboratively evaluating and developing more balanced or useful interpretations rather than imposing positive thinking.
D. Cognitive triangle: Gradual, planned approach to feared situations or cues to support new learning, with appropriate assessment and consent. / Exposure: A teaching model linking thoughts, feelings, and behaviors as mutually influential components of experience.

0450. Choose the definition pair that correctly explains Cognitive restructuring first and Collaborative empiricism second.

A. Cognitive restructuring: Collaboratively evaluating and developing more balanced or useful interpretations rather than imposing positive thinking. / Collaborative empiricism: A CBT stance in which client and therapist jointly test ideas against evidence and experience.
B. Cognitive restructuring: Adjusting CBT language, materials, pacing, and caregiver involvement to the child's developmental capacity. / Collaborative empiricism: A CBT stance in which client and therapist jointly test ideas against evidence and experience.
C. Cognitive restructuring: A CBT stance in which client and therapist jointly test ideas against evidence and experience. / Collaborative empiricism: Collaboratively evaluating and developing more balanced or useful interpretations rather than imposing positive thinking.
D. Cognitive restructuring: Collaboratively evaluating and developing more balanced or useful interpretations rather than imposing positive thinking. / Collaborative empiricism: Planned engagement in meaningful or rewarding activities to increase contact with positive reinforcement.

0451. Which statement accurately contrasts the course concepts Skills rehearsal and Developmental adaptation in CBT?

A. Skills rehearsal: Gradual, planned approach to feared situations or cues to support new learning, with appropriate assessment and consent. / Developmental adaptation in CBT: Adjusting CBT language, materials, pacing, and caregiver involvement to the child's developmental capacity.
B. Skills rehearsal: Practicing a targeted behavior in session, often with modeling, feedback, and repetition. / Developmental adaptation in CBT: Practice of helpful, realistic statements that support coping and task engagement.
C. Skills rehearsal: Adjusting CBT language, materials, pacing, and caregiver involvement to the child's developmental capacity. / Developmental adaptation in CBT: Practicing a targeted behavior in session, often with modeling, feedback, and repetition.
D. Skills rehearsal: Practicing a targeted behavior in session, often with modeling, feedback, and repetition. / Developmental adaptation in CBT: Adjusting CBT language, materials, pacing, and caregiver involvement to the child's developmental capacity.

0452. Which option is the clearest practical expression of Skills rehearsal?

A. Treating a belief as a testable hypothesis and reviewing what the child observes.
B. Role-playing an assertive request and providing supportive, specific feedback.
C. Rehearsing a believable coping phrase a child can use during a challenging moment.
D. Building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation.

0453. A student confuses Behavioral activation with Thought record. Which explanation most accurately separates them?

A. Behavioral activation: Practicing a targeted behavior in session, often with modeling, feedback, and repetition. / Thought record: A structured aid for noticing a situation, automatic thought, emotion, evidence, and alternative perspective.
B. Behavioral activation: A structured aid for noticing a situation, automatic thought, emotion, evidence, and alternative perspective. / Thought record: Planned engagement in meaningful or rewarding activities to increase contact with positive reinforcement.
C. Behavioral activation: Planned engagement in meaningful or rewarding activities to increase contact with positive reinforcement. / Thought record: A structured aid for noticing a situation, automatic thought, emotion, evidence, and alternative perspective.
D. Behavioral activation: Planned engagement in meaningful or rewarding activities to increase contact with positive reinforcement. / Thought record: Gradual, planned approach to feared situations or cues to support new learning, with appropriate assessment and consent.

0454. During work in the parent meeting, a group facilitator identifies this need: treating a belief as a testable hypothesis and reviewing what the child observes. Which idea should guide the response?

A. Collaborative empiricism
B. Coping self-talk
C. Behavioral activation
D. Cognitive restructuring

0455. Choose the definition pair that correctly explains Collaborative empiricism first and Developmental adaptation in CBT second.

A. Collaborative empiricism: A CBT stance in which client and therapist jointly test ideas against evidence and experience. / Developmental adaptation in CBT: Adjusting CBT language, materials, pacing, and caregiver involvement to the child's developmental capacity.
B. Collaborative empiricism: A CBT stance in which client and therapist jointly test ideas against evidence and experience. / Developmental adaptation in CBT: Collaboratively evaluating and developing more balanced or useful interpretations rather than imposing positive thinking.
C. Collaborative empiricism: Gradual, planned approach to feared situations or cues to support new learning, with appropriate assessment and consent. / Developmental adaptation in CBT: Adjusting CBT language, materials, pacing, and caregiver involvement to the child's developmental capacity.
D. Collaborative empiricism: Adjusting CBT language, materials, pacing, and caregiver involvement to the child's developmental capacity. / Developmental adaptation in CBT: A CBT stance in which client and therapist jointly test ideas against evidence and experience.

0456. A trainee must distinguish how Cognitive restructuring and Collaborative empiricism guide practice. Which comparison is accurate?

A. Cognitive restructuring: Using drawings or concrete examples when abstract cognitive language is not yet accessible. / Collaborative empiricism: Treating a belief as a testable hypothesis and reviewing what the child observes.
B. Cognitive restructuring: Examining evidence and generating a realistic alternative thought with the child. / Collaborative empiricism: Treating a belief as a testable hypothesis and reviewing what the child observes.
C. Cognitive restructuring: Treating a belief as a testable hypothesis and reviewing what the child observes. / Collaborative empiricism: Examining evidence and generating a realistic alternative thought with the child.
D. Cognitive restructuring: Examining evidence and generating a realistic alternative thought with the child. / Collaborative empiricism: Scheduling a manageable valued activity and reviewing its effect on mood and functioning.

0457. In a professional consultation about a young person aged 10, the assessment clinician describes this response in the school-based service: building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation. Which term is most apt?

A. Collaborative empiricism
B. Relapse prevention
C. Behavioral activation
D. Exposure

0458. While supporting a adolescent student in the parent meeting, a parent educator adopts this practice: helping a child map how a thought, feeling, and action relate in a particular situation. Which concept best explains the choice?

A. Developmental adaptation in CBT
B. Collaborative empiricism
C. Cognitive triangle
D. Behavioral activation

0459. In child-focused CBT, a case conference asks for a distinction between Cognitive restructuring and Relapse prevention. Which answer is sound?

A. Cognitive restructuring: Collaboratively evaluating and developing more balanced or useful interpretations rather than imposing positive thinking. / Relapse prevention: Planning for future triggers, early warning signs, and continued use of skills after improvement.
B. Cognitive restructuring: Gradual, planned approach to feared situations or cues to support new learning, with appropriate assessment and consent. / Relapse prevention: Planning for future triggers, early warning signs, and continued use of skills after improvement.
C. Cognitive restructuring: Planning for future triggers, early warning signs, and continued use of skills after improvement. / Relapse prevention: Collaboratively evaluating and developing more balanced or useful interpretations rather than imposing positive thinking.
D. Cognitive restructuring: Collaboratively evaluating and developing more balanced or useful interpretations rather than imposing positive thinking. / Relapse prevention: A teaching model linking thoughts, feelings, and behaviors as mutually influential components of experience.

0460. In child-focused CBT, which pair of actions illustrates Skills rehearsal and Relapse prevention, respectively?

A. Skills rehearsal: Role-playing an assertive request and providing supportive, specific feedback. / Relapse prevention: Building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation.
B. Skills rehearsal: Identifying likely setbacks and rehearsing which coping steps the child can use. / Relapse prevention: Role-playing an assertive request and providing supportive, specific feedback.
C. Skills rehearsal: Treating a belief as a testable hypothesis and reviewing what the child observes. / Relapse prevention: Identifying likely setbacks and rehearsing which coping steps the child can use.
D. Skills rehearsal: Role-playing an assertive request and providing supportive, specific feedback. / Relapse prevention: Identifying likely setbacks and rehearsing which coping steps the child can use.

0461. A counselor reviews a plan for a student aged 12 in the community youth program. The plan emphasizes treating a belief as a testable hypothesis and reviewing what the child observes. Which course idea does this reflect?

A. Developmental adaptation in CBT
B. Thought record
C. Collaborative empiricism
D. Cognitive restructuring

0462. Which comparison would correct a trainee's misunderstanding of Collaborative empiricism versus Developmental adaptation in CBT?

A. Collaborative empiricism: Adjusting CBT language, materials, pacing, and caregiver involvement to the child's developmental capacity. / Developmental adaptation in CBT: A CBT stance in which client and therapist jointly test ideas against evidence and experience.
B. Collaborative empiricism: A CBT stance in which client and therapist jointly test ideas against evidence and experience. / Developmental adaptation in CBT: Collaboratively evaluating and developing more balanced or useful interpretations rather than imposing positive thinking.
C. Collaborative empiricism: A CBT stance in which client and therapist jointly test ideas against evidence and experience. / Developmental adaptation in CBT: Adjusting CBT language, materials, pacing, and caregiver involvement to the child's developmental capacity.
D. Collaborative empiricism: Gradual, planned approach to feared situations or cues to support new learning, with appropriate assessment and consent. / Developmental adaptation in CBT: Adjusting CBT language, materials, pacing, and caregiver involvement to the child's developmental capacity.

0463. A teacher and counselor is asked to justify a plan for a client in early adolescence in the student-support meeting. It calls for building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation. Which concept provides the rationale?

A. Behavioral activation
B. Exposure
C. Relapse prevention
D. Cognitive restructuring

0464. A team must select a support approach for a preadolescent child at the multidisciplinary case conference. The school-based clinician recommends building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation. Which idea is most relevant?

A. Collaborative empiricism
B. Skills rehearsal
C. Behavioral activation
D. Exposure

0465. Which paired example correctly applies Cognitive triangle first and Skills rehearsal second?

A. Cognitive triangle: Helping a child map how a thought, feeling, and action relate in a particular situation. / Skills rehearsal: Role-playing an assertive request and providing supportive, specific feedback.
B. Cognitive triangle: Examining evidence and generating a realistic alternative thought with the child. / Skills rehearsal: Role-playing an assertive request and providing supportive, specific feedback.
C. Cognitive triangle: Role-playing an assertive request and providing supportive, specific feedback. / Skills rehearsal: Helping a child map how a thought, feeling, and action relate in a particular situation.
D. Cognitive triangle: Helping a child map how a thought, feeling, and action relate in a particular situation. / Skills rehearsal: Rehearsing a believable coping phrase a child can use during a challenging moment.

0466. Which description belongs with the term Behavioral activation?

A. Collaboratively evaluating and developing more balanced or useful interpretations rather than imposing positive thinking.
B. Planned engagement in meaningful or rewarding activities to increase contact with positive reinforcement.
C. Practice of helpful, realistic statements that support coping and task engagement.
D. Planning for future triggers, early warning signs, and continued use of skills after improvement.

0467. In child-focused CBT, in the school consultation, a school counselor explains why a middle-school student would benefit from identifying likely setbacks and rehearsing which coping steps the child can use. Which course concept underpins the explanation?

A. Collaborative empiricism
B. Relapse prevention
C. Behavioral activation
D. Coping self-talk

0468. For a young person in the behavior-support review, a counselor makes this practice the immediate priority: examining evidence and generating a realistic alternative thought with the child. Which concept fits best?

A. Cognitive restructuring
B. Cognitive triangle
C. Behavioral activation
D. Relapse prevention

0469. In child-focused CBT, a member of a clinical team and a student aged 12 are discussing support in the behavior-support review. The selected practice is identifying likely setbacks and rehearsing which coping steps the child can use. Which concept does this demonstrate?

A. Cognitive restructuring
B. Collaborative empiricism
C. Behavioral activation
D. Relapse prevention

0470. A supervisor asks how Behavioral activation would appear in practice. Which choice should be selected?

A. Scheduling a manageable valued activity and reviewing its effect on mood and functioning.
B. Identifying likely setbacks and rehearsing which coping steps the child can use.
C. Rehearsing a believable coping phrase a child can use during a challenging moment.
D. Using drawings or concrete examples when abstract cognitive language is not yet accessible.

0471. In a supervision quiz, how should Cognitive restructuring be distinguished from Coping self-talk?

A. Cognitive restructuring: Practicing a targeted behavior in session, often with modeling, feedback, and repetition. / Coping self-talk: Practice of helpful, realistic statements that support coping and task engagement.
B. Cognitive restructuring: Practice of helpful, realistic statements that support coping and task engagement. / Coping self-talk: Collaboratively evaluating and developing more balanced or useful interpretations rather than imposing positive thinking.
C. Cognitive restructuring: Collaboratively evaluating and developing more balanced or useful interpretations rather than imposing positive thinking. / Coping self-talk: Practice of helpful, realistic statements that support coping and task engagement.
D. Cognitive restructuring: Collaboratively evaluating and developing more balanced or useful interpretations rather than imposing positive thinking. / Coping self-talk: Gradual, planned approach to feared situations or cues to support new learning, with appropriate assessment and consent.

0472. In child-focused CBT, which applied comparison correctly identifies what belongs to Thought record versus Relapse prevention?

A. Thought record: Scheduling a manageable valued activity and reviewing its effect on mood and functioning. / Relapse prevention: Identifying likely setbacks and rehearsing which coping steps the child can use.
B. Thought record: Using a child-friendly record to examine what happened and what the child thought at that moment. / Relapse prevention: Role-playing an assertive request and providing supportive, specific feedback.
C. Thought record: Identifying likely setbacks and rehearsing which coping steps the child can use. / Relapse prevention: Using a child-friendly record to examine what happened and what the child thought at that moment.
D. Thought record: Using a child-friendly record to examine what happened and what the child thought at that moment. / Relapse prevention: Identifying likely setbacks and rehearsing which coping steps the child can use.

0473. In a supervision quiz, how should Cognitive restructuring be distinguished from Skills rehearsal?

A. Cognitive restructuring: Planned engagement in meaningful or rewarding activities to increase contact with positive reinforcement. / Skills rehearsal: Practicing a targeted behavior in session, often with modeling, feedback, and repetition.
B. Cognitive restructuring: Collaboratively evaluating and developing more balanced or useful interpretations rather than imposing positive thinking. / Skills rehearsal: A CBT stance in which client and therapist jointly test ideas against evidence and experience.
C. Cognitive restructuring: Practicing a targeted behavior in session, often with modeling, feedback, and repetition. / Skills rehearsal: Collaboratively evaluating and developing more balanced or useful interpretations rather than imposing positive thinking.
D. Cognitive restructuring: Collaboratively evaluating and developing more balanced or useful interpretations rather than imposing positive thinking. / Skills rehearsal: Practicing a targeted behavior in session, often with modeling, feedback, and repetition.

0474. Choose the definition pair that correctly explains Thought record first and Collaborative empiricism second.

A. Thought record: A CBT stance in which client and therapist jointly test ideas against evidence and experience. / Collaborative empiricism: A structured aid for noticing a situation, automatic thought, emotion, evidence, and alternative perspective.
B. Thought record: A structured aid for noticing a situation, automatic thought, emotion, evidence, and alternative perspective. / Collaborative empiricism: A teaching model linking thoughts, feelings, and behaviors as mutually influential components of experience.
C. Thought record: A structured aid for noticing a situation, automatic thought, emotion, evidence, and alternative perspective. / Collaborative empiricism: A CBT stance in which client and therapist jointly test ideas against evidence and experience.
D. Thought record: Adjusting CBT language, materials, pacing, and caregiver involvement to the child's developmental capacity. / Collaborative empiricism: A CBT stance in which client and therapist jointly test ideas against evidence and experience.

0475. Which statement shows a sound practice-level distinction between Cognitive restructuring and Developmental adaptation in CBT?

A. Cognitive restructuring: Using drawings or concrete examples when abstract cognitive language is not yet accessible. / Developmental adaptation in CBT: Examining evidence and generating a realistic alternative thought with the child.
B. Cognitive restructuring: Examining evidence and generating a realistic alternative thought with the child. / Developmental adaptation in CBT: Using drawings or concrete examples when abstract cognitive language is not yet accessible.
C. Cognitive restructuring: Treating a belief as a testable hypothesis and reviewing what the child observes. / Developmental adaptation in CBT: Using drawings or concrete examples when abstract cognitive language is not yet accessible.
D. Cognitive restructuring: Examining evidence and generating a realistic alternative thought with the child. / Developmental adaptation in CBT: Using a child-friendly record to examine what happened and what the child thought at that moment.

0476. Which pair of actions illustrates Behavioral activation and Collaborative empiricism, respectively?

A. Behavioral activation: Treating a belief as a testable hypothesis and reviewing what the child observes. / Collaborative empiricism: Scheduling a manageable valued activity and reviewing its effect on mood and functioning.
B. Behavioral activation: Scheduling a manageable valued activity and reviewing its effect on mood and functioning. / Collaborative empiricism: Using a child-friendly record to examine what happened and what the child thought at that moment.
C. Behavioral activation: Scheduling a manageable valued activity and reviewing its effect on mood and functioning. / Collaborative empiricism: Treating a belief as a testable hypothesis and reviewing what the child observes.
D. Behavioral activation: Identifying likely setbacks and rehearsing which coping steps the child can use. / Collaborative empiricism: Treating a belief as a testable hypothesis and reviewing what the child observes.

0477. A teacher and counselor is explaining a choice to a child aged 14 and caregiver in the family session. The choice centers on treating a belief as a testable hypothesis and reviewing what the child observes. Which idea is illustrated?

A. Thought record
B. Collaborative empiricism
C. Exposure
D. Relapse prevention

0478. Which option pairs the definitions of Behavioral activation and Developmental adaptation in CBT correctly, in that order?

A. Behavioral activation: Adjusting CBT language, materials, pacing, and caregiver involvement to the child's developmental capacity. / Developmental adaptation in CBT: Planned engagement in meaningful or rewarding activities to increase contact with positive reinforcement.
B. Behavioral activation: Planned engagement in meaningful or rewarding activities to increase contact with positive reinforcement. / Developmental adaptation in CBT: Practice of helpful, realistic statements that support coping and task engagement.
C. Behavioral activation: Planned engagement in meaningful or rewarding activities to increase contact with positive reinforcement. / Developmental adaptation in CBT: Adjusting CBT language, materials, pacing, and caregiver involvement to the child's developmental capacity.
D. Behavioral activation: Gradual, planned approach to feared situations or cues to support new learning, with appropriate assessment and consent. / Developmental adaptation in CBT: Adjusting CBT language, materials, pacing, and caregiver involvement to the child's developmental capacity.

0479. Which choice aligns each practice with the correct idea, Thought record or Skills rehearsal?

A. Thought record: Role-playing an assertive request and providing supportive, specific feedback. / Skills rehearsal: Using a child-friendly record to examine what happened and what the child thought at that moment.
B. Thought record: Rehearsing a believable coping phrase a child can use during a challenging moment. / Skills rehearsal: Role-playing an assertive request and providing supportive, specific feedback.
C. Thought record: Using a child-friendly record to examine what happened and what the child thought at that moment. / Skills rehearsal: Role-playing an assertive request and providing supportive, specific feedback.
D. Thought record: Using a child-friendly record to examine what happened and what the child thought at that moment. / Skills rehearsal: Using drawings or concrete examples when abstract cognitive language is not yet accessible.

0480. How should a practitioner distinguish the applications of Behavioral activation and Thought record?

A. Behavioral activation: Using a child-friendly record to examine what happened and what the child thought at that moment. / Thought record: Scheduling a manageable valued activity and reviewing its effect on mood and functioning.
B. Behavioral activation: Scheduling a manageable valued activity and reviewing its effect on mood and functioning. / Thought record: Using a child-friendly record to examine what happened and what the child thought at that moment.
C. Behavioral activation: Scheduling a manageable valued activity and reviewing its effect on mood and functioning. / Thought record: Building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation.
D. Behavioral activation: Role-playing an assertive request and providing supportive, specific feedback. / Thought record: Using a child-friendly record to examine what happened and what the child thought at that moment.

0481. A mental-health professional and a student aged 9 are discussing support in the student-support meeting. The selected practice is rehearsing a believable coping phrase a child can use during a challenging moment. Which concept does this demonstrate?

A. Thought record
B. Skills rehearsal
C. Coping self-talk
D. Cognitive restructuring

0482. A supervised trainee and a young person aged 16 are discussing support in the caregiver consultation. The selected practice is role-playing an assertive request and providing supportive, specific feedback. Which concept does this demonstrate?

A. Collaborative empiricism
B. Skills rehearsal
C. Thought record
D. Cognitive triangle

0483. Which pair of actions illustrates Behavioral activation and Thought record, respectively?

A. Behavioral activation: Scheduling a manageable valued activity and reviewing its effect on mood and functioning. / Thought record: Using a child-friendly record to examine what happened and what the child thought at that moment.
B. Behavioral activation: Using a child-friendly record to examine what happened and what the child thought at that moment. / Thought record: Scheduling a manageable valued activity and reviewing its effect on mood and functioning.
C. Behavioral activation: Role-playing an assertive request and providing supportive, specific feedback. / Thought record: Using a child-friendly record to examine what happened and what the child thought at that moment.
D. Behavioral activation: Scheduling a manageable valued activity and reviewing its effect on mood and functioning. / Thought record: Building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation.

0484. In child-focused CBT, in a supervision quiz, how should Behavioral activation be distinguished from Relapse prevention?

A. Behavioral activation: Planned engagement in meaningful or rewarding activities to increase contact with positive reinforcement. / Relapse prevention: Planning for future triggers, early warning signs, and continued use of skills after improvement.
B. Behavioral activation: Planning for future triggers, early warning signs, and continued use of skills after improvement. / Relapse prevention: Planned engagement in meaningful or rewarding activities to increase contact with positive reinforcement.
C. Behavioral activation: Planned engagement in meaningful or rewarding activities to increase contact with positive reinforcement. / Relapse prevention: Gradual, planned approach to feared situations or cues to support new learning, with appropriate assessment and consent.
D. Behavioral activation: A teaching model linking thoughts, feelings, and behaviors as mutually influential components of experience. / Relapse prevention: Planning for future triggers, early warning signs, and continued use of skills after improvement.

0485. For a child aged 8 seen in the after-school program, the therapist recommends a plan built around building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation. Which concept is reflected?

A. Thought record
B. Coping self-talk
C. Exposure
D. Relapse prevention

0486. A trainee must distinguish how Collaborative empiricism and Developmental adaptation in CBT guide practice. Which comparison is accurate?

A. Collaborative empiricism: Using drawings or concrete examples when abstract cognitive language is not yet accessible. / Developmental adaptation in CBT: Treating a belief as a testable hypothesis and reviewing what the child observes.
B. Collaborative empiricism: Treating a belief as a testable hypothesis and reviewing what the child observes. / Developmental adaptation in CBT: Using drawings or concrete examples when abstract cognitive language is not yet accessible.
C. Collaborative empiricism: Building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation. / Developmental adaptation in CBT: Using drawings or concrete examples when abstract cognitive language is not yet accessible.
D. Collaborative empiricism: Treating a belief as a testable hypothesis and reviewing what the child observes. / Developmental adaptation in CBT: Examining evidence and generating a realistic alternative thought with the child.

0487. Which course concept is defined as follows: A structured aid for noticing a situation, automatic thought, emotion, evidence, and alternative perspective.

A. Thought record
B. Cognitive triangle
C. Collaborative empiricism
D. Skills rehearsal

0488. At the counseling practicum, a service navigator reviews whether a plan for a teenage client is appropriate. The relevant practice is examining evidence and generating a realistic alternative thought with the child. Which concept is tested?

A. Coping self-talk
B. Cognitive restructuring
C. Behavioral activation
D. Exposure

0489. A service navigator is asked what should shape a child aged 6's support in the community service agency. The proposed focus is using a child-friendly record to examine what happened and what the child thought at that moment. Which principle does it represent?

A. Skills rehearsal
B. Thought record
C. Relapse prevention
D. Developmental adaptation in CBT

0490. In a supervision review, a caregiver working with a counselor describes work with a middle-school student in the child guidance clinic: examining evidence and generating a realistic alternative thought with the child. What concept is illustrated?

A. Thought record
B. Relapse prevention
C. Cognitive restructuring
D. Coping self-talk

0491. Which option correctly matches each concept to its practice focus: Coping self-talk and Skills rehearsal?

A. Coping self-talk: Rehearsing a believable coping phrase a child can use during a challenging moment. / Skills rehearsal: Treating a belief as a testable hypothesis and reviewing what the child observes.
B. Coping self-talk: Examining evidence and generating a realistic alternative thought with the child. / Skills rehearsal: Role-playing an assertive request and providing supportive, specific feedback.
C. Coping self-talk: Rehearsing a believable coping phrase a child can use during a challenging moment. / Skills rehearsal: Role-playing an assertive request and providing supportive, specific feedback.
D. Coping self-talk: Role-playing an assertive request and providing supportive, specific feedback. / Skills rehearsal: Rehearsing a believable coping phrase a child can use during a challenging moment.

0492. Choose the response that best puts Cognitive triangle into practice.

A. Helping a child map how a thought, feeling, and action relate in a particular situation.
B. Using drawings or concrete examples when abstract cognitive language is not yet accessible.
C. Treating a belief as a testable hypothesis and reviewing what the child observes.
D. Identifying likely setbacks and rehearsing which coping steps the child can use.

0493. Choose the practice comparison that best separates Cognitive triangle from Coping self-talk.

A. Cognitive triangle: Rehearsing a believable coping phrase a child can use during a challenging moment. / Coping self-talk: Helping a child map how a thought, feeling, and action relate in a particular situation.
B. Cognitive triangle: Helping a child map how a thought, feeling, and action relate in a particular situation. / Coping self-talk: Rehearsing a believable coping phrase a child can use during a challenging moment.
C. Cognitive triangle: Helping a child map how a thought, feeling, and action relate in a particular situation. / Coping self-talk: Examining evidence and generating a realistic alternative thought with the child.
D. Cognitive triangle: Using a child-friendly record to examine what happened and what the child thought at that moment. / Coping self-talk: Rehearsing a believable coping phrase a child can use during a challenging moment.

0494. A assessment clinician is supporting a client in early adolescence in the student wellness team. The key practice is role-playing an assertive request and providing supportive, specific feedback. Which course concept is most relevant?

A. Exposure
B. Skills rehearsal
C. Behavioral activation
D. Relapse prevention

0495. In child-focused CBT, which applied comparison correctly identifies what belongs to Skills rehearsal versus Relapse prevention?

A. Skills rehearsal: Role-playing an assertive request and providing supportive, specific feedback. / Relapse prevention: Identifying likely setbacks and rehearsing which coping steps the child can use.
B. Skills rehearsal: Treating a belief as a testable hypothesis and reviewing what the child observes. / Relapse prevention: Identifying likely setbacks and rehearsing which coping steps the child can use.
C. Skills rehearsal: Identifying likely setbacks and rehearsing which coping steps the child can use. / Relapse prevention: Role-playing an assertive request and providing supportive, specific feedback.
D. Skills rehearsal: Role-playing an assertive request and providing supportive, specific feedback. / Relapse prevention: Building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation.

0496. A trainee must explain Behavioral activation. Which answer is accurate?

A. Adjusting CBT language, materials, pacing, and caregiver involvement to the child's developmental capacity.
B. Planning for future triggers, early warning signs, and continued use of skills after improvement.
C. Planned engagement in meaningful or rewarding activities to increase contact with positive reinforcement.
D. A teaching model linking thoughts, feelings, and behaviors as mutually influential components of experience.

0497. While consulting in the caregiver consultation, a mental-health professional supports a young adolescent client by using this approach: examining evidence and generating a realistic alternative thought with the child. Which concept is being applied?

A. Cognitive restructuring
B. Exposure
C. Skills rehearsal
D. Coping self-talk

0498. In child-focused CBT, which option correctly matches each concept to its practice focus: Skills rehearsal and Relapse prevention?

A. Skills rehearsal: Treating a belief as a testable hypothesis and reviewing what the child observes. / Relapse prevention: Identifying likely setbacks and rehearsing which coping steps the child can use.
B. Skills rehearsal: Role-playing an assertive request and providing supportive, specific feedback. / Relapse prevention: Identifying likely setbacks and rehearsing which coping steps the child can use.
C. Skills rehearsal: Identifying likely setbacks and rehearsing which coping steps the child can use. / Relapse prevention: Role-playing an assertive request and providing supportive, specific feedback.
D. Skills rehearsal: Role-playing an assertive request and providing supportive, specific feedback. / Relapse prevention: Building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation.

0499. In a supervision quiz, how should Behavioral activation be distinguished from Developmental adaptation in CBT?

A. Behavioral activation: Planned engagement in meaningful or rewarding activities to increase contact with positive reinforcement. / Developmental adaptation in CBT: Practice of helpful, realistic statements that support coping and task engagement.
B. Behavioral activation: Planned engagement in meaningful or rewarding activities to increase contact with positive reinforcement. / Developmental adaptation in CBT: Adjusting CBT language, materials, pacing, and caregiver involvement to the child's developmental capacity.
C. Behavioral activation: Adjusting CBT language, materials, pacing, and caregiver involvement to the child's developmental capacity. / Developmental adaptation in CBT: Planned engagement in meaningful or rewarding activities to increase contact with positive reinforcement.
D. Behavioral activation: Gradual, planned approach to feared situations or cues to support new learning, with appropriate assessment and consent. / Developmental adaptation in CBT: Adjusting CBT language, materials, pacing, and caregiver involvement to the child's developmental capacity.

0500. Which comparison would correct a trainee's misunderstanding of Coping self-talk versus Skills rehearsal?

A. Coping self-talk: Collaboratively evaluating and developing more balanced or useful interpretations rather than imposing positive thinking. / Skills rehearsal: Practicing a targeted behavior in session, often with modeling, feedback, and repetition.
B. Coping self-talk: Practice of helpful, realistic statements that support coping and task engagement. / Skills rehearsal: Practicing a targeted behavior in session, often with modeling, feedback, and repetition.
C. Coping self-talk: Practice of helpful, realistic statements that support coping and task engagement. / Skills rehearsal: A CBT stance in which client and therapist jointly test ideas against evidence and experience.
D. Coping self-talk: Practicing a targeted behavior in session, often with modeling, feedback, and repetition. / Skills rehearsal: Practice of helpful, realistic statements that support coping and task engagement.

0501. A planning meeting about a young adolescent client includes a counselor. The proposed practice in the clinical planning session is using a child-friendly record to examine what happened and what the child thought at that moment. Which idea underlies it?

A. Cognitive triangle
B. Behavioral activation
C. Skills rehearsal
D. Thought record

0502. In child-focused CBT, which comparison would correct a trainee’s misunderstanding of Thought record versus Relapse prevention?

A. Thought record: A structured aid for noticing a situation, automatic thought, emotion, evidence, and alternative perspective. / Relapse prevention: Planning for future triggers, early warning signs, and continued use of skills after improvement.
B. Thought record: Planned engagement in meaningful or rewarding activities to increase contact with positive reinforcement. / Relapse prevention: Planning for future triggers, early warning signs, and continued use of skills after improvement.
C. Thought record: A structured aid for noticing a situation, automatic thought, emotion, evidence, and alternative perspective. / Relapse prevention: Practicing a targeted behavior in session, often with modeling, feedback, and repetition.
D. Thought record: Planning for future triggers, early warning signs, and continued use of skills after improvement. / Relapse prevention: A structured aid for noticing a situation, automatic thought, emotion, evidence, and alternative perspective.

0503. Which choice aligns each practice with the correct idea, Behavioral activation or Skills rehearsal?

A. Behavioral activation: Scheduling a manageable valued activity and reviewing its effect on mood and functioning. / Skills rehearsal: Role-playing an assertive request and providing supportive, specific feedback.
B. Behavioral activation: Role-playing an assertive request and providing supportive, specific feedback. / Skills rehearsal: Scheduling a manageable valued activity and reviewing its effect on mood and functioning.
C. Behavioral activation: Scheduling a manageable valued activity and reviewing its effect on mood and functioning. / Skills rehearsal: Rehearsing a believable coping phrase a child can use during a challenging moment.
D. Behavioral activation: Using drawings or concrete examples when abstract cognitive language is not yet accessible. / Skills rehearsal: Role-playing an assertive request and providing supportive, specific feedback.

0504. A program coordinator is asked what should shape a student aged 9’s support in the outpatient clinic. The proposed focus is role-playing an assertive request and providing supportive, specific feedback. Which principle does it represent?

A. Thought record
B. Coping self-talk
C. Skills rehearsal
D. Relapse prevention

0505. In the after-school program, a team asks how a youth worker can support a high-school student. One proposed action is treating a belief as a testable hypothesis and reviewing what the child observes. Which idea does it represent?

A. Relapse prevention
B. Collaborative empiricism
C. Coping self-talk
D. Thought record

0506. In child-focused CBT, a planning meeting about a adolescent student includes a counselor. The proposed practice in the multidisciplinary case conference is identifying likely setbacks and rehearsing which coping steps the child can use. Which idea underlies it?

A. Relapse prevention
B. Cognitive triangle
C. Collaborative empiricism
D. Behavioral activation

0507. While consulting in the outpatient clinic, a supervised trainee supports a young person aged 13 by using this approach: treating a belief as a testable hypothesis and reviewing what the child observes. Which concept is being applied?

A. Developmental adaptation in CBT
B. Relapse prevention
C. Behavioral activation
D. Collaborative empiricism

0508. During work in the supervision meeting, a school counselor identifies this need: using a child-friendly record to examine what happened and what the child thought at that moment. Which idea should guide the response?

A. Coping self-talk
B. Thought record
C. Developmental adaptation in CBT
D. Cognitive restructuring

0509. A consultant is preparing a follow-up plan for a child aged 11 in the school consultation. The plan calls for role-playing an assertive request and providing supportive, specific feedback. Which concept names this approach?

A. Cognitive restructuring
B. Skills rehearsal
C. Cognitive triangle
D. Collaborative empiricism

0510. In child-focused CBT, a school-age child is receiving support in the caregiver consultation. The group facilitator is guided by this practice: identifying likely setbacks and rehearsing which coping steps the child can use. Which principle best fits?

A. Relapse prevention
B. Thought record
C. Coping self-talk
D. Exposure

0511. In child-focused CBT, which statement shows a sound practice-level distinction between Cognitive restructuring and Relapse prevention?

A. Cognitive restructuring: Identifying likely setbacks and rehearsing which coping steps the child can use. / Relapse prevention: Examining evidence and generating a realistic alternative thought with the child.
B. Cognitive restructuring: Building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation. / Relapse prevention: Identifying likely setbacks and rehearsing which coping steps the child can use.
C. Cognitive restructuring: Examining evidence and generating a realistic alternative thought with the child. / Relapse prevention: Helping a child map how a thought, feeling, and action relate in a particular situation.
D. Cognitive restructuring: Examining evidence and generating a realistic alternative thought with the child. / Relapse prevention: Identifying likely setbacks and rehearsing which coping steps the child can use.

0512. Which comparison correctly distinguishes Cognitive triangle from Cognitive restructuring?

A. Cognitive triangle: Collaboratively evaluating and developing more balanced or useful interpretations rather than imposing positive thinking. / Cognitive restructuring: A teaching model linking thoughts, feelings, and behaviors as mutually influential components of experience.
B. Cognitive triangle: A teaching model linking thoughts, feelings, and behaviors as mutually influential components of experience. / Cognitive restructuring: A structured aid for noticing a situation, automatic thought, emotion, evidence, and alternative perspective.
C. Cognitive triangle: A teaching model linking thoughts, feelings, and behaviors as mutually influential components of experience. / Cognitive restructuring: Collaboratively evaluating and developing more balanced or useful interpretations rather than imposing positive thinking.
D. Cognitive triangle: Practice of helpful, realistic statements that support coping and task engagement. / Cognitive restructuring: Collaboratively evaluating and developing more balanced or useful interpretations rather than imposing positive thinking.

0513. An interdisciplinary team reviews a child aged 14's case at the student wellness team. The behavior specialist recommends building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation. Which course concept best fits?

A. Cognitive triangle
B. Cognitive restructuring
C. Behavioral activation
D. Exposure

0514. Which statement shows a sound practice-level distinction between Exposure and Collaborative empiricism?

A. Exposure: Rehearsing a believable coping phrase a child can use during a challenging moment. / Collaborative empiricism: Treating a belief as a testable hypothesis and reviewing what the child observes.
B. Exposure: Building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation. / Collaborative empiricism: Identifying likely setbacks and rehearsing which coping steps the child can use.
C. Exposure: Treating a belief as a testable hypothesis and reviewing what the child observes. / Collaborative empiricism: Building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation.
D. Exposure: Building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation. / Collaborative empiricism: Treating a belief as a testable hypothesis and reviewing what the child observes.

0515. While consulting in the youth advocacy program, a mental-health professional supports a adolescent student by using this approach: role-playing an assertive request and providing supportive, specific feedback. Which concept is being applied?

A. Skills rehearsal
B. Coping self-talk
C. Exposure
D. Relapse prevention

0516. Which statement most accurately defines Behavioral activation?

A. Planned engagement in meaningful or rewarding activities to increase contact with positive reinforcement.
B. A structured aid for noticing a situation, automatic thought, emotion, evidence, and alternative perspective.
C. Gradual, planned approach to feared situations or cues to support new learning, with appropriate assessment and consent.
D. A teaching model linking thoughts, feelings, and behaviors as mutually influential components of experience.

0517. A consultant is supporting a child aged 8 in the clinical planning session. The key practice is treating a belief as a testable hypothesis and reviewing what the child observes. Which course concept is most relevant?

A. Cognitive restructuring
B. Exposure
C. Behavioral activation
D. Collaborative empiricism

0518. In child-focused CBT, in the school-based service, a family therapist is considering this approach for a student aged 9: identifying likely setbacks and rehearsing which coping steps the child can use. Which framework does it represent?

A. Cognitive triangle
B. Coping self-talk
C. Relapse prevention
D. Collaborative empiricism

0519. Choose the term that matches this definition: Adjusting CBT language, materials, pacing, and caregiver involvement to the child's developmental capacity.

A. Exposure
B. Thought record
C. Developmental adaptation in CBT
D. Coping self-talk

0520. A therapist describes an intervention for a high-school student in the counseling practicum, centered on role-playing an assertive request and providing supportive, specific feedback. Which named idea is most relevant?

A. Skills rehearsal
B. Coping self-talk
C. Exposure
D. Developmental adaptation in CBT

0521. A child aged 14 is receiving support in the family session. The teacher and counselor is guided by this practice: treating a belief as a testable hypothesis and reviewing what the child observes. Which principle best fits?

A. Behavioral activation
B. Collaborative empiricism
C. Coping self-talk
D. Thought record

0522. Which statement shows a sound practice-level distinction between Exposure and Developmental adaptation in CBT?

A. Exposure: Treating a belief as a testable hypothesis and reviewing what the child observes. / Developmental adaptation in CBT: Using drawings or concrete examples when abstract cognitive language is not yet accessible.
B. Exposure: Using drawings or concrete examples when abstract cognitive language is not yet accessible. / Developmental adaptation in CBT: Building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation.
C. Exposure: Building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation. / Developmental adaptation in CBT: Using drawings or concrete examples when abstract cognitive language is not yet accessible.
D. Exposure: Building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation. / Developmental adaptation in CBT: Role-playing an assertive request and providing supportive, specific feedback.

0523. Which statement most accurately defines Cognitive restructuring?

A. Gradual, planned approach to feared situations or cues to support new learning, with appropriate assessment and consent.
B. Planned engagement in meaningful or rewarding activities to increase contact with positive reinforcement.
C. A CBT stance in which client and therapist jointly test ideas against evidence and experience.
D. Collaboratively evaluating and developing more balanced or useful interpretations rather than imposing positive thinking.

0524. Choose the definition pair that correctly explains Cognitive restructuring first and Developmental adaptation in CBT second.

A. Cognitive restructuring: A CBT stance in which client and therapist jointly test ideas against evidence and experience. / Developmental adaptation in CBT: Adjusting CBT language, materials, pacing, and caregiver involvement to the child's developmental capacity.
B. Cognitive restructuring: Adjusting CBT language, materials, pacing, and caregiver involvement to the child's developmental capacity. / Developmental adaptation in CBT: Collaboratively evaluating and developing more balanced or useful interpretations rather than imposing positive thinking.
C. Cognitive restructuring: Collaboratively evaluating and developing more balanced or useful interpretations rather than imposing positive thinking. / Developmental adaptation in CBT: Adjusting CBT language, materials, pacing, and caregiver involvement to the child's developmental capacity.
D. Cognitive restructuring: Collaboratively evaluating and developing more balanced or useful interpretations rather than imposing positive thinking. / Developmental adaptation in CBT: A structured aid for noticing a situation, automatic thought, emotion, evidence, and alternative perspective.

0525. A mental-health professional prepares for a session in the learning-support meeting with a student aged 15. The intended approach is building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation. Which concept is most relevant?

A. Exposure
B. Developmental adaptation in CBT
C. Relapse prevention
D. Cognitive restructuring

0526. At a case-planning meeting, the counselor proposes rehearsing a believable coping phrase a child can use during a challenging moment. for a child aged 7 seen in the school-based service. Which concept does this illustrate?

A. Relapse prevention
B. Developmental adaptation in CBT
C. Coping self-talk
D. Thought record

0527. For a older adolescent client in the child guidance clinic, a clinical supervisor makes this practice the immediate priority: treating a belief as a testable hypothesis and reviewing what the child observes. Which concept fits best?

A. Thought record
B. Coping self-talk
C. Collaborative empiricism
D. Behavioral activation

0528. A service team discusses a high-school student in the multidisciplinary case conference. Their proposed next step is examining evidence and generating a realistic alternative thought with the child. Which course concept supports it?

A. Skills rehearsal
B. Collaborative empiricism
C. Cognitive restructuring
D. Relapse prevention

0529. Which applied comparison correctly identifies what belongs to Cognitive restructuring versus Coping self-talk?

A. Cognitive restructuring: Examining evidence and generating a realistic alternative thought with the child. / Coping self-talk: Rehearsing a believable coping phrase a child can use during a challenging moment.
B. Cognitive restructuring: Role-playing an assertive request and providing supportive, specific feedback. / Coping self-talk: Rehearsing a believable coping phrase a child can use during a challenging moment.
C. Cognitive restructuring: Rehearsing a believable coping phrase a child can use during a challenging moment. / Coping self-talk: Examining evidence and generating a realistic alternative thought with the child.
D. Cognitive restructuring: Examining evidence and generating a realistic alternative thought with the child. / Coping self-talk: Building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation.

0530. A trainee must choose a practice that exemplifies Cognitive triangle. Which action is the best fit?

A. Helping a child map how a thought, feeling, and action relate in a particular situation.
B. Treating a belief as a testable hypothesis and reviewing what the child observes.
C. Scheduling a manageable valued activity and reviewing its effect on mood and functioning.
D. Rehearsing a believable coping phrase a child can use during a challenging moment.

0531. In child-focused CBT, in a case note about a student aged 17, a assessment clinician working in the parent meeting records this priority: identifying likely setbacks and rehearsing which coping steps the child can use. What principle is reflected?

A. Behavioral activation
B. Developmental adaptation in CBT
C. Relapse prevention
D. Thought record

0532. Which option pairs the definitions of Behavioral activation and Collaborative empiricism correctly, in that order?

A. Behavioral activation: Planned engagement in meaningful or rewarding activities to increase contact with positive reinforcement. / Collaborative empiricism: A CBT stance in which client and therapist jointly test ideas against evidence and experience.
B. Behavioral activation: A CBT stance in which client and therapist jointly test ideas against evidence and experience. / Collaborative empiricism: Planned engagement in meaningful or rewarding activities to increase contact with positive reinforcement.
C. Behavioral activation: Planning for future triggers, early warning signs, and continued use of skills after improvement. / Collaborative empiricism: A CBT stance in which client and therapist jointly test ideas against evidence and experience.
D. Behavioral activation: Planned engagement in meaningful or rewarding activities to increase contact with positive reinforcement. / Collaborative empiricism: A structured aid for noticing a situation, automatic thought, emotion, evidence, and alternative perspective.

0533. A trainee must choose a practice that exemplifies Exposure. Which action is the best fit?

A. Using drawings or concrete examples when abstract cognitive language is not yet accessible.
B. Rehearsing a believable coping phrase a child can use during a challenging moment.
C. Building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation.
D. Examining evidence and generating a realistic alternative thought with the child.

0534. A team must select a support approach for a young person aged 10 at the youth advocacy program. The parent educator recommends treating a belief as a testable hypothesis and reviewing what the child observes. Which idea is most relevant?

A. Exposure
B. Collaborative empiricism
C. Skills rehearsal
D. Cognitive triangle

0535. A service team discusses a student aged 17 in the caregiver consultation. Their proposed next step is helping a child map how a thought, feeling, and action relate in a particular situation. Which course concept supports it?

A. Cognitive restructuring
B. Collaborative empiricism
C. Developmental adaptation in CBT
D. Cognitive triangle

0536. In child-focused CBT, in a professional consultation about a client in late adolescence, the consultant describes this response in the community mental-health service: identifying likely setbacks and rehearsing which coping steps the child can use. Which term is most apt?

A. Developmental adaptation in CBT
B. Relapse prevention
C. Behavioral activation
D. Skills rehearsal

0537. Which named construct is captured by this account? Adjusting CBT language, materials, pacing, and caregiver involvement to the child's developmental capacity.

A. Behavioral activation
B. Developmental adaptation in CBT
C. Coping self-talk
D. Cognitive triangle

0538. In child-focused CBT, how are Coping self-talk and Relapse prevention most accurately differentiated in this curriculum?

A. Coping self-talk: Practicing a targeted behavior in session, often with modeling, feedback, and repetition. / Relapse prevention: Planning for future triggers, early warning signs, and continued use of skills after improvement.
B. Coping self-talk: Practice of helpful, realistic statements that support coping and task engagement. / Relapse prevention: A structured aid for noticing a situation, automatic thought, emotion, evidence, and alternative perspective.
C. Coping self-talk: Practice of helpful, realistic statements that support coping and task engagement. / Relapse prevention: Planning for future triggers, early warning signs, and continued use of skills after improvement.
D. Coping self-talk: Planning for future triggers, early warning signs, and continued use of skills after improvement. / Relapse prevention: Practice of helpful, realistic statements that support coping and task engagement.

0539. A student confuses Thought record with Skills rehearsal. Which explanation most accurately separates them?

A. Thought record: A structured aid for noticing a situation, automatic thought, emotion, evidence, and alternative perspective. / Skills rehearsal: Adjusting CBT language, materials, pacing, and caregiver involvement to the child's developmental capacity.
B. Thought record: A structured aid for noticing a situation, automatic thought, emotion, evidence, and alternative perspective. / Skills rehearsal: Practicing a targeted behavior in session, often with modeling, feedback, and repetition.
C. Thought record: Practicing a targeted behavior in session, often with modeling, feedback, and repetition. / Skills rehearsal: A structured aid for noticing a situation, automatic thought, emotion, evidence, and alternative perspective.
D. Thought record: Practice of helpful, realistic statements that support coping and task engagement. / Skills rehearsal: Practicing a targeted behavior in session, often with modeling, feedback, and repetition.

0540. Which professional action most closely applies Thought record?

A. Rehearsing a believable coping phrase a child can use during a challenging moment.
B. Building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation.
C. Identifying likely setbacks and rehearsing which coping steps the child can use.
D. Using a child-friendly record to examine what happened and what the child thought at that moment.

0541. Which statement accurately contrasts the course concepts Cognitive restructuring and Coping self-talk?

A. Cognitive restructuring: Practice of helpful, realistic statements that support coping and task engagement. / Coping self-talk: Collaboratively evaluating and developing more balanced or useful interpretations rather than imposing positive thinking.
B. Cognitive restructuring: Collaboratively evaluating and developing more balanced or useful interpretations rather than imposing positive thinking. / Coping self-talk: Gradual, planned approach to feared situations or cues to support new learning, with appropriate assessment and consent.
C. Cognitive restructuring: Collaboratively evaluating and developing more balanced or useful interpretations rather than imposing positive thinking. / Coping self-talk: Practice of helpful, realistic statements that support coping and task engagement.
D. Cognitive restructuring: Practicing a targeted behavior in session, often with modeling, feedback, and repetition. / Coping self-talk: Practice of helpful, realistic statements that support coping and task engagement.

0542. In child-focused CBT, which pair of actions illustrates Coping self-talk and Relapse prevention, respectively?

A. Coping self-talk: Rehearsing a believable coping phrase a child can use during a challenging moment. / Relapse prevention: Identifying likely setbacks and rehearsing which coping steps the child can use.
B. Coping self-talk: Role-playing an assertive request and providing supportive, specific feedback. / Relapse prevention: Identifying likely setbacks and rehearsing which coping steps the child can use.
C. Coping self-talk: Identifying likely setbacks and rehearsing which coping steps the child can use. / Relapse prevention: Rehearsing a believable coping phrase a child can use during a challenging moment.
D. Coping self-talk: Rehearsing a believable coping phrase a child can use during a challenging moment. / Relapse prevention: Using a child-friendly record to examine what happened and what the child thought at that moment.

0543. Which statement accurately contrasts the course concepts Cognitive triangle and Cognitive restructuring?

A. Cognitive triangle: Practice of helpful, realistic statements that support coping and task engagement. / Cognitive restructuring: Collaboratively evaluating and developing more balanced or useful interpretations rather than imposing positive thinking.
B. Cognitive triangle: Collaboratively evaluating and developing more balanced or useful interpretations rather than imposing positive thinking. / Cognitive restructuring: A teaching model linking thoughts, feelings, and behaviors as mutually influential components of experience.
C. Cognitive triangle: A teaching model linking thoughts, feelings, and behaviors as mutually influential components of experience. / Cognitive restructuring: Collaboratively evaluating and developing more balanced or useful interpretations rather than imposing positive thinking.
D. Cognitive triangle: A teaching model linking thoughts, feelings, and behaviors as mutually influential components of experience. / Cognitive restructuring: A structured aid for noticing a situation, automatic thought, emotion, evidence, and alternative perspective.

0544. A student confuses Cognitive restructuring with Exposure. Which explanation most accurately separates them?

A. Cognitive restructuring: A structured aid for noticing a situation, automatic thought, emotion, evidence, and alternative perspective. / Exposure: Gradual, planned approach to feared situations or cues to support new learning, with appropriate assessment and consent.
B. Cognitive restructuring: Collaboratively evaluating and developing more balanced or useful interpretations rather than imposing positive thinking. / Exposure: Gradual, planned approach to feared situations or cues to support new learning, with appropriate assessment and consent.
C. Cognitive restructuring: Collaboratively evaluating and developing more balanced or useful interpretations rather than imposing positive thinking. / Exposure: A teaching model linking thoughts, feelings, and behaviors as mutually influential components of experience.
D. Cognitive restructuring: Gradual, planned approach to feared situations or cues to support new learning, with appropriate assessment and consent. / Exposure: Collaboratively evaluating and developing more balanced or useful interpretations rather than imposing positive thinking.

0545. A program coordinator describes an intervention for a young adolescent client in the telehealth session, centered on scheduling a manageable valued activity and reviewing its effect on mood and functioning. Which named idea is most relevant?

A. Relapse prevention
B. Behavioral activation
C. Cognitive restructuring
D. Developmental adaptation in CBT

0546. What is the central meaning of Exposure?

A. Practicing a targeted behavior in session, often with modeling, feedback, and repetition.
B. Practice of helpful, realistic statements that support coping and task engagement.
C. Planning for future triggers, early warning signs, and continued use of skills after improvement.
D. Gradual, planned approach to feared situations or cues to support new learning, with appropriate assessment and consent.

0547. In child-focused CBT, a youth worker is asked to justify a plan for a child aged 7 in the youth advocacy program. It calls for identifying likely setbacks and rehearsing which coping steps the child can use. Which concept provides the rationale?

A. Developmental adaptation in CBT
B. Collaborative empiricism
C. Relapse prevention
D. Skills rehearsal

0548. For a student aged 12 seen in the school consultation, the research trainee recommends a plan built around helping a child map how a thought, feeling, and action relate in a particular situation. Which concept is reflected?

A. Cognitive triangle
B. Exposure
C. Relapse prevention
D. Behavioral activation

0549. In child-focused CBT, a student aged 9's service team meets in the school-based service. The family therapist recommends a change involving identifying likely setbacks and rehearsing which coping steps the child can use. Which idea best explains it?

A. Developmental adaptation in CBT
B. Relapse prevention
C. Skills rehearsal
D. Exposure

0550. A clinical supervisor is asked to evaluate a proposed service for a student aged 9 in the supervision meeting. The defining feature is building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation. Which concept fits?

A. Skills rehearsal
B. Cognitive restructuring
C. Relapse prevention
D. Exposure

0551. In child-focused CBT, how are Cognitive triangle and Relapse prevention most accurately differentiated in this curriculum?

A. Cognitive triangle: Planning for future triggers, early warning signs, and continued use of skills after improvement. / Relapse prevention: A teaching model linking thoughts, feelings, and behaviors as mutually influential components of experience.
B. Cognitive triangle: A structured aid for noticing a situation, automatic thought, emotion, evidence, and alternative perspective. / Relapse prevention: Planning for future triggers, early warning signs, and continued use of skills after improvement.
C. Cognitive triangle: A teaching model linking thoughts, feelings, and behaviors as mutually influential components of experience. / Relapse prevention: Practicing a targeted behavior in session, often with modeling, feedback, and repetition.
D. Cognitive triangle: A teaching model linking thoughts, feelings, and behaviors as mutually influential components of experience. / Relapse prevention: Planning for future triggers, early warning signs, and continued use of skills after improvement.

0552. Which comparison correctly distinguishes Coping self-talk from Developmental adaptation in CBT?

A. Coping self-talk: Adjusting CBT language, materials, pacing, and caregiver involvement to the child's developmental capacity. / Developmental adaptation in CBT: Practice of helpful, realistic statements that support coping and task engagement.
B. Coping self-talk: Practice of helpful, realistic statements that support coping and task engagement. / Developmental adaptation in CBT: Practicing a targeted behavior in session, often with modeling, feedback, and repetition.
C. Coping self-talk: Practice of helpful, realistic statements that support coping and task engagement. / Developmental adaptation in CBT: Adjusting CBT language, materials, pacing, and caregiver involvement to the child's developmental capacity.
D. Coping self-talk: A teaching model linking thoughts, feelings, and behaviors as mutually influential components of experience. / Developmental adaptation in CBT: Adjusting CBT language, materials, pacing, and caregiver involvement to the child's developmental capacity.

0553. In child-focused CBT, identify the most precise label for this idea: Planning for future triggers, early warning signs, and continued use of skills after improvement.

A. Skills rehearsal
B. Behavioral activation
C. Coping self-talk
D. Relapse prevention

0554. In child-focused CBT, a support meeting for a young person aged 16 includes a clinical supervisor in the clinical planning session. The practice under consideration is identifying likely setbacks and rehearsing which coping steps the child can use. Which concept guides it?

A. Relapse prevention
B. Thought record
C. Cognitive restructuring
D. Developmental adaptation in CBT

0555. Which paired example correctly applies Coping self-talk first and Developmental adaptation in CBT second?

A. Coping self-talk: Using drawings or concrete examples when abstract cognitive language is not yet accessible. / Developmental adaptation in CBT: Rehearsing a believable coping phrase a child can use during a challenging moment.
B. Coping self-talk: Rehearsing a believable coping phrase a child can use during a challenging moment. / Developmental adaptation in CBT: Role-playing an assertive request and providing supportive, specific feedback.
C. Coping self-talk: Rehearsing a believable coping phrase a child can use during a challenging moment. / Developmental adaptation in CBT: Using drawings or concrete examples when abstract cognitive language is not yet accessible.
D. Coping self-talk: Helping a child map how a thought, feeling, and action relate in a particular situation. / Developmental adaptation in CBT: Using drawings or concrete examples when abstract cognitive language is not yet accessible.

0556. Select the best explanation of Exposure.

A. Planned engagement in meaningful or rewarding activities to increase contact with positive reinforcement.
B. Gradual, planned approach to feared situations or cues to support new learning, with appropriate assessment and consent.
C. Practice of helpful, realistic statements that support coping and task engagement.
D. Practicing a targeted behavior in session, often with modeling, feedback, and repetition.

0557. A mental-health professional is supporting a student aged 12 in the after-school program. The key practice is using a child-friendly record to examine what happened and what the child thought at that moment. Which course concept is most relevant?

A. Cognitive triangle
B. Thought record
C. Cognitive restructuring
D. Relapse prevention

0558. Which description belongs with the term Thought record?

A. A structured aid for noticing a situation, automatic thought, emotion, evidence, and alternative perspective.
B. Collaboratively evaluating and developing more balanced or useful interpretations rather than imposing positive thinking.
C. Gradual, planned approach to feared situations or cues to support new learning, with appropriate assessment and consent.
D. Planning for future triggers, early warning signs, and continued use of skills after improvement.

0559. When reviewing a client in early adolescence's plan in the parent meeting, the school-based clinician notes that the next step is rehearsing a believable coping phrase a child can use during a challenging moment. Which concept guides this step?

A. Relapse prevention
B. Coping self-talk
C. Collaborative empiricism
D. Developmental adaptation in CBT

0560. In child-focused CBT, which applied comparison correctly identifies what belongs to Collaborative empiricism versus Relapse prevention?

A. Collaborative empiricism: Scheduling a manageable valued activity and reviewing its effect on mood and functioning. / Relapse prevention: Identifying likely setbacks and rehearsing which coping steps the child can use.
B. Collaborative empiricism: Treating a belief as a testable hypothesis and reviewing what the child observes. / Relapse prevention: Identifying likely setbacks and rehearsing which coping steps the child can use.
C. Collaborative empiricism: Identifying likely setbacks and rehearsing which coping steps the child can use. / Relapse prevention: Treating a belief as a testable hypothesis and reviewing what the child observes.
D. Collaborative empiricism: Treating a belief as a testable hypothesis and reviewing what the child observes. / Relapse prevention: Helping a child map how a thought, feeling, and action relate in a particular situation.

0561. Which option pairs the definitions of Skills rehearsal and Developmental adaptation in CBT correctly, in that order?

A. Skills rehearsal: Gradual, planned approach to feared situations or cues to support new learning, with appropriate assessment and consent. / Developmental adaptation in CBT: Adjusting CBT language, materials, pacing, and caregiver involvement to the child's developmental capacity.
B. Skills rehearsal: Adjusting CBT language, materials, pacing, and caregiver involvement to the child's developmental capacity. / Developmental adaptation in CBT: Practicing a targeted behavior in session, often with modeling, feedback, and repetition.
C. Skills rehearsal: Practicing a targeted behavior in session, often with modeling, feedback, and repetition. / Developmental adaptation in CBT: Adjusting CBT language, materials, pacing, and caregiver involvement to the child's developmental capacity.
D. Skills rehearsal: Practicing a targeted behavior in session, often with modeling, feedback, and repetition. / Developmental adaptation in CBT: Practice of helpful, realistic statements that support coping and task engagement.

0562. A supervised trainee and a adolescent student are discussing support in the student wellness team. The selected practice is examining evidence and generating a realistic alternative thought with the child. Which concept does this demonstrate?

A. Cognitive restructuring
B. Coping self-talk
C. Developmental adaptation in CBT
D. Behavioral activation

0563. Which choice aligns each practice with the correct idea, Cognitive triangle or Thought record?

A. Cognitive triangle: Role-playing an assertive request and providing supportive, specific feedback. / Thought record: Using a child-friendly record to examine what happened and what the child thought at that moment.
B. Cognitive triangle: Helping a child map how a thought, feeling, and action relate in a particular situation. / Thought record: Examining evidence and generating a realistic alternative thought with the child.
C. Cognitive triangle: Helping a child map how a thought, feeling, and action relate in a particular situation. / Thought record: Using a child-friendly record to examine what happened and what the child thought at that moment.
D. Cognitive triangle: Using a child-friendly record to examine what happened and what the child thought at that moment. / Thought record: Helping a child map how a thought, feeling, and action relate in a particular situation.

0564. How should a practitioner distinguish the applications of Cognitive restructuring and Exposure?

A. Cognitive restructuring: Examining evidence and generating a realistic alternative thought with the child. / Exposure: Helping a child map how a thought, feeling, and action relate in a particular situation.
B. Cognitive restructuring: Building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation. / Exposure: Examining evidence and generating a realistic alternative thought with the child.
C. Cognitive restructuring: Using a child-friendly record to examine what happened and what the child thought at that moment. / Exposure: Building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation.
D. Cognitive restructuring: Examining evidence and generating a realistic alternative thought with the child. / Exposure: Building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation.

0565. A case conference asks for a distinction between Exposure and Coping self-talk. Which answer is sound?

A. Exposure: Gradual, planned approach to feared situations or cues to support new learning, with appropriate assessment and consent. / Coping self-talk: Planned engagement in meaningful or rewarding activities to increase contact with positive reinforcement.
B. Exposure: A teaching model linking thoughts, feelings, and behaviors as mutually influential components of experience. / Coping self-talk: Practice of helpful, realistic statements that support coping and task engagement.
C. Exposure: Practice of helpful, realistic statements that support coping and task engagement. / Coping self-talk: Gradual, planned approach to feared situations or cues to support new learning, with appropriate assessment and consent.
D. Exposure: Gradual, planned approach to feared situations or cues to support new learning, with appropriate assessment and consent. / Coping self-talk: Practice of helpful, realistic statements that support coping and task engagement.

0566. Which comparison correctly distinguishes Cognitive restructuring from Exposure?

A. Cognitive restructuring: Gradual, planned approach to feared situations or cues to support new learning, with appropriate assessment and consent. / Exposure: Collaboratively evaluating and developing more balanced or useful interpretations rather than imposing positive thinking.
B. Cognitive restructuring: Collaboratively evaluating and developing more balanced or useful interpretations rather than imposing positive thinking. / Exposure: Gradual, planned approach to feared situations or cues to support new learning, with appropriate assessment and consent.
C. Cognitive restructuring: A structured aid for noticing a situation, automatic thought, emotion, evidence, and alternative perspective. / Exposure: Gradual, planned approach to feared situations or cues to support new learning, with appropriate assessment and consent.
D. Cognitive restructuring: Collaboratively evaluating and developing more balanced or useful interpretations rather than imposing positive thinking. / Exposure: A teaching model linking thoughts, feelings, and behaviors as mutually influential components of experience.

0567. Which statement accurately contrasts the course concepts Cognitive restructuring and Collaborative empiricism?

A. Cognitive restructuring: A CBT stance in which client and therapist jointly test ideas against evidence and experience. / Collaborative empiricism: Collaboratively evaluating and developing more balanced or useful interpretations rather than imposing positive thinking.
B. Cognitive restructuring: Collaboratively evaluating and developing more balanced or useful interpretations rather than imposing positive thinking. / Collaborative empiricism: Planned engagement in meaningful or rewarding activities to increase contact with positive reinforcement.
C. Cognitive restructuring: Collaboratively evaluating and developing more balanced or useful interpretations rather than imposing positive thinking. / Collaborative empiricism: A CBT stance in which client and therapist jointly test ideas against evidence and experience.
D. Cognitive restructuring: Adjusting CBT language, materials, pacing, and caregiver involvement to the child's developmental capacity. / Collaborative empiricism: A CBT stance in which client and therapist jointly test ideas against evidence and experience.

0568. At the family session, a clinical supervisor meets with a student aged 15. The practice priority is: examining evidence and generating a realistic alternative thought with the child. Which concept best captures that priority?

A. Cognitive restructuring
B. Exposure
C. Collaborative empiricism
D. Relapse prevention

0569. How are Behavioral activation and Exposure most accurately differentiated in this curriculum?

A. Behavioral activation: Planned engagement in meaningful or rewarding activities to increase contact with positive reinforcement. / Exposure: Gradual, planned approach to feared situations or cues to support new learning, with appropriate assessment and consent.
B. Behavioral activation: Planned engagement in meaningful or rewarding activities to increase contact with positive reinforcement. / Exposure: A CBT stance in which client and therapist jointly test ideas against evidence and experience.
C. Behavioral activation: Gradual, planned approach to feared situations or cues to support new learning, with appropriate assessment and consent. / Exposure: Planned engagement in meaningful or rewarding activities to increase contact with positive reinforcement.
D. Behavioral activation: A structured aid for noticing a situation, automatic thought, emotion, evidence, and alternative perspective. / Exposure: Gradual, planned approach to feared situations or cues to support new learning, with appropriate assessment and consent.

0570. A doctoral student reads the following description. Which concept does it define? A CBT stance in which client and therapist jointly test ideas against evidence and experience.

A. Coping self-talk
B. Collaborative empiricism
C. Behavioral activation
D. Exposure

0571. In a case note about a child aged 7, a mental-health professional working in the outpatient clinic records this priority: scheduling a manageable valued activity and reviewing its effect on mood and functioning. What principle is reflected?

A. Relapse prevention
B. Behavioral activation
C. Cognitive triangle
D. Coping self-talk

0572. In child-focused CBT, a case conference asks for a distinction between Thought record and Relapse prevention. Which answer is sound?

A. Thought record: Planning for future triggers, early warning signs, and continued use of skills after improvement. / Relapse prevention: A structured aid for noticing a situation, automatic thought, emotion, evidence, and alternative perspective.
B. Thought record: Planned engagement in meaningful or rewarding activities to increase contact with positive reinforcement. / Relapse prevention: Planning for future triggers, early warning signs, and continued use of skills after improvement.
C. Thought record: A structured aid for noticing a situation, automatic thought, emotion, evidence, and alternative perspective. / Relapse prevention: Planning for future triggers, early warning signs, and continued use of skills after improvement.
D. Thought record: A structured aid for noticing a situation, automatic thought, emotion, evidence, and alternative perspective. / Relapse prevention: Practicing a targeted behavior in session, often with modeling, feedback, and repetition.

0573. A student confuses Skills rehearsal with Collaborative empiricism. Which explanation most accurately separates them?

A. Skills rehearsal: Practicing a targeted behavior in session, often with modeling, feedback, and repetition. / Collaborative empiricism: A CBT stance in which client and therapist jointly test ideas against evidence and experience.
B. Skills rehearsal: A CBT stance in which client and therapist jointly test ideas against evidence and experience. / Collaborative empiricism: Practicing a targeted behavior in session, often with modeling, feedback, and repetition.
C. Skills rehearsal: A teaching model linking thoughts, feelings, and behaviors as mutually influential components of experience. / Collaborative empiricism: A CBT stance in which client and therapist jointly test ideas against evidence and experience.
D. Skills rehearsal: Practicing a targeted behavior in session, often with modeling, feedback, and repetition. / Collaborative empiricism: Planned engagement in meaningful or rewarding activities to increase contact with positive reinforcement.

0574. A child of elementary-school age is receiving support in the clinical planning session. The consulting counselor is guided by this practice: rehearsing a believable coping phrase a child can use during a challenging moment. Which principle best fits?

A. Cognitive restructuring
B. Cognitive triangle
C. Developmental adaptation in CBT
D. Coping self-talk

0575. In child-focused CBT, how should a practitioner distinguish the applications of Cognitive triangle and Relapse prevention?

A. Cognitive triangle: Using a child-friendly record to examine what happened and what the child thought at that moment. / Relapse prevention: Identifying likely setbacks and rehearsing which coping steps the child can use.
B. Cognitive triangle: Helping a child map how a thought, feeling, and action relate in a particular situation. / Relapse prevention: Role-playing an assertive request and providing supportive, specific feedback.
C. Cognitive triangle: Identifying likely setbacks and rehearsing which coping steps the child can use. / Relapse prevention: Helping a child map how a thought, feeling, and action relate in a particular situation.
D. Cognitive triangle: Helping a child map how a thought, feeling, and action relate in a particular situation. / Relapse prevention: Identifying likely setbacks and rehearsing which coping steps the child can use.

0576. While consulting in the multidisciplinary case conference, a supervised trainee supports a school-age child by using this approach: scheduling a manageable valued activity and reviewing its effect on mood and functioning. Which concept is being applied?

A. Behavioral activation
B. Developmental adaptation in CBT
C. Coping self-talk
D. Exposure

0577. Choose the term that matches this definition: Planned engagement in meaningful or rewarding activities to increase contact with positive reinforcement.

A. Collaborative empiricism
B. Cognitive triangle
C. Thought record
D. Behavioral activation

0578. A support meeting for a student aged 17 includes a behavior specialist in the community youth program. The practice under consideration is scheduling a manageable valued activity and reviewing its effect on mood and functioning. Which concept guides it?

A. Behavioral activation
B. Cognitive triangle
C. Relapse prevention
D. Developmental adaptation in CBT

0579. A supervisor asks for an applied contrast between Exposure and Collaborative empiricism. Which option fits?

A. Exposure: Rehearsing a believable coping phrase a child can use during a challenging moment. / Collaborative empiricism: Treating a belief as a testable hypothesis and reviewing what the child observes.
B. Exposure: Building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation. / Collaborative empiricism: Identifying likely setbacks and rehearsing which coping steps the child can use.
C. Exposure: Treating a belief as a testable hypothesis and reviewing what the child observes. / Collaborative empiricism: Building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation.
D. Exposure: Building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation. / Collaborative empiricism: Treating a belief as a testable hypothesis and reviewing what the child observes.

0580. Which option correctly matches each concept to its practice focus: Thought record and Collaborative empiricism?

A. Thought record: Treating a belief as a testable hypothesis and reviewing what the child observes. / Collaborative empiricism: Using a child-friendly record to examine what happened and what the child thought at that moment.
B. Thought record: Using a child-friendly record to examine what happened and what the child thought at that moment. / Collaborative empiricism: Helping a child map how a thought, feeling, and action relate in a particular situation.
C. Thought record: Using a child-friendly record to examine what happened and what the child thought at that moment. / Collaborative empiricism: Treating a belief as a testable hypothesis and reviewing what the child observes.
D. Thought record: Using drawings or concrete examples when abstract cognitive language is not yet accessible. / Collaborative empiricism: Treating a belief as a testable hypothesis and reviewing what the child observes.

0581. In child-focused CBT, which applied comparison correctly identifies what belongs to Developmental adaptation in CBT versus Relapse prevention?

A. Developmental adaptation in CBT: Treating a belief as a testable hypothesis and reviewing what the child observes. / Relapse prevention: Identifying likely setbacks and rehearsing which coping steps the child can use.
B. Developmental adaptation in CBT: Using drawings or concrete examples when abstract cognitive language is not yet accessible. / Relapse prevention: Identifying likely setbacks and rehearsing which coping steps the child can use.
C. Developmental adaptation in CBT: Using drawings or concrete examples when abstract cognitive language is not yet accessible. / Relapse prevention: Using a child-friendly record to examine what happened and what the child thought at that moment.
D. Developmental adaptation in CBT: Identifying likely setbacks and rehearsing which coping steps the child can use. / Relapse prevention: Using drawings or concrete examples when abstract cognitive language is not yet accessible.

0582. Which pair of actions illustrates Behavioral activation and Coping self-talk, respectively?

A. Behavioral activation: Scheduling a manageable valued activity and reviewing its effect on mood and functioning. / Coping self-talk: Identifying likely setbacks and rehearsing which coping steps the child can use.
B. Behavioral activation: Scheduling a manageable valued activity and reviewing its effect on mood and functioning. / Coping self-talk: Rehearsing a believable coping phrase a child can use during a challenging moment.
C. Behavioral activation: Rehearsing a believable coping phrase a child can use during a challenging moment. / Coping self-talk: Scheduling a manageable valued activity and reviewing its effect on mood and functioning.
D. Behavioral activation: Examining evidence and generating a realistic alternative thought with the child. / Coping self-talk: Rehearsing a believable coping phrase a child can use during a challenging moment.

0583. In child-focused CBT, a service navigator is asked what should shape a young person's support in the child guidance clinic. The proposed focus is identifying likely setbacks and rehearsing which coping steps the child can use. Which principle does it represent?

A. Developmental adaptation in CBT
B. Cognitive triangle
C. Coping self-talk
D. Relapse prevention

0584. Which applied comparison correctly identifies what belongs to Cognitive restructuring versus Collaborative empiricism?

A. Cognitive restructuring: Treating a belief as a testable hypothesis and reviewing what the child observes. / Collaborative empiricism: Examining evidence and generating a realistic alternative thought with the child.
B. Cognitive restructuring: Examining evidence and generating a realistic alternative thought with the child. / Collaborative empiricism: Treating a belief as a testable hypothesis and reviewing what the child observes.
C. Cognitive restructuring: Examining evidence and generating a realistic alternative thought with the child. / Collaborative empiricism: Scheduling a manageable valued activity and reviewing its effect on mood and functioning.
D. Cognitive restructuring: Using drawings or concrete examples when abstract cognitive language is not yet accessible. / Collaborative empiricism: Treating a belief as a testable hypothesis and reviewing what the child observes.

0585. In child-focused CBT, which comparison would correct a trainee's misunderstanding of Cognitive restructuring versus Relapse prevention?

A. Cognitive restructuring: Collaboratively evaluating and developing more balanced or useful interpretations rather than imposing positive thinking. / Relapse prevention: Planning for future triggers, early warning signs, and continued use of skills after improvement.
B. Cognitive restructuring: Planning for future triggers, early warning signs, and continued use of skills after improvement. / Relapse prevention: Collaboratively evaluating and developing more balanced or useful interpretations rather than imposing positive thinking.
C. Cognitive restructuring: Gradual, planned approach to feared situations or cues to support new learning, with appropriate assessment and consent. / Relapse prevention: Planning for future triggers, early warning signs, and continued use of skills after improvement.
D. Cognitive restructuring: Collaboratively evaluating and developing more balanced or useful interpretations rather than imposing positive thinking. / Relapse prevention: A teaching model linking thoughts, feelings, and behaviors as mutually influential components of experience.

0586. A supervisor asks for an applied contrast between Skills rehearsal and Developmental adaptation in CBT. Which option fits?

A. Skills rehearsal: Role-playing an assertive request and providing supportive, specific feedback. / Developmental adaptation in CBT: Using drawings or concrete examples when abstract cognitive language is not yet accessible.
B. Skills rehearsal: Using drawings or concrete examples when abstract cognitive language is not yet accessible. / Developmental adaptation in CBT: Role-playing an assertive request and providing supportive, specific feedback.
C. Skills rehearsal: Role-playing an assertive request and providing supportive, specific feedback. / Developmental adaptation in CBT: Rehearsing a believable coping phrase a child can use during a challenging moment.
D. Skills rehearsal: Building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation. / Developmental adaptation in CBT: Using drawings or concrete examples when abstract cognitive language is not yet accessible.

0587. A school support specialist reviews a plan for a young person aged 16 in the counseling practicum. The plan emphasizes using a child-friendly record to examine what happened and what the child thought at that moment. Which course idea does this reflect?

A. Thought record
B. Skills rehearsal
C. Behavioral activation
D. Exposure

0588. In the child guidance clinic, a consulting counselor explains why a adolescent student would benefit from building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation. Which course concept underpins the explanation?

A. Cognitive restructuring
B. Exposure
C. Relapse prevention
D. Skills rehearsal

0589. At the community service agency, a school support specialist meets with a preadolescent child. The practice priority is: treating a belief as a testable hypothesis and reviewing what the child observes. Which concept best captures that priority?

A. Cognitive triangle
B. Exposure
C. Collaborative empiricism
D. Developmental adaptation in CBT

0590. A support meeting for a school-age child includes a school support specialist in the learning-support meeting. The practice under consideration is helping a child map how a thought, feeling, and action relate in a particular situation. Which concept guides it?

A. Cognitive triangle
B. Thought record
C. Collaborative empiricism
D. Coping self-talk

0591. How are Cognitive triangle and Developmental adaptation in CBT most accurately differentiated in this curriculum?

A. Cognitive triangle: Adjusting CBT language, materials, pacing, and caregiver involvement to the child's developmental capacity. / Developmental adaptation in CBT: A teaching model linking thoughts, feelings, and behaviors as mutually influential components of experience.
B. Cognitive triangle: A teaching model linking thoughts, feelings, and behaviors as mutually influential components of experience. / Developmental adaptation in CBT: Adjusting CBT language, materials, pacing, and caregiver involvement to the child's developmental capacity.
C. Cognitive triangle: A teaching model linking thoughts, feelings, and behaviors as mutually influential components of experience. / Developmental adaptation in CBT: A CBT stance in which client and therapist jointly test ideas against evidence and experience.
D. Cognitive triangle: Collaboratively evaluating and developing more balanced or useful interpretations rather than imposing positive thinking. / Developmental adaptation in CBT: Adjusting CBT language, materials, pacing, and caregiver involvement to the child's developmental capacity.

0592. How are Exposure and Skills rehearsal most accurately differentiated in this curriculum?

A. Exposure: Gradual, planned approach to feared situations or cues to support new learning, with appropriate assessment and consent. / Skills rehearsal: Collaboratively evaluating and developing more balanced or useful interpretations rather than imposing positive thinking.
B. Exposure: Practicing a targeted behavior in session, often with modeling, feedback, and repetition. / Skills rehearsal: Gradual, planned approach to feared situations or cues to support new learning, with appropriate assessment and consent.
C. Exposure: Gradual, planned approach to feared situations or cues to support new learning, with appropriate assessment and consent. / Skills rehearsal: Practicing a targeted behavior in session, often with modeling, feedback, and repetition.
D. Exposure: A CBT stance in which client and therapist jointly test ideas against evidence and experience. / Skills rehearsal: Practicing a targeted behavior in session, often with modeling, feedback, and repetition.

0593. A trainee must distinguish how Coping self-talk and Skills rehearsal guide practice. Which comparison is accurate?

A. Coping self-talk: Role-playing an assertive request and providing supportive, specific feedback. / Skills rehearsal: Rehearsing a believable coping phrase a child can use during a challenging moment.
B. Coping self-talk: Rehearsing a believable coping phrase a child can use during a challenging moment. / Skills rehearsal: Treating a belief as a testable hypothesis and reviewing what the child observes.
C. Coping self-talk: Examining evidence and generating a realistic alternative thought with the child. / Skills rehearsal: Role-playing an assertive request and providing supportive, specific feedback.
D. Coping self-talk: Rehearsing a believable coping phrase a child can use during a challenging moment. / Skills rehearsal: Role-playing an assertive request and providing supportive, specific feedback.

0594. In child-focused CBT, choose the definition pair that correctly explains Thought record first and Relapse prevention second.

A. Thought record: Planning for future triggers, early warning signs, and continued use of skills after improvement. / Relapse prevention: A structured aid for noticing a situation, automatic thought, emotion, evidence, and alternative perspective.
B. Thought record: A structured aid for noticing a situation, automatic thought, emotion, evidence, and alternative perspective. / Relapse prevention: Planning for future triggers, early warning signs, and continued use of skills after improvement.
C. Thought record: A structured aid for noticing a situation, automatic thought, emotion, evidence, and alternative perspective. / Relapse prevention: Practicing a targeted behavior in session, often with modeling, feedback, and repetition.
D. Thought record: Planned engagement in meaningful or rewarding activities to increase contact with positive reinforcement. / Relapse prevention: Planning for future triggers, early warning signs, and continued use of skills after improvement.

0595. How should a practitioner distinguish the applications of Behavioral activation and Coping self-talk?

A. Behavioral activation: Scheduling a manageable valued activity and reviewing its effect on mood and functioning. / Coping self-talk: Identifying likely setbacks and rehearsing which coping steps the child can use.
B. Behavioral activation: Examining evidence and generating a realistic alternative thought with the child. / Coping self-talk: Rehearsing a believable coping phrase a child can use during a challenging moment.
C. Behavioral activation: Scheduling a manageable valued activity and reviewing its effect on mood and functioning. / Coping self-talk: Rehearsing a believable coping phrase a child can use during a challenging moment.
D. Behavioral activation: Rehearsing a believable coping phrase a child can use during a challenging moment. / Coping self-talk: Scheduling a manageable valued activity and reviewing its effect on mood and functioning.

0596. Which option pairs the definitions of Thought record and Coping self-talk correctly, in that order?

A. Thought record: A teaching model linking thoughts, feelings, and behaviors as mutually influential components of experience. / Coping self-talk: Practice of helpful, realistic statements that support coping and task engagement.
B. Thought record: A structured aid for noticing a situation, automatic thought, emotion, evidence, and alternative perspective. / Coping self-talk: Planning for future triggers, early warning signs, and continued use of skills after improvement.
C. Thought record: A structured aid for noticing a situation, automatic thought, emotion, evidence, and alternative perspective. / Coping self-talk: Practice of helpful, realistic statements that support coping and task engagement.
D. Thought record: Practice of helpful, realistic statements that support coping and task engagement. / Coping self-talk: A structured aid for noticing a situation, automatic thought, emotion, evidence, and alternative perspective.

0597. In child-focused CBT, which comparison would correct a trainee's misunderstanding of Collaborative empiricism versus Relapse prevention?

A. Collaborative empiricism: A CBT stance in which client and therapist jointly test ideas against evidence and experience. / Relapse prevention: Planning for future triggers, early warning signs, and continued use of skills after improvement.
B. Collaborative empiricism: Planning for future triggers, early warning signs, and continued use of skills after improvement. / Relapse prevention: A CBT stance in which client and therapist jointly test ideas against evidence and experience.
C. Collaborative empiricism: A CBT stance in which client and therapist jointly test ideas against evidence and experience. / Relapse prevention: A teaching model linking thoughts, feelings, and behaviors as mutually influential components of experience.
D. Collaborative empiricism: Planned engagement in meaningful or rewarding activities to increase contact with positive reinforcement. / Relapse prevention: Planning for future triggers, early warning signs, and continued use of skills after improvement.

0598. At the behavior-support review, a clinical supervisor meets with a child of elementary-school age. The practice priority is: role-playing an assertive request and providing supportive, specific feedback. Which concept best captures that priority?

A. Exposure
B. Thought record
C. Skills rehearsal
D. Collaborative empiricism

0599. A high-school student's service team meets in the school counseling office. The family therapist recommends a change involving using a child-friendly record to examine what happened and what the child thought at that moment. Which idea best explains it?

A. Exposure
B. Thought record
C. Coping self-talk
D. Relapse prevention

0600. In child-focused CBT, for a child aged 11 in the counseling practicum, a play therapist makes this practice the immediate priority: identifying likely setbacks and rehearsing which coping steps the child can use. Which concept fits best?

A. Exposure
B. Developmental adaptation in CBT
C. Relapse prevention
D. Cognitive triangle

0601. Which applied comparison correctly identifies what belongs to Cognitive triangle versus Thought record?

A. Cognitive triangle: Using a child-friendly record to examine what happened and what the child thought at that moment. / Thought record: Helping a child map how a thought, feeling, and action relate in a particular situation.
B. Cognitive triangle: Role-playing an assertive request and providing supportive, specific feedback. / Thought record: Using a child-friendly record to examine what happened and what the child thought at that moment.
C. Cognitive triangle: Helping a child map how a thought, feeling, and action relate in a particular situation. / Thought record: Examining evidence and generating a realistic alternative thought with the child.
D. Cognitive triangle: Helping a child map how a thought, feeling, and action relate in a particular situation. / Thought record: Using a child-friendly record to examine what happened and what the child thought at that moment.

0602. Choose the definition pair that correctly explains Cognitive restructuring first and Coping self-talk second.

A. Cognitive restructuring: Practicing a targeted behavior in session, often with modeling, feedback, and repetition. / Coping self-talk: Practice of helpful, realistic statements that support coping and task engagement.
B. Cognitive restructuring: Collaboratively evaluating and developing more balanced or useful interpretations rather than imposing positive thinking. / Coping self-talk: Practice of helpful, realistic statements that support coping and task engagement.
C. Cognitive restructuring: Practice of helpful, realistic statements that support coping and task engagement. / Coping self-talk: Collaboratively evaluating and developing more balanced or useful interpretations rather than imposing positive thinking.
D. Cognitive restructuring: Collaboratively evaluating and developing more balanced or useful interpretations rather than imposing positive thinking. / Coping self-talk: Gradual, planned approach to feared situations or cues to support new learning, with appropriate assessment and consent.

0603. In child-focused CBT, a supervised trainee prepares for a session in the after-school program with a preadolescent child. The intended approach is identifying likely setbacks and rehearsing which coping steps the child can use. Which concept is most relevant?

A. Behavioral activation
B. Coping self-talk
C. Cognitive triangle
D. Relapse prevention

0604. While consulting in the behavior-support review, a consultant supports a student aged 17 by using this approach: using a child-friendly record to examine what happened and what the child thought at that moment. Which concept is being applied?

A. Thought record
B. Exposure
C. Developmental adaptation in CBT
D. Collaborative empiricism

0605. A play therapist reviews a plan for a middle-school student in the learning-support meeting. The plan emphasizes rehearsing a believable coping phrase a child can use during a challenging moment. Which course idea does this reflect?

A. Coping self-talk
B. Developmental adaptation in CBT
C. Exposure
D. Cognitive triangle

0606. In a case note about a young person aged 10, a supervised trainee working in the learning-support meeting records this priority: using drawings or concrete examples when abstract cognitive language is not yet accessible. What principle is reflected?

A. Developmental adaptation in CBT
B. Exposure
C. Skills rehearsal
D. Collaborative empiricism

0607. Which comparison would correct a trainee's misunderstanding of Cognitive triangle versus Thought record?

A. Cognitive triangle: A teaching model linking thoughts, feelings, and behaviors as mutually influential components of experience. / Thought record: A structured aid for noticing a situation, automatic thought, emotion, evidence, and alternative perspective.
B. Cognitive triangle: Practicing a targeted behavior in session, often with modeling, feedback, and repetition. / Thought record: A structured aid for noticing a situation, automatic thought, emotion, evidence, and alternative perspective.
C. Cognitive triangle: A structured aid for noticing a situation, automatic thought, emotion, evidence, and alternative perspective. / Thought record: A teaching model linking thoughts, feelings, and behaviors as mutually influential components of experience.
D. Cognitive triangle: A teaching model linking thoughts, feelings, and behaviors as mutually influential components of experience. / Thought record: Collaboratively evaluating and developing more balanced or useful interpretations rather than imposing positive thinking.

0608. In child-focused CBT, a community practitioner describes an intervention for a child aged 6 in the community youth program, centered on identifying likely setbacks and rehearsing which coping steps the child can use. Which named idea is most relevant?

A. Exposure
B. Thought record
C. Relapse prevention
D. Cognitive restructuring

0609. A counselor is asked to evaluate a proposed service for a student aged 12 in the community youth program. The defining feature is treating a belief as a testable hypothesis and reviewing what the child observes. Which concept fits?

A. Behavioral activation
B. Skills rehearsal
C. Exposure
D. Collaborative empiricism

0610. In child-focused CBT, for a child of elementary-school age seen in the student-support meeting, the program coordinator recommends a plan built around identifying likely setbacks and rehearsing which coping steps the child can use. Which concept is reflected?

A. Skills rehearsal
B. Cognitive triangle
C. Coping self-talk
D. Relapse prevention

0611. Which statement shows a sound practice-level distinction between Coping self-talk and Collaborative empiricism?

A. Coping self-talk: Building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation. / Collaborative empiricism: Treating a belief as a testable hypothesis and reviewing what the child observes.
B. Coping self-talk: Treating a belief as a testable hypothesis and reviewing what the child observes. / Collaborative empiricism: Rehearsing a believable coping phrase a child can use during a challenging moment.
C. Coping self-talk: Rehearsing a believable coping phrase a child can use during a challenging moment. / Collaborative empiricism: Treating a belief as a testable hypothesis and reviewing what the child observes.
D. Coping self-talk: Rehearsing a believable coping phrase a child can use during a challenging moment. / Collaborative empiricism: Scheduling a manageable valued activity and reviewing its effect on mood and functioning.

0612. Which description belongs with the term Cognitive triangle?

A. Practicing a targeted behavior in session, often with modeling, feedback, and repetition.
B. Gradual, planned approach to feared situations or cues to support new learning, with appropriate assessment and consent.
C. Practice of helpful, realistic statements that support coping and task engagement.
D. A teaching model linking thoughts, feelings, and behaviors as mutually influential components of experience.

0613. Which professional action most closely applies Cognitive restructuring?

A. Scheduling a manageable valued activity and reviewing its effect on mood and functioning.
B. Using a child-friendly record to examine what happened and what the child thought at that moment.
C. Building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation.
D. Examining evidence and generating a realistic alternative thought with the child.

0614. A case conference asks for a distinction between Cognitive triangle and Coping self-talk. Which answer is sound?

A. Cognitive triangle: A teaching model linking thoughts, feelings, and behaviors as mutually influential components of experience. / Coping self-talk: Practice of helpful, realistic statements that support coping and task engagement.
B. Cognitive triangle: Practice of helpful, realistic statements that support coping and task engagement. / Coping self-talk: A teaching model linking thoughts, feelings, and behaviors as mutually influential components of experience.
C. Cognitive triangle: A structured aid for noticing a situation, automatic thought, emotion, evidence, and alternative perspective. / Coping self-talk: Practice of helpful, realistic statements that support coping and task engagement.
D. Cognitive triangle: A teaching model linking thoughts, feelings, and behaviors as mutually influential components of experience. / Coping self-talk: Collaboratively evaluating and developing more balanced or useful interpretations rather than imposing positive thinking.

0615. A community practitioner describes an intervention for a young person aged 10 in the child guidance clinic, centered on using a child-friendly record to examine what happened and what the child thought at that moment. Which named idea is most relevant?

A. Coping self-talk
B. Relapse prevention
C. Thought record
D. Collaborative empiricism

0616. A team must select a support approach for a young adolescent client at the behavior-support review. The family therapist recommends rehearsing a believable coping phrase a child can use during a challenging moment. Which idea is most relevant?

A. Thought record
B. Relapse prevention
C. Coping self-talk
D. Behavioral activation

0617. A trainee must choose a practice that exemplifies Coping self-talk. Which action is the best fit?

A. Rehearsing a believable coping phrase a child can use during a challenging moment.
B. Using a child-friendly record to examine what happened and what the child thought at that moment.
C. Using drawings or concrete examples when abstract cognitive language is not yet accessible.
D. Role-playing an assertive request and providing supportive, specific feedback.

0618. Identify the most precise label for this idea: A CBT stance in which client and therapist jointly test ideas against evidence and experience.

A. Cognitive triangle
B. Coping self-talk
C. Collaborative empiricism
D. Relapse prevention

0619. An interdisciplinary team reviews a student aged 17’s case at the student-support meeting. The play therapist recommends treating a belief as a testable hypothesis and reviewing what the child observes. Which course concept best fits?

A. Skills rehearsal
B. Cognitive restructuring
C. Collaborative empiricism
D. Coping self-talk

0620. Choose the response that best puts Exposure into practice.

A. Role-playing an assertive request and providing supportive, specific feedback.
B. Building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation.
C. Using drawings or concrete examples when abstract cognitive language is not yet accessible.
D. Examining evidence and generating a realistic alternative thought with the child.

0621. Which named construct is captured by this account? Gradual, planned approach to feared situations or cues to support new learning, with appropriate assessment and consent.

A. Skills rehearsal
B. Exposure
C. Cognitive restructuring
D. Behavioral activation

0622. In child-focused CBT, which choice aligns each practice with the correct idea, Exposure or Relapse prevention?

A. Exposure: Building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation. / Relapse prevention: Identifying likely setbacks and rehearsing which coping steps the child can use.
B. Exposure: Building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation. / Relapse prevention: Role-playing an assertive request and providing supportive, specific feedback.
C. Exposure: Identifying likely setbacks and rehearsing which coping steps the child can use. / Relapse prevention: Building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation.
D. Exposure: Using a child-friendly record to examine what happened and what the child thought at that moment. / Relapse prevention: Identifying likely setbacks and rehearsing which coping steps the child can use.

0623. Which comparison would correct a trainee’s misunderstanding of Cognitive triangle versus Collaborative empiricism?

A. Cognitive triangle: Practice of helpful, realistic statements that support coping and task engagement. / Collaborative empiricism: A CBT stance in which client and therapist jointly test ideas against evidence and experience.
B. Cognitive triangle: A teaching model linking thoughts, feelings, and behaviors as mutually influential components of experience. / Collaborative empiricism: A CBT stance in which client and therapist jointly test ideas against evidence and experience.
C. Cognitive triangle: A teaching model linking thoughts, feelings, and behaviors as mutually influential components of experience. / Collaborative empiricism: Gradual, planned approach to feared situations or cues to support new learning, with appropriate assessment and consent.
D. Cognitive triangle: A CBT stance in which client and therapist jointly test ideas against evidence and experience. / Collaborative empiricism: A teaching model linking thoughts, feelings, and behaviors as mutually influential components of experience.

0624. Which comparison correctly distinguishes Cognitive restructuring from Behavioral activation?

A. Cognitive restructuring: Collaboratively evaluating and developing more balanced or useful interpretations rather than imposing positive thinking. / Behavioral activation: Planned engagement in meaningful or rewarding activities to increase contact with positive reinforcement.
B. Cognitive restructuring: Practicing a targeted behavior in session, often with modeling, feedback, and repetition. / Behavioral activation: Planned engagement in meaningful or rewarding activities to increase contact with positive reinforcement.
C. Cognitive restructuring: Collaboratively evaluating and developing more balanced or useful interpretations rather than imposing positive thinking. / Behavioral activation: Adjusting CBT language, materials, pacing, and caregiver involvement to the child’s developmental capacity.
D. Cognitive restructuring: Planned engagement in meaningful or rewarding activities to increase contact with positive reinforcement. / Behavioral activation: Collaboratively evaluating and developing more balanced or useful interpretations rather than imposing positive thinking.

0625. In the school consultation, the agreed focus for a research trainee working with a student aged 12 is helping a child map how a thought, feeling, and action relate in a particular situation. Which concept names this focus?

A. Exposure
B. Cognitive triangle
C. Thought record
D. Developmental adaptation in CBT

0626. A team must select a support approach for a child aged 7 at the student-support meeting. The case coordinator recommends examining evidence and generating a realistic alternative thought with the child. Which idea is most relevant?

A. Skills rehearsal
B. Cognitive restructuring
C. Developmental adaptation in CBT
D. Coping self-talk

0627. A youth worker is explaining a choice to a child aged 11 and caregiver in the family resource center. The choice centers on building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation. Which idea is illustrated?

A. Developmental adaptation in CBT
B. Skills rehearsal
C. Thought record
D. Exposure

0628. A group facilitator is asked to justify a plan for a student aged 15 in the multidisciplinary case conference. It calls for rehearsing a believable coping phrase a child can use during a challenging moment. Which concept provides the rationale?

A. Cognitive restructuring
B. Cognitive triangle
C. Behavioral activation
D. Coping self-talk

0629. A student confuses Behavioral activation with Collaborative empiricism. Which explanation most accurately separates them?

A. Behavioral activation: Planned engagement in meaningful or rewarding activities to increase contact with positive reinforcement. / Collaborative empiricism: A structured aid for noticing a situation, automatic thought, emotion, evidence, and alternative perspective.
B. Behavioral activation: A CBT stance in which client and therapist jointly test ideas against evidence and experience. / Collaborative empiricism: Planned engagement in meaningful or rewarding activities to increase contact with positive reinforcement.
C. Behavioral activation: Planning for future triggers, early warning signs, and continued use of skills after improvement. / Collaborative empiricism: A CBT stance in which client and therapist jointly test ideas against evidence and experience.
D. Behavioral activation: Planned engagement in meaningful or rewarding activities to increase contact with positive reinforcement. / Collaborative empiricism: A CBT stance in which client and therapist jointly test ideas against evidence and experience.

0630. In the caregiver consultation, a school-based clinician is considering this approach for a child aged 6: treating a belief as a testable hypothesis and reviewing what the child observes. Which framework does it represent?

A. Behavioral activation
B. Collaborative empiricism
C. Cognitive triangle
D. Developmental adaptation in CBT

0631. A case conference reviews a research trainee's work with a child of elementary-school age in the community youth program: using a child-friendly record to examine what happened and what the child thought at that moment. Which principle is central?

A. Coping self-talk
B. Cognitive restructuring
C. Thought record
D. Collaborative empiricism

0632. Which option preserves the correct meaning of both Cognitive triangle and Collaborative empiricism?

A. Cognitive triangle: A teaching model linking thoughts, feelings, and behaviors as mutually influential components of experience. / Collaborative empiricism: Gradual, planned approach to feared situations or cues to support new learning, with appropriate assessment and consent.
B. Cognitive triangle: A CBT stance in which client and therapist jointly test ideas against evidence and experience. / Collaborative empiricism: A teaching model linking thoughts, feelings, and behaviors as mutually influential components of experience.
C. Cognitive triangle: Practice of helpful, realistic statements that support coping and task engagement. / Collaborative empiricism: A CBT stance in which client and therapist jointly test ideas against evidence and experience.
D. Cognitive triangle: A teaching model linking thoughts, feelings, and behaviors as mutually influential components of experience. / Collaborative empiricism: A CBT stance in which client and therapist jointly test ideas against evidence and experience.

0633. An interdisciplinary team reviews a young adolescent client's case at the clinical planning session. The counselor recommends using a child-friendly record to examine what happened and what the child thought at that moment. Which course concept best fits?

A. Skills rehearsal
B. Thought record
C. Cognitive triangle
D. Behavioral activation

0634. Which applied comparison correctly identifies what belongs to Exposure versus Thought record?

A. Exposure: Rehearsing a believable coping phrase a child can use during a challenging moment. / Thought record: Using a child-friendly record to examine what happened and what the child thought at that moment.
B. Exposure: Building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation. / Thought record: Using a child-friendly record to examine what happened and what the child thought at that moment.
C. Exposure: Using a child-friendly record to examine what happened and what the child thought at that moment. / Thought record: Building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation.
D. Exposure: Building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation. / Thought record: Using drawings or concrete examples when abstract cognitive language is not yet accessible.

0635. Which choice aligns each practice with the correct idea, Cognitive triangle or Behavioral activation?

A. Cognitive triangle: Identifying likely setbacks and rehearsing which coping steps the child can use. / Behavioral activation: Scheduling a manageable valued activity and reviewing its effect on mood and functioning.
B. Cognitive triangle: Helping a child map how a thought, feeling, and action relate in a particular situation. / Behavioral activation: Scheduling a manageable valued activity and reviewing its effect on mood and functioning.
C. Cognitive triangle: Helping a child map how a thought, feeling, and action relate in a particular situation. / Behavioral activation: Using drawings or concrete examples when abstract cognitive language is not yet accessible.
D. Cognitive triangle: Scheduling a manageable valued activity and reviewing its effect on mood and functioning. / Behavioral activation: Helping a child map how a thought, feeling, and action relate in a particular situation.

0636. During service review in the student-support meeting, a therapist describes using a child-friendly record to examine what happened and what the child thought at that moment. for a young person. Which course idea is most applicable?

A. Relapse prevention
B. Developmental adaptation in CBT
C. Exposure
D. Thought record

0637. A assessment clinician prepares for a session in the child guidance clinic with a young person aged 18. The intended approach is helping a child map how a thought, feeling, and action relate in a particular situation. Which concept is most relevant?

A. Thought record
B. Cognitive triangle
C. Coping self-talk
D. Exposure

0638. In child-focused CBT, which option preserves the correct meaning of both Cognitive triangle and Relapse prevention?

A. Cognitive triangle: Planning for future triggers, early warning signs, and continued use of skills after improvement. / Relapse prevention: A teaching model linking thoughts, feelings, and behaviors as mutually influential components of experience.
B. Cognitive triangle: A structured aid for noticing a situation, automatic thought, emotion, evidence, and alternative perspective. / Relapse prevention: Planning for future triggers, early warning signs, and continued use of skills after improvement.
C. Cognitive triangle: A teaching model linking thoughts, feelings, and behaviors as mutually influential components of experience. / Relapse prevention: Practicing a targeted behavior in session, often with modeling, feedback, and repetition.
D. Cognitive triangle: A teaching model linking thoughts, feelings, and behaviors as mutually influential components of experience. / Relapse prevention: Planning for future triggers, early warning signs, and continued use of skills after improvement.

0639. Which option preserves the correct meaning of both Behavioral activation and Thought record?

A. Behavioral activation: Planned engagement in meaningful or rewarding activities to increase contact with positive reinforcement. / Thought record: Gradual, planned approach to feared situations or cues to support new learning, with appropriate assessment and consent.
B. Behavioral activation: Planned engagement in meaningful or rewarding activities to increase contact with positive reinforcement. / Thought record: A structured aid for noticing a situation, automatic thought, emotion, evidence, and alternative perspective.
C. Behavioral activation: Practicing a targeted behavior in session, often with modeling, feedback, and repetition. / Thought record: A structured aid for noticing a situation, automatic thought, emotion, evidence, and alternative perspective.
D. Behavioral activation: A structured aid for noticing a situation, automatic thought, emotion, evidence, and alternative perspective. / Thought record: Planned engagement in meaningful or rewarding activities to increase contact with positive reinforcement.

0640. While supporting a young person aged 16 in the after-school program, a parent educator adopts this practice: rehearsing a believable coping phrase a child can use during a challenging moment. Which concept best explains the choice?

A. Exposure
B. Cognitive triangle
C. Collaborative empiricism
D. Coping self-talk

0641. A student confuses Exposure with Collaborative empiricism. Which explanation most accurately separates them?

A. Exposure: Gradual, planned approach to feared situations or cues to support new learning, with appropriate assessment and consent. / Collaborative empiricism: Planning for future triggers, early warning signs, and continued use of skills after improvement.
B. Exposure: Practice of helpful, realistic statements that support coping and task engagement. / Collaborative empiricism: A CBT stance in which client and therapist jointly test ideas against evidence and experience.
C. Exposure: A CBT stance in which client and therapist jointly test ideas against evidence and experience. / Collaborative empiricism: Gradual, planned approach to feared situations or cues to support new learning, with appropriate assessment and consent.
D. Exposure: Gradual, planned approach to feared situations or cues to support new learning, with appropriate assessment and consent. / Collaborative empiricism: A CBT stance in which client and therapist jointly test ideas against evidence and experience.

0642. At the classroom support meeting, a therapist reviews whether a plan for a young adolescent client is appropriate. The relevant practice is treating a belief as a testable hypothesis and reviewing what the child observes. Which concept is tested?

A. Thought record
B. Relapse prevention
C. Coping self-talk
D. Collaborative empiricism

0643. A trainee must distinguish how Thought record and Collaborative empiricism guide practice. Which comparison is accurate?

A. Thought record: Using a child-friendly record to examine what happened and what the child thought at that moment. / Collaborative empiricism: Helping a child map how a thought, feeling, and action relate in a particular situation.
B. Thought record: Using a child-friendly record to examine what happened and what the child thought at that moment. / Collaborative empiricism: Treating a belief as a testable hypothesis and reviewing what the child observes.
C. Thought record: Treating a belief as a testable hypothesis and reviewing what the child observes. / Collaborative empiricism: Using a child-friendly record to examine what happened and what the child thought at that moment.
D. Thought record: Using drawings or concrete examples when abstract cognitive language is not yet accessible. / Collaborative empiricism: Treating a belief as a testable hypothesis and reviewing what the child observes.

0644. Which statement accurately contrasts the course concepts Thought record and Skills rehearsal?

A. Thought record: Practice of helpful, realistic statements that support coping and task engagement. / Skills rehearsal: Practicing a targeted behavior in session, often with modeling, feedback, and repetition.
B. Thought record: A structured aid for noticing a situation, automatic thought, emotion, evidence, and alternative perspective. / Skills rehearsal: Adjusting CBT language, materials, pacing, and caregiver involvement to the child's developmental capacity.
C. Thought record: Practicing a targeted behavior in session, often with modeling, feedback, and repetition. / Skills rehearsal: A structured aid for noticing a situation, automatic thought, emotion, evidence, and alternative perspective.
D. Thought record: A structured aid for noticing a situation, automatic thought, emotion, evidence, and alternative perspective. / Skills rehearsal: Practicing a targeted behavior in session, often with modeling, feedback, and repetition.

0645. Which pair of actions illustrates Behavioral activation and Exposure, respectively?

A. Behavioral activation: Using a child-friendly record to examine what happened and what the child thought at that moment. / Exposure: Building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation.
B. Behavioral activation: Scheduling a manageable valued activity and reviewing its effect on mood and functioning. / Exposure: Treating a belief as a testable hypothesis and reviewing what the child observes.
C. Behavioral activation: Scheduling a manageable valued activity and reviewing its effect on mood and functioning. / Exposure: Building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation.
D. Behavioral activation: Building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation. / Exposure: Scheduling a manageable valued activity and reviewing its effect on mood and functioning.

0646. In the youth advocacy program, a teacher and counselor describes the most appropriate support for a middle-school student as using a child-friendly record to examine what happened and what the child thought at that moment. Which framework is being applied?

A. Developmental adaptation in CBT
B. Behavioral activation
C. Skills rehearsal
D. Thought record

0647. Identify the most precise label for this idea: A structured aid for noticing a situation, automatic thought, emotion, evidence, and alternative perspective.

A. Relapse prevention
B. Cognitive triangle
C. Thought record
D. Cognitive restructuring

0648. Which pair of actions illustrates Cognitive triangle and Cognitive restructuring, respectively?

A. Cognitive triangle: Rehearsing a believable coping phrase a child can use during a challenging moment. / Cognitive restructuring: Examining evidence and generating a realistic alternative thought with the child.
B. Cognitive triangle: Helping a child map how a thought, feeling, and action relate in a particular situation. / Cognitive restructuring: Examining evidence and generating a realistic alternative thought with the child.
C. Cognitive triangle: Helping a child map how a thought, feeling, and action relate in a particular situation. / Cognitive restructuring: Using a child-friendly record to examine what happened and what the child thought at that moment.
D. Cognitive triangle: Examining evidence and generating a realistic alternative thought with the child. / Cognitive restructuring: Helping a child map how a thought, feeling, and action relate in a particular situation.

0649. Which statement accurately contrasts the course concepts Cognitive restructuring and Skills rehearsal?

A. Cognitive restructuring: Collaboratively evaluating and developing more balanced or useful interpretations rather than imposing positive thinking. / Skills rehearsal: Practicing a targeted behavior in session, often with modeling, feedback, and repetition.
B. Cognitive restructuring: Practicing a targeted behavior in session, often with modeling, feedback, and repetition. / Skills rehearsal: Collaboratively evaluating and developing more balanced or useful interpretations rather than imposing positive thinking.
C. Cognitive restructuring: Collaboratively evaluating and developing more balanced or useful interpretations rather than imposing positive thinking. / Skills rehearsal: A CBT stance in which client and therapist jointly test ideas against evidence and experience.
D. Cognitive restructuring: Planned engagement in meaningful or rewarding activities to increase contact with positive reinforcement. / Skills rehearsal: Practicing a targeted behavior in session, often with modeling, feedback, and repetition.

0650. Choose the practice comparison that best separates Behavioral activation from Exposure.

A. Behavioral activation: Building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation. / Exposure: Scheduling a manageable valued activity and reviewing its effect on mood and functioning.
B. Behavioral activation: Using a child-friendly record to examine what happened and what the child thought at that moment. / Exposure: Building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation.
C. Behavioral activation: Scheduling a manageable valued activity and reviewing its effect on mood and functioning. / Exposure: Building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation.
D. Behavioral activation: Scheduling a manageable valued activity and reviewing its effect on mood and functioning. / Exposure: Treating a belief as a testable hypothesis and reviewing what the child observes.

0651. Which description belongs with the term Cognitive restructuring?

A. Gradual, planned approach to feared situations or cues to support new learning, with appropriate assessment and consent.
B. Collaboratively evaluating and developing more balanced or useful interpretations rather than imposing positive thinking.
C. Planning for future triggers, early warning signs, and continued use of skills after improvement.
D. A teaching model linking thoughts, feelings, and behaviors as mutually influential components of experience.

0652. Select the best explanation of Cognitive triangle.

A. Planned engagement in meaningful or rewarding activities to increase contact with positive reinforcement.
B. A CBT stance in which client and therapist jointly test ideas against evidence and experience.
C. A teaching model linking thoughts, feelings, and behaviors as mutually influential components of experience.
D. Adjusting CBT language, materials, pacing, and caregiver involvement to the child's developmental capacity.

0653. At the youth advocacy program, a play therapist meets with a child aged 14. The practice priority is: using drawings or concrete examples when abstract cognitive language is not yet accessible. Which concept best captures that priority?

A. Thought record
B. Cognitive triangle
C. Developmental adaptation in CBT
D. Exposure

0654. A assessment clinician is supporting a young person aged 16 in the school consultation. The key practice is examining evidence and generating a realistic alternative thought with the child. Which course concept is most relevant?

A. Behavioral activation
B. Relapse prevention
C. Cognitive restructuring
D. Skills rehearsal

0655. Which pair of actions illustrates Behavioral activation and Skills rehearsal, respectively?

A. Behavioral activation: Using drawings or concrete examples when abstract cognitive language is not yet accessible. / Skills rehearsal: Role-playing an assertive request and providing supportive, specific feedback.
B. Behavioral activation: Scheduling a manageable valued activity and reviewing its effect on mood and functioning. / Skills rehearsal: Role-playing an assertive request and providing supportive, specific feedback.
C. Behavioral activation: Scheduling a manageable valued activity and reviewing its effect on mood and functioning. / Skills rehearsal: Rehearsing a believable coping phrase a child can use during a challenging moment.
D. Behavioral activation: Role-playing an assertive request and providing supportive, specific feedback. / Skills rehearsal: Scheduling a manageable valued activity and reviewing its effect on mood and functioning.

0656. In child-focused CBT, which option preserves the correct meaning of both Thought record and Relapse prevention?

A. Thought record: Planning for future triggers, early warning signs, and continued use of skills after improvement. / Relapse prevention: A structured aid for noticing a situation, automatic thought, emotion, evidence, and alternative perspective.
B. Thought record: A structured aid for noticing a situation, automatic thought, emotion, evidence, and alternative perspective. / Relapse prevention: Planning for future triggers, early warning signs, and continued use of skills after improvement.
C. Thought record: Planned engagement in meaningful or rewarding activities to increase contact with positive reinforcement. / Relapse prevention: Planning for future triggers, early warning signs, and continued use of skills after improvement.
D. Thought record: A structured aid for noticing a situation, automatic thought, emotion, evidence, and alternative perspective. / Relapse prevention: Practicing a targeted behavior in session, often with modeling, feedback, and repetition.

0657. Which applied comparison correctly identifies what belongs to Thought record versus Skills rehearsal?

A. Thought record: Using a child-friendly record to examine what happened and what the child thought at that moment. / Skills rehearsal: Using drawings or concrete examples when abstract cognitive language is not yet accessible.
B. Thought record: Role-playing an assertive request and providing supportive, specific feedback. / Skills rehearsal: Using a child-friendly record to examine what happened and what the child thought at that moment.
C. Thought record: Using a child-friendly record to examine what happened and what the child thought at that moment. / Skills rehearsal: Role-playing an assertive request and providing supportive, specific feedback.
D. Thought record: Rehearsing a believable coping phrase a child can use during a challenging moment. / Skills rehearsal: Role-playing an assertive request and providing supportive, specific feedback.

0658. Choose the definition pair that correctly explains Cognitive triangle first and Thought record second.

A. Cognitive triangle: A structured aid for noticing a situation, automatic thought, emotion, evidence, and alternative perspective. / Thought record: A teaching model linking thoughts, feelings, and behaviors as mutually influential components of experience.
B. Cognitive triangle: A teaching model linking thoughts, feelings, and behaviors as mutually influential components of experience. / Thought record: A structured aid for noticing a situation, automatic thought, emotion, evidence, and alternative perspective.
C. Cognitive triangle: Practicing a targeted behavior in session, often with modeling, feedback, and repetition. / Thought record: A structured aid for noticing a situation, automatic thought, emotion, evidence, and alternative perspective.
D. Cognitive triangle: A teaching model linking thoughts, feelings, and behaviors as mutually influential components of experience. / Thought record: Collaboratively evaluating and developing more balanced or useful interpretations rather than imposing positive thinking.

0659. In the clinical planning session, the agreed focus for a community practitioner working with a teenage client is role-playing an assertive request and providing supportive, specific feedback. Which concept names this focus?

A. Cognitive restructuring
B. Developmental adaptation in CBT
C. Coping self-talk
D. Skills rehearsal

0660. Choose the response that best puts Behavioral activation into practice.

A. Helping a child map how a thought, feeling, and action relate in a particular situation.
B. Rehearsing a believable coping phrase a child can use during a challenging moment.
C. Scheduling a manageable valued activity and reviewing its effect on mood and functioning.
D. Role-playing an assertive request and providing supportive, specific feedback.

0661. How should a practitioner distinguish the applications of Thought record and Collaborative empiricism?

A. Thought record: Using drawings or concrete examples when abstract cognitive language is not yet accessible. / Collaborative empiricism: Treating a belief as a testable hypothesis and reviewing what the child observes.
B. Thought record: Using a child-friendly record to examine what happened and what the child thought at that moment. / Collaborative empiricism: Helping a child map how a thought, feeling, and action relate in a particular situation.
C. Thought record: Using a child-friendly record to examine what happened and what the child thought at that moment. / Collaborative empiricism: Treating a belief as a testable hypothesis and reviewing what the child observes.
D. Thought record: Treating a belief as a testable hypothesis and reviewing what the child observes. / Collaborative empiricism: Using a child-friendly record to examine what happened and what the child thought at that moment.

0662. In the behavior-support review, a consulting counselor describes the most appropriate support for a student aged 9 as scheduling a manageable valued activity and reviewing its effect on mood and functioning. Which framework is being applied?

A. Thought record
B. Behavioral activation
C. Coping self-talk
D. Developmental adaptation in CBT

0663. A parent educator presents a support plan for a preadolescent child at the counseling practicum. Its central feature is using drawings or concrete examples when abstract cognitive language is not yet accessible. Which concept should be named?

A. Developmental adaptation in CBT
B. Thought record
C. Exposure
D. Relapse prevention

0664. A trainee must choose a practice that exemplifies Cognitive restructuring. Which action is the best fit?

A. Examining evidence and generating a realistic alternative thought with the child.
B. Treating a belief as a testable hypothesis and reviewing what the child observes.
C. Building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation.
D. Scheduling a manageable valued activity and reviewing its effect on mood and functioning.

0665. A support meeting for a young person aged 10 includes a play therapist in the parent meeting. The practice under consideration is examining evidence and generating a realistic alternative thought with the child. Which concept guides it?

A. Developmental adaptation in CBT
B. Thought record
C. Cognitive triangle
D. Cognitive restructuring

0666. How should a practitioner distinguish the applications of Behavioral activation and Skills rehearsal?

A. Behavioral activation: Scheduling a manageable valued activity and reviewing its effect on mood and functioning. / Skills rehearsal: Rehearsing a believable coping phrase a child can use during a challenging moment.
B. Behavioral activation: Using drawings or concrete examples when abstract cognitive language is not yet accessible. / Skills rehearsal: Role-playing an assertive request and providing supportive, specific feedback.
C. Behavioral activation: Role-playing an assertive request and providing supportive, specific feedback. / Skills rehearsal: Scheduling a manageable valued activity and reviewing its effect on mood and functioning.
D. Behavioral activation: Scheduling a manageable valued activity and reviewing its effect on mood and functioning. / Skills rehearsal: Role-playing an assertive request and providing supportive, specific feedback.

0667. A student confuses Cognitive triangle with Behavioral activation. Which explanation most accurately separates them?

A. Cognitive triangle: A teaching model linking thoughts, feelings, and behaviors as mutually influential components of experience. / Behavioral activation: Adjusting CBT language, materials, pacing, and caregiver involvement to the child's developmental capacity.
B. Cognitive triangle: Planned engagement in meaningful or rewarding activities to increase contact with positive reinforcement. / Behavioral activation: A teaching model linking thoughts, feelings, and behaviors as mutually influential components of experience.
C. Cognitive triangle: Planning for future triggers, early warning signs, and continued use of skills after improvement. / Behavioral activation: Planned engagement in meaningful or rewarding activities to increase contact with positive reinforcement.
D. Cognitive triangle: A teaching model linking thoughts, feelings, and behaviors as mutually influential components of experience. / Behavioral activation: Planned engagement in meaningful or rewarding activities to increase contact with positive reinforcement.

0668. A case conference asks for a distinction between Coping self-talk and Developmental adaptation in CBT. Which answer is sound?

A. Coping self-talk: A teaching model linking thoughts, feelings, and behaviors as mutually influential components of experience. / Developmental adaptation in CBT: Adjusting CBT language, materials, pacing, and caregiver involvement to the child's developmental capacity.
B. Coping self-talk: Practice of helpful, realistic statements that support coping and task engagement. / Developmental adaptation in CBT: Adjusting CBT language, materials, pacing, and caregiver involvement to the child's developmental capacity.
C. Coping self-talk: Practice of helpful, realistic statements that support coping and task engagement. / Developmental adaptation in CBT: Practicing a targeted behavior in session, often with modeling, feedback, and repetition.
D. Coping self-talk: Adjusting CBT language, materials, pacing, and caregiver involvement to the child's developmental capacity. / Developmental adaptation in CBT: Practice of helpful, realistic statements that support coping and task engagement.

0669. Which paired example correctly applies Cognitive triangle first and Thought record second?

A. Cognitive triangle: Helping a child map how a thought, feeling, and action relate in a particular situation. / Thought record: Using a child-friendly record to examine what happened and what the child thought at that moment.
B. Cognitive triangle: Helping a child map how a thought, feeling, and action relate in a particular situation. / Thought record: Examining evidence and generating a realistic alternative thought with the child.
C. Cognitive triangle: Using a child-friendly record to examine what happened and what the child thought at that moment. / Thought record: Helping a child map how a thought, feeling, and action relate in a particular situation.
D. Cognitive triangle: Role-playing an assertive request and providing supportive, specific feedback. / Thought record: Using a child-friendly record to examine what happened and what the child thought at that moment.

0670. A trainee must distinguish how Behavioral activation and Developmental adaptation in CBT guide practice. Which comparison is accurate?

A. Behavioral activation: Using drawings or concrete examples when abstract cognitive language is not yet accessible. / Developmental adaptation in CBT: Scheduling a manageable valued activity and reviewing its effect on mood and functioning.
B. Behavioral activation: Building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation. / Developmental adaptation in CBT: Using drawings or concrete examples when abstract cognitive language is not yet accessible.
C. Behavioral activation: Scheduling a manageable valued activity and reviewing its effect on mood and functioning. / Developmental adaptation in CBT: Using drawings or concrete examples when abstract cognitive language is not yet accessible.
D. Behavioral activation: Scheduling a manageable valued activity and reviewing its effect on mood and functioning. / Developmental adaptation in CBT: Rehearsing a believable coping phrase a child can use during a challenging moment.

0671. In child-focused CBT, what is the central meaning of Relapse prevention?

A. A teaching model linking thoughts, feelings, and behaviors as mutually influential components of experience.
B. Planned engagement in meaningful or rewarding activities to increase contact with positive reinforcement.
C. Planning for future triggers, early warning signs, and continued use of skills after improvement.
D. Practice of helpful, realistic statements that support coping and task engagement.

0672. A youth worker is asked to justify a plan for a child aged 8 in the caregiver consultation. It calls for using a child-friendly record to examine what happened and what the child thought at that moment. Which concept provides the rationale?

A. Relapse prevention
B. Skills rehearsal
C. Coping self-talk
D. Thought record

0673. Consider a client in late adolescence receiving help in the school-based service. The group facilitator focuses on examining evidence and generating a realistic alternative thought with the child. Which term best describes the guiding idea?

A. Coping self-talk
B. Exposure
C. Cognitive restructuring
D. Cognitive triangle

0674. Choose the term that matches this definition: A CBT stance in which client and therapist jointly test ideas against evidence and experience.

A. Collaborative empiricism
B. Developmental adaptation in CBT
C. Relapse prevention
D. Thought record

0675. Which professional action most closely applies Behavioral activation?

A. Treating a belief as a testable hypothesis and reviewing what the child observes.
B. Scheduling a manageable valued activity and reviewing its effect on mood and functioning.
C. Building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation.
D. Rehearsing a believable coping phrase a child can use during a challenging moment.

0676. In the classroom support meeting, a team asks how a teacher and counselor can support a student aged 17. One proposed action is role-playing an assertive request and providing supportive, specific feedback. Which idea does it represent?

A. Exposure
B. Cognitive triangle
C. Skills rehearsal
D. Behavioral activation

0677. In a supervision quiz, how should Thought record be distinguished from Developmental adaptation in CBT?

A. Thought record: A structured aid for noticing a situation, automatic thought, emotion, evidence, and alternative perspective. / Developmental adaptation in CBT: Adjusting CBT language, materials, pacing, and caregiver involvement to the child's developmental capacity.
B. Thought record: Adjusting CBT language, materials, pacing, and caregiver involvement to the child's developmental capacity. / Developmental adaptation in CBT: A structured aid for noticing a situation, automatic thought, emotion, evidence, and alternative perspective.
C. Thought record: Planning for future triggers, early warning signs, and continued use of skills after improvement. / Developmental adaptation in CBT: Adjusting CBT language, materials, pacing, and caregiver involvement to the child's developmental capacity.
D. Thought record: A structured aid for noticing a situation, automatic thought, emotion, evidence, and alternative perspective. / Developmental adaptation in CBT: Practicing a targeted behavior in session, often with modeling, feedback, and repetition.

0678. Choose the definition pair that correctly explains Thought record first and Skills rehearsal second.

A. Thought record: Practicing a targeted behavior in session, often with modeling, feedback, and repetition. / Skills rehearsal: A structured aid for noticing a situation, automatic thought, emotion, evidence, and alternative perspective.
B. Thought record: Practice of helpful, realistic statements that support coping and task engagement. / Skills rehearsal: Practicing a targeted behavior in session, often with modeling, feedback, and repetition.
C. Thought record: A structured aid for noticing a situation, automatic thought, emotion, evidence, and alternative perspective. / Skills rehearsal: Practicing a targeted behavior in session, often with modeling, feedback, and repetition.
D. Thought record: A structured aid for noticing a situation, automatic thought, emotion, evidence, and alternative perspective. / Skills rehearsal: Adjusting CBT language, materials, pacing, and caregiver involvement to the child's developmental capacity.

0679. Which description belongs with the term Collaborative empiricism?

A. Collaboratively evaluating and developing more balanced or useful interpretations rather than imposing positive thinking.
B. A CBT stance in which client and therapist jointly test ideas against evidence and experience.
C. Practicing a targeted behavior in session, often with modeling, feedback, and repetition.
D. Planned engagement in meaningful or rewarding activities to increase contact with positive reinforcement.

0680. Identify the most precise label for this idea: Collaboratively evaluating and developing more balanced or useful interpretations rather than imposing positive thinking.

A. Behavioral activation
B. Cognitive restructuring
C. Skills rehearsal
D. Exposure

0681. A case conference asks for a distinction between Cognitive triangle and Thought record. Which answer is sound?

A. Cognitive triangle: A structured aid for noticing a situation, automatic thought, emotion, evidence, and alternative perspective. / Thought record: A teaching model linking thoughts, feelings, and behaviors as mutually influential components of experience.
B. Cognitive triangle: Practicing a targeted behavior in session, often with modeling, feedback, and repetition. / Thought record: A structured aid for noticing a situation, automatic thought, emotion, evidence, and alternative perspective.
C. Cognitive triangle: A teaching model linking thoughts, feelings, and behaviors as mutually influential components of experience. / Thought record: Collaboratively evaluating and developing more balanced or useful interpretations rather than imposing positive thinking.
D. Cognitive triangle: A teaching model linking thoughts, feelings, and behaviors as mutually influential components of experience. / Thought record: A structured aid for noticing a situation, automatic thought, emotion, evidence, and alternative perspective.

0682. A older adolescent client is receiving support in the classroom support meeting. The school counselor is guided by this practice: examining evidence and generating a realistic alternative thought with the child. Which principle best fits?

A. Cognitive restructuring
B. Developmental adaptation in CBT
C. Relapse prevention
D. Collaborative empiricism

0683. Choose the definition pair that correctly explains Cognitive restructuring first and Skills rehearsal second.

A. Cognitive restructuring: Collaboratively evaluating and developing more balanced or useful interpretations rather than imposing positive thinking. / Skills rehearsal: A CBT stance in which client and therapist jointly test ideas against evidence and experience.
B. Cognitive restructuring: Collaboratively evaluating and developing more balanced or useful interpretations rather than imposing positive thinking. / Skills rehearsal: Practicing a targeted behavior in session, often with modeling, feedback, and repetition.
C. Cognitive restructuring: Practicing a targeted behavior in session, often with modeling, feedback, and repetition. / Skills rehearsal: Collaboratively evaluating and developing more balanced or useful interpretations rather than imposing positive thinking.
D. Cognitive restructuring: Planned engagement in meaningful or rewarding activities to increase contact with positive reinforcement. / Skills rehearsal: Practicing a targeted behavior in session, often with modeling, feedback, and repetition.

0684. Which applied comparison correctly identifies what belongs to Cognitive restructuring versus Exposure?

A. Cognitive restructuring: Building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation. / Exposure: Examining evidence and generating a realistic alternative thought with the child.
B. Cognitive restructuring: Examining evidence and generating a realistic alternative thought with the child. / Exposure: Building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation.
C. Cognitive restructuring: Using a child-friendly record to examine what happened and what the child thought at that moment. / Exposure: Building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation.
D. Cognitive restructuring: Examining evidence and generating a realistic alternative thought with the child. / Exposure: Helping a child map how a thought, feeling, and action relate in a particular situation.

0685. In the community mental-health service, a group facilitator explains why a high-school student would benefit from scheduling a manageable valued activity and reviewing its effect on mood and functioning. Which course concept underpins the explanation?

A. Collaborative empiricism
B. Thought record
C. Behavioral activation
D. Developmental adaptation in CBT

0686. A child aged 7 is receiving support in the student wellness team. The group facilitator is guided by this practice: using a child-friendly record to examine what happened and what the child thought at that moment. Which principle best fits?

A. Thought record
B. Behavioral activation
C. Coping self-talk
D. Skills rehearsal

0687. A trainee must distinguish how Coping self-talk and Collaborative empiricism guide practice. Which comparison is accurate?

A. Coping self-talk: Building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation. / Collaborative empiricism: Treating a belief as a testable hypothesis and reviewing what the child observes.
B. Coping self-talk: Rehearsing a believable coping phrase a child can use during a challenging moment. / Collaborative empiricism: Treating a belief as a testable hypothesis and reviewing what the child observes.
C. Coping self-talk: Treating a belief as a testable hypothesis and reviewing what the child observes. / Collaborative empiricism: Rehearsing a believable coping phrase a child can use during a challenging moment.
D. Coping self-talk: Rehearsing a believable coping phrase a child can use during a challenging moment. / Collaborative empiricism: Scheduling a manageable valued activity and reviewing its effect on mood and functioning.

0688. Which applied comparison correctly identifies what belongs to Collaborative empiricism versus Developmental adaptation in CBT?

A. Collaborative empiricism: Building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation. / Developmental adaptation in CBT: Using drawings or concrete examples when abstract cognitive language is not yet accessible.
B. Collaborative empiricism: Using drawings or concrete examples when abstract cognitive language is not yet accessible. / Developmental adaptation in CBT: Treating a belief as a testable hypothesis and reviewing what the child observes.
C. Collaborative empiricism: Treating a belief as a testable hypothesis and reviewing what the child observes. / Developmental adaptation in CBT: Using drawings or concrete examples when abstract cognitive language is not yet accessible.
D. Collaborative empiricism: Treating a belief as a testable hypothesis and reviewing what the child observes. / Developmental adaptation in CBT: Examining evidence and generating a realistic alternative thought with the child.

0689. A program coordinator describes an intervention for a adolescent student in the learning-support meeting, centered on treating a belief as a testable hypothesis and reviewing what the child observes. Which named idea is most relevant?

A. Collaborative empiricism
B. Developmental adaptation in CBT
C. Cognitive restructuring
D. Relapse prevention

0690. Which named construct is captured by this account? Collaboratively evaluating and developing more balanced or useful interpretations rather than imposing positive thinking.

A. Skills rehearsal
B. Relapse prevention
C. Cognitive restructuring
D. Cognitive triangle

0691. A family therapist presents a support plan for a child aged 7 at the child guidance clinic. Its central feature is role-playing an assertive request and providing supportive, specific feedback. Which concept should be named?

A. Exposure
B. Developmental adaptation in CBT
C. Collaborative empiricism
D. Skills rehearsal

0692. Choose the term that matches this definition: Gradual, planned approach to feared situations or cues to support new learning, with appropriate assessment and consent.

A. Developmental adaptation in CBT
B. Exposure
C. Skills rehearsal
D. Cognitive triangle

0693. A service team discusses a child aged 6 in the community service agency. Their proposed next step is using a child-friendly record to examine what happened and what the child thought at that moment. Which course concept supports it?

A. Skills rehearsal
B. Behavioral activation
C. Coping self-talk
D. Thought record

0694. In child-focused CBT, a school support specialist reviews a plan for a client in early adolescence in the youth group. The plan emphasizes identifying likely setbacks and rehearsing which coping steps the child can use. Which course idea does this reflect?

A. Relapse prevention
B. Exposure
C. Cognitive triangle
D. Skills rehearsal

0695. While supporting a client in late adolescence in the youth group, a family therapist adopts this practice: building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation. Which concept best explains the choice?

A. Thought record
B. Exposure
C. Developmental adaptation in CBT
D. Skills rehearsal

0696. A supervisor asks how Cognitive restructuring would appear in practice. Which choice should be selected?

A. Rehearsing a believable coping phrase a child can use during a challenging moment.
B. Treating a belief as a testable hypothesis and reviewing what the child observes.
C. Examining evidence and generating a realistic alternative thought with the child.
D. Using a child-friendly record to examine what happened and what the child thought at that moment.

0697. A case discussion concerns a school-age child and a case coordinator in the community service agency. The practitioner is considering role-playing an assertive request and providing supportive, specific feedback. Which principle is involved?

A. Skills rehearsal
B. Exposure
C. Collaborative empiricism
D. Cognitive triangle

0698. A service navigator describes an intervention for a preadolescent child in the youth advocacy program, centered on helping a child map how a thought, feeling, and action relate in a particular situation. Which named idea is most relevant?

A. Relapse prevention
B. Skills rehearsal
C. Cognitive triangle
D. Coping self-talk

0699. A supervisor asks for an applied contrast between Coping self-talk and Developmental adaptation in CBT. Which option fits?

A. Coping self-talk: Using drawings or concrete examples when abstract cognitive language is not yet accessible. / Developmental adaptation in CBT: Rehearsing a believable coping phrase a child can use during a challenging moment.
B. Coping self-talk: Rehearsing a believable coping phrase a child can use during a challenging moment. / Developmental adaptation in CBT: Role-playing an assertive request and providing supportive, specific feedback.
C. Coping self-talk: Helping a child map how a thought, feeling, and action relate in a particular situation. / Developmental adaptation in CBT: Using drawings or concrete examples when abstract cognitive language is not yet accessible.
D. Coping self-talk: Rehearsing a believable coping phrase a child can use during a challenging moment. / Developmental adaptation in CBT: Using drawings or concrete examples when abstract cognitive language is not yet accessible.

0700. A middle-school student and a consultant are reviewing goals in the youth group. The agreed action is scheduling a manageable valued activity and reviewing its effect on mood and functioning. Which principle best accounts for it?

A. Skills rehearsal
B. Coping self-talk
C. Behavioral activation
D. Cognitive triangle

0701. Which comparison would correct a trainee's misunderstanding of Cognitive triangle versus Coping self-talk?

A. Cognitive triangle: A structured aid for noticing a situation, automatic thought, emotion, evidence, and alternative perspective. / Coping self-talk: Practice of helpful, realistic statements that support coping and task engagement.
B. Cognitive triangle: A teaching model linking thoughts, feelings, and behaviors as mutually influential components of experience. / Coping self-talk: Collaboratively evaluating and developing more balanced or useful interpretations rather than imposing positive thinking.
C. Cognitive triangle: A teaching model linking thoughts, feelings, and behaviors as mutually influential components of experience. / Coping self-talk: Practice of helpful, realistic statements that support coping and task engagement.
D. Cognitive triangle: Practice of helpful, realistic statements that support coping and task engagement. / Coping self-talk: A teaching model linking thoughts, feelings, and behaviors as mutually influential components of experience.

0702. In child-focused CBT, while supporting a young person aged 18 in the school counseling office, a case coordinator adopts this practice: identifying likely setbacks and rehearsing which coping steps the child can use. Which concept best explains the choice?

A. Relapse prevention
B. Thought record
C. Cognitive triangle
D. Developmental adaptation in CBT

0703. Which choice aligns each practice with the correct idea, Skills rehearsal or Developmental adaptation in CBT?

A. Skills rehearsal: Using drawings or concrete examples when abstract cognitive language is not yet accessible. / Developmental adaptation in CBT: Role-playing an assertive request and providing supportive, specific feedback.
B. Skills rehearsal: Role-playing an assertive request and providing supportive, specific feedback. / Developmental adaptation in CBT: Rehearsing a believable coping phrase a child can use during a challenging moment.
C. Skills rehearsal: Role-playing an assertive request and providing supportive, specific feedback. / Developmental adaptation in CBT: Using drawings or concrete examples when abstract cognitive language is not yet accessible.
D. Skills rehearsal: Building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation. / Developmental adaptation in CBT: Using drawings or concrete examples when abstract cognitive language is not yet accessible.

0704. A clinical supervisor reviews a plan for a student aged 9 in the supervision meeting. The plan emphasizes building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation. Which course idea does this reflect?

A. Coping self-talk
B. Skills rehearsal
C. Exposure
D. Collaborative empiricism

0705. In child-focused CBT, choose the term that matches this definition: Planning for future triggers, early warning signs, and continued use of skills after improvement.

A. Skills rehearsal
B. Developmental adaptation in CBT
C. Relapse prevention
D. Thought record

0706. In child-focused CBT, a case discussion concerns a high-school student and a caregiver working with a counselor in the telehealth session. The practitioner is considering identifying likely setbacks and rehearsing which coping steps the child can use. Which principle is involved?

A. Relapse prevention
B. Behavioral activation
C. Coping self-talk
D. Exposure

0707. Choose the definition pair that correctly explains Cognitive triangle first and Coping self-talk second.

A. Cognitive triangle: A teaching model linking thoughts, feelings, and behaviors as mutually influential components of experience. / Coping self-talk: Collaboratively evaluating and developing more balanced or useful interpretations rather than imposing positive thinking.
B. Cognitive triangle: A structured aid for noticing a situation, automatic thought, emotion, evidence, and alternative perspective. / Coping self-talk: Practice of helpful, realistic statements that support coping and task engagement.
C. Cognitive triangle: A teaching model linking thoughts, feelings, and behaviors as mutually influential components of experience. / Coping self-talk: Practice of helpful, realistic statements that support coping and task engagement.
D. Cognitive triangle: Practice of helpful, realistic statements that support coping and task engagement. / Coping self-talk: A teaching model linking thoughts, feelings, and behaviors as mutually influential components of experience.

0708. A support meeting for a child aged 6 includes a play therapist in the after-school program. The practice under consideration is role-playing an assertive request and providing supportive, specific feedback. Which concept guides it?

A. Cognitive restructuring
B. Developmental adaptation in CBT
C. Cognitive triangle
D. Skills rehearsal

0709. What is the central meaning of Cognitive triangle?

A. A teaching model linking thoughts, feelings, and behaviors as mutually influential components of experience.
B. Collaboratively evaluating and developing more balanced or useful interpretations rather than imposing positive thinking.
C. Planning for future triggers, early warning signs, and continued use of skills after improvement.
D. Practice of helpful, realistic statements that support coping and task engagement.

0710. Which professional action most closely applies Skills rehearsal?

A. Identifying likely setbacks and rehearsing which coping steps the child can use.
B. Building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation.
C. Role-playing an assertive request and providing supportive, specific feedback.
D. Using a child-friendly record to examine what happened and what the child thought at that moment.

0711. A supervised trainee is supporting a student aged 9 in the community youth program. The key practice is helping a child map how a thought, feeling, and action relate in a particular situation. Which course concept is most relevant?

A. Coping self-talk
B. Relapse prevention
C. Exposure
D. Cognitive triangle

0712. In a supervision review, a caregiver working with a counselor describes work with a child aged 8 in the community youth program: role-playing an assertive request and providing supportive, specific feedback. What concept is illustrated?

A. Exposure
B. Skills rehearsal
C. Thought record
D. Behavioral activation

0713. A teacher and counselor is explaining a choice to a teenage client and caregiver in the after-school program. The choice centers on scheduling a manageable valued activity and reviewing its effect on mood and functioning. Which idea is illustrated?

A. Behavioral activation
B. Cognitive restructuring
C. Collaborative empiricism
D. Relapse prevention

0714. In child-focused CBT, during service review in the community service agency, a therapist describes identifying likely setbacks and rehearsing which coping steps the child can use. for a student aged 15. Which course idea is most applicable?

A. Relapse prevention
B. Behavioral activation
C. Thought record
D. Exposure

0715. Identify the most precise label for this idea: Gradual, planned approach to feared situations or cues to support new learning, with appropriate assessment and consent.

A. Developmental adaptation in CBT
B. Thought record
C. Exposure
D. Cognitive triangle

0716. A trainee must distinguish how Exposure and Coping self-talk guide practice. Which comparison is accurate?

A. Exposure: Building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation. / Coping self-talk: Rehearsing a believable coping phrase a child can use during a challenging moment.
B. Exposure: Helping a child map how a thought, feeling, and action relate in a particular situation. / Coping self-talk: Rehearsing a believable coping phrase a child can use during a challenging moment.
C. Exposure: Rehearsing a believable coping phrase a child can use during a challenging moment. / Coping self-talk: Building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation.
D. Exposure: Building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation. / Coping self-talk: Scheduling a manageable valued activity and reviewing its effect on mood and functioning.

0717. In a case note about a preadolescent child, a assessment clinician working in the community mental-health service records this priority: using a child-friendly record to examine what happened and what the child thought at that moment. What principle is reflected?

A. Cognitive triangle
B. Developmental adaptation in CBT
C. Cognitive restructuring
D. Thought record

0718. Which option is the clearest practical expression of Cognitive restructuring?

A. Using a child-friendly record to examine what happened and what the child thought at that moment.
B. Using drawings or concrete examples when abstract cognitive language is not yet accessible.
C. Identifying likely setbacks and rehearsing which coping steps the child can use.
D. Examining evidence and generating a realistic alternative thought with the child.

0719. At a case-planning meeting, the counselor proposes helping a child map how a thought, feeling, and action relate in a particular situation. for a child aged 8 seen in the school counseling office. Which concept does this illustrate?

A. Cognitive triangle
B. Developmental adaptation in CBT
C. Exposure
D. Relapse prevention

0720. Choose the definition pair that correctly explains Cognitive restructuring first and Thought record second.

A. Cognitive restructuring: A structured aid for noticing a situation, automatic thought, emotion, evidence, and alternative perspective. / Thought record: Collaboratively evaluating and developing more balanced or useful interpretations rather than imposing positive thinking.
B. Cognitive restructuring: Collaboratively evaluating and developing more balanced or useful interpretations rather than imposing positive thinking. / Thought record: A structured aid for noticing a situation, automatic thought, emotion, evidence, and alternative perspective.
C. Cognitive restructuring: Collaboratively evaluating and developing more balanced or useful interpretations rather than imposing positive thinking. / Thought record: Adjusting CBT language, materials, pacing, and caregiver involvement to the child's developmental capacity.
D. Cognitive restructuring: A CBT stance in which client and therapist jointly test ideas against evidence and experience. / Thought record: A structured aid for noticing a situation, automatic thought, emotion, evidence, and alternative perspective.

0721. Which comparison correctly distinguishes Behavioral activation from Thought record?

A. Behavioral activation: Planned engagement in meaningful or rewarding activities to increase contact with positive reinforcement. / Thought record: A structured aid for noticing a situation, automatic thought, emotion, evidence, and alternative perspective.
B. Behavioral activation: Practicing a targeted behavior in session, often with modeling, feedback, and repetition. / Thought record: A structured aid for noticing a situation, automatic thought, emotion, evidence, and alternative perspective.
C. Behavioral activation: Planned engagement in meaningful or rewarding activities to increase contact with positive reinforcement. / Thought record: Gradual, planned approach to feared situations or cues to support new learning, with appropriate assessment and consent.
D. Behavioral activation: A structured aid for noticing a situation, automatic thought, emotion, evidence, and alternative perspective. / Thought record: Planned engagement in meaningful or rewarding activities to increase contact with positive reinforcement.

0722. Which statement accurately contrasts the course concepts Behavioral activation and Collaborative empiricism?

A. Behavioral activation: Planned engagement in meaningful or rewarding activities to increase contact with positive reinforcement. / Collaborative empiricism: A CBT stance in which client and therapist jointly test ideas against evidence and experience.
B. Behavioral activation: A CBT stance in which client and therapist jointly test ideas against evidence and experience. / Collaborative empiricism: Planned engagement in meaningful or rewarding activities to increase contact with positive reinforcement.
C. Behavioral activation: Planned engagement in meaningful or rewarding activities to increase contact with positive reinforcement. / Collaborative empiricism: A structured aid for noticing a situation, automatic thought, emotion, evidence, and alternative perspective.
D. Behavioral activation: Planning for future triggers, early warning signs, and continued use of skills after improvement. / Collaborative empiricism: A CBT stance in which client and therapist jointly test ideas against evidence and experience.

0723. An interdisciplinary team reviews a high-school student's case at the caregiver consultation. The behavior specialist recommends using drawings or concrete examples when abstract cognitive language is not yet accessible. Which course concept best fits?

A. Developmental adaptation in CBT
B. Collaborative empiricism
C. Behavioral activation
D. Exposure

0724. In a supervision quiz, how should Cognitive triangle be distinguished from Exposure?

A. Cognitive triangle: A teaching model linking thoughts, feelings, and behaviors as mutually influential components of experience. / Exposure: Collaboratively evaluating and developing more balanced or useful interpretations rather than imposing positive thinking.
B. Cognitive triangle: Gradual, planned approach to feared situations or cues to support new learning, with appropriate assessment and consent. / Exposure: A teaching model linking thoughts, feelings, and behaviors as mutually influential components of experience.
C. Cognitive triangle: A teaching model linking thoughts, feelings, and behaviors as mutually influential components of experience. / Exposure: Gradual, planned approach to feared situations or cues to support new learning, with appropriate assessment and consent.
D. Cognitive triangle: Planning for future triggers, early warning signs, and continued use of skills after improvement. / Exposure: Gradual, planned approach to feared situations or cues to support new learning, with appropriate assessment and consent.

0725. Which professional action most closely applies Developmental adaptation in CBT?

A. Using drawings or concrete examples when abstract cognitive language is not yet accessible.
B. Role-playing an assertive request and providing supportive, specific feedback.
C. Using a child-friendly record to examine what happened and what the child thought at that moment.
D. Helping a child map how a thought, feeling, and action relate in a particular situation.

0726. In child-focused CBT, which statement accurately contrasts the course concepts Skills rehearsal and Relapse prevention?

A. Skills rehearsal: A CBT stance in which client and therapist jointly test ideas against evidence and experience. / Relapse prevention: Planning for future triggers, early warning signs, and continued use of skills after improvement.
B. Skills rehearsal: Practicing a targeted behavior in session, often with modeling, feedback, and repetition. / Relapse prevention: Planning for future triggers, early warning signs, and continued use of skills after improvement.
C. Skills rehearsal: Planning for future triggers, early warning signs, and continued use of skills after improvement. / Relapse prevention: Practicing a targeted behavior in session, often with modeling, feedback, and repetition.
D. Skills rehearsal: Practicing a targeted behavior in session, often with modeling, feedback, and repetition. / Relapse prevention: Gradual, planned approach to feared situations or cues to support new learning, with appropriate assessment and consent.

0727. In child-focused CBT, choose the definition pair that correctly explains Developmental adaptation in CBT first and Relapse prevention second.

A. Developmental adaptation in CBT: Planning for future triggers, early warning signs, and continued use of skills after improvement. / Relapse prevention: Adjusting CBT language, materials, pacing, and caregiver involvement to the child's developmental capacity.
B. Developmental adaptation in CBT: Adjusting CBT language, materials, pacing, and caregiver involvement to the child's developmental capacity. / Relapse prevention: Planning for future triggers, early warning signs, and continued use of skills after improvement.
C. Developmental adaptation in CBT: A CBT stance in which client and therapist jointly test ideas against evidence and experience. / Relapse prevention: Planning for future triggers, early warning signs, and continued use of skills after improvement.
D. Developmental adaptation in CBT: Adjusting CBT language, materials, pacing, and caregiver involvement to the child's developmental capacity. / Relapse prevention: A structured aid for noticing a situation, automatic thought, emotion, evidence, and alternative perspective.

0728. How are Cognitive triangle and Collaborative empiricism most accurately differentiated in this curriculum?

A. Cognitive triangle: A CBT stance in which client and therapist jointly test ideas against evidence and experience. / Collaborative empiricism: A teaching model linking thoughts, feelings, and behaviors as mutually influential components of experience.
B. Cognitive triangle: A teaching model linking thoughts, feelings, and behaviors as mutually influential components of experience. / Collaborative empiricism: Gradual, planned approach to feared situations or cues to support new learning, with appropriate assessment and consent.
C. Cognitive triangle: A teaching model linking thoughts, feelings, and behaviors as mutually influential components of experience. / Collaborative empiricism: A CBT stance in which client and therapist jointly test ideas against evidence and experience.
D. Cognitive triangle: Practice of helpful, realistic statements that support coping and task engagement. / Collaborative empiricism: A CBT stance in which client and therapist jointly test ideas against evidence and experience.

0729. A doctoral student reads the following description. Which concept does it define? Planned engagement in meaningful or rewarding activities to increase contact with positive reinforcement.

A. Behavioral activation
B. Developmental adaptation in CBT
C. Collaborative empiricism
D. Thought record

0730. In child-focused CBT, in a supervision quiz, how should Collaborative empiricism be distinguished from Relapse prevention?

A. Collaborative empiricism: Planned engagement in meaningful or rewarding activities to increase contact with positive reinforcement. / Relapse prevention: Planning for future triggers, early warning signs, and continued use of skills after improvement.
B. Collaborative empiricism: Planning for future triggers, early warning signs, and continued use of skills after improvement. / Relapse prevention: A CBT stance in which client and therapist jointly test ideas against evidence and experience.
C. Collaborative empiricism: A CBT stance in which client and therapist jointly test ideas against evidence and experience. / Relapse prevention: A teaching model linking thoughts, feelings, and behaviors as mutually influential components of experience.
D. Collaborative empiricism: A CBT stance in which client and therapist jointly test ideas against evidence and experience. / Relapse prevention: Planning for future triggers, early warning signs, and continued use of skills after improvement.

0731. A planning meeting about a student aged 17 includes a play therapist. The proposed practice in the student-support meeting is treating a belief as a testable hypothesis and reviewing what the child observes. Which idea underlies it?

A. Relapse prevention
B. Cognitive triangle
C. Cognitive restructuring
D. Collaborative empiricism

0732. Which statement shows a sound practice-level distinction between Exposure and Coping self-talk?

A. Exposure: Rehearsing a believable coping phrase a child can use during a challenging moment. / Coping self-talk: Building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation.
B. Exposure: Building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation. / Coping self-talk: Rehearsing a believable coping phrase a child can use during a challenging moment.
C. Exposure: Building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation. / Coping self-talk: Scheduling a manageable valued activity and reviewing its effect on mood and functioning.
D. Exposure: Helping a child map how a thought, feeling, and action relate in a particular situation. / Coping self-talk: Rehearsing a believable coping phrase a child can use during a challenging moment.

0733. An interdisciplinary team reviews a preadolescent child's case at the family resource center. The play therapist recommends scheduling a manageable valued activity and reviewing its effect on mood and functioning. Which course concept best fits?

A. Relapse prevention
B. Cognitive triangle
C. Behavioral activation
D. Skills rehearsal

0734. In child-focused CBT, choose the definition pair that correctly explains Skills rehearsal first and Relapse prevention second.

A. Skills rehearsal: Practicing a targeted behavior in session, often with modeling, feedback, and repetition. / Relapse prevention: Planning for future triggers, early warning signs, and continued use of skills after improvement.
B. Skills rehearsal: A CBT stance in which client and therapist jointly test ideas against evidence and experience. / Relapse prevention: Planning for future triggers, early warning signs, and continued use of skills after improvement.
C. Skills rehearsal: Planning for future triggers, early warning signs, and continued use of skills after improvement. / Relapse prevention: Practicing a targeted behavior in session, often with modeling, feedback, and repetition.
D. Skills rehearsal: Practicing a targeted behavior in session, often with modeling, feedback, and repetition. / Relapse prevention: Gradual, planned approach to feared situations or cues to support new learning, with appropriate assessment and consent.

0735. In a supervision quiz, how should Thought record be distinguished from Collaborative empiricism?

A. Thought record: A CBT stance in which client and therapist jointly test ideas against evidence and experience. / Collaborative empiricism: A structured aid for noticing a situation, automatic thought, emotion, evidence, and alternative perspective.
B. Thought record: A structured aid for noticing a situation, automatic thought, emotion, evidence, and alternative perspective. / Collaborative empiricism: A teaching model linking thoughts, feelings, and behaviors as mutually influential components of experience.
C. Thought record: Adjusting CBT language, materials, pacing, and caregiver involvement to the child's developmental capacity. / Collaborative empiricism: A CBT stance in which client and therapist jointly test ideas against evidence and experience.
D. Thought record: A structured aid for noticing a situation, automatic thought, emotion, evidence, and alternative perspective. / Collaborative empiricism: A CBT stance in which client and therapist jointly test ideas against evidence and experience.

0736. In child-focused CBT, which option pairs the definitions of Coping self-talk and Relapse prevention correctly, in that order?

A. Coping self-talk: Practicing a targeted behavior in session, often with modeling, feedback, and repetition. / Relapse prevention: Planning for future triggers, early warning signs, and continued use of skills after improvement.
B. Coping self-talk: Practice of helpful, realistic statements that support coping and task engagement. / Relapse prevention: A structured aid for noticing a situation, automatic thought, emotion, evidence, and alternative perspective.
C. Coping self-talk: Practice of helpful, realistic statements that support coping and task engagement. / Relapse prevention: Planning for future triggers, early warning signs, and continued use of skills after improvement.
D. Coping self-talk: Planning for future triggers, early warning signs, and continued use of skills after improvement. / Relapse prevention: Practice of helpful, realistic statements that support coping and task engagement.

0737. In child-focused CBT, choose the practice comparison that best separates Cognitive restructuring from Relapse prevention.

A. Cognitive restructuring: Building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation. / Relapse prevention: Identifying likely setbacks and rehearsing which coping steps the child can use.
B. Cognitive restructuring: Examining evidence and generating a realistic alternative thought with the child. / Relapse prevention: Helping a child map how a thought, feeling, and action relate in a particular situation.
C. Cognitive restructuring: Examining evidence and generating a realistic alternative thought with the child. / Relapse prevention: Identifying likely setbacks and rehearsing which coping steps the child can use.
D. Cognitive restructuring: Identifying likely setbacks and rehearsing which coping steps the child can use. / Relapse prevention: Examining evidence and generating a realistic alternative thought with the child.

0738. In child-focused CBT, which option is the clearest practical expression of Relapse prevention?

A. Using a child-friendly record to examine what happened and what the child thought at that moment.
B. Identifying likely setbacks and rehearsing which coping steps the child can use.
C. Treating a belief as a testable hypothesis and reviewing what the child observes.
D. Helping a child map how a thought, feeling, and action relate in a particular situation.

0739. Choose the term that matches this definition: Collaboratively evaluating and developing more balanced or useful interpretations rather than imposing positive thinking.

A. Exposure
B. Developmental adaptation in CBT
C. Cognitive restructuring
D. Coping self-talk

0740. Which comparison would correct a trainee's misunderstanding of Cognitive triangle versus Skills rehearsal?

A. Cognitive triangle: Practicing a targeted behavior in session, often with modeling, feedback, and repetition. / Skills rehearsal: A teaching model linking thoughts, feelings, and behaviors as mutually influential components of experience.
B. Cognitive triangle: Collaboratively evaluating and developing more balanced or useful interpretations rather than imposing positive thinking. / Skills rehearsal: Practicing a targeted behavior in session, often with modeling, feedback, and repetition.
C. Cognitive triangle: A teaching model linking thoughts, feelings, and behaviors as mutually influential components of experience. / Skills rehearsal: Practicing a targeted behavior in session, often with modeling, feedback, and repetition.
D. Cognitive triangle: A teaching model linking thoughts, feelings, and behaviors as mutually influential components of experience. / Skills rehearsal: Practice of helpful, realistic statements that support coping and task engagement.

0741. In child-focused CBT, which statement accurately contrasts the course concepts Behavioral activation and Relapse prevention?

A. Behavioral activation: Planning for future triggers, early warning signs, and continued use of skills after improvement. / Relapse prevention: Planned engagement in meaningful or rewarding activities to increase contact with positive reinforcement.
B. Behavioral activation: Planned engagement in meaningful or rewarding activities to increase contact with positive reinforcement. / Relapse prevention: Planning for future triggers, early warning signs, and continued use of skills after improvement.
C. Behavioral activation: Planned engagement in meaningful or rewarding activities to increase contact with positive reinforcement. / Relapse prevention: Gradual, planned approach to feared situations or cues to support new learning, with appropriate assessment and consent.
D. Behavioral activation: A teaching model linking thoughts, feelings, and behaviors as mutually influential components of experience. / Relapse prevention: Planning for future triggers, early warning signs, and continued use of skills after improvement.

0742. In child-focused CBT, which comparison would correct a trainee's misunderstanding of Developmental adaptation in CBT versus Relapse prevention?

A. Developmental adaptation in CBT: Adjusting CBT language, materials, pacing, and caregiver involvement to the child's developmental capacity. / Relapse prevention: A structured aid for noticing a situation, automatic thought, emotion, evidence, and alternative perspective.
B. Developmental adaptation in CBT: Adjusting CBT language, materials, pacing, and caregiver involvement to the child's developmental capacity. / Relapse prevention: Planning for future triggers, early warning signs, and continued use of skills after improvement.
C. Developmental adaptation in CBT: Planning for future triggers, early warning signs, and continued use of skills after improvement. / Relapse prevention: Adjusting CBT language, materials, pacing, and caregiver involvement to the child's developmental capacity.
D. Developmental adaptation in CBT: A CBT stance in which client and therapist jointly test ideas against evidence and experience. / Relapse prevention: Planning for future triggers, early warning signs, and continued use of skills after improvement.

0743. A trainee must distinguish how Cognitive triangle and Skills rehearsal guide practice. Which comparison is accurate?

A. Cognitive triangle: Role-playing an assertive request and providing supportive, specific feedback. / Skills rehearsal: Helping a child map how a thought, feeling, and action relate in a particular situation.
B. Cognitive triangle: Examining evidence and generating a realistic alternative thought with the child. / Skills rehearsal: Role-playing an assertive request and providing supportive, specific feedback.
C. Cognitive triangle: Helping a child map how a thought, feeling, and action relate in a particular situation. / Skills rehearsal: Rehearsing a believable coping phrase a child can use during a challenging moment.
D. Cognitive triangle: Helping a child map how a thought, feeling, and action relate in a particular situation. / Skills rehearsal: Role-playing an assertive request and providing supportive, specific feedback.

0744. In a case note about a young adolescent client, a member of a clinical team working in the supervision meeting records this priority: role-playing an assertive request and providing supportive, specific feedback. What principle is reflected?

A. Cognitive restructuring
B. Behavioral activation
C. Developmental adaptation in CBT
D. Skills rehearsal

0745. In the learning-support meeting, a team asks how a teacher and counselor can support a preadolescent child. One proposed action is examining evidence and generating a realistic alternative thought with the child. Which idea does it represent?

A. Behavioral activation
B. Collaborative empiricism
C. Cognitive restructuring
D. Skills rehearsal

0746. A client in late adolescence's service team meets in the multidisciplinary case conference. The caregiver working with a counselor recommends a change involving using drawings or concrete examples when abstract cognitive language is not yet accessible. Which idea best explains it?

A. Coping self-talk
B. Cognitive triangle
C. Cognitive restructuring
D. Developmental adaptation in CBT

0747. How should a practitioner distinguish the applications of Cognitive triangle and Cognitive restructuring?

A. Cognitive triangle: Helping a child map how a thought, feeling, and action relate in a particular situation. / Cognitive restructuring: Using a child-friendly record to examine what happened and what the child thought at that moment.
B. Cognitive triangle: Examining evidence and generating a realistic alternative thought with the child. / Cognitive restructuring: Helping a child map how a thought, feeling, and action relate in a particular situation.
C. Cognitive triangle: Rehearsing a believable coping phrase a child can use during a challenging moment. / Cognitive restructuring: Examining evidence and generating a realistic alternative thought with the child.
D. Cognitive triangle: Helping a child map how a thought, feeling, and action relate in a particular situation. / Cognitive restructuring: Examining evidence and generating a realistic alternative thought with the child.

0748. In child-focused CBT, a supervisor asks how Relapse prevention would appear in practice. Which choice should be selected?

A. Rehearsing a believable coping phrase a child can use during a challenging moment.
B. Identifying likely setbacks and rehearsing which coping steps the child can use.
C. Using a child-friendly record to examine what happened and what the child thought at that moment.
D. Role-playing an assertive request and providing supportive, specific feedback.

0749. How should a practitioner distinguish the applications of Cognitive restructuring and Coping self-talk?

A. Cognitive restructuring: Role-playing an assertive request and providing supportive, specific feedback. / Coping self-talk: Rehearsing a believable coping phrase a child can use during a challenging moment.
B. Cognitive restructuring: Examining evidence and generating a realistic alternative thought with the child. / Coping self-talk: Rehearsing a believable coping phrase a child can use during a challenging moment.
C. Cognitive restructuring: Rehearsing a believable coping phrase a child can use during a challenging moment. / Coping self-talk: Examining evidence and generating a realistic alternative thought with the child.
D. Cognitive restructuring: Examining evidence and generating a realistic alternative thought with the child. / Coping self-talk: Building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation.

0750. Which course concept is defined as follows: Collaboratively evaluating and developing more balanced or useful interpretations rather than imposing positive thinking.

A. Behavioral activation
B. Coping self-talk
C. Thought record
D. Cognitive restructuring

0751. At the supervision meeting, a community practitioner reviews whether a plan for a older adolescent client is appropriate. The relevant practice is helping a child map how a thought, feeling, and action relate in a particular situation. Which concept is tested?

A. Cognitive triangle
B. Exposure
C. Collaborative empiricism
D. Coping self-talk

0752. Which option preserves the correct meaning of both Exposure and Collaborative empiricism?

A. Exposure: A CBT stance in which client and therapist jointly test ideas against evidence and experience. / Collaborative empiricism: Gradual, planned approach to feared situations or cues to support new learning, with appropriate assessment and consent.
B. Exposure: Gradual, planned approach to feared situations or cues to support new learning, with appropriate assessment and consent. / Collaborative empiricism: Planning for future triggers, early warning signs, and continued use of skills after improvement.
C. Exposure: Gradual, planned approach to feared situations or cues to support new learning, with appropriate assessment and consent. / Collaborative empiricism: A CBT stance in which client and therapist jointly test ideas against evidence and experience.
D. Exposure: Practice of helpful, realistic statements that support coping and task engagement. / Collaborative empiricism: A CBT stance in which client and therapist jointly test ideas against evidence and experience.

0753. A assessment clinician prepares for a session in the community youth program with a teenage client. The intended approach is rehearsing a believable coping phrase a child can use during a challenging moment. Which concept is most relevant?

A. Skills rehearsal
B. Behavioral activation
C. Cognitive triangle
D. Coping self-talk

0754. In child-focused CBT, which comparison would correct a trainee's misunderstanding of Behavioral activation versus Relapse prevention?

A. Behavioral activation: Planning for future triggers, early warning signs, and continued use of skills after improvement. / Relapse prevention: Planned engagement in meaningful or rewarding activities to increase contact with positive reinforcement.
B. Behavioral activation: Planned engagement in meaningful or rewarding activities to increase contact with positive reinforcement. / Relapse prevention: Planning for future triggers, early warning signs, and continued use of skills after improvement.
C. Behavioral activation: A teaching model linking thoughts, feelings, and behaviors as mutually influential components of experience. / Relapse prevention: Planning for future triggers, early warning signs, and continued use of skills after improvement.
D. Behavioral activation: Planned engagement in meaningful or rewarding activities to increase contact with positive reinforcement. / Relapse prevention: Gradual, planned approach to feared situations or cues to support new learning, with appropriate assessment and consent.

0755. In child-focused CBT, choose the practice comparison that best separates Coping self-talk from Relapse prevention.

A. Coping self-talk: Identifying likely setbacks and rehearsing which coping steps the child can use. / Relapse prevention: Rehearsing a believable coping phrase a child can use during a challenging moment.
B. Coping self-talk: Role-playing an assertive request and providing supportive, specific feedback. / Relapse prevention: Identifying likely setbacks and rehearsing which coping steps the child can use.
C. Coping self-talk: Rehearsing a believable coping phrase a child can use during a challenging moment. / Relapse prevention: Using a child-friendly record to examine what happened and what the child thought at that moment.
D. Coping self-talk: Rehearsing a believable coping phrase a child can use during a challenging moment. / Relapse prevention: Identifying likely setbacks and rehearsing which coping steps the child can use.

0756. In child-focused CBT, which comparison correctly distinguishes Cognitive restructuring from Relapse prevention?

A. Cognitive restructuring: Planning for future triggers, early warning signs, and continued use of skills after improvement. / Relapse prevention: Collaboratively evaluating and developing more balanced or useful interpretations rather than imposing positive thinking.
B. Cognitive restructuring: Collaboratively evaluating and developing more balanced or useful interpretations rather than imposing positive thinking. / Relapse prevention: A teaching model linking thoughts, feelings, and behaviors as mutually influential components of experience.
C. Cognitive restructuring: Gradual, planned approach to feared situations or cues to support new learning, with appropriate assessment and consent. / Relapse prevention: Planning for future triggers, early warning signs, and continued use of skills after improvement.
D. Cognitive restructuring: Collaboratively evaluating and developing more balanced or useful interpretations rather than imposing positive thinking. / Relapse prevention: Planning for future triggers, early warning signs, and continued use of skills after improvement.

0757. In the after-school program, a case coordinator is considering this approach for a young adolescent client: helping a child map how a thought, feeling, and action relate in a particular situation. Which framework does it represent?

A. Coping self-talk
B. Behavioral activation
C. Cognitive triangle
D. Exposure

0758. In the family session, the agreed focus for a therapist working with a child aged 7 is using drawings or concrete examples when abstract cognitive language is not yet accessible. Which concept names this focus?

A. Skills rehearsal
B. Relapse prevention
C. Developmental adaptation in CBT
D. Cognitive restructuring

0759. A trainee must distinguish how Cognitive restructuring and Developmental adaptation in CBT guide practice. Which comparison is accurate?

A. Cognitive restructuring: Using drawings or concrete examples when abstract cognitive language is not yet accessible. / Developmental adaptation in CBT: Examining evidence and generating a realistic alternative thought with the child.
B. Cognitive restructuring: Examining evidence and generating a realistic alternative thought with the child. / Developmental adaptation in CBT: Using drawings or concrete examples when abstract cognitive language is not yet accessible.
C. Cognitive restructuring: Treating a belief as a testable hypothesis and reviewing what the child observes. / Developmental adaptation in CBT: Using drawings or concrete examples when abstract cognitive language is not yet accessible.
D. Cognitive restructuring: Examining evidence and generating a realistic alternative thought with the child. / Developmental adaptation in CBT: Using a child-friendly record to examine what happened and what the child thought at that moment.

0760. Consider a child aged 6 receiving help in the multidisciplinary case conference. The youth worker focuses on helping a child map how a thought, feeling, and action relate in a particular situation. Which term best describes the guiding idea?

A. Cognitive restructuring
B. Cognitive triangle
C. Relapse prevention
D. Behavioral activation

0761. A school-age child's service team meets in the family resource center. The parent educator recommends a change involving examining evidence and generating a realistic alternative thought with the child. Which idea best explains it?

A. Behavioral activation
B. Thought record
C. Coping self-talk
D. Cognitive restructuring

0762. A caregiver working with a counselor presents a support plan for a child aged 11 at the community mental-health service. Its central feature is rehearsing a believable coping phrase a child can use during a challenging moment. Which concept should be named?

A. Coping self-talk
B. Collaborative empiricism
C. Exposure
D. Developmental adaptation in CBT

0763. A trainee must explain Cognitive restructuring. Which answer is accurate?

A. Adjusting CBT language, materials, pacing, and caregiver involvement to the child's developmental capacity.
B. Planning for future triggers, early warning signs, and continued use of skills after improvement.
C. A structured aid for noticing a situation, automatic thought, emotion, evidence, and alternative perspective.
D. Collaboratively evaluating and developing more balanced or useful interpretations rather than imposing positive thinking.

0764. When reviewing a older adolescent client's plan in the youth group, the case coordinator notes that the next step is using drawings or concrete examples when abstract cognitive language is not yet accessible. Which concept guides this step?

A. Behavioral activation
B. Developmental adaptation in CBT
C. Exposure
D. Cognitive triangle

0765. In the student-support meeting, a parent educator is considering this approach for a young person aged 13: role-playing an assertive request and providing supportive, specific feedback. Which framework does it represent?

A. Thought record
B. Cognitive triangle
C. Skills rehearsal
D. Cognitive restructuring

0766. Which statement most accurately defines Coping self-talk?

A. Adjusting CBT language, materials, pacing, and caregiver involvement to the child's developmental capacity.
B. Practicing a targeted behavior in session, often with modeling, feedback, and repetition.
C. Practice of helpful, realistic statements that support coping and task engagement.
D. A teaching model linking thoughts, feelings, and behaviors as mutually influential components of experience.

0767. In child-focused CBT, how should a practitioner distinguish the applications of Exposure and Relapse prevention?

A. Exposure: Identifying likely setbacks and rehearsing which coping steps the child can use. / Relapse prevention: Building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation.
B. Exposure: Using a child-friendly record to examine what happened and what the child thought at that moment. / Relapse prevention: Identifying likely setbacks and rehearsing which coping steps the child can use.
C. Exposure: Building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation. / Relapse prevention: Identifying likely setbacks and rehearsing which coping steps the child can use.
D. Exposure: Building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation. / Relapse prevention: Role-playing an assertive request and providing supportive, specific feedback.

0768. In the student wellness team, the agreed focus for a research trainee working with a older adolescent client is rehearsing a believable coping phrase a child can use during a challenging moment. Which concept names this focus?

A. Relapse prevention
B. Coping self-talk
C. Cognitive restructuring
D. Cognitive triangle

0769. For a middle-school student in the school-based service, a behavior specialist makes this practice the immediate priority: helping a child map how a thought, feeling, and action relate in a particular situation. Which concept fits best?

A. Cognitive restructuring
B. Coping self-talk
C. Cognitive triangle
D. Skills rehearsal

0770. A therapist is asked what should shape a client in late adolescence's support in the youth advocacy program. The proposed focus is rehearsing a believable coping phrase a child can use during a challenging moment. Which principle does it represent?

A. Exposure
B. Coping self-talk
C. Cognitive restructuring
D. Cognitive triangle

0771. Which comparison would correct a trainee's misunderstanding of Thought record versus Developmental adaptation in CBT?

A. Thought record: Planning for future triggers, early warning signs, and continued use of skills after improvement. / Developmental adaptation in CBT: Adjusting CBT language, materials, pacing, and caregiver involvement to the child's developmental capacity.
B. Thought record: Adjusting CBT language, materials, pacing, and caregiver involvement to the child's developmental capacity. / Developmental adaptation in CBT: A structured aid for noticing a situation, automatic thought, emotion, evidence, and alternative perspective.
C. Thought record: A structured aid for noticing a situation, automatic thought, emotion, evidence, and alternative perspective. / Developmental adaptation in CBT: Practicing a targeted behavior in session, often with modeling, feedback, and repetition.
D. Thought record: A structured aid for noticing a situation, automatic thought, emotion, evidence, and alternative perspective. / Developmental adaptation in CBT: Adjusting CBT language, materials, pacing, and caregiver involvement to the child's developmental capacity.

0772. Which paired example correctly applies Cognitive restructuring first and Skills rehearsal second?

A. Cognitive restructuring: Examining evidence and generating a realistic alternative thought with the child. / Skills rehearsal: Role-playing an assertive request and providing supportive, specific feedback.
B. Cognitive restructuring: Role-playing an assertive request and providing supportive, specific feedback. / Skills rehearsal: Examining evidence and generating a realistic alternative thought with the child.
C. Cognitive restructuring: Examining evidence and generating a realistic alternative thought with the child. / Skills rehearsal: Treating a belief as a testable hypothesis and reviewing what the child observes.
D. Cognitive restructuring: Scheduling a manageable valued activity and reviewing its effect on mood and functioning. / Skills rehearsal: Role-playing an assertive request and providing supportive, specific feedback.

0773. A team must select a support approach for a child of elementary-school age at the caregiver consultation. The parent educator recommends scheduling a manageable valued activity and reviewing its effect on mood and functioning. Which idea is most relevant?

A. Skills rehearsal
B. Cognitive triangle
C. Developmental adaptation in CBT
D. Behavioral activation

0774. A behavior specialist is asked to evaluate a proposed service for a young person in the parent meeting. The defining feature is role-playing an assertive request and providing supportive, specific feedback. Which concept fits?

A. Skills rehearsal
B. Coping self-talk
C. Cognitive triangle
D. Relapse prevention

0775. A young person aged 13's service team meets in the student-support meeting. The parent educator recommends a change involving role-playing an assertive request and providing supportive, specific feedback. Which idea best explains it?

A. Cognitive triangle
B. Skills rehearsal
C. Coping self-talk
D. Behavioral activation

0776. A consulting counselor is asked to justify a plan for a student aged 12 in the school counseling office. It calls for examining evidence and generating a realistic alternative thought with the child. Which concept provides the rationale?

A. Coping self-talk
B. Cognitive restructuring
C. Thought record
D. Cognitive triangle

0777. A member of a clinical team is preparing a follow-up plan for a child aged 8 in the counseling practicum. The plan calls for scheduling a manageable valued activity and reviewing its effect on mood and functioning. Which concept names this approach?

A. Cognitive triangle
B. Behavioral activation
C. Coping self-talk
D. Relapse prevention

0778. A school counselor is explaining a choice to a older adolescent client and caregiver in the classroom support meeting. The choice centers on examining evidence and generating a realistic alternative thought with the child. Which idea is illustrated?

A. Cognitive restructuring
B. Cognitive triangle
C. Skills rehearsal
D. Developmental adaptation in CBT

0779. Which statement shows a sound practice-level distinction between Skills rehearsal and Collaborative empiricism?

A. Skills rehearsal: Role-playing an assertive request and providing supportive, specific feedback. / Collaborative empiricism: Scheduling a manageable valued activity and reviewing its effect on mood and functioning.
B. Skills rehearsal: Treating a belief as a testable hypothesis and reviewing what the child observes. / Collaborative empiricism: Role-playing an assertive request and providing supportive, specific feedback.
C. Skills rehearsal: Helping a child map how a thought, feeling, and action relate in a particular situation. / Collaborative empiricism: Treating a belief as a testable hypothesis and reviewing what the child observes.
D. Skills rehearsal: Role-playing an assertive request and providing supportive, specific feedback. / Collaborative empiricism: Treating a belief as a testable hypothesis and reviewing what the child observes.

0780. What is the central meaning of Thought record?

A. Planned engagement in meaningful or rewarding activities to increase contact with positive reinforcement.
B. Gradual, planned approach to feared situations or cues to support new learning, with appropriate assessment and consent.
C. A structured aid for noticing a situation, automatic thought, emotion, evidence, and alternative perspective.
D. A teaching model linking thoughts, feelings, and behaviors as mutually influential components of experience.

0781. Which comparison would correct a trainee's misunderstanding of Cognitive restructuring versus Coping self-talk?

A. Cognitive restructuring: Collaboratively evaluating and developing more balanced or useful interpretations rather than imposing positive thinking. / Coping self-talk: Gradual, planned approach to feared situations or cues to support new learning, with appropriate assessment and consent.
B. Cognitive restructuring: Practice of helpful, realistic statements that support coping and task engagement. / Coping self-talk: Collaboratively evaluating and developing more balanced or useful interpretations rather than imposing positive thinking.
C. Cognitive restructuring: Practicing a targeted behavior in session, often with modeling, feedback, and repetition. / Coping self-talk: Practice of helpful, realistic statements that support coping and task engagement.
D. Cognitive restructuring: Collaboratively evaluating and developing more balanced or useful interpretations rather than imposing positive thinking. / Coping self-talk: Practice of helpful, realistic statements that support coping and task engagement.

0782. In child-focused CBT, which option preserves the correct meaning of both Coping self-talk and Relapse prevention?

A. Coping self-talk: Planning for future triggers, early warning signs, and continued use of skills after improvement. / Relapse prevention: Practice of helpful, realistic statements that support coping and task engagement.
B. Coping self-talk: Practice of helpful, realistic statements that support coping and task engagement. / Relapse prevention: Planning for future triggers, early warning signs, and continued use of skills after improvement.
C. Coping self-talk: Practice of helpful, realistic statements that support coping and task engagement. / Relapse prevention: A structured aid for noticing a situation, automatic thought, emotion, evidence, and alternative perspective.
D. Coping self-talk: Practicing a targeted behavior in session, often with modeling, feedback, and repetition. / Relapse prevention: Planning for future triggers, early warning signs, and continued use of skills after improvement.

0783. A group facilitator is explaining a choice to a child aged 7 and caregiver in the student wellness team. The choice centers on using a child-friendly record to examine what happened and what the child thought at that moment. Which idea is illustrated?

A. Relapse prevention
B. Thought record
C. Developmental adaptation in CBT
D. Behavioral activation

0784. Which comparison correctly distinguishes Cognitive triangle from Collaborative empiricism?

A. Cognitive triangle: Practice of helpful, realistic statements that support coping and task engagement. / Collaborative empiricism: A CBT stance in which client and therapist jointly test ideas against evidence and experience.
B. Cognitive triangle: A teaching model linking thoughts, feelings, and behaviors as mutually influential components of experience. / Collaborative empiricism: A CBT stance in which client and therapist jointly test ideas against evidence and experience.
C. Cognitive triangle: A teaching model linking thoughts, feelings, and behaviors as mutually influential components of experience. / Collaborative empiricism: Gradual, planned approach to feared situations or cues to support new learning, with appropriate assessment and consent.
D. Cognitive triangle: A CBT stance in which client and therapist jointly test ideas against evidence and experience. / Collaborative empiricism: A teaching model linking thoughts, feelings, and behaviors as mutually influential components of experience.

0785. Consider a young person aged 18 receiving help in the community mental-health service. The consulting counselor focuses on treating a belief as a testable hypothesis and reviewing what the child observes. Which term best describes the guiding idea?

A. Relapse prevention
B. Collaborative empiricism
C. Cognitive triangle
D. Developmental adaptation in CBT

0786. Identify the most precise label for this idea: Practice of helpful, realistic statements that support coping and task engagement.

A. Thought record
B. Coping self-talk
C. Collaborative empiricism
D. Behavioral activation

0787. At the community youth program, a research trainee reviews whether a plan for a child of elementary-school age is appropriate. The relevant practice is using a child-friendly record to examine what happened and what the child thought at that moment. Which concept is tested?

A. Thought record
B. Collaborative empiricism
C. Skills rehearsal
D. Cognitive triangle

0788. Which statement most accurately defines Collaborative empiricism?

A. Gradual, planned approach to feared situations or cues to support new learning, with appropriate assessment and consent.
B. Collaboratively evaluating and developing more balanced or useful interpretations rather than imposing positive thinking.
C. A CBT stance in which client and therapist jointly test ideas against evidence and experience.
D. Practice of helpful, realistic statements that support coping and task engagement.

0789. In a professional consultation about a young person aged 13, the supervised trainee describes this response in the outpatient clinic: treating a belief as a testable hypothesis and reviewing what the child observes. Which term is most apt?

A. Relapse prevention
B. Collaborative empiricism
C. Cognitive restructuring
D. Developmental adaptation in CBT

0790. In a supervision quiz, how should Skills rehearsal be distinguished from Collaborative empiricism?

A. Skills rehearsal: Practicing a targeted behavior in session, often with modeling, feedback, and repetition. / Collaborative empiricism: A CBT stance in which client and therapist jointly test ideas against evidence and experience.
B. Skills rehearsal: A teaching model linking thoughts, feelings, and behaviors as mutually influential components of experience. / Collaborative empiricism: A CBT stance in which client and therapist jointly test ideas against evidence and experience.
C. Skills rehearsal: A CBT stance in which client and therapist jointly test ideas against evidence and experience. / Collaborative empiricism: Practicing a targeted behavior in session, often with modeling, feedback, and repetition.
D. Skills rehearsal: Practicing a targeted behavior in session, often with modeling, feedback, and repetition. / Collaborative empiricism: Planned engagement in meaningful or rewarding activities to increase contact with positive reinforcement.

0791. At a case-planning meeting, the play therapist proposes using drawings or concrete examples when abstract cognitive language is not yet accessible. for a child aged 14 seen in the youth advocacy program. Which concept does this illustrate?

A. Thought record
B. Exposure
C. Developmental adaptation in CBT
D. Skills rehearsal

0792. An interdisciplinary team reviews a young person aged 10's case at the family session. The school support specialist recommends role-playing an assertive request and providing supportive, specific feedback. Which course concept best fits?

A. Coping self-talk
B. Collaborative empiricism
C. Skills rehearsal
D. Cognitive restructuring

0793. A case conference asks for a distinction between Cognitive triangle and Collaborative empiricism. Which answer is sound?

A. Cognitive triangle: A teaching model linking thoughts, feelings, and behaviors as mutually influential components of experience. / Collaborative empiricism: Gradual, planned approach to feared situations or cues to support new learning, with appropriate assessment and consent.
B. Cognitive triangle: Practice of helpful, realistic statements that support coping and task engagement. / Collaborative empiricism: A CBT stance in which client and therapist jointly test ideas against evidence and experience.
C. Cognitive triangle: A teaching model linking thoughts, feelings, and behaviors as mutually influential components of experience. / Collaborative empiricism: A CBT stance in which client and therapist jointly test ideas against evidence and experience.
D. Cognitive triangle: A CBT stance in which client and therapist jointly test ideas against evidence and experience. / Collaborative empiricism: A teaching model linking thoughts, feelings, and behaviors as mutually influential components of experience.

0794. Choose the practice comparison that best separates Exposure from Coping self-talk.

A. Exposure: Building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation. / Coping self-talk: Rehearsing a believable coping phrase a child can use during a challenging moment.
B. Exposure: Helping a child map how a thought, feeling, and action relate in a particular situation. / Coping self-talk: Rehearsing a believable coping phrase a child can use during a challenging moment.
C. Exposure: Rehearsing a believable coping phrase a child can use during a challenging moment. / Coping self-talk: Building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation.
D. Exposure: Building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation. / Coping self-talk: Scheduling a manageable valued activity and reviewing its effect on mood and functioning.

0795. A service team discusses a adolescent student in the school-based service. Their proposed next step is scheduling a manageable valued activity and reviewing its effect on mood and functioning. Which course concept supports it?

A. Cognitive triangle
B. Behavioral activation
C. Developmental adaptation in CBT
D. Exposure

0796. While supporting a student aged 12 in the clinical planning session, a family therapist adopts this practice: using drawings or concrete examples when abstract cognitive language is not yet accessible. Which concept best explains the choice?

A. Developmental adaptation in CBT
B. Skills rehearsal
C. Exposure
D. Relapse prevention

0797. For a student aged 12 in the community service agency, a clinical supervisor makes this practice the immediate priority: scheduling a manageable valued activity and reviewing its effect on mood and functioning. Which concept fits best?

A. Coping self-talk
B. Exposure
C. Behavioral activation
D. Cognitive restructuring

0798. A planning meeting about a child aged 14 includes a behavior specialist. The proposed practice in the student wellness team is building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation. Which idea underlies it?

A. Cognitive restructuring
B. Exposure
C. Developmental adaptation in CBT
D. Behavioral activation

0799. A child aged 8 and a consultant are reviewing goals in the clinical planning session. The agreed action is treating a belief as a testable hypothesis and reviewing what the child observes. Which principle best accounts for it?

A. Behavioral activation
B. Developmental adaptation in CBT
C. Collaborative empiricism
D. Skills rehearsal

0800. Select the best explanation of Skills rehearsal.

A. Practice of helpful, realistic statements that support coping and task engagement.
B. Collaboratively evaluating and developing more balanced or useful interpretations rather than imposing positive thinking.
C. Practicing a targeted behavior in session, often with modeling, feedback, and repetition.
D. A structured aid for noticing a situation, automatic thought, emotion, evidence, and alternative perspective.

0801. In child-focused CBT, which paired example correctly applies Behavioral activation first and Relapse prevention second?

A. Behavioral activation: Scheduling a manageable valued activity and reviewing its effect on mood and functioning. / Relapse prevention: Identifying likely setbacks and rehearsing which coping steps the child can use.
B. Behavioral activation: Helping a child map how a thought, feeling, and action relate in a particular situation. / Relapse prevention: Identifying likely setbacks and rehearsing which coping steps the child can use.
C. Behavioral activation: Scheduling a manageable valued activity and reviewing its effect on mood and functioning. / Relapse prevention: Building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation.
D. Behavioral activation: Identifying likely setbacks and rehearsing which coping steps the child can use. / Relapse prevention: Scheduling a manageable valued activity and reviewing its effect on mood and functioning.

0802. Which statement most accurately defines Skills rehearsal?

A. Practicing a targeted behavior in session, often with modeling, feedback, and repetition.
B. Collaboratively evaluating and developing more balanced or useful interpretations rather than imposing positive thinking.
C. A structured aid for noticing a situation, automatic thought, emotion, evidence, and alternative perspective.
D. Planning for future triggers, early warning signs, and continued use of skills after improvement.

0803. A supervisor asks for an applied contrast between Exposure and Developmental adaptation in CBT. Which option fits?

A. Exposure: Building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation. / Developmental adaptation in CBT: Using drawings or concrete examples when abstract cognitive language is not yet accessible.
B. Exposure: Treating a belief as a testable hypothesis and reviewing what the child observes. / Developmental adaptation in CBT: Using drawings or concrete examples when abstract cognitive language is not yet accessible.
C. Exposure: Using drawings or concrete examples when abstract cognitive language is not yet accessible. / Developmental adaptation in CBT: Building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation.
D. Exposure: Building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation. / Developmental adaptation in CBT: Role-playing an assertive request and providing supportive, specific feedback.

0804. Which applied comparison correctly identifies what belongs to Cognitive triangle versus Behavioral activation?

A. Cognitive triangle: Identifying likely setbacks and rehearsing which coping steps the child can use. / Behavioral activation: Scheduling a manageable valued activity and reviewing its effect on mood and functioning.
B. Cognitive triangle: Helping a child map how a thought, feeling, and action relate in a particular situation. / Behavioral activation: Using drawings or concrete examples when abstract cognitive language is not yet accessible.
C. Cognitive triangle: Helping a child map how a thought, feeling, and action relate in a particular situation. / Behavioral activation: Scheduling a manageable valued activity and reviewing its effect on mood and functioning.
D. Cognitive triangle: Scheduling a manageable valued activity and reviewing its effect on mood and functioning. / Behavioral activation: Helping a child map how a thought, feeling, and action relate in a particular situation.

0805. Which statement accurately contrasts the course concepts Behavioral activation and Skills rehearsal?

A. Behavioral activation: Planned engagement in meaningful or rewarding activities to increase contact with positive reinforcement. / Skills rehearsal: Practice of helpful, realistic statements that support coping and task engagement.
B. Behavioral activation: Adjusting CBT language, materials, pacing, and caregiver involvement to the child's developmental capacity. / Skills rehearsal: Practicing a targeted behavior in session, often with modeling, feedback, and repetition.
C. Behavioral activation: Practicing a targeted behavior in session, often with modeling, feedback, and repetition. / Skills rehearsal: Planned engagement in meaningful or rewarding activities to increase contact with positive reinforcement.
D. Behavioral activation: Planned engagement in meaningful or rewarding activities to increase contact with positive reinforcement. / Skills rehearsal: Practicing a targeted behavior in session, often with modeling, feedback, and repetition.

0806. A case conference reviews a program coordinator's work with a school-age child in the after-school program: using drawings or concrete examples when abstract cognitive language is not yet accessible. Which principle is central?

A. Developmental adaptation in CBT
B. Collaborative empiricism
C. Cognitive triangle
D. Thought record

0807. In child-focused CBT, a trainee must distinguish how Behavioral activation and Relapse prevention guide practice. Which comparison is accurate?

A. Behavioral activation: Scheduling a manageable valued activity and reviewing its effect on mood and functioning. / Relapse prevention: Identifying likely setbacks and rehearsing which coping steps the child can use.
B. Behavioral activation: Scheduling a manageable valued activity and reviewing its effect on mood and functioning. / Relapse prevention: Building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation.
C. Behavioral activation: Identifying likely setbacks and rehearsing which coping steps the child can use. / Relapse prevention: Scheduling a manageable valued activity and reviewing its effect on mood and functioning.
D. Behavioral activation: Helping a child map how a thought, feeling, and action relate in a particular situation. / Relapse prevention: Identifying likely setbacks and rehearsing which coping steps the child can use.

0808. In a professional consultation about a child aged 14, the member of a clinical team describes this response in the student-support meeting: helping a child map how a thought, feeling, and action relate in a particular situation. Which term is most apt?

A. Collaborative empiricism
B. Cognitive triangle
C. Coping self-talk
D. Cognitive restructuring

0809. During work in the child guidance clinic, a consulting counselor identifies this need: building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation. Which idea should guide the response?

A. Collaborative empiricism
B. Exposure
C. Relapse prevention
D. Developmental adaptation in CBT

0810. During service review in the caregiver consultation, a program coordinator describes rehearsing a believable coping phrase a child can use during a challenging moment. for a student aged 12. Which course idea is most applicable?

A. Behavioral activation
B. Cognitive triangle
C. Coping self-talk
D. Cognitive restructuring

0811. How should a practitioner distinguish the applications of Collaborative empiricism and Developmental adaptation in CBT?

A. Collaborative empiricism: Treating a belief as a testable hypothesis and reviewing what the child observes. / Developmental adaptation in CBT: Using drawings or concrete examples when abstract cognitive language is not yet accessible.
B. Collaborative empiricism: Using drawings or concrete examples when abstract cognitive language is not yet accessible. / Developmental adaptation in CBT: Treating a belief as a testable hypothesis and reviewing what the child observes.
C. Collaborative empiricism: Treating a belief as a testable hypothesis and reviewing what the child observes. / Developmental adaptation in CBT: Examining evidence and generating a realistic alternative thought with the child.
D. Collaborative empiricism: Building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation. / Developmental adaptation in CBT: Using drawings or concrete examples when abstract cognitive language is not yet accessible.

0812. When reviewing a child aged 8’s plan in the community youth program, the caregiver working with a counselor notes that the next step is role-playing an assertive request and providing supportive, specific feedback. Which concept guides this step?

A. Skills rehearsal
B. Thought record
C. Behavioral activation
D. Cognitive triangle

0813. In child-focused CBT, a supervisor asks for an applied contrast between Exposure and Relapse prevention. Which option fits?

A. Exposure: Building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation. / Relapse prevention: Identifying likely setbacks and rehearsing which coping steps the child can use.
B. Exposure: Using a child-friendly record to examine what happened and what the child thought at that moment. / Relapse prevention: Identifying likely setbacks and rehearsing which coping steps the child can use.
C. Exposure: Identifying likely setbacks and rehearsing which coping steps the child can use. / Relapse prevention: Building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation.
D. Exposure: Building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation. / Relapse prevention: Role-playing an assertive request and providing supportive, specific feedback.

0814. In child-focused CBT, an interdisciplinary team reviews a adolescent student’s case at the multidisciplinary case conference. The counselor recommends identifying likely setbacks and rehearsing which coping steps the child can use. Which course concept best fits?

A. Collaborative empiricism
B. Skills rehearsal
C. Relapse prevention
D. Developmental adaptation in CBT

0815. A trainee must distinguish how Cognitive triangle and Exposure guide practice. Which comparison is accurate?

A. Cognitive triangle: Helping a child map how a thought, feeling, and action relate in a particular situation. / Exposure: Building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation.
B. Cognitive triangle: Helping a child map how a thought, feeling, and action relate in a particular situation. / Exposure: Examining evidence and generating a realistic alternative thought with the child.
C. Cognitive triangle: Identifying likely setbacks and rehearsing which coping steps the child can use. / Exposure: Building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation.
D. Cognitive triangle: Building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation. / Exposure: Helping a child map how a thought, feeling, and action relate in a particular situation.

0816. Which choice aligns each practice with the correct idea, Behavioral activation or Collaborative empiricism?

A. Behavioral activation: Scheduling a manageable valued activity and reviewing its effect on mood and functioning. / Collaborative empiricism: Using a child-friendly record to examine what happened and what the child thought at that moment.
B. Behavioral activation: Scheduling a manageable valued activity and reviewing its effect on mood and functioning. / Collaborative empiricism: Treating a belief as a testable hypothesis and reviewing what the child observes.
C. Behavioral activation: Identifying likely setbacks and rehearsing which coping steps the child can use. / Collaborative empiricism: Treating a belief as a testable hypothesis and reviewing what the child observes.
D. Behavioral activation: Treating a belief as a testable hypothesis and reviewing what the child observes. / Collaborative empiricism: Scheduling a manageable valued activity and reviewing its effect on mood and functioning.

0817. A case conference asks for a distinction between Exposure and Skills rehearsal. Which answer is sound?

A. Exposure: A CBT stance in which client and therapist jointly test ideas against evidence and experience. / Skills rehearsal: Practicing a targeted behavior in session, often with modeling, feedback, and repetition.
B. Exposure: Gradual, planned approach to feared situations or cues to support new learning, with appropriate assessment and consent. / Skills rehearsal: Practicing a targeted behavior in session, often with modeling, feedback, and repetition.
C. Exposure: Practicing a targeted behavior in session, often with modeling, feedback, and repetition. / Skills rehearsal: Gradual, planned approach to feared situations or cues to support new learning, with appropriate assessment and consent.
D. Exposure: Gradual, planned approach to feared situations or cues to support new learning, with appropriate assessment and consent. / Skills rehearsal: Collaboratively evaluating and developing more balanced or useful interpretations rather than imposing positive thinking.

0818. While supporting a student aged 9 in the classroom support meeting, a case coordinator adopts this practice: using a child-friendly record to examine what happened and what the child thought at that moment. Which concept best explains the choice?

A. Thought record
B. Behavioral activation
C. Developmental adaptation in CBT
D. Collaborative empiricism

0819. Which statement accurately contrasts the course concepts Cognitive triangle and Behavioral activation?

A. Cognitive triangle: Planning for future triggers, early warning signs, and continued use of skills after improvement. / Behavioral activation: Planned engagement in meaningful or rewarding activities to increase contact with positive reinforcement.
B. Cognitive triangle: A teaching model linking thoughts, feelings, and behaviors as mutually influential components of experience. / Behavioral activation: Planned engagement in meaningful or rewarding activities to increase contact with positive reinforcement.
C. Cognitive triangle: A teaching model linking thoughts, feelings, and behaviors as mutually influential components of experience. / Behavioral activation: Adjusting CBT language, materials, pacing, and caregiver involvement to the child's developmental capacity.
D. Cognitive triangle: Planned engagement in meaningful or rewarding activities to increase contact with positive reinforcement. / Behavioral activation: A teaching model linking thoughts, feelings, and behaviors as mutually influential components of experience.

0820. How should a practitioner distinguish the applications of Thought record and Skills rehearsal?

A. Thought record: Role-playing an assertive request and providing supportive, specific feedback. / Skills rehearsal: Using a child-friendly record to examine what happened and what the child thought at that moment.
B. Thought record: Rehearsing a believable coping phrase a child can use during a challenging moment. / Skills rehearsal: Role-playing an assertive request and providing supportive, specific feedback.
C. Thought record: Using a child-friendly record to examine what happened and what the child thought at that moment. / Skills rehearsal: Role-playing an assertive request and providing supportive, specific feedback.
D. Thought record: Using a child-friendly record to examine what happened and what the child thought at that moment. / Skills rehearsal: Using drawings or concrete examples when abstract cognitive language is not yet accessible.

0821. Which statement accurately contrasts the course concepts Cognitive restructuring and Thought record?

A. Cognitive restructuring: A structured aid for noticing a situation, automatic thought, emotion, evidence, and alternative perspective. / Thought record: Collaboratively evaluating and developing more balanced or useful interpretations rather than imposing positive thinking.
B. Cognitive restructuring: A CBT stance in which client and therapist jointly test ideas against evidence and experience. / Thought record: A structured aid for noticing a situation, automatic thought, emotion, evidence, and alternative perspective.
C. Cognitive restructuring: Collaboratively evaluating and developing more balanced or useful interpretations rather than imposing positive thinking. / Thought record: A structured aid for noticing a situation, automatic thought, emotion, evidence, and alternative perspective.
D. Cognitive restructuring: Collaboratively evaluating and developing more balanced or useful interpretations rather than imposing positive thinking. / Thought record: Adjusting CBT language, materials, pacing, and caregiver involvement to the child's developmental capacity.

0822. A clinical supervisor reviews a plan for a young person aged 18 in the school consultation. The plan emphasizes using drawings or concrete examples when abstract cognitive language is not yet accessible. Which course idea does this reflect?

A. Collaborative empiricism
B. Exposure
C. Thought record
D. Developmental adaptation in CBT

0823. In a supervision quiz, how should Cognitive triangle be distinguished from Cognitive restructuring?

A. Cognitive triangle: Collaboratively evaluating and developing more balanced or useful interpretations rather than imposing positive thinking. / Cognitive restructuring: A teaching model linking thoughts, feelings, and behaviors as mutually influential components of experience.
B. Cognitive triangle: A teaching model linking thoughts, feelings, and behaviors as mutually influential components of experience. / Cognitive restructuring: A structured aid for noticing a situation, automatic thought, emotion, evidence, and alternative perspective.
C. Cognitive triangle: Practice of helpful, realistic statements that support coping and task engagement. / Cognitive restructuring: Collaboratively evaluating and developing more balanced or useful interpretations rather than imposing positive thinking.
D. Cognitive triangle: A teaching model linking thoughts, feelings, and behaviors as mutually influential components of experience. / Cognitive restructuring: Collaboratively evaluating and developing more balanced or useful interpretations rather than imposing positive thinking.

0824. A case conference asks for a distinction between Cognitive triangle and Developmental adaptation in CBT. Which answer is sound?

A. Cognitive triangle: A teaching model linking thoughts, feelings, and behaviors as mutually influential components of experience. / Developmental adaptation in CBT: Adjusting CBT language, materials, pacing, and caregiver involvement to the child's developmental capacity.
B. Cognitive triangle: Adjusting CBT language, materials, pacing, and caregiver involvement to the child's developmental capacity. / Developmental adaptation in CBT: A teaching model linking thoughts, feelings, and behaviors as mutually influential components of experience.
C. Cognitive triangle: Collaboratively evaluating and developing more balanced or useful interpretations rather than imposing positive thinking. / Developmental adaptation in CBT: Adjusting CBT language, materials, pacing, and caregiver involvement to the child's developmental capacity.
D. Cognitive triangle: A teaching model linking thoughts, feelings, and behaviors as mutually influential components of experience. / Developmental adaptation in CBT: A CBT stance in which client and therapist jointly test ideas against evidence and experience.

0825. A case coordinator presents a support plan for a child of elementary-school age at the supervision meeting. Its central feature is treating a belief as a testable hypothesis and reviewing what the child observes. Which concept should be named?

A. Cognitive triangle
B. Cognitive restructuring
C. Thought record
D. Collaborative empiricism

0826. A youth worker is explaining a choice to a young adolescent client and caregiver in the student-support meeting. The choice centers on using drawings or concrete examples when abstract cognitive language is not yet accessible. Which idea is illustrated?

A. Developmental adaptation in CBT
B. Collaborative empiricism
C. Relapse prevention
D. Coping self-talk

0827. While supporting a young person aged 13 in the community youth program, a school-based clinician adopts this practice: examining evidence and generating a realistic alternative thought with the child. Which concept best explains the choice?

A. Developmental adaptation in CBT
B. Cognitive restructuring
C. Behavioral activation
D. Thought record

0828. A young person aged 18 and a supervised trainee are reviewing goals in the family resource center. The agreed action is rehearsing a believable coping phrase a child can use during a challenging moment. Which principle best accounts for it?

A. Skills rehearsal
B. Cognitive restructuring
C. Coping self-talk
D. Developmental adaptation in CBT

0829. Which paired example correctly applies Exposure first and Skills rehearsal second?

A. Exposure: Building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation. / Skills rehearsal: Examining evidence and generating a realistic alternative thought with the child.
B. Exposure: Treating a belief as a testable hypothesis and reviewing what the child observes. / Skills rehearsal: Role-playing an assertive request and providing supportive, specific feedback.
C. Exposure: Role-playing an assertive request and providing supportive, specific feedback. / Skills rehearsal: Building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation.
D. Exposure: Building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation. / Skills rehearsal: Role-playing an assertive request and providing supportive, specific feedback.

0830. A supervisor asks how Collaborative empiricism would appear in practice. Which choice should be selected?

A. Treating a belief as a testable hypothesis and reviewing what the child observes.
B. Identifying likely setbacks and rehearsing which coping steps the child can use.
C. Examining evidence and generating a realistic alternative thought with the child.
D. Building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation.

0831. A student confuses Cognitive triangle with Developmental adaptation in CBT. Which explanation most accurately separates them?

A. Cognitive triangle: A teaching model linking thoughts, feelings, and behaviors as mutually influential components of experience. / Developmental adaptation in CBT: A CBT stance in which client and therapist jointly test ideas against evidence and experience.
B. Cognitive triangle: Collaboratively evaluating and developing more balanced or useful interpretations rather than imposing positive thinking. / Developmental adaptation in CBT: Adjusting CBT language, materials, pacing, and caregiver involvement to the child's developmental capacity.
C. Cognitive triangle: A teaching model linking thoughts, feelings, and behaviors as mutually influential components of experience. / Developmental adaptation in CBT: Adjusting CBT language, materials, pacing, and caregiver involvement to the child's developmental capacity.
D. Cognitive triangle: Adjusting CBT language, materials, pacing, and caregiver involvement to the child's developmental capacity. / Developmental adaptation in CBT: A teaching model linking thoughts, feelings, and behaviors as mutually influential components of experience.

0832. Which choice aligns each practice with the correct idea, Behavioral activation or Developmental adaptation in CBT?

A. Behavioral activation: Scheduling a manageable valued activity and reviewing its effect on mood and functioning. / Developmental adaptation in CBT: Rehearsing a believable coping phrase a child can use during a challenging moment.
B. Behavioral activation: Building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation. / Developmental adaptation in CBT: Using drawings or concrete examples when abstract cognitive language is not yet accessible.
C. Behavioral activation: Using drawings or concrete examples when abstract cognitive language is not yet accessible. / Developmental adaptation in CBT: Scheduling a manageable valued activity and reviewing its effect on mood and functioning.
D. Behavioral activation: Scheduling a manageable valued activity and reviewing its effect on mood and functioning. / Developmental adaptation in CBT: Using drawings or concrete examples when abstract cognitive language is not yet accessible.

0833. Which pair of actions illustrates Exposure and Developmental adaptation in CBT, respectively?

A. Exposure: Building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation. / Developmental adaptation in CBT: Role-playing an assertive request and providing supportive, specific feedback.
B. Exposure: Treating a belief as a testable hypothesis and reviewing what the child observes. / Developmental adaptation in CBT: Using drawings or concrete examples when abstract cognitive language is not yet accessible.
C. Exposure: Using drawings or concrete examples when abstract cognitive language is not yet accessible. / Developmental adaptation in CBT: Building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation.
D. Exposure: Building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation. / Developmental adaptation in CBT: Using drawings or concrete examples when abstract cognitive language is not yet accessible.

0834. Which applied comparison correctly identifies what belongs to Cognitive restructuring versus Skills rehearsal?

A. Cognitive restructuring: Role-playing an assertive request and providing supportive, specific feedback. / Skills rehearsal: Examining evidence and generating a realistic alternative thought with the child.
B. Cognitive restructuring: Scheduling a manageable valued activity and reviewing its effect on mood and functioning. / Skills rehearsal: Role-playing an assertive request and providing supportive, specific feedback.
C. Cognitive restructuring: Examining evidence and generating a realistic alternative thought with the child. / Skills rehearsal: Role-playing an assertive request and providing supportive, specific feedback.
D. Cognitive restructuring: Examining evidence and generating a realistic alternative thought with the child. / Skills rehearsal: Treating a belief as a testable hypothesis and reviewing what the child observes.

0835. In a supervision quiz, how should Cognitive restructuring be distinguished from Exposure?

A. Cognitive restructuring: Collaboratively evaluating and developing more balanced or useful interpretations rather than imposing positive thinking. / Exposure: Gradual, planned approach to feared situations or cues to support new learning, with appropriate assessment and consent.
B. Cognitive restructuring: Collaboratively evaluating and developing more balanced or useful interpretations rather than imposing positive thinking. / Exposure: A teaching model linking thoughts, feelings, and behaviors as mutually influential components of experience.
C. Cognitive restructuring: A structured aid for noticing a situation, automatic thought, emotion, evidence, and alternative perspective. / Exposure: Gradual, planned approach to feared situations or cues to support new learning, with appropriate assessment and consent.
D. Cognitive restructuring: Gradual, planned approach to feared situations or cues to support new learning, with appropriate assessment and consent. / Exposure: Collaboratively evaluating and developing more balanced or useful interpretations rather than imposing positive thinking.

0836. In the community youth program, a team asks how a group facilitator can support a young adolescent client. One proposed action is building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation. Which idea does it represent?

A. Thought record
B. Exposure
C. Relapse prevention
D. Skills rehearsal

0837. Which option preserves the correct meaning of both Cognitive triangle and Coping self-talk?

A. Cognitive triangle: A teaching model linking thoughts, feelings, and behaviors as mutually influential components of experience. / Coping self-talk: Practice of helpful, realistic statements that support coping and task engagement.
B. Cognitive triangle: Practice of helpful, realistic statements that support coping and task engagement. / Coping self-talk: A teaching model linking thoughts, feelings, and behaviors as mutually influential components of experience.
C. Cognitive triangle: A teaching model linking thoughts, feelings, and behaviors as mutually influential components of experience. / Coping self-talk: Collaboratively evaluating and developing more balanced or useful interpretations rather than imposing positive thinking.
D. Cognitive triangle: A structured aid for noticing a situation, automatic thought, emotion, evidence, and alternative perspective. / Coping self-talk: Practice of helpful, realistic statements that support coping and task engagement.

0838. At the school-based service, a counselor meets with a child aged 7. The practice priority is: rehearsing a believable coping phrase a child can use during a challenging moment. Which concept best captures that priority?

A. Cognitive restructuring
B. Developmental adaptation in CBT
C. Coping self-talk
D. Cognitive triangle

0839. In a case note about a child aged 14, a consultant working in the child guidance clinic records this priority: rehearsing a believable coping phrase a child can use during a challenging moment. What principle is reflected?

A. Relapse prevention
B. Cognitive triangle
C. Thought record
D. Coping self-talk

0840. In the school consultation, a team asks how a consulting counselor can support a school-age child. One proposed action is using a child-friendly record to examine what happened and what the child thought at that moment. Which idea does it represent?

A. Cognitive restructuring
B. Exposure
C. Thought record
D. Behavioral activation

0841. In child-focused CBT, which choice aligns each practice with the correct idea, Behavioral activation or Relapse prevention?

A. Behavioral activation: Scheduling a manageable valued activity and reviewing its effect on mood and functioning. / Relapse prevention: Identifying likely setbacks and rehearsing which coping steps the child can use.
B. Behavioral activation: Helping a child map how a thought, feeling, and action relate in a particular situation. / Relapse prevention: Identifying likely setbacks and rehearsing which coping steps the child can use.
C. Behavioral activation: Scheduling a manageable valued activity and reviewing its effect on mood and functioning. / Relapse prevention: Building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation.
D. Behavioral activation: Identifying likely setbacks and rehearsing which coping steps the child can use. / Relapse prevention: Scheduling a manageable valued activity and reviewing its effect on mood and functioning.

0842. Which choice aligns each practice with the correct idea, Thought record or Collaborative empiricism?

A. Thought record: Using a child-friendly record to examine what happened and what the child thought at that moment. / Collaborative empiricism: Treating a belief as a testable hypothesis and reviewing what the child observes.
B. Thought record: Using drawings or concrete examples when abstract cognitive language is not yet accessible. / Collaborative empiricism: Treating a belief as a testable hypothesis and reviewing what the child observes.
C. Thought record: Treating a belief as a testable hypothesis and reviewing what the child observes. / Collaborative empiricism: Using a child-friendly record to examine what happened and what the child thought at that moment.
D. Thought record: Using a child-friendly record to examine what happened and what the child thought at that moment. / Collaborative empiricism: Helping a child map how a thought, feeling, and action relate in a particular situation.

0843. A play therapist is asked to evaluate a proposed service for a middle-school student in the learning-support meeting. The defining feature is rehearsing a believable coping phrase a child can use during a challenging moment. Which concept fits?

A. Coping self-talk
B. Cognitive restructuring
C. Behavioral activation
D. Exposure

0844. Choose the practice comparison that best separates Cognitive restructuring from Collaborative empiricism.

A. Cognitive restructuring: Examining evidence and generating a realistic alternative thought with the child. / Collaborative empiricism: Treating a belief as a testable hypothesis and reviewing what the child observes.
B. Cognitive restructuring: Examining evidence and generating a realistic alternative thought with the child. / Collaborative empiricism: Scheduling a manageable valued activity and reviewing its effect on mood and functioning.
C. Cognitive restructuring: Using drawings or concrete examples when abstract cognitive language is not yet accessible. / Collaborative empiricism: Treating a belief as a testable hypothesis and reviewing what the child observes.
D. Cognitive restructuring: Treating a belief as a testable hypothesis and reviewing what the child observes. / Collaborative empiricism: Examining evidence and generating a realistic alternative thought with the child.

0845. Which option pairs the definitions of Exposure and Developmental adaptation in CBT correctly, in that order?

A. Exposure: Gradual, planned approach to feared situations or cues to support new learning, with appropriate assessment and consent. / Developmental adaptation in CBT: Adjusting CBT language, materials, pacing, and caregiver involvement to the child's developmental capacity.
B. Exposure: Gradual, planned approach to feared situations or cues to support new learning, with appropriate assessment and consent. / Developmental adaptation in CBT: Practicing a targeted behavior in session, often with modeling, feedback, and repetition.
C. Exposure: A CBT stance in which client and therapist jointly test ideas against evidence and experience. / Developmental adaptation in CBT: Adjusting CBT language, materials, pacing, and caregiver involvement to the child's developmental capacity.
D. Exposure: Adjusting CBT language, materials, pacing, and caregiver involvement to the child's developmental capacity. / Developmental adaptation in CBT: Gradual, planned approach to feared situations or cues to support new learning, with appropriate assessment and consent.

0846. In child-focused CBT, choose the definition pair that correctly explains Behavioral activation first and Relapse prevention second.

A. Behavioral activation: Planning for future triggers, early warning signs, and continued use of skills after improvement. / Relapse prevention: Planned engagement in meaningful or rewarding activities to increase contact with positive reinforcement.
B. Behavioral activation: A teaching model linking thoughts, feelings, and behaviors as mutually influential components of experience. / Relapse prevention: Planning for future triggers, early warning signs, and continued use of skills after improvement.
C. Behavioral activation: Planned engagement in meaningful or rewarding activities to increase contact with positive reinforcement. / Relapse prevention: Planning for future triggers, early warning signs, and continued use of skills after improvement.
D. Behavioral activation: Planned engagement in meaningful or rewarding activities to increase contact with positive reinforcement. / Relapse prevention: Gradual, planned approach to feared situations or cues to support new learning, with appropriate assessment and consent.

0847. A consultant is preparing a follow-up plan for a client in early adolescence in the supervision meeting. The plan calls for examining evidence and generating a realistic alternative thought with the child. Which concept names this approach?

A. Skills rehearsal
B. Exposure
C. Behavioral activation
D. Cognitive restructuring

0848. Which comparison correctly distinguishes Exposure from Collaborative empiricism?

A. Exposure: Gradual, planned approach to feared situations or cues to support new learning, with appropriate assessment and consent. / Collaborative empiricism: A CBT stance in which client and therapist jointly test ideas against evidence and experience.
B. Exposure: Practice of helpful, realistic statements that support coping and task engagement. / Collaborative empiricism: A CBT stance in which client and therapist jointly test ideas against evidence and experience.
C. Exposure: A CBT stance in which client and therapist jointly test ideas against evidence and experience. / Collaborative empiricism: Gradual, planned approach to feared situations or cues to support new learning, with appropriate assessment and consent.
D. Exposure: Gradual, planned approach to feared situations or cues to support new learning, with appropriate assessment and consent. / Collaborative empiricism: Planning for future triggers, early warning signs, and continued use of skills after improvement.

0849. In child-focused CBT, a student confuses Cognitive triangle with Relapse prevention. Which explanation most accurately separates them?

A. Cognitive triangle: A teaching model linking thoughts, feelings, and behaviors as mutually influential components of experience. / Relapse prevention: Planning for future triggers, early warning signs, and continued use of skills after improvement.
B. Cognitive triangle: A structured aid for noticing a situation, automatic thought, emotion, evidence, and alternative perspective. / Relapse prevention: Planning for future triggers, early warning signs, and continued use of skills after improvement.
C. Cognitive triangle: Planning for future triggers, early warning signs, and continued use of skills after improvement. / Relapse prevention: A teaching model linking thoughts, feelings, and behaviors as mutually influential components of experience.
D. Cognitive triangle: A teaching model linking thoughts, feelings, and behaviors as mutually influential components of experience. / Relapse prevention: Practicing a targeted behavior in session, often with modeling, feedback, and repetition.

0850. A supervisor asks for an applied contrast between Cognitive triangle and Cognitive restructuring. Which option fits?

A. Cognitive triangle: Rehearsing a believable coping phrase a child can use during a challenging moment. / Cognitive restructuring: Examining evidence and generating a realistic alternative thought with the child.
B. Cognitive triangle: Helping a child map how a thought, feeling, and action relate in a particular situation. / Cognitive restructuring: Examining evidence and generating a realistic alternative thought with the child.
C. Cognitive triangle: Helping a child map how a thought, feeling, and action relate in a particular situation. / Cognitive restructuring: Using a child-friendly record to examine what happened and what the child thought at that moment.
D. Cognitive triangle: Examining evidence and generating a realistic alternative thought with the child. / Cognitive restructuring: Helping a child map how a thought, feeling, and action relate in a particular situation.

0851. Which option is the clearest practical expression of Developmental adaptation in CBT?

A. Building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation.
B. Helping a child map how a thought, feeling, and action relate in a particular situation.
C. Examining evidence and generating a realistic alternative thought with the child.
D. Using drawings or concrete examples when abstract cognitive language is not yet accessible.

0852. A behavior specialist reviews a plan for a young person in the parent meeting. The plan emphasizes role-playing an assertive request and providing supportive, specific feedback. Which course idea does this reflect?

A. Behavioral activation
B. Thought record
C. Collaborative empiricism
D. Skills rehearsal

0853. A supervisor asks how Exposure would appear in practice. Which choice should be selected?

A. Treating a belief as a testable hypothesis and reviewing what the child observes.
B. Helping a child map how a thought, feeling, and action relate in a particular situation.
C. Building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation.
D. Examining evidence and generating a realistic alternative thought with the child.

0854. For a student aged 15 in the community mental-health service, a counselor makes this practice the immediate priority: role-playing an assertive request and providing supportive, specific feedback. Which concept fits best?

A. Thought record
B. Skills rehearsal
C. Developmental adaptation in CBT
D. Exposure

0855. A case conference reviews a service navigator's work with a child aged 14 in the youth group: role-playing an assertive request and providing supportive, specific feedback. Which principle is central?

A. Skills rehearsal
B. Thought record
C. Developmental adaptation in CBT
D. Cognitive triangle

0856. In a supervision review, a parent educator describes work with a young person aged 18 in the learning-support meeting: using a child-friendly record to examine what happened and what the child thought at that moment. What concept is illustrated?

A. Cognitive triangle
B. Developmental adaptation in CBT
C. Cognitive restructuring
D. Thought record

0857. Which option correctly matches each concept to its practice focus: Thought record and Skills rehearsal?

A. Thought record: Rehearsing a believable coping phrase a child can use during a challenging moment. / Skills rehearsal: Role-playing an assertive request and providing supportive, specific feedback.
B. Thought record: Using a child-friendly record to examine what happened and what the child thought at that moment. / Skills rehearsal: Role-playing an assertive request and providing supportive, specific feedback.
C. Thought record: Using a child-friendly record to examine what happened and what the child thought at that moment. / Skills rehearsal: Using drawings or concrete examples when abstract cognitive language is not yet accessible.
D. Thought record: Role-playing an assertive request and providing supportive, specific feedback. / Skills rehearsal: Using a child-friendly record to examine what happened and what the child thought at that moment.

0858. Which comparison would correct a trainee's misunderstanding of Cognitive restructuring versus Skills rehearsal?

A. Cognitive restructuring: Collaboratively evaluating and developing more balanced or useful interpretations rather than imposing positive thinking. / Skills rehearsal: Practicing a targeted behavior in session, often with modeling, feedback, and repetition.
B. Cognitive restructuring: Practicing a targeted behavior in session, often with modeling, feedback, and repetition. / Skills rehearsal: Collaboratively evaluating and developing more balanced or useful interpretations rather than imposing positive thinking.
C. Cognitive restructuring: Planned engagement in meaningful or rewarding activities to increase contact with positive reinforcement. / Skills rehearsal: Practicing a targeted behavior in session, often with modeling, feedback, and repetition.
D. Cognitive restructuring: Collaboratively evaluating and developing more balanced or useful interpretations rather than imposing positive thinking. / Skills rehearsal: A CBT stance in which client and therapist jointly test ideas against evidence and experience.

0859. A research trainee is asked what should shape a young person aged 16's support in the telehealth session. The proposed focus is treating a belief as a testable hypothesis and reviewing what the child observes. Which principle does it represent?

A. Coping self-talk
B. Cognitive restructuring
C. Cognitive triangle
D. Collaborative empiricism

0860. In the community service agency, a school counselor describes the most appropriate support for a young person aged 16 as building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation. Which framework is being applied?

A. Exposure
B. Cognitive restructuring
C. Coping self-talk
D. Cognitive triangle

0861. A member of a clinical team is supporting a student aged 15 in the school counseling office. The key practice is using drawings or concrete examples when abstract cognitive language is not yet accessible. Which course concept is most relevant?

A. Thought record
B. Skills rehearsal
C. Behavioral activation
D. Developmental adaptation in CBT

0862. A member of a clinical team is preparing a follow-up plan for a child aged 7 in the youth group. The plan calls for treating a belief as a testable hypothesis and reviewing what the child observes. Which concept names this approach?

A. Cognitive triangle
B. Thought record
C. Skills rehearsal
D. Collaborative empiricism

0863. A trainee must explain Exposure. Which answer is accurate?

A. A structured aid for noticing a situation, automatic thought, emotion, evidence, and alternative perspective.
B. Collaboratively evaluating and developing more balanced or useful interpretations rather than imposing positive thinking.
C. Planning for future triggers, early warning signs, and continued use of skills after improvement.
D. Gradual, planned approach to feared situations or cues to support new learning, with appropriate assessment and consent.

0864. At a case-planning meeting, the behavior specialist proposes using a child-friendly record to examine what happened and what the child thought at that moment. for a child aged 11 seen in the multidisciplinary case conference. Which concept does this illustrate?

A. Thought record
B. Coping self-talk
C. Collaborative empiricism
D. Developmental adaptation in CBT

0865. A doctoral student reads the following description. Which concept does it define? Practice of helpful, realistic statements that support coping and task engagement.

A. Coping self-talk
B. Collaborative empiricism
C. Skills rehearsal
D. Cognitive triangle

0866. Which description belongs with the term Developmental adaptation in CBT?

A. Adjusting CBT language, materials, pacing, and caregiver involvement to the child's developmental capacity.
B. Practicing a targeted behavior in session, often with modeling, feedback, and repetition.
C. A teaching model linking thoughts, feelings, and behaviors as mutually influential components of experience.
D. Gradual, planned approach to feared situations or cues to support new learning, with appropriate assessment and consent.

0867. In a supervision quiz, how should Behavioral activation be distinguished from Collaborative empiricism?

A. Behavioral activation: Planning for future triggers, early warning signs, and continued use of skills after improvement. / Collaborative empiricism: A CBT stance in which client and therapist jointly test ideas against evidence and experience.
B. Behavioral activation: Planned engagement in meaningful or rewarding activities to increase contact with positive reinforcement. / Collaborative empiricism: A structured aid for noticing a situation, automatic thought, emotion, evidence, and alternative perspective.
C. Behavioral activation: A CBT stance in which client and therapist jointly test ideas against evidence and experience. / Collaborative empiricism: Planned engagement in meaningful or rewarding activities to increase contact with positive reinforcement.
D. Behavioral activation: Planned engagement in meaningful or rewarding activities to increase contact with positive reinforcement. / Collaborative empiricism: A CBT stance in which client and therapist jointly test ideas against evidence and experience.

0868. How are Coping self-talk and Developmental adaptation in CBT most accurately differentiated in this curriculum?

A. Coping self-talk: A teaching model linking thoughts, feelings, and behaviors as mutually influential components of experience. / Developmental adaptation in CBT: Adjusting CBT language, materials, pacing, and caregiver involvement to the child's developmental capacity.
B. Coping self-talk: Adjusting CBT language, materials, pacing, and caregiver involvement to the child's developmental capacity. / Developmental adaptation in CBT: Practice of helpful, realistic statements that support coping and task engagement.
C. Coping self-talk: Practice of helpful, realistic statements that support coping and task engagement. / Developmental adaptation in CBT: Practicing a targeted behavior in session, often with modeling, feedback, and repetition.
D. Coping self-talk: Practice of helpful, realistic statements that support coping and task engagement. / Developmental adaptation in CBT: Adjusting CBT language, materials, pacing, and caregiver involvement to the child's developmental capacity.

0869. What is the central meaning of Behavioral activation?

A. Adjusting CBT language, materials, pacing, and caregiver involvement to the child's developmental capacity.
B. Practicing a targeted behavior in session, often with modeling, feedback, and repetition.
C. Planning for future triggers, early warning signs, and continued use of skills after improvement.
D. Planned engagement in meaningful or rewarding activities to increase contact with positive reinforcement.

0870. A team must select a support approach for a child aged 11 at the family session. The family therapist recommends helping a child map how a thought, feeling, and action relate in a particular situation. Which idea is most relevant?

A. Coping self-talk
B. Skills rehearsal
C. Collaborative empiricism
D. Cognitive triangle

0871. A case conference asks for a distinction between Cognitive triangle and Skills rehearsal. Which answer is sound?

A. Cognitive triangle: A teaching model linking thoughts, feelings, and behaviors as mutually influential components of experience. / Skills rehearsal: Practicing a targeted behavior in session, often with modeling, feedback, and repetition.
B. Cognitive triangle: Collaboratively evaluating and developing more balanced or useful interpretations rather than imposing positive thinking. / Skills rehearsal: Practicing a targeted behavior in session, often with modeling, feedback, and repetition.
C. Cognitive triangle: A teaching model linking thoughts, feelings, and behaviors as mutually influential components of experience. / Skills rehearsal: Practice of helpful, realistic statements that support coping and task engagement.
D. Cognitive triangle: Practicing a targeted behavior in session, often with modeling, feedback, and repetition. / Skills rehearsal: A teaching model linking thoughts, feelings, and behaviors as mutually influential components of experience.

0872. Which choice aligns each practice with the correct idea, Cognitive restructuring or Thought record?

A. Cognitive restructuring: Examining evidence and generating a realistic alternative thought with the child. / Thought record: Using drawings or concrete examples when abstract cognitive language is not yet accessible.
B. Cognitive restructuring: Examining evidence and generating a realistic alternative thought with the child. / Thought record: Using a child-friendly record to examine what happened and what the child thought at that moment.
C. Cognitive restructuring: Treating a belief as a testable hypothesis and reviewing what the child observes. / Thought record: Using a child-friendly record to examine what happened and what the child thought at that moment.
D. Cognitive restructuring: Using a child-friendly record to examine what happened and what the child thought at that moment. / Thought record: Examining evidence and generating a realistic alternative thought with the child.

0873. For a client in early adolescence in the outpatient clinic, a play therapist makes this practice the immediate priority: using a child-friendly record to examine what happened and what the child thought at that moment. Which concept fits best?

A. Behavioral activation
B. Thought record
C. Relapse prevention
D. Cognitive restructuring

0874. Which choice aligns each practice with the correct idea, Cognitive restructuring or Behavioral activation?

A. Cognitive restructuring: Examining evidence and generating a realistic alternative thought with the child. / Behavioral activation: Scheduling a manageable valued activity and reviewing its effect on mood and functioning.
B. Cognitive restructuring: Role-playing an assertive request and providing supportive, specific feedback. / Behavioral activation: Scheduling a manageable valued activity and reviewing its effect on mood and functioning.
C. Cognitive restructuring: Scheduling a manageable valued activity and reviewing its effect on mood and functioning. / Behavioral activation: Examining evidence and generating a realistic alternative thought with the child.
D. Cognitive restructuring: Examining evidence and generating a realistic alternative thought with the child. / Behavioral activation: Using drawings or concrete examples when abstract cognitive language is not yet accessible.

0875. In child-focused CBT, which option pairs the definitions of Exposure and Relapse prevention correctly, in that order?

A. Exposure: Gradual, planned approach to feared situations or cues to support new learning, with appropriate assessment and consent. / Relapse prevention: Practicing a targeted behavior in session, often with modeling, feedback, and repetition.
B. Exposure: Planning for future triggers, early warning signs, and continued use of skills after improvement. / Relapse prevention: Gradual, planned approach to feared situations or cues to support new learning, with appropriate assessment and consent.
C. Exposure: Gradual, planned approach to feared situations or cues to support new learning, with appropriate assessment and consent. / Relapse prevention: Planning for future triggers, early warning signs, and continued use of skills after improvement.
D. Exposure: A structured aid for noticing a situation, automatic thought, emotion, evidence, and alternative perspective. / Relapse prevention: Planning for future triggers, early warning signs, and continued use of skills after improvement.

0876. How are Coping self-talk and Skills rehearsal most accurately differentiated in this curriculum?

A. Coping self-talk: Collaboratively evaluating and developing more balanced or useful interpretations rather than imposing positive thinking. / Skills rehearsal: Practicing a targeted behavior in session, often with modeling, feedback, and repetition.
B. Coping self-talk: Practice of helpful, realistic statements that support coping and task engagement. / Skills rehearsal: A CBT stance in which client and therapist jointly test ideas against evidence and experience.
C. Coping self-talk: Practicing a targeted behavior in session, often with modeling, feedback, and repetition. / Skills rehearsal: Practice of helpful, realistic statements that support coping and task engagement.
D. Coping self-talk: Practice of helpful, realistic statements that support coping and task engagement. / Skills rehearsal: Practicing a targeted behavior in session, often with modeling, feedback, and repetition.

0877. A student confuses Thought record with Coping self-talk. Which explanation most accurately separates them?

A. Thought record: A teaching model linking thoughts, feelings, and behaviors as mutually influential components of experience. / Coping self-talk: Practice of helpful, realistic statements that support coping and task engagement.
B. Thought record: Practice of helpful, realistic statements that support coping and task engagement. / Coping self-talk: A structured aid for noticing a situation, automatic thought, emotion, evidence, and alternative perspective.
C. Thought record: A structured aid for noticing a situation, automatic thought, emotion, evidence, and alternative perspective. / Coping self-talk: Planning for future triggers, early warning signs, and continued use of skills after improvement.
D. Thought record: A structured aid for noticing a situation, automatic thought, emotion, evidence, and alternative perspective. / Coping self-talk: Practice of helpful, realistic statements that support coping and task engagement.

0878. In child-focused CBT, which option correctly matches each concept to its practice focus: Behavioral activation and Relapse prevention?

A. Behavioral activation: Scheduling a manageable valued activity and reviewing its effect on mood and functioning. / Relapse prevention: Identifying likely setbacks and rehearsing which coping steps the child can use.
B. Behavioral activation: Scheduling a manageable valued activity and reviewing its effect on mood and functioning. / Relapse prevention: Building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation.
C. Behavioral activation: Identifying likely setbacks and rehearsing which coping steps the child can use. / Relapse prevention: Scheduling a manageable valued activity and reviewing its effect on mood and functioning.
D. Behavioral activation: Helping a child map how a thought, feeling, and action relate in a particular situation. / Relapse prevention: Identifying likely setbacks and rehearsing which coping steps the child can use.

0879. A supervisor asks how Coping self-talk would appear in practice. Which choice should be selected?

A. Building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation.
B. Using a child-friendly record to examine what happened and what the child thought at that moment.
C. Identifying likely setbacks and rehearsing which coping steps the child can use.
D. Rehearsing a believable coping phrase a child can use during a challenging moment.

0880. In child-focused CBT, in the student-support meeting, the agreed focus for a program coordinator working with a child of elementary-school age is identifying likely setbacks and rehearsing which coping steps the child can use. Which concept names this focus?

A. Relapse prevention
B. Thought record
C. Cognitive triangle
D. Behavioral activation

0881. A play therapist reviews a plan for a young person aged 13 in the telehealth session. The plan emphasizes helping a child map how a thought, feeling, and action relate in a particular situation. Which course idea does this reflect?

A. Developmental adaptation in CBT
B. Cognitive triangle
C. Collaborative empiricism
D. Cognitive restructuring

0882. A case discussion concerns a child aged 11 and a family therapist in the family session. The practitioner is considering helping a child map how a thought, feeling, and action relate in a particular situation. Which principle is involved?

A. Behavioral activation
B. Cognitive triangle
C. Relapse prevention
D. Coping self-talk

0883. Which course concept is defined as follows: Practicing a targeted behavior in session, often with modeling, feedback, and repetition.

A. Behavioral activation
B. Thought record
C. Skills rehearsal
D. Exposure

0884. Which option correctly matches each concept to its practice focus: Cognitive triangle and Thought record?

A. Cognitive triangle: Helping a child map how a thought, feeling, and action relate in a particular situation. / Thought record: Examining evidence and generating a realistic alternative thought with the child.
B. Cognitive triangle: Helping a child map how a thought, feeling, and action relate in a particular situation. / Thought record: Using a child-friendly record to examine what happened and what the child thought at that moment.
C. Cognitive triangle: Using a child-friendly record to examine what happened and what the child thought at that moment. / Thought record: Helping a child map how a thought, feeling, and action relate in a particular situation.
D. Cognitive triangle: Role-playing an assertive request and providing supportive, specific feedback. / Thought record: Using a child-friendly record to examine what happened and what the child thought at that moment.

0885. In the counseling practicum, a team asks how a school counselor can support a child of elementary-school age. One proposed action is helping a child map how a thought, feeling, and action relate in a particular situation. Which idea does it represent?

A. Cognitive triangle
B. Behavioral activation
C. Skills rehearsal
D. Collaborative empiricism

0886. In child-focused CBT, choose the response that best puts Relapse prevention into practice.

A. Using a child-friendly record to examine what happened and what the child thought at that moment.
B. Rehearsing a believable coping phrase a child can use during a challenging moment.
C. Identifying likely setbacks and rehearsing which coping steps the child can use.
D. Treating a belief as a testable hypothesis and reviewing what the child observes.

0887. While consulting in the school-based service, a assessment clinician supports a young person aged 10 by using this approach: building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation. Which concept is being applied?

A. Skills rehearsal
B. Collaborative empiricism
C. Thought record
D. Exposure

0888. Which statement accurately contrasts the course concepts Thought record and Developmental adaptation in CBT?

A. Thought record: Adjusting CBT language, materials, pacing, and caregiver involvement to the child's developmental capacity. / Developmental adaptation in CBT: A structured aid for noticing a situation, automatic thought, emotion, evidence, and alternative perspective.
B. Thought record: A structured aid for noticing a situation, automatic thought, emotion, evidence, and alternative perspective. / Developmental adaptation in CBT: Adjusting CBT language, materials, pacing, and caregiver involvement to the child's developmental capacity.
C. Thought record: Planning for future triggers, early warning signs, and continued use of skills after improvement. / Developmental adaptation in CBT: Adjusting CBT language, materials, pacing, and caregiver involvement to the child's developmental capacity.
D. Thought record: A structured aid for noticing a situation, automatic thought, emotion, evidence, and alternative perspective. / Developmental adaptation in CBT: Practicing a targeted behavior in session, often with modeling, feedback, and repetition.

0889. A therapist is asked what should shape a student aged 17's support in the caregiver consultation. The proposed focus is helping a child map how a thought, feeling, and action relate in a particular situation. Which principle does it represent?

A. Cognitive triangle
B. Behavioral activation
C. Skills rehearsal
D. Collaborative empiricism

0890. Which pair of actions illustrates Thought record and Coping self-talk, respectively?

A. Thought record: Using a child-friendly record to examine what happened and what the child thought at that moment. / Coping self-talk: Identifying likely setbacks and rehearsing which coping steps the child can use.
B. Thought record: Using a child-friendly record to examine what happened and what the child thought at that moment. / Coping self-talk: Rehearsing a believable coping phrase a child can use during a challenging moment.
C. Thought record: Helping a child map how a thought, feeling, and action relate in a particular situation. / Coping self-talk: Rehearsing a believable coping phrase a child can use during a challenging moment.
D. Thought record: Rehearsing a believable coping phrase a child can use during a challenging moment. / Coping self-talk: Using a child-friendly record to examine what happened and what the child thought at that moment.

0891. Which option pairs the definitions of Collaborative empiricism and Developmental adaptation in CBT correctly, in that order?

A. Collaborative empiricism: A CBT stance in which client and therapist jointly test ideas against evidence and experience. / Developmental adaptation in CBT: Adjusting CBT language, materials, pacing, and caregiver involvement to the child's developmental capacity.
B. Collaborative empiricism: A CBT stance in which client and therapist jointly test ideas against evidence and experience. / Developmental adaptation in CBT: Collaboratively evaluating and developing more balanced or useful interpretations rather than imposing positive thinking.
C. Collaborative empiricism: Adjusting CBT language, materials, pacing, and caregiver involvement to the child's developmental capacity. / Developmental adaptation in CBT: A CBT stance in which client and therapist jointly test ideas against evidence and experience.
D. Collaborative empiricism: Gradual, planned approach to feared situations or cues to support new learning, with appropriate assessment and consent. / Developmental adaptation in CBT: Adjusting CBT language, materials, pacing, and caregiver involvement to the child's developmental capacity.

0892. In child-focused CBT, a supervised trainee is preparing a follow-up plan for a preadolescent child in the after-school program. The plan calls for identifying likely setbacks and rehearsing which coping steps the child can use. Which concept names this approach?

A. Coping self-talk
B. Relapse prevention
C. Exposure
D. Cognitive restructuring

0893. How should a practitioner distinguish the applications of Skills rehearsal and Developmental adaptation in CBT?

A. Skills rehearsal: Using drawings or concrete examples when abstract cognitive language is not yet accessible. / Developmental adaptation in CBT: Role-playing an assertive request and providing supportive, specific feedback.
B. Skills rehearsal: Role-playing an assertive request and providing supportive, specific feedback. / Developmental adaptation in CBT: Using drawings or concrete examples when abstract cognitive language is not yet accessible.
C. Skills rehearsal: Role-playing an assertive request and providing supportive, specific feedback. / Developmental adaptation in CBT: Rehearsing a believable coping phrase a child can use during a challenging moment.
D. Skills rehearsal: Building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation. / Developmental adaptation in CBT: Using drawings or concrete examples when abstract cognitive language is not yet accessible.

0894. Which statement accurately contrasts the course concepts Cognitive restructuring and Exposure?

A. Cognitive restructuring: Collaboratively evaluating and developing more balanced or useful interpretations rather than imposing positive thinking. / Exposure: A teaching model linking thoughts, feelings, and behaviors as mutually influential components of experience.
B. Cognitive restructuring: A structured aid for noticing a situation, automatic thought, emotion, evidence, and alternative perspective. / Exposure: Gradual, planned approach to feared situations or cues to support new learning, with appropriate assessment and consent.
C. Cognitive restructuring: Gradual, planned approach to feared situations or cues to support new learning, with appropriate assessment and consent. / Exposure: Collaboratively evaluating and developing more balanced or useful interpretations rather than imposing positive thinking.
D. Cognitive restructuring: Collaboratively evaluating and developing more balanced or useful interpretations rather than imposing positive thinking. / Exposure: Gradual, planned approach to feared situations or cues to support new learning, with appropriate assessment and consent.

0895. Choose the definition pair that correctly explains Thought record first and Developmental adaptation in CBT second.

A. Thought record: A structured aid for noticing a situation, automatic thought, emotion, evidence, and alternative perspective. / Developmental adaptation in CBT: Practicing a targeted behavior in session, often with modeling, feedback, and repetition.
B. Thought record: Adjusting CBT language, materials, pacing, and caregiver involvement to the child's developmental capacity. / Developmental adaptation in CBT: A structured aid for noticing a situation, automatic thought, emotion, evidence, and alternative perspective.
C. Thought record: A structured aid for noticing a situation, automatic thought, emotion, evidence, and alternative perspective. / Developmental adaptation in CBT: Adjusting CBT language, materials, pacing, and caregiver involvement to the child's developmental capacity.
D. Thought record: Planning for future triggers, early warning signs, and continued use of skills after improvement. / Developmental adaptation in CBT: Adjusting CBT language, materials, pacing, and caregiver involvement to the child's developmental capacity.

0896. Which applied comparison correctly identifies what belongs to Cognitive restructuring versus Thought record?

A. Cognitive restructuring: Examining evidence and generating a realistic alternative thought with the child. / Thought record: Using a child-friendly record to examine what happened and what the child thought at that moment.
B. Cognitive restructuring: Treating a belief as a testable hypothesis and reviewing what the child observes. / Thought record: Using a child-friendly record to examine what happened and what the child thought at that moment.
C. Cognitive restructuring: Using a child-friendly record to examine what happened and what the child thought at that moment. / Thought record: Examining evidence and generating a realistic alternative thought with the child.
D. Cognitive restructuring: Examining evidence and generating a realistic alternative thought with the child. / Thought record: Using drawings or concrete examples when abstract cognitive language is not yet accessible.

0897. How should a practitioner distinguish the applications of Skills rehearsal and Collaborative empiricism?

A. Skills rehearsal: Treating a belief as a testable hypothesis and reviewing what the child observes. / Collaborative empiricism: Role-playing an assertive request and providing supportive, specific feedback.
B. Skills rehearsal: Role-playing an assertive request and providing supportive, specific feedback. / Collaborative empiricism: Treating a belief as a testable hypothesis and reviewing what the child observes.
C. Skills rehearsal: Helping a child map how a thought, feeling, and action relate in a particular situation. / Collaborative empiricism: Treating a belief as a testable hypothesis and reviewing what the child observes.
D. Skills rehearsal: Role-playing an assertive request and providing supportive, specific feedback. / Collaborative empiricism: Scheduling a manageable valued activity and reviewing its effect on mood and functioning.

0898. Which applied comparison correctly identifies what belongs to Thought record versus Developmental adaptation in CBT?

A. Thought record: Using a child-friendly record to examine what happened and what the child thought at that moment. / Developmental adaptation in CBT: Using drawings or concrete examples when abstract cognitive language is not yet accessible.
B. Thought record: Identifying likely setbacks and rehearsing which coping steps the child can use. / Developmental adaptation in CBT: Using drawings or concrete examples when abstract cognitive language is not yet accessible.
C. Thought record: Using a child-friendly record to examine what happened and what the child thought at that moment. / Developmental adaptation in CBT: Role-playing an assertive request and providing supportive, specific feedback.
D. Thought record: Using drawings or concrete examples when abstract cognitive language is not yet accessible. / Developmental adaptation in CBT: Using a child-friendly record to examine what happened and what the child thought at that moment.

0899. Choose the response that best puts Thought record into practice.

A. Rehearsing a believable coping phrase a child can use during a challenging moment.
B. Identifying likely setbacks and rehearsing which coping steps the child can use.
C. Using a child-friendly record to examine what happened and what the child thought at that moment.
D. Treating a belief as a testable hypothesis and reviewing what the child observes.

0900. Which pair of actions illustrates Skills rehearsal and Collaborative empiricism, respectively?

A. Skills rehearsal: Role-playing an assertive request and providing supportive, specific feedback. / Collaborative empiricism: Treating a belief as a testable hypothesis and reviewing what the child observes.
B. Skills rehearsal: Treating a belief as a testable hypothesis and reviewing what the child observes. / Collaborative empiricism: Role-playing an assertive request and providing supportive, specific feedback.
C. Skills rehearsal: Role-playing an assertive request and providing supportive, specific feedback. / Collaborative empiricism: Scheduling a manageable valued activity and reviewing its effect on mood and functioning.
D. Skills rehearsal: Helping a child map how a thought, feeling, and action relate in a particular situation. / Collaborative empiricism: Treating a belief as a testable hypothesis and reviewing what the child observes.

0901. Choose the definition pair that correctly explains Cognitive triangle first and Behavioral activation second.

A. Cognitive triangle: Planned engagement in meaningful or rewarding activities to increase contact with positive reinforcement. / Behavioral activation: A teaching model linking thoughts, feelings, and behaviors as mutually influential components of experience.
B. Cognitive triangle: A teaching model linking thoughts, feelings, and behaviors as mutually influential components of experience. / Behavioral activation: Adjusting CBT language, materials, pacing, and caregiver involvement to the child's developmental capacity.
C. Cognitive triangle: A teaching model linking thoughts, feelings, and behaviors as mutually influential components of experience. / Behavioral activation: Planned engagement in meaningful or rewarding activities to increase contact with positive reinforcement.
D. Cognitive triangle: Planning for future triggers, early warning signs, and continued use of skills after improvement. / Behavioral activation: Planned engagement in meaningful or rewarding activities to increase contact with positive reinforcement.

0902. Which option correctly matches each concept to its practice focus: Cognitive triangle and Behavioral activation?

A. Cognitive triangle: Helping a child map how a thought, feeling, and action relate in a particular situation. / Behavioral activation: Using drawings or concrete examples when abstract cognitive language is not yet accessible.
B. Cognitive triangle: Identifying likely setbacks and rehearsing which coping steps the child can use. / Behavioral activation: Scheduling a manageable valued activity and reviewing its effect on mood and functioning.
C. Cognitive triangle: Scheduling a manageable valued activity and reviewing its effect on mood and functioning. / Behavioral activation: Helping a child map how a thought, feeling, and action relate in a particular situation.
D. Cognitive triangle: Helping a child map how a thought, feeling, and action relate in a particular situation. / Behavioral activation: Scheduling a manageable valued activity and reviewing its effect on mood and functioning.

0903. In child-focused CBT, choose the practice comparison that best separates Thought record from Relapse prevention.

A. Thought record: Using a child-friendly record to examine what happened and what the child thought at that moment. / Relapse prevention: Identifying likely setbacks and rehearsing which coping steps the child can use.
B. Thought record: Identifying likely setbacks and rehearsing which coping steps the child can use. / Relapse prevention: Using a child-friendly record to examine what happened and what the child thought at that moment.
C. Thought record: Using a child-friendly record to examine what happened and what the child thought at that moment. / Relapse prevention: Role-playing an assertive request and providing supportive, specific feedback.
D. Thought record: Scheduling a manageable valued activity and reviewing its effect on mood and functioning. / Relapse prevention: Identifying likely setbacks and rehearsing which coping steps the child can use.

0904. In child-focused CBT, which named construct is captured by this account? Planning for future triggers, early warning signs, and continued use of skills after improvement.

A. Coping self-talk
B. Cognitive triangle
C. Relapse prevention
D. Thought record

0905. A trainee must explain Cognitive triangle. Which answer is accurate?

A. A teaching model linking thoughts, feelings, and behaviors as mutually influential components of experience.
B. Planning for future triggers, early warning signs, and continued use of skills after improvement.
C. Practicing a targeted behavior in session, often with modeling, feedback, and repetition.
D. Practice of helpful, realistic statements that support coping and task engagement.

0906. In child-focused CBT, a school support specialist is asked to evaluate a proposed service for a client in early adolescence in the youth group. The defining feature is identifying likely setbacks and rehearsing which coping steps the child can use. Which concept fits?

A. Collaborative empiricism
B. Relapse prevention
C. Exposure
D. Skills rehearsal

0907. Which choice aligns each practice with the correct idea, Collaborative empiricism or Developmental adaptation in CBT?

A. Collaborative empiricism: Treating a belief as a testable hypothesis and reviewing what the child observes. / Developmental adaptation in CBT: Examining evidence and generating a realistic alternative thought with the child.
B. Collaborative empiricism: Building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation. / Developmental adaptation in CBT: Using drawings or concrete examples when abstract cognitive language is not yet accessible.
C. Collaborative empiricism: Using drawings or concrete examples when abstract cognitive language is not yet accessible. / Developmental adaptation in CBT: Treating a belief as a testable hypothesis and reviewing what the child observes.
D. Collaborative empiricism: Treating a belief as a testable hypothesis and reviewing what the child observes. / Developmental adaptation in CBT: Using drawings or concrete examples when abstract cognitive language is not yet accessible.

0908. Which option pairs the definitions of Behavioral activation and Skills rehearsal correctly, in that order?

A. Behavioral activation: Adjusting CBT language, materials, pacing, and caregiver involvement to the child's developmental capacity. / Skills rehearsal: Practicing a targeted behavior in session, often with modeling, feedback, and repetition.
B. Behavioral activation: Planned engagement in meaningful or rewarding activities to increase contact with positive reinforcement. / Skills rehearsal: Practice of helpful, realistic statements that support coping and task engagement.
C. Behavioral activation: Planned engagement in meaningful or rewarding activities to increase contact with positive reinforcement. / Skills rehearsal: Practicing a targeted behavior in session, often with modeling, feedback, and repetition.
D. Behavioral activation: Practicing a targeted behavior in session, often with modeling, feedback, and repetition. / Skills rehearsal: Planned engagement in meaningful or rewarding activities to increase contact with positive reinforcement.

0909. At the after-school program, a program coordinator reviews whether a plan for a school-age child is appropriate. The relevant practice is using drawings or concrete examples when abstract cognitive language is not yet accessible. Which concept is tested?

A. Skills rehearsal
B. Collaborative empiricism
C. Developmental adaptation in CBT
D. Behavioral activation

0910. During service review in the school counseling office, a community practitioner describes scheduling a manageable valued activity and reviewing its effect on mood and functioning. for a young person aged 16. Which course idea is most applicable?

A. Cognitive triangle
B. Skills rehearsal
C. Behavioral activation
D. Cognitive restructuring

0911. In child-focused CBT, in the student wellness team, a team asks how a consulting counselor can support a young person aged 13. One proposed action is identifying likely setbacks and rehearsing which coping steps the child can use. Which idea does it represent?

A. Relapse prevention
B. Thought record
C. Coping self-talk
D. Exposure

0912. A doctoral student reads the following description. Which concept does it define? A structured aid for noticing a situation, automatic thought, emotion, evidence, and alternative perspective.

A. Relapse prevention
B. Collaborative empiricism
C. Thought record
D. Coping self-talk

0913. Which paired example correctly applies Coping self-talk first and Collaborative empiricism second?

A. Coping self-talk: Rehearsing a believable coping phrase a child can use during a challenging moment. / Collaborative empiricism: Treating a belief as a testable hypothesis and reviewing what the child observes.
B. Coping self-talk: Rehearsing a believable coping phrase a child can use during a challenging moment. / Collaborative empiricism: Scheduling a manageable valued activity and reviewing its effect on mood and functioning.
C. Coping self-talk: Treating a belief as a testable hypothesis and reviewing what the child observes. / Collaborative empiricism: Rehearsing a believable coping phrase a child can use during a challenging moment.
D. Coping self-talk: Building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation. / Collaborative empiricism: Treating a belief as a testable hypothesis and reviewing what the child observes.

0914. In a professional consultation about a school-age child, the supervised trainee describes this response in the multidisciplinary case conference: scheduling a manageable valued activity and reviewing its effect on mood and functioning. Which term is most apt?

A. Coping self-talk
B. Behavioral activation
C. Thought record
D. Developmental adaptation in CBT

0915. Which choice aligns each practice with the correct idea, Cognitive triangle or Exposure?

A. Cognitive triangle: Helping a child map how a thought, feeling, and action relate in a particular situation. / Exposure: Building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation.
B. Cognitive triangle: Identifying likely setbacks and rehearsing which coping steps the child can use. / Exposure: Building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation.
C. Cognitive triangle: Helping a child map how a thought, feeling, and action relate in a particular situation. / Exposure: Examining evidence and generating a realistic alternative thought with the child.
D. Cognitive triangle: Building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation. / Exposure: Helping a child map how a thought, feeling, and action relate in a particular situation.

0916. A case discussion concerns a child aged 14 and a caregiver working with a counselor in the school-based service. The practitioner is considering using a child-friendly record to examine what happened and what the child thought at that moment. Which principle is involved?

A. Thought record
B. Relapse prevention
C. Developmental adaptation in CBT
D. Cognitive restructuring

0917. In a supervision quiz, how should Behavioral activation be distinguished from Coping self-talk?

A. Behavioral activation: Planned engagement in meaningful or rewarding activities to increase contact with positive reinforcement. / Coping self-talk: Practice of helpful, realistic statements that support coping and task engagement.
B. Behavioral activation: Practice of helpful, realistic statements that support coping and task engagement. / Coping self-talk: Planned engagement in meaningful or rewarding activities to increase contact with positive reinforcement.
C. Behavioral activation: Collaboratively evaluating and developing more balanced or useful interpretations rather than imposing positive thinking. / Coping self-talk: Practice of helpful, realistic statements that support coping and task engagement.
D. Behavioral activation: Planned engagement in meaningful or rewarding activities to increase contact with positive reinforcement. / Coping self-talk: Planning for future triggers, early warning signs, and continued use of skills after improvement.

0918. A parent educator presents a support plan for a older adolescent client at the outpatient clinic. Its central feature is building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation. Which concept should be named?

A. Behavioral activation
B. Thought record
C. Coping self-talk
D. Exposure

0919. Which statement accurately contrasts the course concepts Cognitive triangle and Exposure?

A. Cognitive triangle: Gradual, planned approach to feared situations or cues to support new learning, with appropriate assessment and consent. / Exposure: A teaching model linking thoughts, feelings, and behaviors as mutually influential components of experience.
B. Cognitive triangle: A teaching model linking thoughts, feelings, and behaviors as mutually influential components of experience. / Exposure: Collaboratively evaluating and developing more balanced or useful interpretations rather than imposing positive thinking.
C. Cognitive triangle: A teaching model linking thoughts, feelings, and behaviors as mutually influential components of experience. / Exposure: Gradual, planned approach to feared situations or cues to support new learning, with appropriate assessment and consent.
D. Cognitive triangle: Planning for future triggers, early warning signs, and continued use of skills after improvement. / Exposure: Gradual, planned approach to feared situations or cues to support new learning, with appropriate assessment and consent.

0920. Which applied comparison correctly identifies what belongs to Cognitive triangle versus Coping self-talk?

A. Cognitive triangle: Using a child-friendly record to examine what happened and what the child thought at that moment. / Coping self-talk: Rehearsing a believable coping phrase a child can use during a challenging moment.
B. Cognitive triangle: Rehearsing a believable coping phrase a child can use during a challenging moment. / Coping self-talk: Helping a child map how a thought, feeling, and action relate in a particular situation.
C. Cognitive triangle: Helping a child map how a thought, feeling, and action relate in a particular situation. / Coping self-talk: Examining evidence and generating a realistic alternative thought with the child.
D. Cognitive triangle: Helping a child map how a thought, feeling, and action relate in a particular situation. / Coping self-talk: Rehearsing a believable coping phrase a child can use during a challenging moment.

0921. Choose the practice comparison that best separates Coping self-talk from Skills rehearsal.

A. Coping self-talk: Rehearsing a believable coping phrase a child can use during a challenging moment. / Skills rehearsal: Treating a belief as a testable hypothesis and reviewing what the child observes.
B. Coping self-talk: Rehearsing a believable coping phrase a child can use during a challenging moment. / Skills rehearsal: Role-playing an assertive request and providing supportive, specific feedback.
C. Coping self-talk: Examining evidence and generating a realistic alternative thought with the child. / Skills rehearsal: Role-playing an assertive request and providing supportive, specific feedback.
D. Coping self-talk: Role-playing an assertive request and providing supportive, specific feedback. / Skills rehearsal: Rehearsing a believable coping phrase a child can use during a challenging moment.

0922. A case discussion concerns a student aged 17 and a school-based clinician in the outpatient clinic. The practitioner is considering using drawings or concrete examples when abstract cognitive language is not yet accessible. Which principle is involved?

A. Coping self-talk
B. Collaborative empiricism
C. Developmental adaptation in CBT
D. Thought record

0923. In the school-based service, a group facilitator describes the most appropriate support for a client in late adolescence as examining evidence and generating a realistic alternative thought with the child. Which framework is being applied?

A. Cognitive triangle
B. Behavioral activation
C. Cognitive restructuring
D. Skills rehearsal

0924. Which choice aligns each practice with the correct idea, Behavioral activation or Coping self-talk?

A. Behavioral activation: Scheduling a manageable valued activity and reviewing its effect on mood and functioning. / Coping self-talk: Identifying likely setbacks and rehearsing which coping steps the child can use.
B. Behavioral activation: Rehearsing a believable coping phrase a child can use during a challenging moment. / Coping self-talk: Scheduling a manageable valued activity and reviewing its effect on mood and functioning.
C. Behavioral activation: Examining evidence and generating a realistic alternative thought with the child. / Coping self-talk: Rehearsing a believable coping phrase a child can use during a challenging moment.
D. Behavioral activation: Scheduling a manageable valued activity and reviewing its effect on mood and functioning. / Coping self-talk: Rehearsing a believable coping phrase a child can use during a challenging moment.

0925. Which option preserves the correct meaning of both Coping self-talk and Collaborative empiricism?

A. Coping self-talk: Gradual, planned approach to feared situations or cues to support new learning, with appropriate assessment and consent. / Collaborative empiricism: A CBT stance in which client and therapist jointly test ideas against evidence and experience.
B. Coping self-talk: Practice of helpful, realistic statements that support coping and task engagement. / Collaborative empiricism: A CBT stance in which client and therapist jointly test ideas against evidence and experience.
C. Coping self-talk: A CBT stance in which client and therapist jointly test ideas against evidence and experience. / Collaborative empiricism: Practice of helpful, realistic statements that support coping and task engagement.
D. Coping self-talk: Practice of helpful, realistic statements that support coping and task engagement. / Collaborative empiricism: Planned engagement in meaningful or rewarding activities to increase contact with positive reinforcement.

0926. In child-focused CBT, which statement most accurately defines Relapse prevention?

A. A CBT stance in which client and therapist jointly test ideas against evidence and experience.
B. Planning for future triggers, early warning signs, and continued use of skills after improvement.
C. Planned engagement in meaningful or rewarding activities to increase contact with positive reinforcement.
D. Adjusting CBT language, materials, pacing, and caregiver involvement to the child's developmental capacity.

0927. In the youth group, a team asks how a school counselor can support a young person aged 10. One proposed action is rehearsing a believable coping phrase a child can use during a challenging moment. Which idea does it represent?

A. Thought record
B. Behavioral activation
C. Coping self-talk
D. Collaborative empiricism

0928. In the multidisciplinary case conference, a caregiver working with a counselor is considering this approach for a client in late adolescence: using drawings or concrete examples when abstract cognitive language is not yet accessible. Which framework does it represent?

A. Developmental adaptation in CBT
B. Skills rehearsal
C. Coping self-talk
D. Cognitive triangle

0929. In child-focused CBT, a student confuses Exposure with Relapse prevention. Which explanation most accurately separates them?

A. Exposure: Planning for future triggers, early warning signs, and continued use of skills after improvement. / Relapse prevention: Gradual, planned approach to feared situations or cues to support new learning, with appropriate assessment and consent.
B. Exposure: Gradual, planned approach to feared situations or cues to support new learning, with appropriate assessment and consent. / Relapse prevention: Practicing a targeted behavior in session, often with modeling, feedback, and repetition.
C. Exposure: A structured aid for noticing a situation, automatic thought, emotion, evidence, and alternative perspective. / Relapse prevention: Planning for future triggers, early warning signs, and continued use of skills after improvement.
D. Exposure: Gradual, planned approach to feared situations or cues to support new learning, with appropriate assessment and consent. / Relapse prevention: Planning for future triggers, early warning signs, and continued use of skills after improvement.

0930. When reviewing a student aged 12's plan in the counseling practicum, the case coordinator notes that the next step is building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation. Which concept guides this step?

A. Developmental adaptation in CBT
B. Exposure
C. Cognitive triangle
D. Cognitive restructuring

0931. Which option pairs the definitions of Thought record and Skills rehearsal correctly, in that order?

A. Thought record: Practicing a targeted behavior in session, often with modeling, feedback, and repetition. / Skills rehearsal: A structured aid for noticing a situation, automatic thought, emotion, evidence, and alternative perspective.
B. Thought record: A structured aid for noticing a situation, automatic thought, emotion, evidence, and alternative perspective. / Skills rehearsal: Practicing a targeted behavior in session, often with modeling, feedback, and repetition.
C. Thought record: A structured aid for noticing a situation, automatic thought, emotion, evidence, and alternative perspective. / Skills rehearsal: Adjusting CBT language, materials, pacing, and caregiver involvement to the child's developmental capacity.
D. Thought record: Practice of helpful, realistic statements that support coping and task engagement. / Skills rehearsal: Practicing a targeted behavior in session, often with modeling, feedback, and repetition.

0932. A case conference asks for a distinction between Coping self-talk and Skills rehearsal. Which answer is sound?

A. Coping self-talk: Collaboratively evaluating and developing more balanced or useful interpretations rather than imposing positive thinking. / Skills rehearsal: Practicing a targeted behavior in session, often with modeling, feedback, and repetition.
B. Coping self-talk: Practice of helpful, realistic statements that support coping and task engagement. / Skills rehearsal: A CBT stance in which client and therapist jointly test ideas against evidence and experience.
C. Coping self-talk: Practice of helpful, realistic statements that support coping and task engagement. / Skills rehearsal: Practicing a targeted behavior in session, often with modeling, feedback, and repetition.
D. Coping self-talk: Practicing a targeted behavior in session, often with modeling, feedback, and repetition. / Skills rehearsal: Practice of helpful, realistic statements that support coping and task engagement.

0933. Which statement shows a sound practice-level distinction between Exposure and Skills rehearsal?

A. Exposure: Building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation. / Skills rehearsal: Role-playing an assertive request and providing supportive, specific feedback.
B. Exposure: Building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation. / Skills rehearsal: Examining evidence and generating a realistic alternative thought with the child.
C. Exposure: Role-playing an assertive request and providing supportive, specific feedback. / Skills rehearsal: Building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation.
D. Exposure: Treating a belief as a testable hypothesis and reviewing what the child observes. / Skills rehearsal: Role-playing an assertive request and providing supportive, specific feedback.

0934. At the caregiver consultation, a play therapist meets with a teenage client. The practice priority is: building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation. Which concept best captures that priority?

A. Skills rehearsal
B. Exposure
C. Collaborative empiricism
D. Developmental adaptation in CBT

0935. Choose the practice comparison that best separates Cognitive triangle from Skills rehearsal.

A. Cognitive triangle: Examining evidence and generating a realistic alternative thought with the child. / Skills rehearsal: Role-playing an assertive request and providing supportive, specific feedback.
B. Cognitive triangle: Helping a child map how a thought, feeling, and action relate in a particular situation. / Skills rehearsal: Rehearsing a believable coping phrase a child can use during a challenging moment.
C. Cognitive triangle: Role-playing an assertive request and providing supportive, specific feedback. / Skills rehearsal: Helping a child map how a thought, feeling, and action relate in a particular situation.
D. Cognitive triangle: Helping a child map how a thought, feeling, and action relate in a particular situation. / Skills rehearsal: Role-playing an assertive request and providing supportive, specific feedback.

0936. A doctoral student reads the following description. Which concept does it define? Adjusting CBT language, materials, pacing, and caregiver involvement to the child's developmental capacity.

A. Cognitive restructuring
B. Developmental adaptation in CBT
C. Relapse prevention
D. Thought record

0937. Which comparison correctly distinguishes Exposure from Skills rehearsal?

A. Exposure: Gradual, planned approach to feared situations or cues to support new learning, with appropriate assessment and consent. / Skills rehearsal: Practicing a targeted behavior in session, often with modeling, feedback, and repetition.
B. Exposure: A CBT stance in which client and therapist jointly test ideas against evidence and experience. / Skills rehearsal: Practicing a targeted behavior in session, often with modeling, feedback, and repetition.
C. Exposure: Gradual, planned approach to feared situations or cues to support new learning, with appropriate assessment and consent. / Skills rehearsal: Collaboratively evaluating and developing more balanced or useful interpretations rather than imposing positive thinking.
D. Exposure: Practicing a targeted behavior in session, often with modeling, feedback, and repetition. / Skills rehearsal: Gradual, planned approach to feared situations or cues to support new learning, with appropriate assessment and consent.

0938. During work in the counseling practicum, a teacher and counselor identifies this need: rehearsing a believable coping phrase a child can use during a challenging moment. Which idea should guide the response?

A. Coping self-talk
B. Collaborative empiricism
C. Skills rehearsal
D. Relapse prevention

0939. Which professional action most closely applies Collaborative empiricism?

A. Building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation.
B. Treating a belief as a testable hypothesis and reviewing what the child observes.
C. Using a child-friendly record to examine what happened and what the child thought at that moment.
D. Rehearsing a believable coping phrase a child can use during a challenging moment.

0940. A supervisor asks for an applied contrast between Exposure and Skills rehearsal. Which option fits?

A. Exposure: Building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation. / Skills rehearsal: Examining evidence and generating a realistic alternative thought with the child.
B. Exposure: Treating a belief as a testable hypothesis and reviewing what the child observes. / Skills rehearsal: Role-playing an assertive request and providing supportive, specific feedback.
C. Exposure: Building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation. / Skills rehearsal: Role-playing an assertive request and providing supportive, specific feedback.
D. Exposure: Role-playing an assertive request and providing supportive, specific feedback. / Skills rehearsal: Building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation.

0941. In the parent meeting, a team asks how a youth worker can support a child aged 14. One proposed action is scheduling a manageable valued activity and reviewing its effect on mood and functioning. Which idea does it represent?

A. Behavioral activation
B. Developmental adaptation in CBT
C. Cognitive restructuring
D. Collaborative empiricism

0942. In a professional consultation about a high-school student, the member of a clinical team describes this response in the community service agency: rehearsing a believable coping phrase a child can use during a challenging moment. Which term is most apt?

A. Behavioral activation
B. Coping self-talk
C. Developmental adaptation in CBT
D. Thought record

0943. A case conference asks for a distinction between Cognitive restructuring and Collaborative empiricism. Which answer is sound?

A. Cognitive restructuring: A CBT stance in which client and therapist jointly test ideas against evidence and experience. / Collaborative empiricism: Collaboratively evaluating and developing more balanced or useful interpretations rather than imposing positive thinking.
B. Cognitive restructuring: Adjusting CBT language, materials, pacing, and caregiver involvement to the child's developmental capacity. / Collaborative empiricism: A CBT stance in which client and therapist jointly test ideas against evidence and experience.
C. Cognitive restructuring: Collaboratively evaluating and developing more balanced or useful interpretations rather than imposing positive thinking. / Collaborative empiricism: A CBT stance in which client and therapist jointly test ideas against evidence and experience.
D. Cognitive restructuring: Collaboratively evaluating and developing more balanced or useful interpretations rather than imposing positive thinking. / Collaborative empiricism: Planned engagement in meaningful or rewarding activities to increase contact with positive reinforcement.

0944. A student confuses Cognitive restructuring with Thought record. Which explanation most accurately separates them?

A. Cognitive restructuring: A structured aid for noticing a situation, automatic thought, emotion, evidence, and alternative perspective. / Thought record: Collaboratively evaluating and developing more balanced or useful interpretations rather than imposing positive thinking.
B. Cognitive restructuring: Collaboratively evaluating and developing more balanced or useful interpretations rather than imposing positive thinking. / Thought record: Adjusting CBT language, materials, pacing, and caregiver involvement to the child's developmental capacity.
C. Cognitive restructuring: Collaboratively evaluating and developing more balanced or useful interpretations rather than imposing positive thinking. / Thought record: A structured aid for noticing a situation, automatic thought, emotion, evidence, and alternative perspective.
D. Cognitive restructuring: A CBT stance in which client and therapist jointly test ideas against evidence and experience. / Thought record: A structured aid for noticing a situation, automatic thought, emotion, evidence, and alternative perspective.

0945. Choose the response that best puts Collaborative empiricism into practice.

A. Building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation.
B. Treating a belief as a testable hypothesis and reviewing what the child observes.
C. Identifying likely setbacks and rehearsing which coping steps the child can use.
D. Examining evidence and generating a realistic alternative thought with the child.

0946. A young person aged 16 and a assessment clinician are reviewing goals in the school consultation. The agreed action is examining evidence and generating a realistic alternative thought with the child. Which principle best accounts for it?

A. Cognitive triangle
B. Cognitive restructuring
C. Thought record
D. Behavioral activation

0947. For a child aged 8 in the telehealth session, a behavior specialist makes this practice the immediate priority: rehearsing a believable coping phrase a child can use during a challenging moment. Which concept fits best?

A. Skills rehearsal
B. Behavioral activation
C. Exposure
D. Coping self-talk

0948. A trainee must explain Coping self-talk. Which answer is accurate?

A. A CBT stance in which client and therapist jointly test ideas against evidence and experience.
B. Gradual, planned approach to feared situations or cues to support new learning, with appropriate assessment and consent.
C. Planning for future triggers, early warning signs, and continued use of skills after improvement.
D. Practice of helpful, realistic statements that support coping and task engagement.

0949. In child-focused CBT, how should a practitioner distinguish the applications of Skills rehearsal and Relapse prevention?

A. Skills rehearsal: Role-playing an assertive request and providing supportive, specific feedback. / Relapse prevention: Building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation.
B. Skills rehearsal: Treating a belief as a testable hypothesis and reviewing what the child observes. / Relapse prevention: Identifying likely setbacks and rehearsing which coping steps the child can use.
C. Skills rehearsal: Identifying likely setbacks and rehearsing which coping steps the child can use. / Relapse prevention: Role-playing an assertive request and providing supportive, specific feedback.
D. Skills rehearsal: Role-playing an assertive request and providing supportive, specific feedback. / Relapse prevention: Identifying likely setbacks and rehearsing which coping steps the child can use.

0950. Which comparison would correct a trainee’s misunderstanding of Cognitive triangle versus Exposure?

A. Cognitive triangle: A teaching model linking thoughts, feelings, and behaviors as mutually influential components of experience. / Exposure: Collaboratively evaluating and developing more balanced or useful interpretations rather than imposing positive thinking.
B. Cognitive triangle: A teaching model linking thoughts, feelings, and behaviors as mutually influential components of experience. / Exposure: Gradual, planned approach to feared situations or cues to support new learning, with appropriate assessment and consent.
C. Cognitive triangle: Planning for future triggers, early warning signs, and continued use of skills after improvement. / Exposure: Gradual, planned approach to feared situations or cues to support new learning, with appropriate assessment and consent.
D. Cognitive triangle: Gradual, planned approach to feared situations or cues to support new learning, with appropriate assessment and consent. / Exposure: A teaching model linking thoughts, feelings, and behaviors as mutually influential components of experience.

0951. A student confuses Behavioral activation with Exposure. Which explanation most accurately separates them?

A. Behavioral activation: Planned engagement in meaningful or rewarding activities to increase contact with positive reinforcement. / Exposure: A CBT stance in which client and therapist jointly test ideas against evidence and experience.
B. Behavioral activation: Gradual, planned approach to feared situations or cues to support new learning, with appropriate assessment and consent. / Exposure: Planned engagement in meaningful or rewarding activities to increase contact with positive reinforcement.
C. Behavioral activation: Planned engagement in meaningful or rewarding activities to increase contact with positive reinforcement. / Exposure: Gradual, planned approach to feared situations or cues to support new learning, with appropriate assessment and consent.
D. Behavioral activation: A structured aid for noticing a situation, automatic thought, emotion, evidence, and alternative perspective. / Exposure: Gradual, planned approach to feared situations or cues to support new learning, with appropriate assessment and consent.

0952. A mental-health professional is preparing a follow-up plan for a child of elementary-school age in the classroom support meeting. The plan calls for using drawings or concrete examples when abstract cognitive language is not yet accessible. Which concept names this approach?

A. Skills rehearsal
B. Cognitive triangle
C. Developmental adaptation in CBT
D. Exposure

0953. Which option correctly matches each concept to its practice focus: Thought record and Developmental adaptation in CBT?

A. Thought record: Identifying likely setbacks and rehearsing which coping steps the child can use. / Developmental adaptation in CBT: Using drawings or concrete examples when abstract cognitive language is not yet accessible.
B. Thought record: Using drawings or concrete examples when abstract cognitive language is not yet accessible. / Developmental adaptation in CBT: Using a child-friendly record to examine what happened and what the child thought at that moment.
C. Thought record: Using a child-friendly record to examine what happened and what the child thought at that moment. / Developmental adaptation in CBT: Role-playing an assertive request and providing supportive, specific feedback.
D. Thought record: Using a child-friendly record to examine what happened and what the child thought at that moment. / Developmental adaptation in CBT: Using drawings or concrete examples when abstract cognitive language is not yet accessible.

0954. A trainee must choose a practice that exemplifies Skills rehearsal. Which action is the best fit?

A. Building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation.
B. Role-playing an assertive request and providing supportive, specific feedback.
C. Identifying likely setbacks and rehearsing which coping steps the child can use.
D. Treating a belief as a testable hypothesis and reviewing what the child observes.

0955. Choose the practice comparison that best separates Exposure from Developmental adaptation in CBT.

A. Exposure: Building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation. / Developmental adaptation in CBT: Role-playing an assertive request and providing supportive, specific feedback.
B. Exposure: Using drawings or concrete examples when abstract cognitive language is not yet accessible. / Developmental adaptation in CBT: Building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation.
C. Exposure: Building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation. / Developmental adaptation in CBT: Using drawings or concrete examples when abstract cognitive language is not yet accessible.
D. Exposure: Treating a belief as a testable hypothesis and reviewing what the child observes. / Developmental adaptation in CBT: Using drawings or concrete examples when abstract cognitive language is not yet accessible.

0956. In the supervision meeting, a school counselor explains why a young person aged 13 would benefit from using a child-friendly record to examine what happened and what the child thought at that moment. Which course concept underpins the explanation?

A. Thought record
B. Skills rehearsal
C. Relapse prevention
D. Developmental adaptation in CBT

0957. Which option preserves the correct meaning of both Cognitive triangle and Developmental adaptation in CBT?

A. Cognitive triangle: Adjusting CBT language, materials, pacing, and caregiver involvement to the child’s developmental capacity. / Developmental adaptation in CBT: A teaching model linking thoughts, feelings, and behaviors as mutually influential components of experience.
B. Cognitive triangle: A teaching model linking thoughts, feelings, and behaviors as mutually influential components of experience. / Developmental adaptation in CBT: A CBT stance in which client and therapist jointly test ideas against evidence and experience.
C. Cognitive triangle: A teaching model linking thoughts, feelings, and behaviors as mutually influential components of experience. / Developmental adaptation in CBT: Adjusting CBT language, materials, pacing, and caregiver involvement to the child’s developmental capacity.
D. Cognitive triangle: Collaboratively evaluating and developing more balanced or useful interpretations rather than imposing positive thinking. / Developmental adaptation in CBT: Adjusting CBT language, materials, pacing, and caregiver involvement to the child’s developmental capacity.

0958. In child-focused CBT, a trainee must distinguish how Cognitive restructuring and Relapse prevention guide practice. Which comparison is accurate?

A. Cognitive restructuring: Examining evidence and generating a realistic alternative thought with the child. / Relapse prevention: Helping a child map how a thought, feeling, and action relate in a particular situation.
B. Cognitive restructuring: Examining evidence and generating a realistic alternative thought with the child. / Relapse prevention: Identifying likely setbacks and rehearsing which coping steps the child can use.
C. Cognitive restructuring: Building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation. / Relapse prevention: Identifying likely setbacks and rehearsing which coping steps the child can use.
D. Cognitive restructuring: Identifying likely setbacks and rehearsing which coping steps the child can use. / Relapse prevention: Examining evidence and generating a realistic alternative thought with the child.

0959. A program coordinator is asked what should shape a high-school student's support in the multidisciplinary case conference. The proposed focus is examining evidence and generating a realistic alternative thought with the child. Which principle does it represent?

A. Cognitive triangle
B. Cognitive restructuring
C. Collaborative empiricism
D. Exposure

0960. A case conference reviews a community practitioner's work with a older adolescent client in the supervision meeting: helping a child map how a thought, feeling, and action relate in a particular situation. Which principle is central?

A. Cognitive restructuring
B. Collaborative empiricism
C. Developmental adaptation in CBT
D. Cognitive triangle

0961. A support meeting for a high-school student includes a counselor in the school consultation. The practice under consideration is building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation. Which concept guides it?

A. Exposure
B. Relapse prevention
C. Collaborative empiricism
D. Behavioral activation

0962. A supervised trainee is supporting a young person aged 18 in the family resource center. The key practice is rehearsing a believable coping phrase a child can use during a challenging moment. Which course concept is most relevant?

A. Skills rehearsal
B. Coping self-talk
C. Exposure
D. Developmental adaptation in CBT

0963. A trainee must explain Skills rehearsal. Which answer is accurate?

A. Planned engagement in meaningful or rewarding activities to increase contact with positive reinforcement.
B. A teaching model linking thoughts, feelings, and behaviors as mutually influential components of experience.
C. Practicing a targeted behavior in session, often with modeling, feedback, and repetition.
D. Planning for future triggers, early warning signs, and continued use of skills after improvement.

0964. Which option preserves the correct meaning of both Exposure and Skills rehearsal?

A. Exposure: Practicing a targeted behavior in session, often with modeling, feedback, and repetition. / Skills rehearsal: Gradual, planned approach to feared situations or cues to support new learning, with appropriate assessment and consent.
B. Exposure: A CBT stance in which client and therapist jointly test ideas against evidence and experience. / Skills rehearsal: Practicing a targeted behavior in session, often with modeling, feedback, and repetition.
C. Exposure: Gradual, planned approach to feared situations or cues to support new learning, with appropriate assessment and consent. / Skills rehearsal: Practicing a targeted behavior in session, often with modeling, feedback, and repetition.
D. Exposure: Gradual, planned approach to feared situations or cues to support new learning, with appropriate assessment and consent. / Skills rehearsal: Collaboratively evaluating and developing more balanced or useful interpretations rather than imposing positive thinking.

0965. A research trainee describes an intervention for a school-age child in the community mental-health service, centered on building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation. Which named idea is most relevant?

A. Exposure
B. Cognitive triangle
C. Coping self-talk
D. Developmental adaptation in CBT

0966. A consulting counselor is explaining a choice to a child of elementary-school age and caregiver in the clinical planning session. The choice centers on rehearsing a believable coping phrase a child can use during a challenging moment. Which idea is illustrated?

A. Exposure
B. Coping self-talk
C. Relapse prevention
D. Cognitive restructuring

0967. Choose the practice comparison that best separates Coping self-talk from Developmental adaptation in CBT.

A. Coping self-talk: Using drawings or concrete examples when abstract cognitive language is not yet accessible. / Developmental adaptation in CBT: Rehearsing a believable coping phrase a child can use during a challenging moment.
B. Coping self-talk: Rehearsing a believable coping phrase a child can use during a challenging moment. / Developmental adaptation in CBT: Role-playing an assertive request and providing supportive, specific feedback.
C. Coping self-talk: Rehearsing a believable coping phrase a child can use during a challenging moment. / Developmental adaptation in CBT: Using drawings or concrete examples when abstract cognitive language is not yet accessible.
D. Coping self-talk: Helping a child map how a thought, feeling, and action relate in a particular situation. / Developmental adaptation in CBT: Using drawings or concrete examples when abstract cognitive language is not yet accessible.

0968. A trainee must distinguish how Cognitive triangle and Collaborative empiricism guide practice. Which comparison is accurate?

A. Cognitive triangle: Rehearsing a believable coping phrase a child can use during a challenging moment. / Collaborative empiricism: Treating a belief as a testable hypothesis and reviewing what the child observes.
B. Cognitive triangle: Helping a child map how a thought, feeling, and action relate in a particular situation. / Collaborative empiricism: Treating a belief as a testable hypothesis and reviewing what the child observes.
C. Cognitive triangle: Helping a child map how a thought, feeling, and action relate in a particular situation. / Collaborative empiricism: Building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation.
D. Cognitive triangle: Treating a belief as a testable hypothesis and reviewing what the child observes. / Collaborative empiricism: Helping a child map how a thought, feeling, and action relate in a particular situation.

0969. A student confuses Skills rehearsal with Developmental adaptation in CBT. Which explanation most accurately separates them?

A. Skills rehearsal: Adjusting CBT language, materials, pacing, and caregiver involvement to the child's developmental capacity. / Developmental adaptation in CBT: Practicing a targeted behavior in session, often with modeling, feedback, and repetition.
B. Skills rehearsal: Practicing a targeted behavior in session, often with modeling, feedback, and repetition. / Developmental adaptation in CBT: Practice of helpful, realistic statements that support coping and task engagement.
C. Skills rehearsal: Practicing a targeted behavior in session, often with modeling, feedback, and repetition. / Developmental adaptation in CBT: Adjusting CBT language, materials, pacing, and caregiver involvement to the child's developmental capacity.
D. Skills rehearsal: Gradual, planned approach to feared situations or cues to support new learning, with appropriate assessment and consent. / Developmental adaptation in CBT: Adjusting CBT language, materials, pacing, and caregiver involvement to the child's developmental capacity.

0970. A student confuses Behavioral activation with Coping self-talk. Which explanation most accurately separates them?

A. Behavioral activation: Collaboratively evaluating and developing more balanced or useful interpretations rather than imposing positive thinking. / Coping self-talk: Practice of helpful, realistic statements that support coping and task engagement.
B. Behavioral activation: Practice of helpful, realistic statements that support coping and task engagement. / Coping self-talk: Planned engagement in meaningful or rewarding activities to increase contact with positive reinforcement.
C. Behavioral activation: Planned engagement in meaningful or rewarding activities to increase contact with positive reinforcement. / Coping self-talk: Planning for future triggers, early warning signs, and continued use of skills after improvement.
D. Behavioral activation: Planned engagement in meaningful or rewarding activities to increase contact with positive reinforcement. / Coping self-talk: Practice of helpful, realistic statements that support coping and task engagement.

0971. A trainee must distinguish how Exposure and Skills rehearsal guide practice. Which comparison is accurate?

A. Exposure: Role-playing an assertive request and providing supportive, specific feedback. / Skills rehearsal: Building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation.
B. Exposure: Building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation. / Skills rehearsal: Role-playing an assertive request and providing supportive, specific feedback.
C. Exposure: Building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation. / Skills rehearsal: Examining evidence and generating a realistic alternative thought with the child.
D. Exposure: Treating a belief as a testable hypothesis and reviewing what the child observes. / Skills rehearsal: Role-playing an assertive request and providing supportive, specific feedback.

0972. In child-focused CBT, a trainee must choose a practice that exemplifies Relapse prevention. Which action is the best fit?

A. Using drawings or concrete examples when abstract cognitive language is not yet accessible.
B. Identifying likely setbacks and rehearsing which coping steps the child can use.
C. Using a child-friendly record to examine what happened and what the child thought at that moment.
D. Treating a belief as a testable hypothesis and reviewing what the child observes.

0973. A community practitioner is asked what should shape a middle-school student's support in the community mental-health service. The proposed focus is using drawings or concrete examples when abstract cognitive language is not yet accessible. Which principle does it represent?

A. Behavioral activation
B. Relapse prevention
C. Developmental adaptation in CBT
D. Skills rehearsal

0974. A therapist describes an intervention for a child aged 14 in the outpatient clinic, centered on examining evidence and generating a realistic alternative thought with the child. Which named idea is most relevant?

A. Thought record
B. Developmental adaptation in CBT
C. Skills rehearsal
D. Cognitive restructuring

0975. In child-focused CBT, how are Cognitive restructuring and Relapse prevention most accurately differentiated in this curriculum?

A. Cognitive restructuring: Planning for future triggers, early warning signs, and continued use of skills after improvement. / Relapse prevention: Collaboratively evaluating and developing more balanced or useful interpretations rather than imposing positive thinking.
B. Cognitive restructuring: Collaboratively evaluating and developing more balanced or useful interpretations rather than imposing positive thinking. / Relapse prevention: Planning for future triggers, early warning signs, and continued use of skills after improvement.
C. Cognitive restructuring: Gradual, planned approach to feared situations or cues to support new learning, with appropriate assessment and consent. / Relapse prevention: Planning for future triggers, early warning signs, and continued use of skills after improvement.
D. Cognitive restructuring: Collaboratively evaluating and developing more balanced or useful interpretations rather than imposing positive thinking. / Relapse prevention: A teaching model linking thoughts, feelings, and behaviors as mutually influential components of experience.

0976. A case conference asks for a distinction between Behavioral activation and Exposure. Which answer is sound?

A. Behavioral activation: Planned engagement in meaningful or rewarding activities to increase contact with positive reinforcement. / Exposure: Gradual, planned approach to feared situations or cues to support new learning, with appropriate assessment and consent.
B. Behavioral activation: A structured aid for noticing a situation, automatic thought, emotion, evidence, and alternative perspective. / Exposure: Gradual, planned approach to feared situations or cues to support new learning, with appropriate assessment and consent.
C. Behavioral activation: Gradual, planned approach to feared situations or cues to support new learning, with appropriate assessment and consent. / Exposure: Planned engagement in meaningful or rewarding activities to increase contact with positive reinforcement.
D. Behavioral activation: Planned engagement in meaningful or rewarding activities to increase contact with positive reinforcement. / Exposure: A CBT stance in which client and therapist jointly test ideas against evidence and experience.

0977. In child-focused CBT, a group facilitator is explaining a choice to a school-age child and caregiver in the caregiver consultation. The choice centers on identifying likely setbacks and rehearsing which coping steps the child can use. Which idea is illustrated?

A. Cognitive restructuring
B. Collaborative empiricism
C. Relapse prevention
D. Developmental adaptation in CBT

0978. Which statement shows a sound practice-level distinction between Behavioral activation and Thought record?

A. Behavioral activation: Using a child-friendly record to examine what happened and what the child thought at that moment. / Thought record: Scheduling a manageable valued activity and reviewing its effect on mood and functioning.
B. Behavioral activation: Scheduling a manageable valued activity and reviewing its effect on mood and functioning. / Thought record: Building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation.
C. Behavioral activation: Scheduling a manageable valued activity and reviewing its effect on mood and functioning. / Thought record: Using a child-friendly record to examine what happened and what the child thought at that moment.
D. Behavioral activation: Role-playing an assertive request and providing supportive, specific feedback. / Thought record: Using a child-friendly record to examine what happened and what the child thought at that moment.

0979. In child-focused CBT, a case conference reviews a research trainee's work with a young person aged 10 in the family resource center: identifying likely setbacks and rehearsing which coping steps the child can use. Which principle is central?

A. Thought record
B. Developmental adaptation in CBT
C. Cognitive restructuring
D. Relapse prevention

0980. A trainee must explain Collaborative empiricism. Which answer is accurate?

A. Practicing a targeted behavior in session, often with modeling, feedback, and repetition.
B. Practice of helpful, realistic statements that support coping and task engagement.
C. A CBT stance in which client and therapist jointly test ideas against evidence and experience.
D. A structured aid for noticing a situation, automatic thought, emotion, evidence, and alternative perspective.

0981. During work in the telehealth session, a youth worker identifies this need: examining evidence and generating a realistic alternative thought with the child. Which idea should guide the response?

A. Skills rehearsal
B. Relapse prevention
C. Cognitive restructuring
D. Collaborative empiricism

0982. Which option correctly matches each concept to its practice focus: Exposure and Coping self-talk?

A. Exposure: Helping a child map how a thought, feeling, and action relate in a particular situation. / Coping self-talk: Rehearsing a believable coping phrase a child can use during a challenging moment.
B. Exposure: Building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation. / Coping self-talk: Scheduling a manageable valued activity and reviewing its effect on mood and functioning.
C. Exposure: Building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation. / Coping self-talk: Rehearsing a believable coping phrase a child can use during a challenging moment.
D. Exposure: Rehearsing a believable coping phrase a child can use during a challenging moment. / Coping self-talk: Building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation.

0983. Which description belongs with the term Coping self-talk?

A. Adjusting CBT language, materials, pacing, and caregiver involvement to the child's developmental capacity.
B. Practice of helpful, realistic statements that support coping and task engagement.
C. A CBT stance in which client and therapist jointly test ideas against evidence and experience.
D. Collaboratively evaluating and developing more balanced or useful interpretations rather than imposing positive thinking.

0984. How should a practitioner distinguish the applications of Exposure and Developmental adaptation in CBT?

A. Exposure: Treating a belief as a testable hypothesis and reviewing what the child observes. / Developmental adaptation in CBT: Using drawings or concrete examples when abstract cognitive language is not yet accessible.
B. Exposure: Building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation. / Developmental adaptation in CBT: Using drawings or concrete examples when abstract cognitive language is not yet accessible.
C. Exposure: Building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation. / Developmental adaptation in CBT: Role-playing an assertive request and providing supportive, specific feedback.
D. Exposure: Using drawings or concrete examples when abstract cognitive language is not yet accessible. / Developmental adaptation in CBT: Building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation.

0985. A case conference asks for a distinction between Exposure and Collaborative empiricism. Which answer is sound?

A. Exposure: A CBT stance in which client and therapist jointly test ideas against evidence and experience. / Collaborative empiricism: Gradual, planned approach to feared situations or cues to support new learning, with appropriate assessment and consent.
B. Exposure: Gradual, planned approach to feared situations or cues to support new learning, with appropriate assessment and consent. / Collaborative empiricism: A CBT stance in which client and therapist jointly test ideas against evidence and experience.
C. Exposure: Practice of helpful, realistic statements that support coping and task engagement. / Collaborative empiricism: A CBT stance in which client and therapist jointly test ideas against evidence and experience.
D. Exposure: Gradual, planned approach to feared situations or cues to support new learning, with appropriate assessment and consent. / Collaborative empiricism: Planning for future triggers, early warning signs, and continued use of skills after improvement.

0986. While supporting a young person in the student wellness team, a caregiver working with a counselor adopts this practice: treating a belief as a testable hypothesis and reviewing what the child observes. Which concept best explains the choice?

A. Cognitive restructuring
B. Behavioral activation
C. Exposure
D. Collaborative empiricism

0987. Which statement most accurately defines Thought record?

A. A structured aid for noticing a situation, automatic thought, emotion, evidence, and alternative perspective.
B. Gradual, planned approach to feared situations or cues to support new learning, with appropriate assessment and consent.
C. Adjusting CBT language, materials, pacing, and caregiver involvement to the child's developmental capacity.
D. Planning for future triggers, early warning signs, and continued use of skills after improvement.

0988. In the telehealth session, a youth worker explains why a student aged 17 would benefit from examining evidence and generating a realistic alternative thought with the child. Which course concept underpins the explanation?

A. Relapse prevention
B. Coping self-talk
C. Cognitive restructuring
D. Thought record

0989. A supervisor asks how Cognitive triangle would appear in practice. Which choice should be selected?

A. Helping a child map how a thought, feeling, and action relate in a particular situation.
B. Using a child-friendly record to examine what happened and what the child thought at that moment.
C. Rehearsing a believable coping phrase a child can use during a challenging moment.
D. Building a collaborative, tolerable practice hierarchy instead of forcing an abrupt confrontation.

0990. In the counseling practicum, a teacher and counselor explains why a child aged 6 would benefit from rehearsing a believable coping phrase a child can use during a challenging moment. Which course concept underpins the explanation?

A. Cognitive triangle
B. Coping self-talk
C. Skills rehearsal
D. Relapse prevention

0991. A doctoral student reads the following description. Which concept does it define? Practicing a targeted behavior in session, often with modeling, feedback, and repetition.

A. Developmental adaptation in CBT
B. Skills rehearsal
C. Thought record
D. Behavioral activation

0992. Which course concept is defined as follows: Planned engagement in meaningful or rewarding activities to increase contact with positive reinforcement.

A. Coping self-talk
B. Developmental adaptation in CBT
C. Cognitive restructuring
D. Behavioral activation

0993. A case conference reviews a service navigator's work with a teenage client in the counseling practicum: examining evidence and generating a realistic alternative thought with the child. Which principle is central?

A. Skills rehearsal
B. Exposure
C. Cognitive triangle
D. Cognitive restructuring

0994. A doctoral student reads the following description. Which concept does it define? A teaching model linking thoughts, feelings, and behaviors as mutually influential components of experience.

A. Skills rehearsal
B. Exposure
C. Cognitive triangle
D. Behavioral activation

0995. A supervised trainee prepares for a session in the parent meeting with a older adolescent client. The intended approach is using a child-friendly record to examine what happened and what the child thought at that moment. Which concept is most relevant?

A. Developmental adaptation in CBT
B. Collaborative empiricism
C. Thought record
D. Behavioral activation

0996. In child-focused CBT, a older adolescent client and a mental-health professional are reviewing goals in the family session. The agreed action is identifying likely setbacks and rehearsing which coping steps the child can use. Which principle best accounts for it?

A. Relapse prevention
B. Behavioral activation
C. Coping self-talk
D. Cognitive triangle

0997. A school counselor is asked to justify a plan for a teenage client in the behavior-support review. It calls for treating a belief as a testable hypothesis and reviewing what the child observes. Which concept provides the rationale?

A. Cognitive triangle
B. Cognitive restructuring
C. Collaborative empiricism
D. Behavioral activation

0998. How are Exposure and Coping self-talk most accurately differentiated in this curriculum?

A. Exposure: Practice of helpful, realistic statements that support coping and task engagement. / Coping self-talk: Gradual, planned approach to feared situations or cues to support new learning, with appropriate assessment and consent.
B. Exposure: Gradual, planned approach to feared situations or cues to support new learning, with appropriate assessment and consent. / Coping self-talk: Planned engagement in meaningful or rewarding activities to increase contact with positive reinforcement.
C. Exposure: Gradual, planned approach to feared situations or cues to support new learning, with appropriate assessment and consent. / Coping self-talk: Practice of helpful, realistic statements that support coping and task engagement.
D. Exposure: A teaching model linking thoughts, feelings, and behaviors as mutually influential components of experience. / Coping self-talk: Practice of helpful, realistic statements that support coping and task engagement.

0999. A trainee must choose a practice that exemplifies Thought record. Which action is the best fit?

A. Helping a child map how a thought, feeling, and action relate in a particular situation.
B. Identifying likely setbacks and rehearsing which coping steps the child can use.
C. Treating a belief as a testable hypothesis and reviewing what the child observes.
D. Using a child-friendly record to examine what happened and what the child thought at that moment.

1000. Which choice aligns each practice with the correct idea, Thought record or Developmental adaptation in CBT?

A. Thought record: Identifying likely setbacks and rehearsing which coping steps the child can use. / Developmental adaptation in CBT: Using drawings or concrete examples when abstract cognitive language is not yet accessible.
B. Thought record: Using drawings or concrete examples when abstract cognitive language is not yet accessible. / Developmental adaptation in CBT: Using a child-friendly record to examine what happened and what the child thought at that moment.
C. Thought record: Using a child-friendly record to examine what happened and what the child thought at that moment. / Developmental adaptation in CBT: Using drawings or concrete examples when abstract cognitive language is not yet accessible.
D. Thought record: Using a child-friendly record to examine what happened and what the child thought at that moment. / Developmental adaptation in CBT: Role-playing an assertive request and providing supportive, specific feedback.

CAC.911 | Crisis Intervention Strategies

QUESTION BANK | 1,000 ITEMS | ANSWERS AT THE END

0001. Choose the practice comparison that best separates Risk formulation from Crisis triage.

A. Risk formulation: Determining which situation requires immediate emergency action and which can be safely managed with timely follow-up. / Crisis triage: Integrating current statements, context, access, supports, and changes rather than relying on one score.
B. Risk formulation: Integrating current statements, context, access, supports, and changes rather than relying on one score. / Crisis triage: Identifying trusted adults and practical supports that can be activated now.
C. Risk formulation: Creating specific steps with the youth and caregivers for what to do if risk increases. / Crisis triage: Determining which situation requires immediate emergency action and which can be safely managed with timely follow-up.
D. Risk formulation: Integrating current statements, context, access, supports, and changes rather than relying on one score. / Crisis triage: Determining which situation requires immediate emergency action and which can be safely managed with timely follow-up.

0002. Which comparison correctly distinguishes Risk formulation from Warm handoff?

A. Risk formulation: A coordinated transfer in which the current helper actively connects the person to the next service. / Warm handoff: A contextual, ongoing synthesis of risk and protective factors, current intent, access, history, and foreseeable changes.
B. Risk formulation: A contextual, ongoing synthesis of risk and protective factors, current intent, access, history, and foreseeable changes. / Warm handoff: Prioritizing urgency and level of response based on immediate danger, need, and available resources.
C. Risk formulation: Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety. / Warm handoff: A coordinated transfer in which the current helper actively connects the person to the next service.
D. Risk formulation: A contextual, ongoing synthesis of risk and protective factors, current intent, access, history, and foreseeable changes. / Warm handoff: A coordinated transfer in which the current helper actively connects the person to the next service.

0003. In the counseling practicum, a team asks how a school counselor can support a child of elementary-school age. One proposed action is clarifying immediate danger and available supports before moving to longer-term goals. Which idea does it represent?

A. Warm handoff
B. Safety planning
C. Least restrictive response
D. Crisis assessment

0004. A trainee must explain Safety planning. Which answer is accurate?

A. Prioritizing urgency and level of response based on immediate danger, need, and available resources.
B. A collaborative, individualized plan identifying warning signs, coping steps, supportive contacts, and emergency resources.
C. A contextual, ongoing synthesis of risk and protective factors, current intent, access, history, and foreseeable changes.
D. The safest effective intervention that imposes the fewest necessary restrictions, consistent with law and policy.

0005. During service review in the student wellness team, a program coordinator describes clarifying immediate danger and available supports before moving to longer-term goals. for a client in late adolescence. Which course idea is most applicable?

A. Safety planning
B. Psychological first aid
C. Crisis assessment
D. Post-crisis follow-up

0006. How should a practitioner distinguish the applications of Risk formulation and Warm handoff?

A. Risk formulation: Using calm, respectful language, space, and choices rather than confrontation. / Warm handoff: Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number.
B. Risk formulation: Integrating current statements, context, access, supports, and changes rather than relying on one score. / Warm handoff: Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number.
C. Risk formulation: Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number. / Warm handoff: Integrating current statements, context, access, supports, and changes rather than relying on one score.
D. Risk formulation: Integrating current statements, context, access, supports, and changes rather than relying on one score. / Warm handoff: Determining which situation requires immediate emergency action and which can be safely managed with timely follow-up.

0007. Choose the definition pair that correctly explains Safety planning first and Least restrictive response second.

A. Safety planning: A collaborative, individualized plan identifying warning signs, coping steps, supportive contacts, and emergency resources. / Least restrictive response: A coordinated transfer in which the current helper actively connects the person to the next service.
B. Safety planning: A collaborative, individualized plan identifying warning signs, coping steps, supportive contacts, and emergency resources. / Least restrictive response: The safest effective intervention that imposes the fewest necessary restrictions, consistent with law and policy.
C. Safety planning: A humane, practical, early response that promotes safety, stabilization, connection, and access to support. / Least restrictive response: The safest effective intervention that imposes the fewest necessary restrictions, consistent with law and policy.
D. Safety planning: The safest effective intervention that imposes the fewest necessary restrictions, consistent with law and policy. / Least restrictive response: A collaborative, individualized plan identifying warning signs, coping steps, supportive contacts, and emergency resources.

0008. Choose the definition pair that correctly explains Crisis triage first and Warm handoff second.

A. Crisis triage: Prioritizing urgency and level of response based on immediate danger, need, and available resources. / Warm handoff: A coordinated transfer in which the current helper actively connects the person to the next service.
B. Crisis triage: Planned reassessment and continuity contact after acute stabilization to review safety and connect ongoing care. / Warm handoff: A coordinated transfer in which the current helper actively connects the person to the next service.
C. Crisis triage: Prioritizing urgency and level of response based on immediate danger, need, and available resources. / Warm handoff: A contextual, ongoing synthesis of risk and protective factors, current intent, access, history, and foreseeable changes.
D. Crisis triage: A coordinated transfer in which the current helper actively connects the person to the next service. / Warm handoff: Prioritizing urgency and level of response based on immediate danger, need, and available resources.

0009. Which comparison would correct a trainee’s misunderstanding of De-escalation versus Post-crisis follow-up?

A. De-escalation: Planned reassessment and continuity contact after acute stabilization to review safety and connect ongoing care. / Post-crisis follow-up: Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety.
B. De-escalation: Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety. / Post-crisis follow-up: The safest effective intervention that imposes the fewest necessary restrictions, consistent with law and policy.
C. De-escalation: A coordinated transfer in which the current helper actively connects the person to the next service. / Post-crisis follow-up: Planned reassessment and continuity contact after acute stabilization to review safety and connect ongoing care.
D. De-escalation: Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety. / Post-crisis follow-up: Planned reassessment and continuity contact after acute stabilization to review safety and connect ongoing care.

0010. A student aged 15 is receiving support in the youth group. The consulting counselor is guided by this practice: clarifying immediate danger and available supports before moving to longer-term goals. Which principle best fits?

A. Risk formulation
B. Crisis triage
C. Crisis assessment
D. Protective factors

0011. While supporting a child aged 6 in the school consultation, a caregiver working with a counselor adopts this practice: using calm, respectful language, space, and choices rather than confrontation. Which concept best explains the choice?

A. De-escalation
B. Risk formulation
C. Warm handoff
D. Least restrictive response

0012. A young person aged 13’s service team meets in the student-support meeting. The parent educator recommends a change involving offering practical assistance and connection without pressuring a person to recount traumatic details. Which idea best explains it?

A. Least restrictive response
B. Crisis triage
C. Psychological first aid
D. Safety planning

0013. A doctoral student reads the following description. Which concept does it define? A contextual, ongoing synthesis of risk and protective factors, current intent, access, history, and foreseeable changes.

A. Least restrictive response
B. Safety planning
C. Protective factors
D. Risk formulation

0014. A case conference asks for a distinction between Safety planning and Psychological first aid. Which answer is sound?

A. Safety planning: A collaborative, individualized plan identifying warning signs, coping steps, supportive contacts, and emergency resources. / Psychological first aid: Planned reassessment and continuity contact after acute stabilization to review safety and connect ongoing care.
B. Safety planning: A collaborative, individualized plan identifying warning signs, coping steps, supportive contacts, and emergency resources. / Psychological first aid: A humane, practical, early response that promotes safety, stabilization, connection, and access to support.
C. Safety planning: A humane, practical, early response that promotes safety, stabilization, connection, and access to support. / Psychological first aid: A collaborative, individualized plan identifying warning signs, coping steps, supportive contacts, and emergency resources.
D. Safety planning: Rapid, focused appraisal of immediate safety, precipitating events, supports, functioning, and urgent needs. / Psychological first aid: A humane, practical, early response that promotes safety, stabilization, connection, and access to support.

0015. A planning meeting about a student aged 17 includes a play therapist. The proposed practice in the student-support meeting is determining which situation requires immediate emergency action and which can be safely managed with timely follow-up. Which idea underlies it?

A. Risk formulation
B. Crisis triage
C. Post-crisis follow-up
D. Protective factors

0016. A planning meeting about a adolescent student includes a counselor. The proposed practice in the multidisciplinary case conference is checking whether the plan worked and whether additional services are needed after the immediate crisis. Which idea underlies it?

A. Psychological first aid
B. Safety planning
C. Crisis triage
D. Post-crisis follow-up

0017. In a professional consultation about a young person aged 10, the assessment clinician describes this response in the school-based service: integrating current statements, context, access, supports, and changes rather than relying on one score. Which term is most apt?

A. Crisis triage
B. Warm handoff
C. De-escalation
D. Risk formulation

0018. A trainee must distinguish how Crisis assessment and Psychological first aid guide practice. Which comparison is accurate?

A. Crisis assessment: Offering practical assistance and connection without pressuring a person to recount traumatic details. / Psychological first aid: Clarifying immediate danger and available supports before moving to longer-term goals.
B. Crisis assessment: Clarifying immediate danger and available supports before moving to longer-term goals. / Psychological first aid: Creating specific steps with the youth and caregivers for what to do if risk increases.
C. Crisis assessment: Clarifying immediate danger and available supports before moving to longer-term goals. / Psychological first aid: Offering practical assistance and connection without pressuring a person to recount traumatic details.
D. Crisis assessment: Integrating current statements, context, access, supports, and changes rather than relying on one score. / Psychological first aid: Offering practical assistance and connection without pressuring a person to recount traumatic details.

0019. An interdisciplinary team reviews a young adolescent client's case at the clinical planning session. The counselor recommends identifying trusted adults and practical supports that can be activated now. Which course concept best fits?

A. Safety planning
B. Protective factors
C. Post-crisis follow-up
D. Least restrictive response

0020. A team must select a support approach for a student aged 17 at the outpatient clinic. The school-based clinician recommends contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number. Which idea is most relevant?

A. Least restrictive response
B. Risk formulation
C. Warm handoff
D. De-escalation

0021. At the multidisciplinary case conference, a behavior specialist meets with a child aged 11. The practice priority is: identifying trusted adults and practical supports that can be activated now. Which concept best captures that priority?

A. Protective factors
B. Post-crisis follow-up
C. Psychological first aid
D. Least restrictive response

0022. A service team discusses a young person in the child guidance clinic. Their proposed next step is checking whether the plan worked and whether additional services are needed after the immediate crisis. Which course concept supports it?

A. Post-crisis follow-up
B. Psychological first aid
C. De-escalation
D. Protective factors

0023. A case conference asks for a distinction between Protective factors and Warm handoff. Which answer is sound?

A. Protective factors: Personal, relational, and contextual resources that may reduce risk or support coping and recovery. / Warm handoff: Planned reassessment and continuity contact after acute stabilization to review safety and connect ongoing care.
B. Protective factors: Personal, relational, and contextual resources that may reduce risk or support coping and recovery. / Warm handoff: A coordinated transfer in which the current helper actively connects the person to the next service.
C. Protective factors: A humane, practical, early response that promotes safety, stabilization, connection, and access to support. / Warm handoff: A coordinated transfer in which the current helper actively connects the person to the next service.
D. Protective factors: A coordinated transfer in which the current helper actively connects the person to the next service. / Warm handoff: Personal, relational, and contextual resources that may reduce risk or support coping and recovery.

0024. In the parent meeting, a group facilitator explains why a student aged 9 would benefit from determining which situation requires immediate emergency action and which can be safely managed with timely follow-up. Which course concept underpins the explanation?

A. Protective factors
B. Crisis triage
C. Warm handoff
D. Least restrictive response

0025. A service navigator describes an intervention for a student aged 17 in the supervision meeting, centered on selecting a proportionate response and reassessing whether restrictions remain necessary. Which named idea is most relevant?

A. Crisis assessment
B. Least restrictive response
C. Warm handoff
D. Safety planning

0026. Which pair of actions illustrates Least restrictive response and Warm handoff, respectively?

A. Least restrictive response: Selecting a proportionate response and reassessing whether restrictions remain necessary. / Warm handoff: Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number.
B. Least restrictive response: Selecting a proportionate response and reassessing whether restrictions remain necessary. / Warm handoff: Identifying trusted adults and practical supports that can be activated now.
C. Least restrictive response: Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number. / Warm handoff: Selecting a proportionate response and reassessing whether restrictions remain necessary.
D. Least restrictive response: Offering practical assistance and connection without pressuring a person to recount traumatic details. / Warm handoff: Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number.

0027. In the learning-support meeting, a team asks how a teacher and counselor can support a preadolescent child. One proposed action is creating specific steps with the youth and caregivers for what to do if risk increases. Which idea does it represent?

A. Post-crisis follow-up
B. Safety planning
C. Crisis triage
D. Protective factors

0028. In a supervision quiz, how should Protective factors be distinguished from Psychological first aid?

A. Protective factors: Personal, relational, and contextual resources that may reduce risk or support coping and recovery. / Psychological first aid: Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety.
B. Protective factors: A humane, practical, early response that promotes safety, stabilization, connection, and access to support. / Psychological first aid: Personal, relational, and contextual resources that may reduce risk or support coping and recovery.
C. Protective factors: Rapid, focused appraisal of immediate safety, precipitating events, supports, functioning, and urgent needs. / Psychological first aid: A humane, practical, early response that promotes safety, stabilization, connection, and access to support.
D. Protective factors: Personal, relational, and contextual resources that may reduce risk or support coping and recovery. / Psychological first aid: A humane, practical, early response that promotes safety, stabilization, connection, and access to support.

0029. In the supervision meeting, a teacher and counselor describes the most appropriate support for a child aged 8 as checking whether the plan worked and whether additional services are needed after the immediate crisis. Which framework is being applied?

A. Psychological first aid
B. Post-crisis follow-up
C. Warm handoff
D. De-escalation

0030. Consider a young person aged 16 receiving help in the community service agency. The school counselor focuses on integrating current statements, context, access, supports, and changes rather than relying on one score. Which term best describes the guiding idea?

A. Crisis triage
B. Risk formulation
C. Psychological first aid
D. Least restrictive response

0031. Choose the response that best puts Crisis assessment into practice.

A. Checking whether the plan worked and whether additional services are needed after the immediate crisis.
B. Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number.
C. Clarifying immediate danger and available supports before moving to longer-term goals.
D. Selecting a proportionate response and reassessing whether restrictions remain necessary.

0032. A member of a clinical team is preparing a follow-up plan for a child aged 7 in the youth group. The plan calls for determining which situation requires immediate emergency action and which can be safely managed with timely follow-up. Which concept names this approach?

A. De-escalation
B. Safety planning
C. Least restrictive response
D. Crisis triage

0033. Which statement accurately contrasts the course concepts De-escalation and Post-crisis follow-up?

A. De-escalation: Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety. / Post-crisis follow-up: The safest effective intervention that imposes the fewest necessary restrictions, consistent with law and policy.
B. De-escalation: Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety. / Post-crisis follow-up: Planned reassessment and continuity contact after acute stabilization to review safety and connect ongoing care.
C. De-escalation: Planned reassessment and continuity contact after acute stabilization to review safety and connect ongoing care. / Post-crisis follow-up: Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety.
D. De-escalation: A coordinated transfer in which the current helper actively connects the person to the next service. / Post-crisis follow-up: Planned reassessment and continuity contact after acute stabilization to review safety and connect ongoing care.

0034. While consulting in the caregiver consultation, a mental-health professional supports a young adolescent client by using this approach: creating specific steps with the youth and caregivers for what to do if risk increases. Which concept is being applied?

A. De-escalation
B. Crisis triage
C. Safety planning
D. Risk formulation

0035. Choose the term that matches this definition: Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety.

A. Crisis triage
B. Crisis assessment
C. De-escalation
D. Protective factors

0036. A supervisor asks how Post-crisis follow-up would appear in practice. Which choice should be selected?

A. Offering practical assistance and connection without pressuring a person to recount traumatic details.
B. Using calm, respectful language, space, and choices rather than confrontation.
C. Checking whether the plan worked and whether additional services are needed after the immediate crisis.
D. Identifying trusted adults and practical supports that can be activated now.

0037. Which comparison would correct a trainee's misunderstanding of De-escalation versus Warm handoff?

A. De-escalation: Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety. / Warm handoff: A coordinated transfer in which the current helper actively connects the person to the next service.
B. De-escalation: The safest effective intervention that imposes the fewest necessary restrictions, consistent with law and policy. / Warm handoff: A coordinated transfer in which the current helper actively connects the person to the next service.
C. De-escalation: A coordinated transfer in which the current helper actively connects the person to the next service. / Warm handoff: Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety.
D. De-escalation: Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety. / Warm handoff: A collaborative, individualized plan identifying warning signs, coping steps, supportive contacts, and emergency resources.

0038. Which pair of actions illustrates Safety planning and De-escalation, respectively?

A. Safety planning: Creating specific steps with the youth and caregivers for what to do if risk increases. / De-escalation: Identifying trusted adults and practical supports that can be activated now.
B. Safety planning: Using calm, respectful language, space, and choices rather than confrontation. / De-escalation: Creating specific steps with the youth and caregivers for what to do if risk increases.
C. Safety planning: Creating specific steps with the youth and caregivers for what to do if risk increases. / De-escalation: Using calm, respectful language, space, and choices rather than confrontation.
D. Safety planning: Clarifying immediate danger and available supports before moving to longer-term goals. / De-escalation: Using calm, respectful language, space, and choices rather than confrontation.

0039. Which option pairs the definitions of Protective factors and Crisis triage correctly, in that order?

A. Protective factors: Personal, relational, and contextual resources that may reduce risk or support coping and recovery. / Crisis triage: Prioritizing urgency and level of response based on immediate danger, need, and available resources.
B. Protective factors: Prioritizing urgency and level of response based on immediate danger, need, and available resources. / Crisis triage: Personal, relational, and contextual resources that may reduce risk or support coping and recovery.
C. Protective factors: A humane, practical, early response that promotes safety, stabilization, connection, and access to support. / Crisis triage: Prioritizing urgency and level of response based on immediate danger, need, and available resources.
D. Protective factors: Personal, relational, and contextual resources that may reduce risk or support coping and recovery. / Crisis triage: A collaborative, individualized plan identifying warning signs, coping steps, supportive contacts, and emergency resources.

0040. An interdisciplinary team reviews a high-school student's case at the caregiver consultation. The behavior specialist recommends contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number. Which course concept best fits?

A. Least restrictive response
B. Warm handoff
C. Protective factors
D. Crisis assessment

0041. What is the central meaning of Risk formulation?

A. A contextual, ongoing synthesis of risk and protective factors, current intent, access, history, and foreseeable changes.
B. Prioritizing urgency and level of response based on immediate danger, need, and available resources.
C. Planned reassessment and continuity contact after acute stabilization to review safety and connect ongoing care.
D. A collaborative, individualized plan identifying warning signs, coping steps, supportive contacts, and emergency resources.

0042. Which option pairs the definitions of Protective factors and Psychological first aid correctly, in that order?

A. Protective factors: Rapid, focused appraisal of immediate safety, precipitating events, supports, functioning, and urgent needs. / Psychological first aid: A humane, practical, early response that promotes safety, stabilization, connection, and access to support.
B. Protective factors: A humane, practical, early response that promotes safety, stabilization, connection, and access to support. / Psychological first aid: Personal, relational, and contextual resources that may reduce risk or support coping and recovery.
C. Protective factors: Personal, relational, and contextual resources that may reduce risk or support coping and recovery. / Psychological first aid: Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety.
D. Protective factors: Personal, relational, and contextual resources that may reduce risk or support coping and recovery. / Psychological first aid: A humane, practical, early response that promotes safety, stabilization, connection, and access to support.

0043. How should a practitioner distinguish the applications of Risk formulation and Post-crisis follow-up?

A. Risk formulation: Identifying trusted adults and practical supports that can be activated now. / Post-crisis follow-up: Checking whether the plan worked and whether additional services are needed after the immediate crisis.
B. Risk formulation: Integrating current statements, context, access, supports, and changes rather than relying on one score. / Post-crisis follow-up: Checking whether the plan worked and whether additional services are needed after the immediate crisis.
C. Risk formulation: Checking whether the plan worked and whether additional services are needed after the immediate crisis. / Post-crisis follow-up: Integrating current statements, context, access, supports, and changes rather than relying on one score.
D. Risk formulation: Integrating current statements, context, access, supports, and changes rather than relying on one score. / Post-crisis follow-up: Using calm, respectful language, space, and choices rather than confrontation.

0044. A case conference asks for a distinction between Crisis assessment and Crisis triage. Which answer is sound?

A. Crisis assessment: A coordinated transfer in which the current helper actively connects the person to the next service. / Crisis triage: Prioritizing urgency and level of response based on immediate danger, need, and available resources.
B. Crisis assessment: Rapid, focused appraisal of immediate safety, precipitating events, supports, functioning, and urgent needs. / Crisis triage: Planned reassessment and continuity contact after acute stabilization to review safety and connect ongoing care.
C. Crisis assessment: Rapid, focused appraisal of immediate safety, precipitating events, supports, functioning, and urgent needs. / Crisis triage: Prioritizing urgency and level of response based on immediate danger, need, and available resources.
D. Crisis assessment: Prioritizing urgency and level of response based on immediate danger, need, and available resources. / Crisis triage: Rapid, focused appraisal of immediate safety, precipitating events, supports, functioning, and urgent needs.

0045. During service review in the family session, a service navigator describes integrating current statements, context, access, supports, and changes rather than relying on one score. for a middle-school student. Which course idea is most applicable?

A. Post-crisis follow-up
B. Risk formulation
C. Psychological first aid
D. Least restrictive response

0046. During work in the counseling practicum, a teacher and counselor identifies this need: selecting a proportionate response and reassessing whether restrictions remain necessary. Which idea should guide the response?

A. Least restrictive response
B. Protective factors
C. Risk formulation
D. Psychological first aid

0047. A service team discusses a client in late adolescence in the youth advocacy program. Their proposed next step is selecting a proportionate response and reassessing whether restrictions remain necessary. Which course concept supports it?

A. Psychological first aid
B. Crisis assessment
C. Risk formulation
D. Least restrictive response

0048. A case conference reviews a service navigator's work with a teenage client in the counseling practicum: creating specific steps with the youth and caregivers for what to do if risk increases. Which principle is central?

A. Post-crisis follow-up
B. Crisis triage
C. Least restrictive response
D. Safety planning

0049. During work in the learning-support meeting, a youth worker identifies this need: offering practical assistance and connection without pressuring a person to recount traumatic details. Which idea should guide the response?

A. De-escalation
B. Post-crisis follow-up
C. Psychological first aid
D. Safety planning

0050. A trainee must distinguish how Risk formulation and Psychological first aid guide practice. Which comparison is accurate?

A. Risk formulation: Integrating current statements, context, access, supports, and changes rather than relying on one score. / Psychological first aid: Determining which situation requires immediate emergency action and which can be safely managed with timely follow-up.
B. Risk formulation: Offering practical assistance and connection without pressuring a person to recount traumatic details. / Psychological first aid: Integrating current statements, context, access, supports, and changes rather than relying on one score.
C. Risk formulation: Integrating current statements, context, access, supports, and changes rather than relying on one score. / Psychological first aid: Offering practical assistance and connection without pressuring a person to recount traumatic details.
D. Risk formulation: Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number. / Psychological first aid: Offering practical assistance and connection without pressuring a person to recount traumatic details.

0051. A support meeting for a student aged 9 includes a counselor in the student wellness team. The practice under consideration is contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number. Which concept guides it?

A. Protective factors
B. Crisis triage
C. Warm handoff
D. Post-crisis follow-up

0052. Which pair of actions illustrates Safety planning and Protective factors, respectively?

A. Safety planning: Identifying trusted adults and practical supports that can be activated now. / Protective factors: Creating specific steps with the youth and caregivers for what to do if risk increases.
B. Safety planning: Creating specific steps with the youth and caregivers for what to do if risk increases. / Protective factors: Integrating current statements, context, access, supports, and changes rather than relying on one score.
C. Safety planning: Clarifying immediate danger and available supports before moving to longer-term goals. / Protective factors: Identifying trusted adults and practical supports that can be activated now.
D. Safety planning: Creating specific steps with the youth and caregivers for what to do if risk increases. / Protective factors: Identifying trusted adults and practical supports that can be activated now.

0053. A assessment clinician and a young person aged 13 are discussing support in the clinical planning session. The selected practice is using calm, respectful language, space, and choices rather than confrontation. Which concept does this demonstrate?

A. Least restrictive response
B. Psychological first aid
C. Risk formulation
D. De-escalation

0054. Which description belongs with the term Crisis triage?

A. Prioritizing urgency and level of response based on immediate danger, need, and available resources.
B. A coordinated transfer in which the current helper actively connects the person to the next service.
C. The safest effective intervention that imposes the fewest necessary restrictions, consistent with law and policy.
D. A contextual, ongoing synthesis of risk and protective factors, current intent, access, history, and foreseeable changes.

0055. A case conference asks for a distinction between Risk formulation and Protective factors. Which answer is sound?

A. Risk formulation: Personal, relational, and contextual resources that may reduce risk or support coping and recovery. / Protective factors: A contextual, ongoing synthesis of risk and protective factors, current intent, access, history, and foreseeable changes.
B. Risk formulation: A contextual, ongoing synthesis of risk and protective factors, current intent, access, history, and foreseeable changes. / Protective factors: A collaborative, individualized plan identifying warning signs, coping steps, supportive contacts, and emergency resources.
C. Risk formulation: A contextual, ongoing synthesis of risk and protective factors, current intent, access, history, and foreseeable changes. / Protective factors: Personal, relational, and contextual resources that may reduce risk or support coping and recovery.
D. Risk formulation: A humane, practical, early response that promotes safety, stabilization, connection, and access to support. / Protective factors: Personal, relational, and contextual resources that may reduce risk or support coping and recovery.

0056. Choose the term that matches this definition: A collaborative, individualized plan identifying warning signs, coping steps, supportive contacts, and emergency resources.

A. Protective factors
B. Safety planning
C. Crisis triage
D. Post-crisis follow-up

0057. A trainee must explain Crisis assessment. Which answer is accurate?

A. Personal, relational, and contextual resources that may reduce risk or support coping and recovery.
B. The safest effective intervention that imposes the fewest necessary restrictions, consistent with law and policy.
C. Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety.
D. Rapid, focused appraisal of immediate safety, precipitating events, supports, functioning, and urgent needs.

0058. Choose the definition pair that correctly explains Protective factors first and Warm handoff second.

A. Protective factors: Personal, relational, and contextual resources that may reduce risk or support coping and recovery. / Warm handoff: Planned reassessment and continuity contact after acute stabilization to review safety and connect ongoing care.
B. Protective factors: A coordinated transfer in which the current helper actively connects the person to the next service. / Warm handoff: Personal, relational, and contextual resources that may reduce risk or support coping and recovery.
C. Protective factors: Personal, relational, and contextual resources that may reduce risk or support coping and recovery. / Warm handoff: A coordinated transfer in which the current helper actively connects the person to the next service.
D. Protective factors: A humane, practical, early response that promotes safety, stabilization, connection, and access to support. / Warm handoff: A coordinated transfer in which the current helper actively connects the person to the next service.

0059. How should a practitioner distinguish the applications of Protective factors and Psychological first aid?

A. Protective factors: Identifying trusted adults and practical supports that can be activated now. / Psychological first aid: Using calm, respectful language, space, and choices rather than confrontation.
B. Protective factors: Identifying trusted adults and practical supports that can be activated now. / Psychological first aid: Offering practical assistance and connection without pressuring a person to recount traumatic details.
C. Protective factors: Offering practical assistance and connection without pressuring a person to recount traumatic details. / Psychological first aid: Identifying trusted adults and practical supports that can be activated now.
D. Protective factors: Clarifying immediate danger and available supports before moving to longer-term goals. / Psychological first aid: Offering practical assistance and connection without pressuring a person to recount traumatic details.

0060. A young person and a member of a clinical team are reviewing goals in the classroom support meeting. The agreed action is integrating current statements, context, access, supports, and changes rather than relying on one score. Which principle best accounts for it?

A. Crisis assessment
B. Warm handoff
C. Safety planning
D. Risk formulation

0061. At the family resource center, a research trainee reviews whether a plan for a young person aged 10 is appropriate. The relevant practice is checking whether the plan worked and whether additional services are needed after the immediate crisis. Which concept is tested?

A. Psychological first aid
B. De-escalation
C. Post-crisis follow-up
D. Least restrictive response

0062. In the student wellness team, the agreed focus for a research trainee working with a older adolescent client is selecting a proportionate response and reassessing whether restrictions remain necessary. Which concept names this focus?

A. Protective factors
B. Post-crisis follow-up
C. Least restrictive response
D. Crisis triage

0063. A youth worker is explaining a choice to a child aged 11 and caregiver in the family resource center. The choice centers on integrating current statements, context, access, supports, and changes rather than relying on one score. Which idea is illustrated?

A. Crisis assessment
B. Post-crisis follow-up
C. Warm handoff
D. Risk formulation

0064. Which option preserves the correct meaning of both Risk formulation and Psychological first aid?

A. Risk formulation: A humane, practical, early response that promotes safety, stabilization, connection, and access to support. / Psychological first aid: A contextual, ongoing synthesis of risk and protective factors, current intent, access, history, and foreseeable changes.
B. Risk formulation: A contextual, ongoing synthesis of risk and protective factors, current intent, access, history, and foreseeable changes. / Psychological first aid: Prioritizing urgency and level of response based on immediate danger, need, and available resources.
C. Risk formulation: A contextual, ongoing synthesis of risk and protective factors, current intent, access, history, and foreseeable changes. / Psychological first aid: A humane, practical, early response that promotes safety, stabilization, connection, and access to support.
D. Risk formulation: A coordinated transfer in which the current helper actively connects the person to the next service. / Psychological first aid: A humane, practical, early response that promotes safety, stabilization, connection, and access to support.

0065. Which statement shows a sound practice-level distinction between Risk formulation and Post-crisis follow-up?

A. Risk formulation: Checking whether the plan worked and whether additional services are needed after the immediate crisis. / Post-crisis follow-up: Integrating current statements, context, access, supports, and changes rather than relying on one score.
B. Risk formulation: Integrating current statements, context, access, supports, and changes rather than relying on one score. / Post-crisis follow-up: Using calm, respectful language, space, and choices rather than confrontation.
C. Risk formulation: Integrating current statements, context, access, supports, and changes rather than relying on one score. / Post-crisis follow-up: Checking whether the plan worked and whether additional services are needed after the immediate crisis.
D. Risk formulation: Identifying trusted adults and practical supports that can be activated now. / Post-crisis follow-up: Checking whether the plan worked and whether additional services are needed after the immediate crisis.

0066. Which option pairs the definitions of Psychological first aid and Post-crisis follow-up correctly, in that order?

A. Psychological first aid: Planned reassessment and continuity contact after acute stabilization to review safety and connect ongoing care. / Post-crisis follow-up: A humane, practical, early response that promotes safety, stabilization, connection, and access to support.
B. Psychological first aid: A humane, practical, early response that promotes safety, stabilization, connection, and access to support. / Post-crisis follow-up: Rapid, focused appraisal of immediate safety, precipitating events, supports, functioning, and urgent needs.
C. Psychological first aid: A contextual, ongoing synthesis of risk and protective factors, current intent, access, history, and foreseeable changes. / Post-crisis follow-up: Planned reassessment and continuity contact after acute stabilization to review safety and connect ongoing care.
D. Psychological first aid: A humane, practical, early response that promotes safety, stabilization, connection, and access to support. / Post-crisis follow-up: Planned reassessment and continuity contact after acute stabilization to review safety and connect ongoing care.

0067. Which applied comparison correctly identifies what belongs to Crisis triage versus Warm handoff?

A. Crisis triage: Determining which situation requires immediate emergency action and which can be safely managed with timely follow-up. / Warm handoff: Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number.
B. Crisis triage: Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number. / Warm handoff: Determining which situation requires immediate emergency action and which can be safely managed with timely follow-up.
C. Crisis triage: Checking whether the plan worked and whether additional services are needed after the immediate crisis. / Warm handoff: Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number.
D. Crisis triage: Determining which situation requires immediate emergency action and which can be safely managed with timely follow-up. / Warm handoff: Integrating current statements, context, access, supports, and changes rather than relying on one score.

0068. Which statement shows a sound practice-level distinction between Risk formulation and Warm handoff?

A. Risk formulation: Using calm, respectful language, space, and choices rather than confrontation. / Warm handoff: Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number.
B. Risk formulation: Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number. / Warm handoff: Integrating current statements, context, access, supports, and changes rather than relying on one score.
C. Risk formulation: Integrating current statements, context, access, supports, and changes rather than relying on one score. / Warm handoff: Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number.
D. Risk formulation: Integrating current statements, context, access, supports, and changes rather than relying on one score. / Warm handoff: Determining which situation requires immediate emergency action and which can be safely managed with timely follow-up.

0069. Which statement shows a sound practice-level distinction between De-escalation and Least restrictive response?

A. De-escalation: Selecting a proportionate response and reassessing whether restrictions remain necessary. / Least restrictive response: Using calm, respectful language, space, and choices rather than confrontation.
B. De-escalation: Determining which situation requires immediate emergency action and which can be safely managed with timely follow-up. / Least restrictive response: Selecting a proportionate response and reassessing whether restrictions remain necessary.
C. De-escalation: Using calm, respectful language, space, and choices rather than confrontation. / Least restrictive response: Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number.
D. De-escalation: Using calm, respectful language, space, and choices rather than confrontation. / Least restrictive response: Selecting a proportionate response and reassessing whether restrictions remain necessary.

0070. Which paired example correctly applies Safety planning first and Crisis triage second?

A. Safety planning: Identifying trusted adults and practical supports that can be activated now. / Crisis triage: Determining which situation requires immediate emergency action and which can be safely managed with timely follow-up.
B. Safety planning: Determining which situation requires immediate emergency action and which can be safely managed with timely follow-up. / Crisis triage: Creating specific steps with the youth and caregivers for what to do if risk increases.
C. Safety planning: Creating specific steps with the youth and caregivers for what to do if risk increases. / Crisis triage: Determining which situation requires immediate emergency action and which can be safely managed with timely follow-up.
D. Safety planning: Creating specific steps with the youth and caregivers for what to do if risk increases. / Crisis triage: Checking whether the plan worked and whether additional services are needed after the immediate crisis.

0071. Which comparison correctly distinguishes Least restrictive response from Crisis triage?

A. Least restrictive response: The safest effective intervention that imposes the fewest necessary restrictions, consistent with law and policy. / Crisis triage: Planned reassessment and continuity contact after acute stabilization to review safety and connect ongoing care.
B. Least restrictive response: The safest effective intervention that imposes the fewest necessary restrictions, consistent with law and policy. / Crisis triage: Prioritizing urgency and level of response based on immediate danger, need, and available resources.
C. Least restrictive response: A contextual, ongoing synthesis of risk and protective factors, current intent, access, history, and foreseeable changes. / Crisis triage: Prioritizing urgency and level of response based on immediate danger, need, and available resources.
D. Least restrictive response: Prioritizing urgency and level of response based on immediate danger, need, and available resources. / Crisis triage: The safest effective intervention that imposes the fewest necessary restrictions, consistent with law and policy.

0072. Choose the response that best puts De-escalation into practice.

A. Determining which situation requires immediate emergency action and which can be safely managed with timely follow-up.
B. Identifying trusted adults and practical supports that can be activated now.
C. Using calm, respectful language, space, and choices rather than confrontation.
D. Integrating current statements, context, access, supports, and changes rather than relying on one score.

0073. A supervised trainee is preparing a follow-up plan for a older adolescent client in the parent meeting. The plan calls for identifying trusted adults and practical supports that can be activated now. Which concept names this approach?

A. De-escalation
B. Post-crisis follow-up
C. Protective factors
D. Risk formulation

0074. Which pair of actions illustrates De-escalation and Risk formulation, respectively?

A. De-escalation: Using calm, respectful language, space, and choices rather than confrontation. / Risk formulation: Integrating current statements, context, access, supports, and changes rather than relying on one score.
B. De-escalation: Using calm, respectful language, space, and choices rather than confrontation. / Risk formulation: Determining which situation requires immediate emergency action and which can be safely managed with timely follow-up.
C. De-escalation: Integrating current statements, context, access, supports, and changes rather than relying on one score. / Risk formulation: Using calm, respectful language, space, and choices rather than confrontation.
D. De-escalation: Identifying trusted adults and practical supports that can be activated now. / Risk formulation: Integrating current statements, context, access, supports, and changes rather than relying on one score.

0075. A child aged 8 and a consultant are reviewing goals in the clinical planning session. The agreed action is determining which situation requires immediate emergency action and which can be safely managed with timely follow-up. Which principle best accounts for it?

A. Psychological first aid
B. Protective factors
C. Crisis triage
D. Risk formulation

0076. A group facilitator is asked to justify a plan for a young person in the clinical planning session. It calls for clarifying immediate danger and available supports before moving to longer-term goals. Which concept provides the rationale?

A. De-escalation
B. Protective factors
C. Least restrictive response
D. Crisis assessment

0077. When reviewing a student aged 12’s plan in the counseling practicum, the case coordinator notes that the next step is integrating current statements, context, access, supports, and changes rather than relying on one score. Which concept guides this step?

A. Crisis assessment
B. De-escalation
C. Risk formulation
D. Psychological first aid

0078. Which comparison correctly distinguishes Protective factors from Least restrictive response?

A. Protective factors: A collaborative, individualized plan identifying warning signs, coping steps, supportive contacts, and emergency resources. / Least restrictive response: The safest effective intervention that imposes the fewest necessary restrictions, consistent with law and policy.
B. Protective factors: Personal, relational, and contextual resources that may reduce risk or support coping and recovery. / Least restrictive response: Rapid, focused appraisal of immediate safety, precipitating events, supports, functioning, and urgent needs.
C. Protective factors: Personal, relational, and contextual resources that may reduce risk or support coping and recovery. / Least restrictive response: The safest effective intervention that imposes the fewest necessary restrictions, consistent with law and policy.
D. Protective factors: The safest effective intervention that imposes the fewest necessary restrictions, consistent with law and policy. / Least restrictive response: Personal, relational, and contextual resources that may reduce risk or support coping and recovery.

0079. In a supervision review, a school-based clinician describes work with a client in early adolescence in the parent meeting: selecting a proportionate response and reassessing whether restrictions remain necessary. What concept is illustrated?

A. Protective factors
B. Least restrictive response
C. Crisis assessment
D. Safety planning

0080. A client in late adolescence's service team meets in the multidisciplinary case conference. The caregiver working with a counselor recommends a change involving contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number. Which idea best explains it?

A. Risk formulation
B. Psychological first aid
C. Warm handoff
D. De-escalation

0081. How should a practitioner distinguish the applications of Crisis assessment and De-escalation?

A. Crisis assessment: Clarifying immediate danger and available supports before moving to longer-term goals. / De-escalation: Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number.
B. Crisis assessment: Clarifying immediate danger and available supports before moving to longer-term goals. / De-escalation: Using calm, respectful language, space, and choices rather than confrontation.
C. Crisis assessment: Using calm, respectful language, space, and choices rather than confrontation. / De-escalation: Clarifying immediate danger and available supports before moving to longer-term goals.
D. Crisis assessment: Checking whether the plan worked and whether additional services are needed after the immediate crisis. / De-escalation: Using calm, respectful language, space, and choices rather than confrontation.

0082. In a supervision quiz, how should Crisis assessment be distinguished from De-escalation?

A. Crisis assessment: Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety. / De-escalation: Rapid, focused appraisal of immediate safety, precipitating events, supports, functioning, and urgent needs.
B. Crisis assessment: Rapid, focused appraisal of immediate safety, precipitating events, supports, functioning, and urgent needs. / De-escalation: Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety.
C. Crisis assessment: Rapid, focused appraisal of immediate safety, precipitating events, supports, functioning, and urgent needs. / De-escalation: A coordinated transfer in which the current helper actively connects the person to the next service.
D. Crisis assessment: Planned reassessment and continuity contact after acute stabilization to review safety and connect ongoing care. / De-escalation: Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety.

0083. Which option correctly matches each concept to its practice focus: Protective factors and Post-crisis follow-up?

A. Protective factors: Creating specific steps with the youth and caregivers for what to do if risk increases. / Post-crisis follow-up: Checking whether the plan worked and whether additional services are needed after the immediate crisis.
B. Protective factors: Checking whether the plan worked and whether additional services are needed after the immediate crisis. / Post-crisis follow-up: Identifying trusted adults and practical supports that can be activated now.
C. Protective factors: Identifying trusted adults and practical supports that can be activated now. / Post-crisis follow-up: Checking whether the plan worked and whether additional services are needed after the immediate crisis.
D. Protective factors: Identifying trusted adults and practical supports that can be activated now. / Post-crisis follow-up: Using calm, respectful language, space, and choices rather than confrontation.

0084. A case conference asks for a distinction between Risk formulation and Psychological first aid. Which answer is sound?

A. Risk formulation: A contextual, ongoing synthesis of risk and protective factors, current intent, access, history, and foreseeable changes. / Psychological first aid: Prioritizing urgency and level of response based on immediate danger, need, and available resources.
B. Risk formulation: A coordinated transfer in which the current helper actively connects the person to the next service. / Psychological first aid: A humane, practical, early response that promotes safety, stabilization, connection, and access to support.
C. Risk formulation: A contextual, ongoing synthesis of risk and protective factors, current intent, access, history, and foreseeable changes. / Psychological first aid: A humane, practical, early response that promotes safety, stabilization, connection, and access to support.
D. Risk formulation: A humane, practical, early response that promotes safety, stabilization, connection, and access to support. / Psychological first aid: A contextual, ongoing synthesis of risk and protective factors, current intent, access, history, and foreseeable changes.

0085. A team must select a support approach for a young adolescent client at the behavior-support review. The family therapist recommends selecting a proportionate response and reassessing whether restrictions remain necessary. Which idea is most relevant?

A. Least restrictive response
B. Risk formulation
C. Post-crisis follow-up
D. Warm handoff

0086. Which statement most accurately defines Protective factors?

A. Prioritizing urgency and level of response based on immediate danger, need, and available resources.
B. A collaborative, individualized plan identifying warning signs, coping steps, supportive contacts, and emergency resources.
C. The safest effective intervention that imposes the fewest necessary restrictions, consistent with law and policy.
D. Personal, relational, and contextual resources that may reduce risk or support coping and recovery.

0087. Which option is the clearest practical expression of Least restrictive response?

A. Determining which situation requires immediate emergency action and which can be safely managed with timely follow-up.
B. Creating specific steps with the youth and caregivers for what to do if risk increases.
C. Selecting a proportionate response and reassessing whether restrictions remain necessary.
D. Identifying trusted adults and practical supports that can be activated now.

0088. Which course concept is defined as follows: The safest effective intervention that imposes the fewest necessary restrictions, consistent with law and policy.

A. Least restrictive response
B. De-escalation
C. Crisis assessment
D. Psychological first aid

0089. How should a practitioner distinguish the applications of Safety planning and Least restrictive response?

A. Safety planning: Creating specific steps with the youth and caregivers for what to do if risk increases. / Least restrictive response: Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number.
B. Safety planning: Selecting a proportionate response and reassessing whether restrictions remain necessary. / Least restrictive response: Creating specific steps with the youth and caregivers for what to do if risk increases.
C. Safety planning: Creating specific steps with the youth and caregivers for what to do if risk increases. / Least restrictive response: Selecting a proportionate response and reassessing whether restrictions remain necessary.
D. Safety planning: Offering practical assistance and connection without pressuring a person to recount traumatic details. / Least restrictive response: Selecting a proportionate response and reassessing whether restrictions remain necessary.

0090. A counselor is asked to evaluate a proposed service for a client in late adolescence in the child guidance clinic. The defining feature is using calm, respectful language, space, and choices rather than confrontation. Which concept fits?

A. De-escalation
B. Crisis triage
C. Psychological first aid
D. Post-crisis follow-up

0091. Which description belongs with the term De-escalation?

A. Prioritizing urgency and level of response based on immediate danger, need, and available resources.
B. A collaborative, individualized plan identifying warning signs, coping steps, supportive contacts, and emergency resources.
C. A coordinated transfer in which the current helper actively connects the person to the next service.
D. Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety.

0092. A trainee must choose a practice that exemplifies Crisis triage. Which action is the best fit?

A. Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number.
B. Clarifying immediate danger and available supports before moving to longer-term goals.
C. Checking whether the plan worked and whether additional services are needed after the immediate crisis.
D. Determining which situation requires immediate emergency action and which can be safely managed with timely follow-up.

0093. In the family resource center, the agreed focus for a program coordinator working with a student aged 15 is identifying trusted adults and practical supports that can be activated now. Which concept names this focus?

A. Protective factors
B. Post-crisis follow-up
C. Crisis assessment
D. Safety planning

0094. Choose the response that best puts Least restrictive response into practice.

A. Selecting a proportionate response and reassessing whether restrictions remain necessary.
B. Identifying trusted adults and practical supports that can be activated now.
C. Integrating current statements, context, access, supports, and changes rather than relying on one score.
D. Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number.

0095. A trainee must explain Risk formulation. Which answer is accurate?

A. A humane, practical, early response that promotes safety, stabilization, connection, and access to support.
B. Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety.
C. Personal, relational, and contextual resources that may reduce risk or support coping and recovery.
D. A contextual, ongoing synthesis of risk and protective factors, current intent, access, history, and foreseeable changes.

0096. Choose the definition pair that correctly explains Crisis assessment first and Psychological first aid second.

A. Crisis assessment: Rapid, focused appraisal of immediate safety, precipitating events, supports, functioning, and urgent needs. / Psychological first aid: A humane, practical, early response that promotes safety, stabilization, connection, and access to support.
B. Crisis assessment: Rapid, focused appraisal of immediate safety, precipitating events, supports, functioning, and urgent needs. / Psychological first aid: A collaborative, individualized plan identifying warning signs, coping steps, supportive contacts, and emergency resources.
C. Crisis assessment: A contextual, ongoing synthesis of risk and protective factors, current intent, access, history, and foreseeable changes. / Psychological first aid: A humane, practical, early response that promotes safety, stabilization, connection, and access to support.
D. Crisis assessment: A humane, practical, early response that promotes safety, stabilization, connection, and access to support. / Psychological first aid: Rapid, focused appraisal of immediate safety, precipitating events, supports, functioning, and urgent needs.

0097. Which choice aligns each practice with the correct idea, Psychological first aid or Warm handoff?

A. Psychological first aid: Offering practical assistance and connection without pressuring a person to recount traumatic details. / Warm handoff: Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number.
B. Psychological first aid: Offering practical assistance and connection without pressuring a person to recount traumatic details. / Warm handoff: Identifying trusted adults and practical supports that can be activated now.
C. Psychological first aid: Checking whether the plan worked and whether additional services are needed after the immediate crisis. / Warm handoff: Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number.
D. Psychological first aid: Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number. / Warm handoff: Offering practical assistance and connection without pressuring a person to recount traumatic details.

0098. During work in the supervision meeting, a school counselor identifies this need: identifying trusted adults and practical supports that can be activated now. Which idea should guide the response?

A. Safety planning
B. Protective factors
C. Risk formulation
D. Warm handoff

0099. A consultant and a young person are discussing support in the school-based service. The selected practice is contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number. Which concept does this demonstrate?

A. Crisis assessment
B. Post-crisis follow-up
C. Crisis triage
D. Warm handoff

0100. At a case-planning meeting, the clinical supervisor proposes offering practical assistance and connection without pressuring a person to recount traumatic details. for a child of elementary-school age seen in the behavior-support review. Which concept does this illustrate?

A. De-escalation
B. Protective factors
C. Crisis assessment
D. Psychological first aid

0101. Which option pairs the definitions of De-escalation and Protective factors correctly, in that order?

A. De-escalation: Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety. / Protective factors: Rapid, focused appraisal of immediate safety, precipitating events, supports, functioning, and urgent needs.
B. De-escalation: Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety. / Protective factors: Personal, relational, and contextual resources that may reduce risk or support coping and recovery.
C. De-escalation: A contextual, ongoing synthesis of risk and protective factors, current intent, access, history, and foreseeable changes. / Protective factors: Personal, relational, and contextual resources that may reduce risk or support coping and recovery.
D. De-escalation: Personal, relational, and contextual resources that may reduce risk or support coping and recovery. / Protective factors: Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety.

0102. Which statement shows a sound practice-level distinction between Crisis assessment and Psychological first aid?

A. Crisis assessment: Clarifying immediate danger and available supports before moving to longer-term goals. / Psychological first aid: Offering practical assistance and connection without pressuring a person to recount traumatic details.
B. Crisis assessment: Integrating current statements, context, access, supports, and changes rather than relying on one score. / Psychological first aid: Offering practical assistance and connection without pressuring a person to recount traumatic details.
C. Crisis assessment: Offering practical assistance and connection without pressuring a person to recount traumatic details. / Psychological first aid: Clarifying immediate danger and available supports before moving to longer-term goals.
D. Crisis assessment: Clarifying immediate danger and available supports before moving to longer-term goals. / Psychological first aid: Creating specific steps with the youth and caregivers for what to do if risk increases.

0103. At the school counseling office, a counselor meets with a child aged 8. The practice priority is: clarifying immediate danger and available supports before moving to longer-term goals. Which concept best captures that priority?

A. Least restrictive response
B. Protective factors
C. Crisis assessment
D. Safety planning

0104. In the family resource center, a team asks how a group facilitator can support a adolescent student. One proposed action is contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number. Which idea does it represent?

A. De-escalation
B. Warm handoff
C. Safety planning
D. Least restrictive response

0105. Which option pairs the definitions of Psychological first aid and Warm handoff correctly, in that order?

A. Psychological first aid: A humane, practical, early response that promotes safety, stabilization, connection, and access to support. / Warm handoff: A coordinated transfer in which the current helper actively connects the person to the next service.
B. Psychological first aid: A humane, practical, early response that promotes safety, stabilization, connection, and access to support. / Warm handoff: Personal, relational, and contextual resources that may reduce risk or support coping and recovery.
C. Psychological first aid: Planned reassessment and continuity contact after acute stabilization to review safety and connect ongoing care. / Warm handoff: A coordinated transfer in which the current helper actively connects the person to the next service.
D. Psychological first aid: A coordinated transfer in which the current helper actively connects the person to the next service. / Warm handoff: A humane, practical, early response that promotes safety, stabilization, connection, and access to support.

0106. A case conference asks for a distinction between Safety planning and Crisis triage. Which answer is sound?

A. Safety planning: A collaborative, individualized plan identifying warning signs, coping steps, supportive contacts, and emergency resources. / Crisis triage: Planned reassessment and continuity contact after acute stabilization to review safety and connect ongoing care.
B. Safety planning: Personal, relational, and contextual resources that may reduce risk or support coping and recovery. / Crisis triage: Prioritizing urgency and level of response based on immediate danger, need, and available resources.
C. Safety planning: A collaborative, individualized plan identifying warning signs, coping steps, supportive contacts, and emergency resources. / Crisis triage: Prioritizing urgency and level of response based on immediate danger, need, and available resources.
D. Safety planning: Prioritizing urgency and level of response based on immediate danger, need, and available resources. / Crisis triage: A collaborative, individualized plan identifying warning signs, coping steps, supportive contacts, and emergency resources.

0107. A consulting counselor is explaining a choice to a child of elementary-school age and caregiver in the clinical planning session. The choice centers on selecting a proportionate response and reassessing whether restrictions remain necessary. Which idea is illustrated?

A. De-escalation
B. Least restrictive response
C. Crisis triage
D. Risk formulation

0108. Which option pairs the definitions of Protective factors and Least restrictive response correctly, in that order?

A. Protective factors: Personal, relational, and contextual resources that may reduce risk or support coping and recovery. / Least restrictive response: The safest effective intervention that imposes the fewest necessary restrictions, consistent with law and policy.
B. Protective factors: A collaborative, individualized plan identifying warning signs, coping steps, supportive contacts, and emergency resources. / Least restrictive response: The safest effective intervention that imposes the fewest necessary restrictions, consistent with law and policy.
C. Protective factors: Personal, relational, and contextual resources that may reduce risk or support coping and recovery. / Least restrictive response: Rapid, focused appraisal of immediate safety, precipitating events, supports, functioning, and urgent needs.
D. Protective factors: The safest effective intervention that imposes the fewest necessary restrictions, consistent with law and policy. / Least restrictive response: Personal, relational, and contextual resources that may reduce risk or support coping and recovery.

0109. A mental-health professional and a high-school student are discussing support in the family resource center. The selected practice is clarifying immediate danger and available supports before moving to longer-term goals. Which concept does this demonstrate?

A. Crisis assessment
B. Psychological first aid
C. Warm handoff
D. Crisis triage

0110. How should a practitioner distinguish the applications of Safety planning and De-escalation?

A. Safety planning: Creating specific steps with the youth and caregivers for what to do if risk increases. / De-escalation: Using calm, respectful language, space, and choices rather than confrontation.
B. Safety planning: Clarifying immediate danger and available supports before moving to longer-term goals. / De-escalation: Using calm, respectful language, space, and choices rather than confrontation.
C. Safety planning: Creating specific steps with the youth and caregivers for what to do if risk increases. / De-escalation: Identifying trusted adults and practical supports that can be activated now.
D. Safety planning: Using calm, respectful language, space, and choices rather than confrontation. / De-escalation: Creating specific steps with the youth and caregivers for what to do if risk increases.

0111. A support meeting for a young person aged 10 includes a play therapist in the parent meeting. The practice under consideration is creating specific steps with the youth and caregivers for what to do if risk increases. Which concept guides it?

A. Crisis triage
B. Risk formulation
C. Crisis assessment
D. Safety planning

0112. A mental-health professional prepares for a session in the learning-support meeting with a student aged 15. The intended approach is integrating current statements, context, access, supports, and changes rather than relying on one score. Which concept is most relevant?

A. De-escalation
B. Warm handoff
C. Risk formulation
D. Post-crisis follow-up

0113. A team must select a support approach for a child aged 7 at the student-support meeting. The case coordinator recommends creating specific steps with the youth and caregivers for what to do if risk increases. Which idea is most relevant?

A. Least restrictive response
B. Safety planning
C. Crisis triage
D. De-escalation

0114. A case conference reviews a service navigator’s work with a child aged 14 in the youth group: offering practical assistance and connection without pressuring a person to recount traumatic details. Which principle is central?

A. Crisis assessment
B. Post-crisis follow-up
C. Psychological first aid
D. De-escalation

0115. During work in the outpatient clinic, a teacher and counselor identifies this need: clarifying immediate danger and available supports before moving to longer-term goals. Which idea should guide the response?

A. Risk formulation
B. Warm handoff
C. Post-crisis follow-up
D. Crisis assessment

0116. A student confuses Psychological first aid with Warm handoff. Which explanation most accurately separates them?

A. Psychological first aid: A coordinated transfer in which the current helper actively connects the person to the next service. / Warm handoff: A humane, practical, early response that promotes safety, stabilization, connection, and access to support.
B. Psychological first aid: Planned reassessment and continuity contact after acute stabilization to review safety and connect ongoing care. / Warm handoff: A coordinated transfer in which the current helper actively connects the person to the next service.
C. Psychological first aid: A humane, practical, early response that promotes safety, stabilization, connection, and access to support. / Warm handoff: A coordinated transfer in which the current helper actively connects the person to the next service.
D. Psychological first aid: A humane, practical, early response that promotes safety, stabilization, connection, and access to support. / Warm handoff: Personal, relational, and contextual resources that may reduce risk or support coping and recovery.

0117. In the school consultation, the agreed focus for a research trainee working with a student aged 12 is clarifying immediate danger and available supports before moving to longer-term goals. Which concept names this focus?

A. Crisis assessment
B. Protective factors
C. Warm handoff
D. Least restrictive response

0118. Which option preserves the correct meaning of both Risk formulation and Warm handoff?

A. Risk formulation: A coordinated transfer in which the current helper actively connects the person to the next service. / Warm handoff: A contextual, ongoing synthesis of risk and protective factors, current intent, access, history, and foreseeable changes.
B. Risk formulation: Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety. / Warm handoff: A coordinated transfer in which the current helper actively connects the person to the next service.
C. Risk formulation: A contextual, ongoing synthesis of risk and protective factors, current intent, access, history, and foreseeable changes. / Warm handoff: Prioritizing urgency and level of response based on immediate danger, need, and available resources.
D. Risk formulation: A contextual, ongoing synthesis of risk and protective factors, current intent, access, history, and foreseeable changes. / Warm handoff: A coordinated transfer in which the current helper actively connects the person to the next service.

0119. How are Psychological first aid and Crisis triage most accurately differentiated in this curriculum?

A. Psychological first aid: A humane, practical, early response that promotes safety, stabilization, connection, and access to support. / Crisis triage: A coordinated transfer in which the current helper actively connects the person to the next service.
B. Psychological first aid: A humane, practical, early response that promotes safety, stabilization, connection, and access to support. / Crisis triage: Prioritizing urgency and level of response based on immediate danger, need, and available resources.
C. Psychological first aid: Personal, relational, and contextual resources that may reduce risk or support coping and recovery. / Crisis triage: Prioritizing urgency and level of response based on immediate danger, need, and available resources.
D. Psychological first aid: Prioritizing urgency and level of response based on immediate danger, need, and available resources. / Crisis triage: A humane, practical, early response that promotes safety, stabilization, connection, and access to support.

0120. A team must select a support approach for a child aged 14 at the school-based service. The caregiver working with a counselor recommends identifying trusted adults and practical supports that can be activated now. Which idea is most relevant?

A. Protective factors
B. Safety planning
C. Warm handoff
D. Least restrictive response

0121. A case conference asks for a distinction between Least restrictive response and Crisis triage. Which answer is sound?

A. Least restrictive response: The safest effective intervention that imposes the fewest necessary restrictions, consistent with law and policy. / Crisis triage: Prioritizing urgency and level of response based on immediate danger, need, and available resources.
B. Least restrictive response: Prioritizing urgency and level of response based on immediate danger, need, and available resources. / Crisis triage: The safest effective intervention that imposes the fewest necessary restrictions, consistent with law and policy.
C. Least restrictive response: The safest effective intervention that imposes the fewest necessary restrictions, consistent with law and policy. / Crisis triage: Planned reassessment and continuity contact after acute stabilization to review safety and connect ongoing care.
D. Least restrictive response: A contextual, ongoing synthesis of risk and protective factors, current intent, access, history, and foreseeable changes. / Crisis triage: Prioritizing urgency and level of response based on immediate danger, need, and available resources.

0122. A consultant is preparing a follow-up plan for a child aged 11 in the school consultation. The plan calls for offering practical assistance and connection without pressuring a person to recount traumatic details. Which concept names this approach?

A. Least restrictive response
B. Post-crisis follow-up
C. Psychological first aid
D. Protective factors

0123. A support meeting for a high-school student includes a counselor in the school consultation. The practice under consideration is integrating current statements, context, access, supports, and changes rather than relying on one score. Which concept guides it?

A. Risk formulation
B. Protective factors
C. Psychological first aid
D. Crisis triage

0124. Choose the definition pair that correctly explains Protective factors first and Post-crisis follow-up second.

A. Protective factors: A collaborative, individualized plan identifying warning signs, coping steps, supportive contacts, and emergency resources. / Post-crisis follow-up: Planned reassessment and continuity contact after acute stabilization to review safety and connect ongoing care.
B. Protective factors: Personal, relational, and contextual resources that may reduce risk or support coping and recovery. / Post-crisis follow-up: Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety.
C. Protective factors: Personal, relational, and contextual resources that may reduce risk or support coping and recovery. / Post-crisis follow-up: Planned reassessment and continuity contact after acute stabilization to review safety and connect ongoing care.
D. Protective factors: Planned reassessment and continuity contact after acute stabilization to review safety and connect ongoing care. / Post-crisis follow-up: Personal, relational, and contextual resources that may reduce risk or support coping and recovery.

0125. In the classroom support meeting, the agreed focus for a service navigator working with a client in early adolescence is using calm, respectful language, space, and choices rather than confrontation. Which concept names this focus?

A. Protective factors
B. Post-crisis follow-up
C. Crisis triage
D. De-escalation

0126. Choose the response that best puts Crisis triage into practice.

A. Selecting a proportionate response and reassessing whether restrictions remain necessary.
B. Determining which situation requires immediate emergency action and which can be safely managed with timely follow-up.
C. Using calm, respectful language, space, and choices rather than confrontation.
D. Offering practical assistance and connection without pressuring a person to recount traumatic details.

0127. In a supervision quiz, how should De-escalation be distinguished from Post-crisis follow-up?

A. De-escalation: Planned reassessment and continuity contact after acute stabilization to review safety and connect ongoing care. / Post-crisis follow-up: Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety.
B. De-escalation: Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety. / Post-crisis follow-up: The safest effective intervention that imposes the fewest necessary restrictions, consistent with law and policy.
C. De-escalation: A coordinated transfer in which the current helper actively connects the person to the next service. / Post-crisis follow-up: Planned reassessment and continuity contact after acute stabilization to review safety and connect ongoing care.
D. De-escalation: Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety. / Post-crisis follow-up: Planned reassessment and continuity contact after acute stabilization to review safety and connect ongoing care.

0128. In the student wellness team, a school-based clinician is considering this approach for a young person aged 10: using calm, respectful language, space, and choices rather than confrontation. Which framework does it represent?

A. Post-crisis follow-up
B. De-escalation
C. Warm handoff
D. Risk formulation

0129. Which option pairs the definitions of Risk formulation and Warm handoff correctly, in that order?

A. Risk formulation: Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety. / Warm handoff: A coordinated transfer in which the current helper actively connects the person to the next service.
B. Risk formulation: A contextual, ongoing synthesis of risk and protective factors, current intent, access, history, and foreseeable changes. / Warm handoff: Prioritizing urgency and level of response based on immediate danger, need, and available resources.
C. Risk formulation: A contextual, ongoing synthesis of risk and protective factors, current intent, access, history, and foreseeable changes. / Warm handoff: A coordinated transfer in which the current helper actively connects the person to the next service.
D. Risk formulation: A coordinated transfer in which the current helper actively connects the person to the next service. / Warm handoff: A contextual, ongoing synthesis of risk and protective factors, current intent, access, history, and foreseeable changes.

0130. What is the central meaning of Safety planning?

A. Rapid, focused appraisal of immediate safety, precipitating events, supports, functioning, and urgent needs.
B. A collaborative, individualized plan identifying warning signs, coping steps, supportive contacts, and emergency resources.
C. A coordinated transfer in which the current helper actively connects the person to the next service.
D. The safest effective intervention that imposes the fewest necessary restrictions, consistent with law and policy.

0131. Choose the practice comparison that best separates Risk formulation from Psychological first aid.

A. Risk formulation: Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number. / Psychological first aid: Offering practical assistance and connection without pressuring a person to recount traumatic details.
B. Risk formulation: Integrating current statements, context, access, supports, and changes rather than relying on one score. / Psychological first aid: Offering practical assistance and connection without pressuring a person to recount traumatic details.
C. Risk formulation: Offering practical assistance and connection without pressuring a person to recount traumatic details. / Psychological first aid: Integrating current statements, context, access, supports, and changes rather than relying on one score.
D. Risk formulation: Integrating current statements, context, access, supports, and changes rather than relying on one score. / Psychological first aid: Determining which situation requires immediate emergency action and which can be safely managed with timely follow-up.

0132. For a teenage client seen in the clinical planning session, the community practitioner recommends a plan built around offering practical assistance and connection without pressuring a person to recount traumatic details. Which concept is reflected?

A. Crisis triage
B. Warm handoff
C. Crisis assessment
D. Psychological first aid

0133. Which option pairs the definitions of Crisis assessment and Safety planning correctly, in that order?

A. Crisis assessment: A coordinated transfer in which the current helper actively connects the person to the next service. / Safety planning: A collaborative, individualized plan identifying warning signs, coping steps, supportive contacts, and emergency resources.
B. Crisis assessment: Rapid, focused appraisal of immediate safety, precipitating events, supports, functioning, and urgent needs. / Safety planning: The safest effective intervention that imposes the fewest necessary restrictions, consistent with law and policy.
C. Crisis assessment: Rapid, focused appraisal of immediate safety, precipitating events, supports, functioning, and urgent needs. / Safety planning: A collaborative, individualized plan identifying warning signs, coping steps, supportive contacts, and emergency resources.
D. Crisis assessment: A collaborative, individualized plan identifying warning signs, coping steps, supportive contacts, and emergency resources. / Safety planning: Rapid, focused appraisal of immediate safety, precipitating events, supports, functioning, and urgent needs.

0134. Which comparison correctly distinguishes Crisis assessment from Safety planning?

A. Crisis assessment: Rapid, focused appraisal of immediate safety, precipitating events, supports, functioning, and urgent needs. / Safety planning: The safest effective intervention that imposes the fewest necessary restrictions, consistent with law and policy.
B. Crisis assessment: Rapid, focused appraisal of immediate safety, precipitating events, supports, functioning, and urgent needs. / Safety planning: A collaborative, individualized plan identifying warning signs, coping steps, supportive contacts, and emergency resources.
C. Crisis assessment: A coordinated transfer in which the current helper actively connects the person to the next service. / Safety planning: A collaborative, individualized plan identifying warning signs, coping steps, supportive contacts, and emergency resources.
D. Crisis assessment: A collaborative, individualized plan identifying warning signs, coping steps, supportive contacts, and emergency resources. / Safety planning: Rapid, focused appraisal of immediate safety, precipitating events, supports, functioning, and urgent needs.

0135. Which applied comparison correctly identifies what belongs to De-escalation versus Crisis triage?

A. De-escalation: Using calm, respectful language, space, and choices rather than confrontation. / Crisis triage: Identifying trusted adults and practical supports that can be activated now.
B. De-escalation: Determining which situation requires immediate emergency action and which can be safely managed with timely follow-up. / Crisis triage: Using calm, respectful language, space, and choices rather than confrontation.
C. De-escalation: Using calm, respectful language, space, and choices rather than confrontation. / Crisis triage: Determining which situation requires immediate emergency action and which can be safely managed with timely follow-up.
D. De-escalation: Clarifying immediate danger and available supports before moving to longer-term goals. / Crisis triage: Determining which situation requires immediate emergency action and which can be safely managed with timely follow-up.

0136. In the community youth program, a team asks how a group facilitator can support a young adolescent client. One proposed action is integrating current statements, context, access, supports, and changes rather than relying on one score. Which idea does it represent?

A. De-escalation
B. Post-crisis follow-up
C. Psychological first aid
D. Risk formulation

0137. An interdisciplinary team reviews a student aged 17’s case at the student-support meeting. The play therapist recommends determining which situation requires immediate emergency action and which can be safely managed with timely follow-up. Which course concept best fits?

A. Warm handoff
B. Crisis triage
C. Post-crisis follow-up
D. Protective factors

0138. Which applied comparison correctly identifies what belongs to Safety planning versus Risk formulation?

A. Safety planning: Creating specific steps with the youth and caregivers for what to do if risk increases. / Risk formulation: Integrating current statements, context, access, supports, and changes rather than relying on one score.
B. Safety planning: Creating specific steps with the youth and caregivers for what to do if risk increases. / Risk formulation: Checking whether the plan worked and whether additional services are needed after the immediate crisis.
C. Safety planning: Using calm, respectful language, space, and choices rather than confrontation. / Risk formulation: Integrating current statements, context, access, supports, and changes rather than relying on one score.
D. Safety planning: Integrating current statements, context, access, supports, and changes rather than relying on one score. / Risk formulation: Creating specific steps with the youth and caregivers for what to do if risk increases.

0139. Which comparison correctly distinguishes Crisis assessment from Warm handoff?

A. Crisis assessment: A coordinated transfer in which the current helper actively connects the person to the next service. / Warm handoff: Rapid, focused appraisal of immediate safety, precipitating events, supports, functioning, and urgent needs.
B. Crisis assessment: Rapid, focused appraisal of immediate safety, precipitating events, supports, functioning, and urgent needs. / Warm handoff: The safest effective intervention that imposes the fewest necessary restrictions, consistent with law and policy.
C. Crisis assessment: Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety. / Warm handoff: A coordinated transfer in which the current helper actively connects the person to the next service.
D. Crisis assessment: Rapid, focused appraisal of immediate safety, precipitating events, supports, functioning, and urgent needs. / Warm handoff: A coordinated transfer in which the current helper actively connects the person to the next service.

0140. Which statement accurately contrasts the course concepts Crisis assessment and Risk formulation?

A. Crisis assessment: A coordinated transfer in which the current helper actively connects the person to the next service. / Risk formulation: A contextual, ongoing synthesis of risk and protective factors, current intent, access, history, and foreseeable changes.
B. Crisis assessment: A contextual, ongoing synthesis of risk and protective factors, current intent, access, history, and foreseeable changes. / Risk formulation: Rapid, focused appraisal of immediate safety, precipitating events, supports, functioning, and urgent needs.
C. Crisis assessment: Rapid, focused appraisal of immediate safety, precipitating events, supports, functioning, and urgent needs. / Risk formulation: Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety.
D. Crisis assessment: Rapid, focused appraisal of immediate safety, precipitating events, supports, functioning, and urgent needs. / Risk formulation: A contextual, ongoing synthesis of risk and protective factors, current intent, access, history, and foreseeable changes.

0141. A older adolescent client is receiving support in the classroom support meeting. The school counselor is guided by this practice: creating specific steps with the youth and caregivers for what to do if risk increases. Which principle best fits?

A. Post-crisis follow-up
B. Crisis triage
C. Safety planning
D. Psychological first aid

0142. During service review in the clinical planning session, a research trainee describes creating specific steps with the youth and caregivers for what to do if risk increases. for a student aged 9. Which course idea is most applicable?

A. Least restrictive response
B. Psychological first aid
C. Warm handoff
D. Safety planning

0143. Which choice aligns each practice with the correct idea, Safety planning or Least restrictive response?

A. Safety planning: Selecting a proportionate response and reassessing whether restrictions remain necessary. / Least restrictive response: Creating specific steps with the youth and caregivers for what to do if risk increases.
B. Safety planning: Creating specific steps with the youth and caregivers for what to do if risk increases. / Least restrictive response: Selecting a proportionate response and reassessing whether restrictions remain necessary.
C. Safety planning: Offering practical assistance and connection without pressuring a person to recount traumatic details. / Least restrictive response: Selecting a proportionate response and reassessing whether restrictions remain necessary.
D. Safety planning: Creating specific steps with the youth and caregivers for what to do if risk increases. / Least restrictive response: Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number.

0144. A case conference reviews a research trainee's work with a young person aged 10 in the family resource center: checking whether the plan worked and whether additional services are needed after the immediate crisis. Which principle is central?

A. Risk formulation
B. De-escalation
C. Crisis triage
D. Post-crisis follow-up

0145. Which comparison correctly distinguishes Safety planning from Risk formulation?

A. Safety planning: Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety. / Risk formulation: A contextual, ongoing synthesis of risk and protective factors, current intent, access, history, and foreseeable changes.
B. Safety planning: A contextual, ongoing synthesis of risk and protective factors, current intent, access, history, and foreseeable changes. / Risk formulation: A collaborative, individualized plan identifying warning signs, coping steps, supportive contacts, and emergency resources.
C. Safety planning: A collaborative, individualized plan identifying warning signs, coping steps, supportive contacts, and emergency resources. / Risk formulation: Planned reassessment and continuity contact after acute stabilization to review safety and connect ongoing care.
D. Safety planning: A collaborative, individualized plan identifying warning signs, coping steps, supportive contacts, and emergency resources. / Risk formulation: A contextual, ongoing synthesis of risk and protective factors, current intent, access, history, and foreseeable changes.

0146. A consulting counselor is asked to justify a plan for a older adolescent client in the school-based service. It calls for offering practical assistance and connection without pressuring a person to recount traumatic details. Which concept provides the rationale?

A. Psychological first aid
B. Risk formulation
C. Safety planning
D. De-escalation

0147. In a professional consultation about a young person aged 13, the supervised trainee describes this response in the outpatient clinic: determining which situation requires immediate emergency action and which can be safely managed with timely follow-up. Which term is most apt?

A. Crisis triage
B. Least restrictive response
C. Crisis assessment
D. De-escalation

0148. At a case-planning meeting, the school support specialist proposes determining which situation requires immediate emergency action and which can be safely managed with timely follow-up. for a preadolescent child seen in the community service agency. Which concept does this illustrate?

A. Least restrictive response
B. Crisis triage
C. Safety planning
D. Risk formulation

0149. Which applied comparison correctly identifies what belongs to Psychological first aid versus Warm handoff?

A. Psychological first aid: Offering practical assistance and connection without pressuring a person to recount traumatic details. / Warm handoff: Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number.
B. Psychological first aid: Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number. / Warm handoff: Offering practical assistance and connection without pressuring a person to recount traumatic details.
C. Psychological first aid: Offering practical assistance and connection without pressuring a person to recount traumatic details. / Warm handoff: Identifying trusted adults and practical supports that can be activated now.
D. Psychological first aid: Checking whether the plan worked and whether additional services are needed after the immediate crisis. / Warm handoff: Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number.

0150. Which option correctly matches each concept to its practice focus: De-escalation and Post-crisis follow-up?

A. De-escalation: Checking whether the plan worked and whether additional services are needed after the immediate crisis. / Post-crisis follow-up: Using calm, respectful language, space, and choices rather than confrontation.
B. De-escalation: Using calm, respectful language, space, and choices rather than confrontation. / Post-crisis follow-up: Selecting a proportionate response and reassessing whether restrictions remain necessary.
C. De-escalation: Using calm, respectful language, space, and choices rather than confrontation. / Post-crisis follow-up: Checking whether the plan worked and whether additional services are needed after the immediate crisis.
D. De-escalation: Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number. / Post-crisis follow-up: Checking whether the plan worked and whether additional services are needed after the immediate crisis.

0151. Which applied comparison correctly identifies what belongs to Safety planning versus Psychological first aid?

A. Safety planning: Creating specific steps with the youth and caregivers for what to do if risk increases. / Psychological first aid: Checking whether the plan worked and whether additional services are needed after the immediate crisis.
B. Safety planning: Clarifying immediate danger and available supports before moving to longer-term goals. / Psychological first aid: Offering practical assistance and connection without pressuring a person to recount traumatic details.
C. Safety planning: Offering practical assistance and connection without pressuring a person to recount traumatic details. / Psychological first aid: Creating specific steps with the youth and caregivers for what to do if risk increases.
D. Safety planning: Creating specific steps with the youth and caregivers for what to do if risk increases. / Psychological first aid: Offering practical assistance and connection without pressuring a person to recount traumatic details.

0152. A case discussion concerns a preadolescent child and a school-based clinician in the multidisciplinary case conference. The practitioner is considering integrating current statements, context, access, supports, and changes rather than relying on one score. Which principle is involved?

A. Warm handoff
B. Post-crisis follow-up
C. Crisis triage
D. Risk formulation

0153. How are Crisis assessment and Post-crisis follow-up most accurately differentiated in this curriculum?

A. Crisis assessment: Prioritizing urgency and level of response based on immediate danger, need, and available resources. / Post-crisis follow-up: Planned reassessment and continuity contact after acute stabilization to review safety and connect ongoing care.
B. Crisis assessment: Rapid, focused appraisal of immediate safety, precipitating events, supports, functioning, and urgent needs. / Post-crisis follow-up: Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety.
C. Crisis assessment: Rapid, focused appraisal of immediate safety, precipitating events, supports, functioning, and urgent needs. / Post-crisis follow-up: Planned reassessment and continuity contact after acute stabilization to review safety and connect ongoing care.
D. Crisis assessment: Planned reassessment and continuity contact after acute stabilization to review safety and connect ongoing care. / Post-crisis follow-up: Rapid, focused appraisal of immediate safety, precipitating events, supports, functioning, and urgent needs.

0154. In the multidisciplinary case conference, a caregiver working with a counselor is considering this approach for a client in late adolescence: contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number. Which framework does it represent?

A. Protective factors
B. Post-crisis follow-up
C. Warm handoff
D. Psychological first aid

0155. Consider a client in late adolescence receiving help in the school-based service. The group facilitator focuses on creating specific steps with the youth and caregivers for what to do if risk increases. Which term best describes the guiding idea?

A. Post-crisis follow-up
B. Safety planning
C. Least restrictive response
D. Psychological first aid

0156. A supervisor asks for an applied contrast between Safety planning and De-escalation. Which option fits?

A. Safety planning: Creating specific steps with the youth and caregivers for what to do if risk increases. / De-escalation: Identifying trusted adults and practical supports that can be activated now.
B. Safety planning: Creating specific steps with the youth and caregivers for what to do if risk increases. / De-escalation: Using calm, respectful language, space, and choices rather than confrontation.
C. Safety planning: Using calm, respectful language, space, and choices rather than confrontation. / De-escalation: Creating specific steps with the youth and caregivers for what to do if risk increases.
D. Safety planning: Clarifying immediate danger and available supports before moving to longer-term goals. / De-escalation: Using calm, respectful language, space, and choices rather than confrontation.

0157. A student confuses De-escalation with Crisis triage. Which explanation most accurately separates them?

A. De-escalation: Rapid, focused appraisal of immediate safety, precipitating events, supports, functioning, and urgent needs. / Crisis triage: Prioritizing urgency and level of response based on immediate danger, need, and available resources.
B. De-escalation: Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety. / Crisis triage: Prioritizing urgency and level of response based on immediate danger, need, and available resources.
C. De-escalation: Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety. / Crisis triage: Personal, relational, and contextual resources that may reduce risk or support coping and recovery.
D. De-escalation: Prioritizing urgency and level of response based on immediate danger, need, and available resources. / Crisis triage: Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety.

0158. For a client in early adolescence in the outpatient clinic, a play therapist makes this practice the immediate priority: identifying trusted adults and practical supports that can be activated now. Which concept fits best?

A. Post-crisis follow-up
B. Protective factors
C. Crisis assessment
D. Safety planning

0159. A trainee must distinguish how De-escalation and Post-crisis follow-up guide practice. Which comparison is accurate?

A. De-escalation: Checking whether the plan worked and whether additional services are needed after the immediate crisis. / Post-crisis follow-up: Using calm, respectful language, space, and choices rather than confrontation.
B. De-escalation: Using calm, respectful language, space, and choices rather than confrontation. / Post-crisis follow-up: Selecting a proportionate response and reassessing whether restrictions remain necessary.
C. De-escalation: Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number. / Post-crisis follow-up: Checking whether the plan worked and whether additional services are needed after the immediate crisis.
D. De-escalation: Using calm, respectful language, space, and choices rather than confrontation. / Post-crisis follow-up: Checking whether the plan worked and whether additional services are needed after the immediate crisis.

0160. A behavior specialist reviews a plan for a child aged 6 in the community mental-health service. The plan emphasizes creating specific steps with the youth and caregivers for what to do if risk increases. Which course idea does this reflect?

A. Crisis assessment
B. Psychological first aid
C. Safety planning
D. Protective factors

0161. A supervisor asks how Crisis triage would appear in practice. Which choice should be selected?

A. Using calm, respectful language, space, and choices rather than confrontation.
B. Selecting a proportionate response and reassessing whether restrictions remain necessary.
C. Offering practical assistance and connection without pressuring a person to recount traumatic details.
D. Determining which situation requires immediate emergency action and which can be safely managed with timely follow-up.

0162. In a supervision quiz, how should Crisis assessment be distinguished from Risk formulation?

A. Crisis assessment: A coordinated transfer in which the current helper actively connects the person to the next service. / Risk formulation: A contextual, ongoing synthesis of risk and protective factors, current intent, access, history, and foreseeable changes.
B. Crisis assessment: Rapid, focused appraisal of immediate safety, precipitating events, supports, functioning, and urgent needs. / Risk formulation: A contextual, ongoing synthesis of risk and protective factors, current intent, access, history, and foreseeable changes.
C. Crisis assessment: Rapid, focused appraisal of immediate safety, precipitating events, supports, functioning, and urgent needs. / Risk formulation: Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety.
D. Crisis assessment: A contextual, ongoing synthesis of risk and protective factors, current intent, access, history, and foreseeable changes. / Risk formulation: Rapid, focused appraisal of immediate safety, precipitating events, supports, functioning, and urgent needs.

0163. A doctoral student reads the following description. Which concept does it define? A coordinated transfer in which the current helper actively connects the person to the next service.

A. Safety planning
B. Psychological first aid
C. Protective factors
D. Warm handoff

0164. A play therapist is asked to evaluate a proposed service for a middle-school student in the learning-support meeting. The defining feature is selecting a proportionate response and reassessing whether restrictions remain necessary. Which concept fits?

A. Least restrictive response
B. Warm handoff
C. Crisis assessment
D. Psychological first aid

0165. Which named construct is captured by this account? The safest effective intervention that imposes the fewest necessary restrictions, consistent with law and policy.

A. Protective factors
B. Risk formulation
C. Post-crisis follow-up
D. Least restrictive response

0166. For a teenage client in the supervision meeting, a school support specialist makes this practice the immediate priority: contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number. Which concept fits best?

A. Warm handoff
B. Post-crisis follow-up
C. Least restrictive response
D. Safety planning

0167. A service navigator describes an intervention for a preadolescent child in the youth advocacy program, centered on clarifying immediate danger and available supports before moving to longer-term goals. Which named idea is most relevant?

A. Crisis assessment
B. Crisis triage
C. Protective factors
D. Safety planning

0168. Which applied comparison correctly identifies what belongs to De-escalation versus Warm handoff?

A. De-escalation: Selecting a proportionate response and reassessing whether restrictions remain necessary. / Warm handoff: Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number.
B. De-escalation: Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number. / Warm handoff: Using calm, respectful language, space, and choices rather than confrontation.
C. De-escalation: Using calm, respectful language, space, and choices rather than confrontation. / Warm handoff: Creating specific steps with the youth and caregivers for what to do if risk increases.
D. De-escalation: Using calm, respectful language, space, and choices rather than confrontation. / Warm handoff: Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number.

0169. Which comparison correctly distinguishes Safety planning from De-escalation?

A. Safety planning: A collaborative, individualized plan identifying warning signs, coping steps, supportive contacts, and emergency resources. / De-escalation: Personal, relational, and contextual resources that may reduce risk or support coping and recovery.
B. Safety planning: A collaborative, individualized plan identifying warning signs, coping steps, supportive contacts, and emergency resources. / De-escalation: Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety.
C. Safety planning: Rapid, focused appraisal of immediate safety, precipitating events, supports, functioning, and urgent needs. / De-escalation: Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety.
D. Safety planning: Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety. / De-escalation: A collaborative, individualized plan identifying warning signs, coping steps, supportive contacts, and emergency resources.

0170. For a child aged 11 in the counseling practicum, a play therapist makes this practice the immediate priority: checking whether the plan worked and whether additional services are needed after the immediate crisis. Which concept fits best?

A. Psychological first aid
B. Warm handoff
C. Least restrictive response
D. Post-crisis follow-up

0171. Which professional action most closely applies De-escalation?

A. Using calm, respectful language, space, and choices rather than confrontation.
B. Identifying trusted adults and practical supports that can be activated now.
C. Selecting a proportionate response and reassessing whether restrictions remain necessary.
D. Checking whether the plan worked and whether additional services are needed after the immediate crisis.

0172. A preadolescent child is receiving support in the school counseling office. The school counselor is guided by this practice: offering practical assistance and connection without pressuring a person to recount traumatic details. Which principle best fits?

A. Psychological first aid
B. Warm handoff
C. Crisis triage
D. De-escalation

0173. In a professional consultation about a client in late adolescence, the consultant describes this response in the community mental-health service: checking whether the plan worked and whether additional services are needed after the immediate crisis. Which term is most apt?

A. Protective factors
B. Post-crisis follow-up
C. Risk formulation
D. Least restrictive response

0174. Choose the term that matches this definition: The safest effective intervention that imposes the fewest necessary restrictions, consistent with law and policy.

A. Protective factors
B. Crisis assessment
C. Least restrictive response
D. Psychological first aid

0175. Which professional action most closely applies Protective factors?

A. Determining which situation requires immediate emergency action and which can be safely managed with timely follow-up.
B. Checking whether the plan worked and whether additional services are needed after the immediate crisis.
C. Using calm, respectful language, space, and choices rather than confrontation.
D. Identifying trusted adults and practical supports that can be activated now.

0176. Choose the definition pair that correctly explains Warm handoff first and Post-crisis follow-up second.

A. Warm handoff: A coordinated transfer in which the current helper actively connects the person to the next service. / Post-crisis follow-up: The safest effective intervention that imposes the fewest necessary restrictions, consistent with law and policy.
B. Warm handoff: Personal, relational, and contextual resources that may reduce risk or support coping and recovery. / Post-crisis follow-up: Planned reassessment and continuity contact after acute stabilization to review safety and connect ongoing care.
C. Warm handoff: A coordinated transfer in which the current helper actively connects the person to the next service. / Post-crisis follow-up: Planned reassessment and continuity contact after acute stabilization to review safety and connect ongoing care.
D. Warm handoff: Planned reassessment and continuity contact after acute stabilization to review safety and connect ongoing care. / Post-crisis follow-up: A coordinated transfer in which the current helper actively connects the person to the next service.

0177. A supervisor asks for an applied contrast between Risk formulation and Psychological first aid. Which option fits?

A. Risk formulation: Offering practical assistance and connection without pressuring a person to recount traumatic details. / Psychological first aid: Integrating current statements, context, access, supports, and changes rather than relying on one score.
B. Risk formulation: Integrating current statements, context, access, supports, and changes rather than relying on one score. / Psychological first aid: Determining which situation requires immediate emergency action and which can be safely managed with timely follow-up.
C. Risk formulation: Integrating current statements, context, access, supports, and changes rather than relying on one score. / Psychological first aid: Offering practical assistance and connection without pressuring a person to recount traumatic details.
D. Risk formulation: Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number. / Psychological first aid: Offering practical assistance and connection without pressuring a person to recount traumatic details.

0178. A doctoral student reads the following description. Which concept does it define? Rapid, focused appraisal of immediate safety, precipitating events, supports, functioning, and urgent needs.

A. Warm handoff
B. De-escalation
C. Safety planning
D. Crisis assessment

0179. In a supervision quiz, how should Safety planning be distinguished from Risk formulation?

A. Safety planning: A collaborative, individualized plan identifying warning signs, coping steps, supportive contacts, and emergency resources. / Risk formulation: Planned reassessment and continuity contact after acute stabilization to review safety and connect ongoing care.
B. Safety planning: A collaborative, individualized plan identifying warning signs, coping steps, supportive contacts, and emergency resources. / Risk formulation: A contextual, ongoing synthesis of risk and protective factors, current intent, access, history, and foreseeable changes.
C. Safety planning: A contextual, ongoing synthesis of risk and protective factors, current intent, access, history, and foreseeable changes. / Risk formulation: A collaborative, individualized plan identifying warning signs, coping steps, supportive contacts, and emergency resources.
D. Safety planning: Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety. / Risk formulation: A contextual, ongoing synthesis of risk and protective factors, current intent, access, history, and foreseeable changes.

0180. A therapist describes an intervention for a child aged 14 in the outpatient clinic, centered on creating specific steps with the youth and caregivers for what to do if risk increases. Which named idea is most relevant?

A. Safety planning
B. Crisis triage
C. Warm handoff
D. Post-crisis follow-up

0181. A supervised trainee and a young person aged 16 are discussing support in the caregiver consultation. The selected practice is offering practical assistance and connection without pressuring a person to recount traumatic details. Which concept does this demonstrate?

A. Crisis triage
B. Crisis assessment
C. Protective factors
D. Psychological first aid

0182. Choose the practice comparison that best separates Crisis assessment from Least restrictive response.

A. Crisis assessment: Creating specific steps with the youth and caregivers for what to do if risk increases. / Least restrictive response: Selecting a proportionate response and reassessing whether restrictions remain necessary.
B. Crisis assessment: Clarifying immediate danger and available supports before moving to longer-term goals. / Least restrictive response: Using calm, respectful language, space, and choices rather than confrontation.
C. Crisis assessment: Selecting a proportionate response and reassessing whether restrictions remain necessary. / Least restrictive response: Clarifying immediate danger and available supports before moving to longer-term goals.
D. Crisis assessment: Clarifying immediate danger and available supports before moving to longer-term goals. / Least restrictive response: Selecting a proportionate response and reassessing whether restrictions remain necessary.

0183. A supervisor asks for an applied contrast between Crisis assessment and Crisis triage. Which option fits?

A. Crisis assessment: Determining which situation requires immediate emergency action and which can be safely managed with timely follow-up. / Crisis triage: Clarifying immediate danger and available supports before moving to longer-term goals.
B. Crisis assessment: Clarifying immediate danger and available supports before moving to longer-term goals. / Crisis triage: Checking whether the plan worked and whether additional services are needed after the immediate crisis.
C. Crisis assessment: Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number. / Crisis triage: Determining which situation requires immediate emergency action and which can be safely managed with timely follow-up.
D. Crisis assessment: Clarifying immediate danger and available supports before moving to longer-term goals. / Crisis triage: Determining which situation requires immediate emergency action and which can be safely managed with timely follow-up.

0184. Which choice aligns each practice with the correct idea, Protective factors or Crisis triage?

A. Protective factors: Identifying trusted adults and practical supports that can be activated now. / Crisis triage: Determining which situation requires immediate emergency action and which can be safely managed with timely follow-up.
B. Protective factors: Determining which situation requires immediate emergency action and which can be safely managed with timely follow-up. / Crisis triage: Identifying trusted adults and practical supports that can be activated now.
C. Protective factors: Identifying trusted adults and practical supports that can be activated now. / Crisis triage: Creating specific steps with the youth and caregivers for what to do if risk increases.
D. Protective factors: Offering practical assistance and connection without pressuring a person to recount traumatic details. / Crisis triage: Determining which situation requires immediate emergency action and which can be safely managed with timely follow-up.

0185. A trainee must distinguish how Warm handoff and Post-crisis follow-up guide practice. Which comparison is accurate?

A. Warm handoff: Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number. / Post-crisis follow-up: Selecting a proportionate response and reassessing whether restrictions remain necessary.
B. Warm handoff: Checking whether the plan worked and whether additional services are needed after the immediate crisis. / Post-crisis follow-up: Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number.
C. Warm handoff: Identifying trusted adults and practical supports that can be activated now. / Post-crisis follow-up: Checking whether the plan worked and whether additional services are needed after the immediate crisis.
D. Warm handoff: Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number. / Post-crisis follow-up: Checking whether the plan worked and whether additional services are needed after the immediate crisis.

0186. In the after-school program, a case coordinator is considering this approach for a young adolescent client: clarifying immediate danger and available supports before moving to longer-term goals. Which framework does it represent?

A. Post-crisis follow-up
B. Crisis assessment
C. Warm handoff
D. Crisis triage

0187. In the family resource center, a parent educator is considering this approach for a school-age child: creating specific steps with the youth and caregivers for what to do if risk increases. Which framework does it represent?

A. Post-crisis follow-up
B. Risk formulation
C. Safety planning
D. Least restrictive response

0188. Which option preserves the correct meaning of both Safety planning and Crisis triage?

A. Safety planning: A collaborative, individualized plan identifying warning signs, coping steps, supportive contacts, and emergency resources. / Crisis triage: Prioritizing urgency and level of response based on immediate danger, need, and available resources.
B. Safety planning: Personal, relational, and contextual resources that may reduce risk or support coping and recovery. / Crisis triage: Prioritizing urgency and level of response based on immediate danger, need, and available resources.
C. Safety planning: Prioritizing urgency and level of response based on immediate danger, need, and available resources. / Crisis triage: A collaborative, individualized plan identifying warning signs, coping steps, supportive contacts, and emergency resources.
D. Safety planning: A collaborative, individualized plan identifying warning signs, coping steps, supportive contacts, and emergency resources. / Crisis triage: Planned reassessment and continuity contact after acute stabilization to review safety and connect ongoing care.

0189. A play therapist is asked to evaluate a proposed service for a young person aged 13 in the telehealth session. The defining feature is clarifying immediate danger and available supports before moving to longer-term goals. Which concept fits?

A. Crisis assessment
B. Psychological first aid
C. Warm handoff
D. Post-crisis follow-up

0190. In a supervision review, a school-based clinician describes work with a young person aged 16 in the community mental-health service: clarifying immediate danger and available supports before moving to longer-term goals. What concept is illustrated?

A. Post-crisis follow-up
B. Crisis assessment
C. Warm handoff
D. De-escalation

0191. During service review in the caregiver consultation, a program coordinator describes selecting a proportionate response and reassessing whether restrictions remain necessary. for a student aged 12. Which course idea is most applicable?

A. Crisis assessment
B. Least restrictive response
C. Crisis triage
D. Warm handoff

0192. A assessment clinician is preparing a follow-up plan for a teenage client in the community youth program. The plan calls for selecting a proportionate response and reassessing whether restrictions remain necessary. Which concept names this approach?

A. De-escalation
B. Least restrictive response
C. Post-crisis follow-up
D. Crisis triage

0193. A behavior specialist reviews a plan for a young person in the parent meeting. The plan emphasizes offering practical assistance and connection without pressuring a person to recount traumatic details. Which course idea does this reflect?

A. Crisis triage
B. Psychological first aid
C. De-escalation
D. Crisis assessment

0194. While consulting in the community service agency, a member of a clinical team supports a high-school student by using this approach: selecting a proportionate response and reassessing whether restrictions remain necessary. Which concept is being applied?

A. Safety planning
B. Crisis triage
C. Least restrictive response
D. Protective factors

0195. Select the best explanation of Crisis triage.

A. Personal, relational, and contextual resources that may reduce risk or support coping and recovery.
B. Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety.
C. Prioritizing urgency and level of response based on immediate danger, need, and available resources.
D. Rapid, focused appraisal of immediate safety, precipitating events, supports, functioning, and urgent needs.

0196. In the youth group, the agreed focus for a community practitioner working with a young person aged 18 is creating specific steps with the youth and caregivers for what to do if risk increases. Which concept names this focus?

A. Protective factors
B. Least restrictive response
C. Safety planning
D. Psychological first aid

0197. Choose the response that best puts Risk formulation into practice.

A. Creating specific steps with the youth and caregivers for what to do if risk increases.
B. Clarifying immediate danger and available supports before moving to longer-term goals.
C. Offering practical assistance and connection without pressuring a person to recount traumatic details.
D. Integrating current statements, context, access, supports, and changes rather than relying on one score.

0198. A supervised trainee is supporting a young person aged 18 in the family resource center. The key practice is selecting a proportionate response and reassessing whether restrictions remain necessary. Which course concept is most relevant?

A. Post-crisis follow-up
B. Risk formulation
C. Crisis triage
D. Least restrictive response

0199. While consulting in the school-based service, a assessment clinician supports a young person aged 10 by using this approach: integrating current statements, context, access, supports, and changes rather than relying on one score. Which concept is being applied?

A. De-escalation
B. Protective factors
C. Risk formulation
D. Post-crisis follow-up

0200. A teacher and counselor is explaining a choice to a teenage client and caregiver in the after-school program. The choice centers on using calm, respectful language, space, and choices rather than confrontation. Which idea is illustrated?

A. Least restrictive response
B. Safety planning
C. De-escalation
D. Crisis assessment

0201. A case discussion concerns a child aged 14 and a caregiver working with a counselor in the school-based service. The practitioner is considering identifying trusted adults and practical supports that can be activated now. Which principle is involved?

A. Risk formulation
B. Crisis assessment
C. Protective factors
D. De-escalation

0202. A mental-health professional is supporting a older adolescent client in the family session. The key practice is checking whether the plan worked and whether additional services are needed after the immediate crisis. Which course concept is most relevant?

A. Crisis triage
B. Post-crisis follow-up
C. Warm handoff
D. Psychological first aid

0203. A supervisor asks for an applied contrast between De-escalation and Risk formulation. Which option fits?

A. De-escalation: Integrating current statements, context, access, supports, and changes rather than relying on one score. / Risk formulation: Using calm, respectful language, space, and choices rather than confrontation.
B. De-escalation: Identifying trusted adults and practical supports that can be activated now. / Risk formulation: Integrating current statements, context, access, supports, and changes rather than relying on one score.
C. De-escalation: Using calm, respectful language, space, and choices rather than confrontation. / Risk formulation: Integrating current statements, context, access, supports, and changes rather than relying on one score.
D. De-escalation: Using calm, respectful language, space, and choices rather than confrontation. / Risk formulation: Determining which situation requires immediate emergency action and which can be safely managed with timely follow-up.

0204. A student aged 9's service team meets in the school-based service. The family therapist recommends a change involving checking whether the plan worked and whether additional services are needed after the immediate crisis. Which idea best explains it?

A. Crisis assessment
B. Post-crisis follow-up
C. De-escalation
D. Least restrictive response

0205. A trainee must explain Crisis triage. Which answer is accurate?

A. A humane, practical, early response that promotes safety, stabilization, connection, and access to support.
B. The safest effective intervention that imposes the fewest necessary restrictions, consistent with law and policy.
C. Planned reassessment and continuity contact after acute stabilization to review safety and connect ongoing care.
D. Prioritizing urgency and level of response based on immediate danger, need, and available resources.

0206. Which option is the clearest practical expression of Risk formulation?

A. Selecting a proportionate response and reassessing whether restrictions remain necessary.
B. Offering practical assistance and connection without pressuring a person to recount traumatic details.
C. Checking whether the plan worked and whether additional services are needed after the immediate crisis.
D. Integrating current statements, context, access, supports, and changes rather than relying on one score.

0207. At a case-planning meeting, the play therapist proposes integrating current statements, context, access, supports, and changes rather than relying on one score. for a teenage client seen in the caregiver consultation. Which concept does this illustrate?

A. Least restrictive response
B. Crisis assessment
C. Post-crisis follow-up
D. Risk formulation

0208. An interdisciplinary team reviews a school-age child's case at the school counseling office. The clinical supervisor recommends selecting a proportionate response and reassessing whether restrictions remain necessary. Which course concept best fits?

A. De-escalation
B. Least restrictive response
C. Crisis triage
D. Warm handoff

0209. Which option preserves the correct meaning of both Crisis assessment and Psychological first aid?

A. Crisis assessment: Rapid, focused appraisal of immediate safety, precipitating events, supports, functioning, and urgent needs. / Psychological first aid: A collaborative, individualized plan identifying warning signs, coping steps, supportive contacts, and emergency resources.
B. Crisis assessment: A contextual, ongoing synthesis of risk and protective factors, current intent, access, history, and foreseeable changes. / Psychological first aid: A humane, practical, early response that promotes safety, stabilization, connection, and access to support.
C. Crisis assessment: A humane, practical, early response that promotes safety, stabilization, connection, and access to support. / Psychological first aid: Rapid, focused appraisal of immediate safety, precipitating events, supports, functioning, and urgent needs.
D. Crisis assessment: Rapid, focused appraisal of immediate safety, precipitating events, supports, functioning, and urgent needs. / Psychological first aid: A humane, practical, early response that promotes safety, stabilization, connection, and access to support.

0210. A supervisor asks how Protective factors would appear in practice. Which choice should be selected?

A. Checking whether the plan worked and whether additional services are needed after the immediate crisis.
B. Identifying trusted adults and practical supports that can be activated now.
C. Using calm, respectful language, space, and choices rather than confrontation.
D. Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number.

0211. A community practitioner is asked what should shape a young person aged 13’s support in the behavior-support review. The proposed focus is integrating current statements, context, access, supports, and changes rather than relying on one score. Which principle does it represent?

A. Risk formulation
B. Psychological first aid
C. Least restrictive response
D. De-escalation

0212. In a case note about a school-age child, a mental-health professional working in the counseling practicum records this priority: determining which situation requires immediate emergency action and which can be safely managed with timely follow-up. What principle is reflected?

A. Crisis triage
B. Risk formulation
C. Least restrictive response
D. Crisis assessment

0213. Select the best explanation of Psychological first aid.

A. The safest effective intervention that imposes the fewest necessary restrictions, consistent with law and policy.
B. A humane, practical, early response that promotes safety, stabilization, connection, and access to support.
C. A coordinated transfer in which the current helper actively connects the person to the next service.
D. Personal, relational, and contextual resources that may reduce risk or support coping and recovery.

0214. Which statement shows a sound practice-level distinction between Crisis assessment and Warm handoff?

A. Crisis assessment: Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number. / Warm handoff: Clarifying immediate danger and available supports before moving to longer-term goals.
B. Crisis assessment: Using calm, respectful language, space, and choices rather than confrontation. / Warm handoff: Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number.
C. Crisis assessment: Clarifying immediate danger and available supports before moving to longer-term goals. / Warm handoff: Selecting a proportionate response and reassessing whether restrictions remain necessary.
D. Crisis assessment: Clarifying immediate danger and available supports before moving to longer-term goals. / Warm handoff: Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number.

0215. A student confuses De-escalation with Least restrictive response. Which explanation most accurately separates them?

A. De-escalation: Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety. / Least restrictive response: A coordinated transfer in which the current helper actively connects the person to the next service.
B. De-escalation: Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety. / Least restrictive response: The safest effective intervention that imposes the fewest necessary restrictions, consistent with law and policy.
C. De-escalation: Prioritizing urgency and level of response based on immediate danger, need, and available resources. / Least restrictive response: The safest effective intervention that imposes the fewest necessary restrictions, consistent with law and policy.
D. De-escalation: The safest effective intervention that imposes the fewest necessary restrictions, consistent with law and policy. / Least restrictive response: Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety.

0216. How should a practitioner distinguish the applications of De-escalation and Protective factors?

A. De-escalation: Using calm, respectful language, space, and choices rather than confrontation. / Protective factors: Clarifying immediate danger and available supports before moving to longer-term goals.
B. De-escalation: Integrating current statements, context, access, supports, and changes rather than relying on one score. / Protective factors: Identifying trusted adults and practical supports that can be activated now.
C. De-escalation: Using calm, respectful language, space, and choices rather than confrontation. / Protective factors: Identifying trusted adults and practical supports that can be activated now.
D. De-escalation: Identifying trusted adults and practical supports that can be activated now. / Protective factors: Using calm, respectful language, space, and choices rather than confrontation.

0217. Which choice aligns each practice with the correct idea, Crisis assessment or De-escalation?

A. Crisis assessment: Checking whether the plan worked and whether additional services are needed after the immediate crisis. / De-escalation: Using calm, respectful language, space, and choices rather than confrontation.
B. Crisis assessment: Clarifying immediate danger and available supports before moving to longer-term goals. / De-escalation: Using calm, respectful language, space, and choices rather than confrontation.
C. Crisis assessment: Using calm, respectful language, space, and choices rather than confrontation. / De-escalation: Clarifying immediate danger and available supports before moving to longer-term goals.
D. Crisis assessment: Clarifying immediate danger and available supports before moving to longer-term goals. / De-escalation: Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number.

0218. Which option preserves the correct meaning of both Crisis assessment and Least restrictive response?

A. Crisis assessment: Rapid, focused appraisal of immediate safety, precipitating events, supports, functioning, and urgent needs. / Least restrictive response: The safest effective intervention that imposes the fewest necessary restrictions, consistent with law and policy.
B. Crisis assessment: The safest effective intervention that imposes the fewest necessary restrictions, consistent with law and policy. / Least restrictive response: Rapid, focused appraisal of immediate safety, precipitating events, supports, functioning, and urgent needs.
C. Crisis assessment: A collaborative, individualized plan identifying warning signs, coping steps, supportive contacts, and emergency resources. / Least restrictive response: The safest effective intervention that imposes the fewest necessary restrictions, consistent with law and policy.
D. Crisis assessment: Rapid, focused appraisal of immediate safety, precipitating events, supports, functioning, and urgent needs. / Least restrictive response: Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety.

0219. Which option preserves the correct meaning of both Protective factors and Post-crisis follow-up?

A. Protective factors: A collaborative, individualized plan identifying warning signs, coping steps, supportive contacts, and emergency resources. / Post-crisis follow-up: Planned reassessment and continuity contact after acute stabilization to review safety and connect ongoing care.
B. Protective factors: Personal, relational, and contextual resources that may reduce risk or support coping and recovery. / Post-crisis follow-up: Planned reassessment and continuity contact after acute stabilization to review safety and connect ongoing care.
C. Protective factors: Planned reassessment and continuity contact after acute stabilization to review safety and connect ongoing care. / Post-crisis follow-up: Personal, relational, and contextual resources that may reduce risk or support coping and recovery.
D. Protective factors: Personal, relational, and contextual resources that may reduce risk or support coping and recovery. / Post-crisis follow-up: Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety.

0220. A student confuses Psychological first aid with Post-crisis follow-up. Which explanation most accurately separates them?

A. Psychological first aid: A contextual, ongoing synthesis of risk and protective factors, current intent, access, history, and foreseeable changes. / Post-crisis follow-up: Planned reassessment and continuity contact after acute stabilization to review safety and connect ongoing care.
B. Psychological first aid: Planned reassessment and continuity contact after acute stabilization to review safety and connect ongoing care. / Post-crisis follow-up: A humane, practical, early response that promotes safety, stabilization, connection, and access to support.
C. Psychological first aid: A humane, practical, early response that promotes safety, stabilization, connection, and access to support. / Post-crisis follow-up: Planned reassessment and continuity contact after acute stabilization to review safety and connect ongoing care.
D. Psychological first aid: A humane, practical, early response that promotes safety, stabilization, connection, and access to support. / Post-crisis follow-up: Rapid, focused appraisal of immediate safety, precipitating events, supports, functioning, and urgent needs.

0221. Which statement accurately contrasts the course concepts Safety planning and Protective factors?

A. Safety planning: Personal, relational, and contextual resources that may reduce risk or support coping and recovery. / Protective factors: A collaborative, individualized plan identifying warning signs, coping steps, supportive contacts, and emergency resources.
B. Safety planning: A collaborative, individualized plan identifying warning signs, coping steps, supportive contacts, and emergency resources. / Protective factors: Personal, relational, and contextual resources that may reduce risk or support coping and recovery.
C. Safety planning: Rapid, focused appraisal of immediate safety, precipitating events, supports, functioning, and urgent needs. / Protective factors: Personal, relational, and contextual resources that may reduce risk or support coping and recovery.
D. Safety planning: A collaborative, individualized plan identifying warning signs, coping steps, supportive contacts, and emergency resources. / Protective factors: A contextual, ongoing synthesis of risk and protective factors, current intent, access, history, and foreseeable changes.

0222. For a student aged 15 in the community mental-health service, a counselor makes this practice the immediate priority: offering practical assistance and connection without pressuring a person to recount traumatic details. Which concept fits best?

A. De-escalation
B. Post-crisis follow-up
C. Risk formulation
D. Psychological first aid

0223. A student confuses Least restrictive response with Post-crisis follow-up. Which explanation most accurately separates them?

A. Least restrictive response: A coordinated transfer in which the current helper actively connects the person to the next service. / Post-crisis follow-up: Planned reassessment and continuity contact after acute stabilization to review safety and connect ongoing care.
B. Least restrictive response: Planned reassessment and continuity contact after acute stabilization to review safety and connect ongoing care. / Post-crisis follow-up: The safest effective intervention that imposes the fewest necessary restrictions, consistent with law and policy.
C. Least restrictive response: The safest effective intervention that imposes the fewest necessary restrictions, consistent with law and policy. / Post-crisis follow-up: A contextual, ongoing synthesis of risk and protective factors, current intent, access, history, and foreseeable changes.
D. Least restrictive response: The safest effective intervention that imposes the fewest necessary restrictions, consistent with law and policy. / Post-crisis follow-up: Planned reassessment and continuity contact after acute stabilization to review safety and connect ongoing care.

0224. Which choice aligns each practice with the correct idea, Psychological first aid or Post-crisis follow-up?

A. Psychological first aid: Offering practical assistance and connection without pressuring a person to recount traumatic details. / Post-crisis follow-up: Clarifying immediate danger and available supports before moving to longer-term goals.
B. Psychological first aid: Offering practical assistance and connection without pressuring a person to recount traumatic details. / Post-crisis follow-up: Checking whether the plan worked and whether additional services are needed after the immediate crisis.
C. Psychological first aid: Integrating current statements, context, access, supports, and changes rather than relying on one score. / Post-crisis follow-up: Checking whether the plan worked and whether additional services are needed after the immediate crisis.
D. Psychological first aid: Checking whether the plan worked and whether additional services are needed after the immediate crisis. / Post-crisis follow-up: Offering practical assistance and connection without pressuring a person to recount traumatic details.

0225. A planning meeting about a child aged 7 includes a clinical supervisor. The proposed practice in the classroom support meeting is clarifying immediate danger and available supports before moving to longer-term goals. Which idea underlies it?

A. Protective factors
B. Crisis assessment
C. Least restrictive response
D. Safety planning

0226. Which choice aligns each practice with the correct idea, Safety planning or Risk formulation?

A. Safety planning: Integrating current statements, context, access, supports, and changes rather than relying on one score. / Risk formulation: Creating specific steps with the youth and caregivers for what to do if risk increases.
B. Safety planning: Using calm, respectful language, space, and choices rather than confrontation. / Risk formulation: Integrating current statements, context, access, supports, and changes rather than relying on one score.
C. Safety planning: Creating specific steps with the youth and caregivers for what to do if risk increases. / Risk formulation: Checking whether the plan worked and whether additional services are needed after the immediate crisis.
D. Safety planning: Creating specific steps with the youth and caregivers for what to do if risk increases. / Risk formulation: Integrating current statements, context, access, supports, and changes rather than relying on one score.

0227. A trainee must distinguish how Crisis assessment and Risk formulation guide practice. Which comparison is accurate?

A. Crisis assessment: Clarifying immediate danger and available supports before moving to longer-term goals. / Risk formulation: Integrating current statements, context, access, supports, and changes rather than relying on one score.
B. Crisis assessment: Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number. / Risk formulation: Integrating current statements, context, access, supports, and changes rather than relying on one score.
C. Crisis assessment: Integrating current statements, context, access, supports, and changes rather than relying on one score. / Risk formulation: Clarifying immediate danger and available supports before moving to longer-term goals.
D. Crisis assessment: Clarifying immediate danger and available supports before moving to longer-term goals. / Risk formulation: Using calm, respectful language, space, and choices rather than confrontation.

0228. A supervisor asks for an applied contrast between Least restrictive response and Post-crisis follow-up. Which option fits?

A. Least restrictive response: Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number. / Post-crisis follow-up: Checking whether the plan worked and whether additional services are needed after the immediate crisis.
B. Least restrictive response: Selecting a proportionate response and reassessing whether restrictions remain necessary. / Post-crisis follow-up: Checking whether the plan worked and whether additional services are needed after the immediate crisis.
C. Least restrictive response: Checking whether the plan worked and whether additional services are needed after the immediate crisis. / Post-crisis follow-up: Selecting a proportionate response and reassessing whether restrictions remain necessary.
D. Least restrictive response: Selecting a proportionate response and reassessing whether restrictions remain necessary. / Post-crisis follow-up: Integrating current statements, context, access, supports, and changes rather than relying on one score.

0229. A supervisor asks how Psychological first aid would appear in practice. Which choice should be selected?

A. Checking whether the plan worked and whether additional services are needed after the immediate crisis.
B. Determining which situation requires immediate emergency action and which can be safely managed with timely follow-up.
C. Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number.
D. Offering practical assistance and connection without pressuring a person to recount traumatic details.

0230. Which option correctly matches each concept to its practice focus: Risk formulation and Least restrictive response?

A. Risk formulation: Selecting a proportionate response and reassessing whether restrictions remain necessary. / Least restrictive response: Integrating current statements, context, access, supports, and changes rather than relying on one score.
B. Risk formulation: Integrating current statements, context, access, supports, and changes rather than relying on one score. / Least restrictive response: Selecting a proportionate response and reassessing whether restrictions remain necessary.
C. Risk formulation: Integrating current statements, context, access, supports, and changes rather than relying on one score. / Least restrictive response: Identifying trusted adults and practical supports that can be activated now.
D. Risk formulation: Creating specific steps with the youth and caregivers for what to do if risk increases. / Least restrictive response: Selecting a proportionate response and reassessing whether restrictions remain necessary.

0231. Consider a middle-school student receiving help in the youth advocacy program. The teacher and counselor focuses on identifying trusted adults and practical supports that can be activated now. Which term best describes the guiding idea?

A. Risk formulation
B. Protective factors
C. Warm handoff
D. Post-crisis follow-up

0232. During service review in the community service agency, a therapist describes checking whether the plan worked and whether additional services are needed after the immediate crisis. for a student aged 15. Which course idea is most applicable?

A. Psychological first aid
B. Warm handoff
C. De-escalation
D. Post-crisis follow-up

0233. Which option pairs the definitions of Risk formulation and Post-crisis follow-up correctly, in that order?

A. Risk formulation: A contextual, ongoing synthesis of risk and protective factors, current intent, access, history, and foreseeable changes. / Post-crisis follow-up: Planned reassessment and continuity contact after acute stabilization to review safety and connect ongoing care.
B. Risk formulation: A contextual, ongoing synthesis of risk and protective factors, current intent, access, history, and foreseeable changes. / Post-crisis follow-up: Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety.
C. Risk formulation: Personal, relational, and contextual resources that may reduce risk or support coping and recovery. / Post-crisis follow-up: Planned reassessment and continuity contact after acute stabilization to review safety and connect ongoing care.
D. Risk formulation: Planned reassessment and continuity contact after acute stabilization to review safety and connect ongoing care. / Post-crisis follow-up: A contextual, ongoing synthesis of risk and protective factors, current intent, access, history, and foreseeable changes.

0234. At the student-support meeting, a school support specialist meets with a older adolescent client. The practice priority is: using calm, respectful language, space, and choices rather than confrontation. Which concept best captures that priority?

A. Risk formulation
B. Safety planning
C. De-escalation
D. Post-crisis follow-up

0235. Which paired example correctly applies Safety planning first and Psychological first aid second?

A. Safety planning: Clarifying immediate danger and available supports before moving to longer-term goals. / Psychological first aid: Offering practical assistance and connection without pressuring a person to recount traumatic details.
B. Safety planning: Creating specific steps with the youth and caregivers for what to do if risk increases. / Psychological first aid: Offering practical assistance and connection without pressuring a person to recount traumatic details.
C. Safety planning: Offering practical assistance and connection without pressuring a person to recount traumatic details. / Psychological first aid: Creating specific steps with the youth and caregivers for what to do if risk increases.
D. Safety planning: Creating specific steps with the youth and caregivers for what to do if risk increases. / Psychological first aid: Checking whether the plan worked and whether additional services are needed after the immediate crisis.

0236. For a child of elementary-school age seen in the student-support meeting, the program coordinator recommends a plan built around checking whether the plan worked and whether additional services are needed after the immediate crisis. Which concept is reflected?

A. Post-crisis follow-up
B. Safety planning
C. Crisis assessment
D. Protective factors

0237. A counselor is asked to evaluate a proposed service for a student aged 12 in the community youth program. The defining feature is determining which situation requires immediate emergency action and which can be safely managed with timely follow-up. Which concept fits?

A. Post-crisis follow-up
B. Crisis triage
C. Crisis assessment
D. Protective factors

0238. What is the central meaning of Psychological first aid?

A. A collaborative, individualized plan identifying warning signs, coping steps, supportive contacts, and emergency resources.
B. The safest effective intervention that imposes the fewest necessary restrictions, consistent with law and policy.
C. A humane, practical, early response that promotes safety, stabilization, connection, and access to support.
D. A contextual, ongoing synthesis of risk and protective factors, current intent, access, history, and foreseeable changes.

0239. What is the central meaning of De-escalation?

A. A humane, practical, early response that promotes safety, stabilization, connection, and access to support.
B. Personal, relational, and contextual resources that may reduce risk or support coping and recovery.
C. The safest effective intervention that imposes the fewest necessary restrictions, consistent with law and policy.
D. Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety.

0240. When reviewing a older adolescent client's plan in the youth group, the case coordinator notes that the next step is contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number. Which concept guides this step?

A. Protective factors
B. Crisis assessment
C. Warm handoff
D. Crisis triage

0241. At a case-planning meeting, the behavior specialist proposes identifying trusted adults and practical supports that can be activated now. for a child aged 11 seen in the multidisciplinary case conference. Which concept does this illustrate?

A. Safety planning
B. Warm handoff
C. De-escalation
D. Protective factors

0242. In a case note about a child of elementary-school age, a supervised trainee working in the telehealth session records this priority: integrating current statements, context, access, supports, and changes rather than relying on one score. What principle is reflected?

A. Safety planning
B. Psychological first aid
C. Risk formulation
D. Warm handoff

0243. A group facilitator is explaining a choice to a school-age child and caregiver in the caregiver consultation. The choice centers on checking whether the plan worked and whether additional services are needed after the immediate crisis. Which idea is illustrated?

A. Risk formulation
B. Safety planning
C. Post-crisis follow-up
D. Protective factors

0244. A trainee must distinguish how Safety planning and Warm handoff guide practice. Which comparison is accurate?

A. Safety planning: Creating specific steps with the youth and caregivers for what to do if risk increases. / Warm handoff: Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number.
B. Safety planning: Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number. / Warm handoff: Creating specific steps with the youth and caregivers for what to do if risk increases.
C. Safety planning: Clarifying immediate danger and available supports before moving to longer-term goals. / Warm handoff: Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number.
D. Safety planning: Creating specific steps with the youth and caregivers for what to do if risk increases. / Warm handoff: Offering practical assistance and connection without pressuring a person to recount traumatic details.

0245. Which applied comparison correctly identifies what belongs to Crisis assessment versus De-escalation?

A. Crisis assessment: Using calm, respectful language, space, and choices rather than confrontation. / De-escalation: Clarifying immediate danger and available supports before moving to longer-term goals.
B. Crisis assessment: Clarifying immediate danger and available supports before moving to longer-term goals. / De-escalation: Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number.
C. Crisis assessment: Clarifying immediate danger and available supports before moving to longer-term goals. / De-escalation: Using calm, respectful language, space, and choices rather than confrontation.
D. Crisis assessment: Checking whether the plan worked and whether additional services are needed after the immediate crisis. / De-escalation: Using calm, respectful language, space, and choices rather than confrontation.

0246. At the community service agency, a school support specialist meets with a preadolescent child. The practice priority is: determining which situation requires immediate emergency action and which can be safely managed with timely follow-up. Which concept best captures that priority?

A. De-escalation
B. Crisis triage
C. Psychological first aid
D. Safety planning

0247. While consulting in the youth advocacy program, a mental-health professional supports a adolescent student by using this approach: offering practical assistance and connection without pressuring a person to recount traumatic details. Which concept is being applied?

A. Safety planning
B. Risk formulation
C. Crisis assessment
D. Psychological first aid

0248. A caregiver working with a counselor presents a support plan for a child aged 11 at the community mental-health service. Its central feature is selecting a proportionate response and reassessing whether restrictions remain necessary. Which concept should be named?

A. Crisis triage
B. Least restrictive response
C. Safety planning
D. De-escalation

0249. A planning meeting about a school-age child includes a clinical supervisor. The proposed practice in the school counseling office is selecting a proportionate response and reassessing whether restrictions remain necessary. Which idea underlies it?

A. Crisis assessment
B. Warm handoff
C. Psychological first aid
D. Least restrictive response

0250. A school-age child's service team meets in the family resource center. The parent educator recommends a change involving creating specific steps with the youth and caregivers for what to do if risk increases. Which idea best explains it?

A. Psychological first aid
B. Warm handoff
C. Safety planning
D. Least restrictive response

0251. How should a practitioner distinguish the applications of Crisis triage and Warm handoff?

A. Crisis triage: Determining which situation requires immediate emergency action and which can be safely managed with timely follow-up. / Warm handoff: Integrating current statements, context, access, supports, and changes rather than relying on one score.
B. Crisis triage: Checking whether the plan worked and whether additional services are needed after the immediate crisis. / Warm handoff: Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number.
C. Crisis triage: Determining which situation requires immediate emergency action and which can be safely managed with timely follow-up. / Warm handoff: Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number.
D. Crisis triage: Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number. / Warm handoff: Determining which situation requires immediate emergency action and which can be safely managed with timely follow-up.

0252. When reviewing a client in early adolescence's plan in the parent meeting, the school-based clinician notes that the next step is selecting a proportionate response and reassessing whether restrictions remain necessary. Which concept guides this step?

A. Least restrictive response
B. Psychological first aid
C. Crisis triage
D. Protective factors

0253. For a young person aged 18 in the youth advocacy program, a school support specialist makes this practice the immediate priority: integrating current statements, context, access, supports, and changes rather than relying on one score. Which concept fits best?

A. Risk formulation
B. Warm handoff
C. Safety planning
D. Post-crisis follow-up

0254. A middle-school student and a consultant are reviewing goals in the youth group. The agreed action is using calm, respectful language, space, and choices rather than confrontation. Which principle best accounts for it?

A. Warm handoff
B. Psychological first aid
C. Least restrictive response
D. De-escalation

0255. During service review in the school counseling office, a community practitioner describes using calm, respectful language, space, and choices rather than confrontation. for a young person aged 16. Which course idea is most applicable?

A. Least restrictive response
B. De-escalation
C. Crisis assessment
D. Warm handoff

0256. Which statement accurately contrasts the course concepts Safety planning and Psychological first aid?

A. Safety planning: Rapid, focused appraisal of immediate safety, precipitating events, supports, functioning, and urgent needs. / Psychological first aid: A humane, practical, early response that promotes safety, stabilization, connection, and access to support.
B. Safety planning: A collaborative, individualized plan identifying warning signs, coping steps, supportive contacts, and emergency resources. / Psychological first aid: Planned reassessment and continuity contact after acute stabilization to review safety and connect ongoing care.
C. Safety planning: A humane, practical, early response that promotes safety, stabilization, connection, and access to support. / Psychological first aid: A collaborative, individualized plan identifying warning signs, coping steps, supportive contacts, and emergency resources.
D. Safety planning: A collaborative, individualized plan identifying warning signs, coping steps, supportive contacts, and emergency resources. / Psychological first aid: A humane, practical, early response that promotes safety, stabilization, connection, and access to support.

0257. A trainee must distinguish how Crisis triage and Post-crisis follow-up guide practice. Which comparison is accurate?

A. Crisis triage: Checking whether the plan worked and whether additional services are needed after the immediate crisis. / Post-crisis follow-up: Determining which situation requires immediate emergency action and which can be safely managed with timely follow-up.
B. Crisis triage: Determining which situation requires immediate emergency action and which can be safely managed with timely follow-up. / Post-crisis follow-up: Checking whether the plan worked and whether additional services are needed after the immediate crisis.
C. Crisis triage: Determining which situation requires immediate emergency action and which can be safely managed with timely follow-up. / Post-crisis follow-up: Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number.
D. Crisis triage: Using calm, respectful language, space, and choices rather than confrontation. / Post-crisis follow-up: Checking whether the plan worked and whether additional services are needed after the immediate crisis.

0258. Which paired example correctly applies Least restrictive response first and Warm handoff second?

A. Least restrictive response: Selecting a proportionate response and reassessing whether restrictions remain necessary. / Warm handoff: Identifying trusted adults and practical supports that can be activated now.
B. Least restrictive response: Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number. / Warm handoff: Selecting a proportionate response and reassessing whether restrictions remain necessary.
C. Least restrictive response: Offering practical assistance and connection without pressuring a person to recount traumatic details. / Warm handoff: Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number.
D. Least restrictive response: Selecting a proportionate response and reassessing whether restrictions remain necessary. / Warm handoff: Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number.

0259. At the after-school program, a program coordinator reviews whether a plan for a school-age child is appropriate. The relevant practice is contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number. Which concept is tested?

A. Warm handoff
B. Protective factors
C. Psychological first aid
D. Risk formulation

0260. Which course concept is defined as follows: Personal, relational, and contextual resources that may reduce risk or support coping and recovery.

A. Post-crisis follow-up
B. Risk formulation
C. Protective factors
D. Psychological first aid

0261. A doctoral student reads the following description. Which concept does it define? Prioritizing urgency and level of response based on immediate danger, need, and available resources.

A. Crisis triage
B. Safety planning
C. Warm handoff
D. Risk formulation

0262. Consider a child aged 6 receiving help in the multidisciplinary case conference. The youth worker focuses on clarifying immediate danger and available supports before moving to longer-term goals. Which term best describes the guiding idea?

A. Crisis triage
B. Crisis assessment
C. Post-crisis follow-up
D. Safety planning

0263. A case conference asks for a distinction between Least restrictive response and Psychological first aid. Which answer is sound?

A. Least restrictive response: The safest effective intervention that imposes the fewest necessary restrictions, consistent with law and policy. / Psychological first aid: A humane, practical, early response that promotes safety, stabilization, connection, and access to support.
B. Least restrictive response: The safest effective intervention that imposes the fewest necessary restrictions, consistent with law and policy. / Psychological first aid: Prioritizing urgency and level of response based on immediate danger, need, and available resources.
C. Least restrictive response: A coordinated transfer in which the current helper actively connects the person to the next service. / Psychological first aid: A humane, practical, early response that promotes safety, stabilization, connection, and access to support.
D. Least restrictive response: A humane, practical, early response that promotes safety, stabilization, connection, and access to support. / Psychological first aid: The safest effective intervention that imposes the fewest necessary restrictions, consistent with law and policy.

0264. A student confuses Safety planning with De-escalation. Which explanation most accurately separates them?

A. Safety planning: Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety. / De-escalation: A collaborative, individualized plan identifying warning signs, coping steps, supportive contacts, and emergency resources.
B. Safety planning: Rapid, focused appraisal of immediate safety, precipitating events, supports, functioning, and urgent needs. / De-escalation: Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety.
C. Safety planning: A collaborative, individualized plan identifying warning signs, coping steps, supportive contacts, and emergency resources. / De-escalation: Personal, relational, and contextual resources that may reduce risk or support coping and recovery.
D. Safety planning: A collaborative, individualized plan identifying warning signs, coping steps, supportive contacts, and emergency resources. / De-escalation: Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety.

0265. At a case-planning meeting, the play therapist proposes contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number. for a child aged 14 seen in the youth advocacy program. Which concept does this illustrate?

A. Crisis triage
B. Psychological first aid
C. Warm handoff
D. Least restrictive response

0266. Which choice aligns each practice with the correct idea, Protective factors or Least restrictive response?

A. Protective factors: Identifying trusted adults and practical supports that can be activated now. / Least restrictive response: Clarifying immediate danger and available supports before moving to longer-term goals.
B. Protective factors: Identifying trusted adults and practical supports that can be activated now. / Least restrictive response: Selecting a proportionate response and reassessing whether restrictions remain necessary.
C. Protective factors: Creating specific steps with the youth and caregivers for what to do if risk increases. / Least restrictive response: Selecting a proportionate response and reassessing whether restrictions remain necessary.
D. Protective factors: Selecting a proportionate response and reassessing whether restrictions remain necessary. / Least restrictive response: Identifying trusted adults and practical supports that can be activated now.

0267. A parent educator presents a support plan for a preadolescent child at the counseling practicum. Its central feature is contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number. Which concept should be named?

A. Protective factors
B. Least restrictive response
C. De-escalation
D. Warm handoff

0268. Which option correctly matches each concept to its practice focus: Safety planning and Crisis triage?

A. Safety planning: Creating specific steps with the youth and caregivers for what to do if risk increases. / Crisis triage: Determining which situation requires immediate emergency action and which can be safely managed with timely follow-up.
B. Safety planning: Identifying trusted adults and practical supports that can be activated now. / Crisis triage: Determining which situation requires immediate emergency action and which can be safely managed with timely follow-up.
C. Safety planning: Creating specific steps with the youth and caregivers for what to do if risk increases. / Crisis triage: Checking whether the plan worked and whether additional services are needed after the immediate crisis.
D. Safety planning: Determining which situation requires immediate emergency action and which can be safely managed with timely follow-up. / Crisis triage: Creating specific steps with the youth and caregivers for what to do if risk increases.

0269. A supervisor asks for an applied contrast between Risk formulation and Crisis triage. Which option fits?

A. Risk formulation: Integrating current statements, context, access, supports, and changes rather than relying on one score. / Crisis triage: Identifying trusted adults and practical supports that can be activated now.
B. Risk formulation: Integrating current statements, context, access, supports, and changes rather than relying on one score. / Crisis triage: Determining which situation requires immediate emergency action and which can be safely managed with timely follow-up.
C. Risk formulation: Determining which situation requires immediate emergency action and which can be safely managed with timely follow-up. / Crisis triage: Integrating current statements, context, access, supports, and changes rather than relying on one score.
D. Risk formulation: Creating specific steps with the youth and caregivers for what to do if risk increases. / Crisis triage: Determining which situation requires immediate emergency action and which can be safely managed with timely follow-up.

0270. A student confuses Crisis assessment with Safety planning. Which explanation most accurately separates them?

A. Crisis assessment: A collaborative, individualized plan identifying warning signs, coping steps, supportive contacts, and emergency resources. / Safety planning: Rapid, focused appraisal of immediate safety, precipitating events, supports, functioning, and urgent needs.
B. Crisis assessment: A coordinated transfer in which the current helper actively connects the person to the next service. / Safety planning: A collaborative, individualized plan identifying warning signs, coping steps, supportive contacts, and emergency resources.
C. Crisis assessment: Rapid, focused appraisal of immediate safety, precipitating events, supports, functioning, and urgent needs. / Safety planning: The safest effective intervention that imposes the fewest necessary restrictions, consistent with law and policy.
D. Crisis assessment: Rapid, focused appraisal of immediate safety, precipitating events, supports, functioning, and urgent needs. / Safety planning: A collaborative, individualized plan identifying warning signs, coping steps, supportive contacts, and emergency resources.

0271. Which statement accurately contrasts the course concepts Crisis assessment and Safety planning?

A. Crisis assessment: A collaborative, individualized plan identifying warning signs, coping steps, supportive contacts, and emergency resources. / Safety planning: Rapid, focused appraisal of immediate safety, precipitating events, supports, functioning, and urgent needs.
B. Crisis assessment: A coordinated transfer in which the current helper actively connects the person to the next service. / Safety planning: A collaborative, individualized plan identifying warning signs, coping steps, supportive contacts, and emergency resources.
C. Crisis assessment: Rapid, focused appraisal of immediate safety, precipitating events, supports, functioning, and urgent needs. / Safety planning: A collaborative, individualized plan identifying warning signs, coping steps, supportive contacts, and emergency resources.
D. Crisis assessment: Rapid, focused appraisal of immediate safety, precipitating events, supports, functioning, and urgent needs. / Safety planning: The safest effective intervention that imposes the fewest necessary restrictions, consistent with law and policy.

0272. A planning meeting about a preadolescent child includes a play therapist. The proposed practice in the family resource center is using calm, respectful language, space, and choices rather than confrontation. Which idea underlies it?

A. Crisis assessment
B. De-escalation
C. Post-crisis follow-up
D. Protective factors

0273. Which applied comparison correctly identifies what belongs to Safety planning versus Protective factors?

A. Safety planning: Clarifying immediate danger and available supports before moving to longer-term goals. / Protective factors: Identifying trusted adults and practical supports that can be activated now.
B. Safety planning: Creating specific steps with the youth and caregivers for what to do if risk increases. / Protective factors: Integrating current statements, context, access, supports, and changes rather than relying on one score.
C. Safety planning: Identifying trusted adults and practical supports that can be activated now. / Protective factors: Creating specific steps with the youth and caregivers for what to do if risk increases.
D. Safety planning: Creating specific steps with the youth and caregivers for what to do if risk increases. / Protective factors: Identifying trusted adults and practical supports that can be activated now.

0274. A youth worker is asked to justify a plan for a child aged 7 in the youth advocacy program. It calls for checking whether the plan worked and whether additional services are needed after the immediate crisis. Which concept provides the rationale?

A. De-escalation
B. Post-crisis follow-up
C. Psychological first aid
D. Safety planning

0275. A case discussion concerns a school-age child and a case coordinator in the community service agency. The practitioner is considering offering practical assistance and connection without pressuring a person to recount traumatic details. Which principle is involved?

A. Least restrictive response
B. Crisis assessment
C. Psychological first aid
D. Warm handoff

0276. Which choice aligns each practice with the correct idea, Crisis assessment or Protective factors?

A. Crisis assessment: Identifying trusted adults and practical supports that can be activated now. / Protective factors: Clarifying immediate danger and available supports before moving to longer-term goals.
B. Crisis assessment: Clarifying immediate danger and available supports before moving to longer-term goals. / Protective factors: Offering practical assistance and connection without pressuring a person to recount traumatic details.
C. Crisis assessment: Clarifying immediate danger and available supports before moving to longer-term goals. / Protective factors: Identifying trusted adults and practical supports that can be activated now.
D. Crisis assessment: Checking whether the plan worked and whether additional services are needed after the immediate crisis. / Protective factors: Identifying trusted adults and practical supports that can be activated now.

0277. A case conference asks for a distinction between De-escalation and Post-crisis follow-up. Which answer is sound?

A. De-escalation: Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety. / Post-crisis follow-up: The safest effective intervention that imposes the fewest necessary restrictions, consistent with law and policy.
B. De-escalation: Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety. / Post-crisis follow-up: Planned reassessment and continuity contact after acute stabilization to review safety and connect ongoing care.
C. De-escalation: Planned reassessment and continuity contact after acute stabilization to review safety and connect ongoing care. / Post-crisis follow-up: Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety.
D. De-escalation: A coordinated transfer in which the current helper actively connects the person to the next service. / Post-crisis follow-up: Planned reassessment and continuity contact after acute stabilization to review safety and connect ongoing care.

0278. Which comparison correctly distinguishes Least restrictive response from Warm handoff?

A. Least restrictive response: A coordinated transfer in which the current helper actively connects the person to the next service. / Warm handoff: The safest effective intervention that imposes the fewest necessary restrictions, consistent with law and policy.
B. Least restrictive response: A humane, practical, early response that promotes safety, stabilization, connection, and access to support. / Warm handoff: A coordinated transfer in which the current helper actively connects the person to the next service.
C. Least restrictive response: The safest effective intervention that imposes the fewest necessary restrictions, consistent with law and policy. / Warm handoff: Personal, relational, and contextual resources that may reduce risk or support coping and recovery.
D. Least restrictive response: The safest effective intervention that imposes the fewest necessary restrictions, consistent with law and policy. / Warm handoff: A coordinated transfer in which the current helper actively connects the person to the next service.

0279. For a student aged 12 seen in the school consultation, the research trainee recommends a plan built around clarifying immediate danger and available supports before moving to longer-term goals. Which concept is reflected?

A. Safety planning
B. De-escalation
C. Crisis assessment
D. Risk formulation

0280. A trainee must distinguish how Safety planning and Least restrictive response guide practice. Which comparison is accurate?

A. Safety planning: Creating specific steps with the youth and caregivers for what to do if risk increases. / Least restrictive response: Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number.
B. Safety planning: Offering practical assistance and connection without pressuring a person to recount traumatic details. / Least restrictive response: Selecting a proportionate response and reassessing whether restrictions remain necessary.
C. Safety planning: Creating specific steps with the youth and caregivers for what to do if risk increases. / Least restrictive response: Selecting a proportionate response and reassessing whether restrictions remain necessary.
D. Safety planning: Selecting a proportionate response and reassessing whether restrictions remain necessary. / Least restrictive response: Creating specific steps with the youth and caregivers for what to do if risk increases.

0281. A service team discusses a child aged 6 in the community service agency. Their proposed next step is identifying trusted adults and practical supports that can be activated now. Which course concept supports it?

A. Post-crisis follow-up
B. Warm handoff
C. Protective factors
D. Least restrictive response

0282. Which comparison would correct a trainee's misunderstanding of Safety planning versus Warm handoff?

A. Safety planning: A collaborative, individualized plan identifying warning signs, coping steps, supportive contacts, and emergency resources. / Warm handoff: A coordinated transfer in which the current helper actively connects the person to the next service.
B. Safety planning: Rapid, focused appraisal of immediate safety, precipitating events, supports, functioning, and urgent needs. / Warm handoff: A coordinated transfer in which the current helper actively connects the person to the next service.
C. Safety planning: A coordinated transfer in which the current helper actively connects the person to the next service. / Warm handoff: A collaborative, individualized plan identifying warning signs, coping steps, supportive contacts, and emergency resources.
D. Safety planning: A collaborative, individualized plan identifying warning signs, coping steps, supportive contacts, and emergency resources. / Warm handoff: A humane, practical, early response that promotes safety, stabilization, connection, and access to support.

0283. Choose the definition pair that correctly explains Risk formulation first and Least restrictive response second.

A. Risk formulation: A contextual, ongoing synthesis of risk and protective factors, current intent, access, history, and foreseeable changes. / Least restrictive response: The safest effective intervention that imposes the fewest necessary restrictions, consistent with law and policy.
B. Risk formulation: The safest effective intervention that imposes the fewest necessary restrictions, consistent with law and policy. / Least restrictive response: A contextual, ongoing synthesis of risk and protective factors, current intent, access, history, and foreseeable changes.
C. Risk formulation: A collaborative, individualized plan identifying warning signs, coping steps, supportive contacts, and emergency resources. / Least restrictive response: The safest effective intervention that imposes the fewest necessary restrictions, consistent with law and policy.
D. Risk formulation: A contextual, ongoing synthesis of risk and protective factors, current intent, access, history, and foreseeable changes. / Least restrictive response: Personal, relational, and contextual resources that may reduce risk or support coping and recovery.

0284. A case conference reviews a community practitioner's work with a preadolescent child in the school consultation: selecting a proportionate response and reassessing whether restrictions remain necessary. Which principle is central?

A. Post-crisis follow-up
B. Least restrictive response
C. Protective factors
D. Psychological first aid

0285. Choose the practice comparison that best separates Least restrictive response from Crisis triage.

A. Least restrictive response: Selecting a proportionate response and reassessing whether restrictions remain necessary. / Crisis triage: Determining which situation requires immediate emergency action and which can be safely managed with timely follow-up.
B. Least restrictive response: Selecting a proportionate response and reassessing whether restrictions remain necessary. / Crisis triage: Checking whether the plan worked and whether additional services are needed after the immediate crisis.
C. Least restrictive response: Integrating current statements, context, access, supports, and changes rather than relying on one score. / Crisis triage: Determining which situation requires immediate emergency action and which can be safely managed with timely follow-up.
D. Least restrictive response: Determining which situation requires immediate emergency action and which can be safely managed with timely follow-up. / Crisis triage: Selecting a proportionate response and reassessing whether restrictions remain necessary.

0286. A support meeting for a school-age child includes a school support specialist in the learning-support meeting. The practice under consideration is clarifying immediate danger and available supports before moving to longer-term goals. Which concept guides it?

A. Least restrictive response
B. Psychological first aid
C. Crisis assessment
D. Risk formulation

0287. In a supervision quiz, how should De-escalation be distinguished from Least restrictive response?

A. De-escalation: The safest effective intervention that imposes the fewest necessary restrictions, consistent with law and policy. / Least restrictive response: Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety.
B. De-escalation: Prioritizing urgency and level of response based on immediate danger, need, and available resources. / Least restrictive response: The safest effective intervention that imposes the fewest necessary restrictions, consistent with law and policy.
C. De-escalation: Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety. / Least restrictive response: A coordinated transfer in which the current helper actively connects the person to the next service.
D. De-escalation: Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety. / Least restrictive response: The safest effective intervention that imposes the fewest necessary restrictions, consistent with law and policy.

0288. How should a practitioner distinguish the applications of Crisis assessment and Risk formulation?

A. Crisis assessment: Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number. / Risk formulation: Integrating current statements, context, access, supports, and changes rather than relying on one score.
B. Crisis assessment: Clarifying immediate danger and available supports before moving to longer-term goals. / Risk formulation: Using calm, respectful language, space, and choices rather than confrontation.
C. Crisis assessment: Integrating current statements, context, access, supports, and changes rather than relying on one score. / Risk formulation: Clarifying immediate danger and available supports before moving to longer-term goals.
D. Crisis assessment: Clarifying immediate danger and available supports before moving to longer-term goals. / Risk formulation: Integrating current statements, context, access, supports, and changes rather than relying on one score.

0289. Which statement most accurately defines Psychological first aid?

A. Planned reassessment and continuity contact after acute stabilization to review safety and connect ongoing care.
B. Prioritizing urgency and level of response based on immediate danger, need, and available resources.
C. A coordinated transfer in which the current helper actively connects the person to the next service.
D. A humane, practical, early response that promotes safety, stabilization, connection, and access to support.

0290. In a supervision quiz, how should De-escalation be distinguished from Warm handoff?

A. De-escalation: The safest effective intervention that imposes the fewest necessary restrictions, consistent with law and policy. / Warm handoff: A coordinated transfer in which the current helper actively connects the person to the next service.
B. De-escalation: Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety. / Warm handoff: A collaborative, individualized plan identifying warning signs, coping steps, supportive contacts, and emergency resources.
C. De-escalation: Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety. / Warm handoff: A coordinated transfer in which the current helper actively connects the person to the next service.
D. De-escalation: A coordinated transfer in which the current helper actively connects the person to the next service. / Warm handoff: Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety.

0291. How should a practitioner distinguish the applications of Psychological first aid and Warm handoff?

A. Psychological first aid: Offering practical assistance and connection without pressuring a person to recount traumatic details. / Warm handoff: Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number.
B. Psychological first aid: Offering practical assistance and connection without pressuring a person to recount traumatic details. / Warm handoff: Identifying trusted adults and practical supports that can be activated now.
C. Psychological first aid: Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number. / Warm handoff: Offering practical assistance and connection without pressuring a person to recount traumatic details.
D. Psychological first aid: Checking whether the plan worked and whether additional services are needed after the immediate crisis. / Warm handoff: Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number.

0292. In a supervision review, a case coordinator describes work with a older adolescent client in the youth group: contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number. What concept is illustrated?

A. De-escalation
B. Warm handoff
C. Crisis assessment
D. Post-crisis follow-up

0293. A trainee must distinguish how De-escalation and Warm handoff guide practice. Which comparison is accurate?

A. De-escalation: Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number. / Warm handoff: Using calm, respectful language, space, and choices rather than confrontation.
B. De-escalation: Using calm, respectful language, space, and choices rather than confrontation. / Warm handoff: Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number.
C. De-escalation: Selecting a proportionate response and reassessing whether restrictions remain necessary. / Warm handoff: Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number.
D. De-escalation: Using calm, respectful language, space, and choices rather than confrontation. / Warm handoff: Creating specific steps with the youth and caregivers for what to do if risk increases.

0294. A group facilitator is asked to justify a plan for a student aged 15 in the multidisciplinary case conference. It calls for selecting a proportionate response and reassessing whether restrictions remain necessary. Which concept provides the rationale?

A. De-escalation
B. Crisis triage
C. Post-crisis follow-up
D. Least restrictive response

0295. In the telehealth session, a youth worker explains why a student aged 17 would benefit from creating specific steps with the youth and caregivers for what to do if risk increases. Which course concept underpins the explanation?

A. Warm handoff
B. Safety planning
C. Psychological first aid
D. Crisis assessment

0296. At the behavior-support review, a clinical supervisor meets with a child of elementary-school age. The practice priority is: offering practical assistance and connection without pressuring a person to recount traumatic details. Which concept best captures that priority?

A. Risk formulation
B. Psychological first aid
C. Post-crisis follow-up
D. De-escalation

0297. A mental-health professional is preparing a follow-up plan for a student aged 15 in the learning-support meeting. The plan calls for integrating current statements, context, access, supports, and changes rather than relying on one score. Which concept names this approach?

A. Risk formulation
B. Safety planning
C. Psychological first aid
D. Crisis triage

0298. Which comparison would correct a trainee's misunderstanding of Warm handoff versus Post-crisis follow-up?

A. Warm handoff: Personal, relational, and contextual resources that may reduce risk or support coping and recovery. / Post-crisis follow-up: Planned reassessment and continuity contact after acute stabilization to review safety and connect ongoing care.
B. Warm handoff: A coordinated transfer in which the current helper actively connects the person to the next service. / Post-crisis follow-up: Planned reassessment and continuity contact after acute stabilization to review safety and connect ongoing care.
C. Warm handoff: A coordinated transfer in which the current helper actively connects the person to the next service. / Post-crisis follow-up: The safest effective intervention that imposes the fewest necessary restrictions, consistent with law and policy.
D. Warm handoff: Planned reassessment and continuity contact after acute stabilization to review safety and connect ongoing care. / Post-crisis follow-up: A coordinated transfer in which the current helper actively connects the person to the next service.

0299. Which applied comparison correctly identifies what belongs to Protective factors versus Post-crisis follow-up?

A. Protective factors: Identifying trusted adults and practical supports that can be activated now. / Post-crisis follow-up: Checking whether the plan worked and whether additional services are needed after the immediate crisis.
B. Protective factors: Identifying trusted adults and practical supports that can be activated now. / Post-crisis follow-up: Using calm, respectful language, space, and choices rather than confrontation.
C. Protective factors: Checking whether the plan worked and whether additional services are needed after the immediate crisis. / Post-crisis follow-up: Identifying trusted adults and practical supports that can be activated now.
D. Protective factors: Creating specific steps with the youth and caregivers for what to do if risk increases. / Post-crisis follow-up: Checking whether the plan worked and whether additional services are needed after the immediate crisis.

0300. A supervisor asks for an applied contrast between Safety planning and Post-crisis follow-up. Which option fits?

A. Safety planning: Checking whether the plan worked and whether additional services are needed after the immediate crisis. / Post-crisis follow-up: Creating specific steps with the youth and caregivers for what to do if risk increases.
B. Safety planning: Creating specific steps with the youth and caregivers for what to do if risk increases. / Post-crisis follow-up: Checking whether the plan worked and whether additional services are needed after the immediate crisis.
C. Safety planning: Creating specific steps with the youth and caregivers for what to do if risk increases. / Post-crisis follow-up: Offering practical assistance and connection without pressuring a person to recount traumatic details.
D. Safety planning: Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number. / Post-crisis follow-up: Checking whether the plan worked and whether additional services are needed after the immediate crisis.

0301. Which option pairs the definitions of Psychological first aid and Crisis triage correctly, in that order?

A. Psychological first aid: A humane, practical, early response that promotes safety, stabilization, connection, and access to support. / Crisis triage: Prioritizing urgency and level of response based on immediate danger, need, and available resources.
B. Psychological first aid: Prioritizing urgency and level of response based on immediate danger, need, and available resources. / Crisis triage: A humane, practical, early response that promotes safety, stabilization, connection, and access to support.
C. Psychological first aid: A humane, practical, early response that promotes safety, stabilization, connection, and access to support. / Crisis triage: A coordinated transfer in which the current helper actively connects the person to the next service.
D. Psychological first aid: Personal, relational, and contextual resources that may reduce risk or support coping and recovery. / Crisis triage: Prioritizing urgency and level of response based on immediate danger, need, and available resources.

0302. A doctoral student reads the following description. Which concept does it define? Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety.

A. Warm handoff
B. Crisis assessment
C. De-escalation
D. Safety planning

0303. At the counseling practicum, a service navigator reviews whether a plan for a teenage client is appropriate. The relevant practice is creating specific steps with the youth and caregivers for what to do if risk increases. Which concept is tested?

A. Safety planning
B. Psychological first aid
C. Crisis triage
D. Risk formulation

0304. A case discussion concerns a child aged 11 and a family therapist in the family session. The practitioner is considering clarifying immediate danger and available supports before moving to longer-term goals. Which principle is involved?

A. Crisis assessment
B. De-escalation
C. Safety planning
D. Least restrictive response

0305. In the community youth program, a consulting counselor explains why a young person aged 16 would benefit from contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number. Which course concept underpins the explanation?

A. Crisis assessment
B. Safety planning
C. Least restrictive response
D. Warm handoff

0306. Which named construct is captured by this account? A contextual, ongoing synthesis of risk and protective factors, current intent, access, history, and foreseeable changes.

A. Crisis triage
B. Safety planning
C. Crisis assessment
D. Risk formulation

0307. Consider a child aged 8 receiving help in the supervision meeting. The teacher and counselor focuses on checking whether the plan worked and whether additional services are needed after the immediate crisis. Which term best describes the guiding idea?

A. De-escalation
B. Safety planning
C. Post-crisis follow-up
D. Psychological first aid

0308. Select the best explanation of Least restrictive response.

A. Prioritizing urgency and level of response based on immediate danger, need, and available resources.
B. A coordinated transfer in which the current helper actively connects the person to the next service.
C. A collaborative, individualized plan identifying warning signs, coping steps, supportive contacts, and emergency resources.
D. The safest effective intervention that imposes the fewest necessary restrictions, consistent with law and policy.

0309. Choose the definition pair that correctly explains Safety planning first and Warm handoff second.

A. Safety planning: A coordinated transfer in which the current helper actively connects the person to the next service. / Warm handoff: A collaborative, individualized plan identifying warning signs, coping steps, supportive contacts, and emergency resources.
B. Safety planning: Rapid, focused appraisal of immediate safety, precipitating events, supports, functioning, and urgent needs. / Warm handoff: A coordinated transfer in which the current helper actively connects the person to the next service.
C. Safety planning: A collaborative, individualized plan identifying warning signs, coping steps, supportive contacts, and emergency resources. / Warm handoff: A humane, practical, early response that promotes safety, stabilization, connection, and access to support.
D. Safety planning: A collaborative, individualized plan identifying warning signs, coping steps, supportive contacts, and emergency resources. / Warm handoff: A coordinated transfer in which the current helper actively connects the person to the next service.

0310. Select the best explanation of Warm handoff.

A. The safest effective intervention that imposes the fewest necessary restrictions, consistent with law and policy.
B. A coordinated transfer in which the current helper actively connects the person to the next service.
C. Prioritizing urgency and level of response based on immediate danger, need, and available resources.
D. A humane, practical, early response that promotes safety, stabilization, connection, and access to support.

0311. While supporting a young person aged 13 in the community youth program, a school-based clinician adopts this practice: creating specific steps with the youth and caregivers for what to do if risk increases. Which concept best explains the choice?

A. Psychological first aid
B. Crisis assessment
C. De-escalation
D. Safety planning

0312. Which statement accurately contrasts the course concepts Protective factors and Least restrictive response?

A. Protective factors: The safest effective intervention that imposes the fewest necessary restrictions, consistent with law and policy. / Least restrictive response: Personal, relational, and contextual resources that may reduce risk or support coping and recovery.
B. Protective factors: A collaborative, individualized plan identifying warning signs, coping steps, supportive contacts, and emergency resources. / Least restrictive response: The safest effective intervention that imposes the fewest necessary restrictions, consistent with law and policy.
C. Protective factors: Personal, relational, and contextual resources that may reduce risk or support coping and recovery. / Least restrictive response: The safest effective intervention that imposes the fewest necessary restrictions, consistent with law and policy.
D. Protective factors: Personal, relational, and contextual resources that may reduce risk or support coping and recovery. / Least restrictive response: Rapid, focused appraisal of immediate safety, precipitating events, supports, functioning, and urgent needs.

0313. In a supervision review, a caregiver working with a counselor describes work with a middle-school student in the child guidance clinic: creating specific steps with the youth and caregivers for what to do if risk increases. What concept is illustrated?

A. Least restrictive response
B. Post-crisis follow-up
C. Safety planning
D. De-escalation

0314. A student confuses Protective factors with Psychological first aid. Which explanation most accurately separates them?

A. Protective factors: Personal, relational, and contextual resources that may reduce risk or support coping and recovery. / Psychological first aid: A humane, practical, early response that promotes safety, stabilization, connection, and access to support.
B. Protective factors: Rapid, focused appraisal of immediate safety, precipitating events, supports, functioning, and urgent needs. / Psychological first aid: A humane, practical, early response that promotes safety, stabilization, connection, and access to support.
C. Protective factors: Personal, relational, and contextual resources that may reduce risk or support coping and recovery. / Psychological first aid: Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety.
D. Protective factors: A humane, practical, early response that promotes safety, stabilization, connection, and access to support. / Psychological first aid: Personal, relational, and contextual resources that may reduce risk or support coping and recovery.

0315. A supervised trainee and a adolescent student are discussing support in the student wellness team. The selected practice is creating specific steps with the youth and caregivers for what to do if risk increases. Which concept does this demonstrate?

A. Protective factors
B. Warm handoff
C. Safety planning
D. Least restrictive response

0316. Which statement most accurately defines Least restrictive response?

A. A coordinated transfer in which the current helper actively connects the person to the next service.
B. Rapid, focused appraisal of immediate safety, precipitating events, supports, functioning, and urgent needs.
C. A contextual, ongoing synthesis of risk and protective factors, current intent, access, history, and foreseeable changes.
D. The safest effective intervention that imposes the fewest necessary restrictions, consistent with law and policy.

0317. When reviewing a middle-school student's plan in the child guidance clinic, the caregiver working with a counselor notes that the next step is creating specific steps with the youth and caregivers for what to do if risk increases. Which concept guides this step?

A. Safety planning
B. Psychological first aid
C. Risk formulation
D. Crisis triage

0318. A trainee must explain Least restrictive response. Which answer is accurate?

A. A humane, practical, early response that promotes safety, stabilization, connection, and access to support.
B. Prioritizing urgency and level of response based on immediate danger, need, and available resources.
C. A collaborative, individualized plan identifying warning signs, coping steps, supportive contacts, and emergency resources.
D. The safest effective intervention that imposes the fewest necessary restrictions, consistent with law and policy.

0319. A team must select a support approach for a child of elementary-school age at the caregiver consultation. The parent educator recommends using calm, respectful language, space, and choices rather than confrontation. Which idea is most relevant?

A. Crisis triage
B. Post-crisis follow-up
C. De-escalation
D. Warm handoff

0320. A team must select a support approach for a young person aged 10 at the youth advocacy program. The parent educator recommends determining which situation requires immediate emergency action and which can be safely managed with timely follow-up. Which idea is most relevant?

A. Protective factors
B. Least restrictive response
C. Crisis triage
D. Risk formulation

0321. A student aged 17's service team meets in the clinical planning session. The caregiver working with a counselor recommends a change involving integrating current statements, context, access, supports, and changes rather than relying on one score. Which idea best explains it?

A. Crisis assessment
B. Psychological first aid
C. Risk formulation
D. Post-crisis follow-up

0322. A assessment clinician prepares for a session in the child guidance clinic with a young person aged 18. The intended approach is clarifying immediate danger and available supports before moving to longer-term goals. Which concept is most relevant?

A. Crisis assessment
B. Psychological first aid
C. Protective factors
D. De-escalation

0323. How are Crisis assessment and Psychological first aid most accurately differentiated in this curriculum?

A. Crisis assessment: Rapid, focused appraisal of immediate safety, precipitating events, supports, functioning, and urgent needs. / Psychological first aid: A humane, practical, early response that promotes safety, stabilization, connection, and access to support.
B. Crisis assessment: Rapid, focused appraisal of immediate safety, precipitating events, supports, functioning, and urgent needs. / Psychological first aid: A collaborative, individualized plan identifying warning signs, coping steps, supportive contacts, and emergency resources.
C. Crisis assessment: A contextual, ongoing synthesis of risk and protective factors, current intent, access, history, and foreseeable changes. / Psychological first aid: A humane, practical, early response that promotes safety, stabilization, connection, and access to support.
D. Crisis assessment: A humane, practical, early response that promotes safety, stabilization, connection, and access to support. / Psychological first aid: Rapid, focused appraisal of immediate safety, precipitating events, supports, functioning, and urgent needs.

0324. Which comparison would correct a trainee's misunderstanding of Protective factors versus Post-crisis follow-up?

A. Protective factors: Personal, relational, and contextual resources that may reduce risk or support coping and recovery. / Post-crisis follow-up: Planned reassessment and continuity contact after acute stabilization to review safety and connect ongoing care.
B. Protective factors: A collaborative, individualized plan identifying warning signs, coping steps, supportive contacts, and emergency resources. / Post-crisis follow-up: Planned reassessment and continuity contact after acute stabilization to review safety and connect ongoing care.
C. Protective factors: Planned reassessment and continuity contact after acute stabilization to review safety and connect ongoing care. / Post-crisis follow-up: Personal, relational, and contextual resources that may reduce risk or support coping and recovery.
D. Protective factors: Personal, relational, and contextual resources that may reduce risk or support coping and recovery. / Post-crisis follow-up: Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety.

0325. Which applied comparison correctly identifies what belongs to Protective factors versus Warm handoff?

A. Protective factors: Identifying trusted adults and practical supports that can be activated now. / Warm handoff: Checking whether the plan worked and whether additional services are needed after the immediate crisis.
B. Protective factors: Offering practical assistance and connection without pressuring a person to recount traumatic details. / Warm handoff: Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number.
C. Protective factors: Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number. / Warm handoff: Identifying trusted adults and practical supports that can be activated now.
D. Protective factors: Identifying trusted adults and practical supports that can be activated now. / Warm handoff: Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number.

0326. Which statement shows a sound practice-level distinction between Safety planning and Post-crisis follow-up?

A. Safety planning: Checking whether the plan worked and whether additional services are needed after the immediate crisis. / Post-crisis follow-up: Creating specific steps with the youth and caregivers for what to do if risk increases.
B. Safety planning: Creating specific steps with the youth and caregivers for what to do if risk increases. / Post-crisis follow-up: Checking whether the plan worked and whether additional services are needed after the immediate crisis.
C. Safety planning: Creating specific steps with the youth and caregivers for what to do if risk increases. / Post-crisis follow-up: Offering practical assistance and connection without pressuring a person to recount traumatic details.
D. Safety planning: Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number. / Post-crisis follow-up: Checking whether the plan worked and whether additional services are needed after the immediate crisis.

0327. Which pair of actions illustrates Protective factors and Psychological first aid, respectively?

A. Protective factors: Identifying trusted adults and practical supports that can be activated now. / Psychological first aid: Offering practical assistance and connection without pressuring a person to recount traumatic details.
B. Protective factors: Clarifying immediate danger and available supports before moving to longer-term goals. / Psychological first aid: Offering practical assistance and connection without pressuring a person to recount traumatic details.
C. Protective factors: Identifying trusted adults and practical supports that can be activated now. / Psychological first aid: Using calm, respectful language, space, and choices rather than confrontation.
D. Protective factors: Offering practical assistance and connection without pressuring a person to recount traumatic details. / Psychological first aid: Identifying trusted adults and practical supports that can be activated now.

0328. Which applied comparison correctly identifies what belongs to Crisis triage versus Post-crisis follow-up?

A. Crisis triage: Checking whether the plan worked and whether additional services are needed after the immediate crisis. / Post-crisis follow-up: Determining which situation requires immediate emergency action and which can be safely managed with timely follow-up.
B. Crisis triage: Determining which situation requires immediate emergency action and which can be safely managed with timely follow-up. / Post-crisis follow-up: Checking whether the plan worked and whether additional services are needed after the immediate crisis.
C. Crisis triage: Using calm, respectful language, space, and choices rather than confrontation. / Post-crisis follow-up: Checking whether the plan worked and whether additional services are needed after the immediate crisis.
D. Crisis triage: Determining which situation requires immediate emergency action and which can be safely managed with timely follow-up. / Post-crisis follow-up: Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number.

0329. A young adolescent client is receiving support in the student-support meeting. The youth worker is guided by this practice: contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number. Which principle best fits?

A. Crisis triage
B. Warm handoff
C. Post-crisis follow-up
D. De-escalation

0330. A student confuses Safety planning with Protective factors. Which explanation most accurately separates them?

A. Safety planning: A collaborative, individualized plan identifying warning signs, coping steps, supportive contacts, and emergency resources. / Protective factors: Personal, relational, and contextual resources that may reduce risk or support coping and recovery.
B. Safety planning: Rapid, focused appraisal of immediate safety, precipitating events, supports, functioning, and urgent needs. / Protective factors: Personal, relational, and contextual resources that may reduce risk or support coping and recovery.
C. Safety planning: Personal, relational, and contextual resources that may reduce risk or support coping and recovery. / Protective factors: A collaborative, individualized plan identifying warning signs, coping steps, supportive contacts, and emergency resources.
D. Safety planning: A collaborative, individualized plan identifying warning signs, coping steps, supportive contacts, and emergency resources. / Protective factors: A contextual, ongoing synthesis of risk and protective factors, current intent, access, history, and foreseeable changes.

0331. A case conference asks for a distinction between Risk formulation and Crisis triage. Which answer is sound?

A. Risk formulation: Prioritizing urgency and level of response based on immediate danger, need, and available resources. / Crisis triage: A contextual, ongoing synthesis of risk and protective factors, current intent, access, history, and foreseeable changes.
B. Risk formulation: A contextual, ongoing synthesis of risk and protective factors, current intent, access, history, and foreseeable changes. / Crisis triage: Personal, relational, and contextual resources that may reduce risk or support coping and recovery.
C. Risk formulation: A contextual, ongoing synthesis of risk and protective factors, current intent, access, history, and foreseeable changes. / Crisis triage: Prioritizing urgency and level of response based on immediate danger, need, and available resources.
D. Risk formulation: A collaborative, individualized plan identifying warning signs, coping steps, supportive contacts, and emergency resources. / Crisis triage: Prioritizing urgency and level of response based on immediate danger, need, and available resources.

0332. Choose the definition pair that correctly explains Crisis assessment first and Protective factors second.

A. Crisis assessment: Personal, relational, and contextual resources that may reduce risk or support coping and recovery. / Protective factors: Rapid, focused appraisal of immediate safety, precipitating events, supports, functioning, and urgent needs.
B. Crisis assessment: Rapid, focused appraisal of immediate safety, precipitating events, supports, functioning, and urgent needs. / Protective factors: Personal, relational, and contextual resources that may reduce risk or support coping and recovery.
C. Crisis assessment: Planned reassessment and continuity contact after acute stabilization to review safety and connect ongoing care. / Protective factors: Personal, relational, and contextual resources that may reduce risk or support coping and recovery.
D. Crisis assessment: Rapid, focused appraisal of immediate safety, precipitating events, supports, functioning, and urgent needs. / Protective factors: A humane, practical, early response that promotes safety, stabilization, connection, and access to support.

0333. Which course concept is defined as follows: A collaborative, individualized plan identifying warning signs, coping steps, supportive contacts, and emergency resources.

A. Psychological first aid
B. Safety planning
C. Least restrictive response
D. De-escalation

0334. Which paired example correctly applies Risk formulation first and Crisis triage second?

A. Risk formulation: Creating specific steps with the youth and caregivers for what to do if risk increases. / Crisis triage: Determining which situation requires immediate emergency action and which can be safely managed with timely follow-up.
B. Risk formulation: Integrating current statements, context, access, supports, and changes rather than relying on one score. / Crisis triage: Determining which situation requires immediate emergency action and which can be safely managed with timely follow-up.
C. Risk formulation: Integrating current statements, context, access, supports, and changes rather than relying on one score. / Crisis triage: Identifying trusted adults and practical supports that can be activated now.
D. Risk formulation: Determining which situation requires immediate emergency action and which can be safely managed with timely follow-up. / Crisis triage: Integrating current statements, context, access, supports, and changes rather than relying on one score.

0335. Which comparison would correct a trainee’s misunderstanding of Risk formulation versus Least restrictive response?

A. Risk formulation: The safest effective intervention that imposes the fewest necessary restrictions, consistent with law and policy. / Least restrictive response: A contextual, ongoing synthesis of risk and protective factors, current intent, access, history, and foreseeable changes.
B. Risk formulation: A contextual, ongoing synthesis of risk and protective factors, current intent, access, history, and foreseeable changes. / Least restrictive response: The safest effective intervention that imposes the fewest necessary restrictions, consistent with law and policy.
C. Risk formulation: A contextual, ongoing synthesis of risk and protective factors, current intent, access, history, and foreseeable changes. / Least restrictive response: Personal, relational, and contextual resources that may reduce risk or support coping and recovery.
D. Risk formulation: A collaborative, individualized plan identifying warning signs, coping steps, supportive contacts, and emergency resources. / Least restrictive response: The safest effective intervention that imposes the fewest necessary restrictions, consistent with law and policy.

0336. Which option preserves the correct meaning of both Least restrictive response and Psychological first aid?

A. Least restrictive response: The safest effective intervention that imposes the fewest necessary restrictions, consistent with law and policy. / Psychological first aid: A humane, practical, early response that promotes safety, stabilization, connection, and access to support.
B. Least restrictive response: The safest effective intervention that imposes the fewest necessary restrictions, consistent with law and policy. / Psychological first aid: Prioritizing urgency and level of response based on immediate danger, need, and available resources.
C. Least restrictive response: A humane, practical, early response that promotes safety, stabilization, connection, and access to support. / Psychological first aid: The safest effective intervention that imposes the fewest necessary restrictions, consistent with law and policy.
D. Least restrictive response: A coordinated transfer in which the current helper actively connects the person to the next service. / Psychological first aid: A humane, practical, early response that promotes safety, stabilization, connection, and access to support.

0337. Choose the definition pair that correctly explains Safety planning first and Protective factors second.

A. Safety planning: A collaborative, individualized plan identifying warning signs, coping steps, supportive contacts, and emergency resources. / Protective factors: A contextual, ongoing synthesis of risk and protective factors, current intent, access, history, and foreseeable changes.
B. Safety planning: A collaborative, individualized plan identifying warning signs, coping steps, supportive contacts, and emergency resources. / Protective factors: Personal, relational, and contextual resources that may reduce risk or support coping and recovery.
C. Safety planning: Personal, relational, and contextual resources that may reduce risk or support coping and recovery. / Protective factors: A collaborative, individualized plan identifying warning signs, coping steps, supportive contacts, and emergency resources.
D. Safety planning: Rapid, focused appraisal of immediate safety, precipitating events, supports, functioning, and urgent needs. / Protective factors: Personal, relational, and contextual resources that may reduce risk or support coping and recovery.

0338. For a student aged 15 seen in the family resource center, the program coordinator recommends a plan built around identifying trusted adults and practical supports that can be activated now. Which concept is reflected?

A. Crisis triage
B. Risk formulation
C. Crisis assessment
D. Protective factors

0339. A school support specialist is asked to evaluate a proposed service for a young person aged 16 in the counseling practicum. The defining feature is identifying trusted adults and practical supports that can be activated now. Which concept fits?

A. Warm handoff
B. Protective factors
C. Crisis assessment
D. Least restrictive response

0340. Which professional action most closely applies Risk formulation?

A. Determining which situation requires immediate emergency action and which can be safely managed with timely follow-up.
B. Integrating current statements, context, access, supports, and changes rather than relying on one score.
C. Using calm, respectful language, space, and choices rather than confrontation.
D. Creating specific steps with the youth and caregivers for what to do if risk increases.

0341. Which comparison correctly distinguishes Crisis assessment from Crisis triage?

A. Crisis assessment: Rapid, focused appraisal of immediate safety, precipitating events, supports, functioning, and urgent needs. / Crisis triage: Planned reassessment and continuity contact after acute stabilization to review safety and connect ongoing care.
B. Crisis assessment: Rapid, focused appraisal of immediate safety, precipitating events, supports, functioning, and urgent needs. / Crisis triage: Prioritizing urgency and level of response based on immediate danger, need, and available resources.
C. Crisis assessment: A coordinated transfer in which the current helper actively connects the person to the next service. / Crisis triage: Prioritizing urgency and level of response based on immediate danger, need, and available resources.
D. Crisis assessment: Prioritizing urgency and level of response based on immediate danger, need, and available resources. / Crisis triage: Rapid, focused appraisal of immediate safety, precipitating events, supports, functioning, and urgent needs.

0342. At a case-planning meeting, the school support specialist proposes using calm, respectful language, space, and choices rather than confrontation. for a older adolescent client seen in the student-support meeting. Which concept does this illustrate?

A. Crisis triage
B. Crisis assessment
C. Risk formulation
D. De-escalation

0343. A supervised trainee is preparing a follow-up plan for a preadolescent child in the after-school program. The plan calls for checking whether the plan worked and whether additional services are needed after the immediate crisis. Which concept names this approach?

A. Crisis triage
B. Safety planning
C. Post-crisis follow-up
D. Psychological first aid

0344. Which option preserves the correct meaning of both Warm handoff and Post-crisis follow-up?

A. Warm handoff: Personal, relational, and contextual resources that may reduce risk or support coping and recovery. / Post-crisis follow-up: Planned reassessment and continuity contact after acute stabilization to review safety and connect ongoing care.
B. Warm handoff: A coordinated transfer in which the current helper actively connects the person to the next service. / Post-crisis follow-up: The safest effective intervention that imposes the fewest necessary restrictions, consistent with law and policy.
C. Warm handoff: A coordinated transfer in which the current helper actively connects the person to the next service. / Post-crisis follow-up: Planned reassessment and continuity contact after acute stabilization to review safety and connect ongoing care.
D. Warm handoff: Planned reassessment and continuity contact after acute stabilization to review safety and connect ongoing care. / Post-crisis follow-up: A coordinated transfer in which the current helper actively connects the person to the next service.

0345. Which comparison would correct a trainee's misunderstanding of Crisis assessment versus Protective factors?

A. Crisis assessment: Personal, relational, and contextual resources that may reduce risk or support coping and recovery. / Protective factors: Rapid, focused appraisal of immediate safety, precipitating events, supports, functioning, and urgent needs.
B. Crisis assessment: Rapid, focused appraisal of immediate safety, precipitating events, supports, functioning, and urgent needs. / Protective factors: A humane, practical, early response that promotes safety, stabilization, connection, and access to support.
C. Crisis assessment: Planned reassessment and continuity contact after acute stabilization to review safety and connect ongoing care. / Protective factors: Personal, relational, and contextual resources that may reduce risk or support coping and recovery.
D. Crisis assessment: Rapid, focused appraisal of immediate safety, precipitating events, supports, functioning, and urgent needs. / Protective factors: Personal, relational, and contextual resources that may reduce risk or support coping and recovery.

0346. Which named construct is captured by this account? Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety.

A. Protective factors
B. De-escalation
C. Crisis triage
D. Least restrictive response

0347. Select the best explanation of Safety planning.

A. A contextual, ongoing synthesis of risk and protective factors, current intent, access, history, and foreseeable changes.
B. A collaborative, individualized plan identifying warning signs, coping steps, supportive contacts, and emergency resources.
C. Personal, relational, and contextual resources that may reduce risk or support coping and recovery.
D. Rapid, focused appraisal of immediate safety, precipitating events, supports, functioning, and urgent needs.

0348. Which comparison would correct a trainee's misunderstanding of Risk formulation versus Protective factors?

A. Risk formulation: A contextual, ongoing synthesis of risk and protective factors, current intent, access, history, and foreseeable changes. / Protective factors: A collaborative, individualized plan identifying warning signs, coping steps, supportive contacts, and emergency resources.
B. Risk formulation: A contextual, ongoing synthesis of risk and protective factors, current intent, access, history, and foreseeable changes. / Protective factors: Personal, relational, and contextual resources that may reduce risk or support coping and recovery.
C. Risk formulation: A humane, practical, early response that promotes safety, stabilization, connection, and access to support. / Protective factors: Personal, relational, and contextual resources that may reduce risk or support coping and recovery.
D. Risk formulation: Personal, relational, and contextual resources that may reduce risk or support coping and recovery. / Protective factors: A contextual, ongoing synthesis of risk and protective factors, current intent, access, history, and foreseeable changes.

0349. A program coordinator describes an intervention for a young adolescent client in the telehealth session, centered on using calm, respectful language, space, and choices rather than confrontation. Which named idea is most relevant?

A. Least restrictive response
B. De-escalation
C. Safety planning
D. Crisis assessment

0350. Which comparison correctly distinguishes Least restrictive response from Post-crisis follow-up?

A. Least restrictive response: Planned reassessment and continuity contact after acute stabilization to review safety and connect ongoing care. / Post-crisis follow-up: The safest effective intervention that imposes the fewest necessary restrictions, consistent with law and policy.
B. Least restrictive response: The safest effective intervention that imposes the fewest necessary restrictions, consistent with law and policy. / Post-crisis follow-up: A contextual, ongoing synthesis of risk and protective factors, current intent, access, history, and foreseeable changes.
C. Least restrictive response: A coordinated transfer in which the current helper actively connects the person to the next service. / Post-crisis follow-up: Planned reassessment and continuity contact after acute stabilization to review safety and connect ongoing care.
D. Least restrictive response: The safest effective intervention that imposes the fewest necessary restrictions, consistent with law and policy. / Post-crisis follow-up: Planned reassessment and continuity contact after acute stabilization to review safety and connect ongoing care.

0351. Which option correctly matches each concept to its practice focus: Risk formulation and Protective factors?

A. Risk formulation: Identifying trusted adults and practical supports that can be activated now. / Protective factors: Integrating current statements, context, access, supports, and changes rather than relying on one score.
B. Risk formulation: Integrating current statements, context, access, supports, and changes rather than relying on one score. / Protective factors: Creating specific steps with the youth and caregivers for what to do if risk increases.
C. Risk formulation: Integrating current statements, context, access, supports, and changes rather than relying on one score. / Protective factors: Identifying trusted adults and practical supports that can be activated now.
D. Risk formulation: Offering practical assistance and connection without pressuring a person to recount traumatic details. / Protective factors: Identifying trusted adults and practical supports that can be activated now.

0352. Which named construct is captured by this account? A humane, practical, early response that promotes safety, stabilization, connection, and access to support.

A. Crisis assessment
B. Psychological first aid
C. Protective factors
D. Safety planning

0353. Which comparison correctly distinguishes Safety planning from Post-crisis follow-up?

A. Safety planning: A collaborative, individualized plan identifying warning signs, coping steps, supportive contacts, and emergency resources. / Post-crisis follow-up: Planned reassessment and continuity contact after acute stabilization to review safety and connect ongoing care.
B. Safety planning: A coordinated transfer in which the current helper actively connects the person to the next service. / Post-crisis follow-up: Planned reassessment and continuity contact after acute stabilization to review safety and connect ongoing care.
C. Safety planning: Planned reassessment and continuity contact after acute stabilization to review safety and connect ongoing care. / Post-crisis follow-up: A collaborative, individualized plan identifying warning signs, coping steps, supportive contacts, and emergency resources.
D. Safety planning: A collaborative, individualized plan identifying warning signs, coping steps, supportive contacts, and emergency resources. / Post-crisis follow-up: A humane, practical, early response that promotes safety, stabilization, connection, and access to support.

0354. A case conference asks for a distinction between Crisis triage and Post-crisis follow-up. Which answer is sound?

A. Crisis triage: Prioritizing urgency and level of response based on immediate danger, need, and available resources. / Post-crisis follow-up: Planned reassessment and continuity contact after acute stabilization to review safety and connect ongoing care.
B. Crisis triage: Prioritizing urgency and level of response based on immediate danger, need, and available resources. / Post-crisis follow-up: A coordinated transfer in which the current helper actively connects the person to the next service.
C. Crisis triage: Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety. / Post-crisis follow-up: Planned reassessment and continuity contact after acute stabilization to review safety and connect ongoing care.
D. Crisis triage: Planned reassessment and continuity contact after acute stabilization to review safety and connect ongoing care. / Post-crisis follow-up: Prioritizing urgency and level of response based on immediate danger, need, and available resources.

0355. In the learning-support meeting, a youth worker explains why a client in late adolescence would benefit from offering practical assistance and connection without pressuring a person to recount traumatic details. Which course concept underpins the explanation?

A. Psychological first aid
B. Least restrictive response
C. Crisis assessment
D. Crisis triage

0356. Choose the practice comparison that best separates Risk formulation from Warm handoff.

A. Risk formulation: Integrating current statements, context, access, supports, and changes rather than relying on one score. / Warm handoff: Determining which situation requires immediate emergency action and which can be safely managed with timely follow-up.
B. Risk formulation: Integrating current statements, context, access, supports, and changes rather than relying on one score. / Warm handoff: Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number.
C. Risk formulation: Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number. / Warm handoff: Integrating current statements, context, access, supports, and changes rather than relying on one score.
D. Risk formulation: Using calm, respectful language, space, and choices rather than confrontation. / Warm handoff: Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number.

0357. Choose the term that matches this definition: A humane, practical, early response that promotes safety, stabilization, connection, and access to support.

A. Psychological first aid
B. Least restrictive response
C. Post-crisis follow-up
D. Crisis triage

0358. A trainee must distinguish how Safety planning and Crisis triage guide practice. Which comparison is accurate?

A. Safety planning: Identifying trusted adults and practical supports that can be activated now. / Crisis triage: Determining which situation requires immediate emergency action and which can be safely managed with timely follow-up.
B. Safety planning: Determining which situation requires immediate emergency action and which can be safely managed with timely follow-up. / Crisis triage: Creating specific steps with the youth and caregivers for what to do if risk increases.
C. Safety planning: Creating specific steps with the youth and caregivers for what to do if risk increases. / Crisis triage: Determining which situation requires immediate emergency action and which can be safely managed with timely follow-up.
D. Safety planning: Creating specific steps with the youth and caregivers for what to do if risk increases. / Crisis triage: Checking whether the plan worked and whether additional services are needed after the immediate crisis.

0359. Which paired example correctly applies Protective factors first and Warm handoff second?

A. Protective factors: Identifying trusted adults and practical supports that can be activated now. / Warm handoff: Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number.
B. Protective factors: Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number. / Warm handoff: Identifying trusted adults and practical supports that can be activated now.
C. Protective factors: Identifying trusted adults and practical supports that can be activated now. / Warm handoff: Checking whether the plan worked and whether additional services are needed after the immediate crisis.
D. Protective factors: Offering practical assistance and connection without pressuring a person to recount traumatic details. / Warm handoff: Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number.

0360. A caregiver working with a counselor presents a support plan for a client in early adolescence at the behavior-support review. Its central feature is clarifying immediate danger and available supports before moving to longer-term goals. Which concept should be named?

A. Safety planning
B. Crisis assessment
C. Crisis triage
D. Post-crisis follow-up

0361. At the caregiver consultation, a play therapist meets with a teenage client. The practice priority is: integrating current statements, context, access, supports, and changes rather than relying on one score. Which concept best captures that priority?

A. Post-crisis follow-up
B. Crisis assessment
C. Risk formulation
D. Warm handoff

0362. Which option preserves the correct meaning of both Least restrictive response and Crisis triage?

A. Least restrictive response: The safest effective intervention that imposes the fewest necessary restrictions, consistent with law and policy. / Crisis triage: Planned reassessment and continuity contact after acute stabilization to review safety and connect ongoing care.
B. Least restrictive response: A contextual, ongoing synthesis of risk and protective factors, current intent, access, history, and foreseeable changes. / Crisis triage: Prioritizing urgency and level of response based on immediate danger, need, and available resources.
C. Least restrictive response: Prioritizing urgency and level of response based on immediate danger, need, and available resources. / Crisis triage: The safest effective intervention that imposes the fewest necessary restrictions, consistent with law and policy.
D. Least restrictive response: The safest effective intervention that imposes the fewest necessary restrictions, consistent with law and policy. / Crisis triage: Prioritizing urgency and level of response based on immediate danger, need, and available resources.

0363. Which comparison correctly distinguishes Psychological first aid from Warm handoff?

A. Psychological first aid: Planned reassessment and continuity contact after acute stabilization to review safety and connect ongoing care. / Warm handoff: A coordinated transfer in which the current helper actively connects the person to the next service.
B. Psychological first aid: A humane, practical, early response that promotes safety, stabilization, connection, and access to support. / Warm handoff: Personal, relational, and contextual resources that may reduce risk or support coping and recovery.
C. Psychological first aid: A humane, practical, early response that promotes safety, stabilization, connection, and access to support. / Warm handoff: A coordinated transfer in which the current helper actively connects the person to the next service.
D. Psychological first aid: A coordinated transfer in which the current helper actively connects the person to the next service. / Warm handoff: A humane, practical, early response that promotes safety, stabilization, connection, and access to support.

0364. Which option preserves the correct meaning of both Risk formulation and Least restrictive response?

A. Risk formulation: A contextual, ongoing synthesis of risk and protective factors, current intent, access, history, and foreseeable changes. / Least restrictive response: The safest effective intervention that imposes the fewest necessary restrictions, consistent with law and policy.
B. Risk formulation: A contextual, ongoing synthesis of risk and protective factors, current intent, access, history, and foreseeable changes. / Least restrictive response: Personal, relational, and contextual resources that may reduce risk or support coping and recovery.
C. Risk formulation: The safest effective intervention that imposes the fewest necessary restrictions, consistent with law and policy. / Least restrictive response: A contextual, ongoing synthesis of risk and protective factors, current intent, access, history, and foreseeable changes.
D. Risk formulation: A collaborative, individualized plan identifying warning signs, coping steps, supportive contacts, and emergency resources. / Least restrictive response: The safest effective intervention that imposes the fewest necessary restrictions, consistent with law and policy.

0365. For a middle-school student in the school-based service, a behavior specialist makes this practice the immediate priority: clarifying immediate danger and available supports before moving to longer-term goals. Which concept fits best?

A. Crisis assessment
B. Post-crisis follow-up
C. Risk formulation
D. Safety planning

0366. How should a practitioner distinguish the applications of Crisis assessment and Safety planning?

A. Crisis assessment: Clarifying immediate danger and available supports before moving to longer-term goals. / Safety planning: Creating specific steps with the youth and caregivers for what to do if risk increases.
B. Crisis assessment: Clarifying immediate danger and available supports before moving to longer-term goals. / Safety planning: Selecting a proportionate response and reassessing whether restrictions remain necessary.
C. Crisis assessment: Creating specific steps with the youth and caregivers for what to do if risk increases. / Safety planning: Clarifying immediate danger and available supports before moving to longer-term goals.
D. Crisis assessment: Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number. / Safety planning: Creating specific steps with the youth and caregivers for what to do if risk increases.

0367. Which statement most accurately defines Risk formulation?

A. A contextual, ongoing synthesis of risk and protective factors, current intent, access, history, and foreseeable changes.
B. Rapid, focused appraisal of immediate safety, precipitating events, supports, functioning, and urgent needs.
C. Personal, relational, and contextual resources that may reduce risk or support coping and recovery.
D. The safest effective intervention that imposes the fewest necessary restrictions, consistent with law and policy.

0368. A family therapist presents a support plan for a child aged 7 at the child guidance clinic. Its central feature is offering practical assistance and connection without pressuring a person to recount traumatic details. Which concept should be named?

A. Least restrictive response
B. Safety planning
C. Psychological first aid
D. Post-crisis follow-up

0369. Choose the practice comparison that best separates Safety planning from Warm handoff.

A. Safety planning: Creating specific steps with the youth and caregivers for what to do if risk increases. / Warm handoff: Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number.
B. Safety planning: Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number. / Warm handoff: Creating specific steps with the youth and caregivers for what to do if risk increases.
C. Safety planning: Clarifying immediate danger and available supports before moving to longer-term goals. / Warm handoff: Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number.
D. Safety planning: Creating specific steps with the youth and caregivers for what to do if risk increases. / Warm handoff: Offering practical assistance and connection without pressuring a person to recount traumatic details.

0370. Which applied comparison correctly identifies what belongs to Protective factors versus Crisis triage?

A. Protective factors: Determining which situation requires immediate emergency action and which can be safely managed with timely follow-up. / Crisis triage: Identifying trusted adults and practical supports that can be activated now.
B. Protective factors: Offering practical assistance and connection without pressuring a person to recount traumatic details. / Crisis triage: Determining which situation requires immediate emergency action and which can be safely managed with timely follow-up.
C. Protective factors: Identifying trusted adults and practical supports that can be activated now. / Crisis triage: Creating specific steps with the youth and caregivers for what to do if risk increases.
D. Protective factors: Identifying trusted adults and practical supports that can be activated now. / Crisis triage: Determining which situation requires immediate emergency action and which can be safely managed with timely follow-up.

0371. A doctoral student reads the following description. Which concept does it define? Personal, relational, and contextual resources that may reduce risk or support coping and recovery.

A. Safety planning
B. Protective factors
C. Crisis assessment
D. Risk formulation

0372. Which statement most accurately defines Warm handoff?

A. Rapid, focused appraisal of immediate safety, precipitating events, supports, functioning, and urgent needs.
B. A contextual, ongoing synthesis of risk and protective factors, current intent, access, history, and foreseeable changes.
C. A collaborative, individualized plan identifying warning signs, coping steps, supportive contacts, and emergency resources.
D. A coordinated transfer in which the current helper actively connects the person to the next service.

0373. A support meeting for a client in late adolescence includes a behavior specialist in the family resource center. The practice under consideration is determining which situation requires immediate emergency action and which can be safely managed with timely follow-up. Which concept guides it?

A. Psychological first aid
B. Crisis triage
C. Least restrictive response
D. Post-crisis follow-up

0374. In the school counseling office, the agreed focus for a service navigator working with a child aged 11 is determining which situation requires immediate emergency action and which can be safely managed with timely follow-up. Which concept names this focus?

A. Protective factors
B. Warm handoff
C. Crisis triage
D. Risk formulation

0375. Which statement most accurately defines De-escalation?

A. A humane, practical, early response that promotes safety, stabilization, connection, and access to support.
B. The safest effective intervention that imposes the fewest necessary restrictions, consistent with law and policy.
C. Personal, relational, and contextual resources that may reduce risk or support coping and recovery.
D. Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety.

0376. Which applied comparison correctly identifies what belongs to Crisis assessment versus Protective factors?

A. Crisis assessment: Identifying trusted adults and practical supports that can be activated now. / Protective factors: Clarifying immediate danger and available supports before moving to longer-term goals.
B. Crisis assessment: Checking whether the plan worked and whether additional services are needed after the immediate crisis. / Protective factors: Identifying trusted adults and practical supports that can be activated now.
C. Crisis assessment: Clarifying immediate danger and available supports before moving to longer-term goals. / Protective factors: Offering practical assistance and connection without pressuring a person to recount traumatic details.
D. Crisis assessment: Clarifying immediate danger and available supports before moving to longer-term goals. / Protective factors: Identifying trusted adults and practical supports that can be activated now.

0377. A planning meeting about a young adolescent client includes a counselor. The proposed practice in the clinical planning session is identifying trusted adults and practical supports that can be activated now. Which idea underlies it?

A. Post-crisis follow-up
B. Protective factors
C. Risk formulation
D. De-escalation

0378. In a case note about a preadolescent child, a assessment clinician working in the community mental-health service records this priority: identifying trusted adults and practical supports that can be activated now. What principle is reflected?

A. Protective factors
B. Risk formulation
C. Warm handoff
D. De-escalation

0379. For a older adolescent client in the child guidance clinic, a clinical supervisor makes this practice the immediate priority: determining which situation requires immediate emergency action and which can be safely managed with timely follow-up. Which concept fits best?

A. Safety planning
B. Post-crisis follow-up
C. Least restrictive response
D. Crisis triage

0380. Which description belongs with the term Post-crisis follow-up?

A. A contextual, ongoing synthesis of risk and protective factors, current intent, access, history, and foreseeable changes.
B. Planned reassessment and continuity contact after acute stabilization to review safety and connect ongoing care.
C. The safest effective intervention that imposes the fewest necessary restrictions, consistent with law and policy.
D. Prioritizing urgency and level of response based on immediate danger, need, and available resources.

0381. A case conference reviews a therapist's work with a young adolescent client in the classroom support meeting: determining which situation requires immediate emergency action and which can be safely managed with timely follow-up. Which principle is central?

A. Post-crisis follow-up
B. Psychological first aid
C. Crisis triage
D. Warm handoff

0382. A case conference asks for a distinction between Risk formulation and Least restrictive response. Which answer is sound?

A. Risk formulation: A contextual, ongoing synthesis of risk and protective factors, current intent, access, history, and foreseeable changes. / Least restrictive response: Personal, relational, and contextual resources that may reduce risk or support coping and recovery.
B. Risk formulation: A contextual, ongoing synthesis of risk and protective factors, current intent, access, history, and foreseeable changes. / Least restrictive response: The safest effective intervention that imposes the fewest necessary restrictions, consistent with law and policy.
C. Risk formulation: A collaborative, individualized plan identifying warning signs, coping steps, supportive contacts, and emergency resources. / Least restrictive response: The safest effective intervention that imposes the fewest necessary restrictions, consistent with law and policy.
D. Risk formulation: The safest effective intervention that imposes the fewest necessary restrictions, consistent with law and policy. / Least restrictive response: A contextual, ongoing synthesis of risk and protective factors, current intent, access, history, and foreseeable changes.

0383. A program coordinator is asked what should shape a student aged 9's support in the outpatient clinic. The proposed focus is offering practical assistance and connection without pressuring a person to recount traumatic details. Which principle does it represent?

A. Psychological first aid
B. Post-crisis follow-up
C. Crisis triage
D. De-escalation

0384. A service team discusses a student aged 9 in the outpatient clinic. Their proposed next step is offering practical assistance and connection without pressuring a person to recount traumatic details. Which course concept supports it?

A. Safety planning
B. Crisis assessment
C. Protective factors
D. Psychological first aid

0385. Which option preserves the correct meaning of both De-escalation and Protective factors?

A. De-escalation: Personal, relational, and contextual resources that may reduce risk or support coping and recovery. / Protective factors: Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety.
B. De-escalation: Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety. / Protective factors: Rapid, focused appraisal of immediate safety, precipitating events, supports, functioning, and urgent needs.
C. De-escalation: Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety. / Protective factors: Personal, relational, and contextual resources that may reduce risk or support coping and recovery.
D. De-escalation: A contextual, ongoing synthesis of risk and protective factors, current intent, access, history, and foreseeable changes. / Protective factors: Personal, relational, and contextual resources that may reduce risk or support coping and recovery.

0386. When reviewing a young person aged 16’s plan in the community mental-health service, the school-based clinician notes that the next step is clarifying immediate danger and available supports before moving to longer-term goals. Which concept guides this step?

A. Post-crisis follow-up
B. Crisis assessment
C. Safety planning
D. Protective factors

0387. A doctoral student reads the following description. Which concept does it define? A humane, practical, early response that promotes safety, stabilization, connection, and access to support.

A. Risk formulation
B. Post-crisis follow-up
C. Psychological first aid
D. Crisis triage

0388. Identify the most precise label for this idea: Rapid, focused appraisal of immediate safety, precipitating events, supports, functioning, and urgent needs.

A. Psychological first aid
B. Post-crisis follow-up
C. Warm handoff
D. Crisis assessment

0389. Which option preserves the correct meaning of both Least restrictive response and Post-crisis follow-up?

A. Least restrictive response: The safest effective intervention that imposes the fewest necessary restrictions, consistent with law and policy. / Post-crisis follow-up: Planned reassessment and continuity contact after acute stabilization to review safety and connect ongoing care.
B. Least restrictive response: Planned reassessment and continuity contact after acute stabilization to review safety and connect ongoing care. / Post-crisis follow-up: The safest effective intervention that imposes the fewest necessary restrictions, consistent with law and policy.
C. Least restrictive response: A coordinated transfer in which the current helper actively connects the person to the next service. / Post-crisis follow-up: Planned reassessment and continuity contact after acute stabilization to review safety and connect ongoing care.
D. Least restrictive response: The safest effective intervention that imposes the fewest necessary restrictions, consistent with law and policy. / Post-crisis follow-up: A contextual, ongoing synthesis of risk and protective factors, current intent, access, history, and foreseeable changes.

0390. Choose the practice comparison that best separates Crisis assessment from Post-crisis follow-up.

A. Crisis assessment: Checking whether the plan worked and whether additional services are needed after the immediate crisis. / Post-crisis follow-up: Clarifying immediate danger and available supports before moving to longer-term goals.
B. Crisis assessment: Determining which situation requires immediate emergency action and which can be safely managed with timely follow-up. / Post-crisis follow-up: Checking whether the plan worked and whether additional services are needed after the immediate crisis.
C. Crisis assessment: Clarifying immediate danger and available supports before moving to longer-term goals. / Post-crisis follow-up: Checking whether the plan worked and whether additional services are needed after the immediate crisis.
D. Crisis assessment: Clarifying immediate danger and available supports before moving to longer-term goals. / Post-crisis follow-up: Using calm, respectful language, space, and choices rather than confrontation.

0391. Which option pairs the definitions of De-escalation and Warm handoff correctly, in that order?

A. De-escalation: The safest effective intervention that imposes the fewest necessary restrictions, consistent with law and policy. / Warm handoff: A coordinated transfer in which the current helper actively connects the person to the next service.
B. De-escalation: Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety. / Warm handoff: A collaborative, individualized plan identifying warning signs, coping steps, supportive contacts, and emergency resources.
C. De-escalation: A coordinated transfer in which the current helper actively connects the person to the next service. / Warm handoff: Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety.
D. De-escalation: Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety. / Warm handoff: A coordinated transfer in which the current helper actively connects the person to the next service.

0392. A supervisor asks how Warm handoff would appear in practice. Which choice should be selected?

A. Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number.
B. Offering practical assistance and connection without pressuring a person to recount traumatic details.
C. Creating specific steps with the youth and caregivers for what to do if risk increases.
D. Checking whether the plan worked and whether additional services are needed after the immediate crisis.

0393. A support meeting for a student aged 17 includes a behavior specialist in the community youth program. The practice under consideration is using calm, respectful language, space, and choices rather than confrontation. Which concept guides it?

A. De-escalation
B. Safety planning
C. Risk formulation
D. Warm handoff

0394. Which statement shows a sound practice-level distinction between Risk formulation and Psychological first aid?

A. Risk formulation: Integrating current statements, context, access, supports, and changes rather than relying on one score. / Psychological first aid: Determining which situation requires immediate emergency action and which can be safely managed with timely follow-up.
B. Risk formulation: Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number. / Psychological first aid: Offering practical assistance and connection without pressuring a person to recount traumatic details.
C. Risk formulation: Integrating current statements, context, access, supports, and changes rather than relying on one score. / Psychological first aid: Offering practical assistance and connection without pressuring a person to recount traumatic details.
D. Risk formulation: Offering practical assistance and connection without pressuring a person to recount traumatic details. / Psychological first aid: Integrating current statements, context, access, supports, and changes rather than relying on one score.

0395. Choose the response that best puts Warm handoff into practice.

A. Creating specific steps with the youth and caregivers for what to do if risk increases.
B. Checking whether the plan worked and whether additional services are needed after the immediate crisis.
C. Determining which situation requires immediate emergency action and which can be safely managed with timely follow-up.
D. Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number.

0396. Choose the term that matches this definition: Planned reassessment and continuity contact after acute stabilization to review safety and connect ongoing care.

A. Crisis assessment
B. Post-crisis follow-up
C. Crisis triage
D. Protective factors

0397. Which comparison correctly distinguishes De-escalation from Risk formulation?

A. De-escalation: Personal, relational, and contextual resources that may reduce risk or support coping and recovery. / Risk formulation: A contextual, ongoing synthesis of risk and protective factors, current intent, access, history, and foreseeable changes.
B. De-escalation: A contextual, ongoing synthesis of risk and protective factors, current intent, access, history, and foreseeable changes. / Risk formulation: Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety.
C. De-escalation: Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety. / Risk formulation: A contextual, ongoing synthesis of risk and protective factors, current intent, access, history, and foreseeable changes.
D. De-escalation: Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety. / Risk formulation: Prioritizing urgency and level of response based on immediate danger, need, and available resources.

0398. An interdisciplinary team reviews a child aged 7's case at the classroom support meeting. The clinical supervisor recommends clarifying immediate danger and available supports before moving to longer-term goals. Which course concept best fits?

A. Least restrictive response
B. Crisis assessment
C. Post-crisis follow-up
D. Warm handoff

0399. A high-school student's service team meets in the school counseling office. The family therapist recommends a change involving identifying trusted adults and practical supports that can be activated now. Which idea best explains it?

A. Safety planning
B. Crisis triage
C. Risk formulation
D. Protective factors

0400. In a supervision review, a family therapist describes work with a young person in the supervision meeting: using calm, respectful language, space, and choices rather than confrontation. What concept is illustrated?

A. De-escalation
B. Warm handoff
C. Safety planning
D. Risk formulation

0401. Which comparison would correct a trainee's misunderstanding of Crisis assessment versus Risk formulation?

A. Crisis assessment: Rapid, focused appraisal of immediate safety, precipitating events, supports, functioning, and urgent needs. / Risk formulation: A contextual, ongoing synthesis of risk and protective factors, current intent, access, history, and foreseeable changes.
B. Crisis assessment: Rapid, focused appraisal of immediate safety, precipitating events, supports, functioning, and urgent needs. / Risk formulation: Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety.
C. Crisis assessment: A coordinated transfer in which the current helper actively connects the person to the next service. / Risk formulation: A contextual, ongoing synthesis of risk and protective factors, current intent, access, history, and foreseeable changes.
D. Crisis assessment: A contextual, ongoing synthesis of risk and protective factors, current intent, access, history, and foreseeable changes. / Risk formulation: Rapid, focused appraisal of immediate safety, precipitating events, supports, functioning, and urgent needs.

0402. Which statement shows a sound practice-level distinction between Least restrictive response and Crisis triage?

A. Least restrictive response: Determining which situation requires immediate emergency action and which can be safely managed with timely follow-up. / Crisis triage: Selecting a proportionate response and reassessing whether restrictions remain necessary.
B. Least restrictive response: Integrating current statements, context, access, supports, and changes rather than relying on one score. / Crisis triage: Determining which situation requires immediate emergency action and which can be safely managed with timely follow-up.
C. Least restrictive response: Selecting a proportionate response and reassessing whether restrictions remain necessary. / Crisis triage: Determining which situation requires immediate emergency action and which can be safely managed with timely follow-up.
D. Least restrictive response: Selecting a proportionate response and reassessing whether restrictions remain necessary. / Crisis triage: Checking whether the plan worked and whether additional services are needed after the immediate crisis.

0403. Which paired example correctly applies De-escalation first and Post-crisis follow-up second?

A. De-escalation: Using calm, respectful language, space, and choices rather than confrontation. / Post-crisis follow-up: Selecting a proportionate response and reassessing whether restrictions remain necessary.
B. De-escalation: Checking whether the plan worked and whether additional services are needed after the immediate crisis. / Post-crisis follow-up: Using calm, respectful language, space, and choices rather than confrontation.
C. De-escalation: Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number. / Post-crisis follow-up: Checking whether the plan worked and whether additional services are needed after the immediate crisis.
D. De-escalation: Using calm, respectful language, space, and choices rather than confrontation. / Post-crisis follow-up: Checking whether the plan worked and whether additional services are needed after the immediate crisis.

0404. A supervisor asks for an applied contrast between Risk formulation and Warm handoff. Which option fits?

A. Risk formulation: Integrating current statements, context, access, supports, and changes rather than relying on one score. / Warm handoff: Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number.
B. Risk formulation: Using calm, respectful language, space, and choices rather than confrontation. / Warm handoff: Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number.
C. Risk formulation: Integrating current statements, context, access, supports, and changes rather than relying on one score. / Warm handoff: Determining which situation requires immediate emergency action and which can be safely managed with timely follow-up.
D. Risk formulation: Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number. / Warm handoff: Integrating current statements, context, access, supports, and changes rather than relying on one score.

0405. A youth worker is asked to justify a plan for a child aged 8 in the caregiver consultation. It calls for identifying trusted adults and practical supports that can be activated now. Which concept provides the rationale?

A. Post-crisis follow-up
B. Crisis triage
C. Protective factors
D. Psychological first aid

0406. Which option correctly matches each concept to its practice focus: Safety planning and Warm handoff?

A. Safety planning: Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number. / Warm handoff: Creating specific steps with the youth and caregivers for what to do if risk increases.
B. Safety planning: Creating specific steps with the youth and caregivers for what to do if risk increases. / Warm handoff: Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number.
C. Safety planning: Clarifying immediate danger and available supports before moving to longer-term goals. / Warm handoff: Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number.
D. Safety planning: Creating specific steps with the youth and caregivers for what to do if risk increases. / Warm handoff: Offering practical assistance and connection without pressuring a person to recount traumatic details.

0407. For a child aged 8 seen in the after-school program, the therapist recommends a plan built around integrating current statements, context, access, supports, and changes rather than relying on one score. Which concept is reflected?

A. Psychological first aid
B. De-escalation
C. Crisis triage
D. Risk formulation

0408. A case conference reviews a research trainee's work with a child of elementary-school age in the community youth program: identifying trusted adults and practical supports that can be activated now. Which principle is central?

A. De-escalation
B. Safety planning
C. Protective factors
D. Psychological first aid

0409. A community practitioner describes an intervention for a young person aged 10 in the child guidance clinic, centered on identifying trusted adults and practical supports that can be activated now. Which named idea is most relevant?

A. Risk formulation
B. Protective factors
C. Safety planning
D. Psychological first aid

0410. Which course concept is defined as follows: A contextual, ongoing synthesis of risk and protective factors, current intent, access, history, and foreseeable changes.

A. Protective factors
B. Risk formulation
C. De-escalation
D. Crisis triage

0411. During work in the child guidance clinic, a consulting counselor identifies this need: integrating current statements, context, access, supports, and changes rather than relying on one score. Which idea should guide the response?

A. Crisis assessment
B. Risk formulation
C. Crisis triage
D. Warm handoff

0412. In a supervision review, a parent educator describes work with a young person aged 18 in the learning-support meeting: identifying trusted adults and practical supports that can be activated now. What concept is illustrated?

A. Warm handoff
B. Crisis triage
C. Protective factors
D. Risk formulation

0413. Which applied comparison correctly identifies what belongs to Crisis assessment versus Risk formulation?

A. Crisis assessment: Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number. / Risk formulation: Integrating current statements, context, access, supports, and changes rather than relying on one score.
B. Crisis assessment: Clarifying immediate danger and available supports before moving to longer-term goals. / Risk formulation: Integrating current statements, context, access, supports, and changes rather than relying on one score.
C. Crisis assessment: Clarifying immediate danger and available supports before moving to longer-term goals. / Risk formulation: Using calm, respectful language, space, and choices rather than confrontation.
D. Crisis assessment: Integrating current statements, context, access, supports, and changes rather than relying on one score. / Risk formulation: Clarifying immediate danger and available supports before moving to longer-term goals.

0414. A trainee must distinguish how Crisis assessment and Least restrictive response guide practice. Which comparison is accurate?

A. Crisis assessment: Clarifying immediate danger and available supports before moving to longer-term goals. / Least restrictive response: Using calm, respectful language, space, and choices rather than confrontation.
B. Crisis assessment: Clarifying immediate danger and available supports before moving to longer-term goals. / Least restrictive response: Selecting a proportionate response and reassessing whether restrictions remain necessary.
C. Crisis assessment: Creating specific steps with the youth and caregivers for what to do if risk increases. / Least restrictive response: Selecting a proportionate response and reassessing whether restrictions remain necessary.
D. Crisis assessment: Selecting a proportionate response and reassessing whether restrictions remain necessary. / Least restrictive response: Clarifying immediate danger and available supports before moving to longer-term goals.

0415. Which paired example correctly applies Least restrictive response first and Psychological first aid second?

A. Least restrictive response: Selecting a proportionate response and reassessing whether restrictions remain necessary. / Psychological first aid: Determining which situation requires immediate emergency action and which can be safely managed with timely follow-up.
B. Least restrictive response: Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number. / Psychological first aid: Offering practical assistance and connection without pressuring a person to recount traumatic details.
C. Least restrictive response: Selecting a proportionate response and reassessing whether restrictions remain necessary. / Psychological first aid: Offering practical assistance and connection without pressuring a person to recount traumatic details.
D. Least restrictive response: Offering practical assistance and connection without pressuring a person to recount traumatic details. / Psychological first aid: Selecting a proportionate response and reassessing whether restrictions remain necessary.

0416. Which statement accurately contrasts the course concepts Psychological first aid and Warm handoff?

A. Psychological first aid: Planned reassessment and continuity contact after acute stabilization to review safety and connect ongoing care. / Warm handoff: A coordinated transfer in which the current helper actively connects the person to the next service.
B. Psychological first aid: A coordinated transfer in which the current helper actively connects the person to the next service. / Warm handoff: A humane, practical, early response that promotes safety, stabilization, connection, and access to support.
C. Psychological first aid: A humane, practical, early response that promotes safety, stabilization, connection, and access to support. / Warm handoff: A coordinated transfer in which the current helper actively connects the person to the next service.
D. Psychological first aid: A humane, practical, early response that promotes safety, stabilization, connection, and access to support. / Warm handoff: Personal, relational, and contextual resources that may reduce risk or support coping and recovery.

0417. Choose the practice comparison that best separates Risk formulation from Least restrictive response.

A. Risk formulation: Creating specific steps with the youth and caregivers for what to do if risk increases. / Least restrictive response: Selecting a proportionate response and reassessing whether restrictions remain necessary.
B. Risk formulation: Integrating current statements, context, access, supports, and changes rather than relying on one score. / Least restrictive response: Selecting a proportionate response and reassessing whether restrictions remain necessary.
C. Risk formulation: Integrating current statements, context, access, supports, and changes rather than relying on one score. / Least restrictive response: Identifying trusted adults and practical supports that can be activated now.
D. Risk formulation: Selecting a proportionate response and reassessing whether restrictions remain necessary. / Least restrictive response: Integrating current statements, context, access, supports, and changes rather than relying on one score.

0418. In the school counseling office, a family therapist is considering this approach for a high-school student: identifying trusted adults and practical supports that can be activated now. Which framework does it represent?

A. Psychological first aid
B. Protective factors
C. Risk formulation
D. Crisis assessment

0419. Which comparison would correct a trainee’s misunderstanding of Crisis triage versus Warm handoff?

A. Crisis triage: Planned reassessment and continuity contact after acute stabilization to review safety and connect ongoing care. / Warm handoff: A coordinated transfer in which the current helper actively connects the person to the next service.
B. Crisis triage: Prioritizing urgency and level of response based on immediate danger, need, and available resources. / Warm handoff: A coordinated transfer in which the current helper actively connects the person to the next service.
C. Crisis triage: Prioritizing urgency and level of response based on immediate danger, need, and available resources. / Warm handoff: A contextual, ongoing synthesis of risk and protective factors, current intent, access, history, and foreseeable changes.
D. Crisis triage: A coordinated transfer in which the current helper actively connects the person to the next service. / Warm handoff: Prioritizing urgency and level of response based on immediate danger, need, and available resources.

0420. While supporting a young person aged 18 in the school counseling office, a case coordinator adopts this practice: checking whether the plan worked and whether additional services are needed after the immediate crisis. Which concept best explains the choice?

A. Post-crisis follow-up
B. Least restrictive response
C. Safety planning
D. Risk formulation

0421. Which applied comparison correctly identifies what belongs to Risk formulation versus Protective factors?

A. Risk formulation: Identifying trusted adults and practical supports that can be activated now. / Protective factors: Integrating current statements, context, access, supports, and changes rather than relying on one score.
B. Risk formulation: Integrating current statements, context, access, supports, and changes rather than relying on one score. / Protective factors: Identifying trusted adults and practical supports that can be activated now.
C. Risk formulation: Offering practical assistance and connection without pressuring a person to recount traumatic details. / Protective factors: Identifying trusted adults and practical supports that can be activated now.
D. Risk formulation: Integrating current statements, context, access, supports, and changes rather than relying on one score. / Protective factors: Creating specific steps with the youth and caregivers for what to do if risk increases.

0422. Which statement accurately contrasts the course concepts Warm handoff and Post-crisis follow-up?

A. Warm handoff: A coordinated transfer in which the current helper actively connects the person to the next service. / Post-crisis follow-up: Planned reassessment and continuity contact after acute stabilization to review safety and connect ongoing care.
B. Warm handoff: Planned reassessment and continuity contact after acute stabilization to review safety and connect ongoing care. / Post-crisis follow-up: A coordinated transfer in which the current helper actively connects the person to the next service.
C. Warm handoff: A coordinated transfer in which the current helper actively connects the person to the next service. / Post-crisis follow-up: The safest effective intervention that imposes the fewest necessary restrictions, consistent with law and policy.
D. Warm handoff: Personal, relational, and contextual resources that may reduce risk or support coping and recovery. / Post-crisis follow-up: Planned reassessment and continuity contact after acute stabilization to review safety and connect ongoing care.

0423. Select the best explanation of De-escalation.

A. Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety.
B. A collaborative, individualized plan identifying warning signs, coping steps, supportive contacts, and emergency resources.
C. The safest effective intervention that imposes the fewest necessary restrictions, consistent with law and policy.
D. A coordinated transfer in which the current helper actively connects the person to the next service.

0424. How are Least restrictive response and Warm handoff most accurately differentiated in this curriculum?

A. Least restrictive response: The safest effective intervention that imposes the fewest necessary restrictions, consistent with law and policy. / Warm handoff: Personal, relational, and contextual resources that may reduce risk or support coping and recovery.
B. Least restrictive response: The safest effective intervention that imposes the fewest necessary restrictions, consistent with law and policy. / Warm handoff: A coordinated transfer in which the current helper actively connects the person to the next service.
C. Least restrictive response: A humane, practical, early response that promotes safety, stabilization, connection, and access to support. / Warm handoff: A coordinated transfer in which the current helper actively connects the person to the next service.
D. Least restrictive response: A coordinated transfer in which the current helper actively connects the person to the next service. / Warm handoff: The safest effective intervention that imposes the fewest necessary restrictions, consistent with law and policy.

0425. How should a practitioner distinguish the applications of Psychological first aid and Crisis triage?

A. Psychological first aid: Offering practical assistance and connection without pressuring a person to recount traumatic details. / Crisis triage: Determining which situation requires immediate emergency action and which can be safely managed with timely follow-up.
B. Psychological first aid: Identifying trusted adults and practical supports that can be activated now. / Crisis triage: Determining which situation requires immediate emergency action and which can be safely managed with timely follow-up.
C. Psychological first aid: Determining which situation requires immediate emergency action and which can be safely managed with timely follow-up. / Crisis triage: Offering practical assistance and connection without pressuring a person to recount traumatic details.
D. Psychological first aid: Offering practical assistance and connection without pressuring a person to recount traumatic details. / Crisis triage: Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number.

0426. Which statement shows a sound practice-level distinction between De-escalation and Protective factors?

A. De-escalation: Integrating current statements, context, access, supports, and changes rather than relying on one score. / Protective factors: Identifying trusted adults and practical supports that can be activated now.
B. De-escalation: Identifying trusted adults and practical supports that can be activated now. / Protective factors: Using calm, respectful language, space, and choices rather than confrontation.
C. De-escalation: Using calm, respectful language, space, and choices rather than confrontation. / Protective factors: Identifying trusted adults and practical supports that can be activated now.
D. De-escalation: Using calm, respectful language, space, and choices rather than confrontation. / Protective factors: Clarifying immediate danger and available supports before moving to longer-term goals.

0427. Which pair of actions illustrates De-escalation and Least restrictive response, respectively?

A. De-escalation: Determining which situation requires immediate emergency action and which can be safely managed with timely follow-up. / Least restrictive response: Selecting a proportionate response and reassessing whether restrictions remain necessary.
B. De-escalation: Selecting a proportionate response and reassessing whether restrictions remain necessary. / Least restrictive response: Using calm, respectful language, space, and choices rather than confrontation.
C. De-escalation: Using calm, respectful language, space, and choices rather than confrontation. / Least restrictive response: Selecting a proportionate response and reassessing whether restrictions remain necessary.
D. De-escalation: Using calm, respectful language, space, and choices rather than confrontation. / Least restrictive response: Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number.

0428. A student confuses Least restrictive response with Warm handoff. Which explanation most accurately separates them?

A. Least restrictive response: The safest effective intervention that imposes the fewest necessary restrictions, consistent with law and policy. / Warm handoff: Personal, relational, and contextual resources that may reduce risk or support coping and recovery.
B. Least restrictive response: The safest effective intervention that imposes the fewest necessary restrictions, consistent with law and policy. / Warm handoff: A coordinated transfer in which the current helper actively connects the person to the next service.
C. Least restrictive response: A humane, practical, early response that promotes safety, stabilization, connection, and access to support. / Warm handoff: A coordinated transfer in which the current helper actively connects the person to the next service.
D. Least restrictive response: A coordinated transfer in which the current helper actively connects the person to the next service. / Warm handoff: The safest effective intervention that imposes the fewest necessary restrictions, consistent with law and policy.

0429. Which statement accurately contrasts the course concepts Safety planning and Risk formulation?

A. Safety planning: A collaborative, individualized plan identifying warning signs, coping steps, supportive contacts, and emergency resources. / Risk formulation: A contextual, ongoing synthesis of risk and protective factors, current intent, access, history, and foreseeable changes.
B. Safety planning: Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety. / Risk formulation: A contextual, ongoing synthesis of risk and protective factors, current intent, access, history, and foreseeable changes.
C. Safety planning: A contextual, ongoing synthesis of risk and protective factors, current intent, access, history, and foreseeable changes. / Risk formulation: A collaborative, individualized plan identifying warning signs, coping steps, supportive contacts, and emergency resources.
D. Safety planning: A collaborative, individualized plan identifying warning signs, coping steps, supportive contacts, and emergency resources. / Risk formulation: Planned reassessment and continuity contact after acute stabilization to review safety and connect ongoing care.

0430. At a case-planning meeting, the counselor proposes selecting a proportionate response and reassessing whether restrictions remain necessary. for a child aged 7 seen in the school-based service. Which concept does this illustrate?

A. Protective factors
B. Safety planning
C. Crisis triage
D. Least restrictive response

0431. Which statement shows a sound practice-level distinction between Risk formulation and Crisis triage?

A. Risk formulation: Integrating current statements, context, access, supports, and changes rather than relying on one score. / Crisis triage: Determining which situation requires immediate emergency action and which can be safely managed with timely follow-up.
B. Risk formulation: Determining which situation requires immediate emergency action and which can be safely managed with timely follow-up. / Crisis triage: Integrating current statements, context, access, supports, and changes rather than relying on one score.
C. Risk formulation: Creating specific steps with the youth and caregivers for what to do if risk increases. / Crisis triage: Determining which situation requires immediate emergency action and which can be safely managed with timely follow-up.
D. Risk formulation: Integrating current statements, context, access, supports, and changes rather than relying on one score. / Crisis triage: Identifying trusted adults and practical supports that can be activated now.

0432. In the student-support meeting, the agreed focus for a program coordinator working with a child of elementary-school age is checking whether the plan worked and whether additional services are needed after the immediate crisis. Which concept names this focus?

A. Post-crisis follow-up
B. Crisis triage
C. Risk formulation
D. Crisis assessment

0433. A member of a clinical team and a student aged 12 are discussing support in the behavior-support review. The selected practice is checking whether the plan worked and whether additional services are needed after the immediate crisis. Which concept does this demonstrate?

A. De-escalation
B. Post-crisis follow-up
C. Protective factors
D. Warm handoff

0434. Which comparison would correct a trainee's misunderstanding of Least restrictive response versus Crisis triage?

A. Least restrictive response: The safest effective intervention that imposes the fewest necessary restrictions, consistent with law and policy. / Crisis triage: Prioritizing urgency and level of response based on immediate danger, need, and available resources.
B. Least restrictive response: The safest effective intervention that imposes the fewest necessary restrictions, consistent with law and policy. / Crisis triage: Planned reassessment and continuity contact after acute stabilization to review safety and connect ongoing care.
C. Least restrictive response: A contextual, ongoing synthesis of risk and protective factors, current intent, access, history, and foreseeable changes. / Crisis triage: Prioritizing urgency and level of response based on immediate danger, need, and available resources.
D. Least restrictive response: Prioritizing urgency and level of response based on immediate danger, need, and available resources. / Crisis triage: The safest effective intervention that imposes the fewest necessary restrictions, consistent with law and policy.

0435. Which comparison would correct a trainee's misunderstanding of Protective factors versus Crisis triage?

A. Protective factors: Personal, relational, and contextual resources that may reduce risk or support coping and recovery. / Crisis triage: Prioritizing urgency and level of response based on immediate danger, need, and available resources.
B. Protective factors: Prioritizing urgency and level of response based on immediate danger, need, and available resources. / Crisis triage: Personal, relational, and contextual resources that may reduce risk or support coping and recovery.
C. Protective factors: A humane, practical, early response that promotes safety, stabilization, connection, and access to support. / Crisis triage: Prioritizing urgency and level of response based on immediate danger, need, and available resources.
D. Protective factors: Personal, relational, and contextual resources that may reduce risk or support coping and recovery. / Crisis triage: A collaborative, individualized plan identifying warning signs, coping steps, supportive contacts, and emergency resources.

0436. Which applied comparison correctly identifies what belongs to Crisis assessment versus Least restrictive response?

A. Crisis assessment: Clarifying immediate danger and available supports before moving to longer-term goals. / Least restrictive response: Selecting a proportionate response and reassessing whether restrictions remain necessary.
B. Crisis assessment: Creating specific steps with the youth and caregivers for what to do if risk increases. / Least restrictive response: Selecting a proportionate response and reassessing whether restrictions remain necessary.
C. Crisis assessment: Selecting a proportionate response and reassessing whether restrictions remain necessary. / Least restrictive response: Clarifying immediate danger and available supports before moving to longer-term goals.
D. Crisis assessment: Clarifying immediate danger and available supports before moving to longer-term goals. / Least restrictive response: Using calm, respectful language, space, and choices rather than confrontation.

0437. Which course concept is defined as follows: Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety.

A. De-escalation
B. Least restrictive response
C. Psychological first aid
D. Safety planning

0438. Choose the response that best puts Post-crisis follow-up into practice.

A. Checking whether the plan worked and whether additional services are needed after the immediate crisis.
B. Offering practical assistance and connection without pressuring a person to recount traumatic details.
C. Creating specific steps with the youth and caregivers for what to do if risk increases.
D. Integrating current statements, context, access, supports, and changes rather than relying on one score.

0439. Which option is the clearest practical expression of Safety planning?

A. Identifying trusted adults and practical supports that can be activated now.
B. Selecting a proportionate response and reassessing whether restrictions remain necessary.
C. Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number.
D. Creating specific steps with the youth and caregivers for what to do if risk increases.

0440. Identify the most precise label for this idea: Prioritizing urgency and level of response based on immediate danger, need, and available resources.

A. Crisis triage
B. Safety planning
C. Least restrictive response
D. Psychological first aid

0441. A student confuses De-escalation with Protective factors. Which explanation most accurately separates them?

A. De-escalation: Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety. / Protective factors: Personal, relational, and contextual resources that may reduce risk or support coping and recovery.
B. De-escalation: Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety. / Protective factors: Rapid, focused appraisal of immediate safety, precipitating events, supports, functioning, and urgent needs.
C. De-escalation: A contextual, ongoing synthesis of risk and protective factors, current intent, access, history, and foreseeable changes. / Protective factors: Personal, relational, and contextual resources that may reduce risk or support coping and recovery.
D. De-escalation: Personal, relational, and contextual resources that may reduce risk or support coping and recovery. / Protective factors: Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety.

0442. A trainee must distinguish how Risk formulation and Least restrictive response guide practice. Which comparison is accurate?

A. Risk formulation: Integrating current statements, context, access, supports, and changes rather than relying on one score. / Least restrictive response: Identifying trusted adults and practical supports that can be activated now.
B. Risk formulation: Selecting a proportionate response and reassessing whether restrictions remain necessary. / Least restrictive response: Integrating current statements, context, access, supports, and changes rather than relying on one score.
C. Risk formulation: Integrating current statements, context, access, supports, and changes rather than relying on one score. / Least restrictive response: Selecting a proportionate response and reassessing whether restrictions remain necessary.
D. Risk formulation: Creating specific steps with the youth and caregivers for what to do if risk increases. / Least restrictive response: Selecting a proportionate response and reassessing whether restrictions remain necessary.

0443. In a supervision quiz, how should Crisis triage be distinguished from Warm handoff?

A. Crisis triage: Planned reassessment and continuity contact after acute stabilization to review safety and connect ongoing care. / Warm handoff: A coordinated transfer in which the current helper actively connects the person to the next service.
B. Crisis triage: Prioritizing urgency and level of response based on immediate danger, need, and available resources. / Warm handoff: A contextual, ongoing synthesis of risk and protective factors, current intent, access, history, and foreseeable changes.
C. Crisis triage: A coordinated transfer in which the current helper actively connects the person to the next service. / Warm handoff: Prioritizing urgency and level of response based on immediate danger, need, and available resources.
D. Crisis triage: Prioritizing urgency and level of response based on immediate danger, need, and available resources. / Warm handoff: A coordinated transfer in which the current helper actively connects the person to the next service.

0444. Which statement accurately contrasts the course concepts De-escalation and Warm handoff?

A. De-escalation: A coordinated transfer in which the current helper actively connects the person to the next service. / Warm handoff: Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety.
B. De-escalation: Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety. / Warm handoff: A collaborative, individualized plan identifying warning signs, coping steps, supportive contacts, and emergency resources.
C. De-escalation: The safest effective intervention that imposes the fewest necessary restrictions, consistent with law and policy. / Warm handoff: A coordinated transfer in which the current helper actively connects the person to the next service.
D. De-escalation: Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety. / Warm handoff: A coordinated transfer in which the current helper actively connects the person to the next service.

0445. When reviewing a young person aged 18’s plan in the learning-support meeting, the parent educator notes that the next step is identifying trusted adults and practical supports that can be activated now. Which concept guides this step?

A. Crisis assessment
B. Psychological first aid
C. Safety planning
D. Protective factors

0446. A case coordinator presents a support plan for a child of elementary-school age at the supervision meeting. Its central feature is determining which situation requires immediate emergency action and which can be safely managed with timely follow-up. Which concept should be named?

A. Least restrictive response
B. Risk formulation
C. Post-crisis follow-up
D. Crisis triage

0447. Which named construct is captured by this account? A collaborative, individualized plan identifying warning signs, coping steps, supportive contacts, and emergency resources.

A. Crisis assessment
B. Safety planning
C. Least restrictive response
D. Crisis triage

0448. A planning meeting about a young person aged 10 includes a school support specialist. The proposed practice in the family session is offering practical assistance and connection without pressuring a person to recount traumatic details. Which idea underlies it?

A. Crisis assessment
B. Post-crisis follow-up
C. Protective factors
D. Psychological first aid

0449. Select the best explanation of Risk formulation.

A. Personal, relational, and contextual resources that may reduce risk or support coping and recovery.
B. A collaborative, individualized plan identifying warning signs, coping steps, supportive contacts, and emergency resources.
C. A contextual, ongoing synthesis of risk and protective factors, current intent, access, history, and foreseeable changes.
D. The safest effective intervention that imposes the fewest necessary restrictions, consistent with law and policy.

0450. A planning meeting about a child of elementary-school age includes a school support specialist. The proposed practice in the after-school program is creating specific steps with the youth and caregivers for what to do if risk increases. Which idea underlies it?

A. Warm handoff
B. Protective factors
C. Safety planning
D. De-escalation

0451. In a professional consultation about a school-age child, the supervised trainee describes this response in the multidisciplinary case conference: using calm, respectful language, space, and choices rather than confrontation. Which term is most apt?

A. Warm handoff
B. Least restrictive response
C. Risk formulation
D. De-escalation

0452. For a older adolescent client seen in the student wellness team, the research trainee recommends a plan built around selecting a proportionate response and reassessing whether restrictions remain necessary. Which concept is reflected?

A. Least restrictive response
B. Crisis assessment
C. Risk formulation
D. Safety planning

0453. A case conference asks for a distinction between Least restrictive response and Warm handoff. Which answer is sound?

A. Least restrictive response: A humane, practical, early response that promotes safety, stabilization, connection, and access to support. / Warm handoff: A coordinated transfer in which the current helper actively connects the person to the next service.
B. Least restrictive response: The safest effective intervention that imposes the fewest necessary restrictions, consistent with law and policy. / Warm handoff: Personal, relational, and contextual resources that may reduce risk or support coping and recovery.
C. Least restrictive response: A coordinated transfer in which the current helper actively connects the person to the next service. / Warm handoff: The safest effective intervention that imposes the fewest necessary restrictions, consistent with law and policy.
D. Least restrictive response: The safest effective intervention that imposes the fewest necessary restrictions, consistent with law and policy. / Warm handoff: A coordinated transfer in which the current helper actively connects the person to the next service.

0454. A counselor reviews a plan for a client in late adolescence in the child guidance clinic. The plan emphasizes using calm, respectful language, space, and choices rather than confrontation. Which course idea does this reflect?

A. De-escalation
B. Least restrictive response
C. Warm handoff
D. Protective factors

0455. Select the best explanation of Post-crisis follow-up.

A. A coordinated transfer in which the current helper actively connects the person to the next service.
B. Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety.
C. Planned reassessment and continuity contact after acute stabilization to review safety and connect ongoing care.
D. Personal, relational, and contextual resources that may reduce risk or support coping and recovery.

0456. Which option preserves the correct meaning of both Crisis assessment and Post-crisis follow-up?

A. Crisis assessment: Rapid, focused appraisal of immediate safety, precipitating events, supports, functioning, and urgent needs. / Post-crisis follow-up: Planned reassessment and continuity contact after acute stabilization to review safety and connect ongoing care.
B. Crisis assessment: Planned reassessment and continuity contact after acute stabilization to review safety and connect ongoing care. / Post-crisis follow-up: Rapid, focused appraisal of immediate safety, precipitating events, supports, functioning, and urgent needs.
C. Crisis assessment: Rapid, focused appraisal of immediate safety, precipitating events, supports, functioning, and urgent needs. / Post-crisis follow-up: Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety.
D. Crisis assessment: Prioritizing urgency and level of response based on immediate danger, need, and available resources. / Post-crisis follow-up: Planned reassessment and continuity contact after acute stabilization to review safety and connect ongoing care.

0457. In a professional consultation about a young adolescent client, the mental-health professional describes this response in the caregiver consultation: creating specific steps with the youth and caregivers for what to do if risk increases. Which term is most apt?

A. Warm handoff
B. De-escalation
C. Risk formulation
D. Safety planning

0458. A doctoral student reads the following description. Which concept does it define? A collaborative, individualized plan identifying warning signs, coping steps, supportive contacts, and emergency resources.

A. Warm handoff
B. Crisis assessment
C. Safety planning
D. Crisis triage

0459. A supervisor asks how Safety planning would appear in practice. Which choice should be selected?

A. Creating specific steps with the youth and caregivers for what to do if risk increases.
B. Selecting a proportionate response and reassessing whether restrictions remain necessary.
C. Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number.
D. Using calm, respectful language, space, and choices rather than confrontation.

0460. A student confuses Crisis assessment with Post-crisis follow-up. Which explanation most accurately separates them?

A. Crisis assessment: Planned reassessment and continuity contact after acute stabilization to review safety and connect ongoing care. / Post-crisis follow-up: Rapid, focused appraisal of immediate safety, precipitating events, supports, functioning, and urgent needs.
B. Crisis assessment: Prioritizing urgency and level of response based on immediate danger, need, and available resources. / Post-crisis follow-up: Planned reassessment and continuity contact after acute stabilization to review safety and connect ongoing care.
C. Crisis assessment: Rapid, focused appraisal of immediate safety, precipitating events, supports, functioning, and urgent needs. / Post-crisis follow-up: Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety.
D. Crisis assessment: Rapid, focused appraisal of immediate safety, precipitating events, supports, functioning, and urgent needs. / Post-crisis follow-up: Planned reassessment and continuity contact after acute stabilization to review safety and connect ongoing care.

0461. Which option preserves the correct meaning of both Safety planning and Post-crisis follow-up?

A. Safety planning: A collaborative, individualized plan identifying warning signs, coping steps, supportive contacts, and emergency resources. / Post-crisis follow-up: A humane, practical, early response that promotes safety, stabilization, connection, and access to support.
B. Safety planning: Planned reassessment and continuity contact after acute stabilization to review safety and connect ongoing care. / Post-crisis follow-up: A collaborative, individualized plan identifying warning signs, coping steps, supportive contacts, and emergency resources.
C. Safety planning: A coordinated transfer in which the current helper actively connects the person to the next service. / Post-crisis follow-up: Planned reassessment and continuity contact after acute stabilization to review safety and connect ongoing care.
D. Safety planning: A collaborative, individualized plan identifying warning signs, coping steps, supportive contacts, and emergency resources. / Post-crisis follow-up: Planned reassessment and continuity contact after acute stabilization to review safety and connect ongoing care.

0462. Which comparison would correct a trainee's misunderstanding of Least restrictive response versus Psychological first aid?

A. Least restrictive response: A humane, practical, early response that promotes safety, stabilization, connection, and access to support. / Psychological first aid: The safest effective intervention that imposes the fewest necessary restrictions, consistent with law and policy.
B. Least restrictive response: The safest effective intervention that imposes the fewest necessary restrictions, consistent with law and policy. / Psychological first aid: Prioritizing urgency and level of response based on immediate danger, need, and available resources.
C. Least restrictive response: The safest effective intervention that imposes the fewest necessary restrictions, consistent with law and policy. / Psychological first aid: A humane, practical, early response that promotes safety, stabilization, connection, and access to support.
D. Least restrictive response: A coordinated transfer in which the current helper actively connects the person to the next service. / Psychological first aid: A humane, practical, early response that promotes safety, stabilization, connection, and access to support.

0463. How should a practitioner distinguish the applications of Psychological first aid and Post-crisis follow-up?

A. Psychological first aid: Offering practical assistance and connection without pressuring a person to recount traumatic details. / Post-crisis follow-up: Checking whether the plan worked and whether additional services are needed after the immediate crisis.
B. Psychological first aid: Offering practical assistance and connection without pressuring a person to recount traumatic details. / Post-crisis follow-up: Clarifying immediate danger and available supports before moving to longer-term goals.
C. Psychological first aid: Integrating current statements, context, access, supports, and changes rather than relying on one score. / Post-crisis follow-up: Checking whether the plan worked and whether additional services are needed after the immediate crisis.
D. Psychological first aid: Checking whether the plan worked and whether additional services are needed after the immediate crisis. / Post-crisis follow-up: Offering practical assistance and connection without pressuring a person to recount traumatic details.

0464. Which option correctly matches each concept to its practice focus: Crisis assessment and De-escalation?

A. Crisis assessment: Clarifying immediate danger and available supports before moving to longer-term goals. / De-escalation: Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number.
B. Crisis assessment: Checking whether the plan worked and whether additional services are needed after the immediate crisis. / De-escalation: Using calm, respectful language, space, and choices rather than confrontation.
C. Crisis assessment: Using calm, respectful language, space, and choices rather than confrontation. / De-escalation: Clarifying immediate danger and available supports before moving to longer-term goals.
D. Crisis assessment: Clarifying immediate danger and available supports before moving to longer-term goals. / De-escalation: Using calm, respectful language, space, and choices rather than confrontation.

0465. In the multidisciplinary case conference, a youth worker describes the most appropriate support for a child aged 6 as clarifying immediate danger and available supports before moving to longer-term goals. Which framework is being applied?

A. Psychological first aid
B. Least restrictive response
C. Crisis assessment
D. Safety planning

0466. Which option is the clearest practical expression of Warm handoff?

A. Checking whether the plan worked and whether additional services are needed after the immediate crisis.
B. Identifying trusted adults and practical supports that can be activated now.
C. Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number.
D. Integrating current statements, context, access, supports, and changes rather than relying on one score.

0467. Which comparison would correct a trainee's misunderstanding of Safety planning versus Post-crisis follow-up?

A. Safety planning: A collaborative, individualized plan identifying warning signs, coping steps, supportive contacts, and emergency resources. / Post-crisis follow-up: Planned reassessment and continuity contact after acute stabilization to review safety and connect ongoing care.
B. Safety planning: A collaborative, individualized plan identifying warning signs, coping steps, supportive contacts, and emergency resources. / Post-crisis follow-up: A humane, practical, early response that promotes safety, stabilization, connection, and access to support.
C. Safety planning: A coordinated transfer in which the current helper actively connects the person to the next service. / Post-crisis follow-up: Planned reassessment and continuity contact after acute stabilization to review safety and connect ongoing care.
D. Safety planning: Planned reassessment and continuity contact after acute stabilization to review safety and connect ongoing care. / Post-crisis follow-up: A collaborative, individualized plan identifying warning signs, coping steps, supportive contacts, and emergency resources.

0468. Which option pairs the definitions of Safety planning and Least restrictive response correctly, in that order?

A. Safety planning: A collaborative, individualized plan identifying warning signs, coping steps, supportive contacts, and emergency resources. / Least restrictive response: A coordinated transfer in which the current helper actively connects the person to the next service.
B. Safety planning: A humane, practical, early response that promotes safety, stabilization, connection, and access to support. / Least restrictive response: The safest effective intervention that imposes the fewest necessary restrictions, consistent with law and policy.
C. Safety planning: The safest effective intervention that imposes the fewest necessary restrictions, consistent with law and policy. / Least restrictive response: A collaborative, individualized plan identifying warning signs, coping steps, supportive contacts, and emergency resources.
D. Safety planning: A collaborative, individualized plan identifying warning signs, coping steps, supportive contacts, and emergency resources. / Least restrictive response: The safest effective intervention that imposes the fewest necessary restrictions, consistent with law and policy.

0469. A client in early adolescence and a assessment clinician are reviewing goals in the student wellness team. The agreed action is offering practical assistance and connection without pressuring a person to recount traumatic details. Which principle best accounts for it?

A. Psychological first aid
B. Crisis triage
C. Post-crisis follow-up
D. Warm handoff

0470. Which choice aligns each practice with the correct idea, De-escalation or Least restrictive response?

A. De-escalation: Using calm, respectful language, space, and choices rather than confrontation. / Least restrictive response: Selecting a proportionate response and reassessing whether restrictions remain necessary.
B. De-escalation: Using calm, respectful language, space, and choices rather than confrontation. / Least restrictive response: Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number.
C. De-escalation: Determining which situation requires immediate emergency action and which can be safely managed with timely follow-up. / Least restrictive response: Selecting a proportionate response and reassessing whether restrictions remain necessary.
D. De-escalation: Selecting a proportionate response and reassessing whether restrictions remain necessary. / Least restrictive response: Using calm, respectful language, space, and choices rather than confrontation.

0471. A adolescent student's service team meets in the family session. The case coordinator recommends a change involving selecting a proportionate response and reassessing whether restrictions remain necessary. Which idea best explains it?

A. Crisis assessment
B. Risk formulation
C. Crisis triage
D. Least restrictive response

0472. Choose the definition pair that correctly explains Crisis assessment first and De-escalation second.

A. Crisis assessment: Planned reassessment and continuity contact after acute stabilization to review safety and connect ongoing care. / De-escalation: Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety.
B. Crisis assessment: Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety. / De-escalation: Rapid, focused appraisal of immediate safety, precipitating events, supports, functioning, and urgent needs.
C. Crisis assessment: Rapid, focused appraisal of immediate safety, precipitating events, supports, functioning, and urgent needs. / De-escalation: A coordinated transfer in which the current helper actively connects the person to the next service.
D. Crisis assessment: Rapid, focused appraisal of immediate safety, precipitating events, supports, functioning, and urgent needs. / De-escalation: Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety.

0473. Which comparison would correct a trainee's misunderstanding of Crisis assessment versus Psychological first aid?

A. Crisis assessment: A contextual, ongoing synthesis of risk and protective factors, current intent, access, history, and foreseeable changes. / Psychological first aid: A humane, practical, early response that promotes safety, stabilization, connection, and access to support.
B. Crisis assessment: A humane, practical, early response that promotes safety, stabilization, connection, and access to support. / Psychological first aid: Rapid, focused appraisal of immediate safety, precipitating events, supports, functioning, and urgent needs.
C. Crisis assessment: Rapid, focused appraisal of immediate safety, precipitating events, supports, functioning, and urgent needs. / Psychological first aid: A collaborative, individualized plan identifying warning signs, coping steps, supportive contacts, and emergency resources.
D. Crisis assessment: Rapid, focused appraisal of immediate safety, precipitating events, supports, functioning, and urgent needs. / Psychological first aid: A humane, practical, early response that promotes safety, stabilization, connection, and access to support.

0474. Which choice aligns each practice with the correct idea, Safety planning or Psychological first aid?

A. Safety planning: Creating specific steps with the youth and caregivers for what to do if risk increases. / Psychological first aid: Offering practical assistance and connection without pressuring a person to recount traumatic details.
B. Safety planning: Creating specific steps with the youth and caregivers for what to do if risk increases. / Psychological first aid: Checking whether the plan worked and whether additional services are needed after the immediate crisis.
C. Safety planning: Clarifying immediate danger and available supports before moving to longer-term goals. / Psychological first aid: Offering practical assistance and connection without pressuring a person to recount traumatic details.
D. Safety planning: Offering practical assistance and connection without pressuring a person to recount traumatic details. / Psychological first aid: Creating specific steps with the youth and caregivers for what to do if risk increases.

0475. At a case-planning meeting, the behavior specialist proposes checking whether the plan worked and whether additional services are needed after the immediate crisis. for a young adolescent client seen in the outpatient clinic. Which concept does this illustrate?

A. Warm handoff
B. Post-crisis follow-up
C. Protective factors
D. Least restrictive response

0476. A teacher and counselor is explaining a choice to a child aged 14 and caregiver in the family session. The choice centers on determining which situation requires immediate emergency action and which can be safely managed with timely follow-up. Which idea is illustrated?

A. Protective factors
B. Crisis triage
C. Least restrictive response
D. Post-crisis follow-up

0477. A service navigator is asked what should shape a child aged 6's support in the community service agency. The proposed focus is identifying trusted adults and practical supports that can be activated now. Which principle does it represent?

A. Protective factors
B. Risk formulation
C. Least restrictive response
D. Warm handoff

0478. A service team discusses a student aged 17 in the caregiver consultation. Their proposed next step is clarifying immediate danger and available supports before moving to longer-term goals. Which course concept supports it?

A. Warm handoff
B. Crisis triage
C. Crisis assessment
D. Safety planning

0479. Which applied comparison correctly identifies what belongs to Safety planning versus Least restrictive response?

A. Safety planning: Selecting a proportionate response and reassessing whether restrictions remain necessary. / Least restrictive response: Creating specific steps with the youth and caregivers for what to do if risk increases.
B. Safety planning: Creating specific steps with the youth and caregivers for what to do if risk increases. / Least restrictive response: Selecting a proportionate response and reassessing whether restrictions remain necessary.
C. Safety planning: Offering practical assistance and connection without pressuring a person to recount traumatic details. / Least restrictive response: Selecting a proportionate response and reassessing whether restrictions remain necessary.
D. Safety planning: Creating specific steps with the youth and caregivers for what to do if risk increases. / Least restrictive response: Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number.

0480. A supervised trainee prepares for a session in the parent meeting with a older adolescent client. The intended approach is identifying trusted adults and practical supports that can be activated now. Which concept is most relevant?

A. Psychological first aid
B. Crisis triage
C. Warm handoff
D. Protective factors

0481. Which named construct is captured by this account? Prioritizing urgency and level of response based on immediate danger, need, and available resources.

A. Crisis triage
B. Safety planning
C. Psychological first aid
D. Crisis assessment

0482. How are De-escalation and Protective factors most accurately differentiated in this curriculum?

A. De-escalation: Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety. / Protective factors: Rapid, focused appraisal of immediate safety, precipitating events, supports, functioning, and urgent needs.
B. De-escalation: Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety. / Protective factors: Personal, relational, and contextual resources that may reduce risk or support coping and recovery.
C. De-escalation: A contextual, ongoing synthesis of risk and protective factors, current intent, access, history, and foreseeable changes. / Protective factors: Personal, relational, and contextual resources that may reduce risk or support coping and recovery.
D. De-escalation: Personal, relational, and contextual resources that may reduce risk or support coping and recovery. / Protective factors: Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety.

0483. A trainee must choose a practice that exemplifies Protective factors. Which action is the best fit?

A. Identifying trusted adults and practical supports that can be activated now.
B. Creating specific steps with the youth and caregivers for what to do if risk increases.
C. Clarifying immediate danger and available supports before moving to longer-term goals.
D. Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number.

0484. How should a practitioner distinguish the applications of De-escalation and Warm handoff?

A. De-escalation: Using calm, respectful language, space, and choices rather than confrontation. / Warm handoff: Creating specific steps with the youth and caregivers for what to do if risk increases.
B. De-escalation: Using calm, respectful language, space, and choices rather than confrontation. / Warm handoff: Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number.
C. De-escalation: Selecting a proportionate response and reassessing whether restrictions remain necessary. / Warm handoff: Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number.
D. De-escalation: Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number. / Warm handoff: Using calm, respectful language, space, and choices rather than confrontation.

0485. Select the best explanation of Protective factors.

A. Personal, relational, and contextual resources that may reduce risk or support coping and recovery.
B. Rapid, focused appraisal of immediate safety, precipitating events, supports, functioning, and urgent needs.
C. Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety.
D. Prioritizing urgency and level of response based on immediate danger, need, and available resources.

0486. During service review in the student-support meeting, a therapist describes identifying trusted adults and practical supports that can be activated now. for a young person. Which course idea is most applicable?

A. Psychological first aid
B. De-escalation
C. Warm handoff
D. Protective factors

0487. In a supervision quiz, how should Psychological first aid be distinguished from Crisis triage?

A. Psychological first aid: A humane, practical, early response that promotes safety, stabilization, connection, and access to support. / Crisis triage: A coordinated transfer in which the current helper actively connects the person to the next service.
B. Psychological first aid: Prioritizing urgency and level of response based on immediate danger, need, and available resources. / Crisis triage: A humane, practical, early response that promotes safety, stabilization, connection, and access to support.
C. Psychological first aid: Personal, relational, and contextual resources that may reduce risk or support coping and recovery. / Crisis triage: Prioritizing urgency and level of response based on immediate danger, need, and available resources.
D. Psychological first aid: A humane, practical, early response that promotes safety, stabilization, connection, and access to support. / Crisis triage: Prioritizing urgency and level of response based on immediate danger, need, and available resources.

0488. In the outpatient clinic, a teacher and counselor explains why a young person aged 10 would benefit from clarifying immediate danger and available supports before moving to longer-term goals. Which course concept underpins the explanation?

A. Crisis assessment
B. De-escalation
C. Least restrictive response
D. Safety planning

0489. Which paired example correctly applies Crisis assessment first and Psychological first aid second?

A. Crisis assessment: Offering practical assistance and connection without pressuring a person to recount traumatic details. / Psychological first aid: Clarifying immediate danger and available supports before moving to longer-term goals.
B. Crisis assessment: Clarifying immediate danger and available supports before moving to longer-term goals. / Psychological first aid: Creating specific steps with the youth and caregivers for what to do if risk increases.
C. Crisis assessment: Clarifying immediate danger and available supports before moving to longer-term goals. / Psychological first aid: Offering practical assistance and connection without pressuring a person to recount traumatic details.
D. Crisis assessment: Integrating current statements, context, access, supports, and changes rather than relying on one score. / Psychological first aid: Offering practical assistance and connection without pressuring a person to recount traumatic details.

0490. A case conference reviews a program coordinator's work with a school-age child in the after-school program: contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number. Which principle is central?

A. Psychological first aid
B. Protective factors
C. Safety planning
D. Warm handoff

0491. In a supervision quiz, how should Protective factors be distinguished from Least restrictive response?

A. Protective factors: A collaborative, individualized plan identifying warning signs, coping steps, supportive contacts, and emergency resources. / Least restrictive response: The safest effective intervention that imposes the fewest necessary restrictions, consistent with law and policy.
B. Protective factors: Personal, relational, and contextual resources that may reduce risk or support coping and recovery. / Least restrictive response: The safest effective intervention that imposes the fewest necessary restrictions, consistent with law and policy.
C. Protective factors: The safest effective intervention that imposes the fewest necessary restrictions, consistent with law and policy. / Least restrictive response: Personal, relational, and contextual resources that may reduce risk or support coping and recovery.
D. Protective factors: Personal, relational, and contextual resources that may reduce risk or support coping and recovery. / Least restrictive response: Rapid, focused appraisal of immediate safety, precipitating events, supports, functioning, and urgent needs.

0492. A trainee must distinguish how Protective factors and Post-crisis follow-up guide practice. Which comparison is accurate?

A. Protective factors: Identifying trusted adults and practical supports that can be activated now. / Post-crisis follow-up: Checking whether the plan worked and whether additional services are needed after the immediate crisis.
B. Protective factors: Creating specific steps with the youth and caregivers for what to do if risk increases. / Post-crisis follow-up: Checking whether the plan worked and whether additional services are needed after the immediate crisis.
C. Protective factors: Identifying trusted adults and practical supports that can be activated now. / Post-crisis follow-up: Using calm, respectful language, space, and choices rather than confrontation.
D. Protective factors: Checking whether the plan worked and whether additional services are needed after the immediate crisis. / Post-crisis follow-up: Identifying trusted adults and practical supports that can be activated now.

0493. Which professional action most closely applies Psychological first aid?

A. Determining which situation requires immediate emergency action and which can be safely managed with timely follow-up.
B. Checking whether the plan worked and whether additional services are needed after the immediate crisis.
C. Offering practical assistance and connection without pressuring a person to recount traumatic details.
D. Clarifying immediate danger and available supports before moving to longer-term goals.

0494. Choose the term that matches this definition: Personal, relational, and contextual resources that may reduce risk or support coping and recovery.

A. Protective factors
B. Crisis assessment
C. Psychological first aid
D. Post-crisis follow-up

0495. A school counselor is explaining a choice to a preadolescent child and caregiver in the school counseling office. The choice centers on offering practical assistance and connection without pressuring a person to recount traumatic details. Which idea is illustrated?

A. Crisis triage
B. Post-crisis follow-up
C. Psychological first aid
D. Least restrictive response

0496. In a supervision review, a family therapist describes work with a student aged 15 in the school consultation: determining which situation requires immediate emergency action and which can be safely managed with timely follow-up. What concept is illustrated?

A. Crisis triage
B. De-escalation
C. Least restrictive response
D. Risk formulation

0497. Choose the term that matches this definition: A contextual, ongoing synthesis of risk and protective factors, current intent, access, history, and foreseeable changes.

A. Psychological first aid
B. Risk formulation
C. Least restrictive response
D. Post-crisis follow-up

0498. A trainee must choose a practice that exemplifies Crisis assessment. Which action is the best fit?

A. Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number.
B. Checking whether the plan worked and whether additional services are needed after the immediate crisis.
C. Clarifying immediate danger and available supports before moving to longer-term goals.
D. Offering practical assistance and connection without pressuring a person to recount traumatic details.

0499. Which paired example correctly applies Crisis assessment first and Crisis triage second?

A. Crisis assessment: Clarifying immediate danger and available supports before moving to longer-term goals. / Crisis triage: Determining which situation requires immediate emergency action and which can be safely managed with timely follow-up.
B. Crisis assessment: Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number. / Crisis triage: Determining which situation requires immediate emergency action and which can be safely managed with timely follow-up.
C. Crisis assessment: Clarifying immediate danger and available supports before moving to longer-term goals. / Crisis triage: Checking whether the plan worked and whether additional services are needed after the immediate crisis.
D. Crisis assessment: Determining which situation requires immediate emergency action and which can be safely managed with timely follow-up. / Crisis triage: Clarifying immediate danger and available supports before moving to longer-term goals.

0500. A play therapist reviews a plan for a young person aged 13 in the telehealth session. The plan emphasizes clarifying immediate danger and available supports before moving to longer-term goals. Which course idea does this reflect?

A. Warm handoff
B. Protective factors
C. Safety planning
D. Crisis assessment

0501. Which pair of actions illustrates De-escalation and Protective factors, respectively?

A. De-escalation: Identifying trusted adults and practical supports that can be activated now. / Protective factors: Using calm, respectful language, space, and choices rather than confrontation.
B. De-escalation: Using calm, respectful language, space, and choices rather than confrontation. / Protective factors: Clarifying immediate danger and available supports before moving to longer-term goals.
C. De-escalation: Integrating current statements, context, access, supports, and changes rather than relying on one score. / Protective factors: Identifying trusted adults and practical supports that can be activated now.
D. De-escalation: Using calm, respectful language, space, and choices rather than confrontation. / Protective factors: Identifying trusted adults and practical supports that can be activated now.

0502. A older adolescent client and a mental-health professional are reviewing goals in the family session. The agreed action is checking whether the plan worked and whether additional services are needed after the immediate crisis. Which principle best accounts for it?

A. Safety planning
B. Protective factors
C. Post-crisis follow-up
D. Warm handoff

0503. During work in the community mental-health service, a group facilitator identifies this need: using calm, respectful language, space, and choices rather than confrontation. Which idea should guide the response?

A. Safety planning
B. Crisis triage
C. Least restrictive response
D. De-escalation

0504. Identify the most precise label for this idea: A humane, practical, early response that promotes safety, stabilization, connection, and access to support.

A. Crisis assessment
B. Risk formulation
C. Psychological first aid
D. Post-crisis follow-up

0505. Which applied comparison correctly identifies what belongs to De-escalation versus Post-crisis follow-up?

A. De-escalation: Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number. / Post-crisis follow-up: Checking whether the plan worked and whether additional services are needed after the immediate crisis.
B. De-escalation: Checking whether the plan worked and whether additional services are needed after the immediate crisis. / Post-crisis follow-up: Using calm, respectful language, space, and choices rather than confrontation.
C. De-escalation: Using calm, respectful language, space, and choices rather than confrontation. / Post-crisis follow-up: Checking whether the plan worked and whether additional services are needed after the immediate crisis.
D. De-escalation: Using calm, respectful language, space, and choices rather than confrontation. / Post-crisis follow-up: Selecting a proportionate response and reassessing whether restrictions remain necessary.

0506. A family therapist presents a support plan for a child aged 8 at the community service agency. Its central feature is creating specific steps with the youth and caregivers for what to do if risk increases. Which concept should be named?

A. Least restrictive response
B. Post-crisis follow-up
C. Psychological first aid
D. Safety planning

0507. A mental-health professional and a student aged 9 are discussing support in the student-support meeting. The selected practice is selecting a proportionate response and reassessing whether restrictions remain necessary. Which concept does this demonstrate?

A. Safety planning
B. Risk formulation
C. Psychological first aid
D. Least restrictive response

0508. Which option correctly matches each concept to its practice focus: Crisis assessment and Least restrictive response?

A. Crisis assessment: Creating specific steps with the youth and caregivers for what to do if risk increases. / Least restrictive response: Selecting a proportionate response and reassessing whether restrictions remain necessary.
B. Crisis assessment: Selecting a proportionate response and reassessing whether restrictions remain necessary. / Least restrictive response: Clarifying immediate danger and available supports before moving to longer-term goals.
C. Crisis assessment: Clarifying immediate danger and available supports before moving to longer-term goals. / Least restrictive response: Using calm, respectful language, space, and choices rather than confrontation.
D. Crisis assessment: Clarifying immediate danger and available supports before moving to longer-term goals. / Least restrictive response: Selecting a proportionate response and reassessing whether restrictions remain necessary.

0509. At the family session, a clinical supervisor meets with a student aged 15. The practice priority is: creating specific steps with the youth and caregivers for what to do if risk increases. Which concept best captures that priority?

A. Protective factors
B. Safety planning
C. Crisis assessment
D. Crisis triage

0510. Which pair of actions illustrates Crisis assessment and Post-crisis follow-up, respectively?

A. Crisis assessment: Clarifying immediate danger and available supports before moving to longer-term goals. / Post-crisis follow-up: Checking whether the plan worked and whether additional services are needed after the immediate crisis.
B. Crisis assessment: Determining which situation requires immediate emergency action and which can be safely managed with timely follow-up. / Post-crisis follow-up: Checking whether the plan worked and whether additional services are needed after the immediate crisis.
C. Crisis assessment: Clarifying immediate danger and available supports before moving to longer-term goals. / Post-crisis follow-up: Using calm, respectful language, space, and choices rather than confrontation.
D. Crisis assessment: Checking whether the plan worked and whether additional services are needed after the immediate crisis. / Post-crisis follow-up: Clarifying immediate danger and available supports before moving to longer-term goals.

0511. For a client in early adolescence seen in the classroom support meeting, the service navigator recommends a plan built around using calm, respectful language, space, and choices rather than confrontation. Which concept is reflected?

A. Protective factors
B. Least restrictive response
C. De-escalation
D. Post-crisis follow-up

0512. In a supervision review, a parent educator describes work with a teenage client in the classroom support meeting: checking whether the plan worked and whether additional services are needed after the immediate crisis. What concept is illustrated?

A. De-escalation
B. Crisis assessment
C. Post-crisis follow-up
D. Safety planning

0513. At the outpatient clinic, a behavior specialist meets with a young adolescent client. The practice priority is: checking whether the plan worked and whether additional services are needed after the immediate crisis. Which concept best captures that priority?

A. Crisis assessment
B. Crisis triage
C. Safety planning
D. Post-crisis follow-up

0514. Which choice aligns each practice with the correct idea, De-escalation or Post-crisis follow-up?

A. De-escalation: Checking whether the plan worked and whether additional services are needed after the immediate crisis. / Post-crisis follow-up: Using calm, respectful language, space, and choices rather than confrontation.
B. De-escalation: Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number. / Post-crisis follow-up: Checking whether the plan worked and whether additional services are needed after the immediate crisis.
C. De-escalation: Using calm, respectful language, space, and choices rather than confrontation. / Post-crisis follow-up: Checking whether the plan worked and whether additional services are needed after the immediate crisis.
D. De-escalation: Using calm, respectful language, space, and choices rather than confrontation. / Post-crisis follow-up: Selecting a proportionate response and reassessing whether restrictions remain necessary.

0515. Which pair of actions illustrates Least restrictive response and Post-crisis follow-up, respectively?

A. Least restrictive response: Checking whether the plan worked and whether additional services are needed after the immediate crisis. / Post-crisis follow-up: Selecting a proportionate response and reassessing whether restrictions remain necessary.
B. Least restrictive response: Selecting a proportionate response and reassessing whether restrictions remain necessary. / Post-crisis follow-up: Integrating current statements, context, access, supports, and changes rather than relying on one score.
C. Least restrictive response: Selecting a proportionate response and reassessing whether restrictions remain necessary. / Post-crisis follow-up: Checking whether the plan worked and whether additional services are needed after the immediate crisis.
D. Least restrictive response: Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number. / Post-crisis follow-up: Checking whether the plan worked and whether additional services are needed after the immediate crisis.

0516. Choose the practice comparison that best separates Crisis assessment from Psychological first aid.

A. Crisis assessment: Clarifying immediate danger and available supports before moving to longer-term goals. / Psychological first aid: Creating specific steps with the youth and caregivers for what to do if risk increases.
B. Crisis assessment: Integrating current statements, context, access, supports, and changes rather than relying on one score. / Psychological first aid: Offering practical assistance and connection without pressuring a person to recount traumatic details.
C. Crisis assessment: Offering practical assistance and connection without pressuring a person to recount traumatic details. / Psychological first aid: Clarifying immediate danger and available supports before moving to longer-term goals.
D. Crisis assessment: Clarifying immediate danger and available supports before moving to longer-term goals. / Psychological first aid: Offering practical assistance and connection without pressuring a person to recount traumatic details.

0517. Choose the definition pair that correctly explains Protective factors first and Crisis triage second.

A. Protective factors: A humane, practical, early response that promotes safety, stabilization, connection, and access to support. / Crisis triage: Prioritizing urgency and level of response based on immediate danger, need, and available resources.
B. Protective factors: Personal, relational, and contextual resources that may reduce risk or support coping and recovery. / Crisis triage: Prioritizing urgency and level of response based on immediate danger, need, and available resources.
C. Protective factors: Prioritizing urgency and level of response based on immediate danger, need, and available resources. / Crisis triage: Personal, relational, and contextual resources that may reduce risk or support coping and recovery.
D. Protective factors: Personal, relational, and contextual resources that may reduce risk or support coping and recovery. / Crisis triage: A collaborative, individualized plan identifying warning signs, coping steps, supportive contacts, and emergency resources.

0518. While consulting in the multidisciplinary case conference, a supervised trainee supports a school-age child by using this approach: using calm, respectful language, space, and choices rather than confrontation. Which concept is being applied?

A. De-escalation
B. Least restrictive response
C. Warm handoff
D. Psychological first aid

0519. A supervisor asks how Risk formulation would appear in practice. Which choice should be selected?

A. Clarifying immediate danger and available supports before moving to longer-term goals.
B. Creating specific steps with the youth and caregivers for what to do if risk increases.
C. Integrating current statements, context, access, supports, and changes rather than relying on one score.
D. Identifying trusted adults and practical supports that can be activated now.

0520. In the child guidance clinic, a school counselor describes the most appropriate support for a client in early adolescence as contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number. Which framework is being applied?

A. Crisis triage
B. Least restrictive response
C. Protective factors
D. Warm handoff

0521. A community practitioner is asked what should shape a middle-school student’s support in the community mental-health service. The proposed focus is contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number. Which principle does it represent?

A. Post-crisis follow-up
B. Crisis triage
C. Warm handoff
D. Least restrictive response

0522. Which choice aligns each practice with the correct idea, Safety planning or Protective factors?

A. Safety planning: Clarifying immediate danger and available supports before moving to longer-term goals. / Protective factors: Identifying trusted adults and practical supports that can be activated now.
B. Safety planning: Identifying trusted adults and practical supports that can be activated now. / Protective factors: Creating specific steps with the youth and caregivers for what to do if risk increases.
C. Safety planning: Creating specific steps with the youth and caregivers for what to do if risk increases. / Protective factors: Integrating current statements, context, access, supports, and changes rather than relying on one score.
D. Safety planning: Creating specific steps with the youth and caregivers for what to do if risk increases. / Protective factors: Identifying trusted adults and practical supports that can be activated now.

0523. A teacher and counselor is asked to justify a plan for a client in early adolescence in the student-support meeting. It calls for integrating current statements, context, access, supports, and changes rather than relying on one score. Which concept provides the rationale?

A. Crisis triage
B. Risk formulation
C. Warm handoff
D. Least restrictive response

0524. A member of a clinical team is supporting a young person in the classroom support meeting. The key practice is integrating current statements, context, access, supports, and changes rather than relying on one score. Which course concept is most relevant?

A. De-escalation
B. Risk formulation
C. Crisis triage
D. Least restrictive response

0525. A consultant and a child aged 6 are discussing support in the school counseling office. The selected practice is integrating current statements, context, access, supports, and changes rather than relying on one score. Which concept does this demonstrate?

A. Post-crisis follow-up
B. Psychological first aid
C. Protective factors
D. Risk formulation

0526. At the parent meeting, a program coordinator reviews whether a plan for a child aged 7 is appropriate. The relevant practice is integrating current statements, context, access, supports, and changes rather than relying on one score. Which concept is tested?

A. Least restrictive response
B. Protective factors
C. Warm handoff
D. Risk formulation

0527. A trainee must distinguish how Risk formulation and Protective factors guide practice. Which comparison is accurate?

A. Risk formulation: Integrating current statements, context, access, supports, and changes rather than relying on one score. / Protective factors: Identifying trusted adults and practical supports that can be activated now.
B. Risk formulation: Integrating current statements, context, access, supports, and changes rather than relying on one score. / Protective factors: Creating specific steps with the youth and caregivers for what to do if risk increases.
C. Risk formulation: Identifying trusted adults and practical supports that can be activated now. / Protective factors: Integrating current statements, context, access, supports, and changes rather than relying on one score.
D. Risk formulation: Offering practical assistance and connection without pressuring a person to recount traumatic details. / Protective factors: Identifying trusted adults and practical supports that can be activated now.

0528. A case conference reviews a community practitioner's work with a older adolescent client in the supervision meeting: clarifying immediate danger and available supports before moving to longer-term goals. Which principle is central?

A. Post-crisis follow-up
B. Crisis assessment
C. Least restrictive response
D. Risk formulation

0529. Identify the most precise label for this idea: A coordinated transfer in which the current helper actively connects the person to the next service.

A. Crisis triage
B. Warm handoff
C. De-escalation
D. Protective factors

0530. Which statement shows a sound practice-level distinction between Safety planning and Warm handoff?

A. Safety planning: Creating specific steps with the youth and caregivers for what to do if risk increases. / Warm handoff: Offering practical assistance and connection without pressuring a person to recount traumatic details.
B. Safety planning: Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number. / Warm handoff: Creating specific steps with the youth and caregivers for what to do if risk increases.
C. Safety planning: Creating specific steps with the youth and caregivers for what to do if risk increases. / Warm handoff: Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number.
D. Safety planning: Clarifying immediate danger and available supports before moving to longer-term goals. / Warm handoff: Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number.

0531. Which statement shows a sound practice-level distinction between Psychological first aid and Crisis triage?

A. Psychological first aid: Offering practical assistance and connection without pressuring a person to recount traumatic details. / Crisis triage: Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number.
B. Psychological first aid: Offering practical assistance and connection without pressuring a person to recount traumatic details. / Crisis triage: Determining which situation requires immediate emergency action and which can be safely managed with timely follow-up.
C. Psychological first aid: Determining which situation requires immediate emergency action and which can be safely managed with timely follow-up. / Crisis triage: Offering practical assistance and connection without pressuring a person to recount traumatic details.
D. Psychological first aid: Identifying trusted adults and practical supports that can be activated now. / Crisis triage: Determining which situation requires immediate emergency action and which can be safely managed with timely follow-up.

0532. Which statement shows a sound practice-level distinction between Risk formulation and Least restrictive response?

A. Risk formulation: Selecting a proportionate response and reassessing whether restrictions remain necessary. / Least restrictive response: Integrating current statements, context, access, supports, and changes rather than relying on one score.
B. Risk formulation: Integrating current statements, context, access, supports, and changes rather than relying on one score. / Least restrictive response: Selecting a proportionate response and reassessing whether restrictions remain necessary.
C. Risk formulation: Integrating current statements, context, access, supports, and changes rather than relying on one score. / Least restrictive response: Identifying trusted adults and practical supports that can be activated now.
D. Risk formulation: Creating specific steps with the youth and caregivers for what to do if risk increases. / Least restrictive response: Selecting a proportionate response and reassessing whether restrictions remain necessary.

0533. A school-based clinician presents a support plan for a child aged 14 at the learning-support meeting. Its central feature is checking whether the plan worked and whether additional services are needed after the immediate crisis. Which concept should be named?

A. Risk formulation
B. Post-crisis follow-up
C. Least restrictive response
D. De-escalation

0534. A student confuses Protective factors with Least restrictive response. Which explanation most accurately separates them?

A. Protective factors: Personal, relational, and contextual resources that may reduce risk or support coping and recovery. / Least restrictive response: The safest effective intervention that imposes the fewest necessary restrictions, consistent with law and policy.
B. Protective factors: The safest effective intervention that imposes the fewest necessary restrictions, consistent with law and policy. / Least restrictive response: Personal, relational, and contextual resources that may reduce risk or support coping and recovery.
C. Protective factors: A collaborative, individualized plan identifying warning signs, coping steps, supportive contacts, and emergency resources. / Least restrictive response: The safest effective intervention that imposes the fewest necessary restrictions, consistent with law and policy.
D. Protective factors: Personal, relational, and contextual resources that may reduce risk or support coping and recovery. / Least restrictive response: Rapid, focused appraisal of immediate safety, precipitating events, supports, functioning, and urgent needs.

0535. A program coordinator describes an intervention for a adolescent student in the learning-support meeting, centered on determining which situation requires immediate emergency action and which can be safely managed with timely follow-up. Which named idea is most relevant?

A. Crisis triage
B. Safety planning
C. Warm handoff
D. De-escalation

0536. Choose the response that best puts Protective factors into practice.

A. Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number.
B. Creating specific steps with the youth and caregivers for what to do if risk increases.
C. Clarifying immediate danger and available supports before moving to longer-term goals.
D. Identifying trusted adults and practical supports that can be activated now.

0537. A counselor reviews a plan for a student aged 12 in the community youth program. The plan emphasizes determining which situation requires immediate emergency action and which can be safely managed with timely follow-up. Which course idea does this reflect?

A. Protective factors
B. Crisis assessment
C. Crisis triage
D. Warm handoff

0538. A support meeting for a adolescent student includes a clinical supervisor in the youth group. The practice under consideration is identifying trusted adults and practical supports that can be activated now. Which concept guides it?

A. Safety planning
B. Psychological first aid
C. Crisis triage
D. Protective factors

0539. Which choice aligns each practice with the correct idea, De-escalation or Psychological first aid?

A. De-escalation: Identifying trusted adults and practical supports that can be activated now. / Psychological first aid: Offering practical assistance and connection without pressuring a person to recount traumatic details.
B. De-escalation: Offering practical assistance and connection without pressuring a person to recount traumatic details. / Psychological first aid: Using calm, respectful language, space, and choices rather than confrontation.
C. De-escalation: Using calm, respectful language, space, and choices rather than confrontation. / Psychological first aid: Offering practical assistance and connection without pressuring a person to recount traumatic details.
D. De-escalation: Using calm, respectful language, space, and choices rather than confrontation. / Psychological first aid: Selecting a proportionate response and reassessing whether restrictions remain necessary.

0540. Which option correctly matches each concept to its practice focus: De-escalation and Crisis triage?

A. De-escalation: Using calm, respectful language, space, and choices rather than confrontation. / Crisis triage: Determining which situation requires immediate emergency action and which can be safely managed with timely follow-up.
B. De-escalation: Clarifying immediate danger and available supports before moving to longer-term goals. / Crisis triage: Determining which situation requires immediate emergency action and which can be safely managed with timely follow-up.
C. De-escalation: Determining which situation requires immediate emergency action and which can be safely managed with timely follow-up. / Crisis triage: Using calm, respectful language, space, and choices rather than confrontation.
D. De-escalation: Using calm, respectful language, space, and choices rather than confrontation. / Crisis triage: Identifying trusted adults and practical supports that can be activated now.

0541. How are Risk formulation and Post-crisis follow-up most accurately differentiated in this curriculum?

A. Risk formulation: A contextual, ongoing synthesis of risk and protective factors, current intent, access, history, and foreseeable changes. / Post-crisis follow-up: Planned reassessment and continuity contact after acute stabilization to review safety and connect ongoing care.
B. Risk formulation: Personal, relational, and contextual resources that may reduce risk or support coping and recovery. / Post-crisis follow-up: Planned reassessment and continuity contact after acute stabilization to review safety and connect ongoing care.
C. Risk formulation: A contextual, ongoing synthesis of risk and protective factors, current intent, access, history, and foreseeable changes. / Post-crisis follow-up: Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety.
D. Risk formulation: Planned reassessment and continuity contact after acute stabilization to review safety and connect ongoing care. / Post-crisis follow-up: A contextual, ongoing synthesis of risk and protective factors, current intent, access, history, and foreseeable changes.

0542. Which option correctly matches each concept to its practice focus: Safety planning and Least restrictive response?

A. Safety planning: Creating specific steps with the youth and caregivers for what to do if risk increases. / Least restrictive response: Selecting a proportionate response and reassessing whether restrictions remain necessary.
B. Safety planning: Selecting a proportionate response and reassessing whether restrictions remain necessary. / Least restrictive response: Creating specific steps with the youth and caregivers for what to do if risk increases.
C. Safety planning: Offering practical assistance and connection without pressuring a person to recount traumatic details. / Least restrictive response: Selecting a proportionate response and reassessing whether restrictions remain necessary.
D. Safety planning: Creating specific steps with the youth and caregivers for what to do if risk increases. / Least restrictive response: Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number.

0543. Which course concept is defined as follows: Planned reassessment and continuity contact after acute stabilization to review safety and connect ongoing care.

A. Psychological first aid
B. Protective factors
C. De-escalation
D. Post-crisis follow-up

0544. How are Risk formulation and Warm handoff most accurately differentiated in this curriculum?

A. Risk formulation: A contextual, ongoing synthesis of risk and protective factors, current intent, access, history, and foreseeable changes. / Warm handoff: A coordinated transfer in which the current helper actively connects the person to the next service.
B. Risk formulation: Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety. / Warm handoff: A coordinated transfer in which the current helper actively connects the person to the next service.
C. Risk formulation: A contextual, ongoing synthesis of risk and protective factors, current intent, access, history, and foreseeable changes. / Warm handoff: Prioritizing urgency and level of response based on immediate danger, need, and available resources.
D. Risk formulation: A coordinated transfer in which the current helper actively connects the person to the next service. / Warm handoff: A contextual, ongoing synthesis of risk and protective factors, current intent, access, history, and foreseeable changes.

0545. Identify the most precise label for this idea: Personal, relational, and contextual resources that may reduce risk or support coping and recovery.

A. Protective factors
B. Crisis assessment
C. De-escalation
D. Post-crisis follow-up

0546. An interdisciplinary team reviews a young person aged 10’s case at the family session. The school support specialist recommends offering practical assistance and connection without pressuring a person to recount traumatic details. Which course concept best fits?

A. Least restrictive response
B. Post-crisis follow-up
C. Psychological first aid
D. De-escalation

0547. In a professional consultation about a child aged 14, the member of a clinical team describes this response in the student-support meeting: clarifying immediate danger and available supports before moving to longer-term goals. Which term is most apt?

A. Post-crisis follow-up
B. Protective factors
C. Warm handoff
D. Crisis assessment

0548. How are Least restrictive response and Post-crisis follow-up most accurately differentiated in this curriculum?

A. Least restrictive response: Planned reassessment and continuity contact after acute stabilization to review safety and connect ongoing care. / Post-crisis follow-up: The safest effective intervention that imposes the fewest necessary restrictions, consistent with law and policy.
B. Least restrictive response: The safest effective intervention that imposes the fewest necessary restrictions, consistent with law and policy. / Post-crisis follow-up: A contextual, ongoing synthesis of risk and protective factors, current intent, access, history, and foreseeable changes.
C. Least restrictive response: A coordinated transfer in which the current helper actively connects the person to the next service. / Post-crisis follow-up: Planned reassessment and continuity contact after acute stabilization to review safety and connect ongoing care.
D. Least restrictive response: The safest effective intervention that imposes the fewest necessary restrictions, consistent with law and policy. / Post-crisis follow-up: Planned reassessment and continuity contact after acute stabilization to review safety and connect ongoing care.

0549. Which paired example correctly applies Safety planning first and Warm handoff second?

A. Safety planning: Creating specific steps with the youth and caregivers for what to do if risk increases. / Warm handoff: Offering practical assistance and connection without pressuring a person to recount traumatic details.
B. Safety planning: Creating specific steps with the youth and caregivers for what to do if risk increases. / Warm handoff: Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number.
C. Safety planning: Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number. / Warm handoff: Creating specific steps with the youth and caregivers for what to do if risk increases.
D. Safety planning: Clarifying immediate danger and available supports before moving to longer-term goals. / Warm handoff: Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number.

0550. In the counseling practicum, a teacher and counselor explains why a child aged 6 would benefit from selecting a proportionate response and reassessing whether restrictions remain necessary. Which course concept underpins the explanation?

A. Safety planning
B. Crisis triage
C. Psychological first aid
D. Least restrictive response

0551. Which option correctly matches each concept to its practice focus: Crisis triage and Post-crisis follow-up?

A. Crisis triage: Using calm, respectful language, space, and choices rather than confrontation. / Post-crisis follow-up: Checking whether the plan worked and whether additional services are needed after the immediate crisis.
B. Crisis triage: Determining which situation requires immediate emergency action and which can be safely managed with timely follow-up. / Post-crisis follow-up: Checking whether the plan worked and whether additional services are needed after the immediate crisis.
C. Crisis triage: Determining which situation requires immediate emergency action and which can be safely managed with timely follow-up. / Post-crisis follow-up: Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number.
D. Crisis triage: Checking whether the plan worked and whether additional services are needed after the immediate crisis. / Post-crisis follow-up: Determining which situation requires immediate emergency action and which can be safely managed with timely follow-up.

0552. In a supervision quiz, how should Safety planning be distinguished from Protective factors?

A. Safety planning: Personal, relational, and contextual resources that may reduce risk or support coping and recovery. / Protective factors: A collaborative, individualized plan identifying warning signs, coping steps, supportive contacts, and emergency resources.
B. Safety planning: A collaborative, individualized plan identifying warning signs, coping steps, supportive contacts, and emergency resources. / Protective factors: A contextual, ongoing synthesis of risk and protective factors, current intent, access, history, and foreseeable changes.
C. Safety planning: A collaborative, individualized plan identifying warning signs, coping steps, supportive contacts, and emergency resources. / Protective factors: Personal, relational, and contextual resources that may reduce risk or support coping and recovery.
D. Safety planning: Rapid, focused appraisal of immediate safety, precipitating events, supports, functioning, and urgent needs. / Protective factors: Personal, relational, and contextual resources that may reduce risk or support coping and recovery.

0553. Which paired example correctly applies Crisis assessment first and Least restrictive response second?

A. Crisis assessment: Clarifying immediate danger and available supports before moving to longer-term goals. / Least restrictive response: Selecting a proportionate response and reassessing whether restrictions remain necessary.
B. Crisis assessment: Creating specific steps with the youth and caregivers for what to do if risk increases. / Least restrictive response: Selecting a proportionate response and reassessing whether restrictions remain necessary.
C. Crisis assessment: Selecting a proportionate response and reassessing whether restrictions remain necessary. / Least restrictive response: Clarifying immediate danger and available supports before moving to longer-term goals.
D. Crisis assessment: Clarifying immediate danger and available supports before moving to longer-term goals. / Least restrictive response: Using calm, respectful language, space, and choices rather than confrontation.

0554. In the telehealth session, a group facilitator describes the most appropriate support for a student aged 12 as offering practical assistance and connection without pressuring a person to recount traumatic details. Which framework is being applied?

A. Risk formulation
B. Psychological first aid
C. Safety planning
D. Least restrictive response

0555. How are Least restrictive response and Crisis triage most accurately differentiated in this curriculum?

A. Least restrictive response: A contextual, ongoing synthesis of risk and protective factors, current intent, access, history, and foreseeable changes. / Crisis triage: Prioritizing urgency and level of response based on immediate danger, need, and available resources.
B. Least restrictive response: The safest effective intervention that imposes the fewest necessary restrictions, consistent with law and policy. / Crisis triage: Prioritizing urgency and level of response based on immediate danger, need, and available resources.
C. Least restrictive response: The safest effective intervention that imposes the fewest necessary restrictions, consistent with law and policy. / Crisis triage: Planned reassessment and continuity contact after acute stabilization to review safety and connect ongoing care.
D. Least restrictive response: Prioritizing urgency and level of response based on immediate danger, need, and available resources. / Crisis triage: The safest effective intervention that imposes the fewest necessary restrictions, consistent with law and policy.

0556. Which option correctly matches each concept to its practice focus: Crisis assessment and Risk formulation?

A. Crisis assessment: Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number. / Risk formulation: Integrating current statements, context, access, supports, and changes rather than relying on one score.
B. Crisis assessment: Clarifying immediate danger and available supports before moving to longer-term goals. / Risk formulation: Using calm, respectful language, space, and choices rather than confrontation.
C. Crisis assessment: Clarifying immediate danger and available supports before moving to longer-term goals. / Risk formulation: Integrating current statements, context, access, supports, and changes rather than relying on one score.
D. Crisis assessment: Integrating current statements, context, access, supports, and changes rather than relying on one score. / Risk formulation: Clarifying immediate danger and available supports before moving to longer-term goals.

0557. Which choice aligns each practice with the correct idea, Crisis assessment or Safety planning?

A. Crisis assessment: Creating specific steps with the youth and caregivers for what to do if risk increases. / Safety planning: Clarifying immediate danger and available supports before moving to longer-term goals.
B. Crisis assessment: Clarifying immediate danger and available supports before moving to longer-term goals. / Safety planning: Selecting a proportionate response and reassessing whether restrictions remain necessary.
C. Crisis assessment: Clarifying immediate danger and available supports before moving to longer-term goals. / Safety planning: Creating specific steps with the youth and caregivers for what to do if risk increases.
D. Crisis assessment: Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number. / Safety planning: Creating specific steps with the youth and caregivers for what to do if risk increases.

0558. A consultant is supporting a middle-school student in the youth group. The key practice is using calm, respectful language, space, and choices rather than confrontation. Which course concept is most relevant?

A. De-escalation
B. Safety planning
C. Warm handoff
D. Least restrictive response

0559. Which paired example correctly applies De-escalation first and Risk formulation second?

A. De-escalation: Integrating current statements, context, access, supports, and changes rather than relying on one score. / Risk formulation: Using calm, respectful language, space, and choices rather than confrontation.
B. De-escalation: Using calm, respectful language, space, and choices rather than confrontation. / Risk formulation: Determining which situation requires immediate emergency action and which can be safely managed with timely follow-up.
C. De-escalation: Identifying trusted adults and practical supports that can be activated now. / Risk formulation: Integrating current statements, context, access, supports, and changes rather than relying on one score.
D. De-escalation: Using calm, respectful language, space, and choices rather than confrontation. / Risk formulation: Integrating current statements, context, access, supports, and changes rather than relying on one score.

0560. A doctoral student reads the following description. Which concept does it define? Planned reassessment and continuity contact after acute stabilization to review safety and connect ongoing care.

A. De-escalation
B. Post-crisis follow-up
C. Safety planning
D. Least restrictive response

0561. Which applied comparison correctly identifies what belongs to Warm handoff versus Post-crisis follow-up?

A. Warm handoff: Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number. / Post-crisis follow-up: Selecting a proportionate response and reassessing whether restrictions remain necessary.
B. Warm handoff: Checking whether the plan worked and whether additional services are needed after the immediate crisis. / Post-crisis follow-up: Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number.
C. Warm handoff: Identifying trusted adults and practical supports that can be activated now. / Post-crisis follow-up: Checking whether the plan worked and whether additional services are needed after the immediate crisis.
D. Warm handoff: Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number. / Post-crisis follow-up: Checking whether the plan worked and whether additional services are needed after the immediate crisis.

0562. How are Crisis assessment and Crisis triage most accurately differentiated in this curriculum?

A. Crisis assessment: Rapid, focused appraisal of immediate safety, precipitating events, supports, functioning, and urgent needs. / Crisis triage: Planned reassessment and continuity contact after acute stabilization to review safety and connect ongoing care.
B. Crisis assessment: Rapid, focused appraisal of immediate safety, precipitating events, supports, functioning, and urgent needs. / Crisis triage: Prioritizing urgency and level of response based on immediate danger, need, and available resources.
C. Crisis assessment: A coordinated transfer in which the current helper actively connects the person to the next service. / Crisis triage: Prioritizing urgency and level of response based on immediate danger, need, and available resources.
D. Crisis assessment: Prioritizing urgency and level of response based on immediate danger, need, and available resources. / Crisis triage: Rapid, focused appraisal of immediate safety, precipitating events, supports, functioning, and urgent needs.

0563. An interdisciplinary team reviews a child aged 14’s case at the student wellness team. The behavior specialist recommends integrating current statements, context, access, supports, and changes rather than relying on one score. Which course concept best fits?

A. Risk formulation
B. Warm handoff
C. Protective factors
D. Least restrictive response

0564. Which paired example correctly applies Crisis assessment first and Protective factors second?

A. Crisis assessment: Clarifying immediate danger and available supports before moving to longer-term goals. / Protective factors: Identifying trusted adults and practical supports that can be activated now.
B. Crisis assessment: Clarifying immediate danger and available supports before moving to longer-term goals. / Protective factors: Offering practical assistance and connection without pressuring a person to recount traumatic details.
C. Crisis assessment: Checking whether the plan worked and whether additional services are needed after the immediate crisis. / Protective factors: Identifying trusted adults and practical supports that can be activated now.
D. Crisis assessment: Identifying trusted adults and practical supports that can be activated now. / Protective factors: Clarifying immediate danger and available supports before moving to longer-term goals.

0565. In a supervision quiz, how should De-escalation be distinguished from Psychological first aid?

A. De-escalation: Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety. / Psychological first aid: A humane, practical, early response that promotes safety, stabilization, connection, and access to support.
B. De-escalation: Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety. / Psychological first aid: The safest effective intervention that imposes the fewest necessary restrictions, consistent with law and policy.
C. De-escalation: Personal, relational, and contextual resources that may reduce risk or support coping and recovery. / Psychological first aid: A humane, practical, early response that promotes safety, stabilization, connection, and access to support.
D. De-escalation: A humane, practical, early response that promotes safety, stabilization, connection, and access to support. / Psychological first aid: Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety.

0566. Which comparison would correct a trainee’s misunderstanding of Safety planning versus Least restrictive response?

A. Safety planning: A humane, practical, early response that promotes safety, stabilization, connection, and access to support. / Least restrictive response: The safest effective intervention that imposes the fewest necessary restrictions, consistent with law and policy.
B. Safety planning: The safest effective intervention that imposes the fewest necessary restrictions, consistent with law and policy. / Least restrictive response: A collaborative, individualized plan identifying warning signs, coping steps, supportive contacts, and emergency resources.
C. Safety planning: A collaborative, individualized plan identifying warning signs, coping steps, supportive contacts, and emergency resources. / Least restrictive response: A coordinated transfer in which the current helper actively connects the person to the next service.
D. Safety planning: A collaborative, individualized plan identifying warning signs, coping steps, supportive contacts, and emergency resources. / Least restrictive response: The safest effective intervention that imposes the fewest necessary restrictions, consistent with law and policy.

0567. A case conference asks for a distinction between Crisis assessment and Psychological first aid. Which answer is sound?

A. Crisis assessment: Rapid, focused appraisal of immediate safety, precipitating events, supports, functioning, and urgent needs. / Psychological first aid: A humane, practical, early response that promotes safety, stabilization, connection, and access to support.
B. Crisis assessment: A contextual, ongoing synthesis of risk and protective factors, current intent, access, history, and foreseeable changes. / Psychological first aid: A humane, practical, early response that promotes safety, stabilization, connection, and access to support.
C. Crisis assessment: A humane, practical, early response that promotes safety, stabilization, connection, and access to support. / Psychological first aid: Rapid, focused appraisal of immediate safety, precipitating events, supports, functioning, and urgent needs.
D. Crisis assessment: Rapid, focused appraisal of immediate safety, precipitating events, supports, functioning, and urgent needs. / Psychological first aid: A collaborative, individualized plan identifying warning signs, coping steps, supportive contacts, and emergency resources.

0568. A student confuses Risk formulation with Crisis triage. Which explanation most accurately separates them?

A. Risk formulation: A contextual, ongoing synthesis of risk and protective factors, current intent, access, history, and foreseeable changes. / Crisis triage: Personal, relational, and contextual resources that may reduce risk or support coping and recovery.
B. Risk formulation: Prioritizing urgency and level of response based on immediate danger, need, and available resources. / Crisis triage: A contextual, ongoing synthesis of risk and protective factors, current intent, access, history, and foreseeable changes.
C. Risk formulation: A contextual, ongoing synthesis of risk and protective factors, current intent, access, history, and foreseeable changes. / Crisis triage: Prioritizing urgency and level of response based on immediate danger, need, and available resources.
D. Risk formulation: A collaborative, individualized plan identifying warning signs, coping steps, supportive contacts, and emergency resources. / Crisis triage: Prioritizing urgency and level of response based on immediate danger, need, and available resources.

0569. A supervisor asks for an applied contrast between De-escalation and Psychological first aid. Which option fits?

A. De-escalation: Using calm, respectful language, space, and choices rather than confrontation. / Psychological first aid: Selecting a proportionate response and reassessing whether restrictions remain necessary.
B. De-escalation: Offering practical assistance and connection without pressuring a person to recount traumatic details. / Psychological first aid: Using calm, respectful language, space, and choices rather than confrontation.
C. De-escalation: Identifying trusted adults and practical supports that can be activated now. / Psychological first aid: Offering practical assistance and connection without pressuring a person to recount traumatic details.
D. De-escalation: Using calm, respectful language, space, and choices rather than confrontation. / Psychological first aid: Offering practical assistance and connection without pressuring a person to recount traumatic details.

0570. A assessment clinician is preparing a follow-up plan for a young person aged 18 in the child guidance clinic. The plan calls for clarifying immediate danger and available supports before moving to longer-term goals. Which concept names this approach?

A. Crisis assessment
B. Least restrictive response
C. Post-crisis follow-up
D. Crisis triage

0571. A therapist describes an intervention for a high-school student in the counseling practicum, centered on offering practical assistance and connection without pressuring a person to recount traumatic details. Which named idea is most relevant?

A. Least restrictive response
B. Psychological first aid
C. Crisis triage
D. Risk formulation

0572. A assessment clinician and a middle-school student are discussing support in the multidisciplinary case conference. The selected practice is determining which situation requires immediate emergency action and which can be safely managed with timely follow-up. Which concept does this demonstrate?

A. Crisis triage
B. Risk formulation
C. Crisis assessment
D. De-escalation

0573. Which statement accurately contrasts the course concepts Protective factors and Crisis triage?

A. Protective factors: A humane, practical, early response that promotes safety, stabilization, connection, and access to support. / Crisis triage: Prioritizing urgency and level of response based on immediate danger, need, and available resources.
B. Protective factors: Prioritizing urgency and level of response based on immediate danger, need, and available resources. / Crisis triage: Personal, relational, and contextual resources that may reduce risk or support coping and recovery.
C. Protective factors: Personal, relational, and contextual resources that may reduce risk or support coping and recovery. / Crisis triage: Prioritizing urgency and level of response based on immediate danger, need, and available resources.
D. Protective factors: Personal, relational, and contextual resources that may reduce risk or support coping and recovery. / Crisis triage: A collaborative, individualized plan identifying warning signs, coping steps, supportive contacts, and emergency resources.

0574. A service team discusses a adolescent student in the school-based service. Their proposed next step is using calm, respectful language, space, and choices rather than confrontation. Which course concept supports it?

A. Post-crisis follow-up
B. De-escalation
C. Least restrictive response
D. Safety planning

0575. During work in the school consultation, a school counselor identifies this need: checking whether the plan worked and whether additional services are needed after the immediate crisis. Which idea should guide the response?

A. Least restrictive response
B. De-escalation
C. Safety planning
D. Post-crisis follow-up

0576. At the youth advocacy program, a play therapist meets with a child aged 14. The practice priority is: contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number. Which concept best captures that priority?

A. Post-crisis follow-up
B. Crisis assessment
C. Crisis triage
D. Warm handoff

0577. A supervisor asks for an applied contrast between Psychological first aid and Crisis triage. Which option fits?

A. Psychological first aid: Identifying trusted adults and practical supports that can be activated now. / Crisis triage: Determining which situation requires immediate emergency action and which can be safely managed with timely follow-up.
B. Psychological first aid: Offering practical assistance and connection without pressuring a person to recount traumatic details. / Crisis triage: Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number.
C. Psychological first aid: Determining which situation requires immediate emergency action and which can be safely managed with timely follow-up. / Crisis triage: Offering practical assistance and connection without pressuring a person to recount traumatic details.
D. Psychological first aid: Offering practical assistance and connection without pressuring a person to recount traumatic details. / Crisis triage: Determining which situation requires immediate emergency action and which can be safely managed with timely follow-up.

0578. Which statement accurately contrasts the course concepts Psychological first aid and Post-crisis follow-up?

A. Psychological first aid: A contextual, ongoing synthesis of risk and protective factors, current intent, access, history, and foreseeable changes. / Post-crisis follow-up: Planned reassessment and continuity contact after acute stabilization to review safety and connect ongoing care.
B. Psychological first aid: Planned reassessment and continuity contact after acute stabilization to review safety and connect ongoing care. / Post-crisis follow-up: A humane, practical, early response that promotes safety, stabilization, connection, and access to support.
C. Psychological first aid: A humane, practical, early response that promotes safety, stabilization, connection, and access to support. / Post-crisis follow-up: Planned reassessment and continuity contact after acute stabilization to review safety and connect ongoing care.
D. Psychological first aid: A humane, practical, early response that promotes safety, stabilization, connection, and access to support. / Post-crisis follow-up: Rapid, focused appraisal of immediate safety, precipitating events, supports, functioning, and urgent needs.

0579. At the youth group, a service navigator reviews whether a plan for a child aged 14 is appropriate. The relevant practice is offering practical assistance and connection without pressuring a person to recount traumatic details. Which concept is tested?

A. De-escalation
B. Psychological first aid
C. Least restrictive response
D. Crisis assessment

0580. Which description belongs with the term Crisis assessment?

A. Rapid, focused appraisal of immediate safety, precipitating events, supports, functioning, and urgent needs.
B. Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety.
C. A collaborative, individualized plan identifying warning signs, coping steps, supportive contacts, and emergency resources.
D. Planned reassessment and continuity contact after acute stabilization to review safety and connect ongoing care.

0581. In a supervision quiz, how should Crisis assessment be distinguished from Protective factors?

A. Crisis assessment: Personal, relational, and contextual resources that may reduce risk or support coping and recovery. / Protective factors: Rapid, focused appraisal of immediate safety, precipitating events, supports, functioning, and urgent needs.
B. Crisis assessment: Rapid, focused appraisal of immediate safety, precipitating events, supports, functioning, and urgent needs. / Protective factors: A humane, practical, early response that promotes safety, stabilization, connection, and access to support.
C. Crisis assessment: Planned reassessment and continuity contact after acute stabilization to review safety and connect ongoing care. / Protective factors: Personal, relational, and contextual resources that may reduce risk or support coping and recovery.
D. Crisis assessment: Rapid, focused appraisal of immediate safety, precipitating events, supports, functioning, and urgent needs. / Protective factors: Personal, relational, and contextual resources that may reduce risk or support coping and recovery.

0582. A behavior specialist is asked to evaluate a proposed service for a young person in the parent meeting. The defining feature is offering practical assistance and connection without pressuring a person to recount traumatic details. Which concept fits?

A. Warm handoff
B. Least restrictive response
C. Protective factors
D. Psychological first aid

0583. Which comparison would correct a trainee’s misunderstanding of Crisis triage versus Post-crisis follow-up?

A. Crisis triage: Prioritizing urgency and level of response based on immediate danger, need, and available resources. / Post-crisis follow-up: A coordinated transfer in which the current helper actively connects the person to the next service.
B. Crisis triage: Prioritizing urgency and level of response based on immediate danger, need, and available resources. / Post-crisis follow-up: Planned reassessment and continuity contact after acute stabilization to review safety and connect ongoing care.
C. Crisis triage: Planned reassessment and continuity contact after acute stabilization to review safety and connect ongoing care. / Post-crisis follow-up: Prioritizing urgency and level of response based on immediate danger, need, and available resources.
D. Crisis triage: Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety. / Post-crisis follow-up: Planned reassessment and continuity contact after acute stabilization to review safety and connect ongoing care.

0584. Choose the practice comparison that best separates Crisis assessment from Crisis triage.

A. Crisis assessment: Clarifying immediate danger and available supports before moving to longer-term goals. / Crisis triage: Determining which situation requires immediate emergency action and which can be safely managed with timely follow-up.
B. Crisis assessment: Clarifying immediate danger and available supports before moving to longer-term goals. / Crisis triage: Checking whether the plan worked and whether additional services are needed after the immediate crisis.
C. Crisis assessment: Determining which situation requires immediate emergency action and which can be safely managed with timely follow-up. / Crisis triage: Clarifying immediate danger and available supports before moving to longer-term goals.
D. Crisis assessment: Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number. / Crisis triage: Determining which situation requires immediate emergency action and which can be safely managed with timely follow-up.

0585. Which option is the clearest practical expression of Post-crisis follow-up?

A. Using calm, respectful language, space, and choices rather than confrontation.
B. Creating specific steps with the youth and caregivers for what to do if risk increases.
C. Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number.
D. Checking whether the plan worked and whether additional services are needed after the immediate crisis.

0586. In the after-school program, the agreed focus for a therapist working with a child aged 8 is integrating current statements, context, access, supports, and changes rather than relying on one score. Which concept names this focus?

A. Psychological first aid
B. Risk formulation
C. Warm handoff
D. Post-crisis follow-up

0587. In a supervision quiz, how should Crisis assessment be distinguished from Safety planning?

A. Crisis assessment: A coordinated transfer in which the current helper actively connects the person to the next service. / Safety planning: A collaborative, individualized plan identifying warning signs, coping steps, supportive contacts, and emergency resources.
B. Crisis assessment: Rapid, focused appraisal of immediate safety, precipitating events, supports, functioning, and urgent needs. / Safety planning: The safest effective intervention that imposes the fewest necessary restrictions, consistent with law and policy.
C. Crisis assessment: A collaborative, individualized plan identifying warning signs, coping steps, supportive contacts, and emergency resources. / Safety planning: Rapid, focused appraisal of immediate safety, precipitating events, supports, functioning, and urgent needs.
D. Crisis assessment: Rapid, focused appraisal of immediate safety, precipitating events, supports, functioning, and urgent needs. / Safety planning: A collaborative, individualized plan identifying warning signs, coping steps, supportive contacts, and emergency resources.

0588. What is the central meaning of Crisis triage?

A. Personal, relational, and contextual resources that may reduce risk or support coping and recovery.
B. A humane, practical, early response that promotes safety, stabilization, connection, and access to support.
C. Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety.
D. Prioritizing urgency and level of response based on immediate danger, need, and available resources.

0589. A support meeting for a child aged 6 includes a play therapist in the after-school program. The practice under consideration is offering practical assistance and connection without pressuring a person to recount traumatic details. Which concept guides it?

A. Crisis assessment
B. De-escalation
C. Post-crisis follow-up
D. Psychological first aid

0590. Which option correctly matches each concept to its practice focus: Safety planning and Psychological first aid?

A. Safety planning: Offering practical assistance and connection without pressuring a person to recount traumatic details. / Psychological first aid: Creating specific steps with the youth and caregivers for what to do if risk increases.
B. Safety planning: Creating specific steps with the youth and caregivers for what to do if risk increases. / Psychological first aid: Offering practical assistance and connection without pressuring a person to recount traumatic details.
C. Safety planning: Clarifying immediate danger and available supports before moving to longer-term goals. / Psychological first aid: Offering practical assistance and connection without pressuring a person to recount traumatic details.
D. Safety planning: Creating specific steps with the youth and caregivers for what to do if risk increases. / Psychological first aid: Checking whether the plan worked and whether additional services are needed after the immediate crisis.

0591. A supervisor asks for an applied contrast between Crisis assessment and Warm handoff. Which option fits?

A. Crisis assessment: Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number. / Warm handoff: Clarifying immediate danger and available supports before moving to longer-term goals.
B. Crisis assessment: Clarifying immediate danger and available supports before moving to longer-term goals. / Warm handoff: Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number.
C. Crisis assessment: Using calm, respectful language, space, and choices rather than confrontation. / Warm handoff: Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number.
D. Crisis assessment: Clarifying immediate danger and available supports before moving to longer-term goals. / Warm handoff: Selecting a proportionate response and reassessing whether restrictions remain necessary.

0592. Which comparison correctly distinguishes Risk formulation from Post-crisis follow-up?

A. Risk formulation: Planned reassessment and continuity contact after acute stabilization to review safety and connect ongoing care. / Post-crisis follow-up: A contextual, ongoing synthesis of risk and protective factors, current intent, access, history, and foreseeable changes.
B. Risk formulation: A contextual, ongoing synthesis of risk and protective factors, current intent, access, history, and foreseeable changes. / Post-crisis follow-up: Planned reassessment and continuity contact after acute stabilization to review safety and connect ongoing care.
C. Risk formulation: A contextual, ongoing synthesis of risk and protective factors, current intent, access, history, and foreseeable changes. / Post-crisis follow-up: Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety.
D. Risk formulation: Personal, relational, and contextual resources that may reduce risk or support coping and recovery. / Post-crisis follow-up: Planned reassessment and continuity contact after acute stabilization to review safety and connect ongoing care.

0593. In the caregiver consultation, a school-based clinician is considering this approach for a child aged 6: determining which situation requires immediate emergency action and which can be safely managed with timely follow-up. Which framework does it represent?

A. Warm handoff
B. Crisis triage
C. Crisis assessment
D. Safety planning

0594. Choose the practice comparison that best separates De-escalation from Protective factors.

A. De-escalation: Using calm, respectful language, space, and choices rather than confrontation. / Protective factors: Clarifying immediate danger and available supports before moving to longer-term goals.
B. De-escalation: Using calm, respectful language, space, and choices rather than confrontation. / Protective factors: Identifying trusted adults and practical supports that can be activated now.
C. De-escalation: Identifying trusted adults and practical supports that can be activated now. / Protective factors: Using calm, respectful language, space, and choices rather than confrontation.
D. De-escalation: Integrating current statements, context, access, supports, and changes rather than relying on one score. / Protective factors: Identifying trusted adults and practical supports that can be activated now.

0595. Which statement shows a sound practice-level distinction between Least restrictive response and Warm handoff?

A. Least restrictive response: Selecting a proportionate response and reassessing whether restrictions remain necessary. / Warm handoff: Identifying trusted adults and practical supports that can be activated now.
B. Least restrictive response: Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number. / Warm handoff: Selecting a proportionate response and reassessing whether restrictions remain necessary.
C. Least restrictive response: Selecting a proportionate response and reassessing whether restrictions remain necessary. / Warm handoff: Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number.
D. Least restrictive response: Offering practical assistance and connection without pressuring a person to recount traumatic details. / Warm handoff: Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number.

0596. For a young person in the behavior-support review, a counselor makes this practice the immediate priority: creating specific steps with the youth and caregivers for what to do if risk increases. Which concept fits best?

A. Protective factors
B. Psychological first aid
C. Safety planning
D. Least restrictive response

0597. During service review in the behavior-support review, a service navigator describes contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number. for a child aged 8. Which course idea is most applicable?

A. Crisis assessment
B. Warm handoff
C. Psychological first aid
D. Risk formulation

0598. At the community youth program, a research trainee reviews whether a plan for a child of elementary-school age is appropriate. The relevant practice is identifying trusted adults and practical supports that can be activated now. Which concept is tested?

A. De-escalation
B. Risk formulation
C. Protective factors
D. Post-crisis follow-up

0599. Choose the definition pair that correctly explains Crisis assessment first and Risk formulation second.

A. Crisis assessment: A contextual, ongoing synthesis of risk and protective factors, current intent, access, history, and foreseeable changes. / Risk formulation: Rapid, focused appraisal of immediate safety, precipitating events, supports, functioning, and urgent needs.
B. Crisis assessment: Rapid, focused appraisal of immediate safety, precipitating events, supports, functioning, and urgent needs. / Risk formulation: Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety.
C. Crisis assessment: Rapid, focused appraisal of immediate safety, precipitating events, supports, functioning, and urgent needs. / Risk formulation: A contextual, ongoing synthesis of risk and protective factors, current intent, access, history, and foreseeable changes.
D. Crisis assessment: A coordinated transfer in which the current helper actively connects the person to the next service. / Risk formulation: A contextual, ongoing synthesis of risk and protective factors, current intent, access, history, and foreseeable changes.

0600. Which option is the clearest practical expression of De-escalation?

A. Creating specific steps with the youth and caregivers for what to do if risk increases.
B. Using calm, respectful language, space, and choices rather than confrontation.
C. Clarifying immediate danger and available supports before moving to longer-term goals.
D. Offering practical assistance and connection without pressuring a person to recount traumatic details.

0601. In the school-based service, a group facilitator describes the most appropriate support for a client in late adolescence as creating specific steps with the youth and caregivers for what to do if risk increases. Which framework is being applied?

A. Safety planning
B. Psychological first aid
C. Risk formulation
D. Warm handoff

0602. A case conference asks for a distinction between Crisis assessment and Least restrictive response. Which answer is sound?

A. Crisis assessment: Rapid, focused appraisal of immediate safety, precipitating events, supports, functioning, and urgent needs. / Least restrictive response: Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety.
B. Crisis assessment: Rapid, focused appraisal of immediate safety, precipitating events, supports, functioning, and urgent needs. / Least restrictive response: The safest effective intervention that imposes the fewest necessary restrictions, consistent with law and policy.
C. Crisis assessment: The safest effective intervention that imposes the fewest necessary restrictions, consistent with law and policy. / Least restrictive response: Rapid, focused appraisal of immediate safety, precipitating events, supports, functioning, and urgent needs.
D. Crisis assessment: A collaborative, individualized plan identifying warning signs, coping steps, supportive contacts, and emergency resources. / Least restrictive response: The safest effective intervention that imposes the fewest necessary restrictions, consistent with law and policy.

0603. Which applied comparison correctly identifies what belongs to Safety planning versus Crisis triage?

A. Safety planning: Determining which situation requires immediate emergency action and which can be safely managed with timely follow-up. / Crisis triage: Creating specific steps with the youth and caregivers for what to do if risk increases.
B. Safety planning: Creating specific steps with the youth and caregivers for what to do if risk increases. / Crisis triage: Checking whether the plan worked and whether additional services are needed after the immediate crisis.
C. Safety planning: Creating specific steps with the youth and caregivers for what to do if risk increases. / Crisis triage: Determining which situation requires immediate emergency action and which can be safely managed with timely follow-up.
D. Safety planning: Identifying trusted adults and practical supports that can be activated now. / Crisis triage: Determining which situation requires immediate emergency action and which can be safely managed with timely follow-up.

0604. A school counselor is explaining a choice to a older adolescent client and caregiver in the classroom support meeting. The choice centers on creating specific steps with the youth and caregivers for what to do if risk increases. Which idea is illustrated?

A. Risk formulation
B. Crisis triage
C. Safety planning
D. Least restrictive response

0605. Which comparison correctly distinguishes Risk formulation from Psychological first aid?

A. Risk formulation: A contextual, ongoing synthesis of risk and protective factors, current intent, access, history, and foreseeable changes. / Psychological first aid: Prioritizing urgency and level of response based on immediate danger, need, and available resources.
B. Risk formulation: A humane, practical, early response that promotes safety, stabilization, connection, and access to support. / Psychological first aid: A contextual, ongoing synthesis of risk and protective factors, current intent, access, history, and foreseeable changes.
C. Risk formulation: A contextual, ongoing synthesis of risk and protective factors, current intent, access, history, and foreseeable changes. / Psychological first aid: A humane, practical, early response that promotes safety, stabilization, connection, and access to support.
D. Risk formulation: A coordinated transfer in which the current helper actively connects the person to the next service. / Psychological first aid: A humane, practical, early response that promotes safety, stabilization, connection, and access to support.

0606. Which statement accurately contrasts the course concepts Safety planning and Crisis triage?

A. Safety planning: A collaborative, individualized plan identifying warning signs, coping steps, supportive contacts, and emergency resources. / Crisis triage: Planned reassessment and continuity contact after acute stabilization to review safety and connect ongoing care.
B. Safety planning: Personal, relational, and contextual resources that may reduce risk or support coping and recovery. / Crisis triage: Prioritizing urgency and level of response based on immediate danger, need, and available resources.
C. Safety planning: Prioritizing urgency and level of response based on immediate danger, need, and available resources. / Crisis triage: A collaborative, individualized plan identifying warning signs, coping steps, supportive contacts, and emergency resources.
D. Safety planning: A collaborative, individualized plan identifying warning signs, coping steps, supportive contacts, and emergency resources. / Crisis triage: Prioritizing urgency and level of response based on immediate danger, need, and available resources.

0607. In a supervision quiz, how should Crisis triage be distinguished from Post-crisis follow-up?

A. Crisis triage: Planned reassessment and continuity contact after acute stabilization to review safety and connect ongoing care. / Post-crisis follow-up: Prioritizing urgency and level of response based on immediate danger, need, and available resources.
B. Crisis triage: Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety. / Post-crisis follow-up: Planned reassessment and continuity contact after acute stabilization to review safety and connect ongoing care.
C. Crisis triage: Prioritizing urgency and level of response based on immediate danger, need, and available resources. / Post-crisis follow-up: Planned reassessment and continuity contact after acute stabilization to review safety and connect ongoing care.
D. Crisis triage: Prioritizing urgency and level of response based on immediate danger, need, and available resources. / Post-crisis follow-up: A coordinated transfer in which the current helper actively connects the person to the next service.

0608. How are Safety planning and Post-crisis follow-up most accurately differentiated in this curriculum?

A. Safety planning: Planned reassessment and continuity contact after acute stabilization to review safety and connect ongoing care. / Post-crisis follow-up: A collaborative, individualized plan identifying warning signs, coping steps, supportive contacts, and emergency resources.
B. Safety planning: A coordinated transfer in which the current helper actively connects the person to the next service. / Post-crisis follow-up: Planned reassessment and continuity contact after acute stabilization to review safety and connect ongoing care.
C. Safety planning: A collaborative, individualized plan identifying warning signs, coping steps, supportive contacts, and emergency resources. / Post-crisis follow-up: A humane, practical, early response that promotes safety, stabilization, connection, and access to support.
D. Safety planning: A collaborative, individualized plan identifying warning signs, coping steps, supportive contacts, and emergency resources. / Post-crisis follow-up: Planned reassessment and continuity contact after acute stabilization to review safety and connect ongoing care.

0609. How are De-escalation and Least restrictive response most accurately differentiated in this curriculum?

A. De-escalation: Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety. / Least restrictive response: The safest effective intervention that imposes the fewest necessary restrictions, consistent with law and policy.
B. De-escalation: The safest effective intervention that imposes the fewest necessary restrictions, consistent with law and policy. / Least restrictive response: Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety.
C. De-escalation: Prioritizing urgency and level of response based on immediate danger, need, and available resources. / Least restrictive response: The safest effective intervention that imposes the fewest necessary restrictions, consistent with law and policy.
D. De-escalation: Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety. / Least restrictive response: A coordinated transfer in which the current helper actively connects the person to the next service.

0610. A case conference asks for a distinction between Crisis assessment and Warm handoff. Which answer is sound?

A. Crisis assessment: A coordinated transfer in which the current helper actively connects the person to the next service. / Warm handoff: Rapid, focused appraisal of immediate safety, precipitating events, supports, functioning, and urgent needs.
B. Crisis assessment: Rapid, focused appraisal of immediate safety, precipitating events, supports, functioning, and urgent needs. / Warm handoff: A coordinated transfer in which the current helper actively connects the person to the next service.
C. Crisis assessment: Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety. / Warm handoff: A coordinated transfer in which the current helper actively connects the person to the next service.
D. Crisis assessment: Rapid, focused appraisal of immediate safety, precipitating events, supports, functioning, and urgent needs. / Warm handoff: The safest effective intervention that imposes the fewest necessary restrictions, consistent with law and policy.

0611. When reviewing a teenage client's plan in the classroom support meeting, the parent educator notes that the next step is checking whether the plan worked and whether additional services are needed after the immediate crisis. Which concept guides this step?

A. Least restrictive response
B. Post-crisis follow-up
C. Crisis triage
D. De-escalation

0612. A parent educator presents a support plan for a older adolescent client at the outpatient clinic. Its central feature is integrating current statements, context, access, supports, and changes rather than relying on one score. Which concept should be named?

A. Risk formulation
B. Crisis triage
C. Psychological first aid
D. Post-crisis follow-up

0613. A planning meeting about a child aged 14 includes a behavior specialist. The proposed practice in the student wellness team is integrating current statements, context, access, supports, and changes rather than relying on one score. Which idea underlies it?

A. Warm handoff
B. Risk formulation
C. Protective factors
D. De-escalation

0614. In the outpatient clinic, a youth worker describes the most appropriate support for a young person as selecting a proportionate response and reassessing whether restrictions remain necessary. Which framework is being applied?

A. De-escalation
B. Risk formulation
C. Post-crisis follow-up
D. Least restrictive response

0615. Choose the practice comparison that best separates Least restrictive response from Post-crisis follow-up.

A. Least restrictive response: Selecting a proportionate response and reassessing whether restrictions remain necessary. / Post-crisis follow-up: Checking whether the plan worked and whether additional services are needed after the immediate crisis.
B. Least restrictive response: Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number. / Post-crisis follow-up: Checking whether the plan worked and whether additional services are needed after the immediate crisis.
C. Least restrictive response: Checking whether the plan worked and whether additional services are needed after the immediate crisis. / Post-crisis follow-up: Selecting a proportionate response and reassessing whether restrictions remain necessary.
D. Least restrictive response: Selecting a proportionate response and reassessing whether restrictions remain necessary. / Post-crisis follow-up: Integrating current statements, context, access, supports, and changes rather than relying on one score.

0616. A trainee must distinguish how Crisis assessment and Crisis triage guide practice. Which comparison is accurate?

A. Crisis assessment: Clarifying immediate danger and available supports before moving to longer-term goals. / Crisis triage: Determining which situation requires immediate emergency action and which can be safely managed with timely follow-up.
B. Crisis assessment: Determining which situation requires immediate emergency action and which can be safely managed with timely follow-up. / Crisis triage: Clarifying immediate danger and available supports before moving to longer-term goals.
C. Crisis assessment: Clarifying immediate danger and available supports before moving to longer-term goals. / Crisis triage: Checking whether the plan worked and whether additional services are needed after the immediate crisis.
D. Crisis assessment: Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number. / Crisis triage: Determining which situation requires immediate emergency action and which can be safely managed with timely follow-up.

0617. A trainee must distinguish how Crisis triage and Warm handoff guide practice. Which comparison is accurate?

A. Crisis triage: Checking whether the plan worked and whether additional services are needed after the immediate crisis. / Warm handoff: Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number.
B. Crisis triage: Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number. / Warm handoff: Determining which situation requires immediate emergency action and which can be safely managed with timely follow-up.
C. Crisis triage: Determining which situation requires immediate emergency action and which can be safely managed with timely follow-up. / Warm handoff: Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number.
D. Crisis triage: Determining which situation requires immediate emergency action and which can be safely managed with timely follow-up. / Warm handoff: Integrating current statements, context, access, supports, and changes rather than relying on one score.

0618. A trainee must choose a practice that exemplifies Safety planning. Which action is the best fit?

A. Creating specific steps with the youth and caregivers for what to do if risk increases.
B. Offering practical assistance and connection without pressuring a person to recount traumatic details.
C. Using calm, respectful language, space, and choices rather than confrontation.
D. Integrating current statements, context, access, supports, and changes rather than relying on one score.

0619. Which option correctly matches each concept to its practice focus: Crisis assessment and Protective factors?

A. Crisis assessment: Clarifying immediate danger and available supports before moving to longer-term goals. / Protective factors: Offering practical assistance and connection without pressuring a person to recount traumatic details.
B. Crisis assessment: Identifying trusted adults and practical supports that can be activated now. / Protective factors: Clarifying immediate danger and available supports before moving to longer-term goals.
C. Crisis assessment: Clarifying immediate danger and available supports before moving to longer-term goals. / Protective factors: Identifying trusted adults and practical supports that can be activated now.
D. Crisis assessment: Checking whether the plan worked and whether additional services are needed after the immediate crisis. / Protective factors: Identifying trusted adults and practical supports that can be activated now.

0620. What is the central meaning of Warm handoff?

A. A coordinated transfer in which the current helper actively connects the person to the next service.
B. A contextual, ongoing synthesis of risk and protective factors, current intent, access, history, and foreseeable changes.
C. The safest effective intervention that imposes the fewest necessary restrictions, consistent with law and policy.
D. Planned reassessment and continuity contact after acute stabilization to review safety and connect ongoing care.

0621. A supervisor asks for an applied contrast between Crisis assessment and Post-crisis follow-up. Which option fits?

A. Crisis assessment: Checking whether the plan worked and whether additional services are needed after the immediate crisis. / Post-crisis follow-up: Clarifying immediate danger and available supports before moving to longer-term goals.
B. Crisis assessment: Determining which situation requires immediate emergency action and which can be safely managed with timely follow-up. / Post-crisis follow-up: Checking whether the plan worked and whether additional services are needed after the immediate crisis.
C. Crisis assessment: Clarifying immediate danger and available supports before moving to longer-term goals. / Post-crisis follow-up: Using calm, respectful language, space, and choices rather than confrontation.
D. Crisis assessment: Clarifying immediate danger and available supports before moving to longer-term goals. / Post-crisis follow-up: Checking whether the plan worked and whether additional services are needed after the immediate crisis.

0622. Which paired example correctly applies Crisis assessment first and Warm handoff second?

A. Crisis assessment: Clarifying immediate danger and available supports before moving to longer-term goals. / Warm handoff: Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number.
B. Crisis assessment: Using calm, respectful language, space, and choices rather than confrontation. / Warm handoff: Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number.
C. Crisis assessment: Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number. / Warm handoff: Clarifying immediate danger and available supports before moving to longer-term goals.
D. Crisis assessment: Clarifying immediate danger and available supports before moving to longer-term goals. / Warm handoff: Selecting a proportionate response and reassessing whether restrictions remain necessary.

0623. A student confuses Crisis assessment with De-escalation. Which explanation most accurately separates them?

A. Crisis assessment: Rapid, focused appraisal of immediate safety, precipitating events, supports, functioning, and urgent needs. / De-escalation: Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety.
B. Crisis assessment: Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety. / De-escalation: Rapid, focused appraisal of immediate safety, precipitating events, supports, functioning, and urgent needs.
C. Crisis assessment: Rapid, focused appraisal of immediate safety, precipitating events, supports, functioning, and urgent needs. / De-escalation: A coordinated transfer in which the current helper actively connects the person to the next service.
D. Crisis assessment: Planned reassessment and continuity contact after acute stabilization to review safety and connect ongoing care. / De-escalation: Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety.

0624. Choose the response that best puts Psychological first aid into practice.

A. Identifying trusted adults and practical supports that can be activated now.
B. Creating specific steps with the youth and caregivers for what to do if risk increases.
C. Offering practical assistance and connection without pressuring a person to recount traumatic details.
D. Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number.

0625. A supervisor asks how De-escalation would appear in practice. Which choice should be selected?

A. Clarifying immediate danger and available supports before moving to longer-term goals.
B. Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number.
C. Using calm, respectful language, space, and choices rather than confrontation.
D. Selecting a proportionate response and reassessing whether restrictions remain necessary.

0626. In a professional consultation about a child aged 6, the assessment clinician describes this response in the telehealth session: contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number. Which term is most apt?

A. Protective factors
B. Warm handoff
C. Crisis assessment
D. Crisis triage

0627. Choose the definition pair that correctly explains Psychological first aid first and Post-crisis follow-up second.

A. Psychological first aid: A contextual, ongoing synthesis of risk and protective factors, current intent, access, history, and foreseeable changes. / Post-crisis follow-up: Planned reassessment and continuity contact after acute stabilization to review safety and connect ongoing care.
B. Psychological first aid: A humane, practical, early response that promotes safety, stabilization, connection, and access to support. / Post-crisis follow-up: Planned reassessment and continuity contact after acute stabilization to review safety and connect ongoing care.
C. Psychological first aid: A humane, practical, early response that promotes safety, stabilization, connection, and access to support. / Post-crisis follow-up: Rapid, focused appraisal of immediate safety, precipitating events, supports, functioning, and urgent needs.
D. Psychological first aid: Planned reassessment and continuity contact after acute stabilization to review safety and connect ongoing care. / Post-crisis follow-up: A humane, practical, early response that promotes safety, stabilization, connection, and access to support.

0628. For a child aged 11 seen in the school counseling office, the service navigator recommends a plan built around determining which situation requires immediate emergency action and which can be safely managed with timely follow-up. Which concept is reflected?

A. Safety planning
B. Psychological first aid
C. Protective factors
D. Crisis triage

0629. Which professional action most closely applies Least restrictive response?

A. Using calm, respectful language, space, and choices rather than confrontation.
B. Integrating current statements, context, access, supports, and changes rather than relying on one score.
C. Checking whether the plan worked and whether additional services are needed after the immediate crisis.
D. Selecting a proportionate response and reassessing whether restrictions remain necessary.

0630. A consulting counselor is explaining a choice to a student aged 15 and caregiver in the youth group. The choice centers on clarifying immediate danger and available supports before moving to longer-term goals. Which idea is illustrated?

A. Protective factors
B. Crisis assessment
C. Safety planning
D. De-escalation

0631. What is the central meaning of Post-crisis follow-up?

A. Planned reassessment and continuity contact after acute stabilization to review safety and connect ongoing care.
B. Prioritizing urgency and level of response based on immediate danger, need, and available resources.
C. Personal, relational, and contextual resources that may reduce risk or support coping and recovery.
D. A humane, practical, early response that promotes safety, stabilization, connection, and access to support.

0632. Which option correctly matches each concept to its practice focus: Crisis assessment and Psychological first aid?

A. Crisis assessment: Offering practical assistance and connection without pressuring a person to recount traumatic details. / Psychological first aid: Clarifying immediate danger and available supports before moving to longer-term goals.
B. Crisis assessment: Integrating current statements, context, access, supports, and changes rather than relying on one score. / Psychological first aid: Offering practical assistance and connection without pressuring a person to recount traumatic details.
C. Crisis assessment: Clarifying immediate danger and available supports before moving to longer-term goals. / Psychological first aid: Creating specific steps with the youth and caregivers for what to do if risk increases.
D. Crisis assessment: Clarifying immediate danger and available supports before moving to longer-term goals. / Psychological first aid: Offering practical assistance and connection without pressuring a person to recount traumatic details.

0633. In a case note about a child aged 14, a consultant working in the child guidance clinic records this priority: selecting a proportionate response and reassessing whether restrictions remain necessary. What principle is reflected?

A. Least restrictive response
B. Psychological first aid
C. Risk formulation
D. Protective factors

0634. Which statement shows a sound practice-level distinction between Crisis assessment and Post-crisis follow-up?

A. Crisis assessment: Clarifying immediate danger and available supports before moving to longer-term goals. / Post-crisis follow-up: Using calm, respectful language, space, and choices rather than confrontation.
B. Crisis assessment: Clarifying immediate danger and available supports before moving to longer-term goals. / Post-crisis follow-up: Checking whether the plan worked and whether additional services are needed after the immediate crisis.
C. Crisis assessment: Determining which situation requires immediate emergency action and which can be safely managed with timely follow-up. / Post-crisis follow-up: Checking whether the plan worked and whether additional services are needed after the immediate crisis.
D. Crisis assessment: Checking whether the plan worked and whether additional services are needed after the immediate crisis. / Post-crisis follow-up: Clarifying immediate danger and available supports before moving to longer-term goals.

0635. A student confuses De-escalation with Risk formulation. Which explanation most accurately separates them?

A. De-escalation: A contextual, ongoing synthesis of risk and protective factors, current intent, access, history, and foreseeable changes. / Risk formulation: Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety.
B. De-escalation: Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety. / Risk formulation: Prioritizing urgency and level of response based on immediate danger, need, and available resources.
C. De-escalation: Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety. / Risk formulation: A contextual, ongoing synthesis of risk and protective factors, current intent, access, history, and foreseeable changes.
D. De-escalation: Personal, relational, and contextual resources that may reduce risk or support coping and recovery. / Risk formulation: A contextual, ongoing synthesis of risk and protective factors, current intent, access, history, and foreseeable changes.

0636. A trainee must choose a practice that exemplifies Post-crisis follow-up. Which action is the best fit?

A. Determining which situation requires immediate emergency action and which can be safely managed with timely follow-up.
B. Offering practical assistance and connection without pressuring a person to recount traumatic details.
C. Checking whether the plan worked and whether additional services are needed after the immediate crisis.
D. Selecting a proportionate response and reassessing whether restrictions remain necessary.

0637. A supervisor asks for an applied contrast between De-escalation and Least restrictive response. Which option fits?

A. De-escalation: Using calm, respectful language, space, and choices rather than confrontation. / Least restrictive response: Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number.
B. De-escalation: Selecting a proportionate response and reassessing whether restrictions remain necessary. / Least restrictive response: Using calm, respectful language, space, and choices rather than confrontation.
C. De-escalation: Using calm, respectful language, space, and choices rather than confrontation. / Least restrictive response: Selecting a proportionate response and reassessing whether restrictions remain necessary.
D. De-escalation: Determining which situation requires immediate emergency action and which can be safely managed with timely follow-up. / Least restrictive response: Selecting a proportionate response and reassessing whether restrictions remain necessary.

0638. At a case-planning meeting, the counselor proposes clarifying immediate danger and available supports before moving to longer-term goals. for a child aged 8 seen in the school counseling office. Which concept does this illustrate?

A. Crisis assessment
B. Risk formulation
C. Psychological first aid
D. Warm handoff

0639. Which pair of actions illustrates De-escalation and Crisis triage, respectively?

A. De-escalation: Determining which situation requires immediate emergency action and which can be safely managed with timely follow-up. / Crisis triage: Using calm, respectful language, space, and choices rather than confrontation.
B. De-escalation: Using calm, respectful language, space, and choices rather than confrontation. / Crisis triage: Determining which situation requires immediate emergency action and which can be safely managed with timely follow-up.
C. De-escalation: Clarifying immediate danger and available supports before moving to longer-term goals. / Crisis triage: Determining which situation requires immediate emergency action and which can be safely managed with timely follow-up.
D. De-escalation: Using calm, respectful language, space, and choices rather than confrontation. / Crisis triage: Identifying trusted adults and practical supports that can be activated now.

0640. Which statement accurately contrasts the course concepts Protective factors and Post-crisis follow-up?

A. Protective factors: Planned reassessment and continuity contact after acute stabilization to review safety and connect ongoing care. / Post-crisis follow-up: Personal, relational, and contextual resources that may reduce risk or support coping and recovery.
B. Protective factors: Personal, relational, and contextual resources that may reduce risk or support coping and recovery. / Post-crisis follow-up: Planned reassessment and continuity contact after acute stabilization to review safety and connect ongoing care.
C. Protective factors: Personal, relational, and contextual resources that may reduce risk or support coping and recovery. / Post-crisis follow-up: Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety.
D. Protective factors: A collaborative, individualized plan identifying warning signs, coping steps, supportive contacts, and emergency resources. / Post-crisis follow-up: Planned reassessment and continuity contact after acute stabilization to review safety and connect ongoing care.

0641. What is the central meaning of Least restrictive response?

A. Rapid, focused appraisal of immediate safety, precipitating events, supports, functioning, and urgent needs.
B. The safest effective intervention that imposes the fewest necessary restrictions, consistent with law and policy.
C. A collaborative, individualized plan identifying warning signs, coping steps, supportive contacts, and emergency resources.
D. Planned reassessment and continuity contact after acute stabilization to review safety and connect ongoing care.

0642. For a child aged 7 seen in the family session, the therapist recommends a plan built around contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number. Which concept is reflected?

A. Crisis triage
B. Crisis assessment
C. Warm handoff
D. Post-crisis follow-up

0643. Choose the practice comparison that best separates Safety planning from Post-crisis follow-up.

A. Safety planning: Creating specific steps with the youth and caregivers for what to do if risk increases. / Post-crisis follow-up: Offering practical assistance and connection without pressuring a person to recount traumatic details.
B. Safety planning: Creating specific steps with the youth and caregivers for what to do if risk increases. / Post-crisis follow-up: Checking whether the plan worked and whether additional services are needed after the immediate crisis.
C. Safety planning: Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number. / Post-crisis follow-up: Checking whether the plan worked and whether additional services are needed after the immediate crisis.
D. Safety planning: Checking whether the plan worked and whether additional services are needed after the immediate crisis. / Post-crisis follow-up: Creating specific steps with the youth and caregivers for what to do if risk increases.

0644. A consultant prepares for a session in the supervision meeting with a client in early adolescence. The intended approach is creating specific steps with the youth and caregivers for what to do if risk increases. Which concept is most relevant?

A. Safety planning
B. Crisis assessment
C. Protective factors
D. Crisis triage

0645. Which professional action most closely applies Warm handoff?

A. Using calm, respectful language, space, and choices rather than confrontation.
B. Creating specific steps with the youth and caregivers for what to do if risk increases.
C. Checking whether the plan worked and whether additional services are needed after the immediate crisis.
D. Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number.

0646. In a supervision review, a caregiver working with a counselor describes work with a child aged 8 in the community youth program: offering practical assistance and connection without pressuring a person to recount traumatic details. What concept is illustrated?

A. Crisis assessment
B. Psychological first aid
C. Safety planning
D. Crisis triage

0647. While consulting in the behavior-support review, a consultant supports a student aged 17 by using this approach: identifying trusted adults and practical supports that can be activated now. Which concept is being applied?

A. Post-crisis follow-up
B. Warm handoff
C. Safety planning
D. Protective factors

0648. A case discussion concerns a student aged 17 and a school-based clinician in the outpatient clinic. The practitioner is considering contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number. Which principle is involved?

A. Psychological first aid
B. Warm handoff
C. Safety planning
D. Risk formulation

0649. A child aged 7 is receiving support in the student wellness team. The group facilitator is guided by this practice: identifying trusted adults and practical supports that can be activated now. Which principle best fits?

A. Risk formulation
B. De-escalation
C. Crisis assessment
D. Protective factors

0650. An interdisciplinary team reviews a adolescent student's case at the multidisciplinary case conference. The counselor recommends checking whether the plan worked and whether additional services are needed after the immediate crisis. Which course concept best fits?

A. Post-crisis follow-up
B. Least restrictive response
C. Risk formulation
D. Safety planning

0651. Which pair of actions illustrates Risk formulation and Crisis triage, respectively?

A. Risk formulation: Creating specific steps with the youth and caregivers for what to do if risk increases. / Crisis triage: Determining which situation requires immediate emergency action and which can be safely managed with timely follow-up.
B. Risk formulation: Determining which situation requires immediate emergency action and which can be safely managed with timely follow-up. / Crisis triage: Integrating current statements, context, access, supports, and changes rather than relying on one score.
C. Risk formulation: Integrating current statements, context, access, supports, and changes rather than relying on one score. / Crisis triage: Identifying trusted adults and practical supports that can be activated now.
D. Risk formulation: Integrating current statements, context, access, supports, and changes rather than relying on one score. / Crisis triage: Determining which situation requires immediate emergency action and which can be safely managed with timely follow-up.

0652. A trainee must choose a practice that exemplifies Risk formulation. Which action is the best fit?

A. Using calm, respectful language, space, and choices rather than confrontation.
B. Selecting a proportionate response and reassessing whether restrictions remain necessary.
C. Integrating current statements, context, access, supports, and changes rather than relying on one score.
D. Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number.

0653. A case discussion concerns a child of elementary-school age and a parent educator in the caregiver consultation. The practitioner is considering using calm, respectful language, space, and choices rather than confrontation. Which principle is involved?

A. De-escalation
B. Risk formulation
C. Crisis triage
D. Safety planning

0654. Which description belongs with the term Warm handoff?

A. Rapid, focused appraisal of immediate safety, precipitating events, supports, functioning, and urgent needs.
B. A coordinated transfer in which the current helper actively connects the person to the next service.
C. A collaborative, individualized plan identifying warning signs, coping steps, supportive contacts, and emergency resources.
D. Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety.

0655. A school support specialist reviews a plan for a young person aged 16 in the counseling practicum. The plan emphasizes identifying trusted adults and practical supports that can be activated now. Which course idea does this reflect?

A. Crisis triage
B. Risk formulation
C. Post-crisis follow-up
D. Protective factors

0656. Which option pairs the definitions of De-escalation and Least restrictive response correctly, in that order?

A. De-escalation: Prioritizing urgency and level of response based on immediate danger, need, and available resources. / Least restrictive response: The safest effective intervention that imposes the fewest necessary restrictions, consistent with law and policy.
B. De-escalation: Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety. / Least restrictive response: A coordinated transfer in which the current helper actively connects the person to the next service.
C. De-escalation: The safest effective intervention that imposes the fewest necessary restrictions, consistent with law and policy. / Least restrictive response: Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety.
D. De-escalation: Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety. / Least restrictive response: The safest effective intervention that imposes the fewest necessary restrictions, consistent with law and policy.

0657. A case discussion concerns a child aged 7 and a case coordinator in the student-support meeting. The practitioner is considering creating specific steps with the youth and caregivers for what to do if risk increases. Which principle is involved?

A. De-escalation
B. Safety planning
C. Warm handoff
D. Least restrictive response

0658. Choose the definition pair that correctly explains De-escalation first and Warm handoff second.

A. De-escalation: The safest effective intervention that imposes the fewest necessary restrictions, consistent with law and policy. / Warm handoff: A coordinated transfer in which the current helper actively connects the person to the next service.
B. De-escalation: A coordinated transfer in which the current helper actively connects the person to the next service. / Warm handoff: Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety.
C. De-escalation: Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety. / Warm handoff: A coordinated transfer in which the current helper actively connects the person to the next service.
D. De-escalation: Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety. / Warm handoff: A collaborative, individualized plan identifying warning signs, coping steps, supportive contacts, and emergency resources.

0659. Which option preserves the correct meaning of both De-escalation and Risk formulation?

A. De-escalation: Personal, relational, and contextual resources that may reduce risk or support coping and recovery. / Risk formulation: A contextual, ongoing synthesis of risk and protective factors, current intent, access, history, and foreseeable changes.
B. De-escalation: Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety. / Risk formulation: A contextual, ongoing synthesis of risk and protective factors, current intent, access, history, and foreseeable changes.
C. De-escalation: Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety. / Risk formulation: Prioritizing urgency and level of response based on immediate danger, need, and available resources.
D. De-escalation: A contextual, ongoing synthesis of risk and protective factors, current intent, access, history, and foreseeable changes. / Risk formulation: Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety.

0660. At a case-planning meeting, the clinical supervisor proposes creating specific steps with the youth and caregivers for what to do if risk increases. for a student aged 15 seen in the family session. Which concept does this illustrate?

A. Least restrictive response
B. Risk formulation
C. Safety planning
D. Post-crisis follow-up

0661. A team must select a support approach for a preadolescent child at the multidisciplinary case conference. The school-based clinician recommends integrating current statements, context, access, supports, and changes rather than relying on one score. Which idea is most relevant?

A. Least restrictive response
B. Safety planning
C. Psychological first aid
D. Risk formulation

0662. In the clinical planning session, a caregiver working with a counselor is considering this approach for a student aged 17: integrating current statements, context, access, supports, and changes rather than relying on one score. Which framework does it represent?

A. Post-crisis follow-up
B. Risk formulation
C. Least restrictive response
D. Psychological first aid

0663. In a supervision quiz, how should De-escalation be distinguished from Crisis triage?

A. De-escalation: Rapid, focused appraisal of immediate safety, precipitating events, supports, functioning, and urgent needs. / Crisis triage: Prioritizing urgency and level of response based on immediate danger, need, and available resources.
B. De-escalation: Prioritizing urgency and level of response based on immediate danger, need, and available resources. / Crisis triage: Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety.
C. De-escalation: Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety. / Crisis triage: Prioritizing urgency and level of response based on immediate danger, need, and available resources.
D. De-escalation: Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety. / Crisis triage: Personal, relational, and contextual resources that may reduce risk or support coping and recovery.

0664. Consider a student aged 9 receiving help in the behavior-support review. The consulting counselor focuses on using calm, respectful language, space, and choices rather than confrontation. Which term best describes the guiding idea?

A. Warm handoff
B. Safety planning
C. De-escalation
D. Post-crisis follow-up

0665. Which option pairs the definitions of Least restrictive response and Post-crisis follow-up correctly, in that order?

A. Least restrictive response: Planned reassessment and continuity contact after acute stabilization to review safety and connect ongoing care. / Post-crisis follow-up: The safest effective intervention that imposes the fewest necessary restrictions, consistent with law and policy.
B. Least restrictive response: A coordinated transfer in which the current helper actively connects the person to the next service. / Post-crisis follow-up: Planned reassessment and continuity contact after acute stabilization to review safety and connect ongoing care.
C. Least restrictive response: The safest effective intervention that imposes the fewest necessary restrictions, consistent with law and policy. / Post-crisis follow-up: Planned reassessment and continuity contact after acute stabilization to review safety and connect ongoing care.
D. Least restrictive response: The safest effective intervention that imposes the fewest necessary restrictions, consistent with law and policy. / Post-crisis follow-up: A contextual, ongoing synthesis of risk and protective factors, current intent, access, history, and foreseeable changes.

0666. A supervised trainee is supporting a student aged 9 in the community youth program. The key practice is clarifying immediate danger and available supports before moving to longer-term goals. Which course concept is most relevant?

A. De-escalation
B. Protective factors
C. Crisis assessment
D. Risk formulation

0667. Which professional action most closely applies Safety planning?

A. Offering practical assistance and connection without pressuring a person to recount traumatic details.
B. Creating specific steps with the youth and caregivers for what to do if risk increases.
C. Clarifying immediate danger and available supports before moving to longer-term goals.
D. Using calm, respectful language, space, and choices rather than confrontation.

0668. A team must select a support approach for a child aged 11 at the family session. The family therapist recommends clarifying immediate danger and available supports before moving to longer-term goals. Which idea is most relevant?

A. Protective factors
B. Risk formulation
C. Crisis assessment
D. De-escalation

0669. Which course concept is defined as follows: Rapid, focused appraisal of immediate safety, precipitating events, supports, functioning, and urgent needs.

A. Protective factors
B. Post-crisis follow-up
C. Risk formulation
D. Crisis assessment

0670. A therapist is asked what should shape a student aged 17’s support in the caregiver consultation. The proposed focus is clarifying immediate danger and available supports before moving to longer-term goals. Which principle does it represent?

A. Psychological first aid
B. Crisis assessment
C. Protective factors
D. Crisis triage

0671. In the community mental-health service, a group facilitator explains why a high-school student would benefit from using calm, respectful language, space, and choices rather than confrontation. Which course concept underpins the explanation?

A. De-escalation
B. Post-crisis follow-up
C. Protective factors
D. Risk formulation

0672. A school-based clinician presents a support plan for a teenage client at the telehealth session. Its central feature is identifying trusted adults and practical supports that can be activated now. Which concept should be named?

A. Post-crisis follow-up
B. Protective factors
C. De-escalation
D. Safety planning

0673. A supervisor asks for an applied contrast between Crisis assessment and Safety planning. Which option fits?

A. Crisis assessment: Creating specific steps with the youth and caregivers for what to do if risk increases. / Safety planning: Clarifying immediate danger and available supports before moving to longer-term goals.
B. Crisis assessment: Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number. / Safety planning: Creating specific steps with the youth and caregivers for what to do if risk increases.
C. Crisis assessment: Clarifying immediate danger and available supports before moving to longer-term goals. / Safety planning: Selecting a proportionate response and reassessing whether restrictions remain necessary.
D. Crisis assessment: Clarifying immediate danger and available supports before moving to longer-term goals. / Safety planning: Creating specific steps with the youth and caregivers for what to do if risk increases.

0674. At the classroom support meeting, a therapist reviews whether a plan for a young adolescent client is appropriate. The relevant practice is determining which situation requires immediate emergency action and which can be safely managed with timely follow-up. Which concept is tested?

A. Protective factors
B. Least restrictive response
C. Warm handoff
D. Crisis triage

0675. A supervisor asks for an applied contrast between Protective factors and Least restrictive response. Which option fits?

A. Protective factors: Creating specific steps with the youth and caregivers for what to do if risk increases. / Least restrictive response: Selecting a proportionate response and reassessing whether restrictions remain necessary.
B. Protective factors: Identifying trusted adults and practical supports that can be activated now. / Least restrictive response: Selecting a proportionate response and reassessing whether restrictions remain necessary.
C. Protective factors: Identifying trusted adults and practical supports that can be activated now. / Least restrictive response: Clarifying immediate danger and available supports before moving to longer-term goals.
D. Protective factors: Selecting a proportionate response and reassessing whether restrictions remain necessary. / Least restrictive response: Identifying trusted adults and practical supports that can be activated now.

0676. Which course concept is defined as follows: Prioritizing urgency and level of response based on immediate danger, need, and available resources.

A. Psychological first aid
B. Warm handoff
C. Crisis triage
D. De-escalation

0677. Which option correctly matches each concept to its practice focus: Least restrictive response and Psychological first aid?

A. Least restrictive response: Selecting a proportionate response and reassessing whether restrictions remain necessary. / Psychological first aid: Offering practical assistance and connection without pressuring a person to recount traumatic details.
B. Least restrictive response: Offering practical assistance and connection without pressuring a person to recount traumatic details. / Psychological first aid: Selecting a proportionate response and reassessing whether restrictions remain necessary.
C. Least restrictive response: Selecting a proportionate response and reassessing whether restrictions remain necessary. / Psychological first aid: Determining which situation requires immediate emergency action and which can be safely managed with timely follow-up.
D. Least restrictive response: Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number. / Psychological first aid: Offering practical assistance and connection without pressuring a person to recount traumatic details.

0678. A mental-health professional is supporting a student aged 12 in the after-school program. The key practice is identifying trusted adults and practical supports that can be activated now. Which course concept is most relevant?

A. Protective factors
B. Risk formulation
C. Post-crisis follow-up
D. Psychological first aid

0679. Which option is the clearest practical expression of Crisis assessment?

A. Selecting a proportionate response and reassessing whether restrictions remain necessary.
B. Using calm, respectful language, space, and choices rather than confrontation.
C. Clarifying immediate danger and available supports before moving to longer-term goals.
D. Offering practical assistance and connection without pressuring a person to recount traumatic details.

0680. A teenage client is receiving support in the after-school program. The teacher and counselor is guided by this practice: using calm, respectful language, space, and choices rather than confrontation. Which principle best fits?

A. Least restrictive response
B. Safety planning
C. De-escalation
D. Post-crisis follow-up

0681. A research trainee describes an intervention for a school-age child in the community mental-health service, centered on integrating current statements, context, access, supports, and changes rather than relying on one score. Which named idea is most relevant?

A. Crisis assessment
B. Warm handoff
C. Risk formulation
D. Protective factors

0682. Which comparison would correct a trainee's misunderstanding of Protective factors versus Warm handoff?

A. Protective factors: Personal, relational, and contextual resources that may reduce risk or support coping and recovery. / Warm handoff: A coordinated transfer in which the current helper actively connects the person to the next service.
B. Protective factors: Personal, relational, and contextual resources that may reduce risk or support coping and recovery. / Warm handoff: Planned reassessment and continuity contact after acute stabilization to review safety and connect ongoing care.
C. Protective factors: A humane, practical, early response that promotes safety, stabilization, connection, and access to support. / Warm handoff: A coordinated transfer in which the current helper actively connects the person to the next service.
D. Protective factors: A coordinated transfer in which the current helper actively connects the person to the next service. / Warm handoff: Personal, relational, and contextual resources that may reduce risk or support coping and recovery.

0683. A trainee must explain Protective factors. Which answer is accurate?

A. A contextual, ongoing synthesis of risk and protective factors, current intent, access, history, and foreseeable changes.
B. A collaborative, individualized plan identifying warning signs, coping steps, supportive contacts, and emergency resources.
C. Personal, relational, and contextual resources that may reduce risk or support coping and recovery.
D. Planned reassessment and continuity contact after acute stabilization to review safety and connect ongoing care.

0684. Which option preserves the correct meaning of both Risk formulation and Protective factors?

A. Risk formulation: A contextual, ongoing synthesis of risk and protective factors, current intent, access, history, and foreseeable changes. / Protective factors: A collaborative, individualized plan identifying warning signs, coping steps, supportive contacts, and emergency resources.
B. Risk formulation: A humane, practical, early response that promotes safety, stabilization, connection, and access to support. / Protective factors: Personal, relational, and contextual resources that may reduce risk or support coping and recovery.
C. Risk formulation: A contextual, ongoing synthesis of risk and protective factors, current intent, access, history, and foreseeable changes. / Protective factors: Personal, relational, and contextual resources that may reduce risk or support coping and recovery.
D. Risk formulation: Personal, relational, and contextual resources that may reduce risk or support coping and recovery. / Protective factors: A contextual, ongoing synthesis of risk and protective factors, current intent, access, history, and foreseeable changes.

0685. Which statement shows a sound practice-level distinction between Least restrictive response and Post-crisis follow-up?

A. Least restrictive response: Selecting a proportionate response and reassessing whether restrictions remain necessary. / Post-crisis follow-up: Integrating current statements, context, access, supports, and changes rather than relying on one score.
B. Least restrictive response: Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number. / Post-crisis follow-up: Checking whether the plan worked and whether additional services are needed after the immediate crisis.
C. Least restrictive response: Checking whether the plan worked and whether additional services are needed after the immediate crisis. / Post-crisis follow-up: Selecting a proportionate response and reassessing whether restrictions remain necessary.
D. Least restrictive response: Selecting a proportionate response and reassessing whether restrictions remain necessary. / Post-crisis follow-up: Checking whether the plan worked and whether additional services are needed after the immediate crisis.

0686. Choose the term that matches this definition: Prioritizing urgency and level of response based on immediate danger, need, and available resources.

A. Crisis triage
B. Least restrictive response
C. Risk formulation
D. Warm handoff

0687. Which option pairs the definitions of Crisis assessment and Post-crisis follow-up correctly, in that order?

A. Crisis assessment: Rapid, focused appraisal of immediate safety, precipitating events, supports, functioning, and urgent needs. / Post-crisis follow-up: Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety.
B. Crisis assessment: Rapid, focused appraisal of immediate safety, precipitating events, supports, functioning, and urgent needs. / Post-crisis follow-up: Planned reassessment and continuity contact after acute stabilization to review safety and connect ongoing care.
C. Crisis assessment: Planned reassessment and continuity contact after acute stabilization to review safety and connect ongoing care. / Post-crisis follow-up: Rapid, focused appraisal of immediate safety, precipitating events, supports, functioning, and urgent needs.
D. Crisis assessment: Prioritizing urgency and level of response based on immediate danger, need, and available resources. / Post-crisis follow-up: Planned reassessment and continuity contact after acute stabilization to review safety and connect ongoing care.

0688. An interdisciplinary team reviews a child of elementary-school age's case at the after-school program. The school support specialist recommends creating specific steps with the youth and caregivers for what to do if risk increases. Which course concept best fits?

A. Crisis triage
B. Warm handoff
C. Crisis assessment
D. Safety planning

0689. How are De-escalation and Risk formulation most accurately differentiated in this curriculum?

A. De-escalation: Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety. / Risk formulation: A contextual, ongoing synthesis of risk and protective factors, current intent, access, history, and foreseeable changes.
B. De-escalation: Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety. / Risk formulation: Prioritizing urgency and level of response based on immediate danger, need, and available resources.
C. De-escalation: Personal, relational, and contextual resources that may reduce risk or support coping and recovery. / Risk formulation: A contextual, ongoing synthesis of risk and protective factors, current intent, access, history, and foreseeable changes.
D. De-escalation: A contextual, ongoing synthesis of risk and protective factors, current intent, access, history, and foreseeable changes. / Risk formulation: Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety.

0690. How are Risk formulation and Crisis triage most accurately differentiated in this curriculum?

A. Risk formulation: A contextual, ongoing synthesis of risk and protective factors, current intent, access, history, and foreseeable changes. / Crisis triage: Prioritizing urgency and level of response based on immediate danger, need, and available resources.
B. Risk formulation: A collaborative, individualized plan identifying warning signs, coping steps, supportive contacts, and emergency resources. / Crisis triage: Prioritizing urgency and level of response based on immediate danger, need, and available resources.
C. Risk formulation: A contextual, ongoing synthesis of risk and protective factors, current intent, access, history, and foreseeable changes. / Crisis triage: Personal, relational, and contextual resources that may reduce risk or support coping and recovery.
D. Risk formulation: Prioritizing urgency and level of response based on immediate danger, need, and available resources. / Crisis triage: A contextual, ongoing synthesis of risk and protective factors, current intent, access, history, and foreseeable changes.

0691. Which paired example correctly applies Least restrictive response first and Crisis triage second?

A. Least restrictive response: Selecting a proportionate response and reassessing whether restrictions remain necessary. / Crisis triage: Checking whether the plan worked and whether additional services are needed after the immediate crisis.
B. Least restrictive response: Determining which situation requires immediate emergency action and which can be safely managed with timely follow-up. / Crisis triage: Selecting a proportionate response and reassessing whether restrictions remain necessary.
C. Least restrictive response: Integrating current statements, context, access, supports, and changes rather than relying on one score. / Crisis triage: Determining which situation requires immediate emergency action and which can be safely managed with timely follow-up.
D. Least restrictive response: Selecting a proportionate response and reassessing whether restrictions remain necessary. / Crisis triage: Determining which situation requires immediate emergency action and which can be safely managed with timely follow-up.

0692. Which statement most accurately defines Crisis assessment?

A. A collaborative, individualized plan identifying warning signs, coping steps, supportive contacts, and emergency resources.
B. Personal, relational, and contextual resources that may reduce risk or support coping and recovery.
C. Rapid, focused appraisal of immediate safety, precipitating events, supports, functioning, and urgent needs.
D. A coordinated transfer in which the current helper actively connects the person to the next service.

0693. Which comparison would correct a trainee's misunderstanding of Safety planning versus Crisis triage?

A. Safety planning: Personal, relational, and contextual resources that may reduce risk or support coping and recovery. / Crisis triage: Prioritizing urgency and level of response based on immediate danger, need, and available resources.
B. Safety planning: A collaborative, individualized plan identifying warning signs, coping steps, supportive contacts, and emergency resources. / Crisis triage: Prioritizing urgency and level of response based on immediate danger, need, and available resources.
C. Safety planning: A collaborative, individualized plan identifying warning signs, coping steps, supportive contacts, and emergency resources. / Crisis triage: Planned reassessment and continuity contact after acute stabilization to review safety and connect ongoing care.
D. Safety planning: Prioritizing urgency and level of response based on immediate danger, need, and available resources. / Crisis triage: A collaborative, individualized plan identifying warning signs, coping steps, supportive contacts, and emergency resources.

0694. Which pair of actions illustrates Psychological first aid and Warm handoff, respectively?

A. Psychological first aid: Offering practical assistance and connection without pressuring a person to recount traumatic details. / Warm handoff: Identifying trusted adults and practical supports that can be activated now.
B. Psychological first aid: Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number. / Warm handoff: Offering practical assistance and connection without pressuring a person to recount traumatic details.
C. Psychological first aid: Checking whether the plan worked and whether additional services are needed after the immediate crisis. / Warm handoff: Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number.
D. Psychological first aid: Offering practical assistance and connection without pressuring a person to recount traumatic details. / Warm handoff: Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number.

0695. Choose the response that best puts Safety planning into practice.

A. Selecting a proportionate response and reassessing whether restrictions remain necessary.
B. Identifying trusted adults and practical supports that can be activated now.
C. Determining which situation requires immediate emergency action and which can be safely managed with timely follow-up.
D. Creating specific steps with the youth and caregivers for what to do if risk increases.

0696. During service review in the multidisciplinary case conference, a research trainee describes offering practical assistance and connection without pressuring a person to recount traumatic details. for a young person aged 18. Which course idea is most applicable?

A. Warm handoff
B. Crisis assessment
C. Risk formulation
D. Psychological first aid

0697. Which choice aligns each practice with the correct idea, Protective factors or Psychological first aid?

A. Protective factors: Identifying trusted adults and practical supports that can be activated now. / Psychological first aid: Using calm, respectful language, space, and choices rather than confrontation.
B. Protective factors: Offering practical assistance and connection without pressuring a person to recount traumatic details. / Psychological first aid: Identifying trusted adults and practical supports that can be activated now.
C. Protective factors: Clarifying immediate danger and available supports before moving to longer-term goals. / Psychological first aid: Offering practical assistance and connection without pressuring a person to recount traumatic details.
D. Protective factors: Identifying trusted adults and practical supports that can be activated now. / Psychological first aid: Offering practical assistance and connection without pressuring a person to recount traumatic details.

0698. Choose the definition pair that correctly explains Crisis assessment first and Least restrictive response second.

A. Crisis assessment: Rapid, focused appraisal of immediate safety, precipitating events, supports, functioning, and urgent needs. / Least restrictive response: Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety.
B. Crisis assessment: The safest effective intervention that imposes the fewest necessary restrictions, consistent with law and policy. / Least restrictive response: Rapid, focused appraisal of immediate safety, precipitating events, supports, functioning, and urgent needs.
C. Crisis assessment: Rapid, focused appraisal of immediate safety, precipitating events, supports, functioning, and urgent needs. / Least restrictive response: The safest effective intervention that imposes the fewest necessary restrictions, consistent with law and policy.
D. Crisis assessment: A collaborative, individualized plan identifying warning signs, coping steps, supportive contacts, and emergency resources. / Least restrictive response: The safest effective intervention that imposes the fewest necessary restrictions, consistent with law and policy.

0699. Choose the definition pair that correctly explains Safety planning first and Crisis triage second.

A. Safety planning: A collaborative, individualized plan identifying warning signs, coping steps, supportive contacts, and emergency resources. / Crisis triage: Prioritizing urgency and level of response based on immediate danger, need, and available resources.
B. Safety planning: A collaborative, individualized plan identifying warning signs, coping steps, supportive contacts, and emergency resources. / Crisis triage: Planned reassessment and continuity contact after acute stabilization to review safety and connect ongoing care.
C. Safety planning: Personal, relational, and contextual resources that may reduce risk or support coping and recovery. / Crisis triage: Prioritizing urgency and level of response based on immediate danger, need, and available resources.
D. Safety planning: Prioritizing urgency and level of response based on immediate danger, need, and available resources. / Crisis triage: A collaborative, individualized plan identifying warning signs, coping steps, supportive contacts, and emergency resources.

0700. While supporting a student aged 9 in the classroom support meeting, a case coordinator adopts this practice: identifying trusted adults and practical supports that can be activated now. Which concept best explains the choice?

A. Crisis assessment
B. Protective factors
C. Least restrictive response
D. Risk formulation

0701. In the child guidance clinic, a consulting counselor explains why a adolescent student would benefit from integrating current statements, context, access, supports, and changes rather than relying on one score. Which course concept underpins the explanation?

A. Risk formulation
B. Warm handoff
C. Psychological first aid
D. Crisis assessment

0702. Which option preserves the correct meaning of both Crisis assessment and Crisis triage?

A. Crisis assessment: Rapid, focused appraisal of immediate safety, precipitating events, supports, functioning, and urgent needs. / Crisis triage: Prioritizing urgency and level of response based on immediate danger, need, and available resources.
B. Crisis assessment: A coordinated transfer in which the current helper actively connects the person to the next service. / Crisis triage: Prioritizing urgency and level of response based on immediate danger, need, and available resources.
C. Crisis assessment: Prioritizing urgency and level of response based on immediate danger, need, and available resources. / Crisis triage: Rapid, focused appraisal of immediate safety, precipitating events, supports, functioning, and urgent needs.
D. Crisis assessment: Rapid, focused appraisal of immediate safety, precipitating events, supports, functioning, and urgent needs. / Crisis triage: Planned reassessment and continuity contact after acute stabilization to review safety and connect ongoing care.

0703. Consider a student aged 12 receiving help in the telehealth session. The group facilitator focuses on offering practical assistance and connection without pressuring a person to recount traumatic details. Which term best describes the guiding idea?

A. De-escalation
B. Protective factors
C. Psychological first aid
D. Crisis assessment

0704. For a student aged 12 in the community service agency, a clinical supervisor makes this practice the immediate priority: using calm, respectful language, space, and choices rather than confrontation. Which concept fits best?

A. Post-crisis follow-up
B. De-escalation
C. Psychological first aid
D. Warm handoff

0705. A case discussion concerns a young adolescent client and a family therapist in the behavior-support review. The practitioner is considering selecting a proportionate response and reassessing whether restrictions remain necessary. Which principle is involved?

A. Least restrictive response
B. Warm handoff
C. Psychological first aid
D. Crisis assessment

0706. Which comparison would correct a trainee’s misunderstanding of Crisis assessment versus Least restrictive response?

A. Crisis assessment: A collaborative, individualized plan identifying warning signs, coping steps, supportive contacts, and emergency resources. / Least restrictive response: The safest effective intervention that imposes the fewest necessary restrictions, consistent with law and policy.
B. Crisis assessment: Rapid, focused appraisal of immediate safety, precipitating events, supports, functioning, and urgent needs. / Least restrictive response: Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety.
C. Crisis assessment: Rapid, focused appraisal of immediate safety, precipitating events, supports, functioning, and urgent needs. / Least restrictive response: The safest effective intervention that imposes the fewest necessary restrictions, consistent with law and policy.
D. Crisis assessment: The safest effective intervention that imposes the fewest necessary restrictions, consistent with law and policy. / Least restrictive response: Rapid, focused appraisal of immediate safety, precipitating events, supports, functioning, and urgent needs.

0707. A trainee must distinguish how Protective factors and Warm handoff guide practice. Which comparison is accurate?

A. Protective factors: Identifying trusted adults and practical supports that can be activated now. / Warm handoff: Checking whether the plan worked and whether additional services are needed after the immediate crisis.
B. Protective factors: Identifying trusted adults and practical supports that can be activated now. / Warm handoff: Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number.
C. Protective factors: Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number. / Warm handoff: Identifying trusted adults and practical supports that can be activated now.
D. Protective factors: Offering practical assistance and connection without pressuring a person to recount traumatic details. / Warm handoff: Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number.

0708. In a case note about a child aged 7, a mental-health professional working in the outpatient clinic records this priority: using calm, respectful language, space, and choices rather than confrontation. What principle is reflected?

A. Crisis assessment
B. Protective factors
C. De-escalation
D. Post-crisis follow-up

0709. A service team discusses a high-school student in the multidisciplinary case conference. Their proposed next step is creating specific steps with the youth and caregivers for what to do if risk increases. Which course concept supports it?

A. Safety planning
B. Warm handoff
C. De-escalation
D. Risk formulation

0710. In a supervision quiz, how should Psychological first aid be distinguished from Warm handoff?

A. Psychological first aid: A humane, practical, early response that promotes safety, stabilization, connection, and access to support. / Warm handoff: A coordinated transfer in which the current helper actively connects the person to the next service.
B. Psychological first aid: A humane, practical, early response that promotes safety, stabilization, connection, and access to support. / Warm handoff: Personal, relational, and contextual resources that may reduce risk or support coping and recovery.
C. Psychological first aid: A coordinated transfer in which the current helper actively connects the person to the next service. / Warm handoff: A humane, practical, early response that promotes safety, stabilization, connection, and access to support.
D. Psychological first aid: Planned reassessment and continuity contact after acute stabilization to review safety and connect ongoing care. / Warm handoff: A coordinated transfer in which the current helper actively connects the person to the next service.

0711. Which description belongs with the term Psychological first aid?

A. The safest effective intervention that imposes the fewest necessary restrictions, consistent with law and policy.
B. A contextual, ongoing synthesis of risk and protective factors, current intent, access, history, and foreseeable changes.
C. Rapid, focused appraisal of immediate safety, precipitating events, supports, functioning, and urgent needs.
D. A humane, practical, early response that promotes safety, stabilization, connection, and access to support.

0712. In the family session, a case coordinator is considering this approach for a adolescent student: selecting a proportionate response and reassessing whether restrictions remain necessary. Which framework does it represent?

A. Post-crisis follow-up
B. Risk formulation
C. Least restrictive response
D. Crisis assessment

0713. Which option correctly matches each concept to its practice focus: Protective factors and Psychological first aid?

A. Protective factors: Offering practical assistance and connection without pressuring a person to recount traumatic details. / Psychological first aid: Identifying trusted adults and practical supports that can be activated now.
B. Protective factors: Identifying trusted adults and practical supports that can be activated now. / Psychological first aid: Offering practical assistance and connection without pressuring a person to recount traumatic details.
C. Protective factors: Clarifying immediate danger and available supports before moving to longer-term goals. / Psychological first aid: Offering practical assistance and connection without pressuring a person to recount traumatic details.
D. Protective factors: Identifying trusted adults and practical supports that can be activated now. / Psychological first aid: Using calm, respectful language, space, and choices rather than confrontation.

0714. During service review in the school-based service, a community practitioner describes determining which situation requires immediate emergency action and which can be safely managed with timely follow-up. for a client in early adolescence. Which course idea is most applicable?

A. Crisis triage
B. Post-crisis follow-up
C. Psychological first aid
D. Protective factors

0715. A school-age child is receiving support in the caregiver consultation. The group facilitator is guided by this practice: checking whether the plan worked and whether additional services are needed after the immediate crisis. Which principle best fits?

A. Crisis assessment
B. Protective factors
C. Post-crisis follow-up
D. De-escalation

0716. While supporting a student aged 12 in the clinical planning session, a family therapist adopts this practice: contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number. Which concept best explains the choice?

A. Least restrictive response
B. Warm handoff
C. Safety planning
D. Risk formulation

0717. Which paired example correctly applies Safety planning first and Post-crisis follow-up second?

A. Safety planning: Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number. / Post-crisis follow-up: Checking whether the plan worked and whether additional services are needed after the immediate crisis.
B. Safety planning: Creating specific steps with the youth and caregivers for what to do if risk increases. / Post-crisis follow-up: Offering practical assistance and connection without pressuring a person to recount traumatic details.
C. Safety planning: Checking whether the plan worked and whether additional services are needed after the immediate crisis. / Post-crisis follow-up: Creating specific steps with the youth and caregivers for what to do if risk increases.
D. Safety planning: Creating specific steps with the youth and caregivers for what to do if risk increases. / Post-crisis follow-up: Checking whether the plan worked and whether additional services are needed after the immediate crisis.

0718. Which option correctly matches each concept to its practice focus: De-escalation and Warm handoff?

A. De-escalation: Using calm, respectful language, space, and choices rather than confrontation. / Warm handoff: Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number.
B. De-escalation: Selecting a proportionate response and reassessing whether restrictions remain necessary. / Warm handoff: Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number.
C. De-escalation: Using calm, respectful language, space, and choices rather than confrontation. / Warm handoff: Creating specific steps with the youth and caregivers for what to do if risk increases.
D. De-escalation: Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number. / Warm handoff: Using calm, respectful language, space, and choices rather than confrontation.

0719. At the supervision meeting, a community practitioner reviews whether a plan for a older adolescent client is appropriate. The relevant practice is clarifying immediate danger and available supports before moving to longer-term goals. Which concept is tested?

A. Psychological first aid
B. Risk formulation
C. Warm handoff
D. Crisis assessment

0720. Which paired example correctly applies Warm handoff first and Post-crisis follow-up second?

A. Warm handoff: Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number. / Post-crisis follow-up: Checking whether the plan worked and whether additional services are needed after the immediate crisis.
B. Warm handoff: Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number. / Post-crisis follow-up: Selecting a proportionate response and reassessing whether restrictions remain necessary.
C. Warm handoff: Checking whether the plan worked and whether additional services are needed after the immediate crisis. / Post-crisis follow-up: Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number.
D. Warm handoff: Identifying trusted adults and practical supports that can be activated now. / Post-crisis follow-up: Checking whether the plan worked and whether additional services are needed after the immediate crisis.

0721. A therapist is asked what should shape a client in late adolescence's support in the youth advocacy program. The proposed focus is selecting a proportionate response and reassessing whether restrictions remain necessary. Which principle does it represent?

A. Least restrictive response
B. De-escalation
C. Warm handoff
D. Crisis assessment

0722. While supporting a young person aged 16 in the after-school program, a parent educator adopts this practice: selecting a proportionate response and reassessing whether restrictions remain necessary. Which concept best explains the choice?

A. Risk formulation
B. Least restrictive response
C. Psychological first aid
D. Warm handoff

0723. A trainee must explain Warm handoff. Which answer is accurate?

A. A coordinated transfer in which the current helper actively connects the person to the next service.
B. A collaborative, individualized plan identifying warning signs, coping steps, supportive contacts, and emergency resources.
C. Rapid, focused appraisal of immediate safety, precipitating events, supports, functioning, and urgent needs.
D. Planned reassessment and continuity contact after acute stabilization to review safety and connect ongoing care.

0724. Which named construct is captured by this account? A coordinated transfer in which the current helper actively connects the person to the next service.

A. Safety planning
B. Least restrictive response
C. Warm handoff
D. Risk formulation

0725. A trainee must distinguish how Crisis assessment and Protective factors guide practice. Which comparison is accurate?

A. Crisis assessment: Checking whether the plan worked and whether additional services are needed after the immediate crisis. / Protective factors: Identifying trusted adults and practical supports that can be activated now.
B. Crisis assessment: Identifying trusted adults and practical supports that can be activated now. / Protective factors: Clarifying immediate danger and available supports before moving to longer-term goals.
C. Crisis assessment: Clarifying immediate danger and available supports before moving to longer-term goals. / Protective factors: Offering practical assistance and connection without pressuring a person to recount traumatic details.
D. Crisis assessment: Clarifying immediate danger and available supports before moving to longer-term goals. / Protective factors: Identifying trusted adults and practical supports that can be activated now.

0726. Which option correctly matches each concept to its practice focus: Protective factors and Crisis triage?

A. Protective factors: Determining which situation requires immediate emergency action and which can be safely managed with timely follow-up. / Crisis triage: Identifying trusted adults and practical supports that can be activated now.
B. Protective factors: Identifying trusted adults and practical supports that can be activated now. / Crisis triage: Determining which situation requires immediate emergency action and which can be safely managed with timely follow-up.
C. Protective factors: Identifying trusted adults and practical supports that can be activated now. / Crisis triage: Creating specific steps with the youth and caregivers for what to do if risk increases.
D. Protective factors: Offering practical assistance and connection without pressuring a person to recount traumatic details. / Crisis triage: Determining which situation requires immediate emergency action and which can be safely managed with timely follow-up.

0727. Select the best explanation of Crisis assessment.

A. Prioritizing urgency and level of response based on immediate danger, need, and available resources.
B. Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety.
C. Rapid, focused appraisal of immediate safety, precipitating events, supports, functioning, and urgent needs.
D. Planned reassessment and continuity contact after acute stabilization to review safety and connect ongoing care.

0728. A child aged 11 is receiving support in the family resource center. The youth worker is guided by this practice: integrating current statements, context, access, supports, and changes rather than relying on one score. Which principle best fits?

A. Warm handoff
B. Risk formulation
C. Protective factors
D. Crisis triage

0729. Which choice aligns each practice with the correct idea, Risk formulation or Post-crisis follow-up?

A. Risk formulation: Integrating current statements, context, access, supports, and changes rather than relying on one score. / Post-crisis follow-up: Checking whether the plan worked and whether additional services are needed after the immediate crisis.
B. Risk formulation: Integrating current statements, context, access, supports, and changes rather than relying on one score. / Post-crisis follow-up: Using calm, respectful language, space, and choices rather than confrontation.
C. Risk formulation: Checking whether the plan worked and whether additional services are needed after the immediate crisis. / Post-crisis follow-up: Integrating current statements, context, access, supports, and changes rather than relying on one score.
D. Risk formulation: Identifying trusted adults and practical supports that can be activated now. / Post-crisis follow-up: Checking whether the plan worked and whether additional services are needed after the immediate crisis.

0730. How should a practitioner distinguish the applications of Protective factors and Least restrictive response?

A. Protective factors: Identifying trusted adults and practical supports that can be activated now. / Least restrictive response: Clarifying immediate danger and available supports before moving to longer-term goals.
B. Protective factors: Identifying trusted adults and practical supports that can be activated now. / Least restrictive response: Selecting a proportionate response and reassessing whether restrictions remain necessary.
C. Protective factors: Creating specific steps with the youth and caregivers for what to do if risk increases. / Least restrictive response: Selecting a proportionate response and reassessing whether restrictions remain necessary.
D. Protective factors: Selecting a proportionate response and reassessing whether restrictions remain necessary. / Least restrictive response: Identifying trusted adults and practical supports that can be activated now.

0731. In the family session, the agreed focus for a therapist working with a child aged 7 is contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number. Which concept names this focus?

A. Crisis triage
B. Least restrictive response
C. Safety planning
D. Warm handoff

0732. Which comparison correctly distinguishes De-escalation from Least restrictive response?

A. De-escalation: Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety. / Least restrictive response: A coordinated transfer in which the current helper actively connects the person to the next service.
B. De-escalation: Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety. / Least restrictive response: The safest effective intervention that imposes the fewest necessary restrictions, consistent with law and policy.
C. De-escalation: Prioritizing urgency and level of response based on immediate danger, need, and available resources. / Least restrictive response: The safest effective intervention that imposes the fewest necessary restrictions, consistent with law and policy.
D. De-escalation: The safest effective intervention that imposes the fewest necessary restrictions, consistent with law and policy. / Least restrictive response: Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety.

0733. Which applied comparison correctly identifies what belongs to Protective factors versus Psychological first aid?

A. Protective factors: Clarifying immediate danger and available supports before moving to longer-term goals. / Psychological first aid: Offering practical assistance and connection without pressuring a person to recount traumatic details.
B. Protective factors: Offering practical assistance and connection without pressuring a person to recount traumatic details. / Psychological first aid: Identifying trusted adults and practical supports that can be activated now.
C. Protective factors: Identifying trusted adults and practical supports that can be activated now. / Psychological first aid: Using calm, respectful language, space, and choices rather than confrontation.
D. Protective factors: Identifying trusted adults and practical supports that can be activated now. / Psychological first aid: Offering practical assistance and connection without pressuring a person to recount traumatic details.

0734. Which description belongs with the term Least restrictive response?

A. Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety.
B. A humane, practical, early response that promotes safety, stabilization, connection, and access to support.
C. Rapid, focused appraisal of immediate safety, precipitating events, supports, functioning, and urgent needs.
D. The safest effective intervention that imposes the fewest necessary restrictions, consistent with law and policy.

0735. A member of a clinical team is preparing a follow-up plan for a child aged 8 in the counseling practicum. The plan calls for using calm, respectful language, space, and choices rather than confrontation. Which concept names this approach?

A. Crisis assessment
B. De-escalation
C. Warm handoff
D. Crisis triage

0736. Which option preserves the correct meaning of both Risk formulation and Crisis triage?

A. Risk formulation: A collaborative, individualized plan identifying warning signs, coping steps, supportive contacts, and emergency resources. / Crisis triage: Prioritizing urgency and level of response based on immediate danger, need, and available resources.
B. Risk formulation: A contextual, ongoing synthesis of risk and protective factors, current intent, access, history, and foreseeable changes. / Crisis triage: Prioritizing urgency and level of response based on immediate danger, need, and available resources.
C. Risk formulation: Prioritizing urgency and level of response based on immediate danger, need, and available resources. / Crisis triage: A contextual, ongoing synthesis of risk and protective factors, current intent, access, history, and foreseeable changes.
D. Risk formulation: A contextual, ongoing synthesis of risk and protective factors, current intent, access, history, and foreseeable changes. / Crisis triage: Personal, relational, and contextual resources that may reduce risk or support coping and recovery.

0737. How should a practitioner distinguish the applications of Crisis assessment and Post-crisis follow-up?

A. Crisis assessment: Clarifying immediate danger and available supports before moving to longer-term goals. / Post-crisis follow-up: Checking whether the plan worked and whether additional services are needed after the immediate crisis.
B. Crisis assessment: Determining which situation requires immediate emergency action and which can be safely managed with timely follow-up. / Post-crisis follow-up: Checking whether the plan worked and whether additional services are needed after the immediate crisis.
C. Crisis assessment: Clarifying immediate danger and available supports before moving to longer-term goals. / Post-crisis follow-up: Using calm, respectful language, space, and choices rather than confrontation.
D. Crisis assessment: Checking whether the plan worked and whether additional services are needed after the immediate crisis. / Post-crisis follow-up: Clarifying immediate danger and available supports before moving to longer-term goals.

0738. In a supervision quiz, how should Risk formulation be distinguished from Post-crisis follow-up?

A. Risk formulation: A contextual, ongoing synthesis of risk and protective factors, current intent, access, history, and foreseeable changes. / Post-crisis follow-up: Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety.
B. Risk formulation: A contextual, ongoing synthesis of risk and protective factors, current intent, access, history, and foreseeable changes. / Post-crisis follow-up: Planned reassessment and continuity contact after acute stabilization to review safety and connect ongoing care.
C. Risk formulation: Planned reassessment and continuity contact after acute stabilization to review safety and connect ongoing care. / Post-crisis follow-up: A contextual, ongoing synthesis of risk and protective factors, current intent, access, history, and foreseeable changes.
D. Risk formulation: Personal, relational, and contextual resources that may reduce risk or support coping and recovery. / Post-crisis follow-up: Planned reassessment and continuity contact after acute stabilization to review safety and connect ongoing care.

0739. For a young person aged 18 seen in the youth group, the community practitioner recommends a plan built around creating specific steps with the youth and caregivers for what to do if risk increases. Which concept is reflected?

A. Protective factors
B. Post-crisis follow-up
C. Safety planning
D. Least restrictive response

0740. Which course concept is defined as follows: A coordinated transfer in which the current helper actively connects the person to the next service.

A. Least restrictive response
B. Post-crisis follow-up
C. Warm handoff
D. Psychological first aid

0741. How should a practitioner distinguish the applications of Safety planning and Protective factors?

A. Safety planning: Identifying trusted adults and practical supports that can be activated now. / Protective factors: Creating specific steps with the youth and caregivers for what to do if risk increases.
B. Safety planning: Creating specific steps with the youth and caregivers for what to do if risk increases. / Protective factors: Integrating current statements, context, access, supports, and changes rather than relying on one score.
C. Safety planning: Creating specific steps with the youth and caregivers for what to do if risk increases. / Protective factors: Identifying trusted adults and practical supports that can be activated now.
D. Safety planning: Clarifying immediate danger and available supports before moving to longer-term goals. / Protective factors: Identifying trusted adults and practical supports that can be activated now.

0742. Which statement shows a sound practice-level distinction between Crisis assessment and Crisis triage?

A. Crisis assessment: Clarifying immediate danger and available supports before moving to longer-term goals. / Crisis triage: Checking whether the plan worked and whether additional services are needed after the immediate crisis.
B. Crisis assessment: Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number. / Crisis triage: Determining which situation requires immediate emergency action and which can be safely managed with timely follow-up.
C. Crisis assessment: Determining which situation requires immediate emergency action and which can be safely managed with timely follow-up. / Crisis triage: Clarifying immediate danger and available supports before moving to longer-term goals.
D. Crisis assessment: Clarifying immediate danger and available supports before moving to longer-term goals. / Crisis triage: Determining which situation requires immediate emergency action and which can be safely managed with timely follow-up.

0743. Identify the most precise label for this idea: Planned reassessment and continuity contact after acute stabilization to review safety and connect ongoing care.

A. Protective factors
B. Post-crisis follow-up
C. Crisis assessment
D. Crisis triage

0744. A service team discusses a middle-school student in the community mental-health service. Their proposed next step is contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number. Which course concept supports it?

A. Risk formulation
B. Safety planning
C. Psychological first aid
D. Warm handoff

0745. Which paired example correctly applies Risk formulation first and Protective factors second?

A. Risk formulation: Integrating current statements, context, access, supports, and changes rather than relying on one score. / Protective factors: Identifying trusted adults and practical supports that can be activated now.
B. Risk formulation: Offering practical assistance and connection without pressuring a person to recount traumatic details. / Protective factors: Identifying trusted adults and practical supports that can be activated now.
C. Risk formulation: Identifying trusted adults and practical supports that can be activated now. / Protective factors: Integrating current statements, context, access, supports, and changes rather than relying on one score.
D. Risk formulation: Integrating current statements, context, access, supports, and changes rather than relying on one score. / Protective factors: Creating specific steps with the youth and caregivers for what to do if risk increases.

0746. In a case note about a child aged 11, a member of a clinical team working in the youth advocacy program records this priority: creating specific steps with the youth and caregivers for what to do if risk increases. What principle is reflected?

A. Warm handoff
B. Post-crisis follow-up
C. Safety planning
D. Crisis assessment

0747. While consulting in the student-support meeting, a member of a clinical team supports a child aged 14 by using this approach: clarifying immediate danger and available supports before moving to longer-term goals. Which concept is being applied?

A. Protective factors
B. Crisis assessment
C. Psychological first aid
D. Crisis triage

0748. A supervisor asks how Crisis assessment would appear in practice. Which choice should be selected?

A. Clarifying immediate danger and available supports before moving to longer-term goals.
B. Integrating current statements, context, access, supports, and changes rather than relying on one score.
C. Offering practical assistance and connection without pressuring a person to recount traumatic details.
D. Selecting a proportionate response and reassessing whether restrictions remain necessary.

0749. In the school consultation, a school counselor explains why a middle-school student would benefit from checking whether the plan worked and whether additional services are needed after the immediate crisis. Which course concept underpins the explanation?

A. Least restrictive response
B. Crisis triage
C. Safety planning
D. Post-crisis follow-up

0750. Which pair of actions illustrates Psychological first aid and Crisis triage, respectively?

A. Psychological first aid: Offering practical assistance and connection without pressuring a person to recount traumatic details. / Crisis triage: Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number.
B. Psychological first aid: Identifying trusted adults and practical supports that can be activated now. / Crisis triage: Determining which situation requires immediate emergency action and which can be safely managed with timely follow-up.
C. Psychological first aid: Determining which situation requires immediate emergency action and which can be safely managed with timely follow-up. / Crisis triage: Offering practical assistance and connection without pressuring a person to recount traumatic details.
D. Psychological first aid: Offering practical assistance and connection without pressuring a person to recount traumatic details. / Crisis triage: Determining which situation requires immediate emergency action and which can be safely managed with timely follow-up.

0751. A student aged 12 and a mental-health professional are reviewing goals in the after-school program. The agreed action is identifying trusted adults and practical supports that can be activated now. Which principle best accounts for it?

A. Post-crisis follow-up
B. Protective factors
C. Least restrictive response
D. Warm handoff

0752. Which pair of actions illustrates Crisis assessment and Warm handoff, respectively?

A. Crisis assessment: Clarifying immediate danger and available supports before moving to longer-term goals. / Warm handoff: Selecting a proportionate response and reassessing whether restrictions remain necessary.
B. Crisis assessment: Using calm, respectful language, space, and choices rather than confrontation. / Warm handoff: Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number.
C. Crisis assessment: Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number. / Warm handoff: Clarifying immediate danger and available supports before moving to longer-term goals.
D. Crisis assessment: Clarifying immediate danger and available supports before moving to longer-term goals. / Warm handoff: Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number.

0753. A behavior specialist is asked to evaluate a proposed service for a child aged 6 in the community mental-health service. The defining feature is creating specific steps with the youth and caregivers for what to do if risk increases. Which concept fits?

A. Least restrictive response
B. Safety planning
C. Warm handoff
D. Crisis triage

0754. Which option is the clearest practical expression of Psychological first aid?

A. Selecting a proportionate response and reassessing whether restrictions remain necessary.
B. Creating specific steps with the youth and caregivers for what to do if risk increases.
C. Using calm, respectful language, space, and choices rather than confrontation.
D. Offering practical assistance and connection without pressuring a person to recount traumatic details.

0755. Choose the definition pair that correctly explains Risk formulation first and Protective factors second.

A. Risk formulation: A contextual, ongoing synthesis of risk and protective factors, current intent, access, history, and foreseeable changes. / Protective factors: Personal, relational, and contextual resources that may reduce risk or support coping and recovery.
B. Risk formulation: A humane, practical, early response that promotes safety, stabilization, connection, and access to support. / Protective factors: Personal, relational, and contextual resources that may reduce risk or support coping and recovery.
C. Risk formulation: Personal, relational, and contextual resources that may reduce risk or support coping and recovery. / Protective factors: A contextual, ongoing synthesis of risk and protective factors, current intent, access, history, and foreseeable changes.
D. Risk formulation: A contextual, ongoing synthesis of risk and protective factors, current intent, access, history, and foreseeable changes. / Protective factors: A collaborative, individualized plan identifying warning signs, coping steps, supportive contacts, and emergency resources.

0756. Which choice aligns each practice with the correct idea, Crisis assessment or Risk formulation?

A. Crisis assessment: Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number. / Risk formulation: Integrating current statements, context, access, supports, and changes rather than relying on one score.
B. Crisis assessment: Clarifying immediate danger and available supports before moving to longer-term goals. / Risk formulation: Integrating current statements, context, access, supports, and changes rather than relying on one score.
C. Crisis assessment: Integrating current statements, context, access, supports, and changes rather than relying on one score. / Risk formulation: Clarifying immediate danger and available supports before moving to longer-term goals.
D. Crisis assessment: Clarifying immediate danger and available supports before moving to longer-term goals. / Risk formulation: Using calm, respectful language, space, and choices rather than confrontation.

0757. In a supervision quiz, how should Protective factors be distinguished from Warm handoff?

A. Protective factors: Personal, relational, and contextual resources that may reduce risk or support coping and recovery. / Warm handoff: A coordinated transfer in which the current helper actively connects the person to the next service.
B. Protective factors: Personal, relational, and contextual resources that may reduce risk or support coping and recovery. / Warm handoff: Planned reassessment and continuity contact after acute stabilization to review safety and connect ongoing care.
C. Protective factors: A humane, practical, early response that promotes safety, stabilization, connection, and access to support. / Warm handoff: A coordinated transfer in which the current helper actively connects the person to the next service.
D. Protective factors: A coordinated transfer in which the current helper actively connects the person to the next service. / Warm handoff: Personal, relational, and contextual resources that may reduce risk or support coping and recovery.

0758. Which statement most accurately defines Post-crisis follow-up?

A. Personal, relational, and contextual resources that may reduce risk or support coping and recovery.
B. The safest effective intervention that imposes the fewest necessary restrictions, consistent with law and policy.
C. Prioritizing urgency and level of response based on immediate danger, need, and available resources.
D. Planned reassessment and continuity contact after acute stabilization to review safety and connect ongoing care.

0759. Which statement shows a sound practice-level distinction between Least restrictive response and Psychological first aid?

A. Least restrictive response: Offering practical assistance and connection without pressuring a person to recount traumatic details. / Psychological first aid: Selecting a proportionate response and reassessing whether restrictions remain necessary.
B. Least restrictive response: Selecting a proportionate response and reassessing whether restrictions remain necessary. / Psychological first aid: Determining which situation requires immediate emergency action and which can be safely managed with timely follow-up.
C. Least restrictive response: Selecting a proportionate response and reassessing whether restrictions remain necessary. / Psychological first aid: Offering practical assistance and connection without pressuring a person to recount traumatic details.
D. Least restrictive response: Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number. / Psychological first aid: Offering practical assistance and connection without pressuring a person to recount traumatic details.

0760. Which description belongs with the term Protective factors?

A. Personal, relational, and contextual resources that may reduce risk or support coping and recovery.
B. A contextual, ongoing synthesis of risk and protective factors, current intent, access, history, and foreseeable changes.
C. A coordinated transfer in which the current helper actively connects the person to the next service.
D. Planned reassessment and continuity contact after acute stabilization to review safety and connect ongoing care.

0761. A teacher and counselor is asked to justify a plan for a child aged 11 in the community service agency. It calls for contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number. Which concept provides the rationale?

A. Safety planning
B. Crisis triage
C. Crisis assessment
D. Warm handoff

0762. A student confuses De-escalation with Psychological first aid. Which explanation most accurately separates them?

A. De-escalation: Personal, relational, and contextual resources that may reduce risk or support coping and recovery. / Psychological first aid: A humane, practical, early response that promotes safety, stabilization, connection, and access to support.
B. De-escalation: Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety. / Psychological first aid: A humane, practical, early response that promotes safety, stabilization, connection, and access to support.
C. De-escalation: Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety. / Psychological first aid: The safest effective intervention that imposes the fewest necessary restrictions, consistent with law and policy.
D. De-escalation: A humane, practical, early response that promotes safety, stabilization, connection, and access to support. / Psychological first aid: Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety.

0763. Which paired example correctly applies Risk formulation first and Least restrictive response second?

A. Risk formulation: Integrating current statements, context, access, supports, and changes rather than relying on one score. / Least restrictive response: Identifying trusted adults and practical supports that can be activated now.
B. Risk formulation: Creating specific steps with the youth and caregivers for what to do if risk increases. / Least restrictive response: Selecting a proportionate response and reassessing whether restrictions remain necessary.
C. Risk formulation: Integrating current statements, context, access, supports, and changes rather than relying on one score. / Least restrictive response: Selecting a proportionate response and reassessing whether restrictions remain necessary.
D. Risk formulation: Selecting a proportionate response and reassessing whether restrictions remain necessary. / Least restrictive response: Integrating current statements, context, access, supports, and changes rather than relying on one score.

0764. Choose the practice comparison that best separates Crisis assessment from Warm handoff.

A. Crisis assessment: Clarifying immediate danger and available supports before moving to longer-term goals. / Warm handoff: Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number.
B. Crisis assessment: Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number. / Warm handoff: Clarifying immediate danger and available supports before moving to longer-term goals.
C. Crisis assessment: Using calm, respectful language, space, and choices rather than confrontation. / Warm handoff: Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number.
D. Crisis assessment: Clarifying immediate danger and available supports before moving to longer-term goals. / Warm handoff: Selecting a proportionate response and reassessing whether restrictions remain necessary.

0765. While supporting a middle-school student in the family resource center, a school-based clinician adopts this practice: offering practical assistance and connection without pressuring a person to recount traumatic details. Which concept best explains the choice?

A. Protective factors
B. Psychological first aid
C. Safety planning
D. De-escalation

0766. A student aged 15 and a member of a clinical team are reviewing goals in the school counseling office. The agreed action is contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number. Which principle best accounts for it?

A. Warm handoff
B. De-escalation
C. Crisis triage
D. Crisis assessment

0767. Which paired example correctly applies Crisis triage first and Post-crisis follow-up second?

A. Crisis triage: Determining which situation requires immediate emergency action and which can be safely managed with timely follow-up. / Post-crisis follow-up: Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number.
B. Crisis triage: Using calm, respectful language, space, and choices rather than confrontation. / Post-crisis follow-up: Checking whether the plan worked and whether additional services are needed after the immediate crisis.
C. Crisis triage: Checking whether the plan worked and whether additional services are needed after the immediate crisis. / Post-crisis follow-up: Determining which situation requires immediate emergency action and which can be safely managed with timely follow-up.
D. Crisis triage: Determining which situation requires immediate emergency action and which can be safely managed with timely follow-up. / Post-crisis follow-up: Checking whether the plan worked and whether additional services are needed after the immediate crisis.

0768. Which pair of actions illustrates Psychological first aid and Post-crisis follow-up, respectively?

A. Psychological first aid: Integrating current statements, context, access, supports, and changes rather than relying on one score. / Post-crisis follow-up: Checking whether the plan worked and whether additional services are needed after the immediate crisis.
B. Psychological first aid: Checking whether the plan worked and whether additional services are needed after the immediate crisis. / Post-crisis follow-up: Offering practical assistance and connection without pressuring a person to recount traumatic details.
C. Psychological first aid: Offering practical assistance and connection without pressuring a person to recount traumatic details. / Post-crisis follow-up: Clarifying immediate danger and available supports before moving to longer-term goals.
D. Psychological first aid: Offering practical assistance and connection without pressuring a person to recount traumatic details. / Post-crisis follow-up: Checking whether the plan worked and whether additional services are needed after the immediate crisis.

0769. In the community service agency, a school counselor describes the most appropriate support for a young person aged 16 as integrating current statements, context, access, supports, and changes rather than relying on one score. Which framework is being applied?

A. Risk formulation
B. Warm handoff
C. Crisis triage
D. Crisis assessment

0770. Which choice aligns each practice with the correct idea, Psychological first aid or Crisis triage?

A. Psychological first aid: Offering practical assistance and connection without pressuring a person to recount traumatic details. / Crisis triage: Determining which situation requires immediate emergency action and which can be safely managed with timely follow-up.
B. Psychological first aid: Offering practical assistance and connection without pressuring a person to recount traumatic details. / Crisis triage: Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number.
C. Psychological first aid: Determining which situation requires immediate emergency action and which can be safely managed with timely follow-up. / Crisis triage: Offering practical assistance and connection without pressuring a person to recount traumatic details.
D. Psychological first aid: Identifying trusted adults and practical supports that can be activated now. / Crisis triage: Determining which situation requires immediate emergency action and which can be safely managed with timely follow-up.

0771. A service team discusses a young person aged 16 in the telehealth session. Their proposed next step is determining which situation requires immediate emergency action and which can be safely managed with timely follow-up. Which course concept supports it?

A. Warm handoff
B. Least restrictive response
C. Crisis triage
D. Protective factors

0772. A young person aged 16 and a assessment clinician are reviewing goals in the school consultation. The agreed action is creating specific steps with the youth and caregivers for what to do if risk increases. Which principle best accounts for it?

A. De-escalation
B. Crisis assessment
C. Risk formulation
D. Safety planning

0773. Consider a client in early adolescence receiving help in the child guidance clinic. The school counselor focuses on contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number. Which term best describes the guiding idea?

A. Post-crisis follow-up
B. Risk formulation
C. Psychological first aid
D. Warm handoff

0774. Which statement shows a sound practice-level distinction between Safety planning and De-escalation?

A. Safety planning: Clarifying immediate danger and available supports before moving to longer-term goals. / De-escalation: Using calm, respectful language, space, and choices rather than confrontation.
B. Safety planning: Creating specific steps with the youth and caregivers for what to do if risk increases. / De-escalation: Identifying trusted adults and practical supports that can be activated now.
C. Safety planning: Creating specific steps with the youth and caregivers for what to do if risk increases. / De-escalation: Using calm, respectful language, space, and choices rather than confrontation.
D. Safety planning: Using calm, respectful language, space, and choices rather than confrontation. / De-escalation: Creating specific steps with the youth and caregivers for what to do if risk increases.

0775. A research trainee describes an intervention for a young person aged 13 in the parent meeting, centered on contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number. Which named idea is most relevant?

A. Least restrictive response
B. Warm handoff
C. De-escalation
D. Psychological first aid

0776. Which comparison correctly distinguishes Psychological first aid from Crisis triage?

A. Psychological first aid: A humane, practical, early response that promotes safety, stabilization, connection, and access to support. / Crisis triage: A coordinated transfer in which the current helper actively connects the person to the next service.
B. Psychological first aid: A humane, practical, early response that promotes safety, stabilization, connection, and access to support. / Crisis triage: Prioritizing urgency and level of response based on immediate danger, need, and available resources.
C. Psychological first aid: Prioritizing urgency and level of response based on immediate danger, need, and available resources. / Crisis triage: A humane, practical, early response that promotes safety, stabilization, connection, and access to support.
D. Psychological first aid: Personal, relational, and contextual resources that may reduce risk or support coping and recovery. / Crisis triage: Prioritizing urgency and level of response based on immediate danger, need, and available resources.

0777. While consulting in the outpatient clinic, a supervised trainee supports a young person aged 13 by using this approach: determining which situation requires immediate emergency action and which can be safely managed with timely follow-up. Which concept is being applied?

A. Crisis triage
B. De-escalation
C. Post-crisis follow-up
D. Risk formulation

0778. A mental-health professional prepares for a session in the classroom support meeting with a child of elementary-school age. The intended approach is contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number. Which concept is most relevant?

A. De-escalation
B. Post-crisis follow-up
C. Warm handoff
D. Risk formulation

0779. Which professional action most closely applies Crisis assessment?

A. Clarifying immediate danger and available supports before moving to longer-term goals.
B. Offering practical assistance and connection without pressuring a person to recount traumatic details.
C. Integrating current statements, context, access, supports, and changes rather than relying on one score.
D. Checking whether the plan worked and whether additional services are needed after the immediate crisis.

0780. A child of elementary-school age is receiving support in the clinical planning session. The consulting counselor is guided by this practice: selecting a proportionate response and reassessing whether restrictions remain necessary. Which principle best fits?

A. Least restrictive response
B. Safety planning
C. Psychological first aid
D. Protective factors

0781. Which statement accurately contrasts the course concepts Crisis triage and Warm handoff?

A. Crisis triage: Planned reassessment and continuity contact after acute stabilization to review safety and connect ongoing care. / Warm handoff: A coordinated transfer in which the current helper actively connects the person to the next service.
B. Crisis triage: Prioritizing urgency and level of response based on immediate danger, need, and available resources. / Warm handoff: A contextual, ongoing synthesis of risk and protective factors, current intent, access, history, and foreseeable changes.
C. Crisis triage: Prioritizing urgency and level of response based on immediate danger, need, and available resources. / Warm handoff: A coordinated transfer in which the current helper actively connects the person to the next service.
D. Crisis triage: A coordinated transfer in which the current helper actively connects the person to the next service. / Warm handoff: Prioritizing urgency and level of response based on immediate danger, need, and available resources.

0782. When reviewing a student aged 15’s plan in the school consultation, the family therapist notes that the next step is determining which situation requires immediate emergency action and which can be safely managed with timely follow-up. Which concept guides this step?

A. Post-crisis follow-up
B. Crisis triage
C. Least restrictive response
D. De-escalation

0783. Which professional action most closely applies Post-crisis follow-up?

A. Integrating current statements, context, access, supports, and changes rather than relying on one score.
B. Determining which situation requires immediate emergency action and which can be safely managed with timely follow-up.
C. Checking whether the plan worked and whether additional services are needed after the immediate crisis.
D. Offering practical assistance and connection without pressuring a person to recount traumatic details.

0784. Which pair of actions illustrates Crisis assessment and Safety planning, respectively?

A. Crisis assessment: Clarifying immediate danger and available supports before moving to longer-term goals. / Safety planning: Selecting a proportionate response and reassessing whether restrictions remain necessary.
B. Crisis assessment: Clarifying immediate danger and available supports before moving to longer-term goals. / Safety planning: Creating specific steps with the youth and caregivers for what to do if risk increases.
C. Crisis assessment: Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number. / Safety planning: Creating specific steps with the youth and caregivers for what to do if risk increases.
D. Crisis assessment: Creating specific steps with the youth and caregivers for what to do if risk increases. / Safety planning: Clarifying immediate danger and available supports before moving to longer-term goals.

0785. A member of a clinical team prepares for a session in the youth group with a child aged 7. The intended approach is determining which situation requires immediate emergency action and which can be safely managed with timely follow-up. Which concept is most relevant?

A. Protective factors
B. Crisis triage
C. Least restrictive response
D. Post-crisis follow-up

0786. Choose the practice comparison that best separates Risk formulation from Protective factors.

A. Risk formulation: Identifying trusted adults and practical supports that can be activated now. / Protective factors: Integrating current statements, context, access, supports, and changes rather than relying on one score.
B. Risk formulation: Integrating current statements, context, access, supports, and changes rather than relying on one score. / Protective factors: Creating specific steps with the youth and caregivers for what to do if risk increases.
C. Risk formulation: Offering practical assistance and connection without pressuring a person to recount traumatic details. / Protective factors: Identifying trusted adults and practical supports that can be activated now.
D. Risk formulation: Integrating current statements, context, access, supports, and changes rather than relying on one score. / Protective factors: Identifying trusted adults and practical supports that can be activated now.

0787. A young adolescent client's service team meets in the after-school program. The case coordinator recommends a change involving clarifying immediate danger and available supports before moving to longer-term goals. Which idea best explains it?

A. Crisis assessment
B. Psychological first aid
C. Post-crisis follow-up
D. Least restrictive response

0788. While supporting a adolescent student in the parent meeting, a parent educator adopts this practice: clarifying immediate danger and available supports before moving to longer-term goals. Which concept best explains the choice?

A. Post-crisis follow-up
B. Least restrictive response
C. Warm handoff
D. Crisis assessment

0789. A group facilitator is explaining a choice to a child aged 7 and caregiver in the student wellness team. The choice centers on identifying trusted adults and practical supports that can be activated now. Which idea is illustrated?

A. Post-crisis follow-up
B. Crisis triage
C. Crisis assessment
D. Protective factors

0790. Which pair of actions illustrates Crisis assessment and De-escalation, respectively?

A. Crisis assessment: Clarifying immediate danger and available supports before moving to longer-term goals. / De-escalation: Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number.
B. Crisis assessment: Using calm, respectful language, space, and choices rather than confrontation. / De-escalation: Clarifying immediate danger and available supports before moving to longer-term goals.
C. Crisis assessment: Clarifying immediate danger and available supports before moving to longer-term goals. / De-escalation: Using calm, respectful language, space, and choices rather than confrontation.
D. Crisis assessment: Checking whether the plan worked and whether additional services are needed after the immediate crisis. / De-escalation: Using calm, respectful language, space, and choices rather than confrontation.

0791. In a case note about a student aged 17, a assessment clinician working in the parent meeting records this priority: checking whether the plan worked and whether additional services are needed after the immediate crisis. What principle is reflected?

A. Protective factors
B. De-escalation
C. Post-crisis follow-up
D. Warm handoff

0792. A program coordinator is asked what should shape a high-school student's support in the multidisciplinary case conference. The proposed focus is creating specific steps with the youth and caregivers for what to do if risk increases. Which principle does it represent?

A. Safety planning
B. De-escalation
C. Psychological first aid
D. Least restrictive response

0793. How should a practitioner distinguish the applications of De-escalation and Psychological first aid?

A. De-escalation: Offering practical assistance and connection without pressuring a person to recount traumatic details. / Psychological first aid: Using calm, respectful language, space, and choices rather than confrontation.
B. De-escalation: Using calm, respectful language, space, and choices rather than confrontation. / Psychological first aid: Offering practical assistance and connection without pressuring a person to recount traumatic details.
C. De-escalation: Using calm, respectful language, space, and choices rather than confrontation. / Psychological first aid: Selecting a proportionate response and reassessing whether restrictions remain necessary.
D. De-escalation: Identifying trusted adults and practical supports that can be activated now. / Psychological first aid: Offering practical assistance and connection without pressuring a person to recount traumatic details.

0794. Which option pairs the definitions of Safety planning and Risk formulation correctly, in that order?

A. Safety planning: A collaborative, individualized plan identifying warning signs, coping steps, supportive contacts, and emergency resources. / Risk formulation: Planned reassessment and continuity contact after acute stabilization to review safety and connect ongoing care.
B. Safety planning: A contextual, ongoing synthesis of risk and protective factors, current intent, access, history, and foreseeable changes. / Risk formulation: A collaborative, individualized plan identifying warning signs, coping steps, supportive contacts, and emergency resources.
C. Safety planning: Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety. / Risk formulation: A contextual, ongoing synthesis of risk and protective factors, current intent, access, history, and foreseeable changes.
D. Safety planning: A collaborative, individualized plan identifying warning signs, coping steps, supportive contacts, and emergency resources. / Risk formulation: A contextual, ongoing synthesis of risk and protective factors, current intent, access, history, and foreseeable changes.

0795. For a child aged 8 in the telehealth session, a behavior specialist makes this practice the immediate priority: selecting a proportionate response and reassessing whether restrictions remain necessary. Which concept fits best?

A. Warm handoff
B. Least restrictive response
C. Protective factors
D. Crisis triage

0796. A trainee must choose a practice that exemplifies De-escalation. Which action is the best fit?

A. Selecting a proportionate response and reassessing whether restrictions remain necessary.
B. Using calm, respectful language, space, and choices rather than confrontation.
C. Checking whether the plan worked and whether additional services are needed after the immediate crisis.
D. Clarifying immediate danger and available supports before moving to longer-term goals.

0797. A case discussion concerns a young person aged 10 and a parent educator in the youth advocacy program. The practitioner is considering determining which situation requires immediate emergency action and which can be safely managed with timely follow-up. Which principle is involved?

A. De-escalation
B. Crisis triage
C. Post-crisis follow-up
D. Warm handoff

0798. How should a practitioner distinguish the applications of De-escalation and Crisis triage?

A. De-escalation: Clarifying immediate danger and available supports before moving to longer-term goals. / Crisis triage: Determining which situation requires immediate emergency action and which can be safely managed with timely follow-up.
B. De-escalation: Using calm, respectful language, space, and choices rather than confrontation. / Crisis triage: Identifying trusted adults and practical supports that can be activated now.
C. De-escalation: Using calm, respectful language, space, and choices rather than confrontation. / Crisis triage: Determining which situation requires immediate emergency action and which can be safely managed with timely follow-up.
D. De-escalation: Determining which situation requires immediate emergency action and which can be safely managed with timely follow-up. / Crisis triage: Using calm, respectful language, space, and choices rather than confrontation.

0799. Which statement accurately contrasts the course concepts De-escalation and Crisis triage?

A. De-escalation: Prioritizing urgency and level of response based on immediate danger, need, and available resources. / Crisis triage: Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety.
B. De-escalation: Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety. / Crisis triage: Personal, relational, and contextual resources that may reduce risk or support coping and recovery.
C. De-escalation: Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety. / Crisis triage: Prioritizing urgency and level of response based on immediate danger, need, and available resources.
D. De-escalation: Rapid, focused appraisal of immediate safety, precipitating events, supports, functioning, and urgent needs. / Crisis triage: Prioritizing urgency and level of response based on immediate danger, need, and available resources.

0800. Which option is the clearest practical expression of Crisis triage?

A. Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number.
B. Checking whether the plan worked and whether additional services are needed after the immediate crisis.
C. Identifying trusted adults and practical supports that can be activated now.
D. Determining which situation requires immediate emergency action and which can be safely managed with timely follow-up.

0801. A assessment clinician prepares for a session in the community youth program with a teenage client. The intended approach is selecting a proportionate response and reassessing whether restrictions remain necessary. Which concept is most relevant?

A. Safety planning
B. Crisis triage
C. De-escalation
D. Least restrictive response

0802. A supervised trainee prepares for a session in the after-school program with a preadolescent child. The intended approach is checking whether the plan worked and whether additional services are needed after the immediate crisis. Which concept is most relevant?

A. Post-crisis follow-up
B. Safety planning
C. Least restrictive response
D. Warm handoff

0803. Which professional action most closely applies Crisis triage?

A. Selecting a proportionate response and reassessing whether restrictions remain necessary.
B. Checking whether the plan worked and whether additional services are needed after the immediate crisis.
C. Determining which situation requires immediate emergency action and which can be safely managed with timely follow-up.
D. Using calm, respectful language, space, and choices rather than confrontation.

0804. In the classroom support meeting, a team asks how a teacher and counselor can support a student aged 17. One proposed action is offering practical assistance and connection without pressuring a person to recount traumatic details. Which idea does it represent?

A. Crisis assessment
B. Psychological first aid
C. Post-crisis follow-up
D. Risk formulation

0805. A assessment clinician is supporting a client in early adolescence in the student wellness team. The key practice is offering practical assistance and connection without pressuring a person to recount traumatic details. Which course concept is most relevant?

A. Crisis triage
B. Psychological first aid
C. Crisis assessment
D. Post-crisis follow-up

0806. A trainee must choose a practice that exemplifies Warm handoff. Which action is the best fit?

A. Integrating current statements, context, access, supports, and changes rather than relying on one score.
B. Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number.
C. Using calm, respectful language, space, and choices rather than confrontation.
D. Creating specific steps with the youth and caregivers for what to do if risk increases.

0807. A child aged 14 is receiving support in the family session. The teacher and counselor is guided by this practice: determining which situation requires immediate emergency action and which can be safely managed with timely follow-up. Which principle best fits?

A. Crisis triage
B. Post-crisis follow-up
C. Risk formulation
D. Warm handoff

0808. Which comparison correctly distinguishes De-escalation from Protective factors?

A. De-escalation: A contextual, ongoing synthesis of risk and protective factors, current intent, access, history, and foreseeable changes. / Protective factors: Personal, relational, and contextual resources that may reduce risk or support coping and recovery.
B. De-escalation: Personal, relational, and contextual resources that may reduce risk or support coping and recovery. / Protective factors: Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety.
C. De-escalation: Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety. / Protective factors: Rapid, focused appraisal of immediate safety, precipitating events, supports, functioning, and urgent needs.
D. De-escalation: Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety. / Protective factors: Personal, relational, and contextual resources that may reduce risk or support coping and recovery.

0809. Which applied comparison correctly identifies what belongs to Protective factors versus Least restrictive response?

A. Protective factors: Identifying trusted adults and practical supports that can be activated now. / Least restrictive response: Selecting a proportionate response and reassessing whether restrictions remain necessary.
B. Protective factors: Selecting a proportionate response and reassessing whether restrictions remain necessary. / Least restrictive response: Identifying trusted adults and practical supports that can be activated now.
C. Protective factors: Identifying trusted adults and practical supports that can be activated now. / Least restrictive response: Clarifying immediate danger and available supports before moving to longer-term goals.
D. Protective factors: Creating specific steps with the youth and caregivers for what to do if risk increases. / Least restrictive response: Selecting a proportionate response and reassessing whether restrictions remain necessary.

0810. In the community mental-health service, a consulting counselor describes the most appropriate support for a young person aged 18 as determining which situation requires immediate emergency action and which can be safely managed with timely follow-up. Which framework is being applied?

A. Risk formulation
B. Protective factors
C. Psychological first aid
D. Crisis triage

0811. Which choice aligns each practice with the correct idea, Crisis triage or Post-crisis follow-up?

A. Crisis triage: Determining which situation requires immediate emergency action and which can be safely managed with timely follow-up. / Post-crisis follow-up: Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number.
B. Crisis triage: Using calm, respectful language, space, and choices rather than confrontation. / Post-crisis follow-up: Checking whether the plan worked and whether additional services are needed after the immediate crisis.
C. Crisis triage: Determining which situation requires immediate emergency action and which can be safely managed with timely follow-up. / Post-crisis follow-up: Checking whether the plan worked and whether additional services are needed after the immediate crisis.
D. Crisis triage: Checking whether the plan worked and whether additional services are needed after the immediate crisis. / Post-crisis follow-up: Determining which situation requires immediate emergency action and which can be safely managed with timely follow-up.

0812. Choose the practice comparison that best separates De-escalation from Risk formulation.

A. De-escalation: Using calm, respectful language, space, and choices rather than confrontation. / Risk formulation: Determining which situation requires immediate emergency action and which can be safely managed with timely follow-up.
B. De-escalation: Using calm, respectful language, space, and choices rather than confrontation. / Risk formulation: Integrating current statements, context, access, supports, and changes rather than relying on one score.
C. De-escalation: Integrating current statements, context, access, supports, and changes rather than relying on one score. / Risk formulation: Using calm, respectful language, space, and choices rather than confrontation.
D. De-escalation: Identifying trusted adults and practical supports that can be activated now. / Risk formulation: Integrating current statements, context, access, supports, and changes rather than relying on one score.

0813. Identify the most precise label for this idea: Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety.

A. Safety planning
B. Crisis assessment
C. Risk formulation
D. De-escalation

0814. A young person aged 18 and a supervised trainee are reviewing goals in the family resource center. The agreed action is selecting a proportionate response and reassessing whether restrictions remain necessary. Which principle best accounts for it?

A. Least restrictive response
B. De-escalation
C. Crisis triage
D. Risk formulation

0815. Choose the definition pair that correctly explains De-escalation first and Crisis triage second.

A. De-escalation: Prioritizing urgency and level of response based on immediate danger, need, and available resources. / Crisis triage: Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety.
B. De-escalation: Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety. / Crisis triage: Personal, relational, and contextual resources that may reduce risk or support coping and recovery.
C. De-escalation: Rapid, focused appraisal of immediate safety, precipitating events, supports, functioning, and urgent needs. / Crisis triage: Prioritizing urgency and level of response based on immediate danger, need, and available resources.
D. De-escalation: Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety. / Crisis triage: Prioritizing urgency and level of response based on immediate danger, need, and available resources.

0816. Which applied comparison correctly identifies what belongs to De-escalation versus Psychological first aid?

A. De-escalation: Using calm, respectful language, space, and choices rather than confrontation. / Psychological first aid: Offering practical assistance and connection without pressuring a person to recount traumatic details.
B. De-escalation: Using calm, respectful language, space, and choices rather than confrontation. / Psychological first aid: Selecting a proportionate response and reassessing whether restrictions remain necessary.
C. De-escalation: Offering practical assistance and connection without pressuring a person to recount traumatic details. / Psychological first aid: Using calm, respectful language, space, and choices rather than confrontation.
D. De-escalation: Identifying trusted adults and practical supports that can be activated now. / Psychological first aid: Offering practical assistance and connection without pressuring a person to recount traumatic details.

0817. While consulting in the community mental-health service, a consultant supports a client in late adolescence by using this approach: checking whether the plan worked and whether additional services are needed after the immediate crisis. Which concept is being applied?

A. Post-crisis follow-up
B. Least restrictive response
C. Psychological first aid
D. Crisis triage

0818. Which statement accurately contrasts the course concepts De-escalation and Psychological first aid?

A. De-escalation: Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety. / Psychological first aid: A humane, practical, early response that promotes safety, stabilization, connection, and access to support.
B. De-escalation: Personal, relational, and contextual resources that may reduce risk or support coping and recovery. / Psychological first aid: A humane, practical, early response that promotes safety, stabilization, connection, and access to support.
C. De-escalation: A humane, practical, early response that promotes safety, stabilization, connection, and access to support. / Psychological first aid: Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety.
D. De-escalation: Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety. / Psychological first aid: The safest effective intervention that imposes the fewest necessary restrictions, consistent with law and policy.

0819. A research trainee is asked what should shape a adolescent student's support in the school-based service. The proposed focus is using calm, respectful language, space, and choices rather than confrontation. Which principle does it represent?

A. Protective factors
B. Risk formulation
C. Psychological first aid
D. De-escalation

0820. How should a practitioner distinguish the applications of De-escalation and Least restrictive response?

A. De-escalation: Using calm, respectful language, space, and choices rather than confrontation. / Least restrictive response: Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number.
B. De-escalation: Using calm, respectful language, space, and choices rather than confrontation. / Least restrictive response: Selecting a proportionate response and reassessing whether restrictions remain necessary.
C. De-escalation: Determining which situation requires immediate emergency action and which can be safely managed with timely follow-up. / Least restrictive response: Selecting a proportionate response and reassessing whether restrictions remain necessary.
D. De-escalation: Selecting a proportionate response and reassessing whether restrictions remain necessary. / Least restrictive response: Using calm, respectful language, space, and choices rather than confrontation.

0821. While consulting in the telehealth session, a assessment clinician supports a child aged 6 by using this approach: contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number. Which concept is being applied?

A. Least restrictive response
B. Warm handoff
C. Post-crisis follow-up
D. Crisis assessment

0822. Which option preserves the correct meaning of both Safety planning and Warm handoff?

A. Safety planning: A coordinated transfer in which the current helper actively connects the person to the next service. / Warm handoff: A collaborative, individualized plan identifying warning signs, coping steps, supportive contacts, and emergency resources.
B. Safety planning: A collaborative, individualized plan identifying warning signs, coping steps, supportive contacts, and emergency resources. / Warm handoff: A coordinated transfer in which the current helper actively connects the person to the next service.
C. Safety planning: A collaborative, individualized plan identifying warning signs, coping steps, supportive contacts, and emergency resources. / Warm handoff: A humane, practical, early response that promotes safety, stabilization, connection, and access to support.
D. Safety planning: Rapid, focused appraisal of immediate safety, precipitating events, supports, functioning, and urgent needs. / Warm handoff: A coordinated transfer in which the current helper actively connects the person to the next service.

0823. How are Risk formulation and Least restrictive response most accurately differentiated in this curriculum?

A. Risk formulation: A contextual, ongoing synthesis of risk and protective factors, current intent, access, history, and foreseeable changes. / Least restrictive response: Personal, relational, and contextual resources that may reduce risk or support coping and recovery.
B. Risk formulation: The safest effective intervention that imposes the fewest necessary restrictions, consistent with law and policy. / Least restrictive response: A contextual, ongoing synthesis of risk and protective factors, current intent, access, history, and foreseeable changes.
C. Risk formulation: A collaborative, individualized plan identifying warning signs, coping steps, supportive contacts, and emergency resources. / Least restrictive response: The safest effective intervention that imposes the fewest necessary restrictions, consistent with law and policy.
D. Risk formulation: A contextual, ongoing synthesis of risk and protective factors, current intent, access, history, and foreseeable changes. / Least restrictive response: The safest effective intervention that imposes the fewest necessary restrictions, consistent with law and policy.

0824. Choose the definition pair that correctly explains Safety planning first and Psychological first aid second.

A. Safety planning: A collaborative, individualized plan identifying warning signs, coping steps, supportive contacts, and emergency resources. / Psychological first aid: Planned reassessment and continuity contact after acute stabilization to review safety and connect ongoing care.
B. Safety planning: A humane, practical, early response that promotes safety, stabilization, connection, and access to support. / Psychological first aid: A collaborative, individualized plan identifying warning signs, coping steps, supportive contacts, and emergency resources.
C. Safety planning: Rapid, focused appraisal of immediate safety, precipitating events, supports, functioning, and urgent needs. / Psychological first aid: A humane, practical, early response that promotes safety, stabilization, connection, and access to support.
D. Safety planning: A collaborative, individualized plan identifying warning signs, coping steps, supportive contacts, and emergency resources. / Psychological first aid: A humane, practical, early response that promotes safety, stabilization, connection, and access to support.

0825. A consultant is preparing a follow-up plan for a client in early adolescence in the supervision meeting. The plan calls for creating specific steps with the youth and caregivers for what to do if risk increases. Which concept names this approach?

A. De-escalation
B. Crisis assessment
C. Least restrictive response
D. Safety planning

0826. A mental-health professional is preparing a follow-up plan for a child of elementary-school age in the classroom support meeting. The plan calls for contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number. Which concept names this approach?

A. Least restrictive response
B. Warm handoff
C. Post-crisis follow-up
D. Crisis triage

0827. In a supervision quiz, how should Protective factors be distinguished from Crisis triage?

A. Protective factors: Prioritizing urgency and level of response based on immediate danger, need, and available resources. / Crisis triage: Personal, relational, and contextual resources that may reduce risk or support coping and recovery.
B. Protective factors: Personal, relational, and contextual resources that may reduce risk or support coping and recovery. / Crisis triage: A collaborative, individualized plan identifying warning signs, coping steps, supportive contacts, and emergency resources.
C. Protective factors: A humane, practical, early response that promotes safety, stabilization, connection, and access to support. / Crisis triage: Prioritizing urgency and level of response based on immediate danger, need, and available resources.
D. Protective factors: Personal, relational, and contextual resources that may reduce risk or support coping and recovery. / Crisis triage: Prioritizing urgency and level of response based on immediate danger, need, and available resources.

0828. A research trainee is asked what should shape a young person aged 16’s support in the telehealth session. The proposed focus is determining which situation requires immediate emergency action and which can be safely managed with timely follow-up. Which principle does it represent?

A. De-escalation
B. Warm handoff
C. Risk formulation
D. Crisis triage

0829. In a professional consultation about a student aged 17, the consultant describes this response in the behavior-support review: identifying trusted adults and practical supports that can be activated now. Which term is most apt?

A. Least restrictive response
B. Post-crisis follow-up
C. Protective factors
D. Risk formulation

0830. A youth worker is explaining a choice to a young adolescent client and caregiver in the student-support meeting. The choice centers on contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number. Which idea is illustrated?

A. Warm handoff
B. Least restrictive response
C. De-escalation
D. Psychological first aid

0831. A student confuses Risk formulation with Warm handoff. Which explanation most accurately separates them?

A. Risk formulation: Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety. / Warm handoff: A coordinated transfer in which the current helper actively connects the person to the next service.
B. Risk formulation: A contextual, ongoing synthesis of risk and protective factors, current intent, access, history, and foreseeable changes. / Warm handoff: A coordinated transfer in which the current helper actively connects the person to the next service.
C. Risk formulation: A contextual, ongoing synthesis of risk and protective factors, current intent, access, history, and foreseeable changes. / Warm handoff: Prioritizing urgency and level of response based on immediate danger, need, and available resources.
D. Risk formulation: A coordinated transfer in which the current helper actively connects the person to the next service. / Warm handoff: A contextual, ongoing synthesis of risk and protective factors, current intent, access, history, and foreseeable changes.

0832. A case conference reviews a program coordinator’s work with a child aged 7 in the parent meeting: integrating current statements, context, access, supports, and changes rather than relying on one score. Which principle is central?

A. Crisis triage
B. Warm handoff
C. Risk formulation
D. Crisis assessment

0833. In the school consultation, a team asks how a consulting counselor can support a school-age child. One proposed action is identifying trusted adults and practical supports that can be activated now. Which idea does it represent?

A. Crisis triage
B. Protective factors
C. Psychological first aid
D. Risk formulation

0834. A play therapist reviews a plan for a middle-school student in the learning-support meeting. The plan emphasizes selecting a proportionate response and reassessing whether restrictions remain necessary. Which course idea does this reflect?

A. Post-crisis follow-up
B. Risk formulation
C. Psychological first aid
D. Least restrictive response

0835. Which pair of actions illustrates Risk formulation and Post-crisis follow-up, respectively?

A. Risk formulation: Integrating current statements, context, access, supports, and changes rather than relying on one score. / Post-crisis follow-up: Using calm, respectful language, space, and choices rather than confrontation.
B. Risk formulation: Identifying trusted adults and practical supports that can be activated now. / Post-crisis follow-up: Checking whether the plan worked and whether additional services are needed after the immediate crisis.
C. Risk formulation: Checking whether the plan worked and whether additional services are needed after the immediate crisis. / Post-crisis follow-up: Integrating current statements, context, access, supports, and changes rather than relying on one score.
D. Risk formulation: Integrating current statements, context, access, supports, and changes rather than relying on one score. / Post-crisis follow-up: Checking whether the plan worked and whether additional services are needed after the immediate crisis.

0836. Which option correctly matches each concept to its practice focus: Crisis triage and Warm handoff?

A. Crisis triage: Determining which situation requires immediate emergency action and which can be safely managed with timely follow-up. / Warm handoff: Integrating current statements, context, access, supports, and changes rather than relying on one score.
B. Crisis triage: Determining which situation requires immediate emergency action and which can be safely managed with timely follow-up. / Warm handoff: Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number.
C. Crisis triage: Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number. / Warm handoff: Determining which situation requires immediate emergency action and which can be safely managed with timely follow-up.
D. Crisis triage: Checking whether the plan worked and whether additional services are needed after the immediate crisis. / Warm handoff: Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number.

0837. In a supervision quiz, how should Safety planning be distinguished from De-escalation?

A. Safety planning: A collaborative, individualized plan identifying warning signs, coping steps, supportive contacts, and emergency resources. / De-escalation: Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety.
B. Safety planning: Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety. / De-escalation: A collaborative, individualized plan identifying warning signs, coping steps, supportive contacts, and emergency resources.
C. Safety planning: Rapid, focused appraisal of immediate safety, precipitating events, supports, functioning, and urgent needs. / De-escalation: Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety.
D. Safety planning: A collaborative, individualized plan identifying warning signs, coping steps, supportive contacts, and emergency resources. / De-escalation: Personal, relational, and contextual resources that may reduce risk or support coping and recovery.

0838. Which option preserves the correct meaning of both Crisis assessment and Warm handoff?

A. Crisis assessment: Rapid, focused appraisal of immediate safety, precipitating events, supports, functioning, and urgent needs. / Warm handoff: A coordinated transfer in which the current helper actively connects the person to the next service.
B. Crisis assessment: A coordinated transfer in which the current helper actively connects the person to the next service. / Warm handoff: Rapid, focused appraisal of immediate safety, precipitating events, supports, functioning, and urgent needs.
C. Crisis assessment: Rapid, focused appraisal of immediate safety, precipitating events, supports, functioning, and urgent needs. / Warm handoff: The safest effective intervention that imposes the fewest necessary restrictions, consistent with law and policy.
D. Crisis assessment: Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety. / Warm handoff: A coordinated transfer in which the current helper actively connects the person to the next service.

0839. In the behavior-support review, a consulting counselor describes the most appropriate support for a student aged 9 as using calm, respectful language, space, and choices rather than confrontation. Which framework is being applied?

A. Crisis triage
B. Least restrictive response
C. Psychological first aid
D. De-escalation

0840. A team must select a support approach for a high-school student at the telehealth session. The caregiver working with a counselor recommends checking whether the plan worked and whether additional services are needed after the immediate crisis. Which idea is most relevant?

A. De-escalation
B. Post-crisis follow-up
C. Protective factors
D. Risk formulation

0841. A school support specialist is asked to evaluate a proposed service for a client in early adolescence in the youth group. The defining feature is checking whether the plan worked and whether additional services are needed after the immediate crisis. Which concept fits?

A. Crisis triage
B. Psychological first aid
C. Protective factors
D. Post-crisis follow-up

0842. Choose the definition pair that correctly explains De-escalation first and Post-crisis follow-up second.

A. De-escalation: Planned reassessment and continuity contact after acute stabilization to review safety and connect ongoing care. / Post-crisis follow-up: Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety.
B. De-escalation: A coordinated transfer in which the current helper actively connects the person to the next service. / Post-crisis follow-up: Planned reassessment and continuity contact after acute stabilization to review safety and connect ongoing care.
C. De-escalation: Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety. / Post-crisis follow-up: The safest effective intervention that imposes the fewest necessary restrictions, consistent with law and policy.
D. De-escalation: Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety. / Post-crisis follow-up: Planned reassessment and continuity contact after acute stabilization to review safety and connect ongoing care.

0843. During work in the community youth program, a consulting counselor identifies this need: contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number. Which idea should guide the response?

A. Warm handoff
B. Crisis triage
C. Risk formulation
D. Protective factors

0844. Which statement accurately contrasts the course concepts Crisis triage and Post-crisis follow-up?

A. Crisis triage: Prioritizing urgency and level of response based on immediate danger, need, and available resources. / Post-crisis follow-up: Planned reassessment and continuity contact after acute stabilization to review safety and connect ongoing care.
B. Crisis triage: Planned reassessment and continuity contact after acute stabilization to review safety and connect ongoing care. / Post-crisis follow-up: Prioritizing urgency and level of response based on immediate danger, need, and available resources.
C. Crisis triage: Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety. / Post-crisis follow-up: Planned reassessment and continuity contact after acute stabilization to review safety and connect ongoing care.
D. Crisis triage: Prioritizing urgency and level of response based on immediate danger, need, and available resources. / Post-crisis follow-up: A coordinated transfer in which the current helper actively connects the person to the next service.

0845. How are Least restrictive response and Psychological first aid most accurately differentiated in this curriculum?

A. Least restrictive response: A humane, practical, early response that promotes safety, stabilization, connection, and access to support. / Psychological first aid: The safest effective intervention that imposes the fewest necessary restrictions, consistent with law and policy.
B. Least restrictive response: The safest effective intervention that imposes the fewest necessary restrictions, consistent with law and policy. / Psychological first aid: A humane, practical, early response that promotes safety, stabilization, connection, and access to support.
C. Least restrictive response: A coordinated transfer in which the current helper actively connects the person to the next service. / Psychological first aid: A humane, practical, early response that promotes safety, stabilization, connection, and access to support.
D. Least restrictive response: The safest effective intervention that imposes the fewest necessary restrictions, consistent with law and policy. / Psychological first aid: Prioritizing urgency and level of response based on immediate danger, need, and available resources.

0846. Which named construct is captured by this account? Rapid, focused appraisal of immediate safety, precipitating events, supports, functioning, and urgent needs.

A. Safety planning
B. Protective factors
C. Crisis assessment
D. Psychological first aid

0847. A supervisor asks for an applied contrast between Least restrictive response and Warm handoff. Which option fits?

A. Least restrictive response: Offering practical assistance and connection without pressuring a person to recount traumatic details. / Warm handoff: Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number.
B. Least restrictive response: Selecting a proportionate response and reassessing whether restrictions remain necessary. / Warm handoff: Identifying trusted adults and practical supports that can be activated now.
C. Least restrictive response: Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number. / Warm handoff: Selecting a proportionate response and reassessing whether restrictions remain necessary.
D. Least restrictive response: Selecting a proportionate response and reassessing whether restrictions remain necessary. / Warm handoff: Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number.

0848. In a case note about a young adolescent client, a member of a clinical team working in the supervision meeting records this priority: offering practical assistance and connection without pressuring a person to recount traumatic details. What principle is reflected?

A. Psychological first aid
B. Least restrictive response
C. De-escalation
D. Crisis triage

0849. A community practitioner describes an intervention for a child aged 6 in the community youth program, centered on checking whether the plan worked and whether additional services are needed after the immediate crisis. Which named idea is most relevant?

A. Protective factors
B. Psychological first aid
C. Warm handoff
D. Post-crisis follow-up

0850. In a supervision review, a case coordinator describes work with a student aged 12 in the counseling practicum: integrating current statements, context, access, supports, and changes rather than relying on one score. What concept is illustrated?

A. Protective factors
B. Risk formulation
C. Crisis triage
D. Psychological first aid

0851. Which statement shows a sound practice-level distinction between De-escalation and Risk formulation?

A. De-escalation: Using calm, respectful language, space, and choices rather than confrontation. / Risk formulation: Integrating current statements, context, access, supports, and changes rather than relying on one score.
B. De-escalation: Identifying trusted adults and practical supports that can be activated now. / Risk formulation: Integrating current statements, context, access, supports, and changes rather than relying on one score.
C. De-escalation: Integrating current statements, context, access, supports, and changes rather than relying on one score. / Risk formulation: Using calm, respectful language, space, and choices rather than confrontation.
D. De-escalation: Using calm, respectful language, space, and choices rather than confrontation. / Risk formulation: Determining which situation requires immediate emergency action and which can be safely managed with timely follow-up.

0852. A case coordinator presents a support plan for a student aged 15 at the youth advocacy program. Its central feature is using calm, respectful language, space, and choices rather than confrontation. Which concept should be named?

A. Safety planning
B. Crisis triage
C. De-escalation
D. Risk formulation

0853. A young person aged 10’s service team meets in the student wellness team. The school-based clinician recommends a change involving using calm, respectful language, space, and choices rather than confrontation. Which idea best explains it?

A. Crisis triage
B. Safety planning
C. De-escalation
D. Risk formulation

0854. Which comparison correctly distinguishes Crisis assessment from Post-crisis follow-up?

A. Crisis assessment: Rapid, focused appraisal of immediate safety, precipitating events, supports, functioning, and urgent needs. / Post-crisis follow-up: Planned reassessment and continuity contact after acute stabilization to review safety and connect ongoing care.
B. Crisis assessment: Rapid, focused appraisal of immediate safety, precipitating events, supports, functioning, and urgent needs. / Post-crisis follow-up: Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety.
C. Crisis assessment: Planned reassessment and continuity contact after acute stabilization to review safety and connect ongoing care. / Post-crisis follow-up: Rapid, focused appraisal of immediate safety, precipitating events, supports, functioning, and urgent needs.
D. Crisis assessment: Prioritizing urgency and level of response based on immediate danger, need, and available resources. / Post-crisis follow-up: Planned reassessment and continuity contact after acute stabilization to review safety and connect ongoing care.

0855. In a professional consultation about a high-school student, the member of a clinical team describes this response in the community service agency: selecting a proportionate response and reassessing whether restrictions remain necessary. Which term is most apt?

A. Crisis assessment
B. Warm handoff
C. Psychological first aid
D. Least restrictive response

0856. Which statement most accurately defines Crisis triage?

A. A coordinated transfer in which the current helper actively connects the person to the next service.
B. The safest effective intervention that imposes the fewest necessary restrictions, consistent with law and policy.
C. Prioritizing urgency and level of response based on immediate danger, need, and available resources.
D. Rapid, focused appraisal of immediate safety, precipitating events, supports, functioning, and urgent needs.

0857. A trainee must explain De-escalation. Which answer is accurate?

A. Rapid, focused appraisal of immediate safety, precipitating events, supports, functioning, and urgent needs.
B. Planned reassessment and continuity contact after acute stabilization to review safety and connect ongoing care.
C. A humane, practical, early response that promotes safety, stabilization, connection, and access to support.
D. Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety.

0858. Choose the practice comparison that best separates Least restrictive response from Warm handoff.

A. Least restrictive response: Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number. / Warm handoff: Selecting a proportionate response and reassessing whether restrictions remain necessary.
B. Least restrictive response: Selecting a proportionate response and reassessing whether restrictions remain necessary. / Warm handoff: Identifying trusted adults and practical supports that can be activated now.
C. Least restrictive response: Offering practical assistance and connection without pressuring a person to recount traumatic details. / Warm handoff: Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number.
D. Least restrictive response: Selecting a proportionate response and reassessing whether restrictions remain necessary. / Warm handoff: Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number.

0859. When reviewing a young person’s plan in the supervision meeting, the family therapist notes that the next step is using calm, respectful language, space, and choices rather than confrontation. Which concept guides this step?

A. Crisis assessment
B. Protective factors
C. De-escalation
D. Safety planning

0860. At the school consultation, a community practitioner reviews whether a plan for a preadolescent child is appropriate. The relevant practice is selecting a proportionate response and reassessing whether restrictions remain necessary. Which concept is tested?

A. Post-crisis follow-up
B. De-escalation
C. Least restrictive response
D. Warm handoff

0861. A school counselor is asked to justify a plan for a teenage client in the behavior-support review. It calls for determining which situation requires immediate emergency action and which can be safely managed with timely follow-up. Which concept provides the rationale?

A. Post-crisis follow-up
B. De-escalation
C. Crisis triage
D. Crisis assessment

0862. A supervisor asks how Least restrictive response would appear in practice. Which choice should be selected?

A. Checking whether the plan worked and whether additional services are needed after the immediate crisis.
B. Selecting a proportionate response and reassessing whether restrictions remain necessary.
C. Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number.
D. Creating specific steps with the youth and caregivers for what to do if risk increases.

0863. Consider a young person receiving help in the outpatient clinic. The youth worker focuses on selecting a proportionate response and reassessing whether restrictions remain necessary. Which term best describes the guiding idea?

A. Least restrictive response
B. De-escalation
C. Safety planning
D. Protective factors

0864. In the clinical planning session, the agreed focus for a community practitioner working with a teenage client is offering practical assistance and connection without pressuring a person to recount traumatic details. Which concept names this focus?

A. Post-crisis follow-up
B. Least restrictive response
C. Psychological first aid
D. Risk formulation

0865. Which option correctly matches each concept to its practice focus: Warm handoff and Post-crisis follow-up?

A. Warm handoff: Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number. / Post-crisis follow-up: Selecting a proportionate response and reassessing whether restrictions remain necessary.
B. Warm handoff: Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number. / Post-crisis follow-up: Checking whether the plan worked and whether additional services are needed after the immediate crisis.
C. Warm handoff: Checking whether the plan worked and whether additional services are needed after the immediate crisis. / Post-crisis follow-up: Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number.
D. Warm handoff: Identifying trusted adults and practical supports that can be activated now. / Post-crisis follow-up: Checking whether the plan worked and whether additional services are needed after the immediate crisis.

0866. At the learning-support meeting, a therapist reviews whether a plan for a child aged 11 is appropriate. The relevant practice is using calm, respectful language, space, and choices rather than confrontation. Which concept is tested?

A. Crisis triage
B. Protective factors
C. Post-crisis follow-up
D. De-escalation

0867. In a supervision quiz, how should Safety planning be distinguished from Psychological first aid?

A. Safety planning: A collaborative, individualized plan identifying warning signs, coping steps, supportive contacts, and emergency resources. / Psychological first aid: Planned reassessment and continuity contact after acute stabilization to review safety and connect ongoing care.
B. Safety planning: Rapid, focused appraisal of immediate safety, precipitating events, supports, functioning, and urgent needs. / Psychological first aid: A humane, practical, early response that promotes safety, stabilization, connection, and access to support.
C. Safety planning: A humane, practical, early response that promotes safety, stabilization, connection, and access to support. / Psychological first aid: A collaborative, individualized plan identifying warning signs, coping steps, supportive contacts, and emergency resources.
D. Safety planning: A collaborative, individualized plan identifying warning signs, coping steps, supportive contacts, and emergency resources. / Psychological first aid: A humane, practical, early response that promotes safety, stabilization, connection, and access to support.

0868. A school counselor is asked to justify a plan for a young person aged 18 in the family session. It calls for using calm, respectful language, space, and choices rather than confrontation. Which concept provides the rationale?

A. De-escalation
B. Protective factors
C. Crisis triage
D. Safety planning

0869. In a case note about a teenage client, a consultant working in the community service agency records this priority: clarifying immediate danger and available supports before moving to longer-term goals. What principle is reflected?

A. Least restrictive response
B. Crisis assessment
C. Psychological first aid
D. Post-crisis follow-up

0870. A member of a clinical team prepares for a session in the counseling practicum with a child aged 8. The intended approach is using calm, respectful language, space, and choices rather than confrontation. Which concept is most relevant?

A. De-escalation
B. Risk formulation
C. Crisis assessment
D. Psychological first aid

0871. A team must select a support approach for a school-age child at the community service agency. The case coordinator recommends offering practical assistance and connection without pressuring a person to recount traumatic details. Which idea is most relevant?

A. Psychological first aid
B. De-escalation
C. Crisis triage
D. Warm handoff

0872. A consultant is supporting a child aged 8 in the clinical planning session. The key practice is determining which situation requires immediate emergency action and which can be safely managed with timely follow-up. Which course concept is most relevant?

A. Crisis triage
B. Warm handoff
C. Least restrictive response
D. De-escalation

0873. How should a practitioner distinguish the applications of Protective factors and Crisis triage?

A. Protective factors: Identifying trusted adults and practical supports that can be activated now. / Crisis triage: Determining which situation requires immediate emergency action and which can be safely managed with timely follow-up.
B. Protective factors: Offering practical assistance and connection without pressuring a person to recount traumatic details. / Crisis triage: Determining which situation requires immediate emergency action and which can be safely managed with timely follow-up.
C. Protective factors: Determining which situation requires immediate emergency action and which can be safely managed with timely follow-up. / Crisis triage: Identifying trusted adults and practical supports that can be activated now.
D. Protective factors: Identifying trusted adults and practical supports that can be activated now. / Crisis triage: Creating specific steps with the youth and caregivers for what to do if risk increases.

0874. A supervisor asks for an applied contrast between Psychological first aid and Warm handoff. Which option fits?

A. Psychological first aid: Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number. / Warm handoff: Offering practical assistance and connection without pressuring a person to recount traumatic details.
B. Psychological first aid: Checking whether the plan worked and whether additional services are needed after the immediate crisis. / Warm handoff: Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number.
C. Psychological first aid: Offering practical assistance and connection without pressuring a person to recount traumatic details. / Warm handoff: Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number.
D. Psychological first aid: Offering practical assistance and connection without pressuring a person to recount traumatic details. / Warm handoff: Identifying trusted adults and practical supports that can be activated now.

0875. A clinical supervisor is asked to evaluate a proposed service for a student aged 9 in the supervision meeting. The defining feature is integrating current statements, context, access, supports, and changes rather than relying on one score. Which concept fits?

A. Risk formulation
B. Crisis assessment
C. Post-crisis follow-up
D. Crisis triage

0876. A child aged 6's service team meets in the caregiver consultation. The school-based clinician recommends a change involving determining which situation requires immediate emergency action and which can be safely managed with timely follow-up. Which idea best explains it?

A. De-escalation
B. Crisis triage
C. Warm handoff
D. Psychological first aid

0877. In a professional consultation about a adolescent student, the mental-health professional describes this response in the youth advocacy program: offering practical assistance and connection without pressuring a person to recount traumatic details. Which term is most apt?

A. Crisis assessment
B. Psychological first aid
C. Protective factors
D. Least restrictive response

0878. Choose the definition pair that correctly explains Least restrictive response first and Psychological first aid second.

A. Least restrictive response: A humane, practical, early response that promotes safety, stabilization, connection, and access to support. / Psychological first aid: The safest effective intervention that imposes the fewest necessary restrictions, consistent with law and policy.
B. Least restrictive response: The safest effective intervention that imposes the fewest necessary restrictions, consistent with law and policy. / Psychological first aid: Prioritizing urgency and level of response based on immediate danger, need, and available resources.
C. Least restrictive response: The safest effective intervention that imposes the fewest necessary restrictions, consistent with law and policy. / Psychological first aid: A humane, practical, early response that promotes safety, stabilization, connection, and access to support.
D. Least restrictive response: A coordinated transfer in which the current helper actively connects the person to the next service. / Psychological first aid: A humane, practical, early response that promotes safety, stabilization, connection, and access to support.

0879. At the school-based service, a counselor meets with a child aged 7. The practice priority is: selecting a proportionate response and reassessing whether restrictions remain necessary. Which concept best captures that priority?

A. Safety planning
B. Least restrictive response
C. Post-crisis follow-up
D. Risk formulation

0880. Which choice aligns each practice with the correct idea, Crisis triage or Warm handoff?

A. Crisis triage: Determining which situation requires immediate emergency action and which can be safely managed with timely follow-up. / Warm handoff: Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number.
B. Crisis triage: Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number. / Warm handoff: Determining which situation requires immediate emergency action and which can be safely managed with timely follow-up.
C. Crisis triage: Determining which situation requires immediate emergency action and which can be safely managed with timely follow-up. / Warm handoff: Integrating current statements, context, access, supports, and changes rather than relying on one score.
D. Crisis triage: Checking whether the plan worked and whether additional services are needed after the immediate crisis. / Warm handoff: Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number.

0881. In a case note about a young person aged 10, a supervised trainee working in the learning-support meeting records this priority: contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number. What principle is reflected?

A. Protective factors
B. Crisis triage
C. Warm handoff
D. De-escalation

0882. A clinical supervisor reviews a plan for a young person aged 18 in the school consultation. The plan emphasizes contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number. Which course idea does this reflect?

A. Crisis triage
B. Warm handoff
C. Protective factors
D. Crisis assessment

0883. A supervisor asks for an applied contrast between Risk formulation and Post-crisis follow-up. Which option fits?

A. Risk formulation: Integrating current statements, context, access, supports, and changes rather than relying on one score. / Post-crisis follow-up: Using calm, respectful language, space, and choices rather than confrontation.
B. Risk formulation: Checking whether the plan worked and whether additional services are needed after the immediate crisis. / Post-crisis follow-up: Integrating current statements, context, access, supports, and changes rather than relying on one score.
C. Risk formulation: Identifying trusted adults and practical supports that can be activated now. / Post-crisis follow-up: Checking whether the plan worked and whether additional services are needed after the immediate crisis.
D. Risk formulation: Integrating current statements, context, access, supports, and changes rather than relying on one score. / Post-crisis follow-up: Checking whether the plan worked and whether additional services are needed after the immediate crisis.

0884. A student confuses Safety planning with Risk formulation. Which explanation most accurately separates them?

A. Safety planning: Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety. / Risk formulation: A contextual, ongoing synthesis of risk and protective factors, current intent, access, history, and foreseeable changes.
B. Safety planning: A contextual, ongoing synthesis of risk and protective factors, current intent, access, history, and foreseeable changes. / Risk formulation: A collaborative, individualized plan identifying warning signs, coping steps, supportive contacts, and emergency resources.
C. Safety planning: A collaborative, individualized plan identifying warning signs, coping steps, supportive contacts, and emergency resources. / Risk formulation: A contextual, ongoing synthesis of risk and protective factors, current intent, access, history, and foreseeable changes.
D. Safety planning: A collaborative, individualized plan identifying warning signs, coping steps, supportive contacts, and emergency resources. / Risk formulation: Planned reassessment and continuity contact after acute stabilization to review safety and connect ongoing care.

0885. Which option pairs the definitions of Crisis assessment and De-escalation correctly, in that order?

A. Crisis assessment: Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety. / De-escalation: Rapid, focused appraisal of immediate safety, precipitating events, supports, functioning, and urgent needs.
B. Crisis assessment: Planned reassessment and continuity contact after acute stabilization to review safety and connect ongoing care. / De-escalation: Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety.
C. Crisis assessment: Rapid, focused appraisal of immediate safety, precipitating events, supports, functioning, and urgent needs. / De-escalation: A coordinated transfer in which the current helper actively connects the person to the next service.
D. Crisis assessment: Rapid, focused appraisal of immediate safety, precipitating events, supports, functioning, and urgent needs. / De-escalation: Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety.

0886. A trainee must explain Post-crisis follow-up. Which answer is accurate?

A. Planned reassessment and continuity contact after acute stabilization to review safety and connect ongoing care.
B. A collaborative, individualized plan identifying warning signs, coping steps, supportive contacts, and emergency resources.
C. Rapid, focused appraisal of immediate safety, precipitating events, supports, functioning, and urgent needs.
D. A contextual, ongoing synthesis of risk and protective factors, current intent, access, history, and foreseeable changes.

0887. Which comparison would correct a trainee's misunderstanding of Safety planning versus Psychological first aid?

A. Safety planning: A humane, practical, early response that promotes safety, stabilization, connection, and access to support. / Psychological first aid: A collaborative, individualized plan identifying warning signs, coping steps, supportive contacts, and emergency resources.
B. Safety planning: A collaborative, individualized plan identifying warning signs, coping steps, supportive contacts, and emergency resources. / Psychological first aid: A humane, practical, early response that promotes safety, stabilization, connection, and access to support.
C. Safety planning: A collaborative, individualized plan identifying warning signs, coping steps, supportive contacts, and emergency resources. / Psychological first aid: Planned reassessment and continuity contact after acute stabilization to review safety and connect ongoing care.
D. Safety planning: Rapid, focused appraisal of immediate safety, precipitating events, supports, functioning, and urgent needs. / Psychological first aid: A humane, practical, early response that promotes safety, stabilization, connection, and access to support.

0888. How are Crisis assessment and Warm handoff most accurately differentiated in this curriculum?

A. Crisis assessment: Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety. / Warm handoff: A coordinated transfer in which the current helper actively connects the person to the next service.
B. Crisis assessment: Rapid, focused appraisal of immediate safety, precipitating events, supports, functioning, and urgent needs. / Warm handoff: The safest effective intervention that imposes the fewest necessary restrictions, consistent with law and policy.
C. Crisis assessment: Rapid, focused appraisal of immediate safety, precipitating events, supports, functioning, and urgent needs. / Warm handoff: A coordinated transfer in which the current helper actively connects the person to the next service.
D. Crisis assessment: A coordinated transfer in which the current helper actively connects the person to the next service. / Warm handoff: Rapid, focused appraisal of immediate safety, precipitating events, supports, functioning, and urgent needs.

0889. A trainee must distinguish how Least restrictive response and Crisis triage guide practice. Which comparison is accurate?

A. Least restrictive response: Selecting a proportionate response and reassessing whether restrictions remain necessary. / Crisis triage: Checking whether the plan worked and whether additional services are needed after the immediate crisis.
B. Least restrictive response: Determining which situation requires immediate emergency action and which can be safely managed with timely follow-up. / Crisis triage: Selecting a proportionate response and reassessing whether restrictions remain necessary.
C. Least restrictive response: Selecting a proportionate response and reassessing whether restrictions remain necessary. / Crisis triage: Determining which situation requires immediate emergency action and which can be safely managed with timely follow-up.
D. Least restrictive response: Integrating current statements, context, access, supports, and changes rather than relying on one score. / Crisis triage: Determining which situation requires immediate emergency action and which can be safely managed with timely follow-up.

0890. Which option pairs the definitions of De-escalation and Crisis triage correctly, in that order?

A. De-escalation: Prioritizing urgency and level of response based on immediate danger, need, and available resources. / Crisis triage: Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety.
B. De-escalation: Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety. / Crisis triage: Prioritizing urgency and level of response based on immediate danger, need, and available resources.
C. De-escalation: Rapid, focused appraisal of immediate safety, precipitating events, supports, functioning, and urgent needs. / Crisis triage: Prioritizing urgency and level of response based on immediate danger, need, and available resources.
D. De-escalation: Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety. / Crisis triage: Personal, relational, and contextual resources that may reduce risk or support coping and recovery.

0891. Which pair of actions illustrates Risk formulation and Warm handoff, respectively?

A. Risk formulation: Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number. / Warm handoff: Integrating current statements, context, access, supports, and changes rather than relying on one score.
B. Risk formulation: Integrating current statements, context, access, supports, and changes rather than relying on one score. / Warm handoff: Determining which situation requires immediate emergency action and which can be safely managed with timely follow-up.
C. Risk formulation: Integrating current statements, context, access, supports, and changes rather than relying on one score. / Warm handoff: Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number.
D. Risk formulation: Using calm, respectful language, space, and choices rather than confrontation. / Warm handoff: Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number.

0892. How should a practitioner distinguish the applications of Least restrictive response and Post-crisis follow-up?

A. Least restrictive response: Selecting a proportionate response and reassessing whether restrictions remain necessary. / Post-crisis follow-up: Integrating current statements, context, access, supports, and changes rather than relying on one score.
B. Least restrictive response: Selecting a proportionate response and reassessing whether restrictions remain necessary. / Post-crisis follow-up: Checking whether the plan worked and whether additional services are needed after the immediate crisis.
C. Least restrictive response: Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number. / Post-crisis follow-up: Checking whether the plan worked and whether additional services are needed after the immediate crisis.
D. Least restrictive response: Checking whether the plan worked and whether additional services are needed after the immediate crisis. / Post-crisis follow-up: Selecting a proportionate response and reassessing whether restrictions remain necessary.

0893. A doctoral student reads the following description. Which concept does it define? The safest effective intervention that imposes the fewest necessary restrictions, consistent with law and policy.

A. Crisis triage
B. Safety planning
C. Crisis assessment
D. Least restrictive response

0894. A case discussion concerns a high-school student and a caregiver working with a counselor in the telehealth session. The practitioner is considering checking whether the plan worked and whether additional services are needed after the immediate crisis. Which principle is involved?

A. Protective factors
B. Post-crisis follow-up
C. Least restrictive response
D. Safety planning

0895. How are Safety planning and Warm handoff most accurately differentiated in this curriculum?

A. Safety planning: Rapid, focused appraisal of immediate safety, precipitating events, supports, functioning, and urgent needs. / Warm handoff: A coordinated transfer in which the current helper actively connects the person to the next service.
B. Safety planning: A collaborative, individualized plan identifying warning signs, coping steps, supportive contacts, and emergency resources. / Warm handoff: A humane, practical, early response that promotes safety, stabilization, connection, and access to support.
C. Safety planning: A collaborative, individualized plan identifying warning signs, coping steps, supportive contacts, and emergency resources. / Warm handoff: A coordinated transfer in which the current helper actively connects the person to the next service.
D. Safety planning: A coordinated transfer in which the current helper actively connects the person to the next service. / Warm handoff: A collaborative, individualized plan identifying warning signs, coping steps, supportive contacts, and emergency resources.

0896. Which statement accurately contrasts the course concepts Safety planning and Least restrictive response?

A. Safety planning: A collaborative, individualized plan identifying warning signs, coping steps, supportive contacts, and emergency resources. / Least restrictive response: A coordinated transfer in which the current helper actively connects the person to the next service.
B. Safety planning: A humane, practical, early response that promotes safety, stabilization, connection, and access to support. / Least restrictive response: The safest effective intervention that imposes the fewest necessary restrictions, consistent with law and policy.
C. Safety planning: The safest effective intervention that imposes the fewest necessary restrictions, consistent with law and policy. / Least restrictive response: A collaborative, individualized plan identifying warning signs, coping steps, supportive contacts, and emergency resources.
D. Safety planning: A collaborative, individualized plan identifying warning signs, coping steps, supportive contacts, and emergency resources. / Least restrictive response: The safest effective intervention that imposes the fewest necessary restrictions, consistent with law and policy.

0897. Choose the practice comparison that best separates Least restrictive response from Psychological first aid.

A. Least restrictive response: Offering practical assistance and connection without pressuring a person to recount traumatic details. / Psychological first aid: Selecting a proportionate response and reassessing whether restrictions remain necessary.
B. Least restrictive response: Selecting a proportionate response and reassessing whether restrictions remain necessary. / Psychological first aid: Determining which situation requires immediate emergency action and which can be safely managed with timely follow-up.
C. Least restrictive response: Selecting a proportionate response and reassessing whether restrictions remain necessary. / Psychological first aid: Offering practical assistance and connection without pressuring a person to recount traumatic details.
D. Least restrictive response: Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number. / Psychological first aid: Offering practical assistance and connection without pressuring a person to recount traumatic details.

0898. A student confuses Risk formulation with Post-crisis follow-up. Which explanation most accurately separates them?

A. Risk formulation: Personal, relational, and contextual resources that may reduce risk or support coping and recovery. / Post-crisis follow-up: Planned reassessment and continuity contact after acute stabilization to review safety and connect ongoing care.
B. Risk formulation: A contextual, ongoing synthesis of risk and protective factors, current intent, access, history, and foreseeable changes. / Post-crisis follow-up: Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety.
C. Risk formulation: A contextual, ongoing synthesis of risk and protective factors, current intent, access, history, and foreseeable changes. / Post-crisis follow-up: Planned reassessment and continuity contact after acute stabilization to review safety and connect ongoing care.
D. Risk formulation: Planned reassessment and continuity contact after acute stabilization to review safety and connect ongoing care. / Post-crisis follow-up: A contextual, ongoing synthesis of risk and protective factors, current intent, access, history, and foreseeable changes.

0899. A service team discusses a young person aged 13 in the behavior-support review. Their proposed next step is integrating current statements, context, access, supports, and changes rather than relying on one score. Which course concept supports it?

A. De-escalation
B. Risk formulation
C. Crisis assessment
D. Post-crisis follow-up

0900. Choose the term that matches this definition: A coordinated transfer in which the current helper actively connects the person to the next service.

A. Post-crisis follow-up
B. Risk formulation
C. Psychological first aid
D. Warm handoff

0901. A supervisor asks for an applied contrast between Safety planning and Risk formulation. Which option fits?

A. Safety planning: Creating specific steps with the youth and caregivers for what to do if risk increases. / Risk formulation: Integrating current statements, context, access, supports, and changes rather than relying on one score.
B. Safety planning: Integrating current statements, context, access, supports, and changes rather than relying on one score. / Risk formulation: Creating specific steps with the youth and caregivers for what to do if risk increases.
C. Safety planning: Using calm, respectful language, space, and choices rather than confrontation. / Risk formulation: Integrating current statements, context, access, supports, and changes rather than relying on one score.
D. Safety planning: Creating specific steps with the youth and caregivers for what to do if risk increases. / Risk formulation: Checking whether the plan worked and whether additional services are needed after the immediate crisis.

0902. A trainee must distinguish how Safety planning and Psychological first aid guide practice. Which comparison is accurate?

A. Safety planning: Creating specific steps with the youth and caregivers for what to do if risk increases. / Psychological first aid: Offering practical assistance and connection without pressuring a person to recount traumatic details.
B. Safety planning: Clarifying immediate danger and available supports before moving to longer-term goals. / Psychological first aid: Offering practical assistance and connection without pressuring a person to recount traumatic details.
C. Safety planning: Offering practical assistance and connection without pressuring a person to recount traumatic details. / Psychological first aid: Creating specific steps with the youth and caregivers for what to do if risk increases.
D. Safety planning: Creating specific steps with the youth and caregivers for what to do if risk increases. / Psychological first aid: Checking whether the plan worked and whether additional services are needed after the immediate crisis.

0903. Which statement accurately contrasts the course concepts Risk formulation and Protective factors?

A. Risk formulation: A contextual, ongoing synthesis of risk and protective factors, current intent, access, history, and foreseeable changes. / Protective factors: Personal, relational, and contextual resources that may reduce risk or support coping and recovery.
B. Risk formulation: A contextual, ongoing synthesis of risk and protective factors, current intent, access, history, and foreseeable changes. / Protective factors: A collaborative, individualized plan identifying warning signs, coping steps, supportive contacts, and emergency resources.
C. Risk formulation: A humane, practical, early response that promotes safety, stabilization, connection, and access to support. / Protective factors: Personal, relational, and contextual resources that may reduce risk or support coping and recovery.
D. Risk formulation: Personal, relational, and contextual resources that may reduce risk or support coping and recovery. / Protective factors: A contextual, ongoing synthesis of risk and protective factors, current intent, access, history, and foreseeable changes.

0904. Which pair of actions illustrates Safety planning and Risk formulation, respectively?

A. Safety planning: Using calm, respectful language, space, and choices rather than confrontation. / Risk formulation: Integrating current statements, context, access, supports, and changes rather than relying on one score.
B. Safety planning: Creating specific steps with the youth and caregivers for what to do if risk increases. / Risk formulation: Checking whether the plan worked and whether additional services are needed after the immediate crisis.
C. Safety planning: Integrating current statements, context, access, supports, and changes rather than relying on one score. / Risk formulation: Creating specific steps with the youth and caregivers for what to do if risk increases.
D. Safety planning: Creating specific steps with the youth and caregivers for what to do if risk increases. / Risk formulation: Integrating current statements, context, access, supports, and changes rather than relying on one score.

0905. Which option correctly matches each concept to its practice focus: Protective factors and Warm handoff?

A. Protective factors: Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number. / Warm handoff: Identifying trusted adults and practical supports that can be activated now.
B. Protective factors: Offering practical assistance and connection without pressuring a person to recount traumatic details. / Warm handoff: Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number.
C. Protective factors: Identifying trusted adults and practical supports that can be activated now. / Warm handoff: Checking whether the plan worked and whether additional services are needed after the immediate crisis.
D. Protective factors: Identifying trusted adults and practical supports that can be activated now. / Warm handoff: Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number.

0906. A student aged 9 and a supervised trainee are reviewing goals in the community youth program. The agreed action is clarifying immediate danger and available supports before moving to longer-term goals. Which principle best accounts for it?

A. Protective factors
B. Least restrictive response
C. De-escalation
D. Crisis assessment

0907. Consider a young person aged 18 receiving help in the community mental-health service. The consulting counselor focuses on determining which situation requires immediate emergency action and which can be safely managed with timely follow-up. Which term best describes the guiding idea?

A. Risk formulation
B. De-escalation
C. Safety planning
D. Crisis triage

0908. What is the central meaning of Crisis assessment?

A. A coordinated transfer in which the current helper actively connects the person to the next service.
B. Rapid, focused appraisal of immediate safety, precipitating events, supports, functioning, and urgent needs.
C. Planned reassessment and continuity contact after acute stabilization to review safety and connect ongoing care.
D. The safest effective intervention that imposes the fewest necessary restrictions, consistent with law and policy.

0909. Which statement accurately contrasts the course concepts Crisis assessment and Protective factors?

A. Crisis assessment: Rapid, focused appraisal of immediate safety, precipitating events, supports, functioning, and urgent needs. / Protective factors: Personal, relational, and contextual resources that may reduce risk or support coping and recovery.
B. Crisis assessment: Rapid, focused appraisal of immediate safety, precipitating events, supports, functioning, and urgent needs. / Protective factors: A humane, practical, early response that promotes safety, stabilization, connection, and access to support.
C. Crisis assessment: Planned reassessment and continuity contact after acute stabilization to review safety and connect ongoing care. / Protective factors: Personal, relational, and contextual resources that may reduce risk or support coping and recovery.
D. Crisis assessment: Personal, relational, and contextual resources that may reduce risk or support coping and recovery. / Protective factors: Rapid, focused appraisal of immediate safety, precipitating events, supports, functioning, and urgent needs.

0910. Which applied comparison correctly identifies what belongs to Crisis assessment versus Safety planning?

A. Crisis assessment: Clarifying immediate danger and available supports before moving to longer-term goals. / Safety planning: Selecting a proportionate response and reassessing whether restrictions remain necessary.
B. Crisis assessment: Creating specific steps with the youth and caregivers for what to do if risk increases. / Safety planning: Clarifying immediate danger and available supports before moving to longer-term goals.
C. Crisis assessment: Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number. / Safety planning: Creating specific steps with the youth and caregivers for what to do if risk increases.
D. Crisis assessment: Clarifying immediate danger and available supports before moving to longer-term goals. / Safety planning: Creating specific steps with the youth and caregivers for what to do if risk increases.

0911. A trainee must distinguish how Least restrictive response and Psychological first aid guide practice. Which comparison is accurate?

A. Least restrictive response: Offering practical assistance and connection without pressuring a person to recount traumatic details. / Psychological first aid: Selecting a proportionate response and reassessing whether restrictions remain necessary.
B. Least restrictive response: Selecting a proportionate response and reassessing whether restrictions remain necessary. / Psychological first aid: Offering practical assistance and connection without pressuring a person to recount traumatic details.
C. Least restrictive response: Selecting a proportionate response and reassessing whether restrictions remain necessary. / Psychological first aid: Determining which situation requires immediate emergency action and which can be safely managed with timely follow-up.
D. Least restrictive response: Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number. / Psychological first aid: Offering practical assistance and connection without pressuring a person to recount traumatic details.

0912. In the student wellness team, a team asks how a consulting counselor can support a young person aged 13. One proposed action is checking whether the plan worked and whether additional services are needed after the immediate crisis. Which idea does it represent?

A. Risk formulation
B. Crisis triage
C. Post-crisis follow-up
D. Warm handoff

0913. Which option preserves the correct meaning of both Least restrictive response and Warm handoff?

A. Least restrictive response: The safest effective intervention that imposes the fewest necessary restrictions, consistent with law and policy. / Warm handoff: A coordinated transfer in which the current helper actively connects the person to the next service.
B. Least restrictive response: The safest effective intervention that imposes the fewest necessary restrictions, consistent with law and policy. / Warm handoff: Personal, relational, and contextual resources that may reduce risk or support coping and recovery.
C. Least restrictive response: A coordinated transfer in which the current helper actively connects the person to the next service. / Warm handoff: The safest effective intervention that imposes the fewest necessary restrictions, consistent with law and policy.
D. Least restrictive response: A humane, practical, early response that promotes safety, stabilization, connection, and access to support. / Warm handoff: A coordinated transfer in which the current helper actively connects the person to the next service.

0914. Which statement most accurately defines Safety planning?

A. A coordinated transfer in which the current helper actively connects the person to the next service.
B. Prioritizing urgency and level of response based on immediate danger, need, and available resources.
C. A collaborative, individualized plan identifying warning signs, coping steps, supportive contacts, and emergency resources.
D. A contextual, ongoing synthesis of risk and protective factors, current intent, access, history, and foreseeable changes.

0915. A supervisor asks for an applied contrast between Least restrictive response and Crisis triage. Which option fits?

A. Least restrictive response: Selecting a proportionate response and reassessing whether restrictions remain necessary. / Crisis triage: Checking whether the plan worked and whether additional services are needed after the immediate crisis.
B. Least restrictive response: Selecting a proportionate response and reassessing whether restrictions remain necessary. / Crisis triage: Determining which situation requires immediate emergency action and which can be safely managed with timely follow-up.
C. Least restrictive response: Integrating current statements, context, access, supports, and changes rather than relying on one score. / Crisis triage: Determining which situation requires immediate emergency action and which can be safely managed with timely follow-up.
D. Least restrictive response: Determining which situation requires immediate emergency action and which can be safely managed with timely follow-up. / Crisis triage: Selecting a proportionate response and reassessing whether restrictions remain necessary.

0916. Which choice aligns each practice with the correct idea, Safety planning or De-escalation?

A. Safety planning: Creating specific steps with the youth and caregivers for what to do if risk increases. / De-escalation: Using calm, respectful language, space, and choices rather than confrontation.
B. Safety planning: Clarifying immediate danger and available supports before moving to longer-term goals. / De-escalation: Using calm, respectful language, space, and choices rather than confrontation.
C. Safety planning: Creating specific steps with the youth and caregivers for what to do if risk increases. / De-escalation: Identifying trusted adults and practical supports that can be activated now.
D. Safety planning: Using calm, respectful language, space, and choices rather than confrontation. / De-escalation: Creating specific steps with the youth and caregivers for what to do if risk increases.

0917. In the student-support meeting, a parent educator is considering this approach for a young person aged 13: offering practical assistance and connection without pressuring a person to recount traumatic details. Which framework does it represent?

A. Risk formulation
B. Crisis assessment
C. Psychological first aid
D. Crisis triage

0918. How should a practitioner distinguish the applications of Safety planning and Risk formulation?

A. Safety planning: Creating specific steps with the youth and caregivers for what to do if risk increases. / Risk formulation: Integrating current statements, context, access, supports, and changes rather than relying on one score.
B. Safety planning: Creating specific steps with the youth and caregivers for what to do if risk increases. / Risk formulation: Checking whether the plan worked and whether additional services are needed after the immediate crisis.
C. Safety planning: Integrating current statements, context, access, supports, and changes rather than relying on one score. / Risk formulation: Creating specific steps with the youth and caregivers for what to do if risk increases.
D. Safety planning: Using calm, respectful language, space, and choices rather than confrontation. / Risk formulation: Integrating current statements, context, access, supports, and changes rather than relying on one score.

0919. Which choice aligns each practice with the correct idea, Protective factors or Warm handoff?

A. Protective factors: Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number. / Warm handoff: Identifying trusted adults and practical supports that can be activated now.
B. Protective factors: Offering practical assistance and connection without pressuring a person to recount traumatic details. / Warm handoff: Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number.
C. Protective factors: Identifying trusted adults and practical supports that can be activated now. / Warm handoff: Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number.
D. Protective factors: Identifying trusted adults and practical supports that can be activated now. / Warm handoff: Checking whether the plan worked and whether additional services are needed after the immediate crisis.

0920. A trainee must choose a practice that exemplifies Least restrictive response. Which action is the best fit?

A. Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number.
B. Clarifying immediate danger and available supports before moving to longer-term goals.
C. Integrating current statements, context, access, supports, and changes rather than relying on one score.
D. Selecting a proportionate response and reassessing whether restrictions remain necessary.

0921. A student confuses Crisis assessment with Warm handoff. Which explanation most accurately separates them?

A. Crisis assessment: Rapid, focused appraisal of immediate safety, precipitating events, supports, functioning, and urgent needs. / Warm handoff: The safest effective intervention that imposes the fewest necessary restrictions, consistent with law and policy.
B. Crisis assessment: A coordinated transfer in which the current helper actively connects the person to the next service. / Warm handoff: Rapid, focused appraisal of immediate safety, precipitating events, supports, functioning, and urgent needs.
C. Crisis assessment: Rapid, focused appraisal of immediate safety, precipitating events, supports, functioning, and urgent needs. / Warm handoff: A coordinated transfer in which the current helper actively connects the person to the next service.
D. Crisis assessment: Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety. / Warm handoff: A coordinated transfer in which the current helper actively connects the person to the next service.

0922. Which choice aligns each practice with the correct idea, De-escalation or Warm handoff?

A. De-escalation: Using calm, respectful language, space, and choices rather than confrontation. / Warm handoff: Creating specific steps with the youth and caregivers for what to do if risk increases.
B. De-escalation: Selecting a proportionate response and reassessing whether restrictions remain necessary. / Warm handoff: Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number.
C. De-escalation: Using calm, respectful language, space, and choices rather than confrontation. / Warm handoff: Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number.
D. De-escalation: Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number. / Warm handoff: Using calm, respectful language, space, and choices rather than confrontation.

0923. A case conference asks for a distinction between De-escalation and Risk formulation. Which answer is sound?

A. De-escalation: A contextual, ongoing synthesis of risk and protective factors, current intent, access, history, and foreseeable changes. / Risk formulation: Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety.
B. De-escalation: Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety. / Risk formulation: A contextual, ongoing synthesis of risk and protective factors, current intent, access, history, and foreseeable changes.
C. De-escalation: Personal, relational, and contextual resources that may reduce risk or support coping and recovery. / Risk formulation: A contextual, ongoing synthesis of risk and protective factors, current intent, access, history, and foreseeable changes.
D. De-escalation: Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety. / Risk formulation: Prioritizing urgency and level of response based on immediate danger, need, and available resources.

0924. A case conference reviews a therapist's work with a child aged 11 in the learning-support meeting: using calm, respectful language, space, and choices rather than confrontation. Which principle is central?

A. Safety planning
B. Crisis assessment
C. De-escalation
D. Crisis triage

0925. Which option pairs the definitions of De-escalation and Psychological first aid correctly, in that order?

A. De-escalation: A humane, practical, early response that promotes safety, stabilization, connection, and access to support. / Psychological first aid: Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety.
B. De-escalation: Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety. / Psychological first aid: The safest effective intervention that imposes the fewest necessary restrictions, consistent with law and policy.
C. De-escalation: Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety. / Psychological first aid: A humane, practical, early response that promotes safety, stabilization, connection, and access to support.
D. De-escalation: Personal, relational, and contextual resources that may reduce risk or support coping and recovery. / Psychological first aid: A humane, practical, early response that promotes safety, stabilization, connection, and access to support.

0926. A clinical supervisor reviews a plan for a student aged 9 in the supervision meeting. The plan emphasizes integrating current statements, context, access, supports, and changes rather than relying on one score. Which course idea does this reflect?

A. Risk formulation
B. Psychological first aid
C. De-escalation
D. Crisis assessment

0927. Which paired example correctly applies Protective factors first and Post-crisis follow-up second?

A. Protective factors: Creating specific steps with the youth and caregivers for what to do if risk increases. / Post-crisis follow-up: Checking whether the plan worked and whether additional services are needed after the immediate crisis.
B. Protective factors: Checking whether the plan worked and whether additional services are needed after the immediate crisis. / Post-crisis follow-up: Identifying trusted adults and practical supports that can be activated now.
C. Protective factors: Identifying trusted adults and practical supports that can be activated now. / Post-crisis follow-up: Using calm, respectful language, space, and choices rather than confrontation.
D. Protective factors: Identifying trusted adults and practical supports that can be activated now. / Post-crisis follow-up: Checking whether the plan worked and whether additional services are needed after the immediate crisis.

0928. A supervisor asks for an applied contrast between De-escalation and Protective factors. Which option fits?

A. De-escalation: Using calm, respectful language, space, and choices rather than confrontation. / Protective factors: Clarifying immediate danger and available supports before moving to longer-term goals.
B. De-escalation: Identifying trusted adults and practical supports that can be activated now. / Protective factors: Using calm, respectful language, space, and choices rather than confrontation.
C. De-escalation: Using calm, respectful language, space, and choices rather than confrontation. / Protective factors: Identifying trusted adults and practical supports that can be activated now.
D. De-escalation: Integrating current statements, context, access, supports, and changes rather than relying on one score. / Protective factors: Identifying trusted adults and practical supports that can be activated now.

0929. While supporting a client in late adolescence in the youth group, a family therapist adopts this practice: integrating current statements, context, access, supports, and changes rather than relying on one score. Which concept best explains the choice?

A. Post-crisis follow-up
B. Warm handoff
C. Risk formulation
D. Crisis assessment

0930. Which option pairs the definitions of Crisis triage and Warm handoff correctly, in that order?

A. Crisis triage: Planned reassessment and continuity contact after acute stabilization to review safety and connect ongoing care. / Warm handoff: A coordinated transfer in which the current helper actively connects the person to the next service.
B. Crisis triage: Prioritizing urgency and level of response based on immediate danger, need, and available resources. / Warm handoff: A coordinated transfer in which the current helper actively connects the person to the next service.
C. Crisis triage: A coordinated transfer in which the current helper actively connects the person to the next service. / Warm handoff: Prioritizing urgency and level of response based on immediate danger, need, and available resources.
D. Crisis triage: Prioritizing urgency and level of response based on immediate danger, need, and available resources. / Warm handoff: A contextual, ongoing synthesis of risk and protective factors, current intent, access, history, and foreseeable changes.

0931. Which paired example correctly applies Risk formulation first and Psychological first aid second?

A. Risk formulation: Offering practical assistance and connection without pressuring a person to recount traumatic details. / Psychological first aid: Integrating current statements, context, access, supports, and changes rather than relying on one score.
B. Risk formulation: Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number. / Psychological first aid: Offering practical assistance and connection without pressuring a person to recount traumatic details.
C. Risk formulation: Integrating current statements, context, access, supports, and changes rather than relying on one score. / Psychological first aid: Offering practical assistance and connection without pressuring a person to recount traumatic details.
D. Risk formulation: Integrating current statements, context, access, supports, and changes rather than relying on one score. / Psychological first aid: Determining which situation requires immediate emergency action and which can be safely managed with timely follow-up.

0932. A trainee must explain Psychological first aid. Which answer is accurate?

A. Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety.
B. Prioritizing urgency and level of response based on immediate danger, need, and available resources.
C. A humane, practical, early response that promotes safety, stabilization, connection, and access to support.
D. Rapid, focused appraisal of immediate safety, precipitating events, supports, functioning, and urgent needs.

0933. Which pair of actions illustrates De-escalation and Psychological first aid, respectively?

A. De-escalation: Using calm, respectful language, space, and choices rather than confrontation. / Psychological first aid: Selecting a proportionate response and reassessing whether restrictions remain necessary.
B. De-escalation: Identifying trusted adults and practical supports that can be activated now. / Psychological first aid: Offering practical assistance and connection without pressuring a person to recount traumatic details.
C. De-escalation: Using calm, respectful language, space, and choices rather than confrontation. / Psychological first aid: Offering practical assistance and connection without pressuring a person to recount traumatic details.
D. De-escalation: Offering practical assistance and connection without pressuring a person to recount traumatic details. / Psychological first aid: Using calm, respectful language, space, and choices rather than confrontation.

0934. Which option pairs the definitions of Safety planning and Protective factors correctly, in that order?

A. Safety planning: Rapid, focused appraisal of immediate safety, precipitating events, supports, functioning, and urgent needs. / Protective factors: Personal, relational, and contextual resources that may reduce risk or support coping and recovery.
B. Safety planning: A collaborative, individualized plan identifying warning signs, coping steps, supportive contacts, and emergency resources. / Protective factors: Personal, relational, and contextual resources that may reduce risk or support coping and recovery.
C. Safety planning: Personal, relational, and contextual resources that may reduce risk or support coping and recovery. / Protective factors: A collaborative, individualized plan identifying warning signs, coping steps, supportive contacts, and emergency resources.
D. Safety planning: A collaborative, individualized plan identifying warning signs, coping steps, supportive contacts, and emergency resources. / Protective factors: A contextual, ongoing synthesis of risk and protective factors, current intent, access, history, and foreseeable changes.

0935. When reviewing a child aged 8's plan in the community youth program, the caregiver working with a counselor notes that the next step is offering practical assistance and connection without pressuring a person to recount traumatic details. Which concept guides this step?

A. Crisis triage
B. Post-crisis follow-up
C. Psychological first aid
D. Crisis assessment

0936. Which option correctly matches each concept to its practice focus: Psychological first aid and Post-crisis follow-up?

A. Psychological first aid: Offering practical assistance and connection without pressuring a person to recount traumatic details. / Post-crisis follow-up: Checking whether the plan worked and whether additional services are needed after the immediate crisis.
B. Psychological first aid: Checking whether the plan worked and whether additional services are needed after the immediate crisis. / Post-crisis follow-up: Offering practical assistance and connection without pressuring a person to recount traumatic details.
C. Psychological first aid: Integrating current statements, context, access, supports, and changes rather than relying on one score. / Post-crisis follow-up: Checking whether the plan worked and whether additional services are needed after the immediate crisis.
D. Psychological first aid: Offering practical assistance and connection without pressuring a person to recount traumatic details. / Post-crisis follow-up: Clarifying immediate danger and available supports before moving to longer-term goals.

0937. A member of a clinical team and a client in late adolescence are discussing support in the family session. The selected practice is identifying trusted adults and practical supports that can be activated now. Which concept does this demonstrate?

A. Least restrictive response
B. Protective factors
C. Post-crisis follow-up
D. Psychological first aid

0938. What is the central meaning of Protective factors?

A. Planned reassessment and continuity contact after acute stabilization to review safety and connect ongoing care.
B. The safest effective intervention that imposes the fewest necessary restrictions, consistent with law and policy.
C. Personal, relational, and contextual resources that may reduce risk or support coping and recovery.
D. A collaborative, individualized plan identifying warning signs, coping steps, supportive contacts, and emergency resources.

0939. A trainee must choose a practice that exemplifies Psychological first aid. Which action is the best fit?

A. Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number.
B. Selecting a proportionate response and reassessing whether restrictions remain necessary.
C. Offering practical assistance and connection without pressuring a person to recount traumatic details.
D. Using calm, respectful language, space, and choices rather than confrontation.

0940. A trainee must distinguish how Safety planning and Post-crisis follow-up guide practice. Which comparison is accurate?

A. Safety planning: Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number. / Post-crisis follow-up: Checking whether the plan worked and whether additional services are needed after the immediate crisis.
B. Safety planning: Checking whether the plan worked and whether additional services are needed after the immediate crisis. / Post-crisis follow-up: Creating specific steps with the youth and caregivers for what to do if risk increases.
C. Safety planning: Creating specific steps with the youth and caregivers for what to do if risk increases. / Post-crisis follow-up: Checking whether the plan worked and whether additional services are needed after the immediate crisis.
D. Safety planning: Creating specific steps with the youth and caregivers for what to do if risk increases. / Post-crisis follow-up: Offering practical assistance and connection without pressuring a person to recount traumatic details.

0941. A service navigator is asked what should shape a young person's support in the child guidance clinic. The proposed focus is checking whether the plan worked and whether additional services are needed after the immediate crisis. Which principle does it represent?

A. Post-crisis follow-up
B. Risk formulation
C. Crisis assessment
D. Protective factors

0942. Which choice aligns each practice with the correct idea, De-escalation or Crisis triage?

A. De-escalation: Determining which situation requires immediate emergency action and which can be safely managed with timely follow-up. / Crisis triage: Using calm, respectful language, space, and choices rather than confrontation.
B. De-escalation: Clarifying immediate danger and available supports before moving to longer-term goals. / Crisis triage: Determining which situation requires immediate emergency action and which can be safely managed with timely follow-up.
C. De-escalation: Using calm, respectful language, space, and choices rather than confrontation. / Crisis triage: Identifying trusted adults and practical supports that can be activated now.
D. De-escalation: Using calm, respectful language, space, and choices rather than confrontation. / Crisis triage: Determining which situation requires immediate emergency action and which can be safely managed with timely follow-up.

0943. Choose the practice comparison that best separates Protective factors from Post-crisis follow-up.

A. Protective factors: Checking whether the plan worked and whether additional services are needed after the immediate crisis. / Post-crisis follow-up: Identifying trusted adults and practical supports that can be activated now.
B. Protective factors: Identifying trusted adults and practical supports that can be activated now. / Post-crisis follow-up: Checking whether the plan worked and whether additional services are needed after the immediate crisis.
C. Protective factors: Creating specific steps with the youth and caregivers for what to do if risk increases. / Post-crisis follow-up: Checking whether the plan worked and whether additional services are needed after the immediate crisis.
D. Protective factors: Identifying trusted adults and practical supports that can be activated now. / Post-crisis follow-up: Using calm, respectful language, space, and choices rather than confrontation.

0944. A student confuses Psychological first aid with Crisis triage. Which explanation most accurately separates them?

A. Psychological first aid: Personal, relational, and contextual resources that may reduce risk or support coping and recovery. / Crisis triage: Prioritizing urgency and level of response based on immediate danger, need, and available resources.
B. Psychological first aid: A humane, practical, early response that promotes safety, stabilization, connection, and access to support. / Crisis triage: Prioritizing urgency and level of response based on immediate danger, need, and available resources.
C. Psychological first aid: Prioritizing urgency and level of response based on immediate danger, need, and available resources. / Crisis triage: A humane, practical, early response that promotes safety, stabilization, connection, and access to support.
D. Psychological first aid: A humane, practical, early response that promotes safety, stabilization, connection, and access to support. / Crisis triage: A coordinated transfer in which the current helper actively connects the person to the next service.

0945. A clinical supervisor is asked to evaluate a proposed service for a young person aged 18 in the school consultation. The defining feature is contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number. Which concept fits?

A. Crisis triage
B. Post-crisis follow-up
C. Warm handoff
D. Safety planning

0946. Which comparison correctly distinguishes De-escalation from Psychological first aid?

A. De-escalation: Personal, relational, and contextual resources that may reduce risk or support coping and recovery. / Psychological first aid: A humane, practical, early response that promotes safety, stabilization, connection, and access to support.
B. De-escalation: Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety. / Psychological first aid: The safest effective intervention that imposes the fewest necessary restrictions, consistent with law and policy.
C. De-escalation: Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety. / Psychological first aid: A humane, practical, early response that promotes safety, stabilization, connection, and access to support.
D. De-escalation: A humane, practical, early response that promotes safety, stabilization, connection, and access to support. / Psychological first aid: Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety.

0947. Which named construct is captured by this account? Personal, relational, and contextual resources that may reduce risk or support coping and recovery.

A. Safety planning
B. De-escalation
C. Protective factors
D. Post-crisis follow-up

0948. In the parent meeting, a team asks how a youth worker can support a child aged 14. One proposed action is using calm, respectful language, space, and choices rather than confrontation. Which idea does it represent?

A. De-escalation
B. Risk formulation
C. Safety planning
D. Protective factors

0949. A case conference asks for a distinction between Protective factors and Post-crisis follow-up. Which answer is sound?

A. Protective factors: Personal, relational, and contextual resources that may reduce risk or support coping and recovery. / Post-crisis follow-up: Planned reassessment and continuity contact after acute stabilization to review safety and connect ongoing care.
B. Protective factors: Planned reassessment and continuity contact after acute stabilization to review safety and connect ongoing care. / Post-crisis follow-up: Personal, relational, and contextual resources that may reduce risk or support coping and recovery.
C. Protective factors: Personal, relational, and contextual resources that may reduce risk or support coping and recovery. / Post-crisis follow-up: Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety.
D. Protective factors: A collaborative, individualized plan identifying warning signs, coping steps, supportive contacts, and emergency resources. / Post-crisis follow-up: Planned reassessment and continuity contact after acute stabilization to review safety and connect ongoing care.

0950. Which option correctly matches each concept to its practice focus: Safety planning and Protective factors?

A. Safety planning: Creating specific steps with the youth and caregivers for what to do if risk increases. / Protective factors: Integrating current statements, context, access, supports, and changes rather than relying on one score.
B. Safety planning: Identifying trusted adults and practical supports that can be activated now. / Protective factors: Creating specific steps with the youth and caregivers for what to do if risk increases.
C. Safety planning: Clarifying immediate danger and available supports before moving to longer-term goals. / Protective factors: Identifying trusted adults and practical supports that can be activated now.
D. Safety planning: Creating specific steps with the youth and caregivers for what to do if risk increases. / Protective factors: Identifying trusted adults and practical supports that can be activated now.

0951. A school support specialist reviews a plan for a client in early adolescence in the youth group. The plan emphasizes checking whether the plan worked and whether additional services are needed after the immediate crisis. Which course idea does this reflect?

A. Post-crisis follow-up
B. Protective factors
C. De-escalation
D. Warm handoff

0952. In a supervision quiz, how should Safety planning be distinguished from Least restrictive response?

A. Safety planning: A humane, practical, early response that promotes safety, stabilization, connection, and access to support. / Least restrictive response: The safest effective intervention that imposes the fewest necessary restrictions, consistent with law and policy.
B. Safety planning: A collaborative, individualized plan identifying warning signs, coping steps, supportive contacts, and emergency resources. / Least restrictive response: A coordinated transfer in which the current helper actively connects the person to the next service.
C. Safety planning: A collaborative, individualized plan identifying warning signs, coping steps, supportive contacts, and emergency resources. / Least restrictive response: The safest effective intervention that imposes the fewest necessary restrictions, consistent with law and policy.
D. Safety planning: The safest effective intervention that imposes the fewest necessary restrictions, consistent with law and policy. / Least restrictive response: A collaborative, individualized plan identifying warning signs, coping steps, supportive contacts, and emergency resources.

0953. In the supervision meeting, a school counselor explains why a young person aged 13 would benefit from identifying trusted adults and practical supports that can be activated now. Which course concept underpins the explanation?

A. Psychological first aid
B. Risk formulation
C. Protective factors
D. Post-crisis follow-up

0954. During work in the telehealth session, a youth worker identifies this need: creating specific steps with the youth and caregivers for what to do if risk increases. Which idea should guide the response?

A. Crisis assessment
B. Protective factors
C. Safety planning
D. Psychological first aid

0955. Choose the term that matches this definition: Rapid, focused appraisal of immediate safety, precipitating events, supports, functioning, and urgent needs.

A. Psychological first aid
B. Crisis assessment
C. Crisis triage
D. Safety planning

0956. Choose the definition pair that correctly explains Protective factors first and Psychological first aid second.

A. Protective factors: Rapid, focused appraisal of immediate safety, precipitating events, supports, functioning, and urgent needs. / Psychological first aid: A humane, practical, early response that promotes safety, stabilization, connection, and access to support.
B. Protective factors: Personal, relational, and contextual resources that may reduce risk or support coping and recovery. / Psychological first aid: A humane, practical, early response that promotes safety, stabilization, connection, and access to support.
C. Protective factors: Personal, relational, and contextual resources that may reduce risk or support coping and recovery. / Psychological first aid: Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety.
D. Protective factors: A humane, practical, early response that promotes safety, stabilization, connection, and access to support. / Psychological first aid: Personal, relational, and contextual resources that may reduce risk or support coping and recovery.

0957. How are Safety planning and De-escalation most accurately differentiated in this curriculum?

A. Safety planning: A collaborative, individualized plan identifying warning signs, coping steps, supportive contacts, and emergency resources. / De-escalation: Personal, relational, and contextual resources that may reduce risk or support coping and recovery.
B. Safety planning: A collaborative, individualized plan identifying warning signs, coping steps, supportive contacts, and emergency resources. / De-escalation: Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety.
C. Safety planning: Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety. / De-escalation: A collaborative, individualized plan identifying warning signs, coping steps, supportive contacts, and emergency resources.
D. Safety planning: Rapid, focused appraisal of immediate safety, precipitating events, supports, functioning, and urgent needs. / De-escalation: Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety.

0958. Which pair of actions illustrates Protective factors and Least restrictive response, respectively?

A. Protective factors: Identifying trusted adults and practical supports that can be activated now. / Least restrictive response: Clarifying immediate danger and available supports before moving to longer-term goals.
B. Protective factors: Creating specific steps with the youth and caregivers for what to do if risk increases. / Least restrictive response: Selecting a proportionate response and reassessing whether restrictions remain necessary.
C. Protective factors: Selecting a proportionate response and reassessing whether restrictions remain necessary. / Least restrictive response: Identifying trusted adults and practical supports that can be activated now.
D. Protective factors: Identifying trusted adults and practical supports that can be activated now. / Least restrictive response: Selecting a proportionate response and reassessing whether restrictions remain necessary.

0959. A case conference asks for a distinction between Warm handoff and Post-crisis follow-up. Which answer is sound?

A. Warm handoff: Personal, relational, and contextual resources that may reduce risk or support coping and recovery. / Post-crisis follow-up: Planned reassessment and continuity contact after acute stabilization to review safety and connect ongoing care.
B. Warm handoff: A coordinated transfer in which the current helper actively connects the person to the next service. / Post-crisis follow-up: The safest effective intervention that imposes the fewest necessary restrictions, consistent with law and policy.
C. Warm handoff: A coordinated transfer in which the current helper actively connects the person to the next service. / Post-crisis follow-up: Planned reassessment and continuity contact after acute stabilization to review safety and connect ongoing care.
D. Warm handoff: Planned reassessment and continuity contact after acute stabilization to review safety and connect ongoing care. / Post-crisis follow-up: A coordinated transfer in which the current helper actively connects the person to the next service.

0960. A trainee must distinguish how Protective factors and Crisis triage guide practice. Which comparison is accurate?

A. Protective factors: Determining which situation requires immediate emergency action and which can be safely managed with timely follow-up. / Crisis triage: Identifying trusted adults and practical supports that can be activated now.
B. Protective factors: Identifying trusted adults and practical supports that can be activated now. / Crisis triage: Determining which situation requires immediate emergency action and which can be safely managed with timely follow-up.
C. Protective factors: Offering practical assistance and connection without pressuring a person to recount traumatic details. / Crisis triage: Determining which situation requires immediate emergency action and which can be safely managed with timely follow-up.
D. Protective factors: Identifying trusted adults and practical supports that can be activated now. / Crisis triage: Creating specific steps with the youth and caregivers for what to do if risk increases.

0961. How are Risk formulation and Psychological first aid most accurately differentiated in this curriculum?

A. Risk formulation: A humane, practical, early response that promotes safety, stabilization, connection, and access to support. / Psychological first aid: A contextual, ongoing synthesis of risk and protective factors, current intent, access, history, and foreseeable changes.
B. Risk formulation: A coordinated transfer in which the current helper actively connects the person to the next service. / Psychological first aid: A humane, practical, early response that promotes safety, stabilization, connection, and access to support.
C. Risk formulation: A contextual, ongoing synthesis of risk and protective factors, current intent, access, history, and foreseeable changes. / Psychological first aid: A humane, practical, early response that promotes safety, stabilization, connection, and access to support.
D. Risk formulation: A contextual, ongoing synthesis of risk and protective factors, current intent, access, history, and foreseeable changes. / Psychological first aid: Prioritizing urgency and level of response based on immediate danger, need, and available resources.

0962. Which description belongs with the term Risk formulation?

A. Personal, relational, and contextual resources that may reduce risk or support coping and recovery.
B. A contextual, ongoing synthesis of risk and protective factors, current intent, access, history, and foreseeable changes.
C. Prioritizing urgency and level of response based on immediate danger, need, and available resources.
D. A humane, practical, early response that promotes safety, stabilization, connection, and access to support.

0963. Which statement accurately contrasts the course concepts Crisis assessment and De-escalation?

A. Crisis assessment: Planned reassessment and continuity contact after acute stabilization to review safety and connect ongoing care. / De-escalation: Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety.
B. Crisis assessment: Rapid, focused appraisal of immediate safety, precipitating events, supports, functioning, and urgent needs. / De-escalation: Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety.
C. Crisis assessment: Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety. / De-escalation: Rapid, focused appraisal of immediate safety, precipitating events, supports, functioning, and urgent needs.
D. Crisis assessment: Rapid, focused appraisal of immediate safety, precipitating events, supports, functioning, and urgent needs. / De-escalation: A coordinated transfer in which the current helper actively connects the person to the next service.

0964. In a supervision quiz, how should Psychological first aid be distinguished from Post-crisis follow-up?

A. Psychological first aid: A contextual, ongoing synthesis of risk and protective factors, current intent, access, history, and foreseeable changes. / Post-crisis follow-up: Planned reassessment and continuity contact after acute stabilization to review safety and connect ongoing care.
B. Psychological first aid: A humane, practical, early response that promotes safety, stabilization, connection, and access to support. / Post-crisis follow-up: Rapid, focused appraisal of immediate safety, precipitating events, supports, functioning, and urgent needs.
C. Psychological first aid: A humane, practical, early response that promotes safety, stabilization, connection, and access to support. / Post-crisis follow-up: Planned reassessment and continuity contact after acute stabilization to review safety and connect ongoing care.
D. Psychological first aid: Planned reassessment and continuity contact after acute stabilization to review safety and connect ongoing care. / Post-crisis follow-up: A humane, practical, early response that promotes safety, stabilization, connection, and access to support.

0965. Identify the most precise label for this idea: A collaborative, individualized plan identifying warning signs, coping steps, supportive contacts, and emergency resources.

A. Risk formulation
B. De-escalation
C. Safety planning
D. Psychological first aid

0966. Identify the most precise label for this idea: The safest effective intervention that imposes the fewest necessary restrictions, consistent with law and policy.

A. Least restrictive response
B. De-escalation
C. Crisis assessment
D. Crisis triage

0967. Choose the practice comparison that best separates Warm handoff from Post-crisis follow-up.

A. Warm handoff: Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number. / Post-crisis follow-up: Selecting a proportionate response and reassessing whether restrictions remain necessary.
B. Warm handoff: Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number. / Post-crisis follow-up: Checking whether the plan worked and whether additional services are needed after the immediate crisis.
C. Warm handoff: Checking whether the plan worked and whether additional services are needed after the immediate crisis. / Post-crisis follow-up: Contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number.
D. Warm handoff: Identifying trusted adults and practical supports that can be activated now. / Post-crisis follow-up: Checking whether the plan worked and whether additional services are needed after the immediate crisis.

0968. A member of a clinical team is supporting a student aged 15 in the school counseling office. The key practice is contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number. Which course concept is most relevant?

A. Crisis assessment
B. Psychological first aid
C. Risk formulation
D. Warm handoff

0969. A support meeting for a young person aged 13 includes a school support specialist in the classroom support meeting. The practice under consideration is selecting a proportionate response and reassessing whether restrictions remain necessary. Which concept guides it?

A. Safety planning
B. Least restrictive response
C. Risk formulation
D. Warm handoff

0970. Which comparison correctly distinguishes Risk formulation from Crisis triage?

A. Risk formulation: A contextual, ongoing synthesis of risk and protective factors, current intent, access, history, and foreseeable changes. / Crisis triage: Prioritizing urgency and level of response based on immediate danger, need, and available resources.
B. Risk formulation: A collaborative, individualized plan identifying warning signs, coping steps, supportive contacts, and emergency resources. / Crisis triage: Prioritizing urgency and level of response based on immediate danger, need, and available resources.
C. Risk formulation: A contextual, ongoing synthesis of risk and protective factors, current intent, access, history, and foreseeable changes. / Crisis triage: Personal, relational, and contextual resources that may reduce risk or support coping and recovery.
D. Risk formulation: Prioritizing urgency and level of response based on immediate danger, need, and available resources. / Crisis triage: A contextual, ongoing synthesis of risk and protective factors, current intent, access, history, and foreseeable changes.

0971. In the school-based service, a family therapist is considering this approach for a student aged 9: checking whether the plan worked and whether additional services are needed after the immediate crisis. Which framework does it represent?

A. Least restrictive response
B. Risk formulation
C. Post-crisis follow-up
D. Protective factors

0972. Which option pairs the definitions of Safety planning and De-escalation correctly, in that order?

A. Safety planning: A collaborative, individualized plan identifying warning signs, coping steps, supportive contacts, and emergency resources. / De-escalation: Personal, relational, and contextual resources that may reduce risk or support coping and recovery.
B. Safety planning: Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety. / De-escalation: A collaborative, individualized plan identifying warning signs, coping steps, supportive contacts, and emergency resources.
C. Safety planning: A collaborative, individualized plan identifying warning signs, coping steps, supportive contacts, and emergency resources. / De-escalation: Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety.
D. Safety planning: Rapid, focused appraisal of immediate safety, precipitating events, supports, functioning, and urgent needs. / De-escalation: Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety.

0973. Which statement accurately contrasts the course concepts Protective factors and Psychological first aid?

A. Protective factors: Personal, relational, and contextual resources that may reduce risk or support coping and recovery. / Psychological first aid: A humane, practical, early response that promotes safety, stabilization, connection, and access to support.
B. Protective factors: Rapid, focused appraisal of immediate safety, precipitating events, supports, functioning, and urgent needs. / Psychological first aid: A humane, practical, early response that promotes safety, stabilization, connection, and access to support.
C. Protective factors: A humane, practical, early response that promotes safety, stabilization, connection, and access to support. / Psychological first aid: Personal, relational, and contextual resources that may reduce risk or support coping and recovery.
D. Protective factors: Personal, relational, and contextual resources that may reduce risk or support coping and recovery. / Psychological first aid: Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety.

0974. In the youth group, a team asks how a school counselor can support a young person aged 10. One proposed action is selecting a proportionate response and reassessing whether restrictions remain necessary. Which idea does it represent?

A. Protective factors
B. Psychological first aid
C. Least restrictive response
D. Warm handoff

0975. A support meeting for a young person aged 16 includes a clinical supervisor in the clinical planning session. The practice under consideration is checking whether the plan worked and whether additional services are needed after the immediate crisis. Which concept guides it?

A. Protective factors
B. Crisis triage
C. Post-crisis follow-up
D. Warm handoff

0976. Which applied comparison correctly identifies what belongs to Psychological first aid versus Post-crisis follow-up?

A. Psychological first aid: Checking whether the plan worked and whether additional services are needed after the immediate crisis. / Post-crisis follow-up: Offering practical assistance and connection without pressuring a person to recount traumatic details.
B. Psychological first aid: Offering practical assistance and connection without pressuring a person to recount traumatic details. / Post-crisis follow-up: Clarifying immediate danger and available supports before moving to longer-term goals.
C. Psychological first aid: Integrating current statements, context, access, supports, and changes rather than relying on one score. / Post-crisis follow-up: Checking whether the plan worked and whether additional services are needed after the immediate crisis.
D. Psychological first aid: Offering practical assistance and connection without pressuring a person to recount traumatic details. / Post-crisis follow-up: Checking whether the plan worked and whether additional services are needed after the immediate crisis.

0977. Choose the definition pair that correctly explains Crisis triage first and Post-crisis follow-up second.

A. Crisis triage: Prioritizing urgency and level of response based on immediate danger, need, and available resources. / Post-crisis follow-up: A coordinated transfer in which the current helper actively connects the person to the next service.
B. Crisis triage: Prioritizing urgency and level of response based on immediate danger, need, and available resources. / Post-crisis follow-up: Planned reassessment and continuity contact after acute stabilization to review safety and connect ongoing care.
C. Crisis triage: Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety. / Post-crisis follow-up: Planned reassessment and continuity contact after acute stabilization to review safety and connect ongoing care.
D. Crisis triage: Planned reassessment and continuity contact after acute stabilization to review safety and connect ongoing care. / Post-crisis follow-up: Prioritizing urgency and level of response based on immediate danger, need, and available resources.

0978. A consultant prepares for a session in the school consultation with a child aged 11. The intended approach is offering practical assistance and connection without pressuring a person to recount traumatic details. Which concept is most relevant?

A. De-escalation
B. Protective factors
C. Safety planning
D. Psychological first aid

0979. While supporting a young person in the student wellness team, a caregiver working with a counselor adopts this practice: determining which situation requires immediate emergency action and which can be safely managed with timely follow-up. Which concept best explains the choice?

A. Warm handoff
B. Crisis triage
C. Post-crisis follow-up
D. De-escalation

0980. A case conference asks for a distinction between Safety planning and Warm handoff. Which answer is sound?

A. Safety planning: A collaborative, individualized plan identifying warning signs, coping steps, supportive contacts, and emergency resources. / Warm handoff: A coordinated transfer in which the current helper actively connects the person to the next service.
B. Safety planning: Rapid, focused appraisal of immediate safety, precipitating events, supports, functioning, and urgent needs. / Warm handoff: A coordinated transfer in which the current helper actively connects the person to the next service.
C. Safety planning: A coordinated transfer in which the current helper actively connects the person to the next service. / Warm handoff: A collaborative, individualized plan identifying warning signs, coping steps, supportive contacts, and emergency resources.
D. Safety planning: A collaborative, individualized plan identifying warning signs, coping steps, supportive contacts, and emergency resources. / Warm handoff: A humane, practical, early response that promotes safety, stabilization, connection, and access to support.

0981. In the after-school program, a team asks how a youth worker can support a high-school student. One proposed action is determining which situation requires immediate emergency action and which can be safely managed with timely follow-up. Which idea does it represent?

A. Risk formulation
B. Crisis triage
C. Warm handoff
D. Protective factors

0982. Which option is the clearest practical expression of Protective factors?

A. Checking whether the plan worked and whether additional services are needed after the immediate crisis.
B. Identifying trusted adults and practical supports that can be activated now.
C. Using calm, respectful language, space, and choices rather than confrontation.
D. Determining which situation requires immediate emergency action and which can be safely managed with timely follow-up.

0983. A case conference asks for a distinction between Crisis assessment and Protective factors. Which answer is sound?

A. Crisis assessment: Rapid, focused appraisal of immediate safety, precipitating events, supports, functioning, and urgent needs. / Protective factors: A humane, practical, early response that promotes safety, stabilization, connection, and access to support.
B. Crisis assessment: Planned reassessment and continuity contact after acute stabilization to review safety and connect ongoing care. / Protective factors: Personal, relational, and contextual resources that may reduce risk or support coping and recovery.
C. Crisis assessment: Personal, relational, and contextual resources that may reduce risk or support coping and recovery. / Protective factors: Rapid, focused appraisal of immediate safety, precipitating events, supports, functioning, and urgent needs.
D. Crisis assessment: Rapid, focused appraisal of immediate safety, precipitating events, supports, functioning, and urgent needs. / Protective factors: Personal, relational, and contextual resources that may reduce risk or support coping and recovery.

0984. In the youth advocacy program, a teacher and counselor describes the most appropriate support for a middle-school student as identifying trusted adults and practical supports that can be activated now. Which framework is being applied?

A. Protective factors
B. Least restrictive response
C. Psychological first aid
D. Warm handoff

0985. Which description belongs with the term Safety planning?

A. A humane, practical, early response that promotes safety, stabilization, connection, and access to support.
B. A collaborative, individualized plan identifying warning signs, coping steps, supportive contacts, and emergency resources.
C. A coordinated transfer in which the current helper actively connects the person to the next service.
D. Personal, relational, and contextual resources that may reduce risk or support coping and recovery.

0986. Which comparison would correct a trainee’s misunderstanding of Crisis assessment versus Crisis triage?

A. Crisis assessment: Rapid, focused appraisal of immediate safety, precipitating events, supports, functioning, and urgent needs. / Crisis triage: Planned reassessment and continuity contact after acute stabilization to review safety and connect ongoing care.
B. Crisis assessment: A coordinated transfer in which the current helper actively connects the person to the next service. / Crisis triage: Prioritizing urgency and level of response based on immediate danger, need, and available resources.
C. Crisis assessment: Rapid, focused appraisal of immediate safety, precipitating events, supports, functioning, and urgent needs. / Crisis triage: Prioritizing urgency and level of response based on immediate danger, need, and available resources.
D. Crisis assessment: Prioritizing urgency and level of response based on immediate danger, need, and available resources. / Crisis triage: Rapid, focused appraisal of immediate safety, precipitating events, supports, functioning, and urgent needs.

0987. Which option pairs the definitions of Crisis assessment and Risk formulation correctly, in that order?

A. Crisis assessment: A contextual, ongoing synthesis of risk and protective factors, current intent, access, history, and foreseeable changes. / Risk formulation: Rapid, focused appraisal of immediate safety, precipitating events, supports, functioning, and urgent needs.
B. Crisis assessment: Rapid, focused appraisal of immediate safety, precipitating events, supports, functioning, and urgent needs. / Risk formulation: Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety.
C. Crisis assessment: Rapid, focused appraisal of immediate safety, precipitating events, supports, functioning, and urgent needs. / Risk formulation: A contextual, ongoing synthesis of risk and protective factors, current intent, access, history, and foreseeable changes.
D. Crisis assessment: A coordinated transfer in which the current helper actively connects the person to the next service. / Risk formulation: A contextual, ongoing synthesis of risk and protective factors, current intent, access, history, and foreseeable changes.

0988. A case conference asks for a distinction between Safety planning and Post-crisis follow-up. Which answer is sound?

A. Safety planning: A collaborative, individualized plan identifying warning signs, coping steps, supportive contacts, and emergency resources. / Post-crisis follow-up: Planned reassessment and continuity contact after acute stabilization to review safety and connect ongoing care.
B. Safety planning: A coordinated transfer in which the current helper actively connects the person to the next service. / Post-crisis follow-up: Planned reassessment and continuity contact after acute stabilization to review safety and connect ongoing care.
C. Safety planning: Planned reassessment and continuity contact after acute stabilization to review safety and connect ongoing care. / Post-crisis follow-up: A collaborative, individualized plan identifying warning signs, coping steps, supportive contacts, and emergency resources.
D. Safety planning: A collaborative, individualized plan identifying warning signs, coping steps, supportive contacts, and emergency resources. / Post-crisis follow-up: A humane, practical, early response that promotes safety, stabilization, connection, and access to support.

0989. Identify the most precise label for this idea: A contextual, ongoing synthesis of risk and protective factors, current intent, access, history, and foreseeable changes.

A. Risk formulation
B. Crisis assessment
C. Warm handoff
D. Psychological first aid

0990. Which statement accurately contrasts the course concepts Crisis assessment and Least restrictive response?

A. Crisis assessment: Rapid, focused appraisal of immediate safety, precipitating events, supports, functioning, and urgent needs. / Least restrictive response: Communication and environmental strategies that reduce immediate arousal while preserving dignity and safety.
B. Crisis assessment: A collaborative, individualized plan identifying warning signs, coping steps, supportive contacts, and emergency resources. / Least restrictive response: The safest effective intervention that imposes the fewest necessary restrictions, consistent with law and policy.
C. Crisis assessment: Rapid, focused appraisal of immediate safety, precipitating events, supports, functioning, and urgent needs. / Least restrictive response: The safest effective intervention that imposes the fewest necessary restrictions, consistent with law and policy.
D. Crisis assessment: The safest effective intervention that imposes the fewest necessary restrictions, consistent with law and policy. / Least restrictive response: Rapid, focused appraisal of immediate safety, precipitating events, supports, functioning, and urgent needs.

0991. A consulting counselor is asked to justify a plan for a student aged 12 in the school counseling office. It calls for creating specific steps with the youth and caregivers for what to do if risk increases. Which concept provides the rationale?

A. Safety planning
B. Warm handoff
C. Psychological first aid
D. Risk formulation

0992. A assessment clinician is supporting a young person aged 16 in the school consultation. The key practice is creating specific steps with the youth and caregivers for what to do if risk increases. Which course concept is most relevant?

A. Safety planning
B. Psychological first aid
C. De-escalation
D. Risk formulation

0993. Which comparison would correct a trainee’s misunderstanding of Risk formulation versus Psychological first aid?

A. Risk formulation: A humane, practical, early response that promotes safety, stabilization, connection, and access to support. / Psychological first aid: A contextual, ongoing synthesis of risk and protective factors, current intent, access, history, and foreseeable changes.
B. Risk formulation: A contextual, ongoing synthesis of risk and protective factors, current intent, access, history, and foreseeable changes. / Psychological first aid: Prioritizing urgency and level of response based on immediate danger, need, and available resources.
C. Risk formulation: A coordinated transfer in which the current helper actively connects the person to the next service. / Psychological first aid: A humane, practical, early response that promotes safety, stabilization, connection, and access to support.
D. Risk formulation: A contextual, ongoing synthesis of risk and protective factors, current intent, access, history, and foreseeable changes. / Psychological first aid: A humane, practical, early response that promotes safety, stabilization, connection, and access to support.

0994. Which named construct is captured by this account? Planned reassessment and continuity contact after acute stabilization to review safety and connect ongoing care.

A. Post-crisis follow-up
B. Safety planning
C. Psychological first aid
D. De-escalation

0995. A planning meeting about a high-school student includes a behavior specialist. The proposed practice in the caregiver consultation is contacting the receiving service with the client, with appropriate permission, rather than providing only a phone number. Which idea underlies it?

A. Protective factors
B. Crisis triage
C. De-escalation
D. Warm handoff

0996. During work in the parent meeting, a group facilitator identifies this need: determining which situation requires immediate emergency action and which can be safely managed with timely follow-up. Which idea should guide the response?

A. De-escalation
B. Protective factors
C. Post-crisis follow-up
D. Crisis triage

0997. Which statement accurately contrasts the course concepts Protective factors and Warm handoff?

A. Protective factors: A coordinated transfer in which the current helper actively connects the person to the next service. / Warm handoff: Personal, relational, and contextual resources that may reduce risk or support coping and recovery.
B. Protective factors: A humane, practical, early response that promotes safety, stabilization, connection, and access to support. / Warm handoff: A coordinated transfer in which the current helper actively connects the person to the next service.
C. Protective factors: Personal, relational, and contextual resources that may reduce risk or support coping and recovery. / Warm handoff: Planned reassessment and continuity contact after acute stabilization to review safety and connect ongoing care.
D. Protective factors: Personal, relational, and contextual resources that may reduce risk or support coping and recovery. / Warm handoff: A coordinated transfer in which the current helper actively connects the person to the next service.

0998. An interdisciplinary team reviews a preadolescent child's case at the family resource center. The play therapist recommends using calm, respectful language, space, and choices rather than confrontation. Which course concept best fits?

A. Protective factors
B. De-escalation
C. Least restrictive response
D. Safety planning

0999. Choose the practice comparison that best separates Safety planning from Crisis triage.

A. Safety planning: Creating specific steps with the youth and caregivers for what to do if risk increases. / Crisis triage: Determining which situation requires immediate emergency action and which can be safely managed with timely follow-up.
B. Safety planning: Identifying trusted adults and practical supports that can be activated now. / Crisis triage: Determining which situation requires immediate emergency action and which can be safely managed with timely follow-up.
C. Safety planning: Creating specific steps with the youth and caregivers for what to do if risk increases. / Crisis triage: Checking whether the plan worked and whether additional services are needed after the immediate crisis.
D. Safety planning: Determining which situation requires immediate emergency action and which can be safely managed with timely follow-up. / Crisis triage: Creating specific steps with the youth and caregivers for what to do if risk increases.

1000. Which course concept is defined as follows: A humane, practical, early response that promotes safety, stabilization, connection, and access to support.

A. Psychological first aid
B. Least restrictive response
C. Post-crisis follow-up
D. Risk formulation

CAC.912 | Research Methods in Child Psychology

QUESTION BANK | 1,000 ITEMS | ANSWERS AT THE END

0001. In the school-based service, a family therapist is considering this approach for a student aged 9: recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work. Which framework does it represent?

A. Longitudinal design
B. Child assent in research
C. Preregistration
D. Internal validity

0002. At the caregiver consultation, a play therapist meets with a teenage client. The practice priority is: comparing age groups during one data-collection period while recognizing age and cohort are confounded. Which concept best captures that priority?

A. External validity
B. Cross-sectional design
C. Confounding variable
D. Internal validity

0003. Choose the definition pair that correctly explains External validity first and Preregistration second.

A. External validity: A precise specification of how a construct or variable is observed, measured, or manipulated. / Preregistration: Publicly documenting hypotheses, methods, and analysis plans before examining outcome data.
B. External validity: The extent to which findings may apply across populations, settings, measures, and conditions beyond the study. / Preregistration: A factor associated with both a presumed cause and outcome that can offer an alternative explanation.
C. External validity: Publicly documenting hypotheses, methods, and analysis plans before examining outcome data. / Preregistration: The extent to which findings may apply across populations, settings, measures, and conditions beyond the study.
D. External validity: The extent to which findings may apply across populations, settings, measures, and conditions beyond the study. / Preregistration: Publicly documenting hypotheses, methods, and analysis plans before examining outcome data.

0004. A trainee must distinguish how Cross-sectional design and Internal validity guide practice. Which comparison is accurate?

A. Cross-sectional design: Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work. / Internal validity: Evaluating whether rival explanations for a treatment effect have been addressed.
B. Cross-sectional design: Comparing age groups during one data-collection period while recognizing age and cohort are confounded. / Internal validity: Explaining a study to a child in accessible language and respecting dissent under applicable safeguards.
C. Cross-sectional design: Evaluating whether rival explanations for a treatment effect have been addressed. / Internal validity: Comparing age groups during one data-collection period while recognizing age and cohort are confounded.
D. Cross-sectional design: Comparing age groups during one data-collection period while recognizing age and cohort are confounded. / Internal validity: Evaluating whether rival explanations for a treatment effect have been addressed.

0005. A therapist describes an intervention for a high-school student in the counseling practicum, centered on considering whether a sample and setting resemble the populations to which results are generalized. Which named idea is most relevant?

A. Informed research consent
B. External validity
C. Preregistration
D. Operational definition

0006. Consider a young person aged 16 receiving help in the community service agency. The school counselor focuses on comparing age groups during one data-collection period while recognizing age and cohort are confounded. Which term best describes the guiding idea?

A. Internal validity
B. Informed research consent
C. Cross-sectional design
D. Preregistration

0007. Which option preserves the correct meaning of both Cross-sectional design and Confounding variable?

A. Cross-sectional design: A design that compares different individuals or groups at one time point. / Confounding variable: A factor associated with both a presumed cause and outcome that can offer an alternative explanation.
B. Cross-sectional design: A design that compares different individuals or groups at one time point. / Confounding variable: The strength of evidence that a study's manipulation or exposure, rather than alternatives, explains the observed effect.
C. Cross-sectional design: A factor associated with both a presumed cause and outcome that can offer an alternative explanation. / Confounding variable: A design that compares different individuals or groups at one time point.
D. Cross-sectional design: Allocation of participants to study conditions by chance to support baseline comparability. / Confounding variable: A factor associated with both a presumed cause and outcome that can offer an alternative explanation.

0008. Choose the practice comparison that best separates Random assignment from Child assent in research.

A. Random assignment: Explaining a study to a child in accessible language and respecting dissent under applicable safeguards. / Child assent in research: Using a chance procedure to allocate enrolled participants to treatment conditions.
B. Random assignment: Using a chance procedure to allocate enrolled participants to treatment conditions. / Child assent in research: Explaining a study to a child in accessible language and respecting dissent under applicable safeguards.
C. Random assignment: Using a chance procedure to allocate enrolled participants to treatment conditions. / Child assent in research: Evaluating whether rival explanations for a treatment effect have been addressed.
D. Random assignment: Comparing age groups during one data-collection period while recognizing age and cohort are confounded. / Child assent in research: Explaining a study to a child in accessible language and respecting dissent under applicable safeguards.

0009. What is the central meaning of Informed research consent?

A. The extent to which findings may apply across populations, settings, measures, and conditions beyond the study.
B. Voluntary authorization to participate based on adequate disclosure, provided by an authorized adult when required.
C. The strength of evidence that a study's manipulation or exposure, rather than alternatives, explains the observed effect.
D. A precise specification of how a construct or variable is observed, measured, or manipulated.

0010. Which option correctly matches each concept to its practice focus: Random assignment and Child assent in research?

A. Random assignment: Comparing age groups during one data-collection period while recognizing age and cohort are confounded. / Child assent in research: Explaining a study to a child in accessible language and respecting dissent under applicable safeguards.
B. Random assignment: Using a chance procedure to allocate enrolled participants to treatment conditions. / Child assent in research: Evaluating whether rival explanations for a treatment effect have been addressed.
C. Random assignment: Using a chance procedure to allocate enrolled participants to treatment conditions. / Child assent in research: Explaining a study to a child in accessible language and respecting dissent under applicable safeguards.
D. Random assignment: Explaining a study to a child in accessible language and respecting dissent under applicable safeguards. / Child assent in research: Using a chance procedure to allocate enrolled participants to treatment conditions.

0011. Which description belongs with the term Cross-sectional design?

A. The strength of evidence that a study's manipulation or exposure, rather than alternatives, explains the observed effect.
B. A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission.
C. A design that compares different individuals or groups at one time point.
D. The extent to which findings may apply across populations, settings, measures, and conditions beyond the study.

0012. Choose the term that matches this definition: The strength of evidence that a study's manipulation or exposure, rather than alternatives, explains the observed effect.

A. Cross-sectional design
B. Child assent in research
C. Internal validity
D. Random assignment

0013. Choose the response that best puts External validity into practice.

A. Explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult.
B. Using a chance procedure to allocate enrolled participants to treatment conditions.
C. Considering whether a sample and setting resemble the populations to which results are generalized.
D. Defining observable criteria for a study variable before collecting data.

0014. How should a practitioner distinguish the applications of Longitudinal design and Child assent in research?

A. Longitudinal design: Explaining a study to a child in accessible language and respecting dissent under applicable safeguards. / Child assent in research: Following the same children over time to study within-person change.
B. Longitudinal design: Identifying a third factor that may account for an observed association between exposure and outcome. / Child assent in research: Explaining a study to a child in accessible language and respecting dissent under applicable safeguards.
C. Longitudinal design: Following the same children over time to study within-person change. / Child assent in research: Explaining a study to a child in accessible language and respecting dissent under applicable safeguards.
D. Longitudinal design: Following the same children over time to study within-person change. / Child assent in research: Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work.

0015. Which option pairs the definitions of Operational definition and Random assignment correctly, in that order?

A. Operational definition: Allocation of participants to study conditions by chance to support baseline comparability. / Random assignment: A precise specification of how a construct or variable is observed, measured, or manipulated.
B. Operational definition: A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission. / Random assignment: Allocation of participants to study conditions by chance to support baseline comparability.
C. Operational definition: A precise specification of how a construct or variable is observed, measured, or manipulated. / Random assignment: Voluntary authorization to participate based on adequate disclosure, provided by an authorized adult when required.
D. Operational definition: A precise specification of how a construct or variable is observed, measured, or manipulated. / Random assignment: Allocation of participants to study conditions by chance to support baseline comparability.

0016. How are Longitudinal design and Cross-sectional design most accurately differentiated in this curriculum?

A. Longitudinal design: A design that measures the same individuals or units across multiple time points. / Cross-sectional design: A design that compares different individuals or groups at one time point.
B. Longitudinal design: A design that compares different individuals or groups at one time point. / Cross-sectional design: A design that measures the same individuals or units across multiple time points.
C. Longitudinal design: The strength of evidence that a study's manipulation or exposure, rather than alternatives, explains the observed effect. / Cross-sectional design: A design that compares different individuals or groups at one time point.
D. Longitudinal design: A design that measures the same individuals or units across multiple time points. / Cross-sectional design: Voluntary authorization to participate based on adequate disclosure, provided by an authorized adult when required.

0017. For a young person in the behavior-support review, a counselor makes this practice the immediate priority: using a chance procedure to allocate enrolled participants to treatment conditions. Which concept fits best?

A. External validity
B. Random assignment
C. Preregistration
D. Cross-sectional design

0018. Which statement most accurately defines Random assignment?

A. Allocation of participants to study conditions by chance to support baseline comparability.
B. A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission.
C. A factor associated with both a presumed cause and outcome that can offer an alternative explanation.
D. A precise specification of how a construct or variable is observed, measured, or manipulated.

0019. A preadolescent child is receiving support in the school counseling office. The school counselor is guided by this practice: considering whether a sample and setting resemble the populations to which results are generalized. Which principle best fits?

A. External validity
B. Confounding variable
C. Random assignment
D. Internal validity

0020. A trainee must distinguish how Informed research consent and Child assent in research guide practice. Which comparison is accurate?

A. Informed research consent: Explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult. / Child assent in research: Using a chance procedure to allocate enrolled participants to treatment conditions.
B. Informed research consent: Explaining a study to a child in accessible language and respecting dissent under applicable safeguards. / Child assent in research: Explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult.
C. Informed research consent: Following the same children over time to study within-person change. / Child assent in research: Explaining a study to a child in accessible language and respecting dissent under applicable safeguards.
D. Informed research consent: Explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult. / Child assent in research: Explaining a study to a child in accessible language and respecting dissent under applicable safeguards.

0021. Which choice aligns each practice with the correct idea, Random assignment or Cross-sectional design?

A. Random assignment: Considering whether a sample and setting resemble the populations to which results are generalized. / Cross-sectional design: Comparing age groups during one data-collection period while recognizing age and cohort are confounded.
B. Random assignment: Comparing age groups during one data-collection period while recognizing age and cohort are confounded. / Cross-sectional design: Using a chance procedure to allocate enrolled participants to treatment conditions.
C. Random assignment: Using a chance procedure to allocate enrolled participants to treatment conditions. / Cross-sectional design: Defining observable criteria for a study variable before collecting data.
D. Random assignment: Using a chance procedure to allocate enrolled participants to treatment conditions. / Cross-sectional design: Comparing age groups during one data-collection period while recognizing age and cohort are confounded.

0022. A parent educator presents a support plan for a preadolescent child at the counseling practicum. Its central feature is explaining a study to a child in accessible language and respecting dissent under applicable safeguards. Which concept should be named?

A. Cross-sectional design
B. Random assignment
C. Child assent in research
D. Preregistration

0023. While supporting a young person aged 13 in the community youth program, a school-based clinician adopts this practice: using a chance procedure to allocate enrolled participants to treatment conditions. Which concept best explains the choice?

A. Random assignment
B. Preregistration
C. Informed research consent
D. Internal validity

0024. How are Internal validity and Child assent in research most accurately differentiated in this curriculum?

A. Internal validity: The extent to which findings may apply across populations, settings, measures, and conditions beyond the study. / Child assent in research: A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission.
B. Internal validity: The strength of evidence that a study's manipulation or exposure, rather than alternatives, explains the observed effect. / Child assent in research: Publicly documenting hypotheses, methods, and analysis plans before examining outcome data.
C. Internal validity: The strength of evidence that a study's manipulation or exposure, rather than alternatives, explains the observed effect. / Child assent in research: A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission.
D. Internal validity: A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission. / Child assent in research: The strength of evidence that a study's manipulation or exposure, rather than alternatives, explains the observed effect.

0025. Which applied comparison correctly identifies what belongs to Operational definition versus Longitudinal design?

A. Operational definition: Defining observable criteria for a study variable before collecting data. / Longitudinal design: Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work.
B. Operational definition: Defining observable criteria for a study variable before collecting data. / Longitudinal design: Following the same children over time to study within-person change.
C. Operational definition: Following the same children over time to study within-person change. / Longitudinal design: Defining observable criteria for a study variable before collecting data.
D. Operational definition: Identifying a third factor that may account for an observed association between exposure and outcome. / Longitudinal design: Following the same children over time to study within-person change.

0026. Which comparison would correct a trainee's misunderstanding of Cross-sectional design versus Confounding variable?

A. Cross-sectional design: A design that compares different individuals or groups at one time point. / Confounding variable: A factor associated with both a presumed cause and outcome that can offer an alternative explanation.
B. Cross-sectional design: A factor associated with both a presumed cause and outcome that can offer an alternative explanation. / Confounding variable: A design that compares different individuals or groups at one time point.
C. Cross-sectional design: A design that compares different individuals or groups at one time point. / Confounding variable: The strength of evidence that a study's manipulation or exposure, rather than alternatives, explains the observed effect.
D. Cross-sectional design: Allocation of participants to study conditions by chance to support baseline comparability. / Confounding variable: A factor associated with both a presumed cause and outcome that can offer an alternative explanation.

0027. Which option is the clearest practical expression of Child assent in research?

A. Comparing age groups during one data-collection period while recognizing age and cohort are confounded.
B. Explaining a study to a child in accessible language and respecting dissent under applicable safeguards.
C. Following the same children over time to study within-person change.
D. Evaluating whether rival explanations for a treatment effect have been addressed.

0028. Consider a student aged 9 receiving help in the behavior-support review. The consulting counselor focuses on following the same children over time to study within-person change. Which term best describes the guiding idea?

A. Longitudinal design
B. Informed research consent
C. Cross-sectional design
D. Confounding variable

0029. How are Cross-sectional design and External validity most accurately differentiated in this curriculum?

A. Cross-sectional design: A design that compares different individuals or groups at one time point. / External validity: The extent to which findings may apply across populations, settings, measures, and conditions beyond the study.
B. Cross-sectional design: A factor associated with both a presumed cause and outcome that can offer an alternative explanation. / External validity: The extent to which findings may apply across populations, settings, measures, and conditions beyond the study.
C. Cross-sectional design: A design that compares different individuals or groups at one time point. / External validity: A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission.
D. Cross-sectional design: The extent to which findings may apply across populations, settings, measures, and conditions beyond the study. / External validity: A design that compares different individuals or groups at one time point.

0030. A student aged 15 and a member of a clinical team are reviewing goals in the school counseling office. The agreed action is explaining a study to a child in accessible language and respecting dissent under applicable safeguards. Which principle best accounts for it?

A. Informed research consent
B. Random assignment
C. Child assent in research
D. Operational definition

0031. At the classroom support meeting, a therapist reviews whether a plan for a young adolescent client is appropriate. The relevant practice is explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult. Which concept is tested?

A. Random assignment
B. Operational definition
C. Child assent in research
D. Informed research consent

0032. Which option correctly matches each concept to its practice focus: Child assent in research and Preregistration?

A. Child assent in research: Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work. / Preregistration: Explaining a study to a child in accessible language and respecting dissent under applicable safeguards.
B. Child assent in research: Explaining a study to a child in accessible language and respecting dissent under applicable safeguards. / Preregistration: Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work.
C. Child assent in research: Defining observable criteria for a study variable before collecting data. / Preregistration: Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work.
D. Child assent in research: Explaining a study to a child in accessible language and respecting dissent under applicable safeguards. / Preregistration: Identifying a third factor that may account for an observed association between exposure and outcome.

0033. A service team discusses a young person aged 13 in the behavior-support review. Their proposed next step is comparing age groups during one data-collection period while recognizing age and cohort are confounded. Which course concept supports it?

A. Operational definition
B. Cross-sectional design
C. Child assent in research
D. Preregistration

0034. A trainee must distinguish how Confounding variable and Informed research consent guide practice. Which comparison is accurate?

A. Confounding variable: Comparing age groups during one data-collection period while recognizing age and cohort are confounded. / Informed research consent: Explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult.
B. Confounding variable: Identifying a third factor that may account for an observed association between exposure and outcome. / Informed research consent: Explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult.
C. Confounding variable: Explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult. / Informed research consent: Identifying a third factor that may account for an observed association between exposure and outcome.
D. Confounding variable: Identifying a third factor that may account for an observed association between exposure and outcome. / Informed research consent: Explaining a study to a child in accessible language and respecting dissent under applicable safeguards.

0035. Choose the term that matches this definition: A design that measures the same individuals or units across multiple time points.

A. Random assignment
B. Preregistration
C. Internal validity
D. Longitudinal design

0036. A supervisor asks for an applied contrast between Cross-sectional design and External validity. Which option fits?

A. Cross-sectional design: Considering whether a sample and setting resemble the populations to which results are generalized. / External validity: Comparing age groups during one data-collection period while recognizing age and cohort are confounded.
B. Cross-sectional design: Identifying a third factor that may account for an observed association between exposure and outcome. / External validity: Considering whether a sample and setting resemble the populations to which results are generalized.
C. Cross-sectional design: Comparing age groups during one data-collection period while recognizing age and cohort are confounded. / External validity: Explaining a study to a child in accessible language and respecting dissent under applicable safeguards.
D. Cross-sectional design: Comparing age groups during one data-collection period while recognizing age and cohort are confounded. / External validity: Considering whether a sample and setting resemble the populations to which results are generalized.

0037. In the caregiver consultation, a school-based clinician is considering this approach for a child aged 6: explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult. Which framework does it represent?

A. Cross-sectional design
B. Random assignment
C. Confounding variable
D. Informed research consent

0038. A assessment clinician is supporting a young person aged 16 in the school consultation. The key practice is using a chance procedure to allocate enrolled participants to treatment conditions. Which course concept is most relevant?

A. Random assignment
B. Confounding variable
C. Informed research consent
D. Cross-sectional design

0039. Which applied comparison correctly identifies what belongs to Confounding variable versus Child assent in research?

A. Confounding variable: Explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult. / Child assent in research: Explaining a study to a child in accessible language and respecting dissent under applicable safeguards.
B. Confounding variable: Identifying a third factor that may account for an observed association between exposure and outcome. / Child assent in research: Considering whether a sample and setting resemble the populations to which results are generalized.
C. Confounding variable: Identifying a third factor that may account for an observed association between exposure and outcome. / Child assent in research: Explaining a study to a child in accessible language and respecting dissent under applicable safeguards.
D. Confounding variable: Explaining a study to a child in accessible language and respecting dissent under applicable safeguards. / Child assent in research: Identifying a third factor that may account for an observed association between exposure and outcome.

0040. A case discussion concerns a child aged 7 and a case coordinator in the student-support meeting. The practitioner is considering using a chance procedure to allocate enrolled participants to treatment conditions. Which principle is involved?

A. Informed research consent
B. Internal validity
C. Random assignment
D. External validity

0041. In a professional consultation about a high-school student, the member of a clinical team describes this response in the community service agency: evaluating whether rival explanations for a treatment effect have been addressed. Which term is most apt?

A. Informed research consent
B. Preregistration
C. Internal validity
D. External validity

0042. A assessment clinician prepares for a session in the child guidance clinic with a young person aged 18. The intended approach is defining observable criteria for a study variable before collecting data. Which concept is most relevant?

A. Preregistration
B. Operational definition
C. External validity
D. Child assent in research

0043. Which comparison correctly distinguishes Confounding variable from Internal validity?

A. Confounding variable: The strength of evidence that a study's manipulation or exposure, rather than alternatives, explains the observed effect. / Internal validity: A factor associated with both a presumed cause and outcome that can offer an alternative explanation.
B. Confounding variable: A factor associated with both a presumed cause and outcome that can offer an alternative explanation. / Internal validity: The strength of evidence that a study's manipulation or exposure, rather than alternatives, explains the observed effect.
C. Confounding variable: A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission. / Internal validity: The strength of evidence that a study's manipulation or exposure, rather than alternatives, explains the observed effect.
D. Confounding variable: A factor associated with both a presumed cause and outcome that can offer an alternative explanation. / Internal validity: A design that compares different individuals or groups at one time point.

0044. Which statement accurately contrasts the course concepts Operational definition and Longitudinal design?

A. Operational definition: A factor associated with both a presumed cause and outcome that can offer an alternative explanation. / Longitudinal design: A design that measures the same individuals or units across multiple time points.
B. Operational definition: A precise specification of how a construct or variable is observed, measured, or manipulated. / Longitudinal design: A design that measures the same individuals or units across multiple time points.
C. Operational definition: A design that measures the same individuals or units across multiple time points. / Longitudinal design: A precise specification of how a construct or variable is observed, measured, or manipulated.
D. Operational definition: A precise specification of how a construct or variable is observed, measured, or manipulated. / Longitudinal design: Publicly documenting hypotheses, methods, and analysis plans before examining outcome data.

0045. In the telehealth session, a youth worker explains why a student aged 17 would benefit from using a chance procedure to allocate enrolled participants to treatment conditions. Which course concept underpins the explanation?

A. Cross-sectional design
B. Random assignment
C. Operational definition
D. Confounding variable

0046. A case conference asks for a distinction between Operational definition and Child assent in research. Which answer is sound?

A. Operational definition: A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission. / Child assent in research: A precise specification of how a construct or variable is observed, measured, or manipulated.
B. Operational definition: A precise specification of how a construct or variable is observed, measured, or manipulated. / Child assent in research: The extent to which findings may apply across populations, settings, measures, and conditions beyond the study.
C. Operational definition: A design that compares different individuals or groups at one time point. / Child assent in research: A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission.
D. Operational definition: A precise specification of how a construct or variable is observed, measured, or manipulated. / Child assent in research: A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission.

0047. Which statement shows a sound practice-level distinction between Operational definition and Child assent in research?

A. Operational definition: Explaining a study to a child in accessible language and respecting dissent under applicable safeguards. / Child assent in research: Defining observable criteria for a study variable before collecting data.
B. Operational definition: Defining observable criteria for a study variable before collecting data. / Child assent in research: Explaining a study to a child in accessible language and respecting dissent under applicable safeguards.
C. Operational definition: Defining observable criteria for a study variable before collecting data. / Child assent in research: Considering whether a sample and setting resemble the populations to which results are generalized.
D. Operational definition: Comparing age groups during one data-collection period while recognizing age and cohort are confounded. / Child assent in research: Explaining a study to a child in accessible language and respecting dissent under applicable safeguards.

0048. Choose the term that matches this definition: A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission.

A. Longitudinal design
B. Internal validity
C. Child assent in research
D. External validity

0049. Which pair of actions illustrates Internal validity and Child assent in research, respectively?

A. Internal validity: Evaluating whether rival explanations for a treatment effect have been addressed. / Child assent in research: Explaining a study to a child in accessible language and respecting dissent under applicable safeguards.
B. Internal validity: Considering whether a sample and setting resemble the populations to which results are generalized. / Child assent in research: Explaining a study to a child in accessible language and respecting dissent under applicable safeguards.
C. Internal validity: Evaluating whether rival explanations for a treatment effect have been addressed. / Child assent in research: Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work.
D. Internal validity: Explaining a study to a child in accessible language and respecting dissent under applicable safeguards. / Child assent in research: Evaluating whether rival explanations for a treatment effect have been addressed.

0050. Which option correctly matches each concept to its practice focus: Longitudinal design and Informed research consent?

A. Longitudinal design: Following the same children over time to study within-person change. / Informed research consent: Considering whether a sample and setting resemble the populations to which results are generalized.
B. Longitudinal design: Explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult. / Informed research consent: Following the same children over time to study within-person change.
C. Longitudinal design: Comparing age groups during one data-collection period while recognizing age and cohort are confounded. / Informed research consent: Explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult.
D. Longitudinal design: Following the same children over time to study within-person change. / Informed research consent: Explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult.

0051. Which statement accurately contrasts the course concepts Confounding variable and Child assent in research?

A. Confounding variable: A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission. / Child assent in research: A factor associated with both a presumed cause and outcome that can offer an alternative explanation.
B. Confounding variable: A factor associated with both a presumed cause and outcome that can offer an alternative explanation. / Child assent in research: The extent to which findings may apply across populations, settings, measures, and conditions beyond the study.
C. Confounding variable: A factor associated with both a presumed cause and outcome that can offer an alternative explanation. / Child assent in research: A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission.
D. Confounding variable: Voluntary authorization to participate based on adequate disclosure, provided by an authorized adult when required. / Child assent in research: A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission.

0052. Which option correctly matches each concept to its practice focus: Random assignment and Internal validity?

A. Random assignment: Evaluating whether rival explanations for a treatment effect have been addressed. / Internal validity: Using a chance procedure to allocate enrolled participants to treatment conditions.
B. Random assignment: Using a chance procedure to allocate enrolled participants to treatment conditions. / Internal validity: Evaluating whether rival explanations for a treatment effect have been addressed.
C. Random assignment: Using a chance procedure to allocate enrolled participants to treatment conditions. / Internal validity: Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work.
D. Random assignment: Identifying a third factor that may account for an observed association between exposure and outcome. / Internal validity: Evaluating whether rival explanations for a treatment effect have been addressed.

0053. Which choice aligns each practice with the correct idea, External validity or Preregistration?

A. External validity: Considering whether a sample and setting resemble the populations to which results are generalized. / Preregistration: Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work.
B. External validity: Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work. / Preregistration: Considering whether a sample and setting resemble the populations to which results are generalized.
C. External validity: Defining observable criteria for a study variable before collecting data. / Preregistration: Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work.
D. External validity: Considering whether a sample and setting resemble the populations to which results are generalized. / Preregistration: Identifying a third factor that may account for an observed association between exposure and outcome.

0054. Choose the response that best puts Random assignment into practice.

A. Defining observable criteria for a study variable before collecting data.
B. Identifying a third factor that may account for an observed association between exposure and outcome.
C. Using a chance procedure to allocate enrolled participants to treatment conditions.
D. Considering whether a sample and setting resemble the populations to which results are generalized.

0055. A mental-health professional is supporting a older adolescent client in the family session. The key practice is recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work. Which course concept is most relevant?

A. Operational definition
B. Preregistration
C. Informed research consent
D. External validity

0056. Which applied comparison correctly identifies what belongs to Operational definition versus Cross-sectional design?

A. Operational definition: Explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult. / Cross-sectional design: Comparing age groups during one data-collection period while recognizing age and cohort are confounded.
B. Operational definition: Defining observable criteria for a study variable before collecting data. / Cross-sectional design: Explaining a study to a child in accessible language and respecting dissent under applicable safeguards.
C. Operational definition: Comparing age groups during one data-collection period while recognizing age and cohort are confounded. / Cross-sectional design: Defining observable criteria for a study variable before collecting data.
D. Operational definition: Defining observable criteria for a study variable before collecting data. / Cross-sectional design: Comparing age groups during one data-collection period while recognizing age and cohort are confounded.

0057. Choose the practice comparison that best separates Internal validity from External validity.

A. Internal validity: Evaluating whether rival explanations for a treatment effect have been addressed. / External validity: Considering whether a sample and setting resemble the populations to which results are generalized.
B. Internal validity: Considering whether a sample and setting resemble the populations to which results are generalized. / External validity: Evaluating whether rival explanations for a treatment effect have been addressed.
C. Internal validity: Explaining a study to a child in accessible language and respecting dissent under applicable safeguards. / External validity: Considering whether a sample and setting resemble the populations to which results are generalized.
D. Internal validity: Evaluating whether rival explanations for a treatment effect have been addressed. / External validity: Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work.

0058. Which named construct is captured by this account? Allocation of participants to study conditions by chance to support baseline comparability.

A. Preregistration
B. Random assignment
C. Child assent in research
D. Longitudinal design

0059. At the learning-support meeting, a therapist reviews whether a plan for a child aged 11 is appropriate. The relevant practice is following the same children over time to study within-person change. Which concept is tested?

A. Longitudinal design
B. Random assignment
C. Confounding variable
D. Child assent in research

0060. At the counseling practicum, a service navigator reviews whether a plan for a teenage client is appropriate. The relevant practice is using a chance procedure to allocate enrolled participants to treatment conditions. Which concept is tested?

A. Confounding variable
B. External validity
C. Random assignment
D. Operational definition

0061. Which description belongs with the term Preregistration?

A. Publicly documenting hypotheses, methods, and analysis plans before examining outcome data.
B. A design that measures the same individuals or units across multiple time points.
C. A design that compares different individuals or groups at one time point.
D. The extent to which findings may apply across populations, settings, measures, and conditions beyond the study.

0062. A school-age child's service team meets in the family resource center. The parent educator recommends a change involving using a chance procedure to allocate enrolled participants to treatment conditions. Which idea best explains it?

A. Random assignment
B. Operational definition
C. Child assent in research
D. Informed research consent

0063. In a professional consultation about a child aged 6, the assessment clinician describes this response in the telehealth session: explaining a study to a child in accessible language and respecting dissent under applicable safeguards. Which term is most apt?

A. Cross-sectional design
B. Confounding variable
C. External validity
D. Child assent in research

0064. In a case note about a young person aged 10, a supervised trainee working in the learning-support meeting records this priority: explaining a study to a child in accessible language and respecting dissent under applicable safeguards. What principle is reflected?

A. Child assent in research
B. Internal validity
C. Operational definition
D. Informed research consent

0065. A member of a clinical team and a student aged 12 are discussing support in the behavior-support review. The selected practice is recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work. Which concept does this demonstrate?

A. Operational definition
B. Internal validity
C. Random assignment
D. Preregistration

0066. In the student wellness team, the agreed focus for a research trainee working with a older adolescent client is evaluating whether rival explanations for a treatment effect have been addressed. Which concept names this focus?

A. Internal validity
B. Operational definition
C. Longitudinal design
D. External validity

0067. Choose the practice comparison that best separates Random assignment from Informed research consent.

A. Random assignment: Comparing age groups during one data-collection period while recognizing age and cohort are confounded. / Informed research consent: Explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult.
B. Random assignment: Using a chance procedure to allocate enrolled participants to treatment conditions. / Informed research consent: Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work.
C. Random assignment: Using a chance procedure to allocate enrolled participants to treatment conditions. / Informed research consent: Explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult.
D. Random assignment: Explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult. / Informed research consent: Using a chance procedure to allocate enrolled participants to treatment conditions.

0068. Choose the response that best puts Longitudinal design into practice.

A. Explaining a study to a child in accessible language and respecting dissent under applicable safeguards.
B. Following the same children over time to study within-person change.
C. Defining observable criteria for a study variable before collecting data.
D. Comparing age groups during one data-collection period while recognizing age and cohort are confounded.

0069. While supporting a middle-school student in the family resource center, a school-based clinician adopts this practice: considering whether a sample and setting resemble the populations to which results are generalized. Which concept best explains the choice?

A. Child assent in research
B. External validity
C. Preregistration
D. Informed research consent

0070. Which comparison would correct a trainee's misunderstanding of Longitudinal design versus Child assent in research?

A. Longitudinal design: A design that measures the same individuals or units across multiple time points. / Child assent in research: A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission.
B. Longitudinal design: A factor associated with both a presumed cause and outcome that can offer an alternative explanation. / Child assent in research: A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission.
C. Longitudinal design: A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission. / Child assent in research: A design that measures the same individuals or units across multiple time points.
D. Longitudinal design: A design that measures the same individuals or units across multiple time points. / Child assent in research: Publicly documenting hypotheses, methods, and analysis plans before examining outcome data.

0071. Choose the definition pair that correctly explains Confounding variable first and External validity second.

A. Confounding variable: A design that measures the same individuals or units across multiple time points. / External validity: The extent to which findings may apply across populations, settings, measures, and conditions beyond the study.
B. Confounding variable: The extent to which findings may apply across populations, settings, measures, and conditions beyond the study. / External validity: A factor associated with both a presumed cause and outcome that can offer an alternative explanation.
C. Confounding variable: A factor associated with both a presumed cause and outcome that can offer an alternative explanation. / External validity: A design that compares different individuals or groups at one time point.
D. Confounding variable: A factor associated with both a presumed cause and outcome that can offer an alternative explanation. / External validity: The extent to which findings may apply across populations, settings, measures, and conditions beyond the study.

0072. In a supervision quiz, how should Random assignment be distinguished from Longitudinal design?

A. Random assignment: Publicly documenting hypotheses, methods, and analysis plans before examining outcome data. / Longitudinal design: A design that measures the same individuals or units across multiple time points.
B. Random assignment: Allocation of participants to study conditions by chance to support baseline comparability. / Longitudinal design: A design that measures the same individuals or units across multiple time points.
C. Random assignment: Allocation of participants to study conditions by chance to support baseline comparability. / Longitudinal design: A precise specification of how a construct or variable is observed, measured, or manipulated.
D. Random assignment: A design that measures the same individuals or units across multiple time points. / Longitudinal design: Allocation of participants to study conditions by chance to support baseline comparability.

0073. How should a practitioner distinguish the applications of Longitudinal design and Confounding variable?

A. Longitudinal design: Identifying a third factor that may account for an observed association between exposure and outcome. / Confounding variable: Following the same children over time to study within-person change.
B. Longitudinal design: Defining observable criteria for a study variable before collecting data. / Confounding variable: Identifying a third factor that may account for an observed association between exposure and outcome.
C. Longitudinal design: Following the same children over time to study within-person change. / Confounding variable: Identifying a third factor that may account for an observed association between exposure and outcome.
D. Longitudinal design: Following the same children over time to study within-person change. / Confounding variable: Explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult.

0074. A planning meeting about a child aged 7 includes a clinical supervisor. The proposed practice in the classroom support meeting is defining observable criteria for a study variable before collecting data. Which idea underlies it?

A. Child assent in research
B. Operational definition
C. Random assignment
D. External validity

0075. How are Operational definition and Informed research consent most accurately differentiated in this curriculum?

A. Operational definition: A precise specification of how a construct or variable is observed, measured, or manipulated. / Informed research consent: The strength of evidence that a study's manipulation or exposure, rather than alternatives, explains the observed effect.
B. Operational definition: Voluntary authorization to participate based on adequate disclosure, provided by an authorized adult when required. / Informed research consent: A precise specification of how a construct or variable is observed, measured, or manipulated.
C. Operational definition: A precise specification of how a construct or variable is observed, measured, or manipulated. / Informed research consent: Voluntary authorization to participate based on adequate disclosure, provided by an authorized adult when required.
D. Operational definition: A factor associated with both a presumed cause and outcome that can offer an alternative explanation. / Informed research consent: Voluntary authorization to participate based on adequate disclosure, provided by an authorized adult when required.

0076. At the school-based service, a counselor meets with a child aged 7. The practice priority is: evaluating whether rival explanations for a treatment effect have been addressed. Which concept best captures that priority?

A. Internal validity
B. Informed research consent
C. Longitudinal design
D. Operational definition

0077. Which choice aligns each practice with the correct idea, Confounding variable or Informed research consent?

A. Confounding variable: Comparing age groups during one data-collection period while recognizing age and cohort are confounded. / Informed research consent: Explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult.
B. Confounding variable: Identifying a third factor that may account for an observed association between exposure and outcome. / Informed research consent: Explaining a study to a child in accessible language and respecting dissent under applicable safeguards.
C. Confounding variable: Identifying a third factor that may account for an observed association between exposure and outcome. / Informed research consent: Explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult.
D. Confounding variable: Explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult. / Informed research consent: Identifying a third factor that may account for an observed association between exposure and outcome.

0078. When reviewing a young person aged 18's plan in the learning-support meeting, the parent educator notes that the next step is identifying a third factor that may account for an observed association between exposure and outcome. Which concept guides this step?

A. External validity
B. Random assignment
C. Operational definition
D. Confounding variable

0079. In the school consultation, a team asks how a consulting counselor can support a school-age child. One proposed action is identifying a third factor that may account for an observed association between exposure and outcome. Which idea does it represent?

A. Cross-sectional design
B. Operational definition
C. Preregistration
D. Confounding variable

0080. Which course concept is defined as follows: Voluntary authorization to participate based on adequate disclosure, provided by an authorized adult when required.

A. Preregistration
B. Informed research consent
C. External validity
D. Random assignment

0081. A case conference asks for a distinction between Random assignment and External validity. Which answer is sound?

A. Random assignment: Allocation of participants to study conditions by chance to support baseline comparability. / External validity: The extent to which findings may apply across populations, settings, measures, and conditions beyond the study.
B. Random assignment: A design that compares different individuals or groups at one time point. / External validity: The extent to which findings may apply across populations, settings, measures, and conditions beyond the study.
C. Random assignment: The extent to which findings may apply across populations, settings, measures, and conditions beyond the study. / External validity: Allocation of participants to study conditions by chance to support baseline comparability.
D. Random assignment: Allocation of participants to study conditions by chance to support baseline comparability. / External validity: A factor associated with both a presumed cause and outcome that can offer an alternative explanation.

0082. A case discussion concerns a young person aged 10 and a parent educator in the youth advocacy program. The practitioner is considering explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult. Which principle is involved?

A. Child assent in research
B. External validity
C. Confounding variable
D. Informed research consent

0083. Which paired example correctly applies Internal validity first and External validity second?

A. Internal validity: Considering whether a sample and setting resemble the populations to which results are generalized. / External validity: Evaluating whether rival explanations for a treatment effect have been addressed.
B. Internal validity: Evaluating whether rival explanations for a treatment effect have been addressed. / External validity: Considering whether a sample and setting resemble the populations to which results are generalized.
C. Internal validity: Evaluating whether rival explanations for a treatment effect have been addressed. / External validity: Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work.
D. Internal validity: Explaining a study to a child in accessible language and respecting dissent under applicable safeguards. / External validity: Considering whether a sample and setting resemble the populations to which results are generalized.

0084. While supporting a student aged 9 in the classroom support meeting, a case coordinator adopts this practice: identifying a third factor that may account for an observed association between exposure and outcome. Which concept best explains the choice?

A. Operational definition
B. Confounding variable
C. Internal validity
D. Random assignment

0085. A student confuses Confounding variable with External validity. Which explanation most accurately separates them?

A. Confounding variable: A design that measures the same individuals or units across multiple time points. / External validity: The extent to which findings may apply across populations, settings, measures, and conditions beyond the study.
B. Confounding variable: The extent to which findings may apply across populations, settings, measures, and conditions beyond the study. / External validity: A factor associated with both a presumed cause and outcome that can offer an alternative explanation.
C. Confounding variable: A factor associated with both a presumed cause and outcome that can offer an alternative explanation. / External validity: The extent to which findings may apply across populations, settings, measures, and conditions beyond the study.
D. Confounding variable: A factor associated with both a presumed cause and outcome that can offer an alternative explanation. / External validity: A design that compares different individuals or groups at one time point.

0086. A community practitioner is asked what should shape a middle-school student's support in the community mental-health service. The proposed focus is explaining a study to a child in accessible language and respecting dissent under applicable safeguards. Which principle does it represent?

A. Child assent in research
B. Longitudinal design
C. Preregistration
D. Cross-sectional design

0087. While supporting a young person in the student wellness team, a caregiver working with a counselor adopts this practice: explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult. Which concept best explains the choice?

A. Informed research consent
B. Longitudinal design
C. Operational definition
D. Random assignment

0088. A program coordinator is asked what should shape a high-school student's support in the multidisciplinary case conference. The proposed focus is using a chance procedure to allocate enrolled participants to treatment conditions. Which principle does it represent?

A. Operational definition
B. Informed research consent
C. Random assignment
D. Preregistration

0089. In the community mental-health service, a consulting counselor describes the most appropriate support for a young person aged 18 as explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult. Which framework is being applied?

A. Confounding variable
B. Informed research consent
C. Preregistration
D. Operational definition

0090. Which option preserves the correct meaning of both Internal validity and Preregistration?

A. Internal validity: The strength of evidence that a study's manipulation or exposure, rather than alternatives, explains the observed effect. / Preregistration: Publicly documenting hypotheses, methods, and analysis plans before examining outcome data.
B. Internal validity: The strength of evidence that a study's manipulation or exposure, rather than alternatives, explains the observed effect. / Preregistration: Allocation of participants to study conditions by chance to support baseline comparability.
C. Internal validity: Publicly documenting hypotheses, methods, and analysis plans before examining outcome data. / Preregistration: The strength of evidence that a study's manipulation or exposure, rather than alternatives, explains the observed effect.
D. Internal validity: A factor associated with both a presumed cause and outcome that can offer an alternative explanation. / Preregistration: Publicly documenting hypotheses, methods, and analysis plans before examining outcome data.

0091. For a teenage client seen in the clinical planning session, the community practitioner recommends a plan built around considering whether a sample and setting resemble the populations to which results are generalized. Which concept is reflected?

A. External validity
B. Internal validity
C. Preregistration
D. Child assent in research

0092. Which option pairs the definitions of Random assignment and Confounding variable correctly, in that order?

A. Random assignment: A design that measures the same individuals or units across multiple time points. / Confounding variable: A factor associated with both a presumed cause and outcome that can offer an alternative explanation.
B. Random assignment: Allocation of participants to study conditions by chance to support baseline comparability. / Confounding variable: Publicly documenting hypotheses, methods, and analysis plans before examining outcome data.
C. Random assignment: Allocation of participants to study conditions by chance to support baseline comparability. / Confounding variable: A factor associated with both a presumed cause and outcome that can offer an alternative explanation.
D. Random assignment: A factor associated with both a presumed cause and outcome that can offer an alternative explanation. / Confounding variable: Allocation of participants to study conditions by chance to support baseline comparability.

0093. How are Longitudinal design and Internal validity most accurately differentiated in this curriculum?

A. Longitudinal design: The strength of evidence that a study's manipulation or exposure, rather than alternatives, explains the observed effect. / Internal validity: A design that measures the same individuals or units across multiple time points.
B. Longitudinal design: A design that measures the same individuals or units across multiple time points. / Internal validity: A precise specification of how a construct or variable is observed, measured, or manipulated.
C. Longitudinal design: A design that measures the same individuals or units across multiple time points. / Internal validity: The strength of evidence that a study's manipulation or exposure, rather than alternatives, explains the observed effect.
D. Longitudinal design: A design that compares different individuals or groups at one time point. / Internal validity: The strength of evidence that a study's manipulation or exposure, rather than alternatives, explains the observed effect.

0094. At the school consultation, a community practitioner reviews whether a plan for a preadolescent child is appropriate. The relevant practice is evaluating whether rival explanations for a treatment effect have been addressed. Which concept is tested?

A. Cross-sectional design
B. Informed research consent
C. Internal validity
D. Random assignment

0095. Which choice aligns each practice with the correct idea, Operational definition or Random assignment?

A. Operational definition: Using a chance procedure to allocate enrolled participants to treatment conditions. / Random assignment: Defining observable criteria for a study variable before collecting data.
B. Operational definition: Defining observable criteria for a study variable before collecting data. / Random assignment: Explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult.
C. Operational definition: Explaining a study to a child in accessible language and respecting dissent under applicable safeguards. / Random assignment: Using a chance procedure to allocate enrolled participants to treatment conditions.
D. Operational definition: Defining observable criteria for a study variable before collecting data. / Random assignment: Using a chance procedure to allocate enrolled participants to treatment conditions.

0096. A member of a clinical team is preparing a follow-up plan for a child aged 7 in the youth group. The plan calls for explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult. Which concept names this approach?

A. Informed research consent
B. Cross-sectional design
C. Longitudinal design
D. Operational definition

0097. Choose the practice comparison that best separates Child assent in research from Preregistration.

A. Child assent in research: Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work. / Preregistration: Explaining a study to a child in accessible language and respecting dissent under applicable safeguards.
B. Child assent in research: Explaining a study to a child in accessible language and respecting dissent under applicable safeguards. / Preregistration: Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work.
C. Child assent in research: Defining observable criteria for a study variable before collecting data. / Preregistration: Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work.
D. Child assent in research: Explaining a study to a child in accessible language and respecting dissent under applicable safeguards. / Preregistration: Identifying a third factor that may account for an observed association between exposure and outcome.

0098. Choose the practice comparison that best separates Operational definition from Child assent in research.

A. Operational definition: Comparing age groups during one data-collection period while recognizing age and cohort are confounded. / Child assent in research: Explaining a study to a child in accessible language and respecting dissent under applicable safeguards.
B. Operational definition: Defining observable criteria for a study variable before collecting data. / Child assent in research: Considering whether a sample and setting resemble the populations to which results are generalized.
C. Operational definition: Defining observable criteria for a study variable before collecting data. / Child assent in research: Explaining a study to a child in accessible language and respecting dissent under applicable safeguards.
D. Operational definition: Explaining a study to a child in accessible language and respecting dissent under applicable safeguards. / Child assent in research: Defining observable criteria for a study variable before collecting data.

0099. Which comparison would correct a trainee’s misunderstanding of Confounding variable versus Preregistration?

A. Confounding variable: Publicly documenting hypotheses, methods, and analysis plans before examining outcome data. / Preregistration: A factor associated with both a presumed cause and outcome that can offer an alternative explanation.
B. Confounding variable: A factor associated with both a presumed cause and outcome that can offer an alternative explanation. / Preregistration: Publicly documenting hypotheses, methods, and analysis plans before examining outcome data.
C. Confounding variable: A factor associated with both a presumed cause and outcome that can offer an alternative explanation. / Preregistration: Voluntary authorization to participate based on adequate disclosure, provided by an authorized adult when required.
D. Confounding variable: A design that compares different individuals or groups at one time point. / Preregistration: Publicly documenting hypotheses, methods, and analysis plans before examining outcome data.

0100. Which pair of actions illustrates Operational definition and Longitudinal design, respectively?

A. Operational definition: Following the same children over time to study within-person change. / Longitudinal design: Defining observable criteria for a study variable before collecting data.
B. Operational definition: Defining observable criteria for a study variable before collecting data. / Longitudinal design: Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work.
C. Operational definition: Defining observable criteria for a study variable before collecting data. / Longitudinal design: Following the same children over time to study within-person change.
D. Operational definition: Identifying a third factor that may account for an observed association between exposure and outcome. / Longitudinal design: Following the same children over time to study within-person change.

0101. How should a practitioner distinguish the applications of External validity and Child assent in research?

A. External validity: Explaining a study to a child in accessible language and respecting dissent under applicable safeguards. / Child assent in research: Considering whether a sample and setting resemble the populations to which results are generalized.
B. External validity: Considering whether a sample and setting resemble the populations to which results are generalized. / Child assent in research: Explaining a study to a child in accessible language and respecting dissent under applicable safeguards.
C. External validity: Explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult. / Child assent in research: Explaining a study to a child in accessible language and respecting dissent under applicable safeguards.
D. External validity: Considering whether a sample and setting resemble the populations to which results are generalized. / Child assent in research: Defining observable criteria for a study variable before collecting data.

0102. How are Operational definition and Preregistration most accurately differentiated in this curriculum?

A. Operational definition: A precise specification of how a construct or variable is observed, measured, or manipulated. / Preregistration: The extent to which findings may apply across populations, settings, measures, and conditions beyond the study.
B. Operational definition: Publicly documenting hypotheses, methods, and analysis plans before examining outcome data. / Preregistration: A precise specification of how a construct or variable is observed, measured, or manipulated.
C. Operational definition: Allocation of participants to study conditions by chance to support baseline comparability. / Preregistration: Publicly documenting hypotheses, methods, and analysis plans before examining outcome data.
D. Operational definition: A precise specification of how a construct or variable is observed, measured, or manipulated. / Preregistration: Publicly documenting hypotheses, methods, and analysis plans before examining outcome data.

0103. A behavior specialist reviews a plan for a young person in the parent meeting. The plan emphasizes considering whether a sample and setting resemble the populations to which results are generalized. Which course idea does this reflect?

A. External validity
B. Confounding variable
C. Preregistration
D. Informed research consent

0104. Which professional action most closely applies Child assent in research?

A. Considering whether a sample and setting resemble the populations to which results are generalized.
B. Explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult.
C. Explaining a study to a child in accessible language and respecting dissent under applicable safeguards.
D. Following the same children over time to study within-person change.

0105. For a older adolescent client seen in the student wellness team, the research trainee recommends a plan built around evaluating whether rival explanations for a treatment effect have been addressed. Which concept is reflected?

A. Child assent in research
B. Confounding variable
C. Internal validity
D. Longitudinal design

0106. Which comparison would correct a trainee’s misunderstanding of Operational definition versus Confounding variable?

A. Operational definition: A precise specification of how a construct or variable is observed, measured, or manipulated. / Confounding variable: A factor associated with both a presumed cause and outcome that can offer an alternative explanation.
B. Operational definition: A precise specification of how a construct or variable is observed, measured, or manipulated. / Confounding variable: Allocation of participants to study conditions by chance to support baseline comparability.
C. Operational definition: A factor associated with both a presumed cause and outcome that can offer an alternative explanation. / Confounding variable: A precise specification of how a construct or variable is observed, measured, or manipulated.
D. Operational definition: A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission. / Confounding variable: A factor associated with both a presumed cause and outcome that can offer an alternative explanation.

0107. Which statement shows a sound practice-level distinction between Cross-sectional design and Informed research consent?

A. Cross-sectional design: Defining observable criteria for a study variable before collecting data. / Informed research consent: Explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult.
B. Cross-sectional design: Comparing age groups during one data-collection period while recognizing age and cohort are confounded. / Informed research consent: Using a chance procedure to allocate enrolled participants to treatment conditions.
C. Cross-sectional design: Comparing age groups during one data-collection period while recognizing age and cohort are confounded. / Informed research consent: Explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult.
D. Cross-sectional design: Explaining study procedures, risks, privacy, and withdrawal to the legally authorized adult. / Informed research consent: Comparing age groups during one data-collection period while recognizing age and cohort are confounded.

0108. Which option is the clearest practical expression of External validity?

A. Identifying a third factor that may account for an observed association between exposure and outcome.
B. Considering whether a sample and setting resemble the populations to which results are generalized.
C. Following the same children over time to study within-person change.
D. Defining observable criteria for a study variable before collecting data.

0109. A supervised trainee is supporting a young person aged 18 in the family resource center. The key practice is evaluating whether rival explanations for a treatment effect have been addressed. Which course concept is most relevant?

A. Operational definition
B. Informed research consent
C. Internal validity
D. External validity

0110. Which statement shows a sound practice-level distinction between Operational definition and Preregistration?

A. Operational definition: Defining observable criteria for a study variable before collecting data. / Preregistration: Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work.
B. Operational definition: Defining observable criteria for a study variable before collecting data. / Preregistration: Considering whether a sample and setting resemble the populations to which results are generalized.
C. Operational definition: Using a chance procedure to allocate enrolled participants to treatment conditions. / Preregistration: Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work.
D. Operational definition: Recording planned outcomes and analyses in advance to distinguish confirmatory from exploratory work. / Preregistration: Defining observable criteria for a study variable before collecting data.

0111. Choose the definition pair that correctly explains Operational definition first and Longitudinal design second.

A. Operational definition: A factor associated with both a presumed cause and outcome that can offer an alternative explanation. / Longitudinal design: A design that measures the same individuals or units across multiple time points.
B. Operational definition: A design that measures the same individuals or units across multiple time points. / Longitudinal design: A precise specification of how a construct or variable is observed, measured, or manipulated.
C. Operational definition: A precise specification of how a construct or variable is observed, measured, or manipulated. / Longitudinal design: Publicly documenting hypotheses, methods, and analysis plans before examining outcome data.
D. Operational definition: A precise specification of how a construct or variable is observed, measured, or manipulated. / Longitudinal design: A design that measures the same individuals or units across multiple time points.

0112. A behavior specialist is asked to evaluate a proposed service for a young person in the parent meeting. The defining feature is considering whether a sample and setting resemble the populations to which results are generalized. Which concept fits?

A. Cross-sectional design
B. Internal validity
C. Confounding variable
D. External validity

0113. What is the central meaning of Child assent in research?

A. Publicly documenting hypotheses, methods, and analysis plans before examining outcome data.
B. A developmentally appropriate affirmative agreement by a child to take part, sought in addition to required adult permission.
C. A factor associated with both a presumed cause and outcome that can offer an alternative explanation.
D. The strength of evidence that a study’s manipulation or exposure, rather than alternatives, explains the observed effect.

0114. At the supervision meeting, a community practitioner reviews whether a plan for a older adolescent client is appropriate. The relevant practice is defining observable criteria for a study variable before collecting data. Which concept is tested?

A. Operational definition
B. Informed research consent
C. Internal validity
D. Child assent in research

0115. A trainee must distinguish how Cross-sectional design and Confounding variable guide practice. Which comparison is accurate?

A. Cross-sectional design: Comparing age groups during one data-collection period while recognizing age and cohort are confounded. / Confounding variable: Evaluating whether rival explanations for a treatment effect have been addressed.
B. Cross-sectional design: Using a chance procedure to allocate enrolled participants to treatment conditions. / Confounding variable: Identifying a third factor that may account for an observed association between exposure and outcome.
C. Cross-sectional design: Identifying a third factor that may account for an observed association between exposure and outcome. / Confounding variable: Comparing age groups during one data-collection period while recognizing age and cohort are confounded.
D. Cross-sectional design: Comparing age groups during one data-collection period while recognizing age and cohort are confounded. / Confounding variable: Identifying a third factor that may account for an observed association between exposure and outcome.

0116. Which statement accurately contrasts the course concepts Cross-sectional design and Confounding variable?

A. Cross-sectional design: A design that compares different individuals or groups at one time point. / Confounding variable: A factor associated with both a presumed cause and outcome that can offer an alternative explanation.
B. Cross-sectional design: A design that compares different individuals or groups at one time point. / Confounding variable: The strength of evidence that a study's manipulation or exposure, rather than alternatives, explains the observed effect.
C. Cross-sectional design: Allocation of participants to study conditions by chance to support baseline comparability. / Confounding variable: A factor associated with both a presumed cause and outcome that can offer an alternative explanation.
D. Cross-sectional design: A factor associated with both a presumed cause and outcome that can offer an alternative explanation. / Confounding variable: A design that compares different individuals or groups at one time point.

0117. For a client in early adolescence in the outpatient clinic, a play therapist makes this practice the immediate priority: identifying a third factor that may account for an observed association between exposure and outcome. Which concept fits best?

A. Child assent in research
B. Operational definition
C. Confounding variable
D. Random assignment

0118. In the clinical planning session, the agreed focus for a community practitioner working with a teenage client is considering whether a sample and setting resemble the populations to which results are generalized. Which concept names this focus?

A. Cross-sectional design
B. External validity
C. Preregistration
D. Random assignment

0119. A consulting counselor is explaining a choice to a child of elementary-school age and caregiver in the clinical planning session. The choice centers on evaluating whether rival explanations for a treatment effect have been addressed. Which idea is illustrated?

A. Confounding variable
B. Internal validity
C. External validity
D. Informed research consent

0120. Choose the practice comparison that best separates Confounding variable from Preregistration.
