0613. Which comparison would correct a trainee's misunderstanding of Placebo response versus Pharmacodynamics?

A. Placebo response: Change following treatment context and expectation that is not necessarily attributable to the active medication ingredient alone. / Pharmacodynamics: How a medication affects the body, including mechanisms and relationships between concentration and effects.
B. Placebo response: Change following treatment context and expectation that is not necessarily attributable to the active medication ingredient alone. / Pharmacodynamics: A prominent regulator-required warning for serious medication risks, whose relevance should be discussed with the prescriber.
C. Placebo response: Systematic attention to unwanted or unexpected effects and communication with the prescriber. / Pharmacodynamics: How a medication affects the body, including mechanisms and relationships between concentration and effects.
D. Placebo response: How a medication affects the body, including mechanisms and relationships between concentration and effects. / Pharmacodynamics: Change following treatment context and expectation that is not necessarily attributable to the active medication ingredient alone.

0614. Which pair of actions illustrates Side-effect monitoring and Medication reconciliation, respectively?

A. Side-effect monitoring: Encouraging an accurate current medication list during care transitions. / Medication reconciliation: Documenting the client's report and facilitating prompt prescriber contact when concerns arise.
B. Side-effect monitoring: Documenting the client's report and facilitating prompt prescriber contact when concerns arise. / Medication reconciliation: Asking about barriers, preferences, and experiences instead of labeling a client noncompliant.
C. Side-effect monitoring: Documenting the client's report and facilitating prompt prescriber contact when concerns arise. / Medication reconciliation: Encouraging an accurate current medication list during care transitions.
D. Side-effect monitoring: Referring medication decisions to a qualified prescriber rather than recommending a dose change. / Medication reconciliation: Encouraging an accurate current medication list during care transitions.

0615. A supervisor asks for an applied contrast between Side-effect monitoring and Pharmacokinetics. Which option fits?

A. Side-effect monitoring: Asking about barriers, preferences, and experiences instead of labeling a client noncompliant. / Pharmacokinetics: Understanding that age, metabolism, and other factors can affect medication concentration over time.
B. Side-effect monitoring: Understanding that age, metabolism, and other factors can affect medication concentration over time. / Pharmacokinetics: Documenting the client's report and facilitating prompt prescriber contact when concerns arise.
C. Side-effect monitoring: Documenting the client's report and facilitating prompt prescriber contact when concerns arise. / Pharmacokinetics: Understanding that age, metabolism, and other factors can affect medication concentration over time.
D. Side-effect monitoring: Documenting the client's report and facilitating prompt prescriber contact when concerns arise. / Pharmacokinetics: Directing questions about a serious labeled risk to the prescriber and supporting informed discussion.

0616. During service review in the multidisciplinary case conference, a research trainee describes understanding that age, metabolism, and other factors can affect medication concentration over time. for a young person aged 18. Which course idea is most applicable?

A. Scope of practice
B. Pharmacodynamics
C. Pharmacokinetics
D. Medication reconciliation

0617. Which option preserves the correct meaning of both Medication adherence and Pharmacodynamics?

A. Medication adherence: The extent to which medication use corresponds with an agreed treatment plan, best explored without blame. / Pharmacodynamics: Systematic attention to unwanted or unexpected effects and communication with the prescriber.
B. Medication adherence: The extent to which medication use corresponds with an agreed treatment plan, best explored without blame. / Pharmacodynamics: How a medication affects the body, including mechanisms and relationships between concentration and effects.
C. Medication adherence: Coordinated communication among professionals with distinct roles to support safe, coherent care. / Pharmacodynamics: How a medication affects the body, including mechanisms and relationships between concentration and effects.
D. Medication adherence: How a medication affects the body, including mechanisms and relationships between concentration and effects. / Pharmacodynamics: The extent to which medication use corresponds with an agreed treatment plan, best explored without blame.

0618. A trainee must distinguish how Medication adherence and Placebo response guide practice. Which comparison is accurate?

A. Medication adherence: Supporting the family to discuss benefits, risks, and preferences with the prescribing clinician. / Placebo response: Interpreting a reported improvement in light of expectations and other treatment-context effects.
B. Medication adherence: Asking about barriers, preferences, and experiences instead of labeling a client noncompliant. / Placebo response: Interpreting a reported improvement in light of expectations and other treatment-context effects.
C. Medication adherence: Interpreting a reported improvement in light of expectations and other treatment-context effects. / Placebo response: Asking about barriers, preferences, and experiences instead of labeling a client noncompliant.
D. Medication adherence: Asking about barriers, preferences, and experiences instead of labeling a client noncompliant. / Placebo response: Directing questions about a serious labeled risk to the prescriber and supporting informed discussion.

0619. Which pair of actions illustrates Shared decision-making and Pharmacodynamics, respectively?

A. Shared decision-making: Directing questions about a serious labeled risk to the prescriber and supporting informed discussion. / Pharmacodynamics: Distinguishing a medication's action and effects from how the body processes it.
B. Shared decision-making: Distinguishing a medication's action and effects from how the body processes it. / Pharmacodynamics: Supporting the family to discuss benefits, risks, and preferences with the prescribing clinician.
C. Shared decision-making: Supporting the family to discuss benefits, risks, and preferences with the prescribing clinician. / Pharmacodynamics: Interpreting a reported improvement in light of expectations and other treatment-context effects.
D. Shared decision-making: Supporting the family to discuss benefits, risks, and preferences with the prescribing clinician. / Pharmacodynamics: Distinguishing a medication's action and effects from how the body processes it.

0620. In psychopharmacology practice, a older adolescent client and a mental-health professional are reviewing goals in the family session. The agreed action is sharing relevant observations with the prescriber with appropriate permission and clear role boundaries. Which principle best accounts for it?

A. Pharmacodynamics
B. Interprofessional collaboration
C. Medication reconciliation
D. Medication adherence

0621. In psychopharmacology practice, a planning meeting about a adolescent student includes a counselor. The proposed practice in the multidisciplinary case conference is sharing relevant observations with the prescriber with appropriate permission and clear role boundaries. Which idea underlies it?

A. Placebo response
B. Interprofessional collaboration
C. Scope of practice
D. Medication reconciliation

0622. How should a practitioner distinguish the applications of Medication adherence and Medication reconciliation?

A. Medication adherence: Asking about barriers, preferences, and experiences instead of labeling a client noncompliant. / Medication reconciliation: Supporting the family to discuss benefits, risks, and preferences with the prescribing clinician.
B. Medication adherence: Encouraging an accurate current medication list during care transitions. / Medication reconciliation: Asking about barriers, preferences, and experiences instead of labeling a client noncompliant.
C. Medication adherence: Referring medication decisions to a qualified prescriber rather than recommending a dose change. / Medication reconciliation: Encouraging an accurate current medication list during care transitions.
D. Medication adherence: Asking about barriers, preferences, and experiences instead of labeling a client noncompliant. / Medication reconciliation: Encouraging an accurate current medication list during care transitions.

0623. A planning meeting about a school-age child includes a clinical supervisor. The proposed practice in the school counseling office is interpreting a reported improvement in light of expectations and other treatment-context effects. Which idea underlies it?

A. Placebo response
B. Medication adherence
C. Pharmacodynamics
D. Side-effect monitoring

0624. A school-age child's service team meets in the family resource center. The parent educator recommends a change involving asking about barriers, preferences, and experiences instead of labeling a client noncompliant. Which idea best explains it?

A. Scope of practice
B. Medication adherence
C. Medication reconciliation
D. Black box warning

0625. During work in the counseling practicum, a teacher and counselor identifies this need: interpreting a reported improvement in light of expectations and other treatment-context effects. Which idea should guide the response?

A. Medication adherence
B. Black box warning
C. Side-effect monitoring
D. Placebo response

0626. Which statement shows a sound practice-level distinction between Medication adherence and Side-effect monitoring?

A. Medication adherence: Sharing relevant observations with the prescriber with appropriate permission and clear role boundaries. / Side-effect monitoring: Documenting the client's report and facilitating prompt prescriber contact when concerns arise.
B. Medication adherence: Asking about barriers, preferences, and experiences instead of labeling a client noncompliant. / Side-effect monitoring: Understanding that age, metabolism, and other factors can affect medication concentration over time.
C. Medication adherence: Documenting the client's report and facilitating prompt prescriber contact when concerns arise. / Side-effect monitoring: Asking about barriers, preferences, and experiences instead of labeling a client noncompliant.
D. Medication adherence: Asking about barriers, preferences, and experiences instead of labeling a client noncompliant. / Side-effect monitoring: Documenting the client's report and facilitating prompt prescriber contact when concerns arise.

0627. In a case note about a young adolescent client, a member of a clinical team working in the supervision meeting records this priority: understanding that age, metabolism, and other factors can affect medication concentration over time. What principle is reflected?

A. Medication reconciliation
B. Pharmacokinetics
C. Scope of practice
D. Placebo response

0628. A supervisor asks for an applied contrast between Shared decision-making and Pharmacodynamics. Which option fits?

A. Shared decision-making: Supporting the family to discuss benefits, risks, and preferences with the prescribing clinician. / Pharmacodynamics: Interpreting a reported improvement in light of expectations and other treatment-context effects.
B. Shared decision-making: Supporting the family to discuss benefits, risks, and preferences with the prescribing clinician. / Pharmacodynamics: Distinguishing a medication's action and effects from how the body processes it.
C. Shared decision-making: Directing questions about a serious labeled risk to the prescriber and supporting informed discussion. / Pharmacodynamics: Distinguishing a medication's action and effects from how the body processes it.
D. Shared decision-making: Distinguishing a medication's action and effects from how the body processes it. / Pharmacodynamics: Supporting the family to discuss benefits, risks, and preferences with the prescribing clinician.

0629. Which comparison would correct a trainee’s misunderstanding of Medication reconciliation versus Pharmacodynamics?

A. Medication reconciliation: How a medication affects the body, including mechanisms and relationships between concentration and effects. / Pharmacodynamics: Reviewing a person’s current medications and supplements to identify what is actually being used.
B. Medication reconciliation: The legal and professional boundaries defining services a practitioner is authorized and competent to provide. / Pharmacodynamics: How a medication affects the body, including mechanisms and relationships between concentration and effects.
C. Medication reconciliation: Reviewing a person’s current medications and supplements to identify what is actually being used. / Pharmacodynamics: The extent to which medication use corresponds with an agreed treatment plan, best explored without blame.
D. Medication reconciliation: Reviewing a person’s current medications and supplements to identify what is actually being used. / Pharmacodynamics: How a medication affects the body, including mechanisms and relationships between concentration and effects.

0630. Which paired example correctly applies Placebo response first and Pharmacokinetics second?

A. Placebo response: Understanding that age, metabolism, and other factors can affect medication concentration over time. / Pharmacokinetics: Interpreting a reported improvement in light of expectations and other treatment-context effects.
B. Placebo response: Interpreting a reported improvement in light of expectations and other treatment-context effects. / Pharmacokinetics: Understanding that age, metabolism, and other factors can affect medication concentration over time.
C. Placebo response: Interpreting a reported improvement in light of expectations and other treatment-context effects. / Pharmacokinetics: Supporting the family to discuss benefits, risks, and preferences with the prescribing clinician.
D. Placebo response: Directing questions about a serious labeled risk to the prescriber and supporting informed discussion. / Pharmacokinetics: Understanding that age, metabolism, and other factors can affect medication concentration over time.

0631. Which comparison correctly distinguishes Shared decision-making from Pharmacokinetics?

A. Shared decision-making: How the body absorbs, distributes, metabolizes, and eliminates a medication. / Pharmacokinetics: A collaborative process integrating clinical evidence and the client’s informed preferences and values.
B. Shared decision-making: A collaborative process integrating clinical evidence and the client’s informed preferences and values. / Pharmacokinetics: The legal and professional boundaries defining services a practitioner is authorized and competent to provide.
C. Shared decision-making: How a medication affects the body, including mechanisms and relationships between concentration and effects. / Pharmacokinetics: How the body absorbs, distributes, metabolizes, and eliminates a medication.
D. Shared decision-making: A collaborative process integrating clinical evidence and the client’s informed preferences and values. / Pharmacokinetics: How the body absorbs, distributes, metabolizes, and eliminates a medication.

0632. In psychopharmacology practice, how should a practitioner distinguish the applications of Pharmacokinetics and Interprofessional collaboration?

A. Pharmacokinetics: Sharing relevant observations with the prescriber with appropriate permission and clear role boundaries. / Interprofessional collaboration: Understanding that age, metabolism, and other factors can affect medication concentration over time.
B. Pharmacokinetics: Supporting the family to discuss benefits, risks, and preferences with the prescribing clinician. / Interprofessional collaboration: Sharing relevant observations with the prescriber with appropriate permission and clear role boundaries.
C. Pharmacokinetics: Understanding that age, metabolism, and other factors can affect medication concentration over time. / Interprofessional collaboration: Referring medication decisions to a qualified prescriber rather than recommending a dose change.
D. Pharmacokinetics: Understanding that age, metabolism, and other factors can affect medication concentration over time. / Interprofessional collaboration: Sharing relevant observations with the prescriber with appropriate permission and clear role boundaries.

0633. How should a practitioner distinguish the applications of Medication reconciliation and Pharmacokinetics?

A. Medication reconciliation: Understanding that age, metabolism, and other factors can affect medication concentration over time. / Pharmacokinetics: Encouraging an accurate current medication list during care transitions.
B. Medication reconciliation: Encouraging an accurate current medication list during care transitions. / Pharmacokinetics: Referring medication decisions to a qualified prescriber rather than recommending a dose change.
C. Medication reconciliation: Sharing relevant observations with the prescriber with appropriate permission and clear role boundaries. / Pharmacokinetics: Understanding that age, metabolism, and other factors can affect medication concentration over time.
D. Medication reconciliation: Encouraging an accurate current medication list during care transitions. / Pharmacokinetics: Understanding that age, metabolism, and other factors can affect medication concentration over time.

0634. Choose the definition pair that correctly explains Shared decision-making first and Placebo response second.

A. Shared decision-making: A collaborative process integrating clinical evidence and the client’s informed preferences and values. / Placebo response: Change following treatment context and expectation that is not necessarily attributable to the active medication ingredient alone.
B. Shared decision-making: A collaborative process integrating clinical evidence and the client’s informed preferences and values. / Placebo response: How a medication affects the body, including mechanisms and relationships between concentration and effects.
C. Shared decision-making: Systematic attention to unwanted or unexpected effects and communication with the prescriber. / Placebo response: Change following treatment context and expectation that is not necessarily attributable to the active medication ingredient alone.
D. Shared decision-making: Change following treatment context and expectation that is not necessarily attributable to the active medication ingredient alone. / Placebo response: A collaborative process integrating clinical evidence and the client’s informed preferences and values.

0635. Choose the response that best puts Scope of practice into practice.

A. Distinguishing a medication’s action and effects from how the body processes it.
B. Referring medication decisions to a qualified prescriber rather than recommending a dose change.
C. Documenting the client’s report and facilitating prompt prescriber contact when concerns arise.
D. Sharing relevant observations with the prescriber with appropriate permission and clear role boundaries.

0636. A supervisor asks how Side-effect monitoring would appear in practice. Which choice should be selected?

A. Documenting the client’s report and facilitating prompt prescriber contact when concerns arise.
B. Sharing relevant observations with the prescriber with appropriate permission and clear role boundaries.
C. Interpreting a reported improvement in light of expectations and other treatment-context effects.
D. Directing questions about a serious labeled risk to the prescriber and supporting informed discussion.

0637. Which option correctly matches each concept to its practice focus: Medication reconciliation and Pharmacodynamics?

A. Medication reconciliation: Encouraging an accurate current medication list during care transitions. / Pharmacodynamics: Distinguishing a medication’s action and effects from how the body processes it.
B. Medication reconciliation: Distinguishing a medication’s action and effects from how the body processes it. / Pharmacodynamics: Encouraging an accurate current medication list during care transitions.
C. Medication reconciliation: Encouraging an accurate current medication list during care transitions. / Pharmacodynamics: Asking about barriers, preferences, and experiences instead of labeling a client noncompliant.
D. Medication reconciliation: Referring medication decisions to a qualified prescriber rather than recommending a dose change. / Pharmacodynamics: Distinguishing a medication’s action and effects from how the body processes it.

0638. A child aged 7 is receiving support in the student wellness team. The group facilitator is guided by this practice: encouraging an accurate current medication list during care transitions. Which principle best fits?

A. Black box warning
B. Pharmacokinetics
C. Medication reconciliation
D. Interprofessional collaboration

0639. While consulting in the student-support meeting, a member of a clinical team supports a child aged 14 by using this approach: referring medication decisions to a qualified prescriber rather than recommending a dose change. Which concept is being applied?

A. Placebo response
B. Scope of practice
C. Medication reconciliation
D. Medication adherence

0640. A planning meeting about a young adolescent client includes a counselor. The proposed practice in the clinical planning session is encouraging an accurate current medication list during care transitions. Which idea underlies it?

A. Shared decision-making
B. Medication reconciliation
C. Side-effect monitoring
D. Pharmacodynamics

0641. Which option is the clearest practical expression of Scope of practice?

A. Directing questions about a serious labeled risk to the prescriber and supporting informed discussion.
B. Referring medication decisions to a qualified prescriber rather than recommending a dose change.
C. Supporting the family to discuss benefits, risks, and preferences with the prescribing clinician.
D. Sharing relevant observations with the prescriber with appropriate permission and clear role boundaries.

0642. Which option correctly matches each concept to its practice focus: Medication reconciliation and Pharmacokinetics?

A. Medication reconciliation: Sharing relevant observations with the prescriber with appropriate permission and clear role boundaries. / Pharmacokinetics: Understanding that age, metabolism, and other factors can affect medication concentration over time.
B. Medication reconciliation: Understanding that age, metabolism, and other factors can affect medication concentration over time. / Pharmacokinetics: Encouraging an accurate current medication list during care transitions.
C. Medication reconciliation: Encouraging an accurate current medication list during care transitions. / Pharmacokinetics: Understanding that age, metabolism, and other factors can affect medication concentration over time.
D. Medication reconciliation: Encouraging an accurate current medication list during care transitions. / Pharmacokinetics: Referring medication decisions to a qualified prescriber rather than recommending a dose change.

0643. In psychopharmacology practice, how are Shared decision-making and Interprofessional collaboration most accurately differentiated in this curriculum?

A. Shared decision-making: A collaborative process integrating clinical evidence and the client's informed preferences and values. / Interprofessional collaboration: The legal and professional boundaries defining services a practitioner is authorized and competent to provide.
B. Shared decision-making: Systematic attention to unwanted or unexpected effects and communication with the prescriber. / Interprofessional collaboration: Coordinated communication among professionals with distinct roles to support safe, coherent care.
C. Shared decision-making: Coordinated communication among professionals with distinct roles to support safe, coherent care. / Interprofessional collaboration: A collaborative process integrating clinical evidence and the client's informed preferences and values.
D. Shared decision-making: A collaborative process integrating clinical evidence and the client's informed preferences and values. / Interprofessional collaboration: Coordinated communication among professionals with distinct roles to support safe, coherent care.

0644. In psychopharmacology practice, choose the practice comparison that best separates Black box warning from Interprofessional collaboration.

A. Black box warning: Directing questions about a serious labeled risk to the prescriber and supporting informed discussion. / Interprofessional collaboration: Sharing relevant observations with the prescriber with appropriate permission and clear role boundaries.
B. Black box warning: Directing questions about a serious labeled risk to the prescriber and supporting informed discussion. / Interprofessional collaboration: Asking about barriers, preferences, and experiences instead of labeling a client noncompliant.
C. Black box warning: Sharing relevant observations with the prescriber with appropriate permission and clear role boundaries. / Interprofessional collaboration: Directing questions about a serious labeled risk to the prescriber and supporting informed discussion.
D. Black box warning: Interpreting a reported improvement in light of expectations and other treatment-context effects. / Interprofessional collaboration: Sharing relevant observations with the prescriber with appropriate permission and clear role boundaries.

0645. In the school-based service, a group facilitator describes the most appropriate support for a client in late adolescence as asking about barriers, preferences, and experiences instead of labeling a client noncompliant. Which framework is being applied?

A. Medication adherence
B. Interprofessional collaboration
C. Side-effect monitoring
D. Medication reconciliation

0646. In psychopharmacology practice, choose the definition pair that correctly explains Medication reconciliation first and Interprofessional collaboration second.

A. Medication reconciliation: Reviewing a person's current medications and supplements to identify what is actually being used. / Interprofessional collaboration: A collaborative process integrating clinical evidence and the client's informed preferences and values.
B. Medication reconciliation: Reviewing a person's current medications and supplements to identify what is actually being used. / Interprofessional collaboration: Coordinated communication among professionals with distinct roles to support safe, coherent care.
C. Medication reconciliation: The extent to which medication use corresponds with an agreed treatment plan, best explored without blame. / Interprofessional collaboration: Coordinated communication among professionals with distinct roles to support safe, coherent care.
D. Medication reconciliation: Coordinated communication among professionals with distinct roles to support safe, coherent care. / Interprofessional collaboration: Reviewing a person's current medications and supplements to identify what is actually being used.

0647. What is the central meaning of Pharmacodynamics?

A. A collaborative process integrating clinical evidence and the client's informed preferences and values.
B. The extent to which medication use corresponds with an agreed treatment plan, best explored without blame.
C. How a medication affects the body, including mechanisms and relationships between concentration and effects.
D. Coordinated communication among professionals with distinct roles to support safe, coherent care.

0648. How are Side-effect monitoring and Shared decision-making most accurately differentiated in this curriculum?

A. Side-effect monitoring: Systematic attention to unwanted or unexpected effects and communication with the prescriber. / Shared decision-making: A collaborative process integrating clinical evidence and the client's informed preferences and values.
B. Side-effect monitoring: Systematic attention to unwanted or unexpected effects and communication with the prescriber. / Shared decision-making: Change following treatment context and expectation that is not necessarily attributable to the active medication ingredient alone.
C. Side-effect monitoring: A collaborative process integrating clinical evidence and the client's informed preferences and values. / Shared decision-making: Systematic attention to unwanted or unexpected effects and communication with the prescriber.
D. Side-effect monitoring: The legal and professional boundaries defining services a practitioner is authorized and competent to provide. / Shared decision-making: A collaborative process integrating clinical evidence and the client's informed preferences and values.

0649. A case conference asks for a distinction between Placebo response and Pharmacokinetics. Which answer is sound?

A. Placebo response: A prominent regulator-required warning for serious medication risks, whose relevance should be discussed with the prescriber. / Pharmacokinetics: How the body absorbs, distributes, metabolizes, and eliminates a medication.
B. Placebo response: Change following treatment context and expectation that is not necessarily attributable to the active medication ingredient alone. / Pharmacokinetics: A collaborative process integrating clinical evidence and the client's informed preferences and values.
C. Placebo response: Change following treatment context and expectation that is not necessarily attributable to the active medication ingredient alone. / Pharmacokinetics: How the body absorbs, distributes, metabolizes, and eliminates a medication.
D. Placebo response: How the body absorbs, distributes, metabolizes, and eliminates a medication. / Pharmacokinetics: Change following treatment context and expectation that is not necessarily attributable to the active medication ingredient alone.

0650. A research trainee is asked what should shape a young person aged 16's support in the telehealth session. The proposed focus is distinguishing a medication's action and effects from how the body processes it. Which principle does it represent?

A. Medication reconciliation
B. Pharmacodynamics
C. Black box warning
D. Scope of practice

0651. Which option correctly matches each concept to its practice focus: Medication adherence and Medication reconciliation?

A. Medication adherence: Asking about barriers, preferences, and experiences instead of labeling a client noncompliant. / Medication reconciliation: Supporting the family to discuss benefits, risks, and preferences with the prescribing clinician.
B. Medication adherence: Encouraging an accurate current medication list during care transitions. / Medication reconciliation: Asking about barriers, preferences, and experiences instead of labeling a client noncompliant.
C. Medication adherence: Asking about barriers, preferences, and experiences instead of labeling a client noncompliant. / Medication reconciliation: Encouraging an accurate current medication list during care transitions.
D. Medication adherence: Referring medication decisions to a qualified prescriber rather than recommending a dose change. / Medication reconciliation: Encouraging an accurate current medication list during care transitions.

0652. At a case-planning meeting, the school support specialist proposes distinguishing a medication's action and effects from how the body processes it. for a preadolescent child seen in the community service agency. Which concept does this illustrate?

A. Pharmacodynamics
B. Placebo response
C. Medication reconciliation
D. Black box warning

0653. How should a practitioner distinguish the applications of Side-effect monitoring and Pharmacokinetics?

A. Side-effect monitoring: Documenting the client's report and facilitating prompt prescriber contact when concerns arise. / Pharmacokinetics: Understanding that age, metabolism, and other factors can affect medication concentration over time.
B. Side-effect monitoring: Documenting the client's report and facilitating prompt prescriber contact when concerns arise. / Pharmacokinetics: Directing questions about a serious labeled risk to the prescriber and supporting informed discussion.
C. Side-effect monitoring: Understanding that age, metabolism, and other factors can affect medication concentration over time. / Pharmacokinetics: Documenting the client's report and facilitating prompt prescriber contact when concerns arise.
D. Side-effect monitoring: Asking about barriers, preferences, and experiences instead of labeling a client noncompliant. / Pharmacokinetics: Understanding that age, metabolism, and other factors can affect medication concentration over time.

0654. During service review in the behavior-support review, a service navigator describes directing questions about a serious labeled risk to the prescriber and supporting informed discussion. for a child aged 8. Which course idea is most applicable?

A. Pharmacodynamics
B. Medication reconciliation
C. Placebo response
D. Black box warning

0655. In psychopharmacology practice, choose the definition pair that correctly explains Pharmacokinetics first and Interprofessional collaboration second.

A. Pharmacokinetics: How the body absorbs, distributes, metabolizes, and eliminates a medication. / Interprofessional collaboration: The legal and professional boundaries defining services a practitioner is authorized and competent to provide.
B. Pharmacokinetics: How the body absorbs, distributes, metabolizes, and eliminates a medication. / Interprofessional collaboration: Coordinated communication among professionals with distinct roles to support safe, coherent care.
C. Pharmacokinetics: Coordinated communication among professionals with distinct roles to support safe, coherent care. / Interprofessional collaboration: How the body absorbs, distributes, metabolizes, and eliminates a medication.
D. Pharmacokinetics: A collaborative process integrating clinical evidence and the client's informed preferences and values. / Interprofessional collaboration: Coordinated communication among professionals with distinct roles to support safe, coherent care.

0656. A family therapist presents a support plan for a child aged 8 at the community service agency. Its central feature is asking about barriers, preferences, and experiences instead of labeling a client noncompliant. Which concept should be named?

A. Interprofessional collaboration
B. Medication adherence
C. Placebo response
D. Black box warning

0657. In a supervision quiz, how should Side-effect monitoring be distinguished from Pharmacokinetics?

A. Side-effect monitoring: Systematic attention to unwanted or unexpected effects and communication with the prescriber. / Pharmacokinetics: A prominent regulator-required warning for serious medication risks, whose relevance should be discussed with the prescriber.
B. Side-effect monitoring: Systematic attention to unwanted or unexpected effects and communication with the prescriber. / Pharmacokinetics: How the body absorbs, distributes, metabolizes, and eliminates a medication.
C. Side-effect monitoring: The extent to which medication use corresponds with an agreed treatment plan, best explored without blame. / Pharmacokinetics: How the body absorbs, distributes, metabolizes, and eliminates a medication.
D. Side-effect monitoring: How the body absorbs, distributes, metabolizes, and eliminates a medication. / Pharmacokinetics: Systematic attention to unwanted or unexpected effects and communication with the prescriber.

0658. In psychopharmacology practice, a case conference asks for a distinction between Medication reconciliation and Interprofessional collaboration. Which answer is sound?

A. Medication reconciliation: The extent to which medication use corresponds with an agreed treatment plan, best explored without blame. / Interprofessional collaboration: Coordinated communication among professionals with distinct roles to support safe, coherent care.
B. Medication reconciliation: Reviewing a person's current medications and supplements to identify what is actually being used. / Interprofessional collaboration: A collaborative process integrating clinical evidence and the client's informed preferences and values.
C. Medication reconciliation: Coordinated communication among professionals with distinct roles to support safe, coherent care. / Interprofessional collaboration: Reviewing a person's current medications and supplements to identify what is actually being used.
D. Medication reconciliation: Reviewing a person's current medications and supplements to identify what is actually being used. / Interprofessional collaboration: Coordinated communication among professionals with distinct roles to support safe, coherent care.

0659. Which statement accurately contrasts the course concepts Medication adherence and Pharmacodynamics?

A. Medication adherence: The extent to which medication use corresponds with an agreed treatment plan, best explored without blame. / Pharmacodynamics: How a medication affects the body, including mechanisms and relationships between concentration and effects.
B. Medication adherence: How a medication affects the body, including mechanisms and relationships between concentration and effects. / Pharmacodynamics: The extent to which medication use corresponds with an agreed treatment plan, best explored without blame.
C. Medication adherence: Coordinated communication among professionals with distinct roles to support safe, coherent care. / Pharmacodynamics: How a medication affects the body, including mechanisms and relationships between concentration and effects.
D. Medication adherence: The extent to which medication use corresponds with an agreed treatment plan, best explored without blame. / Pharmacodynamics: Systematic attention to unwanted or unexpected effects and communication with the prescriber.

0660. Which statement accurately contrasts the course concepts Medication reconciliation and Black box warning?

A. Medication reconciliation: A collaborative process integrating clinical evidence and the client's informed preferences and values. / Black box warning: A prominent regulator-required warning for serious medication risks, whose relevance should be discussed with the prescriber.
B. Medication reconciliation: A prominent regulator-required warning for serious medication risks, whose relevance should be discussed with the prescriber. / Black box warning: Reviewing a person's current medications and supplements to identify what is actually being used.
C. Medication reconciliation: Reviewing a person's current medications and supplements to identify what is actually being used. / Black box warning: How a medication affects the body, including mechanisms and relationships between concentration and effects.
D. Medication reconciliation: Reviewing a person's current medications and supplements to identify what is actually being used. / Black box warning: A prominent regulator-required warning for serious medication risks, whose relevance should be discussed with the prescriber.

0661. In psychopharmacology practice, a team must select a support approach for a high-school student at the telehealth session. The caregiver working with a counselor recommends sharing relevant observations with the prescriber with appropriate permission and clear role boundaries. Which idea is most relevant?

A. Shared decision-making
B. Pharmacokinetics
C. Interprofessional collaboration
D. Medication adherence

0662. When reviewing a middle-school student's plan in the child guidance clinic, the caregiver working with a counselor notes that the next step is asking about barriers, preferences, and experiences instead of labeling a client noncompliant. Which concept guides this step?

A. Medication adherence
B. Interprofessional collaboration
C. Placebo response
D. Side-effect monitoring

0663. A team must select a support approach for a school-age child at the community service agency. The case coordinator recommends understanding that age, metabolism, and other factors can affect medication concentration over time. Which idea is most relevant?

A. Interprofessional collaboration
B. Medication reconciliation
C. Pharmacokinetics
D. Medication adherence

0664. A clinical supervisor reviews a plan for a young person aged 18 in the school consultation. The plan emphasizes directing questions about a serious labeled risk to the prescriber and supporting informed discussion. Which course idea does this reflect?

A. Medication reconciliation
B. Pharmacokinetics
C. Pharmacodynamics
D. Black box warning

0665. Choose the term that matches this definition: How a medication affects the body, including mechanisms and relationships between concentration and effects.

A. Pharmacodynamics
B. Pharmacokinetics
C. Side-effect monitoring
D. Medication reconciliation

0666. Which paired example correctly applies Medication reconciliation first and Black box warning second?

A. Medication reconciliation: Encouraging an accurate current medication list during care transitions. / Black box warning: Directing questions about a serious labeled risk to the prescriber and supporting informed discussion.
B. Medication reconciliation: Directing questions about a serious labeled risk to the prescriber and supporting informed discussion. / Black box warning: Encouraging an accurate current medication list during care transitions.
C. Medication reconciliation: Supporting the family to discuss benefits, risks, and preferences with the prescribing clinician. / Black box warning: Directing questions about a serious labeled risk to the prescriber and supporting informed discussion.
D. Medication reconciliation: Encouraging an accurate current medication list during care transitions. / Black box warning: Distinguishing a medication's action and effects from how the body processes it.

0667. Which statement shows a sound practice-level distinction between Side-effect monitoring and Medication reconciliation?

A. Side-effect monitoring: Referring medication decisions to a qualified prescriber rather than recommending a dose change. / Medication reconciliation: Encouraging an accurate current medication list during care transitions.
B. Side-effect monitoring: Documenting the client's report and facilitating prompt prescriber contact when concerns arise. / Medication reconciliation: Encouraging an accurate current medication list during care transitions.
C. Side-effect monitoring: Documenting the client's report and facilitating prompt prescriber contact when concerns arise. / Medication reconciliation: Asking about barriers, preferences, and experiences instead of labeling a client noncompliant.
D. Side-effect monitoring: Encouraging an accurate current medication list during care transitions. / Medication reconciliation: Documenting the client's report and facilitating prompt prescriber contact when concerns arise.

0668. In psychopharmacology practice, a school-based clinician presents a support plan for a child aged 14 at the learning-support meeting. Its central feature is sharing relevant observations with the prescriber with appropriate permission and clear role boundaries. Which concept should be named?

A. Black box warning
B. Pharmacokinetics
C. Shared decision-making
D. Interprofessional collaboration

0669. Which statement most accurately defines Scope of practice?

A. How the body absorbs, distributes, metabolizes, and eliminates a medication.
B. Systematic attention to unwanted or unexpected effects and communication with the prescriber.
C. A prominent regulator-required warning for serious medication risks, whose relevance should be discussed with the prescriber.
D. The legal and professional boundaries defining services a practitioner is authorized and competent to provide.

0670. Which paired example correctly applies Side-effect monitoring first and Shared decision-making second?

A. Side-effect monitoring: Supporting the family to discuss benefits, risks, and preferences with the prescribing clinician. / Shared decision-making: Documenting the client's report and facilitating prompt prescriber contact when concerns arise.
B. Side-effect monitoring: Documenting the client's report and facilitating prompt prescriber contact when concerns arise. / Shared decision-making: Supporting the family to discuss benefits, risks, and preferences with the prescribing clinician.
C. Side-effect monitoring: Documenting the client's report and facilitating prompt prescriber contact when concerns arise. / Shared decision-making: Interpreting a reported improvement in light of expectations and other treatment-context effects.
D. Side-effect monitoring: Referring medication decisions to a qualified prescriber rather than recommending a dose change. / Shared decision-making: Supporting the family to discuss benefits, risks, and preferences with the prescribing clinician.

0671. For a student aged 12 seen in the school consultation, the research trainee recommends a plan built around referring medication decisions to a qualified prescriber rather than recommending a dose change. Which concept is reflected?

A. Scope of practice
B. Side-effect monitoring
C. Interprofessional collaboration
D. Placebo response

0672. A supervisor asks for an applied contrast between Shared decision-making and Black box warning. Which option fits?

A. Shared decision-making: Encouraging an accurate current medication list during care transitions. / Black box warning: Directing questions about a serious labeled risk to the prescriber and supporting informed discussion.
B. Shared decision-making: Directing questions about a serious labeled risk to the prescriber and supporting informed discussion. / Black box warning: Supporting the family to discuss benefits, risks, and preferences with the prescribing clinician.
C. Shared decision-making: Supporting the family to discuss benefits, risks, and preferences with the prescribing clinician. / Black box warning: Directing questions about a serious labeled risk to the prescriber and supporting informed discussion.
D. Shared decision-making: Supporting the family to discuss benefits, risks, and preferences with the prescribing clinician. / Black box warning: Referring medication decisions to a qualified prescriber rather than recommending a dose change.

0673. Choose the definition pair that correctly explains Scope of practice first and Shared decision-making second.

A. Scope of practice: The legal and professional boundaries defining services a practitioner is authorized and competent to provide. / Shared decision-making: A prominent regulator-required warning for serious medication risks, whose relevance should be discussed with the prescriber.
B. Scope of practice: The legal and professional boundaries defining services a practitioner is authorized and competent to provide. / Shared decision-making: A collaborative process integrating clinical evidence and the client's informed preferences and values.
C. Scope of practice: Systematic attention to unwanted or unexpected effects and communication with the prescriber. / Shared decision-making: A collaborative process integrating clinical evidence and the client's informed preferences and values.
D. Scope of practice: A collaborative process integrating clinical evidence and the client's informed preferences and values. / Shared decision-making: The legal and professional boundaries defining services a practitioner is authorized and competent to provide.

0674. Which option preserves the correct meaning of both Side-effect monitoring and Shared decision-making?

A. Side-effect monitoring: A collaborative process integrating clinical evidence and the client's informed preferences and values. / Shared decision-making: Systematic attention to unwanted or unexpected effects and communication with the prescriber.
B. Side-effect monitoring: Systematic attention to unwanted or unexpected effects and communication with the prescriber. / Shared decision-making: Change following treatment context and expectation that is not necessarily attributable to the active medication ingredient alone.
C. Side-effect monitoring: Systematic attention to unwanted or unexpected effects and communication with the prescriber. / Shared decision-making: A collaborative process integrating clinical evidence and the client's informed preferences and values.
D. Side-effect monitoring: The legal and professional boundaries defining services a practitioner is authorized and competent to provide. / Shared decision-making: A collaborative process integrating clinical evidence and the client's informed preferences and values.

0675. A team must select a support approach for a child aged 11 at the family session. The family therapist recommends referring medication decisions to a qualified prescriber rather than recommending a dose change. Which idea is most relevant?

A. Pharmacokinetics
B. Scope of practice
C. Placebo response
D. Black box warning

0676. In a supervision review, a parent educator describes work with a young person aged 18 in the learning-support meeting: encouraging an accurate current medication list during care transitions. What concept is illustrated?

A. Shared decision-making
B. Medication reconciliation
C. Pharmacodynamics
D. Placebo response

0677. In the student wellness team, a school-based clinician is considering this approach for a young person aged 10: documenting the client's report and facilitating prompt prescriber contact when concerns arise. Which framework does it represent?

A. Medication reconciliation
B. Placebo response
C. Side-effect monitoring
D. Shared decision-making

0678. A consultant is preparing a follow-up plan for a child aged 11 in the school consultation. The plan calls for understanding that age, metabolism, and other factors can affect medication concentration over time. Which concept names this approach?

A. Side-effect monitoring
B. Interprofessional collaboration
C. Medication reconciliation
D. Pharmacokinetics

0679. In psychopharmacology practice, choose the practice comparison that best separates Medication adherence from Interprofessional collaboration.

A. Medication adherence: Asking about barriers, preferences, and experiences instead of labeling a client noncompliant. / Interprofessional collaboration: Sharing relevant observations with the prescriber with appropriate permission and clear role boundaries.
B. Medication adherence: Referring medication decisions to a qualified prescriber rather than recommending a dose change. / Interprofessional collaboration: Sharing relevant observations with the prescriber with appropriate permission and clear role boundaries.
C. Medication adherence: Sharing relevant observations with the prescriber with appropriate permission and clear role boundaries. / Interprofessional collaboration: Asking about barriers, preferences, and experiences instead of labeling a client noncompliant.
D. Medication adherence: Asking about barriers, preferences, and experiences instead of labeling a client noncompliant. / Interprofessional collaboration: Encouraging an accurate current medication list during care transitions.

0680. A client in late adolescence's service team meets in the multidisciplinary case conference. The caregiver working with a counselor recommends a change involving directing questions about a serious labeled risk to the prescriber and supporting informed discussion. Which idea best explains it?

A. Side-effect monitoring
B. Pharmacodynamics
C. Placebo response
D. Black box warning

0681. Which description belongs with the term Scope of practice?

A. How the body absorbs, distributes, metabolizes, and eliminates a medication.
B. The legal and professional boundaries defining services a practitioner is authorized and competent to provide.
C. Systematic attention to unwanted or unexpected effects and communication with the prescriber.
D. The extent to which medication use corresponds with an agreed treatment plan, best explored without blame.

0682. In psychopharmacology practice, how should a practitioner distinguish the applications of Shared decision-making and Interprofessional collaboration?

A. Shared decision-making: Supporting the family to discuss benefits, risks, and preferences with the prescribing clinician. / Interprofessional collaboration: Sharing relevant observations with the prescriber with appropriate permission and clear role boundaries.
B. Shared decision-making: Supporting the family to discuss benefits, risks, and preferences with the prescribing clinician. / Interprofessional collaboration: Referring medication decisions to a qualified prescriber rather than recommending a dose change.
C. Shared decision-making: Documenting the client's report and facilitating prompt prescriber contact when concerns arise. / Interprofessional collaboration: Sharing relevant observations with the prescriber with appropriate permission and clear role boundaries.
D. Shared decision-making: Sharing relevant observations with the prescriber with appropriate permission and clear role boundaries. / Interprofessional collaboration: Supporting the family to discuss benefits, risks, and preferences with the prescribing clinician.

0683. In the child guidance clinic, a consulting counselor explains why a adolescent student would benefit from supporting the family to discuss benefits, risks, and preferences with the prescribing clinician. Which course concept underpins the explanation?

A. Pharmacokinetics
B. Shared decision-making
C. Pharmacodynamics
D. Scope of practice

0684. During work in the telehealth session, a youth worker identifies this need: asking about barriers, preferences, and experiences instead of labeling a client noncompliant. Which idea should guide the response?

A. Medication adherence
B. Shared decision-making
C. Placebo response
D. Side-effect monitoring

0685. Choose the definition pair that correctly explains Medication reconciliation first and Black box warning second.

A. Medication reconciliation: Reviewing a person's current medications and supplements to identify what is actually being used. / Black box warning: How a medication affects the body, including mechanisms and relationships between concentration and effects.
B. Medication reconciliation: Reviewing a person's current medications and supplements to identify what is actually being used. / Black box warning: A prominent regulator-required warning for serious medication risks, whose relevance should be discussed with the prescriber.
C. Medication reconciliation: A prominent regulator-required warning for serious medication risks, whose relevance should be discussed with the prescriber. / Black box warning: Reviewing a person's current medications and supplements to identify what is actually being used.
D. Medication reconciliation: A collaborative process integrating clinical evidence and the client's informed preferences and values. / Black box warning: A prominent regulator-required warning for serious medication risks, whose relevance should be discussed with the prescriber.

0686. A trainee must explain Medication adherence. Which answer is accurate?

A. How a medication affects the body, including mechanisms and relationships between concentration and effects.
B. The extent to which medication use corresponds with an agreed treatment plan, best explored without blame.
C. The legal and professional boundaries defining services a practitioner is authorized and competent to provide.
D. Change following treatment context and expectation that is not necessarily attributable to the active medication ingredient alone.

0687. A service team discusses a student aged 17 in the caregiver consultation. Their proposed next step is referring medication decisions to a qualified prescriber rather than recommending a dose change. Which course concept supports it?

A. Medication adherence
B. Shared decision-making
C. Scope of practice
D. Placebo response

0688. How should a practitioner distinguish the applications of Medication adherence and Placebo response?

A. Medication adherence: Supporting the family to discuss benefits, risks, and preferences with the prescribing clinician. / Placebo response: Interpreting a reported improvement in light of expectations and other treatment-context effects.
B. Medication adherence: Asking about barriers, preferences, and experiences instead of labeling a client noncompliant. / Placebo response: Directing questions about a serious labeled risk to the prescriber and supporting informed discussion.
C. Medication adherence: Asking about barriers, preferences, and experiences instead of labeling a client noncompliant. / Placebo response: Interpreting a reported improvement in light of expectations and other treatment-context effects.
D. Medication adherence: Interpreting a reported improvement in light of expectations and other treatment-context effects. / Placebo response: Asking about barriers, preferences, and experiences instead of labeling a client noncompliant.

0689. Choose the definition pair that correctly explains Shared decision-making first and Medication reconciliation second.

A. Shared decision-making: A collaborative process integrating clinical evidence and the client's informed preferences and values. / Medication reconciliation: Reviewing a person's current medications and supplements to identify what is actually being used.
B. Shared decision-making: A collaborative process integrating clinical evidence and the client's informed preferences and values. / Medication reconciliation: The extent to which medication use corresponds with an agreed treatment plan, best explored without blame.
C. Shared decision-making: Coordinated communication among professionals with distinct roles to support safe, coherent care. / Medication reconciliation: Reviewing a person's current medications and supplements to identify what is actually being used.
D. Shared decision-making: Reviewing a person's current medications and supplements to identify what is actually being used. / Medication reconciliation: A collaborative process integrating clinical evidence and the client's informed preferences and values.

0690. A young person aged 16 and a assessment clinician are reviewing goals in the school consultation. The agreed action is asking about barriers, preferences, and experiences instead of labeling a client noncompliant. Which principle best accounts for it?

A. Interprofessional collaboration
B. Medication adherence
C. Black box warning
D. Placebo response

0691. In the youth advocacy program, a teacher and counselor describes the most appropriate support for a middle-school student as encouraging an accurate current medication list during care transitions. Which framework is being applied?

A. Placebo response
B. Scope of practice
C. Side-effect monitoring
D. Medication reconciliation

0692. Which statement shows a sound practice-level distinction between Pharmacokinetics and Pharmacodynamics?

A. Pharmacokinetics: Asking about barriers, preferences, and experiences instead of labeling a client noncompliant. / Pharmacodynamics: Distinguishing a medication's action and effects from how the body processes it.
B. Pharmacokinetics: Distinguishing a medication's action and effects from how the body processes it. / Pharmacodynamics: Understanding that age, metabolism, and other factors can affect medication concentration over time.
C. Pharmacokinetics: Understanding that age, metabolism, and other factors can affect medication concentration over time. / Pharmacodynamics: Directing questions about a serious labeled risk to the prescriber and supporting informed discussion.
D. Pharmacokinetics: Understanding that age, metabolism, and other factors can affect medication concentration over time. / Pharmacodynamics: Distinguishing a medication's action and effects from how the body processes it.

0693. In psychopharmacology practice, which option preserves the correct meaning of both Scope of practice and Interprofessional collaboration?

A. Scope of practice: Coordinated communication among professionals with distinct roles to support safe, coherent care. / Interprofessional collaboration: The legal and professional boundaries defining services a practitioner is authorized and competent to provide.
B. Scope of practice: The legal and professional boundaries defining services a practitioner is authorized and competent to provide. / Interprofessional collaboration: Coordinated communication among professionals with distinct roles to support safe, coherent care.
C. Scope of practice: Systematic attention to unwanted or unexpected effects and communication with the prescriber. / Interprofessional collaboration: Coordinated communication among professionals with distinct roles to support safe, coherent care.
D. Scope of practice: The legal and professional boundaries defining services a practitioner is authorized and competent to provide. / Interprofessional collaboration: Reviewing a person's current medications and supplements to identify what is actually being used.

0694. Which paired example correctly applies Medication adherence first and Pharmacodynamics second?

A. Medication adherence: Asking about barriers, preferences, and experiences instead of labeling a client noncompliant. / Pharmacodynamics: Distinguishing a medication's action and effects from how the body processes it.
B. Medication adherence: Sharing relevant observations with the prescriber with appropriate permission and clear role boundaries. / Pharmacodynamics: Distinguishing a medication's action and effects from how the body processes it.
C. Medication adherence: Asking about barriers, preferences, and experiences instead of labeling a client noncompliant. / Pharmacodynamics: Documenting the client's report and facilitating prompt prescriber contact when concerns arise.
D. Medication adherence: Distinguishing a medication's action and effects from how the body processes it. / Pharmacodynamics: Asking about barriers, preferences, and experiences instead of labeling a client noncompliant.

0695. A team must select a support approach for a preadolescent child at the multidisciplinary case conference. The school-based clinician recommends supporting the family to discuss benefits, risks, and preferences with the prescribing clinician. Which idea is most relevant?

A. Shared decision-making
B. Black box warning
C. Placebo response
D. Pharmacodynamics

0696. In a supervision quiz, how should Medication reconciliation be distinguished from Pharmacodynamics?

A. Medication reconciliation: The legal and professional boundaries defining services a practitioner is authorized and competent to provide. / Pharmacodynamics: How a medication affects the body, including mechanisms and relationships between concentration and effects.
B. Medication reconciliation: How a medication affects the body, including mechanisms and relationships between concentration and effects. / Pharmacodynamics: Reviewing a person's current medications and supplements to identify what is actually being used.
C. Medication reconciliation: Reviewing a person's current medications and supplements to identify what is actually being used. / Pharmacodynamics: How a medication affects the body, including mechanisms and relationships between concentration and effects.
D. Medication reconciliation: Reviewing a person's current medications and supplements to identify what is actually being used. / Pharmacodynamics: The extent to which medication use corresponds with an agreed treatment plan, best explored without blame.

0697. A team must select a support approach for a child aged 14 at the school-based service. The caregiver working with a counselor recommends encouraging an accurate current medication list during care transitions. Which idea is most relevant?

A. Medication adherence
B. Interprofessional collaboration
C. Pharmacokinetics
D. Medication reconciliation

0698. Which comparison correctly distinguishes Side-effect monitoring from Placebo response?

A. Side-effect monitoring: The extent to which medication use corresponds with an agreed treatment plan, best explored without blame. / Placebo response: Change following treatment context and expectation that is not necessarily attributable to the active medication ingredient alone.
B. Side-effect monitoring: Systematic attention to unwanted or unexpected effects and communication with the prescriber. / Placebo response: The legal and professional boundaries defining services a practitioner is authorized and competent to provide.
C. Side-effect monitoring: Systematic attention to unwanted or unexpected effects and communication with the prescriber. / Placebo response: Change following treatment context and expectation that is not necessarily attributable to the active medication ingredient alone.
D. Side-effect monitoring: Change following treatment context and expectation that is not necessarily attributable to the active medication ingredient alone. / Placebo response: Systematic attention to unwanted or unexpected effects and communication with the prescriber.

0699. A case discussion concerns a child of elementary-school age and a parent educator in the caregiver consultation. The practitioner is considering documenting the client's report and facilitating prompt prescriber contact when concerns arise. Which principle is involved?

A. Side-effect monitoring
B. Interprofessional collaboration
C. Pharmacodynamics
D. Placebo response

0700. A older adolescent client is receiving support in the classroom support meeting. The school counselor is guided by this practice: asking about barriers, preferences, and experiences instead of labeling a client noncompliant. Which principle best fits?

A. Pharmacokinetics
B. Interprofessional collaboration
C. Medication adherence
D. Shared decision-making

0701. Choose the practice comparison that best separates Placebo response from Pharmacokinetics.

A. Placebo response: Directing questions about a serious labeled risk to the prescriber and supporting informed discussion. / Pharmacokinetics: Understanding that age, metabolism, and other factors can affect medication concentration over time.
B. Placebo response: Interpreting a reported improvement in light of expectations and other treatment-context effects. / Pharmacokinetics: Understanding that age, metabolism, and other factors can affect medication concentration over time.
C. Placebo response: Interpreting a reported improvement in light of expectations and other treatment-context effects. / Pharmacokinetics: Supporting the family to discuss benefits, risks, and preferences with the prescribing clinician.
D. Placebo response: Understanding that age, metabolism, and other factors can affect medication concentration over time. / Pharmacokinetics: Interpreting a reported improvement in light of expectations and other treatment-context effects.

0702. A trainee must choose a practice that exemplifies Side-effect monitoring. Which action is the best fit?

A. Referring medication decisions to a qualified prescriber rather than recommending a dose change.
B. Understanding that age, metabolism, and other factors can affect medication concentration over time.
C. Sharing relevant observations with the prescriber with appropriate permission and clear role boundaries.
D. Documenting the client's report and facilitating prompt prescriber contact when concerns arise.

0703. Which applied comparison correctly identifies what belongs to Pharmacokinetics versus Black box warning?

A. Pharmacokinetics: Distinguishing a medication's action and effects from how the body processes it. / Black box warning: Directing questions about a serious labeled risk to the prescriber and supporting informed discussion.
B. Pharmacokinetics: Understanding that age, metabolism, and other factors can affect medication concentration over time. / Black box warning: Directing questions about a serious labeled risk to the prescriber and supporting informed discussion.
C. Pharmacokinetics: Understanding that age, metabolism, and other factors can affect medication concentration over time. / Black box warning: Referring medication decisions to a qualified prescriber rather than recommending a dose change.
D. Pharmacokinetics: Directing questions about a serious labeled risk to the prescriber and supporting informed discussion. / Black box warning: Understanding that age, metabolism, and other factors can affect medication concentration over time.

0704. In the student wellness team, the agreed focus for a research trainee working with a older adolescent client is interpreting a reported improvement in light of expectations and other treatment-context effects. Which concept names this focus?

A. Placebo response
B. Pharmacodynamics
C. Black box warning
D. Scope of practice

0705. A supervisor asks for an applied contrast between Scope of practice and Medication adherence. Which option fits?

A. Scope of practice: Distinguishing a medication's action and effects from how the body processes it. / Medication adherence: Asking about barriers, preferences, and experiences instead of labeling a client noncompliant.
B. Scope of practice: Referring medication decisions to a qualified prescriber rather than recommending a dose change. / Medication adherence: Documenting the client's report and facilitating prompt prescriber contact when concerns arise.
C. Scope of practice: Referring medication decisions to a qualified prescriber rather than recommending a dose change. / Medication adherence: Asking about barriers, preferences, and experiences instead of labeling a client noncompliant.
D. Scope of practice: Asking about barriers, preferences, and experiences instead of labeling a client noncompliant. / Medication adherence: Referring medication decisions to a qualified prescriber rather than recommending a dose change.

0706. In the multidisciplinary case conference, a caregiver working with a counselor is considering this approach for a client in late adolescence: directing questions about a serious labeled risk to the prescriber and supporting informed discussion. Which framework does it represent?

A. Pharmacodynamics
B. Medication reconciliation
C. Black box warning
D. Pharmacokinetics

0707. A community practitioner is asked what should shape a young person aged 13's support in the behavior-support review. The proposed focus is supporting the family to discuss benefits, risks, and preferences with the prescribing clinician. Which principle does it represent?

A. Shared decision-making
B. Placebo response
C. Pharmacokinetics
D. Scope of practice

0708. In psychopharmacology practice, a trainee must distinguish how Pharmacodynamics and Interprofessional collaboration guide practice. Which comparison is accurate?

A. Pharmacodynamics: Asking about barriers, preferences, and experiences instead of labeling a client noncompliant. / Interprofessional collaboration: Sharing relevant observations with the prescriber with appropriate permission and clear role boundaries.
B. Pharmacodynamics: Sharing relevant observations with the prescriber with appropriate permission and clear role boundaries. / Interprofessional collaboration: Distinguishing a medication's action and effects from how the body processes it.
C. Pharmacodynamics: Distinguishing a medication's action and effects from how the body processes it. / Interprofessional collaboration: Sharing relevant observations with the prescriber with appropriate permission and clear role boundaries.
D. Pharmacodynamics: Distinguishing a medication's action and effects from how the body processes it. / Interprofessional collaboration: Referring medication decisions to a qualified prescriber rather than recommending a dose change.

0709. Which option pairs the definitions of Shared decision-making and Black box warning correctly, in that order?

A. Shared decision-making: A collaborative process integrating clinical evidence and the client's informed preferences and values. / Black box warning: The legal and professional boundaries defining services a practitioner is authorized and competent to provide.
B. Shared decision-making: Reviewing a person's current medications and supplements to identify what is actually being used. / Black box warning: A prominent regulator-required warning for serious medication risks, whose relevance should be discussed with the prescriber.
C. Shared decision-making: A collaborative process integrating clinical evidence and the client's informed preferences and values. / Black box warning: A prominent regulator-required warning for serious medication risks, whose relevance should be discussed with the prescriber.
D. Shared decision-making: A prominent regulator-required warning for serious medication risks, whose relevance should be discussed with the prescriber. / Black box warning: A collaborative process integrating clinical evidence and the client's informed preferences and values.

0710. In a professional consultation about a child aged 14, the member of a clinical team describes this response in the student-support meeting: referring medication decisions to a qualified prescriber rather than recommending a dose change. Which term is most apt?

A. Scope of practice
B. Shared decision-making
C. Pharmacodynamics
D. Medication reconciliation

0711. Which paired example correctly applies Placebo response first and Black box warning second?

A. Placebo response: Interpreting a reported improvement in light of expectations and other treatment-context effects. / Black box warning: Directing questions about a serious labeled risk to the prescriber and supporting informed discussion.
B. Placebo response: Documenting the client's report and facilitating prompt prescriber contact when concerns arise. / Black box warning: Directing questions about a serious labeled risk to the prescriber and supporting informed discussion.
C. Placebo response: Directing questions about a serious labeled risk to the prescriber and supporting informed discussion. / Black box warning: Interpreting a reported improvement in light of expectations and other treatment-context effects.
D. Placebo response: Interpreting a reported improvement in light of expectations and other treatment-context effects. / Black box warning: Referring medication decisions to a qualified prescriber rather than recommending a dose change.

0712. Which professional action most closely applies Pharmacodynamics?

A. Distinguishing a medication's action and effects from how the body processes it.
B. Documenting the client's report and facilitating prompt prescriber contact when concerns arise.
C. Sharing relevant observations with the prescriber with appropriate permission and clear role boundaries.
D. Asking about barriers, preferences, and experiences instead of labeling a client noncompliant.

0713. Which course concept is defined as follows: The extent to which medication use corresponds with an agreed treatment plan, best explored without blame.

A. Interprofessional collaboration
B. Placebo response
C. Pharmacokinetics
D. Medication adherence

0714. Which statement accurately contrasts the course concepts Side-effect monitoring and Pharmacokinetics?

A. Side-effect monitoring: The extent to which medication use corresponds with an agreed treatment plan, best explored without blame. / Pharmacokinetics: How the body absorbs, distributes, metabolizes, and eliminates a medication.
B. Side-effect monitoring: Systematic attention to unwanted or unexpected effects and communication with the prescriber. / Pharmacokinetics: How the body absorbs, distributes, metabolizes, and eliminates a medication.
C. Side-effect monitoring: How the body absorbs, distributes, metabolizes, and eliminates a medication. / Pharmacokinetics: Systematic attention to unwanted or unexpected effects and communication with the prescriber.
D. Side-effect monitoring: Systematic attention to unwanted or unexpected effects and communication with the prescriber. / Pharmacokinetics: A prominent regulator-required warning for serious medication risks, whose relevance should be discussed with the prescriber.

0715. In psychopharmacology practice, consider a child aged 8 receiving help in the supervision meeting. The teacher and counselor focuses on sharing relevant observations with the prescriber with appropriate permission and clear role boundaries. Which term best describes the guiding idea?

A. Interprofessional collaboration
B. Placebo response
C. Medication adherence
D. Black box warning

0716. A behavior specialist is asked to evaluate a proposed service for a child aged 6 in the community mental-health service. The defining feature is asking about barriers, preferences, and experiences instead of labeling a client noncompliant. Which concept fits?

A. Interprofessional collaboration
B. Shared decision-making
C. Pharmacodynamics
D. Medication adherence

0717. In a supervision quiz, how should Medication adherence be distinguished from Side-effect monitoring?

A. Medication adherence: The extent to which medication use corresponds with an agreed treatment plan, best explored without blame. / Side-effect monitoring: Systematic attention to unwanted or unexpected effects and communication with the prescriber.
B. Medication adherence: The extent to which medication use corresponds with an agreed treatment plan, best explored without blame. / Side-effect monitoring: How the body absorbs, distributes, metabolizes, and eliminates a medication.
C. Medication adherence: Coordinated communication among professionals with distinct roles to support safe, coherent care. / Side-effect monitoring: Systematic attention to unwanted or unexpected effects and communication with the prescriber.
D. Medication adherence: Systematic attention to unwanted or unexpected effects and communication with the prescriber. / Side-effect monitoring: The extent to which medication use corresponds with an agreed treatment plan, best explored without blame.

0718. A child aged 6's service team meets in the caregiver consultation. The school-based clinician recommends a change involving distinguishing a medication's action and effects from how the body processes it. Which idea best explains it?

A. Medication reconciliation
B. Black box warning
C. Medication adherence
D. Pharmacodynamics

0719. A case conference asks for a distinction between Side-effect monitoring and Shared decision-making. Which answer is sound?

A. Side-effect monitoring: Systematic attention to unwanted or unexpected effects and communication with the prescriber. / Shared decision-making: Change following treatment context and expectation that is not necessarily attributable to the active medication ingredient alone.
B. Side-effect monitoring: The legal and professional boundaries defining services a practitioner is authorized and competent to provide. / Shared decision-making: A collaborative process integrating clinical evidence and the client's informed preferences and values.
C. Side-effect monitoring: Systematic attention to unwanted or unexpected effects and communication with the prescriber. / Shared decision-making: A collaborative process integrating clinical evidence and the client's informed preferences and values.
D. Side-effect monitoring: A collaborative process integrating clinical evidence and the client's informed preferences and values. / Shared decision-making: Systematic attention to unwanted or unexpected effects and communication with the prescriber.

0720. Which description belongs with the term Pharmacodynamics?

A. The extent to which medication use corresponds with an agreed treatment plan, best explored without blame.
B. How a medication affects the body, including mechanisms and relationships between concentration and effects.
C. Systematic attention to unwanted or unexpected effects and communication with the prescriber.
D. Coordinated communication among professionals with distinct roles to support safe, coherent care.

0721. A client in early adolescence and a assessment clinician are reviewing goals in the student wellness team. The agreed action is understanding that age, metabolism, and other factors can affect medication concentration over time. Which principle best accounts for it?

A. Placebo response
B. Pharmacokinetics
C. Medication reconciliation
D. Interprofessional collaboration

0722. Which course concept is defined as follows: Change following treatment context and expectation that is not necessarily attributable to the active medication ingredient alone.

A. Interprofessional collaboration
B. Scope of practice
C. Medication reconciliation
D. Placebo response

0723. A service team discusses a student aged 9 in the outpatient clinic. Their proposed next step is understanding that age, metabolism, and other factors can affect medication concentration over time. Which course concept supports it?

A. Interprofessional collaboration
B. Side-effect monitoring
C. Pharmacodynamics
D. Pharmacokinetics

0724. Which choice aligns each practice with the correct idea, Medication adherence or Placebo response?

A. Medication adherence: Asking about barriers, preferences, and experiences instead of labeling a client noncompliant. / Placebo response: Directing questions about a serious labeled risk to the prescriber and supporting informed discussion.
B. Medication adherence: Supporting the family to discuss benefits, risks, and preferences with the prescribing clinician. / Placebo response: Interpreting a reported improvement in light of expectations and other treatment-context effects.
C. Medication adherence: Interpreting a reported improvement in light of expectations and other treatment-context effects. / Placebo response: Asking about barriers, preferences, and experiences instead of labeling a client noncompliant.
D. Medication adherence: Asking about barriers, preferences, and experiences instead of labeling a client noncompliant. / Placebo response: Interpreting a reported improvement in light of expectations and other treatment-context effects.

0725. In psychopharmacology practice, which comparison would correct a trainee's misunderstanding of Side-effect monitoring versus Interprofessional collaboration?

A. Side-effect monitoring: Coordinated communication among professionals with distinct roles to support safe, coherent care. / Interprofessional collaboration: Systematic attention to unwanted or unexpected effects and communication with the prescriber.
B. Side-effect monitoring: How the body absorbs, distributes, metabolizes, and eliminates a medication. / Interprofessional collaboration: Coordinated communication among professionals with distinct roles to support safe, coherent care.
C. Side-effect monitoring: Systematic attention to unwanted or unexpected effects and communication with the prescriber. / Interprofessional collaboration: The extent to which medication use corresponds with an agreed treatment plan, best explored without blame.
D. Side-effect monitoring: Systematic attention to unwanted or unexpected effects and communication with the prescriber. / Interprofessional collaboration: Coordinated communication among professionals with distinct roles to support safe, coherent care.

0726. A young person and a member of a clinical team are reviewing goals in the classroom support meeting. The agreed action is supporting the family to discuss benefits, risks, and preferences with the prescribing clinician. Which principle best accounts for it?

A. Pharmacodynamics
B. Shared decision-making
C. Scope of practice
D. Side-effect monitoring

0727. A planning meeting about a young person aged 10 includes a school support specialist. The proposed practice in the family session is understanding that age, metabolism, and other factors can affect medication concentration over time. Which idea underlies it?

A. Medication reconciliation
B. Black box warning
C. Placebo response
D. Pharmacokinetics

0728. Consider a middle-school student receiving help in the youth advocacy program. The teacher and counselor focuses on encouraging an accurate current medication list during care transitions. Which term best describes the guiding idea?

A. Pharmacokinetics
B. Medication reconciliation
C. Medication adherence
D. Placebo response

0729. A trainee must explain Placebo response. Which answer is accurate?

A. Change following treatment context and expectation that is not necessarily attributable to the active medication ingredient alone.
B. A collaborative process integrating clinical evidence and the client's informed preferences and values.
C. Reviewing a person's current medications and supplements to identify what is actually being used.
D. Systematic attention to unwanted or unexpected effects and communication with the prescriber.

0730. A student confuses Side-effect monitoring with Placebo response. Which explanation most accurately separates them?

A. Side-effect monitoring: Systematic attention to unwanted or unexpected effects and communication with the prescriber. / Placebo response: The legal and professional boundaries defining services a practitioner is authorized and competent to provide.
B. Side-effect monitoring: The extent to which medication use corresponds with an agreed treatment plan, best explored without blame. / Placebo response: Change following treatment context and expectation that is not necessarily attributable to the active medication ingredient alone.
C. Side-effect monitoring: Change following treatment context and expectation that is not necessarily attributable to the active medication ingredient alone. / Placebo response: Systematic attention to unwanted or unexpected effects and communication with the prescriber.
D. Side-effect monitoring: Systematic attention to unwanted or unexpected effects and communication with the prescriber. / Placebo response: Change following treatment context and expectation that is not necessarily attributable to the active medication ingredient alone.

0731. Choose the practice comparison that best separates Placebo response from Pharmacodynamics.

A. Placebo response: Interpreting a reported improvement in light of expectations and other treatment-context effects. / Pharmacodynamics: Distinguishing a medication's action and effects from how the body processes it.
B. Placebo response: Distinguishing a medication's action and effects from how the body processes it. / Pharmacodynamics: Interpreting a reported improvement in light of expectations and other treatment-context effects.
C. Placebo response: Interpreting a reported improvement in light of expectations and other treatment-context effects. / Pharmacodynamics: Directing questions about a serious labeled risk to the prescriber and supporting informed discussion.
D. Placebo response: Documenting the client's report and facilitating prompt prescriber contact when concerns arise. / Pharmacodynamics: Distinguishing a medication's action and effects from how the body processes it.

0732. Which comparison would correct a trainee's misunderstanding of Placebo response versus Pharmacokinetics?

A. Placebo response: How the body absorbs, distributes, metabolizes, and eliminates a medication. / Pharmacokinetics: Change following treatment context and expectation that is not necessarily attributable to the active medication ingredient alone.
B. Placebo response: Change following treatment context and expectation that is not necessarily attributable to the active medication ingredient alone. / Pharmacokinetics: A collaborative process integrating clinical evidence and the client's informed preferences and values.
C. Placebo response: Change following treatment context and expectation that is not necessarily attributable to the active medication ingredient alone. / Pharmacokinetics: How the body absorbs, distributes, metabolizes, and eliminates a medication.
D. Placebo response: A prominent regulator-required warning for serious medication risks, whose relevance should be discussed with the prescriber. / Pharmacokinetics: How the body absorbs, distributes, metabolizes, and eliminates a medication.

0733. A support meeting for a child aged 6 includes a play therapist in the after-school program. The practice under consideration is understanding that age, metabolism, and other factors can affect medication concentration over time. Which concept guides it?

A. Pharmacodynamics
B. Black box warning
C. Pharmacokinetics
D. Side-effect monitoring

0734. How should a practitioner distinguish the applications of Side-effect monitoring and Black box warning?

A. Side-effect monitoring: Directing questions about a serious labeled risk to the prescriber and supporting informed discussion. / Black box warning: Documenting the client's report and facilitating prompt prescriber contact when concerns arise.
B. Side-effect monitoring: Documenting the client's report and facilitating prompt prescriber contact when concerns arise. / Black box warning: Directing questions about a serious labeled risk to the prescriber and supporting informed discussion.
C. Side-effect monitoring: Documenting the client's report and facilitating prompt prescriber contact when concerns arise. / Black box warning: Encouraging an accurate current medication list during care transitions.
D. Side-effect monitoring: Interpreting a reported improvement in light of expectations and other treatment-context effects. / Black box warning: Directing questions about a serious labeled risk to the prescriber and supporting informed discussion.

0735. A supervisor asks for an applied contrast between Side-effect monitoring and Placebo response. Which option fits?

A. Side-effect monitoring: Asking about barriers, preferences, and experiences instead of labeling a client noncompliant. / Placebo response: Interpreting a reported improvement in light of expectations and other treatment-context effects.
B. Side-effect monitoring: Documenting the client's report and facilitating prompt prescriber contact when concerns arise. / Placebo response: Interpreting a reported improvement in light of expectations and other treatment-context effects.
C. Side-effect monitoring: Documenting the client's report and facilitating prompt prescriber contact when concerns arise. / Placebo response: Referring medication decisions to a qualified prescriber rather than recommending a dose change.
D. Side-effect monitoring: Interpreting a reported improvement in light of expectations and other treatment-context effects. / Placebo response: Documenting the client's report and facilitating prompt prescriber contact when concerns arise.

0736. What is the central meaning of Medication adherence?

A. Reviewing a person's current medications and supplements to identify what is actually being used.
B. The extent to which medication use corresponds with an agreed treatment plan, best explored without blame.
C. How the body absorbs, distributes, metabolizes, and eliminates a medication.
D. How a medication affects the body, including mechanisms and relationships between concentration and effects.

0737. Which description belongs with the term Black box warning?

A. A collaborative process integrating clinical evidence and the client's informed preferences and values.
B. How a medication affects the body, including mechanisms and relationships between concentration and effects.
C. A prominent regulator-required warning for serious medication risks, whose relevance should be discussed with the prescriber.
D. Systematic attention to unwanted or unexpected effects and communication with the prescriber.

0738. Which professional action most closely applies Medication reconciliation?

A. Referring medication decisions to a qualified prescriber rather than recommending a dose change.
B. Directing questions about a serious labeled risk to the prescriber and supporting informed discussion.
C. Encouraging an accurate current medication list during care transitions.
D. Asking about barriers, preferences, and experiences instead of labeling a client noncompliant.

0739. Which statement most accurately defines Side-effect monitoring?

A. Systematic attention to unwanted or unexpected effects and communication with the prescriber.
B. Change following treatment context and expectation that is not necessarily attributable to the active medication ingredient alone.
C. A collaborative process integrating clinical evidence and the client's informed preferences and values.
D. How a medication affects the body, including mechanisms and relationships between concentration and effects.

0740. Choose the definition pair that correctly explains Placebo response first and Pharmacokinetics second.

A. Placebo response: A prominent regulator-required warning for serious medication risks, whose relevance should be discussed with the prescriber. / Pharmacokinetics: How the body absorbs, distributes, metabolizes, and eliminates a medication.
B. Placebo response: Change following treatment context and expectation that is not necessarily attributable to the active medication ingredient alone. / Pharmacokinetics: A collaborative process integrating clinical evidence and the client's informed preferences and values.
C. Placebo response: Change following treatment context and expectation that is not necessarily attributable to the active medication ingredient alone. / Pharmacokinetics: How the body absorbs, distributes, metabolizes, and eliminates a medication.
D. Placebo response: How the body absorbs, distributes, metabolizes, and eliminates a medication. / Pharmacokinetics: Change following treatment context and expectation that is not necessarily attributable to the active medication ingredient alone.

0741. A supervised trainee and a young person aged 16 are discussing support in the caregiver consultation. The selected practice is understanding that age, metabolism, and other factors can affect medication concentration over time. Which concept does this demonstrate?

A. Pharmacodynamics
B. Interprofessional collaboration
C. Side-effect monitoring
D. Pharmacokinetics

0742. Which option preserves the correct meaning of both Scope of practice and Pharmacodynamics?

A. Scope of practice: Coordinated communication among professionals with distinct roles to support safe, coherent care. / Pharmacodynamics: How a medication affects the body, including mechanisms and relationships between concentration and effects.
B. Scope of practice: How a medication affects the body, including mechanisms and relationships between concentration and effects. / Pharmacodynamics: The legal and professional boundaries defining services a practitioner is authorized and competent to provide.
C. Scope of practice: The legal and professional boundaries defining services a practitioner is authorized and competent to provide. / Pharmacodynamics: How a medication affects the body, including mechanisms and relationships between concentration and effects.
D. Scope of practice: The legal and professional boundaries defining services a practitioner is authorized and competent to provide. / Pharmacodynamics: A prominent regulator-required warning for serious medication risks, whose relevance should be discussed with the prescriber.

0743. Which comparison would correct a trainee’s misunderstanding of Side-effect monitoring versus Black box warning?

A. Side-effect monitoring: Change following treatment context and expectation that is not necessarily attributable to the active medication ingredient alone. / Black box warning: A prominent regulator-required warning for serious medication risks, whose relevance should be discussed with the prescriber.
B. Side-effect monitoring: Systematic attention to unwanted or unexpected effects and communication with the prescriber. / Black box warning: A prominent regulator-required warning for serious medication risks, whose relevance should be discussed with the prescriber.
C. Side-effect monitoring: A prominent regulator-required warning for serious medication risks, whose relevance should be discussed with the prescriber. / Black box warning: Systematic attention to unwanted or unexpected effects and communication with the prescriber.
D. Side-effect monitoring: Systematic attention to unwanted or unexpected effects and communication with the prescriber. / Black box warning: Reviewing a person’s current medications and supplements to identify what is actually being used.

0744. Select the best explanation of Shared decision-making.

A. Coordinated communication among professionals with distinct roles to support safe, coherent care.
B. A collaborative process integrating clinical evidence and the client’s informed preferences and values.
C. A prominent regulator-required warning for serious medication risks, whose relevance should be discussed with the prescriber.
D. How the body absorbs, distributes, metabolizes, and eliminates a medication.

0745. Which comparison correctly distinguishes Side-effect monitoring from Shared decision-making?

A. Side-effect monitoring: The legal and professional boundaries defining services a practitioner is authorized and competent to provide. / Shared decision-making: A collaborative process integrating clinical evidence and the client’s informed preferences and values.
B. Side-effect monitoring: A collaborative process integrating clinical evidence and the client’s informed preferences and values. / Shared decision-making: Systematic attention to unwanted or unexpected effects and communication with the prescriber.
C. Side-effect monitoring: Systematic attention to unwanted or unexpected effects and communication with the prescriber. / Shared decision-making: Change following treatment context and expectation that is not necessarily attributable to the active medication ingredient alone.
D. Side-effect monitoring: Systematic attention to unwanted or unexpected effects and communication with the prescriber. / Shared decision-making: A collaborative process integrating clinical evidence and the client’s informed preferences and values.

0746. Which statement accurately contrasts the course concepts Shared decision-making and Medication reconciliation?

A. Shared decision-making: A collaborative process integrating clinical evidence and the client’s informed preferences and values. / Medication reconciliation: Reviewing a person’s current medications and supplements to identify what is actually being used.
B. Shared decision-making: Reviewing a person’s current medications and supplements to identify what is actually being used. / Medication reconciliation: A collaborative process integrating clinical evidence and the client’s informed preferences and values.
C. Shared decision-making: Coordinated communication among professionals with distinct roles to support safe, coherent care. / Medication reconciliation: Reviewing a person’s current medications and supplements to identify what is actually being used.
D. Shared decision-making: A collaborative process integrating clinical evidence and the client’s informed preferences and values. / Medication reconciliation: The extent to which medication use corresponds with an agreed treatment plan, best explored without blame.

0747. A preadolescent child is receiving support in the school counseling office. The school counselor is guided by this practice: understanding that age, metabolism, and other factors can affect medication concentration over time. Which principle best fits?

A. Side-effect monitoring
B. Pharmacokinetics
C. Interprofessional collaboration
D. Scope of practice

0748. In a case note about a school-age child, a mental-health professional working in the counseling practicum records this priority: distinguishing a medication’s action and effects from how the body processes it. What principle is reflected?

A. Scope of practice
B. Pharmacodynamics
C. Pharmacokinetics
D. Side-effect monitoring

0749. In psychopharmacology practice, a trainee must distinguish how Side-effect monitoring and Interprofessional collaboration guide practice. Which comparison is accurate?

A. Side-effect monitoring: Sharing relevant observations with the prescriber with appropriate permission and clear role boundaries. / Interprofessional collaboration: Documenting the client’s report and facilitating prompt prescriber contact when concerns arise.
B. Side-effect monitoring: Documenting the client’s report and facilitating prompt prescriber contact when concerns arise. / Interprofessional collaboration: Sharing relevant observations with the prescriber with appropriate permission and clear role boundaries.
C. Side-effect monitoring: Understanding that age, metabolism, and other factors can affect medication concentration over time. / Interprofessional collaboration: Sharing relevant observations with the prescriber with appropriate permission and clear role boundaries.
D. Side-effect monitoring: Documenting the client’s report and facilitating prompt prescriber contact when concerns arise. / Interprofessional collaboration: Asking about barriers, preferences, and experiences instead of labeling a client noncompliant.

0750. Which description belongs with the term Medication adherence?

A. The extent to which medication use corresponds with an agreed treatment plan, best explored without blame.
B. A prominent regulator-required warning for serious medication risks, whose relevance should be discussed with the prescriber.
C. The legal and professional boundaries defining services a practitioner is authorized and competent to provide.
D. Coordinated communication among professionals with distinct roles to support safe, coherent care.

0751. How are Scope of practice and Pharmacokinetics most accurately differentiated in this curriculum?

A. Scope of practice: How the body absorbs, distributes, metabolizes, and eliminates a medication. / Pharmacokinetics: The legal and professional boundaries defining services a practitioner is authorized and competent to provide.
B. Scope of practice: The legal and professional boundaries defining services a practitioner is authorized and competent to provide. / Pharmacokinetics: A collaborative process integrating clinical evidence and the client’s informed preferences and values.
C. Scope of practice: The extent to which medication use corresponds with an agreed treatment plan, best explored without blame. / Pharmacokinetics: How the body absorbs, distributes, metabolizes, and eliminates a medication.
D. Scope of practice: The legal and professional boundaries defining services a practitioner is authorized and competent to provide. / Pharmacokinetics: How the body absorbs, distributes, metabolizes, and eliminates a medication.

0752. Identify the most precise label for this idea: Change following treatment context and expectation that is not necessarily attributable to the active medication ingredient alone.

A. Placebo response
B. Medication reconciliation
C. Side-effect monitoring
D. Scope of practice

0753. Which statement accurately contrasts the course concepts Side-effect monitoring and Pharmacodynamics?

A. Side-effect monitoring: How a medication affects the body, including mechanisms and relationships between concentration and effects. / Pharmacodynamics: Systematic attention to unwanted or unexpected effects and communication with the prescriber.
B. Side-effect monitoring: Systematic attention to unwanted or unexpected effects and communication with the prescriber. / Pharmacodynamics: How a medication affects the body, including mechanisms and relationships between concentration and effects.
C. Side-effect monitoring: Systematic attention to unwanted or unexpected effects and communication with the prescriber. / Pharmacodynamics: Reviewing a person's current medications and supplements to identify what is actually being used.
D. Side-effect monitoring: A prominent regulator-required warning for serious medication risks, whose relevance should be discussed with the prescriber. / Pharmacodynamics: How a medication affects the body, including mechanisms and relationships between concentration and effects.

0754. Which option pairs the definitions of Side-effect monitoring and Pharmacodynamics correctly, in that order?

A. Side-effect monitoring: How a medication affects the body, including mechanisms and relationships between concentration and effects. / Pharmacodynamics: Systematic attention to unwanted or unexpected effects and communication with the prescriber.
B. Side-effect monitoring: Systematic attention to unwanted or unexpected effects and communication with the prescriber. / Pharmacodynamics: Reviewing a person's current medications and supplements to identify what is actually being used.
C. Side-effect monitoring: A prominent regulator-required warning for serious medication risks, whose relevance should be discussed with the prescriber. / Pharmacodynamics: How a medication affects the body, including mechanisms and relationships between concentration and effects.
D. Side-effect monitoring: Systematic attention to unwanted or unexpected effects and communication with the prescriber. / Pharmacodynamics: How a medication affects the body, including mechanisms and relationships between concentration and effects.

0755. A high-school student's service team meets in the school counseling office. The family therapist recommends a change involving encouraging an accurate current medication list during care transitions. Which idea best explains it?

A. Interprofessional collaboration
B. Pharmacokinetics
C. Placebo response
D. Medication reconciliation

0756. Which applied comparison correctly identifies what belongs to Medication adherence versus Pharmacokinetics?

A. Medication adherence: Understanding that age, metabolism, and other factors can affect medication concentration over time. / Pharmacokinetics: Asking about barriers, preferences, and experiences instead of labeling a client noncompliant.
B. Medication adherence: Encouraging an accurate current medication list during care transitions. / Pharmacokinetics: Understanding that age, metabolism, and other factors can affect medication concentration over time.
C. Medication adherence: Asking about barriers, preferences, and experiences instead of labeling a client noncompliant. / Pharmacokinetics: Supporting the family to discuss benefits, risks, and preferences with the prescribing clinician.
D. Medication adherence: Asking about barriers, preferences, and experiences instead of labeling a client noncompliant. / Pharmacokinetics: Understanding that age, metabolism, and other factors can affect medication concentration over time.

0757. A child aged 14 is receiving support in the family session. The teacher and counselor is guided by this practice: distinguishing a medication's action and effects from how the body processes it. Which principle best fits?

A. Scope of practice
B. Placebo response
C. Pharmacodynamics
D. Side-effect monitoring

0758. Consider a child aged 6 receiving help in the multidisciplinary case conference. The youth worker focuses on referring medication decisions to a qualified prescriber rather than recommending a dose change. Which term best describes the guiding idea?

A. Pharmacokinetics
B. Medication reconciliation
C. Pharmacodynamics
D. Scope of practice

0759. A case conference asks for a distinction between Medication adherence and Pharmacokinetics. Which answer is sound?

A. Medication adherence: The extent to which medication use corresponds with an agreed treatment plan, best explored without blame. / Pharmacokinetics: A collaborative process integrating clinical evidence and the client's informed preferences and values.
B. Medication adherence: How the body absorbs, distributes, metabolizes, and eliminates a medication. / Pharmacokinetics: The extent to which medication use corresponds with an agreed treatment plan, best explored without blame.
C. Medication adherence: The extent to which medication use corresponds with an agreed treatment plan, best explored without blame. / Pharmacokinetics: How the body absorbs, distributes, metabolizes, and eliminates a medication.
D. Medication adherence: Reviewing a person's current medications and supplements to identify what is actually being used. / Pharmacokinetics: How the body absorbs, distributes, metabolizes, and eliminates a medication.

0760. Which statement accurately contrasts the course concepts Scope of practice and Medication adherence?

A. Scope of practice: The legal and professional boundaries defining services a practitioner is authorized and competent to provide. / Medication adherence: Systematic attention to unwanted or unexpected effects and communication with the prescriber.
B. Scope of practice: The extent to which medication use corresponds with an agreed treatment plan, best explored without blame. / Medication adherence: The legal and professional boundaries defining services a practitioner is authorized and competent to provide.
C. Scope of practice: The legal and professional boundaries defining services a practitioner is authorized and competent to provide. / Medication adherence: The extent to which medication use corresponds with an agreed treatment plan, best explored without blame.
D. Scope of practice: How a medication affects the body, including mechanisms and relationships between concentration and effects. / Medication adherence: The extent to which medication use corresponds with an agreed treatment plan, best explored without blame.

0761. In a supervision quiz, how should Pharmacokinetics be distinguished from Black box warning?

A. Pharmacokinetics: How a medication affects the body, including mechanisms and relationships between concentration and effects. / Black box warning: A prominent regulator-required warning for serious medication risks, whose relevance should be discussed with the prescriber.
B. Pharmacokinetics: How the body absorbs, distributes, metabolizes, and eliminates a medication. / Black box warning: The legal and professional boundaries defining services a practitioner is authorized and competent to provide.
C. Pharmacokinetics: How the body absorbs, distributes, metabolizes, and eliminates a medication. / Black box warning: A prominent regulator-required warning for serious medication risks, whose relevance should be discussed with the prescriber.
D. Pharmacokinetics: A prominent regulator-required warning for serious medication risks, whose relevance should be discussed with the prescriber. / Black box warning: How the body absorbs, distributes, metabolizes, and eliminates a medication.

0762. Choose the definition pair that correctly explains Medication reconciliation first and Pharmacodynamics second.

A. Medication reconciliation: How a medication affects the body, including mechanisms and relationships between concentration and effects. / Pharmacodynamics: Reviewing a person's current medications and supplements to identify what is actually being used.
B. Medication reconciliation: Reviewing a person's current medications and supplements to identify what is actually being used. / Pharmacodynamics: The extent to which medication use corresponds with an agreed treatment plan, best explored without blame.
C. Medication reconciliation: The legal and professional boundaries defining services a practitioner is authorized and competent to provide. / Pharmacodynamics: How a medication affects the body, including mechanisms and relationships between concentration and effects.
D. Medication reconciliation: Reviewing a person's current medications and supplements to identify what is actually being used. / Pharmacodynamics: How a medication affects the body, including mechanisms and relationships between concentration and effects.

0763. A service navigator describes an intervention for a preadolescent child in the youth advocacy program, centered on referring medication decisions to a qualified prescriber rather than recommending a dose change. Which named idea is most relevant?

A. Black box warning
B. Scope of practice
C. Placebo response
D. Shared decision-making

0764. A consulting counselor is explaining a choice to a child of elementary-school age and caregiver in the clinical planning session. The choice centers on interpreting a reported improvement in light of expectations and other treatment-context effects. Which idea is illustrated?

A. Black box warning
B. Medication reconciliation
C. Shared decision-making
D. Placebo response

0765. Choose the practice comparison that best separates Scope of practice from Black box warning.

A. Scope of practice: Directing questions about a serious labeled risk to the prescriber and supporting informed discussion. / Black box warning: Referring medication decisions to a qualified prescriber rather than recommending a dose change.
B. Scope of practice: Referring medication decisions to a qualified prescriber rather than recommending a dose change. / Black box warning: Documenting the client's report and facilitating prompt prescriber contact when concerns arise.
C. Scope of practice: Referring medication decisions to a qualified prescriber rather than recommending a dose change. / Black box warning: Directing questions about a serious labeled risk to the prescriber and supporting informed discussion.
D. Scope of practice: Distinguishing a medication's action and effects from how the body processes it. / Black box warning: Directing questions about a serious labeled risk to the prescriber and supporting informed discussion.

0766. How should a practitioner distinguish the applications of Pharmacokinetics and Black box warning?

A. Pharmacokinetics: Directing questions about a serious labeled risk to the prescriber and supporting informed discussion. / Black box warning: Understanding that age, metabolism, and other factors can affect medication concentration over time.
B. Pharmacokinetics: Understanding that age, metabolism, and other factors can affect medication concentration over time. / Black box warning: Directing questions about a serious labeled risk to the prescriber and supporting informed discussion.
C. Pharmacokinetics: Understanding that age, metabolism, and other factors can affect medication concentration over time. / Black box warning: Referring medication decisions to a qualified prescriber rather than recommending a dose change.
D. Pharmacokinetics: Distinguishing a medication's action and effects from how the body processes it. / Black box warning: Directing questions about a serious labeled risk to the prescriber and supporting informed discussion.

0767. Which course concept is defined as follows: How the body absorbs, distributes, metabolizes, and eliminates a medication.

A. Pharmacokinetics
B. Scope of practice
C. Medication adherence
D. Pharmacodynamics

0768. Choose the definition pair that correctly explains Side-effect monitoring first and Pharmacodynamics second.

A. Side-effect monitoring: Systematic attention to unwanted or unexpected effects and communication with the prescriber. / Pharmacodynamics: Reviewing a person's current medications and supplements to identify what is actually being used.
B. Side-effect monitoring: A prominent regulator-required warning for serious medication risks, whose relevance should be discussed with the prescriber. / Pharmacodynamics: How a medication affects the body, including mechanisms and relationships between concentration and effects.
C. Side-effect monitoring: How a medication affects the body, including mechanisms and relationships between concentration and effects. / Pharmacodynamics: Systematic attention to unwanted or unexpected effects and communication with the prescriber.
D. Side-effect monitoring: Systematic attention to unwanted or unexpected effects and communication with the prescriber. / Pharmacodynamics: How a medication affects the body, including mechanisms and relationships between concentration and effects.

0769. A doctoral student reads the following description. Which concept does it define? How a medication affects the body, including mechanisms and relationships between concentration and effects.

A. Shared decision-making
B. Pharmacodynamics
C. Scope of practice
D. Pharmacokinetics

0770. A service navigator describes an intervention for a student aged 17 in the supervision meeting, centered on interpreting a reported improvement in light of expectations and other treatment-context effects. Which named idea is most relevant?

A. Pharmacokinetics
B. Shared decision-making
C. Interprofessional collaboration
D. Placebo response

0771. Choose the response that best puts Pharmacokinetics into practice.

A. Documenting the client's report and facilitating prompt prescriber contact when concerns arise.
B. Referring medication decisions to a qualified prescriber rather than recommending a dose change.
C. Encouraging an accurate current medication list during care transitions.
D. Understanding that age, metabolism, and other factors can affect medication concentration over time.

0772. Which applied comparison correctly identifies what belongs to Side-effect monitoring versus Pharmacodynamics?

A. Side-effect monitoring: Directing questions about a serious labeled risk to the prescriber and supporting informed discussion. / Pharmacodynamics: Distinguishing a medication's action and effects from how the body processes it.
B. Side-effect monitoring: Documenting the client's report and facilitating prompt prescriber contact when concerns arise. / Pharmacodynamics: Distinguishing a medication's action and effects from how the body processes it.
C. Side-effect monitoring: Documenting the client's report and facilitating prompt prescriber contact when concerns arise. / Pharmacodynamics: Encouraging an accurate current medication list during care transitions.
D. Side-effect monitoring: Distinguishing a medication's action and effects from how the body processes it. / Pharmacodynamics: Documenting the client's report and facilitating prompt prescriber contact when concerns arise.

0773. Which statement most accurately defines Medication adherence?

A. The extent to which medication use corresponds with an agreed treatment plan, best explored without blame.
B. A prominent regulator-required warning for serious medication risks, whose relevance should be discussed with the prescriber.
C. How the body absorbs, distributes, metabolizes, and eliminates a medication.
D. Change following treatment context and expectation that is not necessarily attributable to the active medication ingredient alone.

0774. In psychopharmacology practice, which option correctly matches each concept to its practice focus: Black box warning and Interprofessional collaboration?

A. Black box warning: Directing questions about a serious labeled risk to the prescriber and supporting informed discussion. / Interprofessional collaboration: Sharing relevant observations with the prescriber with appropriate permission and clear role boundaries.
B. Black box warning: Sharing relevant observations with the prescriber with appropriate permission and clear role boundaries. / Interprofessional collaboration: Directing questions about a serious labeled risk to the prescriber and supporting informed discussion.
C. Black box warning: Interpreting a reported improvement in light of expectations and other treatment-context effects. / Interprofessional collaboration: Sharing relevant observations with the prescriber with appropriate permission and clear role boundaries.
D. Black box warning: Directing questions about a serious labeled risk to the prescriber and supporting informed discussion. / Interprofessional collaboration: Asking about barriers, preferences, and experiences instead of labeling a client noncompliant.

0775. In a supervision quiz, how should Medication adherence be distinguished from Medication reconciliation?

A. Medication adherence: The extent to which medication use corresponds with an agreed treatment plan, best explored without blame. / Medication reconciliation: Reviewing a person's current medications and supplements to identify what is actually being used.
B. Medication adherence: Reviewing a person's current medications and supplements to identify what is actually being used. / Medication reconciliation: The extent to which medication use corresponds with an agreed treatment plan, best explored without blame.
C. Medication adherence: The extent to which medication use corresponds with an agreed treatment plan, best explored without blame. / Medication reconciliation: A collaborative process integrating clinical evidence and the client's informed preferences and values.
D. Medication adherence: The legal and professional boundaries defining services a practitioner is authorized and competent to provide. / Medication reconciliation: Reviewing a person's current medications and supplements to identify what is actually being used.

0776. In psychopharmacology practice, how are Placebo response and Interprofessional collaboration most accurately differentiated in this curriculum?

A. Placebo response: Change following treatment context and expectation that is not necessarily attributable to the active medication ingredient alone. / Interprofessional collaboration: How the body absorbs, distributes, metabolizes, and eliminates a medication.
B. Placebo response: Systematic attention to unwanted or unexpected effects and communication with the prescriber. / Interprofessional collaboration: Coordinated communication among professionals with distinct roles to support safe, coherent care.
C. Placebo response: Change following treatment context and expectation that is not necessarily attributable to the active medication ingredient alone. / Interprofessional collaboration: Coordinated communication among professionals with distinct roles to support safe, coherent care.
D. Placebo response: Coordinated communication among professionals with distinct roles to support safe, coherent care. / Interprofessional collaboration: Change following treatment context and expectation that is not necessarily attributable to the active medication ingredient alone.

0777. An interdisciplinary team reviews a young person aged 10's case at the family session. The school support specialist recommends understanding that age, metabolism, and other factors can affect medication concentration over time. Which course concept best fits?

A. Pharmacokinetics
B. Black box warning
C. Medication adherence
D. Side-effect monitoring

0778. In psychopharmacology practice, which choice aligns each practice with the correct idea, Side-effect monitoring or Interprofessional collaboration?

A. Side-effect monitoring: Understanding that age, metabolism, and other factors can affect medication concentration over time. / Interprofessional collaboration: Sharing relevant observations with the prescriber with appropriate permission and clear role boundaries.
B. Side-effect monitoring: Documenting the client's report and facilitating prompt prescriber contact when concerns arise. / Interprofessional collaboration: Sharing relevant observations with the prescriber with appropriate permission and clear role boundaries.
C. Side-effect monitoring: Sharing relevant observations with the prescriber with appropriate permission and clear role boundaries. / Interprofessional collaboration: Documenting the client's report and facilitating prompt prescriber contact when concerns arise.
D. Side-effect monitoring: Documenting the client's report and facilitating prompt prescriber contact when concerns arise. / Interprofessional collaboration: Asking about barriers, preferences, and experiences instead of labeling a client noncompliant.

0779. Which choice aligns each practice with the correct idea, Medication reconciliation or Placebo response?

A. Medication reconciliation: Documenting the client's report and facilitating prompt prescriber contact when concerns arise. / Placebo response: Interpreting a reported improvement in light of expectations and other treatment-context effects.
B. Medication reconciliation: Encouraging an accurate current medication list during care transitions. / Placebo response: Interpreting a reported improvement in light of expectations and other treatment-context effects.
C. Medication reconciliation: Encouraging an accurate current medication list during care transitions. / Placebo response: Sharing relevant observations with the prescriber with appropriate permission and clear role boundaries.
D. Medication reconciliation: Interpreting a reported improvement in light of expectations and other treatment-context effects. / Placebo response: Encouraging an accurate current medication list during care transitions.

0780. Which choice aligns each practice with the correct idea, Medication adherence or Pharmacokinetics?

A. Medication adherence: Asking about barriers, preferences, and experiences instead of labeling a client noncompliant. / Pharmacokinetics: Supporting the family to discuss benefits, risks, and preferences with the prescribing clinician.
B. Medication adherence: Asking about barriers, preferences, and experiences instead of labeling a client noncompliant. / Pharmacokinetics: Understanding that age, metabolism, and other factors can affect medication concentration over time.
C. Medication adherence: Encouraging an accurate current medication list during care transitions. / Pharmacokinetics: Understanding that age, metabolism, and other factors can affect medication concentration over time.
D. Medication adherence: Understanding that age, metabolism, and other factors can affect medication concentration over time. / Pharmacokinetics: Asking about barriers, preferences, and experiences instead of labeling a client noncompliant.

0781. A trainee must distinguish how Medication reconciliation and Pharmacodynamics guide practice. Which comparison is accurate?

A. Medication reconciliation: Distinguishing a medication's action and effects from how the body processes it. / Pharmacodynamics: Encouraging an accurate current medication list during care transitions.
B. Medication reconciliation: Encouraging an accurate current medication list during care transitions. / Pharmacodynamics: Distinguishing a medication's action and effects from how the body processes it.
C. Medication reconciliation: Referring medication decisions to a qualified prescriber rather than recommending a dose change. / Pharmacodynamics: Distinguishing a medication's action and effects from how the body processes it.
D. Medication reconciliation: Encouraging an accurate current medication list during care transitions. / Pharmacodynamics: Asking about barriers, preferences, and experiences instead of labeling a client noncompliant.

0782. Which statement accurately contrasts the course concepts Medication adherence and Pharmacokinetics?

A. Medication adherence: The extent to which medication use corresponds with an agreed treatment plan, best explored without blame. / Pharmacokinetics: How the body absorbs, distributes, metabolizes, and eliminates a medication.
B. Medication adherence: Reviewing a person's current medications and supplements to identify what is actually being used. / Pharmacokinetics: How the body absorbs, distributes, metabolizes, and eliminates a medication.
C. Medication adherence: The extent to which medication use corresponds with an agreed treatment plan, best explored without blame. / Pharmacokinetics: A collaborative process integrating clinical evidence and the client's informed preferences and values.
D. Medication adherence: How the body absorbs, distributes, metabolizes, and eliminates a medication. / Pharmacokinetics: The extent to which medication use corresponds with an agreed treatment plan, best explored without blame.

0783. In a supervision quiz, how should Scope of practice be distinguished from Medication reconciliation?

A. Scope of practice: The legal and professional boundaries defining services a practitioner is authorized and competent to provide. / Medication reconciliation: Change following treatment context and expectation that is not necessarily attributable to the active medication ingredient alone.
B. Scope of practice: Coordinated communication among professionals with distinct roles to support safe, coherent care. / Medication reconciliation: Reviewing a person's current medications and supplements to identify what is actually being used.
C. Scope of practice: Reviewing a person's current medications and supplements to identify what is actually being used. / Medication reconciliation: The legal and professional boundaries defining services a practitioner is authorized and competent to provide.
D. Scope of practice: The legal and professional boundaries defining services a practitioner is authorized and competent to provide. / Medication reconciliation: Reviewing a person's current medications and supplements to identify what is actually being used.

0784. In the child guidance clinic, a school counselor describes the most appropriate support for a client in early adolescence as directing questions about a serious labeled risk to the prescriber and supporting informed discussion. Which framework is being applied?

A. Black box warning
B. Pharmacodynamics
C. Medication reconciliation
D. Scope of practice

0785. When reviewing a student aged 15's plan in the school consultation, the family therapist notes that the next step is distinguishing a medication's action and effects from how the body processes it. Which concept guides this step?

A. Placebo response
B. Side-effect monitoring
C. Pharmacodynamics
D. Scope of practice

0786. Which professional action most closely applies Side-effect monitoring?

A. Asking about barriers, preferences, and experiences instead of labeling a client noncompliant.
B. Referring medication decisions to a qualified prescriber rather than recommending a dose change.
C. Documenting the client's report and facilitating prompt prescriber contact when concerns arise.
D. Encouraging an accurate current medication list during care transitions.

0787. A play therapist reviews a plan for a middle-school student in the learning-support meeting. The plan emphasizes interpreting a reported improvement in light of expectations and other treatment-context effects. Which course idea does this reflect?

A. Shared decision-making
B. Placebo response
C. Pharmacodynamics
D. Medication reconciliation

0788. A mental-health professional is supporting a student aged 12 in the after-school program. The key practice is encouraging an accurate current medication list during care transitions. Which course concept is most relevant?

A. Interprofessional collaboration
B. Medication reconciliation
C. Pharmacokinetics
D. Pharmacodynamics

0789. A trainee must distinguish how Side-effect monitoring and Black box warning guide practice. Which comparison is accurate?

A. Side-effect monitoring: Directing questions about a serious labeled risk to the prescriber and supporting informed discussion. / Black box warning: Documenting the client's report and facilitating prompt prescriber contact when concerns arise.
B. Side-effect monitoring: Documenting the client's report and facilitating prompt prescriber contact when concerns arise. / Black box warning: Encouraging an accurate current medication list during care transitions.
C. Side-effect monitoring: Documenting the client's report and facilitating prompt prescriber contact when concerns arise. / Black box warning: Directing questions about a serious labeled risk to the prescriber and supporting informed discussion.
D. Side-effect monitoring: Interpreting a reported improvement in light of expectations and other treatment-context effects. / Black box warning: Directing questions about a serious labeled risk to the prescriber and supporting informed discussion.

0790. Which statement shows a sound practice-level distinction between Shared decision-making and Placebo response?

A. Shared decision-making: Supporting the family to discuss benefits, risks, and preferences with the prescribing clinician. / Placebo response: Interpreting a reported improvement in light of expectations and other treatment-context effects.
B. Shared decision-making: Documenting the client's report and facilitating prompt prescriber contact when concerns arise. / Placebo response: Interpreting a reported improvement in light of expectations and other treatment-context effects.
C. Shared decision-making: Interpreting a reported improvement in light of expectations and other treatment-context effects. / Placebo response: Supporting the family to discuss benefits, risks, and preferences with the prescribing clinician.
D. Shared decision-making: Supporting the family to discuss benefits, risks, and preferences with the prescribing clinician. / Placebo response: Distinguishing a medication's action and effects from how the body processes it.

0791. In psychopharmacology practice, a community practitioner describes an intervention for a child aged 6 in the community youth program, centered on sharing relevant observations with the prescriber with appropriate permission and clear role boundaries. Which named idea is most relevant?

A. Side-effect monitoring
B. Placebo response
C. Medication reconciliation
D. Interprofessional collaboration

0792. A case conference asks for a distinction between Shared decision-making and Pharmacokinetics. Which answer is sound?

A. Shared decision-making: How the body absorbs, distributes, metabolizes, and eliminates a medication. / Pharmacokinetics: A collaborative process integrating clinical evidence and the client's informed preferences and values.
B. Shared decision-making: A collaborative process integrating clinical evidence and the client's informed preferences and values. / Pharmacokinetics: How the body absorbs, distributes, metabolizes, and eliminates a medication.
C. Shared decision-making: How a medication affects the body, including mechanisms and relationships between concentration and effects. / Pharmacokinetics: How the body absorbs, distributes, metabolizes, and eliminates a medication.
D. Shared decision-making: A collaborative process integrating clinical evidence and the client's informed preferences and values. / Pharmacokinetics: The legal and professional boundaries defining services a practitioner is authorized and competent to provide.

0793. In psychopharmacology practice, a mental-health professional is supporting a older adolescent client in the family session. The key practice is sharing relevant observations with the prescriber with appropriate permission and clear role boundaries. Which course concept is most relevant?

A. Interprofessional collaboration
B. Scope of practice
C. Medication adherence
D. Pharmacodynamics

0794. At the classroom support meeting, a therapist reviews whether a plan for a young adolescent client is appropriate. The relevant practice is distinguishing a medication's action and effects from how the body processes it. Which concept is tested?

A. Medication reconciliation
B. Pharmacodynamics
C. Interprofessional collaboration
D. Scope of practice

0795. In the behavior-support review, a consulting counselor describes the most appropriate support for a student aged 9 as documenting the client's report and facilitating prompt prescriber contact when concerns arise. Which framework is being applied?

A. Side-effect monitoring
B. Black box warning
C. Interprofessional collaboration
D. Pharmacodynamics

0796. Which statement accurately contrasts the course concepts Pharmacodynamics and Black box warning?

A. Pharmacodynamics: Reviewing a person's current medications and supplements to identify what is actually being used. / Black box warning: A prominent regulator-required warning for serious medication risks, whose relevance should be discussed with the prescriber.
B. Pharmacodynamics: How a medication affects the body, including mechanisms and relationships between concentration and effects. / Black box warning: A prominent regulator-required warning for serious medication risks, whose relevance should be discussed with the prescriber.
C. Pharmacodynamics: How a medication affects the body, including mechanisms and relationships between concentration and effects. / Black box warning: The extent to which medication use corresponds with an agreed treatment plan, best explored without blame.
D. Pharmacodynamics: A prominent regulator-required warning for serious medication risks, whose relevance should be discussed with the prescriber. / Black box warning: How a medication affects the body, including mechanisms and relationships between concentration and effects.

0797. In psychopharmacology practice, an interdisciplinary team reviews a adolescent student's case at the multidisciplinary case conference. The counselor recommends sharing relevant observations with the prescriber with appropriate permission and clear role boundaries. Which course concept best fits?

A. Interprofessional collaboration
B. Scope of practice
C. Black box warning
D. Medication reconciliation

0798. A behavior specialist is asked to evaluate a proposed service for a young person in the parent meeting. The defining feature is understanding that age, metabolism, and other factors can affect medication concentration over time. Which concept fits?

A. Pharmacodynamics
B. Interprofessional collaboration
C. Medication reconciliation
D. Pharmacokinetics

0799. In a supervision review, a caregiver working with a counselor describes work with a child aged 8 in the community youth program: understanding that age, metabolism, and other factors can affect medication concentration over time. What concept is illustrated?

A. Pharmacodynamics
B. Placebo response
C. Pharmacokinetics
D. Shared decision-making

0800. Which statement most accurately defines Black box warning?

A. A collaborative process integrating clinical evidence and the client's informed preferences and values.
B. A prominent regulator-required warning for serious medication risks, whose relevance should be discussed with the prescriber.
C. Systematic attention to unwanted or unexpected effects and communication with the prescriber.
D. Change following treatment context and expectation that is not necessarily attributable to the active medication ingredient alone.

0801. In a case note about a child aged 7, a mental-health professional working in the outpatient clinic records this priority: documenting the client's report and facilitating prompt prescriber contact when concerns arise. What principle is reflected?

A. Pharmacokinetics
B. Interprofessional collaboration
C. Side-effect monitoring
D. Shared decision-making

0802. In the family session, the agreed focus for a therapist working with a child aged 7 is directing questions about a serious labeled risk to the prescriber and supporting informed discussion. Which concept names this focus?

A. Shared decision-making
B. Interprofessional collaboration
C. Black box warning
D. Medication reconciliation

0803. A student confuses Shared decision-making with Pharmacodynamics. Which explanation most accurately separates them?

A. Shared decision-making: A collaborative process integrating clinical evidence and the client's informed preferences and values. / Pharmacodynamics: Change following treatment context and expectation that is not necessarily attributable to the active medication ingredient alone.
B. Shared decision-making: A prominent regulator-required warning for serious medication risks, whose relevance should be discussed with the prescriber. / Pharmacodynamics: How a medication affects the body, including mechanisms and relationships between concentration and effects.
C. Shared decision-making: A collaborative process integrating clinical evidence and the client's informed preferences and values. / Pharmacodynamics: How a medication affects the body, including mechanisms and relationships between concentration and effects.
D. Shared decision-making: How a medication affects the body, including mechanisms and relationships between concentration and effects. / Pharmacodynamics: A collaborative process integrating clinical evidence and the client's informed preferences and values.

0804. A supervisor asks for an applied contrast between Medication reconciliation and Placebo response. Which option fits?

A. Medication reconciliation: Encouraging an accurate current medication list during care transitions. / Placebo response: Interpreting a reported improvement in light of expectations and other treatment-context effects.
B. Medication reconciliation: Encouraging an accurate current medication list during care transitions. / Placebo response: Sharing relevant observations with the prescriber with appropriate permission and clear role boundaries.
C. Medication reconciliation: Documenting the client's report and facilitating prompt prescriber contact when concerns arise. / Placebo response: Interpreting a reported improvement in light of expectations and other treatment-context effects.
D. Medication reconciliation: Interpreting a reported improvement in light of expectations and other treatment-context effects. / Placebo response: Encouraging an accurate current medication list during care transitions.

0805. Which statement shows a sound practice-level distinction between Shared decision-making and Pharmacokinetics?

A. Shared decision-making: Understanding that age, metabolism, and other factors can affect medication concentration over time. / Pharmacokinetics: Supporting the family to discuss benefits, risks, and preferences with the prescribing clinician.
B. Shared decision-making: Supporting the family to discuss benefits, risks, and preferences with the prescribing clinician. / Pharmacokinetics: Referring medication decisions to a qualified prescriber rather than recommending a dose change.
C. Shared decision-making: Distinguishing a medication's action and effects from how the body processes it. / Pharmacokinetics: Understanding that age, metabolism, and other factors can affect medication concentration over time.
D. Shared decision-making: Supporting the family to discuss benefits, risks, and preferences with the prescribing clinician. / Pharmacokinetics: Understanding that age, metabolism, and other factors can affect medication concentration over time.

0806. Which pair of actions illustrates Medication adherence and Side-effect monitoring, respectively?

A. Medication adherence: Sharing relevant observations with the prescriber with appropriate permission and clear role boundaries. / Side-effect monitoring: Documenting the client's report and facilitating prompt prescriber contact when concerns arise.
B. Medication adherence: Asking about barriers, preferences, and experiences instead of labeling a client noncompliant. / Side-effect monitoring: Understanding that age, metabolism, and other factors can affect medication concentration over time.
C. Medication adherence: Documenting the client's report and facilitating prompt prescriber contact when concerns arise. / Side-effect monitoring: Asking about barriers, preferences, and experiences instead of labeling a client noncompliant.
D. Medication adherence: Asking about barriers, preferences, and experiences instead of labeling a client noncompliant. / Side-effect monitoring: Documenting the client's report and facilitating prompt prescriber contact when concerns arise.

0807. At a case-planning meeting, the clinical supervisor proposes understanding that age, metabolism, and other factors can affect medication concentration over time. for a child of elementary-school age seen in the behavior-support review. Which concept does this illustrate?

A. Pharmacokinetics
B. Shared decision-making
C. Interprofessional collaboration
D. Medication reconciliation

0808. At a case-planning meeting, the play therapist proposes directing questions about a serious labeled risk to the prescriber and supporting informed discussion. for a child aged 14 seen in the youth advocacy program. Which concept does this illustrate?

A. Medication adherence
B. Black box warning
C. Side-effect monitoring
D. Interprofessional collaboration

0809. In the classroom support meeting, the agreed focus for a service navigator working with a client in early adolescence is documenting the client's report and facilitating prompt prescriber contact when concerns arise. Which concept names this focus?

A. Interprofessional collaboration
B. Shared decision-making
C. Side-effect monitoring
D. Medication reconciliation

0810. Which course concept is defined as follows: A collaborative process integrating clinical evidence and the client's informed preferences and values.

A. Shared decision-making
B. Medication adherence
C. Medication reconciliation
D. Scope of practice

0811. Which professional action most closely applies Placebo response?

A. Interpreting a reported improvement in light of expectations and other treatment-context effects.
B. Sharing relevant observations with the prescriber with appropriate permission and clear role boundaries.
C. Understanding that age, metabolism, and other factors can affect medication concentration over time.
D. Referring medication decisions to a qualified prescriber rather than recommending a dose change.

0812. Which applied comparison correctly identifies what belongs to Scope of practice versus Medication reconciliation?

A. Scope of practice: Referring medication decisions to a qualified prescriber rather than recommending a dose change. / Medication reconciliation: Interpreting a reported improvement in light of expectations and other treatment-context effects.
B. Scope of practice: Referring medication decisions to a qualified prescriber rather than recommending a dose change. / Medication reconciliation: Encouraging an accurate current medication list during care transitions.
C. Scope of practice: Sharing relevant observations with the prescriber with appropriate permission and clear role boundaries. / Medication reconciliation: Encouraging an accurate current medication list during care transitions.
D. Scope of practice: Encouraging an accurate current medication list during care transitions. / Medication reconciliation: Referring medication decisions to a qualified prescriber rather than recommending a dose change.

0813. A trainee must distinguish how Scope of practice and Medication reconciliation guide practice. Which comparison is accurate?

A. Scope of practice: Referring medication decisions to a qualified prescriber rather than recommending a dose change. / Medication reconciliation: Encouraging an accurate current medication list during care transitions.
B. Scope of practice: Referring medication decisions to a qualified prescriber rather than recommending a dose change. / Medication reconciliation: Interpreting a reported improvement in light of expectations and other treatment-context effects.
C. Scope of practice: Encouraging an accurate current medication list during care transitions. / Medication reconciliation: Referring medication decisions to a qualified prescriber rather than recommending a dose change.
D. Scope of practice: Sharing relevant observations with the prescriber with appropriate permission and clear role boundaries. / Medication reconciliation: Encouraging an accurate current medication list during care transitions.

0814. In a supervision quiz, how should Scope of practice be distinguished from Shared decision-making?

A. Scope of practice: Systematic attention to unwanted or unexpected effects and communication with the prescriber. / Shared decision-making: A collaborative process integrating clinical evidence and the client's informed preferences and values.
B. Scope of practice: A collaborative process integrating clinical evidence and the client's informed preferences and values. / Shared decision-making: The legal and professional boundaries defining services a practitioner is authorized and competent to provide.
C. Scope of practice: The legal and professional boundaries defining services a practitioner is authorized and competent to provide. / Shared decision-making: A collaborative process integrating clinical evidence and the client's informed preferences and values.
D. Scope of practice: The legal and professional boundaries defining services a practitioner is authorized and competent to provide. / Shared decision-making: A prominent regulator-required warning for serious medication risks, whose relevance should be discussed with the prescriber.

0815. A planning meeting about a student aged 17 includes a play therapist. The proposed practice in the student-support meeting is distinguishing a medication's action and effects from how the body processes it. Which idea underlies it?

A. Medication adherence
B. Scope of practice
C. Pharmacokinetics
D. Pharmacodynamics

0816. Choose the term that matches this definition: Change following treatment context and expectation that is not necessarily attributable to the active medication ingredient alone.

A. Side-effect monitoring
B. Pharmacokinetics
C. Medication adherence
D. Placebo response

0817. A trainee must distinguish how Placebo response and Pharmacokinetics guide practice. Which comparison is accurate?

A. Placebo response: Directing questions about a serious labeled risk to the prescriber and supporting informed discussion. / Pharmacokinetics: Understanding that age, metabolism, and other factors can affect medication concentration over time.
B. Placebo response: Understanding that age, metabolism, and other factors can affect medication concentration over time. / Pharmacokinetics: Interpreting a reported improvement in light of expectations and other treatment-context effects.
C. Placebo response: Interpreting a reported improvement in light of expectations and other treatment-context effects. / Pharmacokinetics: Understanding that age, metabolism, and other factors can affect medication concentration over time.
D. Placebo response: Interpreting a reported improvement in light of expectations and other treatment-context effects. / Pharmacokinetics: Supporting the family to discuss benefits, risks, and preferences with the prescribing clinician.

0818. Which pair of actions illustrates Scope of practice and Black box warning, respectively?

A. Scope of practice: Distinguishing a medication's action and effects from how the body processes it. / Black box warning: Directing questions about a serious labeled risk to the prescriber and supporting informed discussion.
B. Scope of practice: Referring medication decisions to a qualified prescriber rather than recommending a dose change. / Black box warning: Documenting the client's report and facilitating prompt prescriber contact when concerns arise.
C. Scope of practice: Directing questions about a serious labeled risk to the prescriber and supporting informed discussion. / Black box warning: Referring medication decisions to a qualified prescriber rather than recommending a dose change.
D. Scope of practice: Referring medication decisions to a qualified prescriber rather than recommending a dose change. / Black box warning: Directing questions about a serious labeled risk to the prescriber and supporting informed discussion.

0819. A student aged 15 is receiving support in the youth group. The consulting counselor is guided by this practice: referring medication decisions to a qualified prescriber rather than recommending a dose change. Which principle best fits?

A. Side-effect monitoring
B. Black box warning
C. Scope of practice
D. Interprofessional collaboration

0820. Which course concept is defined as follows: Reviewing a person's current medications and supplements to identify what is actually being used.

A. Medication reconciliation
B. Pharmacokinetics
C. Pharmacodynamics
D. Black box warning

0821. Which statement accurately contrasts the course concepts Pharmacokinetics and Black box warning?

A. Pharmacokinetics: How the body absorbs, distributes, metabolizes, and eliminates a medication. / Black box warning: The legal and professional boundaries defining services a practitioner is authorized and competent to provide.
B. Pharmacokinetics: A prominent regulator-required warning for serious medication risks, whose relevance should be discussed with the prescriber. / Black box warning: How the body absorbs, distributes, metabolizes, and eliminates a medication.
C. Pharmacokinetics: How a medication affects the body, including mechanisms and relationships between concentration and effects. / Black box warning: A prominent regulator-required warning for serious medication risks, whose relevance should be discussed with the prescriber.
D. Pharmacokinetics: How the body absorbs, distributes, metabolizes, and eliminates a medication. / Black box warning: A prominent regulator-required warning for serious medication risks, whose relevance should be discussed with the prescriber.

0822. In psychopharmacology practice, a student confuses Shared decision-making with Interprofessional collaboration. Which explanation most accurately separates them?

A. Shared decision-making: Coordinated communication among professionals with distinct roles to support safe, coherent care. / Interprofessional collaboration: A collaborative process integrating clinical evidence and the client's informed preferences and values.
B. Shared decision-making: A collaborative process integrating clinical evidence and the client's informed preferences and values. / Interprofessional collaboration: Coordinated communication among professionals with distinct roles to support safe, coherent care.
C. Shared decision-making: A collaborative process integrating clinical evidence and the client's informed preferences and values. / Interprofessional collaboration: The legal and professional boundaries defining services a practitioner is authorized and competent to provide.
D. Shared decision-making: Systematic attention to unwanted or unexpected effects and communication with the prescriber. / Interprofessional collaboration: Coordinated communication among professionals with distinct roles to support safe, coherent care.

0823. Which comparison correctly distinguishes Scope of practice from Medication adherence?

A. Scope of practice: The legal and professional boundaries defining services a practitioner is authorized and competent to provide. / Medication adherence: The extent to which medication use corresponds with an agreed treatment plan, best explored without blame.
B. Scope of practice: The extent to which medication use corresponds with an agreed treatment plan, best explored without blame. / Medication adherence: The legal and professional boundaries defining services a practitioner is authorized and competent to provide.
C. Scope of practice: How a medication affects the body, including mechanisms and relationships between concentration and effects. / Medication adherence: The extent to which medication use corresponds with an agreed treatment plan, best explored without blame.
D. Scope of practice: The legal and professional boundaries defining services a practitioner is authorized and competent to provide. / Medication adherence: Systematic attention to unwanted or unexpected effects and communication with the prescriber.

0824. In psychopharmacology practice, a student confuses Scope of practice with Interprofessional collaboration. Which explanation most accurately separates them?

A. Scope of practice: The legal and professional boundaries defining services a practitioner is authorized and competent to provide. / Interprofessional collaboration: Reviewing a person's current medications and supplements to identify what is actually being used.
B. Scope of practice: Coordinated communication among professionals with distinct roles to support safe, coherent care. / Interprofessional collaboration: The legal and professional boundaries defining services a practitioner is authorized and competent to provide.
C. Scope of practice: The legal and professional boundaries defining services a practitioner is authorized and competent to provide. / Interprofessional collaboration: Coordinated communication among professionals with distinct roles to support safe, coherent care.
D. Scope of practice: Systematic attention to unwanted or unexpected effects and communication with the prescriber. / Interprofessional collaboration: Coordinated communication among professionals with distinct roles to support safe, coherent care.

0825. Choose the response that best puts Medication adherence into practice.

A. Asking about barriers, preferences, and experiences instead of labeling a client noncompliant.
B. Encouraging an accurate current medication list during care transitions.
C. Sharing relevant observations with the prescriber with appropriate permission and clear role boundaries.
D. Documenting the client's report and facilitating prompt prescriber contact when concerns arise.

0826. A case conference asks for a distinction between Scope of practice and Pharmacokinetics. Which answer is sound?

A. Scope of practice: The extent to which medication use corresponds with an agreed treatment plan, best explored without blame. / Pharmacokinetics: How the body absorbs, distributes, metabolizes, and eliminates a medication.
B. Scope of practice: The legal and professional boundaries defining services a practitioner is authorized and competent to provide. / Pharmacokinetics: A collaborative process integrating clinical evidence and the client's informed preferences and values.
C. Scope of practice: How the body absorbs, distributes, metabolizes, and eliminates a medication. / Pharmacokinetics: The legal and professional boundaries defining services a practitioner is authorized and competent to provide.
D. Scope of practice: The legal and professional boundaries defining services a practitioner is authorized and competent to provide. / Pharmacokinetics: How the body absorbs, distributes, metabolizes, and eliminates a medication.

0827. Which option correctly matches each concept to its practice focus: Scope of practice and Pharmacokinetics?

A. Scope of practice: Asking about barriers, preferences, and experiences instead of labeling a client noncompliant. / Pharmacokinetics: Understanding that age, metabolism, and other factors can affect medication concentration over time.
B. Scope of practice: Referring medication decisions to a qualified prescriber rather than recommending a dose change. / Pharmacokinetics: Supporting the family to discuss benefits, risks, and preferences with the prescribing clinician.
C. Scope of practice: Understanding that age, metabolism, and other factors can affect medication concentration over time. / Pharmacokinetics: Referring medication decisions to a qualified prescriber rather than recommending a dose change.
D. Scope of practice: Referring medication decisions to a qualified prescriber rather than recommending a dose change. / Pharmacokinetics: Understanding that age, metabolism, and other factors can affect medication concentration over time.

0828. Which option pairs the definitions of Scope of practice and Medication adherence correctly, in that order?

A. Scope of practice: How a medication affects the body, including mechanisms and relationships between concentration and effects. / Medication adherence: The extent to which medication use corresponds with an agreed treatment plan, best explored without blame.
B. Scope of practice: The legal and professional boundaries defining services a practitioner is authorized and competent to provide. / Medication adherence: The extent to which medication use corresponds with an agreed treatment plan, best explored without blame.
C. Scope of practice: The extent to which medication use corresponds with an agreed treatment plan, best explored without blame. / Medication adherence: The legal and professional boundaries defining services a practitioner is authorized and competent to provide.
D. Scope of practice: The legal and professional boundaries defining services a practitioner is authorized and competent to provide. / Medication adherence: Systematic attention to unwanted or unexpected effects and communication with the prescriber.

0829. In a professional consultation about a young person aged 13, the supervised trainee describes this response in the outpatient clinic: distinguishing a medication's action and effects from how the body processes it. Which term is most apt?

A. Pharmacokinetics
B. Interprofessional collaboration
C. Pharmacodynamics
D. Medication reconciliation

0830. Which option pairs the definitions of Medication reconciliation and Pharmacodynamics correctly, in that order?

A. Medication reconciliation: The legal and professional boundaries defining services a practitioner is authorized and competent to provide. / Pharmacodynamics: How a medication affects the body, including mechanisms and relationships between concentration and effects.
B. Medication reconciliation: Reviewing a person's current medications and supplements to identify what is actually being used. / Pharmacodynamics: How a medication affects the body, including mechanisms and relationships between concentration and effects.
C. Medication reconciliation: How a medication affects the body, including mechanisms and relationships between concentration and effects. / Pharmacodynamics: Reviewing a person's current medications and supplements to identify what is actually being used.
D. Medication reconciliation: Reviewing a person's current medications and supplements to identify what is actually being used. / Pharmacodynamics: The extent to which medication use corresponds with an agreed treatment plan, best explored without blame.

0831. For a teenage client in the supervision meeting, a school support specialist makes this practice the immediate priority: directing questions about a serious labeled risk to the prescriber and supporting informed discussion. Which concept fits best?

A. Medication reconciliation
B. Black box warning
C. Pharmacokinetics
D. Pharmacodynamics

0832. Identify the most precise label for this idea: The extent to which medication use corresponds with an agreed treatment plan, best explored without blame.

A. Shared decision-making
B. Scope of practice
C. Medication adherence
D. Medication reconciliation

0833. Identify the most precise label for this idea: The legal and professional boundaries defining services a practitioner is authorized and competent to provide.

A. Medication adherence
B. Medication reconciliation
C. Interprofessional collaboration
D. Scope of practice

0834. While supporting a student aged 12 in the clinical planning session, a family therapist adopts this practice: directing questions about a serious labeled risk to the prescriber and supporting informed discussion. Which concept best explains the choice?

A. Black box warning
B. Medication adherence
C. Pharmacodynamics
D. Shared decision-making

0835. In the youth group, the agreed focus for a community practitioner working with a young person aged 18 is asking about barriers, preferences, and experiences instead of labeling a client noncompliant. Which concept names this focus?

A. Interprofessional collaboration
B. Placebo response
C. Shared decision-making
D. Medication adherence

0836. Which pair of actions illustrates Medication reconciliation and Placebo response, respectively?

A. Medication reconciliation: Encouraging an accurate current medication list during care transitions. / Placebo response: Sharing relevant observations with the prescriber with appropriate permission and clear role boundaries.
B. Medication reconciliation: Documenting the client's report and facilitating prompt prescriber contact when concerns arise. / Placebo response: Interpreting a reported improvement in light of expectations and other treatment-context effects.
C. Medication reconciliation: Encouraging an accurate current medication list during care transitions. / Placebo response: Interpreting a reported improvement in light of expectations and other treatment-context effects.
D. Medication reconciliation: Interpreting a reported improvement in light of expectations and other treatment-context effects. / Placebo response: Encouraging an accurate current medication list during care transitions.

0837. In psychopharmacology practice, a school support specialist is asked to evaluate a proposed service for a client in early adolescence in the youth group. The defining feature is sharing relevant observations with the prescriber with appropriate permission and clear role boundaries. Which concept fits?

A. Interprofessional collaboration
B. Medication reconciliation
C. Scope of practice
D. Side-effect monitoring

0838. What is the central meaning of Shared decision-making?

A. Change following treatment context and expectation that is not necessarily attributable to the active medication ingredient alone.
B. A collaborative process integrating clinical evidence and the client's informed preferences and values.
C. Systematic attention to unwanted or unexpected effects and communication with the prescriber.
D. Reviewing a person's current medications and supplements to identify what is actually being used.

0839. In a supervision quiz, how should Scope of practice be distinguished from Medication adherence?

A. Scope of practice: How a medication affects the body, including mechanisms and relationships between concentration and effects. / Medication adherence: The extent to which medication use corresponds with an agreed treatment plan, best explored without blame.
B. Scope of practice: The extent to which medication use corresponds with an agreed treatment plan, best explored without blame. / Medication adherence: The legal and professional boundaries defining services a practitioner is authorized and competent to provide.
C. Scope of practice: The legal and professional boundaries defining services a practitioner is authorized and competent to provide. / Medication adherence: The extent to which medication use corresponds with an agreed treatment plan, best explored without blame.
D. Scope of practice: The legal and professional boundaries defining services a practitioner is authorized and competent to provide. / Medication adherence: Systematic attention to unwanted or unexpected effects and communication with the prescriber.

0840. Which statement shows a sound practice-level distinction between Placebo response and Pharmacokinetics?

A. Placebo response: Directing questions about a serious labeled risk to the prescriber and supporting informed discussion. / Pharmacokinetics: Understanding that age, metabolism, and other factors can affect medication concentration over time.
B. Placebo response: Understanding that age, metabolism, and other factors can affect medication concentration over time. / Pharmacokinetics: Interpreting a reported improvement in light of expectations and other treatment-context effects.
C. Placebo response: Interpreting a reported improvement in light of expectations and other treatment-context effects. / Pharmacokinetics: Understanding that age, metabolism, and other factors can affect medication concentration over time.
D. Placebo response: Interpreting a reported improvement in light of expectations and other treatment-context effects. / Pharmacokinetics: Supporting the family to discuss benefits, risks, and preferences with the prescribing clinician.

0841. Select the best explanation of Medication reconciliation.

A. How the body absorbs, distributes, metabolizes, and eliminates a medication.
B. Reviewing a person's current medications and supplements to identify what is actually being used.
C. Systematic attention to unwanted or unexpected effects and communication with the prescriber.
D. Change following treatment context and expectation that is not necessarily attributable to the active medication ingredient alone.

0842. A team must select a support approach for a child aged 7 at the student-support meeting. The case coordinator recommends asking about barriers, preferences, and experiences instead of labeling a client noncompliant. Which idea is most relevant?

A. Medication adherence
B. Placebo response
C. Black box warning
D. Medication reconciliation

0843. A supervisor asks for an applied contrast between Placebo response and Pharmacodynamics. Which option fits?

A. Placebo response: Interpreting a reported improvement in light of expectations and other treatment-context effects. / Pharmacodynamics: Distinguishing a medication's action and effects from how the body processes it.
B. Placebo response: Interpreting a reported improvement in light of expectations and other treatment-context effects. / Pharmacodynamics: Directing questions about a serious labeled risk to the prescriber and supporting informed discussion.
C. Placebo response: Distinguishing a medication's action and effects from how the body processes it. / Pharmacodynamics: Interpreting a reported improvement in light of expectations and other treatment-context effects.
D. Placebo response: Documenting the client's report and facilitating prompt prescriber contact when concerns arise. / Pharmacodynamics: Distinguishing a medication's action and effects from how the body processes it.

0844. During service review in the student wellness team, a program coordinator describes referring medication decisions to a qualified prescriber rather than recommending a dose change. for a client in late adolescence. Which course idea is most applicable?

A. Side-effect monitoring
B. Interprofessional collaboration
C. Scope of practice
D. Placebo response

0845. Choose the definition pair that correctly explains Medication adherence first and Pharmacodynamics second.

A. Medication adherence: How a medication affects the body, including mechanisms and relationships between concentration and effects. / Pharmacodynamics: The extent to which medication use corresponds with an agreed treatment plan, best explored without blame.
B. Medication adherence: The extent to which medication use corresponds with an agreed treatment plan, best explored without blame. / Pharmacodynamics: How a medication affects the body, including mechanisms and relationships between concentration and effects.
C. Medication adherence: Coordinated communication among professionals with distinct roles to support safe, coherent care. / Pharmacodynamics: How a medication affects the body, including mechanisms and relationships between concentration and effects.
D. Medication adherence: The extent to which medication use corresponds with an agreed treatment plan, best explored without blame. / Pharmacodynamics: Systematic attention to unwanted or unexpected effects and communication with the prescriber.

0846. A play therapist is asked to evaluate a proposed service for a young person aged 13 in the telehealth session. The defining feature is referring medication decisions to a qualified prescriber rather than recommending a dose change. Which concept fits?

A. Side-effect monitoring
B. Interprofessional collaboration
C. Scope of practice
D. Medication adherence

0847. In psychopharmacology practice, while supporting a young person aged 18 in the school counseling office, a case coordinator adopts this practice: sharing relevant observations with the prescriber with appropriate permission and clear role boundaries. Which concept best explains the choice?

A. Interprofessional collaboration
B. Side-effect monitoring
C. Medication adherence
D. Placebo response

0848. Which description belongs with the term Side-effect monitoring?

A. Systematic attention to unwanted or unexpected effects and communication with the prescriber.
B. Change following treatment context and expectation that is not necessarily attributable to the active medication ingredient alone.
C. The extent to which medication use corresponds with an agreed treatment plan, best explored without blame.
D. Coordinated communication among professionals with distinct roles to support safe, coherent care.

0849. In psychopharmacology practice, a student aged 9's service team meets in the school-based service. The family therapist recommends a change involving sharing relevant observations with the prescriber with appropriate permission and clear role boundaries. Which idea best explains it?

A. Scope of practice
B. Interprofessional collaboration
C. Pharmacokinetics
D. Medication adherence

0850. Which pair of actions illustrates Scope of practice and Side-effect monitoring, respectively?

A. Scope of practice: Documenting the client's report and facilitating prompt prescriber contact when concerns arise. / Side-effect monitoring: Referring medication decisions to a qualified prescriber rather than recommending a dose change.
B. Scope of practice: Directing questions about a serious labeled risk to the prescriber and supporting informed discussion. / Side-effect monitoring: Documenting the client's report and facilitating prompt prescriber contact when concerns arise.
C. Scope of practice: Referring medication decisions to a qualified prescriber rather than recommending a dose change. / Side-effect monitoring: Documenting the client's report and facilitating prompt prescriber contact when concerns arise.
D. Scope of practice: Referring medication decisions to a qualified prescriber rather than recommending a dose change. / Side-effect monitoring: Understanding that age, metabolism, and other factors can affect medication concentration over time.

0851. A case conference asks for a distinction between Medication adherence and Black box warning. Which answer is sound?

A. Medication adherence: The extent to which medication use corresponds with an agreed treatment plan, best explored without blame. / Black box warning: A prominent regulator-required warning for serious medication risks, whose relevance should be discussed with the prescriber.
B. Medication adherence: The legal and professional boundaries defining services a practitioner is authorized and competent to provide. / Black box warning: A prominent regulator-required warning for serious medication risks, whose relevance should be discussed with the prescriber.
C. Medication adherence: The extent to which medication use corresponds with an agreed treatment plan, best explored without blame. / Black box warning: Reviewing a person's current medications and supplements to identify what is actually being used.
D. Medication adherence: A prominent regulator-required warning for serious medication risks, whose relevance should be discussed with the prescriber. / Black box warning: The extent to which medication use corresponds with an agreed treatment plan, best explored without blame.

0852. Choose the definition pair that correctly explains Scope of practice first and Pharmacokinetics second.

A. Scope of practice: The extent to which medication use corresponds with an agreed treatment plan, best explored without blame. / Pharmacokinetics: How the body absorbs, distributes, metabolizes, and eliminates a medication.
B. Scope of practice: The legal and professional boundaries defining services a practitioner is authorized and competent to provide. / Pharmacokinetics: A collaborative process integrating clinical evidence and the client's informed preferences and values.
C. Scope of practice: The legal and professional boundaries defining services a practitioner is authorized and competent to provide. / Pharmacokinetics: How the body absorbs, distributes, metabolizes, and eliminates a medication.
D. Scope of practice: How the body absorbs, distributes, metabolizes, and eliminates a medication. / Pharmacokinetics: The legal and professional boundaries defining services a practitioner is authorized and competent to provide.

0853. Which comparison would correct a trainee's misunderstanding of Shared decision-making versus Medication reconciliation?

A. Shared decision-making: Coordinated communication among professionals with distinct roles to support safe, coherent care. / Medication reconciliation: Reviewing a person's current medications and supplements to identify what is actually being used.
B. Shared decision-making: A collaborative process integrating clinical evidence and the client's informed preferences and values. / Medication reconciliation: Reviewing a person's current medications and supplements to identify what is actually being used.
C. Shared decision-making: Reviewing a person's current medications and supplements to identify what is actually being used. / Medication reconciliation: A collaborative process integrating clinical evidence and the client's informed preferences and values.
D. Shared decision-making: A collaborative process integrating clinical evidence and the client's informed preferences and values. / Medication reconciliation: The extent to which medication use corresponds with an agreed treatment plan, best explored without blame.

0854. In psychopharmacology practice, which pair of actions illustrates Pharmacokinetics and Interprofessional collaboration, respectively?

A. Pharmacokinetics: Understanding that age, metabolism, and other factors can affect medication concentration over time. / Interprofessional collaboration: Sharing relevant observations with the prescriber with appropriate permission and clear role boundaries.
B. Pharmacokinetics: Understanding that age, metabolism, and other factors can affect medication concentration over time. / Interprofessional collaboration: Referring medication decisions to a qualified prescriber rather than recommending a dose change.
C. Pharmacokinetics: Sharing relevant observations with the prescriber with appropriate permission and clear role boundaries. / Interprofessional collaboration: Understanding that age, metabolism, and other factors can affect medication concentration over time.
D. Pharmacokinetics: Supporting the family to discuss benefits, risks, and preferences with the prescribing clinician. / Interprofessional collaboration: Sharing relevant observations with the prescriber with appropriate permission and clear role boundaries.

0855. Which comparison correctly distinguishes Pharmacokinetics from Pharmacodynamics?

A. Pharmacokinetics: How the body absorbs, distributes, metabolizes, and eliminates a medication. / Pharmacodynamics: How a medication affects the body, including mechanisms and relationships between concentration and effects.
B. Pharmacokinetics: How the body absorbs, distributes, metabolizes, and eliminates a medication. / Pharmacodynamics: A prominent regulator-required warning for serious medication risks, whose relevance should be discussed with the prescriber.
C. Pharmacokinetics: The extent to which medication use corresponds with an agreed treatment plan, best explored without blame. / Pharmacodynamics: How a medication affects the body, including mechanisms and relationships between concentration and effects.
D. Pharmacokinetics: How a medication affects the body, including mechanisms and relationships between concentration and effects. / Pharmacodynamics: How the body absorbs, distributes, metabolizes, and eliminates a medication.

0856. In psychopharmacology practice, in a professional consultation about a client in late adolescence, the consultant describes this response in the community mental-health service: sharing relevant observations with the prescriber with appropriate permission and clear role boundaries. Which term is most apt?

A. Interprofessional collaboration
B. Shared decision-making
C. Medication adherence
D. Pharmacodynamics

0857. A supervisor asks how Black box warning would appear in practice. Which choice should be selected?

A. Distinguishing a medication's action and effects from how the body processes it.
B. Interpreting a reported improvement in light of expectations and other treatment-context effects.
C. Asking about barriers, preferences, and experiences instead of labeling a client noncompliant.
D. Directing questions about a serious labeled risk to the prescriber and supporting informed discussion.

0858. Which pair of actions illustrates Side-effect monitoring and Pharmacokinetics, respectively?

A. Side-effect monitoring: Documenting the client's report and facilitating prompt prescriber contact when concerns arise. / Pharmacokinetics: Directing questions about a serious labeled risk to the prescriber and supporting informed discussion.
B. Side-effect monitoring: Documenting the client's report and facilitating prompt prescriber contact when concerns arise. / Pharmacokinetics: Understanding that age, metabolism, and other factors can affect medication concentration over time.
C. Side-effect monitoring: Understanding that age, metabolism, and other factors can affect medication concentration over time. / Pharmacokinetics: Documenting the client's report and facilitating prompt prescriber contact when concerns arise.
D. Side-effect monitoring: Asking about barriers, preferences, and experiences instead of labeling a client noncompliant. / Pharmacokinetics: Understanding that age, metabolism, and other factors can affect medication concentration over time.

0859. Which paired example correctly applies Shared decision-making first and Placebo response second?

A. Shared decision-making: Supporting the family to discuss benefits, risks, and preferences with the prescribing clinician. / Placebo response: Distinguishing a medication's action and effects from how the body processes it.
B. Shared decision-making: Interpreting a reported improvement in light of expectations and other treatment-context effects. / Placebo response: Supporting the family to discuss benefits, risks, and preferences with the prescribing clinician.
C. Shared decision-making: Supporting the family to discuss benefits, risks, and preferences with the prescribing clinician. / Placebo response: Interpreting a reported improvement in light of expectations and other treatment-context effects.
D. Shared decision-making: Documenting the client's report and facilitating prompt prescriber contact when concerns arise. / Placebo response: Interpreting a reported improvement in light of expectations and other treatment-context effects.

0860. Which comparison correctly distinguishes Pharmacokinetics from Black box warning?

A. Pharmacokinetics: How the body absorbs, distributes, metabolizes, and eliminates a medication. / Black box warning: The legal and professional boundaries defining services a practitioner is authorized and competent to provide.
B. Pharmacokinetics: How a medication affects the body, including mechanisms and relationships between concentration and effects. / Black box warning: A prominent regulator-required warning for serious medication risks, whose relevance should be discussed with the prescriber.
C. Pharmacokinetics: A prominent regulator-required warning for serious medication risks, whose relevance should be discussed with the prescriber. / Black box warning: How the body absorbs, distributes, metabolizes, and eliminates a medication.
D. Pharmacokinetics: How the body absorbs, distributes, metabolizes, and eliminates a medication. / Black box warning: A prominent regulator-required warning for serious medication risks, whose relevance should be discussed with the prescriber.

0861. Choose the definition pair that correctly explains Side-effect monitoring first and Black box warning second.

A. Side-effect monitoring: Systematic attention to unwanted or unexpected effects and communication with the prescriber. / Black box warning: A prominent regulator-required warning for serious medication risks, whose relevance should be discussed with the prescriber.
B. Side-effect monitoring: Systematic attention to unwanted or unexpected effects and communication with the prescriber. / Black box warning: Reviewing a person's current medications and supplements to identify what is actually being used.
C. Side-effect monitoring: A prominent regulator-required warning for serious medication risks, whose relevance should be discussed with the prescriber. / Black box warning: Systematic attention to unwanted or unexpected effects and communication with the prescriber.
D. Side-effect monitoring: Change following treatment context and expectation that is not necessarily attributable to the active medication ingredient alone. / Black box warning: A prominent regulator-required warning for serious medication risks, whose relevance should be discussed with the prescriber.

0862. In psychopharmacology practice, which option preserves the correct meaning of both Placebo response and Interprofessional collaboration?

A. Placebo response: Systematic attention to unwanted or unexpected effects and communication with the prescriber. / Interprofessional collaboration: Coordinated communication among professionals with distinct roles to support safe, coherent care.
B. Placebo response: Change following treatment context and expectation that is not necessarily attributable to the active medication ingredient alone. / Interprofessional collaboration: How the body absorbs, distributes, metabolizes, and eliminates a medication.
C. Placebo response: Coordinated communication among professionals with distinct roles to support safe, coherent care. / Interprofessional collaboration: Change following treatment context and expectation that is not necessarily attributable to the active medication ingredient alone.
D. Placebo response: Change following treatment context and expectation that is not necessarily attributable to the active medication ingredient alone. / Interprofessional collaboration: Coordinated communication among professionals with distinct roles to support safe, coherent care.

0863. Which named construct is captured by this account? The legal and professional boundaries defining services a practitioner is authorized and competent to provide.

A. Medication adherence
B. Pharmacokinetics
C. Scope of practice
D. Black box warning

0864. A service team discusses a young person aged 16 in the telehealth session. Their proposed next step is distinguishing a medication's action and effects from how the body processes it. Which course concept supports it?

A. Pharmacodynamics
B. Pharmacokinetics
C. Medication adherence
D. Shared decision-making

0865. Which choice aligns each practice with the correct idea, Pharmacokinetics or Pharmacodynamics?

A. Pharmacokinetics: Understanding that age, metabolism, and other factors can affect medication concentration over time. / Pharmacodynamics: Distinguishing a medication's action and effects from how the body processes it.
B. Pharmacokinetics: Asking about barriers, preferences, and experiences instead of labeling a client noncompliant. / Pharmacodynamics: Distinguishing a medication's action and effects from how the body processes it.
C. Pharmacokinetics: Distinguishing a medication's action and effects from how the body processes it. / Pharmacodynamics: Understanding that age, metabolism, and other factors can affect medication concentration over time.
D. Pharmacokinetics: Understanding that age, metabolism, and other factors can affect medication concentration over time. / Pharmacodynamics: Directing questions about a serious labeled risk to the prescriber and supporting informed discussion.

0866. In the school consultation, a team asks how a consulting counselor can support a school-age child. One proposed action is encouraging an accurate current medication list during care transitions. Which idea does it represent?

A. Shared decision-making
B. Pharmacokinetics
C. Medication reconciliation
D. Medication adherence

0867. Which option preserves the correct meaning of both Shared decision-making and Pharmacodynamics?

A. Shared decision-making: A collaborative process integrating clinical evidence and the client's informed preferences and values. / Pharmacodynamics: Change following treatment context and expectation that is not necessarily attributable to the active medication ingredient alone.
B. Shared decision-making: How a medication affects the body, including mechanisms and relationships between concentration and effects. / Pharmacodynamics: A collaborative process integrating clinical evidence and the client's informed preferences and values.
C. Shared decision-making: A prominent regulator-required warning for serious medication risks, whose relevance should be discussed with the prescriber. / Pharmacodynamics: How a medication affects the body, including mechanisms and relationships between concentration and effects.
D. Shared decision-making: A collaborative process integrating clinical evidence and the client's informed preferences and values. / Pharmacodynamics: How a medication affects the body, including mechanisms and relationships between concentration and effects.

0868. In psychopharmacology practice, for a child aged 11 in the counseling practicum, a play therapist makes this practice the immediate priority: sharing relevant observations with the prescriber with appropriate permission and clear role boundaries. Which concept fits best?

A. Medication reconciliation
B. Placebo response
C. Shared decision-making
D. Interprofessional collaboration

0869. A case discussion concerns a child aged 7 and a case coordinator in the student-support meeting. The practitioner is considering asking about barriers, preferences, and experiences instead of labeling a client noncompliant. Which principle is involved?

A. Medication adherence
B. Side-effect monitoring
C. Black box warning
D. Pharmacokinetics

0870. In the parent meeting, a team asks how a youth worker can support a child aged 14. One proposed action is documenting the client's report and facilitating prompt prescriber contact when concerns arise. Which idea does it represent?

A. Interprofessional collaboration
B. Side-effect monitoring
C. Shared decision-making
D. Pharmacokinetics

0871. A case conference asks for a distinction between Shared decision-making and Placebo response. Which answer is sound?

A. Shared decision-making: Change following treatment context and expectation that is not necessarily attributable to the active medication ingredient alone. / Placebo response: A collaborative process integrating clinical evidence and the client's informed preferences and values.
B. Shared decision-making: A collaborative process integrating clinical evidence and the client's informed preferences and values. / Placebo response: How a medication affects the body, including mechanisms and relationships between concentration and effects.
C. Shared decision-making: Systematic attention to unwanted or unexpected effects and communication with the prescriber. / Placebo response: Change following treatment context and expectation that is not necessarily attributable to the active medication ingredient alone.
D. Shared decision-making: A collaborative process integrating clinical evidence and the client's informed preferences and values. / Placebo response: Change following treatment context and expectation that is not necessarily attributable to the active medication ingredient alone.

0872. Which option pairs the definitions of Medication reconciliation and Pharmacokinetics correctly, in that order?

A. Medication reconciliation: Reviewing a person's current medications and supplements to identify what is actually being used. / Pharmacokinetics: How the body absorbs, distributes, metabolizes, and eliminates a medication.
B. Medication reconciliation: Coordinated communication among professionals with distinct roles to support safe, coherent care. / Pharmacokinetics: How the body absorbs, distributes, metabolizes, and eliminates a medication.
C. Medication reconciliation: How the body absorbs, distributes, metabolizes, and eliminates a medication. / Pharmacokinetics: Reviewing a person's current medications and supplements to identify what is actually being used.
D. Medication reconciliation: Reviewing a person's current medications and supplements to identify what is actually being used. / Pharmacokinetics: The legal and professional boundaries defining services a practitioner is authorized and competent to provide.

0873. In psychopharmacology practice, which option pairs the definitions of Shared decision-making and Interprofessional collaboration correctly, in that order?

A. Shared decision-making: A collaborative process integrating clinical evidence and the client's informed preferences and values. / Interprofessional collaboration: The legal and professional boundaries defining services a practitioner is authorized and competent to provide.
B. Shared decision-making: Systematic attention to unwanted or unexpected effects and communication with the prescriber. / Interprofessional collaboration: Coordinated communication among professionals with distinct roles to support safe, coherent care.
C. Shared decision-making: A collaborative process integrating clinical evidence and the client's informed preferences and values. / Interprofessional collaboration: Coordinated communication among professionals with distinct roles to support safe, coherent care.
D. Shared decision-making: Coordinated communication among professionals with distinct roles to support safe, coherent care. / Interprofessional collaboration: A collaborative process integrating clinical evidence and the client's informed preferences and values.

0874. In psychopharmacology practice, a case conference asks for a distinction between Medication adherence and Interprofessional collaboration. Which answer is sound?

A. Medication adherence: The legal and professional boundaries defining services a practitioner is authorized and competent to provide. / Interprofessional collaboration: Coordinated communication among professionals with distinct roles to support safe, coherent care.
B. Medication adherence: The extent to which medication use corresponds with an agreed treatment plan, best explored without blame. / Interprofessional collaboration: Reviewing a person's current medications and supplements to identify what is actually being used.
C. Medication adherence: Coordinated communication among professionals with distinct roles to support safe, coherent care. / Interprofessional collaboration: The extent to which medication use corresponds with an agreed treatment plan, best explored without blame.
D. Medication adherence: The extent to which medication use corresponds with an agreed treatment plan, best explored without blame. / Interprofessional collaboration: Coordinated communication among professionals with distinct roles to support safe, coherent care.

0875. Choose the definition pair that correctly explains Medication reconciliation first and Pharmacokinetics second.

A. Medication reconciliation: Coordinated communication among professionals with distinct roles to support safe, coherent care. / Pharmacokinetics: How the body absorbs, distributes, metabolizes, and eliminates a medication.
B. Medication reconciliation: How the body absorbs, distributes, metabolizes, and eliminates a medication. / Pharmacokinetics: Reviewing a person's current medications and supplements to identify what is actually being used.
C. Medication reconciliation: Reviewing a person's current medications and supplements to identify what is actually being used. / Pharmacokinetics: How the body absorbs, distributes, metabolizes, and eliminates a medication.
D. Medication reconciliation: Reviewing a person's current medications and supplements to identify what is actually being used. / Pharmacokinetics: The legal and professional boundaries defining services a practitioner is authorized and competent to provide.

0876. Which applied comparison correctly identifies what belongs to Pharmacodynamics versus Black box warning?

A. Pharmacodynamics: Encouraging an accurate current medication list during care transitions. / Black box warning: Directing questions about a serious labeled risk to the prescriber and supporting informed discussion.
B. Pharmacodynamics: Distinguishing a medication's action and effects from how the body processes it. / Black box warning: Asking about barriers, preferences, and experiences instead of labeling a client noncompliant.
C. Pharmacodynamics: Distinguishing a medication's action and effects from how the body processes it. / Black box warning: Directing questions about a serious labeled risk to the prescriber and supporting informed discussion.
D. Pharmacodynamics: Directing questions about a serious labeled risk to the prescriber and supporting informed discussion. / Black box warning: Distinguishing a medication's action and effects from how the body processes it.

0877. A young person aged 10’s service team meets in the student wellness team. The school-based clinician recommends a change involving documenting the client’s report and facilitating prompt prescriber contact when concerns arise. Which idea best explains it?

A. Medication adherence
B. Side-effect monitoring
C. Pharmacodynamics
D. Black box warning

0878. A supervisor asks how Medication adherence would appear in practice. Which choice should be selected?

A. Distinguishing a medication’s action and effects from how the body processes it.
B. Sharing relevant observations with the prescriber with appropriate permission and clear role boundaries.
C. Asking about barriers, preferences, and experiences instead of labeling a client noncompliant.
D. Understanding that age, metabolism, and other factors can affect medication concentration over time.

0879. Which statement accurately contrasts the course concepts Medication reconciliation and Pharmacokinetics?

A. Medication reconciliation: Reviewing a person’s current medications and supplements to identify what is actually being used. / Pharmacokinetics: How the body absorbs, distributes, metabolizes, and eliminates a medication.
B. Medication reconciliation: Reviewing a person’s current medications and supplements to identify what is actually being used. / Pharmacokinetics: The legal and professional boundaries defining services a practitioner is authorized and competent to provide.
C. Medication reconciliation: Coordinated communication among professionals with distinct roles to support safe, coherent care. / Pharmacokinetics: How the body absorbs, distributes, metabolizes, and eliminates a medication.
D. Medication reconciliation: How the body absorbs, distributes, metabolizes, and eliminates a medication. / Pharmacokinetics: Reviewing a person’s current medications and supplements to identify what is actually being used.

0880. A assessment clinician prepares for a session in the child guidance clinic with a young person aged 18. The intended approach is referring medication decisions to a qualified prescriber rather than recommending a dose change. Which concept is most relevant?

A. Medication adherence
B. Black box warning
C. Interprofessional collaboration
D. Scope of practice

0881. In the community mental-health service, a consulting counselor describes the most appropriate support for a young person aged 18 as distinguishing a medication’s action and effects from how the body processes it. Which framework is being applied?

A. Pharmacodynamics
B. Scope of practice
C. Placebo response
D. Side-effect monitoring

0882. What is the central meaning of Black box warning?

A. How a medication affects the body, including mechanisms and relationships between concentration and effects.
B. A prominent regulator-required warning for serious medication risks, whose relevance should be discussed with the prescriber.
C. How the body absorbs, distributes, metabolizes, and eliminates a medication.
D. Systematic attention to unwanted or unexpected effects and communication with the prescriber.

0883. In a professional consultation about a student aged 17, the consultant describes this response in the behavior-support review: encouraging an accurate current medication list during care transitions. Which term is most apt?

A. Shared decision-making
B. Pharmacodynamics
C. Medication reconciliation
D. Side-effect monitoring

0884. A trainee must distinguish how Shared decision-making and Placebo response guide practice. Which comparison is accurate?

A. Shared decision-making: Interpreting a reported improvement in light of expectations and other treatment-context effects. / Placebo response: Supporting the family to discuss benefits, risks, and preferences with the prescribing clinician.
B. Shared decision-making: Supporting the family to discuss benefits, risks, and preferences with the prescribing clinician. / Placebo response: Distinguishing a medication’s action and effects from how the body processes it.
C. Shared decision-making: Documenting the client’s report and facilitating prompt prescriber contact when concerns arise. / Placebo response: Interpreting a reported improvement in light of expectations and other treatment-context effects.
D. Shared decision-making: Supporting the family to discuss benefits, risks, and preferences with the prescribing clinician. / Placebo response: Interpreting a reported improvement in light of expectations and other treatment-context effects.

0885. A consultant and a young person are discussing support in the school-based service. The selected practice is directing questions about a serious labeled risk to the prescriber and supporting informed discussion. Which concept does this demonstrate?

A. Pharmacodynamics
B. Placebo response
C. Black box warning
D. Interprofessional collaboration

0886. A consulting counselor is explaining a choice to a student aged 15 and caregiver in the youth group. The choice centers on referring medication decisions to a qualified prescriber rather than recommending a dose change. Which idea is illustrated?

A. Medication reconciliation
B. Scope of practice
C. Interprofessional collaboration
D. Medication adherence

0887. A trainee must distinguish how Scope of practice and Pharmacodynamics guide practice. Which comparison is accurate?

A. Scope of practice: Referring medication decisions to a qualified prescriber rather than recommending a dose change. / Pharmacodynamics: Distinguishing a medication’s action and effects from how the body processes it.
B. Scope of practice: Referring medication decisions to a qualified prescriber rather than recommending a dose change. / Pharmacodynamics: Directing questions about a serious labeled risk to the prescriber and supporting informed discussion.
C. Scope of practice: Sharing relevant observations with the prescriber with appropriate permission and clear role boundaries. / Pharmacodynamics: Distinguishing a medication’s action and effects from how the body processes it.
D. Scope of practice: Distinguishing a medication’s action and effects from how the body processes it. / Pharmacodynamics: Referring medication decisions to a qualified prescriber rather than recommending a dose change.

0888. A planning meeting about a child of elementary-school age includes a school support specialist. The proposed practice in the after-school program is asking about barriers, preferences, and experiences instead of labeling a client noncompliant. Which idea underlies it?

A. Scope of practice
B. Interprofessional collaboration
C. Medication adherence
D. Pharmacodynamics

0889. A consultant prepares for a session in the school consultation with a child aged 11. The intended approach is understanding that age, metabolism, and other factors can affect medication concentration over time. Which concept is most relevant?

A. Shared decision-making
B. Pharmacokinetics
C. Black box warning
D. Side-effect monitoring

0890. How are Shared decision-making and Placebo response most accurately differentiated in this curriculum?

A. Shared decision-making: A collaborative process integrating clinical evidence and the client's informed preferences and values. / Placebo response: Change following treatment context and expectation that is not necessarily attributable to the active medication ingredient alone.
B. Shared decision-making: A collaborative process integrating clinical evidence and the client's informed preferences and values. / Placebo response: How a medication affects the body, including mechanisms and relationships between concentration and effects.
C. Shared decision-making: Change following treatment context and expectation that is not necessarily attributable to the active medication ingredient alone. / Placebo response: A collaborative process integrating clinical evidence and the client's informed preferences and values.
D. Shared decision-making: Systematic attention to unwanted or unexpected effects and communication with the prescriber. / Placebo response: Change following treatment context and expectation that is not necessarily attributable to the active medication ingredient alone.

0891. What is the central meaning of Side-effect monitoring?

A. The extent to which medication use corresponds with an agreed treatment plan, best explored without blame.
B. Systematic attention to unwanted or unexpected effects and communication with the prescriber.
C. Change following treatment context and expectation that is not necessarily attributable to the active medication ingredient alone.
D. A collaborative process integrating clinical evidence and the client's informed preferences and values.

0892. A consulting counselor is asked to justify a plan for a student aged 12 in the school counseling office. It calls for asking about barriers, preferences, and experiences instead of labeling a client noncompliant. Which concept provides the rationale?

A. Interprofessional collaboration
B. Black box warning
C. Medication reconciliation
D. Medication adherence

0893. When reviewing a client in early adolescence's plan in the parent meeting, the school-based clinician notes that the next step is interpreting a reported improvement in light of expectations and other treatment-context effects. Which concept guides this step?

A. Interprofessional collaboration
B. Placebo response
C. Pharmacodynamics
D. Side-effect monitoring

0894. A consultant is preparing a follow-up plan for a client in early adolescence in the supervision meeting. The plan calls for asking about barriers, preferences, and experiences instead of labeling a client noncompliant. Which concept names this approach?

A. Medication reconciliation
B. Medication adherence
C. Pharmacokinetics
D. Interprofessional collaboration

0895. Choose the definition pair that correctly explains Medication adherence first and Pharmacokinetics second.

A. Medication adherence: How the body absorbs, distributes, metabolizes, and eliminates a medication. / Pharmacokinetics: The extent to which medication use corresponds with an agreed treatment plan, best explored without blame.
B. Medication adherence: The extent to which medication use corresponds with an agreed treatment plan, best explored without blame. / Pharmacokinetics: A collaborative process integrating clinical evidence and the client's informed preferences and values.
C. Medication adherence: The extent to which medication use corresponds with an agreed treatment plan, best explored without blame. / Pharmacokinetics: How the body absorbs, distributes, metabolizes, and eliminates a medication.
D. Medication adherence: Reviewing a person's current medications and supplements to identify what is actually being used. / Pharmacokinetics: How the body absorbs, distributes, metabolizes, and eliminates a medication.

0896. A clinical supervisor is asked to evaluate a proposed service for a student aged 9 in the supervision meeting. The defining feature is supporting the family to discuss benefits, risks, and preferences with the prescribing clinician. Which concept fits?

A. Pharmacodynamics
B. Shared decision-making
C. Medication adherence
D. Black box warning

0897. In psychopharmacology practice, a trainee must explain Interprofessional collaboration. Which answer is accurate?

A. How the body absorbs, distributes, metabolizes, and eliminates a medication.
B. The extent to which medication use corresponds with an agreed treatment plan, best explored without blame.
C. How a medication affects the body, including mechanisms and relationships between concentration and effects.
D. Coordinated communication among professionals with distinct roles to support safe, coherent care.

0898. A supervisor asks how Medication reconciliation would appear in practice. Which choice should be selected?

A. Encouraging an accurate current medication list during care transitions.
B. Sharing relevant observations with the prescriber with appropriate permission and clear role boundaries.
C. Supporting the family to discuss benefits, risks, and preferences with the prescribing clinician.
D. Interpreting a reported improvement in light of expectations and other treatment-context effects.

0899. While supporting a young person in the student wellness team, a caregiver working with a counselor adopts this practice: distinguishing a medication's action and effects from how the body processes it. Which concept best explains the choice?

A. Medication reconciliation
B. Placebo response
C. Pharmacodynamics
D. Side-effect monitoring

0900. During work in the community youth program, a consulting counselor identifies this need: directing questions about a serious labeled risk to the prescriber and supporting informed discussion. Which idea should guide the response?

A. Medication reconciliation
B. Placebo response
C. Black box warning
D. Scope of practice

0901. In psychopharmacology practice, a case conference asks for a distinction between Side-effect monitoring and Interprofessional collaboration. Which answer is sound?

A. Side-effect monitoring: Systematic attention to unwanted or unexpected effects and communication with the prescriber. / Interprofessional collaboration: Coordinated communication among professionals with distinct roles to support safe, coherent care.
B. Side-effect monitoring: Coordinated communication among professionals with distinct roles to support safe, coherent care. / Interprofessional collaboration: Systematic attention to unwanted or unexpected effects and communication with the prescriber.
C. Side-effect monitoring: How the body absorbs, distributes, metabolizes, and eliminates a medication. / Interprofessional collaboration: Coordinated communication among professionals with distinct roles to support safe, coherent care.
D. Side-effect monitoring: Systematic attention to unwanted or unexpected effects and communication with the prescriber. / Interprofessional collaboration: The extent to which medication use corresponds with an agreed treatment plan, best explored without blame.

0902. In psychopharmacology practice, which comparison would correct a trainee's misunderstanding of Black box warning versus Interprofessional collaboration?

A. Black box warning: Change following treatment context and expectation that is not necessarily attributable to the active medication ingredient alone. / Interprofessional collaboration: Coordinated communication among professionals with distinct roles to support safe, coherent care.
B. Black box warning: A prominent regulator-required warning for serious medication risks, whose relevance should be discussed with the prescriber. / Interprofessional collaboration: Coordinated communication among professionals with distinct roles to support safe, coherent care.
C. Black box warning: A prominent regulator-required warning for serious medication risks, whose relevance should be discussed with the prescriber. / Interprofessional collaboration: The extent to which medication use corresponds with an agreed treatment plan, best explored without blame.
D. Black box warning: Coordinated communication among professionals with distinct roles to support safe, coherent care. / Interprofessional collaboration: A prominent regulator-required warning for serious medication risks, whose relevance should be discussed with the prescriber.

0903. A supervisor asks how Scope of practice would appear in practice. Which choice should be selected?

A. Documenting the client's report and facilitating prompt prescriber contact when concerns arise.
B. Interpreting a reported improvement in light of expectations and other treatment-context effects.
C. Referring medication decisions to a qualified prescriber rather than recommending a dose change.
D. Encouraging an accurate current medication list during care transitions.

0904. A adolescent student's service team meets in the family session. The case coordinator recommends a change involving interpreting a reported improvement in light of expectations and other treatment-context effects. Which idea best explains it?

A. Interprofessional collaboration
B. Placebo response
C. Shared decision-making
D. Medication reconciliation

0905. Which named construct is captured by this account? How the body absorbs, distributes, metabolizes, and eliminates a medication.

A. Pharmacodynamics
B. Medication adherence
C. Shared decision-making
D. Pharmacokinetics

0906. Which choice aligns each practice with the correct idea, Medication adherence or Shared decision-making?

A. Medication adherence: Asking about barriers, preferences, and experiences instead of labeling a client noncompliant. / Shared decision-making: Directing questions about a serious labeled risk to the prescriber and supporting informed discussion.
B. Medication adherence: Supporting the family to discuss benefits, risks, and preferences with the prescribing clinician. / Shared decision-making: Asking about barriers, preferences, and experiences instead of labeling a client noncompliant.
C. Medication adherence: Asking about barriers, preferences, and experiences instead of labeling a client noncompliant. / Shared decision-making: Supporting the family to discuss benefits, risks, and preferences with the prescribing clinician.
D. Medication adherence: Distinguishing a medication's action and effects from how the body processes it. / Shared decision-making: Supporting the family to discuss benefits, risks, and preferences with the prescribing clinician.

0907. At a case-planning meeting, the behavior specialist proposes encouraging an accurate current medication list during care transitions. for a child aged 11 seen in the multidisciplinary case conference. Which concept does this illustrate?

A. Pharmacokinetics
B. Black box warning
C. Medication reconciliation
D. Pharmacodynamics

0908. While consulting in the caregiver consultation, a mental-health professional supports a young adolescent client by using this approach: asking about barriers, preferences, and experiences instead of labeling a client noncompliant. Which concept is being applied?

A. Placebo response
B. Interprofessional collaboration
C. Scope of practice
D. Medication adherence

0909. A supervised trainee is supporting a young person aged 18 in the family resource center. The key practice is interpreting a reported improvement in light of expectations and other treatment-context effects. Which course concept is most relevant?

A. Side-effect monitoring
B. Interprofessional collaboration
C. Medication reconciliation
D. Placebo response

0910. While consulting in the outpatient clinic, a supervised trainee supports a young person aged 13 by using this approach: distinguishing a medication's action and effects from how the body processes it. Which concept is being applied?

A. Side-effect monitoring
B. Placebo response
C. Pharmacodynamics
D. Pharmacokinetics

0911. In psychopharmacology practice, which option correctly matches each concept to its practice focus: Pharmacodynamics and Interprofessional collaboration?

A. Pharmacodynamics: Distinguishing a medication's action and effects from how the body processes it. / Interprofessional collaboration: Referring medication decisions to a qualified prescriber rather than recommending a dose change.
B. Pharmacodynamics: Sharing relevant observations with the prescriber with appropriate permission and clear role boundaries. / Interprofessional collaboration: Distinguishing a medication's action and effects from how the body processes it.
C. Pharmacodynamics: Distinguishing a medication's action and effects from how the body processes it. / Interprofessional collaboration: Sharing relevant observations with the prescriber with appropriate permission and clear role boundaries.
D. Pharmacodynamics: Asking about barriers, preferences, and experiences instead of labeling a client noncompliant. / Interprofessional collaboration: Sharing relevant observations with the prescriber with appropriate permission and clear role boundaries.

0912. A student confuses Medication reconciliation with Placebo response. Which explanation most accurately separates them?

A. Medication reconciliation: Reviewing a person's current medications and supplements to identify what is actually being used. / Placebo response: Coordinated communication among professionals with distinct roles to support safe, coherent care.
B. Medication reconciliation: Systematic attention to unwanted or unexpected effects and communication with the prescriber. / Placebo response: Change following treatment context and expectation that is not necessarily attributable to the active medication ingredient alone.
C. Medication reconciliation: Change following treatment context and expectation that is not necessarily attributable to the active medication ingredient alone. / Placebo response: Reviewing a person's current medications and supplements to identify what is actually being used.
D. Medication reconciliation: Reviewing a person's current medications and supplements to identify what is actually being used. / Placebo response: Change following treatment context and expectation that is not necessarily attributable to the active medication ingredient alone.

0913. A team must select a support approach for a young adolescent client at the behavior-support review. The family therapist recommends interpreting a reported improvement in light of expectations and other treatment-context effects. Which idea is most relevant?

A. Black box warning
B. Shared decision-making
C. Scope of practice
D. Placebo response

0914. How should a practitioner distinguish the applications of Medication reconciliation and Placebo response?

A. Medication reconciliation: Documenting the client's report and facilitating prompt prescriber contact when concerns arise. / Placebo response: Interpreting a reported improvement in light of expectations and other treatment-context effects.
B. Medication reconciliation: Encouraging an accurate current medication list during care transitions. / Placebo response: Sharing relevant observations with the prescriber with appropriate permission and clear role boundaries.
C. Medication reconciliation: Interpreting a reported improvement in light of expectations and other treatment-context effects. / Placebo response: Encouraging an accurate current medication list during care transitions.
D. Medication reconciliation: Encouraging an accurate current medication list during care transitions. / Placebo response: Interpreting a reported improvement in light of expectations and other treatment-context effects.

0915. Which choice aligns each practice with the correct idea, Side-effect monitoring or Placebo response?

A. Side-effect monitoring: Documenting the client's report and facilitating prompt prescriber contact when concerns arise. / Placebo response: Interpreting a reported improvement in light of expectations and other treatment-context effects.
B. Side-effect monitoring: Asking about barriers, preferences, and experiences instead of labeling a client noncompliant. / Placebo response: Interpreting a reported improvement in light of expectations and other treatment-context effects.
C. Side-effect monitoring: Interpreting a reported improvement in light of expectations and other treatment-context effects. / Placebo response: Documenting the client's report and facilitating prompt prescriber contact when concerns arise.
D. Side-effect monitoring: Documenting the client's report and facilitating prompt prescriber contact when concerns arise. / Placebo response: Referring medication decisions to a qualified prescriber rather than recommending a dose change.

0916. In psychopharmacology practice, in the school consultation, a school counselor explains why a middle-school student would benefit from sharing relevant observations with the prescriber with appropriate permission and clear role boundaries. Which course concept underpins the explanation?

A. Interprofessional collaboration
B. Shared decision-making
C. Medication reconciliation
D. Pharmacodynamics

0917. Choose the definition pair that correctly explains Pharmacodynamics first and Black box warning second.

A. Pharmacodynamics: Reviewing a person's current medications and supplements to identify what is actually being used. / Black box warning: A prominent regulator-required warning for serious medication risks, whose relevance should be discussed with the prescriber.
B. Pharmacodynamics: How a medication affects the body, including mechanisms and relationships between concentration and effects. / Black box warning: A prominent regulator-required warning for serious medication risks, whose relevance should be discussed with the prescriber.
C. Pharmacodynamics: A prominent regulator-required warning for serious medication risks, whose relevance should be discussed with the prescriber. / Black box warning: How a medication affects the body, including mechanisms and relationships between concentration and effects.
D. Pharmacodynamics: How a medication affects the body, including mechanisms and relationships between concentration and effects. / Black box warning: The extent to which medication use corresponds with an agreed treatment plan, best explored without blame.

0918. During service review in the clinical planning session, a research trainee describes asking about barriers, preferences, and experiences instead of labeling a client noncompliant. for a student aged 9. Which course idea is most applicable?

A. Black box warning
B. Scope of practice
C. Medication reconciliation
D. Medication adherence

0919. In psychopharmacology practice, while consulting in the community mental-health service, a consultant supports a client in late adolescence by using this approach: sharing relevant observations with the prescriber with appropriate permission and clear role boundaries. Which concept is being applied?

A. Interprofessional collaboration
B. Pharmacodynamics
C. Medication reconciliation
D. Shared decision-making

0920. A planning meeting about a child aged 14 includes a behavior specialist. The proposed practice in the student wellness team is supporting the family to discuss benefits, risks, and preferences with the prescribing clinician. Which idea underlies it?

A. Medication reconciliation
B. Interprofessional collaboration
C. Medication adherence
D. Shared decision-making

0921. Which description belongs with the term Shared decision-making?

A. A collaborative process integrating clinical evidence and the client’s informed preferences and values.
B. Coordinated communication among professionals with distinct roles to support safe, coherent care.
C. The legal and professional boundaries defining services a practitioner is authorized and competent to provide.
D. Change following treatment context and expectation that is not necessarily attributable to the active medication ingredient alone.

0922. In a case note about a teenage client, a consultant working in the community service agency records this priority: referring medication decisions to a qualified prescriber rather than recommending a dose change. What principle is reflected?

A. Black box warning
B. Side-effect monitoring
C. Placebo response
D. Scope of practice

0923. An interdisciplinary team reviews a child aged 14’s case at the student wellness team. The behavior specialist recommends supporting the family to discuss benefits, risks, and preferences with the prescribing clinician. Which course concept best fits?

A. Shared decision-making
B. Side-effect monitoring
C. Medication adherence
D. Pharmacokinetics

0924. Which option preserves the correct meaning of both Shared decision-making and Placebo response?

A. Shared decision-making: A collaborative process integrating clinical evidence and the client’s informed preferences and values. / Placebo response: Change following treatment context and expectation that is not necessarily attributable to the active medication ingredient alone.
B. Shared decision-making: Systematic attention to unwanted or unexpected effects and communication with the prescriber. / Placebo response: Change following treatment context and expectation that is not necessarily attributable to the active medication ingredient alone.
C. Shared decision-making: A collaborative process integrating clinical evidence and the client’s informed preferences and values. / Placebo response: How a medication affects the body, including mechanisms and relationships between concentration and effects.
D. Shared decision-making: Change following treatment context and expectation that is not necessarily attributable to the active medication ingredient alone. / Placebo response: A collaborative process integrating clinical evidence and the client’s informed preferences and values.

0925. For a student aged 15 in the community mental-health service, a counselor makes this practice the immediate priority: understanding that age, metabolism, and other factors can affect medication concentration over time. Which concept fits best?

A. Pharmacokinetics
B. Interprofessional collaboration
C. Side-effect monitoring
D. Shared decision-making

0926. In psychopharmacology practice, which applied comparison correctly identifies what belongs to Side-effect monitoring versus Interprofessional collaboration?

A. Side-effect monitoring: Sharing relevant observations with the prescriber with appropriate permission and clear role boundaries. / Interprofessional collaboration: Documenting the client’s report and facilitating prompt prescriber contact when concerns arise.
B. Side-effect monitoring: Documenting the client’s report and facilitating prompt prescriber contact when concerns arise. / Interprofessional collaboration: Asking about barriers, preferences, and experiences instead of labeling a client noncompliant.
C. Side-effect monitoring: Documenting the client’s report and facilitating prompt prescriber contact when concerns arise. / Interprofessional collaboration: Sharing relevant observations with the prescriber with appropriate permission and clear role boundaries.
D. Side-effect monitoring: Understanding that age, metabolism, and other factors can affect medication concentration over time. / Interprofessional collaboration: Sharing relevant observations with the prescriber with appropriate permission and clear role boundaries.

0927. In the family session, a case coordinator is considering this approach for a adolescent student: interpreting a reported improvement in light of expectations and other treatment-context effects. Which framework does it represent?

A. Pharmacokinetics
B. Medication adherence
C. Medication reconciliation
D. Placebo response

0928. A therapist is asked what should shape a student aged 17’s support in the caregiver consultation. The proposed focus is referring medication decisions to a qualified prescriber rather than recommending a dose change. Which principle does it represent?

A. Scope of practice
B. Medication adherence
C. Pharmacokinetics
D. Shared decision-making

0929. A young person aged 18 and a supervised trainee are reviewing goals in the family resource center. The agreed action is interpreting a reported improvement in light of expectations and other treatment-context effects. Which principle best accounts for it?

A. Pharmacokinetics
B. Placebo response
C. Shared decision-making
D. Medication adherence

0930. A support meeting for a high-school student includes a counselor in the school consultation. The practice under consideration is supporting the family to discuss benefits, risks, and preferences with the prescribing clinician. Which concept guides it?

A. Shared decision-making
B. Placebo response
C. Black box warning
D. Pharmacokinetics

0931. Which paired example correctly applies Shared decision-making first and Medication reconciliation second?

A. Shared decision-making: Supporting the family to discuss benefits, risks, and preferences with the prescribing clinician. / Medication reconciliation: Asking about barriers, preferences, and experiences instead of labeling a client noncompliant.
B. Shared decision-making: Sharing relevant observations with the prescriber with appropriate permission and clear role boundaries. / Medication reconciliation: Encouraging an accurate current medication list during care transitions.
C. Shared decision-making: Encouraging an accurate current medication list during care transitions. / Medication reconciliation: Supporting the family to discuss benefits, risks, and preferences with the prescribing clinician.
D. Shared decision-making: Supporting the family to discuss benefits, risks, and preferences with the prescribing clinician. / Medication reconciliation: Encouraging an accurate current medication list during care transitions.

0932. How should a practitioner distinguish the applications of Pharmacokinetics and Pharmacodynamics?

A. Pharmacokinetics: Asking about barriers, preferences, and experiences instead of labeling a client noncompliant. / Pharmacodynamics: Distinguishing a medication's action and effects from how the body processes it.
B. Pharmacokinetics: Distinguishing a medication's action and effects from how the body processes it. / Pharmacodynamics: Understanding that age, metabolism, and other factors can affect medication concentration over time.
C. Pharmacokinetics: Understanding that age, metabolism, and other factors can affect medication concentration over time. / Pharmacodynamics: Directing questions about a serious labeled risk to the prescriber and supporting informed discussion.
D. Pharmacokinetics: Understanding that age, metabolism, and other factors can affect medication concentration over time. / Pharmacodynamics: Distinguishing a medication's action and effects from how the body processes it.

0933. How are Shared decision-making and Pharmacodynamics most accurately differentiated in this curriculum?

A. Shared decision-making: A collaborative process integrating clinical evidence and the client's informed preferences and values. / Pharmacodynamics: How a medication affects the body, including mechanisms and relationships between concentration and effects.
B. Shared decision-making: How a medication affects the body, including mechanisms and relationships between concentration and effects. / Pharmacodynamics: A collaborative process integrating clinical evidence and the client's informed preferences and values.
C. Shared decision-making: A collaborative process integrating clinical evidence and the client's informed preferences and values. / Pharmacodynamics: Change following treatment context and expectation that is not necessarily attributable to the active medication ingredient alone.
D. Shared decision-making: A prominent regulator-required warning for serious medication risks, whose relevance should be discussed with the prescriber. / Pharmacodynamics: How a medication affects the body, including mechanisms and relationships between concentration and effects.

0934. A clinical supervisor is asked to evaluate a proposed service for a young person aged 18 in the school consultation. The defining feature is directing questions about a serious labeled risk to the prescriber and supporting informed discussion. Which concept fits?

A. Pharmacodynamics
B. Placebo response
C. Black box warning
D. Scope of practice

0935. A supervisor asks how Pharmacokinetics would appear in practice. Which choice should be selected?

A. Sharing relevant observations with the prescriber with appropriate permission and clear role boundaries.
B. Referring medication decisions to a qualified prescriber rather than recommending a dose change.
C. Encouraging an accurate current medication list during care transitions.
D. Understanding that age, metabolism, and other factors can affect medication concentration over time.

0936. For a student aged 15 seen in the family resource center, the program coordinator recommends a plan built around encouraging an accurate current medication list during care transitions. Which concept is reflected?

A. Scope of practice
B. Shared decision-making
C. Medication adherence
D. Medication reconciliation

0937. A child aged 11 is receiving support in the family resource center. The youth worker is guided by this practice: supporting the family to discuss benefits, risks, and preferences with the prescribing clinician. Which principle best fits?

A. Shared decision-making
B. Scope of practice
C. Pharmacokinetics
D. Medication reconciliation

0938. Which professional action most closely applies Pharmacokinetics?

A. Directing questions about a serious labeled risk to the prescriber and supporting informed discussion.
B. Understanding that age, metabolism, and other factors can affect medication concentration over time.
C. Referring medication decisions to a qualified prescriber rather than recommending a dose change.
D. Documenting the client's report and facilitating prompt prescriber contact when concerns arise.

0939. Choose the practice comparison that best separates Shared decision-making from Placebo response.

A. Shared decision-making: Interpreting a reported improvement in light of expectations and other treatment-context effects. / Placebo response: Supporting the family to discuss benefits, risks, and preferences with the prescribing clinician.
B. Shared decision-making: Supporting the family to discuss benefits, risks, and preferences with the prescribing clinician. / Placebo response: Interpreting a reported improvement in light of expectations and other treatment-context effects.
C. Shared decision-making: Documenting the client's report and facilitating prompt prescriber contact when concerns arise. / Placebo response: Interpreting a reported improvement in light of expectations and other treatment-context effects.
D. Shared decision-making: Supporting the family to discuss benefits, risks, and preferences with the prescribing clinician. / Placebo response: Distinguishing a medication's action and effects from how the body processes it.

0940. A assessment clinician is preparing a follow-up plan for a young person aged 18 in the child guidance clinic. The plan calls for referring medication decisions to a qualified prescriber rather than recommending a dose change. Which concept names this approach?

A. Medication adherence
B. Pharmacokinetics
C. Medication reconciliation
D. Scope of practice

0941. Choose the response that best puts Shared decision-making into practice.

A. Supporting the family to discuss benefits, risks, and preferences with the prescribing clinician.
B. Documenting the client's report and facilitating prompt prescriber contact when concerns arise.
C. Interpreting a reported improvement in light of expectations and other treatment-context effects.
D. Sharing relevant observations with the prescriber with appropriate permission and clear role boundaries.

0942. A supervisor asks for an applied contrast between Shared decision-making and Pharmacokinetics. Which option fits?

A. Shared decision-making: Understanding that age, metabolism, and other factors can affect medication concentration over time. / Pharmacokinetics: Supporting the family to discuss benefits, risks, and preferences with the prescribing clinician.
B. Shared decision-making: Distinguishing a medication's action and effects from how the body processes it. / Pharmacokinetics: Understanding that age, metabolism, and other factors can affect medication concentration over time.
C. Shared decision-making: Supporting the family to discuss benefits, risks, and preferences with the prescribing clinician. / Pharmacokinetics: Referring medication decisions to a qualified prescriber rather than recommending a dose change.
D. Shared decision-making: Supporting the family to discuss benefits, risks, and preferences with the prescribing clinician. / Pharmacokinetics: Understanding that age, metabolism, and other factors can affect medication concentration over time.

0943. Which choice aligns each practice with the correct idea, Medication reconciliation or Pharmacokinetics?

A. Medication reconciliation: Encouraging an accurate current medication list during care transitions. / Pharmacokinetics: Understanding that age, metabolism, and other factors can affect medication concentration over time.
B. Medication reconciliation: Understanding that age, metabolism, and other factors can affect medication concentration over time. / Pharmacokinetics: Encouraging an accurate current medication list during care transitions.
C. Medication reconciliation: Sharing relevant observations with the prescriber with appropriate permission and clear role boundaries. / Pharmacokinetics: Understanding that age, metabolism, and other factors can affect medication concentration over time.
D. Medication reconciliation: Encouraging an accurate current medication list during care transitions. / Pharmacokinetics: Referring medication decisions to a qualified prescriber rather than recommending a dose change.

0944. A member of a clinical team is supporting a young person in the classroom support meeting. The key practice is supporting the family to discuss benefits, risks, and preferences with the prescribing clinician. Which course concept is most relevant?

A. Shared decision-making
B. Interprofessional collaboration
C. Black box warning
D. Placebo response

0945. In a supervision quiz, how should Scope of practice be distinguished from Side-effect monitoring?

A. Scope of practice: The legal and professional boundaries defining services a practitioner is authorized and competent to provide. / Side-effect monitoring: How the body absorbs, distributes, metabolizes, and eliminates a medication.
B. Scope of practice: A prominent regulator-required warning for serious medication risks, whose relevance should be discussed with the prescriber. / Side-effect monitoring: Systematic attention to unwanted or unexpected effects and communication with the prescriber.
C. Scope of practice: Systematic attention to unwanted or unexpected effects and communication with the prescriber. / Side-effect monitoring: The legal and professional boundaries defining services a practitioner is authorized and competent to provide.
D. Scope of practice: The legal and professional boundaries defining services a practitioner is authorized and competent to provide. / Side-effect monitoring: Systematic attention to unwanted or unexpected effects and communication with the prescriber.

0946. A mental-health professional and a student aged 9 are discussing support in the student-support meeting. The selected practice is interpreting a reported improvement in light of expectations and other treatment-context effects. Which concept does this demonstrate?

A. Pharmacokinetics
B. Medication adherence
C. Scope of practice
D. Placebo response

0947. In psychopharmacology practice, what is the central meaning of Interprofessional collaboration?

A. Change following treatment context and expectation that is not necessarily attributable to the active medication ingredient alone.
B. How a medication affects the body, including mechanisms and relationships between concentration and effects.
C. Coordinated communication among professionals with distinct roles to support safe, coherent care.
D. A collaborative process integrating clinical evidence and the client's informed preferences and values.

0948. For a child aged 8 seen in the after-school program, the therapist recommends a plan built around supporting the family to discuss benefits, risks, and preferences with the prescribing clinician. Which concept is reflected?

A. Placebo response
B. Shared decision-making
C. Interprofessional collaboration
D. Pharmacodynamics

0949. Which applied comparison correctly identifies what belongs to Medication reconciliation versus Pharmacodynamics?

A. Medication reconciliation: Encouraging an accurate current medication list during care transitions. / Pharmacodynamics: Distinguishing a medication's action and effects from how the body processes it.
B. Medication reconciliation: Encouraging an accurate current medication list during care transitions. / Pharmacodynamics: Asking about barriers, preferences, and experiences instead of labeling a client noncompliant.
C. Medication reconciliation: Referring medication decisions to a qualified prescriber rather than recommending a dose change. / Pharmacodynamics: Distinguishing a medication's action and effects from how the body processes it.
D. Medication reconciliation: Distinguishing a medication's action and effects from how the body processes it. / Pharmacodynamics: Encouraging an accurate current medication list during care transitions.

0950. Which choice aligns each practice with the correct idea, Scope of practice or Shared decision-making?

A. Scope of practice: Referring medication decisions to a qualified prescriber rather than recommending a dose change. / Shared decision-making: Directing questions about a serious labeled risk to the prescriber and supporting informed discussion.
B. Scope of practice: Supporting the family to discuss benefits, risks, and preferences with the prescribing clinician. / Shared decision-making: Referring medication decisions to a qualified prescriber rather than recommending a dose change.
C. Scope of practice: Referring medication decisions to a qualified prescriber rather than recommending a dose change. / Shared decision-making: Supporting the family to discuss benefits, risks, and preferences with the prescribing clinician.
D. Scope of practice: Documenting the client's report and facilitating prompt prescriber contact when concerns arise. / Shared decision-making: Supporting the family to discuss benefits, risks, and preferences with the prescribing clinician.

0951. In a supervision quiz, how should Pharmacodynamics be distinguished from Black box warning?

A. Pharmacodynamics: How a medication affects the body, including mechanisms and relationships between concentration and effects. / Black box warning: The extent to which medication use corresponds with an agreed treatment plan, best explored without blame.
B. Pharmacodynamics: A prominent regulator-required warning for serious medication risks, whose relevance should be discussed with the prescriber. / Black box warning: How a medication affects the body, including mechanisms and relationships between concentration and effects.
C. Pharmacodynamics: How a medication affects the body, including mechanisms and relationships between concentration and effects. / Black box warning: A prominent regulator-required warning for serious medication risks, whose relevance should be discussed with the prescriber.
D. Pharmacodynamics: Reviewing a person's current medications and supplements to identify what is actually being used. / Black box warning: A prominent regulator-required warning for serious medication risks, whose relevance should be discussed with the prescriber.

0952. In the school consultation, the agreed focus for a research trainee working with a student aged 12 is referring medication decisions to a qualified prescriber rather than recommending a dose change. Which concept names this focus?

A. Interprofessional collaboration
B. Pharmacodynamics
C. Pharmacokinetics
D. Scope of practice

0953. How should a practitioner distinguish the applications of Side-effect monitoring and Pharmacodynamics?

A. Side-effect monitoring: Documenting the client's report and facilitating prompt prescriber contact when concerns arise. / Pharmacodynamics: Distinguishing a medication's action and effects from how the body processes it.
B. Side-effect monitoring: Documenting the client's report and facilitating prompt prescriber contact when concerns arise. / Pharmacodynamics: Encouraging an accurate current medication list during care transitions.
C. Side-effect monitoring: Directing questions about a serious labeled risk to the prescriber and supporting informed discussion. / Pharmacodynamics: Distinguishing a medication's action and effects from how the body processes it.
D. Side-effect monitoring: Distinguishing a medication's action and effects from how the body processes it. / Pharmacodynamics: Documenting the client's report and facilitating prompt prescriber contact when concerns arise.

0954. In the family resource center, the agreed focus for a program coordinator working with a student aged 15 is encouraging an accurate current medication list during care transitions. Which concept names this focus?

A. Scope of practice
B. Medication adherence
C. Pharmacokinetics
D. Medication reconciliation

0955. Consider a young person receiving help in the outpatient clinic. The youth worker focuses on interpreting a reported improvement in light of expectations and other treatment-context effects. Which term best describes the guiding idea?

A. Placebo response
B. Interprofessional collaboration
C. Medication adherence
D. Scope of practice

0956. An interdisciplinary team reviews a high-school student's case at the caregiver consultation. The behavior specialist recommends directing questions about a serious labeled risk to the prescriber and supporting informed discussion. Which course concept best fits?

A. Black box warning
B. Side-effect monitoring
C. Shared decision-making
D. Scope of practice

0957. Which choice aligns each practice with the correct idea, Side-effect monitoring or Pharmacokinetics?

A. Side-effect monitoring: Asking about barriers, preferences, and experiences instead of labeling a client noncompliant. / Pharmacokinetics: Understanding that age, metabolism, and other factors can affect medication concentration over time.
B. Side-effect monitoring: Understanding that age, metabolism, and other factors can affect medication concentration over time. / Pharmacokinetics: Documenting the client's report and facilitating prompt prescriber contact when concerns arise.
C. Side-effect monitoring: Documenting the client's report and facilitating prompt prescriber contact when concerns arise. / Pharmacokinetics: Understanding that age, metabolism, and other factors can affect medication concentration over time.
D. Side-effect monitoring: Documenting the client's report and facilitating prompt prescriber contact when concerns arise. / Pharmacokinetics: Directing questions about a serious labeled risk to the prescriber and supporting informed discussion.

0958. In psychopharmacology practice, at the family resource center, a research trainee reviews whether a plan for a young person aged 10 is appropriate. The relevant practice is sharing relevant observations with the prescriber with appropriate permission and clear role boundaries. Which concept is tested?

A. Black box warning
B. Interprofessional collaboration
C. Shared decision-making
D. Placebo response

0959. While consulting in the school-based service, a assessment clinician supports a young person aged 10 by using this approach: supporting the family to discuss benefits, risks, and preferences with the prescribing clinician. Which concept is being applied?

A. Side-effect monitoring
B. Shared decision-making
C. Black box warning
D. Medication reconciliation

0960. In psychopharmacology practice, select the best explanation of Interprofessional collaboration.

A. A collaborative process integrating clinical evidence and the client's informed preferences and values.
B. Reviewing a person's current medications and supplements to identify what is actually being used.
C. The extent to which medication use corresponds with an agreed treatment plan, best explored without blame.
D. Coordinated communication among professionals with distinct roles to support safe, coherent care.

0961. Which option pairs the definitions of Scope of practice and Side-effect monitoring correctly, in that order?

A. Scope of practice: The legal and professional boundaries defining services a practitioner is authorized and competent to provide. / Side-effect monitoring: Systematic attention to unwanted or unexpected effects and communication with the prescriber.
B. Scope of practice: A prominent regulator-required warning for serious medication risks, whose relevance should be discussed with the prescriber. / Side-effect monitoring: Systematic attention to unwanted or unexpected effects and communication with the prescriber.
C. Scope of practice: The legal and professional boundaries defining services a practitioner is authorized and competent to provide. / Side-effect monitoring: How the body absorbs, distributes, metabolizes, and eliminates a medication.
D. Scope of practice: Systematic attention to unwanted or unexpected effects and communication with the prescriber. / Side-effect monitoring: The legal and professional boundaries defining services a practitioner is authorized and competent to provide.

0962. Which pair of actions illustrates Placebo response and Black box warning, respectively?

A. Placebo response: Interpreting a reported improvement in light of expectations and other treatment-context effects. / Black box warning: Directing questions about a serious labeled risk to the prescriber and supporting informed discussion.
B. Placebo response: Documenting the client's report and facilitating prompt prescriber contact when concerns arise. / Black box warning: Directing questions about a serious labeled risk to the prescriber and supporting informed discussion.
C. Placebo response: Directing questions about a serious labeled risk to the prescriber and supporting informed discussion. / Black box warning: Interpreting a reported improvement in light of expectations and other treatment-context effects.
D. Placebo response: Interpreting a reported improvement in light of expectations and other treatment-context effects. / Black box warning: Referring medication decisions to a qualified prescriber rather than recommending a dose change.

0963. How are Placebo response and Black box warning most accurately differentiated in this curriculum?

A. Placebo response: Change following treatment context and expectation that is not necessarily attributable to the active medication ingredient alone. / Black box warning: A prominent regulator-required warning for serious medication risks, whose relevance should be discussed with the prescriber.
B. Placebo response: Change following treatment context and expectation that is not necessarily attributable to the active medication ingredient alone. / Black box warning: The legal and professional boundaries defining services a practitioner is authorized and competent to provide.
C. Placebo response: A prominent regulator-required warning for serious medication risks, whose relevance should be discussed with the prescriber. / Black box warning: Change following treatment context and expectation that is not necessarily attributable to the active medication ingredient alone.
D. Placebo response: Systematic attention to unwanted or unexpected effects and communication with the prescriber. / Black box warning: A prominent regulator-required warning for serious medication risks, whose relevance should be discussed with the prescriber.

0964. A member of a clinical team prepares for a session in the counseling practicum with a child aged 8. The intended approach is documenting the client's report and facilitating prompt prescriber contact when concerns arise. Which concept is most relevant?

A. Pharmacokinetics
B. Side-effect monitoring
C. Black box warning
D. Medication reconciliation

0965. During service review in the student-support meeting, a therapist describes encouraging an accurate current medication list during care transitions. for a young person. Which course idea is most applicable?

A. Black box warning
B. Shared decision-making
C. Medication reconciliation
D. Side-effect monitoring

0966. When reviewing a student aged 12's plan in the counseling practicum, the case coordinator notes that the next step is supporting the family to discuss benefits, risks, and preferences with the prescribing clinician. Which concept guides this step?

A. Black box warning
B. Shared decision-making
C. Side-effect monitoring
D. Medication adherence

0967. In psychopharmacology practice, a supervisor asks for an applied contrast between Shared decision-making and Interprofessional collaboration. Which option fits?

A. Shared decision-making: Supporting the family to discuss benefits, risks, and preferences with the prescribing clinician. / Interprofessional collaboration: Sharing relevant observations with the prescriber with appropriate permission and clear role boundaries.
B. Shared decision-making: Sharing relevant observations with the prescriber with appropriate permission and clear role boundaries. / Interprofessional collaboration: Supporting the family to discuss benefits, risks, and preferences with the prescribing clinician.
C. Shared decision-making: Documenting the client's report and facilitating prompt prescriber contact when concerns arise. / Interprofessional collaboration: Sharing relevant observations with the prescriber with appropriate permission and clear role boundaries.
D. Shared decision-making: Supporting the family to discuss benefits, risks, and preferences with the prescribing clinician. / Interprofessional collaboration: Referring medication decisions to a qualified prescriber rather than recommending a dose change.

0968. A trainee must distinguish how Shared decision-making and Medication reconciliation guide practice. Which comparison is accurate?

A. Shared decision-making: Supporting the family to discuss benefits, risks, and preferences with the prescribing clinician. / Medication reconciliation: Asking about barriers, preferences, and experiences instead of labeling a client noncompliant.
B. Shared decision-making: Supporting the family to discuss benefits, risks, and preferences with the prescribing clinician. / Medication reconciliation: Encouraging an accurate current medication list during care transitions.
C. Shared decision-making: Sharing relevant observations with the prescriber with appropriate permission and clear role boundaries. / Medication reconciliation: Encouraging an accurate current medication list during care transitions.
D. Shared decision-making: Encouraging an accurate current medication list during care transitions. / Medication reconciliation: Supporting the family to discuss benefits, risks, and preferences with the prescribing clinician.

0969. Which statement accurately contrasts the course concepts Medication reconciliation and Pharmacodynamics?

A. Medication reconciliation: Reviewing a person's current medications and supplements to identify what is actually being used. / Pharmacodynamics: The extent to which medication use corresponds with an agreed treatment plan, best explored without blame.
B. Medication reconciliation: How a medication affects the body, including mechanisms and relationships between concentration and effects. / Pharmacodynamics: Reviewing a person's current medications and supplements to identify what is actually being used.
C. Medication reconciliation: Reviewing a person's current medications and supplements to identify what is actually being used. / Pharmacodynamics: How a medication affects the body, including mechanisms and relationships between concentration and effects.
D. Medication reconciliation: The legal and professional boundaries defining services a practitioner is authorized and competent to provide. / Pharmacodynamics: How a medication affects the body, including mechanisms and relationships between concentration and effects.

0970. Which paired example correctly applies Shared decision-making first and Pharmacodynamics second?

A. Shared decision-making: Distinguishing a medication's action and effects from how the body processes it. / Pharmacodynamics: Supporting the family to discuss benefits, risks, and preferences with the prescribing clinician.
B. Shared decision-making: Supporting the family to discuss benefits, risks, and preferences with the prescribing clinician. / Pharmacodynamics: Interpreting a reported improvement in light of expectations and other treatment-context effects.
C. Shared decision-making: Directing questions about a serious labeled risk to the prescriber and supporting informed discussion. / Pharmacodynamics: Distinguishing a medication's action and effects from how the body processes it.
D. Shared decision-making: Supporting the family to discuss benefits, risks, and preferences with the prescribing clinician. / Pharmacodynamics: Distinguishing a medication's action and effects from how the body processes it.

0971. In the outpatient clinic, a youth worker describes the most appropriate support for a young person as interpreting a reported improvement in light of expectations and other treatment-context effects. Which framework is being applied?

A. Side-effect monitoring
B. Interprofessional collaboration
C. Placebo response
D. Pharmacokinetics

0972. What is the central meaning of Pharmacokinetics?

A. The legal and professional boundaries defining services a practitioner is authorized and competent to provide.
B. How the body absorbs, distributes, metabolizes, and eliminates a medication.
C. The extent to which medication use corresponds with an agreed treatment plan, best explored without blame.
D. Systematic attention to unwanted or unexpected effects and communication with the prescriber.

0973. Consider a student aged 9 receiving help in the behavior-support review. The consulting counselor focuses on documenting the client's report and facilitating prompt prescriber contact when concerns arise. Which term best describes the guiding idea?

A. Side-effect monitoring
B. Black box warning
C. Medication reconciliation
D. Placebo response

0974. A research trainee describes an intervention for a school-age child in the community mental-health service, centered on supporting the family to discuss benefits, risks, and preferences with the prescribing clinician. Which named idea is most relevant?

A. Pharmacodynamics
B. Shared decision-making
C. Side-effect monitoring
D. Black box warning

0975. Which paired example correctly applies Scope of practice first and Pharmacokinetics second?

A. Scope of practice: Referring medication decisions to a qualified prescriber rather than recommending a dose change. / Pharmacokinetics: Understanding that age, metabolism, and other factors can affect medication concentration over time.
B. Scope of practice: Referring medication decisions to a qualified prescriber rather than recommending a dose change. / Pharmacokinetics: Supporting the family to discuss benefits, risks, and preferences with the prescribing clinician.
C. Scope of practice: Asking about barriers, preferences, and experiences instead of labeling a client noncompliant. / Pharmacokinetics: Understanding that age, metabolism, and other factors can affect medication concentration over time.
D. Scope of practice: Understanding that age, metabolism, and other factors can affect medication concentration over time. / Pharmacokinetics: Referring medication decisions to a qualified prescriber rather than recommending a dose change.

0976. A doctoral student reads the following description. Which concept does it define? How the body absorbs, distributes, metabolizes, and eliminates a medication.

A. Medication reconciliation
B. Pharmacokinetics
C. Medication adherence
D. Interprofessional collaboration

0977. Which option preserves the correct meaning of both Shared decision-making and Black box warning?

A. Shared decision-making: A collaborative process integrating clinical evidence and the client's informed preferences and values. / Black box warning: The legal and professional boundaries defining services a practitioner is authorized and competent to provide.
B. Shared decision-making: A collaborative process integrating clinical evidence and the client's informed preferences and values. / Black box warning: A prominent regulator-required warning for serious medication risks, whose relevance should be discussed with the prescriber.
C. Shared decision-making: A prominent regulator-required warning for serious medication risks, whose relevance should be discussed with the prescriber. / Black box warning: A collaborative process integrating clinical evidence and the client's informed preferences and values.
D. Shared decision-making: Reviewing a person's current medications and supplements to identify what is actually being used. / Black box warning: A prominent regulator-required warning for serious medication risks, whose relevance should be discussed with the prescriber.

0978. Which applied comparison correctly identifies what belongs to Medication reconciliation versus Placebo response?

A. Medication reconciliation: Documenting the client's report and facilitating prompt prescriber contact when concerns arise. / Placebo response: Interpreting a reported improvement in light of expectations and other treatment-context effects.
B. Medication reconciliation: Encouraging an accurate current medication list during care transitions. / Placebo response: Sharing relevant observations with the prescriber with appropriate permission and clear role boundaries.
C. Medication reconciliation: Interpreting a reported improvement in light of expectations and other treatment-context effects. / Placebo response: Encouraging an accurate current medication list during care transitions.
D. Medication reconciliation: Encouraging an accurate current medication list during care transitions. / Placebo response: Interpreting a reported improvement in light of expectations and other treatment-context effects.

0979. A child of elementary-school age is receiving support in the clinical planning session. The consulting counselor is guided by this practice: interpreting a reported improvement in light of expectations and other treatment-context effects. Which principle best fits?

A. Pharmacodynamics
B. Medication adherence
C. Placebo response
D. Medication reconciliation

0980. In psychopharmacology practice, which comparison correctly distinguishes Medication adherence from Interprofessional collaboration?

A. Medication adherence: The extent to which medication use corresponds with an agreed treatment plan, best explored without blame. / Interprofessional collaboration: Coordinated communication among professionals with distinct roles to support safe, coherent care.
B. Medication adherence: The legal and professional boundaries defining services a practitioner is authorized and competent to provide. / Interprofessional collaboration: Coordinated communication among professionals with distinct roles to support safe, coherent care.
C. Medication adherence: Coordinated communication among professionals with distinct roles to support safe, coherent care. / Interprofessional collaboration: The extent to which medication use corresponds with an agreed treatment plan, best explored without blame.
D. Medication adherence: The extent to which medication use corresponds with an agreed treatment plan, best explored without blame. / Interprofessional collaboration: Reviewing a person's current medications and supplements to identify what is actually being used.

0981. In psychopharmacology practice, choose the definition pair that correctly explains Black box warning first and Interprofessional collaboration second.

A. Black box warning: A prominent regulator-required warning for serious medication risks, whose relevance should be discussed with the prescriber. / Interprofessional collaboration: Coordinated communication among professionals with distinct roles to support safe, coherent care.
B. Black box warning: A prominent regulator-required warning for serious medication risks, whose relevance should be discussed with the prescriber. / Interprofessional collaboration: The extent to which medication use corresponds with an agreed treatment plan, best explored without blame.
C. Black box warning: Change following treatment context and expectation that is not necessarily attributable to the active medication ingredient alone. / Interprofessional collaboration: Coordinated communication among professionals with distinct roles to support safe, coherent care.
D. Black box warning: Coordinated communication among professionals with distinct roles to support safe, coherent care. / Interprofessional collaboration: A prominent regulator-required warning for serious medication risks, whose relevance should be discussed with the prescriber.

0982. At the supervision meeting, a community practitioner reviews whether a plan for a older adolescent client is appropriate. The relevant practice is referring medication decisions to a qualified prescriber rather than recommending a dose change. Which concept is tested?

A. Medication adherence
B. Scope of practice
C. Pharmacodynamics
D. Medication reconciliation

0983. For a older adolescent client in the child guidance clinic, a clinical supervisor makes this practice the immediate priority: distinguishing a medication's action and effects from how the body processes it. Which concept fits best?

A. Pharmacodynamics
B. Medication adherence
C. Black box warning
D. Interprofessional collaboration

0984. A consultant is supporting a middle-school student in the youth group. The key practice is documenting the client's report and facilitating prompt prescriber contact when concerns arise. Which course concept is most relevant?

A. Interprofessional collaboration
B. Scope of practice
C. Black box warning
D. Side-effect monitoring

0985. Which named construct is captured by this account? Reviewing a person's current medications and supplements to identify what is actually being used.

A. Medication reconciliation
B. Pharmacodynamics
C. Side-effect monitoring
D. Scope of practice

0986. A caregiver working with a counselor presents a support plan for a child aged 11 at the community mental-health service. Its central feature is interpreting a reported improvement in light of expectations and other treatment-context effects. Which concept should be named?

A. Scope of practice
B. Medication reconciliation
C. Medication adherence
D. Placebo response

0987. A case conference reviews a community practitioner's work with a preadolescent child in the school consultation: interpreting a reported improvement in light of expectations and other treatment-context effects. Which principle is central?

A. Medication reconciliation
B. Interprofessional collaboration
C. Pharmacokinetics
D. Placebo response

0988. In psychopharmacology practice, in the school-based service, a family therapist is considering this approach for a student aged 9: sharing relevant observations with the prescriber with appropriate permission and clear role boundaries. Which framework does it represent?

A. Interprofessional collaboration
B. Pharmacokinetics
C. Placebo response
D. Scope of practice

0989. At the youth group, a service navigator reviews whether a plan for a child aged 14 is appropriate. The relevant practice is understanding that age, metabolism, and other factors can affect medication concentration over time. Which concept is tested?

A. Side-effect monitoring
B. Placebo response
C. Pharmacokinetics
D. Pharmacodynamics

0990. In psychopharmacology practice, which description belongs with the term Interprofessional collaboration?

A. Coordinated communication among professionals with distinct roles to support safe, coherent care.
B. The extent to which medication use corresponds with an agreed treatment plan, best explored without blame.
C. How a medication affects the body, including mechanisms and relationships between concentration and effects.
D. A collaborative process integrating clinical evidence and the client's informed preferences and values.

0991. A student confuses Side-effect monitoring with Pharmacodynamics. Which explanation most accurately separates them?

A. Side-effect monitoring: Systematic attention to unwanted or unexpected effects and communication with the prescriber. / Pharmacodynamics: How a medication affects the body, including mechanisms and relationships between concentration and effects.
B. Side-effect monitoring: Systematic attention to unwanted or unexpected effects and communication with the prescriber. / Pharmacodynamics: Reviewing a person's current medications and supplements to identify what is actually being used.
C. Side-effect monitoring: A prominent regulator-required warning for serious medication risks, whose relevance should be discussed with the prescriber. / Pharmacodynamics: How a medication affects the body, including mechanisms and relationships between concentration and effects.
D. Side-effect monitoring: How a medication affects the body, including mechanisms and relationships between concentration and effects. / Pharmacodynamics: Systematic attention to unwanted or unexpected effects and communication with the prescriber.

0992. In a supervision review, a family therapist describes work with a young person in the supervision meeting: documenting the client's report and facilitating prompt prescriber contact when concerns arise. What concept is illustrated?

A. Side-effect monitoring
B. Pharmacodynamics
C. Medication adherence
D. Shared decision-making

0993. In psychopharmacology practice, a student confuses Pharmacokinetics with Interprofessional collaboration. Which explanation most accurately separates them?

A. Pharmacokinetics: How the body absorbs, distributes, metabolizes, and eliminates a medication. / Interprofessional collaboration: The legal and professional boundaries defining services a practitioner is authorized and competent to provide.
B. Pharmacokinetics: Coordinated communication among professionals with distinct roles to support safe, coherent care. / Interprofessional collaboration: How the body absorbs, distributes, metabolizes, and eliminates a medication.
C. Pharmacokinetics: A collaborative process integrating clinical evidence and the client's informed preferences and values. / Interprofessional collaboration: Coordinated communication among professionals with distinct roles to support safe, coherent care.
D. Pharmacokinetics: How the body absorbs, distributes, metabolizes, and eliminates a medication. / Interprofessional collaboration: Coordinated communication among professionals with distinct roles to support safe, coherent care.

0994. Select the best explanation of Medication adherence.

A. The legal and professional boundaries defining services a practitioner is authorized and competent to provide.
B. A collaborative process integrating clinical evidence and the client's informed preferences and values.
C. Systematic attention to unwanted or unexpected effects and communication with the prescriber.
D. The extent to which medication use corresponds with an agreed treatment plan, best explored without blame.

0995. Which comparison would correct a trainee's misunderstanding of Scope of practice versus Medication reconciliation?

A. Scope of practice: The legal and professional boundaries defining services a practitioner is authorized and competent to provide. / Medication reconciliation: Change following treatment context and expectation that is not necessarily attributable to the active medication ingredient alone.
B. Scope of practice: The legal and professional boundaries defining services a practitioner is authorized and competent to provide. / Medication reconciliation: Reviewing a person's current medications and supplements to identify what is actually being used.
C. Scope of practice: Reviewing a person's current medications and supplements to identify what is actually being used. / Medication reconciliation: The legal and professional boundaries defining services a practitioner is authorized and competent to provide.
D. Scope of practice: Coordinated communication among professionals with distinct roles to support safe, coherent care. / Medication reconciliation: Reviewing a person's current medications and supplements to identify what is actually being used.

0996. At the multidisciplinary case conference, a behavior specialist meets with a child aged 11. The practice priority is: encouraging an accurate current medication list during care transitions. Which concept best captures that priority?

A. Medication reconciliation
B. Scope of practice
C. Pharmacokinetics
D. Shared decision-making

0997. In psychopharmacology practice, a supervised trainee prepares for a session in the after-school program with a preadolescent child. The intended approach is sharing relevant observations with the prescriber with appropriate permission and clear role boundaries. Which concept is most relevant?

A. Interprofessional collaboration
B. Side-effect monitoring
C. Scope of practice
D. Black box warning

0998. Which pair of actions illustrates Pharmacokinetics and Pharmacodynamics, respectively?

A. Pharmacokinetics: Understanding that age, metabolism, and other factors can affect medication concentration over time. / Pharmacodynamics: Directing questions about a serious labeled risk to the prescriber and supporting informed discussion.
B. Pharmacokinetics: Understanding that age, metabolism, and other factors can affect medication concentration over time. / Pharmacodynamics: Distinguishing a medication’s action and effects from how the body processes it.
C. Pharmacokinetics: Asking about barriers, preferences, and experiences instead of labeling a client noncompliant. / Pharmacodynamics: Distinguishing a medication’s action and effects from how the body processes it.
D. Pharmacokinetics: Distinguishing a medication’s action and effects from how the body processes it. / Pharmacodynamics: Understanding that age, metabolism, and other factors can affect medication concentration over time.

0999. A counselor reviews a plan for a student aged 12 in the community youth program. The plan emphasizes distinguishing a medication’s action and effects from how the body processes it. Which course idea does this reflect?

A. Pharmacodynamics
B. Scope of practice
C. Interprofessional collaboration
D. Pharmacokinetics

1000. In psychopharmacology practice, a trainee must distinguish how Medication adherence and Interprofessional collaboration guide practice. Which comparison is accurate?

A. Medication adherence: Asking about barriers, preferences, and experiences instead of labeling a client noncompliant. / Interprofessional collaboration: Encouraging an accurate current medication list during care transitions.
B. Medication adherence: Sharing relevant observations with the prescriber with appropriate permission and clear role boundaries. / Interprofessional collaboration: Asking about barriers, preferences, and experiences instead of labeling a client noncompliant.
C. Medication adherence: Referring medication decisions to a qualified prescriber rather than recommending a dose change. / Interprofessional collaboration: Sharing relevant observations with the prescriber with appropriate permission and clear role boundaries.
D. Medication adherence: Asking about barriers, preferences, and experiences instead of labeling a client noncompliant. / Interprofessional collaboration: Sharing relevant observations with the prescriber with appropriate permission and clear role boundaries.

CAC.918 | Special Topics in Adolescent Mental Health

QUESTION BANK | 1,000 ITEMS | ANSWERS AT THE END

0001. A case conference reviews a research trainee's work with a young person aged 10 in the family resource center: examining pathways and turning points rather than treating a current symptom as fixed destiny. Which principle is central?

A. Developmental psychopathology
B. Nonsuicidal self-injury
C. Suicide protective factors
D. Peer contagion consideration

0002. In a supervision quiz, how should Sleep hygiene be distinguished from Eating-disorder warning signs?

A. Sleep hygiene: Behaviors and environmental practices that support regular, restorative sleep. / Eating-disorder warning signs: The balance between digital engagement and health, relationships, sleep, and functioning as experienced by the individual.
B. Sleep hygiene: Behaviors and environmental practices that support regular, restorative sleep. / Eating-disorder warning signs: Behavioral, cognitive, and physical indicators that warrant careful assessment and referral to qualified care.
C. Sleep hygiene: Behavioral, cognitive, and physical indicators that warrant careful assessment and referral to qualified care. / Eating-disorder warning signs: Behaviors and environmental practices that support regular, restorative sleep.
D. Sleep hygiene: A framework studying how typical and atypical developmental processes interact across time and context. / Eating-disorder warning signs: Behavioral, cognitive, and physical indicators that warrant careful assessment and referral to qualified care.

0003. Which applied comparison correctly identifies what belongs to Sleep hygiene versus Body image?

A. Sleep hygiene: Exploring body-related distress and social pressures without reinforcing appearance-based judgments. / Body image: Exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions.
B. Sleep hygiene: Exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions. / Body image: Exploring how online activities affect this adolescent's sleep, connection, mood, and goals.
C. Sleep hygiene: Using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity. / Body image: Exploring body-related distress and social pressures without reinforcing appearance-based judgments.
D. Sleep hygiene: Exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions. / Body image: Exploring body-related distress and social pressures without reinforcing appearance-based judgments.

0004. During service review in the behavior-support review, a service navigator describes using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior. for a child aged 8. Which course idea is most applicable?

A. Gender-affirming support
B. Eating-disorder warning signs
C. Developmental psychopathology
D. Peer contagion consideration

0005. A case discussion concerns a high-school student and a caregiver working with a counselor in the telehealth session. The practitioner is considering examining pathways and turning points rather than treating a current symptom as fixed destiny. Which principle is involved?

A. Digital wellbeing
B. Sleep hygiene
C. Body image
D. Developmental psychopathology

0006. Which named construct is captured by this account? An evolving process of exploring and integrating personal, social, and cultural understandings of self.

A. Body image
B. Adolescent identity development
C. Eating-disorder warning signs
D. Developmental psychopathology

0007. Which option correctly matches each concept to its practice focus: Digital wellbeing and Developmental psychopathology?

A. Digital wellbeing: Exploring how online activities affect this adolescent's sleep, connection, mood, and goals. / Developmental psychopathology: Examining pathways and turning points rather than treating a current symptom as fixed destiny.
B. Digital wellbeing: Providing respectful space for exploration without forcing a fixed label or timeline. / Developmental psychopathology: Examining pathways and turning points rather than treating a current symptom as fixed destiny.
C. Digital wellbeing: Exploring how online activities affect this adolescent's sleep, connection, mood, and goals. / Developmental psychopathology: Exploring body-related distress and social pressures without reinforcing appearance-based judgments.
D. Digital wellbeing: Examining pathways and turning points rather than treating a current symptom as fixed destiny. / Developmental psychopathology: Exploring how online activities affect this adolescent's sleep, connection, mood, and goals.

0008. What is the central meaning of Developmental psychopathology?

A. A framework studying how typical and atypical developmental processes interact across time and context.
B. Respectful support that recognizes a young person's expressed gender and attends to safety, dignity, and context.
C. Thoughts, feelings, and perceptions concerning one's body, shaped by personal and social influences.
D. Personal and contextual supports that can reduce risk or strengthen reasons and pathways for safety.

0009. Choose the practice comparison that best separates Peer contagion consideration from Developmental psychopathology.

A. Peer contagion consideration: Using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior. / Developmental psychopathology: Exploring body-related distress and social pressures without reinforcing appearance-based judgments.
B. Peer contagion consideration: Asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either. / Developmental psychopathology: Examining pathways and turning points rather than treating a current symptom as fixed destiny.
C. Peer contagion consideration: Using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior. / Developmental psychopathology: Examining pathways and turning points rather than treating a current symptom as fixed destiny.
D. Peer contagion consideration: Examining pathways and turning points rather than treating a current symptom as fixed destiny. / Developmental psychopathology: Using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior.

0010. A consultant and a young person are discussing support in the school-based service. The selected practice is using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior. Which concept does this demonstrate?

A. Body image
B. Nonsuicidal self-injury
C. Peer contagion consideration
D. Gender-affirming support

0011. During service review in the family session, a service navigator describes identifying trusted relationships, coping resources, and accessible support that can be activated. for a middle-school student. Which course idea is most applicable?

A. Developmental psychopathology
B. Suicide protective factors
C. Digital wellbeing
D. Body image

0012. Select the best explanation of Suicide protective factors.

A. Personal and contextual supports that can reduce risk or strengthen reasons and pathways for safety.
B. Respectful support that recognizes a young person's expressed gender and attends to safety, dignity, and context.
C. The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices.
D. Intentional self-inflicted injury without stated intent to die, requiring compassionate assessment and safety planning.

0013. In a supervision quiz, how should Nonsuicidal self-injury be distinguished from Developmental psychopathology?

A. Nonsuicidal self-injury: Intentional self-inflicted injury without stated intent to die, requiring compassionate assessment and safety planning. / Developmental psychopathology: Personal and contextual supports that can reduce risk or strengthen reasons and pathways for safety.
B. Nonsuicidal self-injury: A framework studying how typical and atypical developmental processes interact across time and context. / Developmental psychopathology: Intentional self-inflicted injury without stated intent to die, requiring compassionate assessment and safety planning.
C. Nonsuicidal self-injury: The balance between digital engagement and health, relationships, sleep, and functioning as experienced by the individual. / Developmental psychopathology: A framework studying how typical and atypical developmental processes interact across time and context.
D. Nonsuicidal self-injury: Intentional self-inflicted injury without stated intent to die, requiring compassionate assessment and safety planning. / Developmental psychopathology: A framework studying how typical and atypical developmental processes interact across time and context.

0014. Which option preserves the correct meaning of both Adolescent identity development and Eating-disorder warning signs?

A. Adolescent identity development: A framework studying how typical and atypical developmental processes interact across time and context. / Eating-disorder warning signs: Behavioral, cognitive, and physical indicators that warrant careful assessment and referral to qualified care.
B. Adolescent identity development: An evolving process of exploring and integrating personal, social, and cultural understandings of self. / Eating-disorder warning signs: Behavioral, cognitive, and physical indicators that warrant careful assessment and referral to qualified care.
C. Adolescent identity development: An evolving process of exploring and integrating personal, social, and cultural understandings of self. / Eating-disorder warning signs: The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices.
D. Adolescent identity development: Behavioral, cognitive, and physical indicators that warrant careful assessment and referral to qualified care. / Eating-disorder warning signs: An evolving process of exploring and integrating personal, social, and cultural understandings of self.

0015. Which paired example correctly applies Body image first and Gender-affirming support second?

A. Body image: Exploring body-related distress and social pressures without reinforcing appearance-based judgments. / Gender-affirming support: Examining pathways and turning points rather than treating a current symptom as fixed destiny.
B. Body image: Exploring body-related distress and social pressures without reinforcing appearance-based judgments. / Gender-affirming support: Using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity.
C. Body image: Using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior. / Gender-affirming support: Using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity.
D. Body image: Using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity. / Gender-affirming support: Exploring body-related distress and social pressures without reinforcing appearance-based judgments.

0016. Which option pairs the definitions of Adolescent identity development and Developmental psychopathology correctly, in that order?

A. Adolescent identity development: An evolving process of exploring and integrating personal, social, and cultural understandings of self. / Developmental psychopathology: Respectful support that recognizes a young person's expressed gender and attends to safety, dignity, and context.
B. Adolescent identity development: An evolving process of exploring and integrating personal, social, and cultural understandings of self. / Developmental psychopathology: A framework studying how typical and atypical developmental processes interact across time and context.
C. Adolescent identity development: A framework studying how typical and atypical developmental processes interact across time and context. / Developmental psychopathology: An evolving process of exploring and integrating personal, social, and cultural understandings of self.
D. Adolescent identity development: Behaviors and environmental practices that support regular, restorative sleep. / Developmental psychopathology: A framework studying how typical and atypical developmental processes interact across time and context.

0017. A supervisor asks for an applied contrast between Adolescent identity development and Developmental psychopathology. Which option fits?

A. Adolescent identity development: Exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions. / Developmental psychopathology: Examining pathways and turning points rather than treating a current symptom as fixed destiny.
B. Adolescent identity development: Examining pathways and turning points rather than treating a current symptom as fixed destiny. / Developmental psychopathology: Providing respectful space for exploration without forcing a fixed label or timeline.
C. Adolescent identity development: Providing respectful space for exploration without forcing a fixed label or timeline. / Developmental psychopathology: Examining pathways and turning points rather than treating a current symptom as fixed destiny.
D. Adolescent identity development: Providing respectful space for exploration without forcing a fixed label or timeline. / Developmental psychopathology: Using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity.

0018. In the school counseling office, a family therapist is considering this approach for a high-school student: exploring how online activities affect this adolescent's sleep, connection, mood, and goals. Which framework does it represent?

A. Digital wellbeing
B. Eating-disorder warning signs
C. Body image
D. Adolescent identity development

0019. A service team discusses a young person aged 16 in the telehealth session. Their proposed next step is using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity. Which course concept supports it?

A. Peer contagion consideration
B. Gender-affirming support
C. Nonsuicidal self-injury
D. Sleep hygiene

0020. A trainee must explain Adolescent identity development. Which answer is accurate?

A. Intentional self-inflicted injury without stated intent to die, requiring compassionate assessment and safety planning.
B. The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices.
C. An evolving process of exploring and integrating personal, social, and cultural understandings of self.
D. Behaviors and environmental practices that support regular, restorative sleep.

0021. In the classroom support meeting, a team asks how a teacher and counselor can support a student aged 17. One proposed action is responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation. Which idea does it represent?

A. Developmental psychopathology
B. Gender-affirming support
C. Peer contagion consideration
D. Eating-disorder warning signs

0022. During work in the outpatient clinic, a teacher and counselor identifies this need: providing respectful space for exploration without forcing a fixed label or timeline. Which idea should guide the response?

A. Adolescent identity development
B. Suicide protective factors
C. Digital wellbeing
D. Nonsuicidal self-injury

0023. In a professional consultation about a student aged 17, the consultant describes this response in the behavior-support review: exploring how online activities affect this adolescent's sleep, connection, mood, and goals. Which term is most apt?

A. Body image
B. Eating-disorder warning signs
C. Nonsuicidal self-injury
D. Digital wellbeing

0024. Which statement accurately contrasts the course concepts Peer contagion consideration and Developmental psychopathology?

A. Peer contagion consideration: Intentional self-inflicted injury without stated intent to die, requiring compassionate assessment and safety planning. / Developmental psychopathology: A framework studying how typical and atypical developmental processes interact across time and context.
B. Peer contagion consideration: The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices. / Developmental psychopathology: Thoughts, feelings, and perceptions concerning one's body, shaped by personal and social influences.
C. Peer contagion consideration: The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices. / Developmental psychopathology: A framework studying how typical and atypical developmental processes interact across time and context.
D. Peer contagion consideration: A framework studying how typical and atypical developmental processes interact across time and context. / Developmental psychopathology: The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices.

0025. Which paired example correctly applies Nonsuicidal self-injury first and Suicide protective factors second?

A. Nonsuicidal self-injury: Providing respectful space for exploration without forcing a fixed label or timeline. / Suicide protective factors: Identifying trusted relationships, coping resources, and accessible support that can be activated.
B. Nonsuicidal self-injury: Asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either. / Suicide protective factors: Exploring body-related distress and social pressures without reinforcing appearance-based judgments.
C. Nonsuicidal self-injury: Asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either. / Suicide protective factors: Identifying trusted relationships, coping resources, and accessible support that can be activated.
D. Nonsuicidal self-injury: Identifying trusted relationships, coping resources, and accessible support that can be activated. / Suicide protective factors: Asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either.

0026. During service review in the school counseling office, a community practitioner describes asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either. for a young person aged 16. Which course idea is most applicable?

A. Peer contagion consideration
B. Developmental psychopathology
C. Nonsuicidal self-injury
D. Gender-affirming support

0027. Choose the definition pair that correctly explains Adolescent identity development first and Nonsuicidal self-injury second.

A. Adolescent identity development: Intentional self-inflicted injury without stated intent to die, requiring compassionate assessment and safety planning. / Nonsuicidal self-injury: An evolving process of exploring and integrating personal, social, and cultural understandings of self.
B. Adolescent identity development: An evolving process of exploring and integrating personal, social, and cultural understandings of self. / Nonsuicidal self-injury: Intentional self-inflicted injury without stated intent to die, requiring compassionate assessment and safety planning.
C. Adolescent identity development: An evolving process of exploring and integrating personal, social, and cultural understandings of self. / Nonsuicidal self-injury: The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices.
D. Adolescent identity development: Behavioral, cognitive, and physical indicators that warrant careful assessment and referral to qualified care. / Nonsuicidal self-injury: Intentional self-inflicted injury without stated intent to die, requiring compassionate assessment and safety planning.

0028. A support meeting for a young person aged 13 includes a school support specialist in the classroom support meeting. The practice under consideration is exploring body-related distress and social pressures without reinforcing appearance-based judgments. Which concept guides it?

A. Eating-disorder warning signs
B. Adolescent identity development
C. Peer contagion consideration
D. Body image

0029. How should a practitioner distinguish the applications of Nonsuicidal self-injury and Peer contagion consideration?

A. Nonsuicidal self-injury: Using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior. / Peer contagion consideration: Asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either.
B. Nonsuicidal self-injury: Providing respectful space for exploration without forcing a fixed label or timeline. / Peer contagion consideration: Using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior.
C. Nonsuicidal self-injury: Asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either. / Peer contagion consideration: Responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation.
D. Nonsuicidal self-injury: Asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either. / Peer contagion consideration: Using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior.

0030. A student confuses Adolescent identity development with Sleep hygiene. Which explanation most accurately separates them?

A. Adolescent identity development: The balance between digital engagement and health, relationships, sleep, and functioning as experienced by the individual. / Sleep hygiene: Behaviors and environmental practices that support regular, restorative sleep.
B. Adolescent identity development: An evolving process of exploring and integrating personal, social, and cultural understandings of self. / Sleep hygiene: Intentional self-inflicted injury without stated intent to die, requiring compassionate assessment and safety planning.
C. Adolescent identity development: An evolving process of exploring and integrating personal, social, and cultural understandings of self. / Sleep hygiene: Behaviors and environmental practices that support regular, restorative sleep.
D. Adolescent identity development: Behaviors and environmental practices that support regular, restorative sleep. / Sleep hygiene: An evolving process of exploring and integrating personal, social, and cultural understandings of self.

0031. A trainee must distinguish how Suicide protective factors and Eating-disorder warning signs guide practice. Which comparison is accurate?

A. Suicide protective factors: Identifying trusted relationships, coping resources, and accessible support that can be activated. / Eating-disorder warning signs: Responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation.
B. Suicide protective factors: Responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation. / Eating-disorder warning signs: Identifying trusted relationships, coping resources, and accessible support that can be activated.
C. Suicide protective factors: Using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior. / Eating-disorder warning signs: Responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation.
D. Suicide protective factors: Identifying trusted relationships, coping resources, and accessible support that can be activated. / Eating-disorder warning signs: Providing respectful space for exploration without forcing a fixed label or timeline.

0032. Which pair of actions illustrates Eating-disorder warning signs and Peer contagion consideration, respectively?

A. Eating-disorder warning signs: Responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation. / Peer contagion consideration: Using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior.
B. Eating-disorder warning signs: Responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation. / Peer contagion consideration: Exploring how online activities affect this adolescent's sleep, connection, mood, and goals.
C. Eating-disorder warning signs: Asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either. / Peer contagion consideration: Using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior.
D. Eating-disorder warning signs: Using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior. / Peer contagion consideration: Responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation.

0033. A play therapist reviews a plan for a middle-school student in the learning-support meeting. The plan emphasizes exploring body-related distress and social pressures without reinforcing appearance-based judgments. Which course idea does this reflect?

A. Nonsuicidal self-injury
B. Digital wellbeing
C. Eating-disorder warning signs
D. Body image

0034. How are Adolescent identity development and Gender-affirming support most accurately differentiated in this curriculum?

A. Adolescent identity development: Behaviors and environmental practices that support regular, restorative sleep. / Gender-affirming support: Respectful support that recognizes a young person's expressed gender and attends to safety, dignity, and context.
B. Adolescent identity development: An evolving process of exploring and integrating personal, social, and cultural understandings of self. / Gender-affirming support: Personal and contextual supports that can reduce risk or strengthen reasons and pathways for safety.
C. Adolescent identity development: Respectful support that recognizes a young person's expressed gender and attends to safety, dignity, and context. / Gender-affirming support: An evolving process of exploring and integrating personal, social, and cultural understandings of self.
D. Adolescent identity development: An evolving process of exploring and integrating personal, social, and cultural understandings of self. / Gender-affirming support: Respectful support that recognizes a young person's expressed gender and attends to safety, dignity, and context.

0035. Which choice aligns each practice with the correct idea, Sleep hygiene or Body image?

A. Sleep hygiene: Exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions. / Body image: Exploring how online activities affect this adolescent's sleep, connection, mood, and goals.
B. Sleep hygiene: Exploring body-related distress and social pressures without reinforcing appearance-based judgments. / Body image: Exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions.
C. Sleep hygiene: Using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity. / Body image: Exploring body-related distress and social pressures without reinforcing appearance-based judgments.
D. Sleep hygiene: Exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions. / Body image: Exploring body-related distress and social pressures without reinforcing appearance-based judgments.

0036. Which statement shows a sound practice-level distinction between Adolescent identity development and Developmental psychopathology?

A. Adolescent identity development: Providing respectful space for exploration without forcing a fixed label or timeline. / Developmental psychopathology: Examining pathways and turning points rather than treating a current symptom as fixed destiny.
B. Adolescent identity development: Examining pathways and turning points rather than treating a current symptom as fixed destiny. / Developmental psychopathology: Providing respectful space for exploration without forcing a fixed label or timeline.
C. Adolescent identity development: Providing respectful space for exploration without forcing a fixed label or timeline. / Developmental psychopathology: Using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity.
D. Adolescent identity development: Exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions. / Developmental psychopathology: Examining pathways and turning points rather than treating a current symptom as fixed destiny.

0037. A consultant is preparing a follow-up plan for a child aged 11 in the school consultation. The plan calls for responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation. Which concept names this approach?

A. Digital wellbeing
B. Eating-disorder warning signs
C. Sleep hygiene
D. Gender-affirming support

0038. A case conference asks for a distinction between Suicide protective factors and Body image. Which answer is sound?

A. Suicide protective factors: Personal and contextual supports that can reduce risk or strengthen reasons and pathways for safety. / Body image: Thoughts, feelings, and perceptions concerning one's body, shaped by personal and social influences.
B. Suicide protective factors: Thoughts, feelings, and perceptions concerning one's body, shaped by personal and social influences. / Body image: Personal and contextual supports that can reduce risk or strengthen reasons and pathways for safety.
C. Suicide protective factors: Personal and contextual supports that can reduce risk or strengthen reasons and pathways for safety. / Body image: Behaviors and environmental practices that support regular, restorative sleep.
D. Suicide protective factors: Behavioral, cognitive, and physical indicators that warrant careful assessment and referral to qualified care. / Body image: Thoughts, feelings, and perceptions concerning one's body, shaped by personal and social influences.

0039. Which applied comparison correctly identifies what belongs to Digital wellbeing versus Developmental psychopathology?

A. Digital wellbeing: Examining pathways and turning points rather than treating a current symptom as fixed destiny. / Developmental psychopathology: Exploring how online activities affect this adolescent's sleep, connection, mood, and goals.
B. Digital wellbeing: Exploring how online activities affect this adolescent's sleep, connection, mood, and goals. / Developmental psychopathology: Exploring body-related distress and social pressures without reinforcing appearance-based judgments.
C. Digital wellbeing: Providing respectful space for exploration without forcing a fixed label or timeline. / Developmental psychopathology: Examining pathways and turning points rather than treating a current symptom as fixed destiny.
D. Digital wellbeing: Exploring how online activities affect this adolescent's sleep, connection, mood, and goals. / Developmental psychopathology: Examining pathways and turning points rather than treating a current symptom as fixed destiny.

0040. A service navigator is asked what should shape a young person's support in the child guidance clinic. The proposed focus is examining pathways and turning points rather than treating a current symptom as fixed destiny. Which principle does it represent?

A. Suicide protective factors
B. Eating-disorder warning signs
C. Gender-affirming support
D. Developmental psychopathology

0041. Which statement accurately contrasts the course concepts Sleep hygiene and Digital wellbeing?

A. Sleep hygiene: Behaviors and environmental practices that support regular, restorative sleep. / Digital wellbeing: Intentional self-inflicted injury without stated intent to die, requiring compassionate assessment and safety planning.
B. Sleep hygiene: Thoughts, feelings, and perceptions concerning one's body, shaped by personal and social influences. / Digital wellbeing: The balance between digital engagement and health, relationships, sleep, and functioning as experienced by the individual.
C. Sleep hygiene: Behaviors and environmental practices that support regular, restorative sleep. / Digital wellbeing: The balance between digital engagement and health, relationships, sleep, and functioning as experienced by the individual.
D. Sleep hygiene: The balance between digital engagement and health, relationships, sleep, and functioning as experienced by the individual. / Digital wellbeing: Behaviors and environmental practices that support regular, restorative sleep.

0042. Which option pairs the definitions of Adolescent identity development and Sleep hygiene correctly, in that order?

A. Adolescent identity development: An evolving process of exploring and integrating personal, social, and cultural understandings of self. / Sleep hygiene: Intentional self-inflicted injury without stated intent to die, requiring compassionate assessment and safety planning.
B. Adolescent identity development: An evolving process of exploring and integrating personal, social, and cultural understandings of self. / Sleep hygiene: Behaviors and environmental practices that support regular, restorative sleep.
C. Adolescent identity development: The balance between digital engagement and health, relationships, sleep, and functioning as experienced by the individual. / Sleep hygiene: Behaviors and environmental practices that support regular, restorative sleep.
D. Adolescent identity development: Behaviors and environmental practices that support regular, restorative sleep. / Sleep hygiene: An evolving process of exploring and integrating personal, social, and cultural understandings of self.

0043. How are Suicide protective factors and Peer contagion consideration most accurately differentiated in this curriculum?

A. Suicide protective factors: Personal and contextual supports that can reduce risk or strengthen reasons and pathways for safety. / Peer contagion consideration: The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices.
B. Suicide protective factors: The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices. / Peer contagion consideration: Personal and contextual supports that can reduce risk or strengthen reasons and pathways for safety.
C. Suicide protective factors: A framework studying how typical and atypical developmental processes interact across time and context. / Peer contagion consideration: The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices.
D. Suicide protective factors: Personal and contextual supports that can reduce risk or strengthen reasons and pathways for safety. / Peer contagion consideration: Behavioral, cognitive, and physical indicators that warrant careful assessment and referral to qualified care.

0044. An interdisciplinary team reviews a school-age child's case at the school counseling office. The clinical supervisor recommends exploring body-related distress and social pressures without reinforcing appearance-based judgments. Which course concept best fits?

A. Suicide protective factors
B. Body image
C. Nonsuicidal self-injury
D. Gender-affirming support

0045. A case discussion concerns a child aged 7 and a case coordinator in the student-support meeting. The practitioner is considering exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions. Which principle is involved?

A. Eating-disorder warning signs
B. Developmental psychopathology
C. Peer contagion consideration
D. Sleep hygiene

0046. Choose the definition pair that correctly explains Adolescent identity development first and Suicide protective factors second.

A. Adolescent identity development: Personal and contextual supports that can reduce risk or strengthen reasons and pathways for safety. / Suicide protective factors: An evolving process of exploring and integrating personal, social, and cultural understandings of self.
B. Adolescent identity development: An evolving process of exploring and integrating personal, social, and cultural understandings of self. / Suicide protective factors: The balance between digital engagement and health, relationships, sleep, and functioning as experienced by the individual.
C. Adolescent identity development: An evolving process of exploring and integrating personal, social, and cultural understandings of self. / Suicide protective factors: Personal and contextual supports that can reduce risk or strengthen reasons and pathways for safety.
D. Adolescent identity development: A framework studying how typical and atypical developmental processes interact across time and context. / Suicide protective factors: Personal and contextual supports that can reduce risk or strengthen reasons and pathways for safety.

0047. While consulting in the school-based service, a assessment clinician supports a young person aged 10 by using this approach: identifying trusted relationships, coping resources, and accessible support that can be activated. Which concept is being applied?

A. Adolescent identity development
B. Developmental psychopathology
C. Suicide protective factors
D. Nonsuicidal self-injury

0048. For a child aged 11 seen in the school counseling office, the service navigator recommends a plan built around using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity. Which concept is reflected?

A. Gender-affirming support
B. Developmental psychopathology
C. Digital wellbeing
D. Nonsuicidal self-injury

0049. Which professional action most closely applies Body image?

A. Exploring body-related distress and social pressures without reinforcing appearance-based judgments.
B. Responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation.
C. Exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions.
D. Using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity.

0050. A trainee must distinguish how Peer contagion consideration and Developmental psychopathology guide practice. Which comparison is accurate?

A. Peer contagion consideration: Examining pathways and turning points rather than treating a current symptom as fixed destiny. / Developmental psychopathology: Using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior.
B. Peer contagion consideration: Using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior. / Developmental psychopathology: Exploring body-related distress and social pressures without reinforcing appearance-based judgments.
C. Peer contagion consideration: Using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior. / Developmental psychopathology: Examining pathways and turning points rather than treating a current symptom as fixed destiny.
D. Peer contagion consideration: Asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either. / Developmental psychopathology: Examining pathways and turning points rather than treating a current symptom as fixed destiny.

0051. A student aged 15 and a member of a clinical team are reviewing goals in the school counseling office. The agreed action is using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior. Which principle best accounts for it?

A. Nonsuicidal self-injury
B. Peer contagion consideration
C. Adolescent identity development
D. Eating-disorder warning signs

0052. A supervisor asks for an applied contrast between Body image and Developmental psychopathology. Which option fits?

A. Body image: Examining pathways and turning points rather than treating a current symptom as fixed destiny. / Developmental psychopathology: Exploring body-related distress and social pressures without reinforcing appearance-based judgments.
B. Body image: Exploring body-related distress and social pressures without reinforcing appearance-based judgments. / Developmental psychopathology: Providing respectful space for exploration without forcing a fixed label or timeline.
C. Body image: Exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions. / Developmental psychopathology: Examining pathways and turning points rather than treating a current symptom as fixed destiny.
D. Body image: Exploring body-related distress and social pressures without reinforcing appearance-based judgments. / Developmental psychopathology: Examining pathways and turning points rather than treating a current symptom as fixed destiny.

0053. Which statement accurately contrasts the course concepts Digital wellbeing and Gender-affirming support?

A. Digital wellbeing: Behaviors and environmental practices that support regular, restorative sleep. / Gender-affirming support: Respectful support that recognizes a young person's expressed gender and attends to safety, dignity, and context.
B. Digital wellbeing: The balance between digital engagement and health, relationships, sleep, and functioning as experienced by the individual. / Gender-affirming support: A framework studying how typical and atypical developmental processes interact across time and context.
C. Digital wellbeing: The balance between digital engagement and health, relationships, sleep, and functioning as experienced by the individual. / Gender-affirming support: Respectful support that recognizes a young person's expressed gender and attends to safety, dignity, and context.
D. Digital wellbeing: Respectful support that recognizes a young person's expressed gender and attends to safety, dignity, and context. / Gender-affirming support: The balance between digital engagement and health, relationships, sleep, and functioning as experienced by the individual.

0054. Choose the practice comparison that best separates Suicide protective factors from Eating-disorder warning signs.

A. Suicide protective factors: Identifying trusted relationships, coping resources, and accessible support that can be activated. / Eating-disorder warning signs: Providing respectful space for exploration without forcing a fixed label or timeline.
B. Suicide protective factors: Identifying trusted relationships, coping resources, and accessible support that can be activated. / Eating-disorder warning signs: Responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation.
C. Suicide protective factors: Responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation. / Eating-disorder warning signs: Identifying trusted relationships, coping resources, and accessible support that can be activated.
D. Suicide protective factors: Using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior. / Eating-disorder warning signs: Responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation.

0055. Which comparison would correct a trainee's misunderstanding of Sleep hygiene versus Peer contagion consideration?

A. Sleep hygiene: Respectful support that recognizes a young person's expressed gender and attends to safety, dignity, and context. / Peer contagion consideration: The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices.
B. Sleep hygiene: Behaviors and environmental practices that support regular, restorative sleep. / Peer contagion consideration: Personal and contextual supports that can reduce risk or strengthen reasons and pathways for safety.
C. Sleep hygiene: Behaviors and environmental practices that support regular, restorative sleep. / Peer contagion consideration: The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices.
D. Sleep hygiene: The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices. / Peer contagion consideration: Behaviors and environmental practices that support regular, restorative sleep.

0056. Choose the practice comparison that best separates Sleep hygiene from Peer contagion consideration.

A. Sleep hygiene: Exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions. / Peer contagion consideration: Using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior.
B. Sleep hygiene: Using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity. / Peer contagion consideration: Using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior.
C. Sleep hygiene: Using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior. / Peer contagion consideration: Exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions.
D. Sleep hygiene: Exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions. / Peer contagion consideration: Identifying trusted relationships, coping resources, and accessible support that can be activated.

0057. During work in the community youth program, a consulting counselor identifies this need: using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior. Which idea should guide the response?

A. Sleep hygiene
B. Peer contagion consideration
C. Adolescent identity development
D. Eating-disorder warning signs

0058. A team must select a support approach for a high-school student at the telehealth session. The caregiver working with a counselor recommends examining pathways and turning points rather than treating a current symptom as fixed destiny. Which idea is most relevant?

A. Gender-affirming support
B. Developmental psychopathology
C. Body image
D. Adolescent identity development

0059. A supervisor asks for an applied contrast between Adolescent identity development and Peer contagion consideration. Which option fits?

A. Adolescent identity development: Providing respectful space for exploration without forcing a fixed label or timeline. / Peer contagion consideration: Exploring how online activities affect this adolescent's sleep, connection, mood, and goals.
B. Adolescent identity development: Responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation. / Peer contagion consideration: Using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior.
C. Adolescent identity development: Using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior. / Peer contagion consideration: Providing respectful space for exploration without forcing a fixed label or timeline.
D. Adolescent identity development: Providing respectful space for exploration without forcing a fixed label or timeline. / Peer contagion consideration: Using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior.

0060. While consulting in the outpatient clinic, a supervised trainee supports a young person aged 13 by using this approach: using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity. Which concept is being applied?

A. Gender-affirming support
B. Adolescent identity development
C. Developmental psychopathology
D. Sleep hygiene

0061. In a supervision quiz, how should Adolescent identity development be distinguished from Nonsuicidal self-injury?

A. Adolescent identity development: An evolving process of exploring and integrating personal, social, and cultural understandings of self. / Nonsuicidal self-injury: Intentional self-inflicted injury without stated intent to die, requiring compassionate assessment and safety planning.
B. Adolescent identity development: Behavioral, cognitive, and physical indicators that warrant careful assessment and referral to qualified care. / Nonsuicidal self-injury: Intentional self-inflicted injury without stated intent to die, requiring compassionate assessment and safety planning.
C. Adolescent identity development: An evolving process of exploring and integrating personal, social, and cultural understandings of self. / Nonsuicidal self-injury: The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices.
D. Adolescent identity development: Intentional self-inflicted injury without stated intent to die, requiring compassionate assessment and safety planning. / Nonsuicidal self-injury: An evolving process of exploring and integrating personal, social, and cultural understandings of self.

0062. At a case-planning meeting, the clinical supervisor proposes responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation. for a child of elementary-school age seen in the behavior-support review. Which concept does this illustrate?

A. Sleep hygiene
B. Body image
C. Gender-affirming support
D. Eating-disorder warning signs

0063. Which statement shows a sound practice-level distinction between Sleep hygiene and Peer contagion consideration?

A. Sleep hygiene: Using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity. / Peer contagion consideration: Using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior.
B. Sleep hygiene: Exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions. / Peer contagion consideration: Using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior.
C. Sleep hygiene: Using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior. / Peer contagion consideration: Exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions.
D. Sleep hygiene: Exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions. / Peer contagion consideration: Identifying trusted relationships, coping resources, and accessible support that can be activated.

0064. A case conference asks for a distinction between Body image and Peer contagion consideration. Which answer is sound?

A. Body image: The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices. / Peer contagion consideration: Thoughts, feelings, and perceptions concerning one's body, shaped by personal and social influences.
B. Body image: Thoughts, feelings, and perceptions concerning one's body, shaped by personal and social influences. / Peer contagion consideration: Respectful support that recognizes a young person's expressed gender and attends to safety, dignity, and context.
C. Body image: Thoughts, feelings, and perceptions concerning one's body, shaped by personal and social influences. / Peer contagion consideration: The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices.
D. Body image: Intentional self-inflicted injury without stated intent to die, requiring compassionate assessment and safety planning. / Peer contagion consideration: The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices.

0065. When reviewing a older adolescent client's plan in the youth group, the case coordinator notes that the next step is using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior. Which concept guides this step?

A. Eating-disorder warning signs
B. Body image
C. Peer contagion consideration
D. Suicide protective factors

0066. Which paired example correctly applies Suicide protective factors first and Eating-disorder warning signs second?

A. Suicide protective factors: Using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior. / Eating-disorder warning signs: Responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation.
B. Suicide protective factors: Identifying trusted relationships, coping resources, and accessible support that can be activated. / Eating-disorder warning signs: Providing respectful space for exploration without forcing a fixed label or timeline.
C. Suicide protective factors: Responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation. / Eating-disorder warning signs: Identifying trusted relationships, coping resources, and accessible support that can be activated.
D. Suicide protective factors: Identifying trusted relationships, coping resources, and accessible support that can be activated. / Eating-disorder warning signs: Responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation.

0067. A planning meeting about a school-age child includes a clinical supervisor. The proposed practice in the school counseling office is exploring body-related distress and social pressures without reinforcing appearance-based judgments. Which idea underlies it?

A. Adolescent identity development
B. Suicide protective factors
C. Eating-disorder warning signs
D. Body image

0068. Which pair of actions illustrates Body image and Peer contagion consideration, respectively?

A. Body image: Asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either. / Peer contagion consideration: Using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior.
B. Body image: Exploring body-related distress and social pressures without reinforcing appearance-based judgments. / Peer contagion consideration: Using the young person’s stated name and pronouns and assessing supports and safety without pathologizing identity.
C. Body image: Using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior. / Peer contagion consideration: Exploring body-related distress and social pressures without reinforcing appearance-based judgments.
D. Body image: Exploring body-related distress and social pressures without reinforcing appearance-based judgments. / Peer contagion consideration: Using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior.

0069. At the community youth program, a research trainee reviews whether a plan for a child of elementary-school age is appropriate. The relevant practice is exploring how online activities affect this adolescent’s sleep, connection, mood, and goals. Which concept is tested?

A. Nonsuicidal self-injury
B. Sleep hygiene
C. Digital wellbeing
D. Gender-affirming support

0070. In the school-based service, a family therapist is considering this approach for a student aged 9: examining pathways and turning points rather than treating a current symptom as fixed destiny. Which framework does it represent?

A. Eating-disorder warning signs
B. Gender-affirming support
C. Developmental psychopathology
D. Suicide protective factors

0071. Which pair of actions illustrates Nonsuicidal self-injury and Digital wellbeing, respectively?

A. Nonsuicidal self-injury: Asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either. / Digital wellbeing: Exploring how online activities affect this adolescent’s sleep, connection, mood, and goals.
B. Nonsuicidal self-injury: Examining pathways and turning points rather than treating a current symptom as fixed destiny. / Digital wellbeing: Exploring how online activities affect this adolescent’s sleep, connection, mood, and goals.
C. Nonsuicidal self-injury: Asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either. / Digital wellbeing: Using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior.
D. Nonsuicidal self-injury: Exploring how online activities affect this adolescent’s sleep, connection, mood, and goals. / Digital wellbeing: Asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either.

0072. A mental-health professional prepares for a session in the learning-support meeting with a student aged 15. The intended approach is identifying trusted relationships, coping resources, and accessible support that can be activated. Which concept is most relevant?

A. Suicide protective factors
B. Digital wellbeing
C. Adolescent identity development
D. Body image

0073. Which comparison correctly distinguishes Nonsuicidal self-injury from Eating-disorder warning signs?

A. Nonsuicidal self-injury: Respectful support that recognizes a young person’s expressed gender and attends to safety, dignity, and context. / Eating-disorder warning signs: Behavioral, cognitive, and physical indicators that warrant careful assessment and referral to qualified care.
B. Nonsuicidal self-injury: Intentional self-inflicted injury without stated intent to die, requiring compassionate assessment and safety planning. / Eating-disorder warning signs: Behavioral, cognitive, and physical indicators that warrant careful assessment and referral to qualified care.
C. Nonsuicidal self-injury: Intentional self-inflicted injury without stated intent to die, requiring compassionate assessment and safety planning. / Eating-disorder warning signs: A framework studying how typical and atypical developmental processes interact across time and context.
D. Nonsuicidal self-injury: Behavioral, cognitive, and physical indicators that warrant careful assessment and referral to qualified care. / Eating-disorder warning signs: Intentional self-inflicted injury without stated intent to die, requiring compassionate assessment and safety planning.

0074. In the school counseling office, the agreed focus for a service navigator working with a child aged 11 is using the young person’s stated name and pronouns and assessing supports and safety without pathologizing identity. Which concept names this focus?

A. Digital wellbeing
B. Gender-affirming support
C. Adolescent identity development
D. Peer contagion consideration

0075. A caregiver working with a counselor presents a support plan for a client in early adolescence at the behavior-support review. Its central feature is providing respectful space for exploration without forcing a fixed label or timeline. Which concept should be named?

A. Developmental psychopathology
B. Gender-affirming support
C. Adolescent identity development
D. Eating-disorder warning signs

0076. A young person aged 13’s service team meets in the student-support meeting. The parent educator recommends a change involving responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation. Which idea best explains it?

A. Nonsuicidal self-injury
B. Peer contagion consideration
C. Eating-disorder warning signs
D. Gender-affirming support

0077. Which statement accurately contrasts the course concepts Eating-disorder warning signs and Peer contagion consideration?

A. Eating-disorder warning signs: Behavioral, cognitive, and physical indicators that warrant careful assessment and referral to qualified care. / Peer contagion consideration: The balance between digital engagement and health, relationships, sleep, and functioning as experienced by the individual.
B. Eating-disorder warning signs: Intentional self-inflicted injury without stated intent to die, requiring compassionate assessment and safety planning. / Peer contagion consideration: The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices.
C. Eating-disorder warning signs: The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices. / Peer contagion consideration: Behavioral, cognitive, and physical indicators that warrant careful assessment and referral to qualified care.
D. Eating-disorder warning signs: Behavioral, cognitive, and physical indicators that warrant careful assessment and referral to qualified care. / Peer contagion consideration: The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices.

0078. Which option preserves the correct meaning of both Adolescent identity development and Developmental psychopathology?

A. Adolescent identity development: Behaviors and environmental practices that support regular, restorative sleep. / Developmental psychopathology: A framework studying how typical and atypical developmental processes interact across time and context.
B. Adolescent identity development: An evolving process of exploring and integrating personal, social, and cultural understandings of self. / Developmental psychopathology: Respectful support that recognizes a young person’s expressed gender and attends to safety, dignity, and context.
C. Adolescent identity development: An evolving process of exploring and integrating personal, social, and cultural understandings of self. / Developmental psychopathology: A framework studying how typical and atypical developmental processes interact across time and context.
D. Adolescent identity development: A framework studying how typical and atypical developmental processes interact across time and context. / Developmental psychopathology: An evolving process of exploring and integrating personal, social, and cultural understandings of self.

0079. A trainee must choose a practice that exemplifies Suicide protective factors. Which action is the best fit?

A. Identifying trusted relationships, coping resources, and accessible support that can be activated.
B. Using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior.
C. Exploring how online activities affect this adolescent’s sleep, connection, mood, and goals.
D. Exploring body-related distress and social pressures without reinforcing appearance-based judgments.

0080. A community practitioner describes an intervention for a child aged 6 in the community youth program, centered on examining pathways and turning points rather than treating a current symptom as fixed destiny. Which named idea is most relevant?

A. Adolescent identity development
B. Developmental psychopathology
C. Peer contagion consideration
D. Suicide protective factors

0081. A supervisor asks for an applied contrast between Sleep hygiene and Developmental psychopathology. Which option fits?

A. Sleep hygiene: Exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions. / Developmental psychopathology: Exploring how online activities affect this adolescent’s sleep, connection, mood, and goals.
B. Sleep hygiene: Exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions. / Developmental psychopathology: Examining pathways and turning points rather than treating a current symptom as fixed destiny.
C. Sleep hygiene: Using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior. / Developmental psychopathology: Examining pathways and turning points rather than treating a current symptom as fixed destiny.
D. Sleep hygiene: Examining pathways and turning points rather than treating a current symptom as fixed destiny. / Developmental psychopathology: Exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions.

0082. Which statement shows a sound practice-level distinction between Suicide protective factors and Body image?

A. Suicide protective factors: Exploring body-related distress and social pressures without reinforcing appearance-based judgments. / Body image: Identifying trusted relationships, coping resources, and accessible support that can be activated.
B. Suicide protective factors: Identifying trusted relationships, coping resources, and accessible support that can be activated. / Body image: Exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions.
C. Suicide protective factors: Responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation. / Body image: Exploring body-related distress and social pressures without reinforcing appearance-based judgments.
D. Suicide protective factors: Identifying trusted relationships, coping resources, and accessible support that can be activated. / Body image: Exploring body-related distress and social pressures without reinforcing appearance-based judgments.

0083. A supervised trainee prepares for a session in the parent meeting with a older adolescent client. The intended approach is exploring how online activities affect this adolescent’s sleep, connection, mood, and goals. Which concept is most relevant?

A. Suicide protective factors
B. Developmental psychopathology
C. Sleep hygiene
D. Digital wellbeing

0084. How should a practitioner distinguish the applications of Sleep hygiene and Digital wellbeing?

A. Sleep hygiene: Exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions. / Digital wellbeing: Exploring how online activities affect this adolescent’s sleep, connection, mood, and goals.
B. Sleep hygiene: Exploring body-related distress and social pressures without reinforcing appearance-based judgments. / Digital wellbeing: Exploring how online activities affect this adolescent’s sleep, connection, mood, and goals.
C. Sleep hygiene: Exploring how online activities affect this adolescent’s sleep, connection, mood, and goals. / Digital wellbeing: Exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions.
D. Sleep hygiene: Exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions. / Digital wellbeing: Asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either.

0085. An interdisciplinary team reviews a young person aged 10’s case at the family session. The school support specialist recommends responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation. Which course concept best fits?

A. Eating-disorder warning signs
B. Body image
C. Digital wellbeing
D. Nonsuicidal self-injury

0086. In the community youth program, a team asks how a group facilitator can support a young adolescent client. One proposed action is identifying trusted relationships, coping resources, and accessible support that can be activated. Which idea does it represent?

A. Adolescent identity development
B. Sleep hygiene
C. Body image
D. Suicide protective factors

0087. During service review in the clinical planning session, a research trainee describes exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions. for a student aged 9. Which course idea is most applicable?

A. Eating-disorder warning signs
B. Adolescent identity development
C. Nonsuicidal self-injury
D. Sleep hygiene

0088. In a supervision quiz, how should Sleep hygiene be distinguished from Nonsuicidal self-injury?

A. Sleep hygiene: Intentional self-inflicted injury without stated intent to die, requiring compassionate assessment and safety planning. / Nonsuicidal self-injury: Behaviors and environmental practices that support regular, restorative sleep.
B. Sleep hygiene: Behaviors and environmental practices that support regular, restorative sleep. / Nonsuicidal self-injury: The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices.
C. Sleep hygiene: Behaviors and environmental practices that support regular, restorative sleep. / Nonsuicidal self-injury: Intentional self-inflicted injury without stated intent to die, requiring compassionate assessment and safety planning.
D. Sleep hygiene: The balance between digital engagement and health, relationships, sleep, and functioning as experienced by the individual. / Nonsuicidal self-injury: Intentional self-inflicted injury without stated intent to die, requiring compassionate assessment and safety planning.

0089. Which statement accurately contrasts the course concepts Digital wellbeing and Body image?

A. Digital wellbeing: Intentional self-inflicted injury without stated intent to die, requiring compassionate assessment and safety planning. / Body image: Thoughts, feelings, and perceptions concerning one's body, shaped by personal and social influences.
B. Digital wellbeing: The balance between digital engagement and health, relationships, sleep, and functioning as experienced by the individual. / Body image: An evolving process of exploring and integrating personal, social, and cultural understandings of self.
C. Digital wellbeing: The balance between digital engagement and health, relationships, sleep, and functioning as experienced by the individual. / Body image: Thoughts, feelings, and perceptions concerning one's body, shaped by personal and social influences.
D. Digital wellbeing: Thoughts, feelings, and perceptions concerning one's body, shaped by personal and social influences. / Body image: The balance between digital engagement and health, relationships, sleep, and functioning as experienced by the individual.

0090. Choose the term that matches this definition: Thoughts, feelings, and perceptions concerning one's body, shaped by personal and social influences.

A. Peer contagion consideration
B. Adolescent identity development
C. Digital wellbeing
D. Body image

0091. In a supervision quiz, how should Nonsuicidal self-injury be distinguished from Peer contagion consideration?

A. Nonsuicidal self-injury: Intentional self-inflicted injury without stated intent to die, requiring compassionate assessment and safety planning. / Peer contagion consideration: Behavioral, cognitive, and physical indicators that warrant careful assessment and referral to qualified care.
B. Nonsuicidal self-injury: An evolving process of exploring and integrating personal, social, and cultural understandings of self. / Peer contagion consideration: The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices.
C. Nonsuicidal self-injury: The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices. / Peer contagion consideration: Intentional self-inflicted injury without stated intent to die, requiring compassionate assessment and safety planning.
D. Nonsuicidal self-injury: Intentional self-inflicted injury without stated intent to die, requiring compassionate assessment and safety planning. / Peer contagion consideration: The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices.

0092. A preadolescent child is receiving support in the school counseling office. The school counselor is guided by this practice: responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation. Which principle best fits?

A. Digital wellbeing
B. Suicide protective factors
C. Eating-disorder warning signs
D. Sleep hygiene

0093. A student aged 9 and a supervised trainee are reviewing goals in the community youth program. The agreed action is providing respectful space for exploration without forcing a fixed label or timeline. Which principle best accounts for it?

A. Adolescent identity development
B. Eating-disorder warning signs
C. Gender-affirming support
D. Suicide protective factors

0094. Choose the definition pair that correctly explains Sleep hygiene first and Body image second.

A. Sleep hygiene: Thoughts, feelings, and perceptions concerning one's body, shaped by personal and social influences. / Body image: Behaviors and environmental practices that support regular, restorative sleep.
B. Sleep hygiene: Behaviors and environmental practices that support regular, restorative sleep. / Body image: The balance between digital engagement and health, relationships, sleep, and functioning as experienced by the individual.
C. Sleep hygiene: Respectful support that recognizes a young person's expressed gender and attends to safety, dignity, and context. / Body image: Thoughts, feelings, and perceptions concerning one's body, shaped by personal and social influences.
D. Sleep hygiene: Behaviors and environmental practices that support regular, restorative sleep. / Body image: Thoughts, feelings, and perceptions concerning one's body, shaped by personal and social influences.

0095. For a young person aged 18 in the youth advocacy program, a school support specialist makes this practice the immediate priority: identifying trusted relationships, coping resources, and accessible support that can be activated. Which concept fits best?

A. Digital wellbeing
B. Suicide protective factors
C. Developmental psychopathology
D. Sleep hygiene

0096. Choose the term that matches this definition: Intentional self-inflicted injury without stated intent to die, requiring compassionate assessment and safety planning.

A. Adolescent identity development
B. Developmental psychopathology
C. Nonsuicidal self-injury
D. Digital wellbeing

0097. Which option correctly matches each concept to its practice focus: Eating-disorder warning signs and Developmental psychopathology?

A. Eating-disorder warning signs: Providing respectful space for exploration without forcing a fixed label or timeline. / Developmental psychopathology: Examining pathways and turning points rather than treating a current symptom as fixed destiny.
B. Eating-disorder warning signs: Responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation. / Developmental psychopathology: Examining pathways and turning points rather than treating a current symptom as fixed destiny.
C. Eating-disorder warning signs: Responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation. / Developmental psychopathology: Exploring body-related distress and social pressures without reinforcing appearance-based judgments.
D. Eating-disorder warning signs: Examining pathways and turning points rather than treating a current symptom as fixed destiny. / Developmental psychopathology: Responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation.

0098. Choose the response that best puts Eating-disorder warning signs into practice.

A. Using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity.
B. Exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions.
C. Using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior.
D. Responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation.

0099. In the community youth program, a consulting counselor explains why a young person aged 16 would benefit from using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior. Which course concept underpins the explanation?

A. Body image
B. Digital wellbeing
C. Eating-disorder warning signs
D. Peer contagion consideration

0100. Which applied comparison correctly identifies what belongs to Nonsuicidal self-injury versus Peer contagion consideration?

A. Nonsuicidal self-injury: Asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either. / Peer contagion consideration: Using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior.
B. Nonsuicidal self-injury: Using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior. / Peer contagion consideration: Asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either.
C. Nonsuicidal self-injury: Providing respectful space for exploration without forcing a fixed label or timeline. / Peer contagion consideration: Using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior.
D. Nonsuicidal self-injury: Asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either. / Peer contagion consideration: Responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation.

0101. At the counseling practicum, a service navigator reviews whether a plan for a teenage client is appropriate. The relevant practice is exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions. Which concept is tested?

A. Nonsuicidal self-injury
B. Gender-affirming support
C. Eating-disorder warning signs
D. Sleep hygiene

0102. A school support specialist reviews a plan for a client in early adolescence in the youth group. The plan emphasizes examining pathways and turning points rather than treating a current symptom as fixed destiny. Which course idea does this reflect?

A. Sleep hygiene
B. Developmental psychopathology
C. Peer contagion consideration
D. Nonsuicidal self-injury

0103. A support meeting for a high-school student includes a counselor in the school consultation. The practice under consideration is identifying trusted relationships, coping resources, and accessible support that can be activated. Which concept guides it?

A. Adolescent identity development
B. Suicide protective factors
C. Body image
D. Developmental psychopathology

0104. Which pair of actions illustrates Nonsuicidal self-injury and Suicide protective factors, respectively?

A. Nonsuicidal self-injury: Asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either. / Suicide protective factors: Identifying trusted relationships, coping resources, and accessible support that can be activated.
B. Nonsuicidal self-injury: Asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either. / Suicide protective factors: Exploring body-related distress and social pressures without reinforcing appearance-based judgments.
C. Nonsuicidal self-injury: Identifying trusted relationships, coping resources, and accessible support that can be activated. / Suicide protective factors: Asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either.
D. Nonsuicidal self-injury: Providing respectful space for exploration without forcing a fixed label or timeline. / Suicide protective factors: Identifying trusted relationships, coping resources, and accessible support that can be activated.

0105. A service team discusses a client in late adolescence in the youth advocacy program. Their proposed next step is exploring body-related distress and social pressures without reinforcing appearance-based judgments. Which course concept supports it?

A. Nonsuicidal self-injury
B. Gender-affirming support
C. Body image
D. Developmental psychopathology

0106. Choose the practice comparison that best separates Adolescent identity development from Developmental psychopathology.

A. Adolescent identity development: Examining pathways and turning points rather than treating a current symptom as fixed destiny. / Developmental psychopathology: Providing respectful space for exploration without forcing a fixed label or timeline.
B. Adolescent identity development: Providing respectful space for exploration without forcing a fixed label or timeline. / Developmental psychopathology: Using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity.
C. Adolescent identity development: Exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions. / Developmental psychopathology: Examining pathways and turning points rather than treating a current symptom as fixed destiny.
D. Adolescent identity development: Providing respectful space for exploration without forcing a fixed label or timeline. / Developmental psychopathology: Examining pathways and turning points rather than treating a current symptom as fixed destiny.

0107. Which choice aligns each practice with the correct idea, Digital wellbeing or Body image?

A. Digital wellbeing: Asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either. / Body image: Exploring body-related distress and social pressures without reinforcing appearance-based judgments.
B. Digital wellbeing: Exploring body-related distress and social pressures without reinforcing appearance-based judgments. / Body image: Exploring how online activities affect this adolescent's sleep, connection, mood, and goals.
C. Digital wellbeing: Exploring how online activities affect this adolescent's sleep, connection, mood, and goals. / Body image: Exploring body-related distress and social pressures without reinforcing appearance-based judgments.
D. Digital wellbeing: Exploring how online activities affect this adolescent's sleep, connection, mood, and goals. / Body image: Providing respectful space for exploration without forcing a fixed label or timeline.

0108. What is the central meaning of Digital wellbeing?

A. The balance between digital engagement and health, relationships, sleep, and functioning as experienced by the individual.
B. Thoughts, feelings, and perceptions concerning one's body, shaped by personal and social influences.
C. Behavioral, cognitive, and physical indicators that warrant careful assessment and referral to qualified care.
D. Behaviors and environmental practices that support regular, restorative sleep.

0109. Which statement accurately contrasts the course concepts Eating-disorder warning signs and Developmental psychopathology?

A. Eating-disorder warning signs: Behavioral, cognitive, and physical indicators that warrant careful assessment and referral to qualified care. / Developmental psychopathology: A framework studying how typical and atypical developmental processes interact across time and context.
B. Eating-disorder warning signs: A framework studying how typical and atypical developmental processes interact across time and context. / Developmental psychopathology: Behavioral, cognitive, and physical indicators that warrant careful assessment and referral to qualified care.
C. Eating-disorder warning signs: Behavioral, cognitive, and physical indicators that warrant careful assessment and referral to qualified care. / Developmental psychopathology: Thoughts, feelings, and perceptions concerning one's body, shaped by personal and social influences.
D. Eating-disorder warning signs: An evolving process of exploring and integrating personal, social, and cultural understandings of self. / Developmental psychopathology: A framework studying how typical and atypical developmental processes interact across time and context.

0110. Which professional action most closely applies Gender-affirming support?

A. Providing respectful space for exploration without forcing a fixed label or timeline.
B. Asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either.
C. Using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity.
D. Responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation.

0111. A trainee must distinguish how Suicide protective factors and Body image guide practice. Which comparison is accurate?

A. Suicide protective factors: Identifying trusted relationships, coping resources, and accessible support that can be activated. / Body image: Exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions.
B. Suicide protective factors: Identifying trusted relationships, coping resources, and accessible support that can be activated. / Body image: Exploring body-related distress and social pressures without reinforcing appearance-based judgments.
C. Suicide protective factors: Exploring body-related distress and social pressures without reinforcing appearance-based judgments. / Body image: Identifying trusted relationships, coping resources, and accessible support that can be activated.
D. Suicide protective factors: Responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation. / Body image: Exploring body-related distress and social pressures without reinforcing appearance-based judgments.

0112. Which professional action most closely applies Digital wellbeing?

A. Exploring how online activities affect this adolescent's sleep, connection, mood, and goals.
B. Exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions.
C. Exploring body-related distress and social pressures without reinforcing appearance-based judgments.
D. Examining pathways and turning points rather than treating a current symptom as fixed destiny.

0113. Which choice aligns each practice with the correct idea, Sleep hygiene or Digital wellbeing?

A. Sleep hygiene: Exploring how online activities affect this adolescent's sleep, connection, mood, and goals. / Digital wellbeing: Exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions.
B. Sleep hygiene: Exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions. / Digital wellbeing: Exploring how online activities affect this adolescent's sleep, connection, mood, and goals.
C. Sleep hygiene: Exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions. / Digital wellbeing: Asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either.
D. Sleep hygiene: Exploring body-related distress and social pressures without reinforcing appearance-based judgments. / Digital wellbeing: Exploring how online activities affect this adolescent's sleep, connection, mood, and goals.

0114. A case coordinator presents a support plan for a child of elementary-school age at the supervision meeting. Its central feature is using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity. Which concept should be named?

A. Peer contagion consideration
B. Gender-affirming support
C. Adolescent identity development
D. Developmental psychopathology

0115. In a professional consultation about a high-school student, the member of a clinical team describes this response in the community service agency: exploring body-related distress and social pressures without reinforcing appearance-based judgments. Which term is most apt?

A. Developmental psychopathology
B. Body image
C. Adolescent identity development
D. Sleep hygiene

0116. A trainee must distinguish how Gender-affirming support and Developmental psychopathology guide practice. Which comparison is accurate?

A. Gender-affirming support: Examining pathways and turning points rather than treating a current symptom as fixed destiny. / Developmental psychopathology: Using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity.
B. Gender-affirming support: Using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity. / Developmental psychopathology: Examining pathways and turning points rather than treating a current symptom as fixed destiny.
C. Gender-affirming support: Responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation. / Developmental psychopathology: Examining pathways and turning points rather than treating a current symptom as fixed destiny.
D. Gender-affirming support: Using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity. / Developmental psychopathology: Providing respectful space for exploration without forcing a fixed label or timeline.

0117. At the student-support meeting, a school support specialist meets with a older adolescent client. The practice priority is: asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either. Which concept best captures that priority?

A. Nonsuicidal self-injury
B. Developmental psychopathology
C. Adolescent identity development
D. Peer contagion consideration

0118. At the family resource center, a research trainee reviews whether a plan for a young person aged 10 is appropriate. The relevant practice is examining pathways and turning points rather than treating a current symptom as fixed destiny. Which concept is tested?

A. Developmental psychopathology
B. Digital wellbeing
C. Body image
D. Peer contagion consideration

0119. For a young person aged 18 seen in the youth group, the community practitioner recommends a plan built around exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions. Which concept is reflected?

A. Adolescent identity development
B. Suicide protective factors
C. Peer contagion consideration
D. Sleep hygiene

0120. Which choice aligns each practice with the correct idea, Gender-affirming support or Developmental psychopathology?

A. Gender-affirming support: Responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation. / Developmental psychopathology: Examining pathways and turning points rather than treating a current symptom as fixed destiny.
B. Gender-affirming support: Using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity. / Developmental psychopathology: Providing respectful space for exploration without forcing a fixed label or timeline.
C. Gender-affirming support: Examining pathways and turning points rather than treating a current symptom as fixed destiny. / Developmental psychopathology: Using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity.
D. Gender-affirming support: Using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity. / Developmental psychopathology: Examining pathways and turning points rather than treating a current symptom as fixed destiny.

0121. For a older adolescent client seen in the student wellness team, the research trainee recommends a plan built around exploring body-related distress and social pressures without reinforcing appearance-based judgments. Which concept is reflected?

A. Digital wellbeing
B. Body image
C. Developmental psychopathology
D. Sleep hygiene

0122. Which comparison would correct a trainee's misunderstanding of Gender-affirming support versus Developmental psychopathology?

A. Gender-affirming support: Respectful support that recognizes a young person's expressed gender and attends to safety, dignity, and context. / Developmental psychopathology: A framework studying how typical and atypical developmental processes interact across time and context.
B. Gender-affirming support: A framework studying how typical and atypical developmental processes interact across time and context. / Developmental psychopathology: Respectful support that recognizes a young person's expressed gender and attends to safety, dignity, and context.
C. Gender-affirming support: Respectful support that recognizes a young person's expressed gender and attends to safety, dignity, and context. / Developmental psychopathology: An evolving process of exploring and integrating personal, social, and cultural understandings of self.
D. Gender-affirming support: Behavioral, cognitive, and physical indicators that warrant careful assessment and referral to qualified care. / Developmental psychopathology: A framework studying how typical and atypical developmental processes interact across time and context.

0123. A assessment clinician is preparing a follow-up plan for a young person aged 18 in the child guidance clinic. The plan calls for providing respectful space for exploration without forcing a fixed label or timeline. Which concept names this approach?

A. Suicide protective factors
B. Adolescent identity development
C. Digital wellbeing
D. Developmental psychopathology

0124. While supporting a client in late adolescence in the youth group, a family therapist adopts this practice: identifying trusted relationships, coping resources, and accessible support that can be activated. Which concept best explains the choice?

A. Eating-disorder warning signs
B. Adolescent identity development
C. Sleep hygiene
D. Suicide protective factors

0125. A trainee must distinguish how Digital wellbeing and Peer contagion consideration guide practice. Which comparison is accurate?

A. Digital wellbeing: Using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior. / Peer contagion consideration: Exploring how online activities affect this adolescent's sleep, connection, mood, and goals.
B. Digital wellbeing: Exploring how online activities affect this adolescent's sleep, connection, mood, and goals. / Peer contagion consideration: Exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions.
C. Digital wellbeing: Asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either. / Peer contagion consideration: Using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior.
D. Digital wellbeing: Exploring how online activities affect this adolescent's sleep, connection, mood, and goals. / Peer contagion consideration: Using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior.

0126. Which statement most accurately defines Body image?

A. The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices.
B. Behavioral, cognitive, and physical indicators that warrant careful assessment and referral to qualified care.
C. The balance between digital engagement and health, relationships, sleep, and functioning as experienced by the individual.
D. Thoughts, feelings, and perceptions concerning one's body, shaped by personal and social influences.

0127. Which option preserves the correct meaning of both Adolescent identity development and Body image?

A. Adolescent identity development: The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices. / Body image: Thoughts, feelings, and perceptions concerning one's body, shaped by personal and social influences.
B. Adolescent identity development: An evolving process of exploring and integrating personal, social, and cultural understandings of self. / Body image: Thoughts, feelings, and perceptions concerning one's body, shaped by personal and social influences.
C. Adolescent identity development: An evolving process of exploring and integrating personal, social, and cultural understandings of self. / Body image: Personal and contextual supports that can reduce risk or strengthen reasons and pathways for safety.
D. Adolescent identity development: Thoughts, feelings, and perceptions concerning one's body, shaped by personal and social influences. / Body image: An evolving process of exploring and integrating personal, social, and cultural understandings of self.

0128. Which course concept is defined as follows: The balance between digital engagement and health, relationships, sleep, and functioning as experienced by the individual.

A. Eating-disorder warning signs
B. Developmental psychopathology
C. Suicide protective factors
D. Digital wellbeing

0129. What is the central meaning of Gender-affirming support?

A. Thoughts, feelings, and perceptions concerning one's body, shaped by personal and social influences.
B. The balance between digital engagement and health, relationships, sleep, and functioning as experienced by the individual.
C. Respectful support that recognizes a young person's expressed gender and attends to safety, dignity, and context.
D. An evolving process of exploring and integrating personal, social, and cultural understandings of self.

0130. Select the best explanation of Peer contagion consideration.

A. The balance between digital engagement and health, relationships, sleep, and functioning as experienced by the individual.
B. Thoughts, feelings, and perceptions concerning one's body, shaped by personal and social influences.
C. Behaviors and environmental practices that support regular, restorative sleep.
D. The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices.

0131. Which pair of actions illustrates Nonsuicidal self-injury and Body image, respectively?

A. Nonsuicidal self-injury: Using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior. / Body image: Exploring body-related distress and social pressures without reinforcing appearance-based judgments.
B. Nonsuicidal self-injury: Asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either. / Body image: Exploring body-related distress and social pressures without reinforcing appearance-based judgments.
C. Nonsuicidal self-injury: Asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either. / Body image: Providing respectful space for exploration without forcing a fixed label or timeline.
D. Nonsuicidal self-injury: Exploring body-related distress and social pressures without reinforcing appearance-based judgments. / Body image: Asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either.

0132. While supporting a child aged 6 in the school consultation, a caregiver working with a counselor adopts this practice: asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either. Which concept best explains the choice?

A. Eating-disorder warning signs
B. Digital wellbeing
C. Nonsuicidal self-injury
D. Gender-affirming support

0133. Which statement most accurately defines Adolescent identity development?

A. Behavioral, cognitive, and physical indicators that warrant careful assessment and referral to qualified care.
B. An evolving process of exploring and integrating personal, social, and cultural understandings of self.
C. Personal and contextual supports that can reduce risk or strengthen reasons and pathways for safety.
D. The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices.

0134. Which choice aligns each practice with the correct idea, Eating-disorder warning signs or Peer contagion consideration?

A. Eating-disorder warning signs: Using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior. / Peer contagion consideration: Responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation.
B. Eating-disorder warning signs: Asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either. / Peer contagion consideration: Using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior.
C. Eating-disorder warning signs: Responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation. / Peer contagion consideration: Exploring how online activities affect this adolescent's sleep, connection, mood, and goals.
D. Eating-disorder warning signs: Responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation. / Peer contagion consideration: Using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior.

0135. A service team discusses a young person aged 13 in the behavior-support review. Their proposed next step is identifying trusted relationships, coping resources, and accessible support that can be activated. Which course concept supports it?

A. Suicide protective factors
B. Gender-affirming support
C. Digital wellbeing
D. Sleep hygiene

0136. A clinical supervisor reviews a plan for a young person aged 18 in the school consultation. The plan emphasizes using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior. Which course idea does this reflect?

A. Sleep hygiene
B. Digital wellbeing
C. Body image
D. Peer contagion consideration

0137. How should a practitioner distinguish the applications of Sleep hygiene and Suicide protective factors?

A. Sleep hygiene: Identifying trusted relationships, coping resources, and accessible support that can be activated. / Suicide protective factors: Exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions.
B. Sleep hygiene: Using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior. / Suicide protective factors: Identifying trusted relationships, coping resources, and accessible support that can be activated.
C. Sleep hygiene: Exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions. / Suicide protective factors: Examining pathways and turning points rather than treating a current symptom as fixed destiny.
D. Sleep hygiene: Exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions. / Suicide protective factors: Identifying trusted relationships, coping resources, and accessible support that can be activated.

0138. Which named construct is captured by this account? Behaviors and environmental practices that support regular, restorative sleep.

A. Nonsuicidal self-injury
B. Sleep hygiene
C. Eating-disorder warning signs
D. Peer contagion consideration

0139. Choose the response that best puts Adolescent identity development into practice.

A. Exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions.
B. Examining pathways and turning points rather than treating a current symptom as fixed destiny.
C. Providing respectful space for exploration without forcing a fixed label or timeline.
D. Exploring how online activities affect this adolescent's sleep, connection, mood, and goals.

0140. Which paired example correctly applies Sleep hygiene first and Eating-disorder warning signs second?

A. Sleep hygiene: Responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation. / Eating-disorder warning signs: Exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions.
B. Sleep hygiene: Exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions. / Eating-disorder warning signs: Exploring how online activities affect this adolescent's sleep, connection, mood, and goals.
C. Sleep hygiene: Examining pathways and turning points rather than treating a current symptom as fixed destiny. / Eating-disorder warning signs: Responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation.
D. Sleep hygiene: Exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions. / Eating-disorder warning signs: Responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation.

0141. Which comparison would correct a trainee's misunderstanding of Sleep hygiene versus Body image?

A. Sleep hygiene: Behaviors and environmental practices that support regular, restorative sleep. / Body image: The balance between digital engagement and health, relationships, sleep, and functioning as experienced by the individual.
B. Sleep hygiene: Respectful support that recognizes a young person's expressed gender and attends to safety, dignity, and context. / Body image: Thoughts, feelings, and perceptions concerning one's body, shaped by personal and social influences.
C. Sleep hygiene: Behaviors and environmental practices that support regular, restorative sleep. / Body image: Thoughts, feelings, and perceptions concerning one's body, shaped by personal and social influences.
D. Sleep hygiene: Thoughts, feelings, and perceptions concerning one's body, shaped by personal and social influences. / Body image: Behaviors and environmental practices that support regular, restorative sleep.

0142. A supervisor asks for an applied contrast between Eating-disorder warning signs and Peer contagion consideration. Which option fits?

A. Eating-disorder warning signs: Asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either. / Peer contagion consideration: Using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior.
B. Eating-disorder warning signs: Responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation. / Peer contagion consideration: Exploring how online activities affect this adolescent's sleep, connection, mood, and goals.
C. Eating-disorder warning signs: Using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior. / Peer contagion consideration: Responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation.
D. Eating-disorder warning signs: Responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation. / Peer contagion consideration: Using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior.

0143. Which option preserves the correct meaning of both Sleep hygiene and Peer contagion consideration?

A. Sleep hygiene: Respectful support that recognizes a young person's expressed gender and attends to safety, dignity, and context. / Peer contagion consideration: The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices.
B. Sleep hygiene: Behaviors and environmental practices that support regular, restorative sleep. / Peer contagion consideration: The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices.
C. Sleep hygiene: Behaviors and environmental practices that support regular, restorative sleep. / Peer contagion consideration: Personal and contextual supports that can reduce risk or strengthen reasons and pathways for safety.
D. Sleep hygiene: The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices. / Peer contagion consideration: Behaviors and environmental practices that support regular, restorative sleep.

0144. A case conference reviews a research trainee's work with a child of elementary-school age in the community youth program: exploring how online activities affect this adolescent's sleep, connection, mood, and goals. Which principle is central?

A. Digital wellbeing
B. Nonsuicidal self-injury
C. Peer contagion consideration
D. Gender-affirming support

0145. In a supervision quiz, how should Eating-disorder warning signs be distinguished from Gender-affirming support?

A. Eating-disorder warning signs: Intentional self-inflicted injury without stated intent to die, requiring compassionate assessment and safety planning. / Gender-affirming support: Respectful support that recognizes a young person's expressed gender and attends to safety, dignity, and context.
B. Eating-disorder warning signs: Behavioral, cognitive, and physical indicators that warrant careful assessment and referral to qualified care. / Gender-affirming support: Respectful support that recognizes a young person's expressed gender and attends to safety, dignity, and context.
C. Eating-disorder warning signs: Behavioral, cognitive, and physical indicators that warrant careful assessment and referral to qualified care. / Gender-affirming support: A framework studying how typical and atypical developmental processes interact across time and context.
D. Eating-disorder warning signs: Respectful support that recognizes a young person's expressed gender and attends to safety, dignity, and context. / Gender-affirming support: Behavioral, cognitive, and physical indicators that warrant careful assessment and referral to qualified care.

0146. Which pair of actions illustrates Sleep hygiene and Suicide protective factors, respectively?

A. Sleep hygiene: Using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior. / Suicide protective factors: Identifying trusted relationships, coping resources, and accessible support that can be activated.
B. Sleep hygiene: Exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions. / Suicide protective factors: Identifying trusted relationships, coping resources, and accessible support that can be activated.
C. Sleep hygiene: Exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions. / Suicide protective factors: Examining pathways and turning points rather than treating a current symptom as fixed destiny.
D. Sleep hygiene: Identifying trusted relationships, coping resources, and accessible support that can be activated. / Suicide protective factors: Exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions.

0147. In the student wellness team, a school-based clinician is considering this approach for a young person aged 10: asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either. Which framework does it represent?

A. Adolescent identity development
B. Suicide protective factors
C. Nonsuicidal self-injury
D. Developmental psychopathology

0148. A service navigator describes an intervention for a student aged 17 in the supervision meeting, centered on exploring body-related distress and social pressures without reinforcing appearance-based judgments. Which named idea is most relevant?

A. Body image
B. Nonsuicidal self-injury
C. Suicide protective factors
D. Peer contagion consideration

0149. Which course concept is defined as follows: Behaviors and environmental practices that support regular, restorative sleep.

A. Nonsuicidal self-injury
B. Sleep hygiene
C. Adolescent identity development
D. Developmental psychopathology

0150. A support meeting for a student aged 17 includes a behavior specialist in the community youth program. The practice under consideration is asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either. Which concept guides it?

A. Gender-affirming support
B. Nonsuicidal self-injury
C. Body image
D. Eating-disorder warning signs

0151. At the school consultation, a community practitioner reviews whether a plan for a preadolescent child is appropriate. The relevant practice is exploring body-related distress and social pressures without reinforcing appearance-based judgments. Which concept is tested?

A. Peer contagion consideration
B. Digital wellbeing
C. Suicide protective factors
D. Body image

0152. A family therapist presents a support plan for a child aged 8 at the community service agency. Its central feature is exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions. Which concept should be named?

A. Suicide protective factors
B. Adolescent identity development
C. Sleep hygiene
D. Peer contagion consideration

0153. A student confuses Nonsuicidal self-injury with Suicide protective factors. Which explanation most accurately separates them?

A. Nonsuicidal self-injury: An evolving process of exploring and integrating personal, social, and cultural understandings of self. / Suicide protective factors: Personal and contextual supports that can reduce risk or strengthen reasons and pathways for safety.
B. Nonsuicidal self-injury: Intentional self-inflicted injury without stated intent to die, requiring compassionate assessment and safety planning. / Suicide protective factors: Personal and contextual supports that can reduce risk or strengthen reasons and pathways for safety.
C. Nonsuicidal self-injury: Intentional self-inflicted injury without stated intent to die, requiring compassionate assessment and safety planning. / Suicide protective factors: Thoughts, feelings, and perceptions concerning one’s body, shaped by personal and social influences.
D. Nonsuicidal self-injury: Personal and contextual supports that can reduce risk or strengthen reasons and pathways for safety. / Suicide protective factors: Intentional self-inflicted injury without stated intent to die, requiring compassionate assessment and safety planning.

0154. During work in the supervision meeting, a school counselor identifies this need: exploring how online activities affect this adolescent’s sleep, connection, mood, and goals. Which idea should guide the response?

A. Adolescent identity development
B. Digital wellbeing
C. Body image
D. Sleep hygiene

0155. In the student wellness team, a team asks how a consulting counselor can support a young person aged 13. One proposed action is examining pathways and turning points rather than treating a current symptom as fixed destiny. Which idea does it represent?

A. Eating-disorder warning signs
B. Adolescent identity development
C. Body image
D. Developmental psychopathology

0156. In a supervision quiz, how should Eating-disorder warning signs be distinguished from Peer contagion consideration?

A. Eating-disorder warning signs: Behavioral, cognitive, and physical indicators that warrant careful assessment and referral to qualified care. / Peer contagion consideration: The balance between digital engagement and health, relationships, sleep, and functioning as experienced by the individual.
B. Eating-disorder warning signs: The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices. / Peer contagion consideration: Behavioral, cognitive, and physical indicators that warrant careful assessment and referral to qualified care.
C. Eating-disorder warning signs: Intentional self-inflicted injury without stated intent to die, requiring compassionate assessment and safety planning. / Peer contagion consideration: The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices.
D. Eating-disorder warning signs: Behavioral, cognitive, and physical indicators that warrant careful assessment and referral to qualified care. / Peer contagion consideration: The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices.

0157. Which option is the clearest practical expression of Body image?

A. Exploring how online activities affect this adolescent's sleep, connection, mood, and goals.
B. Exploring body-related distress and social pressures without reinforcing appearance-based judgments.
C. Asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either.
D. Exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions.

0158. In the telehealth session, a youth worker explains why a student aged 17 would benefit from exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions. Which course concept underpins the explanation?

A. Suicide protective factors
B. Sleep hygiene
C. Developmental psychopathology
D. Adolescent identity development

0159. Which option correctly matches each concept to its practice focus: Suicide protective factors and Digital wellbeing?

A. Suicide protective factors: Identifying trusted relationships, coping resources, and accessible support that can be activated. / Digital wellbeing: Using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior.
B. Suicide protective factors: Using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity. / Digital wellbeing: Exploring how online activities affect this adolescent's sleep, connection, mood, and goals.
C. Suicide protective factors: Exploring how online activities affect this adolescent's sleep, connection, mood, and goals. / Digital wellbeing: Identifying trusted relationships, coping resources, and accessible support that can be activated.
D. Suicide protective factors: Identifying trusted relationships, coping resources, and accessible support that can be activated. / Digital wellbeing: Exploring how online activities affect this adolescent's sleep, connection, mood, and goals.

0160. A case conference asks for a distinction between Sleep hygiene and Peer contagion consideration. Which answer is sound?

A. Sleep hygiene: Behaviors and environmental practices that support regular, restorative sleep. / Peer contagion consideration: The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices.
B. Sleep hygiene: Behaviors and environmental practices that support regular, restorative sleep. / Peer contagion consideration: Personal and contextual supports that can reduce risk or strengthen reasons and pathways for safety.
C. Sleep hygiene: Respectful support that recognizes a young person's expressed gender and attends to safety, dignity, and context. / Peer contagion consideration: The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices.
D. Sleep hygiene: The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices. / Peer contagion consideration: Behaviors and environmental practices that support regular, restorative sleep.

0161. In the behavior-support review, a consulting counselor describes the most appropriate support for a student aged 9 as asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either. Which framework is being applied?

A. Developmental psychopathology
B. Nonsuicidal self-injury
C. Adolescent identity development
D. Peer contagion consideration

0162. While consulting in the community mental-health service, a consultant supports a client in late adolescence by using this approach: examining pathways and turning points rather than treating a current symptom as fixed destiny. Which concept is being applied?

A. Adolescent identity development
B. Body image
C. Sleep hygiene
D. Developmental psychopathology

0163. In the supervision meeting, a school counselor explains why a young person aged 13 would benefit from exploring how online activities affect this adolescent's sleep, connection, mood, and goals. Which course concept underpins the explanation?

A. Body image
B. Digital wellbeing
C. Eating-disorder warning signs
D. Sleep hygiene

0164. Choose the practice comparison that best separates Body image from Peer contagion consideration.

A. Body image: Exploring body-related distress and social pressures without reinforcing appearance-based judgments. / Peer contagion consideration: Using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity.
B. Body image: Using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior. / Peer contagion consideration: Exploring body-related distress and social pressures without reinforcing appearance-based judgments.
C. Body image: Asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either. / Peer contagion consideration: Using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior.
D. Body image: Exploring body-related distress and social pressures without reinforcing appearance-based judgments. / Peer contagion consideration: Using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior.

0165. A youth worker is explaining a choice to a child aged 11 and caregiver in the family resource center. The choice centers on identifying trusted relationships, coping resources, and accessible support that can be activated. Which idea is illustrated?

A. Developmental psychopathology
B. Nonsuicidal self-injury
C. Sleep hygiene
D. Suicide protective factors

0166. A parent educator presents a support plan for a older adolescent client at the outpatient clinic. Its central feature is identifying trusted relationships, coping resources, and accessible support that can be activated. Which concept should be named?

A. Eating-disorder warning signs
B. Gender-affirming support
C. Suicide protective factors
D. Digital wellbeing

0167. A parent educator presents a support plan for a preadolescent child at the counseling practicum. Its central feature is using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior. Which concept should be named?

A. Developmental psychopathology
B. Eating-disorder warning signs
C. Peer contagion consideration
D. Digital wellbeing

0168. Which statement shows a sound practice-level distinction between Sleep hygiene and Developmental psychopathology?

A. Sleep hygiene: Examining pathways and turning points rather than treating a current symptom as fixed destiny. / Developmental psychopathology: Exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions.
B. Sleep hygiene: Using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior. / Developmental psychopathology: Examining pathways and turning points rather than treating a current symptom as fixed destiny.
C. Sleep hygiene: Exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions. / Developmental psychopathology: Examining pathways and turning points rather than treating a current symptom as fixed destiny.
D. Sleep hygiene: Exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions. / Developmental psychopathology: Exploring how online activities affect this adolescent's sleep, connection, mood, and goals.

0169. At a case-planning meeting, the behavior specialist proposes exploring how online activities affect this adolescent's sleep, connection, mood, and goals. for a child aged 11 seen in the multidisciplinary case conference. Which concept does this illustrate?

A. Developmental psychopathology
B. Peer contagion consideration
C. Digital wellbeing
D. Body image

0170. Which statement accurately contrasts the course concepts Digital wellbeing and Peer contagion consideration?

A. Digital wellbeing: The balance between digital engagement and health, relationships, sleep, and functioning as experienced by the individual. / Peer contagion consideration: The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices.
B. Digital wellbeing: The balance between digital engagement and health, relationships, sleep, and functioning as experienced by the individual. / Peer contagion consideration: Behaviors and environmental practices that support regular, restorative sleep.
C. Digital wellbeing: Intentional self-inflicted injury without stated intent to die, requiring compassionate assessment and safety planning. / Peer contagion consideration: The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices.
D. Digital wellbeing: The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices. / Peer contagion consideration: The balance between digital engagement and health, relationships, sleep, and functioning as experienced by the individual.

0171. In a case note about a preadolescent child, a assessment clinician working in the community mental-health service records this priority: exploring how online activities affect this adolescent's sleep, connection, mood, and goals. What principle is reflected?

A. Gender-affirming support
B. Eating-disorder warning signs
C. Digital wellbeing
D. Adolescent identity development

0172. In the school consultation, a team asks how a consulting counselor can support a school-age child. One proposed action is exploring how online activities affect this adolescent's sleep, connection, mood, and goals. Which idea does it represent?

A. Gender-affirming support
B. Nonsuicidal self-injury
C. Digital wellbeing
D. Body image

0173. For a middle-school student in the school-based service, a behavior specialist makes this practice the immediate priority: providing respectful space for exploration without forcing a fixed label or timeline. Which concept fits best?

A. Gender-affirming support
B. Adolescent identity development
C. Developmental psychopathology
D. Peer contagion consideration

0174. Which named construct is captured by this account? Personal and contextual supports that can reduce risk or strengthen reasons and pathways for safety.

A. Peer contagion consideration
B. Eating-disorder warning signs
C. Suicide protective factors
D. Nonsuicidal self-injury

0175. A doctoral student reads the following description. Which concept does it define? Personal and contextual supports that can reduce risk or strengthen reasons and pathways for safety.

A. Body image
B. Peer contagion consideration
C. Sleep hygiene
D. Suicide protective factors

0176. Choose the practice comparison that best separates Sleep hygiene from Gender-affirming support.

A. Sleep hygiene: Using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity. / Gender-affirming support: Exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions.
B. Sleep hygiene: Asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either. / Gender-affirming support: Using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity.
C. Sleep hygiene: Exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions. / Gender-affirming support: Responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation.
D. Sleep hygiene: Exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions. / Gender-affirming support: Using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity.

0177. Choose the response that best puts Sleep hygiene into practice.

A. Responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation.
B. Identifying trusted relationships, coping resources, and accessible support that can be activated.
C. Exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions.
D. Asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either.

0178. For a client in early adolescence in the outpatient clinic, a play therapist makes this practice the immediate priority: exploring how online activities affect this adolescent's sleep, connection, mood, and goals. Which concept fits best?

A. Digital wellbeing
B. Body image
C. Gender-affirming support
D. Developmental psychopathology

0179. A school support specialist is asked to evaluate a proposed service for a client in early adolescence in the youth group. The defining feature is examining pathways and turning points rather than treating a current symptom as fixed destiny. Which concept fits?

A. Body image
B. Peer contagion consideration
C. Developmental psychopathology
D. Adolescent identity development

0180. A case conference asks for a distinction between Body image and Eating-disorder warning signs. Which answer is sound?

A. Body image: Behavioral, cognitive, and physical indicators that warrant careful assessment and referral to qualified care. / Eating-disorder warning signs: Thoughts, feelings, and perceptions concerning one's body, shaped by personal and social influences.
B. Body image: Thoughts, feelings, and perceptions concerning one's body, shaped by personal and social influences. / Eating-disorder warning signs: Behavioral, cognitive, and physical indicators that warrant careful assessment and referral to qualified care.
C. Body image: Respectful support that recognizes a young person's expressed gender and attends to safety, dignity, and context. / Eating-disorder warning signs: Behavioral, cognitive, and physical indicators that warrant careful assessment and referral to qualified care.
D. Body image: Thoughts, feelings, and perceptions concerning one's body, shaped by personal and social influences. / Eating-disorder warning signs: A framework studying how typical and atypical developmental processes interact across time and context.

0181. A supervisor asks how Nonsuicidal self-injury would appear in practice. Which choice should be selected?

A. Asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either.
B. Using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior.
C. Responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation.
D. Providing respectful space for exploration without forcing a fixed label or timeline.

0182. How should a practitioner distinguish the applications of Digital wellbeing and Gender-affirming support?

A. Digital wellbeing: Exploring how online activities affect this adolescent's sleep, connection, mood, and goals. / Gender-affirming support: Using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity.
B. Digital wellbeing: Using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity. / Gender-affirming support: Exploring how online activities affect this adolescent's sleep, connection, mood, and goals.
C. Digital wellbeing: Exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions. / Gender-affirming support: Using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity.
D. Digital wellbeing: Exploring how online activities affect this adolescent's sleep, connection, mood, and goals. / Gender-affirming support: Examining pathways and turning points rather than treating a current symptom as fixed destiny.

0183. Which option correctly matches each concept to its practice focus: Suicide protective factors and Body image?

A. Suicide protective factors: Responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation. / Body image: Exploring body-related distress and social pressures without reinforcing appearance-based judgments.
B. Suicide protective factors: Identifying trusted relationships, coping resources, and accessible support that can be activated. / Body image: Exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions.
C. Suicide protective factors: Identifying trusted relationships, coping resources, and accessible support that can be activated. / Body image: Exploring body-related distress and social pressures without reinforcing appearance-based judgments.
D. Suicide protective factors: Exploring body-related distress and social pressures without reinforcing appearance-based judgments. / Body image: Identifying trusted relationships, coping resources, and accessible support that can be activated.

0184. Which option preserves the correct meaning of both Suicide protective factors and Eating-disorder warning signs?

A. Suicide protective factors: Behavioral, cognitive, and physical indicators that warrant careful assessment and referral to qualified care. / Eating-disorder warning signs: Personal and contextual supports that can reduce risk or strengthen reasons and pathways for safety.
B. Suicide protective factors: The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices. / Eating-disorder warning signs: Behavioral, cognitive, and physical indicators that warrant careful assessment and referral to qualified care.
C. Suicide protective factors: Personal and contextual supports that can reduce risk or strengthen reasons and pathways for safety. / Eating-disorder warning signs: An evolving process of exploring and integrating personal, social, and cultural understandings of self.
D. Suicide protective factors: Personal and contextual supports that can reduce risk or strengthen reasons and pathways for safety. / Eating-disorder warning signs: Behavioral, cognitive, and physical indicators that warrant careful assessment and referral to qualified care.

0185. Consider a young person aged 16 receiving help in the community service agency. The school counselor focuses on identifying trusted relationships, coping resources, and accessible support that can be activated. Which term best describes the guiding idea?

A. Nonsuicidal self-injury
B. Digital wellbeing
C. Suicide protective factors
D. Sleep hygiene

0186. Select the best explanation of Developmental psychopathology.

A. The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices.
B. Behavioral, cognitive, and physical indicators that warrant careful assessment and referral to qualified care.
C. Personal and contextual supports that can reduce risk or strengthen reasons and pathways for safety.
D. A framework studying how typical and atypical developmental processes interact across time and context.

0187. A member of a clinical team prepares for a session in the counseling practicum with a child aged 8. The intended approach is asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either. Which concept is most relevant?

A. Peer contagion consideration
B. Adolescent identity development
C. Nonsuicidal self-injury
D. Digital wellbeing

0188. Which description belongs with the term Eating-disorder warning signs?

A. Behavioral, cognitive, and physical indicators that warrant careful assessment and referral to qualified care.
B. A framework studying how typical and atypical developmental processes interact across time and context.
C. The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices.
D. Behaviors and environmental practices that support regular, restorative sleep.

0189. While consulting in the behavior-support review, a consultant supports a student aged 17 by using this approach: exploring how online activities affect this adolescent's sleep, connection, mood, and goals. Which concept is being applied?

A. Peer contagion consideration
B. Suicide protective factors
C. Nonsuicidal self-injury
D. Digital wellbeing

0190. Which choice aligns each practice with the correct idea, Eating-disorder warning signs or Gender-affirming support?

A. Eating-disorder warning signs: Asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either. / Gender-affirming support: Using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity.
B. Eating-disorder warning signs: Using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity. / Gender-affirming support: Responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation.
C. Eating-disorder warning signs: Responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation. / Gender-affirming support: Examining pathways and turning points rather than treating a current symptom as fixed destiny.
D. Eating-disorder warning signs: Responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation. / Gender-affirming support: Using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity.

0191. A doctoral student reads the following description. Which concept does it define? The balance between digital engagement and health, relationships, sleep, and functioning as experienced by the individual.

A. Developmental psychopathology
B. Sleep hygiene
C. Digital wellbeing
D. Body image

0192. A case conference reviews a service navigator's work with a child aged 14 in the youth group: responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation. Which principle is central?

A. Eating-disorder warning signs
B. Nonsuicidal self-injury
C. Body image
D. Peer contagion consideration

0193. While supporting a young person aged 13 in the community youth program, a school-based clinician adopts this practice: exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions. Which concept best explains the choice?

A. Digital wellbeing
B. Sleep hygiene
C. Gender-affirming support
D. Nonsuicidal self-injury

0194. While supporting a young person aged 18 in the school counseling office, a case coordinator adopts this practice: examining pathways and turning points rather than treating a current symptom as fixed destiny. Which concept best explains the choice?

A. Peer contagion consideration
B. Suicide protective factors
C. Body image
D. Developmental psychopathology

0195. Which comparison correctly distinguishes Suicide protective factors from Eating-disorder warning signs?

A. Suicide protective factors: Personal and contextual supports that can reduce risk or strengthen reasons and pathways for safety. / Eating-disorder warning signs: Behavioral, cognitive, and physical indicators that warrant careful assessment and referral to qualified care.
B. Suicide protective factors: Personal and contextual supports that can reduce risk or strengthen reasons and pathways for safety. / Eating-disorder warning signs: An evolving process of exploring and integrating personal, social, and cultural understandings of self.
C. Suicide protective factors: The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices. / Eating-disorder warning signs: Behavioral, cognitive, and physical indicators that warrant careful assessment and referral to qualified care.
D. Suicide protective factors: Behavioral, cognitive, and physical indicators that warrant careful assessment and referral to qualified care. / Eating-disorder warning signs: Personal and contextual supports that can reduce risk or strengthen reasons and pathways for safety.

0196. In a supervision quiz, how should Digital wellbeing be distinguished from Peer contagion consideration?

A. Digital wellbeing: The balance between digital engagement and health, relationships, sleep, and functioning as experienced by the individual. / Peer contagion consideration: The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices.
B. Digital wellbeing: The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices. / Peer contagion consideration: The balance between digital engagement and health, relationships, sleep, and functioning as experienced by the individual.
C. Digital wellbeing: The balance between digital engagement and health, relationships, sleep, and functioning as experienced by the individual. / Peer contagion consideration: Behaviors and environmental practices that support regular, restorative sleep.
D. Digital wellbeing: Intentional self-inflicted injury without stated intent to die, requiring compassionate assessment and safety planning. / Peer contagion consideration: The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices.

0197. A consulting counselor is asked to justify a plan for a older adolescent client in the school-based service. It calls for responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation. Which concept provides the rationale?

A. Developmental psychopathology
B. Body image
C. Eating-disorder warning signs
D. Nonsuicidal self-injury

0198. A supervisor asks for an applied contrast between Body image and Gender-affirming support. Which option fits?

A. Body image: Using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior. / Gender-affirming support: Using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity.
B. Body image: Using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity. / Gender-affirming support: Exploring body-related distress and social pressures without reinforcing appearance-based judgments.
C. Body image: Exploring body-related distress and social pressures without reinforcing appearance-based judgments. / Gender-affirming support: Using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity.
D. Body image: Exploring body-related distress and social pressures without reinforcing appearance-based judgments. / Gender-affirming support: Examining pathways and turning points rather than treating a current symptom as fixed destiny.

0199. Which option is the clearest practical expression of Developmental psychopathology?

A. Using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity.
B. Providing respectful space for exploration without forcing a fixed label or timeline.
C. Exploring body-related distress and social pressures without reinforcing appearance-based judgments.
D. Examining pathways and turning points rather than treating a current symptom as fixed destiny.

0200. In the clinical planning session, the agreed focus for a community practitioner working with a teenage client is responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation. Which concept names this focus?

A. Peer contagion consideration
B. Eating-disorder warning signs
C. Body image
D. Nonsuicidal self-injury

0201. A case conference asks for a distinction between Digital wellbeing and Peer contagion consideration. Which answer is sound?

A. Digital wellbeing: Intentional self-inflicted injury without stated intent to die, requiring compassionate assessment and safety planning. / Peer contagion consideration: The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices.
B. Digital wellbeing: The balance between digital engagement and health, relationships, sleep, and functioning as experienced by the individual. / Peer contagion consideration: The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices.
C. Digital wellbeing: The balance between digital engagement and health, relationships, sleep, and functioning as experienced by the individual. / Peer contagion consideration: Behaviors and environmental practices that support regular, restorative sleep.
D. Digital wellbeing: The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices. / Peer contagion consideration: The balance between digital engagement and health, relationships, sleep, and functioning as experienced by the individual.

0202. How are Body image and Eating-disorder warning signs most accurately differentiated in this curriculum?

A. Body image: Thoughts, feelings, and perceptions concerning one's body, shaped by personal and social influences. / Eating-disorder warning signs: A framework studying how typical and atypical developmental processes interact across time and context.
B. Body image: Respectful support that recognizes a young person's expressed gender and attends to safety, dignity, and context. / Eating-disorder warning signs: Behavioral, cognitive, and physical indicators that warrant careful assessment and referral to qualified care.
C. Body image: Behavioral, cognitive, and physical indicators that warrant careful assessment and referral to qualified care. / Eating-disorder warning signs: Thoughts, feelings, and perceptions concerning one's body, shaped by personal and social influences.
D. Body image: Thoughts, feelings, and perceptions concerning one's body, shaped by personal and social influences. / Eating-disorder warning signs: Behavioral, cognitive, and physical indicators that warrant careful assessment and referral to qualified care.

0203. Which applied comparison correctly identifies what belongs to Sleep hygiene versus Eating-disorder warning signs?

A. Sleep hygiene: Examining pathways and turning points rather than treating a current symptom as fixed destiny. / Eating-disorder warning signs: Responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation.
B. Sleep hygiene: Responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation. / Eating-disorder warning signs: Exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions.
C. Sleep hygiene: Exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions. / Eating-disorder warning signs: Responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation.
D. Sleep hygiene: Exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions. / Eating-disorder warning signs: Exploring how online activities affect this adolescent's sleep, connection, mood, and goals.

0204. A supervisor asks how Digital wellbeing would appear in practice. Which choice should be selected?

A. Examining pathways and turning points rather than treating a current symptom as fixed destiny.
B. Responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation.
C. Providing respectful space for exploration without forcing a fixed label or timeline.
D. Exploring how online activities affect this adolescent's sleep, connection, mood, and goals.

0205. Choose the definition pair that correctly explains Adolescent identity development first and Digital wellbeing second.

A. Adolescent identity development: Respectful support that recognizes a young person's expressed gender and attends to safety, dignity, and context. / Digital wellbeing: The balance between digital engagement and health, relationships, sleep, and functioning as experienced by the individual.
B. Adolescent identity development: The balance between digital engagement and health, relationships, sleep, and functioning as experienced by the individual. / Digital wellbeing: An evolving process of exploring and integrating personal, social, and cultural understandings of self.
C. Adolescent identity development: An evolving process of exploring and integrating personal, social, and cultural understandings of self. / Digital wellbeing: Intentional self-inflicted injury without stated intent to die, requiring compassionate assessment and safety planning.
D. Adolescent identity development: An evolving process of exploring and integrating personal, social, and cultural understandings of self. / Digital wellbeing: The balance between digital engagement and health, relationships, sleep, and functioning as experienced by the individual.

0206. Which comparison would correct a trainee’s misunderstanding of Body image versus Eating-disorder warning signs?

A. Body image: Respectful support that recognizes a young person’s expressed gender and attends to safety, dignity, and context. / Eating-disorder warning signs: Behavioral, cognitive, and physical indicators that warrant careful assessment and referral to qualified care.
B. Body image: Thoughts, feelings, and perceptions concerning one’s body, shaped by personal and social influences. / Eating-disorder warning signs: Behavioral, cognitive, and physical indicators that warrant careful assessment and referral to qualified care.
C. Body image: Thoughts, feelings, and perceptions concerning one’s body, shaped by personal and social influences. / Eating-disorder warning signs: A framework studying how typical and atypical developmental processes interact across time and context.
D. Body image: Behavioral, cognitive, and physical indicators that warrant careful assessment and referral to qualified care. / Eating-disorder warning signs: Thoughts, feelings, and perceptions concerning one’s body, shaped by personal and social influences.

0207. At the behavior-support review, a clinical supervisor meets with a child of elementary-school age. The practice priority is: responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation. Which concept best captures that priority?

A. Eating-disorder warning signs
B. Developmental psychopathology
C. Sleep hygiene
D. Peer contagion consideration

0208. A group facilitator is explaining a choice to a child aged 7 and caregiver in the student wellness team. The choice centers on exploring how online activities affect this adolescent’s sleep, connection, mood, and goals. Which idea is illustrated?

A. Eating-disorder warning signs
B. Body image
C. Peer contagion consideration
D. Digital wellbeing

0209. Which statement shows a sound practice-level distinction between Nonsuicidal self-injury and Body image?

A. Nonsuicidal self-injury: Asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either. / Body image: Exploring body-related distress and social pressures without reinforcing appearance-based judgments.
B. Nonsuicidal self-injury: Asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either. / Body image: Providing respectful space for exploration without forcing a fixed label or timeline.
C. Nonsuicidal self-injury: Using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior. / Body image: Exploring body-related distress and social pressures without reinforcing appearance-based judgments.
D. Nonsuicidal self-injury: Exploring body-related distress and social pressures without reinforcing appearance-based judgments. / Body image: Asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either.

0210. Which paired example correctly applies Digital wellbeing first and Peer contagion consideration second?

A. Digital wellbeing: Using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior. / Peer contagion consideration: Exploring how online activities affect this adolescent’s sleep, connection, mood, and goals.
B. Digital wellbeing: Exploring how online activities affect this adolescent’s sleep, connection, mood, and goals. / Peer contagion consideration: Exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions.
C. Digital wellbeing: Asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either. / Peer contagion consideration: Using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior.
D. Digital wellbeing: Exploring how online activities affect this adolescent’s sleep, connection, mood, and goals. / Peer contagion consideration: Using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior.

0211. A youth worker is asked to justify a plan for a child aged 7 in the youth advocacy program. It calls for examining pathways and turning points rather than treating a current symptom as fixed destiny. Which concept provides the rationale?

A. Developmental psychopathology
B. Gender-affirming support
C. Sleep hygiene
D. Adolescent identity development

0212. What is the central meaning of Eating-disorder warning signs?

A. Behavioral, cognitive, and physical indicators that warrant careful assessment and referral to qualified care.
B. An evolving process of exploring and integrating personal, social, and cultural understandings of self.
C. Personal and contextual supports that can reduce risk or strengthen reasons and pathways for safety.
D. Intentional self-inflicted injury without stated intent to die, requiring compassionate assessment and safety planning.

0213. Which option preserves the correct meaning of both Suicide protective factors and Gender-affirming support?

A. Suicide protective factors: Personal and contextual supports that can reduce risk or strengthen reasons and pathways for safety. / Gender-affirming support: Respectful support that recognizes a young person’s expressed gender and attends to safety, dignity, and context.
B. Suicide protective factors: Personal and contextual supports that can reduce risk or strengthen reasons and pathways for safety. / Gender-affirming support: Intentional self-inflicted injury without stated intent to die, requiring compassionate assessment and safety planning.
C. Suicide protective factors: The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices. / Gender-affirming support: Respectful support that recognizes a young person’s expressed gender and attends to safety, dignity, and context.
D. Suicide protective factors: Respectful support that recognizes a young person’s expressed gender and attends to safety, dignity, and context. / Gender-affirming support: Personal and contextual supports that can reduce risk or strengthen reasons and pathways for safety.

0214. Which option preserves the correct meaning of both Nonsuicidal self-injury and Digital wellbeing?

A. Nonsuicidal self-injury: Intentional self-inflicted injury without stated intent to die, requiring compassionate assessment and safety planning. / Digital wellbeing: The balance between digital engagement and health, relationships, sleep, and functioning as experienced by the individual.
B. Nonsuicidal self-injury: The balance between digital engagement and health, relationships, sleep, and functioning as experienced by the individual. / Digital wellbeing: Intentional self-inflicted injury without stated intent to die, requiring compassionate assessment and safety planning.
C. Nonsuicidal self-injury: Intentional self-inflicted injury without stated intent to die, requiring compassionate assessment and safety planning. / Digital wellbeing: The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices.
D. Nonsuicidal self-injury: A framework studying how typical and atypical developmental processes interact across time and context. / Digital wellbeing: The balance between digital engagement and health, relationships, sleep, and functioning as experienced by the individual.

0215. Which option is the clearest practical expression of Sleep hygiene?

A. Exploring how online activities affect this adolescent’s sleep, connection, mood, and goals.
B. Exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions.
C. Using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior.
D. Using the young person’s stated name and pronouns and assessing supports and safety without pathologizing identity.

0216. A case conference reviews a therapist's work with a child aged 11 in the learning-support meeting: asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either. Which principle is central?

A. Eating-disorder warning signs
B. Sleep hygiene
C. Gender-affirming support
D. Nonsuicidal self-injury

0217. Which named construct is captured by this account? The balance between digital engagement and health, relationships, sleep, and functioning as experienced by the individual.

A. Gender-affirming support
B. Nonsuicidal self-injury
C. Adolescent identity development
D. Digital wellbeing

0218. A consultant is supporting a child aged 8 in the clinical planning session. The key practice is using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity. Which course concept is most relevant?

A. Adolescent identity development
B. Peer contagion consideration
C. Sleep hygiene
D. Gender-affirming support

0219. A young adolescent client's service team meets in the after-school program. The case coordinator recommends a change involving providing respectful space for exploration without forcing a fixed label or timeline. Which idea best explains it?

A. Peer contagion consideration
B. Nonsuicidal self-injury
C. Adolescent identity development
D. Sleep hygiene

0220. Which comparison would correct a trainee's misunderstanding of Suicide protective factors versus Eating-disorder warning signs?

A. Suicide protective factors: Personal and contextual supports that can reduce risk or strengthen reasons and pathways for safety. / Eating-disorder warning signs: Behavioral, cognitive, and physical indicators that warrant careful assessment and referral to qualified care.
B. Suicide protective factors: The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices. / Eating-disorder warning signs: Behavioral, cognitive, and physical indicators that warrant careful assessment and referral to qualified care.
C. Suicide protective factors: Personal and contextual supports that can reduce risk or strengthen reasons and pathways for safety. / Eating-disorder warning signs: An evolving process of exploring and integrating personal, social, and cultural understandings of self.
D. Suicide protective factors: Behavioral, cognitive, and physical indicators that warrant careful assessment and referral to qualified care. / Eating-disorder warning signs: Personal and contextual supports that can reduce risk or strengthen reasons and pathways for safety.

0221. A play therapist is asked to evaluate a proposed service for a young person aged 13 in the telehealth session. The defining feature is providing respectful space for exploration without forcing a fixed label or timeline. Which concept fits?

A. Body image
B. Adolescent identity development
C. Gender-affirming support
D. Peer contagion consideration

0222. Identify the most precise label for this idea: Respectful support that recognizes a young person's expressed gender and attends to safety, dignity, and context.

A. Nonsuicidal self-injury
B. Sleep hygiene
C. Suicide protective factors
D. Gender-affirming support

0223. At a case-planning meeting, the behavior specialist proposes examining pathways and turning points rather than treating a current symptom as fixed destiny. for a young adolescent client seen in the outpatient clinic. Which concept does this illustrate?

A. Nonsuicidal self-injury
B. Developmental psychopathology
C. Peer contagion consideration
D. Gender-affirming support

0224. Which pair of actions illustrates Adolescent identity development and Nonsuicidal self-injury, respectively?

A. Adolescent identity development: Responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation. / Nonsuicidal self-injury: Asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either.
B. Adolescent identity development: Asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either. / Nonsuicidal self-injury: Providing respectful space for exploration without forcing a fixed label or timeline.
C. Adolescent identity development: Providing respectful space for exploration without forcing a fixed label or timeline. / Nonsuicidal self-injury: Asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either.
D. Adolescent identity development: Providing respectful space for exploration without forcing a fixed label or timeline. / Nonsuicidal self-injury: Using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior.

0225. A student confuses Nonsuicidal self-injury with Body image. Which explanation most accurately separates them?

A. Nonsuicidal self-injury: Thoughts, feelings, and perceptions concerning one's body, shaped by personal and social influences. / Body image: Intentional self-inflicted injury without stated intent to die, requiring compassionate assessment and safety planning.
B. Nonsuicidal self-injury: Intentional self-inflicted injury without stated intent to die, requiring compassionate assessment and safety planning. / Body image: An evolving process of exploring and integrating personal, social, and cultural understandings of self.
C. Nonsuicidal self-injury: Intentional self-inflicted injury without stated intent to die, requiring compassionate assessment and safety planning. / Body image: Thoughts, feelings, and perceptions concerning one's body, shaped by personal and social influences.
D. Nonsuicidal self-injury: The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices. / Body image: Thoughts, feelings, and perceptions concerning one's body, shaped by personal and social influences.

0226. Which applied comparison correctly identifies what belongs to Digital wellbeing versus Gender-affirming support?

A. Digital wellbeing: Exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions. / Gender-affirming support: Using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity.
B. Digital wellbeing: Exploring how online activities affect this adolescent's sleep, connection, mood, and goals. / Gender-affirming support: Using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity.
C. Digital wellbeing: Exploring how online activities affect this adolescent's sleep, connection, mood, and goals. / Gender-affirming support: Examining pathways and turning points rather than treating a current symptom as fixed destiny.
D. Digital wellbeing: Using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity. / Gender-affirming support: Exploring how online activities affect this adolescent's sleep, connection, mood, and goals.

0227. During work in the parent meeting, a group facilitator identifies this need: using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity. Which idea should guide the response?

A. Body image
B. Gender-affirming support
C. Suicide protective factors
D. Nonsuicidal self-injury

0228. Choose the response that best puts Gender-affirming support into practice.

A. Exploring how online activities affect this adolescent's sleep, connection, mood, and goals.
B. Exploring body-related distress and social pressures without reinforcing appearance-based judgments.
C. Responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation.
D. Using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity.

0229. Which choice aligns each practice with the correct idea, Digital wellbeing or Peer contagion consideration?

A. Digital wellbeing: Asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either. / Peer contagion consideration: Using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior.
B. Digital wellbeing: Exploring how online activities affect this adolescent's sleep, connection, mood, and goals. / Peer contagion consideration: Exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions.
C. Digital wellbeing: Using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior. / Peer contagion consideration: Exploring how online activities affect this adolescent's sleep, connection, mood, and goals.
D. Digital wellbeing: Exploring how online activities affect this adolescent's sleep, connection, mood, and goals. / Peer contagion consideration: Using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior.

0230. Which choice aligns each practice with the correct idea, Adolescent identity development or Suicide protective factors?

A. Adolescent identity development: Providing respectful space for exploration without forcing a fixed label or timeline. / Suicide protective factors: Identifying trusted relationships, coping resources, and accessible support that can be activated.
B. Adolescent identity development: Identifying trusted relationships, coping resources, and accessible support that can be activated. / Suicide protective factors: Providing respectful space for exploration without forcing a fixed label or timeline.
C. Adolescent identity development: Providing respectful space for exploration without forcing a fixed label or timeline. / Suicide protective factors: Exploring how online activities affect this adolescent's sleep, connection, mood, and goals.
D. Adolescent identity development: Examining pathways and turning points rather than treating a current symptom as fixed destiny. / Suicide protective factors: Identifying trusted relationships, coping resources, and accessible support that can be activated.

0231. Which statement accurately contrasts the course concepts Nonsuicidal self-injury and Peer contagion consideration?

A. Nonsuicidal self-injury: The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices. / Peer contagion consideration: Intentional self-inflicted injury without stated intent to die, requiring compassionate assessment and safety planning.
B. Nonsuicidal self-injury: An evolving process of exploring and integrating personal, social, and cultural understandings of self. / Peer contagion consideration: The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices.
C. Nonsuicidal self-injury: Intentional self-inflicted injury without stated intent to die, requiring compassionate assessment and safety planning. / Peer contagion consideration: Behavioral, cognitive, and physical indicators that warrant careful assessment and referral to qualified care.
D. Nonsuicidal self-injury: Intentional self-inflicted injury without stated intent to die, requiring compassionate assessment and safety planning. / Peer contagion consideration: The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices.

0232. A supervisor asks for an applied contrast between Nonsuicidal self-injury and Body image. Which option fits?

A. Nonsuicidal self-injury: Asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either. / Body image: Exploring body-related distress and social pressures without reinforcing appearance-based judgments.
B. Nonsuicidal self-injury: Exploring body-related distress and social pressures without reinforcing appearance-based judgments. / Body image: Asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either.
C. Nonsuicidal self-injury: Using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior. / Body image: Exploring body-related distress and social pressures without reinforcing appearance-based judgments.
D. Nonsuicidal self-injury: Asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either. / Body image: Providing respectful space for exploration without forcing a fixed label or timeline.

0233. How should a practitioner distinguish the applications of Digital wellbeing and Body image?

A. Digital wellbeing: Asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either. / Body image: Exploring body-related distress and social pressures without reinforcing appearance-based judgments.
B. Digital wellbeing: Exploring how online activities affect this adolescent's sleep, connection, mood, and goals. / Body image: Exploring body-related distress and social pressures without reinforcing appearance-based judgments.
C. Digital wellbeing: Exploring body-related distress and social pressures without reinforcing appearance-based judgments. / Body image: Exploring how online activities affect this adolescent's sleep, connection, mood, and goals.
D. Digital wellbeing: Exploring how online activities affect this adolescent's sleep, connection, mood, and goals. / Body image: Providing respectful space for exploration without forcing a fixed label or timeline.

0234. In a supervision quiz, how should Suicide protective factors be distinguished from Developmental psychopathology?

A. Suicide protective factors: Personal and contextual supports that can reduce risk or strengthen reasons and pathways for safety. / Developmental psychopathology: Behaviors and environmental practices that support regular, restorative sleep.
B. Suicide protective factors: A framework studying how typical and atypical developmental processes interact across time and context. / Developmental psychopathology: Personal and contextual supports that can reduce risk or strengthen reasons and pathways for safety.
C. Suicide protective factors: An evolving process of exploring and integrating personal, social, and cultural understandings of self. / Developmental psychopathology: A framework studying how typical and atypical developmental processes interact across time and context.
D. Suicide protective factors: Personal and contextual supports that can reduce risk or strengthen reasons and pathways for safety. / Developmental psychopathology: A framework studying how typical and atypical developmental processes interact across time and context.

0235. A supervisor asks how Suicide protective factors would appear in practice. Which choice should be selected?

A. Examining pathways and turning points rather than treating a current symptom as fixed destiny.
B. Using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity.
C. Identifying trusted relationships, coping resources, and accessible support that can be activated.
D. Asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either.

0236. Which statement accurately contrasts the course concepts Nonsuicidal self-injury and Eating-disorder warning signs?

A. Nonsuicidal self-injury: Intentional self-inflicted injury without stated intent to die, requiring compassionate assessment and safety planning. / Eating-disorder warning signs: Behavioral, cognitive, and physical indicators that warrant careful assessment and referral to qualified care.
B. Nonsuicidal self-injury: Intentional self-inflicted injury without stated intent to die, requiring compassionate assessment and safety planning. / Eating-disorder warning signs: A framework studying how typical and atypical developmental processes interact across time and context.
C. Nonsuicidal self-injury: Behavioral, cognitive, and physical indicators that warrant careful assessment and referral to qualified care. / Eating-disorder warning signs: Intentional self-inflicted injury without stated intent to die, requiring compassionate assessment and safety planning.
D. Nonsuicidal self-injury: Respectful support that recognizes a young person's expressed gender and attends to safety, dignity, and context. / Eating-disorder warning signs: Behavioral, cognitive, and physical indicators that warrant careful assessment and referral to qualified care.

0237. Which statement accurately contrasts the course concepts Adolescent identity development and Sleep hygiene?

A. Adolescent identity development: Behaviors and environmental practices that support regular, restorative sleep. / Sleep hygiene: An evolving process of exploring and integrating personal, social, and cultural understandings of self.
B. Adolescent identity development: The balance between digital engagement and health, relationships, sleep, and functioning as experienced by the individual. / Sleep hygiene: Behaviors and environmental practices that support regular, restorative sleep.
C. Adolescent identity development: An evolving process of exploring and integrating personal, social, and cultural understandings of self. / Sleep hygiene: Intentional self-inflicted injury without stated intent to die, requiring compassionate assessment and safety planning.
D. Adolescent identity development: An evolving process of exploring and integrating personal, social, and cultural understandings of self. / Sleep hygiene: Behaviors and environmental practices that support regular, restorative sleep.

0238. Which paired example correctly applies Suicide protective factors first and Digital wellbeing second?

A. Suicide protective factors: Identifying trusted relationships, coping resources, and accessible support that can be activated. / Digital wellbeing: Exploring how online activities affect this adolescent's sleep, connection, mood, and goals.
B. Suicide protective factors: Exploring how online activities affect this adolescent's sleep, connection, mood, and goals. / Digital wellbeing: Identifying trusted relationships, coping resources, and accessible support that can be activated.
C. Suicide protective factors: Using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity. / Digital wellbeing: Exploring how online activities affect this adolescent's sleep, connection, mood, and goals.
D. Suicide protective factors: Identifying trusted relationships, coping resources, and accessible support that can be activated. / Digital wellbeing: Using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior.

0239. For a student aged 15 seen in the family resource center, the program coordinator recommends a plan built around exploring how online activities affect this adolescent's sleep, connection, mood, and goals. Which concept is reflected?

A. Body image
B. Developmental psychopathology
C. Suicide protective factors
D. Digital wellbeing

0240. A school-age child is receiving support in the caregiver consultation. The group facilitator is guided by this practice: examining pathways and turning points rather than treating a current symptom as fixed destiny. Which principle best fits?

A. Eating-disorder warning signs
B. Developmental psychopathology
C. Gender-affirming support
D. Body image

0241. A supervisor asks how Eating-disorder warning signs would appear in practice. Which choice should be selected?

A. Providing respectful space for exploration without forcing a fixed label or timeline.
B. Using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior.
C. Responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation.
D. Asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either.

0242. Choose the practice comparison that best separates Suicide protective factors from Peer contagion consideration.

A. Suicide protective factors: Examining pathways and turning points rather than treating a current symptom as fixed destiny. / Peer contagion consideration: Using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior.
B. Suicide protective factors: Using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior. / Peer contagion consideration: Identifying trusted relationships, coping resources, and accessible support that can be activated.
C. Suicide protective factors: Identifying trusted relationships, coping resources, and accessible support that can be activated. / Peer contagion consideration: Responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation.
D. Suicide protective factors: Identifying trusted relationships, coping resources, and accessible support that can be activated. / Peer contagion consideration: Using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior.

0243. How should a practitioner distinguish the applications of Adolescent identity development and Suicide protective factors?

A. Adolescent identity development: Identifying trusted relationships, coping resources, and accessible support that can be activated. / Suicide protective factors: Providing respectful space for exploration without forcing a fixed label or timeline.
B. Adolescent identity development: Examining pathways and turning points rather than treating a current symptom as fixed destiny. / Suicide protective factors: Identifying trusted relationships, coping resources, and accessible support that can be activated.
C. Adolescent identity development: Providing respectful space for exploration without forcing a fixed label or timeline. / Suicide protective factors: Exploring how online activities affect this adolescent's sleep, connection, mood, and goals.
D. Adolescent identity development: Providing respectful space for exploration without forcing a fixed label or timeline. / Suicide protective factors: Identifying trusted relationships, coping resources, and accessible support that can be activated.

0244. A child aged 7 is receiving support in the student wellness team. The group facilitator is guided by this practice: exploring how online activities affect this adolescent's sleep, connection, mood, and goals. Which principle best fits?

A. Adolescent identity development
B. Gender-affirming support
C. Eating-disorder warning signs
D. Digital wellbeing

0245. A mental-health professional is supporting a student aged 12 in the after-school program. The key practice is exploring how online activities affect this adolescent's sleep, connection, mood, and goals. Which course concept is most relevant?

A. Peer contagion consideration
B. Adolescent identity development
C. Suicide protective factors
D. Digital wellbeing

0246. A trainee must distinguish how Nonsuicidal self-injury and Peer contagion consideration guide practice. Which comparison is accurate?

A. Nonsuicidal self-injury: Providing respectful space for exploration without forcing a fixed label or timeline. / Peer contagion consideration: Using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior.
B. Nonsuicidal self-injury: Using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior. / Peer contagion consideration: Asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either.
C. Nonsuicidal self-injury: Asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either. / Peer contagion consideration: Responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation.
D. Nonsuicidal self-injury: Asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either. / Peer contagion consideration: Using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior.

0247. A older adolescent client is receiving support in the classroom support meeting. The school counselor is guided by this practice: exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions. Which principle best fits?

A. Digital wellbeing
B. Sleep hygiene
C. Eating-disorder warning signs
D. Adolescent identity development

0248. How are Eating-disorder warning signs and Gender-affirming support most accurately differentiated in this curriculum?

A. Eating-disorder warning signs: Behavioral, cognitive, and physical indicators that warrant careful assessment and referral to qualified care. / Gender-affirming support: Respectful support that recognizes a young person's expressed gender and attends to safety, dignity, and context.
B. Eating-disorder warning signs: Respectful support that recognizes a young person's expressed gender and attends to safety, dignity, and context. / Gender-affirming support: Behavioral, cognitive, and physical indicators that warrant careful assessment and referral to qualified care.
C. Eating-disorder warning signs: Behavioral, cognitive, and physical indicators that warrant careful assessment and referral to qualified care. / Gender-affirming support: A framework studying how typical and atypical developmental processes interact across time and context.
D. Eating-disorder warning signs: Intentional self-inflicted injury without stated intent to die, requiring compassionate assessment and safety planning. / Gender-affirming support: Respectful support that recognizes a young person's expressed gender and attends to safety, dignity, and context.

0249. In a supervision review, a school-based clinician describes work with a client in early adolescence in the parent meeting: exploring body-related distress and social pressures without reinforcing appearance-based judgments. What concept is illustrated?

A. Digital wellbeing
B. Sleep hygiene
C. Body image
D. Eating-disorder warning signs

0250. Which statement accurately contrasts the course concepts Adolescent identity development and Suicide protective factors?

A. Adolescent identity development: Personal and contextual supports that can reduce risk or strengthen reasons and pathways for safety. / Suicide protective factors: An evolving process of exploring and integrating personal, social, and cultural understandings of self.
B. Adolescent identity development: A framework studying how typical and atypical developmental processes interact across time and context. / Suicide protective factors: Personal and contextual supports that can reduce risk or strengthen reasons and pathways for safety.
C. Adolescent identity development: An evolving process of exploring and integrating personal, social, and cultural understandings of self. / Suicide protective factors: The balance between digital engagement and health, relationships, sleep, and functioning as experienced by the individual.
D. Adolescent identity development: An evolving process of exploring and integrating personal, social, and cultural understandings of self. / Suicide protective factors: Personal and contextual supports that can reduce risk or strengthen reasons and pathways for safety.

0251. Which description belongs with the term Suicide protective factors?

A. The balance between digital engagement and health, relationships, sleep, and functioning as experienced by the individual.
B. Personal and contextual supports that can reduce risk or strengthen reasons and pathways for safety.
C. Respectful support that recognizes a young person's expressed gender and attends to safety, dignity, and context.
D. Intentional self-inflicted injury without stated intent to die, requiring compassionate assessment and safety planning.

0252. In a case note about a child aged 14, a consultant working in the child guidance clinic records this priority: exploring body-related distress and social pressures without reinforcing appearance-based judgments. What principle is reflected?

A. Sleep hygiene
B. Body image
C. Eating-disorder warning signs
D. Digital wellbeing

0253. Which pair of actions illustrates Eating-disorder warning signs and Gender-affirming support, respectively?

A. Eating-disorder warning signs: Responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation. / Gender-affirming support: Examining pathways and turning points rather than treating a current symptom as fixed destiny.
B. Eating-disorder warning signs: Using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity. / Gender-affirming support: Responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation.
C. Eating-disorder warning signs: Responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation. / Gender-affirming support: Using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity.
D. Eating-disorder warning signs: Asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either. / Gender-affirming support: Using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity.

0254. A supervisor asks how Gender-affirming support would appear in practice. Which choice should be selected?

A. Providing respectful space for exploration without forcing a fixed label or timeline.
B. Using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity.
C. Exploring how online activities affect this adolescent's sleep, connection, mood, and goals.
D. Exploring body-related distress and social pressures without reinforcing appearance-based judgments.

0255. A student aged 17’s service team meets in the clinical planning session. The caregiver working with a counselor recommends a change involving identifying trusted relationships, coping resources, and accessible support that can be activated. Which idea best explains it?

A. Suicide protective factors
B. Body image
C. Developmental psychopathology
D. Sleep hygiene

0256. Which comparison correctly distinguishes Sleep hygiene from Nonsuicidal self-injury?

A. Sleep hygiene: Behaviors and environmental practices that support regular, restorative sleep. / Nonsuicidal self-injury: Intentional self-inflicted injury without stated intent to die, requiring compassionate assessment and safety planning.
B. Sleep hygiene: The balance between digital engagement and health, relationships, sleep, and functioning as experienced by the individual. / Nonsuicidal self-injury: Intentional self-inflicted injury without stated intent to die, requiring compassionate assessment and safety planning.
C. Sleep hygiene: Intentional self-inflicted injury without stated intent to die, requiring compassionate assessment and safety planning. / Nonsuicidal self-injury: Behaviors and environmental practices that support regular, restorative sleep.
D. Sleep hygiene: Behaviors and environmental practices that support regular, restorative sleep. / Nonsuicidal self-injury: The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices.

0257. Which option pairs the definitions of Digital wellbeing and Gender-affirming support correctly, in that order?

A. Digital wellbeing: The balance between digital engagement and health, relationships, sleep, and functioning as experienced by the individual. / Gender-affirming support: A framework studying how typical and atypical developmental processes interact across time and context.
B. Digital wellbeing: The balance between digital engagement and health, relationships, sleep, and functioning as experienced by the individual. / Gender-affirming support: Respectful support that recognizes a young person’s expressed gender and attends to safety, dignity, and context.
C. Digital wellbeing: Behaviors and environmental practices that support regular, restorative sleep. / Gender-affirming support: Respectful support that recognizes a young person’s expressed gender and attends to safety, dignity, and context.
D. Digital wellbeing: Respectful support that recognizes a young person’s expressed gender and attends to safety, dignity, and context. / Gender-affirming support: The balance between digital engagement and health, relationships, sleep, and functioning as experienced by the individual.

0258. In a supervision review, a case coordinator describes work with a older adolescent client in the youth group: using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior. What concept is illustrated?

A. Sleep hygiene
B. Digital wellbeing
C. Peer contagion consideration
D. Adolescent identity development

0259. Which statement accurately contrasts the course concepts Gender-affirming support and Developmental psychopathology?

A. Gender-affirming support: Behavioral, cognitive, and physical indicators that warrant careful assessment and referral to qualified care. / Developmental psychopathology: A framework studying how typical and atypical developmental processes interact across time and context.
B. Gender-affirming support: Respectful support that recognizes a young person’s expressed gender and attends to safety, dignity, and context. / Developmental psychopathology: A framework studying how typical and atypical developmental processes interact across time and context.
C. Gender-affirming support: Respectful support that recognizes a young person’s expressed gender and attends to safety, dignity, and context. / Developmental psychopathology: An evolving process of exploring and integrating personal, social, and cultural understandings of self.
D. Gender-affirming support: A framework studying how typical and atypical developmental processes interact across time and context. / Developmental psychopathology: Respectful support that recognizes a young person’s expressed gender and attends to safety, dignity, and context.

0260. When reviewing a young person’s plan in the supervision meeting, the family therapist notes that the next step is asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either. Which concept guides this step?

A. Nonsuicidal self-injury
B. Eating-disorder warning signs
C. Gender-affirming support
D. Digital wellbeing

0261. Select the best explanation of Body image.

A. Thoughts, feelings, and perceptions concerning one’s body, shaped by personal and social influences.
B. An evolving process of exploring and integrating personal, social, and cultural understandings of self.
C. Respectful support that recognizes a young person’s expressed gender and attends to safety, dignity, and context.
D. Behavioral, cognitive, and physical indicators that warrant careful assessment and referral to qualified care.

0262. A behavior specialist is asked to evaluate a proposed service for a child aged 6 in the community mental-health service. The defining feature is exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions. Which concept fits?

A. Adolescent identity development
B. Gender-affirming support
C. Nonsuicidal self-injury
D. Sleep hygiene

0263. A child aged 8 and a consultant are reviewing goals in the clinical planning session. The agreed action is using the young person’s stated name and pronouns and assessing supports and safety without pathologizing identity. Which principle best accounts for it?

A. Eating-disorder warning signs
B. Peer contagion consideration
C. Developmental psychopathology
D. Gender-affirming support

0264. A student confuses Adolescent identity development with Developmental psychopathology. Which explanation most accurately separates them?

A. Adolescent identity development: An evolving process of exploring and integrating personal, social, and cultural understandings of self. / Developmental psychopathology: A framework studying how typical and atypical developmental processes interact across time and context.
B. Adolescent identity development: A framework studying how typical and atypical developmental processes interact across time and context. / Developmental psychopathology: An evolving process of exploring and integrating personal, social, and cultural understandings of self.
C. Adolescent identity development: An evolving process of exploring and integrating personal, social, and cultural understandings of self. / Developmental psychopathology: Respectful support that recognizes a young person’s expressed gender and attends to safety, dignity, and context.
D. Adolescent identity development: Behaviors and environmental practices that support regular, restorative sleep. / Developmental psychopathology: A framework studying how typical and atypical developmental processes interact across time and context.

0265. Which pair of actions illustrates Suicide protective factors and Gender-affirming support, respectively?

A. Suicide protective factors: Using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior. / Gender-affirming support: Using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity.
B. Suicide protective factors: Identifying trusted relationships, coping resources, and accessible support that can be activated. / Gender-affirming support: Using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity.
C. Suicide protective factors: Using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity. / Gender-affirming support: Identifying trusted relationships, coping resources, and accessible support that can be activated.
D. Suicide protective factors: Identifying trusted relationships, coping resources, and accessible support that can be activated. / Gender-affirming support: Asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either.

0266. Which named construct is captured by this account? Intentional self-inflicted injury without stated intent to die, requiring compassionate assessment and safety planning.

A. Digital wellbeing
B. Adolescent identity development
C. Nonsuicidal self-injury
D. Eating-disorder warning signs

0267. Which option pairs the definitions of Nonsuicidal self-injury and Eating-disorder warning signs correctly, in that order?

A. Nonsuicidal self-injury: Intentional self-inflicted injury without stated intent to die, requiring compassionate assessment and safety planning. / Eating-disorder warning signs: Behavioral, cognitive, and physical indicators that warrant careful assessment and referral to qualified care.
B. Nonsuicidal self-injury: Intentional self-inflicted injury without stated intent to die, requiring compassionate assessment and safety planning. / Eating-disorder warning signs: A framework studying how typical and atypical developmental processes interact across time and context.
C. Nonsuicidal self-injury: Respectful support that recognizes a young person's expressed gender and attends to safety, dignity, and context. / Eating-disorder warning signs: Behavioral, cognitive, and physical indicators that warrant careful assessment and referral to qualified care.
D. Nonsuicidal self-injury: Behavioral, cognitive, and physical indicators that warrant careful assessment and referral to qualified care. / Eating-disorder warning signs: Intentional self-inflicted injury without stated intent to die, requiring compassionate assessment and safety planning.

0268. Which option correctly matches each concept to its practice focus: Sleep hygiene and Peer contagion consideration?

A. Sleep hygiene: Exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions. / Peer contagion consideration: Using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior.
B. Sleep hygiene: Using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior. / Peer contagion consideration: Exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions.
C. Sleep hygiene: Using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity. / Peer contagion consideration: Using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior.
D. Sleep hygiene: Exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions. / Peer contagion consideration: Identifying trusted relationships, coping resources, and accessible support that can be activated.

0269. How should a practitioner distinguish the applications of Eating-disorder warning signs and Gender-affirming support?

A. Eating-disorder warning signs: Using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity. / Gender-affirming support: Responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation.
B. Eating-disorder warning signs: Responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation. / Gender-affirming support: Examining pathways and turning points rather than treating a current symptom as fixed destiny.
C. Eating-disorder warning signs: Responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation. / Gender-affirming support: Using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity.
D. Eating-disorder warning signs: Asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either. / Gender-affirming support: Using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity.

0270. In a supervision review, a caregiver working with a counselor describes work with a middle-school student in the child guidance clinic: exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions. What concept is illustrated?

A. Developmental psychopathology
B. Digital wellbeing
C. Adolescent identity development
D. Sleep hygiene

0271. A trainee must distinguish how Body image and Eating-disorder warning signs guide practice. Which comparison is accurate?

A. Body image: Exploring body-related distress and social pressures without reinforcing appearance-based judgments. / Eating-disorder warning signs: Responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation.
B. Body image: Exploring body-related distress and social pressures without reinforcing appearance-based judgments. / Eating-disorder warning signs: Examining pathways and turning points rather than treating a current symptom as fixed destiny.
C. Body image: Responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation. / Eating-disorder warning signs: Exploring body-related distress and social pressures without reinforcing appearance-based judgments.
D. Body image: Using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity. / Eating-disorder warning signs: Responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation.

0272. Choose the practice comparison that best separates Sleep hygiene from Developmental psychopathology.

A. Sleep hygiene: Using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior. / Developmental psychopathology: Examining pathways and turning points rather than treating a current symptom as fixed destiny.
B. Sleep hygiene: Examining pathways and turning points rather than treating a current symptom as fixed destiny. / Developmental psychopathology: Exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions.
C. Sleep hygiene: Exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions. / Developmental psychopathology: Exploring how online activities affect this adolescent's sleep, connection, mood, and goals.
D. Sleep hygiene: Exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions. / Developmental psychopathology: Examining pathways and turning points rather than treating a current symptom as fixed destiny.

0273. A mental-health professional is preparing a follow-up plan for a child of elementary-school age in the classroom support meeting. The plan calls for using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior. Which concept names this approach?

A. Peer contagion consideration
B. Body image
C. Gender-affirming support
D. Sleep hygiene

0274. In the community mental-health service, a consulting counselor describes the most appropriate support for a young person aged 18 as using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity. Which framework is being applied?

A. Body image
B. Gender-affirming support
C. Suicide protective factors
D. Nonsuicidal self-injury

0275. A service team discusses a high-school student in the multidisciplinary case conference. Their proposed next step is exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions. Which course concept supports it?

A. Gender-affirming support
B. Sleep hygiene
C. Nonsuicidal self-injury
D. Peer contagion consideration

0276. A doctoral student reads the following description. Which concept does it define? An evolving process of exploring and integrating personal, social, and cultural understandings of self.

A. Peer contagion consideration
B. Nonsuicidal self-injury
C. Developmental psychopathology
D. Adolescent identity development

0277. Which description belongs with the term Body image?

A. The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices.
B. An evolving process of exploring and integrating personal, social, and cultural understandings of self.
C. Behaviors and environmental practices that support regular, restorative sleep.
D. Thoughts, feelings, and perceptions concerning one's body, shaped by personal and social influences.

0278. A service team discusses a student aged 17 in the caregiver consultation. Their proposed next step is providing respectful space for exploration without forcing a fixed label or timeline. Which course concept supports it?

A. Developmental psychopathology
B. Nonsuicidal self-injury
C. Adolescent identity development
D. Suicide protective factors

0279. In a professional consultation about a adolescent student, the mental-health professional describes this response in the youth advocacy program: responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation. Which term is most apt?

A. Body image
B. Digital wellbeing
C. Adolescent identity development
D. Eating-disorder warning signs

0280. Choose the practice comparison that best separates Body image from Developmental psychopathology.

A. Body image: Exploring body-related distress and social pressures without reinforcing appearance-based judgments. / Developmental psychopathology: Providing respectful space for exploration without forcing a fixed label or timeline.
B. Body image: Examining pathways and turning points rather than treating a current symptom as fixed destiny. / Developmental psychopathology: Exploring body-related distress and social pressures without reinforcing appearance-based judgments.
C. Body image: Exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions. / Developmental psychopathology: Examining pathways and turning points rather than treating a current symptom as fixed destiny.
D. Body image: Exploring body-related distress and social pressures without reinforcing appearance-based judgments. / Developmental psychopathology: Examining pathways and turning points rather than treating a current symptom as fixed destiny.

0281. In the multidisciplinary case conference, a caregiver working with a counselor is considering this approach for a client in late adolescence: using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior. Which framework does it represent?

A. Eating-disorder warning signs
B. Nonsuicidal self-injury
C. Peer contagion consideration
D. Suicide protective factors

0282. An interdisciplinary team reviews a high-school student's case at the caregiver consultation. The behavior specialist recommends using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior. Which course concept best fits?

A. Nonsuicidal self-injury
B. Peer contagion consideration
C. Adolescent identity development
D. Suicide protective factors

0283. Which applied comparison correctly identifies what belongs to Peer contagion consideration versus Developmental psychopathology?

A. Peer contagion consideration: Examining pathways and turning points rather than treating a current symptom as fixed destiny. / Developmental psychopathology: Using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior.
B. Peer contagion consideration: Using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior. / Developmental psychopathology: Exploring body-related distress and social pressures without reinforcing appearance-based judgments.
C. Peer contagion consideration: Asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either. / Developmental psychopathology: Examining pathways and turning points rather than treating a current symptom as fixed destiny.
D. Peer contagion consideration: Using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior. / Developmental psychopathology: Examining pathways and turning points rather than treating a current symptom as fixed destiny.

0284. Which comparison would correct a trainee’s misunderstanding of Digital wellbeing versus Developmental psychopathology?

A. Digital wellbeing: The balance between digital engagement and health, relationships, sleep, and functioning as experienced by the individual. / Developmental psychopathology: A framework studying how typical and atypical developmental processes interact across time and context.
B. Digital wellbeing: An evolving process of exploring and integrating personal, social, and cultural understandings of self. / Developmental psychopathology: A framework studying how typical and atypical developmental processes interact across time and context.
C. Digital wellbeing: The balance between digital engagement and health, relationships, sleep, and functioning as experienced by the individual. / Developmental psychopathology: Thoughts, feelings, and perceptions concerning one’s body, shaped by personal and social influences.
D. Digital wellbeing: A framework studying how typical and atypical developmental processes interact across time and context. / Developmental psychopathology: The balance between digital engagement and health, relationships, sleep, and functioning as experienced by the individual.

0285. Which paired example correctly applies Adolescent identity development first and Body image second?

A. Adolescent identity development: Providing respectful space for exploration without forcing a fixed label or timeline. / Body image: Identifying trusted relationships, coping resources, and accessible support that can be activated.
B. Adolescent identity development: Providing respectful space for exploration without forcing a fixed label or timeline. / Body image: Exploring body-related distress and social pressures without reinforcing appearance-based judgments.
C. Adolescent identity development: Using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior. / Body image: Exploring body-related distress and social pressures without reinforcing appearance-based judgments.
D. Adolescent identity development: Exploring body-related distress and social pressures without reinforcing appearance-based judgments. / Body image: Providing respectful space for exploration without forcing a fixed label or timeline.

0286. Which comparison would correct a trainee’s misunderstanding of Sleep hygiene versus Developmental psychopathology?

A. Sleep hygiene: A framework studying how typical and atypical developmental processes interact across time and context. / Developmental psychopathology: Behaviors and environmental practices that support regular, restorative sleep.
B. Sleep hygiene: Behaviors and environmental practices that support regular, restorative sleep. / Developmental psychopathology: A framework studying how typical and atypical developmental processes interact across time and context.
C. Sleep hygiene: Behaviors and environmental practices that support regular, restorative sleep. / Developmental psychopathology: The balance between digital engagement and health, relationships, sleep, and functioning as experienced by the individual.
D. Sleep hygiene: The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices. / Developmental psychopathology: A framework studying how typical and atypical developmental processes interact across time and context.

0287. In a supervision review, a caregiver working with a counselor describes work with a child aged 8 in the community youth program: responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation. What concept is illustrated?

A. Gender-affirming support
B. Eating-disorder warning signs
C. Adolescent identity development
D. Peer contagion consideration

0288. Which paired example correctly applies Sleep hygiene first and Peer contagion consideration second?

A. Sleep hygiene: Using the young person’s stated name and pronouns and assessing supports and safety without pathologizing identity. / Peer contagion consideration: Using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior.
B. Sleep hygiene: Using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior. / Peer contagion consideration: Exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions.
C. Sleep hygiene: Exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions. / Peer contagion consideration: Identifying trusted relationships, coping resources, and accessible support that can be activated.
D. Sleep hygiene: Exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions. / Peer contagion consideration: Using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior.

0289. A supervisor asks how Sleep hygiene would appear in practice. Which choice should be selected?

A. Examining pathways and turning points rather than treating a current symptom as fixed destiny.
B. Exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions.
C. Exploring how online activities affect this adolescent’s sleep, connection, mood, and goals.
D. Asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either.

0290. In a professional consultation about a young person aged 10, the assessment clinician describes this response in the school-based service: identifying trusted relationships, coping resources, and accessible support that can be activated. Which term is most apt?

A. Suicide protective factors
B. Digital wellbeing
C. Peer contagion consideration
D. Eating-disorder warning signs

0291. A trainee must explain Eating-disorder warning signs. Which answer is accurate?

A. Personal and contextual supports that can reduce risk or strengthen reasons and pathways for safety.
B. A framework studying how typical and atypical developmental processes interact across time and context.
C. Behavioral, cognitive, and physical indicators that warrant careful assessment and referral to qualified care.
D. Intentional self-inflicted injury without stated intent to die, requiring compassionate assessment and safety planning.

0292. Which professional action most closely applies Sleep hygiene?

A. Exploring how online activities affect this adolescent’s sleep, connection, mood, and goals.
B. Using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior.
C. Examining pathways and turning points rather than treating a current symptom as fixed destiny.
D. Exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions.

0293. A mental-health professional prepares for a session in the classroom support meeting with a child of elementary-school age. The intended approach is using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior. Which concept is most relevant?

A. Adolescent identity development
B. Sleep hygiene
C. Gender-affirming support
D. Peer contagion consideration

0294. A consulting counselor is explaining a choice to a student aged 15 and caregiver in the youth group. The choice centers on providing respectful space for exploration without forcing a fixed label or timeline. Which idea is illustrated?

A. Sleep hygiene
B. Developmental psychopathology
C. Body image
D. Adolescent identity development

0295. Which statement accurately contrasts the course concepts Gender-affirming support and Peer contagion consideration?

A. Gender-affirming support: Behavioral, cognitive, and physical indicators that warrant careful assessment and referral to qualified care. / Peer contagion consideration: The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices.
B. Gender-affirming support: Respectful support that recognizes a young person's expressed gender and attends to safety, dignity, and context. / Peer contagion consideration: The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices.
C. Gender-affirming support: The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices. / Peer contagion consideration: Respectful support that recognizes a young person's expressed gender and attends to safety, dignity, and context.
D. Gender-affirming support: Respectful support that recognizes a young person's expressed gender and attends to safety, dignity, and context. / Peer contagion consideration: A framework studying how typical and atypical developmental processes interact across time and context.

0296. Which option pairs the definitions of Body image and Developmental psychopathology correctly, in that order?

A. Body image: Behaviors and environmental practices that support regular, restorative sleep. / Developmental psychopathology: A framework studying how typical and atypical developmental processes interact across time and context.
B. Body image: A framework studying how typical and atypical developmental processes interact across time and context. / Developmental psychopathology: Thoughts, feelings, and perceptions concerning one's body, shaped by personal and social influences.
C. Body image: Thoughts, feelings, and perceptions concerning one's body, shaped by personal and social influences. / Developmental psychopathology: An evolving process of exploring and integrating personal, social, and cultural understandings of self.
D. Body image: Thoughts, feelings, and perceptions concerning one's body, shaped by personal and social influences. / Developmental psychopathology: A framework studying how typical and atypical developmental processes interact across time and context.

0297. A trainee must explain Gender-affirming support. Which answer is accurate?

A. A framework studying how typical and atypical developmental processes interact across time and context.
B. Respectful support that recognizes a young person's expressed gender and attends to safety, dignity, and context.
C. Personal and contextual supports that can reduce risk or strengthen reasons and pathways for safety.
D. The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices.

0298. In a supervision quiz, how should Nonsuicidal self-injury be distinguished from Body image?

A. Nonsuicidal self-injury: Thoughts, feelings, and perceptions concerning one's body, shaped by personal and social influences. / Body image: Intentional self-inflicted injury without stated intent to die, requiring compassionate assessment and safety planning.
B. Nonsuicidal self-injury: The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices. / Body image: Thoughts, feelings, and perceptions concerning one's body, shaped by personal and social influences.
C. Nonsuicidal self-injury: Intentional self-inflicted injury without stated intent to die, requiring compassionate assessment and safety planning. / Body image: Thoughts, feelings, and perceptions concerning one's body, shaped by personal and social influences.
D. Nonsuicidal self-injury: Intentional self-inflicted injury without stated intent to die, requiring compassionate assessment and safety planning. / Body image: An evolving process of exploring and integrating personal, social, and cultural understandings of self.

0299. When reviewing a young person aged 18's plan in the learning-support meeting, the parent educator notes that the next step is exploring how online activities affect this adolescent's sleep, connection, mood, and goals. Which concept guides this step?

A. Developmental psychopathology
B. Adolescent identity development
C. Body image
D. Digital wellbeing

0300. During service review in the student-support meeting, a therapist describes exploring how online activities affect this adolescent's sleep, connection, mood, and goals. for a young person. Which course idea is most applicable?

A. Adolescent identity development
B. Developmental psychopathology
C. Digital wellbeing
D. Peer contagion consideration

0301. Which option correctly matches each concept to its practice focus: Sleep hygiene and Body image?

A. Sleep hygiene: Exploring body-related distress and social pressures without reinforcing appearance-based judgments. / Body image: Exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions.
B. Sleep hygiene: Exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions. / Body image: Exploring body-related distress and social pressures without reinforcing appearance-based judgments.
C. Sleep hygiene: Exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions. / Body image: Exploring how online activities affect this adolescent's sleep, connection, mood, and goals.
D. Sleep hygiene: Using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity. / Body image: Exploring body-related distress and social pressures without reinforcing appearance-based judgments.

0302. In a supervision quiz, how should Sleep hygiene be distinguished from Body image?

A. Sleep hygiene: Behaviors and environmental practices that support regular, restorative sleep. / Body image: Thoughts, feelings, and perceptions concerning one's body, shaped by personal and social influences.
B. Sleep hygiene: Thoughts, feelings, and perceptions concerning one's body, shaped by personal and social influences. / Body image: Behaviors and environmental practices that support regular, restorative sleep.
C. Sleep hygiene: Behaviors and environmental practices that support regular, restorative sleep. / Body image: The balance between digital engagement and health, relationships, sleep, and functioning as experienced by the individual.
D. Sleep hygiene: Respectful support that recognizes a young person's expressed gender and attends to safety, dignity, and context. / Body image: Thoughts, feelings, and perceptions concerning one's body, shaped by personal and social influences.

0303. In the after-school program, a team asks how a youth worker can support a high-school student. One proposed action is using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity. Which idea does it represent?

A. Body image
B. Adolescent identity development
C. Digital wellbeing
D. Gender-affirming support

0304. A support meeting for a child aged 6 includes a play therapist in the after-school program. The practice under consideration is responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation. Which concept guides it?

A. Peer contagion consideration
B. Body image
C. Digital wellbeing
D. Eating-disorder warning signs

0305. An interdisciplinary team reviews a student aged 17's case at the student-support meeting. The play therapist recommends using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity. Which course concept best fits?

A. Gender-affirming support
B. Body image
C. Nonsuicidal self-injury
D. Suicide protective factors

0306. Choose the response that best puts Nonsuicidal self-injury into practice.

A. Using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity.
B. Asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either.
C. Identifying trusted relationships, coping resources, and accessible support that can be activated.
D. Examining pathways and turning points rather than treating a current symptom as fixed destiny.

0307. Which option preserves the correct meaning of both Body image and Eating-disorder warning signs?

A. Body image: Thoughts, feelings, and perceptions concerning one's body, shaped by personal and social influences. / Eating-disorder warning signs: A framework studying how typical and atypical developmental processes interact across time and context.
B. Body image: Thoughts, feelings, and perceptions concerning one's body, shaped by personal and social influences. / Eating-disorder warning signs: Behavioral, cognitive, and physical indicators that warrant careful assessment and referral to qualified care.
C. Body image: Behavioral, cognitive, and physical indicators that warrant careful assessment and referral to qualified care. / Eating-disorder warning signs: Thoughts, feelings, and perceptions concerning one's body, shaped by personal and social influences.
D. Body image: Respectful support that recognizes a young person's expressed gender and attends to safety, dignity, and context. / Eating-disorder warning signs: Behavioral, cognitive, and physical indicators that warrant careful assessment and referral to qualified care.

0308. A case conference reviews a therapist's work with a young adolescent client in the classroom support meeting: using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity. Which principle is central?

A. Suicide protective factors
B. Digital wellbeing
C. Gender-affirming support
D. Sleep hygiene

0309. Which description belongs with the term Digital wellbeing?

A. Personal and contextual supports that can reduce risk or strengthen reasons and pathways for safety.
B. The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices.
C. Behaviors and environmental practices that support regular, restorative sleep.
D. The balance between digital engagement and health, relationships, sleep, and functioning as experienced by the individual.

0310. Which pair of actions illustrates Sleep hygiene and Digital wellbeing, respectively?

A. Sleep hygiene: Exploring body-related distress and social pressures without reinforcing appearance-based judgments. / Digital wellbeing: Exploring how online activities affect this adolescent's sleep, connection, mood, and goals.
B. Sleep hygiene: Exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions. / Digital wellbeing: Asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either.
C. Sleep hygiene: Exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions. / Digital wellbeing: Exploring how online activities affect this adolescent's sleep, connection, mood, and goals.
D. Sleep hygiene: Exploring how online activities affect this adolescent's sleep, connection, mood, and goals. / Digital wellbeing: Exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions.

0311. A trainee must distinguish how Adolescent identity development and Eating-disorder warning signs guide practice. Which comparison is accurate?

A. Adolescent identity development: Providing respectful space for exploration without forcing a fixed label or timeline. / Eating-disorder warning signs: Responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation.
B. Adolescent identity development: Responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation. / Eating-disorder warning signs: Providing respectful space for exploration without forcing a fixed label or timeline.
C. Adolescent identity development: Providing respectful space for exploration without forcing a fixed label or timeline. / Eating-disorder warning signs: Using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior.
D. Adolescent identity development: Examining pathways and turning points rather than treating a current symptom as fixed destiny. / Eating-disorder warning signs: Responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation.

0312. A student aged 9's service team meets in the school-based service. The family therapist recommends a change involving examining pathways and turning points rather than treating a current symptom as fixed destiny. Which idea best explains it?

A. Body image
B. Peer contagion consideration
C. Suicide protective factors
D. Developmental psychopathology

0313. A case discussion concerns a student aged 17 and a school-based clinician in the outpatient clinic. The practitioner is considering using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior. Which principle is involved?

A. Peer contagion consideration
B. Developmental psychopathology
C. Sleep hygiene
D. Nonsuicidal self-injury

0314. A support meeting for a adolescent student includes a clinical supervisor in the youth group. The practice under consideration is exploring how online activities affect this adolescent's sleep, connection, mood, and goals. Which concept guides it?

A. Body image
B. Sleep hygiene
C. Adolescent identity development
D. Digital wellbeing

0315. At the community service agency, a school support specialist meets with a preadolescent child. The practice priority is: using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity. Which concept best captures that priority?

A. Gender-affirming support
B. Digital wellbeing
C. Eating-disorder warning signs
D. Body image

0316. A planning meeting about a young person aged 10 includes a school support specialist. The proposed practice in the family session is responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation. Which idea underlies it?

A. Digital wellbeing
B. Body image
C. Eating-disorder warning signs
D. Peer contagion consideration

0317. A research trainee is asked what should shape a adolescent student's support in the school-based service. The proposed focus is asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either. Which principle does it represent?

A. Suicide protective factors
B. Digital wellbeing
C. Nonsuicidal self-injury
D. Peer contagion consideration

0318. A case conference asks for a distinction between Sleep hygiene and Eating-disorder warning signs. Which answer is sound?

A. Sleep hygiene: Behavioral, cognitive, and physical indicators that warrant careful assessment and referral to qualified care. / Eating-disorder warning signs: Behaviors and environmental practices that support regular, restorative sleep.
B. Sleep hygiene: Behaviors and environmental practices that support regular, restorative sleep. / Eating-disorder warning signs: The balance between digital engagement and health, relationships, sleep, and functioning as experienced by the individual.
C. Sleep hygiene: Behaviors and environmental practices that support regular, restorative sleep. / Eating-disorder warning signs: Behavioral, cognitive, and physical indicators that warrant careful assessment and referral to qualified care.
D. Sleep hygiene: A framework studying how typical and atypical developmental processes interact across time and context. / Eating-disorder warning signs: Behavioral, cognitive, and physical indicators that warrant careful assessment and referral to qualified care.

0319. During service review in the student wellness team, a program coordinator describes providing respectful space for exploration without forcing a fixed label or timeline. for a client in late adolescence. Which course idea is most applicable?

A. Body image
B. Developmental psychopathology
C. Digital wellbeing
D. Adolescent identity development

0320. Which option preserves the correct meaning of both Adolescent identity development and Gender-affirming support?

A. Adolescent identity development: An evolving process of exploring and integrating personal, social, and cultural understandings of self. / Gender-affirming support: Respectful support that recognizes a young person's expressed gender and attends to safety, dignity, and context.
B. Adolescent identity development: An evolving process of exploring and integrating personal, social, and cultural understandings of self. / Gender-affirming support: Personal and contextual supports that can reduce risk or strengthen reasons and pathways for safety.
C. Adolescent identity development: Respectful support that recognizes a young person's expressed gender and attends to safety, dignity, and context. / Gender-affirming support: An evolving process of exploring and integrating personal, social, and cultural understandings of self.
D. Adolescent identity development: Behaviors and environmental practices that support regular, restorative sleep. / Gender-affirming support: Respectful support that recognizes a young person's expressed gender and attends to safety, dignity, and context.

0321. A trainee must choose a practice that exemplifies Gender-affirming support. Which action is the best fit?

A. Providing respectful space for exploration without forcing a fixed label or timeline.
B. Exploring body-related distress and social pressures without reinforcing appearance-based judgments.
C. Using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity.
D. Exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions.

0322. Which comparison correctly distinguishes Nonsuicidal self-injury from Digital wellbeing?

A. Nonsuicidal self-injury: Intentional self-inflicted injury without stated intent to die, requiring compassionate assessment and safety planning. / Digital wellbeing: The balance between digital engagement and health, relationships, sleep, and functioning as experienced by the individual.
B. Nonsuicidal self-injury: Intentional self-inflicted injury without stated intent to die, requiring compassionate assessment and safety planning. / Digital wellbeing: The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices.
C. Nonsuicidal self-injury: A framework studying how typical and atypical developmental processes interact across time and context. / Digital wellbeing: The balance between digital engagement and health, relationships, sleep, and functioning as experienced by the individual.
D. Nonsuicidal self-injury: The balance between digital engagement and health, relationships, sleep, and functioning as experienced by the individual. / Digital wellbeing: Intentional self-inflicted injury without stated intent to die, requiring compassionate assessment and safety planning.

0323. Identify the most precise label for this idea: Personal and contextual supports that can reduce risk or strengthen reasons and pathways for safety.

A. Gender-affirming support
B. Digital wellbeing
C. Suicide protective factors
D. Sleep hygiene

0324. A supervisor asks for an applied contrast between Digital wellbeing and Body image. Which option fits?

A. Digital wellbeing: Exploring how online activities affect this adolescent's sleep, connection, mood, and goals. / Body image: Providing respectful space for exploration without forcing a fixed label or timeline.
B. Digital wellbeing: Asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either. / Body image: Exploring body-related distress and social pressures without reinforcing appearance-based judgments.
C. Digital wellbeing: Exploring how online activities affect this adolescent's sleep, connection, mood, and goals. / Body image: Exploring body-related distress and social pressures without reinforcing appearance-based judgments.
D. Digital wellbeing: Exploring body-related distress and social pressures without reinforcing appearance-based judgments. / Body image: Exploring how online activities affect this adolescent's sleep, connection, mood, and goals.

0325. A teacher and counselor is asked to justify a plan for a child aged 11 in the community service agency. It calls for using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior. Which concept provides the rationale?

A. Developmental psychopathology
B. Peer contagion consideration
C. Eating-disorder warning signs
D. Nonsuicidal self-injury

0326. Which option correctly matches each concept to its practice focus: Digital wellbeing and Eating-disorder warning signs?

A. Digital wellbeing: Exploring how online activities affect this adolescent's sleep, connection, mood, and goals. / Eating-disorder warning signs: Exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions.
B. Digital wellbeing: Exploring how online activities affect this adolescent's sleep, connection, mood, and goals. / Eating-disorder warning signs: Responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation.
C. Digital wellbeing: Responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation. / Eating-disorder warning signs: Exploring how online activities affect this adolescent's sleep, connection, mood, and goals.
D. Digital wellbeing: Exploring body-related distress and social pressures without reinforcing appearance-based judgments. / Eating-disorder warning signs: Responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation.

0327. While consulting in the community service agency, a member of a clinical team supports a high-school student by using this approach: exploring body-related distress and social pressures without reinforcing appearance-based judgments. Which concept is being applied?

A. Peer contagion consideration
B. Suicide protective factors
C. Body image
D. Digital wellbeing

0328. Which statement accurately contrasts the course concepts Nonsuicidal self-injury and Gender-affirming support?

A. Nonsuicidal self-injury: An evolving process of exploring and integrating personal, social, and cultural understandings of self. / Gender-affirming support: Respectful support that recognizes a young person's expressed gender and attends to safety, dignity, and context.
B. Nonsuicidal self-injury: Intentional self-inflicted injury without stated intent to die, requiring compassionate assessment and safety planning. / Gender-affirming support: Respectful support that recognizes a young person's expressed gender and attends to safety, dignity, and context.
C. Nonsuicidal self-injury: Respectful support that recognizes a young person's expressed gender and attends to safety, dignity, and context. / Gender-affirming support: Intentional self-inflicted injury without stated intent to die, requiring compassionate assessment and safety planning.
D. Nonsuicidal self-injury: Intentional self-inflicted injury without stated intent to die, requiring compassionate assessment and safety planning. / Gender-affirming support: Behaviors and environmental practices that support regular, restorative sleep.

0329. A case conference reviews a service navigator's work with a teenage client in the counseling practicum: exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions. Which principle is central?

A. Peer contagion consideration
B. Digital wellbeing
C. Body image
D. Sleep hygiene

0330. Which pair of actions illustrates Adolescent identity development and Developmental psychopathology, respectively?

A. Adolescent identity development: Exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions. / Developmental psychopathology: Examining pathways and turning points rather than treating a current symptom as fixed destiny.
B. Adolescent identity development: Providing respectful space for exploration without forcing a fixed label or timeline. / Developmental psychopathology: Using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity.
C. Adolescent identity development: Examining pathways and turning points rather than treating a current symptom as fixed destiny. / Developmental psychopathology: Providing respectful space for exploration without forcing a fixed label or timeline.
D. Adolescent identity development: Providing respectful space for exploration without forcing a fixed label or timeline. / Developmental psychopathology: Examining pathways and turning points rather than treating a current symptom as fixed destiny.

0331. Which choice aligns each practice with the correct idea, Sleep hygiene or Nonsuicidal self-injury?

A. Sleep hygiene: Exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions. / Nonsuicidal self-injury: Asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either.
B. Sleep hygiene: Exploring how online activities affect this adolescent's sleep, connection, mood, and goals. / Nonsuicidal self-injury: Asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either.
C. Sleep hygiene: Asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either. / Nonsuicidal self-injury: Exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions.
D. Sleep hygiene: Exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions. / Nonsuicidal self-injury: Using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior.

0332. How are Body image and Peer contagion consideration most accurately differentiated in this curriculum?

A. Body image: The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices. / Peer contagion consideration: Thoughts, feelings, and perceptions concerning one's body, shaped by personal and social influences.
B. Body image: Intentional self-inflicted injury without stated intent to die, requiring compassionate assessment and safety planning. / Peer contagion consideration: The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices.
C. Body image: Thoughts, feelings, and perceptions concerning one's body, shaped by personal and social influences. / Peer contagion consideration: Respectful support that recognizes a young person's expressed gender and attends to safety, dignity, and context.
D. Body image: Thoughts, feelings, and perceptions concerning one's body, shaped by personal and social influences. / Peer contagion consideration: The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices.

0333. Which option pairs the definitions of Eating-disorder warning signs and Gender-affirming support correctly, in that order?

A. Eating-disorder warning signs: Behavioral, cognitive, and physical indicators that warrant careful assessment and referral to qualified care. / Gender-affirming support: Respectful support that recognizes a young person's expressed gender and attends to safety, dignity, and context.
B. Eating-disorder warning signs: Behavioral, cognitive, and physical indicators that warrant careful assessment and referral to qualified care. / Gender-affirming support: A framework studying how typical and atypical developmental processes interact across time and context.
C. Eating-disorder warning signs: Respectful support that recognizes a young person's expressed gender and attends to safety, dignity, and context. / Gender-affirming support: Behavioral, cognitive, and physical indicators that warrant careful assessment and referral to qualified care.
D. Eating-disorder warning signs: Intentional self-inflicted injury without stated intent to die, requiring compassionate assessment and safety planning. / Gender-affirming support: Respectful support that recognizes a young person's expressed gender and attends to safety, dignity, and context.

0334. Which description belongs with the term Sleep hygiene?

A. An evolving process of exploring and integrating personal, social, and cultural understandings of self.
B. Personal and contextual supports that can reduce risk or strengthen reasons and pathways for safety.
C. The balance between digital engagement and health, relationships, sleep, and functioning as experienced by the individual.
D. Behaviors and environmental practices that support regular, restorative sleep.

0335. A mental-health professional is supporting a older adolescent client in the family session. The key practice is examining pathways and turning points rather than treating a current symptom as fixed destiny. Which course concept is most relevant?

A. Developmental psychopathology
B. Sleep hygiene
C. Digital wellbeing
D. Eating-disorder warning signs

0336. A team must select a support approach for a child aged 11 at the family session. The family therapist recommends providing respectful space for exploration without forcing a fixed label or timeline. Which idea is most relevant?

A. Eating-disorder warning signs
B. Gender-affirming support
C. Adolescent identity development
D. Developmental psychopathology

0337. During work in the learning-support meeting, a youth worker identifies this need: responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation. Which idea should guide the response?

A. Eating-disorder warning signs
B. Adolescent identity development
C. Body image
D. Developmental psychopathology

0338. A counselor reviews a plan for a student aged 12 in the community youth program. The plan emphasizes using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity. Which course idea does this reflect?

A. Eating-disorder warning signs
B. Suicide protective factors
C. Gender-affirming support
D. Developmental psychopathology

0339. Choose the practice comparison that best separates Body image from Eating-disorder warning signs.

A. Body image: Exploring body-related distress and social pressures without reinforcing appearance-based judgments. / Eating-disorder warning signs: Examining pathways and turning points rather than treating a current symptom as fixed destiny.
B. Body image: Using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity. / Eating-disorder warning signs: Responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation.
C. Body image: Exploring body-related distress and social pressures without reinforcing appearance-based judgments. / Eating-disorder warning signs: Responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation.
D. Body image: Responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation. / Eating-disorder warning signs: Exploring body-related distress and social pressures without reinforcing appearance-based judgments.

0340. In a case note about a young adolescent client, a member of a clinical team working in the supervision meeting records this priority: responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation. What principle is reflected?

A. Sleep hygiene
B. Body image
C. Eating-disorder warning signs
D. Digital wellbeing

0341. How should a practitioner distinguish the applications of Sleep hygiene and Body image?

A. Sleep hygiene: Exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions. / Body image: Exploring body-related distress and social pressures without reinforcing appearance-based judgments.
B. Sleep hygiene: Using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity. / Body image: Exploring body-related distress and social pressures without reinforcing appearance-based judgments.
C. Sleep hygiene: Exploring body-related distress and social pressures without reinforcing appearance-based judgments. / Body image: Exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions.
D. Sleep hygiene: Exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions. / Body image: Exploring how online activities affect this adolescent's sleep, connection, mood, and goals.

0342. A trainee must choose a practice that exemplifies Peer contagion consideration. Which action is the best fit?

A. Using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior.
B. Using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity.
C. Identifying trusted relationships, coping resources, and accessible support that can be activated.
D. Exploring how online activities affect this adolescent's sleep, connection, mood, and goals.

0343. A therapist describes an intervention for a child aged 14 in the outpatient clinic, centered on exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions. Which named idea is most relevant?

A. Digital wellbeing
B. Sleep hygiene
C. Suicide protective factors
D. Developmental psychopathology

0344. Select the best explanation of Eating-disorder warning signs.

A. The balance between digital engagement and health, relationships, sleep, and functioning as experienced by the individual.
B. Respectful support that recognizes a young person's expressed gender and attends to safety, dignity, and context.
C. Thoughts, feelings, and perceptions concerning one's body, shaped by personal and social influences.
D. Behavioral, cognitive, and physical indicators that warrant careful assessment and referral to qualified care.

0345. A case conference asks for a distinction between Nonsuicidal self-injury and Suicide protective factors. Which answer is sound?

A. Nonsuicidal self-injury: Personal and contextual supports that can reduce risk or strengthen reasons and pathways for safety. / Suicide protective factors: Intentional self-inflicted injury without stated intent to die, requiring compassionate assessment and safety planning.
B. Nonsuicidal self-injury: Intentional self-inflicted injury without stated intent to die, requiring compassionate assessment and safety planning. / Suicide protective factors: Personal and contextual supports that can reduce risk or strengthen reasons and pathways for safety.
C. Nonsuicidal self-injury: Intentional self-inflicted injury without stated intent to die, requiring compassionate assessment and safety planning. / Suicide protective factors: Thoughts, feelings, and perceptions concerning one's body, shaped by personal and social influences.
D. Nonsuicidal self-injury: An evolving process of exploring and integrating personal, social, and cultural understandings of self. / Suicide protective factors: Personal and contextual supports that can reduce risk or strengthen reasons and pathways for safety.

0346. A supervisor asks for an applied contrast between Body image and Peer contagion consideration. Which option fits?

A. Body image: Exploring body-related distress and social pressures without reinforcing appearance-based judgments. / Peer contagion consideration: Using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior.
B. Body image: Asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either. / Peer contagion consideration: Using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior.
C. Body image: Exploring body-related distress and social pressures without reinforcing appearance-based judgments. / Peer contagion consideration: Using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity.
D. Body image: Using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior. / Peer contagion consideration: Exploring body-related distress and social pressures without reinforcing appearance-based judgments.

0347. Choose the practice comparison that best separates Adolescent identity development from Body image.

A. Adolescent identity development: Using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior. / Body image: Exploring body-related distress and social pressures without reinforcing appearance-based judgments.
B. Adolescent identity development: Exploring body-related distress and social pressures without reinforcing appearance-based judgments. / Body image: Providing respectful space for exploration without forcing a fixed label or timeline.
C. Adolescent identity development: Providing respectful space for exploration without forcing a fixed label or timeline. / Body image: Exploring body-related distress and social pressures without reinforcing appearance-based judgments.
D. Adolescent identity development: Providing respectful space for exploration without forcing a fixed label or timeline. / Body image: Identifying trusted relationships, coping resources, and accessible support that can be activated.

0348. Which option correctly matches each concept to its practice focus: Peer contagion consideration and Developmental psychopathology?

A. Peer contagion consideration: Examining pathways and turning points rather than treating a current symptom as fixed destiny. / Developmental psychopathology: Using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior.
B. Peer contagion consideration: Asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either. / Developmental psychopathology: Examining pathways and turning points rather than treating a current symptom as fixed destiny.
C. Peer contagion consideration: Using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior. / Developmental psychopathology: Exploring body-related distress and social pressures without reinforcing appearance-based judgments.
D. Peer contagion consideration: Using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior. / Developmental psychopathology: Examining pathways and turning points rather than treating a current symptom as fixed destiny.

0349. A planning meeting about a preadolescent child includes a play therapist. The proposed practice in the family resource center is asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either. Which idea underlies it?

A. Body image
B. Peer contagion consideration
C. Gender-affirming support
D. Nonsuicidal self-injury

0350. For a student aged 12 in the community service agency, a clinical supervisor makes this practice the immediate priority: asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either. Which concept fits best?

A. Peer contagion consideration
B. Nonsuicidal self-injury
C. Adolescent identity development
D. Digital wellbeing

0351. In a professional consultation about a client in late adolescence, the consultant describes this response in the community mental-health service: examining pathways and turning points rather than treating a current symptom as fixed destiny. Which term is most apt?

A. Gender-affirming support
B. Sleep hygiene
C. Developmental psychopathology
D. Nonsuicidal self-injury

0352. A therapist is asked what should shape a student aged 17's support in the caregiver consultation. The proposed focus is providing respectful space for exploration without forcing a fixed label or timeline. Which principle does it represent?

A. Developmental psychopathology
B. Gender-affirming support
C. Suicide protective factors
D. Adolescent identity development

0353. During service review in the community service agency, a therapist describes examining pathways and turning points rather than treating a current symptom as fixed destiny. for a student aged 15. Which course idea is most applicable?

A. Digital wellbeing
B. Gender-affirming support
C. Peer contagion consideration
D. Developmental psychopathology

0354. While consulting in the youth advocacy program, a mental-health professional supports a adolescent student by using this approach: responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation. Which concept is being applied?

A. Suicide protective factors
B. Eating-disorder warning signs
C. Body image
D. Nonsuicidal self-injury

0355. A member of a clinical team prepares for a session in the youth group with a child aged 7. The intended approach is using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity. Which concept is most relevant?

A. Digital wellbeing
B. Sleep hygiene
C. Gender-affirming support
D. Developmental psychopathology

0356. While supporting a student aged 12 in the clinical planning session, a family therapist adopts this practice: using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior. Which concept best explains the choice?

A. Suicide protective factors
B. Sleep hygiene
C. Nonsuicidal self-injury
D. Peer contagion consideration

0357. A assessment clinician is supporting a client in early adolescence in the student wellness team. The key practice is responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation. Which course concept is most relevant?

A. Digital wellbeing
B. Gender-affirming support
C. Developmental psychopathology
D. Eating-disorder warning signs

0358. Which statement shows a sound practice-level distinction between Suicide protective factors and Eating-disorder warning signs?

A. Suicide protective factors: Responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation. / Eating-disorder warning signs: Identifying trusted relationships, coping resources, and accessible support that can be activated.
B. Suicide protective factors: Identifying trusted relationships, coping resources, and accessible support that can be activated. / Eating-disorder warning signs: Responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation.
C. Suicide protective factors: Identifying trusted relationships, coping resources, and accessible support that can be activated. / Eating-disorder warning signs: Providing respectful space for exploration without forcing a fixed label or timeline.
D. Suicide protective factors: Using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior. / Eating-disorder warning signs: Responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation.

0359. A caregiver working with a counselor presents a support plan for a child aged 11 at the community mental-health service. Its central feature is exploring body-related distress and social pressures without reinforcing appearance-based judgments. Which concept should be named?

A. Suicide protective factors
B. Body image
C. Eating-disorder warning signs
D. Digital wellbeing

0360. A child aged 14 is receiving support in the family session. The teacher and counselor is guided by this practice: using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity. Which principle best fits?

A. Peer contagion consideration
B. Gender-affirming support
C. Suicide protective factors
D. Eating-disorder warning signs

0361. At the caregiver consultation, a play therapist meets with a teenage client. The practice priority is: identifying trusted relationships, coping resources, and accessible support that can be activated. Which concept best captures that priority?

A. Suicide protective factors
B. Developmental psychopathology
C. Sleep hygiene
D. Gender-affirming support

0362. In a case note about a child aged 7, a mental-health professional working in the outpatient clinic records this priority: asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either. What principle is reflected?

A. Nonsuicidal self-injury
B. Adolescent identity development
C. Gender-affirming support
D. Developmental psychopathology

0363. Choose the practice comparison that best separates Suicide protective factors from Gender-affirming support.

A. Suicide protective factors: Identifying trusted relationships, coping resources, and accessible support that can be activated. / Gender-affirming support: Using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity.
B. Suicide protective factors: Using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity. / Gender-affirming support: Identifying trusted relationships, coping resources, and accessible support that can be activated.
C. Suicide protective factors: Using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior. / Gender-affirming support: Using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity.
D. Suicide protective factors: Identifying trusted relationships, coping resources, and accessible support that can be activated. / Gender-affirming support: Asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either.

0364. A client in late adolescence's service team meets in the multidisciplinary case conference. The caregiver working with a counselor recommends a change involving using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior. Which idea best explains it?

A. Nonsuicidal self-injury
B. Gender-affirming support
C. Eating-disorder warning signs
D. Peer contagion consideration

0365. A counselor reviews a plan for a client in late adolescence in the child guidance clinic. The plan emphasizes asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either. Which course idea does this reflect?

A. Adolescent identity development
B. Nonsuicidal self-injury
C. Eating-disorder warning signs
D. Body image

0366. A supervised trainee is preparing a follow-up plan for a preadolescent child in the after-school program. The plan calls for examining pathways and turning points rather than treating a current symptom as fixed destiny. Which concept names this approach?

A. Developmental psychopathology
B. Eating-disorder warning signs
C. Suicide protective factors
D. Sleep hygiene

0367. A case discussion concerns a school-age child and a case coordinator in the community service agency. The practitioner is considering responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation. Which principle is involved?

A. Digital wellbeing
B. Gender-affirming support
C. Eating-disorder warning signs
D. Developmental psychopathology

0368. A consulting counselor is asked to justify a plan for a student aged 12 in the school counseling office. It calls for exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions. Which concept provides the rationale?

A. Body image
B. Nonsuicidal self-injury
C. Sleep hygiene
D. Digital wellbeing

0369. A supervisor asks for an applied contrast between Sleep hygiene and Suicide protective factors. Which option fits?

A. Sleep hygiene: Exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions. / Suicide protective factors: Identifying trusted relationships, coping resources, and accessible support that can be activated.
B. Sleep hygiene: Exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions. / Suicide protective factors: Examining pathways and turning points rather than treating a current symptom as fixed destiny.
C. Sleep hygiene: Identifying trusted relationships, coping resources, and accessible support that can be activated. / Suicide protective factors: Exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions.
D. Sleep hygiene: Using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior. / Suicide protective factors: Identifying trusted relationships, coping resources, and accessible support that can be activated.

0370. At a case-planning meeting, the clinical supervisor proposes exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions. for a student aged 15 seen in the family session. Which concept does this illustrate?

A. Body image
B. Sleep hygiene
C. Peer contagion consideration
D. Developmental psychopathology

0371. Which paired example correctly applies Suicide protective factors first and Gender-affirming support second?

A. Suicide protective factors: Using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior. / Gender-affirming support: Using the young person’s stated name and pronouns and assessing supports and safety without pathologizing identity.
B. Suicide protective factors: Identifying trusted relationships, coping resources, and accessible support that can be activated. / Gender-affirming support: Asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either.
C. Suicide protective factors: Identifying trusted relationships, coping resources, and accessible support that can be activated. / Gender-affirming support: Using the young person’s stated name and pronouns and assessing supports and safety without pathologizing identity.
D. Suicide protective factors: Using the young person’s stated name and pronouns and assessing supports and safety without pathologizing identity. / Gender-affirming support: Identifying trusted relationships, coping resources, and accessible support that can be activated.

0372. In the school consultation, the agreed focus for a research trainee working with a student aged 12 is providing respectful space for exploration without forcing a fixed label or timeline. Which concept names this focus?

A. Sleep hygiene
B. Body image
C. Adolescent identity development
D. Gender-affirming support

0373. A trainee must distinguish how Digital wellbeing and Developmental psychopathology guide practice. Which comparison is accurate?

A. Digital wellbeing: Providing respectful space for exploration without forcing a fixed label or timeline. / Developmental psychopathology: Examining pathways and turning points rather than treating a current symptom as fixed destiny.
B. Digital wellbeing: Examining pathways and turning points rather than treating a current symptom as fixed destiny. / Developmental psychopathology: Exploring how online activities affect this adolescent’s sleep, connection, mood, and goals.
C. Digital wellbeing: Exploring how online activities affect this adolescent’s sleep, connection, mood, and goals. / Developmental psychopathology: Exploring body-related distress and social pressures without reinforcing appearance-based judgments.
D. Digital wellbeing: Exploring how online activities affect this adolescent’s sleep, connection, mood, and goals. / Developmental psychopathology: Examining pathways and turning points rather than treating a current symptom as fixed destiny.

0374. A trainee must distinguish how Adolescent identity development and Digital wellbeing guide practice. Which comparison is accurate?

A. Adolescent identity development: Providing respectful space for exploration without forcing a fixed label or timeline. / Digital wellbeing: Exploring how online activities affect this adolescent’s sleep, connection, mood, and goals.
B. Adolescent identity development: Providing respectful space for exploration without forcing a fixed label or timeline. / Digital wellbeing: Asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either.
C. Adolescent identity development: Using the young person’s stated name and pronouns and assessing supports and safety without pathologizing identity. / Digital wellbeing: Exploring how online activities affect this adolescent’s sleep, connection, mood, and goals.
D. Adolescent identity development: Exploring how online activities affect this adolescent’s sleep, connection, mood, and goals. / Digital wellbeing: Providing respectful space for exploration without forcing a fixed label or timeline.

0375. In a professional consultation about a child aged 6, the assessment clinician describes this response in the telehealth session: using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior. Which term is most apt?

A. Digital wellbeing
B. Gender-affirming support
C. Peer contagion consideration
D. Developmental psychopathology

0376. A group facilitator is asked to justify a plan for a young person in the clinical planning session. It calls for providing respectful space for exploration without forcing a fixed label or timeline. Which concept provides the rationale?

A. Adolescent identity development
B. Nonsuicidal self-injury
C. Gender-affirming support
D. Sleep hygiene

0377. A service team discusses a adolescent student in the school-based service. Their proposed next step is asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either. Which course concept supports it?

A. Eating-disorder warning signs
B. Nonsuicidal self-injury
C. Peer contagion consideration
D. Gender-affirming support

0378. A trainee must choose a practice that exemplifies Nonsuicidal self-injury. Which action is the best fit?

A. Identifying trusted relationships, coping resources, and accessible support that can be activated.
B. Exploring body-related distress and social pressures without reinforcing appearance-based judgments.
C. Asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either.
D. Using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity.

0379. Which applied comparison correctly identifies what belongs to Eating-disorder warning signs versus Developmental psychopathology?

A. Eating-disorder warning signs: Examining pathways and turning points rather than treating a current symptom as fixed destiny. / Developmental psychopathology: Responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation.
B. Eating-disorder warning signs: Providing respectful space for exploration without forcing a fixed label or timeline. / Developmental psychopathology: Examining pathways and turning points rather than treating a current symptom as fixed destiny.
C. Eating-disorder warning signs: Responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation. / Developmental psychopathology: Examining pathways and turning points rather than treating a current symptom as fixed destiny.
D. Eating-disorder warning signs: Responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation. / Developmental psychopathology: Exploring body-related distress and social pressures without reinforcing appearance-based judgments.

0380. Which option preserves the correct meaning of both Body image and Gender-affirming support?

A. Body image: Thoughts, feelings, and perceptions concerning one's body, shaped by personal and social influences. / Gender-affirming support: A framework studying how typical and atypical developmental processes interact across time and context.
B. Body image: Thoughts, feelings, and perceptions concerning one's body, shaped by personal and social influences. / Gender-affirming support: Respectful support that recognizes a young person's expressed gender and attends to safety, dignity, and context.
C. Body image: The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices. / Gender-affirming support: Respectful support that recognizes a young person's expressed gender and attends to safety, dignity, and context.
D. Body image: Respectful support that recognizes a young person's expressed gender and attends to safety, dignity, and context. / Gender-affirming support: Thoughts, feelings, and perceptions concerning one's body, shaped by personal and social influences.

0381. In a case note about a child aged 11, a member of a clinical team working in the youth advocacy program records this priority: exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions. What principle is reflected?

A. Nonsuicidal self-injury
B. Body image
C. Sleep hygiene
D. Suicide protective factors

0382. A trainee must distinguish how Body image and Gender-affirming support guide practice. Which comparison is accurate?

A. Body image: Exploring body-related distress and social pressures without reinforcing appearance-based judgments. / Gender-affirming support: Using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity.
B. Body image: Using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity. / Gender-affirming support: Exploring body-related distress and social pressures without reinforcing appearance-based judgments.
C. Body image: Using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior. / Gender-affirming support: Using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity.
D. Body image: Exploring body-related distress and social pressures without reinforcing appearance-based judgments. / Gender-affirming support: Examining pathways and turning points rather than treating a current symptom as fixed destiny.

0383. Which description belongs with the term Adolescent identity development?

A. The balance between digital engagement and health, relationships, sleep, and functioning as experienced by the individual.
B. Respectful support that recognizes a young person's expressed gender and attends to safety, dignity, and context.
C. Intentional self-inflicted injury without stated intent to die, requiring compassionate assessment and safety planning.
D. An evolving process of exploring and integrating personal, social, and cultural understandings of self.

0384. Which statement accurately contrasts the course concepts Sleep hygiene and Suicide protective factors?

A. Sleep hygiene: Behaviors and environmental practices that support regular, restorative sleep. / Suicide protective factors: A framework studying how typical and atypical developmental processes interact across time and context.
B. Sleep hygiene: The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices. / Suicide protective factors: Personal and contextual supports that can reduce risk or strengthen reasons and pathways for safety.
C. Sleep hygiene: Behaviors and environmental practices that support regular, restorative sleep. / Suicide protective factors: Personal and contextual supports that can reduce risk or strengthen reasons and pathways for safety.
D. Sleep hygiene: Personal and contextual supports that can reduce risk or strengthen reasons and pathways for safety. / Suicide protective factors: Behaviors and environmental practices that support regular, restorative sleep.

0385. A community practitioner describes an intervention for a young person aged 10 in the child guidance clinic, centered on exploring how online activities affect this adolescent's sleep, connection, mood, and goals. Which named idea is most relevant?

A. Adolescent identity development
B. Eating-disorder warning signs
C. Gender-affirming support
D. Digital wellbeing

0386. A team must select a support approach for a school-age child at the community service agency. The case coordinator recommends responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation. Which idea is most relevant?

A. Eating-disorder warning signs
B. Peer contagion consideration
C. Digital wellbeing
D. Body image

0387. Which option pairs the definitions of Adolescent identity development and Suicide protective factors correctly, in that order?

A. Adolescent identity development: An evolving process of exploring and integrating personal, social, and cultural understandings of self. / Suicide protective factors: The balance between digital engagement and health, relationships, sleep, and functioning as experienced by the individual.
B. Adolescent identity development: An evolving process of exploring and integrating personal, social, and cultural understandings of self. / Suicide protective factors: Personal and contextual supports that can reduce risk or strengthen reasons and pathways for safety.
C. Adolescent identity development: Personal and contextual supports that can reduce risk or strengthen reasons and pathways for safety. / Suicide protective factors: An evolving process of exploring and integrating personal, social, and cultural understandings of self.
D. Adolescent identity development: A framework studying how typical and atypical developmental processes interact across time and context. / Suicide protective factors: Personal and contextual supports that can reduce risk or strengthen reasons and pathways for safety.

0388. A adolescent student's service team meets in the family session. The case coordinator recommends a change involving exploring body-related distress and social pressures without reinforcing appearance-based judgments. Which idea best explains it?

A. Gender-affirming support
B. Developmental psychopathology
C. Body image
D. Suicide protective factors

0389. Which option correctly matches each concept to its practice focus: Gender-affirming support and Developmental psychopathology?

A. Gender-affirming support: Examining pathways and turning points rather than treating a current symptom as fixed destiny. / Developmental psychopathology: Using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity.
B. Gender-affirming support: Using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity. / Developmental psychopathology: Providing respectful space for exploration without forcing a fixed label or timeline.
C. Gender-affirming support: Responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation. / Developmental psychopathology: Examining pathways and turning points rather than treating a current symptom as fixed destiny.
D. Gender-affirming support: Using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity. / Developmental psychopathology: Examining pathways and turning points rather than treating a current symptom as fixed destiny.

0390. How are Body image and Developmental psychopathology most accurately differentiated in this curriculum?

A. Body image: Behaviors and environmental practices that support regular, restorative sleep. / Developmental psychopathology: A framework studying how typical and atypical developmental processes interact across time and context.
B. Body image: Thoughts, feelings, and perceptions concerning one's body, shaped by personal and social influences. / Developmental psychopathology: A framework studying how typical and atypical developmental processes interact across time and context.
C. Body image: Thoughts, feelings, and perceptions concerning one's body, shaped by personal and social influences. / Developmental psychopathology: An evolving process of exploring and integrating personal, social, and cultural understandings of self.
D. Body image: A framework studying how typical and atypical developmental processes interact across time and context. / Developmental psychopathology: Thoughts, feelings, and perceptions concerning one's body, shaped by personal and social influences.

0391. Choose the definition pair that correctly explains Nonsuicidal self-injury first and Peer contagion consideration second.

A. Nonsuicidal self-injury: Intentional self-inflicted injury without stated intent to die, requiring compassionate assessment and safety planning. / Peer contagion consideration: Behavioral, cognitive, and physical indicators that warrant careful assessment and referral to qualified care.
B. Nonsuicidal self-injury: The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices. / Peer contagion consideration: Intentional self-inflicted injury without stated intent to die, requiring compassionate assessment and safety planning.
C. Nonsuicidal self-injury: Intentional self-inflicted injury without stated intent to die, requiring compassionate assessment and safety planning. / Peer contagion consideration: The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices.
D. Nonsuicidal self-injury: An evolving process of exploring and integrating personal, social, and cultural understandings of self. / Peer contagion consideration: The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices.

0392. An interdisciplinary team reviews a young adolescent client's case at the clinical planning session. The counselor recommends exploring how online activities affect this adolescent's sleep, connection, mood, and goals. Which course concept best fits?

A. Body image
B. Digital wellbeing
C. Peer contagion consideration
D. Sleep hygiene

0393. Which option correctly matches each concept to its practice focus: Nonsuicidal self-injury and Gender-affirming support?

A. Nonsuicidal self-injury: Asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either. / Gender-affirming support: Using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity.
B. Nonsuicidal self-injury: Using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity. / Gender-affirming support: Asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either.
C. Nonsuicidal self-injury: Asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either. / Gender-affirming support: Exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions.
D. Nonsuicidal self-injury: Providing respectful space for exploration without forcing a fixed label or timeline. / Gender-affirming support: Using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity.

0394. A trainee must distinguish how Digital wellbeing and Gender-affirming support guide practice. Which comparison is accurate?

A. Digital wellbeing: Exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions. / Gender-affirming support: Using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity.
B. Digital wellbeing: Using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity. / Gender-affirming support: Exploring how online activities affect this adolescent's sleep, connection, mood, and goals.
C. Digital wellbeing: Exploring how online activities affect this adolescent's sleep, connection, mood, and goals. / Gender-affirming support: Using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity.
D. Digital wellbeing: Exploring how online activities affect this adolescent's sleep, connection, mood, and goals. / Gender-affirming support: Examining pathways and turning points rather than treating a current symptom as fixed destiny.

0395. Which course concept is defined as follows: Behavioral, cognitive, and physical indicators that warrant careful assessment and referral to qualified care.

A. Eating-disorder warning signs
B. Gender-affirming support
C. Adolescent identity development
D. Suicide protective factors

0396. A member of a clinical team is preparing a follow-up plan for a child aged 8 in the counseling practicum. The plan calls for asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either. Which concept names this approach?

A. Adolescent identity development
B. Suicide protective factors
C. Nonsuicidal self-injury
D. Peer contagion consideration

0397. Select the best explanation of Sleep hygiene.

A. Intentional self-inflicted injury without stated intent to die, requiring compassionate assessment and safety planning.
B. Behaviors and environmental practices that support regular, restorative sleep.
C. A framework studying how typical and atypical developmental processes interact across time and context.
D. The balance between digital engagement and health, relationships, sleep, and functioning as experienced by the individual.

0398. In a supervision review, a family therapist describes work with a young person in the supervision meeting: asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either. What concept is illustrated?

A. Developmental psychopathology
B. Gender-affirming support
C. Body image
D. Nonsuicidal self-injury

0399. Which comparison correctly distinguishes Adolescent identity development from Peer contagion consideration?

A. Adolescent identity development: An evolving process of exploring and integrating personal, social, and cultural understandings of self. / Peer contagion consideration: The balance between digital engagement and health, relationships, sleep, and functioning as experienced by the individual.
B. Adolescent identity development: The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices. / Peer contagion consideration: An evolving process of exploring and integrating personal, social, and cultural understandings of self.
C. Adolescent identity development: An evolving process of exploring and integrating personal, social, and cultural understandings of self. / Peer contagion consideration: The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices.
D. Adolescent identity development: Behavioral, cognitive, and physical indicators that warrant careful assessment and referral to qualified care. / Peer contagion consideration: The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices.

0400. Choose the definition pair that correctly explains Adolescent identity development first and Eating-disorder warning signs second.

A. Adolescent identity development: An evolving process of exploring and integrating personal, social, and cultural understandings of self. / Eating-disorder warning signs: Behavioral, cognitive, and physical indicators that warrant careful assessment and referral to qualified care.
B. Adolescent identity development: An evolving process of exploring and integrating personal, social, and cultural understandings of self. / Eating-disorder warning signs: The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices.
C. Adolescent identity development: A framework studying how typical and atypical developmental processes interact across time and context. / Eating-disorder warning signs: Behavioral, cognitive, and physical indicators that warrant careful assessment and referral to qualified care.
D. Adolescent identity development: Behavioral, cognitive, and physical indicators that warrant careful assessment and referral to qualified care. / Eating-disorder warning signs: An evolving process of exploring and integrating personal, social, and cultural understandings of self.

0401. How are Body image and Gender-affirming support most accurately differentiated in this curriculum?

A. Body image: Thoughts, feelings, and perceptions concerning one’s body, shaped by personal and social influences. / Gender-affirming support: Respectful support that recognizes a young person’s expressed gender and attends to safety, dignity, and context.
B. Body image: Respectful support that recognizes a young person’s expressed gender and attends to safety, dignity, and context. / Gender-affirming support: Thoughts, feelings, and perceptions concerning one’s body, shaped by personal and social influences.
C. Body image: The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices. / Gender-affirming support: Respectful support that recognizes a young person’s expressed gender and attends to safety, dignity, and context.
D. Body image: Thoughts, feelings, and perceptions concerning one’s body, shaped by personal and social influences. / Gender-affirming support: A framework studying how typical and atypical developmental processes interact across time and context.

0402. Which option is the clearest practical expression of Digital wellbeing?

A. Identifying trusted relationships, coping resources, and accessible support that can be activated.
B. Exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions.
C. Responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation.
D. Exploring how online activities affect this adolescent’s sleep, connection, mood, and goals.

0403. In a supervision quiz, how should Sleep hygiene be distinguished from Digital wellbeing?

A. Sleep hygiene: Behaviors and environmental practices that support regular, restorative sleep. / Digital wellbeing: The balance between digital engagement and health, relationships, sleep, and functioning as experienced by the individual.
B. Sleep hygiene: Thoughts, feelings, and perceptions concerning one’s body, shaped by personal and social influences. / Digital wellbeing: The balance between digital engagement and health, relationships, sleep, and functioning as experienced by the individual.
C. Sleep hygiene: The balance between digital engagement and health, relationships, sleep, and functioning as experienced by the individual. / Digital wellbeing: Behaviors and environmental practices that support regular, restorative sleep.
D. Sleep hygiene: Behaviors and environmental practices that support regular, restorative sleep. / Digital wellbeing: Intentional self-inflicted injury without stated intent to die, requiring compassionate assessment and safety planning.

0404. A assessment clinician is supporting a young person aged 16 in the school consultation. The key practice is exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions. Which course concept is most relevant?

A. Adolescent identity development
B. Sleep hygiene
C. Peer contagion consideration
D. Developmental psychopathology

0405. A doctoral student reads the following description. Which concept does it define? Behaviors and environmental practices that support regular, restorative sleep.

A. Body image
B. Sleep hygiene
C. Peer contagion consideration
D. Eating-disorder warning signs

0406. In a professional consultation about a young person aged 13, the supervised trainee describes this response in the outpatient clinic: using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity. Which term is most apt?

A. Developmental psychopathology
B. Body image
C. Adolescent identity development
D. Gender-affirming support

0407. Which pair of actions illustrates Body image and Developmental psychopathology, respectively?

A. Body image: Examining pathways and turning points rather than treating a current symptom as fixed destiny. / Developmental psychopathology: Exploring body-related distress and social pressures without reinforcing appearance-based judgments.
B. Body image: Exploring body-related distress and social pressures without reinforcing appearance-based judgments. / Developmental psychopathology: Examining pathways and turning points rather than treating a current symptom as fixed destiny.
C. Body image: Exploring body-related distress and social pressures without reinforcing appearance-based judgments. / Developmental psychopathology: Providing respectful space for exploration without forcing a fixed label or timeline.
D. Body image: Exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions. / Developmental psychopathology: Examining pathways and turning points rather than treating a current symptom as fixed destiny.

0408. How should a practitioner distinguish the applications of Digital wellbeing and Eating-disorder warning signs?

A. Digital wellbeing: Exploring how online activities affect this adolescent's sleep, connection, mood, and goals. / Eating-disorder warning signs: Exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions.
B. Digital wellbeing: Exploring how online activities affect this adolescent's sleep, connection, mood, and goals. / Eating-disorder warning signs: Responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation.
C. Digital wellbeing: Exploring body-related distress and social pressures without reinforcing appearance-based judgments. / Eating-disorder warning signs: Responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation.
D. Digital wellbeing: Responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation. / Eating-disorder warning signs: Exploring how online activities affect this adolescent's sleep, connection, mood, and goals.

0409. At the family session, a clinical supervisor meets with a student aged 15. The practice priority is: exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions. Which concept best captures that priority?

A. Developmental psychopathology
B. Suicide protective factors
C. Digital wellbeing
D. Sleep hygiene

0410. A assessment clinician is preparing a follow-up plan for a teenage client in the community youth program. The plan calls for exploring body-related distress and social pressures without reinforcing appearance-based judgments. Which concept names this approach?

A. Suicide protective factors
B. Peer contagion consideration
C. Body image
D. Sleep hygiene

0411. In a case note about a young person aged 10, a supervised trainee working in the learning-support meeting records this priority: using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior. What principle is reflected?

A. Developmental psychopathology
B. Peer contagion consideration
C. Eating-disorder warning signs
D. Body image

0412. A trainee must distinguish how Gender-affirming support and Peer contagion consideration guide practice. Which comparison is accurate?

A. Gender-affirming support: Using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior. / Peer contagion consideration: Using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity.
B. Gender-affirming support: Using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity. / Peer contagion consideration: Examining pathways and turning points rather than treating a current symptom as fixed destiny.
C. Gender-affirming support: Responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation. / Peer contagion consideration: Using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior.
D. Gender-affirming support: Using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity. / Peer contagion consideration: Using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior.

0413. How should a practitioner distinguish the applications of Eating-disorder warning signs and Peer contagion consideration?

A. Eating-disorder warning signs: Using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior. / Peer contagion consideration: Responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation.
B. Eating-disorder warning signs: Responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation. / Peer contagion consideration: Using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior.
C. Eating-disorder warning signs: Responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation. / Peer contagion consideration: Exploring how online activities affect this adolescent's sleep, connection, mood, and goals.
D. Eating-disorder warning signs: Asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either. / Peer contagion consideration: Using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior.

0414. A support meeting for a young person aged 16 includes a clinical supervisor in the clinical planning session. The practice under consideration is examining pathways and turning points rather than treating a current symptom as fixed destiny. Which concept guides it?

A. Gender-affirming support
B. Developmental psychopathology
C. Peer contagion consideration
D. Sleep hygiene

0415. In a professional consultation about a child aged 14, the member of a clinical team describes this response in the student-support meeting: providing respectful space for exploration without forcing a fixed label or timeline. Which term is most apt?

A. Adolescent identity development
B. Suicide protective factors
C. Eating-disorder warning signs
D. Body image

0416. Which choice aligns each practice with the correct idea, Adolescent identity development or Nonsuicidal self-injury?

A. Adolescent identity development: Asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either. / Nonsuicidal self-injury: Providing respectful space for exploration without forcing a fixed label or timeline.
B. Adolescent identity development: Responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation. / Nonsuicidal self-injury: Asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either.
C. Adolescent identity development: Providing respectful space for exploration without forcing a fixed label or timeline. / Nonsuicidal self-injury: Using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior.
D. Adolescent identity development: Providing respectful space for exploration without forcing a fixed label or timeline. / Nonsuicidal self-injury: Asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either.

0417. A student confuses Body image with Peer contagion consideration. Which explanation most accurately separates them?

A. Body image: Thoughts, feelings, and perceptions concerning one's body, shaped by personal and social influences. / Peer contagion consideration: The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices.
B. Body image: The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices. / Peer contagion consideration: Thoughts, feelings, and perceptions concerning one's body, shaped by personal and social influences.
C. Body image: Thoughts, feelings, and perceptions concerning one's body, shaped by personal and social influences. / Peer contagion consideration: Respectful support that recognizes a young person's expressed gender and attends to safety, dignity, and context.
D. Body image: Intentional self-inflicted injury without stated intent to die, requiring compassionate assessment and safety planning. / Peer contagion consideration: The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices.

0418. A member of a clinical team is supporting a student aged 15 in the school counseling office. The key practice is using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior. Which course concept is most relevant?

A. Peer contagion consideration
B. Eating-disorder warning signs
C. Body image
D. Nonsuicidal self-injury

0419. Choose the term that matches this definition: Personal and contextual supports that can reduce risk or strengthen reasons and pathways for safety.

A. Peer contagion consideration
B. Eating-disorder warning signs
C. Body image
D. Suicide protective factors

0420. Choose the term that matches this definition: The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices.

A. Eating-disorder warning signs
B. Adolescent identity development
C. Nonsuicidal self-injury
D. Peer contagion consideration

0421. Which applied comparison correctly identifies what belongs to Gender-affirming support versus Developmental psychopathology?

A. Gender-affirming support: Responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation. / Developmental psychopathology: Examining pathways and turning points rather than treating a current symptom as fixed destiny.
B. Gender-affirming support: Examining pathways and turning points rather than treating a current symptom as fixed destiny. / Developmental psychopathology: Using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity.
C. Gender-affirming support: Using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity. / Developmental psychopathology: Providing respectful space for exploration without forcing a fixed label or timeline.
D. Gender-affirming support: Using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity. / Developmental psychopathology: Examining pathways and turning points rather than treating a current symptom as fixed destiny.

0422. Which professional action most closely applies Suicide protective factors?

A. Identifying trusted relationships, coping resources, and accessible support that can be activated.
B. Using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior.
C. Responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation.
D. Using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity.

0423. Choose the definition pair that correctly explains Digital wellbeing first and Developmental psychopathology second.

A. Digital wellbeing: The balance between digital engagement and health, relationships, sleep, and functioning as experienced by the individual. / Developmental psychopathology: A framework studying how typical and atypical developmental processes interact across time and context.
B. Digital wellbeing: The balance between digital engagement and health, relationships, sleep, and functioning as experienced by the individual. / Developmental psychopathology: Thoughts, feelings, and perceptions concerning one's body, shaped by personal and social influences.
C. Digital wellbeing: A framework studying how typical and atypical developmental processes interact across time and context. / Developmental psychopathology: The balance between digital engagement and health, relationships, sleep, and functioning as experienced by the individual.
D. Digital wellbeing: An evolving process of exploring and integrating personal, social, and cultural understandings of self. / Developmental psychopathology: A framework studying how typical and atypical developmental processes interact across time and context.

0424. Consider a young person receiving help in the outpatient clinic. The youth worker focuses on exploring body-related distress and social pressures without reinforcing appearance-based judgments. Which term best describes the guiding idea?

A. Body image
B. Eating-disorder warning signs
C. Developmental psychopathology
D. Peer contagion consideration

0425. At a case-planning meeting, the school support specialist proposes using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity. for a preadolescent child seen in the community service agency. Which concept does this illustrate?

A. Gender-affirming support
B. Nonsuicidal self-injury
C. Suicide protective factors
D. Eating-disorder warning signs

0426. A planning meeting about a young adolescent client includes a counselor. The proposed practice in the clinical planning session is exploring how online activities affect this adolescent's sleep, connection, mood, and goals. Which idea underlies it?

A. Nonsuicidal self-injury
B. Digital wellbeing
C. Developmental psychopathology
D. Adolescent identity development

0427. For a child aged 7 seen in the family session, the therapist recommends a plan built around using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior. Which concept is reflected?

A. Digital wellbeing
B. Gender-affirming support
C. Body image
D. Peer contagion consideration

0428. Which comparison would correct a trainee's misunderstanding of Adolescent identity development versus Body image?

A. Adolescent identity development: Thoughts, feelings, and perceptions concerning one's body, shaped by personal and social influences. / Body image: An evolving process of exploring and integrating personal, social, and cultural understandings of self.
B. Adolescent identity development: An evolving process of exploring and integrating personal, social, and cultural understandings of self. / Body image: Thoughts, feelings, and perceptions concerning one's body, shaped by personal and social influences.
C. Adolescent identity development: An evolving process of exploring and integrating personal, social, and cultural understandings of self. / Body image: Personal and contextual supports that can reduce risk or strengthen reasons and pathways for safety.
D. Adolescent identity development: The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices. / Body image: Thoughts, feelings, and perceptions concerning one's body, shaped by personal and social influences.

0429. Which applied comparison correctly identifies what belongs to Adolescent identity development versus Body image?

A. Adolescent identity development: Providing respectful space for exploration without forcing a fixed label or timeline. / Body image: Exploring body-related distress and social pressures without reinforcing appearance-based judgments.
B. Adolescent identity development: Exploring body-related distress and social pressures without reinforcing appearance-based judgments. / Body image: Providing respectful space for exploration without forcing a fixed label or timeline.
C. Adolescent identity development: Using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior. / Body image: Exploring body-related distress and social pressures without reinforcing appearance-based judgments.
D. Adolescent identity development: Providing respectful space for exploration without forcing a fixed label or timeline. / Body image: Identifying trusted relationships, coping resources, and accessible support that can be activated.

0430. Which statement shows a sound practice-level distinction between Body image and Gender-affirming support?

A. Body image: Exploring body-related distress and social pressures without reinforcing appearance-based judgments. / Gender-affirming support: Using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity.
B. Body image: Using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity. / Gender-affirming support: Exploring body-related distress and social pressures without reinforcing appearance-based judgments.
C. Body image: Using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior. / Gender-affirming support: Using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity.
D. Body image: Exploring body-related distress and social pressures without reinforcing appearance-based judgments. / Gender-affirming support: Examining pathways and turning points rather than treating a current symptom as fixed destiny.

0431. A trainee must explain Sleep hygiene. Which answer is accurate?

A. Respectful support that recognizes a young person's expressed gender and attends to safety, dignity, and context.
B. Thoughts, feelings, and perceptions concerning one's body, shaped by personal and social influences.
C. Behaviors and environmental practices that support regular, restorative sleep.
D. The balance between digital engagement and health, relationships, sleep, and functioning as experienced by the individual.

0432. A supervisor asks for an applied contrast between Suicide protective factors and Eating-disorder warning signs. Which option fits?

A. Suicide protective factors: Identifying trusted relationships, coping resources, and accessible support that can be activated. / Eating-disorder warning signs: Responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation.
B. Suicide protective factors: Responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation. / Eating-disorder warning signs: Identifying trusted relationships, coping resources, and accessible support that can be activated.
C. Suicide protective factors: Identifying trusted relationships, coping resources, and accessible support that can be activated. / Eating-disorder warning signs: Providing respectful space for exploration without forcing a fixed label or timeline.
D. Suicide protective factors: Using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior. / Eating-disorder warning signs: Responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation.

0433. In the family resource center, a parent educator is considering this approach for a school-age child: exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions. Which framework does it represent?

A. Suicide protective factors
B. Sleep hygiene
C. Eating-disorder warning signs
D. Adolescent identity development

0434. In a supervision quiz, how should Eating-disorder warning signs be distinguished from Developmental psychopathology?

A. Eating-disorder warning signs: Behavioral, cognitive, and physical indicators that warrant careful assessment and referral to qualified care. / Developmental psychopathology: Thoughts, feelings, and perceptions concerning one's body, shaped by personal and social influences.
B. Eating-disorder warning signs: A framework studying how typical and atypical developmental processes interact across time and context. / Developmental psychopathology: Behavioral, cognitive, and physical indicators that warrant careful assessment and referral to qualified care.
C. Eating-disorder warning signs: An evolving process of exploring and integrating personal, social, and cultural understandings of self. / Developmental psychopathology: A framework studying how typical and atypical developmental processes interact across time and context.
D. Eating-disorder warning signs: Behavioral, cognitive, and physical indicators that warrant careful assessment and referral to qualified care. / Developmental psychopathology: A framework studying how typical and atypical developmental processes interact across time and context.

0435. While supporting a middle-school student in the family resource center, a school-based clinician adopts this practice: responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation. Which concept best explains the choice?

A. Body image
B. Suicide protective factors
C. Eating-disorder warning signs
D. Digital wellbeing

0436. Which comparison would correct a trainee's misunderstanding of Body image versus Gender-affirming support?

A. Body image: The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices. / Gender-affirming support: Respectful support that recognizes a young person's expressed gender and attends to safety, dignity, and context.
B. Body image: Thoughts, feelings, and perceptions concerning one's body, shaped by personal and social influences. / Gender-affirming support: A framework studying how typical and atypical developmental processes interact across time and context.
C. Body image: Thoughts, feelings, and perceptions concerning one's body, shaped by personal and social influences. / Gender-affirming support: Respectful support that recognizes a young person's expressed gender and attends to safety, dignity, and context.
D. Body image: Respectful support that recognizes a young person's expressed gender and attends to safety, dignity, and context. / Gender-affirming support: Thoughts, feelings, and perceptions concerning one's body, shaped by personal and social influences.

0437. When reviewing a middle-school student's plan in the child guidance clinic, the caregiver working with a counselor notes that the next step is exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions. Which concept guides this step?

A. Developmental psychopathology
B. Peer contagion consideration
C. Digital wellbeing
D. Sleep hygiene

0438. A team must select a support approach for a child aged 14 at the school-based service. The caregiver working with a counselor recommends exploring how online activities affect this adolescent's sleep, connection, mood, and goals. Which idea is most relevant?

A. Peer contagion consideration
B. Suicide protective factors
C. Digital wellbeing
D. Eating-disorder warning signs

0439. For a young person in the behavior-support review, a counselor makes this practice the immediate priority: exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions. Which concept fits best?

A. Developmental psychopathology
B. Sleep hygiene
C. Gender-affirming support
D. Peer contagion consideration

0440. A planning meeting about a high-school student includes a behavior specialist. The proposed practice in the caregiver consultation is using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior. Which idea underlies it?

A. Adolescent identity development
B. Peer contagion consideration
C. Sleep hygiene
D. Suicide protective factors

0441. At the classroom support meeting, a therapist reviews whether a plan for a young adolescent client is appropriate. The relevant practice is using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity. Which concept is tested?

A. Eating-disorder warning signs
B. Nonsuicidal self-injury
C. Suicide protective factors
D. Gender-affirming support

0442. A case conference reviews a program coordinator's work with a child aged 7 in the parent meeting: identifying trusted relationships, coping resources, and accessible support that can be activated. Which principle is central?

A. Eating-disorder warning signs
B. Digital wellbeing
C. Suicide protective factors
D. Adolescent identity development

0443. In the after-school program, a case coordinator is considering this approach for a young adolescent client: providing respectful space for exploration without forcing a fixed label or timeline. Which framework does it represent?

A. Nonsuicidal self-injury
B. Adolescent identity development
C. Suicide protective factors
D. Sleep hygiene

0444. Which option is the clearest practical expression of Gender-affirming support?

A. Exploring how online activities affect this adolescent's sleep, connection, mood, and goals.
B. Identifying trusted relationships, coping resources, and accessible support that can be activated.
C. Using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior.
D. Using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity.

0445. At a case-planning meeting, the counselor proposes providing respectful space for exploration without forcing a fixed label or timeline. for a child aged 8 seen in the school counseling office. Which concept does this illustrate?

A. Peer contagion consideration
B. Body image
C. Developmental psychopathology
D. Adolescent identity development

0446. How are Adolescent identity development and Eating-disorder warning signs most accurately differentiated in this curriculum?

A. Adolescent identity development: Behavioral, cognitive, and physical indicators that warrant careful assessment and referral to qualified care. / Eating-disorder warning signs: An evolving process of exploring and integrating personal, social, and cultural understandings of self.
B. Adolescent identity development: An evolving process of exploring and integrating personal, social, and cultural understandings of self. / Eating-disorder warning signs: The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices.
C. Adolescent identity development: A framework studying how typical and atypical developmental processes interact across time and context. / Eating-disorder warning signs: Behavioral, cognitive, and physical indicators that warrant careful assessment and referral to qualified care.
D. Adolescent identity development: An evolving process of exploring and integrating personal, social, and cultural understandings of self. / Eating-disorder warning signs: Behavioral, cognitive, and physical indicators that warrant careful assessment and referral to qualified care.

0447. Which option preserves the correct meaning of both Body image and Peer contagion consideration?

A. Body image: Thoughts, feelings, and perceptions concerning one's body, shaped by personal and social influences. / Peer contagion consideration: The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices.
B. Body image: Thoughts, feelings, and perceptions concerning one's body, shaped by personal and social influences. / Peer contagion consideration: Respectful support that recognizes a young person's expressed gender and attends to safety, dignity, and context.
C. Body image: The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices. / Peer contagion consideration: Thoughts, feelings, and perceptions concerning one's body, shaped by personal and social influences.
D. Body image: Intentional self-inflicted injury without stated intent to die, requiring compassionate assessment and safety planning. / Peer contagion consideration: The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices.

0448. A supervisor asks for an applied contrast between Nonsuicidal self-injury and Eating-disorder warning signs. Which option fits?

A. Nonsuicidal self-injury: Using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity. / Eating-disorder warning signs: Responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation.
B. Nonsuicidal self-injury: Asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either. / Eating-disorder warning signs: Responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation.
C. Nonsuicidal self-injury: Responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation. / Eating-disorder warning signs: Asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either.
D. Nonsuicidal self-injury: Asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either. / Eating-disorder warning signs: Examining pathways and turning points rather than treating a current symptom as fixed destiny.

0449. Which comparison correctly distinguishes Sleep hygiene from Developmental psychopathology?

A. Sleep hygiene: A framework studying how typical and atypical developmental processes interact across time and context. / Developmental psychopathology: Behaviors and environmental practices that support regular, restorative sleep.
B. Sleep hygiene: The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices. / Developmental psychopathology: A framework studying how typical and atypical developmental processes interact across time and context.
C. Sleep hygiene: Behaviors and environmental practices that support regular, restorative sleep. / Developmental psychopathology: A framework studying how typical and atypical developmental processes interact across time and context.
D. Sleep hygiene: Behaviors and environmental practices that support regular, restorative sleep. / Developmental psychopathology: The balance between digital engagement and health, relationships, sleep, and functioning as experienced by the individual.

0450. What is the central meaning of Sleep hygiene?

A. Behavioral, cognitive, and physical indicators that warrant careful assessment and referral to qualified care.
B. Behaviors and environmental practices that support regular, restorative sleep.
C. Respectful support that recognizes a young person's expressed gender and attends to safety, dignity, and context.
D. The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices.

0451. A group facilitator is asked to justify a plan for a student aged 15 in the multidisciplinary case conference. It calls for exploring body-related distress and social pressures without reinforcing appearance-based judgments. Which concept provides the rationale?

A. Nonsuicidal self-injury
B. Suicide protective factors
C. Peer contagion consideration
D. Body image

0452. A case conference reviews a community practitioner's work with a preadolescent child in the school consultation: exploring body-related distress and social pressures without reinforcing appearance-based judgments. Which principle is central?

A. Body image
B. Eating-disorder warning signs
C. Gender-affirming support
D. Peer contagion consideration

0453. Which comparison would correct a trainee's misunderstanding of Digital wellbeing versus Peer contagion consideration?

A. Digital wellbeing: The balance between digital engagement and health, relationships, sleep, and functioning as experienced by the individual. / Peer contagion consideration: The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices.
B. Digital wellbeing: The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices. / Peer contagion consideration: The balance between digital engagement and health, relationships, sleep, and functioning as experienced by the individual.
C. Digital wellbeing: Intentional self-inflicted injury without stated intent to die, requiring compassionate assessment and safety planning. / Peer contagion consideration: The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices.
D. Digital wellbeing: The balance between digital engagement and health, relationships, sleep, and functioning as experienced by the individual. / Peer contagion consideration: Behaviors and environmental practices that support regular, restorative sleep.

0454. A case conference asks for a distinction between Digital wellbeing and Developmental psychopathology. Which answer is sound?

A. Digital wellbeing: The balance between digital engagement and health, relationships, sleep, and functioning as experienced by the individual. / Developmental psychopathology: Thoughts, feelings, and perceptions concerning one's body, shaped by personal and social influences.
B. Digital wellbeing: An evolving process of exploring and integrating personal, social, and cultural understandings of self. / Developmental psychopathology: A framework studying how typical and atypical developmental processes interact across time and context.
C. Digital wellbeing: The balance between digital engagement and health, relationships, sleep, and functioning as experienced by the individual. / Developmental psychopathology: A framework studying how typical and atypical developmental processes interact across time and context.
D. Digital wellbeing: A framework studying how typical and atypical developmental processes interact across time and context. / Developmental psychopathology: The balance between digital engagement and health, relationships, sleep, and functioning as experienced by the individual.

0455. A teacher and counselor is explaining a choice to a child aged 14 and caregiver in the family session. The choice centers on using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity. Which idea is illustrated?

A. Gender-affirming support
B. Sleep hygiene
C. Digital wellbeing
D. Developmental psychopathology

0456. A community practitioner is asked what should shape a young person aged 13's support in the behavior-support review. The proposed focus is identifying trusted relationships, coping resources, and accessible support that can be activated. Which principle does it represent?

A. Developmental psychopathology
B. Nonsuicidal self-injury
C. Body image
D. Suicide protective factors

0457. At the parent meeting, a program coordinator reviews whether a plan for a child aged 7 is appropriate. The relevant practice is identifying trusted relationships, coping resources, and accessible support that can be activated. Which concept is tested?

A. Sleep hygiene
B. Digital wellbeing
C. Body image
D. Suicide protective factors

0458. A case conference asks for a distinction between Suicide protective factors and Gender-affirming support. Which answer is sound?

A. Suicide protective factors: Personal and contextual supports that can reduce risk or strengthen reasons and pathways for safety. / Gender-affirming support: Intentional self-inflicted injury without stated intent to die, requiring compassionate assessment and safety planning.
B. Suicide protective factors: Personal and contextual supports that can reduce risk or strengthen reasons and pathways for safety. / Gender-affirming support: Respectful support that recognizes a young person's expressed gender and attends to safety, dignity, and context.
C. Suicide protective factors: Respectful support that recognizes a young person's expressed gender and attends to safety, dignity, and context. / Gender-affirming support: Personal and contextual supports that can reduce risk or strengthen reasons and pathways for safety.
D. Suicide protective factors: The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices. / Gender-affirming support: Respectful support that recognizes a young person's expressed gender and attends to safety, dignity, and context.

0459. In the learning-support meeting, a team asks how a teacher and counselor can support a preadolescent child. One proposed action is exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions. Which idea does it represent?

A. Nonsuicidal self-injury
B. Eating-disorder warning signs
C. Sleep hygiene
D. Suicide protective factors

0460. At the school-based service, a counselor meets with a child aged 7. The practice priority is: exploring body-related distress and social pressures without reinforcing appearance-based judgments. Which concept best captures that priority?

A. Sleep hygiene
B. Adolescent identity development
C. Body image
D. Peer contagion consideration

0461. A trainee must choose a practice that exemplifies Sleep hygiene. Which action is the best fit?

A. Using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity.
B. Exploring body-related distress and social pressures without reinforcing appearance-based judgments.
C. Exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions.
D. Identifying trusted relationships, coping resources, and accessible support that can be activated.

0462. Consider a child aged 8 receiving help in the supervision meeting. The teacher and counselor focuses on examining pathways and turning points rather than treating a current symptom as fixed destiny. Which term best describes the guiding idea?

A. Nonsuicidal self-injury
B. Developmental psychopathology
C. Suicide protective factors
D. Body image

0463. A supervised trainee is supporting a young person aged 18 in the family resource center. The key practice is exploring body-related distress and social pressures without reinforcing appearance-based judgments. Which course concept is most relevant?

A. Sleep hygiene
B. Nonsuicidal self-injury
C. Gender-affirming support
D. Body image

0464. Which professional action most closely applies Developmental psychopathology?

A. Providing respectful space for exploration without forcing a fixed label or timeline.
B. Examining pathways and turning points rather than treating a current symptom as fixed destiny.
C. Responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation.
D. Exploring how online activities affect this adolescent's sleep, connection, mood, and goals.

0465. In the youth group, the agreed focus for a community practitioner working with a young person aged 18 is exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions. Which concept names this focus?

A. Digital wellbeing
B. Sleep hygiene
C. Suicide protective factors
D. Peer contagion consideration

0466. Choose the term that matches this definition: The balance between digital engagement and health, relationships, sleep, and functioning as experienced by the individual.

A. Suicide protective factors
B. Digital wellbeing
C. Gender-affirming support
D. Eating-disorder warning signs

0467. How should a practitioner distinguish the applications of Nonsuicidal self-injury and Eating-disorder warning signs?

A. Nonsuicidal self-injury: Responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation. / Eating-disorder warning signs: Asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either.
B. Nonsuicidal self-injury: Asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either. / Eating-disorder warning signs: Responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation.
C. Nonsuicidal self-injury: Asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either. / Eating-disorder warning signs: Examining pathways and turning points rather than treating a current symptom as fixed destiny.
D. Nonsuicidal self-injury: Using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity. / Eating-disorder warning signs: Responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation.

0468. A planning meeting about a child aged 7 includes a clinical supervisor. The proposed practice in the classroom support meeting is providing respectful space for exploration without forcing a fixed label or timeline. Which idea underlies it?

A. Adolescent identity development
B. Peer contagion consideration
C. Nonsuicidal self-injury
D. Suicide protective factors

0469. Which option preserves the correct meaning of both Peer contagion consideration and Developmental psychopathology?

A. Peer contagion consideration: The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices. / Developmental psychopathology: A framework studying how typical and atypical developmental processes interact across time and context.
B. Peer contagion consideration: The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices. / Developmental psychopathology: Thoughts, feelings, and perceptions concerning one's body, shaped by personal and social influences.
C. Peer contagion consideration: A framework studying how typical and atypical developmental processes interact across time and context. / Developmental psychopathology: The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices.
D. Peer contagion consideration: Intentional self-inflicted injury without stated intent to die, requiring compassionate assessment and safety planning. / Developmental psychopathology: A framework studying how typical and atypical developmental processes interact across time and context.

0470. A school counselor is asked to justify a plan for a teenage client in the behavior-support review. It calls for using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity. Which concept provides the rationale?

A. Nonsuicidal self-injury
B. Suicide protective factors
C. Sleep hygiene
D. Gender-affirming support

0471. Which option pairs the definitions of Digital wellbeing and Body image correctly, in that order?

A. Digital wellbeing: Thoughts, feelings, and perceptions concerning one's body, shaped by personal and social influences. / Body image: The balance between digital engagement and health, relationships, sleep, and functioning as experienced by the individual.
B. Digital wellbeing: The balance between digital engagement and health, relationships, sleep, and functioning as experienced by the individual. / Body image: Thoughts, feelings, and perceptions concerning one's body, shaped by personal and social influences.
C. Digital wellbeing: The balance between digital engagement and health, relationships, sleep, and functioning as experienced by the individual. / Body image: An evolving process of exploring and integrating personal, social, and cultural understandings of self.
D. Digital wellbeing: Intentional self-inflicted injury without stated intent to die, requiring compassionate assessment and safety planning. / Body image: Thoughts, feelings, and perceptions concerning one's body, shaped by personal and social influences.

0472. At a case-planning meeting, the school support specialist proposes asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either. for a older adolescent client seen in the student-support meeting. Which concept does this illustrate?

A. Nonsuicidal self-injury
B. Sleep hygiene
C. Developmental psychopathology
D. Suicide protective factors

0473. Which choice aligns each practice with the correct idea, Adolescent identity development or Digital wellbeing?

A. Adolescent identity development: Using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity. / Digital wellbeing: Exploring how online activities affect this adolescent's sleep, connection, mood, and goals.
B. Adolescent identity development: Providing respectful space for exploration without forcing a fixed label or timeline. / Digital wellbeing: Exploring how online activities affect this adolescent's sleep, connection, mood, and goals.
C. Adolescent identity development: Exploring how online activities affect this adolescent's sleep, connection, mood, and goals. / Digital wellbeing: Providing respectful space for exploration without forcing a fixed label or timeline.
D. Adolescent identity development: Providing respectful space for exploration without forcing a fixed label or timeline. / Digital wellbeing: Asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either.

0474. A service navigator describes an intervention for a preadolescent child in the youth advocacy program, centered on providing respectful space for exploration without forcing a fixed label or timeline. Which named idea is most relevant?

A. Gender-affirming support
B. Adolescent identity development
C. Nonsuicidal self-injury
D. Eating-disorder warning signs

0475. Which option is the clearest practical expression of Nonsuicidal self-injury?

A. Asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either.
B. Identifying trusted relationships, coping resources, and accessible support that can be activated.
C. Exploring body-related distress and social pressures without reinforcing appearance-based judgments.
D. Exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions.

0476. A trainee must choose a practice that exemplifies Digital wellbeing. Which action is the best fit?

A. Providing respectful space for exploration without forcing a fixed label or timeline.
B. Exploring how online activities affect this adolescent's sleep, connection, mood, and goals.
C. Asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either.
D. Identifying trusted relationships, coping resources, and accessible support that can be activated.

0477. A member of a clinical team is supporting a young person in the classroom support meeting. The key practice is identifying trusted relationships, coping resources, and accessible support that can be activated. Which course concept is most relevant?

A. Suicide protective factors
B. Peer contagion consideration
C. Nonsuicidal self-injury
D. Developmental psychopathology

0478. In the counseling practicum, a teacher and counselor explains why a child aged 6 would benefit from exploring body-related distress and social pressures without reinforcing appearance-based judgments. Which course concept underpins the explanation?

A. Developmental psychopathology
B. Digital wellbeing
C. Sleep hygiene
D. Body image

0479. Identify the most precise label for this idea: Behaviors and environmental practices that support regular, restorative sleep.

A. Sleep hygiene
B. Eating-disorder warning signs
C. Gender-affirming support
D. Digital wellbeing

0480. Which comparison correctly distinguishes Body image from Peer contagion consideration?

A. Body image: The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices. / Peer contagion consideration: Thoughts, feelings, and perceptions concerning one's body, shaped by personal and social influences.
B. Body image: Intentional self-inflicted injury without stated intent to die, requiring compassionate assessment and safety planning. / Peer contagion consideration: The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices.
C. Body image: Thoughts, feelings, and perceptions concerning one's body, shaped by personal and social influences. / Peer contagion consideration: Respectful support that recognizes a young person's expressed gender and attends to safety, dignity, and context.
D. Body image: Thoughts, feelings, and perceptions concerning one's body, shaped by personal and social influences. / Peer contagion consideration: The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices.

0481. In a case note about a teenage client, a consultant working in the community service agency records this priority: providing respectful space for exploration without forcing a fixed label or timeline. What principle is reflected?

A. Sleep hygiene
B. Nonsuicidal self-injury
C. Adolescent identity development
D. Peer contagion consideration

0482. Which pair of actions illustrates Nonsuicidal self-injury and Eating-disorder warning signs, respectively?

A. Nonsuicidal self-injury: Using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity. / Eating-disorder warning signs: Responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation.
B. Nonsuicidal self-injury: Asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either. / Eating-disorder warning signs: Responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation.
C. Nonsuicidal self-injury: Responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation. / Eating-disorder warning signs: Asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either.
D. Nonsuicidal self-injury: Asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either. / Eating-disorder warning signs: Examining pathways and turning points rather than treating a current symptom as fixed destiny.

0483. When reviewing a student aged 12's plan in the counseling practicum, the case coordinator notes that the next step is identifying trusted relationships, coping resources, and accessible support that can be activated. Which concept guides this step?

A. Body image
B. Suicide protective factors
C. Digital wellbeing
D. Eating-disorder warning signs

0484. How are Nonsuicidal self-injury and Suicide protective factors most accurately differentiated in this curriculum?

A. Nonsuicidal self-injury: Intentional self-inflicted injury without stated intent to die, requiring compassionate assessment and safety planning. / Suicide protective factors: Personal and contextual supports that can reduce risk or strengthen reasons and pathways for safety.
B. Nonsuicidal self-injury: Intentional self-inflicted injury without stated intent to die, requiring compassionate assessment and safety planning. / Suicide protective factors: Thoughts, feelings, and perceptions concerning one's body, shaped by personal and social influences.
C. Nonsuicidal self-injury: Personal and contextual supports that can reduce risk or strengthen reasons and pathways for safety. / Suicide protective factors: Intentional self-inflicted injury without stated intent to die, requiring compassionate assessment and safety planning.
D. Nonsuicidal self-injury: An evolving process of exploring and integrating personal, social, and cultural understandings of self. / Suicide protective factors: Personal and contextual supports that can reduce risk or strengthen reasons and pathways for safety.

0485. A service team discusses a middle-school student in the community mental-health service. Their proposed next step is using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior. Which course concept supports it?

A. Body image
B. Peer contagion consideration
C. Gender-affirming support
D. Sleep hygiene

0486. Which professional action most closely applies Nonsuicidal self-injury?

A. Examining pathways and turning points rather than treating a current symptom as fixed destiny.
B. Using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity.
C. Asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either.
D. Responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation.

0487. A trainee must distinguish how Sleep hygiene and Developmental psychopathology guide practice. Which comparison is accurate?

A. Sleep hygiene: Exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions. / Developmental psychopathology: Examining pathways and turning points rather than treating a current symptom as fixed destiny.
B. Sleep hygiene: Using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior. / Developmental psychopathology: Examining pathways and turning points rather than treating a current symptom as fixed destiny.
C. Sleep hygiene: Exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions. / Developmental psychopathology: Exploring how online activities affect this adolescent's sleep, connection, mood, and goals.
D. Sleep hygiene: Examining pathways and turning points rather than treating a current symptom as fixed destiny. / Developmental psychopathology: Exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions.

0488. For a child aged 11 in the counseling practicum, a play therapist makes this practice the immediate priority: examining pathways and turning points rather than treating a current symptom as fixed destiny. Which concept fits best?

A. Eating-disorder warning signs
B. Body image
C. Peer contagion consideration
D. Developmental psychopathology

0489. A behavior specialist reviews a plan for a child aged 6 in the community mental-health service. The plan emphasizes exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions. Which course idea does this reflect?

A. Suicide protective factors
B. Developmental psychopathology
C. Peer contagion consideration
D. Sleep hygiene

0490. Choose the practice comparison that best separates Adolescent identity development from Gender-affirming support.

A. Adolescent identity development: Exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions. / Gender-affirming support: Using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity.
B. Adolescent identity development: Providing respectful space for exploration without forcing a fixed label or timeline. / Gender-affirming support: Identifying trusted relationships, coping resources, and accessible support that can be activated.
C. Adolescent identity development: Providing respectful space for exploration without forcing a fixed label or timeline. / Gender-affirming support: Using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity.
D. Adolescent identity development: Using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity. / Gender-affirming support: Providing respectful space for exploration without forcing a fixed label or timeline.

0491. Select the best explanation of Digital wellbeing.

A. Respectful support that recognizes a young person's expressed gender and attends to safety, dignity, and context.
B. The balance between digital engagement and health, relationships, sleep, and functioning as experienced by the individual.
C. The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices.
D. Thoughts, feelings, and perceptions concerning one's body, shaped by personal and social influences.

0492. Which statement shows a sound practice-level distinction between Suicide protective factors and Peer contagion consideration?

A. Suicide protective factors: Identifying trusted relationships, coping resources, and accessible support that can be activated. / Peer contagion consideration: Using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior.
B. Suicide protective factors: Examining pathways and turning points rather than treating a current symptom as fixed destiny. / Peer contagion consideration: Using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior.
C. Suicide protective factors: Using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior. / Peer contagion consideration: Identifying trusted relationships, coping resources, and accessible support that can be activated.
D. Suicide protective factors: Identifying trusted relationships, coping resources, and accessible support that can be activated. / Peer contagion consideration: Responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation.

0493. Which named construct is captured by this account? The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices.

A. Eating-disorder warning signs
B. Gender-affirming support
C. Peer contagion consideration
D. Nonsuicidal self-injury

0494. Consider a student aged 12 receiving help in the telehealth session. The group facilitator focuses on responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation. Which term best describes the guiding idea?

A. Sleep hygiene
B. Eating-disorder warning signs
C. Peer contagion consideration
D. Gender-affirming support

0495. Which comparison correctly distinguishes Nonsuicidal self-injury from Body image?

A. Nonsuicidal self-injury: The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices. / Body image: Thoughts, feelings, and perceptions concerning one's body, shaped by personal and social influences.
B. Nonsuicidal self-injury: Thoughts, feelings, and perceptions concerning one's body, shaped by personal and social influences. / Body image: Intentional self-inflicted injury without stated intent to die, requiring compassionate assessment and safety planning.
C. Nonsuicidal self-injury: Intentional self-inflicted injury without stated intent to die, requiring compassionate assessment and safety planning. / Body image: Thoughts, feelings, and perceptions concerning one's body, shaped by personal and social influences.
D. Nonsuicidal self-injury: Intentional self-inflicted injury without stated intent to die, requiring compassionate assessment and safety planning. / Body image: An evolving process of exploring and integrating personal, social, and cultural understandings of self.

0496. Which comparison correctly distinguishes Sleep hygiene from Suicide protective factors?

A. Sleep hygiene: Behaviors and environmental practices that support regular, restorative sleep. / Suicide protective factors: A framework studying how typical and atypical developmental processes interact across time and context.
B. Sleep hygiene: The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices. / Suicide protective factors: Personal and contextual supports that can reduce risk or strengthen reasons and pathways for safety.
C. Sleep hygiene: Personal and contextual supports that can reduce risk or strengthen reasons and pathways for safety. / Suicide protective factors: Behaviors and environmental practices that support regular, restorative sleep.
D. Sleep hygiene: Behaviors and environmental practices that support regular, restorative sleep. / Suicide protective factors: Personal and contextual supports that can reduce risk or strengthen reasons and pathways for safety.

0497. A supervisor asks how Peer contagion consideration would appear in practice. Which choice should be selected?

A. Examining pathways and turning points rather than treating a current symptom as fixed destiny.
B. Using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity.
C. Using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior.
D. Exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions.

0498. Which option preserves the correct meaning of both Sleep hygiene and Gender-affirming support?

A. Sleep hygiene: Respectful support that recognizes a young person's expressed gender and attends to safety, dignity, and context. / Gender-affirming support: Behaviors and environmental practices that support regular, restorative sleep.
B. Sleep hygiene: Behaviors and environmental practices that support regular, restorative sleep. / Gender-affirming support: Respectful support that recognizes a young person's expressed gender and attends to safety, dignity, and context.
C. Sleep hygiene: Intentional self-inflicted injury without stated intent to die, requiring compassionate assessment and safety planning. / Gender-affirming support: Respectful support that recognizes a young person's expressed gender and attends to safety, dignity, and context.
D. Sleep hygiene: Behaviors and environmental practices that support regular, restorative sleep. / Gender-affirming support: Behavioral, cognitive, and physical indicators that warrant careful assessment and referral to qualified care.

0499. A member of a clinical team and a client in late adolescence are discussing support in the family session. The selected practice is exploring how online activities affect this adolescent's sleep, connection, mood, and goals. Which concept does this demonstrate?

A. Body image
B. Suicide protective factors
C. Digital wellbeing
D. Peer contagion consideration

0500. A student confuses Adolescent identity development with Nonsuicidal self-injury. Which explanation most accurately separates them?

A. Adolescent identity development: An evolving process of exploring and integrating personal, social, and cultural understandings of self. / Nonsuicidal self-injury: The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices.
B. Adolescent identity development: Behavioral, cognitive, and physical indicators that warrant careful assessment and referral to qualified care. / Nonsuicidal self-injury: Intentional self-inflicted injury without stated intent to die, requiring compassionate assessment and safety planning.
C. Adolescent identity development: An evolving process of exploring and integrating personal, social, and cultural understandings of self. / Nonsuicidal self-injury: Intentional self-inflicted injury without stated intent to die, requiring compassionate assessment and safety planning.
D. Adolescent identity development: Intentional self-inflicted injury without stated intent to die, requiring compassionate assessment and safety planning. / Nonsuicidal self-injury: An evolving process of exploring and integrating personal, social, and cultural understandings of self.

0501. Which option pairs the definitions of Adolescent identity development and Nonsuicidal self-injury correctly, in that order?

A. Adolescent identity development: An evolving process of exploring and integrating personal, social, and cultural understandings of self. / Nonsuicidal self-injury: The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices.
B. Adolescent identity development: Intentional self-inflicted injury without stated intent to die, requiring compassionate assessment and safety planning. / Nonsuicidal self-injury: An evolving process of exploring and integrating personal, social, and cultural understandings of self.
C. Adolescent identity development: An evolving process of exploring and integrating personal, social, and cultural understandings of self. / Nonsuicidal self-injury: Intentional self-inflicted injury without stated intent to die, requiring compassionate assessment and safety planning.
D. Adolescent identity development: Behavioral, cognitive, and physical indicators that warrant careful assessment and referral to qualified care. / Nonsuicidal self-injury: Intentional self-inflicted injury without stated intent to die, requiring compassionate assessment and safety planning.

0502. In the classroom support meeting, the agreed focus for a service navigator working with a client in early adolescence is asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either. Which concept names this focus?

A. Nonsuicidal self-injury
B. Adolescent identity development
C. Suicide protective factors
D. Developmental psychopathology

0503. At the supervision meeting, a community practitioner reviews whether a plan for a older adolescent client is appropriate. The relevant practice is providing respectful space for exploration without forcing a fixed label or timeline. Which concept is tested?

A. Eating-disorder warning signs
B. Sleep hygiene
C. Adolescent identity development
D. Nonsuicidal self-injury

0504. During service review in the caregiver consultation, a program coordinator describes exploring body-related distress and social pressures without reinforcing appearance-based judgments. for a student aged 12. Which course idea is most applicable?

A. Suicide protective factors
B. Peer contagion consideration
C. Nonsuicidal self-injury
D. Body image

0505. Choose the term that matches this definition: Behavioral, cognitive, and physical indicators that warrant careful assessment and referral to qualified care.

A. Peer contagion consideration
B. Adolescent identity development
C. Gender-affirming support
D. Eating-disorder warning signs

0506. In a supervision quiz, how should Nonsuicidal self-injury be distinguished from Gender-affirming support?

A. Nonsuicidal self-injury: Respectful support that recognizes a young person's expressed gender and attends to safety, dignity, and context. / Gender-affirming support: Intentional self-inflicted injury without stated intent to die, requiring compassionate assessment and safety planning.
B. Nonsuicidal self-injury: Intentional self-inflicted injury without stated intent to die, requiring compassionate assessment and safety planning. / Gender-affirming support: Behaviors and environmental practices that support regular, restorative sleep.
C. Nonsuicidal self-injury: An evolving process of exploring and integrating personal, social, and cultural understandings of self. / Gender-affirming support: Respectful support that recognizes a young person's expressed gender and attends to safety, dignity, and context.
D. Nonsuicidal self-injury: Intentional self-inflicted injury without stated intent to die, requiring compassionate assessment and safety planning. / Gender-affirming support: Respectful support that recognizes a young person's expressed gender and attends to safety, dignity, and context.

0507. Which option is the clearest practical expression of Peer contagion consideration?

A. Using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior.
B. Identifying trusted relationships, coping resources, and accessible support that can be activated.
C. Providing respectful space for exploration without forcing a fixed label or timeline.
D. Examining pathways and turning points rather than treating a current symptom as fixed destiny.

0508. A case conference asks for a distinction between Suicide protective factors and Digital wellbeing. Which answer is sound?

A. Suicide protective factors: The balance between digital engagement and health, relationships, sleep, and functioning as experienced by the individual. / Digital wellbeing: Personal and contextual supports that can reduce risk or strengthen reasons and pathways for safety.
B. Suicide protective factors: Personal and contextual supports that can reduce risk or strengthen reasons and pathways for safety. / Digital wellbeing: The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices.
C. Suicide protective factors: Respectful support that recognizes a young person's expressed gender and attends to safety, dignity, and context. / Digital wellbeing: The balance between digital engagement and health, relationships, sleep, and functioning as experienced by the individual.
D. Suicide protective factors: Personal and contextual supports that can reduce risk or strengthen reasons and pathways for safety. / Digital wellbeing: The balance between digital engagement and health, relationships, sleep, and functioning as experienced by the individual.

0509. A supervisor asks for an applied contrast between Eating-disorder warning signs and Gender-affirming support. Which option fits?

A. Eating-disorder warning signs: Responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation. / Gender-affirming support: Examining pathways and turning points rather than treating a current symptom as fixed destiny.
B. Eating-disorder warning signs: Using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity. / Gender-affirming support: Responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation.
C. Eating-disorder warning signs: Asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either. / Gender-affirming support: Using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity.
D. Eating-disorder warning signs: Responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation. / Gender-affirming support: Using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity.

0510. At the youth advocacy program, a play therapist meets with a child aged 14. The practice priority is: using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior. Which concept best captures that priority?

A. Gender-affirming support
B. Peer contagion consideration
C. Nonsuicidal self-injury
D. Body image

0511. Which choice aligns each practice with the correct idea, Sleep hygiene or Suicide protective factors?

A. Sleep hygiene: Using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior. / Suicide protective factors: Identifying trusted relationships, coping resources, and accessible support that can be activated.
B. Sleep hygiene: Identifying trusted relationships, coping resources, and accessible support that can be activated. / Suicide protective factors: Exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions.
C. Sleep hygiene: Exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions. / Suicide protective factors: Examining pathways and turning points rather than treating a current symptom as fixed destiny.
D. Sleep hygiene: Exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions. / Suicide protective factors: Identifying trusted relationships, coping resources, and accessible support that can be activated.

0512. A case conference asks for a distinction between Sleep hygiene and Gender-affirming support. Which answer is sound?

A. Sleep hygiene: Intentional self-inflicted injury without stated intent to die, requiring compassionate assessment and safety planning. / Gender-affirming support: Respectful support that recognizes a young person's expressed gender and attends to safety, dignity, and context.
B. Sleep hygiene: Respectful support that recognizes a young person's expressed gender and attends to safety, dignity, and context. / Gender-affirming support: Behaviors and environmental practices that support regular, restorative sleep.
C. Sleep hygiene: Behaviors and environmental practices that support regular, restorative sleep. / Gender-affirming support: Respectful support that recognizes a young person's expressed gender and attends to safety, dignity, and context.
D. Sleep hygiene: Behaviors and environmental practices that support regular, restorative sleep. / Gender-affirming support: Behavioral, cognitive, and physical indicators that warrant careful assessment and referral to qualified care.

0513. A trainee must explain Body image. Which answer is accurate?

A. Thoughts, feelings, and perceptions concerning one's body, shaped by personal and social influences.
B. Respectful support that recognizes a young person's expressed gender and attends to safety, dignity, and context.
C. The balance between digital engagement and health, relationships, sleep, and functioning as experienced by the individual.
D. Personal and contextual supports that can reduce risk or strengthen reasons and pathways for safety.

0514. A middle-school student and a consultant are reviewing goals in the youth group. The agreed action is asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either. Which principle best accounts for it?

A. Body image
B. Nonsuicidal self-injury
C. Peer contagion consideration
D. Gender-affirming support

0515. A assessment clinician and a middle-school student are discussing support in the multidisciplinary case conference. The selected practice is using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity. Which concept does this demonstrate?

A. Eating-disorder warning signs
B. Gender-affirming support
C. Digital wellbeing
D. Nonsuicidal self-injury

0516. Which applied comparison correctly identifies what belongs to Digital wellbeing versus Body image?

A. Digital wellbeing: Asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either. / Body image: Exploring body-related distress and social pressures without reinforcing appearance-based judgments.
B. Digital wellbeing: Exploring how online activities affect this adolescent's sleep, connection, mood, and goals. / Body image: Providing respectful space for exploration without forcing a fixed label or timeline.
C. Digital wellbeing: Exploring body-related distress and social pressures without reinforcing appearance-based judgments. / Body image: Exploring how online activities affect this adolescent's sleep, connection, mood, and goals.
D. Digital wellbeing: Exploring how online activities affect this adolescent's sleep, connection, mood, and goals. / Body image: Exploring body-related distress and social pressures without reinforcing appearance-based judgments.

0517. In a case note about a child of elementary-school age, a supervised trainee working in the telehealth session records this priority: identifying trusted relationships, coping resources, and accessible support that can be activated. What principle is reflected?

A. Suicide protective factors
B. Body image
C. Digital wellbeing
D. Nonsuicidal self-injury

0518. While consulting in the multidisciplinary case conference, a supervised trainee supports a school-age child by using this approach: asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either. Which concept is being applied?

A. Nonsuicidal self-injury
B. Suicide protective factors
C. Eating-disorder warning signs
D. Sleep hygiene

0519. Choose the definition pair that correctly explains Sleep hygiene first and Gender-affirming support second.

A. Sleep hygiene: Intentional self-inflicted injury without stated intent to die, requiring compassionate assessment and safety planning. / Gender-affirming support: Respectful support that recognizes a young person's expressed gender and attends to safety, dignity, and context.
B. Sleep hygiene: Behaviors and environmental practices that support regular, restorative sleep. / Gender-affirming support: Behavioral, cognitive, and physical indicators that warrant careful assessment and referral to qualified care.
C. Sleep hygiene: Respectful support that recognizes a young person's expressed gender and attends to safety, dignity, and context. / Gender-affirming support: Behaviors and environmental practices that support regular, restorative sleep.
D. Sleep hygiene: Behaviors and environmental practices that support regular, restorative sleep. / Gender-affirming support: Respectful support that recognizes a young person's expressed gender and attends to safety, dignity, and context.

0520. A team must select a support approach for a preadolescent child at the multidisciplinary case conference. The school-based clinician recommends identifying trusted relationships, coping resources, and accessible support that can be activated. Which idea is most relevant?

A. Peer contagion consideration
B. Gender-affirming support
C. Suicide protective factors
D. Body image

0521. Which option preserves the correct meaning of both Adolescent identity development and Peer contagion consideration?

A. Adolescent identity development: The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices. / Peer contagion consideration: An evolving process of exploring and integrating personal, social, and cultural understandings of self.
B. Adolescent identity development: An evolving process of exploring and integrating personal, social, and cultural understandings of self. / Peer contagion consideration: The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices.
C. Adolescent identity development: Behavioral, cognitive, and physical indicators that warrant careful assessment and referral to qualified care. / Peer contagion consideration: The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices.
D. Adolescent identity development: An evolving process of exploring and integrating personal, social, and cultural understandings of self. / Peer contagion consideration: The balance between digital engagement and health, relationships, sleep, and functioning as experienced by the individual.

0522. A student confuses Suicide protective factors with Gender-affirming support. Which explanation most accurately separates them?

A. Suicide protective factors: Personal and contextual supports that can reduce risk or strengthen reasons and pathways for safety. / Gender-affirming support: Respectful support that recognizes a young person's expressed gender and attends to safety, dignity, and context.
B. Suicide protective factors: Respectful support that recognizes a young person's expressed gender and attends to safety, dignity, and context. / Gender-affirming support: Personal and contextual supports that can reduce risk or strengthen reasons and pathways for safety.
C. Suicide protective factors: Personal and contextual supports that can reduce risk or strengthen reasons and pathways for safety. / Gender-affirming support: Intentional self-inflicted injury without stated intent to die, requiring compassionate assessment and safety planning.
D. Suicide protective factors: The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices. / Gender-affirming support: Respectful support that recognizes a young person's expressed gender and attends to safety, dignity, and context.

0523. How are Suicide protective factors and Gender-affirming support most accurately differentiated in this curriculum?

A. Suicide protective factors: Personal and contextual supports that can reduce risk or strengthen reasons and pathways for safety. / Gender-affirming support: Respectful support that recognizes a young person's expressed gender and attends to safety, dignity, and context.
B. Suicide protective factors: Respectful support that recognizes a young person's expressed gender and attends to safety, dignity, and context. / Gender-affirming support: Personal and contextual supports that can reduce risk or strengthen reasons and pathways for safety.
C. Suicide protective factors: Personal and contextual supports that can reduce risk or strengthen reasons and pathways for safety. / Gender-affirming support: Intentional self-inflicted injury without stated intent to die, requiring compassionate assessment and safety planning.
D. Suicide protective factors: The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices. / Gender-affirming support: Respectful support that recognizes a young person's expressed gender and attends to safety, dignity, and context.

0524. A doctoral student reads the following description. Which concept does it define? Thoughts, feelings, and perceptions concerning one's body, shaped by personal and social influences.

A. Adolescent identity development
B. Suicide protective factors
C. Peer contagion consideration
D. Body image

0525. A service team discusses a child aged 6 in the community service agency. Their proposed next step is exploring how online activities affect this adolescent's sleep, connection, mood, and goals. Which course concept supports it?

A. Eating-disorder warning signs
B. Peer contagion consideration
C. Gender-affirming support
D. Digital wellbeing

0526. Which statement shows a sound practice-level distinction between Nonsuicidal self-injury and Suicide protective factors?

A. Nonsuicidal self-injury: Identifying trusted relationships, coping resources, and accessible support that can be activated. / Suicide protective factors: Asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either.
B. Nonsuicidal self-injury: Providing respectful space for exploration without forcing a fixed label or timeline. / Suicide protective factors: Identifying trusted relationships, coping resources, and accessible support that can be activated.
C. Nonsuicidal self-injury: Asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either. / Suicide protective factors: Exploring body-related distress and social pressures without reinforcing appearance-based judgments.
D. Nonsuicidal self-injury: Asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either. / Suicide protective factors: Identifying trusted relationships, coping resources, and accessible support that can be activated.

0527. A team must select a support approach for a young adolescent client at the behavior-support review. The family therapist recommends exploring body-related distress and social pressures without reinforcing appearance-based judgments. Which idea is most relevant?

A. Digital wellbeing
B. Eating-disorder warning signs
C. Nonsuicidal self-injury
D. Body image

0528. A supervisor asks for an applied contrast between Suicide protective factors and Gender-affirming support. Which option fits?

A. Suicide protective factors: Using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity. / Gender-affirming support: Identifying trusted relationships, coping resources, and accessible support that can be activated.
B. Suicide protective factors: Identifying trusted relationships, coping resources, and accessible support that can be activated. / Gender-affirming support: Asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either.
C. Suicide protective factors: Identifying trusted relationships, coping resources, and accessible support that can be activated. / Gender-affirming support: Using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity.
D. Suicide protective factors: Using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior. / Gender-affirming support: Using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity.

0529. Which applied comparison correctly identifies what belongs to Sleep hygiene versus Suicide protective factors?

A. Sleep hygiene: Exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions. / Suicide protective factors: Examining pathways and turning points rather than treating a current symptom as fixed destiny.
B. Sleep hygiene: Identifying trusted relationships, coping resources, and accessible support that can be activated. / Suicide protective factors: Exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions.
C. Sleep hygiene: Exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions. / Suicide protective factors: Identifying trusted relationships, coping resources, and accessible support that can be activated.
D. Sleep hygiene: Using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior. / Suicide protective factors: Identifying trusted relationships, coping resources, and accessible support that can be activated.

0530. Choose the definition pair that correctly explains Sleep hygiene first and Eating-disorder warning signs second.

A. Sleep hygiene: Behaviors and environmental practices that support regular, restorative sleep. / Eating-disorder warning signs: Behavioral, cognitive, and physical indicators that warrant careful assessment and referral to qualified care.
B. Sleep hygiene: Behaviors and environmental practices that support regular, restorative sleep. / Eating-disorder warning signs: The balance between digital engagement and health, relationships, sleep, and functioning as experienced by the individual.
C. Sleep hygiene: A framework studying how typical and atypical developmental processes interact across time and context. / Eating-disorder warning signs: Behavioral, cognitive, and physical indicators that warrant careful assessment and referral to qualified care.
D. Sleep hygiene: Behavioral, cognitive, and physical indicators that warrant careful assessment and referral to qualified care. / Eating-disorder warning signs: Behaviors and environmental practices that support regular, restorative sleep.

0531. A school-based clinician presents a support plan for a child aged 14 at the learning-support meeting. Its central feature is examining pathways and turning points rather than treating a current symptom as fixed destiny. Which concept should be named?

A. Sleep hygiene
B. Body image
C. Developmental psychopathology
D. Digital wellbeing

0532. A service team discusses a student aged 9 in the outpatient clinic. Their proposed next step is responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation. Which course concept supports it?

A. Adolescent identity development
B. Eating-disorder warning signs
C. Peer contagion consideration
D. Digital wellbeing

0533. Which comparison would correct a trainee's misunderstanding of Gender-affirming support versus Peer contagion consideration?

A. Gender-affirming support: Respectful support that recognizes a young person's expressed gender and attends to safety, dignity, and context. / Peer contagion consideration: The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices.
B. Gender-affirming support: Behavioral, cognitive, and physical indicators that warrant careful assessment and referral to qualified care. / Peer contagion consideration: The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices.
C. Gender-affirming support: The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices. / Peer contagion consideration: Respectful support that recognizes a young person's expressed gender and attends to safety, dignity, and context.
D. Gender-affirming support: Respectful support that recognizes a young person's expressed gender and attends to safety, dignity, and context. / Peer contagion consideration: A framework studying how typical and atypical developmental processes interact across time and context.

0534. Which statement accurately contrasts the course concepts Suicide protective factors and Digital wellbeing?

A. Suicide protective factors: Personal and contextual supports that can reduce risk or strengthen reasons and pathways for safety. / Digital wellbeing: The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices.
B. Suicide protective factors: The balance between digital engagement and health, relationships, sleep, and functioning as experienced by the individual. / Digital wellbeing: Personal and contextual supports that can reduce risk or strengthen reasons and pathways for safety.
C. Suicide protective factors: Respectful support that recognizes a young person's expressed gender and attends to safety, dignity, and context. / Digital wellbeing: The balance between digital engagement and health, relationships, sleep, and functioning as experienced by the individual.
D. Suicide protective factors: Personal and contextual supports that can reduce risk or strengthen reasons and pathways for safety. / Digital wellbeing: The balance between digital engagement and health, relationships, sleep, and functioning as experienced by the individual.

0535. A trainee must choose a practice that exemplifies Developmental psychopathology. Which action is the best fit?

A. Examining pathways and turning points rather than treating a current symptom as fixed destiny.
B. Using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity.
C. Providing respectful space for exploration without forcing a fixed label or timeline.
D. Exploring body-related distress and social pressures without reinforcing appearance-based judgments.

0536. A supervised trainee is supporting a student aged 9 in the community youth program. The key practice is providing respectful space for exploration without forcing a fixed label or timeline. Which course concept is most relevant?

A. Body image
B. Adolescent identity development
C. Eating-disorder warning signs
D. Sleep hygiene

0537. In the telehealth session, a group facilitator describes the most appropriate support for a student aged 12 as responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation. Which framework is being applied?

A. Eating-disorder warning signs
B. Peer contagion consideration
C. Digital wellbeing
D. Body image

0538. In the community mental-health service, a group facilitator explains why a high-school student would benefit from asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either. Which course concept underpins the explanation?

A. Peer contagion consideration
B. Gender-affirming support
C. Nonsuicidal self-injury
D. Sleep hygiene

0539. A trainee must distinguish how Suicide protective factors and Digital wellbeing guide practice. Which comparison is accurate?

A. Suicide protective factors: Identifying trusted relationships, coping resources, and accessible support that can be activated. / Digital wellbeing: Exploring how online activities affect this adolescent's sleep, connection, mood, and goals.
B. Suicide protective factors: Using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity. / Digital wellbeing: Exploring how online activities affect this adolescent's sleep, connection, mood, and goals.
C. Suicide protective factors: Identifying trusted relationships, coping resources, and accessible support that can be activated. / Digital wellbeing: Using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior.
D. Suicide protective factors: Exploring how online activities affect this adolescent's sleep, connection, mood, and goals. / Digital wellbeing: Identifying trusted relationships, coping resources, and accessible support that can be activated.

0540. Which option preserves the correct meaning of both Digital wellbeing and Developmental psychopathology?

A. Digital wellbeing: A framework studying how typical and atypical developmental processes interact across time and context. / Developmental psychopathology: The balance between digital engagement and health, relationships, sleep, and functioning as experienced by the individual.
B. Digital wellbeing: An evolving process of exploring and integrating personal, social, and cultural understandings of self. / Developmental psychopathology: A framework studying how typical and atypical developmental processes interact across time and context.
C. Digital wellbeing: The balance between digital engagement and health, relationships, sleep, and functioning as experienced by the individual. / Developmental psychopathology: A framework studying how typical and atypical developmental processes interact across time and context.
D. Digital wellbeing: The balance between digital engagement and health, relationships, sleep, and functioning as experienced by the individual. / Developmental psychopathology: Thoughts, feelings, and perceptions concerning one's body, shaped by personal and social influences.

0541. Consider a middle-school student receiving help in the youth advocacy program. The teacher and counselor focuses on exploring how online activities affect this adolescent's sleep, connection, mood, and goals. Which term best describes the guiding idea?

A. Suicide protective factors
B. Developmental psychopathology
C. Adolescent identity development
D. Digital wellbeing

0542. A program coordinator is asked what should shape a high-school student's support in the multidisciplinary case conference. The proposed focus is exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions. Which principle does it represent?

A. Adolescent identity development
B. Nonsuicidal self-injury
C. Sleep hygiene
D. Eating-disorder warning signs

0543. Which choice aligns each practice with the correct idea, Digital wellbeing or Eating-disorder warning signs?

A. Digital wellbeing: Exploring body-related distress and social pressures without reinforcing appearance-based judgments. / Eating-disorder warning signs: Responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation.
B. Digital wellbeing: Responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation. / Eating-disorder warning signs: Exploring how online activities affect this adolescent's sleep, connection, mood, and goals.
C. Digital wellbeing: Exploring how online activities affect this adolescent's sleep, connection, mood, and goals. / Eating-disorder warning signs: Exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions.
D. Digital wellbeing: Exploring how online activities affect this adolescent's sleep, connection, mood, and goals. / Eating-disorder warning signs: Responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation.

0544. Which applied comparison correctly identifies what belongs to Adolescent identity development versus Sleep hygiene?

A. Adolescent identity development: Providing respectful space for exploration without forcing a fixed label or timeline. / Sleep hygiene: Exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions.
B. Adolescent identity development: Exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions. / Sleep hygiene: Providing respectful space for exploration without forcing a fixed label or timeline.
C. Adolescent identity development: Exploring how online activities affect this adolescent's sleep, connection, mood, and goals. / Sleep hygiene: Exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions.
D. Adolescent identity development: Providing respectful space for exploration without forcing a fixed label or timeline. / Sleep hygiene: Asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either.

0545. Choose the practice comparison that best separates Body image from Gender-affirming support.

A. Body image: Using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior. / Gender-affirming support: Using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity.
B. Body image: Using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity. / Gender-affirming support: Exploring body-related distress and social pressures without reinforcing appearance-based judgments.
C. Body image: Exploring body-related distress and social pressures without reinforcing appearance-based judgments. / Gender-affirming support: Using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity.
D. Body image: Exploring body-related distress and social pressures without reinforcing appearance-based judgments. / Gender-affirming support: Examining pathways and turning points rather than treating a current symptom as fixed destiny.

0546. A youth worker is explaining a choice to a young adolescent client and caregiver in the student-support meeting. The choice centers on using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior. Which idea is illustrated?

A. Digital wellbeing
B. Peer contagion consideration
C. Eating-disorder warning signs
D. Sleep hygiene

0547. Which paired example correctly applies Nonsuicidal self-injury first and Developmental psychopathology second?

A. Nonsuicidal self-injury: Exploring how online activities affect this adolescent's sleep, connection, mood, and goals. / Developmental psychopathology: Examining pathways and turning points rather than treating a current symptom as fixed destiny.
B. Nonsuicidal self-injury: Asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either. / Developmental psychopathology: Examining pathways and turning points rather than treating a current symptom as fixed destiny.
C. Nonsuicidal self-injury: Asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either. / Developmental psychopathology: Identifying trusted relationships, coping resources, and accessible support that can be activated.
D. Nonsuicidal self-injury: Examining pathways and turning points rather than treating a current symptom as fixed destiny. / Developmental psychopathology: Asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either.

0548. In a professional consultation about a school-age child, the supervised trainee describes this response in the multidisciplinary case conference: asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either. Which term is most apt?

A. Developmental psychopathology
B. Peer contagion consideration
C. Nonsuicidal self-injury
D. Body image

0549. Which professional action most closely applies Adolescent identity development?

A. Exploring body-related distress and social pressures without reinforcing appearance-based judgments.
B. Responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation.
C. Using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity.
D. Providing respectful space for exploration without forcing a fixed label or timeline.

0550. A research trainee describes an intervention for a school-age child in the community mental-health service, centered on identifying trusted relationships, coping resources, and accessible support that can be activated. Which named idea is most relevant?

A. Developmental psychopathology
B. Body image
C. Digital wellbeing
D. Suicide protective factors

0551. Which paired example correctly applies Body image first and Peer contagion consideration second?

A. Body image: Asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either. / Peer contagion consideration: Using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior.
B. Body image: Using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior. / Peer contagion consideration: Exploring body-related distress and social pressures without reinforcing appearance-based judgments.
C. Body image: Exploring body-related distress and social pressures without reinforcing appearance-based judgments. / Peer contagion consideration: Using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior.
D. Body image: Exploring body-related distress and social pressures without reinforcing appearance-based judgments. / Peer contagion consideration: Using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity.

0552. Which comparison correctly distinguishes Body image from Developmental psychopathology?

A. Body image: Thoughts, feelings, and perceptions concerning one's body, shaped by personal and social influences. / Developmental psychopathology: A framework studying how typical and atypical developmental processes interact across time and context.
B. Body image: Thoughts, feelings, and perceptions concerning one's body, shaped by personal and social influences. / Developmental psychopathology: An evolving process of exploring and integrating personal, social, and cultural understandings of self.
C. Body image: Behaviors and environmental practices that support regular, restorative sleep. / Developmental psychopathology: A framework studying how typical and atypical developmental processes interact across time and context.
D. Body image: A framework studying how typical and atypical developmental processes interact across time and context. / Developmental psychopathology: Thoughts, feelings, and perceptions concerning one's body, shaped by personal and social influences.

0553. In the student-support meeting, a parent educator is considering this approach for a young person aged 13: responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation. Which framework does it represent?

A. Eating-disorder warning signs
B. Nonsuicidal self-injury
C. Adolescent identity development
D. Peer contagion consideration

0554. A school support specialist is asked to evaluate a proposed service for a young person aged 16 in the counseling practicum. The defining feature is exploring how online activities affect this adolescent's sleep, connection, mood, and goals. Which concept fits?

A. Developmental psychopathology
B. Digital wellbeing
C. Nonsuicidal self-injury
D. Adolescent identity development

0555. Which option correctly matches each concept to its practice focus: Adolescent identity development and Suicide protective factors?

A. Adolescent identity development: Identifying trusted relationships, coping resources, and accessible support that can be activated. / Suicide protective factors: Providing respectful space for exploration without forcing a fixed label or timeline.
B. Adolescent identity development: Providing respectful space for exploration without forcing a fixed label or timeline. / Suicide protective factors: Exploring how online activities affect this adolescent's sleep, connection, mood, and goals.
C. Adolescent identity development: Examining pathways and turning points rather than treating a current symptom as fixed destiny. / Suicide protective factors: Identifying trusted relationships, coping resources, and accessible support that can be activated.
D. Adolescent identity development: Providing respectful space for exploration without forcing a fixed label or timeline. / Suicide protective factors: Identifying trusted relationships, coping resources, and accessible support that can be activated.

0556. Which choice aligns each practice with the correct idea, Gender-affirming support or Peer contagion consideration?

A. Gender-affirming support: Using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior. / Peer contagion consideration: Using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity.
B. Gender-affirming support: Using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity. / Peer contagion consideration: Using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior.
C. Gender-affirming support: Using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity. / Peer contagion consideration: Examining pathways and turning points rather than treating a current symptom as fixed destiny.
D. Gender-affirming support: Responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation. / Peer contagion consideration: Using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior.

0557. A teacher and counselor is explaining a choice to a teenage client and caregiver in the after-school program. The choice centers on asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either. Which idea is illustrated?

A. Suicide protective factors
B. Adolescent identity development
C. Eating-disorder warning signs
D. Nonsuicidal self-injury

0558. A school counselor is explaining a choice to a older adolescent client and caregiver in the classroom support meeting. The choice centers on exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions. Which idea is illustrated?

A. Eating-disorder warning signs
B. Sleep hygiene
C. Digital wellbeing
D. Adolescent identity development

0559. In the caregiver consultation, a school-based clinician is considering this approach for a child aged 6: using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity. Which framework does it represent?

A. Gender-affirming support
B. Nonsuicidal self-injury
C. Body image
D. Peer contagion consideration

0560. A planning meeting about a child of elementary-school age includes a school support specialist. The proposed practice in the after-school program is exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions. Which idea underlies it?

A. Nonsuicidal self-injury
B. Peer contagion consideration
C. Developmental psychopathology
D. Sleep hygiene

0561. Which pair of actions illustrates Eating-disorder warning signs and Developmental psychopathology, respectively?

A. Eating-disorder warning signs: Providing respectful space for exploration without forcing a fixed label or timeline. / Developmental psychopathology: Examining pathways and turning points rather than treating a current symptom as fixed destiny.
B. Eating-disorder warning signs: Examining pathways and turning points rather than treating a current symptom as fixed destiny. / Developmental psychopathology: Responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation.
C. Eating-disorder warning signs: Responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation. / Developmental psychopathology: Examining pathways and turning points rather than treating a current symptom as fixed destiny.
D. Eating-disorder warning signs: Responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation. / Developmental psychopathology: Exploring body-related distress and social pressures without reinforcing appearance-based judgments.

0562. Consider a child aged 6 receiving help in the multidisciplinary case conference. The youth worker focuses on providing respectful space for exploration without forcing a fixed label or timeline. Which term best describes the guiding idea?

A. Suicide protective factors
B. Peer contagion consideration
C. Adolescent identity development
D. Body image

0563. A case conference asks for a distinction between Adolescent identity development and Gender-affirming support. Which answer is sound?

A. Adolescent identity development: An evolving process of exploring and integrating personal, social, and cultural understandings of self. / Gender-affirming support: Respectful support that recognizes a young person's expressed gender and attends to safety, dignity, and context.
B. Adolescent identity development: An evolving process of exploring and integrating personal, social, and cultural understandings of self. / Gender-affirming support: Personal and contextual supports that can reduce risk or strengthen reasons and pathways for safety.
C. Adolescent identity development: Respectful support that recognizes a young person's expressed gender and attends to safety, dignity, and context. / Gender-affirming support: An evolving process of exploring and integrating personal, social, and cultural understandings of self.
D. Adolescent identity development: Behaviors and environmental practices that support regular, restorative sleep. / Gender-affirming support: Respectful support that recognizes a young person's expressed gender and attends to safety, dignity, and context.

0564. Which pair of actions illustrates Adolescent identity development and Sleep hygiene, respectively?

A. Adolescent identity development: Providing respectful space for exploration without forcing a fixed label or timeline. / Sleep hygiene: Asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either.
B. Adolescent identity development: Exploring how online activities affect this adolescent's sleep, connection, mood, and goals. / Sleep hygiene: Exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions.
C. Adolescent identity development: Exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions. / Sleep hygiene: Providing respectful space for exploration without forcing a fixed label or timeline.
D. Adolescent identity development: Providing respectful space for exploration without forcing a fixed label or timeline. / Sleep hygiene: Exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions.

0565. How are Suicide protective factors and Developmental psychopathology most accurately differentiated in this curriculum?

A. Suicide protective factors: Personal and contextual supports that can reduce risk or strengthen reasons and pathways for safety. / Developmental psychopathology: A framework studying how typical and atypical developmental processes interact across time and context.
B. Suicide protective factors: An evolving process of exploring and integrating personal, social, and cultural understandings of self. / Developmental psychopathology: A framework studying how typical and atypical developmental processes interact across time and context.
C. Suicide protective factors: Personal and contextual supports that can reduce risk or strengthen reasons and pathways for safety. / Developmental psychopathology: Behaviors and environmental practices that support regular, restorative sleep.
D. Suicide protective factors: A framework studying how typical and atypical developmental processes interact across time and context. / Developmental psychopathology: Personal and contextual supports that can reduce risk or strengthen reasons and pathways for safety.

0566. A counselor is asked to evaluate a proposed service for a client in late adolescence in the child guidance clinic. The defining feature is asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either. Which concept fits?

A. Eating-disorder warning signs
B. Adolescent identity development
C. Gender-affirming support
D. Nonsuicidal self-injury

0567. A case discussion concerns a child of elementary-school age and a parent educator in the caregiver consultation. The practitioner is considering asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either. Which principle is involved?

A. Gender-affirming support
B. Developmental psychopathology
C. Body image
D. Nonsuicidal self-injury

0568. Which option pairs the definitions of Suicide protective factors and Peer contagion consideration correctly, in that order?

A. Suicide protective factors: A framework studying how typical and atypical developmental processes interact across time and context. / Peer contagion consideration: The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices.
B. Suicide protective factors: Personal and contextual supports that can reduce risk or strengthen reasons and pathways for safety. / Peer contagion consideration: The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices.
C. Suicide protective factors: The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices. / Peer contagion consideration: Personal and contextual supports that can reduce risk or strengthen reasons and pathways for safety.
D. Suicide protective factors: Personal and contextual supports that can reduce risk or strengthen reasons and pathways for safety. / Peer contagion consideration: Behavioral, cognitive, and physical indicators that warrant careful assessment and referral to qualified care.

0569. At a case-planning meeting, the play therapist proposes using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior. for a child aged 14 seen in the youth advocacy program. Which concept does this illustrate?

A. Sleep hygiene
B. Body image
C. Peer contagion consideration
D. Suicide protective factors

0570. A clinical supervisor reviews a plan for a student aged 9 in the supervision meeting. The plan emphasizes identifying trusted relationships, coping resources, and accessible support that can be activated. Which course idea does this reflect?

A. Suicide protective factors
B. Eating-disorder warning signs
C. Sleep hygiene
D. Peer contagion consideration

0571. Which comparison would correct a trainee's misunderstanding of Nonsuicidal self-injury versus Developmental psychopathology?

A. Nonsuicidal self-injury: Intentional self-inflicted injury without stated intent to die, requiring compassionate assessment and safety planning. / Developmental psychopathology: Personal and contextual supports that can reduce risk or strengthen reasons and pathways for safety.
B. Nonsuicidal self-injury: The balance between digital engagement and health, relationships, sleep, and functioning as experienced by the individual. / Developmental psychopathology: A framework studying how typical and atypical developmental processes interact across time and context.
C. Nonsuicidal self-injury: A framework studying how typical and atypical developmental processes interact across time and context. / Developmental psychopathology: Intentional self-inflicted injury without stated intent to die, requiring compassionate assessment and safety planning.
D. Nonsuicidal self-injury: Intentional self-inflicted injury without stated intent to die, requiring compassionate assessment and safety planning. / Developmental psychopathology: A framework studying how typical and atypical developmental processes interact across time and context.

0572. A mental-health professional is preparing a follow-up plan for a student aged 15 in the learning-support meeting. The plan calls for identifying trusted relationships, coping resources, and accessible support that can be activated. Which concept names this approach?

A. Suicide protective factors
B. Adolescent identity development
C. Nonsuicidal self-injury
D. Eating-disorder warning signs

0573. Which option pairs the definitions of Sleep hygiene and Suicide protective factors correctly, in that order?

A. Sleep hygiene: Personal and contextual supports that can reduce risk or strengthen reasons and pathways for safety. / Suicide protective factors: Behaviors and environmental practices that support regular, restorative sleep.
B. Sleep hygiene: The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices. / Suicide protective factors: Personal and contextual supports that can reduce risk or strengthen reasons and pathways for safety.
C. Sleep hygiene: Behaviors and environmental practices that support regular, restorative sleep. / Suicide protective factors: A framework studying how typical and atypical developmental processes interact across time and context.
D. Sleep hygiene: Behaviors and environmental practices that support regular, restorative sleep. / Suicide protective factors: Personal and contextual supports that can reduce risk or strengthen reasons and pathways for safety.

0574. A team must select a support approach for a child aged 7 at the student-support meeting. The case coordinator recommends exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions. Which idea is most relevant?

A. Nonsuicidal self-injury
B. Gender-affirming support
C. Peer contagion consideration
D. Sleep hygiene

0575. Which comparison correctly distinguishes Adolescent identity development from Developmental psychopathology?

A. Adolescent identity development: A framework studying how typical and atypical developmental processes interact across time and context. / Developmental psychopathology: An evolving process of exploring and integrating personal, social, and cultural understandings of self.
B. Adolescent identity development: An evolving process of exploring and integrating personal, social, and cultural understandings of self. / Developmental psychopathology: Respectful support that recognizes a young person’s expressed gender and attends to safety, dignity, and context.
C. Adolescent identity development: Behaviors and environmental practices that support regular, restorative sleep. / Developmental psychopathology: A framework studying how typical and atypical developmental processes interact across time and context.
D. Adolescent identity development: An evolving process of exploring and integrating personal, social, and cultural understandings of self. / Developmental psychopathology: A framework studying how typical and atypical developmental processes interact across time and context.

0576. A team must select a support approach for a child of elementary-school age at the caregiver consultation. The parent educator recommends asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either. Which idea is most relevant?

A. Sleep hygiene
B. Nonsuicidal self-injury
C. Eating-disorder warning signs
D. Suicide protective factors

0577. In the family resource center, a team asks how a group facilitator can support a adolescent student. One proposed action is using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior. Which idea does it represent?

A. Digital wellbeing
B. Peer contagion consideration
C. Sleep hygiene
D. Adolescent identity development

0578. At a case-planning meeting, the counselor proposes exploring body-related distress and social pressures without reinforcing appearance-based judgments. for a child aged 7 seen in the school-based service. Which concept does this illustrate?

A. Gender-affirming support
B. Peer contagion consideration
C. Body image
D. Eating-disorder warning signs

0579. Which paired example correctly applies Adolescent identity development first and Eating-disorder warning signs second?

A. Adolescent identity development: Providing respectful space for exploration without forcing a fixed label or timeline. / Eating-disorder warning signs: Responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation.
B. Adolescent identity development: Providing respectful space for exploration without forcing a fixed label or timeline. / Eating-disorder warning signs: Using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior.
C. Adolescent identity development: Examining pathways and turning points rather than treating a current symptom as fixed destiny. / Eating-disorder warning signs: Responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation.
D. Adolescent identity development: Responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation. / Eating-disorder warning signs: Providing respectful space for exploration without forcing a fixed label or timeline.

0580. Choose the definition pair that correctly explains Nonsuicidal self-injury first and Developmental psychopathology second.

A. Nonsuicidal self-injury: The balance between digital engagement and health, relationships, sleep, and functioning as experienced by the individual. / Developmental psychopathology: A framework studying how typical and atypical developmental processes interact across time and context.
B. Nonsuicidal self-injury: Intentional self-inflicted injury without stated intent to die, requiring compassionate assessment and safety planning. / Developmental psychopathology: Personal and contextual supports that can reduce risk or strengthen reasons and pathways for safety.
C. Nonsuicidal self-injury: A framework studying how typical and atypical developmental processes interact across time and context. / Developmental psychopathology: Intentional self-inflicted injury without stated intent to die, requiring compassionate assessment and safety planning.
D. Nonsuicidal self-injury: Intentional self-inflicted injury without stated intent to die, requiring compassionate assessment and safety planning. / Developmental psychopathology: A framework studying how typical and atypical developmental processes interact across time and context.

0581. Choose the term that matches this definition: An evolving process of exploring and integrating personal, social, and cultural understandings of self.

A. Sleep hygiene
B. Gender-affirming support
C. Eating-disorder warning signs
D. Adolescent identity development

0582. Which statement shows a sound practice-level distinction between Body image and Peer contagion consideration?

A. Body image: Exploring body-related distress and social pressures without reinforcing appearance-based judgments. / Peer contagion consideration: Using the young person’s stated name and pronouns and assessing supports and safety without pathologizing identity.
B. Body image: Exploring body-related distress and social pressures without reinforcing appearance-based judgments. / Peer contagion consideration: Using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior.
C. Body image: Asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either. / Peer contagion consideration: Using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior.
D. Body image: Using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior. / Peer contagion consideration: Exploring body-related distress and social pressures without reinforcing appearance-based judgments.

0583. How are Suicide protective factors and Body image most accurately differentiated in this curriculum?

A. Suicide protective factors: Personal and contextual supports that can reduce risk or strengthen reasons and pathways for safety. / Body image: Behaviors and environmental practices that support regular, restorative sleep.
B. Suicide protective factors: Behavioral, cognitive, and physical indicators that warrant careful assessment and referral to qualified care. / Body image: Thoughts, feelings, and perceptions concerning one's body, shaped by personal and social influences.
C. Suicide protective factors: Personal and contextual supports that can reduce risk or strengthen reasons and pathways for safety. / Body image: Thoughts, feelings, and perceptions concerning one's body, shaped by personal and social influences.
D. Suicide protective factors: Thoughts, feelings, and perceptions concerning one's body, shaped by personal and social influences. / Body image: Personal and contextual supports that can reduce risk or strengthen reasons and pathways for safety.

0584. Choose the definition pair that correctly explains Sleep hygiene first and Peer contagion consideration second.

A. Sleep hygiene: Behaviors and environmental practices that support regular, restorative sleep. / Peer contagion consideration: Personal and contextual supports that can reduce risk or strengthen reasons and pathways for safety.
B. Sleep hygiene: Behaviors and environmental practices that support regular, restorative sleep. / Peer contagion consideration: The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices.
C. Sleep hygiene: The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices. / Peer contagion consideration: Behaviors and environmental practices that support regular, restorative sleep.
D. Sleep hygiene: Respectful support that recognizes a young person's expressed gender and attends to safety, dignity, and context. / Peer contagion consideration: The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices.

0585. A student confuses Nonsuicidal self-injury with Eating-disorder warning signs. Which explanation most accurately separates them?

A. Nonsuicidal self-injury: Intentional self-inflicted injury without stated intent to die, requiring compassionate assessment and safety planning. / Eating-disorder warning signs: Behavioral, cognitive, and physical indicators that warrant careful assessment and referral to qualified care.
B. Nonsuicidal self-injury: Behavioral, cognitive, and physical indicators that warrant careful assessment and referral to qualified care. / Eating-disorder warning signs: Intentional self-inflicted injury without stated intent to die, requiring compassionate assessment and safety planning.
C. Nonsuicidal self-injury: Respectful support that recognizes a young person's expressed gender and attends to safety, dignity, and context. / Eating-disorder warning signs: Behavioral, cognitive, and physical indicators that warrant careful assessment and referral to qualified care.
D. Nonsuicidal self-injury: Intentional self-inflicted injury without stated intent to die, requiring compassionate assessment and safety planning. / Eating-disorder warning signs: A framework studying how typical and atypical developmental processes interact across time and context.

0586. Choose the term that matches this definition: Behaviors and environmental practices that support regular, restorative sleep.

A. Gender-affirming support
B. Sleep hygiene
C. Eating-disorder warning signs
D. Peer contagion consideration

0587. A trainee must explain Developmental psychopathology. Which answer is accurate?

A. Behavioral, cognitive, and physical indicators that warrant careful assessment and referral to qualified care.
B. An evolving process of exploring and integrating personal, social, and cultural understandings of self.
C. A framework studying how typical and atypical developmental processes interact across time and context.
D. Behaviors and environmental practices that support regular, restorative sleep.

0588. Which comparison correctly distinguishes Adolescent identity development from Sleep hygiene?

A. Adolescent identity development: An evolving process of exploring and integrating personal, social, and cultural understandings of self. / Sleep hygiene: Behaviors and environmental practices that support regular, restorative sleep.
B. Adolescent identity development: An evolving process of exploring and integrating personal, social, and cultural understandings of self. / Sleep hygiene: Intentional self-inflicted injury without stated intent to die, requiring compassionate assessment and safety planning.
C. Adolescent identity development: The balance between digital engagement and health, relationships, sleep, and functioning as experienced by the individual. / Sleep hygiene: Behaviors and environmental practices that support regular, restorative sleep.
D. Adolescent identity development: Behaviors and environmental practices that support regular, restorative sleep. / Sleep hygiene: An evolving process of exploring and integrating personal, social, and cultural understandings of self.

0589. Which option preserves the correct meaning of both Suicide protective factors and Digital wellbeing?

A. Suicide protective factors: Respectful support that recognizes a young person's expressed gender and attends to safety, dignity, and context. / Digital wellbeing: The balance between digital engagement and health, relationships, sleep, and functioning as experienced by the individual.
B. Suicide protective factors: The balance between digital engagement and health, relationships, sleep, and functioning as experienced by the individual. / Digital wellbeing: Personal and contextual supports that can reduce risk or strengthen reasons and pathways for safety.
C. Suicide protective factors: Personal and contextual supports that can reduce risk or strengthen reasons and pathways for safety. / Digital wellbeing: The balance between digital engagement and health, relationships, sleep, and functioning as experienced by the individual.
D. Suicide protective factors: Personal and contextual supports that can reduce risk or strengthen reasons and pathways for safety. / Digital wellbeing: The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices.

0590. During service review in the school-based service, a community practitioner describes using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity. for a client in early adolescence. Which course idea is most applicable?

A. Nonsuicidal self-injury
B. Digital wellbeing
C. Suicide protective factors
D. Gender-affirming support

0591. A planning meeting about a adolescent student includes a counselor. The proposed practice in the multidisciplinary case conference is examining pathways and turning points rather than treating a current symptom as fixed destiny. Which idea underlies it?

A. Developmental psychopathology
B. Suicide protective factors
C. Adolescent identity development
D. Eating-disorder warning signs

0592. Which comparison would correct a trainee’s misunderstanding of Digital wellbeing versus Gender-affirming support?

A. Digital wellbeing: The balance between digital engagement and health, relationships, sleep, and functioning as experienced by the individual. / Gender-affirming support: Respectful support that recognizes a young person’s expressed gender and attends to safety, dignity, and context.
B. Digital wellbeing: Behaviors and environmental practices that support regular, restorative sleep. / Gender-affirming support: Respectful support that recognizes a young person’s expressed gender and attends to safety, dignity, and context.
C. Digital wellbeing: Respectful support that recognizes a young person’s expressed gender and attends to safety, dignity, and context. / Gender-affirming support: The balance between digital engagement and health, relationships, sleep, and functioning as experienced by the individual.
D. Digital wellbeing: The balance between digital engagement and health, relationships, sleep, and functioning as experienced by the individual. / Gender-affirming support: A framework studying how typical and atypical developmental processes interact across time and context.

0593. Consider a client in early adolescence receiving help in the child guidance clinic. The school counselor focuses on using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior. Which term best describes the guiding idea?

A. Sleep hygiene
B. Adolescent identity development
C. Peer contagion consideration
D. Gender-affirming support

0594. Which option pairs the definitions of Gender-affirming support and Peer contagion consideration correctly, in that order?

A. Gender-affirming support: The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices. / Peer contagion consideration: Respectful support that recognizes a young person’s expressed gender and attends to safety, dignity, and context.
B. Gender-affirming support: Behavioral, cognitive, and physical indicators that warrant careful assessment and referral to qualified care. / Peer contagion consideration: The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices.
C. Gender-affirming support: Respectful support that recognizes a young person’s expressed gender and attends to safety, dignity, and context. / Peer contagion consideration: A framework studying how typical and atypical developmental processes interact across time and context.
D. Gender-affirming support: Respectful support that recognizes a young person’s expressed gender and attends to safety, dignity, and context. / Peer contagion consideration: The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices.

0595. Which comparison correctly distinguishes Suicide protective factors from Peer contagion consideration?

A. Suicide protective factors: A framework studying how typical and atypical developmental processes interact across time and context. / Peer contagion consideration: The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices.
B. Suicide protective factors: The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices. / Peer contagion consideration: Personal and contextual supports that can reduce risk or strengthen reasons and pathways for safety.
C. Suicide protective factors: Personal and contextual supports that can reduce risk or strengthen reasons and pathways for safety. / Peer contagion consideration: Behavioral, cognitive, and physical indicators that warrant careful assessment and referral to qualified care.
D. Suicide protective factors: Personal and contextual supports that can reduce risk or strengthen reasons and pathways for safety. / Peer contagion consideration: The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices.

0596. Which option is the clearest practical expression of Eating-disorder warning signs?

A. Exploring body-related distress and social pressures without reinforcing appearance-based judgments.
B. Providing respectful space for exploration without forcing a fixed label or timeline.
C. Responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation.
D. Exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions.

0597. Which description belongs with the term Gender-affirming support?

A. The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices.
B. Respectful support that recognizes a young person’s expressed gender and attends to safety, dignity, and context.
C. Intentional self-inflicted injury without stated intent to die, requiring compassionate assessment and safety planning.
D. An evolving process of exploring and integrating personal, social, and cultural understandings of self.

0598. A child aged 6’s service team meets in the caregiver consultation. The school-based clinician recommends a change involving using the young person’s stated name and pronouns and assessing supports and safety without pathologizing identity. Which idea best explains it?

A. Adolescent identity development
B. Peer contagion consideration
C. Sleep hygiene
D. Gender-affirming support

0599. In the multidisciplinary case conference, a youth worker describes the most appropriate support for a child aged 6 as providing respectful space for exploration without forcing a fixed label or timeline. Which framework is being applied?

A. Body image
B. Sleep hygiene
C. Adolescent identity development
D. Developmental psychopathology

0600. A research trainee is asked what should shape a young person aged 16’s support in the telehealth session. The proposed focus is using the young person’s stated name and pronouns and assessing supports and safety without pathologizing identity. Which principle does it represent?

A. Gender-affirming support
B. Adolescent identity development
C. Digital wellbeing
D. Body image

0601. Which comparison correctly distinguishes Eating-disorder warning signs from Gender-affirming support?

A. Eating-disorder warning signs: Respectful support that recognizes a young person’s expressed gender and attends to safety, dignity, and context. / Gender-affirming support: Behavioral, cognitive, and physical indicators that warrant careful assessment and referral to qualified care.
B. Eating-disorder warning signs: Behavioral, cognitive, and physical indicators that warrant careful assessment and referral to qualified care. / Gender-affirming support: Respectful support that recognizes a young person’s expressed gender and attends to safety, dignity, and context.
C. Eating-disorder warning signs: Intentional self-inflicted injury without stated intent to die, requiring compassionate assessment and safety planning. / Gender-affirming support: Respectful support that recognizes a young person’s expressed gender and attends to safety, dignity, and context.
D. Eating-disorder warning signs: Behavioral, cognitive, and physical indicators that warrant careful assessment and referral to qualified care. / Gender-affirming support: A framework studying how typical and atypical developmental processes interact across time and context.

0602. What is the central meaning of Peer contagion consideration?

A. A framework studying how typical and atypical developmental processes interact across time and context.
B. The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices.
C. Thoughts, feelings, and perceptions concerning one's body, shaped by personal and social influences.
D. Intentional self-inflicted injury without stated intent to die, requiring compassionate assessment and safety planning.

0603. Choose the practice comparison that best separates Digital wellbeing from Developmental psychopathology.

A. Digital wellbeing: Examining pathways and turning points rather than treating a current symptom as fixed destiny. / Developmental psychopathology: Exploring how online activities affect this adolescent's sleep, connection, mood, and goals.
B. Digital wellbeing: Providing respectful space for exploration without forcing a fixed label or timeline. / Developmental psychopathology: Examining pathways and turning points rather than treating a current symptom as fixed destiny.
C. Digital wellbeing: Exploring how online activities affect this adolescent's sleep, connection, mood, and goals. / Developmental psychopathology: Examining pathways and turning points rather than treating a current symptom as fixed destiny.
D. Digital wellbeing: Exploring how online activities affect this adolescent's sleep, connection, mood, and goals. / Developmental psychopathology: Exploring body-related distress and social pressures without reinforcing appearance-based judgments.

0604. A student confuses Eating-disorder warning signs with Peer contagion consideration. Which explanation most accurately separates them?

A. Eating-disorder warning signs: The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices. / Peer contagion consideration: Behavioral, cognitive, and physical indicators that warrant careful assessment and referral to qualified care.
B. Eating-disorder warning signs: Intentional self-inflicted injury without stated intent to die, requiring compassionate assessment and safety planning. / Peer contagion consideration: The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices.
C. Eating-disorder warning signs: Behavioral, cognitive, and physical indicators that warrant careful assessment and referral to qualified care. / Peer contagion consideration: The balance between digital engagement and health, relationships, sleep, and functioning as experienced by the individual.
D. Eating-disorder warning signs: Behavioral, cognitive, and physical indicators that warrant careful assessment and referral to qualified care. / Peer contagion consideration: The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices.

0605. In a supervision quiz, how should Nonsuicidal self-injury be distinguished from Eating-disorder warning signs?

A. Nonsuicidal self-injury: Behavioral, cognitive, and physical indicators that warrant careful assessment and referral to qualified care. / Eating-disorder warning signs: Intentional self-inflicted injury without stated intent to die, requiring compassionate assessment and safety planning.
B. Nonsuicidal self-injury: Intentional self-inflicted injury without stated intent to die, requiring compassionate assessment and safety planning. / Eating-disorder warning signs: Behavioral, cognitive, and physical indicators that warrant careful assessment and referral to qualified care.
C. Nonsuicidal self-injury: Respectful support that recognizes a young person's expressed gender and attends to safety, dignity, and context. / Eating-disorder warning signs: Behavioral, cognitive, and physical indicators that warrant careful assessment and referral to qualified care.
D. Nonsuicidal self-injury: Intentional self-inflicted injury without stated intent to die, requiring compassionate assessment and safety planning. / Eating-disorder warning signs: A framework studying how typical and atypical developmental processes interact across time and context.

0606. How are Sleep hygiene and Nonsuicidal self-injury most accurately differentiated in this curriculum?

A. Sleep hygiene: The balance between digital engagement and health, relationships, sleep, and functioning as experienced by the individual. / Nonsuicidal self-injury: Intentional self-inflicted injury without stated intent to die, requiring compassionate assessment and safety planning.
B. Sleep hygiene: Intentional self-inflicted injury without stated intent to die, requiring compassionate assessment and safety planning. / Nonsuicidal self-injury: Behaviors and environmental practices that support regular, restorative sleep.
C. Sleep hygiene: Behaviors and environmental practices that support regular, restorative sleep. / Nonsuicidal self-injury: The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices.
D. Sleep hygiene: Behaviors and environmental practices that support regular, restorative sleep. / Nonsuicidal self-injury: Intentional self-inflicted injury without stated intent to die, requiring compassionate assessment and safety planning.

0607. When reviewing a client in early adolescence's plan in the parent meeting, the school-based clinician notes that the next step is exploring body-related distress and social pressures without reinforcing appearance-based judgments. Which concept guides this step?

A. Suicide protective factors
B. Nonsuicidal self-injury
C. Developmental psychopathology
D. Body image

0608. In the youth advocacy program, a teacher and counselor describes the most appropriate support for a middle-school student as exploring how online activities affect this adolescent's sleep, connection, mood, and goals. Which framework is being applied?

A. Eating-disorder warning signs
B. Digital wellbeing
C. Body image
D. Suicide protective factors

0609. In the community service agency, a school counselor describes the most appropriate support for a young person aged 16 as identifying trusted relationships, coping resources, and accessible support that can be activated. Which framework is being applied?

A. Body image
B. Suicide protective factors
C. Adolescent identity development
D. Developmental psychopathology

0610. Identify the most precise label for this idea: The balance between digital engagement and health, relationships, sleep, and functioning as experienced by the individual.

A. Peer contagion consideration
B. Developmental psychopathology
C. Nonsuicidal self-injury
D. Digital wellbeing

0611. Which option pairs the definitions of Nonsuicidal self-injury and Body image correctly, in that order?

A. Nonsuicidal self-injury: Intentional self-inflicted injury without stated intent to die, requiring compassionate assessment and safety planning. / Body image: An evolving process of exploring and integrating personal, social, and cultural understandings of self.
B. Nonsuicidal self-injury: Intentional self-inflicted injury without stated intent to die, requiring compassionate assessment and safety planning. / Body image: Thoughts, feelings, and perceptions concerning one's body, shaped by personal and social influences.
C. Nonsuicidal self-injury: Thoughts, feelings, and perceptions concerning one's body, shaped by personal and social influences. / Body image: Intentional self-inflicted injury without stated intent to die, requiring compassionate assessment and safety planning.
D. Nonsuicidal self-injury: The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices. / Body image: Thoughts, feelings, and perceptions concerning one's body, shaped by personal and social influences.

0612. Choose the response that best puts Developmental psychopathology into practice.

A. Responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation.
B. Providing respectful space for exploration without forcing a fixed label or timeline.
C. Examining pathways and turning points rather than treating a current symptom as fixed destiny.
D. Exploring body-related distress and social pressures without reinforcing appearance-based judgments.

0613. Which statement most accurately defines Developmental psychopathology?

A. The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices.
B. A framework studying how typical and atypical developmental processes interact across time and context.
C. Intentional self-inflicted injury without stated intent to die, requiring compassionate assessment and safety planning.
D. An evolving process of exploring and integrating personal, social, and cultural understandings of self.

0614. A supervisor asks how Body image would appear in practice. Which choice should be selected?

A. Asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either.
B. Responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation.
C. Exploring body-related distress and social pressures without reinforcing appearance-based judgments.
D. Examining pathways and turning points rather than treating a current symptom as fixed destiny.

0615. Which option correctly matches each concept to its practice focus: Adolescent identity development and Digital wellbeing?

A. Adolescent identity development: Exploring how online activities affect this adolescent's sleep, connection, mood, and goals. / Digital wellbeing: Providing respectful space for exploration without forcing a fixed label or timeline.
B. Adolescent identity development: Providing respectful space for exploration without forcing a fixed label or timeline. / Digital wellbeing: Exploring how online activities affect this adolescent's sleep, connection, mood, and goals.
C. Adolescent identity development: Providing respectful space for exploration without forcing a fixed label or timeline. / Digital wellbeing: Asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either.
D. Adolescent identity development: Using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity. / Digital wellbeing: Exploring how online activities affect this adolescent's sleep, connection, mood, and goals.

0616. While supporting a student aged 9 in the classroom support meeting, a case coordinator adopts this practice: exploring how online activities affect this adolescent's sleep, connection, mood, and goals. Which concept best explains the choice?

A. Sleep hygiene
B. Digital wellbeing
C. Developmental psychopathology
D. Body image

0617. In the family session, a case coordinator is considering this approach for a adolescent student: exploring body-related distress and social pressures without reinforcing appearance-based judgments. Which framework does it represent?

A. Adolescent identity development
B. Peer contagion consideration
C. Developmental psychopathology
D. Body image

0618. What is the central meaning of Body image?

A. Behavioral, cognitive, and physical indicators that warrant careful assessment and referral to qualified care.
B. The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices.
C. Thoughts, feelings, and perceptions concerning one's body, shaped by personal and social influences.
D. Respectful support that recognizes a young person's expressed gender and attends to safety, dignity, and context.

0619. Which statement most accurately defines Eating-disorder warning signs?

A. Behavioral, cognitive, and physical indicators that warrant careful assessment and referral to qualified care.
B. A framework studying how typical and atypical developmental processes interact across time and context.
C. An evolving process of exploring and integrating personal, social, and cultural understandings of self.
D. Personal and contextual supports that can reduce risk or strengthen reasons and pathways for safety.

0620. A doctoral student reads the following description. Which concept does it define? Behavioral, cognitive, and physical indicators that warrant careful assessment and referral to qualified care.

A. Eating-disorder warning signs
B. Developmental psychopathology
C. Digital wellbeing
D. Gender-affirming support

0621. In a supervision quiz, how should Gender-affirming support be distinguished from Peer contagion consideration?

A. Gender-affirming support: The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices. / Peer contagion consideration: Respectful support that recognizes a young person's expressed gender and attends to safety, dignity, and context.
B. Gender-affirming support: Respectful support that recognizes a young person's expressed gender and attends to safety, dignity, and context. / Peer contagion consideration: A framework studying how typical and atypical developmental processes interact across time and context.
C. Gender-affirming support: Respectful support that recognizes a young person's expressed gender and attends to safety, dignity, and context. / Peer contagion consideration: The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices.
D. Gender-affirming support: Behavioral, cognitive, and physical indicators that warrant careful assessment and referral to qualified care. / Peer contagion consideration: The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices.

0622. Which option preserves the correct meaning of both Nonsuicidal self-injury and Suicide protective factors?

A. Nonsuicidal self-injury: Personal and contextual supports that can reduce risk or strengthen reasons and pathways for safety. / Suicide protective factors: Intentional self-inflicted injury without stated intent to die, requiring compassionate assessment and safety planning.
B. Nonsuicidal self-injury: An evolving process of exploring and integrating personal, social, and cultural understandings of self. / Suicide protective factors: Personal and contextual supports that can reduce risk or strengthen reasons and pathways for safety.
C. Nonsuicidal self-injury: Intentional self-inflicted injury without stated intent to die, requiring compassionate assessment and safety planning. / Suicide protective factors: Personal and contextual supports that can reduce risk or strengthen reasons and pathways for safety.
D. Nonsuicidal self-injury: Intentional self-inflicted injury without stated intent to die, requiring compassionate assessment and safety planning. / Suicide protective factors: Thoughts, feelings, and perceptions concerning one's body, shaped by personal and social influences.

0623. A trainee must distinguish how Sleep hygiene and Eating-disorder warning signs guide practice. Which comparison is accurate?

A. Sleep hygiene: Exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions. / Eating-disorder warning signs: Responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation.
B. Sleep hygiene: Responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation. / Eating-disorder warning signs: Exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions.
C. Sleep hygiene: Exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions. / Eating-disorder warning signs: Exploring how online activities affect this adolescent's sleep, connection, mood, and goals.
D. Sleep hygiene: Examining pathways and turning points rather than treating a current symptom as fixed destiny. / Eating-disorder warning signs: Responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation.

0624. Identify the most precise label for this idea: An evolving process of exploring and integrating personal, social, and cultural understandings of self.

A. Adolescent identity development
B. Sleep hygiene
C. Body image
D. Eating-disorder warning signs

0625. Consider a student aged 9 receiving help in the behavior-support review. The consulting counselor focuses on asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either. Which term best describes the guiding idea?

A. Nonsuicidal self-injury
B. Gender-affirming support
C. Developmental psychopathology
D. Adolescent identity development

0626. A child aged 11 is receiving support in the family resource center. The youth worker is guided by this practice: identifying trusted relationships, coping resources, and accessible support that can be activated. Which principle best fits?

A. Suicide protective factors
B. Body image
C. Adolescent identity development
D. Gender-affirming support

0627. Which option pairs the definitions of Sleep hygiene and Nonsuicidal self-injury correctly, in that order?

A. Sleep hygiene: Behaviors and environmental practices that support regular, restorative sleep. / Nonsuicidal self-injury: Intentional self-inflicted injury without stated intent to die, requiring compassionate assessment and safety planning.
B. Sleep hygiene: The balance between digital engagement and health, relationships, sleep, and functioning as experienced by the individual. / Nonsuicidal self-injury: Intentional self-inflicted injury without stated intent to die, requiring compassionate assessment and safety planning.
C. Sleep hygiene: Intentional self-inflicted injury without stated intent to die, requiring compassionate assessment and safety planning. / Nonsuicidal self-injury: Behaviors and environmental practices that support regular, restorative sleep.
D. Sleep hygiene: Behaviors and environmental practices that support regular, restorative sleep. / Nonsuicidal self-injury: The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices.

0628. In the outpatient clinic, a teacher and counselor explains why a young person aged 10 would benefit from providing respectful space for exploration without forcing a fixed label or timeline. Which course concept underpins the explanation?

A. Peer contagion consideration
B. Adolescent identity development
C. Developmental psychopathology
D. Sleep hygiene

0629. A supervised trainee prepares for a session in the after-school program with a preadolescent child. The intended approach is examining pathways and turning points rather than treating a current symptom as fixed destiny. Which concept is most relevant?

A. Sleep hygiene
B. Suicide protective factors
C. Peer contagion consideration
D. Developmental psychopathology

0630. Which named construct is captured by this account? A framework studying how typical and atypical developmental processes interact across time and context.

A. Developmental psychopathology
B. Suicide protective factors
C. Peer contagion consideration
D. Body image

0631. Which option is the clearest practical expression of Suicide protective factors?

A. Identifying trusted relationships, coping resources, and accessible support that can be activated.
B. Asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either.
C. Using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity.
D. Examining pathways and turning points rather than treating a current symptom as fixed destiny.

0632. A student confuses Nonsuicidal self-injury with Gender-affirming support. Which explanation most accurately separates them?

A. Nonsuicidal self-injury: Intentional self-inflicted injury without stated intent to die, requiring compassionate assessment and safety planning. / Gender-affirming support: Respectful support that recognizes a young person's expressed gender and attends to safety, dignity, and context.
B. Nonsuicidal self-injury: An evolving process of exploring and integrating personal, social, and cultural understandings of self. / Gender-affirming support: Respectful support that recognizes a young person's expressed gender and attends to safety, dignity, and context.
C. Nonsuicidal self-injury: Respectful support that recognizes a young person's expressed gender and attends to safety, dignity, and context. / Gender-affirming support: Intentional self-inflicted injury without stated intent to die, requiring compassionate assessment and safety planning.
D. Nonsuicidal self-injury: Intentional self-inflicted injury without stated intent to die, requiring compassionate assessment and safety planning. / Gender-affirming support: Behaviors and environmental practices that support regular, restorative sleep.

0633. A young person aged 18 and a supervised trainee are reviewing goals in the family resource center. The agreed action is exploring body-related distress and social pressures without reinforcing appearance-based judgments. Which principle best accounts for it?

A. Nonsuicidal self-injury
B. Body image
C. Suicide protective factors
D. Adolescent identity development

0634. Choose the definition pair that correctly explains Adolescent identity development first and Body image second.

A. Adolescent identity development: Thoughts, feelings, and perceptions concerning one's body, shaped by personal and social influences. / Body image: An evolving process of exploring and integrating personal, social, and cultural understandings of self.
B. Adolescent identity development: An evolving process of exploring and integrating personal, social, and cultural understandings of self. / Body image: Thoughts, feelings, and perceptions concerning one's body, shaped by personal and social influences.
C. Adolescent identity development: An evolving process of exploring and integrating personal, social, and cultural understandings of self. / Body image: Personal and contextual supports that can reduce risk or strengthen reasons and pathways for safety.
D. Adolescent identity development: The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices. / Body image: Thoughts, feelings, and perceptions concerning one's body, shaped by personal and social influences.

0635. Which option correctly matches each concept to its practice focus: Nonsuicidal self-injury and Developmental psychopathology?

A. Nonsuicidal self-injury: Asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either. / Developmental psychopathology: Examining pathways and turning points rather than treating a current symptom as fixed destiny.
B. Nonsuicidal self-injury: Exploring how online activities affect this adolescent's sleep, connection, mood, and goals. / Developmental psychopathology: Examining pathways and turning points rather than treating a current symptom as fixed destiny.
C. Nonsuicidal self-injury: Examining pathways and turning points rather than treating a current symptom as fixed destiny. / Developmental psychopathology: Asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either.
D. Nonsuicidal self-injury: Asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either. / Developmental psychopathology: Identifying trusted relationships, coping resources, and accessible support that can be activated.

0636. In the learning-support meeting, a youth worker explains why a client in late adolescence would benefit from responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation. Which course concept underpins the explanation?

A. Developmental psychopathology
B. Peer contagion consideration
C. Eating-disorder warning signs
D. Digital wellbeing

0637. A high-school student's service team meets in the school counseling office. The family therapist recommends a change involving exploring how online activities affect this adolescent's sleep, connection, mood, and goals. Which idea best explains it?

A. Digital wellbeing
B. Adolescent identity development
C. Sleep hygiene
D. Peer contagion consideration

0638. Which paired example correctly applies Sleep hygiene first and Gender-affirming support second?

A. Sleep hygiene: Exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions. / Gender-affirming support: Responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation.
B. Sleep hygiene: Exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions. / Gender-affirming support: Using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity.
C. Sleep hygiene: Asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either. / Gender-affirming support: Using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity.
D. Sleep hygiene: Using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity. / Gender-affirming support: Exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions.

0639. Which statement most accurately defines Nonsuicidal self-injury?

A. Behavioral, cognitive, and physical indicators that warrant careful assessment and referral to qualified care.
B. The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices.
C. Thoughts, feelings, and perceptions concerning one's body, shaped by personal and social influences.
D. Intentional self-inflicted injury without stated intent to die, requiring compassionate assessment and safety planning.

0640. A case discussion concerns a young adolescent client and a family therapist in the behavior-support review. The practitioner is considering exploring body-related distress and social pressures without reinforcing appearance-based judgments. Which principle is involved?

A. Suicide protective factors
B. Digital wellbeing
C. Body image
D. Eating-disorder warning signs

0641. Which paired example correctly applies Body image first and Eating-disorder warning signs second?

A. Body image: Exploring body-related distress and social pressures without reinforcing appearance-based judgments. / Eating-disorder warning signs: Responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation.
B. Body image: Exploring body-related distress and social pressures without reinforcing appearance-based judgments. / Eating-disorder warning signs: Examining pathways and turning points rather than treating a current symptom as fixed destiny.
C. Body image: Using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity. / Eating-disorder warning signs: Responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation.
D. Body image: Responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation. / Eating-disorder warning signs: Exploring body-related distress and social pressures without reinforcing appearance-based judgments.

0642. A school counselor is asked to justify a plan for a young person aged 18 in the family session. It calls for asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either. Which concept provides the rationale?

A. Gender-affirming support
B. Nonsuicidal self-injury
C. Sleep hygiene
D. Developmental psychopathology

0643. Which option pairs the definitions of Sleep hygiene and Digital wellbeing correctly, in that order?

A. Sleep hygiene: Thoughts, feelings, and perceptions concerning one's body, shaped by personal and social influences. / Digital wellbeing: The balance between digital engagement and health, relationships, sleep, and functioning as experienced by the individual.
B. Sleep hygiene: The balance between digital engagement and health, relationships, sleep, and functioning as experienced by the individual. / Digital wellbeing: Behaviors and environmental practices that support regular, restorative sleep.
C. Sleep hygiene: Behaviors and environmental practices that support regular, restorative sleep. / Digital wellbeing: Intentional self-inflicted injury without stated intent to die, requiring compassionate assessment and safety planning.
D. Sleep hygiene: Behaviors and environmental practices that support regular, restorative sleep. / Digital wellbeing: The balance between digital engagement and health, relationships, sleep, and functioning as experienced by the individual.

0644. In the family session, the agreed focus for a therapist working with a child aged 7 is using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior. Which concept names this focus?

A. Eating-disorder warning signs
B. Adolescent identity development
C. Sleep hygiene
D. Peer contagion consideration

0645. For a child aged 8 seen in the after-school program, the therapist recommends a plan built around identifying trusted relationships, coping resources, and accessible support that can be activated. Which concept is reflected?

A. Suicide protective factors
B. Nonsuicidal self-injury
C. Sleep hygiene
D. Eating-disorder warning signs

0646. For a older adolescent client in the child guidance clinic, a clinical supervisor makes this practice the immediate priority: using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity. Which concept fits best?

A. Gender-affirming support
B. Developmental psychopathology
C. Eating-disorder warning signs
D. Suicide protective factors

0647. Which option correctly matches each concept to its practice focus: Sleep hygiene and Digital wellbeing?

A. Sleep hygiene: Exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions. / Digital wellbeing: Exploring how online activities affect this adolescent's sleep, connection, mood, and goals.
B. Sleep hygiene: Exploring how online activities affect this adolescent's sleep, connection, mood, and goals. / Digital wellbeing: Exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions.
C. Sleep hygiene: Exploring body-related distress and social pressures without reinforcing appearance-based judgments. / Digital wellbeing: Exploring how online activities affect this adolescent's sleep, connection, mood, and goals.
D. Sleep hygiene: Exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions. / Digital wellbeing: Asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either.

0648. Which option pairs the definitions of Nonsuicidal self-injury and Digital wellbeing correctly, in that order?

A. Nonsuicidal self-injury: The balance between digital engagement and health, relationships, sleep, and functioning as experienced by the individual. / Digital wellbeing: Intentional self-inflicted injury without stated intent to die, requiring compassionate assessment and safety planning.
B. Nonsuicidal self-injury: Intentional self-inflicted injury without stated intent to die, requiring compassionate assessment and safety planning. / Digital wellbeing: The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices.
C. Nonsuicidal self-injury: Intentional self-inflicted injury without stated intent to die, requiring compassionate assessment and safety planning. / Digital wellbeing: The balance between digital engagement and health, relationships, sleep, and functioning as experienced by the individual.
D. Nonsuicidal self-injury: A framework studying how typical and atypical developmental processes interact across time and context. / Digital wellbeing: The balance between digital engagement and health, relationships, sleep, and functioning as experienced by the individual.

0649. Which option pairs the definitions of Digital wellbeing and Eating-disorder warning signs correctly, in that order?

A. Digital wellbeing: The balance between digital engagement and health, relationships, sleep, and functioning as experienced by the individual. / Eating-disorder warning signs: Behavioral, cognitive, and physical indicators that warrant careful assessment and referral to qualified care.
B. Digital wellbeing: Behavioral, cognitive, and physical indicators that warrant careful assessment and referral to qualified care. / Eating-disorder warning signs: The balance between digital engagement and health, relationships, sleep, and functioning as experienced by the individual.
C. Digital wellbeing: The balance between digital engagement and health, relationships, sleep, and functioning as experienced by the individual. / Eating-disorder warning signs: Behaviors and environmental practices that support regular, restorative sleep.
D. Digital wellbeing: Thoughts, feelings, and perceptions concerning one's body, shaped by personal and social influences. / Eating-disorder warning signs: Behavioral, cognitive, and physical indicators that warrant careful assessment and referral to qualified care.

0650. During work in the counseling practicum, a teacher and counselor identifies this need: exploring body-related distress and social pressures without reinforcing appearance-based judgments. Which idea should guide the response?

A. Nonsuicidal self-injury
B. Body image
C. Digital wellbeing
D. Eating-disorder warning signs

0651. Which statement most accurately defines Sleep hygiene?

A. Behaviors and environmental practices that support regular, restorative sleep.
B. Behavioral, cognitive, and physical indicators that warrant careful assessment and referral to qualified care.
C. Respectful support that recognizes a young person's expressed gender and attends to safety, dignity, and context.
D. The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices.

0652. How should a practitioner distinguish the applications of Body image and Developmental psychopathology?

A. Body image: Exploring body-related distress and social pressures without reinforcing appearance-based judgments. / Developmental psychopathology: Examining pathways and turning points rather than treating a current symptom as fixed destiny.
B. Body image: Exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions. / Developmental psychopathology: Examining pathways and turning points rather than treating a current symptom as fixed destiny.
C. Body image: Examining pathways and turning points rather than treating a current symptom as fixed destiny. / Developmental psychopathology: Exploring body-related distress and social pressures without reinforcing appearance-based judgments.
D. Body image: Exploring body-related distress and social pressures without reinforcing appearance-based judgments. / Developmental psychopathology: Providing respectful space for exploration without forcing a fixed label or timeline.

0653. Which choice aligns each practice with the correct idea, Suicide protective factors or Developmental psychopathology?

A. Suicide protective factors: Identifying trusted relationships, coping resources, and accessible support that can be activated. / Developmental psychopathology: Exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions.
B. Suicide protective factors: Examining pathways and turning points rather than treating a current symptom as fixed destiny. / Developmental psychopathology: Identifying trusted relationships, coping resources, and accessible support that can be activated.
C. Suicide protective factors: Providing respectful space for exploration without forcing a fixed label or timeline. / Developmental psychopathology: Examining pathways and turning points rather than treating a current symptom as fixed destiny.
D. Suicide protective factors: Identifying trusted relationships, coping resources, and accessible support that can be activated. / Developmental psychopathology: Examining pathways and turning points rather than treating a current symptom as fixed destiny.

0654. A support meeting for a young person aged 10 includes a play therapist in the parent meeting. The practice under consideration is exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions. Which concept guides it?

A. Sleep hygiene
B. Developmental psychopathology
C. Adolescent identity development
D. Gender-affirming support

0655. Choose the practice comparison that best separates Nonsuicidal self-injury from Digital wellbeing.

A. Nonsuicidal self-injury: Examining pathways and turning points rather than treating a current symptom as fixed destiny. / Digital wellbeing: Exploring how online activities affect this adolescent's sleep, connection, mood, and goals.
B. Nonsuicidal self-injury: Exploring how online activities affect this adolescent's sleep, connection, mood, and goals. / Digital wellbeing: Asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either.
C. Nonsuicidal self-injury: Asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either. / Digital wellbeing: Using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior.
D. Nonsuicidal self-injury: Asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either. / Digital wellbeing: Exploring how online activities affect this adolescent's sleep, connection, mood, and goals.

0656. In a case note about a student aged 17, a assessment clinician working in the parent meeting records this priority: examining pathways and turning points rather than treating a current symptom as fixed destiny. What principle is reflected?

A. Eating-disorder warning signs
B. Developmental psychopathology
C. Body image
D. Digital wellbeing

0657. A student confuses Suicide protective factors with Developmental psychopathology. Which explanation most accurately separates them?

A. Suicide protective factors: An evolving process of exploring and integrating personal, social, and cultural understandings of self. / Developmental psychopathology: A framework studying how typical and atypical developmental processes interact across time and context.
B. Suicide protective factors: A framework studying how typical and atypical developmental processes interact across time and context. / Developmental psychopathology: Personal and contextual supports that can reduce risk or strengthen reasons and pathways for safety.
C. Suicide protective factors: Personal and contextual supports that can reduce risk or strengthen reasons and pathways for safety. / Developmental psychopathology: Behaviors and environmental practices that support regular, restorative sleep.
D. Suicide protective factors: Personal and contextual supports that can reduce risk or strengthen reasons and pathways for safety. / Developmental psychopathology: A framework studying how typical and atypical developmental processes interact across time and context.

0658. Which choice aligns each practice with the correct idea, Nonsuicidal self-injury or Gender-affirming support?

A. Nonsuicidal self-injury: Asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either. / Gender-affirming support: Using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity.
B. Nonsuicidal self-injury: Asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either. / Gender-affirming support: Exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions.
C. Nonsuicidal self-injury: Using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity. / Gender-affirming support: Asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either.
D. Nonsuicidal self-injury: Providing respectful space for exploration without forcing a fixed label or timeline. / Gender-affirming support: Using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity.

0659. In a supervision quiz, how should Digital wellbeing be distinguished from Eating-disorder warning signs?

A. Digital wellbeing: The balance between digital engagement and health, relationships, sleep, and functioning as experienced by the individual. / Eating-disorder warning signs: Behaviors and environmental practices that support regular, restorative sleep.
B. Digital wellbeing: Behavioral, cognitive, and physical indicators that warrant careful assessment and referral to qualified care. / Eating-disorder warning signs: The balance between digital engagement and health, relationships, sleep, and functioning as experienced by the individual.
C. Digital wellbeing: Thoughts, feelings, and perceptions concerning one's body, shaped by personal and social influences. / Eating-disorder warning signs: Behavioral, cognitive, and physical indicators that warrant careful assessment and referral to qualified care.
D. Digital wellbeing: The balance between digital engagement and health, relationships, sleep, and functioning as experienced by the individual. / Eating-disorder warning signs: Behavioral, cognitive, and physical indicators that warrant careful assessment and referral to qualified care.

0660. Which statement shows a sound practice-level distinction between Nonsuicidal self-injury and Digital wellbeing?

A. Nonsuicidal self-injury: Exploring how online activities affect this adolescent's sleep, connection, mood, and goals. / Digital wellbeing: Asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either.
B. Nonsuicidal self-injury: Asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either. / Digital wellbeing: Exploring how online activities affect this adolescent's sleep, connection, mood, and goals.
C. Nonsuicidal self-injury: Asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either. / Digital wellbeing: Using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior.
D. Nonsuicidal self-injury: Examining pathways and turning points rather than treating a current symptom as fixed destiny. / Digital wellbeing: Exploring how online activities affect this adolescent's sleep, connection, mood, and goals.

0661. A school-based clinician presents a support plan for a teenage client at the telehealth session. Its central feature is exploring how online activities affect this adolescent's sleep, connection, mood, and goals. Which concept should be named?

A. Suicide protective factors
B. Eating-disorder warning signs
C. Gender-affirming support
D. Digital wellbeing

0662. A supervisor asks for an applied contrast between Suicide protective factors and Peer contagion consideration. Which option fits?

A. Suicide protective factors: Identifying trusted relationships, coping resources, and accessible support that can be activated. / Peer contagion consideration: Using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior.
B. Suicide protective factors: Using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior. / Peer contagion consideration: Identifying trusted relationships, coping resources, and accessible support that can be activated.
C. Suicide protective factors: Identifying trusted relationships, coping resources, and accessible support that can be activated. / Peer contagion consideration: Responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation.
D. Suicide protective factors: Examining pathways and turning points rather than treating a current symptom as fixed destiny. / Peer contagion consideration: Using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior.

0663. Which statement most accurately defines Gender-affirming support?

A. A framework studying how typical and atypical developmental processes interact across time and context.
B. Behaviors and environmental practices that support regular, restorative sleep.
C. Respectful support that recognizes a young person's expressed gender and attends to safety, dignity, and context.
D. The balance between digital engagement and health, relationships, sleep, and functioning as experienced by the individual.

0664. A clinical supervisor is asked to evaluate a proposed service for a young person aged 18 in the school consultation. The defining feature is using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior. Which concept fits?

A. Gender-affirming support
B. Sleep hygiene
C. Body image
D. Peer contagion consideration

0665. Which course concept is defined as follows: Personal and contextual supports that can reduce risk or strengthen reasons and pathways for safety.

A. Developmental psychopathology
B. Sleep hygiene
C. Body image
D. Suicide protective factors

0666. Identify the most precise label for this idea: A framework studying how typical and atypical developmental processes interact across time and context.

A. Body image
B. Sleep hygiene
C. Digital wellbeing
D. Developmental psychopathology

0667. When reviewing a young person aged 16's plan in the community mental-health service, the school-based clinician notes that the next step is providing respectful space for exploration without forcing a fixed label or timeline. Which concept guides this step?

A. Suicide protective factors
B. Adolescent identity development
C. Eating-disorder warning signs
D. Sleep hygiene

0668. A assessment clinician and a young person aged 13 are discussing support in the clinical planning session. The selected practice is asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either. Which concept does this demonstrate?

A. Nonsuicidal self-injury
B. Eating-disorder warning signs
C. Suicide protective factors
D. Developmental psychopathology

0669. Which option correctly matches each concept to its practice focus: Body image and Eating-disorder warning signs?

A. Body image: Responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation. / Eating-disorder warning signs: Exploring body-related distress and social pressures without reinforcing appearance-based judgments.
B. Body image: Exploring body-related distress and social pressures without reinforcing appearance-based judgments. / Eating-disorder warning signs: Examining pathways and turning points rather than treating a current symptom as fixed destiny.
C. Body image: Using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity. / Eating-disorder warning signs: Responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation.
D. Body image: Exploring body-related distress and social pressures without reinforcing appearance-based judgments. / Eating-disorder warning signs: Responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation.

0670. Which option correctly matches each concept to its practice focus: Adolescent identity development and Eating-disorder warning signs?

A. Adolescent identity development: Providing respectful space for exploration without forcing a fixed label or timeline. / Eating-disorder warning signs: Responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation.
B. Adolescent identity development: Responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation. / Eating-disorder warning signs: Providing respectful space for exploration without forcing a fixed label or timeline.
C. Adolescent identity development: Examining pathways and turning points rather than treating a current symptom as fixed destiny. / Eating-disorder warning signs: Responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation.
D. Adolescent identity development: Providing respectful space for exploration without forcing a fixed label or timeline. / Eating-disorder warning signs: Using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior.

0671. Which paired example correctly applies Adolescent identity development first and Digital wellbeing second?

A. Adolescent identity development: Exploring how online activities affect this adolescent's sleep, connection, mood, and goals. / Digital wellbeing: Providing respectful space for exploration without forcing a fixed label or timeline.
B. Adolescent identity development: Providing respectful space for exploration without forcing a fixed label or timeline. / Digital wellbeing: Asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either.
C. Adolescent identity development: Using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity. / Digital wellbeing: Exploring how online activities affect this adolescent's sleep, connection, mood, and goals.
D. Adolescent identity development: Providing respectful space for exploration without forcing a fixed label or timeline. / Digital wellbeing: Exploring how online activities affect this adolescent's sleep, connection, mood, and goals.

0672. A support meeting for a school-age child includes a school support specialist in the learning-support meeting. The practice under consideration is providing respectful space for exploration without forcing a fixed label or timeline. Which concept guides it?

A. Peer contagion consideration
B. Adolescent identity development
C. Body image
D. Nonsuicidal self-injury

0673. Choose the definition pair that correctly explains Digital wellbeing first and Peer contagion consideration second.

A. Digital wellbeing: The balance between digital engagement and health, relationships, sleep, and functioning as experienced by the individual. / Peer contagion consideration: The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices.
B. Digital wellbeing: Intentional self-inflicted injury without stated intent to die, requiring compassionate assessment and safety planning. / Peer contagion consideration: The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices.
C. Digital wellbeing: The balance between digital engagement and health, relationships, sleep, and functioning as experienced by the individual. / Peer contagion consideration: Behaviors and environmental practices that support regular, restorative sleep.
D. Digital wellbeing: The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices. / Peer contagion consideration: The balance between digital engagement and health, relationships, sleep, and functioning as experienced by the individual.

0674. In the child guidance clinic, a consulting counselor explains why a adolescent student would benefit from identifying trusted relationships, coping resources, and accessible support that can be activated. Which course concept underpins the explanation?

A. Eating-disorder warning signs
B. Gender-affirming support
C. Developmental psychopathology
D. Suicide protective factors

0675. A therapist is asked what should shape a client in late adolescence's support in the youth advocacy program. The proposed focus is exploring body-related distress and social pressures without reinforcing appearance-based judgments. Which principle does it represent?

A. Suicide protective factors
B. Body image
C. Nonsuicidal self-injury
D. Gender-affirming support

0676. Which option pairs the definitions of Eating-disorder warning signs and Developmental psychopathology correctly, in that order?

A. Eating-disorder warning signs: A framework studying how typical and atypical developmental processes interact across time and context. / Developmental psychopathology: Behavioral, cognitive, and physical indicators that warrant careful assessment and referral to qualified care.
B. Eating-disorder warning signs: Behavioral, cognitive, and physical indicators that warrant careful assessment and referral to qualified care. / Developmental psychopathology: A framework studying how typical and atypical developmental processes interact across time and context.
C. Eating-disorder warning signs: An evolving process of exploring and integrating personal, social, and cultural understandings of self. / Developmental psychopathology: A framework studying how typical and atypical developmental processes interact across time and context.
D. Eating-disorder warning signs: Behavioral, cognitive, and physical indicators that warrant careful assessment and referral to qualified care. / Developmental psychopathology: Thoughts, feelings, and perceptions concerning one's body, shaped by personal and social influences.

0677. A student aged 12 and a mental-health professional are reviewing goals in the after-school program. The agreed action is exploring how online activities affect this adolescent's sleep, connection, mood, and goals. Which principle best accounts for it?

A. Digital wellbeing
B. Suicide protective factors
C. Developmental psychopathology
D. Sleep hygiene

0678. A case conference asks for a distinction between Adolescent identity development and Peer contagion consideration. Which answer is sound?

A. Adolescent identity development: Behavioral, cognitive, and physical indicators that warrant careful assessment and referral to qualified care. / Peer contagion consideration: The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices.
B. Adolescent identity development: An evolving process of exploring and integrating personal, social, and cultural understandings of self. / Peer contagion consideration: The balance between digital engagement and health, relationships, sleep, and functioning as experienced by the individual.
C. Adolescent identity development: An evolving process of exploring and integrating personal, social, and cultural understandings of self. / Peer contagion consideration: The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices.
D. Adolescent identity development: The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices. / Peer contagion consideration: An evolving process of exploring and integrating personal, social, and cultural understandings of self.

0679. A trainee must distinguish how Sleep hygiene and Peer contagion consideration guide practice. Which comparison is accurate?

A. Sleep hygiene: Exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions. / Peer contagion consideration: Using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior.
B. Sleep hygiene: Using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior. / Peer contagion consideration: Exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions.
C. Sleep hygiene: Exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions. / Peer contagion consideration: Identifying trusted relationships, coping resources, and accessible support that can be activated.
D. Sleep hygiene: Using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity. / Peer contagion consideration: Using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior.

0680. During work in the community mental-health service, a group facilitator identifies this need: asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either. Which idea should guide the response?

A. Body image
B. Nonsuicidal self-injury
C. Suicide protective factors
D. Eating-disorder warning signs

0681. Which description belongs with the term Developmental psychopathology?

A. The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices.
B. Personal and contextual supports that can reduce risk or strengthen reasons and pathways for safety.
C. Respectful support that recognizes a young person's expressed gender and attends to safety, dignity, and context.
D. A framework studying how typical and atypical developmental processes interact across time and context.

0682. A case discussion concerns a child aged 14 and a caregiver working with a counselor in the school-based service. The practitioner is considering exploring how online activities affect this adolescent's sleep, connection, mood, and goals. Which principle is involved?

A. Peer contagion consideration
B. Gender-affirming support
C. Digital wellbeing
D. Sleep hygiene

0683. Identify the most precise label for this idea: Thoughts, feelings, and perceptions concerning one's body, shaped by personal and social influences.

A. Body image
B. Developmental psychopathology
C. Eating-disorder warning signs
D. Peer contagion consideration

0684. Which statement most accurately defines Digital wellbeing?

A. Personal and contextual supports that can reduce risk or strengthen reasons and pathways for safety.
B. The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices.
C. A framework studying how typical and atypical developmental processes interact across time and context.
D. The balance between digital engagement and health, relationships, sleep, and functioning as experienced by the individual.

0685. Choose the practice comparison that best separates Nonsuicidal self-injury from Suicide protective factors.

A. Nonsuicidal self-injury: Providing respectful space for exploration without forcing a fixed label or timeline. / Suicide protective factors: Identifying trusted relationships, coping resources, and accessible support that can be activated.
B. Nonsuicidal self-injury: Asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either. / Suicide protective factors: Identifying trusted relationships, coping resources, and accessible support that can be activated.
C. Nonsuicidal self-injury: Asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either. / Suicide protective factors: Exploring body-related distress and social pressures without reinforcing appearance-based judgments.
D. Nonsuicidal self-injury: Identifying trusted relationships, coping resources, and accessible support that can be activated. / Suicide protective factors: Asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either.

0686. A client in early adolescence and a assessment clinician are reviewing goals in the student wellness team. The agreed action is responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation. Which principle best accounts for it?

A. Gender-affirming support
B. Eating-disorder warning signs
C. Digital wellbeing
D. Nonsuicidal self-injury

0687. In a supervision quiz, how should Adolescent identity development be distinguished from Sleep hygiene?

A. Adolescent identity development: An evolving process of exploring and integrating personal, social, and cultural understandings of self. / Sleep hygiene: Behaviors and environmental practices that support regular, restorative sleep.
B. Adolescent identity development: Behaviors and environmental practices that support regular, restorative sleep. / Sleep hygiene: An evolving process of exploring and integrating personal, social, and cultural understandings of self.
C. Adolescent identity development: An evolving process of exploring and integrating personal, social, and cultural understandings of self. / Sleep hygiene: Intentional self-inflicted injury without stated intent to die, requiring compassionate assessment and safety planning.
D. Adolescent identity development: The balance between digital engagement and health, relationships, sleep, and functioning as experienced by the individual. / Sleep hygiene: Behaviors and environmental practices that support regular, restorative sleep.

0688. Which statement accurately contrasts the course concepts Nonsuicidal self-injury and Developmental psychopathology?

A. Nonsuicidal self-injury: A framework studying how typical and atypical developmental processes interact across time and context. / Developmental psychopathology: Intentional self-inflicted injury without stated intent to die, requiring compassionate assessment and safety planning.
B. Nonsuicidal self-injury: Intentional self-inflicted injury without stated intent to die, requiring compassionate assessment and safety planning. / Developmental psychopathology: A framework studying how typical and atypical developmental processes interact across time and context.
C. Nonsuicidal self-injury: The balance between digital engagement and health, relationships, sleep, and functioning as experienced by the individual. / Developmental psychopathology: A framework studying how typical and atypical developmental processes interact across time and context.
D. Nonsuicidal self-injury: Intentional self-inflicted injury without stated intent to die, requiring compassionate assessment and safety planning. / Developmental psychopathology: Personal and contextual supports that can reduce risk or strengthen reasons and pathways for safety.

0689. In the student-support meeting, the agreed focus for a program coordinator working with a child of elementary-school age is examining pathways and turning points rather than treating a current symptom as fixed destiny. Which concept names this focus?

A. Body image
B. Suicide protective factors
C. Developmental psychopathology
D. Peer contagion consideration

0690. Which statement shows a sound practice-level distinction between Adolescent identity development and Gender-affirming support?

A. Adolescent identity development: Using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity. / Gender-affirming support: Providing respectful space for exploration without forcing a fixed label or timeline.
B. Adolescent identity development: Providing respectful space for exploration without forcing a fixed label or timeline. / Gender-affirming support: Using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity.
C. Adolescent identity development: Providing respectful space for exploration without forcing a fixed label or timeline. / Gender-affirming support: Identifying trusted relationships, coping resources, and accessible support that can be activated.
D. Adolescent identity development: Exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions. / Gender-affirming support: Using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity.

0691. A trainee must explain Digital wellbeing. Which answer is accurate?

A. Personal and contextual supports that can reduce risk or strengthen reasons and pathways for safety.
B. The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices.
C. Respectful support that recognizes a young person's expressed gender and attends to safety, dignity, and context.
D. The balance between digital engagement and health, relationships, sleep, and functioning as experienced by the individual.

0692. Which option preserves the correct meaning of both Sleep hygiene and Developmental psychopathology?

A. Sleep hygiene: Behaviors and environmental practices that support regular, restorative sleep. / Developmental psychopathology: The balance between digital engagement and health, relationships, sleep, and functioning as experienced by the individual.
B. Sleep hygiene: A framework studying how typical and atypical developmental processes interact across time and context. / Developmental psychopathology: Behaviors and environmental practices that support regular, restorative sleep.
C. Sleep hygiene: Behaviors and environmental practices that support regular, restorative sleep. / Developmental psychopathology: A framework studying how typical and atypical developmental processes interact across time and context.
D. Sleep hygiene: The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices. / Developmental psychopathology: A framework studying how typical and atypical developmental processes interact across time and context.

0693. How should a practitioner distinguish the applications of Adolescent identity development and Sleep hygiene?

A. Adolescent identity development: Providing respectful space for exploration without forcing a fixed label or timeline. / Sleep hygiene: Asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either.
B. Adolescent identity development: Exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions. / Sleep hygiene: Providing respectful space for exploration without forcing a fixed label or timeline.
C. Adolescent identity development: Exploring how online activities affect this adolescent's sleep, connection, mood, and goals. / Sleep hygiene: Exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions.
D. Adolescent identity development: Providing respectful space for exploration without forcing a fixed label or timeline. / Sleep hygiene: Exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions.

0694. Which option preserves the correct meaning of both Suicide protective factors and Body image?

A. Suicide protective factors: Personal and contextual supports that can reduce risk or strengthen reasons and pathways for safety. / Body image: Thoughts, feelings, and perceptions concerning one's body, shaped by personal and social influences.
B. Suicide protective factors: Behavioral, cognitive, and physical indicators that warrant careful assessment and referral to qualified care. / Body image: Thoughts, feelings, and perceptions concerning one's body, shaped by personal and social influences.
C. Suicide protective factors: Personal and contextual supports that can reduce risk or strengthen reasons and pathways for safety. / Body image: Behaviors and environmental practices that support regular, restorative sleep.
D. Suicide protective factors: Thoughts, feelings, and perceptions concerning one's body, shaped by personal and social influences. / Body image: Personal and contextual supports that can reduce risk or strengthen reasons and pathways for safety.

0695. Which statement most accurately defines Peer contagion consideration?

A. The balance between digital engagement and health, relationships, sleep, and functioning as experienced by the individual.
B. Thoughts, feelings, and perceptions concerning one's body, shaped by personal and social influences.
C. Personal and contextual supports that can reduce risk or strengthen reasons and pathways for safety.
D. The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices.

0696. Which description belongs with the term Nonsuicidal self-injury?

A. The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices.
B. A framework studying how typical and atypical developmental processes interact across time and context.
C. Personal and contextual supports that can reduce risk or strengthen reasons and pathways for safety.
D. Intentional self-inflicted injury without stated intent to die, requiring compassionate assessment and safety planning.

0697. A case conference asks for a distinction between Nonsuicidal self-injury and Developmental psychopathology. Which answer is sound?

A. Nonsuicidal self-injury: The balance between digital engagement and health, relationships, sleep, and functioning as experienced by the individual. / Developmental psychopathology: A framework studying how typical and atypical developmental processes interact across time and context.
B. Nonsuicidal self-injury: A framework studying how typical and atypical developmental processes interact across time and context. / Developmental psychopathology: Intentional self-inflicted injury without stated intent to die, requiring compassionate assessment and safety planning.
C. Nonsuicidal self-injury: Intentional self-inflicted injury without stated intent to die, requiring compassionate assessment and safety planning. / Developmental psychopathology: Personal and contextual supports that can reduce risk or strengthen reasons and pathways for safety.
D. Nonsuicidal self-injury: Intentional self-inflicted injury without stated intent to die, requiring compassionate assessment and safety planning. / Developmental psychopathology: A framework studying how typical and atypical developmental processes interact across time and context.

0698. In the parent meeting, a team asks how a youth worker can support a child aged 14. One proposed action is asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either. Which idea does it represent?

A. Suicide protective factors
B. Nonsuicidal self-injury
C. Sleep hygiene
D. Developmental psychopathology

0699. Which choice aligns each practice with the correct idea, Nonsuicidal self-injury or Body image?

A. Nonsuicidal self-injury: Using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior. / Body image: Exploring body-related distress and social pressures without reinforcing appearance-based judgments.
B. Nonsuicidal self-injury: Exploring body-related distress and social pressures without reinforcing appearance-based judgments. / Body image: Asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either.
C. Nonsuicidal self-injury: Asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either. / Body image: Providing respectful space for exploration without forcing a fixed label or timeline.
D. Nonsuicidal self-injury: Asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either. / Body image: Exploring body-related distress and social pressures without reinforcing appearance-based judgments.

0700. A consultant prepares for a session in the supervision meeting with a client in early adolescence. The intended approach is exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions. Which concept is most relevant?

A. Eating-disorder warning signs
B. Suicide protective factors
C. Sleep hygiene
D. Adolescent identity development

0701. How should a practitioner distinguish the applications of Eating-disorder warning signs and Developmental psychopathology?

A. Eating-disorder warning signs: Examining pathways and turning points rather than treating a current symptom as fixed destiny. / Developmental psychopathology: Responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation.
B. Eating-disorder warning signs: Responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation. / Developmental psychopathology: Exploring body-related distress and social pressures without reinforcing appearance-based judgments.
C. Eating-disorder warning signs: Responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation. / Developmental psychopathology: Examining pathways and turning points rather than treating a current symptom as fixed destiny.
D. Eating-disorder warning signs: Providing respectful space for exploration without forcing a fixed label or timeline. / Developmental psychopathology: Examining pathways and turning points rather than treating a current symptom as fixed destiny.

0702. A student confuses Eating-disorder warning signs with Developmental psychopathology. Which explanation most accurately separates them?

A. Eating-disorder warning signs: Behavioral, cognitive, and physical indicators that warrant careful assessment and referral to qualified care. / Developmental psychopathology: Thoughts, feelings, and perceptions concerning one's body, shaped by personal and social influences.
B. Eating-disorder warning signs: A framework studying how typical and atypical developmental processes interact across time and context. / Developmental psychopathology: Behavioral, cognitive, and physical indicators that warrant careful assessment and referral to qualified care.
C. Eating-disorder warning signs: Behavioral, cognitive, and physical indicators that warrant careful assessment and referral to qualified care. / Developmental psychopathology: A framework studying how typical and atypical developmental processes interact across time and context.
D. Eating-disorder warning signs: An evolving process of exploring and integrating personal, social, and cultural understandings of self. / Developmental psychopathology: A framework studying how typical and atypical developmental processes interact across time and context.

0703. Which choice aligns each practice with the correct idea, Nonsuicidal self-injury or Peer contagion consideration?

A. Nonsuicidal self-injury: Using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior. / Peer contagion consideration: Asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either.
B. Nonsuicidal self-injury: Asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either. / Peer contagion consideration: Responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation.
C. Nonsuicidal self-injury: Asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either. / Peer contagion consideration: Using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior.
D. Nonsuicidal self-injury: Providing respectful space for exploration without forcing a fixed label or timeline. / Peer contagion consideration: Using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior.

0704. A consultant is preparing a follow-up plan for a client in early adolescence in the supervision meeting. The plan calls for exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions. Which concept names this approach?

A. Suicide protective factors
B. Sleep hygiene
C. Adolescent identity development
D. Gender-affirming support

0705. An interdisciplinary team reviews a child of elementary-school age's case at the after-school program. The school support specialist recommends exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions. Which course concept best fits?

A. Digital wellbeing
B. Eating-disorder warning signs
C. Body image
D. Sleep hygiene

0706. Which option correctly matches each concept to its practice focus: Sleep hygiene and Eating-disorder warning signs?

A. Sleep hygiene: Exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions. / Eating-disorder warning signs: Responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation.
B. Sleep hygiene: Responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation. / Eating-disorder warning signs: Exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions.
C. Sleep hygiene: Examining pathways and turning points rather than treating a current symptom as fixed destiny. / Eating-disorder warning signs: Responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation.
D. Sleep hygiene: Exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions. / Eating-disorder warning signs: Exploring how online activities affect this adolescent's sleep, connection, mood, and goals.

0707. Which course concept is defined as follows: Respectful support that recognizes a young person's expressed gender and attends to safety, dignity, and context.

A. Adolescent identity development
B. Eating-disorder warning signs
C. Sleep hygiene
D. Gender-affirming support

0708. Which pair of actions illustrates Suicide protective factors and Developmental psychopathology, respectively?

A. Suicide protective factors: Examining pathways and turning points rather than treating a current symptom as fixed destiny. / Developmental psychopathology: Identifying trusted relationships, coping resources, and accessible support that can be activated.
B. Suicide protective factors: Identifying trusted relationships, coping resources, and accessible support that can be activated. / Developmental psychopathology: Examining pathways and turning points rather than treating a current symptom as fixed destiny.
C. Suicide protective factors: Identifying trusted relationships, coping resources, and accessible support that can be activated. / Developmental psychopathology: Exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions.
D. Suicide protective factors: Providing respectful space for exploration without forcing a fixed label or timeline. / Developmental psychopathology: Examining pathways and turning points rather than treating a current symptom as fixed destiny.

0709. A team must select a support approach for a student aged 17 at the outpatient clinic. The school-based clinician recommends using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior. Which idea is most relevant?

A. Adolescent identity development
B. Body image
C. Peer contagion consideration
D. Developmental psychopathology

0710. Which statement shows a sound practice-level distinction between Adolescent identity development and Eating-disorder warning signs?

A. Adolescent identity development: Providing respectful space for exploration without forcing a fixed label or timeline. / Eating-disorder warning signs: Responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation.
B. Adolescent identity development: Responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation. / Eating-disorder warning signs: Providing respectful space for exploration without forcing a fixed label or timeline.
C. Adolescent identity development: Providing respectful space for exploration without forcing a fixed label or timeline. / Eating-disorder warning signs: Using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior.
D. Adolescent identity development: Examining pathways and turning points rather than treating a current symptom as fixed destiny. / Eating-disorder warning signs: Responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation.

0711. What is the central meaning of Nonsuicidal self-injury?

A. Thoughts, feelings, and perceptions concerning one's body, shaped by personal and social influences.
B. Intentional self-inflicted injury without stated intent to die, requiring compassionate assessment and safety planning.
C. A framework studying how typical and atypical developmental processes interact across time and context.
D. Personal and contextual supports that can reduce risk or strengthen reasons and pathways for safety.

0712. Which paired example correctly applies Suicide protective factors first and Body image second?

A. Suicide protective factors: Responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation. / Body image: Exploring body-related distress and social pressures without reinforcing appearance-based judgments.
B. Suicide protective factors: Exploring body-related distress and social pressures without reinforcing appearance-based judgments. / Body image: Identifying trusted relationships, coping resources, and accessible support that can be activated.
C. Suicide protective factors: Identifying trusted relationships, coping resources, and accessible support that can be activated. / Body image: Exploring body-related distress and social pressures without reinforcing appearance-based judgments.
D. Suicide protective factors: Identifying trusted relationships, coping resources, and accessible support that can be activated. / Body image: Exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions.

0713. A case conference asks for a distinction between Peer contagion consideration and Developmental psychopathology. Which answer is sound?

A. Peer contagion consideration: The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices. / Developmental psychopathology: A framework studying how typical and atypical developmental processes interact across time and context.
B. Peer contagion consideration: The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices. / Developmental psychopathology: Thoughts, feelings, and perceptions concerning one's body, shaped by personal and social influences.
C. Peer contagion consideration: A framework studying how typical and atypical developmental processes interact across time and context. / Developmental psychopathology: The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices.
D. Peer contagion consideration: Intentional self-inflicted injury without stated intent to die, requiring compassionate assessment and safety planning. / Developmental psychopathology: A framework studying how typical and atypical developmental processes interact across time and context.

0714. Which option preserves the correct meaning of both Suicide protective factors and Peer contagion consideration?

A. Suicide protective factors: Personal and contextual supports that can reduce risk or strengthen reasons and pathways for safety. / Peer contagion consideration: Behavioral, cognitive, and physical indicators that warrant careful assessment and referral to qualified care.
B. Suicide protective factors: The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices. / Peer contagion consideration: Personal and contextual supports that can reduce risk or strengthen reasons and pathways for safety.
C. Suicide protective factors: A framework studying how typical and atypical developmental processes interact across time and context. / Peer contagion consideration: The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices.
D. Suicide protective factors: Personal and contextual supports that can reduce risk or strengthen reasons and pathways for safety. / Peer contagion consideration: The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices.

0715. Which option is the clearest practical expression of Adolescent identity development?

A. Asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either.
B. Using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity.
C. Exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions.
D. Providing respectful space for exploration without forcing a fixed label or timeline.

0716. How should a practitioner distinguish the applications of Suicide protective factors and Peer contagion consideration?

A. Suicide protective factors: Identifying trusted relationships, coping resources, and accessible support that can be activated. / Peer contagion consideration: Responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation.
B. Suicide protective factors: Examining pathways and turning points rather than treating a current symptom as fixed destiny. / Peer contagion consideration: Using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior.
C. Suicide protective factors: Using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior. / Peer contagion consideration: Identifying trusted relationships, coping resources, and accessible support that can be activated.
D. Suicide protective factors: Identifying trusted relationships, coping resources, and accessible support that can be activated. / Peer contagion consideration: Using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior.

0717. A case conference asks for a distinction between Suicide protective factors and Eating-disorder warning signs. Which answer is sound?

A. Suicide protective factors: Personal and contextual supports that can reduce risk or strengthen reasons and pathways for safety. / Eating-disorder warning signs: An evolving process of exploring and integrating personal, social, and cultural understandings of self.
B. Suicide protective factors: The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices. / Eating-disorder warning signs: Behavioral, cognitive, and physical indicators that warrant careful assessment and referral to qualified care.
C. Suicide protective factors: Behavioral, cognitive, and physical indicators that warrant careful assessment and referral to qualified care. / Eating-disorder warning signs: Personal and contextual supports that can reduce risk or strengthen reasons and pathways for safety.
D. Suicide protective factors: Personal and contextual supports that can reduce risk or strengthen reasons and pathways for safety. / Eating-disorder warning signs: Behavioral, cognitive, and physical indicators that warrant careful assessment and referral to qualified care.

0718. A supervised trainee and a adolescent student are discussing support in the student wellness team. The selected practice is exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions. Which concept does this demonstrate?

A. Peer contagion consideration
B. Eating-disorder warning signs
C. Nonsuicidal self-injury
D. Sleep hygiene

0719. Which comparison would correct a trainee's misunderstanding of Adolescent identity development versus Eating-disorder warning signs?

A. Adolescent identity development: Behavioral, cognitive, and physical indicators that warrant careful assessment and referral to qualified care. / Eating-disorder warning signs: An evolving process of exploring and integrating personal, social, and cultural understandings of self.
B. Adolescent identity development: An evolving process of exploring and integrating personal, social, and cultural understandings of self. / Eating-disorder warning signs: The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices.
C. Adolescent identity development: A framework studying how typical and atypical developmental processes interact across time and context. / Eating-disorder warning signs: Behavioral, cognitive, and physical indicators that warrant careful assessment and referral to qualified care.
D. Adolescent identity development: An evolving process of exploring and integrating personal, social, and cultural understandings of self. / Eating-disorder warning signs: Behavioral, cognitive, and physical indicators that warrant careful assessment and referral to qualified care.

0720. A play therapist is asked to evaluate a proposed service for a middle-school student in the learning-support meeting. The defining feature is exploring body-related distress and social pressures without reinforcing appearance-based judgments. Which concept fits?

A. Developmental psychopathology
B. Eating-disorder warning signs
C. Body image
D. Sleep hygiene

0721. In the parent meeting, a group facilitator explains why a student aged 9 would benefit from using the young person’s stated name and pronouns and assessing supports and safety without pathologizing identity. Which course concept underpins the explanation?

A. Gender-affirming support
B. Suicide protective factors
C. Digital wellbeing
D. Peer contagion consideration

0722. A doctoral student reads the following description. Which concept does it define? A framework studying how typical and atypical developmental processes interact across time and context.

A. Eating-disorder warning signs
B. Gender-affirming support
C. Developmental psychopathology
D. Suicide protective factors

0723. A case conference asks for a distinction between Body image and Gender-affirming support. Which answer is sound?

A. Body image: The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices. / Gender-affirming support: Respectful support that recognizes a young person’s expressed gender and attends to safety, dignity, and context.
B. Body image: Respectful support that recognizes a young person’s expressed gender and attends to safety, dignity, and context. / Gender-affirming support: Thoughts, feelings, and perceptions concerning one’s body, shaped by personal and social influences.
C. Body image: Thoughts, feelings, and perceptions concerning one’s body, shaped by personal and social influences. / Gender-affirming support: Respectful support that recognizes a young person’s expressed gender and attends to safety, dignity, and context.
D. Body image: Thoughts, feelings, and perceptions concerning one’s body, shaped by personal and social influences. / Gender-affirming support: A framework studying how typical and atypical developmental processes interact across time and context.

0724. Which comparison correctly distinguishes Eating-disorder warning signs from Peer contagion consideration?

A. Eating-disorder warning signs: Intentional self-inflicted injury without stated intent to die, requiring compassionate assessment and safety planning. / Peer contagion consideration: The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices.
B. Eating-disorder warning signs: Behavioral, cognitive, and physical indicators that warrant careful assessment and referral to qualified care. / Peer contagion consideration: The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices.
C. Eating-disorder warning signs: The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices. / Peer contagion consideration: Behavioral, cognitive, and physical indicators that warrant careful assessment and referral to qualified care.
D. Eating-disorder warning signs: Behavioral, cognitive, and physical indicators that warrant careful assessment and referral to qualified care. / Peer contagion consideration: The balance between digital engagement and health, relationships, sleep, and functioning as experienced by the individual.

0725. In the supervision meeting, a teacher and counselor describes the most appropriate support for a child aged 8 as examining pathways and turning points rather than treating a current symptom as fixed destiny. Which framework is being applied?

A. Digital wellbeing
B. Body image
C. Adolescent identity development
D. Developmental psychopathology

0726. During work in the telehealth session, a youth worker identifies this need: exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions. Which idea should guide the response?

A. Body image
B. Sleep hygiene
C. Digital wellbeing
D. Peer contagion consideration

0727. At the youth group, a service navigator reviews whether a plan for a child aged 14 is appropriate. The relevant practice is responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation. Which concept is tested?

A. Gender-affirming support
B. Digital wellbeing
C. Developmental psychopathology
D. Eating-disorder warning signs

0728. A group facilitator is explaining a choice to a school-age child and caregiver in the caregiver consultation. The choice centers on examining pathways and turning points rather than treating a current symptom as fixed destiny. Which idea is illustrated?

A. Nonsuicidal self-injury
B. Developmental psychopathology
C. Gender-affirming support
D. Sleep hygiene

0729. A service navigator is asked what should shape a child aged 6’s support in the community service agency. The proposed focus is exploring how online activities affect this adolescent’s sleep, connection, mood, and goals. Which principle does it represent?

A. Body image
B. Suicide protective factors
C. Digital wellbeing
D. Developmental psychopathology

0730. Identify the most precise label for this idea: Behavioral, cognitive, and physical indicators that warrant careful assessment and referral to qualified care.

A. Sleep hygiene
B. Digital wellbeing
C. Body image
D. Eating-disorder warning signs

0731. Select the best explanation of Gender-affirming support.

A. The balance between digital engagement and health, relationships, sleep, and functioning as experienced by the individual.
B. Intentional self-inflicted injury without stated intent to die, requiring compassionate assessment and safety planning.
C. Personal and contextual supports that can reduce risk or strengthen reasons and pathways for safety.
D. Respectful support that recognizes a young person’s expressed gender and attends to safety, dignity, and context.

0732. Which applied comparison correctly identifies what belongs to Adolescent identity development versus Suicide protective factors?

A. Adolescent identity development: Examining pathways and turning points rather than treating a current symptom as fixed destiny. / Suicide protective factors: Identifying trusted relationships, coping resources, and accessible support that can be activated.
B. Adolescent identity development: Providing respectful space for exploration without forcing a fixed label or timeline. / Suicide protective factors: Identifying trusted relationships, coping resources, and accessible support that can be activated.
C. Adolescent identity development: Identifying trusted relationships, coping resources, and accessible support that can be activated. / Suicide protective factors: Providing respectful space for exploration without forcing a fixed label or timeline.
D. Adolescent identity development: Providing respectful space for exploration without forcing a fixed label or timeline. / Suicide protective factors: Exploring how online activities affect this adolescent's sleep, connection, mood, and goals.

0733. Choose the definition pair that correctly explains Body image first and Eating-disorder warning signs second.

A. Body image: Respectful support that recognizes a young person's expressed gender and attends to safety, dignity, and context. / Eating-disorder warning signs: Behavioral, cognitive, and physical indicators that warrant careful assessment and referral to qualified care.
B. Body image: Thoughts, feelings, and perceptions concerning one's body, shaped by personal and social influences. / Eating-disorder warning signs: A framework studying how typical and atypical developmental processes interact across time and context.
C. Body image: Behavioral, cognitive, and physical indicators that warrant careful assessment and referral to qualified care. / Eating-disorder warning signs: Thoughts, feelings, and perceptions concerning one's body, shaped by personal and social influences.
D. Body image: Thoughts, feelings, and perceptions concerning one's body, shaped by personal and social influences. / Eating-disorder warning signs: Behavioral, cognitive, and physical indicators that warrant careful assessment and referral to qualified care.

0734. Choose the practice comparison that best separates Adolescent identity development from Eating-disorder warning signs.

A. Adolescent identity development: Providing respectful space for exploration without forcing a fixed label or timeline. / Eating-disorder warning signs: Using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior.
B. Adolescent identity development: Examining pathways and turning points rather than treating a current symptom as fixed destiny. / Eating-disorder warning signs: Responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation.
C. Adolescent identity development: Providing respectful space for exploration without forcing a fixed label or timeline. / Eating-disorder warning signs: Responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation.
D. Adolescent identity development: Responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation. / Eating-disorder warning signs: Providing respectful space for exploration without forcing a fixed label or timeline.

0735. How should a practitioner distinguish the applications of Adolescent identity development and Nonsuicidal self-injury?

A. Adolescent identity development: Providing respectful space for exploration without forcing a fixed label or timeline. / Nonsuicidal self-injury: Using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior.
B. Adolescent identity development: Responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation. / Nonsuicidal self-injury: Asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either.
C. Adolescent identity development: Providing respectful space for exploration without forcing a fixed label or timeline. / Nonsuicidal self-injury: Asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either.
D. Adolescent identity development: Asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either. / Nonsuicidal self-injury: Providing respectful space for exploration without forcing a fixed label or timeline.

0736. In a professional consultation about a young adolescent client, the mental-health professional describes this response in the caregiver consultation: exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions. Which term is most apt?

A. Nonsuicidal self-injury
B. Sleep hygiene
C. Gender-affirming support
D. Developmental psychopathology

0737. An interdisciplinary team reviews a child aged 7's case at the classroom support meeting. The clinical supervisor recommends providing respectful space for exploration without forcing a fixed label or timeline. Which course concept best fits?

A. Body image
B. Adolescent identity development
C. Developmental psychopathology
D. Nonsuicidal self-injury

0738. A student confuses Suicide protective factors with Peer contagion consideration. Which explanation most accurately separates them?

A. Suicide protective factors: Personal and contextual supports that can reduce risk or strengthen reasons and pathways for safety. / Peer contagion consideration: Behavioral, cognitive, and physical indicators that warrant careful assessment and referral to qualified care.
B. Suicide protective factors: Personal and contextual supports that can reduce risk or strengthen reasons and pathways for safety. / Peer contagion consideration: The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices.
C. Suicide protective factors: A framework studying how typical and atypical developmental processes interact across time and context. / Peer contagion consideration: The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices.
D. Suicide protective factors: The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices. / Peer contagion consideration: Personal and contextual supports that can reduce risk or strengthen reasons and pathways for safety.

0739. While consulting in the student-support meeting, a member of a clinical team supports a child aged 14 by using this approach: providing respectful space for exploration without forcing a fixed label or timeline. Which concept is being applied?

A. Adolescent identity development
B. Digital wellbeing
C. Nonsuicidal self-injury
D. Eating-disorder warning signs

0740. A case conference reviews a program coordinator's work with a school-age child in the after-school program: using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior. Which principle is central?

A. Suicide protective factors
B. Gender-affirming support
C. Eating-disorder warning signs
D. Peer contagion consideration

0741. A supervisor asks for an applied contrast between Sleep hygiene and Nonsuicidal self-injury. Which option fits?

A. Sleep hygiene: Exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions. / Nonsuicidal self-injury: Using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior.
B. Sleep hygiene: Exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions. / Nonsuicidal self-injury: Asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either.
C. Sleep hygiene: Exploring how online activities affect this adolescent's sleep, connection, mood, and goals. / Nonsuicidal self-injury: Asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either.
D. Sleep hygiene: Asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either. / Nonsuicidal self-injury: Exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions.

0742. Which comparison would correct a trainee's misunderstanding of Suicide protective factors versus Digital wellbeing?

A. Suicide protective factors: Respectful support that recognizes a young person's expressed gender and attends to safety, dignity, and context. / Digital wellbeing: The balance between digital engagement and health, relationships, sleep, and functioning as experienced by the individual.
B. Suicide protective factors: The balance between digital engagement and health, relationships, sleep, and functioning as experienced by the individual. / Digital wellbeing: Personal and contextual supports that can reduce risk or strengthen reasons and pathways for safety.
C. Suicide protective factors: Personal and contextual supports that can reduce risk or strengthen reasons and pathways for safety. / Digital wellbeing: The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices.
D. Suicide protective factors: Personal and contextual supports that can reduce risk or strengthen reasons and pathways for safety. / Digital wellbeing: The balance between digital engagement and health, relationships, sleep, and functioning as experienced by the individual.

0743. Choose the term that matches this definition: A framework studying how typical and atypical developmental processes interact across time and context.

A. Sleep hygiene
B. Eating-disorder warning signs
C. Nonsuicidal self-injury
D. Developmental psychopathology

0744. In a supervision quiz, how should Adolescent identity development be distinguished from Suicide protective factors?

A. Adolescent identity development: An evolving process of exploring and integrating personal, social, and cultural understandings of self. / Suicide protective factors: The balance between digital engagement and health, relationships, sleep, and functioning as experienced by the individual.
B. Adolescent identity development: Personal and contextual supports that can reduce risk or strengthen reasons and pathways for safety. / Suicide protective factors: An evolving process of exploring and integrating personal, social, and cultural understandings of self.
C. Adolescent identity development: An evolving process of exploring and integrating personal, social, and cultural understandings of self. / Suicide protective factors: Personal and contextual supports that can reduce risk or strengthen reasons and pathways for safety.
D. Adolescent identity development: A framework studying how typical and atypical developmental processes interact across time and context. / Suicide protective factors: Personal and contextual supports that can reduce risk or strengthen reasons and pathways for safety.

0745. Which applied comparison correctly identifies what belongs to Nonsuicidal self-injury versus Developmental psychopathology?

A. Nonsuicidal self-injury: Exploring how online activities affect this adolescent's sleep, connection, mood, and goals. / Developmental psychopathology: Examining pathways and turning points rather than treating a current symptom as fixed destiny.
B. Nonsuicidal self-injury: Asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either. / Developmental psychopathology: Identifying trusted relationships, coping resources, and accessible support that can be activated.
C. Nonsuicidal self-injury: Asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either. / Developmental psychopathology: Examining pathways and turning points rather than treating a current symptom as fixed destiny.
D. Nonsuicidal self-injury: Examining pathways and turning points rather than treating a current symptom as fixed destiny. / Developmental psychopathology: Asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either.

0746. A trainee must explain Peer contagion consideration. Which answer is accurate?

A. Behavioral, cognitive, and physical indicators that warrant careful assessment and referral to qualified care.
B. Respectful support that recognizes a young person's expressed gender and attends to safety, dignity, and context.
C. An evolving process of exploring and integrating personal, social, and cultural understandings of self.
D. The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices.

0747. Which course concept is defined as follows: A framework studying how typical and atypical developmental processes interact across time and context.

A. Digital wellbeing
B. Developmental psychopathology
C. Adolescent identity development
D. Gender-affirming support

0748. A family therapist presents a support plan for a child aged 7 at the child guidance clinic. Its central feature is responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation. Which concept should be named?

A. Peer contagion consideration
B. Body image
C. Eating-disorder warning signs
D. Digital wellbeing

0749. How are Adolescent identity development and Developmental psychopathology most accurately differentiated in this curriculum?

A. Adolescent identity development: An evolving process of exploring and integrating personal, social, and cultural understandings of self. / Developmental psychopathology: Respectful support that recognizes a young person's expressed gender and attends to safety, dignity, and context.
B. Adolescent identity development: An evolving process of exploring and integrating personal, social, and cultural understandings of self. / Developmental psychopathology: A framework studying how typical and atypical developmental processes interact across time and context.
C. Adolescent identity development: Behaviors and environmental practices that support regular, restorative sleep. / Developmental psychopathology: A framework studying how typical and atypical developmental processes interact across time and context.
D. Adolescent identity development: A framework studying how typical and atypical developmental processes interact across time and context. / Developmental psychopathology: An evolving process of exploring and integrating personal, social, and cultural understandings of self.

0750. For a child aged 8 in the telehealth session, a behavior specialist makes this practice the immediate priority: exploring body-related distress and social pressures without reinforcing appearance-based judgments. Which concept fits best?

A. Sleep hygiene
B. Body image
C. Peer contagion consideration
D. Eating-disorder warning signs

0751. A student confuses Sleep hygiene with Digital wellbeing. Which explanation most accurately separates them?

A. Sleep hygiene: Behaviors and environmental practices that support regular, restorative sleep. / Digital wellbeing: Intentional self-inflicted injury without stated intent to die, requiring compassionate assessment and safety planning.
B. Sleep hygiene: Behaviors and environmental practices that support regular, restorative sleep. / Digital wellbeing: The balance between digital engagement and health, relationships, sleep, and functioning as experienced by the individual.
C. Sleep hygiene: The balance between digital engagement and health, relationships, sleep, and functioning as experienced by the individual. / Digital wellbeing: Behaviors and environmental practices that support regular, restorative sleep.
D. Sleep hygiene: Thoughts, feelings, and perceptions concerning one's body, shaped by personal and social influences. / Digital wellbeing: The balance between digital engagement and health, relationships, sleep, and functioning as experienced by the individual.

0752. What is the central meaning of Suicide protective factors?

A. An evolving process of exploring and integrating personal, social, and cultural understandings of self.
B. A framework studying how typical and atypical developmental processes interact across time and context.
C. Personal and contextual supports that can reduce risk or strengthen reasons and pathways for safety.
D. Behavioral, cognitive, and physical indicators that warrant careful assessment and referral to qualified care.

0753. Which statement accurately contrasts the course concepts Digital wellbeing and Developmental psychopathology?

A. Digital wellbeing: A framework studying how typical and atypical developmental processes interact across time and context. / Developmental psychopathology: The balance between digital engagement and health, relationships, sleep, and functioning as experienced by the individual.
B. Digital wellbeing: An evolving process of exploring and integrating personal, social, and cultural understandings of self. / Developmental psychopathology: A framework studying how typical and atypical developmental processes interact across time and context.
C. Digital wellbeing: The balance between digital engagement and health, relationships, sleep, and functioning as experienced by the individual. / Developmental psychopathology: Thoughts, feelings, and perceptions concerning one's body, shaped by personal and social influences.
D. Digital wellbeing: The balance between digital engagement and health, relationships, sleep, and functioning as experienced by the individual. / Developmental psychopathology: A framework studying how typical and atypical developmental processes interact across time and context.

0754. A young person aged 10's service team meets in the student wellness team. The school-based clinician recommends a change involving asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either. Which idea best explains it?

A. Eating-disorder warning signs
B. Developmental psychopathology
C. Digital wellbeing
D. Nonsuicidal self-injury

0755. A consultant is supporting a middle-school student in the youth group. The key practice is asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either. Which course concept is most relevant?

A. Digital wellbeing
B. Gender-affirming support
C. Eating-disorder warning signs
D. Nonsuicidal self-injury

0756. A case conference asks for a distinction between Adolescent identity development and Body image. Which answer is sound?

A. Adolescent identity development: An evolving process of exploring and integrating personal, social, and cultural understandings of self. / Body image: Thoughts, feelings, and perceptions concerning one's body, shaped by personal and social influences.
B. Adolescent identity development: Thoughts, feelings, and perceptions concerning one's body, shaped by personal and social influences. / Body image: An evolving process of exploring and integrating personal, social, and cultural understandings of self.
C. Adolescent identity development: The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices. / Body image: Thoughts, feelings, and perceptions concerning one's body, shaped by personal and social influences.
D. Adolescent identity development: An evolving process of exploring and integrating personal, social, and cultural understandings of self. / Body image: Personal and contextual supports that can reduce risk or strengthen reasons and pathways for safety.

0757. A student confuses Digital wellbeing with Eating-disorder warning signs. Which explanation most accurately separates them?

A. Digital wellbeing: Thoughts, feelings, and perceptions concerning one's body, shaped by personal and social influences. / Eating-disorder warning signs: Behavioral, cognitive, and physical indicators that warrant careful assessment and referral to qualified care.
B. Digital wellbeing: The balance between digital engagement and health, relationships, sleep, and functioning as experienced by the individual. / Eating-disorder warning signs: Behaviors and environmental practices that support regular, restorative sleep.
C. Digital wellbeing: Behavioral, cognitive, and physical indicators that warrant careful assessment and referral to qualified care. / Eating-disorder warning signs: The balance between digital engagement and health, relationships, sleep, and functioning as experienced by the individual.
D. Digital wellbeing: The balance between digital engagement and health, relationships, sleep, and functioning as experienced by the individual. / Eating-disorder warning signs: Behavioral, cognitive, and physical indicators that warrant careful assessment and referral to qualified care.

0758. Which option correctly matches each concept to its practice focus: Adolescent identity development and Body image?

A. Adolescent identity development: Using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior. / Body image: Exploring body-related distress and social pressures without reinforcing appearance-based judgments.
B. Adolescent identity development: Providing respectful space for exploration without forcing a fixed label or timeline. / Body image: Identifying trusted relationships, coping resources, and accessible support that can be activated.
C. Adolescent identity development: Exploring body-related distress and social pressures without reinforcing appearance-based judgments. / Body image: Providing respectful space for exploration without forcing a fixed label or timeline.
D. Adolescent identity development: Providing respectful space for exploration without forcing a fixed label or timeline. / Body image: Exploring body-related distress and social pressures without reinforcing appearance-based judgments.

0759. Which course concept is defined as follows: Thoughts, feelings, and perceptions concerning one's body, shaped by personal and social influences.

A. Nonsuicidal self-injury
B. Peer contagion consideration
C. Body image
D. Gender-affirming support

0760. In a supervision review, a school-based clinician describes work with a young person aged 16 in the community mental-health service: providing respectful space for exploration without forcing a fixed label or timeline. What concept is illustrated?

A. Nonsuicidal self-injury
B. Peer contagion consideration
C. Sleep hygiene
D. Adolescent identity development

0761. A program coordinator describes an intervention for a young adolescent client in the telehealth session, centered on asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either. Which named idea is most relevant?

A. Peer contagion consideration
B. Body image
C. Eating-disorder warning signs
D. Nonsuicidal self-injury

0762. Which applied comparison correctly identifies what belongs to Adolescent identity development versus Digital wellbeing?

A. Adolescent identity development: Exploring how online activities affect this adolescent's sleep, connection, mood, and goals. / Digital wellbeing: Providing respectful space for exploration without forcing a fixed label or timeline.
B. Adolescent identity development: Using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity. / Digital wellbeing: Exploring how online activities affect this adolescent's sleep, connection, mood, and goals.
C. Adolescent identity development: Providing respectful space for exploration without forcing a fixed label or timeline. / Digital wellbeing: Asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either.
D. Adolescent identity development: Providing respectful space for exploration without forcing a fixed label or timeline. / Digital wellbeing: Exploring how online activities affect this adolescent's sleep, connection, mood, and goals.

0763. A student confuses Nonsuicidal self-injury with Digital wellbeing. Which explanation most accurately separates them?

A. Nonsuicidal self-injury: The balance between digital engagement and health, relationships, sleep, and functioning as experienced by the individual. / Digital wellbeing: Intentional self-inflicted injury without stated intent to die, requiring compassionate assessment and safety planning.
B. Nonsuicidal self-injury: Intentional self-inflicted injury without stated intent to die, requiring compassionate assessment and safety planning. / Digital wellbeing: The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices.
C. Nonsuicidal self-injury: Intentional self-inflicted injury without stated intent to die, requiring compassionate assessment and safety planning. / Digital wellbeing: The balance between digital engagement and health, relationships, sleep, and functioning as experienced by the individual.
D. Nonsuicidal self-injury: A framework studying how typical and atypical developmental processes interact across time and context. / Digital wellbeing: The balance between digital engagement and health, relationships, sleep, and functioning as experienced by the individual.

0764. A older adolescent client and a mental-health professional are reviewing goals in the family session. The agreed action is examining pathways and turning points rather than treating a current symptom as fixed destiny. Which principle best accounts for it?

A. Developmental psychopathology
B. Adolescent identity development
C. Suicide protective factors
D. Peer contagion consideration

0765. A student confuses Eating-disorder warning signs with Gender-affirming support. Which explanation most accurately separates them?

A. Eating-disorder warning signs: Intentional self-inflicted injury without stated intent to die, requiring compassionate assessment and safety planning. / Gender-affirming support: Respectful support that recognizes a young person's expressed gender and attends to safety, dignity, and context.
B. Eating-disorder warning signs: Behavioral, cognitive, and physical indicators that warrant careful assessment and referral to qualified care. / Gender-affirming support: Respectful support that recognizes a young person's expressed gender and attends to safety, dignity, and context.
C. Eating-disorder warning signs: Behavioral, cognitive, and physical indicators that warrant careful assessment and referral to qualified care. / Gender-affirming support: A framework studying how typical and atypical developmental processes interact across time and context.
D. Eating-disorder warning signs: Respectful support that recognizes a young person's expressed gender and attends to safety, dignity, and context. / Gender-affirming support: Behavioral, cognitive, and physical indicators that warrant careful assessment and referral to qualified care.

0766. Choose the definition pair that correctly explains Nonsuicidal self-injury first and Gender-affirming support second.

A. Nonsuicidal self-injury: Intentional self-inflicted injury without stated intent to die, requiring compassionate assessment and safety planning. / Gender-affirming support: Behaviors and environmental practices that support regular, restorative sleep.
B. Nonsuicidal self-injury: Respectful support that recognizes a young person's expressed gender and attends to safety, dignity, and context. / Gender-affirming support: Intentional self-inflicted injury without stated intent to die, requiring compassionate assessment and safety planning.
C. Nonsuicidal self-injury: An evolving process of exploring and integrating personal, social, and cultural understandings of self. / Gender-affirming support: Respectful support that recognizes a young person's expressed gender and attends to safety, dignity, and context.
D. Nonsuicidal self-injury: Intentional self-inflicted injury without stated intent to die, requiring compassionate assessment and safety planning. / Gender-affirming support: Respectful support that recognizes a young person's expressed gender and attends to safety, dignity, and context.

0767. A clinical supervisor is asked to evaluate a proposed service for a student aged 9 in the supervision meeting. The defining feature is identifying trusted relationships, coping resources, and accessible support that can be activated. Which concept fits?

A. Suicide protective factors
B. Digital wellbeing
C. Developmental psychopathology
D. Peer contagion consideration

0768. In a supervision quiz, how should Digital wellbeing be distinguished from Body image?

A. Digital wellbeing: Thoughts, feelings, and perceptions concerning one's body, shaped by personal and social influences. / Body image: The balance between digital engagement and health, relationships, sleep, and functioning as experienced by the individual.
B. Digital wellbeing: The balance between digital engagement and health, relationships, sleep, and functioning as experienced by the individual. / Body image: An evolving process of exploring and integrating personal, social, and cultural understandings of self.
C. Digital wellbeing: Intentional self-inflicted injury without stated intent to die, requiring compassionate assessment and safety planning. / Body image: Thoughts, feelings, and perceptions concerning one's body, shaped by personal and social influences.
D. Digital wellbeing: The balance between digital engagement and health, relationships, sleep, and functioning as experienced by the individual. / Body image: Thoughts, feelings, and perceptions concerning one's body, shaped by personal and social influences.

0769. A service team discusses a young person in the child guidance clinic. Their proposed next step is examining pathways and turning points rather than treating a current symptom as fixed destiny. Which course concept supports it?

A. Nonsuicidal self-injury
B. Digital wellbeing
C. Developmental psychopathology
D. Adolescent identity development

0770. How are Suicide protective factors and Eating-disorder warning signs most accurately differentiated in this curriculum?

A. Suicide protective factors: Personal and contextual supports that can reduce risk or strengthen reasons and pathways for safety. / Eating-disorder warning signs: Behavioral, cognitive, and physical indicators that warrant careful assessment and referral to qualified care.
B. Suicide protective factors: Personal and contextual supports that can reduce risk or strengthen reasons and pathways for safety. / Eating-disorder warning signs: An evolving process of exploring and integrating personal, social, and cultural understandings of self.
C. Suicide protective factors: Behavioral, cognitive, and physical indicators that warrant careful assessment and referral to qualified care. / Eating-disorder warning signs: Personal and contextual supports that can reduce risk or strengthen reasons and pathways for safety.
D. Suicide protective factors: The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices. / Eating-disorder warning signs: Behavioral, cognitive, and physical indicators that warrant careful assessment and referral to qualified care.

0771. In the after-school program, the agreed focus for a therapist working with a child aged 8 is identifying trusted relationships, coping resources, and accessible support that can be activated. Which concept names this focus?

A. Body image
B. Gender-affirming support
C. Nonsuicidal self-injury
D. Suicide protective factors

0772. Which comparison would correct a trainee's misunderstanding of Peer contagion consideration versus Developmental psychopathology?

A. Peer contagion consideration: Intentional self-inflicted injury without stated intent to die, requiring compassionate assessment and safety planning. / Developmental psychopathology: A framework studying how typical and atypical developmental processes interact across time and context.
B. Peer contagion consideration: A framework studying how typical and atypical developmental processes interact across time and context. / Developmental psychopathology: The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices.
C. Peer contagion consideration: The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices. / Developmental psychopathology: A framework studying how typical and atypical developmental processes interact across time and context.
D. Peer contagion consideration: The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices. / Developmental psychopathology: Thoughts, feelings, and perceptions concerning one's body, shaped by personal and social influences.

0773. Choose the definition pair that correctly explains Suicide protective factors first and Digital wellbeing second.

A. Suicide protective factors: Personal and contextual supports that can reduce risk or strengthen reasons and pathways for safety. / Digital wellbeing: The balance between digital engagement and health, relationships, sleep, and functioning as experienced by the individual.
B. Suicide protective factors: Personal and contextual supports that can reduce risk or strengthen reasons and pathways for safety. / Digital wellbeing: The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices.
C. Suicide protective factors: The balance between digital engagement and health, relationships, sleep, and functioning as experienced by the individual. / Digital wellbeing: Personal and contextual supports that can reduce risk or strengthen reasons and pathways for safety.
D. Suicide protective factors: Respectful support that recognizes a young person's expressed gender and attends to safety, dignity, and context. / Digital wellbeing: The balance between digital engagement and health, relationships, sleep, and functioning as experienced by the individual.

0774. A doctoral student reads the following description. Which concept does it define? Intentional self-inflicted injury without stated intent to die, requiring compassionate assessment and safety planning.

A. Body image
B. Nonsuicidal self-injury
C. Developmental psychopathology
D. Peer contagion consideration

0775. Identify the most precise label for this idea: The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices.

A. Nonsuicidal self-injury
B. Sleep hygiene
C. Peer contagion consideration
D. Developmental psychopathology

0776. A support meeting for a student aged 9 includes a counselor in the student wellness team. The practice under consideration is using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior. Which concept guides it?

A. Suicide protective factors
B. Adolescent identity development
C. Body image
D. Peer contagion consideration

0777. Which applied comparison correctly identifies what belongs to Eating-disorder warning signs versus Peer contagion consideration?

A. Eating-disorder warning signs: Asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either. / Peer contagion consideration: Using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior.
B. Eating-disorder warning signs: Responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation. / Peer contagion consideration: Exploring how online activities affect this adolescent's sleep, connection, mood, and goals.
C. Eating-disorder warning signs: Responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation. / Peer contagion consideration: Using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior.
D. Eating-disorder warning signs: Using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior. / Peer contagion consideration: Responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation.

0778. Which comparison would correct a trainee's misunderstanding of Adolescent identity development versus Digital wellbeing?

A. Adolescent identity development: Respectful support that recognizes a young person's expressed gender and attends to safety, dignity, and context. / Digital wellbeing: The balance between digital engagement and health, relationships, sleep, and functioning as experienced by the individual.
B. Adolescent identity development: An evolving process of exploring and integrating personal, social, and cultural understandings of self. / Digital wellbeing: Intentional self-inflicted injury without stated intent to die, requiring compassionate assessment and safety planning.
C. Adolescent identity development: The balance between digital engagement and health, relationships, sleep, and functioning as experienced by the individual. / Digital wellbeing: An evolving process of exploring and integrating personal, social, and cultural understandings of self.
D. Adolescent identity development: An evolving process of exploring and integrating personal, social, and cultural understandings of self. / Digital wellbeing: The balance between digital engagement and health, relationships, sleep, and functioning as experienced by the individual.

0779. In a supervision quiz, how should Adolescent identity development be distinguished from Digital wellbeing?

A. Adolescent identity development: An evolving process of exploring and integrating personal, social, and cultural understandings of self. / Digital wellbeing: Intentional self-inflicted injury without stated intent to die, requiring compassionate assessment and safety planning.
B. Adolescent identity development: An evolving process of exploring and integrating personal, social, and cultural understandings of self. / Digital wellbeing: The balance between digital engagement and health, relationships, sleep, and functioning as experienced by the individual.
C. Adolescent identity development: The balance between digital engagement and health, relationships, sleep, and functioning as experienced by the individual. / Digital wellbeing: An evolving process of exploring and integrating personal, social, and cultural understandings of self.
D. Adolescent identity development: Respectful support that recognizes a young person's expressed gender and attends to safety, dignity, and context. / Digital wellbeing: The balance between digital engagement and health, relationships, sleep, and functioning as experienced by the individual.

0780. Which choice aligns each practice with the correct idea, Nonsuicidal self-injury or Eating-disorder warning signs?

A. Nonsuicidal self-injury: Asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either. / Eating-disorder warning signs: Responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation.
B. Nonsuicidal self-injury: Responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation. / Eating-disorder warning signs: Asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either.
C. Nonsuicidal self-injury: Using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity. / Eating-disorder warning signs: Responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation.
D. Nonsuicidal self-injury: Asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either. / Eating-disorder warning signs: Examining pathways and turning points rather than treating a current symptom as fixed destiny.

0781. A case conference asks for a distinction between Adolescent identity development and Digital wellbeing. Which answer is sound?

A. Adolescent identity development: An evolving process of exploring and integrating personal, social, and cultural understandings of self. / Digital wellbeing: Intentional self-inflicted injury without stated intent to die, requiring compassionate assessment and safety planning.
B. Adolescent identity development: An evolving process of exploring and integrating personal, social, and cultural understandings of self. / Digital wellbeing: The balance between digital engagement and health, relationships, sleep, and functioning as experienced by the individual.
C. Adolescent identity development: Respectful support that recognizes a young person's expressed gender and attends to safety, dignity, and context. / Digital wellbeing: The balance between digital engagement and health, relationships, sleep, and functioning as experienced by the individual.
D. Adolescent identity development: The balance between digital engagement and health, relationships, sleep, and functioning as experienced by the individual. / Digital wellbeing: An evolving process of exploring and integrating personal, social, and cultural understandings of self.

0782. Which statement shows a sound practice-level distinction between Adolescent identity development and Peer contagion consideration?

A. Adolescent identity development: Providing respectful space for exploration without forcing a fixed label or timeline. / Peer contagion consideration: Exploring how online activities affect this adolescent's sleep, connection, mood, and goals.
B. Adolescent identity development: Using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior. / Peer contagion consideration: Providing respectful space for exploration without forcing a fixed label or timeline.
C. Adolescent identity development: Responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation. / Peer contagion consideration: Using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior.
D. Adolescent identity development: Providing respectful space for exploration without forcing a fixed label or timeline. / Peer contagion consideration: Using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior.

0783. In a supervision review, a family therapist describes work with a student aged 15 in the school consultation: using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity. What concept is illustrated?

A. Developmental psychopathology
B. Adolescent identity development
C. Sleep hygiene
D. Gender-affirming support

0784. Which statement accurately contrasts the course concepts Adolescent identity development and Nonsuicidal self-injury?

A. Adolescent identity development: An evolving process of exploring and integrating personal, social, and cultural understandings of self. / Nonsuicidal self-injury: The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices.
B. Adolescent identity development: Behavioral, cognitive, and physical indicators that warrant careful assessment and referral to qualified care. / Nonsuicidal self-injury: Intentional self-inflicted injury without stated intent to die, requiring compassionate assessment and safety planning.
C. Adolescent identity development: An evolving process of exploring and integrating personal, social, and cultural understandings of self. / Nonsuicidal self-injury: Intentional self-inflicted injury without stated intent to die, requiring compassionate assessment and safety planning.
D. Adolescent identity development: Intentional self-inflicted injury without stated intent to die, requiring compassionate assessment and safety planning. / Nonsuicidal self-injury: An evolving process of exploring and integrating personal, social, and cultural understandings of self.

0785. A member of a clinical team is preparing a follow-up plan for a child aged 7 in the youth group. The plan calls for using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity. Which concept names this approach?

A. Gender-affirming support
B. Digital wellbeing
C. Peer contagion consideration
D. Adolescent identity development

0786. A supervisor asks how Developmental psychopathology would appear in practice. Which choice should be selected?

A. Using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior.
B. Examining pathways and turning points rather than treating a current symptom as fixed destiny.
C. Identifying trusted relationships, coping resources, and accessible support that can be activated.
D. Exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions.

0787. A therapist describes an intervention for a high-school student in the counseling practicum, centered on responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation. Which named idea is most relevant?

A. Body image
B. Suicide protective factors
C. Adolescent identity development
D. Eating-disorder warning signs

0788. During work in the child guidance clinic, a consulting counselor identifies this need: identifying trusted relationships, coping resources, and accessible support that can be activated. Which idea should guide the response?

A. Gender-affirming support
B. Adolescent identity development
C. Suicide protective factors
D. Nonsuicidal self-injury

0789. A supervised trainee and a young person aged 16 are discussing support in the caregiver consultation. The selected practice is responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation. Which concept does this demonstrate?

A. Peer contagion consideration
B. Adolescent identity development
C. Eating-disorder warning signs
D. Body image

0790. How should a practitioner distinguish the applications of Gender-affirming support and Peer contagion consideration?

A. Gender-affirming support: Responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation. / Peer contagion consideration: Using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior.
B. Gender-affirming support: Using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity. / Peer contagion consideration: Using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior.
C. Gender-affirming support: Using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior. / Peer contagion consideration: Using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity.
D. Gender-affirming support: Using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity. / Peer contagion consideration: Examining pathways and turning points rather than treating a current symptom as fixed destiny.

0791. Which professional action most closely applies Peer contagion consideration?

A. Responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation.
B. Asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either.
C. Examining pathways and turning points rather than treating a current symptom as fixed destiny.
D. Using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior.

0792. Choose the definition pair that correctly explains Gender-affirming support first and Developmental psychopathology second.

A. Gender-affirming support: A framework studying how typical and atypical developmental processes interact across time and context. / Developmental psychopathology: Respectful support that recognizes a young person's expressed gender and attends to safety, dignity, and context.
B. Gender-affirming support: Respectful support that recognizes a young person's expressed gender and attends to safety, dignity, and context. / Developmental psychopathology: A framework studying how typical and atypical developmental processes interact across time and context.
C. Gender-affirming support: Respectful support that recognizes a young person's expressed gender and attends to safety, dignity, and context. / Developmental psychopathology: An evolving process of exploring and integrating personal, social, and cultural understandings of self.
D. Gender-affirming support: Behavioral, cognitive, and physical indicators that warrant careful assessment and referral to qualified care. / Developmental psychopathology: A framework studying how typical and atypical developmental processes interact across time and context.

0793. A planning meeting about a child aged 14 includes a behavior specialist. The proposed practice in the student wellness team is identifying trusted relationships, coping resources, and accessible support that can be activated. Which idea underlies it?

A. Gender-affirming support
B. Suicide protective factors
C. Eating-disorder warning signs
D. Developmental psychopathology

0794. A doctoral student reads the following description. Which concept does it define? The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices.

A. Digital wellbeing
B. Eating-disorder warning signs
C. Suicide protective factors
D. Peer contagion consideration

0795. A play therapist reviews a plan for a young person aged 13 in the telehealth session. The plan emphasizes providing respectful space for exploration without forcing a fixed label or timeline. Which course idea does this reflect?

A. Nonsuicidal self-injury
B. Suicide protective factors
C. Adolescent identity development
D. Peer contagion consideration

0796. Which comparison would correct a trainee's misunderstanding of Sleep hygiene versus Gender-affirming support?

A. Sleep hygiene: Behaviors and environmental practices that support regular, restorative sleep. / Gender-affirming support: Respectful support that recognizes a young person's expressed gender and attends to safety, dignity, and context.
B. Sleep hygiene: Intentional self-inflicted injury without stated intent to die, requiring compassionate assessment and safety planning. / Gender-affirming support: Respectful support that recognizes a young person's expressed gender and attends to safety, dignity, and context.
C. Sleep hygiene: Behaviors and environmental practices that support regular, restorative sleep. / Gender-affirming support: Behavioral, cognitive, and physical indicators that warrant careful assessment and referral to qualified care.
D. Sleep hygiene: Respectful support that recognizes a young person's expressed gender and attends to safety, dignity, and context. / Gender-affirming support: Behaviors and environmental practices that support regular, restorative sleep.

0797. A student confuses Sleep hygiene with Suicide protective factors. Which explanation most accurately separates them?

A. Sleep hygiene: The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices. / Suicide protective factors: Personal and contextual supports that can reduce risk or strengthen reasons and pathways for safety.
B. Sleep hygiene: Behaviors and environmental practices that support regular, restorative sleep. / Suicide protective factors: A framework studying how typical and atypical developmental processes interact across time and context.
C. Sleep hygiene: Behaviors and environmental practices that support regular, restorative sleep. / Suicide protective factors: Personal and contextual supports that can reduce risk or strengthen reasons and pathways for safety.
D. Sleep hygiene: Personal and contextual supports that can reduce risk or strengthen reasons and pathways for safety. / Suicide protective factors: Behaviors and environmental practices that support regular, restorative sleep.

0798. Which applied comparison correctly identifies what belongs to Adolescent identity development versus Nonsuicidal self-injury?

A. Adolescent identity development: Providing respectful space for exploration without forcing a fixed label or timeline. / Nonsuicidal self-injury: Using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior.
B. Adolescent identity development: Providing respectful space for exploration without forcing a fixed label or timeline. / Nonsuicidal self-injury: Asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either.
C. Adolescent identity development: Responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation. / Nonsuicidal self-injury: Asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either.
D. Adolescent identity development: Asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either. / Nonsuicidal self-injury: Providing respectful space for exploration without forcing a fixed label or timeline.

0799. Which paired example correctly applies Adolescent identity development first and Peer contagion consideration second?

A. Adolescent identity development: Providing respectful space for exploration without forcing a fixed label or timeline. / Peer contagion consideration: Using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior.
B. Adolescent identity development: Providing respectful space for exploration without forcing a fixed label or timeline. / Peer contagion consideration: Exploring how online activities affect this adolescent's sleep, connection, mood, and goals.
C. Adolescent identity development: Responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation. / Peer contagion consideration: Using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior.
D. Adolescent identity development: Using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior. / Peer contagion consideration: Providing respectful space for exploration without forcing a fixed label or timeline.

0800. At the learning-support meeting, a therapist reviews whether a plan for a child aged 11 is appropriate. The relevant practice is asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either. Which concept is tested?

A. Adolescent identity development
B. Peer contagion consideration
C. Nonsuicidal self-injury
D. Body image

0801. Select the best explanation of Nonsuicidal self-injury.

A. Intentional self-inflicted injury without stated intent to die, requiring compassionate assessment and safety planning.
B. Behaviors and environmental practices that support regular, restorative sleep.
C. The balance between digital engagement and health, relationships, sleep, and functioning as experienced by the individual.
D. A framework studying how typical and atypical developmental processes interact across time and context.

0802. For a student aged 12 seen in the school consultation, the research trainee recommends a plan built around providing respectful space for exploration without forcing a fixed label or timeline. Which concept is reflected?

A. Peer contagion consideration
B. Adolescent identity development
C. Eating-disorder warning signs
D. Sleep hygiene

0803. Which comparison would correct a trainee's misunderstanding of Suicide protective factors versus Body image?

A. Suicide protective factors: Personal and contextual supports that can reduce risk or strengthen reasons and pathways for safety. / Body image: Thoughts, feelings, and perceptions concerning one's body, shaped by personal and social influences.
B. Suicide protective factors: Thoughts, feelings, and perceptions concerning one's body, shaped by personal and social influences. / Body image: Personal and contextual supports that can reduce risk or strengthen reasons and pathways for safety.
C. Suicide protective factors: Personal and contextual supports that can reduce risk or strengthen reasons and pathways for safety. / Body image: Behaviors and environmental practices that support regular, restorative sleep.
D. Suicide protective factors: Behavioral, cognitive, and physical indicators that warrant careful assessment and referral to qualified care. / Body image: Thoughts, feelings, and perceptions concerning one's body, shaped by personal and social influences.

0804. Which applied comparison correctly identifies what belongs to Nonsuicidal self-injury versus Eating-disorder warning signs?

A. Nonsuicidal self-injury: Asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either. / Eating-disorder warning signs: Examining pathways and turning points rather than treating a current symptom as fixed destiny.
B. Nonsuicidal self-injury: Asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either. / Eating-disorder warning signs: Responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation.
C. Nonsuicidal self-injury: Responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation. / Eating-disorder warning signs: Asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either.
D. Nonsuicidal self-injury: Using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity. / Eating-disorder warning signs: Responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation.

0805. Which statement accurately contrasts the course concepts Adolescent identity development and Digital wellbeing?

A. Adolescent identity development: The balance between digital engagement and health, relationships, sleep, and functioning as experienced by the individual. / Digital wellbeing: An evolving process of exploring and integrating personal, social, and cultural understandings of self.
B. Adolescent identity development: Respectful support that recognizes a young person's expressed gender and attends to safety, dignity, and context. / Digital wellbeing: The balance between digital engagement and health, relationships, sleep, and functioning as experienced by the individual.
C. Adolescent identity development: An evolving process of exploring and integrating personal, social, and cultural understandings of self. / Digital wellbeing: Intentional self-inflicted injury without stated intent to die, requiring compassionate assessment and safety planning.
D. Adolescent identity development: An evolving process of exploring and integrating personal, social, and cultural understandings of self. / Digital wellbeing: The balance between digital engagement and health, relationships, sleep, and functioning as experienced by the individual.

0806. A trainee must choose a practice that exemplifies Eating-disorder warning signs. Which action is the best fit?

A. Responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation.
B. Using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior.
C. Exploring how online activities affect this adolescent's sleep, connection, mood, and goals.
D. Exploring body-related distress and social pressures without reinforcing appearance-based judgments.

0807. A assessment clinician prepares for a session in the community youth program with a teenage client. The intended approach is exploring body-related distress and social pressures without reinforcing appearance-based judgments. Which concept is most relevant?

A. Sleep hygiene
B. Peer contagion consideration
C. Body image
D. Adolescent identity development

0808. Which professional action most closely applies Eating-disorder warning signs?

A. Responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation.
B. Using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior.
C. Exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions.
D. Providing respectful space for exploration without forcing a fixed label or timeline.

0809. Choose the definition pair that correctly explains Gender-affirming support first and Peer contagion consideration second.

A. Gender-affirming support: Respectful support that recognizes a young person's expressed gender and attends to safety, dignity, and context. / Peer contagion consideration: The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices.
B. Gender-affirming support: Behavioral, cognitive, and physical indicators that warrant careful assessment and referral to qualified care. / Peer contagion consideration: The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices.
C. Gender-affirming support: Respectful support that recognizes a young person's expressed gender and attends to safety, dignity, and context. / Peer contagion consideration: A framework studying how typical and atypical developmental processes interact across time and context.
D. Gender-affirming support: The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices. / Peer contagion consideration: Respectful support that recognizes a young person's expressed gender and attends to safety, dignity, and context.

0810. In the counseling practicum, a team asks how a school counselor can support a child of elementary-school age. One proposed action is providing respectful space for exploration without forcing a fixed label or timeline. Which idea does it represent?

A. Body image
B. Adolescent identity development
C. Developmental psychopathology
D. Gender-affirming support

0811. In a supervision quiz, how should Digital wellbeing be distinguished from Gender-affirming support?

A. Digital wellbeing: Respectful support that recognizes a young person's expressed gender and attends to safety, dignity, and context. / Gender-affirming support: The balance between digital engagement and health, relationships, sleep, and functioning as experienced by the individual.
B. Digital wellbeing: Behaviors and environmental practices that support regular, restorative sleep. / Gender-affirming support: Respectful support that recognizes a young person's expressed gender and attends to safety, dignity, and context.
C. Digital wellbeing: The balance between digital engagement and health, relationships, sleep, and functioning as experienced by the individual. / Gender-affirming support: Respectful support that recognizes a young person's expressed gender and attends to safety, dignity, and context.
D. Digital wellbeing: The balance between digital engagement and health, relationships, sleep, and functioning as experienced by the individual. / Gender-affirming support: A framework studying how typical and atypical developmental processes interact across time and context.

0812. At the school counseling office, a counselor meets with a child aged 8. The practice priority is: providing respectful space for exploration without forcing a fixed label or timeline. Which concept best captures that priority?

A. Digital wellbeing
B. Peer contagion consideration
C. Adolescent identity development
D. Body image

0813. Which pair of actions illustrates Suicide protective factors and Peer contagion consideration, respectively?

A. Suicide protective factors: Identifying trusted relationships, coping resources, and accessible support that can be activated. / Peer contagion consideration: Using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior.
B. Suicide protective factors: Using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior. / Peer contagion consideration: Identifying trusted relationships, coping resources, and accessible support that can be activated.
C. Suicide protective factors: Identifying trusted relationships, coping resources, and accessible support that can be activated. / Peer contagion consideration: Responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation.
D. Suicide protective factors: Examining pathways and turning points rather than treating a current symptom as fixed destiny. / Peer contagion consideration: Using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior.

0814. Which pair of actions illustrates Digital wellbeing and Body image, respectively?

A. Digital wellbeing: Exploring body-related distress and social pressures without reinforcing appearance-based judgments. / Body image: Exploring how online activities affect this adolescent's sleep, connection, mood, and goals.
B. Digital wellbeing: Exploring how online activities affect this adolescent's sleep, connection, mood, and goals. / Body image: Providing respectful space for exploration without forcing a fixed label or timeline.
C. Digital wellbeing: Exploring how online activities affect this adolescent's sleep, connection, mood, and goals. / Body image: Exploring body-related distress and social pressures without reinforcing appearance-based judgments.
D. Digital wellbeing: Asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either. / Body image: Exploring body-related distress and social pressures without reinforcing appearance-based judgments.

0815. For a teenage client seen in the clinical planning session, the community practitioner recommends a plan built around responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation. Which concept is reflected?

A. Body image
B. Eating-disorder warning signs
C. Developmental psychopathology
D. Adolescent identity development

0816. A supervised trainee is preparing a follow-up plan for a older adolescent client in the parent meeting. The plan calls for exploring how online activities affect this adolescent's sleep, connection, mood, and goals. Which concept names this approach?

A. Body image
B. Adolescent identity development
C. Digital wellbeing
D. Nonsuicidal self-injury

0817. A trainee must distinguish how Sleep hygiene and Body image guide practice. Which comparison is accurate?

A. Sleep hygiene: Exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions. / Body image: Exploring how online activities affect this adolescent's sleep, connection, mood, and goals.
B. Sleep hygiene: Using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity. / Body image: Exploring body-related distress and social pressures without reinforcing appearance-based judgments.
C. Sleep hygiene: Exploring body-related distress and social pressures without reinforcing appearance-based judgments. / Body image: Exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions.
D. Sleep hygiene: Exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions. / Body image: Exploring body-related distress and social pressures without reinforcing appearance-based judgments.

0818. Which paired example correctly applies Gender-affirming support first and Developmental psychopathology second?

A. Gender-affirming support: Examining pathways and turning points rather than treating a current symptom as fixed destiny. / Developmental psychopathology: Using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity.
B. Gender-affirming support: Using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity. / Developmental psychopathology: Providing respectful space for exploration without forcing a fixed label or timeline.
C. Gender-affirming support: Using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity. / Developmental psychopathology: Examining pathways and turning points rather than treating a current symptom as fixed destiny.
D. Gender-affirming support: Responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation. / Developmental psychopathology: Examining pathways and turning points rather than treating a current symptom as fixed destiny.

0819. A student confuses Adolescent identity development with Peer contagion consideration. Which explanation most accurately separates them?

A. Adolescent identity development: An evolving process of exploring and integrating personal, social, and cultural understandings of self. / Peer contagion consideration: The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices.
B. Adolescent identity development: Behavioral, cognitive, and physical indicators that warrant careful assessment and referral to qualified care. / Peer contagion consideration: The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices.
C. Adolescent identity development: The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices. / Peer contagion consideration: An evolving process of exploring and integrating personal, social, and cultural understandings of self.
D. Adolescent identity development: An evolving process of exploring and integrating personal, social, and cultural understandings of self. / Peer contagion consideration: The balance between digital engagement and health, relationships, sleep, and functioning as experienced by the individual.

0820. At the multidisciplinary case conference, a behavior specialist meets with a child aged 11. The practice priority is: exploring how online activities affect this adolescent's sleep, connection, mood, and goals. Which concept best captures that priority?

A. Nonsuicidal self-injury
B. Digital wellbeing
C. Eating-disorder warning signs
D. Adolescent identity development

0821. Which comparison correctly distinguishes Suicide protective factors from Gender-affirming support?

A. Suicide protective factors: Personal and contextual supports that can reduce risk or strengthen reasons and pathways for safety. / Gender-affirming support: Intentional self-inflicted injury without stated intent to die, requiring compassionate assessment and safety planning.
B. Suicide protective factors: The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices. / Gender-affirming support: Respectful support that recognizes a young person's expressed gender and attends to safety, dignity, and context.
C. Suicide protective factors: Personal and contextual supports that can reduce risk or strengthen reasons and pathways for safety. / Gender-affirming support: Respectful support that recognizes a young person's expressed gender and attends to safety, dignity, and context.
D. Suicide protective factors: Respectful support that recognizes a young person's expressed gender and attends to safety, dignity, and context. / Gender-affirming support: Personal and contextual supports that can reduce risk or strengthen reasons and pathways for safety.

0822. When reviewing a teenage client's plan in the classroom support meeting, the parent educator notes that the next step is examining pathways and turning points rather than treating a current symptom as fixed destiny. Which concept guides this step?

A. Peer contagion consideration
B. Developmental psychopathology
C. Adolescent identity development
D. Body image

0823. Which paired example correctly applies Adolescent identity development first and Gender-affirming support second?

A. Adolescent identity development: Exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions. / Gender-affirming support: Using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity.
B. Adolescent identity development: Using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity. / Gender-affirming support: Providing respectful space for exploration without forcing a fixed label or timeline.
C. Adolescent identity development: Providing respectful space for exploration without forcing a fixed label or timeline. / Gender-affirming support: Using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity.
D. Adolescent identity development: Providing respectful space for exploration without forcing a fixed label or timeline. / Gender-affirming support: Identifying trusted relationships, coping resources, and accessible support that can be activated.

0824. Which statement shows a sound practice-level distinction between Body image and Developmental psychopathology?

A. Body image: Examining pathways and turning points rather than treating a current symptom as fixed destiny. / Developmental psychopathology: Exploring body-related distress and social pressures without reinforcing appearance-based judgments.
B. Body image: Exploring body-related distress and social pressures without reinforcing appearance-based judgments. / Developmental psychopathology: Providing respectful space for exploration without forcing a fixed label or timeline.
C. Body image: Exploring body-related distress and social pressures without reinforcing appearance-based judgments. / Developmental psychopathology: Examining pathways and turning points rather than treating a current symptom as fixed destiny.
D. Body image: Exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions. / Developmental psychopathology: Examining pathways and turning points rather than treating a current symptom as fixed destiny.

0825. Which course concept is defined as follows: The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices.

A. Sleep hygiene
B. Body image
C. Peer contagion consideration
D. Developmental psychopathology

0826. Which choice aligns each practice with the correct idea, Sleep hygiene or Eating-disorder warning signs?

A. Sleep hygiene: Exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions. / Eating-disorder warning signs: Exploring how online activities affect this adolescent's sleep, connection, mood, and goals.
B. Sleep hygiene: Exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions. / Eating-disorder warning signs: Responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation.
C. Sleep hygiene: Examining pathways and turning points rather than treating a current symptom as fixed destiny. / Eating-disorder warning signs: Responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation.
D. Sleep hygiene: Responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation. / Eating-disorder warning signs: Exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions.

0827. Which comparison would correct a trainee’s misunderstanding of Adolescent identity development versus Gender-affirming support?

A. Adolescent identity development: An evolving process of exploring and integrating personal, social, and cultural understandings of self. / Gender-affirming support: Personal and contextual supports that can reduce risk or strengthen reasons and pathways for safety.
B. Adolescent identity development: Behaviors and environmental practices that support regular, restorative sleep. / Gender-affirming support: Respectful support that recognizes a young person’s expressed gender and attends to safety, dignity, and context.
C. Adolescent identity development: An evolving process of exploring and integrating personal, social, and cultural understandings of self. / Gender-affirming support: Respectful support that recognizes a young person’s expressed gender and attends to safety, dignity, and context.
D. Adolescent identity development: Respectful support that recognizes a young person’s expressed gender and attends to safety, dignity, and context. / Gender-affirming support: An evolving process of exploring and integrating personal, social, and cultural understandings of self.

0828. How are Adolescent identity development and Peer contagion consideration most accurately differentiated in this curriculum?

A. Adolescent identity development: Behavioral, cognitive, and physical indicators that warrant careful assessment and referral to qualified care. / Peer contagion consideration: The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices.
B. Adolescent identity development: The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices. / Peer contagion consideration: An evolving process of exploring and integrating personal, social, and cultural understandings of self.
C. Adolescent identity development: An evolving process of exploring and integrating personal, social, and cultural understandings of self. / Peer contagion consideration: The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices.
D. Adolescent identity development: An evolving process of exploring and integrating personal, social, and cultural understandings of self. / Peer contagion consideration: The balance between digital engagement and health, relationships, sleep, and functioning as experienced by the individual.

0829. Which pair of actions illustrates Digital wellbeing and Eating-disorder warning signs, respectively?

A. Digital wellbeing: Exploring body-related distress and social pressures without reinforcing appearance-based judgments. / Eating-disorder warning signs: Responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation.
B. Digital wellbeing: Exploring how online activities affect this adolescent’s sleep, connection, mood, and goals. / Eating-disorder warning signs: Exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions.
C. Digital wellbeing: Exploring how online activities affect this adolescent’s sleep, connection, mood, and goals. / Eating-disorder warning signs: Responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation.
D. Digital wellbeing: Responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation. / Eating-disorder warning signs: Exploring how online activities affect this adolescent’s sleep, connection, mood, and goals.

0830. While consulting in the caregiver consultation, a mental-health professional supports a young adolescent client by using this approach: exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions. Which concept is being applied?

A. Peer contagion consideration
B. Digital wellbeing
C. Developmental psychopathology
D. Sleep hygiene

0831. A school-age child’s service team meets in the family resource center. The parent educator recommends a change involving exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions. Which idea best explains it?

A. Developmental psychopathology
B. Nonsuicidal self-injury
C. Sleep hygiene
D. Digital wellbeing

0832. In a case note about a school-age child, a mental-health professional working in the counseling practicum records this priority: using the young person’s stated name and pronouns and assessing supports and safety without pathologizing identity. What principle is reflected?

A. Sleep hygiene
B. Nonsuicidal self-injury
C. Eating-disorder warning signs
D. Gender-affirming support

0833. In a supervision quiz, how should Sleep hygiene be distinguished from Suicide protective factors?

A. Sleep hygiene: The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices. / Suicide protective factors: Personal and contextual supports that can reduce risk or strengthen reasons and pathways for safety.
B. Sleep hygiene: Behaviors and environmental practices that support regular, restorative sleep. / Suicide protective factors: A framework studying how typical and atypical developmental processes interact across time and context.
C. Sleep hygiene: Personal and contextual supports that can reduce risk or strengthen reasons and pathways for safety. / Suicide protective factors: Behaviors and environmental practices that support regular, restorative sleep.
D. Sleep hygiene: Behaviors and environmental practices that support regular, restorative sleep. / Suicide protective factors: Personal and contextual supports that can reduce risk or strengthen reasons and pathways for safety.

0834. In the school-based service, a group facilitator describes the most appropriate support for a client in late adolescence as exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions. Which framework is being applied?

A. Body image
B. Gender-affirming support
C. Sleep hygiene
D. Peer contagion consideration

0835. A community practitioner is asked what should shape a middle-school student’s support in the community mental-health service. The proposed focus is using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior. Which principle does it represent?

A. Suicide protective factors
B. Gender-affirming support
C. Peer contagion consideration
D. Nonsuicidal self-injury

0836. A member of a clinical team and a student aged 12 are discussing support in the behavior-support review. The selected practice is examining pathways and turning points rather than treating a current symptom as fixed destiny. Which concept does this demonstrate?

A. Sleep hygiene
B. Eating-disorder warning signs
C. Developmental psychopathology
D. Gender-affirming support

0837. Which statement shows a sound practice-level distinction between Suicide protective factors and Developmental psychopathology?

A. Suicide protective factors: Examining pathways and turning points rather than treating a current symptom as fixed destiny. / Developmental psychopathology: Identifying trusted relationships, coping resources, and accessible support that can be activated.
B. Suicide protective factors: Providing respectful space for exploration without forcing a fixed label or timeline. / Developmental psychopathology: Examining pathways and turning points rather than treating a current symptom as fixed destiny.
C. Suicide protective factors: Identifying trusted relationships, coping resources, and accessible support that can be activated. / Developmental psychopathology: Exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions.
D. Suicide protective factors: Identifying trusted relationships, coping resources, and accessible support that can be activated. / Developmental psychopathology: Examining pathways and turning points rather than treating a current symptom as fixed destiny.

0838. Which named construct is captured by this account? Thoughts, feelings, and perceptions concerning one's body, shaped by personal and social influences.

A. Peer contagion consideration
B. Body image
C. Gender-affirming support
D. Suicide protective factors

0839. An interdisciplinary team reviews a preadolescent child's case at the family resource center. The play therapist recommends asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either. Which course concept best fits?

A. Nonsuicidal self-injury
B. Sleep hygiene
C. Adolescent identity development
D. Eating-disorder warning signs

0840. For a student aged 15 in the community mental-health service, a counselor makes this practice the immediate priority: responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation. Which concept fits best?

A. Suicide protective factors
B. Eating-disorder warning signs
C. Body image
D. Peer contagion consideration

0841. Which applied comparison correctly identifies what belongs to Sleep hygiene versus Gender-affirming support?

A. Sleep hygiene: Using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity. / Gender-affirming support: Exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions.
B. Sleep hygiene: Exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions. / Gender-affirming support: Using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity.
C. Sleep hygiene: Asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either. / Gender-affirming support: Using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity.
D. Sleep hygiene: Exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions. / Gender-affirming support: Responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation.

0842. In a supervision review, a parent educator describes work with a teenage client in the classroom support meeting: examining pathways and turning points rather than treating a current symptom as fixed destiny. What concept is illustrated?

A. Developmental psychopathology
B. Eating-disorder warning signs
C. Gender-affirming support
D. Adolescent identity development

0843. A teenage client is receiving support in the after-school program. The teacher and counselor is guided by this practice: asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either. Which principle best fits?

A. Adolescent identity development
B. Nonsuicidal self-injury
C. Gender-affirming support
D. Sleep hygiene

0844. How should a practitioner distinguish the applications of Nonsuicidal self-injury and Body image?

A. Nonsuicidal self-injury: Using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior. / Body image: Exploring body-related distress and social pressures without reinforcing appearance-based judgments.
B. Nonsuicidal self-injury: Asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either. / Body image: Exploring body-related distress and social pressures without reinforcing appearance-based judgments.
C. Nonsuicidal self-injury: Exploring body-related distress and social pressures without reinforcing appearance-based judgments. / Body image: Asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either.
D. Nonsuicidal self-injury: Asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either. / Body image: Providing respectful space for exploration without forcing a fixed label or timeline.

0845. A trainee must distinguish how Sleep hygiene and Gender-affirming support guide practice. Which comparison is accurate?

A. Sleep hygiene: Asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either. / Gender-affirming support: Using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity.
B. Sleep hygiene: Using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity. / Gender-affirming support: Exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions.
C. Sleep hygiene: Exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions. / Gender-affirming support: Responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation.
D. Sleep hygiene: Exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions. / Gender-affirming support: Using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity.

0846. A case conference asks for a distinction between Adolescent identity development and Eating-disorder warning signs. Which answer is sound?

A. Adolescent identity development: Behavioral, cognitive, and physical indicators that warrant careful assessment and referral to qualified care. / Eating-disorder warning signs: An evolving process of exploring and integrating personal, social, and cultural understandings of self.
B. Adolescent identity development: An evolving process of exploring and integrating personal, social, and cultural understandings of self. / Eating-disorder warning signs: Behavioral, cognitive, and physical indicators that warrant careful assessment and referral to qualified care.
C. Adolescent identity development: An evolving process of exploring and integrating personal, social, and cultural understandings of self. / Eating-disorder warning signs: The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices.
D. Adolescent identity development: A framework studying how typical and atypical developmental processes interact across time and context. / Eating-disorder warning signs: Behavioral, cognitive, and physical indicators that warrant careful assessment and referral to qualified care.

0847. A trainee must choose a practice that exemplifies Body image. Which action is the best fit?

A. Exploring body-related distress and social pressures without reinforcing appearance-based judgments.
B. Providing respectful space for exploration without forcing a fixed label or timeline.
C. Exploring how online activities affect this adolescent's sleep, connection, mood, and goals.
D. Using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity.

0848. How should a practitioner distinguish the applications of Sleep hygiene and Nonsuicidal self-injury?

A. Sleep hygiene: Exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions. / Nonsuicidal self-injury: Asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either.
B. Sleep hygiene: Exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions. / Nonsuicidal self-injury: Using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior.
C. Sleep hygiene: Asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either. / Nonsuicidal self-injury: Exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions.
D. Sleep hygiene: Exploring how online activities affect this adolescent's sleep, connection, mood, and goals. / Nonsuicidal self-injury: Asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either.

0849. A team must select a support approach for a young person aged 10 at the youth advocacy program. The parent educator recommends using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity. Which idea is most relevant?

A. Gender-affirming support
B. Adolescent identity development
C. Peer contagion consideration
D. Body image

0850. Choose the definition pair that correctly explains Suicide protective factors first and Body image second.

A. Suicide protective factors: Personal and contextual supports that can reduce risk or strengthen reasons and pathways for safety. / Body image: Thoughts, feelings, and perceptions concerning one's body, shaped by personal and social influences.
B. Suicide protective factors: Behavioral, cognitive, and physical indicators that warrant careful assessment and referral to qualified care. / Body image: Thoughts, feelings, and perceptions concerning one's body, shaped by personal and social influences.
C. Suicide protective factors: Thoughts, feelings, and perceptions concerning one's body, shaped by personal and social influences. / Body image: Personal and contextual supports that can reduce risk or strengthen reasons and pathways for safety.
D. Suicide protective factors: Personal and contextual supports that can reduce risk or strengthen reasons and pathways for safety. / Body image: Behaviors and environmental practices that support regular, restorative sleep.

0851. Which description belongs with the term Peer contagion consideration?

A. Intentional self-inflicted injury without stated intent to die, requiring compassionate assessment and safety planning.
B. An evolving process of exploring and integrating personal, social, and cultural understandings of self.
C. Behaviors and environmental practices that support regular, restorative sleep.
D. The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices.

0852. Which comparison would correct a trainee's misunderstanding of Adolescent identity development versus Suicide protective factors?

A. Adolescent identity development: A framework studying how typical and atypical developmental processes interact across time and context. / Suicide protective factors: Personal and contextual supports that can reduce risk or strengthen reasons and pathways for safety.
B. Adolescent identity development: An evolving process of exploring and integrating personal, social, and cultural understandings of self. / Suicide protective factors: The balance between digital engagement and health, relationships, sleep, and functioning as experienced by the individual.
C. Adolescent identity development: Personal and contextual supports that can reduce risk or strengthen reasons and pathways for safety. / Suicide protective factors: An evolving process of exploring and integrating personal, social, and cultural understandings of self.
D. Adolescent identity development: An evolving process of exploring and integrating personal, social, and cultural understandings of self. / Suicide protective factors: Personal and contextual supports that can reduce risk or strengthen reasons and pathways for safety.

0853. A student confuses Digital wellbeing with Body image. Which explanation most accurately separates them?

A. Digital wellbeing: Intentional self-inflicted injury without stated intent to die, requiring compassionate assessment and safety planning. / Body image: Thoughts, feelings, and perceptions concerning one's body, shaped by personal and social influences.
B. Digital wellbeing: The balance between digital engagement and health, relationships, sleep, and functioning as experienced by the individual. / Body image: An evolving process of exploring and integrating personal, social, and cultural understandings of self.
C. Digital wellbeing: The balance between digital engagement and health, relationships, sleep, and functioning as experienced by the individual. / Body image: Thoughts, feelings, and perceptions concerning one's body, shaped by personal and social influences.
D. Digital wellbeing: Thoughts, feelings, and perceptions concerning one's body, shaped by personal and social influences. / Body image: The balance between digital engagement and health, relationships, sleep, and functioning as experienced by the individual.

0854. Which statement accurately contrasts the course concepts Sleep hygiene and Body image?

A. Sleep hygiene: Respectful support that recognizes a young person's expressed gender and attends to safety, dignity, and context. / Body image: Thoughts, feelings, and perceptions concerning one's body, shaped by personal and social influences.
B. Sleep hygiene: Behaviors and environmental practices that support regular, restorative sleep. / Body image: The balance between digital engagement and health, relationships, sleep, and functioning as experienced by the individual.
C. Sleep hygiene: Thoughts, feelings, and perceptions concerning one's body, shaped by personal and social influences. / Body image: Behaviors and environmental practices that support regular, restorative sleep.
D. Sleep hygiene: Behaviors and environmental practices that support regular, restorative sleep. / Body image: Thoughts, feelings, and perceptions concerning one's body, shaped by personal and social influences.

0855. In the clinical planning session, a caregiver working with a counselor is considering this approach for a student aged 17: identifying trusted relationships, coping resources, and accessible support that can be activated. Which framework does it represent?

A. Eating-disorder warning signs
B. Nonsuicidal self-injury
C. Suicide protective factors
D. Body image

0856. Which choice aligns each practice with the correct idea, Adolescent identity development or Sleep hygiene?

A. Adolescent identity development: Providing respectful space for exploration without forcing a fixed label or timeline. / Sleep hygiene: Asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either.
B. Adolescent identity development: Exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions. / Sleep hygiene: Providing respectful space for exploration without forcing a fixed label or timeline.
C. Adolescent identity development: Providing respectful space for exploration without forcing a fixed label or timeline. / Sleep hygiene: Exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions.
D. Adolescent identity development: Exploring how online activities affect this adolescent's sleep, connection, mood, and goals. / Sleep hygiene: Exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions.

0857. A young adolescent client is receiving support in the student-support meeting. The youth worker is guided by this practice: using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior. Which principle best fits?

A. Peer contagion consideration
B. Adolescent identity development
C. Nonsuicidal self-injury
D. Sleep hygiene

0858. Which comparison correctly distinguishes Nonsuicidal self-injury from Suicide protective factors?

A. Nonsuicidal self-injury: Personal and contextual supports that can reduce risk or strengthen reasons and pathways for safety. / Suicide protective factors: Intentional self-inflicted injury without stated intent to die, requiring compassionate assessment and safety planning.
B. Nonsuicidal self-injury: An evolving process of exploring and integrating personal, social, and cultural understandings of self. / Suicide protective factors: Personal and contextual supports that can reduce risk or strengthen reasons and pathways for safety.
C. Nonsuicidal self-injury: Intentional self-inflicted injury without stated intent to die, requiring compassionate assessment and safety planning. / Suicide protective factors: Personal and contextual supports that can reduce risk or strengthen reasons and pathways for safety.
D. Nonsuicidal self-injury: Intentional self-inflicted injury without stated intent to die, requiring compassionate assessment and safety planning. / Suicide protective factors: Thoughts, feelings, and perceptions concerning one's body, shaped by personal and social influences.

0859. Which statement shows a sound practice-level distinction between Eating-disorder warning signs and Gender-affirming support?

A. Eating-disorder warning signs: Responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation. / Gender-affirming support: Examining pathways and turning points rather than treating a current symptom as fixed destiny.
B. Eating-disorder warning signs: Responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation. / Gender-affirming support: Using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity.
C. Eating-disorder warning signs: Asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either. / Gender-affirming support: Using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity.
D. Eating-disorder warning signs: Using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity. / Gender-affirming support: Responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation.

0860. At a case-planning meeting, the play therapist proposes identifying trusted relationships, coping resources, and accessible support that can be activated. for a teenage client seen in the caregiver consultation. Which concept does this illustrate?

A. Digital wellbeing
B. Adolescent identity development
C. Suicide protective factors
D. Sleep hygiene

0861. A young person aged 16 and a assessment clinician are reviewing goals in the school consultation. The agreed action is exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions. Which principle best accounts for it?

A. Developmental psychopathology
B. Sleep hygiene
C. Body image
D. Digital wellbeing

0862. A trainee must distinguish how Adolescent identity development and Body image guide practice. Which comparison is accurate?

A. Adolescent identity development: Providing respectful space for exploration without forcing a fixed label or timeline. / Body image: Identifying trusted relationships, coping resources, and accessible support that can be activated.
B. Adolescent identity development: Exploring body-related distress and social pressures without reinforcing appearance-based judgments. / Body image: Providing respectful space for exploration without forcing a fixed label or timeline.
C. Adolescent identity development: Providing respectful space for exploration without forcing a fixed label or timeline. / Body image: Exploring body-related distress and social pressures without reinforcing appearance-based judgments.
D. Adolescent identity development: Using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior. / Body image: Exploring body-related distress and social pressures without reinforcing appearance-based judgments.

0863. Which option correctly matches each concept to its practice focus: Digital wellbeing and Gender-affirming support?

A. Digital wellbeing: Exploring how online activities affect this adolescent's sleep, connection, mood, and goals. / Gender-affirming support: Using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity.
B. Digital wellbeing: Exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions. / Gender-affirming support: Using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity.
C. Digital wellbeing: Using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity. / Gender-affirming support: Exploring how online activities affect this adolescent's sleep, connection, mood, and goals.
D. Digital wellbeing: Exploring how online activities affect this adolescent's sleep, connection, mood, and goals. / Gender-affirming support: Examining pathways and turning points rather than treating a current symptom as fixed destiny.

0864. Which statement most accurately defines Suicide protective factors?

A. An evolving process of exploring and integrating personal, social, and cultural understandings of self.
B. Personal and contextual supports that can reduce risk or strengthen reasons and pathways for safety.
C. Intentional self-inflicted injury without stated intent to die, requiring compassionate assessment and safety planning.
D. Behavioral, cognitive, and physical indicators that warrant careful assessment and referral to qualified care.

0865. A consultant and a child aged 6 are discussing support in the school counseling office. The selected practice is identifying trusted relationships, coping resources, and accessible support that can be activated. Which concept does this demonstrate?

A. Digital wellbeing
B. Body image
C. Peer contagion consideration
D. Suicide protective factors

0866. Which statement accurately contrasts the course concepts Digital wellbeing and Eating-disorder warning signs?

A. Digital wellbeing: Thoughts, feelings, and perceptions concerning one's body, shaped by personal and social influences. / Eating-disorder warning signs: Behavioral, cognitive, and physical indicators that warrant careful assessment and referral to qualified care.
B. Digital wellbeing: The balance between digital engagement and health, relationships, sleep, and functioning as experienced by the individual. / Eating-disorder warning signs: Behaviors and environmental practices that support regular, restorative sleep.
C. Digital wellbeing: The balance between digital engagement and health, relationships, sleep, and functioning as experienced by the individual. / Eating-disorder warning signs: Behavioral, cognitive, and physical indicators that warrant careful assessment and referral to qualified care.
D. Digital wellbeing: Behavioral, cognitive, and physical indicators that warrant careful assessment and referral to qualified care. / Eating-disorder warning signs: The balance between digital engagement and health, relationships, sleep, and functioning as experienced by the individual.

0867. A planning meeting about a student aged 17 includes a play therapist. The proposed practice in the student-support meeting is using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity. Which idea underlies it?

A. Eating-disorder warning signs
B. Gender-affirming support
C. Adolescent identity development
D. Peer contagion consideration

0868. Which paired example correctly applies Peer contagion consideration first and Developmental psychopathology second?

A. Peer contagion consideration: Examining pathways and turning points rather than treating a current symptom as fixed destiny. / Developmental psychopathology: Using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior.
B. Peer contagion consideration: Using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior. / Developmental psychopathology: Exploring body-related distress and social pressures without reinforcing appearance-based judgments.
C. Peer contagion consideration: Using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior. / Developmental psychopathology: Examining pathways and turning points rather than treating a current symptom as fixed destiny.
D. Peer contagion consideration: Asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either. / Developmental psychopathology: Examining pathways and turning points rather than treating a current symptom as fixed destiny.

0869. A student confuses Body image with Developmental psychopathology. Which explanation most accurately separates them?

A. Body image: Thoughts, feelings, and perceptions concerning one's body, shaped by personal and social influences. / Developmental psychopathology: An evolving process of exploring and integrating personal, social, and cultural understandings of self.
B. Body image: A framework studying how typical and atypical developmental processes interact across time and context. / Developmental psychopathology: Thoughts, feelings, and perceptions concerning one's body, shaped by personal and social influences.
C. Body image: Thoughts, feelings, and perceptions concerning one's body, shaped by personal and social influences. / Developmental psychopathology: A framework studying how typical and atypical developmental processes interact across time and context.
D. Body image: Behaviors and environmental practices that support regular, restorative sleep. / Developmental psychopathology: A framework studying how typical and atypical developmental processes interact across time and context.

0870. A child of elementary-school age is receiving support in the clinical planning session. The consulting counselor is guided by this practice: exploring body-related distress and social pressures without reinforcing appearance-based judgments. Which principle best fits?

A. Suicide protective factors
B. Body image
C. Adolescent identity development
D. Developmental psychopathology

0871. Which option pairs the definitions of Suicide protective factors and Developmental psychopathology correctly, in that order?

A. Suicide protective factors: Personal and contextual supports that can reduce risk or strengthen reasons and pathways for safety. / Developmental psychopathology: Behaviors and environmental practices that support regular, restorative sleep.
B. Suicide protective factors: Personal and contextual supports that can reduce risk or strengthen reasons and pathways for safety. / Developmental psychopathology: A framework studying how typical and atypical developmental processes interact across time and context.
C. Suicide protective factors: A framework studying how typical and atypical developmental processes interact across time and context. / Developmental psychopathology: Personal and contextual supports that can reduce risk or strengthen reasons and pathways for safety.
D. Suicide protective factors: An evolving process of exploring and integrating personal, social, and cultural understandings of self. / Developmental psychopathology: A framework studying how typical and atypical developmental processes interact across time and context.

0872. A assessment clinician prepares for a session in the child guidance clinic with a young person aged 18. The intended approach is providing respectful space for exploration without forcing a fixed label or timeline. Which concept is most relevant?

A. Adolescent identity development
B. Suicide protective factors
C. Gender-affirming support
D. Peer contagion consideration

0873. When reviewing a student aged 15's plan in the school consultation, the family therapist notes that the next step is using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity. Which concept guides this step?

A. Gender-affirming support
B. Sleep hygiene
C. Adolescent identity development
D. Suicide protective factors

0874. A youth worker is asked to justify a plan for a child aged 8 in the caregiver consultation. It calls for exploring how online activities affect this adolescent's sleep, connection, mood, and goals. Which concept provides the rationale?

A. Nonsuicidal self-injury
B. Digital wellbeing
C. Adolescent identity development
D. Peer contagion consideration

0875. Choose the practice comparison that best separates Suicide protective factors from Digital wellbeing.

A. Suicide protective factors: Identifying trusted relationships, coping resources, and accessible support that can be activated. / Digital wellbeing: Using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior.
B. Suicide protective factors: Exploring how online activities affect this adolescent's sleep, connection, mood, and goals. / Digital wellbeing: Identifying trusted relationships, coping resources, and accessible support that can be activated.
C. Suicide protective factors: Using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity. / Digital wellbeing: Exploring how online activities affect this adolescent's sleep, connection, mood, and goals.
D. Suicide protective factors: Identifying trusted relationships, coping resources, and accessible support that can be activated. / Digital wellbeing: Exploring how online activities affect this adolescent's sleep, connection, mood, and goals.

0876. Choose the definition pair that correctly explains Eating-disorder warning signs first and Developmental psychopathology second.

A. Eating-disorder warning signs: A framework studying how typical and atypical developmental processes interact across time and context. / Developmental psychopathology: Behavioral, cognitive, and physical indicators that warrant careful assessment and referral to qualified care.
B. Eating-disorder warning signs: An evolving process of exploring and integrating personal, social, and cultural understandings of self. / Developmental psychopathology: A framework studying how typical and atypical developmental processes interact across time and context.
C. Eating-disorder warning signs: Behavioral, cognitive, and physical indicators that warrant careful assessment and referral to qualified care. / Developmental psychopathology: Thoughts, feelings, and perceptions concerning one's body, shaped by personal and social influences.
D. Eating-disorder warning signs: Behavioral, cognitive, and physical indicators that warrant careful assessment and referral to qualified care. / Developmental psychopathology: A framework studying how typical and atypical developmental processes interact across time and context.

0877. During service review in the multidisciplinary case conference, a research trainee describes responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation. for a young person aged 18. Which course idea is most applicable?

A. Digital wellbeing
B. Suicide protective factors
C. Body image
D. Eating-disorder warning signs

0878. Which applied comparison correctly identifies what belongs to Digital wellbeing versus Peer contagion consideration?

A. Digital wellbeing: Exploring how online activities affect this adolescent's sleep, connection, mood, and goals. / Peer contagion consideration: Using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior.
B. Digital wellbeing: Asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either. / Peer contagion consideration: Using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior.
C. Digital wellbeing: Exploring how online activities affect this adolescent's sleep, connection, mood, and goals. / Peer contagion consideration: Exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions.
D. Digital wellbeing: Using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior. / Peer contagion consideration: Exploring how online activities affect this adolescent's sleep, connection, mood, and goals.

0879. Choose the response that best puts Body image into practice.

A. Exploring body-related distress and social pressures without reinforcing appearance-based judgments.
B. Exploring how online activities affect this adolescent's sleep, connection, mood, and goals.
C. Responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation.
D. Exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions.

0880. A trainee must distinguish how Nonsuicidal self-injury and Developmental psychopathology guide practice. Which comparison is accurate?

A. Nonsuicidal self-injury: Examining pathways and turning points rather than treating a current symptom as fixed destiny. / Developmental psychopathology: Asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either.
B. Nonsuicidal self-injury: Exploring how online activities affect this adolescent's sleep, connection, mood, and goals. / Developmental psychopathology: Examining pathways and turning points rather than treating a current symptom as fixed destiny.
C. Nonsuicidal self-injury: Asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either. / Developmental psychopathology: Identifying trusted relationships, coping resources, and accessible support that can be activated.
D. Nonsuicidal self-injury: Asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either. / Developmental psychopathology: Examining pathways and turning points rather than treating a current symptom as fixed destiny.

0881. Which statement accurately contrasts the course concepts Sleep hygiene and Gender-affirming support?

A. Sleep hygiene: Behaviors and environmental practices that support regular, restorative sleep. / Gender-affirming support: Respectful support that recognizes a young person's expressed gender and attends to safety, dignity, and context.
B. Sleep hygiene: Behaviors and environmental practices that support regular, restorative sleep. / Gender-affirming support: Behavioral, cognitive, and physical indicators that warrant careful assessment and referral to qualified care.
C. Sleep hygiene: Respectful support that recognizes a young person's expressed gender and attends to safety, dignity, and context. / Gender-affirming support: Behaviors and environmental practices that support regular, restorative sleep.
D. Sleep hygiene: Intentional self-inflicted injury without stated intent to die, requiring compassionate assessment and safety planning. / Gender-affirming support: Respectful support that recognizes a young person's expressed gender and attends to safety, dignity, and context.

0882. How are Sleep hygiene and Developmental psychopathology most accurately differentiated in this curriculum?

A. Sleep hygiene: A framework studying how typical and atypical developmental processes interact across time and context. / Developmental psychopathology: Behaviors and environmental practices that support regular, restorative sleep.
B. Sleep hygiene: The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices. / Developmental psychopathology: A framework studying how typical and atypical developmental processes interact across time and context.
C. Sleep hygiene: Behaviors and environmental practices that support regular, restorative sleep. / Developmental psychopathology: The balance between digital engagement and health, relationships, sleep, and functioning as experienced by the individual.
D. Sleep hygiene: Behaviors and environmental practices that support regular, restorative sleep. / Developmental psychopathology: A framework studying how typical and atypical developmental processes interact across time and context.

0883. A mental-health professional and a student aged 9 are discussing support in the student-support meeting. The selected practice is exploring body-related distress and social pressures without reinforcing appearance-based judgments. Which concept does this demonstrate?

A. Sleep hygiene
B. Body image
C. Gender-affirming support
D. Peer contagion consideration

0884. In the school consultation, a school counselor explains why a middle-school student would benefit from examining pathways and turning points rather than treating a current symptom as fixed destiny. Which course concept underpins the explanation?

A. Nonsuicidal self-injury
B. Peer contagion consideration
C. Developmental psychopathology
D. Eating-disorder warning signs

0885. Select the best explanation of Adolescent identity development.

A. An evolving process of exploring and integrating personal, social, and cultural understandings of self.
B. The balance between digital engagement and health, relationships, sleep, and functioning as experienced by the individual.
C. Thoughts, feelings, and perceptions concerning one's body, shaped by personal and social influences.
D. A framework studying how typical and atypical developmental processes interact across time and context.

0886. Which paired example correctly applies Sleep hygiene first and Developmental psychopathology second?

A. Sleep hygiene: Exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions. / Developmental psychopathology: Examining pathways and turning points rather than treating a current symptom as fixed destiny.
B. Sleep hygiene: Exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions. / Developmental psychopathology: Exploring how online activities affect this adolescent's sleep, connection, mood, and goals.
C. Sleep hygiene: Examining pathways and turning points rather than treating a current symptom as fixed destiny. / Developmental psychopathology: Exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions.
D. Sleep hygiene: Using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior. / Developmental psychopathology: Examining pathways and turning points rather than treating a current symptom as fixed destiny.

0887. For a client in early adolescence seen in the classroom support meeting, the service navigator recommends a plan built around asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either. Which concept is reflected?

A. Body image
B. Peer contagion consideration
C. Adolescent identity development
D. Nonsuicidal self-injury

0888. A program coordinator describes an intervention for a adolescent student in the learning-support meeting, centered on using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity. Which named idea is most relevant?

A. Peer contagion consideration
B. Developmental psychopathology
C. Adolescent identity development
D. Gender-affirming support

0889. Which applied comparison correctly identifies what belongs to Suicide protective factors versus Digital wellbeing?

A. Suicide protective factors: Identifying trusted relationships, coping resources, and accessible support that can be activated. / Digital wellbeing: Exploring how online activities affect this adolescent's sleep, connection, mood, and goals.
B. Suicide protective factors: Using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity. / Digital wellbeing: Exploring how online activities affect this adolescent's sleep, connection, mood, and goals.
C. Suicide protective factors: Exploring how online activities affect this adolescent's sleep, connection, mood, and goals. / Digital wellbeing: Identifying trusted relationships, coping resources, and accessible support that can be activated.
D. Suicide protective factors: Identifying trusted relationships, coping resources, and accessible support that can be activated. / Digital wellbeing: Using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior.

0890. Choose the definition pair that correctly explains Sleep hygiene first and Digital wellbeing second.

A. Sleep hygiene: The balance between digital engagement and health, relationships, sleep, and functioning as experienced by the individual. / Digital wellbeing: Behaviors and environmental practices that support regular, restorative sleep.
B. Sleep hygiene: Thoughts, feelings, and perceptions concerning one's body, shaped by personal and social influences. / Digital wellbeing: The balance between digital engagement and health, relationships, sleep, and functioning as experienced by the individual.
C. Sleep hygiene: Behaviors and environmental practices that support regular, restorative sleep. / Digital wellbeing: Intentional self-inflicted injury without stated intent to die, requiring compassionate assessment and safety planning.
D. Sleep hygiene: Behaviors and environmental practices that support regular, restorative sleep. / Digital wellbeing: The balance between digital engagement and health, relationships, sleep, and functioning as experienced by the individual.

0891. A young person and a member of a clinical team are reviewing goals in the classroom support meeting. The agreed action is identifying trusted relationships, coping resources, and accessible support that can be activated. Which principle best accounts for it?

A. Sleep hygiene
B. Peer contagion consideration
C. Nonsuicidal self-injury
D. Suicide protective factors

0892. When reviewing a child aged 8's plan in the community youth program, the caregiver working with a counselor notes that the next step is responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation. Which concept guides this step?

A. Suicide protective factors
B. Eating-disorder warning signs
C. Sleep hygiene
D. Adolescent identity development

0893. A trainee must distinguish how Adolescent identity development and Suicide protective factors guide practice. Which comparison is accurate?

A. Adolescent identity development: Examining pathways and turning points rather than treating a current symptom as fixed destiny. / Suicide protective factors: Identifying trusted relationships, coping resources, and accessible support that can be activated.
B. Adolescent identity development: Identifying trusted relationships, coping resources, and accessible support that can be activated. / Suicide protective factors: Providing respectful space for exploration without forcing a fixed label or timeline.
C. Adolescent identity development: Providing respectful space for exploration without forcing a fixed label or timeline. / Suicide protective factors: Exploring how online activities affect this adolescent's sleep, connection, mood, and goals.
D. Adolescent identity development: Providing respectful space for exploration without forcing a fixed label or timeline. / Suicide protective factors: Identifying trusted relationships, coping resources, and accessible support that can be activated.

0894. Choose the definition pair that correctly explains Peer contagion consideration first and Developmental psychopathology second.

A. Peer contagion consideration: Intentional self-inflicted injury without stated intent to die, requiring compassionate assessment and safety planning. / Developmental psychopathology: A framework studying how typical and atypical developmental processes interact across time and context.
B. Peer contagion consideration: A framework studying how typical and atypical developmental processes interact across time and context. / Developmental psychopathology: The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices.
C. Peer contagion consideration: The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices. / Developmental psychopathology: A framework studying how typical and atypical developmental processes interact across time and context.
D. Peer contagion consideration: The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices. / Developmental psychopathology: Thoughts, feelings, and perceptions concerning one's body, shaped by personal and social influences.

0895. At the after-school program, a program coordinator reviews whether a plan for a school-age child is appropriate. The relevant practice is using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior. Which concept is tested?

A. Peer contagion consideration
B. Digital wellbeing
C. Adolescent identity development
D. Sleep hygiene

0896. Choose the response that best puts Digital wellbeing into practice.

A. Exploring how online activities affect this adolescent's sleep, connection, mood, and goals.
B. Asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either.
C. Using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity.
D. Providing respectful space for exploration without forcing a fixed label or timeline.

0897. For a child of elementary-school age seen in the student-support meeting, the program coordinator recommends a plan built around examining pathways and turning points rather than treating a current symptom as fixed destiny. Which concept is reflected?

A. Digital wellbeing
B. Suicide protective factors
C. Eating-disorder warning signs
D. Developmental psychopathology

0898. How are Nonsuicidal self-injury and Digital wellbeing most accurately differentiated in this curriculum?

A. Nonsuicidal self-injury: A framework studying how typical and atypical developmental processes interact across time and context. / Digital wellbeing: The balance between digital engagement and health, relationships, sleep, and functioning as experienced by the individual.
B. Nonsuicidal self-injury: The balance between digital engagement and health, relationships, sleep, and functioning as experienced by the individual. / Digital wellbeing: Intentional self-inflicted injury without stated intent to die, requiring compassionate assessment and safety planning.
C. Nonsuicidal self-injury: Intentional self-inflicted injury without stated intent to die, requiring compassionate assessment and safety planning. / Digital wellbeing: The balance between digital engagement and health, relationships, sleep, and functioning as experienced by the individual.
D. Nonsuicidal self-injury: Intentional self-inflicted injury without stated intent to die, requiring compassionate assessment and safety planning. / Digital wellbeing: The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices.

0899. A behavior specialist reviews a plan for a young person in the parent meeting. The plan emphasizes responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation. Which course idea does this reflect?

A. Sleep hygiene
B. Digital wellbeing
C. Eating-disorder warning signs
D. Peer contagion consideration

0900. Which course concept is defined as follows: Intentional self-inflicted injury without stated intent to die, requiring compassionate assessment and safety planning.

A. Body image
B. Adolescent identity development
C. Suicide protective factors
D. Nonsuicidal self-injury

0901. Identify the most precise label for this idea: Intentional self-inflicted injury without stated intent to die, requiring compassionate assessment and safety planning.

A. Nonsuicidal self-injury
B. Developmental psychopathology
C. Adolescent identity development
D. Peer contagion consideration

0902. In a supervision quiz, how should Gender-affirming support be distinguished from Developmental psychopathology?

A. Gender-affirming support: Respectful support that recognizes a young person's expressed gender and attends to safety, dignity, and context. / Developmental psychopathology: An evolving process of exploring and integrating personal, social, and cultural understandings of self.
B. Gender-affirming support: Respectful support that recognizes a young person's expressed gender and attends to safety, dignity, and context. / Developmental psychopathology: A framework studying how typical and atypical developmental processes interact across time and context.
C. Gender-affirming support: A framework studying how typical and atypical developmental processes interact across time and context. / Developmental psychopathology: Respectful support that recognizes a young person's expressed gender and attends to safety, dignity, and context.
D. Gender-affirming support: Behavioral, cognitive, and physical indicators that warrant careful assessment and referral to qualified care. / Developmental psychopathology: A framework studying how typical and atypical developmental processes interact across time and context.

0903. A trainee must choose a practice that exemplifies Adolescent identity development. Which action is the best fit?

A. Identifying trusted relationships, coping resources, and accessible support that can be activated.
B. Examining pathways and turning points rather than treating a current symptom as fixed destiny.
C. Using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior.
D. Providing respectful space for exploration without forcing a fixed label or timeline.

0904. In a supervision review, a parent educator describes work with a young person aged 18 in the learning-support meeting: exploring how online activities affect this adolescent's sleep, connection, mood, and goals. What concept is illustrated?

A. Sleep hygiene
B. Nonsuicidal self-injury
C. Suicide protective factors
D. Digital wellbeing

0905. A case discussion concerns a preadolescent child and a school-based clinician in the multidisciplinary case conference. The practitioner is considering identifying trusted relationships, coping resources, and accessible support that can be activated. Which principle is involved?

A. Body image
B. Digital wellbeing
C. Suicide protective factors
D. Eating-disorder warning signs

0906. Choose the practice comparison that best separates Suicide protective factors from Body image.

A. Suicide protective factors: Identifying trusted relationships, coping resources, and accessible support that can be activated. / Body image: Exploring body-related distress and social pressures without reinforcing appearance-based judgments.
B. Suicide protective factors: Identifying trusted relationships, coping resources, and accessible support that can be activated. / Body image: Exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions.
C. Suicide protective factors: Responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation. / Body image: Exploring body-related distress and social pressures without reinforcing appearance-based judgments.
D. Suicide protective factors: Exploring body-related distress and social pressures without reinforcing appearance-based judgments. / Body image: Identifying trusted relationships, coping resources, and accessible support that can be activated.

0907. Which applied comparison correctly identifies what belongs to Gender-affirming support versus Peer contagion consideration?

A. Gender-affirming support: Responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation. / Peer contagion consideration: Using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior.
B. Gender-affirming support: Using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity. / Peer contagion consideration: Using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior.
C. Gender-affirming support: Using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity. / Peer contagion consideration: Examining pathways and turning points rather than treating a current symptom as fixed destiny.
D. Gender-affirming support: Using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior. / Peer contagion consideration: Using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity.

0908. A consultant prepares for a session in the school consultation with a child aged 11. The intended approach is responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation. Which concept is most relevant?

A. Peer contagion consideration
B. Eating-disorder warning signs
C. Adolescent identity development
D. Gender-affirming support

0909. Which comparison correctly distinguishes Digital wellbeing from Body image?

A. Digital wellbeing: The balance between digital engagement and health, relationships, sleep, and functioning as experienced by the individual. / Body image: Thoughts, feelings, and perceptions concerning one's body, shaped by personal and social influences.
B. Digital wellbeing: The balance between digital engagement and health, relationships, sleep, and functioning as experienced by the individual. / Body image: An evolving process of exploring and integrating personal, social, and cultural understandings of self.
C. Digital wellbeing: Thoughts, feelings, and perceptions concerning one's body, shaped by personal and social influences. / Body image: The balance between digital engagement and health, relationships, sleep, and functioning as experienced by the individual.
D. Digital wellbeing: Intentional self-inflicted injury without stated intent to die, requiring compassionate assessment and safety planning. / Body image: Thoughts, feelings, and perceptions concerning one's body, shaped by personal and social influences.

0910. A case conference asks for a distinction between Gender-affirming support and Developmental psychopathology. Which answer is sound?

A. Gender-affirming support: Respectful support that recognizes a young person's expressed gender and attends to safety, dignity, and context. / Developmental psychopathology: A framework studying how typical and atypical developmental processes interact across time and context.
B. Gender-affirming support: Behavioral, cognitive, and physical indicators that warrant careful assessment and referral to qualified care. / Developmental psychopathology: A framework studying how typical and atypical developmental processes interact across time and context.
C. Gender-affirming support: Respectful support that recognizes a young person's expressed gender and attends to safety, dignity, and context. / Developmental psychopathology: An evolving process of exploring and integrating personal, social, and cultural understandings of self.
D. Gender-affirming support: A framework studying how typical and atypical developmental processes interact across time and context. / Developmental psychopathology: Respectful support that recognizes a young person's expressed gender and attends to safety, dignity, and context.

0911. A supervisor asks for an applied contrast between Nonsuicidal self-injury and Digital wellbeing. Which option fits?

A. Nonsuicidal self-injury: Exploring how online activities affect this adolescent's sleep, connection, mood, and goals. / Digital wellbeing: Asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either.
B. Nonsuicidal self-injury: Examining pathways and turning points rather than treating a current symptom as fixed destiny. / Digital wellbeing: Exploring how online activities affect this adolescent's sleep, connection, mood, and goals.
C. Nonsuicidal self-injury: Asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either. / Digital wellbeing: Using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior.
D. Nonsuicidal self-injury: Asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either. / Digital wellbeing: Exploring how online activities affect this adolescent's sleep, connection, mood, and goals.

0912. Which statement accurately contrasts the course concepts Sleep hygiene and Eating-disorder warning signs?

A. Sleep hygiene: A framework studying how typical and atypical developmental processes interact across time and context. / Eating-disorder warning signs: Behavioral, cognitive, and physical indicators that warrant careful assessment and referral to qualified care.
B. Sleep hygiene: Behavioral, cognitive, and physical indicators that warrant careful assessment and referral to qualified care. / Eating-disorder warning signs: Behaviors and environmental practices that support regular, restorative sleep.
C. Sleep hygiene: Behaviors and environmental practices that support regular, restorative sleep. / Eating-disorder warning signs: Behavioral, cognitive, and physical indicators that warrant careful assessment and referral to qualified care.
D. Sleep hygiene: Behaviors and environmental practices that support regular, restorative sleep. / Eating-disorder warning signs: The balance between digital engagement and health, relationships, sleep, and functioning as experienced by the individual.

0913. A consulting counselor is explaining a choice to a child of elementary-school age and caregiver in the clinical planning session. The choice centers on exploring body-related distress and social pressures without reinforcing appearance-based judgments. Which idea is illustrated?

A. Adolescent identity development
B. Peer contagion consideration
C. Body image
D. Sleep hygiene

0914. Which option correctly matches each concept to its practice focus: Adolescent identity development and Nonsuicidal self-injury?

A. Adolescent identity development: Responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation. / Nonsuicidal self-injury: Asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either.
B. Adolescent identity development: Providing respectful space for exploration without forcing a fixed label or timeline. / Nonsuicidal self-injury: Asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either.
C. Adolescent identity development: Providing respectful space for exploration without forcing a fixed label or timeline. / Nonsuicidal self-injury: Using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior.
D. Adolescent identity development: Asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either. / Nonsuicidal self-injury: Providing respectful space for exploration without forcing a fixed label or timeline.

0915. What is the central meaning of Adolescent identity development?

A. Behavioral, cognitive, and physical indicators that warrant careful assessment and referral to qualified care.
B. An evolving process of exploring and integrating personal, social, and cultural understandings of self.
C. A framework studying how typical and atypical developmental processes interact across time and context.
D. Personal and contextual supports that can reduce risk or strengthen reasons and pathways for safety.

0916. A supervisor asks for an applied contrast between Adolescent identity development and Gender-affirming support. Which option fits?

A. Adolescent identity development: Providing respectful space for exploration without forcing a fixed label or timeline. / Gender-affirming support: Identifying trusted relationships, coping resources, and accessible support that can be activated.
B. Adolescent identity development: Using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity. / Gender-affirming support: Providing respectful space for exploration without forcing a fixed label or timeline.
C. Adolescent identity development: Exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions. / Gender-affirming support: Using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity.
D. Adolescent identity development: Providing respectful space for exploration without forcing a fixed label or timeline. / Gender-affirming support: Using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity.

0917. In the student wellness team, the agreed focus for a research trainee working with a older adolescent client is exploring body-related distress and social pressures without reinforcing appearance-based judgments. Which concept names this focus?

A. Body image
B. Digital wellbeing
C. Suicide protective factors
D. Gender-affirming support

0918. A student confuses Sleep hygiene with Nonsuicidal self-injury. Which explanation most accurately separates them?

A. Sleep hygiene: The balance between digital engagement and health, relationships, sleep, and functioning as experienced by the individual. / Nonsuicidal self-injury: Intentional self-inflicted injury without stated intent to die, requiring compassionate assessment and safety planning.
B. Sleep hygiene: Behaviors and environmental practices that support regular, restorative sleep. / Nonsuicidal self-injury: The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices.
C. Sleep hygiene: Behaviors and environmental practices that support regular, restorative sleep. / Nonsuicidal self-injury: Intentional self-inflicted injury without stated intent to die, requiring compassionate assessment and safety planning.
D. Sleep hygiene: Intentional self-inflicted injury without stated intent to die, requiring compassionate assessment and safety planning. / Nonsuicidal self-injury: Behaviors and environmental practices that support regular, restorative sleep.

0919. Which pair of actions illustrates Nonsuicidal self-injury and Gender-affirming support, respectively?

A. Nonsuicidal self-injury: Asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either. / Gender-affirming support: Using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity.
B. Nonsuicidal self-injury: Asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either. / Gender-affirming support: Exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions.
C. Nonsuicidal self-injury: Using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity. / Gender-affirming support: Asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either.
D. Nonsuicidal self-injury: Providing respectful space for exploration without forcing a fixed label or timeline. / Gender-affirming support: Using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity.

0920. Which comparison correctly distinguishes Suicide protective factors from Developmental psychopathology?

A. Suicide protective factors: A framework studying how typical and atypical developmental processes interact across time and context. / Developmental psychopathology: Personal and contextual supports that can reduce risk or strengthen reasons and pathways for safety.
B. Suicide protective factors: Personal and contextual supports that can reduce risk or strengthen reasons and pathways for safety. / Developmental psychopathology: A framework studying how typical and atypical developmental processes interact across time and context.
C. Suicide protective factors: An evolving process of exploring and integrating personal, social, and cultural understandings of self. / Developmental psychopathology: A framework studying how typical and atypical developmental processes interact across time and context.
D. Suicide protective factors: Personal and contextual supports that can reduce risk or strengthen reasons and pathways for safety. / Developmental psychopathology: Behaviors and environmental practices that support regular, restorative sleep.

0921. Which choice aligns each practice with the correct idea, Digital wellbeing or Gender-affirming support?

A. Digital wellbeing: Exploring how online activities affect this adolescent's sleep, connection, mood, and goals. / Gender-affirming support: Using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity.
B. Digital wellbeing: Exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions. / Gender-affirming support: Using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity.
C. Digital wellbeing: Exploring how online activities affect this adolescent's sleep, connection, mood, and goals. / Gender-affirming support: Examining pathways and turning points rather than treating a current symptom as fixed destiny.
D. Digital wellbeing: Using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity. / Gender-affirming support: Exploring how online activities affect this adolescent's sleep, connection, mood, and goals.

0922. A case conference asks for a distinction between Sleep hygiene and Developmental psychopathology. Which answer is sound?

A. Sleep hygiene: A framework studying how typical and atypical developmental processes interact across time and context. / Developmental psychopathology: Behaviors and environmental practices that support regular, restorative sleep.
B. Sleep hygiene: The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices. / Developmental psychopathology: A framework studying how typical and atypical developmental processes interact across time and context.
C. Sleep hygiene: Behaviors and environmental practices that support regular, restorative sleep. / Developmental psychopathology: The balance between digital engagement and health, relationships, sleep, and functioning as experienced by the individual.
D. Sleep hygiene: Behaviors and environmental practices that support regular, restorative sleep. / Developmental psychopathology: A framework studying how typical and atypical developmental processes interact across time and context.

0923. A trainee must distinguish how Adolescent identity development and Gender-affirming support guide practice. Which comparison is accurate?

A. Adolescent identity development: Providing respectful space for exploration without forcing a fixed label or timeline. / Gender-affirming support: Identifying trusted relationships, coping resources, and accessible support that can be activated.
B. Adolescent identity development: Exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions. / Gender-affirming support: Using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity.
C. Adolescent identity development: Providing respectful space for exploration without forcing a fixed label or timeline. / Gender-affirming support: Using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity.
D. Adolescent identity development: Using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity. / Gender-affirming support: Providing respectful space for exploration without forcing a fixed label or timeline.

0924. Which course concept is defined as follows: An evolving process of exploring and integrating personal, social, and cultural understandings of self.

A. Peer contagion consideration
B. Adolescent identity development
C. Sleep hygiene
D. Nonsuicidal self-injury

0925. Which option correctly matches each concept to its practice focus: Sleep hygiene and Gender-affirming support?

A. Sleep hygiene: Using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity. / Gender-affirming support: Exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions.
B. Sleep hygiene: Exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions. / Gender-affirming support: Using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity.
C. Sleep hygiene: Exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions. / Gender-affirming support: Responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation.
D. Sleep hygiene: Asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either. / Gender-affirming support: Using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity.

0926. Which named construct is captured by this account? Respectful support that recognizes a young person's expressed gender and attends to safety, dignity, and context.

A. Gender-affirming support
B. Nonsuicidal self-injury
C. Peer contagion consideration
D. Digital wellbeing

0927. Which statement accurately contrasts the course concepts Adolescent identity development and Body image?

A. Adolescent identity development: An evolving process of exploring and integrating personal, social, and cultural understandings of self. / Body image: Thoughts, feelings, and perceptions concerning one's body, shaped by personal and social influences.
B. Adolescent identity development: Thoughts, feelings, and perceptions concerning one's body, shaped by personal and social influences. / Body image: An evolving process of exploring and integrating personal, social, and cultural understandings of self.
C. Adolescent identity development: The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices. / Body image: Thoughts, feelings, and perceptions concerning one's body, shaped by personal and social influences.
D. Adolescent identity development: An evolving process of exploring and integrating personal, social, and cultural understandings of self. / Body image: Personal and contextual supports that can reduce risk or strengthen reasons and pathways for safety.

0928. A trainee must explain Nonsuicidal self-injury. Which answer is accurate?

A. Behaviors and environmental practices that support regular, restorative sleep.
B. Intentional self-inflicted injury without stated intent to die, requiring compassionate assessment and safety planning.
C. Respectful support that recognizes a young person's expressed gender and attends to safety, dignity, and context.
D. Personal and contextual supports that can reduce risk or strengthen reasons and pathways for safety.

0929. A case coordinator presents a support plan for a student aged 15 at the youth advocacy program. Its central feature is asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either. Which concept should be named?

A. Body image
B. Sleep hygiene
C. Adolescent identity development
D. Nonsuicidal self-injury

0930. A supervisor asks how Adolescent identity development would appear in practice. Which choice should be selected?

A. Using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior.
B. Providing respectful space for exploration without forcing a fixed label or timeline.
C. Identifying trusted relationships, coping resources, and accessible support that can be activated.
D. Examining pathways and turning points rather than treating a current symptom as fixed destiny.

0931. Which option preserves the correct meaning of both Body image and Developmental psychopathology?

A. Body image: Thoughts, feelings, and perceptions concerning one's body, shaped by personal and social influences. / Developmental psychopathology: An evolving process of exploring and integrating personal, social, and cultural understandings of self.
B. Body image: A framework studying how typical and atypical developmental processes interact across time and context. / Developmental psychopathology: Thoughts, feelings, and perceptions concerning one's body, shaped by personal and social influences.
C. Body image: Behaviors and environmental practices that support regular, restorative sleep. / Developmental psychopathology: A framework studying how typical and atypical developmental processes interact across time and context.
D. Body image: Thoughts, feelings, and perceptions concerning one's body, shaped by personal and social influences. / Developmental psychopathology: A framework studying how typical and atypical developmental processes interact across time and context.

0932. How are Nonsuicidal self-injury and Body image most accurately differentiated in this curriculum?

A. Nonsuicidal self-injury: Intentional self-inflicted injury without stated intent to die, requiring compassionate assessment and safety planning. / Body image: Thoughts, feelings, and perceptions concerning one's body, shaped by personal and social influences.
B. Nonsuicidal self-injury: Intentional self-inflicted injury without stated intent to die, requiring compassionate assessment and safety planning. / Body image: An evolving process of exploring and integrating personal, social, and cultural understandings of self.
C. Nonsuicidal self-injury: Thoughts, feelings, and perceptions concerning one's body, shaped by personal and social influences. / Body image: Intentional self-inflicted injury without stated intent to die, requiring compassionate assessment and safety planning.
D. Nonsuicidal self-injury: The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices. / Body image: Thoughts, feelings, and perceptions concerning one's body, shaped by personal and social influences.

0933. How should a practitioner distinguish the applications of Suicide protective factors and Developmental psychopathology?

A. Suicide protective factors: Examining pathways and turning points rather than treating a current symptom as fixed destiny. / Developmental psychopathology: Identifying trusted relationships, coping resources, and accessible support that can be activated.
B. Suicide protective factors: Providing respectful space for exploration without forcing a fixed label or timeline. / Developmental psychopathology: Examining pathways and turning points rather than treating a current symptom as fixed destiny.
C. Suicide protective factors: Identifying trusted relationships, coping resources, and accessible support that can be activated. / Developmental psychopathology: Examining pathways and turning points rather than treating a current symptom as fixed destiny.
D. Suicide protective factors: Identifying trusted relationships, coping resources, and accessible support that can be activated. / Developmental psychopathology: Exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions.

0934. A trainee must explain Suicide protective factors. Which answer is accurate?

A. Personal and contextual supports that can reduce risk or strengthen reasons and pathways for safety.
B. The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices.
C. Behavioral, cognitive, and physical indicators that warrant careful assessment and referral to qualified care.
D. A framework studying how typical and atypical developmental processes interact across time and context.

0935. Which option correctly matches each concept to its practice focus: Nonsuicidal self-injury and Peer contagion consideration?

A. Nonsuicidal self-injury: Asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either. / Peer contagion consideration: Responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation.
B. Nonsuicidal self-injury: Using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior. / Peer contagion consideration: Asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either.
C. Nonsuicidal self-injury: Asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either. / Peer contagion consideration: Using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior.
D. Nonsuicidal self-injury: Providing respectful space for exploration without forcing a fixed label or timeline. / Peer contagion consideration: Using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior.

0936. Which comparison would correct a trainee's misunderstanding of Sleep hygiene versus Eating-disorder warning signs?

A. Sleep hygiene: Behaviors and environmental practices that support regular, restorative sleep. / Eating-disorder warning signs: The balance between digital engagement and health, relationships, sleep, and functioning as experienced by the individual.
B. Sleep hygiene: Behavioral, cognitive, and physical indicators that warrant careful assessment and referral to qualified care. / Eating-disorder warning signs: Behaviors and environmental practices that support regular, restorative sleep.
C. Sleep hygiene: Behaviors and environmental practices that support regular, restorative sleep. / Eating-disorder warning signs: Behavioral, cognitive, and physical indicators that warrant careful assessment and referral to qualified care.
D. Sleep hygiene: A framework studying how typical and atypical developmental processes interact across time and context. / Eating-disorder warning signs: Behavioral, cognitive, and physical indicators that warrant careful assessment and referral to qualified care.

0937. Which option correctly matches each concept to its practice focus: Digital wellbeing and Peer contagion consideration?

A. Digital wellbeing: Asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either. / Peer contagion consideration: Using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior.
B. Digital wellbeing: Using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior. / Peer contagion consideration: Exploring how online activities affect this adolescent's sleep, connection, mood, and goals.
C. Digital wellbeing: Exploring how online activities affect this adolescent's sleep, connection, mood, and goals. / Peer contagion consideration: Exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions.
D. Digital wellbeing: Exploring how online activities affect this adolescent's sleep, connection, mood, and goals. / Peer contagion consideration: Using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior.

0938. A mental-health professional and a high-school student are discussing support in the family resource center. The selected practice is providing respectful space for exploration without forcing a fixed label or timeline. Which concept does this demonstrate?

A. Nonsuicidal self-injury
B. Adolescent identity development
C. Digital wellbeing
D. Suicide protective factors

0939. A case discussion concerns a child aged 11 and a family therapist in the family session. The practitioner is considering providing respectful space for exploration without forcing a fixed label or timeline. Which principle is involved?

A. Peer contagion consideration
B. Gender-affirming support
C. Developmental psychopathology
D. Adolescent identity development

0940. A supervisor asks for an applied contrast between Adolescent identity development and Sleep hygiene. Which option fits?

A. Adolescent identity development: Exploring how online activities affect this adolescent's sleep, connection, mood, and goals. / Sleep hygiene: Exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions.
B. Adolescent identity development: Providing respectful space for exploration without forcing a fixed label or timeline. / Sleep hygiene: Asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either.
C. Adolescent identity development: Exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions. / Sleep hygiene: Providing respectful space for exploration without forcing a fixed label or timeline.
D. Adolescent identity development: Providing respectful space for exploration without forcing a fixed label or timeline. / Sleep hygiene: Exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions.

0941. Which applied comparison correctly identifies what belongs to Nonsuicidal self-injury versus Gender-affirming support?

A. Nonsuicidal self-injury: Asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either. / Gender-affirming support: Exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions.
B. Nonsuicidal self-injury: Using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity. / Gender-affirming support: Asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either.
C. Nonsuicidal self-injury: Providing respectful space for exploration without forcing a fixed label or timeline. / Gender-affirming support: Using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity.
D. Nonsuicidal self-injury: Asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either. / Gender-affirming support: Using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity.

0942. A supervisor asks for an applied contrast between Suicide protective factors and Developmental psychopathology. Which option fits?

A. Suicide protective factors: Examining pathways and turning points rather than treating a current symptom as fixed destiny. / Developmental psychopathology: Identifying trusted relationships, coping resources, and accessible support that can be activated.
B. Suicide protective factors: Identifying trusted relationships, coping resources, and accessible support that can be activated. / Developmental psychopathology: Examining pathways and turning points rather than treating a current symptom as fixed destiny.
C. Suicide protective factors: Providing respectful space for exploration without forcing a fixed label or timeline. / Developmental psychopathology: Examining pathways and turning points rather than treating a current symptom as fixed destiny.
D. Suicide protective factors: Identifying trusted relationships, coping resources, and accessible support that can be activated. / Developmental psychopathology: Exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions.

0943. For a teenage client in the supervision meeting, a school support specialist makes this practice the immediate priority: using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior. Which concept fits best?

A. Nonsuicidal self-injury
B. Gender-affirming support
C. Peer contagion consideration
D. Sleep hygiene

0944. Which choice aligns each practice with the correct idea, Nonsuicidal self-injury or Developmental psychopathology?

A. Nonsuicidal self-injury: Exploring how online activities affect this adolescent's sleep, connection, mood, and goals. / Developmental psychopathology: Examining pathways and turning points rather than treating a current symptom as fixed destiny.
B. Nonsuicidal self-injury: Asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either. / Developmental psychopathology: Identifying trusted relationships, coping resources, and accessible support that can be activated.
C. Nonsuicidal self-injury: Examining pathways and turning points rather than treating a current symptom as fixed destiny. / Developmental psychopathology: Asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either.
D. Nonsuicidal self-injury: Asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either. / Developmental psychopathology: Examining pathways and turning points rather than treating a current symptom as fixed destiny.

0945. While supporting a young person aged 16 in the after-school program, a parent educator adopts this practice: exploring body-related distress and social pressures without reinforcing appearance-based judgments. Which concept best explains the choice?

A. Body image
B. Gender-affirming support
C. Nonsuicidal self-injury
D. Developmental psychopathology

0946. In the child guidance clinic, a school counselor describes the most appropriate support for a client in early adolescence as using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior. Which framework is being applied?

A. Peer contagion consideration
B. Digital wellbeing
C. Eating-disorder warning signs
D. Developmental psychopathology

0947. Which option pairs the definitions of Sleep hygiene and Body image correctly, in that order?

A. Sleep hygiene: Thoughts, feelings, and perceptions concerning one's body, shaped by personal and social influences. / Body image: Behaviors and environmental practices that support regular, restorative sleep.
B. Sleep hygiene: Behaviors and environmental practices that support regular, restorative sleep. / Body image: The balance between digital engagement and health, relationships, sleep, and functioning as experienced by the individual.
C. Sleep hygiene: Behaviors and environmental practices that support regular, restorative sleep. / Body image: Thoughts, feelings, and perceptions concerning one's body, shaped by personal and social influences.
D. Sleep hygiene: Respectful support that recognizes a young person's expressed gender and attends to safety, dignity, and context. / Body image: Thoughts, feelings, and perceptions concerning one's body, shaped by personal and social influences.

0948. Consider a young person aged 18 receiving help in the community mental-health service. The consulting counselor focuses on using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity. Which term best describes the guiding idea?

A. Developmental psychopathology
B. Eating-disorder warning signs
C. Gender-affirming support
D. Suicide protective factors

0949. A student aged 15 is receiving support in the youth group. The consulting counselor is guided by this practice: providing respectful space for exploration without forcing a fixed label or timeline. Which principle best fits?

A. Developmental psychopathology
B. Peer contagion consideration
C. Digital wellbeing
D. Adolescent identity development

0950. In a supervision review, a case coordinator describes work with a student aged 12 in the counseling practicum: identifying trusted relationships, coping resources, and accessible support that can be activated. What concept is illustrated?

A. Body image
B. Gender-affirming support
C. Suicide protective factors
D. Sleep hygiene

0951. A doctoral student reads the following description. Which concept does it define? Respectful support that recognizes a young person's expressed gender and attends to safety, dignity, and context.

A. Nonsuicidal self-injury
B. Adolescent identity development
C. Gender-affirming support
D. Suicide protective factors

0952. A school support specialist reviews a plan for a young person aged 16 in the counseling practicum. The plan emphasizes exploring how online activities affect this adolescent's sleep, connection, mood, and goals. Which course idea does this reflect?

A. Body image
B. Suicide protective factors
C. Gender-affirming support
D. Digital wellbeing

0953. In the youth group, a team asks how a school counselor can support a young person aged 10. One proposed action is exploring body-related distress and social pressures without reinforcing appearance-based judgments. Which idea does it represent?

A. Sleep hygiene
B. Digital wellbeing
C. Eating-disorder warning signs
D. Body image

0954. A research trainee describes an intervention for a young person aged 13 in the parent meeting, centered on using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior. Which named idea is most relevant?

A. Eating-disorder warning signs
B. Peer contagion consideration
C. Sleep hygiene
D. Gender-affirming support

0955. During work in the school consultation, a school counselor identifies this need: examining pathways and turning points rather than treating a current symptom as fixed destiny. Which idea should guide the response?

A. Gender-affirming support
B. Suicide protective factors
C. Digital wellbeing
D. Developmental psychopathology

0956. Which comparison correctly distinguishes Adolescent identity development from Gender-affirming support?

A. Adolescent identity development: Respectful support that recognizes a young person's expressed gender and attends to safety, dignity, and context. / Gender-affirming support: An evolving process of exploring and integrating personal, social, and cultural understandings of self.
B. Adolescent identity development: An evolving process of exploring and integrating personal, social, and cultural understandings of self. / Gender-affirming support: Respectful support that recognizes a young person's expressed gender and attends to safety, dignity, and context.
C. Adolescent identity development: An evolving process of exploring and integrating personal, social, and cultural understandings of self. / Gender-affirming support: Personal and contextual supports that can reduce risk or strengthen reasons and pathways for safety.
D. Adolescent identity development: Behaviors and environmental practices that support regular, restorative sleep. / Gender-affirming support: Respectful support that recognizes a young person's expressed gender and attends to safety, dignity, and context.

0957. An interdisciplinary team reviews a adolescent student's case at the multidisciplinary case conference. The counselor recommends examining pathways and turning points rather than treating a current symptom as fixed destiny. Which course concept best fits?

A. Body image
B. Developmental psychopathology
C. Sleep hygiene
D. Adolescent identity development

0958. A support meeting for a client in late adolescence includes a behavior specialist in the family resource center. The practice under consideration is using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity. Which concept guides it?

A. Sleep hygiene
B. Suicide protective factors
C. Gender-affirming support
D. Adolescent identity development

0959. Consider a client in late adolescence receiving help in the school-based service. The group facilitator focuses on exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions. Which term best describes the guiding idea?

A. Body image
B. Suicide protective factors
C. Sleep hygiene
D. Peer contagion consideration

0960. In the family resource center, the agreed focus for a program coordinator working with a student aged 15 is exploring how online activities affect this adolescent's sleep, connection, mood, and goals. Which concept names this focus?

A. Nonsuicidal self-injury
B. Sleep hygiene
C. Adolescent identity development
D. Digital wellbeing

0961. A counselor is asked to evaluate a proposed service for a student aged 12 in the community youth program. The defining feature is using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity. Which concept fits?

A. Body image
B. Gender-affirming support
C. Eating-disorder warning signs
D. Developmental psychopathology

0962. In the outpatient clinic, a youth worker describes the most appropriate support for a young person as exploring body-related distress and social pressures without reinforcing appearance-based judgments. Which framework is being applied?

A. Sleep hygiene
B. Suicide protective factors
C. Body image
D. Gender-affirming support

0963. At the outpatient clinic, a behavior specialist meets with a young adolescent client. The practice priority is: examining pathways and turning points rather than treating a current symptom as fixed destiny. Which concept best captures that priority?

A. Nonsuicidal self-injury
B. Digital wellbeing
C. Developmental psychopathology
D. Adolescent identity development

0964. A program coordinator is asked what should shape a student aged 9's support in the outpatient clinic. The proposed focus is responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation. Which principle does it represent?

A. Body image
B. Adolescent identity development
C. Eating-disorder warning signs
D. Digital wellbeing

0965. Which option correctly matches each concept to its practice focus: Gender-affirming support and Peer contagion consideration?

A. Gender-affirming support: Responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation. / Peer contagion consideration: Using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior.
B. Gender-affirming support: Using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity. / Peer contagion consideration: Using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior.
C. Gender-affirming support: Using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior. / Peer contagion consideration: Using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity.
D. Gender-affirming support: Using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity. / Peer contagion consideration: Examining pathways and turning points rather than treating a current symptom as fixed destiny.

0966. Choose the definition pair that correctly explains Digital wellbeing first and Gender-affirming support second.

A. Digital wellbeing: Respectful support that recognizes a young person's expressed gender and attends to safety, dignity, and context. / Gender-affirming support: The balance between digital engagement and health, relationships, sleep, and functioning as experienced by the individual.
B. Digital wellbeing: The balance between digital engagement and health, relationships, sleep, and functioning as experienced by the individual. / Gender-affirming support: A framework studying how typical and atypical developmental processes interact across time and context.
C. Digital wellbeing: Behaviors and environmental practices that support regular, restorative sleep. / Gender-affirming support: Respectful support that recognizes a young person's expressed gender and attends to safety, dignity, and context.
D. Digital wellbeing: The balance between digital engagement and health, relationships, sleep, and functioning as experienced by the individual. / Gender-affirming support: Respectful support that recognizes a young person's expressed gender and attends to safety, dignity, and context.

0967. Which comparison would correct a trainee's misunderstanding of Nonsuicidal self-injury versus Peer contagion consideration?

A. Nonsuicidal self-injury: An evolving process of exploring and integrating personal, social, and cultural understandings of self. / Peer contagion consideration: The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices.
B. Nonsuicidal self-injury: Intentional self-inflicted injury without stated intent to die, requiring compassionate assessment and safety planning. / Peer contagion consideration: Behavioral, cognitive, and physical indicators that warrant careful assessment and referral to qualified care.
C. Nonsuicidal self-injury: Intentional self-inflicted injury without stated intent to die, requiring compassionate assessment and safety planning. / Peer contagion consideration: The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices.
D. Nonsuicidal self-injury: The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices. / Peer contagion consideration: Intentional self-inflicted injury without stated intent to die, requiring compassionate assessment and safety planning.

0968. Which comparison correctly distinguishes Body image from Gender-affirming support?

A. Body image: Respectful support that recognizes a young person's expressed gender and attends to safety, dignity, and context. / Gender-affirming support: Thoughts, feelings, and perceptions concerning one's body, shaped by personal and social influences.
B. Body image: Thoughts, feelings, and perceptions concerning one's body, shaped by personal and social influences. / Gender-affirming support: Respectful support that recognizes a young person's expressed gender and attends to safety, dignity, and context.
C. Body image: Thoughts, feelings, and perceptions concerning one's body, shaped by personal and social influences. / Gender-affirming support: A framework studying how typical and atypical developmental processes interact across time and context.
D. Body image: The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices. / Gender-affirming support: Respectful support that recognizes a young person's expressed gender and attends to safety, dignity, and context.

0969. Which pair of actions illustrates Sleep hygiene and Nonsuicidal self-injury, respectively?

A. Sleep hygiene: Exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions. / Nonsuicidal self-injury: Asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either.
B. Sleep hygiene: Exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions. / Nonsuicidal self-injury: Using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior.
C. Sleep hygiene: Asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either. / Nonsuicidal self-injury: Exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions.
D. Sleep hygiene: Exploring how online activities affect this adolescent's sleep, connection, mood, and goals. / Nonsuicidal self-injury: Asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either.

0970. How should a practitioner distinguish the applications of Nonsuicidal self-injury and Gender-affirming support?

A. Nonsuicidal self-injury: Using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity. / Gender-affirming support: Asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either.
B. Nonsuicidal self-injury: Asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either. / Gender-affirming support: Exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions.
C. Nonsuicidal self-injury: Providing respectful space for exploration without forcing a fixed label or timeline. / Gender-affirming support: Using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity.
D. Nonsuicidal self-injury: Asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either. / Gender-affirming support: Using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity.

0971. Which named construct is captured by this account? Behavioral, cognitive, and physical indicators that warrant careful assessment and referral to qualified care.

A. Body image
B. Eating-disorder warning signs
C. Developmental psychopathology
D. Gender-affirming support

0972. Which option pairs the definitions of Eating-disorder warning signs and Peer contagion consideration correctly, in that order?

A. Eating-disorder warning signs: Behavioral, cognitive, and physical indicators that warrant careful assessment and referral to qualified care. / Peer contagion consideration: The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices.
B. Eating-disorder warning signs: Behavioral, cognitive, and physical indicators that warrant careful assessment and referral to qualified care. / Peer contagion consideration: The balance between digital engagement and health, relationships, sleep, and functioning as experienced by the individual.
C. Eating-disorder warning signs: Intentional self-inflicted injury without stated intent to die, requiring compassionate assessment and safety planning. / Peer contagion consideration: The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices.
D. Eating-disorder warning signs: The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices. / Peer contagion consideration: Behavioral, cognitive, and physical indicators that warrant careful assessment and referral to qualified care.

0973. Choose the definition pair that correctly explains Digital wellbeing first and Eating-disorder warning signs second.

A. Digital wellbeing: Behavioral, cognitive, and physical indicators that warrant careful assessment and referral to qualified care. / Eating-disorder warning signs: The balance between digital engagement and health, relationships, sleep, and functioning as experienced by the individual.
B. Digital wellbeing: The balance between digital engagement and health, relationships, sleep, and functioning as experienced by the individual. / Eating-disorder warning signs: Behaviors and environmental practices that support regular, restorative sleep.
C. Digital wellbeing: The balance between digital engagement and health, relationships, sleep, and functioning as experienced by the individual. / Eating-disorder warning signs: Behavioral, cognitive, and physical indicators that warrant careful assessment and referral to qualified care.
D. Digital wellbeing: Thoughts, feelings, and perceptions concerning one's body, shaped by personal and social influences. / Eating-disorder warning signs: Behavioral, cognitive, and physical indicators that warrant careful assessment and referral to qualified care.

0974. How should a practitioner distinguish the applications of Adolescent identity development and Developmental psychopathology?

A. Adolescent identity development: Exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions. / Developmental psychopathology: Examining pathways and turning points rather than treating a current symptom as fixed destiny.
B. Adolescent identity development: Providing respectful space for exploration without forcing a fixed label or timeline. / Developmental psychopathology: Examining pathways and turning points rather than treating a current symptom as fixed destiny.
C. Adolescent identity development: Examining pathways and turning points rather than treating a current symptom as fixed destiny. / Developmental psychopathology: Providing respectful space for exploration without forcing a fixed label or timeline.
D. Adolescent identity development: Providing respectful space for exploration without forcing a fixed label or timeline. / Developmental psychopathology: Using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity.

0975. Which option pairs the definitions of Nonsuicidal self-injury and Gender-affirming support correctly, in that order?

A. Nonsuicidal self-injury: Respectful support that recognizes a young person's expressed gender and attends to safety, dignity, and context. / Gender-affirming support: Intentional self-inflicted injury without stated intent to die, requiring compassionate assessment and safety planning.
B. Nonsuicidal self-injury: Intentional self-inflicted injury without stated intent to die, requiring compassionate assessment and safety planning. / Gender-affirming support: Respectful support that recognizes a young person's expressed gender and attends to safety, dignity, and context.
C. Nonsuicidal self-injury: Intentional self-inflicted injury without stated intent to die, requiring compassionate assessment and safety planning. / Gender-affirming support: Behaviors and environmental practices that support regular, restorative sleep.
D. Nonsuicidal self-injury: An evolving process of exploring and integrating personal, social, and cultural understandings of self. / Gender-affirming support: Respectful support that recognizes a young person's expressed gender and attends to safety, dignity, and context.

0976. A behavior specialist is asked to evaluate a proposed service for a young person in the parent meeting. The defining feature is responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation. Which concept fits?

A. Eating-disorder warning signs
B. Gender-affirming support
C. Developmental psychopathology
D. Nonsuicidal self-injury

0977. An interdisciplinary team reviews a child aged 14's case at the student wellness team. The behavior specialist recommends identifying trusted relationships, coping resources, and accessible support that can be activated. Which course concept best fits?

A. Suicide protective factors
B. Nonsuicidal self-injury
C. Developmental psychopathology
D. Digital wellbeing

0978. While supporting a young person in the student wellness team, a caregiver working with a counselor adopts this practice: using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity. Which concept best explains the choice?

A. Digital wellbeing
B. Nonsuicidal self-injury
C. Sleep hygiene
D. Gender-affirming support

0979. Which statement shows a sound practice-level distinction between Sleep hygiene and Nonsuicidal self-injury?

A. Sleep hygiene: Exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions. / Nonsuicidal self-injury: Using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior.
B. Sleep hygiene: Exploring how online activities affect this adolescent's sleep, connection, mood, and goals. / Nonsuicidal self-injury: Asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either.
C. Sleep hygiene: Exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions. / Nonsuicidal self-injury: Asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either.
D. Sleep hygiene: Asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either. / Nonsuicidal self-injury: Exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions.

0980. Which choice aligns each practice with the correct idea, Eating-disorder warning signs or Developmental psychopathology?

A. Eating-disorder warning signs: Responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation. / Developmental psychopathology: Exploring body-related distress and social pressures without reinforcing appearance-based judgments.
B. Eating-disorder warning signs: Examining pathways and turning points rather than treating a current symptom as fixed destiny. / Developmental psychopathology: Responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation.
C. Eating-disorder warning signs: Providing respectful space for exploration without forcing a fixed label or timeline. / Developmental psychopathology: Examining pathways and turning points rather than treating a current symptom as fixed destiny.
D. Eating-disorder warning signs: Responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation. / Developmental psychopathology: Examining pathways and turning points rather than treating a current symptom as fixed destiny.

0981. A case discussion concerns a young person aged 10 and a parent educator in the youth advocacy program. The practitioner is considering using the young person’s stated name and pronouns and assessing supports and safety without pathologizing identity. Which principle is involved?

A. Gender-affirming support
B. Nonsuicidal self-injury
C. Sleep hygiene
D. Suicide protective factors

0982. A school counselor is explaining a choice to a preadolescent child and caregiver in the school counseling office. The choice centers on responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation. Which idea is illustrated?

A. Body image
B. Eating-disorder warning signs
C. Sleep hygiene
D. Nonsuicidal self-injury

0983. Choose the term that matches this definition: Respectful support that recognizes a young person’s expressed gender and attends to safety, dignity, and context.

A. Gender-affirming support
B. Body image
C. Eating-disorder warning signs
D. Digital wellbeing

0984. How are Sleep hygiene and Peer contagion consideration most accurately differentiated in this curriculum?

A. Sleep hygiene: Respectful support that recognizes a young person’s expressed gender and attends to safety, dignity, and context. / Peer contagion consideration: The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices.
B. Sleep hygiene: Behaviors and environmental practices that support regular, restorative sleep. / Peer contagion consideration: The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices.
C. Sleep hygiene: The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices. / Peer contagion consideration: Behaviors and environmental practices that support regular, restorative sleep.
D. Sleep hygiene: Behaviors and environmental practices that support regular, restorative sleep. / Peer contagion consideration: Personal and contextual supports that can reduce risk or strengthen reasons and pathways for safety.

0985. Which option pairs the definitions of Nonsuicidal self-injury and Peer contagion consideration correctly, in that order?

A. Nonsuicidal self-injury: The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices. / Peer contagion consideration: Intentional self-inflicted injury without stated intent to die, requiring compassionate assessment and safety planning.
B. Nonsuicidal self-injury: An evolving process of exploring and integrating personal, social, and cultural understandings of self. / Peer contagion consideration: The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices.
C. Nonsuicidal self-injury: Intentional self-inflicted injury without stated intent to die, requiring compassionate assessment and safety planning. / Peer contagion consideration: Behavioral, cognitive, and physical indicators that warrant careful assessment and referral to qualified care.
D. Nonsuicidal self-injury: Intentional self-inflicted injury without stated intent to die, requiring compassionate assessment and safety planning. / Peer contagion consideration: The possibility that discussion or modeling of risky behavior may influence peers, requiring careful group and media practices.

0986. Choose the response that best puts Peer contagion consideration into practice.

A. Using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior.
B. Identifying trusted relationships, coping resources, and accessible support that can be activated.
C. Providing respectful space for exploration without forcing a fixed label or timeline.
D. Exploring how online activities affect this adolescent’s sleep, connection, mood, and goals.

0987. While supporting a adolescent student in the parent meeting, a parent educator adopts this practice: providing respectful space for exploration without forcing a fixed label or timeline. Which concept best explains the choice?

A. Nonsuicidal self-injury
B. Eating-disorder warning signs
C. Sleep hygiene
D. Adolescent identity development

0988. Which applied comparison correctly identifies what belongs to Sleep hygiene versus Digital wellbeing?

A. Sleep hygiene: Exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions. / Digital wellbeing: Exploring how online activities affect this adolescent’s sleep, connection, mood, and goals.
B. Sleep hygiene: Exploring how online activities affect this adolescent’s sleep, connection, mood, and goals. / Digital wellbeing: Exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions.
C. Sleep hygiene: Exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions. / Digital wellbeing: Asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either.
D. Sleep hygiene: Exploring body-related distress and social pressures without reinforcing appearance-based judgments. / Digital wellbeing: Exploring how online activities affect this adolescent’s sleep, connection, mood, and goals.

0989. A teacher and counselor is asked to justify a plan for a client in early adolescence in the student-support meeting. It calls for identifying trusted relationships, coping resources, and accessible support that can be activated. Which concept provides the rationale?

A. Suicide protective factors
B. Peer contagion consideration
C. Sleep hygiene
D. Developmental psychopathology

0990. Which statement shows a sound practice-level distinction between Body image and Eating-disorder warning signs?

A. Body image: Using the young person’s stated name and pronouns and assessing supports and safety without pathologizing identity. / Eating-disorder warning signs: Responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation.
B. Body image: Responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation. / Eating-disorder warning signs: Exploring body-related distress and social pressures without reinforcing appearance-based judgments.
C. Body image: Exploring body-related distress and social pressures without reinforcing appearance-based judgments. / Eating-disorder warning signs: Responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation.
D. Body image: Exploring body-related distress and social pressures without reinforcing appearance-based judgments. / Eating-disorder warning signs: Examining pathways and turning points rather than treating a current symptom as fixed destiny.

0991. Choose the practice comparison that best separates Adolescent identity development from Peer contagion consideration.

A. Adolescent identity development: Using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior. / Peer contagion consideration: Providing respectful space for exploration without forcing a fixed label or timeline.
B. Adolescent identity development: Providing respectful space for exploration without forcing a fixed label or timeline. / Peer contagion consideration: Exploring how online activities affect this adolescent's sleep, connection, mood, and goals.
C. Adolescent identity development: Responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation. / Peer contagion consideration: Using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior.
D. Adolescent identity development: Providing respectful space for exploration without forcing a fixed label or timeline. / Peer contagion consideration: Using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior.

0992. Which statement shows a sound practice-level distinction between Suicide protective factors and Gender-affirming support?

A. Suicide protective factors: Identifying trusted relationships, coping resources, and accessible support that can be activated. / Gender-affirming support: Using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity.
B. Suicide protective factors: Using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity. / Gender-affirming support: Identifying trusted relationships, coping resources, and accessible support that can be activated.
C. Suicide protective factors: Using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior. / Gender-affirming support: Using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity.
D. Suicide protective factors: Identifying trusted relationships, coping resources, and accessible support that can be activated. / Gender-affirming support: Asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either.

0993. Which pair of actions illustrates Adolescent identity development and Peer contagion consideration, respectively?

A. Adolescent identity development: Providing respectful space for exploration without forcing a fixed label or timeline. / Peer contagion consideration: Exploring how online activities affect this adolescent's sleep, connection, mood, and goals.
B. Adolescent identity development: Responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation. / Peer contagion consideration: Using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior.
C. Adolescent identity development: Using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior. / Peer contagion consideration: Providing respectful space for exploration without forcing a fixed label or timeline.
D. Adolescent identity development: Providing respectful space for exploration without forcing a fixed label or timeline. / Peer contagion consideration: Using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior.

0994. How should a practitioner distinguish the applications of Nonsuicidal self-injury and Digital wellbeing?

A. Nonsuicidal self-injury: Asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either. / Digital wellbeing: Exploring how online activities affect this adolescent's sleep, connection, mood, and goals.
B. Nonsuicidal self-injury: Exploring how online activities affect this adolescent's sleep, connection, mood, and goals. / Digital wellbeing: Asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either.
C. Nonsuicidal self-injury: Examining pathways and turning points rather than treating a current symptom as fixed destiny. / Digital wellbeing: Exploring how online activities affect this adolescent's sleep, connection, mood, and goals.
D. Nonsuicidal self-injury: Asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either. / Digital wellbeing: Using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior.

0995. A case conference reviews a community practitioner's work with a older adolescent client in the supervision meeting: providing respectful space for exploration without forcing a fixed label or timeline. Which principle is central?

A. Peer contagion consideration
B. Eating-disorder warning signs
C. Body image
D. Adolescent identity development

0996. Which applied comparison correctly identifies what belongs to Digital wellbeing versus Eating-disorder warning signs?

A. Digital wellbeing: Exploring body-related distress and social pressures without reinforcing appearance-based judgments. / Eating-disorder warning signs: Responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation.
B. Digital wellbeing: Responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation. / Eating-disorder warning signs: Exploring how online activities affect this adolescent's sleep, connection, mood, and goals.
C. Digital wellbeing: Exploring how online activities affect this adolescent's sleep, connection, mood, and goals. / Eating-disorder warning signs: Exploring consistent sleep schedules, evening routines, light, and other practical sleep conditions.
D. Digital wellbeing: Exploring how online activities affect this adolescent's sleep, connection, mood, and goals. / Eating-disorder warning signs: Responding to concerning restriction, bingeing, purging, or medical symptoms with timely qualified evaluation.

0997. A supervisor asks for an applied contrast between Nonsuicidal self-injury and Suicide protective factors. Which option fits?

A. Nonsuicidal self-injury: Providing respectful space for exploration without forcing a fixed label or timeline. / Suicide protective factors: Identifying trusted relationships, coping resources, and accessible support that can be activated.
B. Nonsuicidal self-injury: Asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either. / Suicide protective factors: Identifying trusted relationships, coping resources, and accessible support that can be activated.
C. Nonsuicidal self-injury: Identifying trusted relationships, coping resources, and accessible support that can be activated. / Suicide protective factors: Asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either.
D. Nonsuicidal self-injury: Asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either. / Suicide protective factors: Exploring body-related distress and social pressures without reinforcing appearance-based judgments.

0998. Choose the response that best puts Suicide protective factors into practice.

A. Using the young person's stated name and pronouns and assessing supports and safety without pathologizing identity.
B. Exploring how online activities affect this adolescent's sleep, connection, mood, and goals.
C. Asking directly and nonjudgmentally about function, injury, and suicide risk rather than assuming either.
D. Identifying trusted relationships, coping resources, and accessible support that can be activated.

0999. While consulting in the telehealth session, a assessment clinician supports a child aged 6 by using this approach: using safe, non-graphic language and avoiding detail that could inadvertently model harmful behavior. Which concept is being applied?

A. Eating-disorder warning signs
B. Nonsuicidal self-injury
C. Gender-affirming support
D. Peer contagion consideration

1000. Which paired example correctly applies Digital wellbeing first and Developmental psychopathology second?

A. Digital wellbeing: Exploring how online activities affect this adolescent’s sleep, connection, mood, and goals. / Developmental psychopathology: Examining pathways and turning points rather than treating a current symptom as fixed destiny.
B. Digital wellbeing: Providing respectful space for exploration without forcing a fixed label or timeline. / Developmental psychopathology: Examining pathways and turning points rather than treating a current symptom as fixed destiny.
C. Digital wellbeing: Examining pathways and turning points rather than treating a current symptom as fixed destiny. / Developmental psychopathology: Exploring how online activities affect this adolescent’s sleep, connection, mood, and goals.
D. Digital wellbeing: Exploring how online activities affect this adolescent’s sleep, connection, mood, and goals. / Developmental psychopathology: Exploring body-related distress and social pressures without reinforcing appearance-based judgments.

CAC.919 | Advocacy in Child and Adolescent Services

QUESTION BANK | 1,000 ITEMS | ANSWERS AT THE END

0001. A play therapist is asked to evaluate a proposed service for a middle-school student in the learning-support meeting. The defining feature is summarizing a service gap and actionable recommendations for decision makers. Which concept fits?

A. Participatory decision-making
B. Advocacy ethics
C. Service navigation
D. Policy brief

0002. Which choice aligns each practice with the correct idea, Service navigation or Advocacy ethics?

A. Service navigation: Clarifying eligibility, referral steps, and follow-up barriers with a family. / Advocacy ethics: Creating safe, accessible ways for youth input to shape a program.
B. Service navigation: Obtaining permission and discussing foreseeable benefits and risks before speaking on a client's behalf. / Advocacy ethics: Clarifying eligibility, referral steps, and follow-up barriers with a family.
C. Service navigation: Clarifying eligibility, referral steps, and follow-up barriers with a family. / Advocacy ethics: Obtaining permission and discussing foreseeable benefits and risks before speaking on a client's behalf.
D. Service navigation: Seeking youth input early and showing how it influenced a service decision. / Advocacy ethics: Obtaining permission and discussing foreseeable benefits and risks before speaking on a client's behalf.

0003. Which course concept is defined as follows: Practical assistance that helps people identify, access, and coordinate appropriate services.

A. Systems advocacy
B. Coalition building
C. Service navigation
D. Self-advocacy

0004. Which statement shows a sound practice-level distinction between Participatory decision-making and Service navigation?

A. Participatory decision-making: Clarifying eligibility, referral steps, and follow-up barriers with a family. / Service navigation: Seeking youth input early and showing how it influenced a service decision.
B. Participatory decision-making: Seeking youth input early and showing how it influenced a service decision. / Service navigation: Creating safe, accessible ways for youth input to shape a program.
C. Participatory decision-making: Supporting a family to navigate a referral barrier with the young person's informed involvement. / Service navigation: Clarifying eligibility, referral steps, and follow-up barriers with a family.
D. Participatory decision-making: Seeking youth input early and showing how it influenced a service decision. / Service navigation: Clarifying eligibility, referral steps, and follow-up barriers with a family.

0005. A case coordinator presents a support plan for a child of elementary-school age at the supervision meeting. Its central feature is clarifying eligibility, referral steps, and follow-up barriers with a family. Which concept should be named?

A. Service navigation
B. Advocacy ethics
C. Participatory decision-making
D. Individual advocacy

0006. Which comparison correctly distinguishes Systems advocacy from Advocacy ethics?

A. Systems advocacy: Efforts to change policies, practices, or resource arrangements that affect groups of people. / Advocacy ethics: A community-led approach that builds on existing strengths, relationships, and resources.
B. Systems advocacy: Organizing collaboration among people and groups with aligned interests to pursue shared change. / Advocacy ethics: Balancing empowerment, consent, role boundaries, confidentiality, and potential consequences when advocating.
C. Systems advocacy: Balancing empowerment, consent, role boundaries, confidentiality, and potential consequences when advocating. / Advocacy ethics: Efforts to change policies, practices, or resource arrangements that affect groups of people.
D. Systems advocacy: Efforts to change policies, practices, or resource arrangements that affect groups of people. / Advocacy ethics: Balancing empowerment, consent, role boundaries, confidentiality, and potential consequences when advocating.

0007. A support meeting for a child aged 6 includes a play therapist in the after-school program. The practice under consideration is agreeing on a common goal, roles, and communication practices across partner organizations. Which concept guides it?

A. Service navigation
B. Participatory decision-making
C. Individual advocacy
D. Coalition building

0008. A assessment clinician is preparing a follow-up plan for a young person aged 18 in the child guidance clinic. The plan calls for supporting a family to navigate a referral barrier with the young person's informed involvement. Which concept names this approach?

A. Individual advocacy
B. Systems advocacy
C. Coalition building
D. Advocacy ethics

0009. A supervisor asks for an applied contrast between Coalition building and Service navigation. Which option fits?

A. Coalition building: Clarifying eligibility, referral steps, and follow-up barriers with a family. / Service navigation: Agreeing on a common goal, roles, and communication practices across partner organizations.
B. Coalition building: Agreeing on a common goal, roles, and communication practices across partner organizations. / Service navigation: Helping a youth prepare to state a support need in a meeting.
C. Coalition building: Creating safe, accessible ways for youth input to shape a program. / Service navigation: Clarifying eligibility, referral steps, and follow-up barriers with a family.
D. Coalition building: Agreeing on a common goal, roles, and communication practices across partner organizations. / Service navigation: Clarifying eligibility, referral steps, and follow-up barriers with a family.

0010. Which pair of actions illustrates Coalition building and Advocacy ethics, respectively?

A. Coalition building: Obtaining permission and discussing foreseeable benefits and risks before speaking on a client's behalf. / Advocacy ethics: Agreeing on a common goal, roles, and communication practices across partner organizations.
B. Coalition building: Agreeing on a common goal, roles, and communication practices across partner organizations. / Advocacy ethics: Mapping community skills and networks before designing an outside-led program.
C. Coalition building: Agreeing on a common goal, roles, and communication practices across partner organizations. / Advocacy ethics: Obtaining permission and discussing foreseeable benefits and risks before speaking on a client's behalf.
D. Coalition building: Seeking youth input early and showing how it influenced a service decision. / Advocacy ethics: Obtaining permission and discussing foreseeable benefits and risks before speaking on a client's behalf.

0011. Which applied comparison correctly identifies what belongs to Systems advocacy versus Participatory decision-making?

A. Systems advocacy: Creating safe, accessible ways for youth input to shape a program. / Participatory decision-making: Seeking youth input early and showing how it influenced a service decision.
B. Systems advocacy: Seeking youth input early and showing how it influenced a service decision. / Participatory decision-making: Using documented access barriers to recommend a service-system change.
C. Systems advocacy: Using documented access barriers to recommend a service-system change. / Participatory decision-making: Supporting a family to navigate a referral barrier with the young person's informed involvement.
D. Systems advocacy: Using documented access barriers to recommend a service-system change. / Participatory decision-making: Seeking youth input early and showing how it influenced a service decision.

0012. A case discussion concerns a young person aged 10 and a parent educator in the youth advocacy program. The practitioner is considering clarifying eligibility, referral steps, and follow-up barriers with a family. Which principle is involved?

A. Self-advocacy
B. Service navigation
C. Advocacy ethics
D. Individual advocacy

0013. During service review in the multidisciplinary case conference, a research trainee describes agreeing on a common goal, roles, and communication practices across partner organizations. for a young person aged 18. Which course idea is most applicable?

A. Participatory decision-making
B. Coalition building
C. Service navigation
D. Systems advocacy

0014. In the after-school program, a team asks how a youth worker can support a high-school student. One proposed action is clarifying eligibility, referral steps, and follow-up barriers with a family. Which idea does it represent?

A. Advocacy ethics
B. Service navigation
C. Youth voice
D. Coalition building

0015. For a student aged 12 seen in the school consultation, the research trainee recommends a plan built around supporting a family to navigate a referral barrier with the young person's informed involvement. Which concept is reflected?

A. Individual advocacy
B. Advocacy ethics
C. Coalition building
D. Asset-based community development

0016. A consultant prepares for a session in the supervision meeting with a client in early adolescence. The intended approach is using documented access barriers to recommend a service-system change. Which concept is most relevant?

A. Systems advocacy
B. Coalition building
C. Service navigation
D. Asset-based community development

0017. A trainee must choose a practice that exemplifies Participatory decision-making. Which action is the best fit?

A. Using documented access barriers to recommend a service-system change.
B. Creating safe, accessible ways for youth input to shape a program.
C. Agreeing on a common goal, roles, and communication practices across partner organizations.
D. Seeking youth input early and showing how it influenced a service decision.

0018. Which statement accurately contrasts the course concepts Individual advocacy and Systems advocacy?

A. Individual advocacy: Organizing collaboration among people and groups with aligned interests to pursue shared change. / Systems advocacy: Efforts to change policies, practices, or resource arrangements that affect groups of people.
B. Individual advocacy: Action taken with or on behalf of a person to secure access, rights, or needed services. / Systems advocacy: Balancing empowerment, consent, role boundaries, confidentiality, and potential consequences when advocating.
C. Individual advocacy: Efforts to change policies, practices, or resource arrangements that affect groups of people. / Systems advocacy: Action taken with or on behalf of a person to secure access, rights, or needed services.
D. Individual advocacy: Action taken with or on behalf of a person to secure access, rights, or needed services. / Systems advocacy: Efforts to change policies, practices, or resource arrangements that affect groups of people.

0019. In the after-school program, the agreed focus for a therapist working with a child aged 8 is seeking youth input early and showing how it influenced a service decision. Which concept names this focus?

A. Systems advocacy
B. Policy brief
C. Participatory decision-making
D. Individual advocacy

0020. When reviewing a teenage client's plan in the classroom support meeting, the parent educator notes that the next step is obtaining permission and discussing foreseeable benefits and risks before speaking on a client's behalf. Which concept guides this step?

A. Advocacy ethics
B. Youth voice
C. Service navigation
D. Systems advocacy

0021. In the family session, a case coordinator is considering this approach for a adolescent student: summarizing a service gap and actionable recommendations for decision makers. Which framework does it represent?

A. Advocacy ethics
B. Youth voice
C. Self-advocacy
D. Policy brief

0022. A school-based clinician presents a support plan for a teenage client at the telehealth session. Its central feature is mapping community skills and networks before designing an outside-led program. Which concept should be named?

A. Service navigation
B. Asset-based community development
C. Systems advocacy
D. Coalition building

0023. Choose the definition pair that correctly explains Youth voice first and Advocacy ethics second.

A. Youth voice: Meaningful inclusion of young people's perspectives and influence in services and decisions affecting them. / Advocacy ethics: Practical assistance that helps people identify, access, and coordinate appropriate services.
B. Youth voice: Meaningful inclusion of young people's perspectives and influence in services and decisions affecting them. / Advocacy ethics: Balancing empowerment, consent, role boundaries, confidentiality, and potential consequences when advocating.
C. Youth voice: A community-led approach that builds on existing strengths, relationships, and resources. / Advocacy ethics: Balancing empowerment, consent, role boundaries, confidentiality, and potential consequences when advocating.
D. Youth voice: Balancing empowerment, consent, role boundaries, confidentiality, and potential consequences when advocating. / Advocacy ethics: Meaningful inclusion of young people's perspectives and influence in services and decisions affecting them.

0024. Which option correctly matches each concept to its practice focus: Participatory decision-making and Asset-based community development?

A. Participatory decision-making: Seeking youth input early and showing how it influenced a service decision. / Asset-based community development: Mapping community skills and networks before designing an outside-led program.
B. Participatory decision-making: Mapping community skills and networks before designing an outside-led program. / Asset-based community development: Seeking youth input early and showing how it influenced a service decision.
C. Participatory decision-making: Seeking youth input early and showing how it influenced a service decision. / Asset-based community development: Using documented access barriers to recommend a service-system change.
D. Participatory decision-making: Supporting a family to navigate a referral barrier with the young person's informed involvement. / Asset-based community development: Mapping community skills and networks before designing an outside-led program.

0025. A student confuses Participatory decision-making with Advocacy ethics. Which explanation most accurately separates them?

A. Participatory decision-making: Including affected young people and families meaningfully in decisions that shape services. / Advocacy ethics: Balancing empowerment, consent, role boundaries, confidentiality, and potential consequences when advocating.
B. Participatory decision-making: Balancing empowerment, consent, role boundaries, confidentiality, and potential consequences when advocating. / Advocacy ethics: Including affected young people and families meaningfully in decisions that shape services.
C. Participatory decision-making: A person's ability and opportunity to communicate needs, preferences, and rights and participate in decisions. / Advocacy ethics: Balancing empowerment, consent, role boundaries, confidentiality, and potential consequences when advocating.
D. Participatory decision-making: Including affected young people and families meaningfully in decisions that shape services. / Advocacy ethics: A concise evidence-informed document that defines a policy issue and presents feasible options or recommendations.

0026. Choose the definition pair that correctly explains Individual advocacy first and Asset-based community development second.

A. Individual advocacy: Balancing empowerment, consent, role boundaries, confidentiality, and potential consequences when advocating. / Asset-based community development: A community-led approach that builds on existing strengths, relationships, and resources.
B. Individual advocacy: Action taken with or on behalf of a person to secure access, rights, or needed services. / Asset-based community development: Including affected young people and families meaningfully in decisions that shape services.
C. Individual advocacy: A community-led approach that builds on existing strengths, relationships, and resources. / Asset-based community development: Action taken with or on behalf of a person to secure access, rights, or needed services.
D. Individual advocacy: Action taken with or on behalf of a person to secure access, rights, or needed services. / Asset-based community development: A community-led approach that builds on existing strengths, relationships, and resources.

0027. Which statement accurately contrasts the course concepts Asset-based community development and Policy brief?

A. Asset-based community development: Organizing collaboration among people and groups with aligned interests to pursue shared change. / Policy brief: A concise evidence-informed document that defines a policy issue and presents feasible options or recommendations.
B. Asset-based community development: A concise evidence-informed document that defines a policy issue and presents feasible options or recommendations. / Policy brief: A community-led approach that builds on existing strengths, relationships, and resources.
C. Asset-based community development: A community-led approach that builds on existing strengths, relationships, and resources. / Policy brief: Practical assistance that helps people identify, access, and coordinate appropriate services.
D. Asset-based community development: A community-led approach that builds on existing strengths, relationships, and resources. / Policy brief: A concise evidence-informed document that defines a policy issue and presents feasible options or recommendations.

0028. Which statement shows a sound practice-level distinction between Participatory decision-making and Policy brief?

A. Participatory decision-making: Seeking youth input early and showing how it influenced a service decision. / Policy brief: Helping a youth prepare to state a support need in a meeting.
B. Participatory decision-making: Seeking youth input early and showing how it influenced a service decision. / Policy brief: Summarizing a service gap and actionable recommendations for decision makers.
C. Participatory decision-making: Mapping community skills and networks before designing an outside-led program. / Policy brief: Summarizing a service gap and actionable recommendations for decision makers.
D. Participatory decision-making: Summarizing a service gap and actionable recommendations for decision makers. / Policy brief: Seeking youth input early and showing how it influenced a service decision.

0029. Which description belongs with the term Asset-based community development?

A. Action taken with or on behalf of a person to secure access, rights, or needed services.
B. A community-led approach that builds on existing strengths, relationships, and resources.
C. Practical assistance that helps people identify, access, and coordinate appropriate services.
D. A concise evidence-informed document that defines a policy issue and presents feasible options or recommendations.

0030. How should a practitioner distinguish the applications of Self-advocacy and Service navigation?

A. Self-advocacy: Helping a youth prepare to state a support need in a meeting. / Service navigation: Summarizing a service gap and actionable recommendations for decision makers.
B. Self-advocacy: Mapping community skills and networks before designing an outside-led program. / Service navigation: Clarifying eligibility, referral steps, and follow-up barriers with a family.
C. Self-advocacy: Helping a youth prepare to state a support need in a meeting. / Service navigation: Clarifying eligibility, referral steps, and follow-up barriers with a family.
D. Self-advocacy: Clarifying eligibility, referral steps, and follow-up barriers with a family. / Service navigation: Helping a youth prepare to state a support need in a meeting.

0031. Identify the most precise label for this idea: Efforts to change policies, practices, or resource arrangements that affect groups of people.

A. Systems advocacy
B. Service navigation
C. Coalition building
D. Advocacy ethics

0032. Which option pairs the definitions of Self-advocacy and Youth voice correctly, in that order?

A. Self-advocacy: Meaningful inclusion of young people's perspectives and influence in services and decisions affecting them. / Youth voice: A person's ability and opportunity to communicate needs, preferences, and rights and participate in decisions.
B. Self-advocacy: A person's ability and opportunity to communicate needs, preferences, and rights and participate in decisions. / Youth voice: Meaningful inclusion of young people's perspectives and influence in services and decisions affecting them.
C. Self-advocacy: Practical assistance that helps people identify, access, and coordinate appropriate services. / Youth voice: Meaningful inclusion of young people's perspectives and influence in services and decisions affecting them.
D. Self-advocacy: A person's ability and opportunity to communicate needs, preferences, and rights and participate in decisions. / Youth voice: Including affected young people and families meaningfully in decisions that shape services.

0033. Which statement most accurately defines Youth voice?

A. A community-led approach that builds on existing strengths, relationships, and resources.
B. Efforts to change policies, practices, or resource arrangements that affect groups of people.
C. Meaningful inclusion of young people's perspectives and influence in services and decisions affecting them.
D. A concise evidence-informed document that defines a policy issue and presents feasible options or recommendations.

0034. A doctoral student reads the following description. Which concept does it define? Practical assistance that helps people identify, access, and coordinate appropriate services.

A. Coalition building
B. Self-advocacy
C. Service navigation
D. Advocacy ethics

0035. Choose the response that best puts Self-advocacy into practice.

A. Agreeing on a common goal, roles, and communication practices across partner organizations.
B. Summarizing a service gap and actionable recommendations for decision makers.
C. Clarifying eligibility, referral steps, and follow-up barriers with a family.
D. Helping a youth prepare to state a support need in a meeting.

0036. A case conference asks for a distinction between Policy brief and Youth voice. Which answer is sound?

A. Policy brief: A concise evidence-informed document that defines a policy issue and presents feasible options or recommendations. / Youth voice: Efforts to change policies, practices, or resource arrangements that affect groups of people.
B. Policy brief: A concise evidence-informed document that defines a policy issue and presents feasible options or recommendations. / Youth voice: Meaningful inclusion of young people's perspectives and influence in services and decisions affecting them.
C. Policy brief: Meaningful inclusion of young people's perspectives and influence in services and decisions affecting them. / Youth voice: A concise evidence-informed document that defines a policy issue and presents feasible options or recommendations.
D. Policy brief: Practical assistance that helps people identify, access, and coordinate appropriate services. / Youth voice: Meaningful inclusion of young people's perspectives and influence in services and decisions affecting them.

0037. In a supervision quiz, how should Asset-based community development be distinguished from Service navigation?

A. Asset-based community development: A community-led approach that builds on existing strengths, relationships, and resources. / Service navigation: Practical assistance that helps people identify, access, and coordinate appropriate services.
B. Asset-based community development: Practical assistance that helps people identify, access, and coordinate appropriate services. / Service navigation: A community-led approach that builds on existing strengths, relationships, and resources.
C. Asset-based community development: Action taken with or on behalf of a person to secure access, rights, or needed services. / Service navigation: Practical assistance that helps people identify, access, and coordinate appropriate services.
D. Asset-based community development: A community-led approach that builds on existing strengths, relationships, and resources. / Service navigation: Efforts to change policies, practices, or resource arrangements that affect groups of people.

0038. An interdisciplinary team reviews a young adolescent client's case at the clinical planning session. The counselor recommends mapping community skills and networks before designing an outside-led program. Which course concept best fits?

A. Systems advocacy
B. Asset-based community development
C. Coalition building
D. Individual advocacy

0039. How should a practitioner distinguish the applications of Self-advocacy and Asset-based community development?

A. Self-advocacy: Helping a youth prepare to state a support need in a meeting. / Asset-based community development: Mapping community skills and networks before designing an outside-led program.
B. Self-advocacy: Supporting a family to navigate a referral barrier with the young person's informed involvement. / Asset-based community development: Mapping community skills and networks before designing an outside-led program.
C. Self-advocacy: Mapping community skills and networks before designing an outside-led program. / Asset-based community development: Helping a youth prepare to state a support need in a meeting.
D. Self-advocacy: Helping a youth prepare to state a support need in a meeting. / Asset-based community development: Using documented access barriers to recommend a service-system change.

0040. A supervisor asks how Participatory decision-making would appear in practice. Which choice should be selected?

A. Mapping community skills and networks before designing an outside-led program.
B. Supporting a family to navigate a referral barrier with the young person's informed involvement.
C. Seeking youth input early and showing how it influenced a service decision.
D. Agreeing on a common goal, roles, and communication practices across partner organizations.

0041. Which description belongs with the term Policy brief?

A. A concise evidence-informed document that defines a policy issue and presents feasible options or recommendations.
B. Practical assistance that helps people identify, access, and coordinate appropriate services.
C. Action taken with or on behalf of a person to secure access, rights, or needed services.
D. Efforts to change policies, practices, or resource arrangements that affect groups of people.

0042. Which option preserves the correct meaning of both Participatory decision-making and Coalition building?

A. Participatory decision-making: Meaningful inclusion of young people's perspectives and influence in services and decisions affecting them. / Coalition building: Organizing collaboration among people and groups with aligned interests to pursue shared change.
B. Participatory decision-making: Including affected young people and families meaningfully in decisions that shape services. / Coalition building: Efforts to change policies, practices, or resource arrangements that affect groups of people.
C. Participatory decision-making: Organizing collaboration among people and groups with aligned interests to pursue shared change. / Coalition building: Including affected young people and families meaningfully in decisions that shape services.
D. Participatory decision-making: Including affected young people and families meaningfully in decisions that shape services. / Coalition building: Organizing collaboration among people and groups with aligned interests to pursue shared change.

0043. A case discussion concerns a preadolescent child and a school-based clinician in the multidisciplinary case conference. The practitioner is considering seeking youth input early and showing how it influenced a service decision. Which principle is involved?

A. Youth voice
B. Asset-based community development
C. Participatory decision-making
D. Systems advocacy

0044. At the classroom support meeting, a therapist reviews whether a plan for a young adolescent client is appropriate. The relevant practice is clarifying eligibility, referral steps, and follow-up barriers with a family. Which concept is tested?

A. Advocacy ethics
B. Policy brief
C. Individual advocacy
D. Service navigation

0045. A supervisor asks for an applied contrast between Participatory decision-making and Advocacy ethics. Which option fits?

A. Participatory decision-making: Obtaining permission and discussing foreseeable benefits and risks before speaking on a client's behalf. / Advocacy ethics: Seeking youth input early and showing how it influenced a service decision.
B. Participatory decision-making: Seeking youth input early and showing how it influenced a service decision. / Advocacy ethics: Obtaining permission and discussing foreseeable benefits and risks before speaking on a client's behalf.
C. Participatory decision-making: Seeking youth input early and showing how it influenced a service decision. / Advocacy ethics: Summarizing a service gap and actionable recommendations for decision makers.
D. Participatory decision-making: Helping a youth prepare to state a support need in a meeting. / Advocacy ethics: Obtaining permission and discussing foreseeable benefits and risks before speaking on a client's behalf.

0046. At the school-based service, a counselor meets with a child aged 7. The practice priority is: summarizing a service gap and actionable recommendations for decision makers. Which concept best captures that priority?

A. Youth voice
B. Policy brief
C. Self-advocacy
D. Advocacy ethics

0047. In a case note about a young person aged 10, a supervised trainee working in the learning-support meeting records this priority: creating safe, accessible ways for youth input to shape a program. What principle is reflected?

A. Policy brief
B. Coalition building
C. Youth voice
D. Individual advocacy

0048. A supervisor asks for an applied contrast between Individual advocacy and Systems advocacy. Which option fits?

A. Individual advocacy: Supporting a family to navigate a referral barrier with the young person's informed involvement. / Systems advocacy: Obtaining permission and discussing foreseeable benefits and risks before speaking on a client's behalf.
B. Individual advocacy: Agreeing on a common goal, roles, and communication practices across partner organizations. / Systems advocacy: Using documented access barriers to recommend a service-system change.
C. Individual advocacy: Supporting a family to navigate a referral barrier with the young person's informed involvement. / Systems advocacy: Using documented access barriers to recommend a service-system change.
D. Individual advocacy: Using documented access barriers to recommend a service-system change. / Systems advocacy: Supporting a family to navigate a referral barrier with the young person's informed involvement.

0049. A case conference asks for a distinction between Individual advocacy and Asset-based community development. Which answer is sound?

A. Individual advocacy: A community-led approach that builds on existing strengths, relationships, and resources. / Asset-based community development: Action taken with or on behalf of a person to secure access, rights, or needed services.
B. Individual advocacy: Action taken with or on behalf of a person to secure access, rights, or needed services. / Asset-based community development: Including affected young people and families meaningfully in decisions that shape services.
C. Individual advocacy: Action taken with or on behalf of a person to secure access, rights, or needed services. / Asset-based community development: A community-led approach that builds on existing strengths, relationships, and resources.
D. Individual advocacy: Balancing empowerment, consent, role boundaries, confidentiality, and potential consequences when advocating. / Asset-based community development: A community-led approach that builds on existing strengths, relationships, and resources.

0050. A school support specialist reviews a plan for a young person aged 16 in the counseling practicum. The plan emphasizes mapping community skills and networks before designing an outside-led program. Which course idea does this reflect?

A. Policy brief
B. Individual advocacy
C. Asset-based community development
D. Systems advocacy

0051. A trainee must explain Individual advocacy. Which answer is accurate?

A. Meaningful inclusion of young people's perspectives and influence in services and decisions affecting them.
B. A community-led approach that builds on existing strengths, relationships, and resources.
C. A person's ability and opportunity to communicate needs, preferences, and rights and participate in decisions.
D. Action taken with or on behalf of a person to secure access, rights, or needed services.

0052. A doctoral student reads the following description. Which concept does it define? A person's ability and opportunity to communicate needs, preferences, and rights and participate in decisions.

A. Self-advocacy
B. Policy brief
C. Youth voice
D. Individual advocacy

0053. Which paired example correctly applies Individual advocacy first and Asset-based community development second?

A. Individual advocacy: Obtaining permission and discussing foreseeable benefits and risks before speaking on a client's behalf. / Asset-based community development: Mapping community skills and networks before designing an outside-led program.
B. Individual advocacy: Supporting a family to navigate a referral barrier with the young person's informed involvement. / Asset-based community development: Seeking youth input early and showing how it influenced a service decision.
C. Individual advocacy: Supporting a family to navigate a referral barrier with the young person's informed involvement. / Asset-based community development: Mapping community skills and networks before designing an outside-led program.
D. Individual advocacy: Mapping community skills and networks before designing an outside-led program. / Asset-based community development: Supporting a family to navigate a referral barrier with the young person's informed involvement.

0054. Which pair of actions illustrates Individual advocacy and Youth voice, respectively?

A. Individual advocacy: Creating safe, accessible ways for youth input to shape a program. / Youth voice: Supporting a family to navigate a referral barrier with the young person's informed involvement.
B. Individual advocacy: Supporting a family to navigate a referral barrier with the young person's informed involvement. / Youth voice: Clarifying eligibility, referral steps, and follow-up barriers with a family.
C. Individual advocacy: Using documented access barriers to recommend a service-system change. / Youth voice: Creating safe, accessible ways for youth input to shape a program.
D. Individual advocacy: Supporting a family to navigate a referral barrier with the young person's informed involvement. / Youth voice: Creating safe, accessible ways for youth input to shape a program.

0055. In the student-support meeting, a parent educator is considering this approach for a young person aged 13: agreeing on a common goal, roles, and communication practices across partner organizations. Which framework does it represent?

A. Individual advocacy
B. Participatory decision-making
C. Policy brief
D. Coalition building

0056. Which statement accurately contrasts the course concepts Systems advocacy and Asset-based community development?

A. Systems advocacy: A person's ability and opportunity to communicate needs, preferences, and rights and participate in decisions. / Asset-based community development: A community-led approach that builds on existing strengths, relationships, and resources.
B. Systems advocacy: A community-led approach that builds on existing strengths, relationships, and resources. / Asset-based community development: Efforts to change policies, practices, or resource arrangements that affect groups of people.
C. Systems advocacy: Efforts to change policies, practices, or resource arrangements that affect groups of people. / Asset-based community development: Including affected young people and families meaningfully in decisions that shape services.
D. Systems advocacy: Efforts to change policies, practices, or resource arrangements that affect groups of people. / Asset-based community development: A community-led approach that builds on existing strengths, relationships, and resources.

0057. Which choice aligns each practice with the correct idea, Self-advocacy or Policy brief?

A. Self-advocacy: Creating safe, accessible ways for youth input to shape a program. / Policy brief: Summarizing a service gap and actionable recommendations for decision makers.
B. Self-advocacy: Summarizing a service gap and actionable recommendations for decision makers. / Policy brief: Helping a youth prepare to state a support need in a meeting.
C. Self-advocacy: Helping a youth prepare to state a support need in a meeting. / Policy brief: Summarizing a service gap and actionable recommendations for decision makers.
D. Self-advocacy: Helping a youth prepare to state a support need in a meeting. / Policy brief: Seeking youth input early and showing how it influenced a service decision.

0058. A adolescent student's service team meets in the family session. The case coordinator recommends a change involving summarizing a service gap and actionable recommendations for decision makers. Which idea best explains it?

A. Policy brief
B. Systems advocacy
C. Coalition building
D. Advocacy ethics

0059. Which comparison would correct a trainee’s misunderstanding of Individual advocacy versus Policy brief?

A. Individual advocacy: A concise evidence-informed document that defines a policy issue and presents feasible options or recommendations. / Policy brief: Action taken with or on behalf of a person to secure access, rights, or needed services.
B. Individual advocacy: A person’s ability and opportunity to communicate needs, preferences, and rights and participate in decisions. / Policy brief: A concise evidence-informed document that defines a policy issue and presents feasible options or recommendations.
C. Individual advocacy: Action taken with or on behalf of a person to secure access, rights, or needed services. / Policy brief: Including affected young people and families meaningfully in decisions that shape services.
D. Individual advocacy: Action taken with or on behalf of a person to secure access, rights, or needed services. / Policy brief: A concise evidence-informed document that defines a policy issue and presents feasible options or recommendations.

0060. Choose the practice comparison that best separates Participatory decision-making from Youth voice.

A. Participatory decision-making: Clarifying eligibility, referral steps, and follow-up barriers with a family. / Youth voice: Creating safe, accessible ways for youth input to shape a program.
B. Participatory decision-making: Seeking youth input early and showing how it influenced a service decision. / Youth voice: Supporting a family to navigate a referral barrier with the young person’s informed involvement.
C. Participatory decision-making: Seeking youth input early and showing how it influenced a service decision. / Youth voice: Creating safe, accessible ways for youth input to shape a program.
D. Participatory decision-making: Creating safe, accessible ways for youth input to shape a program. / Youth voice: Seeking youth input early and showing how it influenced a service decision.

0061. A trainee must distinguish how Systems advocacy and Coalition building guide practice. Which comparison is accurate?

A. Systems advocacy: Helping a youth prepare to state a support need in a meeting. / Coalition building: Agreeing on a common goal, roles, and communication practices across partner organizations.
B. Systems advocacy: Using documented access barriers to recommend a service-system change. / Coalition building: Agreeing on a common goal, roles, and communication practices across partner organizations.
C. Systems advocacy: Agreeing on a common goal, roles, and communication practices across partner organizations. / Coalition building: Using documented access barriers to recommend a service-system change.
D. Systems advocacy: Using documented access barriers to recommend a service-system change. / Coalition building: Mapping community skills and networks before designing an outside-led program.

0062. A consultant and a child aged 6 are discussing support in the school counseling office. The selected practice is seeking youth input early and showing how it influenced a service decision. Which concept does this demonstrate?

A. Systems advocacy
B. Self-advocacy
C. Asset-based community development
D. Participatory decision-making

0063. Which comparison would correct a trainee’s misunderstanding of Systems advocacy versus Advocacy ethics?

A. Systems advocacy: Efforts to change policies, practices, or resource arrangements that affect groups of people. / Advocacy ethics: Balancing empowerment, consent, role boundaries, confidentiality, and potential consequences when advocating.
B. Systems advocacy: Balancing empowerment, consent, role boundaries, confidentiality, and potential consequences when advocating. / Advocacy ethics: Efforts to change policies, practices, or resource arrangements that affect groups of people.
C. Systems advocacy: Organizing collaboration among people and groups with aligned interests to pursue shared change. / Advocacy ethics: Balancing empowerment, consent, role boundaries, confidentiality, and potential consequences when advocating.
D. Systems advocacy: Efforts to change policies, practices, or resource arrangements that affect groups of people. / Advocacy ethics: A community-led approach that builds on existing strengths, relationships, and resources.

0064. A case discussion concerns a child aged 7 and a case coordinator in the student-support meeting. The practitioner is considering using documented access barriers to recommend a service-system change. Which principle is involved?

A. Advocacy ethics
B. Asset-based community development
C. Systems advocacy
D. Youth voice

0065. During work in the community youth program, a consulting counselor identifies this need: creating safe, accessible ways for youth input to shape a program. Which idea should guide the response?

A. Youth voice
B. Asset-based community development
C. Policy brief
D. Advocacy ethics

0066. Which option correctly matches each concept to its practice focus: Asset-based community development and Advocacy ethics?

A. Asset-based community development: Mapping community skills and networks before designing an outside-led program. / Advocacy ethics: Obtaining permission and discussing foreseeable benefits and risks before speaking on a client’s behalf.
B. Asset-based community development: Obtaining permission and discussing foreseeable benefits and risks before speaking on a client’s behalf. / Advocacy ethics: Mapping community skills and networks before designing an outside-led program.
C. Asset-based community development: Mapping community skills and networks before designing an outside-led program. / Advocacy ethics: Creating safe, accessible ways for youth input to shape a program.
D. Asset-based community development: Seeking youth input early and showing how it influenced a service decision. / Advocacy ethics: Obtaining permission and discussing foreseeable benefits and risks before speaking on a client’s behalf.

0067. A support meeting for a young person aged 16 includes a clinical supervisor in the clinical planning session. The practice under consideration is obtaining permission and discussing foreseeable benefits and risks before speaking on a client’s behalf. Which concept guides it?

A. Systems advocacy
B. Service navigation
C. Asset-based community development
D. Advocacy ethics

0068. Which option preserves the correct meaning of both Systems advocacy and Advocacy ethics?

A. Systems advocacy: Balancing empowerment, consent, role boundaries, confidentiality, and potential consequences when advocating. / Advocacy ethics: Efforts to change policies, practices, or resource arrangements that affect groups of people.
B. Systems advocacy: Efforts to change policies, practices, or resource arrangements that affect groups of people. / Advocacy ethics: A community-led approach that builds on existing strengths, relationships, and resources.
C. Systems advocacy: Organizing collaboration among people and groups with aligned interests to pursue shared change. / Advocacy ethics: Balancing empowerment, consent, role boundaries, confidentiality, and potential consequences when advocating.
D. Systems advocacy: Efforts to change policies, practices, or resource arrangements that affect groups of people. / Advocacy ethics: Balancing empowerment, consent, role boundaries, confidentiality, and potential consequences when advocating.

0069. A trainee must explain Coalition building. Which answer is accurate?

A. Balancing empowerment, consent, role boundaries, confidentiality, and potential consequences when advocating.
B. A concise evidence-informed document that defines a policy issue and presents feasible options or recommendations.
C. Organizing collaboration among people and groups with aligned interests to pursue shared change.
D. A community-led approach that builds on existing strengths, relationships, and resources.

0070. How should a practitioner distinguish the applications of Asset-based community development and Service navigation?

A. Asset-based community development: Mapping community skills and networks before designing an outside-led program. / Service navigation: Using documented access barriers to recommend a service-system change.
B. Asset-based community development: Supporting a family to navigate a referral barrier with the young person's informed involvement. / Service navigation: Clarifying eligibility, referral steps, and follow-up barriers with a family.
C. Asset-based community development: Clarifying eligibility, referral steps, and follow-up barriers with a family. / Service navigation: Mapping community skills and networks before designing an outside-led program.
D. Asset-based community development: Mapping community skills and networks before designing an outside-led program. / Service navigation: Clarifying eligibility, referral steps, and follow-up barriers with a family.

0071. A therapist describes an intervention for a child aged 14 in the outpatient clinic, centered on using documented access barriers to recommend a service-system change. Which named idea is most relevant?

A. Coalition building
B. Youth voice
C. Systems advocacy
D. Asset-based community development

0072. A program coordinator describes an intervention for a adolescent student in the learning-support meeting, centered on clarifying eligibility, referral steps, and follow-up barriers with a family. Which named idea is most relevant?

A. Advocacy ethics
B. Systems advocacy
C. Youth voice
D. Service navigation

0073. During work in the community mental-health service, a group facilitator identifies this need: helping a youth prepare to state a support need in a meeting. Which idea should guide the response?

A. Service navigation
B. Asset-based community development
C. Policy brief
D. Self-advocacy

0074. A trainee must distinguish how Self-advocacy and Youth voice guide practice. Which comparison is accurate?

A. Self-advocacy: Clarifying eligibility, referral steps, and follow-up barriers with a family. / Youth voice: Creating safe, accessible ways for youth input to shape a program.
B. Self-advocacy: Helping a youth prepare to state a support need in a meeting. / Youth voice: Creating safe, accessible ways for youth input to shape a program.
C. Self-advocacy: Creating safe, accessible ways for youth input to shape a program. / Youth voice: Helping a youth prepare to state a support need in a meeting.
D. Self-advocacy: Helping a youth prepare to state a support need in a meeting. / Youth voice: Seeking youth input early and showing how it influenced a service decision.

0075. While supporting a student aged 12 in the clinical planning session, a family therapist adopts this practice: creating safe, accessible ways for youth input to shape a program. Which concept best explains the choice?

A. Policy brief
B. Individual advocacy
C. Youth voice
D. Advocacy ethics

0076. Which option preserves the correct meaning of both Self-advocacy and Participatory decision-making?

A. Self-advocacy: Including affected young people and families meaningfully in decisions that shape services. / Participatory decision-making: A person's ability and opportunity to communicate needs, preferences, and rights and participate in decisions.
B. Self-advocacy: A person's ability and opportunity to communicate needs, preferences, and rights and participate in decisions. / Participatory decision-making: Organizing collaboration among people and groups with aligned interests to pursue shared change.
C. Self-advocacy: A person's ability and opportunity to communicate needs, preferences, and rights and participate in decisions. / Participatory decision-making: Including affected young people and families meaningfully in decisions that shape services.
D. Self-advocacy: Meaningful inclusion of young people's perspectives and influence in services and decisions affecting them. / Participatory decision-making: Including affected young people and families meaningfully in decisions that shape services.

0077. In a professional consultation about a high-school student, the member of a clinical team describes this response in the community service agency: summarizing a service gap and actionable recommendations for decision makers. Which term is most apt?

A. Service navigation
B. Asset-based community development
C. Advocacy ethics
D. Policy brief

0078. A trainee must choose a practice that exemplifies Service navigation. Which action is the best fit?

A. Obtaining permission and discussing foreseeable benefits and risks before speaking on a client's behalf.
B. Creating safe, accessible ways for youth input to shape a program.
C. Clarifying eligibility, referral steps, and follow-up barriers with a family.
D. Seeking youth input early and showing how it influenced a service decision.

0079. Which option preserves the correct meaning of both Youth voice and Advocacy ethics?

A. Youth voice: Meaningful inclusion of young people's perspectives and influence in services and decisions affecting them. / Advocacy ethics: Practical assistance that helps people identify, access, and coordinate appropriate services.
B. Youth voice: Balancing empowerment, consent, role boundaries, confidentiality, and potential consequences when advocating. / Advocacy ethics: Meaningful inclusion of young people's perspectives and influence in services and decisions affecting them.
C. Youth voice: A community-led approach that builds on existing strengths, relationships, and resources. / Advocacy ethics: Balancing empowerment, consent, role boundaries, confidentiality, and potential consequences when advocating.
D. Youth voice: Meaningful inclusion of young people's perspectives and influence in services and decisions affecting them. / Advocacy ethics: Balancing empowerment, consent, role boundaries, confidentiality, and potential consequences when advocating.

0080. When reviewing a older adolescent client's plan in the youth group, the case coordinator notes that the next step is creating safe, accessible ways for youth input to shape a program. Which concept guides this step?

A. Individual advocacy
B. Youth voice
C. Advocacy ethics
D. Asset-based community development

0081. Which option correctly matches each concept to its practice focus: Systems advocacy and Asset-based community development?

A. Systems advocacy: Using documented access barriers to recommend a service-system change. / Asset-based community development: Mapping community skills and networks before designing an outside-led program.
B. Systems advocacy: Using documented access barriers to recommend a service-system change. / Asset-based community development: Seeking youth input early and showing how it influenced a service decision.
C. Systems advocacy: Helping a youth prepare to state a support need in a meeting. / Asset-based community development: Mapping community skills and networks before designing an outside-led program.
D. Systems advocacy: Mapping community skills and networks before designing an outside-led program. / Asset-based community development: Using documented access barriers to recommend a service-system change.

0082. Which statement accurately contrasts the course concepts Service navigation and Advocacy ethics?

A. Service navigation: Including affected young people and families meaningfully in decisions that shape services. / Advocacy ethics: Balancing empowerment, consent, role boundaries, confidentiality, and potential consequences when advocating.
B. Service navigation: Practical assistance that helps people identify, access, and coordinate appropriate services. / Advocacy ethics: Meaningful inclusion of young people's perspectives and influence in services and decisions affecting them.
C. Service navigation: Practical assistance that helps people identify, access, and coordinate appropriate services. / Advocacy ethics: Balancing empowerment, consent, role boundaries, confidentiality, and potential consequences when advocating.
D. Service navigation: Balancing empowerment, consent, role boundaries, confidentiality, and potential consequences when advocating. / Advocacy ethics: Practical assistance that helps people identify, access, and coordinate appropriate services.

0083. Choose the response that best puts Youth voice into practice.

A. Creating safe, accessible ways for youth input to shape a program.
B. Seeking youth input early and showing how it influenced a service decision.
C. Agreeing on a common goal, roles, and communication practices across partner organizations.
D. Using documented access barriers to recommend a service-system change.

0084. Which pair of actions illustrates Asset-based community development and Coalition building, respectively?

A. Asset-based community development: Helping a youth prepare to state a support need in a meeting. / Coalition building: Agreeing on a common goal, roles, and communication practices across partner organizations.
B. Asset-based community development: Agreeing on a common goal, roles, and communication practices across partner organizations. / Coalition building: Mapping community skills and networks before designing an outside-led program.
C. Asset-based community development: Mapping community skills and networks before designing an outside-led program. / Coalition building: Supporting a family to navigate a referral barrier with the young person's informed involvement.
D. Asset-based community development: Mapping community skills and networks before designing an outside-led program. / Coalition building: Agreeing on a common goal, roles, and communication practices across partner organizations.

0085. In the classroom support meeting, a team asks how a teacher and counselor can support a student aged 17. One proposed action is agreeing on a common goal, roles, and communication practices across partner organizations. Which idea does it represent?

A. Service navigation
B. Youth voice
C. Coalition building
D. Individual advocacy

0086. Which choice aligns each practice with the correct idea, Participatory decision-making or Advocacy ethics?

A. Participatory decision-making: Seeking youth input early and showing how it influenced a service decision. / Advocacy ethics: Summarizing a service gap and actionable recommendations for decision makers.
B. Participatory decision-making: Seeking youth input early and showing how it influenced a service decision. / Advocacy ethics: Obtaining permission and discussing foreseeable benefits and risks before speaking on a client's behalf.
C. Participatory decision-making: Obtaining permission and discussing foreseeable benefits and risks before speaking on a client's behalf. / Advocacy ethics: Seeking youth input early and showing how it influenced a service decision.
D. Participatory decision-making: Helping a youth prepare to state a support need in a meeting. / Advocacy ethics: Obtaining permission and discussing foreseeable benefits and risks before speaking on a client's behalf.

0087. Which paired example correctly applies Asset-based community development first and Youth voice second?

A. Asset-based community development: Mapping community skills and networks before designing an outside-led program. / Youth voice: Agreeing on a common goal, roles, and communication practices across partner organizations.
B. Asset-based community development: Creating safe, accessible ways for youth input to shape a program. / Youth voice: Mapping community skills and networks before designing an outside-led program.
C. Asset-based community development: Mapping community skills and networks before designing an outside-led program. / Youth voice: Creating safe, accessible ways for youth input to shape a program.
D. Asset-based community development: Using documented access barriers to recommend a service-system change. / Youth voice: Creating safe, accessible ways for youth input to shape a program.

0088. In a case note about a child aged 7, a mental-health professional working in the outpatient clinic records this priority: helping a youth prepare to state a support need in a meeting. What principle is reflected?

A. Systems advocacy
B. Policy brief
C. Youth voice
D. Self-advocacy

0089. In a case note about a child aged 14, a consultant working in the child guidance clinic records this priority: summarizing a service gap and actionable recommendations for decision makers. What principle is reflected?

A. Individual advocacy
B. Self-advocacy
C. Systems advocacy
D. Policy brief

0090. While consulting in the student-support meeting, a member of a clinical team supports a child aged 14 by using this approach: supporting a family to navigate a referral barrier with the young person’s informed involvement. Which concept is being applied?

A. Individual advocacy
B. Advocacy ethics
C. Systems advocacy
D. Asset-based community development

0091. A trainee must explain Asset-based community development. Which answer is accurate?

A. Practical assistance that helps people identify, access, and coordinate appropriate services.
B. Efforts to change policies, practices, or resource arrangements that affect groups of people.
C. Including affected young people and families meaningfully in decisions that shape services.
D. A community-led approach that builds on existing strengths, relationships, and resources.

0092. A student aged 15 is receiving support in the youth group. The consulting counselor is guided by this practice: supporting a family to navigate a referral barrier with the young person’s informed involvement. Which principle best fits?

A. Systems advocacy
B. Individual advocacy
C. Youth voice
D. Participatory decision-making

0093. A mental-health professional and a student aged 9 are discussing support in the student-support meeting. The selected practice is summarizing a service gap and actionable recommendations for decision makers. Which concept does this demonstrate?

A. Service navigation
B. Advocacy ethics
C. Coalition building
D. Policy brief

0094. In the community mental-health service, a consulting counselor describes the most appropriate support for a young person aged 18 as clarifying eligibility, referral steps, and follow-up barriers with a family. Which framework is being applied?

A. Participatory decision-making
B. Service navigation
C. Self-advocacy
D. Systems advocacy

0095. Which paired example correctly applies Participatory decision-making first and Service navigation second?

A. Participatory decision-making: Seeking youth input early and showing how it influenced a service decision. / Service navigation: Creating safe, accessible ways for youth input to shape a program.
B. Participatory decision-making: Supporting a family to navigate a referral barrier with the young person’s informed involvement. / Service navigation: Clarifying eligibility, referral steps, and follow-up barriers with a family.
C. Participatory decision-making: Seeking youth input early and showing how it influenced a service decision. / Service navigation: Clarifying eligibility, referral steps, and follow-up barriers with a family.
D. Participatory decision-making: Clarifying eligibility, referral steps, and follow-up barriers with a family. / Service navigation: Seeking youth input early and showing how it influenced a service decision.

0096. In a supervision quiz, how should Systems advocacy be distinguished from Policy brief?

A. Systems advocacy: Meaningful inclusion of young people’s perspectives and influence in services and decisions affecting them. / Policy brief: A concise evidence-informed document that defines a policy issue and presents feasible options or recommendations.
B. Systems advocacy: Efforts to change policies, practices, or resource arrangements that affect groups of people. / Policy brief: A person’s ability and opportunity to communicate needs, preferences, and rights and participate in decisions.
C. Systems advocacy: Efforts to change policies, practices, or resource arrangements that affect groups of people. / Policy brief: A concise evidence-informed document that defines a policy issue and presents feasible options or recommendations.
D. Systems advocacy: A concise evidence-informed document that defines a policy issue and presents feasible options or recommendations. / Policy brief: Efforts to change policies, practices, or resource arrangements that affect groups of people.

0097. Which option correctly matches each concept to its practice focus: Youth voice and Advocacy ethics?

A. Youth voice: Obtaining permission and discussing foreseeable benefits and risks before speaking on a client's behalf. / Advocacy ethics: Creating safe, accessible ways for youth input to shape a program.
B. Youth voice: Creating safe, accessible ways for youth input to shape a program. / Advocacy ethics: Clarifying eligibility, referral steps, and follow-up barriers with a family.
C. Youth voice: Creating safe, accessible ways for youth input to shape a program. / Advocacy ethics: Obtaining permission and discussing foreseeable benefits and risks before speaking on a client's behalf.
D. Youth voice: Mapping community skills and networks before designing an outside-led program. / Advocacy ethics: Obtaining permission and discussing foreseeable benefits and risks before speaking on a client's behalf.

0098. A case discussion concerns a student aged 17 and a school-based clinician in the outpatient clinic. The practitioner is considering creating safe, accessible ways for youth input to shape a program. Which principle is involved?

A. Systems advocacy
B. Individual advocacy
C. Youth voice
D. Self-advocacy

0099. Which comparison would correct a trainee's misunderstanding of Individual advocacy versus Service navigation?

A. Individual advocacy: Action taken with or on behalf of a person to secure access, rights, or needed services. / Service navigation: Practical assistance that helps people identify, access, and coordinate appropriate services.
B. Individual advocacy: A concise evidence-informed document that defines a policy issue and presents feasible options or recommendations. / Service navigation: Practical assistance that helps people identify, access, and coordinate appropriate services.
C. Individual advocacy: Practical assistance that helps people identify, access, and coordinate appropriate services. / Service navigation: Action taken with or on behalf of a person to secure access, rights, or needed services.
D. Individual advocacy: Action taken with or on behalf of a person to secure access, rights, or needed services. / Service navigation: Meaningful inclusion of young people's perspectives and influence in services and decisions affecting them.

0100. A clinical supervisor is asked to evaluate a proposed service for a young person aged 18 in the school consultation. The defining feature is creating safe, accessible ways for youth input to shape a program. Which concept fits?

A. Systems advocacy
B. Asset-based community development
C. Youth voice
D. Coalition building

0101. Which option pairs the definitions of Policy brief and Advocacy ethics correctly, in that order?

A. Policy brief: Balancing empowerment, consent, role boundaries, confidentiality, and potential consequences when advocating. / Advocacy ethics: A concise evidence-informed document that defines a policy issue and presents feasible options or recommendations.
B. Policy brief: Efforts to change policies, practices, or resource arrangements that affect groups of people. / Advocacy ethics: Balancing empowerment, consent, role boundaries, confidentiality, and potential consequences when advocating.
C. Policy brief: A concise evidence-informed document that defines a policy issue and presents feasible options or recommendations. / Advocacy ethics: Balancing empowerment, consent, role boundaries, confidentiality, and potential consequences when advocating.
D. Policy brief: A concise evidence-informed document that defines a policy issue and presents feasible options or recommendations. / Advocacy ethics: Organizing collaboration among people and groups with aligned interests to pursue shared change.

0102. A school support specialist is asked to evaluate a proposed service for a young person aged 16 in the counseling practicum. The defining feature is mapping community skills and networks before designing an outside-led program. Which concept fits?

A. Coalition building
B. Asset-based community development
C. Advocacy ethics
D. Policy brief

0103. A supervised trainee prepares for a session in the after-school program with a preadolescent child. The intended approach is obtaining permission and discussing foreseeable benefits and risks before speaking on a client's behalf. Which concept is most relevant?

A. Asset-based community development
B. Systems advocacy
C. Advocacy ethics
D. Policy brief

0104. Which choice aligns each practice with the correct idea, Systems advocacy or Coalition building?

A. Systems advocacy: Helping a youth prepare to state a support need in a meeting. / Coalition building: Agreeing on a common goal, roles, and communication practices across partner organizations.
B. Systems advocacy: Using documented access barriers to recommend a service-system change. / Coalition building: Agreeing on a common goal, roles, and communication practices across partner organizations.
C. Systems advocacy: Using documented access barriers to recommend a service-system change. / Coalition building: Mapping community skills and networks before designing an outside-led program.
D. Systems advocacy: Agreeing on a common goal, roles, and communication practices across partner organizations. / Coalition building: Using documented access barriers to recommend a service-system change.

0105. A research trainee describes an intervention for a school-age child in the community mental-health service, centered on seeking youth input early and showing how it influenced a service decision. Which named idea is most relevant?

A. Participatory decision-making
B. Asset-based community development
C. Youth voice
D. Self-advocacy

0106. A member of a clinical team is preparing a follow-up plan for a child aged 7 in the youth group. The plan calls for clarifying eligibility, referral steps, and follow-up barriers with a family. Which concept names this approach?

A. Participatory decision-making
B. Advocacy ethics
C. Systems advocacy
D. Service navigation

0107. Which comparison would correct a trainee’s misunderstanding of Systems advocacy versus Coalition building?

A. Systems advocacy: Efforts to change policies, practices, or resource arrangements that affect groups of people. / Coalition building: A community-led approach that builds on existing strengths, relationships, and resources.
B. Systems advocacy: Organizing collaboration among people and groups with aligned interests to pursue shared change. / Coalition building: Efforts to change policies, practices, or resource arrangements that affect groups of people.
C. Systems advocacy: Efforts to change policies, practices, or resource arrangements that affect groups of people. / Coalition building: Organizing collaboration among people and groups with aligned interests to pursue shared change.
D. Systems advocacy: A person’s ability and opportunity to communicate needs, preferences, and rights and participate in decisions. / Coalition building: Organizing collaboration among people and groups with aligned interests to pursue shared change.

0108. Which pair of actions illustrates Systems advocacy and Asset-based community development, respectively?

A. Systems advocacy: Mapping community skills and networks before designing an outside-led program. / Asset-based community development: Using documented access barriers to recommend a service-system change.
B. Systems advocacy: Helping a youth prepare to state a support need in a meeting. / Asset-based community development: Mapping community skills and networks before designing an outside-led program.
C. Systems advocacy: Using documented access barriers to recommend a service-system change. / Asset-based community development: Seeking youth input early and showing how it influenced a service decision.
D. Systems advocacy: Using documented access barriers to recommend a service-system change. / Asset-based community development: Mapping community skills and networks before designing an outside-led program.

0109. How should a practitioner distinguish the applications of Coalition building and Service navigation?

A. Coalition building: Creating safe, accessible ways for youth input to shape a program. / Service navigation: Clarifying eligibility, referral steps, and follow-up barriers with a family.
B. Coalition building: Agreeing on a common goal, roles, and communication practices across partner organizations. / Service navigation: Clarifying eligibility, referral steps, and follow-up barriers with a family.
C. Coalition building: Clarifying eligibility, referral steps, and follow-up barriers with a family. / Service navigation: Agreeing on a common goal, roles, and communication practices across partner organizations.
D. Coalition building: Agreeing on a common goal, roles, and communication practices across partner organizations. / Service navigation: Helping a youth prepare to state a support need in a meeting.

0110. Which option pairs the definitions of Participatory decision-making and Youth voice correctly, in that order?

A. Participatory decision-making: Practical assistance that helps people identify, access, and coordinate appropriate services. / Youth voice: Meaningful inclusion of young people’s perspectives and influence in services and decisions affecting them.
B. Participatory decision-making: Including affected young people and families meaningfully in decisions that shape services. / Youth voice: Action taken with or on behalf of a person to secure access, rights, or needed services.
C. Participatory decision-making: Including affected young people and families meaningfully in decisions that shape services. / Youth voice: Meaningful inclusion of young people’s perspectives and influence in services and decisions affecting them.
D. Participatory decision-making: Meaningful inclusion of young people’s perspectives and influence in services and decisions affecting them. / Youth voice: Including affected young people and families meaningfully in decisions that shape services.

0111. A trainee must choose a practice that exemplifies Advocacy ethics. Which action is the best fit?

A. Agreeing on a common goal, roles, and communication practices across partner organizations.
B. Seeking youth input early and showing how it influenced a service decision.
C. Mapping community skills and networks before designing an outside-led program.
D. Obtaining permission and discussing foreseeable benefits and risks before speaking on a client’s behalf.

0112. In a supervision quiz, how should Self-advocacy be distinguished from Coalition building?

A. Self-advocacy: A person’s ability and opportunity to communicate needs, preferences, and rights and participate in decisions. / Coalition building: Organizing collaboration among people and groups with aligned interests to pursue shared change.
B. Self-advocacy: A person’s ability and opportunity to communicate needs, preferences, and rights and participate in decisions. / Coalition building: Including affected young people and families meaningfully in decisions that shape services.
C. Self-advocacy: A concise evidence-informed document that defines a policy issue and presents feasible options or recommendations. / Coalition building: Organizing collaboration among people and groups with aligned interests to pursue shared change.
D. Self-advocacy: Organizing collaboration among people and groups with aligned interests to pursue shared change. / Coalition building: A person’s ability and opportunity to communicate needs, preferences, and rights and participate in decisions.

0113. A support meeting for a student aged 17 includes a behavior specialist in the community youth program. The practice under consideration is helping a youth prepare to state a support need in a meeting. Which concept guides it?

A. Systems advocacy
B. Self-advocacy
C. Youth voice
D. Individual advocacy

0114. While supporting a student aged 9 in the classroom support meeting, a case coordinator adopts this practice: mapping community skills and networks before designing an outside-led program. Which concept best explains the choice?

A. Coalition building
B. Self-advocacy
C. Advocacy ethics
D. Asset-based community development

0115. A service team discusses a child aged 6 in the community service agency. Their proposed next step is mapping community skills and networks before designing an outside-led program. Which course concept supports it?

A. Youth voice
B. Asset-based community development
C. Systems advocacy
D. Self-advocacy

0116. What is the central meaning of Participatory decision-making?

A. Including affected young people and families meaningfully in decisions that shape services.
B. Balancing empowerment, consent, role boundaries, confidentiality, and potential consequences when advocating.
C. Meaningful inclusion of young people’s perspectives and influence in services and decisions affecting them.
D. Organizing collaboration among people and groups with aligned interests to pursue shared change.

0117. In a supervision quiz, how should Individual advocacy be distinguished from Systems advocacy?

A. Individual advocacy: Efforts to change policies, practices, or resource arrangements that affect groups of people. / Systems advocacy: Action taken with or on behalf of a person to secure access, rights, or needed services.
B. Individual advocacy: Action taken with or on behalf of a person to secure access, rights, or needed services. / Systems advocacy: Efforts to change policies, practices, or resource arrangements that affect groups of people.
C. Individual advocacy: Organizing collaboration among people and groups with aligned interests to pursue shared change. / Systems advocacy: Efforts to change policies, practices, or resource arrangements that affect groups of people.
D. Individual advocacy: Action taken with or on behalf of a person to secure access, rights, or needed services. / Systems advocacy: Balancing empowerment, consent, role boundaries, confidentiality, and potential consequences when advocating.

0118. A program coordinator describes an intervention for a young adolescent client in the telehealth session, centered on helping a youth prepare to state a support need in a meeting. Which named idea is most relevant?

A. Self-advocacy
B. Youth voice
C. Service navigation
D. Asset-based community development

0119. A community practitioner is asked what should shape a middle-school student's support in the community mental-health service. The proposed focus is creating safe, accessible ways for youth input to shape a program. Which principle does it represent?

A. Systems advocacy
B. Youth voice
C. Self-advocacy
D. Advocacy ethics

0120. An interdisciplinary team reviews a student aged 17's case at the student-support meeting. The play therapist recommends clarifying eligibility, referral steps, and follow-up barriers with a family. Which course concept best fits?

A. Self-advocacy
B. Policy brief
C. Service navigation
D. Participatory decision-making

0121. When reviewing a student aged 12's plan in the counseling practicum, the case coordinator notes that the next step is seeking youth input early and showing how it influenced a service decision. Which concept guides this step?

A. Self-advocacy
B. Youth voice
C. Participatory decision-making
D. Asset-based community development

0122. A student confuses Self-advocacy with Participatory decision-making. Which explanation most accurately separates them?

A. Self-advocacy: Meaningful inclusion of young people's perspectives and influence in services and decisions affecting them. / Participatory decision-making: Including affected young people and families meaningfully in decisions that shape services.
B. Self-advocacy: A person's ability and opportunity to communicate needs, preferences, and rights and participate in decisions. / Participatory decision-making: Including affected young people and families meaningfully in decisions that shape services.
C. Self-advocacy: A person's ability and opportunity to communicate needs, preferences, and rights and participate in decisions. / Participatory decision-making: Organizing collaboration among people and groups with aligned interests to pursue shared change.
D. Self-advocacy: Including affected young people and families meaningfully in decisions that shape services. / Participatory decision-making: A person's ability and opportunity to communicate needs, preferences, and rights and participate in decisions.

0123. How should a practitioner distinguish the applications of Systems advocacy and Policy brief?

A. Systems advocacy: Summarizing a service gap and actionable recommendations for decision makers. / Policy brief: Using documented access barriers to recommend a service-system change.
B. Systems advocacy: Using documented access barriers to recommend a service-system change. / Policy brief: Summarizing a service gap and actionable recommendations for decision makers.
C. Systems advocacy: Creating safe, accessible ways for youth input to shape a program. / Policy brief: Summarizing a service gap and actionable recommendations for decision makers.
D. Systems advocacy: Using documented access barriers to recommend a service-system change. / Policy brief: Helping a youth prepare to state a support need in a meeting.

0124. A client in late adolescence's service team meets in the multidisciplinary case conference. The caregiver working with a counselor recommends a change involving creating safe, accessible ways for youth input to shape a program. Which idea best explains it?

A. Advocacy ethics
B. Asset-based community development
C. Service navigation
D. Youth voice

0125. A child aged 7 is receiving support in the student wellness team. The group facilitator is guided by this practice: mapping community skills and networks before designing an outside-led program. Which principle best fits?

A. Policy brief
B. Service navigation
C. Youth voice
D. Asset-based community development

0126. How should a practitioner distinguish the applications of Systems advocacy and Asset-based community development?

A. Systems advocacy: Helping a youth prepare to state a support need in a meeting. / Asset-based community development: Mapping community skills and networks before designing an outside-led program.
B. Systems advocacy: Using documented access barriers to recommend a service-system change. / Asset-based community development: Seeking youth input early and showing how it influenced a service decision.
C. Systems advocacy: Using documented access barriers to recommend a service-system change. / Asset-based community development: Mapping community skills and networks before designing an outside-led program.
D. Systems advocacy: Mapping community skills and networks before designing an outside-led program. / Asset-based community development: Using documented access barriers to recommend a service-system change.

0127. Consider a young person receiving help in the outpatient clinic. The youth worker focuses on summarizing a service gap and actionable recommendations for decision makers. Which term best describes the guiding idea?

A. Service navigation
B. Policy brief
C. Self-advocacy
D. Youth voice

0128. In a supervision quiz, how should Asset-based community development be distinguished from Policy brief?

A. Asset-based community development: A concise evidence-informed document that defines a policy issue and presents feasible options or recommendations. / Policy brief: A community-led approach that builds on existing strengths, relationships, and resources.
B. Asset-based community development: Organizing collaboration among people and groups with aligned interests to pursue shared change. / Policy brief: A concise evidence-informed document that defines a policy issue and presents feasible options or recommendations.
C. Asset-based community development: A community-led approach that builds on existing strengths, relationships, and resources. / Policy brief: A concise evidence-informed document that defines a policy issue and presents feasible options or recommendations.
D. Asset-based community development: A community-led approach that builds on existing strengths, relationships, and resources. / Policy brief: Practical assistance that helps people identify, access, and coordinate appropriate services.

0129. A school-age child's service team meets in the family resource center. The parent educator recommends a change involving using documented access barriers to recommend a service-system change. Which idea best explains it?

A. Coalition building
B. Individual advocacy
C. Youth voice
D. Systems advocacy

0130. Which statement accurately contrasts the course concepts Individual advocacy and Policy brief?

A. Individual advocacy: Action taken with or on behalf of a person to secure access, rights, or needed services. / Policy brief: Including affected young people and families meaningfully in decisions that shape services.
B. Individual advocacy: A person's ability and opportunity to communicate needs, preferences, and rights and participate in decisions. / Policy brief: A concise evidence-informed document that defines a policy issue and presents feasible options or recommendations.
C. Individual advocacy: Action taken with or on behalf of a person to secure access, rights, or needed services. / Policy brief: A concise evidence-informed document that defines a policy issue and presents feasible options or recommendations.
D. Individual advocacy: A concise evidence-informed document that defines a policy issue and presents feasible options or recommendations. / Policy brief: Action taken with or on behalf of a person to secure access, rights, or needed services.

0131. Which choice aligns each practice with the correct idea, Individual advocacy or Self-advocacy?

A. Individual advocacy: Creating safe, accessible ways for youth input to shape a program. / Self-advocacy: Helping a youth prepare to state a support need in a meeting.
B. Individual advocacy: Supporting a family to navigate a referral barrier with the young person's informed involvement. / Self-advocacy: Helping a youth prepare to state a support need in a meeting.
C. Individual advocacy: Helping a youth prepare to state a support need in a meeting. / Self-advocacy: Supporting a family to navigate a referral barrier with the young person's informed involvement.
D. Individual advocacy: Supporting a family to navigate a referral barrier with the young person's informed involvement. / Self-advocacy: Clarifying eligibility, referral steps, and follow-up barriers with a family.

0132. In the school consultation, the agreed focus for a research trainee working with a student aged 12 is supporting a family to navigate a referral barrier with the young person's informed involvement. Which concept names this focus?

A. Systems advocacy
B. Advocacy ethics
C. Individual advocacy
D. Asset-based community development

0133. In the learning-support meeting, a youth worker explains why a client in late adolescence would benefit from agreeing on a common goal, roles, and communication practices across partner organizations. Which course concept underpins the explanation?

A. Asset-based community development
B. Advocacy ethics
C. Self-advocacy
D. Coalition building

0134. In a supervision quiz, how should Systems advocacy be distinguished from Coalition building?

A. Systems advocacy: A person's ability and opportunity to communicate needs, preferences, and rights and participate in decisions. / Coalition building: Organizing collaboration among people and groups with aligned interests to pursue shared change.
B. Systems advocacy: Efforts to change policies, practices, or resource arrangements that affect groups of people. / Coalition building: A community-led approach that builds on existing strengths, relationships, and resources.
C. Systems advocacy: Efforts to change policies, practices, or resource arrangements that affect groups of people. / Coalition building: Organizing collaboration among people and groups with aligned interests to pursue shared change.
D. Systems advocacy: Organizing collaboration among people and groups with aligned interests to pursue shared change. / Coalition building: Efforts to change policies, practices, or resource arrangements that affect groups of people.

0135. In the community service agency, a school counselor describes the most appropriate support for a young person aged 16 as seeking youth input early and showing how it influenced a service decision. Which framework is being applied?

A. Systems advocacy
B. Youth voice
C. Self-advocacy
D. Participatory decision-making

0136. A case conference asks for a distinction between Asset-based community development and Youth voice. Which answer is sound?

A. Asset-based community development: A community-led approach that builds on existing strengths, relationships, and resources. / Youth voice: Meaningful inclusion of young people's perspectives and influence in services and decisions affecting them.
B. Asset-based community development: Efforts to change policies, practices, or resource arrangements that affect groups of people. / Youth voice: Meaningful inclusion of young people's perspectives and influence in services and decisions affecting them.
C. Asset-based community development: A community-led approach that builds on existing strengths, relationships, and resources. / Youth voice: Organizing collaboration among people and groups with aligned interests to pursue shared change.
D. Asset-based community development: Meaningful inclusion of young people's perspectives and influence in services and decisions affecting them. / Youth voice: A community-led approach that builds on existing strengths, relationships, and resources.

0137. A middle-school student and a consultant are reviewing goals in the youth group. The agreed action is helping a youth prepare to state a support need in a meeting. Which principle best accounts for it?

A. Service navigation
B. Participatory decision-making
C. Self-advocacy
D. Individual advocacy

0138. A service team discusses a high-school student in the multidisciplinary case conference. Their proposed next step is using documented access barriers to recommend a service-system change. Which course concept supports it?

A. Individual advocacy
B. Policy brief
C. Systems advocacy
D. Coalition building

0139. A team must select a support approach for a young adolescent client at the behavior-support review. The family therapist recommends summarizing a service gap and actionable recommendations for decision makers. Which idea is most relevant?

A. Individual advocacy
B. Self-advocacy
C. Service navigation
D. Policy brief

0140. Which option is the clearest practical expression of Asset-based community development?

A. Mapping community skills and networks before designing an outside-led program.
B. Clarifying eligibility, referral steps, and follow-up barriers with a family.
C. Helping a youth prepare to state a support need in a meeting.
D. Obtaining permission and discussing foreseeable benefits and risks before speaking on a client's behalf.

0141. A consulting counselor is asked to justify a plan for a older adolescent client in the school-based service. It calls for agreeing on a common goal, roles, and communication practices across partner organizations. Which concept provides the rationale?

A. Self-advocacy
B. Service navigation
C. Advocacy ethics
D. Coalition building

0142. A student confuses Participatory decision-making with Service navigation. Which explanation most accurately separates them?

A. Participatory decision-making: Including affected young people and families meaningfully in decisions that shape services. / Service navigation: Practical assistance that helps people identify, access, and coordinate appropriate services.
B. Participatory decision-making: Practical assistance that helps people identify, access, and coordinate appropriate services. / Service navigation: Including affected young people and families meaningfully in decisions that shape services.
C. Participatory decision-making: Action taken with or on behalf of a person to secure access, rights, or needed services. / Service navigation: Practical assistance that helps people identify, access, and coordinate appropriate services.
D. Participatory decision-making: Including affected young people and families meaningfully in decisions that shape services. / Service navigation: Meaningful inclusion of young people's perspectives and influence in services and decisions affecting them.

0143. A case conference asks for a distinction between Systems advocacy and Service navigation. Which answer is sound?

A. Systems advocacy: Practical assistance that helps people identify, access, and coordinate appropriate services. / Service navigation: Efforts to change policies, practices, or resource arrangements that affect groups of people.
B. Systems advocacy: Efforts to change policies, practices, or resource arrangements that affect groups of people. / Service navigation: Practical assistance that helps people identify, access, and coordinate appropriate services.
C. Systems advocacy: A community-led approach that builds on existing strengths, relationships, and resources. / Service navigation: Practical assistance that helps people identify, access, and coordinate appropriate services.
D. Systems advocacy: Efforts to change policies, practices, or resource arrangements that affect groups of people. / Service navigation: Meaningful inclusion of young people's perspectives and influence in services and decisions affecting them.

0144. During service review in the community service agency, a therapist describes obtaining permission and discussing foreseeable benefits and risks before speaking on a client's behalf. for a student aged 15. Which course idea is most applicable?

A. Advocacy ethics
B. Systems advocacy
C. Service navigation
D. Policy brief

0145. Which option pairs the definitions of Self-advocacy and Service navigation correctly, in that order?

A. Self-advocacy: A person's ability and opportunity to communicate needs, preferences, and rights and participate in decisions. / Service navigation: A concise evidence-informed document that defines a policy issue and presents feasible options or recommendations.
B. Self-advocacy: A community-led approach that builds on existing strengths, relationships, and resources. / Service navigation: Practical assistance that helps people identify, access, and coordinate appropriate services.
C. Self-advocacy: A person's ability and opportunity to communicate needs, preferences, and rights and participate in decisions. / Service navigation: Practical assistance that helps people identify, access, and coordinate appropriate services.
D. Self-advocacy: Practical assistance that helps people identify, access, and coordinate appropriate services. / Service navigation: A person's ability and opportunity to communicate needs, preferences, and rights and participate in decisions.

0146. A case discussion concerns a young adolescent client and a family therapist in the behavior-support review. The practitioner is considering summarizing a service gap and actionable recommendations for decision makers. Which principle is involved?

A. Advocacy ethics
B. Asset-based community development
C. Policy brief
D. Service navigation

0147. A trainee must explain Advocacy ethics. Which answer is accurate?

A. Balancing empowerment, consent, role boundaries, confidentiality, and potential consequences when advocating.
B. Action taken with or on behalf of a person to secure access, rights, or needed services.
C. Practical assistance that helps people identify, access, and coordinate appropriate services.
D. A concise evidence-informed document that defines a policy issue and presents feasible options or recommendations.

0148. In the parent meeting, a team asks how a youth worker can support a child aged 14. One proposed action is helping a youth prepare to state a support need in a meeting. Which idea does it represent?

A. Systems advocacy
B. Policy brief
C. Advocacy ethics
D. Self-advocacy

0149. A teacher and counselor is explaining a choice to a teenage client and caregiver in the after-school program. The choice centers on helping a youth prepare to state a support need in a meeting. Which idea is illustrated?

A. Policy brief
B. Individual advocacy
C. Asset-based community development
D. Self-advocacy

0150. When reviewing a middle-school student's plan in the child guidance clinic, the caregiver working with a counselor notes that the next step is using documented access barriers to recommend a service-system change. Which concept guides this step?

A. Advocacy ethics
B. Individual advocacy
C. Systems advocacy
D. Self-advocacy

0151. A trainee must distinguish how Participatory decision-making and Coalition building guide practice. Which comparison is accurate?

A. Participatory decision-making: Seeking youth input early and showing how it influenced a service decision. / Coalition building: Agreeing on a common goal, roles, and communication practices across partner organizations.
B. Participatory decision-making: Agreeing on a common goal, roles, and communication practices across partner organizations. / Coalition building: Seeking youth input early and showing how it influenced a service decision.
C. Participatory decision-making: Creating safe, accessible ways for youth input to shape a program. / Coalition building: Agreeing on a common goal, roles, and communication practices across partner organizations.
D. Participatory decision-making: Seeking youth input early and showing how it influenced a service decision. / Coalition building: Using documented access barriers to recommend a service-system change.

0152. Which statement most accurately defines Participatory decision-making?

A. Including affected young people and families meaningfully in decisions that shape services.
B. Action taken with or on behalf of a person to secure access, rights, or needed services.
C. Balancing empowerment, consent, role boundaries, confidentiality, and potential consequences when advocating.
D. A person's ability and opportunity to communicate needs, preferences, and rights and participate in decisions.

0153. A trainee must distinguish how Youth voice and Advocacy ethics guide practice. Which comparison is accurate?

A. Youth voice: Creating safe, accessible ways for youth input to shape a program. / Advocacy ethics: Clarifying eligibility, referral steps, and follow-up barriers with a family.
B. Youth voice: Creating safe, accessible ways for youth input to shape a program. / Advocacy ethics: Obtaining permission and discussing foreseeable benefits and risks before speaking on a client's behalf.
C. Youth voice: Mapping community skills and networks before designing an outside-led program. / Advocacy ethics: Obtaining permission and discussing foreseeable benefits and risks before speaking on a client's behalf.
D. Youth voice: Obtaining permission and discussing foreseeable benefits and risks before speaking on a client's behalf. / Advocacy ethics: Creating safe, accessible ways for youth input to shape a program.

0154. For a older adolescent client seen in the student wellness team, the research trainee recommends a plan built around summarizing a service gap and actionable recommendations for decision makers. Which concept is reflected?

A. Policy brief
B. Coalition building
C. Advocacy ethics
D. Individual advocacy

0155. Choose the definition pair that correctly explains Asset-based community development first and Youth voice second.

A. Asset-based community development: A community-led approach that builds on existing strengths, relationships, and resources. / Youth voice: Organizing collaboration among people and groups with aligned interests to pursue shared change.
B. Asset-based community development: Efforts to change policies, practices, or resource arrangements that affect groups of people. / Youth voice: Meaningful inclusion of young people's perspectives and influence in services and decisions affecting them.
C. Asset-based community development: A community-led approach that builds on existing strengths, relationships, and resources. / Youth voice: Meaningful inclusion of young people's perspectives and influence in services and decisions affecting them.
D. Asset-based community development: Meaningful inclusion of young people's perspectives and influence in services and decisions affecting them. / Youth voice: A community-led approach that builds on existing strengths, relationships, and resources.

0156. How should a practitioner distinguish the applications of Self-advocacy and Coalition building?

A. Self-advocacy: Agreeing on a common goal, roles, and communication practices across partner organizations. / Coalition building: Helping a youth prepare to state a support need in a meeting.
B. Self-advocacy: Summarizing a service gap and actionable recommendations for decision makers. / Coalition building: Agreeing on a common goal, roles, and communication practices across partner organizations.
C. Self-advocacy: Helping a youth prepare to state a support need in a meeting. / Coalition building: Seeking youth input early and showing how it influenced a service decision.
D. Self-advocacy: Helping a youth prepare to state a support need in a meeting. / Coalition building: Agreeing on a common goal, roles, and communication practices across partner organizations.

0157. A mental-health professional is preparing a follow-up plan for a student aged 15 in the learning-support meeting. The plan calls for seeking youth input early and showing how it influenced a service decision. Which concept names this approach?

A. Youth voice
B. Participatory decision-making
C. Asset-based community development
D. Systems advocacy

0158. A caregiver working with a counselor presents a support plan for a child aged 11 at the community mental-health service. Its central feature is summarizing a service gap and actionable recommendations for decision makers. Which concept should be named?

A. Systems advocacy
B. Policy brief
C. Individual advocacy
D. Service navigation

0159. Which pair of actions illustrates Self-advocacy and Asset-based community development, respectively?

A. Self-advocacy: Helping a youth prepare to state a support need in a meeting. / Asset-based community development: Mapping community skills and networks before designing an outside-led program.
B. Self-advocacy: Supporting a family to navigate a referral barrier with the young person's informed involvement. / Asset-based community development: Mapping community skills and networks before designing an outside-led program.
C. Self-advocacy: Helping a youth prepare to state a support need in a meeting. / Asset-based community development: Using documented access barriers to recommend a service-system change.
D. Self-advocacy: Mapping community skills and networks before designing an outside-led program. / Asset-based community development: Helping a youth prepare to state a support need in a meeting.

0160. Choose the practice comparison that best separates Participatory decision-making from Service navigation.

A. Participatory decision-making: Seeking youth input early and showing how it influenced a service decision. / Service navigation: Creating safe, accessible ways for youth input to shape a program.
B. Participatory decision-making: Supporting a family to navigate a referral barrier with the young person's informed involvement. / Service navigation: Clarifying eligibility, referral steps, and follow-up barriers with a family.
C. Participatory decision-making: Seeking youth input early and showing how it influenced a service decision. / Service navigation: Clarifying eligibility, referral steps, and follow-up barriers with a family.
D. Participatory decision-making: Clarifying eligibility, referral steps, and follow-up barriers with a family. / Service navigation: Seeking youth input early and showing how it influenced a service decision.

0161. In a supervision review, a case coordinator describes work with a older adolescent client in the youth group: creating safe, accessible ways for youth input to shape a program. What concept is illustrated?

A. Policy brief
B. Coalition building
C. Youth voice
D. Asset-based community development

0162. How should a practitioner distinguish the applications of Participatory decision-making and Youth voice?

A. Participatory decision-making: Creating safe, accessible ways for youth input to shape a program. / Youth voice: Seeking youth input early and showing how it influenced a service decision.
B. Participatory decision-making: Seeking youth input early and showing how it influenced a service decision. / Youth voice: Supporting a family to navigate a referral barrier with the young person's informed involvement.
C. Participatory decision-making: Clarifying eligibility, referral steps, and follow-up barriers with a family. / Youth voice: Creating safe, accessible ways for youth input to shape a program.
D. Participatory decision-making: Seeking youth input early and showing how it influenced a service decision. / Youth voice: Creating safe, accessible ways for youth input to shape a program.

0163. A behavior specialist reviews a plan for a child aged 6 in the community mental-health service. The plan emphasizes using documented access barriers to recommend a service-system change. Which course idea does this reflect?

A. Service navigation
B. Advocacy ethics
C. Systems advocacy
D. Policy brief

0164. At the after-school program, a program coordinator reviews whether a plan for a school-age child is appropriate. The relevant practice is creating safe, accessible ways for youth input to shape a program. Which concept is tested?

A. Individual advocacy
B. Participatory decision-making
C. Policy brief
D. Youth voice

0165. Which applied comparison correctly identifies what belongs to Self-advocacy versus Coalition building?

A. Self-advocacy: Summarizing a service gap and actionable recommendations for decision makers. / Coalition building: Agreeing on a common goal, roles, and communication practices across partner organizations.
B. Self-advocacy: Helping a youth prepare to state a support need in a meeting. / Coalition building: Agreeing on a common goal, roles, and communication practices across partner organizations.
C. Self-advocacy: Helping a youth prepare to state a support need in a meeting. / Coalition building: Seeking youth input early and showing how it influenced a service decision.
D. Self-advocacy: Agreeing on a common goal, roles, and communication practices across partner organizations. / Coalition building: Helping a youth prepare to state a support need in a meeting.

0166. In the telehealth session, a youth worker explains why a student aged 17 would benefit from using documented access barriers to recommend a service-system change. Which course concept underpins the explanation?

A. Participatory decision-making
B. Systems advocacy
C. Service navigation
D. Individual advocacy

0167. A service team discusses a young person aged 16 in the telehealth session. Their proposed next step is clarifying eligibility, referral steps, and follow-up barriers with a family. Which course concept supports it?

A. Service navigation
B. Self-advocacy
C. Individual advocacy
D. Advocacy ethics

0168. In a professional consultation about a adolescent student, the mental-health professional describes this response in the youth advocacy program: agreeing on a common goal, roles, and communication practices across partner organizations. Which term is most apt?

A. Individual advocacy
B. Coalition building
C. Systems advocacy
D. Policy brief

0169. Which option correctly matches each concept to its practice focus: Participatory decision-making and Policy brief?

A. Participatory decision-making: Summarizing a service gap and actionable recommendations for decision makers. / Policy brief: Seeking youth input early and showing how it influenced a service decision.
B. Participatory decision-making: Seeking youth input early and showing how it influenced a service decision. / Policy brief: Helping a youth prepare to state a support need in a meeting.
C. Participatory decision-making: Mapping community skills and networks before designing an outside-led program. / Policy brief: Summarizing a service gap and actionable recommendations for decision makers.
D. Participatory decision-making: Seeking youth input early and showing how it influenced a service decision. / Policy brief: Summarizing a service gap and actionable recommendations for decision makers.

0170. A case conference reviews a therapist's work with a child aged 11 in the learning-support meeting: helping a youth prepare to state a support need in a meeting. Which principle is central?

A. Participatory decision-making
B. Self-advocacy
C. Advocacy ethics
D. Asset-based community development

0171. Which option is the clearest practical expression of Service navigation?

A. Obtaining permission and discussing foreseeable benefits and risks before speaking on a client's behalf.
B. Summarizing a service gap and actionable recommendations for decision makers.
C. Clarifying eligibility, referral steps, and follow-up barriers with a family.
D. Creating safe, accessible ways for youth input to shape a program.

0172. For a older adolescent client in the child guidance clinic, a clinical supervisor makes this practice the immediate priority: clarifying eligibility, referral steps, and follow-up barriers with a family. Which concept fits best?

A. Advocacy ethics
B. Self-advocacy
C. Policy brief
D. Service navigation

0173. A case conference reviews a service navigator's work with a child aged 14 in the youth group: agreeing on a common goal, roles, and communication practices across partner organizations. Which principle is central?

A. Self-advocacy
B. Participatory decision-making
C. Advocacy ethics
D. Coalition building

0174. Which choice aligns each practice with the correct idea, Individual advocacy or Participatory decision-making?

A. Individual advocacy: Supporting a family to navigate a referral barrier with the young person's informed involvement. / Participatory decision-making: Obtaining permission and discussing foreseeable benefits and risks before speaking on a client's behalf.
B. Individual advocacy: Creating safe, accessible ways for youth input to shape a program. / Participatory decision-making: Seeking youth input early and showing how it influenced a service decision.
C. Individual advocacy: Supporting a family to navigate a referral barrier with the young person's informed involvement. / Participatory decision-making: Seeking youth input early and showing how it influenced a service decision.
D. Individual advocacy: Seeking youth input early and showing how it influenced a service decision. / Participatory decision-making: Supporting a family to navigate a referral barrier with the young person's informed involvement.

0175. A support meeting for a young person aged 13 includes a school support specialist in the classroom support meeting. The practice under consideration is summarizing a service gap and actionable recommendations for decision makers. Which concept guides it?

A. Asset-based community development
B. Policy brief
C. Participatory decision-making
D. Systems advocacy

0176. In a case note about a child of elementary-school age, a supervised trainee working in the telehealth session records this priority: seeking youth input early and showing how it influenced a service decision. What principle is reflected?

A. Participatory decision-making
B. Coalition building
C. Individual advocacy
D. Service navigation

0177. Consider a middle-school student receiving help in the youth advocacy program. The teacher and counselor focuses on mapping community skills and networks before designing an outside-led program. Which term best describes the guiding idea?

A. Policy brief
B. Participatory decision-making
C. Asset-based community development
D. Youth voice

0178. A service team discusses a adolescent student in the school-based service. Their proposed next step is helping a youth prepare to state a support need in a meeting. Which course concept supports it?

A. Self-advocacy
B. Youth voice
C. Service navigation
D. Asset-based community development

0179. Choose the practice comparison that best separates Individual advocacy from Coalition building.

A. Individual advocacy: Helping a youth prepare to state a support need in a meeting. / Coalition building: Agreeing on a common goal, roles, and communication practices across partner organizations.
B. Individual advocacy: Supporting a family to navigate a referral barrier with the young person’s informed involvement. / Coalition building: Agreeing on a common goal, roles, and communication practices across partner organizations.
C. Individual advocacy: Supporting a family to navigate a referral barrier with the young person’s informed involvement. / Coalition building: Obtaining permission and discussing foreseeable benefits and risks before speaking on a client’s behalf.
D. Individual advocacy: Agreeing on a common goal, roles, and communication practices across partner organizations. / Coalition building: Supporting a family to navigate a referral barrier with the young person’s informed involvement.

0180. While consulting in the school-based service, a assessment clinician supports a young person aged 10 by using this approach: seeking youth input early and showing how it influenced a service decision. Which concept is being applied?

A. Participatory decision-making
B. Coalition building
C. Advocacy ethics
D. Youth voice

0181. A student confuses Individual advocacy with Youth voice. Which explanation most accurately separates them?

A. Individual advocacy: Action taken with or on behalf of a person to secure access, rights, or needed services. / Youth voice: Meaningful inclusion of young people’s perspectives and influence in services and decisions affecting them.
B. Individual advocacy: Efforts to change policies, practices, or resource arrangements that affect groups of people. / Youth voice: Meaningful inclusion of young people’s perspectives and influence in services and decisions affecting them.
C. Individual advocacy: Meaningful inclusion of young people’s perspectives and influence in services and decisions affecting them. / Youth voice: Action taken with or on behalf of a person to secure access, rights, or needed services.
D. Individual advocacy: Action taken with or on behalf of a person to secure access, rights, or needed services. / Youth voice: Practical assistance that helps people identify, access, and coordinate appropriate services.

0182. At the community service agency, a school support specialist meets with a preadolescent child. The practice priority is: clarifying eligibility, referral steps, and follow-up barriers with a family. Which concept best captures that priority?

A. Asset-based community development
B. Coalition building
C. Service navigation
D. Advocacy ethics

0183. While consulting in the telehealth session, a assessment clinician supports a child aged 6 by using this approach: creating safe, accessible ways for youth input to shape a program. Which concept is being applied?

A. Asset-based community development
B. Youth voice
C. Self-advocacy
D. Policy brief

0184. Which comparison correctly distinguishes Participatory decision-making from Youth voice?

A. Participatory decision-making: Meaningful inclusion of young people’s perspectives and influence in services and decisions affecting them. / Youth voice: Including affected young people and families meaningfully in decisions that shape services.
B. Participatory decision-making: Practical assistance that helps people identify, access, and coordinate appropriate services. / Youth voice: Meaningful inclusion of young people’s perspectives and influence in services and decisions affecting them.
C. Participatory decision-making: Including affected young people and families meaningfully in decisions that shape services. / Youth voice: Action taken with or on behalf of a person to secure access, rights, or needed services.
D. Participatory decision-making: Including affected young people and families meaningfully in decisions that shape services. / Youth voice: Meaningful inclusion of young people’s perspectives and influence in services and decisions affecting them.

0185. Which comparison correctly distinguishes Self-advocacy from Asset-based community development?

A. Self-advocacy: A person's ability and opportunity to communicate needs, preferences, and rights and participate in decisions. / Asset-based community development: Efforts to change policies, practices, or resource arrangements that affect groups of people.
B. Self-advocacy: A person's ability and opportunity to communicate needs, preferences, and rights and participate in decisions. / Asset-based community development: A community-led approach that builds on existing strengths, relationships, and resources.
C. Self-advocacy: A community-led approach that builds on existing strengths, relationships, and resources. / Asset-based community development: A person's ability and opportunity to communicate needs, preferences, and rights and participate in decisions.
D. Self-advocacy: Action taken with or on behalf of a person to secure access, rights, or needed services. / Asset-based community development: A community-led approach that builds on existing strengths, relationships, and resources.

0186. Choose the term that matches this definition: A concise evidence-informed document that defines a policy issue and presents feasible options or recommendations.

A. Self-advocacy
B. Participatory decision-making
C. Policy brief
D. Coalition building

0187. For a client in early adolescence in the outpatient clinic, a play therapist makes this practice the immediate priority: mapping community skills and networks before designing an outside-led program. Which concept fits best?

A. Asset-based community development
B. Participatory decision-making
C. Youth voice
D. Individual advocacy

0188. A supervisor asks for an applied contrast between Policy brief and Advocacy ethics. Which option fits?

A. Policy brief: Summarizing a service gap and actionable recommendations for decision makers. / Advocacy ethics: Obtaining permission and discussing foreseeable benefits and risks before speaking on a client's behalf.
B. Policy brief: Summarizing a service gap and actionable recommendations for decision makers. / Advocacy ethics: Agreeing on a common goal, roles, and communication practices across partner organizations.
C. Policy brief: Obtaining permission and discussing foreseeable benefits and risks before speaking on a client's behalf. / Advocacy ethics: Summarizing a service gap and actionable recommendations for decision makers.
D. Policy brief: Using documented access barriers to recommend a service-system change. / Advocacy ethics: Obtaining permission and discussing foreseeable benefits and risks before speaking on a client's behalf.

0189. In the supervision meeting, a teacher and counselor describes the most appropriate support for a child aged 8 as obtaining permission and discussing foreseeable benefits and risks before speaking on a client's behalf. Which framework is being applied?

A. Coalition building
B. Policy brief
C. Participatory decision-making
D. Advocacy ethics

0190. Which option pairs the definitions of Self-advocacy and Asset-based community development correctly, in that order?

A. Self-advocacy: A person's ability and opportunity to communicate needs, preferences, and rights and participate in decisions. / Asset-based community development: A community-led approach that builds on existing strengths, relationships, and resources.
B. Self-advocacy: A person's ability and opportunity to communicate needs, preferences, and rights and participate in decisions. / Asset-based community development: Efforts to change policies, practices, or resource arrangements that affect groups of people.
C. Self-advocacy: Action taken with or on behalf of a person to secure access, rights, or needed services. / Asset-based community development: A community-led approach that builds on existing strengths, relationships, and resources.
D. Self-advocacy: A community-led approach that builds on existing strengths, relationships, and resources. / Asset-based community development: A person's ability and opportunity to communicate needs, preferences, and rights and participate in decisions.

0191. Which comparison would correct a trainee's misunderstanding of Policy brief versus Coalition building?

A. Policy brief: A concise evidence-informed document that defines a policy issue and presents feasible options or recommendations. / Coalition building: Organizing collaboration among people and groups with aligned interests to pursue shared change.
B. Policy brief: A concise evidence-informed document that defines a policy issue and presents feasible options or recommendations. / Coalition building: A person's ability and opportunity to communicate needs, preferences, and rights and participate in decisions.
C. Policy brief: Balancing empowerment, consent, role boundaries, confidentiality, and potential consequences when advocating. / Coalition building: Organizing collaboration among people and groups with aligned interests to pursue shared change.
D. Policy brief: Organizing collaboration among people and groups with aligned interests to pursue shared change. / Coalition building: A concise evidence-informed document that defines a policy issue and presents feasible options or recommendations.

0192. Which applied comparison correctly identifies what belongs to Participatory decision-making versus Asset-based community development?

A. Participatory decision-making: Seeking youth input early and showing how it influenced a service decision. / Asset-based community development: Mapping community skills and networks before designing an outside-led program.
B. Participatory decision-making: Supporting a family to navigate a referral barrier with the young person's informed involvement. / Asset-based community development: Mapping community skills and networks before designing an outside-led program.
C. Participatory decision-making: Mapping community skills and networks before designing an outside-led program. / Asset-based community development: Seeking youth input early and showing how it influenced a service decision.
D. Participatory decision-making: Seeking youth input early and showing how it influenced a service decision. / Asset-based community development: Using documented access barriers to recommend a service-system change.

0193. A case conference asks for a distinction between Participatory decision-making and Service navigation. Which answer is sound?

A. Participatory decision-making: Action taken with or on behalf of a person to secure access, rights, or needed services. / Service navigation: Practical assistance that helps people identify, access, and coordinate appropriate services.
B. Participatory decision-making: Practical assistance that helps people identify, access, and coordinate appropriate services. / Service navigation: Including affected young people and families meaningfully in decisions that shape services.
C. Participatory decision-making: Including affected young people and families meaningfully in decisions that shape services. / Service navigation: Practical assistance that helps people identify, access, and coordinate appropriate services.
D. Participatory decision-making: Including affected young people and families meaningfully in decisions that shape services. / Service navigation: Meaningful inclusion of young people's perspectives and influence in services and decisions affecting them.

0194. Choose the term that matches this definition: Efforts to change policies, practices, or resource arrangements that affect groups of people.

A. Service navigation
B. Systems advocacy
C. Asset-based community development
D. Policy brief

0195. How are Participatory decision-making and Advocacy ethics most accurately differentiated in this curriculum?

A. Participatory decision-making: A person's ability and opportunity to communicate needs, preferences, and rights and participate in decisions. / Advocacy ethics: Balancing empowerment, consent, role boundaries, confidentiality, and potential consequences when advocating.
B. Participatory decision-making: Including affected young people and families meaningfully in decisions that shape services. / Advocacy ethics: A concise evidence-informed document that defines a policy issue and presents feasible options or recommendations.
C. Participatory decision-making: Balancing empowerment, consent, role boundaries, confidentiality, and potential consequences when advocating. / Advocacy ethics: Including affected young people and families meaningfully in decisions that shape services.
D. Participatory decision-making: Including affected young people and families meaningfully in decisions that shape services. / Advocacy ethics: Balancing empowerment, consent, role boundaries, confidentiality, and potential consequences when advocating.

0196. In a supervision quiz, how should Individual advocacy be distinguished from Self-advocacy?

A. Individual advocacy: Action taken with or on behalf of a person to secure access, rights, or needed services. / Self-advocacy: A person's ability and opportunity to communicate needs, preferences, and rights and participate in decisions.
B. Individual advocacy: Action taken with or on behalf of a person to secure access, rights, or needed services. / Self-advocacy: Practical assistance that helps people identify, access, and coordinate appropriate services.
C. Individual advocacy: Meaningful inclusion of young people's perspectives and influence in services and decisions affecting them. / Self-advocacy: A person's ability and opportunity to communicate needs, preferences, and rights and participate in decisions.
D. Individual advocacy: A person's ability and opportunity to communicate needs, preferences, and rights and participate in decisions. / Self-advocacy: Action taken with or on behalf of a person to secure access, rights, or needed services.

0197. Which option preserves the correct meaning of both Policy brief and Coalition building?

A. Policy brief: Organizing collaboration among people and groups with aligned interests to pursue shared change. / Coalition building: A concise evidence-informed document that defines a policy issue and presents feasible options or recommendations.
B. Policy brief: A concise evidence-informed document that defines a policy issue and presents feasible options or recommendations. / Coalition building: A person's ability and opportunity to communicate needs, preferences, and rights and participate in decisions.
C. Policy brief: A concise evidence-informed document that defines a policy issue and presents feasible options or recommendations. / Coalition building: Organizing collaboration among people and groups with aligned interests to pursue shared change.
D. Policy brief: Balancing empowerment, consent, role boundaries, confidentiality, and potential consequences when advocating. / Coalition building: Organizing collaboration among people and groups with aligned interests to pursue shared change.

0198. Which choice aligns each practice with the correct idea, Asset-based community development or Coalition building?

A. Asset-based community development: Mapping community skills and networks before designing an outside-led program. / Coalition building: Agreeing on a common goal, roles, and communication practices across partner organizations.
B. Asset-based community development: Mapping community skills and networks before designing an outside-led program. / Coalition building: Supporting a family to navigate a referral barrier with the young person's informed involvement.
C. Asset-based community development: Helping a youth prepare to state a support need in a meeting. / Coalition building: Agreeing on a common goal, roles, and communication practices across partner organizations.
D. Asset-based community development: Agreeing on a common goal, roles, and communication practices across partner organizations. / Coalition building: Mapping community skills and networks before designing an outside-led program.

0199. Which option correctly matches each concept to its practice focus: Asset-based community development and Coalition building?

A. Asset-based community development: Helping a youth prepare to state a support need in a meeting. / Coalition building: Agreeing on a common goal, roles, and communication practices across partner organizations.
B. Asset-based community development: Mapping community skills and networks before designing an outside-led program. / Coalition building: Agreeing on a common goal, roles, and communication practices across partner organizations.
C. Asset-based community development: Mapping community skills and networks before designing an outside-led program. / Coalition building: Supporting a family to navigate a referral barrier with the young person's informed involvement.
D. Asset-based community development: Agreeing on a common goal, roles, and communication practices across partner organizations. / Coalition building: Mapping community skills and networks before designing an outside-led program.

0200. Which option correctly matches each concept to its practice focus: Service navigation and Youth voice?

A. Service navigation: Agreeing on a common goal, roles, and communication practices across partner organizations. / Youth voice: Creating safe, accessible ways for youth input to shape a program.
B. Service navigation: Clarifying eligibility, referral steps, and follow-up barriers with a family. / Youth voice: Seeking youth input early and showing how it influenced a service decision.
C. Service navigation: Creating safe, accessible ways for youth input to shape a program. / Youth voice: Clarifying eligibility, referral steps, and follow-up barriers with a family.
D. Service navigation: Clarifying eligibility, referral steps, and follow-up barriers with a family. / Youth voice: Creating safe, accessible ways for youth input to shape a program.

0201. In the school consultation, a team asks how a consulting counselor can support a school-age child. One proposed action is mapping community skills and networks before designing an outside-led program. Which idea does it represent?

A. Systems advocacy
B. Asset-based community development
C. Coalition building
D. Policy brief

0202. Which paired example correctly applies Self-advocacy first and Participatory decision-making second?

A. Self-advocacy: Creating safe, accessible ways for youth input to shape a program. / Participatory decision-making: Seeking youth input early and showing how it influenced a service decision.
B. Self-advocacy: Seeking youth input early and showing how it influenced a service decision. / Participatory decision-making: Helping a youth prepare to state a support need in a meeting.
C. Self-advocacy: Helping a youth prepare to state a support need in a meeting. / Participatory decision-making: Agreeing on a common goal, roles, and communication practices across partner organizations.
D. Self-advocacy: Helping a youth prepare to state a support need in a meeting. / Participatory decision-making: Seeking youth input early and showing how it influenced a service decision.

0203. A student confuses Coalition building with Youth voice. Which explanation most accurately separates them?

A. Coalition building: Organizing collaboration among people and groups with aligned interests to pursue shared change. / Youth voice: Meaningful inclusion of young people's perspectives and influence in services and decisions affecting them.
B. Coalition building: Organizing collaboration among people and groups with aligned interests to pursue shared change. / Youth voice: Action taken with or on behalf of a person to secure access, rights, or needed services.
C. Coalition building: Practical assistance that helps people identify, access, and coordinate appropriate services. / Youth voice: Meaningful inclusion of young people's perspectives and influence in services and decisions affecting them.
D. Coalition building: Meaningful inclusion of young people's perspectives and influence in services and decisions affecting them. / Youth voice: Organizing collaboration among people and groups with aligned interests to pursue shared change.

0204. Choose the practice comparison that best separates Participatory decision-making from Policy brief.

A. Participatory decision-making: Mapping community skills and networks before designing an outside-led program. / Policy brief: Summarizing a service gap and actionable recommendations for decision makers.
B. Participatory decision-making: Summarizing a service gap and actionable recommendations for decision makers. / Policy brief: Seeking youth input early and showing how it influenced a service decision.
C. Participatory decision-making: Seeking youth input early and showing how it influenced a service decision. / Policy brief: Helping a youth prepare to state a support need in a meeting.
D. Participatory decision-making: Seeking youth input early and showing how it influenced a service decision. / Policy brief: Summarizing a service gap and actionable recommendations for decision makers.

0205. A program coordinator is asked what should shape a student aged 9's support in the outpatient clinic. The proposed focus is agreeing on a common goal, roles, and communication practices across partner organizations. Which principle does it represent?

A. Coalition building
B. Systems advocacy
C. Self-advocacy
D. Youth voice

0206. A trainee must explain Service navigation. Which answer is accurate?

A. Practical assistance that helps people identify, access, and coordinate appropriate services.
B. Including affected young people and families meaningfully in decisions that shape services.
C. Meaningful inclusion of young people's perspectives and influence in services and decisions affecting them.
D. A community-led approach that builds on existing strengths, relationships, and resources.

0207. A assessment clinician and a young person aged 13 are discussing support in the clinical planning session. The selected practice is helping a youth prepare to state a support need in a meeting. Which concept does this demonstrate?

A. Advocacy ethics
B. Service navigation
C. Self-advocacy
D. Participatory decision-making

0208. A parent educator presents a support plan for a older adolescent client at the outpatient clinic. Its central feature is seeking youth input early and showing how it influenced a service decision. Which concept should be named?

A. Coalition building
B. Advocacy ethics
C. Individual advocacy
D. Participatory decision-making

0209. Which applied comparison correctly identifies what belongs to Individual advocacy versus Participatory decision-making?

A. Individual advocacy: Supporting a family to navigate a referral barrier with the young person's informed involvement. / Participatory decision-making: Seeking youth input early and showing how it influenced a service decision.
B. Individual advocacy: Supporting a family to navigate a referral barrier with the young person's informed involvement. / Participatory decision-making: Obtaining permission and discussing foreseeable benefits and risks before speaking on a client's behalf.
C. Individual advocacy: Seeking youth input early and showing how it influenced a service decision. / Participatory decision-making: Supporting a family to navigate a referral barrier with the young person's informed involvement.
D. Individual advocacy: Creating safe, accessible ways for youth input to shape a program. / Participatory decision-making: Seeking youth input early and showing how it influenced a service decision.

0210. A teacher and counselor is asked to justify a plan for a client in early adolescence in the student-support meeting. It calls for seeking youth input early and showing how it influenced a service decision. Which concept provides the rationale?

A. Systems advocacy
B. Asset-based community development
C. Coalition building
D. Participatory decision-making

0211. Which statement accurately contrasts the course concepts Systems advocacy and Coalition building?

A. Systems advocacy: Organizing collaboration among people and groups with aligned interests to pursue shared change. / Coalition building: Efforts to change policies, practices, or resource arrangements that affect groups of people.
B. Systems advocacy: Efforts to change policies, practices, or resource arrangements that affect groups of people. / Coalition building: Organizing collaboration among people and groups with aligned interests to pursue shared change.
C. Systems advocacy: A person's ability and opportunity to communicate needs, preferences, and rights and participate in decisions. / Coalition building: Organizing collaboration among people and groups with aligned interests to pursue shared change.
D. Systems advocacy: Efforts to change policies, practices, or resource arrangements that affect groups of people. / Coalition building: A community-led approach that builds on existing strengths, relationships, and resources.

0212. Select the best explanation of Systems advocacy.

A. Balancing empowerment, consent, role boundaries, confidentiality, and potential consequences when advocating.
B. A concise evidence-informed document that defines a policy issue and presents feasible options or recommendations.
C. Efforts to change policies, practices, or resource arrangements that affect groups of people.
D. Practical assistance that helps people identify, access, and coordinate appropriate services.

0213. An interdisciplinary team reviews a preadolescent child's case at the family resource center. The play therapist recommends helping a youth prepare to state a support need in a meeting. Which course concept best fits?

A. Youth voice
B. Service navigation
C. Self-advocacy
D. Coalition building

0214. Which pair of actions illustrates Systems advocacy and Participatory decision-making, respectively?

A. Systems advocacy: Using documented access barriers to recommend a service-system change. / Participatory decision-making: Seeking youth input early and showing how it influenced a service decision.
B. Systems advocacy: Using documented access barriers to recommend a service-system change. / Participatory decision-making: Supporting a family to navigate a referral barrier with the young person's informed involvement.
C. Systems advocacy: Creating safe, accessible ways for youth input to shape a program. / Participatory decision-making: Seeking youth input early and showing how it influenced a service decision.
D. Systems advocacy: Seeking youth input early and showing how it influenced a service decision. / Participatory decision-making: Using documented access barriers to recommend a service-system change.

0215. A behavior specialist reviews a plan for a young person in the parent meeting. The plan emphasizes agreeing on a common goal, roles, and communication practices across partner organizations. Which course idea does this reflect?

A. Individual advocacy
B. Participatory decision-making
C. Systems advocacy
D. Coalition building

0216. A young adolescent client is receiving support in the student-support meeting. The youth worker is guided by this practice: creating safe, accessible ways for youth input to shape a program. Which principle best fits?

A. Individual advocacy
B. Coalition building
C. Youth voice
D. Self-advocacy

0217. In a supervision review, a school-based clinician describes work with a young person aged 16 in the community mental-health service: supporting a family to navigate a referral barrier with the young person's informed involvement. What concept is illustrated?

A. Service navigation
B. Advocacy ethics
C. Youth voice
D. Individual advocacy

0218. Which description belongs with the term Individual advocacy?

A. Balancing empowerment, consent, role boundaries, confidentiality, and potential consequences when advocating.
B. Action taken with or on behalf of a person to secure access, rights, or needed services.
C. A concise evidence-informed document that defines a policy issue and presents feasible options or recommendations.
D. A community-led approach that builds on existing strengths, relationships, and resources.

0219. Which paired example correctly applies Participatory decision-making first and Asset-based community development second?

A. Participatory decision-making: Seeking youth input early and showing how it influenced a service decision. / Asset-based community development: Using documented access barriers to recommend a service-system change.
B. Participatory decision-making: Mapping community skills and networks before designing an outside-led program. / Asset-based community development: Seeking youth input early and showing how it influenced a service decision.
C. Participatory decision-making: Seeking youth input early and showing how it influenced a service decision. / Asset-based community development: Mapping community skills and networks before designing an outside-led program.
D. Participatory decision-making: Supporting a family to navigate a referral barrier with the young person's informed involvement. / Asset-based community development: Mapping community skills and networks before designing an outside-led program.

0220. A group facilitator is explaining a choice to a school-age child and caregiver in the caregiver consultation. The choice centers on obtaining permission and discussing foreseeable benefits and risks before speaking on a client's behalf. Which idea is illustrated?

A. Self-advocacy
B. Advocacy ethics
C. Youth voice
D. Coalition building

0221. For a teenage client seen in the clinical planning session, the community practitioner recommends a plan built around agreeing on a common goal, roles, and communication practices across partner organizations. Which concept is reflected?

A. Advocacy ethics
B. Policy brief
C. Service navigation
D. Coalition building

0222. Which option pairs the definitions of Self-advocacy and Policy brief correctly, in that order?

A. Self-advocacy: Meaningful inclusion of young people's perspectives and influence in services and decisions affecting them. / Policy brief: A concise evidence-informed document that defines a policy issue and presents feasible options or recommendations.
B. Self-advocacy: A person's ability and opportunity to communicate needs, preferences, and rights and participate in decisions. / Policy brief: A concise evidence-informed document that defines a policy issue and presents feasible options or recommendations.
C. Self-advocacy: A person's ability and opportunity to communicate needs, preferences, and rights and participate in decisions. / Policy brief: Including affected young people and families meaningfully in decisions that shape services.
D. Self-advocacy: A concise evidence-informed document that defines a policy issue and presents feasible options or recommendations. / Policy brief: A person's ability and opportunity to communicate needs, preferences, and rights and participate in decisions.

0223. In a supervision quiz, how should Coalition building be distinguished from Advocacy ethics?

A. Coalition building: Balancing empowerment, consent, role boundaries, confidentiality, and potential consequences when advocating. / Advocacy ethics: Organizing collaboration among people and groups with aligned interests to pursue shared change.
B. Coalition building: Including affected young people and families meaningfully in decisions that shape services. / Advocacy ethics: Balancing empowerment, consent, role boundaries, confidentiality, and potential consequences when advocating.
C. Coalition building: Organizing collaboration among people and groups with aligned interests to pursue shared change. / Advocacy ethics: Balancing empowerment, consent, role boundaries, confidentiality, and potential consequences when advocating.
D. Coalition building: Organizing collaboration among people and groups with aligned interests to pursue shared change. / Advocacy ethics: A community-led approach that builds on existing strengths, relationships, and resources.

0224. A teacher and counselor is asked to justify a plan for a child aged 11 in the community service agency. It calls for creating safe, accessible ways for youth input to shape a program. Which concept provides the rationale?

A. Youth voice
B. Individual advocacy
C. Self-advocacy
D. Advocacy ethics

0225. What is the central meaning of Systems advocacy?

A. A person’s ability and opportunity to communicate needs, preferences, and rights and participate in decisions.
B. Meaningful inclusion of young people’s perspectives and influence in services and decisions affecting them.
C. A concise evidence-informed document that defines a policy issue and presents feasible options or recommendations.
D. Efforts to change policies, practices, or resource arrangements that affect groups of people.

0226. A older adolescent client and a mental-health professional are reviewing goals in the family session. The agreed action is obtaining permission and discussing foreseeable benefits and risks before speaking on a client’s behalf. Which principle best accounts for it?

A. Advocacy ethics
B. Service navigation
C. Coalition building
D. Participatory decision-making

0227. Which choice aligns each practice with the correct idea, Asset-based community development or Youth voice?

A. Asset-based community development: Creating safe, accessible ways for youth input to shape a program. / Youth voice: Mapping community skills and networks before designing an outside-led program.
B. Asset-based community development: Mapping community skills and networks before designing an outside-led program. / Youth voice: Creating safe, accessible ways for youth input to shape a program.
C. Asset-based community development: Using documented access barriers to recommend a service-system change. / Youth voice: Creating safe, accessible ways for youth input to shape a program.
D. Asset-based community development: Mapping community skills and networks before designing an outside-led program. / Youth voice: Agreeing on a common goal, roles, and communication practices across partner organizations.

0228. A student aged 17’s service team meets in the clinical planning session. The caregiver working with a counselor recommends a change involving seeking youth input early and showing how it influenced a service decision. Which idea best explains it?

A. Asset-based community development
B. Participatory decision-making
C. Self-advocacy
D. Advocacy ethics

0229. In the student wellness team, a school-based clinician is considering this approach for a young person aged 10: helping a youth prepare to state a support need in a meeting. Which framework does it represent?

A. Asset-based community development
B. Self-advocacy
C. Policy brief
D. Coalition building

0230. In the counseling practicum, a teacher and counselor explains why a child aged 6 would benefit from summarizing a service gap and actionable recommendations for decision makers. Which course concept underpins the explanation?

A. Individual advocacy
B. Youth voice
C. Asset-based community development
D. Policy brief

0231. A mental-health professional and a high-school student are discussing support in the family resource center. The selected practice is supporting a family to navigate a referral barrier with the young person’s informed involvement. Which concept does this demonstrate?

A. Asset-based community development
B. Individual advocacy
C. Youth voice
D. Systems advocacy

0232. A case discussion concerns a child of elementary-school age and a parent educator in the caregiver consultation. The practitioner is considering helping a youth prepare to state a support need in a meeting. Which principle is involved?

A. Asset-based community development
B. Self-advocacy
C. Individual advocacy
D. Service navigation

0233. Identify the most precise label for this idea: A concise evidence-informed document that defines a policy issue and presents feasible options or recommendations.

A. Individual advocacy
B. Policy brief
C. Advocacy ethics
D. Service navigation

0234. A case conference reviews a community practitioner’s work with a preadolescent child in the school consultation: summarizing a service gap and actionable recommendations for decision makers. Which principle is central?

A. Advocacy ethics
B. Policy brief
C. Participatory decision-making
D. Individual advocacy

0235. A planning meeting about a young person aged 10 includes a school support specialist. The proposed practice in the family session is agreeing on a common goal, roles, and communication practices across partner organizations. Which idea underlies it?

A. Coalition building
B. Individual advocacy
C. Participatory decision-making
D. Youth voice

0236. How are Self-advocacy and Policy brief most accurately differentiated in this curriculum?

A. Self-advocacy: A person’s ability and opportunity to communicate needs, preferences, and rights and participate in decisions. / Policy brief: Including affected young people and families meaningfully in decisions that shape services.
B. Self-advocacy: A person’s ability and opportunity to communicate needs, preferences, and rights and participate in decisions. / Policy brief: A concise evidence-informed document that defines a policy issue and presents feasible options or recommendations.
C. Self-advocacy: Meaningful inclusion of young people’s perspectives and influence in services and decisions affecting them. / Policy brief: A concise evidence-informed document that defines a policy issue and presents feasible options or recommendations.
D. Self-advocacy: A concise evidence-informed document that defines a policy issue and presents feasible options or recommendations. / Policy brief: A person’s ability and opportunity to communicate needs, preferences, and rights and participate in decisions.

0237. How should a practitioner distinguish the applications of Service navigation and Youth voice?

A. Service navigation: Clarifying eligibility, referral steps, and follow-up barriers with a family. / Youth voice: Creating safe, accessible ways for youth input to shape a program.
B. Service navigation: Creating safe, accessible ways for youth input to shape a program. / Youth voice: Clarifying eligibility, referral steps, and follow-up barriers with a family.
C. Service navigation: Clarifying eligibility, referral steps, and follow-up barriers with a family. / Youth voice: Seeking youth input early and showing how it influenced a service decision.
D. Service navigation: Agreeing on a common goal, roles, and communication practices across partner organizations. / Youth voice: Creating safe, accessible ways for youth input to shape a program.

0238. How are Policy brief and Youth voice most accurately differentiated in this curriculum?

A. Policy brief: A concise evidence-informed document that defines a policy issue and presents feasible options or recommendations. / Youth voice: Meaningful inclusion of young people’s perspectives and influence in services and decisions affecting them.
B. Policy brief: Practical assistance that helps people identify, access, and coordinate appropriate services. / Youth voice: Meaningful inclusion of young people’s perspectives and influence in services and decisions affecting them.
C. Policy brief: Meaningful inclusion of young people’s perspectives and influence in services and decisions affecting them. / Youth voice: A concise evidence-informed document that defines a policy issue and presents feasible options or recommendations.
D. Policy brief: A concise evidence-informed document that defines a policy issue and presents feasible options or recommendations. / Youth voice: Efforts to change policies, practices, or resource arrangements that affect groups of people.

0239. A student confuses Systems advocacy with Participatory decision-making. Which explanation most accurately separates them?

A. Systems advocacy: Meaningful inclusion of young people’s perspectives and influence in services and decisions affecting them. / Participatory decision-making: Including affected young people and families meaningfully in decisions that shape services.
B. Systems advocacy: Efforts to change policies, practices, or resource arrangements that affect groups of people. / Participatory decision-making: Action taken with or on behalf of a person to secure access, rights, or needed services.
C. Systems advocacy: Efforts to change policies, practices, or resource arrangements that affect groups of people. / Participatory decision-making: Including affected young people and families meaningfully in decisions that shape services.
D. Systems advocacy: Including affected young people and families meaningfully in decisions that shape services. / Participatory decision-making: Efforts to change policies, practices, or resource arrangements that affect groups of people.

0240. Choose the practice comparison that best separates Policy brief from Coalition building.

A. Policy brief: Summarizing a service gap and actionable recommendations for decision makers. / Coalition building: Agreeing on a common goal, roles, and communication practices across partner organizations.
B. Policy brief: Summarizing a service gap and actionable recommendations for decision makers. / Coalition building: Helping a youth prepare to state a support need in a meeting.
C. Policy brief: Agreeing on a common goal, roles, and communication practices across partner organizations. / Coalition building: Summarizing a service gap and actionable recommendations for decision makers.
D. Policy brief: Obtaining permission and discussing foreseeable benefits and risks before speaking on a client’s behalf. / Coalition building: Agreeing on a common goal, roles, and communication practices across partner organizations.

0241. A doctoral student reads the following description. Which concept does it define? Including affected young people and families meaningfully in decisions that shape services.

A. Youth voice
B. Participatory decision-making
C. Individual advocacy
D. Self-advocacy

0242. A planning meeting about a child aged 7 includes a clinical supervisor. The proposed practice in the classroom support meeting is supporting a family to navigate a referral barrier with the young person’s informed involvement. Which idea underlies it?

A. Self-advocacy
B. Coalition building
C. Policy brief
D. Individual advocacy

0243. For a child aged 7 seen in the family session, the therapist recommends a plan built around creating safe, accessible ways for youth input to shape a program. Which concept is reflected?

A. Coalition building
B. Advocacy ethics
C. Asset-based community development
D. Youth voice

0244. An interdisciplinary team reviews a young person aged 10’s case at the family session. The school support specialist recommends agreeing on a common goal, roles, and communication practices across partner organizations. Which course concept best fits?

A. Advocacy ethics
B. Service navigation
C. Participatory decision-making
D. Coalition building

0245. A student confuses Coalition building with Advocacy ethics. Which explanation most accurately separates them?

A. Coalition building: Including affected young people and families meaningfully in decisions that shape services. / Advocacy ethics: Balancing empowerment, consent, role boundaries, confidentiality, and potential consequences when advocating.
B. Coalition building: Balancing empowerment, consent, role boundaries, confidentiality, and potential consequences when advocating. / Advocacy ethics: Organizing collaboration among people and groups with aligned interests to pursue shared change.
C. Coalition building: Organizing collaboration among people and groups with aligned interests to pursue shared change. / Advocacy ethics: A community-led approach that builds on existing strengths, relationships, and resources.
D. Coalition building: Organizing collaboration among people and groups with aligned interests to pursue shared change. / Advocacy ethics: Balancing empowerment, consent, role boundaries, confidentiality, and potential consequences when advocating.

0246. Which paired example correctly applies Systems advocacy first and Advocacy ethics second?

A. Systems advocacy: Using documented access barriers to recommend a service-system change. / Advocacy ethics: Mapping community skills and networks before designing an outside-led program.
B. Systems advocacy: Obtaining permission and discussing foreseeable benefits and risks before speaking on a client’s behalf. / Advocacy ethics: Using documented access barriers to recommend a service-system change.
C. Systems advocacy: Agreeing on a common goal, roles, and communication practices across partner organizations. / Advocacy ethics: Obtaining permission and discussing foreseeable benefits and risks before speaking on a client’s behalf.
D. Systems advocacy: Using documented access barriers to recommend a service-system change. / Advocacy ethics: Obtaining permission and discussing foreseeable benefits and risks before speaking on a client’s behalf.

0247. Which statement shows a sound practice-level distinction between Policy brief and Coalition building?

A. Policy brief: Summarizing a service gap and actionable recommendations for decision makers. / Coalition building: Agreeing on a common goal, roles, and communication practices across partner organizations.
B. Policy brief: Agreeing on a common goal, roles, and communication practices across partner organizations. / Coalition building: Summarizing a service gap and actionable recommendations for decision makers.
C. Policy brief: Summarizing a service gap and actionable recommendations for decision makers. / Coalition building: Helping a youth prepare to state a support need in a meeting.
D. Policy brief: Obtaining permission and discussing foreseeable benefits and risks before speaking on a client’s behalf. / Coalition building: Agreeing on a common goal, roles, and communication practices across partner organizations.

0248. Which statement shows a sound practice-level distinction between Policy brief and Youth voice?

A. Policy brief: Summarizing a service gap and actionable recommendations for decision makers. / Youth voice: Creating safe, accessible ways for youth input to shape a program.
B. Policy brief: Summarizing a service gap and actionable recommendations for decision makers. / Youth voice: Using documented access barriers to recommend a service-system change.
C. Policy brief: Clarifying eligibility, referral steps, and follow-up barriers with a family. / Youth voice: Creating safe, accessible ways for youth input to shape a program.
D. Policy brief: Creating safe, accessible ways for youth input to shape a program. / Youth voice: Summarizing a service gap and actionable recommendations for decision makers.

0249. A trainee must distinguish how Self-advocacy and Advocacy ethics guide practice. Which comparison is accurate?

A. Self-advocacy: Helping a youth prepare to state a support need in a meeting. / Advocacy ethics: Mapping community skills and networks before designing an outside-led program.
B. Self-advocacy: Helping a youth prepare to state a support need in a meeting. / Advocacy ethics: Obtaining permission and discussing foreseeable benefits and risks before speaking on a client’s behalf.
C. Self-advocacy: Seeking youth input early and showing how it influenced a service decision. / Advocacy ethics: Obtaining permission and discussing foreseeable benefits and risks before speaking on a client’s behalf.
D. Self-advocacy: Obtaining permission and discussing foreseeable benefits and risks before speaking on a client’s behalf. / Advocacy ethics: Helping a youth prepare to state a support need in a meeting.

0250. Which paired example correctly applies Youth voice first and Advocacy ethics second?

A. Youth voice: Creating safe, accessible ways for youth input to shape a program. / Advocacy ethics: Obtaining permission and discussing foreseeable benefits and risks before speaking on a client’s behalf.
B. Youth voice: Obtaining permission and discussing foreseeable benefits and risks before speaking on a client’s behalf. / Advocacy ethics: Creating safe, accessible ways for youth input to shape a program.
C. Youth voice: Creating safe, accessible ways for youth input to shape a program. / Advocacy ethics: Clarifying eligibility, referral steps, and follow-up barriers with a family.
D. Youth voice: Mapping community skills and networks before designing an outside-led program. / Advocacy ethics: Obtaining permission and discussing foreseeable benefits and risks before speaking on a client’s behalf.

0251. Select the best explanation of Service navigation.

A. Practical assistance that helps people identify, access, and coordinate appropriate services.
B. Action taken with or on behalf of a person to secure access, rights, or needed services.
C. Including affected young people and families meaningfully in decisions that shape services.
D. A concise evidence-informed document that defines a policy issue and presents feasible options or recommendations.

0252. Which pair of actions illustrates Individual advocacy and Systems advocacy, respectively?

A. Individual advocacy: Supporting a family to navigate a referral barrier with the young person's informed involvement. / Systems advocacy: Obtaining permission and discussing foreseeable benefits and risks before speaking on a client's behalf.
B. Individual advocacy: Agreeing on a common goal, roles, and communication practices across partner organizations. / Systems advocacy: Using documented access barriers to recommend a service-system change.
C. Individual advocacy: Supporting a family to navigate a referral barrier with the young person's informed involvement. / Systems advocacy: Using documented access barriers to recommend a service-system change.
D. Individual advocacy: Using documented access barriers to recommend a service-system change. / Systems advocacy: Supporting a family to navigate a referral barrier with the young person's informed involvement.

0253. Which paired example correctly applies Participatory decision-making first and Policy brief second?

A. Participatory decision-making: Seeking youth input early and showing how it influenced a service decision. / Policy brief: Helping a youth prepare to state a support need in a meeting.
B. Participatory decision-making: Mapping community skills and networks before designing an outside-led program. / Policy brief: Summarizing a service gap and actionable recommendations for decision makers.
C. Participatory decision-making: Seeking youth input early and showing how it influenced a service decision. / Policy brief: Summarizing a service gap and actionable recommendations for decision makers.
D. Participatory decision-making: Summarizing a service gap and actionable recommendations for decision makers. / Policy brief: Seeking youth input early and showing how it influenced a service decision.

0254. Which pair of actions illustrates Policy brief and Youth voice, respectively?

A. Policy brief: Clarifying eligibility, referral steps, and follow-up barriers with a family. / Youth voice: Creating safe, accessible ways for youth input to shape a program.
B. Policy brief: Creating safe, accessible ways for youth input to shape a program. / Youth voice: Summarizing a service gap and actionable recommendations for decision makers.
C. Policy brief: Summarizing a service gap and actionable recommendations for decision makers. / Youth voice: Creating safe, accessible ways for youth input to shape a program.
D. Policy brief: Summarizing a service gap and actionable recommendations for decision makers. / Youth voice: Using documented access barriers to recommend a service-system change.

0255. Which course concept is defined as follows: A concise evidence-informed document that defines a policy issue and presents feasible options or recommendations.

A. Coalition building
B. Youth voice
C. Participatory decision-making
D. Policy brief

0256. A assessment clinician is supporting a client in early adolescence in the student wellness team. The key practice is agreeing on a common goal, roles, and communication practices across partner organizations. Which course concept is most relevant?

A. Service navigation
B. Participatory decision-making
C. Youth voice
D. Coalition building

0257. A assessment clinician and a middle-school student are discussing support in the multidisciplinary case conference. The selected practice is clarifying eligibility, referral steps, and follow-up barriers with a family. Which concept does this demonstrate?

A. Self-advocacy
B. Service navigation
C. Advocacy ethics
D. Systems advocacy

0258. A member of a clinical team is supporting a young person in the classroom support meeting. The key practice is seeking youth input early and showing how it influenced a service decision. Which course concept is most relevant?

A. Participatory decision-making
B. Policy brief
C. Advocacy ethics
D. Self-advocacy

0259. Which statement most accurately defines Systems advocacy?

A. Organizing collaboration among people and groups with aligned interests to pursue shared change.
B. Action taken with or on behalf of a person to secure access, rights, or needed services.
C. Efforts to change policies, practices, or resource arrangements that affect groups of people.
D. Balancing empowerment, consent, role boundaries, confidentiality, and potential consequences when advocating.

0260. How should a practitioner distinguish the applications of Individual advocacy and Participatory decision-making?

A. Individual advocacy: Supporting a family to navigate a referral barrier with the young person's informed involvement. / Participatory decision-making: Seeking youth input early and showing how it influenced a service decision.
B. Individual advocacy: Supporting a family to navigate a referral barrier with the young person's informed involvement. / Participatory decision-making: Obtaining permission and discussing foreseeable benefits and risks before speaking on a client's behalf.
C. Individual advocacy: Creating safe, accessible ways for youth input to shape a program. / Participatory decision-making: Seeking youth input early and showing how it influenced a service decision.
D. Individual advocacy: Seeking youth input early and showing how it influenced a service decision. / Participatory decision-making: Supporting a family to navigate a referral barrier with the young person's informed involvement.

0261. Choose the definition pair that correctly explains Individual advocacy first and Policy brief second.

A. Individual advocacy: A person's ability and opportunity to communicate needs, preferences, and rights and participate in decisions. / Policy brief: A concise evidence-informed document that defines a policy issue and presents feasible options or recommendations.
B. Individual advocacy: A concise evidence-informed document that defines a policy issue and presents feasible options or recommendations. / Policy brief: Action taken with or on behalf of a person to secure access, rights, or needed services.
C. Individual advocacy: Action taken with or on behalf of a person to secure access, rights, or needed services. / Policy brief: Including affected young people and families meaningfully in decisions that shape services.
D. Individual advocacy: Action taken with or on behalf of a person to secure access, rights, or needed services. / Policy brief: A concise evidence-informed document that defines a policy issue and presents feasible options or recommendations.

0262. Which applied comparison correctly identifies what belongs to Self-advocacy versus Service navigation?

A. Self-advocacy: Mapping community skills and networks before designing an outside-led program. / Service navigation: Clarifying eligibility, referral steps, and follow-up barriers with a family.
B. Self-advocacy: Helping a youth prepare to state a support need in a meeting. / Service navigation: Clarifying eligibility, referral steps, and follow-up barriers with a family.
C. Self-advocacy: Clarifying eligibility, referral steps, and follow-up barriers with a family. / Service navigation: Helping a youth prepare to state a support need in a meeting.
D. Self-advocacy: Helping a youth prepare to state a support need in a meeting. / Service navigation: Summarizing a service gap and actionable recommendations for decision makers.

0263. A older adolescent client is receiving support in the classroom support meeting. The school counselor is guided by this practice: using documented access barriers to recommend a service-system change. Which principle best fits?

A. Systems advocacy
B. Self-advocacy
C. Individual advocacy
D. Participatory decision-making

0264. In the counseling practicum, a team asks how a school counselor can support a child of elementary-school age. One proposed action is supporting a family to navigate a referral barrier with the young person’s informed involvement. Which idea does it represent?

A. Advocacy ethics
B. Coalition building
C. Individual advocacy
D. Systems advocacy

0265. Which statement shows a sound practice-level distinction between Individual advocacy and Advocacy ethics?

A. Individual advocacy: Supporting a family to navigate a referral barrier with the young person’s informed involvement. / Advocacy ethics: Obtaining permission and discussing foreseeable benefits and risks before speaking on a client’s behalf.
B. Individual advocacy: Helping a youth prepare to state a support need in a meeting. / Advocacy ethics: Obtaining permission and discussing foreseeable benefits and risks before speaking on a client’s behalf.
C. Individual advocacy: Supporting a family to navigate a referral barrier with the young person’s informed involvement. / Advocacy ethics: Summarizing a service gap and actionable recommendations for decision makers.
D. Individual advocacy: Obtaining permission and discussing foreseeable benefits and risks before speaking on a client’s behalf. / Advocacy ethics: Supporting a family to navigate a referral barrier with the young person’s informed involvement.

0266. A clinical supervisor reviews a plan for a student aged 9 in the supervision meeting. The plan emphasizes seeking youth input early and showing how it influenced a service decision. Which course idea does this reflect?

A. Self-advocacy
B. Systems advocacy
C. Participatory decision-making
D. Individual advocacy

0267. Which statement shows a sound practice-level distinction between Systems advocacy and Youth voice?

A. Systems advocacy: Using documented access barriers to recommend a service-system change. / Youth voice: Creating safe, accessible ways for youth input to shape a program.
B. Systems advocacy: Supporting a family to navigate a referral barrier with the young person’s informed involvement. / Youth voice: Creating safe, accessible ways for youth input to shape a program.
C. Systems advocacy: Creating safe, accessible ways for youth input to shape a program. / Youth voice: Using documented access barriers to recommend a service-system change.
D. Systems advocacy: Using documented access barriers to recommend a service-system change. / Youth voice: Obtaining permission and discussing foreseeable benefits and risks before speaking on a client’s behalf.

0268. When reviewing a young person’s plan in the supervision meeting, the family therapist notes that the next step is helping a youth prepare to state a support need in a meeting. Which concept guides this step?

A. Advocacy ethics
B. Self-advocacy
C. Youth voice
D. Service navigation

0269. While consulting in the multidisciplinary case conference, a supervised trainee supports a school-age child by using this approach: helping a youth prepare to state a support need in a meeting. Which concept is being applied?

A. Individual advocacy
B. Self-advocacy
C. Systems advocacy
D. Service navigation

0270. In a supervision quiz, how should Individual advocacy be distinguished from Participatory decision-making?

A. Individual advocacy: Including affected young people and families meaningfully in decisions that shape services. / Participatory decision-making: Action taken with or on behalf of a person to secure access, rights, or needed services.
B. Individual advocacy: Action taken with or on behalf of a person to secure access, rights, or needed services. / Participatory decision-making: Balancing empowerment, consent, role boundaries, confidentiality, and potential consequences when advocating.
C. Individual advocacy: Meaningful inclusion of young people’s perspectives and influence in services and decisions affecting them. / Participatory decision-making: Including affected young people and families meaningfully in decisions that shape services.
D. Individual advocacy: Action taken with or on behalf of a person to secure access, rights, or needed services. / Participatory decision-making: Including affected young people and families meaningfully in decisions that shape services.

0271. Which comparison correctly distinguishes Systems advocacy from Self-advocacy?

A. Systems advocacy: A person’s ability and opportunity to communicate needs, preferences, and rights and participate in decisions. / Self-advocacy: Efforts to change policies, practices, or resource arrangements that affect groups of people.
B. Systems advocacy: Including affected young people and families meaningfully in decisions that shape services. / Self-advocacy: A person’s ability and opportunity to communicate needs, preferences, and rights and participate in decisions.
C. Systems advocacy: Efforts to change policies, practices, or resource arrangements that affect groups of people. / Self-advocacy: A person’s ability and opportunity to communicate needs, preferences, and rights and participate in decisions.
D. Systems advocacy: Efforts to change policies, practices, or resource arrangements that affect groups of people. / Self-advocacy: A community-led approach that builds on existing strengths, relationships, and resources.

0272. At a case-planning meeting, the counselor proposes supporting a family to navigate a referral barrier with the young person’s informed involvement. for a child aged 8 seen in the school counseling office. Which concept does this illustrate?

A. Advocacy ethics
B. Coalition building
C. Systems advocacy
D. Individual advocacy

0273. Which statement shows a sound practice-level distinction between Participatory decision-making and Coalition building?

A. Participatory decision-making: Creating safe, accessible ways for youth input to shape a program. / Coalition building: Agreeing on a common goal, roles, and communication practices across partner organizations.
B. Participatory decision-making: Seeking youth input early and showing how it influenced a service decision. / Coalition building: Agreeing on a common goal, roles, and communication practices across partner organizations.
C. Participatory decision-making: Agreeing on a common goal, roles, and communication practices across partner organizations. / Coalition building: Seeking youth input early and showing how it influenced a service decision.
D. Participatory decision-making: Seeking youth input early and showing how it influenced a service decision. / Coalition building: Using documented access barriers to recommend a service-system change.

0274. Choose the definition pair that correctly explains Participatory decision-making first and Asset-based community development second.

A. Participatory decision-making: A community-led approach that builds on existing strengths, relationships, and resources. / Asset-based community development: Including affected young people and families meaningfully in decisions that shape services.
B. Participatory decision-making: Action taken with or on behalf of a person to secure access, rights, or needed services. / Asset-based community development: A community-led approach that builds on existing strengths, relationships, and resources.
C. Participatory decision-making: Including affected young people and families meaningfully in decisions that shape services. / Asset-based community development: A community-led approach that builds on existing strengths, relationships, and resources.
D. Participatory decision-making: Including affected young people and families meaningfully in decisions that shape services. / Asset-based community development: Efforts to change policies, practices, or resource arrangements that affect groups of people.

0275. In the clinical planning session, the agreed focus for a community practitioner working with a teenage client is agreeing on a common goal, roles, and communication practices across partner organizations. Which concept names this focus?

A. Self-advocacy
B. Advocacy ethics
C. Participatory decision-making
D. Coalition building

0276. A planning meeting about a child of elementary-school age includes a school support specialist. The proposed practice in the after-school program is using documented access barriers to recommend a service-system change. Which idea underlies it?

A. Systems advocacy
B. Policy brief
C. Individual advocacy
D. Asset-based community development

0277. In a supervision quiz, how should Systems advocacy be distinguished from Participatory decision-making?

A. Systems advocacy: Meaningful inclusion of young people’s perspectives and influence in services and decisions affecting them. / Participatory decision-making: Including affected young people and families meaningfully in decisions that shape services.
B. Systems advocacy: Efforts to change policies, practices, or resource arrangements that affect groups of people. / Participatory decision-making: Including affected young people and families meaningfully in decisions that shape services.
C. Systems advocacy: Including affected young people and families meaningfully in decisions that shape services. / Participatory decision-making: Efforts to change policies, practices, or resource arrangements that affect groups of people.
D. Systems advocacy: Efforts to change policies, practices, or resource arrangements that affect groups of people. / Participatory decision-making: Action taken with or on behalf of a person to secure access, rights, or needed services.

0278. A school support specialist reviews a plan for a client in early adolescence in the youth group. The plan emphasizes obtaining permission and discussing foreseeable benefits and risks before speaking on a client’s behalf. Which course idea does this reflect?

A. Asset-based community development
B. Advocacy ethics
C. Youth voice
D. Service navigation

0279. In the school counseling office, the agreed focus for a service navigator working with a child aged 11 is clarifying eligibility, referral steps, and follow-up barriers with a family. Which concept names this focus?

A. Systems advocacy
B. Advocacy ethics
C. Policy brief
D. Service navigation

0280. A supervisor asks for an applied contrast between Self-advocacy and Asset-based community development. Which option fits?

A. Self-advocacy: Helping a youth prepare to state a support need in a meeting. / Asset-based community development: Mapping community skills and networks before designing an outside-led program.
B. Self-advocacy: Mapping community skills and networks before designing an outside-led program. / Asset-based community development: Helping a youth prepare to state a support need in a meeting.
C. Self-advocacy: Helping a youth prepare to state a support need in a meeting. / Asset-based community development: Using documented access barriers to recommend a service-system change.
D. Self-advocacy: Supporting a family to navigate a referral barrier with the young person's informed involvement. / Asset-based community development: Mapping community skills and networks before designing an outside-led program.

0281. A case conference reviews a service navigator's work with a teenage client in the counseling practicum: using documented access barriers to recommend a service-system change. Which principle is central?

A. Policy brief
B. Asset-based community development
C. Systems advocacy
D. Individual advocacy

0282. A school counselor is asked to justify a plan for a young person aged 18 in the family session. It calls for helping a youth prepare to state a support need in a meeting. Which concept provides the rationale?

A. Individual advocacy
B. Policy brief
C. Self-advocacy
D. Advocacy ethics

0283. Which named construct is captured by this account? A person's ability and opportunity to communicate needs, preferences, and rights and participate in decisions.

A. Self-advocacy
B. Systems advocacy
C. Participatory decision-making
D. Policy brief

0284. Which course concept is defined as follows: A person's ability and opportunity to communicate needs, preferences, and rights and participate in decisions.

A. Self-advocacy
B. Advocacy ethics
C. Individual advocacy
D. Service navigation

0285. At the caregiver consultation, a play therapist meets with a teenage client. The practice priority is: seeking youth input early and showing how it influenced a service decision. Which concept best captures that priority?

A. Service navigation
B. Self-advocacy
C. Participatory decision-making
D. Asset-based community development

0286. For a child aged 11 seen in the school counseling office, the service navigator recommends a plan built around clarifying eligibility, referral steps, and follow-up barriers with a family. Which concept is reflected?

A. Asset-based community development
B. Systems advocacy
C. Advocacy ethics
D. Service navigation

0287. Which option correctly matches each concept to its practice focus: Individual advocacy and Participatory decision-making?

A. Individual advocacy: Seeking youth input early and showing how it influenced a service decision. / Participatory decision-making: Supporting a family to navigate a referral barrier with the young person's informed involvement.
B. Individual advocacy: Supporting a family to navigate a referral barrier with the young person's informed involvement. / Participatory decision-making: Seeking youth input early and showing how it influenced a service decision.
C. Individual advocacy: Supporting a family to navigate a referral barrier with the young person's informed involvement. / Participatory decision-making: Obtaining permission and discussing foreseeable benefits and risks before speaking on a client's behalf.
D. Individual advocacy: Creating safe, accessible ways for youth input to shape a program. / Participatory decision-making: Seeking youth input early and showing how it influenced a service decision.

0288. Which pair of actions illustrates Self-advocacy and Coalition building, respectively?

A. Self-advocacy: Helping a youth prepare to state a support need in a meeting. / Coalition building: Seeking youth input early and showing how it influenced a service decision.
B. Self-advocacy: Helping a youth prepare to state a support need in a meeting. / Coalition building: Agreeing on a common goal, roles, and communication practices across partner organizations.
C. Self-advocacy: Agreeing on a common goal, roles, and communication practices across partner organizations. / Coalition building: Helping a youth prepare to state a support need in a meeting.
D. Self-advocacy: Summarizing a service gap and actionable recommendations for decision makers. / Coalition building: Agreeing on a common goal, roles, and communication practices across partner organizations.

0289. Choose the response that best puts Individual advocacy into practice.

A. Clarifying eligibility, referral steps, and follow-up barriers with a family.
B. Helping a youth prepare to state a support need in a meeting.
C. Mapping community skills and networks before designing an outside-led program.
D. Supporting a family to navigate a referral barrier with the young person's informed involvement.

0290. Which choice aligns each practice with the correct idea, Asset-based community development or Policy brief?

A. Asset-based community development: Agreeing on a common goal, roles, and communication practices across partner organizations. / Policy brief: Summarizing a service gap and actionable recommendations for decision makers.
B. Asset-based community development: Mapping community skills and networks before designing an outside-led program. / Policy brief: Clarifying eligibility, referral steps, and follow-up barriers with a family.
C. Asset-based community development: Summarizing a service gap and actionable recommendations for decision makers. / Policy brief: Mapping community skills and networks before designing an outside-led program.
D. Asset-based community development: Mapping community skills and networks before designing an outside-led program. / Policy brief: Summarizing a service gap and actionable recommendations for decision makers.

0291. At the student-support meeting, a school support specialist meets with a older adolescent client. The practice priority is: helping a youth prepare to state a support need in a meeting. Which concept best captures that priority?

A. Participatory decision-making
B. Systems advocacy
C. Service navigation
D. Self-advocacy

0292. Choose the practice comparison that best separates Policy brief from Advocacy ethics.

A. Policy brief: Obtaining permission and discussing foreseeable benefits and risks before speaking on a client's behalf. / Advocacy ethics: Summarizing a service gap and actionable recommendations for decision makers.
B. Policy brief: Summarizing a service gap and actionable recommendations for decision makers. / Advocacy ethics: Agreeing on a common goal, roles, and communication practices across partner organizations.
C. Policy brief: Using documented access barriers to recommend a service-system change. / Advocacy ethics: Obtaining permission and discussing foreseeable benefits and risks before speaking on a client's behalf.
D. Policy brief: Summarizing a service gap and actionable recommendations for decision makers. / Advocacy ethics: Obtaining permission and discussing foreseeable benefits and risks before speaking on a client's behalf.

0293. Which applied comparison correctly identifies what belongs to Asset-based community development versus Youth voice?

A. Asset-based community development: Creating safe, accessible ways for youth input to shape a program. / Youth voice: Mapping community skills and networks before designing an outside-led program.
B. Asset-based community development: Mapping community skills and networks before designing an outside-led program. / Youth voice: Agreeing on a common goal, roles, and communication practices across partner organizations.
C. Asset-based community development: Mapping community skills and networks before designing an outside-led program. / Youth voice: Creating safe, accessible ways for youth input to shape a program.
D. Asset-based community development: Using documented access barriers to recommend a service-system change. / Youth voice: Creating safe, accessible ways for youth input to shape a program.

0294. A child aged 6's service team meets in the caregiver consultation. The school-based clinician recommends a change involving clarifying eligibility, referral steps, and follow-up barriers with a family. Which idea best explains it?

A. Systems advocacy
B. Service navigation
C. Youth voice
D. Coalition building

0295. Which option pairs the definitions of Systems advocacy and Participatory decision-making correctly, in that order?

A. Systems advocacy: Efforts to change policies, practices, or resource arrangements that affect groups of people. / Participatory decision-making: Including affected young people and families meaningfully in decisions that shape services.
B. Systems advocacy: Efforts to change policies, practices, or resource arrangements that affect groups of people. / Participatory decision-making: Action taken with or on behalf of a person to secure access, rights, or needed services.
C. Systems advocacy: Meaningful inclusion of young people's perspectives and influence in services and decisions affecting them. / Participatory decision-making: Including affected young people and families meaningfully in decisions that shape services.
D. Systems advocacy: Including affected young people and families meaningfully in decisions that shape services. / Participatory decision-making: Efforts to change policies, practices, or resource arrangements that affect groups of people.

0296. Which statement shows a sound practice-level distinction between Policy brief and Service navigation?

A. Policy brief: Clarifying eligibility, referral steps, and follow-up barriers with a family. / Service navigation: Summarizing a service gap and actionable recommendations for decision makers.
B. Policy brief: Obtaining permission and discussing foreseeable benefits and risks before speaking on a client's behalf. / Service navigation: Clarifying eligibility, referral steps, and follow-up barriers with a family.
C. Policy brief: Summarizing a service gap and actionable recommendations for decision makers. / Service navigation: Using documented access barriers to recommend a service-system change.
D. Policy brief: Summarizing a service gap and actionable recommendations for decision makers. / Service navigation: Clarifying eligibility, referral steps, and follow-up barriers with a family.

0297. An interdisciplinary team reviews a child of elementary-school age's case at the after-school program. The school support specialist recommends using documented access barriers to recommend a service-system change. Which course concept best fits?

A. Systems advocacy
B. Service navigation
C. Asset-based community development
D. Advocacy ethics

0298. Which course concept is defined as follows: Meaningful inclusion of young people's perspectives and influence in services and decisions affecting them.

A. Advocacy ethics
B. Youth voice
C. Systems advocacy
D. Coalition building

0299. A supervisor asks for an applied contrast between Individual advocacy and Service navigation. Which option fits?

A. Individual advocacy: Clarifying eligibility, referral steps, and follow-up barriers with a family. / Service navigation: Supporting a family to navigate a referral barrier with the young person's informed involvement.
B. Individual advocacy: Summarizing a service gap and actionable recommendations for decision makers. / Service navigation: Clarifying eligibility, referral steps, and follow-up barriers with a family.
C. Individual advocacy: Supporting a family to navigate a referral barrier with the young person's informed involvement. / Service navigation: Clarifying eligibility, referral steps, and follow-up barriers with a family.
D. Individual advocacy: Supporting a family to navigate a referral barrier with the young person's informed involvement. / Service navigation: Creating safe, accessible ways for youth input to shape a program.

0300. Choose the term that matches this definition: A community-led approach that builds on existing strengths, relationships, and resources.

A. Service navigation
B. Policy brief
C. Asset-based community development
D. Coalition building

0301. During service review in the behavior-support review, a service navigator describes creating safe, accessible ways for youth input to shape a program. for a child aged 8. Which course idea is most applicable?

A. Self-advocacy
B. Asset-based community development
C. Youth voice
D. Coalition building

0302. A supervisor asks how Coalition building would appear in practice. Which choice should be selected?

A. Agreeing on a common goal, roles, and communication practices across partner organizations.
B. Obtaining permission and discussing foreseeable benefits and risks before speaking on a client's behalf.
C. Supporting a family to navigate a referral barrier with the young person's informed involvement.
D. Clarifying eligibility, referral steps, and follow-up barriers with a family.

0303. Which comparison would correct a trainee's misunderstanding of Self-advocacy versus Advocacy ethics?

A. Self-advocacy: A person's ability and opportunity to communicate needs, preferences, and rights and participate in decisions. / Advocacy ethics: A community-led approach that builds on existing strengths, relationships, and resources.
B. Self-advocacy: A person's ability and opportunity to communicate needs, preferences, and rights and participate in decisions. / Advocacy ethics: Balancing empowerment, consent, role boundaries, confidentiality, and potential consequences when advocating.
C. Self-advocacy: Balancing empowerment, consent, role boundaries, confidentiality, and potential consequences when advocating. / Advocacy ethics: A person's ability and opportunity to communicate needs, preferences, and rights and participate in decisions.
D. Self-advocacy: Including affected young people and families meaningfully in decisions that shape services. / Advocacy ethics: Balancing empowerment, consent, role boundaries, confidentiality, and potential consequences when advocating.

0304. Which option correctly matches each concept to its practice focus: Systems advocacy and Service navigation?

A. Systems advocacy: Using documented access barriers to recommend a service-system change. / Service navigation: Creating safe, accessible ways for youth input to shape a program.
B. Systems advocacy: Using documented access barriers to recommend a service-system change. / Service navigation: Clarifying eligibility, referral steps, and follow-up barriers with a family.
C. Systems advocacy: Mapping community skills and networks before designing an outside-led program. / Service navigation: Clarifying eligibility, referral steps, and follow-up barriers with a family.
D. Systems advocacy: Clarifying eligibility, referral steps, and follow-up barriers with a family. / Service navigation: Using documented access barriers to recommend a service-system change.

0305. A doctoral student reads the following description. Which concept does it define? Action taken with or on behalf of a person to secure access, rights, or needed services.

A. Self-advocacy
B. Individual advocacy
C. Asset-based community development
D. Advocacy ethics

0306. A team must select a support approach for a student aged 17 at the outpatient clinic. The school-based clinician recommends creating safe, accessible ways for youth input to shape a program. Which idea is most relevant?

A. Self-advocacy
B. Youth voice
C. Individual advocacy
D. Participatory decision-making

0307. Which statement accurately contrasts the course concepts Coalition building and Advocacy ethics?

A. Coalition building: Organizing collaboration among people and groups with aligned interests to pursue shared change. / Advocacy ethics: A community-led approach that builds on existing strengths, relationships, and resources.
B. Coalition building: Including affected young people and families meaningfully in decisions that shape services. / Advocacy ethics: Balancing empowerment, consent, role boundaries, confidentiality, and potential consequences when advocating.
C. Coalition building: Balancing empowerment, consent, role boundaries, confidentiality, and potential consequences when advocating. / Advocacy ethics: Organizing collaboration among people and groups with aligned interests to pursue shared change.
D. Coalition building: Organizing collaboration among people and groups with aligned interests to pursue shared change. / Advocacy ethics: Balancing empowerment, consent, role boundaries, confidentiality, and potential consequences when advocating.

0308. How are Policy brief and Service navigation most accurately differentiated in this curriculum?

A. Policy brief: A concise evidence-informed document that defines a policy issue and presents feasible options or recommendations. / Service navigation: Practical assistance that helps people identify, access, and coordinate appropriate services.
B. Policy brief: A concise evidence-informed document that defines a policy issue and presents feasible options or recommendations. / Service navigation: Efforts to change policies, practices, or resource arrangements that affect groups of people.
C. Policy brief: Practical assistance that helps people identify, access, and coordinate appropriate services. / Service navigation: A concise evidence-informed document that defines a policy issue and presents feasible options or recommendations.
D. Policy brief: Balancing empowerment, consent, role boundaries, confidentiality, and potential consequences when advocating. / Service navigation: Practical assistance that helps people identify, access, and coordinate appropriate services.

0309. Which option correctly matches each concept to its practice focus: Systems advocacy and Policy brief?

A. Systems advocacy: Creating safe, accessible ways for youth input to shape a program. / Policy brief: Summarizing a service gap and actionable recommendations for decision makers.
B. Systems advocacy: Using documented access barriers to recommend a service-system change. / Policy brief: Summarizing a service gap and actionable recommendations for decision makers.
C. Systems advocacy: Summarizing a service gap and actionable recommendations for decision makers. / Policy brief: Using documented access barriers to recommend a service-system change.
D. Systems advocacy: Using documented access barriers to recommend a service-system change. / Policy brief: Helping a youth prepare to state a support need in a meeting.

0310. Which statement shows a sound practice-level distinction between Participatory decision-making and Youth voice?

A. Participatory decision-making: Creating safe, accessible ways for youth input to shape a program. / Youth voice: Seeking youth input early and showing how it influenced a service decision.
B. Participatory decision-making: Seeking youth input early and showing how it influenced a service decision. / Youth voice: Supporting a family to navigate a referral barrier with the young person's informed involvement.
C. Participatory decision-making: Seeking youth input early and showing how it influenced a service decision. / Youth voice: Creating safe, accessible ways for youth input to shape a program.
D. Participatory decision-making: Clarifying eligibility, referral steps, and follow-up barriers with a family. / Youth voice: Creating safe, accessible ways for youth input to shape a program.

0311. Which comparison would correct a trainee's misunderstanding of Systems advocacy versus Service navigation?

A. Systems advocacy: Efforts to change policies, practices, or resource arrangements that affect groups of people. / Service navigation: Practical assistance that helps people identify, access, and coordinate appropriate services.
B. Systems advocacy: Efforts to change policies, practices, or resource arrangements that affect groups of people. / Service navigation: Meaningful inclusion of young people's perspectives and influence in services and decisions affecting them.
C. Systems advocacy: Practical assistance that helps people identify, access, and coordinate appropriate services. / Service navigation: Efforts to change policies, practices, or resource arrangements that affect groups of people.
D. Systems advocacy: A community-led approach that builds on existing strengths, relationships, and resources. / Service navigation: Practical assistance that helps people identify, access, and coordinate appropriate services.

0312. A young person and a member of a clinical team are reviewing goals in the classroom support meeting. The agreed action is seeking youth input early and showing how it influenced a service decision. Which principle best accounts for it?

A. Self-advocacy
B. Participatory decision-making
C. Service navigation
D. Policy brief

0313. Which option pairs the definitions of Individual advocacy and Advocacy ethics correctly, in that order?

A. Individual advocacy: Balancing empowerment, consent, role boundaries, confidentiality, and potential consequences when advocating. / Advocacy ethics: Action taken with or on behalf of a person to secure access, rights, or needed services.
B. Individual advocacy: Action taken with or on behalf of a person to secure access, rights, or needed services. / Advocacy ethics: A concise evidence-informed document that defines a policy issue and presents feasible options or recommendations.
C. Individual advocacy: Action taken with or on behalf of a person to secure access, rights, or needed services. / Advocacy ethics: Balancing empowerment, consent, role boundaries, confidentiality, and potential consequences when advocating.
D. Individual advocacy: A person's ability and opportunity to communicate needs, preferences, and rights and participate in decisions. / Advocacy ethics: Balancing empowerment, consent, role boundaries, confidentiality, and potential consequences when advocating.

0314. Which named construct is captured by this account? Action taken with or on behalf of a person to secure access, rights, or needed services.

A. Youth voice
B. Service navigation
C. Individual advocacy
D. Coalition building

0315. Which statement accurately contrasts the course concepts Coalition building and Youth voice?

A. Coalition building: Meaningful inclusion of young people's perspectives and influence in services and decisions affecting them. / Youth voice: Organizing collaboration among people and groups with aligned interests to pursue shared change.
B. Coalition building: Organizing collaboration among people and groups with aligned interests to pursue shared change. / Youth voice: Meaningful inclusion of young people's perspectives and influence in services and decisions affecting them.
C. Coalition building: Organizing collaboration among people and groups with aligned interests to pursue shared change. / Youth voice: Action taken with or on behalf of a person to secure access, rights, or needed services.
D. Coalition building: Practical assistance that helps people identify, access, and coordinate appropriate services. / Youth voice: Meaningful inclusion of young people's perspectives and influence in services and decisions affecting them.

0316. A counselor reviews a plan for a student aged 12 in the community youth program. The plan emphasizes clarifying eligibility, referral steps, and follow-up barriers with a family. Which course idea does this reflect?

A. Service navigation
B. Individual advocacy
C. Youth voice
D. Coalition building

0317. In a professional consultation about a child aged 6, the assessment clinician describes this response in the telehealth session: creating safe, accessible ways for youth input to shape a program. Which term is most apt?

A. Youth voice
B. Service navigation
C. Policy brief
D. Self-advocacy

0318. Which statement accurately contrasts the course concepts Systems advocacy and Service navigation?

A. Systems advocacy: Practical assistance that helps people identify, access, and coordinate appropriate services. / Service navigation: Efforts to change policies, practices, or resource arrangements that affect groups of people.
B. Systems advocacy: Efforts to change policies, practices, or resource arrangements that affect groups of people. / Service navigation: Meaningful inclusion of young people's perspectives and influence in services and decisions affecting them.
C. Systems advocacy: Efforts to change policies, practices, or resource arrangements that affect groups of people. / Service navigation: Practical assistance that helps people identify, access, and coordinate appropriate services.
D. Systems advocacy: A community-led approach that builds on existing strengths, relationships, and resources. / Service navigation: Practical assistance that helps people identify, access, and coordinate appropriate services.

0319. Which pair of actions illustrates Individual advocacy and Advocacy ethics, respectively?

A. Individual advocacy: Helping a youth prepare to state a support need in a meeting. / Advocacy ethics: Obtaining permission and discussing foreseeable benefits and risks before speaking on a client's behalf.
B. Individual advocacy: Supporting a family to navigate a referral barrier with the young person's informed involvement. / Advocacy ethics: Obtaining permission and discussing foreseeable benefits and risks before speaking on a client's behalf.
C. Individual advocacy: Supporting a family to navigate a referral barrier with the young person's informed involvement. / Advocacy ethics: Summarizing a service gap and actionable recommendations for decision makers.
D. Individual advocacy: Obtaining permission and discussing foreseeable benefits and risks before speaking on a client's behalf. / Advocacy ethics: Supporting a family to navigate a referral barrier with the young person's informed involvement.

0320. A case conference reviews a research trainee's work with a child of elementary-school age in the community youth program: mapping community skills and networks before designing an outside-led program. Which principle is central?

A. Asset-based community development
B. Coalition building
C. Participatory decision-making
D. Youth voice

0321. Choose the definition pair that correctly explains Systems advocacy first and Policy brief second.

A. Systems advocacy: A concise evidence-informed document that defines a policy issue and presents feasible options or recommendations. / Policy brief: Efforts to change policies, practices, or resource arrangements that affect groups of people.
B. Systems advocacy: Efforts to change policies, practices, or resource arrangements that affect groups of people. / Policy brief: A person's ability and opportunity to communicate needs, preferences, and rights and participate in decisions.
C. Systems advocacy: Meaningful inclusion of young people's perspectives and influence in services and decisions affecting them. / Policy brief: A concise evidence-informed document that defines a policy issue and presents feasible options or recommendations.
D. Systems advocacy: Efforts to change policies, practices, or resource arrangements that affect groups of people. / Policy brief: A concise evidence-informed document that defines a policy issue and presents feasible options or recommendations.

0322. Choose the term that matches this definition: Including affected young people and families meaningfully in decisions that shape services.

A. Service navigation
B. Policy brief
C. Participatory decision-making
D. Youth voice

0323. Which option pairs the definitions of Systems advocacy and Asset-based community development correctly, in that order?

A. Systems advocacy: A person's ability and opportunity to communicate needs, preferences, and rights and participate in decisions. / Asset-based community development: A community-led approach that builds on existing strengths, relationships, and resources.
B. Systems advocacy: Efforts to change policies, practices, or resource arrangements that affect groups of people. / Asset-based community development: A community-led approach that builds on existing strengths, relationships, and resources.
C. Systems advocacy: Efforts to change policies, practices, or resource arrangements that affect groups of people. / Asset-based community development: Including affected young people and families meaningfully in decisions that shape services.
D. Systems advocacy: A community-led approach that builds on existing strengths, relationships, and resources. / Asset-based community development: Efforts to change policies, practices, or resource arrangements that affect groups of people.

0324. A play therapist is asked to evaluate a proposed service for a young person aged 13 in the telehealth session. The defining feature is supporting a family to navigate a referral barrier with the young person's informed involvement. Which concept fits?

A. Individual advocacy
B. Service navigation
C. Participatory decision-making
D. Systems advocacy

0325. Which pair of actions illustrates Self-advocacy and Participatory decision-making, respectively?

A. Self-advocacy: Helping a youth prepare to state a support need in a meeting. / Participatory decision-making: Seeking youth input early and showing how it influenced a service decision.
B. Self-advocacy: Seeking youth input early and showing how it influenced a service decision. / Participatory decision-making: Helping a youth prepare to state a support need in a meeting.
C. Self-advocacy: Creating safe, accessible ways for youth input to shape a program. / Participatory decision-making: Seeking youth input early and showing how it influenced a service decision.
D. Self-advocacy: Helping a youth prepare to state a support need in a meeting. / Participatory decision-making: Agreeing on a common goal, roles, and communication practices across partner organizations.

0326. How should a practitioner distinguish the applications of Self-advocacy and Youth voice?

A. Self-advocacy: Clarifying eligibility, referral steps, and follow-up barriers with a family. / Youth voice: Creating safe, accessible ways for youth input to shape a program.
B. Self-advocacy: Helping a youth prepare to state a support need in a meeting. / Youth voice: Creating safe, accessible ways for youth input to shape a program.
C. Self-advocacy: Helping a youth prepare to state a support need in a meeting. / Youth voice: Seeking youth input early and showing how it influenced a service decision.
D. Self-advocacy: Creating safe, accessible ways for youth input to shape a program. / Youth voice: Helping a youth prepare to state a support need in a meeting.

0327. Choose the practice comparison that best separates Systems advocacy from Advocacy ethics.

A. Systems advocacy: Using documented access barriers to recommend a service-system change. / Advocacy ethics: Obtaining permission and discussing foreseeable benefits and risks before speaking on a client's behalf.
B. Systems advocacy: Using documented access barriers to recommend a service-system change. / Advocacy ethics: Mapping community skills and networks before designing an outside-led program.
C. Systems advocacy: Agreeing on a common goal, roles, and communication practices across partner organizations. / Advocacy ethics: Obtaining permission and discussing foreseeable benefits and risks before speaking on a client's behalf.
D. Systems advocacy: Obtaining permission and discussing foreseeable benefits and risks before speaking on a client's behalf. / Advocacy ethics: Using documented access barriers to recommend a service-system change.

0328. In the student-support meeting, the agreed focus for a program coordinator working with a child of elementary-school age is obtaining permission and discussing foreseeable benefits and risks before speaking on a client's behalf. Which concept names this focus?

A. Service navigation
B. Asset-based community development
C. Advocacy ethics
D. Systems advocacy

0329. Which applied comparison correctly identifies what belongs to Asset-based community development versus Advocacy ethics?

A. Asset-based community development: Seeking youth input early and showing how it influenced a service decision. / Advocacy ethics: Obtaining permission and discussing foreseeable benefits and risks before speaking on a client's behalf.
B. Asset-based community development: Mapping community skills and networks before designing an outside-led program. / Advocacy ethics: Creating safe, accessible ways for youth input to shape a program.
C. Asset-based community development: Obtaining permission and discussing foreseeable benefits and risks before speaking on a client's behalf. / Advocacy ethics: Mapping community skills and networks before designing an outside-led program.
D. Asset-based community development: Mapping community skills and networks before designing an outside-led program. / Advocacy ethics: Obtaining permission and discussing foreseeable benefits and risks before speaking on a client's behalf.

0330. At the parent meeting, a program coordinator reviews whether a plan for a child aged 7 is appropriate. The relevant practice is seeking youth input early and showing how it influenced a service decision. Which concept is tested?

A. Self-advocacy
B. Participatory decision-making
C. Systems advocacy
D. Youth voice

0331. A student confuses Individual advocacy with Systems advocacy. Which explanation most accurately separates them?

A. Individual advocacy: Action taken with or on behalf of a person to secure access, rights, or needed services. / Systems advocacy: Balancing empowerment, consent, role boundaries, confidentiality, and potential consequences when advocating.
B. Individual advocacy: Efforts to change policies, practices, or resource arrangements that affect groups of people. / Systems advocacy: Action taken with or on behalf of a person to secure access, rights, or needed services.
C. Individual advocacy: Organizing collaboration among people and groups with aligned interests to pursue shared change. / Systems advocacy: Efforts to change policies, practices, or resource arrangements that affect groups of people.
D. Individual advocacy: Action taken with or on behalf of a person to secure access, rights, or needed services. / Systems advocacy: Efforts to change policies, practices, or resource arrangements that affect groups of people.

0332. A trainee must explain Systems advocacy. Which answer is accurate?

A. A concise evidence-informed document that defines a policy issue and presents feasible options or recommendations.
B. Efforts to change policies, practices, or resource arrangements that affect groups of people.
C. Action taken with or on behalf of a person to secure access, rights, or needed services.
D. A community-led approach that builds on existing strengths, relationships, and resources.

0333. How should a practitioner distinguish the applications of Participatory decision-making and Advocacy ethics?

A. Participatory decision-making: Seeking youth input early and showing how it influenced a service decision. / Advocacy ethics: Obtaining permission and discussing foreseeable benefits and risks before speaking on a client's behalf.
B. Participatory decision-making: Helping a youth prepare to state a support need in a meeting. / Advocacy ethics: Obtaining permission and discussing foreseeable benefits and risks before speaking on a client's behalf.
C. Participatory decision-making: Seeking youth input early and showing how it influenced a service decision. / Advocacy ethics: Summarizing a service gap and actionable recommendations for decision makers.
D. Participatory decision-making: Obtaining permission and discussing foreseeable benefits and risks before speaking on a client's behalf. / Advocacy ethics: Seeking youth input early and showing how it influenced a service decision.

0334. A case conference asks for a distinction between Systems advocacy and Youth voice. Which answer is sound?

A. Systems advocacy: Action taken with or on behalf of a person to secure access, rights, or needed services. / Youth voice: Meaningful inclusion of young people's perspectives and influence in services and decisions affecting them.
B. Systems advocacy: Efforts to change policies, practices, or resource arrangements that affect groups of people. / Youth voice: Meaningful inclusion of young people's perspectives and influence in services and decisions affecting them.
C. Systems advocacy: Efforts to change policies, practices, or resource arrangements that affect groups of people. / Youth voice: Balancing empowerment, consent, role boundaries, confidentiality, and potential consequences when advocating.
D. Systems advocacy: Meaningful inclusion of young people's perspectives and influence in services and decisions affecting them. / Youth voice: Efforts to change policies, practices, or resource arrangements that affect groups of people.

0335. How are Individual advocacy and Advocacy ethics most accurately differentiated in this curriculum?

A. Individual advocacy: Action taken with or on behalf of a person to secure access, rights, or needed services. / Advocacy ethics: Balancing empowerment, consent, role boundaries, confidentiality, and potential consequences when advocating.
B. Individual advocacy: Action taken with or on behalf of a person to secure access, rights, or needed services. / Advocacy ethics: A concise evidence-informed document that defines a policy issue and presents feasible options or recommendations.
C. Individual advocacy: A person's ability and opportunity to communicate needs, preferences, and rights and participate in decisions. / Advocacy ethics: Balancing empowerment, consent, role boundaries, confidentiality, and potential consequences when advocating.
D. Individual advocacy: Balancing empowerment, consent, role boundaries, confidentiality, and potential consequences when advocating. / Advocacy ethics: Action taken with or on behalf of a person to secure access, rights, or needed services.

0336. Which statement shows a sound practice-level distinction between Self-advocacy and Asset-based community development?

A. Self-advocacy: Mapping community skills and networks before designing an outside-led program. / Asset-based community development: Helping a youth prepare to state a support need in a meeting.
B. Self-advocacy: Helping a youth prepare to state a support need in a meeting. / Asset-based community development: Using documented access barriers to recommend a service-system change.
C. Self-advocacy: Supporting a family to navigate a referral barrier with the young person's informed involvement. / Asset-based community development: Mapping community skills and networks before designing an outside-led program.
D. Self-advocacy: Helping a youth prepare to state a support need in a meeting. / Asset-based community development: Mapping community skills and networks before designing an outside-led program.

0337. A trainee must choose a practice that exemplifies Policy brief. Which action is the best fit?

A. Summarizing a service gap and actionable recommendations for decision makers.
B. Agreeing on a common goal, roles, and communication practices across partner organizations.
C. Helping a youth prepare to state a support need in a meeting.
D. Supporting a family to navigate a referral barrier with the young person's informed involvement.

0338. For a student aged 15 seen in the family resource center, the program coordinator recommends a plan built around mapping community skills and networks before designing an outside-led program. Which concept is reflected?

A. Coalition building
B. Service navigation
C. Policy brief
D. Asset-based community development

0339. In a case note about a child aged 11, a member of a clinical team working in the youth advocacy program records this priority: using documented access barriers to recommend a service-system change. What principle is reflected?

A. Participatory decision-making
B. Service navigation
C. Self-advocacy
D. Systems advocacy

0340. For a child of elementary-school age seen in the student-support meeting, the program coordinator recommends a plan built around obtaining permission and discussing foreseeable benefits and risks before speaking on a client's behalf. Which concept is reflected?

A. Advocacy ethics
B. Coalition building
C. Youth voice
D. Systems advocacy

0341. A supervisor asks for an applied contrast between Individual advocacy and Youth voice. Which option fits?

A. Individual advocacy: Using documented access barriers to recommend a service-system change. / Youth voice: Creating safe, accessible ways for youth input to shape a program.
B. Individual advocacy: Creating safe, accessible ways for youth input to shape a program. / Youth voice: Supporting a family to navigate a referral barrier with the young person's informed involvement.
C. Individual advocacy: Supporting a family to navigate a referral barrier with the young person's informed involvement. / Youth voice: Creating safe, accessible ways for youth input to shape a program.
D. Individual advocacy: Supporting a family to navigate a referral barrier with the young person's informed involvement. / Youth voice: Clarifying eligibility, referral steps, and follow-up barriers with a family.

0342. In a professional consultation about a child aged 14, the member of a clinical team describes this response in the student-support meeting: supporting a family to navigate a referral barrier with the young person's informed involvement. Which term is most apt?

A. Advocacy ethics
B. Asset-based community development
C. Coalition building
D. Individual advocacy

0343. Select the best explanation of Youth voice.

A. Meaningful inclusion of young people's perspectives and influence in services and decisions affecting them.
B. Balancing empowerment, consent, role boundaries, confidentiality, and potential consequences when advocating.
C. Organizing collaboration among people and groups with aligned interests to pursue shared change.
D. A person's ability and opportunity to communicate needs, preferences, and rights and participate in decisions.

0344. A supervisor asks for an applied contrast between Participatory decision-making and Coalition building. Which option fits?

A. Participatory decision-making: Seeking youth input early and showing how it influenced a service decision. / Coalition building: Using documented access barriers to recommend a service-system change.
B. Participatory decision-making: Seeking youth input early and showing how it influenced a service decision. / Coalition building: Agreeing on a common goal, roles, and communication practices across partner organizations.
C. Participatory decision-making: Agreeing on a common goal, roles, and communication practices across partner organizations. / Coalition building: Seeking youth input early and showing how it influenced a service decision.
D. Participatory decision-making: Creating safe, accessible ways for youth input to shape a program. / Coalition building: Agreeing on a common goal, roles, and communication practices across partner organizations.

0345. A case conference reviews a research trainee's work with a young person aged 10 in the family resource center: obtaining permission and discussing foreseeable benefits and risks before speaking on a client's behalf. Which principle is central?

A. Service navigation
B. Advocacy ethics
C. Systems advocacy
D. Self-advocacy

0346. Which course concept is defined as follows: Efforts to change policies, practices, or resource arrangements that affect groups of people.

A. Participatory decision-making
B. Systems advocacy
C. Individual advocacy
D. Policy brief

0347. A case conference asks for a distinction between Service navigation and Advocacy ethics. Which answer is sound?

A. Service navigation: Practical assistance that helps people identify, access, and coordinate appropriate services. / Advocacy ethics: Balancing empowerment, consent, role boundaries, confidentiality, and potential consequences when advocating.
B. Service navigation: Balancing empowerment, consent, role boundaries, confidentiality, and potential consequences when advocating. / Advocacy ethics: Practical assistance that helps people identify, access, and coordinate appropriate services.
C. Service navigation: Including affected young people and families meaningfully in decisions that shape services. / Advocacy ethics: Balancing empowerment, consent, role boundaries, confidentiality, and potential consequences when advocating.
D. Service navigation: Practical assistance that helps people identify, access, and coordinate appropriate services. / Advocacy ethics: Meaningful inclusion of young people's perspectives and influence in services and decisions affecting them.

0348. A case discussion concerns a child aged 11 and a family therapist in the family session. The practitioner is considering supporting a family to navigate a referral barrier with the young person's informed involvement. Which principle is involved?

A. Systems advocacy
B. Self-advocacy
C. Asset-based community development
D. Individual advocacy

0349. Which applied comparison correctly identifies what belongs to Systems advocacy versus Coalition building?

A. Systems advocacy: Using documented access barriers to recommend a service-system change. / Coalition building: Agreeing on a common goal, roles, and communication practices across partner organizations.
B. Systems advocacy: Agreeing on a common goal, roles, and communication practices across partner organizations. / Coalition building: Using documented access barriers to recommend a service-system change.
C. Systems advocacy: Using documented access barriers to recommend a service-system change. / Coalition building: Mapping community skills and networks before designing an outside-led program.
D. Systems advocacy: Helping a youth prepare to state a support need in a meeting. / Coalition building: Agreeing on a common goal, roles, and communication practices across partner organizations.

0350. Which statement accurately contrasts the course concepts Asset-based community development and Youth voice?

A. Asset-based community development: Efforts to change policies, practices, or resource arrangements that affect groups of people. / Youth voice: Meaningful inclusion of young people's perspectives and influence in services and decisions affecting them.
B. Asset-based community development: A community-led approach that builds on existing strengths, relationships, and resources. / Youth voice: Meaningful inclusion of young people's perspectives and influence in services and decisions affecting them.
C. Asset-based community development: A community-led approach that builds on existing strengths, relationships, and resources. / Youth voice: Organizing collaboration among people and groups with aligned interests to pursue shared change.
D. Asset-based community development: Meaningful inclusion of young people's perspectives and influence in services and decisions affecting them. / Youth voice: A community-led approach that builds on existing strengths, relationships, and resources.

0351. A trainee must distinguish how Policy brief and Coalition building guide practice. Which comparison is accurate?

A. Policy brief: Summarizing a service gap and actionable recommendations for decision makers. / Coalition building: Helping a youth prepare to state a support need in a meeting.
B. Policy brief: Obtaining permission and discussing foreseeable benefits and risks before speaking on a client's behalf. / Coalition building: Agreeing on a common goal, roles, and communication practices across partner organizations.
C. Policy brief: Summarizing a service gap and actionable recommendations for decision makers. / Coalition building: Agreeing on a common goal, roles, and communication practices across partner organizations.
D. Policy brief: Agreeing on a common goal, roles, and communication practices across partner organizations. / Coalition building: Summarizing a service gap and actionable recommendations for decision makers.

0352. At a case-planning meeting, the school support specialist proposes helping a youth prepare to state a support need in a meeting. for a older adolescent client seen in the student-support meeting. Which concept does this illustrate?

A. Systems advocacy
B. Participatory decision-making
C. Youth voice
D. Self-advocacy

0353. A supervised trainee is preparing a follow-up plan for a preadolescent child in the after-school program. The plan calls for obtaining permission and discussing foreseeable benefits and risks before speaking on a client's behalf. Which concept names this approach?

A. Policy brief
B. Self-advocacy
C. Advocacy ethics
D. Systems advocacy

0354. A assessment clinician prepares for a session in the community youth program with a teenage client. The intended approach is summarizing a service gap and actionable recommendations for decision makers. Which concept is most relevant?

A. Asset-based community development
B. Youth voice
C. Participatory decision-making
D. Policy brief

0355. A mental-health professional prepares for a session in the learning-support meeting with a student aged 15. The intended approach is seeking youth input early and showing how it influenced a service decision. Which concept is most relevant?

A. Participatory decision-making
B. Self-advocacy
C. Youth voice
D. Systems advocacy

0356. Which statement accurately contrasts the course concepts Asset-based community development and Service navigation?

A. Asset-based community development: Practical assistance that helps people identify, access, and coordinate appropriate services. / Service navigation: A community-led approach that builds on existing strengths, relationships, and resources.
B. Asset-based community development: Action taken with or on behalf of a person to secure access, rights, or needed services. / Service navigation: Practical assistance that helps people identify, access, and coordinate appropriate services.
C. Asset-based community development: A community-led approach that builds on existing strengths, relationships, and resources. / Service navigation: Practical assistance that helps people identify, access, and coordinate appropriate services.
D. Asset-based community development: A community-led approach that builds on existing strengths, relationships, and resources. / Service navigation: Efforts to change policies, practices, or resource arrangements that affect groups of people.

0357. A planning meeting about a child aged 14 includes a behavior specialist. The proposed practice in the student wellness team is seeking youth input early and showing how it influenced a service decision. Which idea underlies it?

A. Participatory decision-making
B. Asset-based community development
C. Advocacy ethics
D. Service navigation

0358. During work in the child guidance clinic, a consulting counselor identifies this need: seeking youth input early and showing how it influenced a service decision. Which idea should guide the response?

A. Coalition building
B. Self-advocacy
C. Individual advocacy
D. Participatory decision-making

0359. A research trainee describes an intervention for a young person aged 13 in the parent meeting, centered on creating safe, accessible ways for youth input to shape a program. Which named idea is most relevant?

A. Individual advocacy
B. Systems advocacy
C. Youth voice
D. Participatory decision-making

0360. A trainee must explain Self-advocacy. Which answer is accurate?

A. Practical assistance that helps people identify, access, and coordinate appropriate services.
B. Action taken with or on behalf of a person to secure access, rights, or needed services.
C. A person’s ability and opportunity to communicate needs, preferences, and rights and participate in decisions.
D. A community-led approach that builds on existing strengths, relationships, and resources.

0361. Select the best explanation of Self-advocacy.

A. Meaningful inclusion of young people’s perspectives and influence in services and decisions affecting them.
B. Including affected young people and families meaningfully in decisions that shape services.
C. A person’s ability and opportunity to communicate needs, preferences, and rights and participate in decisions.
D. Action taken with or on behalf of a person to secure access, rights, or needed services.

0362. Which comparison correctly distinguishes Participatory decision-making from Coalition building?

A. Participatory decision-making: Including affected young people and families meaningfully in decisions that shape services. / Coalition building: Efforts to change policies, practices, or resource arrangements that affect groups of people.
B. Participatory decision-making: Meaningful inclusion of young people’s perspectives and influence in services and decisions affecting them. / Coalition building: Organizing collaboration among people and groups with aligned interests to pursue shared change.
C. Participatory decision-making: Including affected young people and families meaningfully in decisions that shape services. / Coalition building: Organizing collaboration among people and groups with aligned interests to pursue shared change.
D. Participatory decision-making: Organizing collaboration among people and groups with aligned interests to pursue shared change. / Coalition building: Including affected young people and families meaningfully in decisions that shape services.

0363. A service team discusses a client in late adolescence in the youth advocacy program. Their proposed next step is summarizing a service gap and actionable recommendations for decision makers. Which course concept supports it?

A. Advocacy ethics
B. Service navigation
C. Asset-based community development
D. Policy brief

0364. A member of a clinical team and a student aged 12 are discussing support in the behavior-support review. The selected practice is obtaining permission and discussing foreseeable benefits and risks before speaking on a client’s behalf. Which concept does this demonstrate?

A. Advocacy ethics
B. Service navigation
C. Policy brief
D. Self-advocacy

0365. A supervisor asks how Self-advocacy would appear in practice. Which choice should be selected?

A. Helping a youth prepare to state a support need in a meeting.
B. Creating safe, accessible ways for youth input to shape a program.
C. Mapping community skills and networks before designing an outside-led program.
D. Supporting a family to navigate a referral barrier with the young person’s informed involvement.

0366. Which statement shows a sound practice-level distinction between Individual advocacy and Youth voice?

A. Individual advocacy: Supporting a family to navigate a referral barrier with the young person’s informed involvement. / Youth voice: Creating safe, accessible ways for youth input to shape a program.
B. Individual advocacy: Using documented access barriers to recommend a service-system change. / Youth voice: Creating safe, accessible ways for youth input to shape a program.
C. Individual advocacy: Supporting a family to navigate a referral barrier with the young person’s informed involvement. / Youth voice: Clarifying eligibility, referral steps, and follow-up barriers with a family.
D. Individual advocacy: Creating safe, accessible ways for youth input to shape a program. / Youth voice: Supporting a family to navigate a referral barrier with the young person’s informed involvement.

0367. In a supervision quiz, how should Asset-based community development be distinguished from Coalition building?

A. Asset-based community development: A person's ability and opportunity to communicate needs, preferences, and rights and participate in decisions. / Coalition building: Organizing collaboration among people and groups with aligned interests to pursue shared change.
B. Asset-based community development: A community-led approach that builds on existing strengths, relationships, and resources. / Coalition building: Organizing collaboration among people and groups with aligned interests to pursue shared change.
C. Asset-based community development: Organizing collaboration among people and groups with aligned interests to pursue shared change. / Coalition building: A community-led approach that builds on existing strengths, relationships, and resources.
D. Asset-based community development: A community-led approach that builds on existing strengths, relationships, and resources. / Coalition building: Action taken with or on behalf of a person to secure access, rights, or needed services.

0368. How should a practitioner distinguish the applications of Systems advocacy and Participatory decision-making?

A. Systems advocacy: Seeking youth input early and showing how it influenced a service decision. / Participatory decision-making: Using documented access barriers to recommend a service-system change.
B. Systems advocacy: Using documented access barriers to recommend a service-system change. / Participatory decision-making: Seeking youth input early and showing how it influenced a service decision.
C. Systems advocacy: Using documented access barriers to recommend a service-system change. / Participatory decision-making: Supporting a family to navigate a referral barrier with the young person's informed involvement.
D. Systems advocacy: Creating safe, accessible ways for youth input to shape a program. / Participatory decision-making: Seeking youth input early and showing how it influenced a service decision.

0369. While supporting a young person aged 18 in the school counseling office, a case coordinator adopts this practice: obtaining permission and discussing foreseeable benefits and risks before speaking on a client's behalf. Which concept best explains the choice?

A. Participatory decision-making
B. Individual advocacy
C. Advocacy ethics
D. Systems advocacy

0370. In a supervision review, a case coordinator describes work with a student aged 12 in the counseling practicum: seeking youth input early and showing how it influenced a service decision. What concept is illustrated?

A. Asset-based community development
B. Individual advocacy
C. Systems advocacy
D. Participatory decision-making

0371. Choose the definition pair that correctly explains Coalition building first and Advocacy ethics second.

A. Coalition building: Including affected young people and families meaningfully in decisions that shape services. / Advocacy ethics: Balancing empowerment, consent, role boundaries, confidentiality, and potential consequences when advocating.
B. Coalition building: Organizing collaboration among people and groups with aligned interests to pursue shared change. / Advocacy ethics: A community-led approach that builds on existing strengths, relationships, and resources.
C. Coalition building: Organizing collaboration among people and groups with aligned interests to pursue shared change. / Advocacy ethics: Balancing empowerment, consent, role boundaries, confidentiality, and potential consequences when advocating.
D. Coalition building: Balancing empowerment, consent, role boundaries, confidentiality, and potential consequences when advocating. / Advocacy ethics: Organizing collaboration among people and groups with aligned interests to pursue shared change.

0372. Identify the most precise label for this idea: Balancing empowerment, consent, role boundaries, confidentiality, and potential consequences when advocating.

A. Advocacy ethics
B. Coalition building
C. Self-advocacy
D. Service navigation

0373. A team must select a support approach for a child aged 11 at the family session. The family therapist recommends supporting a family to navigate a referral barrier with the young person's informed involvement. Which idea is most relevant?

A. Asset-based community development
B. Advocacy ethics
C. Systems advocacy
D. Individual advocacy

0374. Which statement most accurately defines Service navigation?

A. Practical assistance that helps people identify, access, and coordinate appropriate services.
B. A person's ability and opportunity to communicate needs, preferences, and rights and participate in decisions.
C. Action taken with or on behalf of a person to secure access, rights, or needed services.
D. Balancing empowerment, consent, role boundaries, confidentiality, and potential consequences when advocating.

0375. Which pair of actions illustrates Participatory decision-making and Service navigation, respectively?

A. Participatory decision-making: Seeking youth input early and showing how it influenced a service decision. / Service navigation: Clarifying eligibility, referral steps, and follow-up barriers with a family.
B. Participatory decision-making: Supporting a family to navigate a referral barrier with the young person's informed involvement. / Service navigation: Clarifying eligibility, referral steps, and follow-up barriers with a family.
C. Participatory decision-making: Seeking youth input early and showing how it influenced a service decision. / Service navigation: Creating safe, accessible ways for youth input to shape a program.
D. Participatory decision-making: Clarifying eligibility, referral steps, and follow-up barriers with a family. / Service navigation: Seeking youth input early and showing how it influenced a service decision.

0376. Which statement shows a sound practice-level distinction between Participatory decision-making and Advocacy ethics?

A. Participatory decision-making: Obtaining permission and discussing foreseeable benefits and risks before speaking on a client's behalf. / Advocacy ethics: Seeking youth input early and showing how it influenced a service decision.
B. Participatory decision-making: Helping a youth prepare to state a support need in a meeting. / Advocacy ethics: Obtaining permission and discussing foreseeable benefits and risks before speaking on a client's behalf.
C. Participatory decision-making: Seeking youth input early and showing how it influenced a service decision. / Advocacy ethics: Summarizing a service gap and actionable recommendations for decision makers.
D. Participatory decision-making: Seeking youth input early and showing how it influenced a service decision. / Advocacy ethics: Obtaining permission and discussing foreseeable benefits and risks before speaking on a client's behalf.

0377. Choose the practice comparison that best separates Individual advocacy from Policy brief.

A. Individual advocacy: Supporting a family to navigate a referral barrier with the young person’s informed involvement. / Policy brief: Summarizing a service gap and actionable recommendations for decision makers.
B. Individual advocacy: Summarizing a service gap and actionable recommendations for decision makers. / Policy brief: Supporting a family to navigate a referral barrier with the young person’s informed involvement.
C. Individual advocacy: Supporting a family to navigate a referral barrier with the young person’s informed involvement. / Policy brief: Seeking youth input early and showing how it influenced a service decision.
D. Individual advocacy: Helping a youth prepare to state a support need in a meeting. / Policy brief: Summarizing a service gap and actionable recommendations for decision makers.

0378. Which comparison correctly distinguishes Participatory decision-making from Advocacy ethics?

A. Participatory decision-making: Balancing empowerment, consent, role boundaries, confidentiality, and potential consequences when advocating. / Advocacy ethics: Including affected young people and families meaningfully in decisions that shape services.
B. Participatory decision-making: A person’s ability and opportunity to communicate needs, preferences, and rights and participate in decisions. / Advocacy ethics: Balancing empowerment, consent, role boundaries, confidentiality, and potential consequences when advocating.
C. Participatory decision-making: Including affected young people and families meaningfully in decisions that shape services. / Advocacy ethics: Balancing empowerment, consent, role boundaries, confidentiality, and potential consequences when advocating.
D. Participatory decision-making: Including affected young people and families meaningfully in decisions that shape services. / Advocacy ethics: A concise evidence-informed document that defines a policy issue and presents feasible options or recommendations.

0379. Choose the practice comparison that best separates Individual advocacy from Advocacy ethics.

A. Individual advocacy: Obtaining permission and discussing foreseeable benefits and risks before speaking on a client’s behalf. / Advocacy ethics: Supporting a family to navigate a referral barrier with the young person’s informed involvement.
B. Individual advocacy: Helping a youth prepare to state a support need in a meeting. / Advocacy ethics: Obtaining permission and discussing foreseeable benefits and risks before speaking on a client’s behalf.
C. Individual advocacy: Supporting a family to navigate a referral barrier with the young person’s informed involvement. / Advocacy ethics: Obtaining permission and discussing foreseeable benefits and risks before speaking on a client’s behalf.
D. Individual advocacy: Supporting a family to navigate a referral barrier with the young person’s informed involvement. / Advocacy ethics: Summarizing a service gap and actionable recommendations for decision makers.

0380. In the child guidance clinic, a school counselor describes the most appropriate support for a client in early adolescence as creating safe, accessible ways for youth input to shape a program. Which framework is being applied?

A. Advocacy ethics
B. Youth voice
C. Individual advocacy
D. Systems advocacy

0381. Choose the response that best puts Asset-based community development into practice.

A. Clarifying eligibility, referral steps, and follow-up barriers with a family.
B. Mapping community skills and networks before designing an outside-led program.
C. Using documented access barriers to recommend a service-system change.
D. Creating safe, accessible ways for youth input to shape a program.

0382. Which applied comparison correctly identifies what belongs to Asset-based community development versus Coalition building?

A. Asset-based community development: Mapping community skills and networks before designing an outside-led program. / Coalition building: Supporting a family to navigate a referral barrier with the young person’s informed involvement.
B. Asset-based community development: Mapping community skills and networks before designing an outside-led program. / Coalition building: Agreeing on a common goal, roles, and communication practices across partner organizations.
C. Asset-based community development: Agreeing on a common goal, roles, and communication practices across partner organizations. / Coalition building: Mapping community skills and networks before designing an outside-led program.
D. Asset-based community development: Helping a youth prepare to state a support need in a meeting. / Coalition building: Agreeing on a common goal, roles, and communication practices across partner organizations.

0383. Which named construct is captured by this account? Organizing collaboration among people and groups with aligned interests to pursue shared change.

A. Systems advocacy
B. Advocacy ethics
C. Asset-based community development
D. Coalition building

0384. A student confuses Systems advocacy with Asset-based community development. Which explanation most accurately separates them?

A. Systems advocacy: A person’s ability and opportunity to communicate needs, preferences, and rights and participate in decisions. / Asset-based community development: A community-led approach that builds on existing strengths, relationships, and resources.
B. Systems advocacy: Efforts to change policies, practices, or resource arrangements that affect groups of people. / Asset-based community development: Including affected young people and families meaningfully in decisions that shape services.
C. Systems advocacy: Efforts to change policies, practices, or resource arrangements that affect groups of people. / Asset-based community development: A community-led approach that builds on existing strengths, relationships, and resources.
D. Systems advocacy: A community-led approach that builds on existing strengths, relationships, and resources. / Asset-based community development: Efforts to change policies, practices, or resource arrangements that affect groups of people.

0385. A planning meeting about a preadolescent child includes a play therapist. The proposed practice in the family resource center is helping a youth prepare to state a support need in a meeting. Which idea underlies it?

A. Self-advocacy
B. Policy brief
C. Participatory decision-making
D. Asset-based community development

0386. A group facilitator is asked to justify a plan for a young person in the clinical planning session. It calls for supporting a family to navigate a referral barrier with the young person’s informed involvement. Which concept provides the rationale?

A. Asset-based community development
B. Individual advocacy
C. Youth voice
D. Participatory decision-making

0387. A assessment clinician is preparing a follow-up plan for a teenage client in the community youth program. The plan calls for summarizing a service gap and actionable recommendations for decision makers. Which concept names this approach?

A. Policy brief
B. Participatory decision-making
C. Youth voice
D. Self-advocacy

0388. Which comparison would correct a trainee's misunderstanding of Participatory decision-making versus Coalition building?

A. Participatory decision-making: Including affected young people and families meaningfully in decisions that shape services. / Coalition building: Organizing collaboration among people and groups with aligned interests to pursue shared change.
B. Participatory decision-making: Including affected young people and families meaningfully in decisions that shape services. / Coalition building: Efforts to change policies, practices, or resource arrangements that affect groups of people.
C. Participatory decision-making: Meaningful inclusion of young people's perspectives and influence in services and decisions affecting them. / Coalition building: Organizing collaboration among people and groups with aligned interests to pursue shared change.
D. Participatory decision-making: Organizing collaboration among people and groups with aligned interests to pursue shared change. / Coalition building: Including affected young people and families meaningfully in decisions that shape services.

0389. Which pair of actions illustrates Self-advocacy and Policy brief, respectively?

A. Self-advocacy: Helping a youth prepare to state a support need in a meeting. / Policy brief: Summarizing a service gap and actionable recommendations for decision makers.
B. Self-advocacy: Helping a youth prepare to state a support need in a meeting. / Policy brief: Seeking youth input early and showing how it influenced a service decision.
C. Self-advocacy: Creating safe, accessible ways for youth input to shape a program. / Policy brief: Summarizing a service gap and actionable recommendations for decision makers.
D. Self-advocacy: Summarizing a service gap and actionable recommendations for decision makers. / Policy brief: Helping a youth prepare to state a support need in a meeting.

0390. Which choice aligns each practice with the correct idea, Coalition building or Advocacy ethics?

A. Coalition building: Agreeing on a common goal, roles, and communication practices across partner organizations. / Advocacy ethics: Obtaining permission and discussing foreseeable benefits and risks before speaking on a client's behalf.
B. Coalition building: Seeking youth input early and showing how it influenced a service decision. / Advocacy ethics: Obtaining permission and discussing foreseeable benefits and risks before speaking on a client's behalf.
C. Coalition building: Agreeing on a common goal, roles, and communication practices across partner organizations. / Advocacy ethics: Mapping community skills and networks before designing an outside-led program.
D. Coalition building: Obtaining permission and discussing foreseeable benefits and risks before speaking on a client's behalf. / Advocacy ethics: Agreeing on a common goal, roles, and communication practices across partner organizations.

0391. A young person aged 18 and a supervised trainee are reviewing goals in the family resource center. The agreed action is summarizing a service gap and actionable recommendations for decision makers. Which principle best accounts for it?

A. Self-advocacy
B. Policy brief
C. Asset-based community development
D. Youth voice

0392. A service team discusses a young person aged 13 in the behavior-support review. Their proposed next step is seeking youth input early and showing how it influenced a service decision. Which course concept supports it?

A. Participatory decision-making
B. Policy brief
C. Individual advocacy
D. Self-advocacy

0393. How are Individual advocacy and Youth voice most accurately differentiated in this curriculum?

A. Individual advocacy: Meaningful inclusion of young people's perspectives and influence in services and decisions affecting them. / Youth voice: Action taken with or on behalf of a person to secure access, rights, or needed services.
B. Individual advocacy: Efforts to change policies, practices, or resource arrangements that affect groups of people. / Youth voice: Meaningful inclusion of young people's perspectives and influence in services and decisions affecting them.
C. Individual advocacy: Action taken with or on behalf of a person to secure access, rights, or needed services. / Youth voice: Practical assistance that helps people identify, access, and coordinate appropriate services.
D. Individual advocacy: Action taken with or on behalf of a person to secure access, rights, or needed services. / Youth voice: Meaningful inclusion of young people's perspectives and influence in services and decisions affecting them.

0394. Which applied comparison correctly identifies what belongs to Individual advocacy versus Policy brief?

A. Individual advocacy: Summarizing a service gap and actionable recommendations for decision makers. / Policy brief: Supporting a family to navigate a referral barrier with the young person's informed involvement.
B. Individual advocacy: Supporting a family to navigate a referral barrier with the young person's informed involvement. / Policy brief: Summarizing a service gap and actionable recommendations for decision makers.
C. Individual advocacy: Supporting a family to navigate a referral barrier with the young person's informed involvement. / Policy brief: Seeking youth input early and showing how it influenced a service decision.
D. Individual advocacy: Helping a youth prepare to state a support need in a meeting. / Policy brief: Summarizing a service gap and actionable recommendations for decision makers.

0395. A case discussion concerns a child aged 14 and a caregiver working with a counselor in the school-based service. The practitioner is considering mapping community skills and networks before designing an outside-led program. Which principle is involved?

A. Advocacy ethics
B. Youth voice
C. Asset-based community development
D. Participatory decision-making

0396. A school counselor is asked to justify a plan for a teenage client in the behavior-support review. It calls for clarifying eligibility, referral steps, and follow-up barriers with a family. Which concept provides the rationale?

A. Advocacy ethics
B. Service navigation
C. Self-advocacy
D. Coalition building

0397. Which paired example correctly applies Individual advocacy first and Coalition building second?

A. Individual advocacy: Helping a youth prepare to state a support need in a meeting. / Coalition building: Agreeing on a common goal, roles, and communication practices across partner organizations.
B. Individual advocacy: Agreeing on a common goal, roles, and communication practices across partner organizations. / Coalition building: Supporting a family to navigate a referral barrier with the young person's informed involvement.
C. Individual advocacy: Supporting a family to navigate a referral barrier with the young person's informed involvement. / Coalition building: Agreeing on a common goal, roles, and communication practices across partner organizations.
D. Individual advocacy: Supporting a family to navigate a referral barrier with the young person's informed involvement. / Coalition building: Obtaining permission and discussing foreseeable benefits and risks before speaking on a client's behalf.

0398. A family therapist presents a support plan for a child aged 8 at the community service agency. Its central feature is using documented access barriers to recommend a service-system change. Which concept should be named?

A. Systems advocacy
B. Youth voice
C. Asset-based community development
D. Individual advocacy

0399. A trainee must distinguish how Asset-based community development and Advocacy ethics guide practice. Which comparison is accurate?

A. Asset-based community development: Mapping community skills and networks before designing an outside-led program. / Advocacy ethics: Obtaining permission and discussing foreseeable benefits and risks before speaking on a client's behalf.
B. Asset-based community development: Seeking youth input early and showing how it influenced a service decision. / Advocacy ethics: Obtaining permission and discussing foreseeable benefits and risks before speaking on a client's behalf.
C. Asset-based community development: Mapping community skills and networks before designing an outside-led program. / Advocacy ethics: Creating safe, accessible ways for youth input to shape a program.
D. Asset-based community development: Obtaining permission and discussing foreseeable benefits and risks before speaking on a client's behalf. / Advocacy ethics: Mapping community skills and networks before designing an outside-led program.

0400. In the after-school program, a case coordinator is considering this approach for a young adolescent client: supporting a family to navigate a referral barrier with the young person's informed involvement. Which framework does it represent?

A. Advocacy ethics
B. Coalition building
C. Self-advocacy
D. Individual advocacy

0401. Which statement shows a sound practice-level distinction between Policy brief and Advocacy ethics?

A. Policy brief: Summarizing a service gap and actionable recommendations for decision makers. / Advocacy ethics: Agreeing on a common goal, roles, and communication practices across partner organizations.
B. Policy brief: Obtaining permission and discussing foreseeable benefits and risks before speaking on a client's behalf. / Advocacy ethics: Summarizing a service gap and actionable recommendations for decision makers.
C. Policy brief: Summarizing a service gap and actionable recommendations for decision makers. / Advocacy ethics: Obtaining permission and discussing foreseeable benefits and risks before speaking on a client's behalf.
D. Policy brief: Using documented access barriers to recommend a service-system change. / Advocacy ethics: Obtaining permission and discussing foreseeable benefits and risks before speaking on a client's behalf.

0402. How are Participatory decision-making and Youth voice most accurately differentiated in this curriculum?

A. Participatory decision-making: Meaningful inclusion of young people's perspectives and influence in services and decisions affecting them. / Youth voice: Including affected young people and families meaningfully in decisions that shape services.
B. Participatory decision-making: Including affected young people and families meaningfully in decisions that shape services. / Youth voice: Action taken with or on behalf of a person to secure access, rights, or needed services.
C. Participatory decision-making: Practical assistance that helps people identify, access, and coordinate appropriate services. / Youth voice: Meaningful inclusion of young people's perspectives and influence in services and decisions affecting them.
D. Participatory decision-making: Including affected young people and families meaningfully in decisions that shape services. / Youth voice: Meaningful inclusion of young people's perspectives and influence in services and decisions affecting them.

0403. A supervisor asks for an applied contrast between Systems advocacy and Advocacy ethics. Which option fits?

A. Systems advocacy: Agreeing on a common goal, roles, and communication practices across partner organizations. / Advocacy ethics: Obtaining permission and discussing foreseeable benefits and risks before speaking on a client's behalf.
B. Systems advocacy: Obtaining permission and discussing foreseeable benefits and risks before speaking on a client's behalf. / Advocacy ethics: Using documented access barriers to recommend a service-system change.
C. Systems advocacy: Using documented access barriers to recommend a service-system change. / Advocacy ethics: Mapping community skills and networks before designing an outside-led program.
D. Systems advocacy: Using documented access barriers to recommend a service-system change. / Advocacy ethics: Obtaining permission and discussing foreseeable benefits and risks before speaking on a client's behalf.

0404. Which choice aligns each practice with the correct idea, Systems advocacy or Asset-based community development?

A. Systems advocacy: Helping a youth prepare to state a support need in a meeting. / Asset-based community development: Mapping community skills and networks before designing an outside-led program.
B. Systems advocacy: Using documented access barriers to recommend a service-system change. / Asset-based community development: Mapping community skills and networks before designing an outside-led program.
C. Systems advocacy: Using documented access barriers to recommend a service-system change. / Asset-based community development: Seeking youth input early and showing how it influenced a service decision.
D. Systems advocacy: Mapping community skills and networks before designing an outside-led program. / Asset-based community development: Using documented access barriers to recommend a service-system change.

0405. Which comparison would correct a trainee’s misunderstanding of Individual advocacy versus Asset-based community development?

A. Individual advocacy: Action taken with or on behalf of a person to secure access, rights, or needed services. / Asset-based community development: Including affected young people and families meaningfully in decisions that shape services.
B. Individual advocacy: A community-led approach that builds on existing strengths, relationships, and resources. / Asset-based community development: Action taken with or on behalf of a person to secure access, rights, or needed services.
C. Individual advocacy: Action taken with or on behalf of a person to secure access, rights, or needed services. / Asset-based community development: A community-led approach that builds on existing strengths, relationships, and resources.
D. Individual advocacy: Balancing empowerment, consent, role boundaries, confidentiality, and potential consequences when advocating. / Asset-based community development: A community-led approach that builds on existing strengths, relationships, and resources.

0406. How should a practitioner distinguish the applications of Asset-based community development and Coalition building?

A. Asset-based community development: Helping a youth prepare to state a support need in a meeting. / Coalition building: Agreeing on a common goal, roles, and communication practices across partner organizations.
B. Asset-based community development: Mapping community skills and networks before designing an outside-led program. / Coalition building: Agreeing on a common goal, roles, and communication practices across partner organizations.
C. Asset-based community development: Agreeing on a common goal, roles, and communication practices across partner organizations. / Coalition building: Mapping community skills and networks before designing an outside-led program.
D. Asset-based community development: Mapping community skills and networks before designing an outside-led program. / Coalition building: Supporting a family to navigate a referral barrier with the young person’s informed involvement.

0407. Choose the definition pair that correctly explains Policy brief first and Coalition building second.

A. Policy brief: A concise evidence-informed document that defines a policy issue and presents feasible options or recommendations. / Coalition building: Organizing collaboration among people and groups with aligned interests to pursue shared change.
B. Policy brief: Balancing empowerment, consent, role boundaries, confidentiality, and potential consequences when advocating. / Coalition building: Organizing collaboration among people and groups with aligned interests to pursue shared change.
C. Policy brief: Organizing collaboration among people and groups with aligned interests to pursue shared change. / Coalition building: A concise evidence-informed document that defines a policy issue and presents feasible options or recommendations.
D. Policy brief: A concise evidence-informed document that defines a policy issue and presents feasible options or recommendations. / Coalition building: A person’s ability and opportunity to communicate needs, preferences, and rights and participate in decisions.

0408. A teacher and counselor is explaining a choice to a child aged 14 and caregiver in the family session. The choice centers on clarifying eligibility, referral steps, and follow-up barriers with a family. Which idea is illustrated?

A. Self-advocacy
B. Advocacy ethics
C. Policy brief
D. Service navigation

0409. Which paired example correctly applies Policy brief first and Service navigation second?

A. Policy brief: Summarizing a service gap and actionable recommendations for decision makers. / Service navigation: Clarifying eligibility, referral steps, and follow-up barriers with a family.
B. Policy brief: Clarifying eligibility, referral steps, and follow-up barriers with a family. / Service navigation: Summarizing a service gap and actionable recommendations for decision makers.
C. Policy brief: Summarizing a service gap and actionable recommendations for decision makers. / Service navigation: Using documented access barriers to recommend a service-system change.
D. Policy brief: Obtaining permission and discussing foreseeable benefits and risks before speaking on a client’s behalf. / Service navigation: Clarifying eligibility, referral steps, and follow-up barriers with a family.

0410. A team must select a support approach for a child aged 14 at the school-based service. The caregiver working with a counselor recommends mapping community skills and networks before designing an outside-led program. Which idea is most relevant?

A. Asset-based community development
B. Systems advocacy
C. Policy brief
D. Advocacy ethics

0411. An interdisciplinary team reviews a child aged 14’s case at the student wellness team. The behavior specialist recommends seeking youth input early and showing how it influenced a service decision. Which course concept best fits?

A. Asset-based community development
B. Participatory decision-making
C. Policy brief
D. Advocacy ethics

0412. At the youth advocacy program, a play therapist meets with a child aged 14. The practice priority is: creating safe, accessible ways for youth input to shape a program. Which concept best captures that priority?

A. Systems advocacy
B. Youth voice
C. Advocacy ethics
D. Policy brief

0413. Which professional action most closely applies Participatory decision-making?

A. Using documented access barriers to recommend a service-system change.
B. Seeking youth input early and showing how it influenced a service decision.
C. Clarifying eligibility, referral steps, and follow-up barriers with a family.
D. Obtaining permission and discussing foreseeable benefits and risks before speaking on a client’s behalf.

0414. While consulting in the community mental-health service, a consultant supports a client in late adolescence by using this approach: obtaining permission and discussing foreseeable benefits and risks before speaking on a client’s behalf. Which concept is being applied?

A. Advocacy ethics
B. Youth voice
C. Participatory decision-making
D. Service navigation

0415. At the school counseling office, a counselor meets with a child aged 8. The practice priority is: supporting a family to navigate a referral barrier with the young person's informed involvement. Which concept best captures that priority?

A. Asset-based community development
B. Coalition building
C. Individual advocacy
D. Systems advocacy

0416. In a supervision quiz, how should Self-advocacy be distinguished from Advocacy ethics?

A. Self-advocacy: A person's ability and opportunity to communicate needs, preferences, and rights and participate in decisions. / Advocacy ethics: A community-led approach that builds on existing strengths, relationships, and resources.
B. Self-advocacy: A person's ability and opportunity to communicate needs, preferences, and rights and participate in decisions. / Advocacy ethics: Balancing empowerment, consent, role boundaries, confidentiality, and potential consequences when advocating.
C. Self-advocacy: Balancing empowerment, consent, role boundaries, confidentiality, and potential consequences when advocating. / Advocacy ethics: A person's ability and opportunity to communicate needs, preferences, and rights and participate in decisions.
D. Self-advocacy: Including affected young people and families meaningfully in decisions that shape services. / Advocacy ethics: Balancing empowerment, consent, role boundaries, confidentiality, and potential consequences when advocating.

0417. How are Self-advocacy and Participatory decision-making most accurately differentiated in this curriculum?

A. Self-advocacy: Meaningful inclusion of young people's perspectives and influence in services and decisions affecting them. / Participatory decision-making: Including affected young people and families meaningfully in decisions that shape services.
B. Self-advocacy: Including affected young people and families meaningfully in decisions that shape services. / Participatory decision-making: A person's ability and opportunity to communicate needs, preferences, and rights and participate in decisions.
C. Self-advocacy: A person's ability and opportunity to communicate needs, preferences, and rights and participate in decisions. / Participatory decision-making: Organizing collaboration among people and groups with aligned interests to pursue shared change.
D. Self-advocacy: A person's ability and opportunity to communicate needs, preferences, and rights and participate in decisions. / Participatory decision-making: Including affected young people and families meaningfully in decisions that shape services.

0418. A member of a clinical team prepares for a session in the youth group with a child aged 7. The intended approach is clarifying eligibility, referral steps, and follow-up barriers with a family. Which concept is most relevant?

A. Policy brief
B. Service navigation
C. Participatory decision-making
D. Coalition building

0419. Choose the practice comparison that best separates Youth voice from Advocacy ethics.

A. Youth voice: Mapping community skills and networks before designing an outside-led program. / Advocacy ethics: Obtaining permission and discussing foreseeable benefits and risks before speaking on a client's behalf.
B. Youth voice: Obtaining permission and discussing foreseeable benefits and risks before speaking on a client's behalf. / Advocacy ethics: Creating safe, accessible ways for youth input to shape a program.
C. Youth voice: Creating safe, accessible ways for youth input to shape a program. / Advocacy ethics: Obtaining permission and discussing foreseeable benefits and risks before speaking on a client's behalf.
D. Youth voice: Creating safe, accessible ways for youth input to shape a program. / Advocacy ethics: Clarifying eligibility, referral steps, and follow-up barriers with a family.

0420. A case discussion concerns a school-age child and a case coordinator in the community service agency. The practitioner is considering agreeing on a common goal, roles, and communication practices across partner organizations. Which principle is involved?

A. Systems advocacy
B. Youth voice
C. Coalition building
D. Participatory decision-making

0421. Choose the definition pair that correctly explains Systems advocacy first and Asset-based community development second.

A. Systems advocacy: A community-led approach that builds on existing strengths, relationships, and resources. / Asset-based community development: Efforts to change policies, practices, or resource arrangements that affect groups of people.
B. Systems advocacy: A person's ability and opportunity to communicate needs, preferences, and rights and participate in decisions. / Asset-based community development: A community-led approach that builds on existing strengths, relationships, and resources.
C. Systems advocacy: Efforts to change policies, practices, or resource arrangements that affect groups of people. / Asset-based community development: Including affected young people and families meaningfully in decisions that shape services.
D. Systems advocacy: Efforts to change policies, practices, or resource arrangements that affect groups of people. / Asset-based community development: A community-led approach that builds on existing strengths, relationships, and resources.

0422. A case conference asks for a distinction between Systems advocacy and Coalition building. Which answer is sound?

A. Systems advocacy: Organizing collaboration among people and groups with aligned interests to pursue shared change. / Coalition building: Efforts to change policies, practices, or resource arrangements that affect groups of people.
B. Systems advocacy: Efforts to change policies, practices, or resource arrangements that affect groups of people. / Coalition building: Organizing collaboration among people and groups with aligned interests to pursue shared change.
C. Systems advocacy: Efforts to change policies, practices, or resource arrangements that affect groups of people. / Coalition building: A community-led approach that builds on existing strengths, relationships, and resources.
D. Systems advocacy: A person's ability and opportunity to communicate needs, preferences, and rights and participate in decisions. / Coalition building: Organizing collaboration among people and groups with aligned interests to pursue shared change.

0423. Which choice aligns each practice with the correct idea, Service navigation or Youth voice?

A. Service navigation: Clarifying eligibility, referral steps, and follow-up barriers with a family. / Youth voice: Creating safe, accessible ways for youth input to shape a program.
B. Service navigation: Creating safe, accessible ways for youth input to shape a program. / Youth voice: Clarifying eligibility, referral steps, and follow-up barriers with a family.
C. Service navigation: Agreeing on a common goal, roles, and communication practices across partner organizations. / Youth voice: Creating safe, accessible ways for youth input to shape a program.
D. Service navigation: Clarifying eligibility, referral steps, and follow-up barriers with a family. / Youth voice: Seeking youth input early and showing how it influenced a service decision.

0424. A supervisor asks for an applied contrast between Systems advocacy and Self-advocacy. Which option fits?

A. Systems advocacy: Using documented access barriers to recommend a service-system change. / Self-advocacy: Mapping community skills and networks before designing an outside-led program.
B. Systems advocacy: Helping a youth prepare to state a support need in a meeting. / Self-advocacy: Using documented access barriers to recommend a service-system change.
C. Systems advocacy: Using documented access barriers to recommend a service-system change. / Self-advocacy: Helping a youth prepare to state a support need in a meeting.
D. Systems advocacy: Seeking youth input early and showing how it influenced a service decision. / Self-advocacy: Helping a youth prepare to state a support need in a meeting.

0425. Which named construct is captured by this account? Balancing empowerment, consent, role boundaries, confidentiality, and potential consequences when advocating.

A. Coalition building
B. Advocacy ethics
C. Service navigation
D. Participatory decision-making

0426. In the telehealth session, a group facilitator describes the most appropriate support for a student aged 12 as agreeing on a common goal, roles, and communication practices across partner organizations. Which framework is being applied?

A. Policy brief
B. Participatory decision-making
C. Coalition building
D. Self-advocacy

0427. A supervisor asks for an applied contrast between Participatory decision-making and Service navigation. Which option fits?

A. Participatory decision-making: Clarifying eligibility, referral steps, and follow-up barriers with a family. / Service navigation: Seeking youth input early and showing how it influenced a service decision.
B. Participatory decision-making: Supporting a family to navigate a referral barrier with the young person's informed involvement. / Service navigation: Clarifying eligibility, referral steps, and follow-up barriers with a family.
C. Participatory decision-making: Seeking youth input early and showing how it influenced a service decision. / Service navigation: Creating safe, accessible ways for youth input to shape a program.
D. Participatory decision-making: Seeking youth input early and showing how it influenced a service decision. / Service navigation: Clarifying eligibility, referral steps, and follow-up barriers with a family.

0428. During service review in the clinical planning session, a research trainee describes using documented access barriers to recommend a service-system change. for a student aged 9. Which course idea is most applicable?

A. Policy brief
B. Participatory decision-making
C. Individual advocacy
D. Systems advocacy

0429. Choose the response that best puts Coalition building into practice.

A. Obtaining permission and discussing foreseeable benefits and risks before speaking on a client's behalf.
B. Agreeing on a common goal, roles, and communication practices across partner organizations.
C. Using documented access barriers to recommend a service-system change.
D. Summarizing a service gap and actionable recommendations for decision makers.

0430. A service navigator describes an intervention for a preadolescent child in the youth advocacy program, centered on supporting a family to navigate a referral barrier with the young person's informed involvement. Which named idea is most relevant?

A. Individual advocacy
B. Asset-based community development
C. Youth voice
D. Service navigation

0431. Which professional action most closely applies Youth voice?

A. Seeking youth input early and showing how it influenced a service decision.
B. Creating safe, accessible ways for youth input to shape a program.
C. Clarifying eligibility, referral steps, and follow-up barriers with a family.
D. Supporting a family to navigate a referral barrier with the young person's informed involvement.

0432. A student confuses Asset-based community development with Coalition building. Which explanation most accurately separates them?

A. Asset-based community development: A person's ability and opportunity to communicate needs, preferences, and rights and participate in decisions. / Coalition building: Organizing collaboration among people and groups with aligned interests to pursue shared change.
B. Asset-based community development: A community-led approach that builds on existing strengths, relationships, and resources. / Coalition building: Organizing collaboration among people and groups with aligned interests to pursue shared change.
C. Asset-based community development: Organizing collaboration among people and groups with aligned interests to pursue shared change. / Coalition building: A community-led approach that builds on existing strengths, relationships, and resources.
D. Asset-based community development: A community-led approach that builds on existing strengths, relationships, and resources. / Coalition building: Action taken with or on behalf of a person to secure access, rights, or needed services.

0433. In a case note about a young adolescent client, a member of a clinical team working in the supervision meeting records this priority: agreeing on a common goal, roles, and communication practices across partner organizations. What principle is reflected?

A. Advocacy ethics
B. Coalition building
C. Individual advocacy
D. Service navigation

0434. Which option pairs the definitions of Asset-based community development and Coalition building correctly, in that order?

A. Asset-based community development: A community-led approach that builds on existing strengths, relationships, and resources. / Coalition building: Organizing collaboration among people and groups with aligned interests to pursue shared change.
B. Asset-based community development: A person's ability and opportunity to communicate needs, preferences, and rights and participate in decisions. / Coalition building: Organizing collaboration among people and groups with aligned interests to pursue shared change.
C. Asset-based community development: Organizing collaboration among people and groups with aligned interests to pursue shared change. / Coalition building: A community-led approach that builds on existing strengths, relationships, and resources.
D. Asset-based community development: A community-led approach that builds on existing strengths, relationships, and resources. / Coalition building: Action taken with or on behalf of a person to secure access, rights, or needed services.

0435. Choose the response that best puts Service navigation into practice.

A. Clarifying eligibility, referral steps, and follow-up barriers with a family.
B. Summarizing a service gap and actionable recommendations for decision makers.
C. Supporting a family to navigate a referral barrier with the young person's informed involvement.
D. Seeking youth input early and showing how it influenced a service decision.

0436. A supervisor asks how Advocacy ethics would appear in practice. Which choice should be selected?

A. Summarizing a service gap and actionable recommendations for decision makers.
B. Obtaining permission and discussing foreseeable benefits and risks before speaking on a client's behalf.
C. Creating safe, accessible ways for youth input to shape a program.
D. Seeking youth input early and showing how it influenced a service decision.

0437. A caregiver working with a counselor presents a support plan for a client in early adolescence at the behavior-support review. Its central feature is supporting a family to navigate a referral barrier with the young person's informed involvement. Which concept should be named?

A. Coalition building
B. Individual advocacy
C. Policy brief
D. Advocacy ethics

0438. Choose the definition pair that correctly explains Individual advocacy first and Coalition building second.

A. Individual advocacy: Organizing collaboration among people and groups with aligned interests to pursue shared change. / Coalition building: Action taken with or on behalf of a person to secure access, rights, or needed services.
B. Individual advocacy: Action taken with or on behalf of a person to secure access, rights, or needed services. / Coalition building: Balancing empowerment, consent, role boundaries, confidentiality, and potential consequences when advocating.
C. Individual advocacy: Action taken with or on behalf of a person to secure access, rights, or needed services. / Coalition building: Organizing collaboration among people and groups with aligned interests to pursue shared change.
D. Individual advocacy: A person's ability and opportunity to communicate needs, preferences, and rights and participate in decisions. / Coalition building: Organizing collaboration among people and groups with aligned interests to pursue shared change.

0439. During work in the outpatient clinic, a teacher and counselor identifies this need: supporting a family to navigate a referral barrier with the young person's informed involvement. Which idea should guide the response?

A. Advocacy ethics
B. Individual advocacy
C. Systems advocacy
D. Youth voice

0440. Which pair of actions illustrates Participatory decision-making and Youth voice, respectively?

A. Participatory decision-making: Seeking youth input early and showing how it influenced a service decision. / Youth voice: Creating safe, accessible ways for youth input to shape a program.
B. Participatory decision-making: Clarifying eligibility, referral steps, and follow-up barriers with a family. / Youth voice: Creating safe, accessible ways for youth input to shape a program.
C. Participatory decision-making: Seeking youth input early and showing how it influenced a service decision. / Youth voice: Supporting a family to navigate a referral barrier with the young person's informed involvement.
D. Participatory decision-making: Creating safe, accessible ways for youth input to shape a program. / Youth voice: Seeking youth input early and showing how it influenced a service decision.

0441. How should a practitioner distinguish the applications of Individual advocacy and Advocacy ethics?

A. Individual advocacy: Supporting a family to navigate a referral barrier with the young person's informed involvement. / Advocacy ethics: Summarizing a service gap and actionable recommendations for decision makers.
B. Individual advocacy: Supporting a family to navigate a referral barrier with the young person's informed involvement. / Advocacy ethics: Obtaining permission and discussing foreseeable benefits and risks before speaking on a client's behalf.
C. Individual advocacy: Helping a youth prepare to state a support need in a meeting. / Advocacy ethics: Obtaining permission and discussing foreseeable benefits and risks before speaking on a client's behalf.
D. Individual advocacy: Obtaining permission and discussing foreseeable benefits and risks before speaking on a client's behalf. / Advocacy ethics: Supporting a family to navigate a referral barrier with the young person's informed involvement.

0442. While supporting a young person aged 13 in the community youth program, a school-based clinician adopts this practice: using documented access barriers to recommend a service-system change. Which concept best explains the choice?

A. Asset-based community development
B. Systems advocacy
C. Participatory decision-making
D. Advocacy ethics

0443. Which course concept is defined as follows: Including affected young people and families meaningfully in decisions that shape services.

A. Participatory decision-making
B. Asset-based community development
C. Systems advocacy
D. Coalition building

0444. Which professional action most closely applies Individual advocacy?

A. Obtaining permission and discussing foreseeable benefits and risks before speaking on a client's behalf.
B. Agreeing on a common goal, roles, and communication practices across partner organizations.
C. Supporting a family to navigate a referral barrier with the young person's informed involvement.
D. Summarizing a service gap and actionable recommendations for decision makers.

0445. When reviewing a student aged 15’s plan in the school consultation, the family therapist notes that the next step is clarifying eligibility, referral steps, and follow-up barriers with a family. Which concept guides this step?

A. Participatory decision-making
B. Systems advocacy
C. Advocacy ethics
D. Service navigation

0446. A counselor reviews a plan for a client in late adolescence in the child guidance clinic. The plan emphasizes helping a youth prepare to state a support need in a meeting. Which course idea does this reflect?

A. Advocacy ethics
B. Self-advocacy
C. Systems advocacy
D. Policy brief

0447. Which option preserves the correct meaning of both Policy brief and Advocacy ethics?

A. Policy brief: A concise evidence-informed document that defines a policy issue and presents feasible options or recommendations. / Advocacy ethics: Balancing empowerment, consent, role boundaries, confidentiality, and potential consequences when advocating.
B. Policy brief: Balancing empowerment, consent, role boundaries, confidentiality, and potential consequences when advocating. / Advocacy ethics: A concise evidence-informed document that defines a policy issue and presents feasible options or recommendations.
C. Policy brief: A concise evidence-informed document that defines a policy issue and presents feasible options or recommendations. / Advocacy ethics: Organizing collaboration among people and groups with aligned interests to pursue shared change.
D. Policy brief: Efforts to change policies, practices, or resource arrangements that affect groups of people. / Advocacy ethics: Balancing empowerment, consent, role boundaries, confidentiality, and potential consequences when advocating.

0448. Identify the most precise label for this idea: Including affected young people and families meaningfully in decisions that shape services.

A. Coalition building
B. Youth voice
C. Individual advocacy
D. Participatory decision-making

0449. Which comparison would correct a trainee’s misunderstanding of Policy brief versus Service navigation?

A. Policy brief: Balancing empowerment, consent, role boundaries, confidentiality, and potential consequences when advocating. / Service navigation: Practical assistance that helps people identify, access, and coordinate appropriate services.
B. Policy brief: Practical assistance that helps people identify, access, and coordinate appropriate services. / Service navigation: A concise evidence-informed document that defines a policy issue and presents feasible options or recommendations.
C. Policy brief: A concise evidence-informed document that defines a policy issue and presents feasible options or recommendations. / Service navigation: Efforts to change policies, practices, or resource arrangements that affect groups of people.
D. Policy brief: A concise evidence-informed document that defines a policy issue and presents feasible options or recommendations. / Service navigation: Practical assistance that helps people identify, access, and coordinate appropriate services.

0450. A supervisor asks how Service navigation would appear in practice. Which choice should be selected?

A. Mapping community skills and networks before designing an outside-led program.
B. Obtaining permission and discussing foreseeable benefits and risks before speaking on a client’s behalf.
C. Seeking youth input early and showing how it influenced a service decision.
D. Clarifying eligibility, referral steps, and follow-up barriers with a family.

0451. What is the central meaning of Service navigation?

A. Action taken with or on behalf of a person to secure access, rights, or needed services.
B. Efforts to change policies, practices, or resource arrangements that affect groups of people.
C. Practical assistance that helps people identify, access, and coordinate appropriate services.
D. Including affected young people and families meaningfully in decisions that shape services.

0452. Select the best explanation of Coalition building.

A. A concise evidence-informed document that defines a policy issue and presents feasible options or recommendations.
B. Organizing collaboration among people and groups with aligned interests to pursue shared change.
C. Action taken with or on behalf of a person to secure access, rights, or needed services.
D. A person’s ability and opportunity to communicate needs, preferences, and rights and participate in decisions.

0453. A case conference asks for a distinction between Policy brief and Service navigation. Which answer is sound?

A. Policy brief: Practical assistance that helps people identify, access, and coordinate appropriate services. / Service navigation: A concise evidence-informed document that defines a policy issue and presents feasible options or recommendations.
B. Policy brief: A concise evidence-informed document that defines a policy issue and presents feasible options or recommendations. / Service navigation: Practical assistance that helps people identify, access, and coordinate appropriate services.
C. Policy brief: Balancing empowerment, consent, role boundaries, confidentiality, and potential consequences when advocating. / Service navigation: Practical assistance that helps people identify, access, and coordinate appropriate services.
D. Policy brief: A concise evidence-informed document that defines a policy issue and presents feasible options or recommendations. / Service navigation: Efforts to change policies, practices, or resource arrangements that affect groups of people.

0454. Which applied comparison correctly identifies what belongs to Service navigation versus Youth voice?

A. Service navigation: Clarifying eligibility, referral steps, and follow-up barriers with a family. / Youth voice: Seeking youth input early and showing how it influenced a service decision.
B. Service navigation: Clarifying eligibility, referral steps, and follow-up barriers with a family. / Youth voice: Creating safe, accessible ways for youth input to shape a program.
C. Service navigation: Creating safe, accessible ways for youth input to shape a program. / Youth voice: Clarifying eligibility, referral steps, and follow-up barriers with a family.
D. Service navigation: Agreeing on a common goal, roles, and communication practices across partner organizations. / Youth voice: Creating safe, accessible ways for youth input to shape a program.

0455. Choose the term that matches this definition: Organizing collaboration among people and groups with aligned interests to pursue shared change.

A. Participatory decision-making
B. Coalition building
C. Service navigation
D. Youth voice

0456. A research trainee is asked what should shape a adolescent student's support in the school-based service. The proposed focus is helping a youth prepare to state a support need in a meeting. Which principle does it represent?

A. Asset-based community development
B. Self-advocacy
C. Coalition building
D. Individual advocacy

0457. A counselor is asked to evaluate a proposed service for a student aged 12 in the community youth program. The defining feature is clarifying eligibility, referral steps, and follow-up barriers with a family. Which concept fits?

A. Self-advocacy
B. Asset-based community development
C. Advocacy ethics
D. Service navigation

0458. A student aged 15 and a member of a clinical team are reviewing goals in the school counseling office. The agreed action is creating safe, accessible ways for youth input to shape a program. Which principle best accounts for it?

A. Coalition building
B. Participatory decision-making
C. Advocacy ethics
D. Youth voice

0459. Identify the most precise label for this idea: A community-led approach that builds on existing strengths, relationships, and resources.

A. Individual advocacy
B. Asset-based community development
C. Coalition building
D. Service navigation

0460. A consultant is supporting a middle-school student in the youth group. The key practice is helping a youth prepare to state a support need in a meeting. Which course concept is most relevant?

A. Service navigation
B. Asset-based community development
C. Self-advocacy
D. Advocacy ethics

0461. Choose the response that best puts Policy brief into practice.

A. Helping a youth prepare to state a support need in a meeting.
B. Summarizing a service gap and actionable recommendations for decision makers.
C. Mapping community skills and networks before designing an outside-led program.
D. Creating safe, accessible ways for youth input to shape a program.

0462. A trainee must distinguish how Service navigation and Youth voice guide practice. Which comparison is accurate?

A. Service navigation: Clarifying eligibility, referral steps, and follow-up barriers with a family. / Youth voice: Creating safe, accessible ways for youth input to shape a program.
B. Service navigation: Creating safe, accessible ways for youth input to shape a program. / Youth voice: Clarifying eligibility, referral steps, and follow-up barriers with a family.
C. Service navigation: Clarifying eligibility, referral steps, and follow-up barriers with a family. / Youth voice: Seeking youth input early and showing how it influenced a service decision.
D. Service navigation: Agreeing on a common goal, roles, and communication practices across partner organizations. / Youth voice: Creating safe, accessible ways for youth input to shape a program.

0463. Which option preserves the correct meaning of both Policy brief and Service navigation?

A. Policy brief: Practical assistance that helps people identify, access, and coordinate appropriate services. / Service navigation: A concise evidence-informed document that defines a policy issue and presents feasible options or recommendations.
B. Policy brief: A concise evidence-informed document that defines a policy issue and presents feasible options or recommendations. / Service navigation: Efforts to change policies, practices, or resource arrangements that affect groups of people.
C. Policy brief: Balancing empowerment, consent, role boundaries, confidentiality, and potential consequences when advocating. / Service navigation: Practical assistance that helps people identify, access, and coordinate appropriate services.
D. Policy brief: A concise evidence-informed document that defines a policy issue and presents feasible options or recommendations. / Service navigation: Practical assistance that helps people identify, access, and coordinate appropriate services.

0464. A mental-health professional prepares for a session in the classroom support meeting with a child of elementary-school age. The intended approach is creating safe, accessible ways for youth input to shape a program. Which concept is most relevant?

A. Asset-based community development
B. Policy brief
C. Youth voice
D. Coalition building

0465. A therapist is asked what should shape a client in late adolescence's support in the youth advocacy program. The proposed focus is summarizing a service gap and actionable recommendations for decision makers. Which principle does it represent?

A. Participatory decision-making
B. Self-advocacy
C. Policy brief
D. Coalition building

0466. How should a practitioner distinguish the applications of Self-advocacy and Policy brief?

A. Self-advocacy: Helping a youth prepare to state a support need in a meeting. / Policy brief: Seeking youth input early and showing how it influenced a service decision.
B. Self-advocacy: Helping a youth prepare to state a support need in a meeting. / Policy brief: Summarizing a service gap and actionable recommendations for decision makers.
C. Self-advocacy: Summarizing a service gap and actionable recommendations for decision makers. / Policy brief: Helping a youth prepare to state a support need in a meeting.
D. Self-advocacy: Creating safe, accessible ways for youth input to shape a program. / Policy brief: Summarizing a service gap and actionable recommendations for decision makers.

0467. A preadolescent child is receiving support in the school counseling office. The school counselor is guided by this practice: agreeing on a common goal, roles, and communication practices across partner organizations. Which principle best fits?

A. Coalition building
B. Service navigation
C. Self-advocacy
D. Systems advocacy

0468. A consultant is preparing a follow-up plan for a client in early adolescence in the supervision meeting. The plan calls for using documented access barriers to recommend a service-system change. Which concept names this approach?

A. Systems advocacy
B. Coalition building
C. Asset-based community development
D. Advocacy ethics

0469. Which comparison correctly distinguishes Coalition building from Youth voice?

A. Coalition building: Organizing collaboration among people and groups with aligned interests to pursue shared change. / Youth voice: Meaningful inclusion of young people's perspectives and influence in services and decisions affecting them.
B. Coalition building: Organizing collaboration among people and groups with aligned interests to pursue shared change. / Youth voice: Action taken with or on behalf of a person to secure access, rights, or needed services.
C. Coalition building: Practical assistance that helps people identify, access, and coordinate appropriate services. / Youth voice: Meaningful inclusion of young people's perspectives and influence in services and decisions affecting them.
D. Coalition building: Meaningful inclusion of young people's perspectives and influence in services and decisions affecting them. / Youth voice: Organizing collaboration among people and groups with aligned interests to pursue shared change.

0470. A case conference reviews a program coordinator's work with a school-age child in the after-school program: creating safe, accessible ways for youth input to shape a program. Which principle is central?

A. Youth voice
B. Individual advocacy
C. Service navigation
D. Policy brief

0471. Which choice aligns each practice with the correct idea, Systems advocacy or Self-advocacy?

A. Systems advocacy: Helping a youth prepare to state a support need in a meeting. / Self-advocacy: Using documented access barriers to recommend a service-system change.
B. Systems advocacy: Using documented access barriers to recommend a service-system change. / Self-advocacy: Helping a youth prepare to state a support need in a meeting.
C. Systems advocacy: Seeking youth input early and showing how it influenced a service decision. / Self-advocacy: Helping a youth prepare to state a support need in a meeting.
D. Systems advocacy: Using documented access barriers to recommend a service-system change. / Self-advocacy: Mapping community skills and networks before designing an outside-led program.

0472. At the outpatient clinic, a behavior specialist meets with a young adolescent client. The practice priority is: obtaining permission and discussing foreseeable benefits and risks before speaking on a client's behalf. Which concept best captures that priority?

A. Individual advocacy
B. Participatory decision-making
C. Advocacy ethics
D. Policy brief

0473. Which statement accurately contrasts the course concepts Self-advocacy and Youth voice?

A. Self-advocacy: A person's ability and opportunity to communicate needs, preferences, and rights and participate in decisions. / Youth voice: Meaningful inclusion of young people's perspectives and influence in services and decisions affecting them.
B. Self-advocacy: Practical assistance that helps people identify, access, and coordinate appropriate services. / Youth voice: Meaningful inclusion of young people's perspectives and influence in services and decisions affecting them.
C. Self-advocacy: Meaningful inclusion of young people's perspectives and influence in services and decisions affecting them. / Youth voice: A person's ability and opportunity to communicate needs, preferences, and rights and participate in decisions.
D. Self-advocacy: A person's ability and opportunity to communicate needs, preferences, and rights and participate in decisions. / Youth voice: Including affected young people and families meaningfully in decisions that shape services.

0474. Which option correctly matches each concept to its practice focus: Individual advocacy and Self-advocacy?

A. Individual advocacy: Creating safe, accessible ways for youth input to shape a program. / Self-advocacy: Helping a youth prepare to state a support need in a meeting.
B. Individual advocacy: Supporting a family to navigate a referral barrier with the young person's informed involvement. / Self-advocacy: Helping a youth prepare to state a support need in a meeting.
C. Individual advocacy: Supporting a family to navigate a referral barrier with the young person's informed involvement. / Self-advocacy: Clarifying eligibility, referral steps, and follow-up barriers with a family.
D. Individual advocacy: Helping a youth prepare to state a support need in a meeting. / Self-advocacy: Supporting a family to navigate a referral barrier with the young person's informed involvement.

0475. How should a practitioner distinguish the applications of Coalition building and Advocacy ethics?

A. Coalition building: Agreeing on a common goal, roles, and communication practices across partner organizations. / Advocacy ethics: Obtaining permission and discussing foreseeable benefits and risks before speaking on a client's behalf.
B. Coalition building: Obtaining permission and discussing foreseeable benefits and risks before speaking on a client's behalf. / Advocacy ethics: Agreeing on a common goal, roles, and communication practices across partner organizations.
C. Coalition building: Seeking youth input early and showing how it influenced a service decision. / Advocacy ethics: Obtaining permission and discussing foreseeable benefits and risks before speaking on a client's behalf.
D. Coalition building: Agreeing on a common goal, roles, and communication practices across partner organizations. / Advocacy ethics: Mapping community skills and networks before designing an outside-led program.

0476. Which choice aligns each practice with the correct idea, Self-advocacy or Advocacy ethics?

A. Self-advocacy: Helping a youth prepare to state a support need in a meeting. / Advocacy ethics: Mapping community skills and networks before designing an outside-led program.
B. Self-advocacy: Helping a youth prepare to state a support need in a meeting. / Advocacy ethics: Obtaining permission and discussing foreseeable benefits and risks before speaking on a client's behalf.
C. Self-advocacy: Seeking youth input early and showing how it influenced a service decision. / Advocacy ethics: Obtaining permission and discussing foreseeable benefits and risks before speaking on a client's behalf.
D. Self-advocacy: Obtaining permission and discussing foreseeable benefits and risks before speaking on a client's behalf. / Advocacy ethics: Helping a youth prepare to state a support need in a meeting.

0477. At the family resource center, a research trainee reviews whether a plan for a young person aged 10 is appropriate. The relevant practice is obtaining permission and discussing foreseeable benefits and risks before speaking on a client's behalf. Which concept is tested?

A. Coalition building
B. Advocacy ethics
C. Youth voice
D. Individual advocacy

0478. A case conference asks for a distinction between Individual advocacy and Youth voice. Which answer is sound?

A. Individual advocacy: Action taken with or on behalf of a person to secure access, rights, or needed services. / Youth voice: Practical assistance that helps people identify, access, and coordinate appropriate services.
B. Individual advocacy: Action taken with or on behalf of a person to secure access, rights, or needed services. / Youth voice: Meaningful inclusion of young people's perspectives and influence in services and decisions affecting them.
C. Individual advocacy: Meaningful inclusion of young people's perspectives and influence in services and decisions affecting them. / Youth voice: Action taken with or on behalf of a person to secure access, rights, or needed services.
D. Individual advocacy: Efforts to change policies, practices, or resource arrangements that affect groups of people. / Youth voice: Meaningful inclusion of young people's perspectives and influence in services and decisions affecting them.

0479. A assessment clinician is supporting a young person aged 16 in the school consultation. The key practice is using documented access barriers to recommend a service-system change. Which course concept is most relevant?

A. Systems advocacy
B. Participatory decision-making
C. Individual advocacy
D. Asset-based community development

0480. Which option preserves the correct meaning of both Individual advocacy and Advocacy ethics?

A. Individual advocacy: Action taken with or on behalf of a person to secure access, rights, or needed services. / Advocacy ethics: A concise evidence-informed document that defines a policy issue and presents feasible options or recommendations.
B. Individual advocacy: Action taken with or on behalf of a person to secure access, rights, or needed services. / Advocacy ethics: Balancing empowerment, consent, role boundaries, confidentiality, and potential consequences when advocating.
C. Individual advocacy: Balancing empowerment, consent, role boundaries, confidentiality, and potential consequences when advocating. / Advocacy ethics: Action taken with or on behalf of a person to secure access, rights, or needed services.
D. Individual advocacy: A person's ability and opportunity to communicate needs, preferences, and rights and participate in decisions. / Advocacy ethics: Balancing empowerment, consent, role boundaries, confidentiality, and potential consequences when advocating.

0481. A student confuses Participatory decision-making with Youth voice. Which explanation most accurately separates them?

A. Participatory decision-making: Including affected young people and families meaningfully in decisions that shape services. / Youth voice: Action taken with or on behalf of a person to secure access, rights, or needed services.
B. Participatory decision-making: Practical assistance that helps people identify, access, and coordinate appropriate services. / Youth voice: Meaningful inclusion of young people's perspectives and influence in services and decisions affecting them.
C. Participatory decision-making: Including affected young people and families meaningfully in decisions that shape services. / Youth voice: Meaningful inclusion of young people's perspectives and influence in services and decisions affecting them.
D. Participatory decision-making: Meaningful inclusion of young people's perspectives and influence in services and decisions affecting them. / Youth voice: Including affected young people and families meaningfully in decisions that shape services.

0482. How should a practitioner distinguish the applications of Coalition building and Youth voice?

A. Coalition building: Creating safe, accessible ways for youth input to shape a program. / Youth voice: Agreeing on a common goal, roles, and communication practices across partner organizations.
B. Coalition building: Agreeing on a common goal, roles, and communication practices across partner organizations. / Youth voice: Creating safe, accessible ways for youth input to shape a program.
C. Coalition building: Clarifying eligibility, referral steps, and follow-up barriers with a family. / Youth voice: Creating safe, accessible ways for youth input to shape a program.
D. Coalition building: Agreeing on a common goal, roles, and communication practices across partner organizations. / Youth voice: Supporting a family to navigate a referral barrier with the young person's informed involvement.

0483. Which statement shows a sound practice-level distinction between Individual advocacy and Service navigation?

A. Individual advocacy: Summarizing a service gap and actionable recommendations for decision makers. / Service navigation: Clarifying eligibility, referral steps, and follow-up barriers with a family.
B. Individual advocacy: Supporting a family to navigate a referral barrier with the young person's informed involvement. / Service navigation: Clarifying eligibility, referral steps, and follow-up barriers with a family.
C. Individual advocacy: Clarifying eligibility, referral steps, and follow-up barriers with a family. / Service navigation: Supporting a family to navigate a referral barrier with the young person's informed involvement.
D. Individual advocacy: Supporting a family to navigate a referral barrier with the young person's informed involvement. / Service navigation: Creating safe, accessible ways for youth input to shape a program.

0484. Choose the definition pair that correctly explains Asset-based community development first and Advocacy ethics second.

A. Asset-based community development: A community-led approach that builds on existing strengths, relationships, and resources. / Advocacy ethics: Balancing empowerment, consent, role boundaries, confidentiality, and potential consequences when advocating.
B. Asset-based community development: Balancing empowerment, consent, role boundaries, confidentiality, and potential consequences when advocating. / Advocacy ethics: A community-led approach that builds on existing strengths, relationships, and resources.
C. Asset-based community development: A community-led approach that builds on existing strengths, relationships, and resources. / Advocacy ethics: Meaningful inclusion of young people's perspectives and influence in services and decisions affecting them.
D. Asset-based community development: Including affected young people and families meaningfully in decisions that shape services. / Advocacy ethics: Balancing empowerment, consent, role boundaries, confidentiality, and potential consequences when advocating.

0485. A trainee must distinguish how Service navigation and Advocacy ethics guide practice. Which comparison is accurate?

A. Service navigation: Seeking youth input early and showing how it influenced a service decision. / Advocacy ethics: Obtaining permission and discussing foreseeable benefits and risks before speaking on a client's behalf.
B. Service navigation: Clarifying eligibility, referral steps, and follow-up barriers with a family. / Advocacy ethics: Obtaining permission and discussing foreseeable benefits and risks before speaking on a client's behalf.
C. Service navigation: Obtaining permission and discussing foreseeable benefits and risks before speaking on a client's behalf. / Advocacy ethics: Clarifying eligibility, referral steps, and follow-up barriers with a family.
D. Service navigation: Clarifying eligibility, referral steps, and follow-up barriers with a family. / Advocacy ethics: Creating safe, accessible ways for youth input to shape a program.

0486. A trainee must distinguish how Individual advocacy and Policy brief guide practice. Which comparison is accurate?

A. Individual advocacy: Summarizing a service gap and actionable recommendations for decision makers. / Policy brief: Supporting a family to navigate a referral barrier with the young person's informed involvement.
B. Individual advocacy: Helping a youth prepare to state a support need in a meeting. / Policy brief: Summarizing a service gap and actionable recommendations for decision makers.
C. Individual advocacy: Supporting a family to navigate a referral barrier with the young person's informed involvement. / Policy brief: Seeking youth input early and showing how it influenced a service decision.
D. Individual advocacy: Supporting a family to navigate a referral barrier with the young person's informed involvement. / Policy brief: Summarizing a service gap and actionable recommendations for decision makers.

0487. Which comparison would correct a trainee's misunderstanding of Asset-based community development versus Youth voice?

A. Asset-based community development: A community-led approach that builds on existing strengths, relationships, and resources. / Youth voice: Meaningful inclusion of young people's perspectives and influence in services and decisions affecting them.
B. Asset-based community development: Meaningful inclusion of young people's perspectives and influence in services and decisions affecting them. / Youth voice: A community-led approach that builds on existing strengths, relationships, and resources.
C. Asset-based community development: Efforts to change policies, practices, or resource arrangements that affect groups of people. / Youth voice: Meaningful inclusion of young people's perspectives and influence in services and decisions affecting them.
D. Asset-based community development: A community-led approach that builds on existing strengths, relationships, and resources. / Youth voice: Organizing collaboration among people and groups with aligned interests to pursue shared change.

0488. A member of a clinical team and a client in late adolescence are discussing support in the family session. The selected practice is mapping community skills and networks before designing an outside-led program. Which concept does this demonstrate?

A. Coalition building
B. Youth voice
C. Individual advocacy
D. Asset-based community development

0489. Which statement shows a sound practice-level distinction between Systems advocacy and Self-advocacy?

A. Systems advocacy: Using documented access barriers to recommend a service-system change. / Self-advocacy: Mapping community skills and networks before designing an outside-led program.
B. Systems advocacy: Helping a youth prepare to state a support need in a meeting. / Self-advocacy: Using documented access barriers to recommend a service-system change.
C. Systems advocacy: Seeking youth input early and showing how it influenced a service decision. / Self-advocacy: Helping a youth prepare to state a support need in a meeting.
D. Systems advocacy: Using documented access barriers to recommend a service-system change. / Self-advocacy: Helping a youth prepare to state a support need in a meeting.

0490. Which option pairs the definitions of Individual advocacy and Self-advocacy correctly, in that order?

A. Individual advocacy: Meaningful inclusion of young people's perspectives and influence in services and decisions affecting them. / Self-advocacy: A person's ability and opportunity to communicate needs, preferences, and rights and participate in decisions.
B. Individual advocacy: Action taken with or on behalf of a person to secure access, rights, or needed services. / Self-advocacy: A person's ability and opportunity to communicate needs, preferences, and rights and participate in decisions.
C. Individual advocacy: Action taken with or on behalf of a person to secure access, rights, or needed services. / Self-advocacy: Practical assistance that helps people identify, access, and coordinate appropriate services.
D. Individual advocacy: A person's ability and opportunity to communicate needs, preferences, and rights and participate in decisions. / Self-advocacy: Action taken with or on behalf of a person to secure access, rights, or needed services.

0491. During service review in the student-support meeting, a therapist describes mapping community skills and networks before designing an outside-led program. for a young person. Which course idea is most applicable?

A. Participatory decision-making
B. Coalition building
C. Policy brief
D. Asset-based community development

0492. Which statement accurately contrasts the course concepts Individual advocacy and Participatory decision-making?

A. Individual advocacy: Including affected young people and families meaningfully in decisions that shape services. / Participatory decision-making: Action taken with or on behalf of a person to secure access, rights, or needed services.
B. Individual advocacy: Meaningful inclusion of young people's perspectives and influence in services and decisions affecting them. / Participatory decision-making: Including affected young people and families meaningfully in decisions that shape services.
C. Individual advocacy: Action taken with or on behalf of a person to secure access, rights, or needed services. / Participatory decision-making: Including affected young people and families meaningfully in decisions that shape services.
D. Individual advocacy: Action taken with or on behalf of a person to secure access, rights, or needed services. / Participatory decision-making: Balancing empowerment, consent, role boundaries, confidentiality, and potential consequences when advocating.

0493. A support meeting for a client in late adolescence includes a behavior specialist in the family resource center. The practice under consideration is clarifying eligibility, referral steps, and follow-up barriers with a family. Which concept guides it?

A. Service navigation
B. Asset-based community development
C. Individual advocacy
D. Advocacy ethics

0494. What is the central meaning of Asset-based community development?

A. A community-led approach that builds on existing strengths, relationships, and resources.
B. A person's ability and opportunity to communicate needs, preferences, and rights and participate in decisions.
C. Practical assistance that helps people identify, access, and coordinate appropriate services.
D. Action taken with or on behalf of a person to secure access, rights, or needed services.

0495. Which statement most accurately defines Policy brief?

A. Practical assistance that helps people identify, access, and coordinate appropriate services.
B. A concise evidence-informed document that defines a policy issue and presents feasible options or recommendations.
C. Organizing collaboration among people and groups with aligned interests to pursue shared change.
D. Including affected young people and families meaningfully in decisions that shape services.

0496. Which named construct is captured by this account? A concise evidence-informed document that defines a policy issue and presents feasible options or recommendations.

A. Service navigation
B. Policy brief
C. Advocacy ethics
D. Coalition building

0497. A trainee must distinguish how Individual advocacy and Service navigation guide practice. Which comparison is accurate?

A. Individual advocacy: Summarizing a service gap and actionable recommendations for decision makers. / Service navigation: Clarifying eligibility, referral steps, and follow-up barriers with a family.
B. Individual advocacy: Supporting a family to navigate a referral barrier with the young person's informed involvement. / Service navigation: Creating safe, accessible ways for youth input to shape a program.
C. Individual advocacy: Supporting a family to navigate a referral barrier with the young person's informed involvement. / Service navigation: Clarifying eligibility, referral steps, and follow-up barriers with a family.
D. Individual advocacy: Clarifying eligibility, referral steps, and follow-up barriers with a family. / Service navigation: Supporting a family to navigate a referral barrier with the young person's informed involvement.

0498. Which statement accurately contrasts the course concepts Systems advocacy and Policy brief?

A. Systems advocacy: Efforts to change policies, practices, or resource arrangements that affect groups of people. / Policy brief: A concise evidence-informed document that defines a policy issue and presents feasible options or recommendations.
B. Systems advocacy: Meaningful inclusion of young people's perspectives and influence in services and decisions affecting them. / Policy brief: A concise evidence-informed document that defines a policy issue and presents feasible options or recommendations.
C. Systems advocacy: Efforts to change policies, practices, or resource arrangements that affect groups of people. / Policy brief: A person's ability and opportunity to communicate needs, preferences, and rights and participate in decisions.
D. Systems advocacy: A concise evidence-informed document that defines a policy issue and presents feasible options or recommendations. / Policy brief: Efforts to change policies, practices, or resource arrangements that affect groups of people.

0499. A supervisor asks for an applied contrast between Coalition building and Youth voice. Which option fits?

A. Coalition building: Clarifying eligibility, referral steps, and follow-up barriers with a family. / Youth voice: Creating safe, accessible ways for youth input to shape a program.
B. Coalition building: Creating safe, accessible ways for youth input to shape a program. / Youth voice: Agreeing on a common goal, roles, and communication practices across partner organizations.
C. Coalition building: Agreeing on a common goal, roles, and communication practices across partner organizations. / Youth voice: Supporting a family to navigate a referral barrier with the young person's informed involvement.
D. Coalition building: Agreeing on a common goal, roles, and communication practices across partner organizations. / Youth voice: Creating safe, accessible ways for youth input to shape a program.

0500. A trainee must distinguish how Participatory decision-making and Asset-based community development guide practice. Which comparison is accurate?

A. Participatory decision-making: Seeking youth input early and showing how it influenced a service decision. / Asset-based community development: Using documented access barriers to recommend a service-system change.
B. Participatory decision-making: Seeking youth input early and showing how it influenced a service decision. / Asset-based community development: Mapping community skills and networks before designing an outside-led program.
C. Participatory decision-making: Supporting a family to navigate a referral barrier with the young person's informed involvement. / Asset-based community development: Mapping community skills and networks before designing an outside-led program.
D. Participatory decision-making: Mapping community skills and networks before designing an outside-led program. / Asset-based community development: Seeking youth input early and showing how it influenced a service decision.

0501. Which statement accurately contrasts the course concepts Service navigation and Youth voice?

A. Service navigation: Practical assistance that helps people identify, access, and coordinate appropriate services. / Youth voice: Meaningful inclusion of young people's perspectives and influence in services and decisions affecting them.
B. Service navigation: Meaningful inclusion of young people's perspectives and influence in services and decisions affecting them. / Youth voice: Practical assistance that helps people identify, access, and coordinate appropriate services.
C. Service navigation: Organizing collaboration among people and groups with aligned interests to pursue shared change. / Youth voice: Meaningful inclusion of young people's perspectives and influence in services and decisions affecting them.
D. Service navigation: Practical assistance that helps people identify, access, and coordinate appropriate services. / Youth voice: Including affected young people and families meaningfully in decisions that shape services.

0502. While supporting a adolescent student in the parent meeting, a parent educator adopts this practice: supporting a family to navigate a referral barrier with the young person's informed involvement. Which concept best explains the choice?

A. Participatory decision-making
B. Self-advocacy
C. Youth voice
D. Individual advocacy

0503. Which choice aligns each practice with the correct idea, Systems advocacy or Participatory decision-making?

A. Systems advocacy: Using documented access barriers to recommend a service-system change. / Participatory decision-making: Supporting a family to navigate a referral barrier with the young person's informed involvement.
B. Systems advocacy: Seeking youth input early and showing how it influenced a service decision. / Participatory decision-making: Using documented access barriers to recommend a service-system change.
C. Systems advocacy: Creating safe, accessible ways for youth input to shape a program. / Participatory decision-making: Seeking youth input early and showing how it influenced a service decision.
D. Systems advocacy: Using documented access barriers to recommend a service-system change. / Participatory decision-making: Seeking youth input early and showing how it influenced a service decision.

0504. A student aged 9's service team meets in the school-based service. The family therapist recommends a change involving obtaining permission and discussing foreseeable benefits and risks before speaking on a client's behalf. Which idea best explains it?

A. Systems advocacy
B. Self-advocacy
C. Individual advocacy
D. Advocacy ethics

0505. In the school-based service, a family therapist is considering this approach for a student aged 9: obtaining permission and discussing foreseeable benefits and risks before speaking on a client's behalf. Which framework does it represent?

A. Asset-based community development
B. Coalition building
C. Self-advocacy
D. Advocacy ethics

0506. Choose the definition pair that correctly explains Systems advocacy first and Youth voice second.

A. Systems advocacy: Efforts to change policies, practices, or resource arrangements that affect groups of people. / Youth voice: Balancing empowerment, consent, role boundaries, confidentiality, and potential consequences when advocating.
B. Systems advocacy: Action taken with or on behalf of a person to secure access, rights, or needed services. / Youth voice: Meaningful inclusion of young people's perspectives and influence in services and decisions affecting them.
C. Systems advocacy: Efforts to change policies, practices, or resource arrangements that affect groups of people. / Youth voice: Meaningful inclusion of young people's perspectives and influence in services and decisions affecting them.
D. Systems advocacy: Meaningful inclusion of young people's perspectives and influence in services and decisions affecting them. / Youth voice: Efforts to change policies, practices, or resource arrangements that affect groups of people.

0507. Which statement accurately contrasts the course concepts Individual advocacy and Asset-based community development?

A. Individual advocacy: Action taken with or on behalf of a person to secure access, rights, or needed services. / Asset-based community development: A community-led approach that builds on existing strengths, relationships, and resources.
B. Individual advocacy: Balancing empowerment, consent, role boundaries, confidentiality, and potential consequences when advocating. / Asset-based community development: A community-led approach that builds on existing strengths, relationships, and resources.
C. Individual advocacy: Action taken with or on behalf of a person to secure access, rights, or needed services. / Asset-based community development: Including affected young people and families meaningfully in decisions that shape services.
D. Individual advocacy: A community-led approach that builds on existing strengths, relationships, and resources. / Asset-based community development: Action taken with or on behalf of a person to secure access, rights, or needed services.

0508. A family therapist presents a support plan for a child aged 7 at the child guidance clinic. Its central feature is agreeing on a common goal, roles, and communication practices across partner organizations. Which concept should be named?

A. Participatory decision-making
B. Coalition building
C. Advocacy ethics
D. Individual advocacy

0509. Which comparison correctly distinguishes Policy brief from Advocacy ethics?

A. Policy brief: A concise evidence-informed document that defines a policy issue and presents feasible options or recommendations. / Advocacy ethics: Organizing collaboration among people and groups with aligned interests to pursue shared change.
B. Policy brief: A concise evidence-informed document that defines a policy issue and presents feasible options or recommendations. / Advocacy ethics: Balancing empowerment, consent, role boundaries, confidentiality, and potential consequences when advocating.
C. Policy brief: Balancing empowerment, consent, role boundaries, confidentiality, and potential consequences when advocating. / Advocacy ethics: A concise evidence-informed document that defines a policy issue and presents feasible options or recommendations.
D. Policy brief: Efforts to change policies, practices, or resource arrangements that affect groups of people. / Advocacy ethics: Balancing empowerment, consent, role boundaries, confidentiality, and potential consequences when advocating.

0510. Choose the practice comparison that best separates Individual advocacy from Service navigation.

A. Individual advocacy: Supporting a family to navigate a referral barrier with the young person's informed involvement. / Service navigation: Creating safe, accessible ways for youth input to shape a program.
B. Individual advocacy: Clarifying eligibility, referral steps, and follow-up barriers with a family. / Service navigation: Supporting a family to navigate a referral barrier with the young person's informed involvement.
C. Individual advocacy: Summarizing a service gap and actionable recommendations for decision makers. / Service navigation: Clarifying eligibility, referral steps, and follow-up barriers with a family.
D. Individual advocacy: Supporting a family to navigate a referral barrier with the young person's informed involvement. / Service navigation: Clarifying eligibility, referral steps, and follow-up barriers with a family.

0511. Choose the term that matches this definition: Practical assistance that helps people identify, access, and coordinate appropriate services.

A. Policy brief
B. Service navigation
C. Self-advocacy
D. Coalition building

0512. A supervised trainee prepares for a session in the parent meeting with a older adolescent client. The intended approach is mapping community skills and networks before designing an outside-led program. Which concept is most relevant?

A. Advocacy ethics
B. Asset-based community development
C. Coalition building
D. Youth voice

0513. A consulting counselor is explaining a choice to a student aged 15 and caregiver in the youth group. The choice centers on supporting a family to navigate a referral barrier with the young person’s informed involvement. Which idea is illustrated?

A. Systems advocacy
B. Youth voice
C. Policy brief
D. Individual advocacy

0514. A group facilitator is explaining a choice to a child aged 7 and caregiver in the student wellness team. The choice centers on mapping community skills and networks before designing an outside-led program. Which idea is illustrated?

A. Coalition building
B. Individual advocacy
C. Policy brief
D. Asset-based community development

0515. During work in the supervision meeting, a school counselor identifies this need: mapping community skills and networks before designing an outside-led program. Which idea should guide the response?

A. Advocacy ethics
B. Self-advocacy
C. Youth voice
D. Asset-based community development

0516. Which applied comparison correctly identifies what belongs to Asset-based community development versus Service navigation?

A. Asset-based community development: Clarifying eligibility, referral steps, and follow-up barriers with a family. / Service navigation: Mapping community skills and networks before designing an outside-led program.
B. Asset-based community development: Supporting a family to navigate a referral barrier with the young person’s informed involvement. / Service navigation: Clarifying eligibility, referral steps, and follow-up barriers with a family.
C. Asset-based community development: Mapping community skills and networks before designing an outside-led program. / Service navigation: Clarifying eligibility, referral steps, and follow-up barriers with a family.
D. Asset-based community development: Mapping community skills and networks before designing an outside-led program. / Service navigation: Using documented access barriers to recommend a service-system change.

0517. During work in the learning-support meeting, a youth worker identifies this need: agreeing on a common goal, roles, and communication practices across partner organizations. Which idea should guide the response?

A. Advocacy ethics
B. Individual advocacy
C. Policy brief
D. Coalition building

0518. Which pair of actions illustrates Coalition building and Youth voice, respectively?

A. Coalition building: Creating safe, accessible ways for youth input to shape a program. / Youth voice: Agreeing on a common goal, roles, and communication practices across partner organizations.
B. Coalition building: Agreeing on a common goal, roles, and communication practices across partner organizations. / Youth voice: Supporting a family to navigate a referral barrier with the young person’s informed involvement.
C. Coalition building: Clarifying eligibility, referral steps, and follow-up barriers with a family. / Youth voice: Creating safe, accessible ways for youth input to shape a program.
D. Coalition building: Agreeing on a common goal, roles, and communication practices across partner organizations. / Youth voice: Creating safe, accessible ways for youth input to shape a program.

0519. In the youth group, the agreed focus for a community practitioner working with a young person aged 18 is using documented access barriers to recommend a service-system change. Which concept names this focus?

A. Systems advocacy
B. Service navigation
C. Policy brief
D. Coalition building

0520. Which option preserves the correct meaning of both Individual advocacy and Coalition building?

A. Individual advocacy: A person’s ability and opportunity to communicate needs, preferences, and rights and participate in decisions. / Coalition building: Organizing collaboration among people and groups with aligned interests to pursue shared change.
B. Individual advocacy: Action taken with or on behalf of a person to secure access, rights, or needed services. / Coalition building: Organizing collaboration among people and groups with aligned interests to pursue shared change.
C. Individual advocacy: Action taken with or on behalf of a person to secure access, rights, or needed services. / Coalition building: Balancing empowerment, consent, role boundaries, confidentiality, and potential consequences when advocating.
D. Individual advocacy: Organizing collaboration among people and groups with aligned interests to pursue shared change. / Coalition building: Action taken with or on behalf of a person to secure access, rights, or needed services.

0521. A case conference reviews a therapist’s work with a young adolescent client in the classroom support meeting: clarifying eligibility, referral steps, and follow-up barriers with a family. Which principle is central?

A. Systems advocacy
B. Service navigation
C. Participatory decision-making
D. Advocacy ethics

0522. Consider a child aged 6 receiving help in the multidisciplinary case conference. The youth worker focuses on supporting a family to navigate a referral barrier with the young person’s informed involvement. Which term best describes the guiding idea?

A. Service navigation
B. Coalition building
C. Individual advocacy
D. Youth voice

0523. While consulting in the community service agency, a member of a clinical team supports a high-school student by using this approach: summarizing a service gap and actionable recommendations for decision makers. Which concept is being applied?

A. Participatory decision-making
B. Policy brief
C. Coalition building
D. Individual advocacy

0524. Which comparison correctly distinguishes Self-advocacy from Participatory decision-making?

A. Self-advocacy: Including affected young people and families meaningfully in decisions that shape services. / Participatory decision-making: A person's ability and opportunity to communicate needs, preferences, and rights and participate in decisions.
B. Self-advocacy: A person's ability and opportunity to communicate needs, preferences, and rights and participate in decisions. / Participatory decision-making: Including affected young people and families meaningfully in decisions that shape services.
C. Self-advocacy: A person's ability and opportunity to communicate needs, preferences, and rights and participate in decisions. / Participatory decision-making: Organizing collaboration among people and groups with aligned interests to pursue shared change.
D. Self-advocacy: Meaningful inclusion of young people's perspectives and influence in services and decisions affecting them. / Participatory decision-making: Including affected young people and families meaningfully in decisions that shape services.

0525. Choose the practice comparison that best separates Self-advocacy from Asset-based community development.

A. Self-advocacy: Helping a youth prepare to state a support need in a meeting. / Asset-based community development: Mapping community skills and networks before designing an outside-led program.
B. Self-advocacy: Supporting a family to navigate a referral barrier with the young person's informed involvement. / Asset-based community development: Mapping community skills and networks before designing an outside-led program.
C. Self-advocacy: Helping a youth prepare to state a support need in a meeting. / Asset-based community development: Using documented access barriers to recommend a service-system change.
D. Self-advocacy: Mapping community skills and networks before designing an outside-led program. / Asset-based community development: Helping a youth prepare to state a support need in a meeting.

0526. At a case-planning meeting, the play therapist proposes creating safe, accessible ways for youth input to shape a program. for a child aged 14 seen in the youth advocacy program. Which concept does this illustrate?

A. Coalition building
B. Systems advocacy
C. Youth voice
D. Individual advocacy

0527. Which statement shows a sound practice-level distinction between Self-advocacy and Policy brief?

A. Self-advocacy: Helping a youth prepare to state a support need in a meeting. / Policy brief: Seeking youth input early and showing how it influenced a service decision.
B. Self-advocacy: Creating safe, accessible ways for youth input to shape a program. / Policy brief: Summarizing a service gap and actionable recommendations for decision makers.
C. Self-advocacy: Helping a youth prepare to state a support need in a meeting. / Policy brief: Summarizing a service gap and actionable recommendations for decision makers.
D. Self-advocacy: Summarizing a service gap and actionable recommendations for decision makers. / Policy brief: Helping a youth prepare to state a support need in a meeting.

0528. A behavior specialist is asked to evaluate a proposed service for a child aged 6 in the community mental-health service. The defining feature is using documented access barriers to recommend a service-system change. Which concept fits?

A. Service navigation
B. Systems advocacy
C. Individual advocacy
D. Advocacy ethics

0529. Which pair of actions illustrates Systems advocacy and Self-advocacy, respectively?

A. Systems advocacy: Helping a youth prepare to state a support need in a meeting. / Self-advocacy: Using documented access barriers to recommend a service-system change.
B. Systems advocacy: Using documented access barriers to recommend a service-system change. / Self-advocacy: Helping a youth prepare to state a support need in a meeting.
C. Systems advocacy: Seeking youth input early and showing how it influenced a service decision. / Self-advocacy: Helping a youth prepare to state a support need in a meeting.
D. Systems advocacy: Using documented access barriers to recommend a service-system change. / Self-advocacy: Mapping community skills and networks before designing an outside-led program.

0530. A youth worker is explaining a choice to a child aged 11 and caregiver in the family resource center. The choice centers on seeking youth input early and showing how it influenced a service decision. Which idea is illustrated?

A. Advocacy ethics
B. Systems advocacy
C. Asset-based community development
D. Participatory decision-making

0531. Which named construct is captured by this account? A community-led approach that builds on existing strengths, relationships, and resources.

A. Youth voice
B. Asset-based community development
C. Advocacy ethics
D. Self-advocacy

0532. Which paired example correctly applies Policy brief first and Coalition building second?

A. Policy brief: Obtaining permission and discussing foreseeable benefits and risks before speaking on a client's behalf. / Coalition building: Agreeing on a common goal, roles, and communication practices across partner organizations.
B. Policy brief: Agreeing on a common goal, roles, and communication practices across partner organizations. / Coalition building: Summarizing a service gap and actionable recommendations for decision makers.
C. Policy brief: Summarizing a service gap and actionable recommendations for decision makers. / Coalition building: Helping a youth prepare to state a support need in a meeting.
D. Policy brief: Summarizing a service gap and actionable recommendations for decision makers. / Coalition building: Agreeing on a common goal, roles, and communication practices across partner organizations.

0533. Which comparison would correct a trainee’s misunderstanding of Asset-based community development versus Service navigation?

A. Asset-based community development: Practical assistance that helps people identify, access, and coordinate appropriate services. / Service navigation: A community-led approach that builds on existing strengths, relationships, and resources.
B. Asset-based community development: A community-led approach that builds on existing strengths, relationships, and resources. / Service navigation: Efforts to change policies, practices, or resource arrangements that affect groups of people.
C. Asset-based community development: A community-led approach that builds on existing strengths, relationships, and resources. / Service navigation: Practical assistance that helps people identify, access, and coordinate appropriate services.
D. Asset-based community development: Action taken with or on behalf of a person to secure access, rights, or needed services. / Service navigation: Practical assistance that helps people identify, access, and coordinate appropriate services.

0534. Which choice aligns each practice with the correct idea, Coalition building or Youth voice?

A. Coalition building: Clarifying eligibility, referral steps, and follow-up barriers with a family. / Youth voice: Creating safe, accessible ways for youth input to shape a program.
B. Coalition building: Agreeing on a common goal, roles, and communication practices across partner organizations. / Youth voice: Supporting a family to navigate a referral barrier with the young person’s informed involvement.
C. Coalition building: Creating safe, accessible ways for youth input to shape a program. / Youth voice: Agreeing on a common goal, roles, and communication practices across partner organizations.
D. Coalition building: Agreeing on a common goal, roles, and communication practices across partner organizations. / Youth voice: Creating safe, accessible ways for youth input to shape a program.

0535. Choose the response that best puts Advocacy ethics into practice.

A. Agreeing on a common goal, roles, and communication practices across partner organizations.
B. Obtaining permission and discussing foreseeable benefits and risks before speaking on a client’s behalf.
C. Helping a youth prepare to state a support need in a meeting.
D. Mapping community skills and networks before designing an outside-led program.

0536. In the parent meeting, a group facilitator explains why a student aged 9 would benefit from clarifying eligibility, referral steps, and follow-up barriers with a family. Which course concept underpins the explanation?

A. Service navigation
B. Individual advocacy
C. Policy brief
D. Systems advocacy

0537. In the school-based service, a group facilitator describes the most appropriate support for a client in late adolescence as using documented access barriers to recommend a service-system change. Which framework is being applied?

A. Self-advocacy
B. Systems advocacy
C. Youth voice
D. Asset-based community development

0538. In a supervision quiz, how should Coalition building be distinguished from Youth voice?

A. Coalition building: Practical assistance that helps people identify, access, and coordinate appropriate services. / Youth voice: Meaningful inclusion of young people’s perspectives and influence in services and decisions affecting them.
B. Coalition building: Organizing collaboration among people and groups with aligned interests to pursue shared change. / Youth voice: Action taken with or on behalf of a person to secure access, rights, or needed services.
C. Coalition building: Meaningful inclusion of young people’s perspectives and influence in services and decisions affecting them. / Youth voice: Organizing collaboration among people and groups with aligned interests to pursue shared change.
D. Coalition building: Organizing collaboration among people and groups with aligned interests to pursue shared change. / Youth voice: Meaningful inclusion of young people’s perspectives and influence in services and decisions affecting them.

0539. How are Self-advocacy and Asset-based community development most accurately differentiated in this curriculum?

A. Self-advocacy: A community-led approach that builds on existing strengths, relationships, and resources. / Asset-based community development: A person’s ability and opportunity to communicate needs, preferences, and rights and participate in decisions.
B. Self-advocacy: Action taken with or on behalf of a person to secure access, rights, or needed services. / Asset-based community development: A community-led approach that builds on existing strengths, relationships, and resources.
C. Self-advocacy: A person’s ability and opportunity to communicate needs, preferences, and rights and participate in decisions. / Asset-based community development: Efforts to change policies, practices, or resource arrangements that affect groups of people.
D. Self-advocacy: A person’s ability and opportunity to communicate needs, preferences, and rights and participate in decisions. / Asset-based community development: A community-led approach that builds on existing strengths, relationships, and resources.

0540. Which comparison would correct a trainee’s misunderstanding of Individual advocacy versus Coalition building?

A. Individual advocacy: Action taken with or on behalf of a person to secure access, rights, or needed services. / Coalition building: Organizing collaboration among people and groups with aligned interests to pursue shared change.
B. Individual advocacy: Action taken with or on behalf of a person to secure access, rights, or needed services. / Coalition building: Balancing empowerment, consent, role boundaries, confidentiality, and potential consequences when advocating.
C. Individual advocacy: A person’s ability and opportunity to communicate needs, preferences, and rights and participate in decisions. / Coalition building: Organizing collaboration among people and groups with aligned interests to pursue shared change.
D. Individual advocacy: Organizing collaboration among people and groups with aligned interests to pursue shared change. / Coalition building: Action taken with or on behalf of a person to secure access, rights, or needed services.

0541. Which option pairs the definitions of Individual advocacy and Systems advocacy correctly, in that order?

A. Individual advocacy: Action taken with or on behalf of a person to secure access, rights, or needed services. / Systems advocacy: Balancing empowerment, consent, role boundaries, confidentiality, and potential consequences when advocating.
B. Individual advocacy: Action taken with or on behalf of a person to secure access, rights, or needed services. / Systems advocacy: Efforts to change policies, practices, or resource arrangements that affect groups of people.
C. Individual advocacy: Organizing collaboration among people and groups with aligned interests to pursue shared change. / Systems advocacy: Efforts to change policies, practices, or resource arrangements that affect groups of people.
D. Individual advocacy: Efforts to change policies, practices, or resource arrangements that affect groups of people. / Systems advocacy: Action taken with or on behalf of a person to secure access, rights, or needed services.

0542. Which option pairs the definitions of Participatory decision-making and Advocacy ethics correctly, in that order?

A. Participatory decision-making: Balancing empowerment, consent, role boundaries, confidentiality, and potential consequences when advocating. / Advocacy ethics: Including affected young people and families meaningfully in decisions that shape services.
B. Participatory decision-making: Including affected young people and families meaningfully in decisions that shape services. / Advocacy ethics: A concise evidence-informed document that defines a policy issue and presents feasible options or recommendations.
C. Participatory decision-making: A person's ability and opportunity to communicate needs, preferences, and rights and participate in decisions. / Advocacy ethics: Balancing empowerment, consent, role boundaries, confidentiality, and potential consequences when advocating.
D. Participatory decision-making: Including affected young people and families meaningfully in decisions that shape services. / Advocacy ethics: Balancing empowerment, consent, role boundaries, confidentiality, and potential consequences when advocating.

0543. Which choice aligns each practice with the correct idea, Individual advocacy or Asset-based community development?

A. Individual advocacy: Mapping community skills and networks before designing an outside-led program. / Asset-based community development: Supporting a family to navigate a referral barrier with the young person's informed involvement.
B. Individual advocacy: Obtaining permission and discussing foreseeable benefits and risks before speaking on a client's behalf. / Asset-based community development: Mapping community skills and networks before designing an outside-led program.
C. Individual advocacy: Supporting a family to navigate a referral barrier with the young person's informed involvement. / Asset-based community development: Mapping community skills and networks before designing an outside-led program.
D. Individual advocacy: Supporting a family to navigate a referral barrier with the young person's informed involvement. / Asset-based community development: Seeking youth input early and showing how it influenced a service decision.

0544. A teenage client is receiving support in the after-school program. The teacher and counselor is guided by this practice: helping a youth prepare to state a support need in a meeting. Which principle best fits?

A. Individual advocacy
B. Policy brief
C. Self-advocacy
D. Participatory decision-making

0545. Choose the definition pair that correctly explains Self-advocacy first and Advocacy ethics second.

A. Self-advocacy: A person's ability and opportunity to communicate needs, preferences, and rights and participate in decisions. / Advocacy ethics: Balancing empowerment, consent, role boundaries, confidentiality, and potential consequences when advocating.
B. Self-advocacy: A person's ability and opportunity to communicate needs, preferences, and rights and participate in decisions. / Advocacy ethics: A community-led approach that builds on existing strengths, relationships, and resources.
C. Self-advocacy: Including affected young people and families meaningfully in decisions that shape services. / Advocacy ethics: Balancing empowerment, consent, role boundaries, confidentiality, and potential consequences when advocating.
D. Self-advocacy: Balancing empowerment, consent, role boundaries, confidentiality, and potential consequences when advocating. / Advocacy ethics: A person's ability and opportunity to communicate needs, preferences, and rights and participate in decisions.

0546. A doctoral student reads the following description. Which concept does it define? Efforts to change policies, practices, or resource arrangements that affect groups of people.

A. Systems advocacy
B. Youth voice
C. Participatory decision-making
D. Individual advocacy

0547. Which option is the clearest practical expression of Coalition building?

A. Using documented access barriers to recommend a service-system change.
B. Summarizing a service gap and actionable recommendations for decision makers.
C. Seeking youth input early and showing how it influenced a service decision.
D. Agreeing on a common goal, roles, and communication practices across partner organizations.

0548. In the community mental-health service, a group facilitator explains why a high-school student would benefit from helping a youth prepare to state a support need in a meeting. Which course concept underpins the explanation?

A. Service navigation
B. Individual advocacy
C. Systems advocacy
D. Self-advocacy

0549. A planning meeting about a adolescent student includes a counselor. The proposed practice in the multidisciplinary case conference is obtaining permission and discussing foreseeable benefits and risks before speaking on a client's behalf. Which idea underlies it?

A. Policy brief
B. Self-advocacy
C. Advocacy ethics
D. Youth voice

0550. Choose the definition pair that correctly explains Self-advocacy first and Service navigation second.

A. Self-advocacy: Practical assistance that helps people identify, access, and coordinate appropriate services. / Service navigation: A person's ability and opportunity to communicate needs, preferences, and rights and participate in decisions.
B. Self-advocacy: A community-led approach that builds on existing strengths, relationships, and resources. / Service navigation: Practical assistance that helps people identify, access, and coordinate appropriate services.
C. Self-advocacy: A person's ability and opportunity to communicate needs, preferences, and rights and participate in decisions. / Service navigation: A concise evidence-informed document that defines a policy issue and presents feasible options or recommendations.
D. Self-advocacy: A person's ability and opportunity to communicate needs, preferences, and rights and participate in decisions. / Service navigation: Practical assistance that helps people identify, access, and coordinate appropriate services.

0551. How should a practitioner distinguish the applications of Systems advocacy and Self-advocacy?

A. Systems advocacy: Using documented access barriers to recommend a service-system change. / Self-advocacy: Mapping community skills and networks before designing an outside-led program.
B. Systems advocacy: Using documented access barriers to recommend a service-system change. / Self-advocacy: Helping a youth prepare to state a support need in a meeting.
C. Systems advocacy: Seeking youth input early and showing how it influenced a service decision. / Self-advocacy: Helping a youth prepare to state a support need in a meeting.
D. Systems advocacy: Helping a youth prepare to state a support need in a meeting. / Self-advocacy: Using documented access barriers to recommend a service-system change.

0552. A member of a clinical team prepares for a session in the counseling practicum with a child aged 8. The intended approach is helping a youth prepare to state a support need in a meeting. Which concept is most relevant?

A. Systems advocacy
B. Asset-based community development
C. Youth voice
D. Self-advocacy

0553. A trainee must distinguish how Policy brief and Service navigation guide practice. Which comparison is accurate?

A. Policy brief: Clarifying eligibility, referral steps, and follow-up barriers with a family. / Service navigation: Summarizing a service gap and actionable recommendations for decision makers.
B. Policy brief: Summarizing a service gap and actionable recommendations for decision makers. / Service navigation: Clarifying eligibility, referral steps, and follow-up barriers with a family.
C. Policy brief: Summarizing a service gap and actionable recommendations for decision makers. / Service navigation: Using documented access barriers to recommend a service-system change.
D. Policy brief: Obtaining permission and discussing foreseeable benefits and risks before speaking on a client's behalf. / Service navigation: Clarifying eligibility, referral steps, and follow-up barriers with a family.

0554. How are Individual advocacy and Coalition building most accurately differentiated in this curriculum?

A. Individual advocacy: Organizing collaboration among people and groups with aligned interests to pursue shared change. / Coalition building: Action taken with or on behalf of a person to secure access, rights, or needed services.
B. Individual advocacy: Action taken with or on behalf of a person to secure access, rights, or needed services. / Coalition building: Organizing collaboration among people and groups with aligned interests to pursue shared change.
C. Individual advocacy: Action taken with or on behalf of a person to secure access, rights, or needed services. / Coalition building: Balancing empowerment, consent, role boundaries, confidentiality, and potential consequences when advocating.
D. Individual advocacy: A person's ability and opportunity to communicate needs, preferences, and rights and participate in decisions. / Coalition building: Organizing collaboration among people and groups with aligned interests to pursue shared change.

0555. Which comparison would correct a trainee's misunderstanding of Asset-based community development versus Advocacy ethics?

A. Asset-based community development: Balancing empowerment, consent, role boundaries, confidentiality, and potential consequences when advocating. / Advocacy ethics: A community-led approach that builds on existing strengths, relationships, and resources.
B. Asset-based community development: Including affected young people and families meaningfully in decisions that shape services. / Advocacy ethics: Balancing empowerment, consent, role boundaries, confidentiality, and potential consequences when advocating.
C. Asset-based community development: A community-led approach that builds on existing strengths, relationships, and resources. / Advocacy ethics: Balancing empowerment, consent, role boundaries, confidentiality, and potential consequences when advocating.
D. Asset-based community development: A community-led approach that builds on existing strengths, relationships, and resources. / Advocacy ethics: Meaningful inclusion of young people's perspectives and influence in services and decisions affecting them.

0556. A supervisor asks for an applied contrast between Self-advocacy and Coalition building. Which option fits?

A. Self-advocacy: Helping a youth prepare to state a support need in a meeting. / Coalition building: Agreeing on a common goal, roles, and communication practices across partner organizations.
B. Self-advocacy: Summarizing a service gap and actionable recommendations for decision makers. / Coalition building: Agreeing on a common goal, roles, and communication practices across partner organizations.
C. Self-advocacy: Agreeing on a common goal, roles, and communication practices across partner organizations. / Coalition building: Helping a youth prepare to state a support need in a meeting.
D. Self-advocacy: Helping a youth prepare to state a support need in a meeting. / Coalition building: Seeking youth input early and showing how it influenced a service decision.

0557. A case conference asks for a distinction between Participatory decision-making and Coalition building. Which answer is sound?

A. Participatory decision-making: Including affected young people and families meaningfully in decisions that shape services. / Coalition building: Organizing collaboration among people and groups with aligned interests to pursue shared change.
B. Participatory decision-making: Meaningful inclusion of young people's perspectives and influence in services and decisions affecting them. / Coalition building: Organizing collaboration among people and groups with aligned interests to pursue shared change.
C. Participatory decision-making: Including affected young people and families meaningfully in decisions that shape services. / Coalition building: Efforts to change policies, practices, or resource arrangements that affect groups of people.
D. Participatory decision-making: Organizing collaboration among people and groups with aligned interests to pursue shared change. / Coalition building: Including affected young people and families meaningfully in decisions that shape services.

0558. Which paired example correctly applies Service navigation first and Advocacy ethics second?

A. Service navigation: Clarifying eligibility, referral steps, and follow-up barriers with a family. / Advocacy ethics: Obtaining permission and discussing foreseeable benefits and risks before speaking on a client's behalf.
B. Service navigation: Seeking youth input early and showing how it influenced a service decision. / Advocacy ethics: Obtaining permission and discussing foreseeable benefits and risks before speaking on a client's behalf.
C. Service navigation: Clarifying eligibility, referral steps, and follow-up barriers with a family. / Advocacy ethics: Creating safe, accessible ways for youth input to shape a program.
D. Service navigation: Obtaining permission and discussing foreseeable benefits and risks before speaking on a client's behalf. / Advocacy ethics: Clarifying eligibility, referral steps, and follow-up barriers with a family.

0559. Select the best explanation of Policy brief.

A. A community-led approach that builds on existing strengths, relationships, and resources.
B. Practical assistance that helps people identify, access, and coordinate appropriate services.
C. A concise evidence-informed document that defines a policy issue and presents feasible options or recommendations.
D. Action taken with or on behalf of a person to secure access, rights, or needed services.

0560. For a child aged 8 in the telehealth session, a behavior specialist makes this practice the immediate priority: summarizing a service gap and actionable recommendations for decision makers. Which concept fits best?

A. Policy brief
B. Individual advocacy
C. Youth voice
D. Self-advocacy

0561. During work in the counseling practicum, a teacher and counselor identifies this need: summarizing a service gap and actionable recommendations for decision makers. Which idea should guide the response?

A. Systems advocacy
B. Participatory decision-making
C. Advocacy ethics
D. Policy brief

0562. Which comparison would correct a trainee's misunderstanding of Service navigation versus Youth voice?

A. Service navigation: Organizing collaboration among people and groups with aligned interests to pursue shared change. / Youth voice: Meaningful inclusion of young people's perspectives and influence in services and decisions affecting them.
B. Service navigation: Practical assistance that helps people identify, access, and coordinate appropriate services. / Youth voice: Including affected young people and families meaningfully in decisions that shape services.
C. Service navigation: Meaningful inclusion of young people's perspectives and influence in services and decisions affecting them. / Youth voice: Practical assistance that helps people identify, access, and coordinate appropriate services.
D. Service navigation: Practical assistance that helps people identify, access, and coordinate appropriate services. / Youth voice: Meaningful inclusion of young people's perspectives and influence in services and decisions affecting them.

0563. Identify the most precise label for this idea: A person's ability and opportunity to communicate needs, preferences, and rights and participate in decisions.

A. Self-advocacy
B. Participatory decision-making
C. Advocacy ethics
D. Service navigation

0564. Which paired example correctly applies Participatory decision-making first and Coalition building second?

A. Participatory decision-making: Agreeing on a common goal, roles, and communication practices across partner organizations. / Coalition building: Seeking youth input early and showing how it influenced a service decision.
B. Participatory decision-making: Seeking youth input early and showing how it influenced a service decision. / Coalition building: Agreeing on a common goal, roles, and communication practices across partner organizations.
C. Participatory decision-making: Creating safe, accessible ways for youth input to shape a program. / Coalition building: Agreeing on a common goal, roles, and communication practices across partner organizations.
D. Participatory decision-making: Seeking youth input early and showing how it influenced a service decision. / Coalition building: Using documented access barriers to recommend a service-system change.

0565. A student confuses Coalition building with Service navigation. Which explanation most accurately separates them?

A. Coalition building: Organizing collaboration among people and groups with aligned interests to pursue shared change. / Service navigation: A person's ability and opportunity to communicate needs, preferences, and rights and participate in decisions.
B. Coalition building: Meaningful inclusion of young people's perspectives and influence in services and decisions affecting them. / Service navigation: Practical assistance that helps people identify, access, and coordinate appropriate services.
C. Coalition building: Practical assistance that helps people identify, access, and coordinate appropriate services. / Service navigation: Organizing collaboration among people and groups with aligned interests to pursue shared change.
D. Coalition building: Organizing collaboration among people and groups with aligned interests to pursue shared change. / Service navigation: Practical assistance that helps people identify, access, and coordinate appropriate services.

0566. During service review in the school-based service, a community practitioner describes clarifying eligibility, referral steps, and follow-up barriers with a family. for a client in early adolescence. Which course idea is most applicable?

A. Individual advocacy
B. Service navigation
C. Advocacy ethics
D. Youth voice

0567. A community practitioner describes an intervention for a child aged 6 in the community youth program, centered on obtaining permission and discussing foreseeable benefits and risks before speaking on a client's behalf. Which named idea is most relevant?

A. Advocacy ethics
B. Systems advocacy
C. Participatory decision-making
D. Policy brief

0568. A service navigator is asked what should shape a child aged 6's support in the community service agency. The proposed focus is mapping community skills and networks before designing an outside-led program. Which principle does it represent?

A. Participatory decision-making
B. Coalition building
C. Individual advocacy
D. Asset-based community development

0569. Choose the definition pair that correctly explains Individual advocacy first and Participatory decision-making second.

A. Individual advocacy: Action taken with or on behalf of a person to secure access, rights, or needed services. / Participatory decision-making: Including affected young people and families meaningfully in decisions that shape services.
B. Individual advocacy: Including affected young people and families meaningfully in decisions that shape services. / Participatory decision-making: Action taken with or on behalf of a person to secure access, rights, or needed services.
C. Individual advocacy: Meaningful inclusion of young people's perspectives and influence in services and decisions affecting them. / Participatory decision-making: Including affected young people and families meaningfully in decisions that shape services.
D. Individual advocacy: Action taken with or on behalf of a person to secure access, rights, or needed services. / Participatory decision-making: Balancing empowerment, consent, role boundaries, confidentiality, and potential consequences when advocating.

0570. Consider a young person aged 18 receiving help in the community mental-health service. The consulting counselor focuses on clarifying eligibility, referral steps, and follow-up barriers with a family. Which term best describes the guiding idea?

A. Service navigation
B. Individual advocacy
C. Coalition building
D. Participatory decision-making

0571. How are Systems advocacy and Advocacy ethics most accurately differentiated in this curriculum?

A. Systems advocacy: Efforts to change policies, practices, or resource arrangements that affect groups of people. / Advocacy ethics: A community-led approach that builds on existing strengths, relationships, and resources.
B. Systems advocacy: Efforts to change policies, practices, or resource arrangements that affect groups of people. / Advocacy ethics: Balancing empowerment, consent, role boundaries, confidentiality, and potential consequences when advocating.
C. Systems advocacy: Organizing collaboration among people and groups with aligned interests to pursue shared change. / Advocacy ethics: Balancing empowerment, consent, role boundaries, confidentiality, and potential consequences when advocating.
D. Systems advocacy: Balancing empowerment, consent, role boundaries, confidentiality, and potential consequences when advocating. / Advocacy ethics: Efforts to change policies, practices, or resource arrangements that affect groups of people.

0572. At the community youth program, a research trainee reviews whether a plan for a child of elementary-school age is appropriate. The relevant practice is mapping community skills and networks before designing an outside-led program. Which concept is tested?

A. Policy brief
B. Asset-based community development
C. Youth voice
D. Coalition building

0573. A play therapist reviews a plan for a young person aged 13 in the telehealth session. The plan emphasizes supporting a family to navigate a referral barrier with the young person's informed involvement. Which course idea does this reflect?

A. Individual advocacy
B. Self-advocacy
C. Policy brief
D. Coalition building

0574. A supervisor asks for an applied contrast between Self-advocacy and Policy brief. Which option fits?

A. Self-advocacy: Helping a youth prepare to state a support need in a meeting. / Policy brief: Summarizing a service gap and actionable recommendations for decision makers.
B. Self-advocacy: Summarizing a service gap and actionable recommendations for decision makers. / Policy brief: Helping a youth prepare to state a support need in a meeting.
C. Self-advocacy: Creating safe, accessible ways for youth input to shape a program. / Policy brief: Summarizing a service gap and actionable recommendations for decision makers.
D. Self-advocacy: Helping a youth prepare to state a support need in a meeting. / Policy brief: Seeking youth input early and showing how it influenced a service decision.

0575. A supervisor asks for an applied contrast between Policy brief and Youth voice. Which option fits?

A. Policy brief: Creating safe, accessible ways for youth input to shape a program. / Youth voice: Summarizing a service gap and actionable recommendations for decision makers.
B. Policy brief: Clarifying eligibility, referral steps, and follow-up barriers with a family. / Youth voice: Creating safe, accessible ways for youth input to shape a program.
C. Policy brief: Summarizing a service gap and actionable recommendations for decision makers. / Youth voice: Using documented access barriers to recommend a service-system change.
D. Policy brief: Summarizing a service gap and actionable recommendations for decision makers. / Youth voice: Creating safe, accessible ways for youth input to shape a program.

0576. A supervisor asks how Systems advocacy would appear in practice. Which choice should be selected?

A. Clarifying eligibility, referral steps, and follow-up barriers with a family.
B. Creating safe, accessible ways for youth input to shape a program.
C. Summarizing a service gap and actionable recommendations for decision makers.
D. Using documented access barriers to recommend a service-system change.

0577. In a supervision review, a parent educator describes work with a young person aged 18 in the learning-support meeting: mapping community skills and networks before designing an outside-led program. What concept is illustrated?

A. Self-advocacy
B. Service navigation
C. Individual advocacy
D. Asset-based community development

0578. Which professional action most closely applies Advocacy ethics?

A. Creating safe, accessible ways for youth input to shape a program.
B. Helping a youth prepare to state a support need in a meeting.
C. Obtaining permission and discussing foreseeable benefits and risks before speaking on a client's behalf.
D. Mapping community skills and networks before designing an outside-led program.

0579. A team must select a support approach for a young person aged 10 at the youth advocacy program. The parent educator recommends clarifying eligibility, referral steps, and follow-up barriers with a family. Which idea is most relevant?

A. Policy brief
B. Coalition building
C. Participatory decision-making
D. Service navigation

0580. What is the central meaning of Individual advocacy?

A. Action taken with or on behalf of a person to secure access, rights, or needed services.
B. Practical assistance that helps people identify, access, and coordinate appropriate services.
C. A person's ability and opportunity to communicate needs, preferences, and rights and participate in decisions.
D. Organizing collaboration among people and groups with aligned interests to pursue shared change.

0581. Which comparison correctly distinguishes Individual advocacy from Youth voice?

A. Individual advocacy: Meaningful inclusion of young people's perspectives and influence in services and decisions affecting them. / Youth voice: Action taken with or on behalf of a person to secure access, rights, or needed services.
B. Individual advocacy: Action taken with or on behalf of a person to secure access, rights, or needed services. / Youth voice: Practical assistance that helps people identify, access, and coordinate appropriate services.
C. Individual advocacy: Action taken with or on behalf of a person to secure access, rights, or needed services. / Youth voice: Meaningful inclusion of young people's perspectives and influence in services and decisions affecting them.
D. Individual advocacy: Efforts to change policies, practices, or resource arrangements that affect groups of people. / Youth voice: Meaningful inclusion of young people's perspectives and influence in services and decisions affecting them.

0582. In the school counseling office, a family therapist is considering this approach for a high-school student: mapping community skills and networks before designing an outside-led program. Which framework does it represent?

A. Youth voice
B. Service navigation
C. Asset-based community development
D. Self-advocacy

0583. At a case-planning meeting, the counselor proposes summarizing a service gap and actionable recommendations for decision makers. for a child aged 7 seen in the school-based service. Which concept does this illustrate?

A. Participatory decision-making
B. Individual advocacy
C. Policy brief
D. Self-advocacy

0584. Which statement shows a sound practice-level distinction between Individual advocacy and Coalition building?

A. Individual advocacy: Supporting a family to navigate a referral barrier with the young person's informed involvement. / Coalition building: Agreeing on a common goal, roles, and communication practices across partner organizations.
B. Individual advocacy: Supporting a family to navigate a referral barrier with the young person's informed involvement. / Coalition building: Obtaining permission and discussing foreseeable benefits and risks before speaking on a client's behalf.
C. Individual advocacy: Helping a youth prepare to state a support need in a meeting. / Coalition building: Agreeing on a common goal, roles, and communication practices across partner organizations.
D. Individual advocacy: Agreeing on a common goal, roles, and communication practices across partner organizations. / Coalition building: Supporting a family to navigate a referral barrier with the young person's informed involvement.

0585. In a case note about a teenage client, a consultant working in the community service agency records this priority: supporting a family to navigate a referral barrier with the young person's informed involvement. What principle is reflected?

A. Individual advocacy
B. Asset-based community development
C. Policy brief
D. Self-advocacy

0586. In the child guidance clinic, a consulting counselor explains why a adolescent student would benefit from seeking youth input early and showing how it influenced a service decision. Which course concept underpins the explanation?

A. Policy brief
B. Youth voice
C. Individual advocacy
D. Participatory decision-making

0587. While consulting in the caregiver consultation, a mental-health professional supports a young adolescent client by using this approach: using documented access barriers to recommend a service-system change. Which concept is being applied?

A. Service navigation
B. Asset-based community development
C. Youth voice
D. Systems advocacy

0588. Select the best explanation of Asset-based community development.

A. Action taken with or on behalf of a person to secure access, rights, or needed services.
B. A community-led approach that builds on existing strengths, relationships, and resources.
C. Practical assistance that helps people identify, access, and coordinate appropriate services.
D. Including affected young people and families meaningfully in decisions that shape services.

0589. Which option is the clearest practical expression of Individual advocacy?

A. Using documented access barriers to recommend a service-system change.
B. Summarizing a service gap and actionable recommendations for decision makers.
C. Supporting a family to navigate a referral barrier with the young person's informed involvement.
D. Creating safe, accessible ways for youth input to shape a program.

0590. Which option correctly matches each concept to its practice focus: Asset-based community development and Youth voice?

A. Asset-based community development: Creating safe, accessible ways for youth input to shape a program. / Youth voice: Mapping community skills and networks before designing an outside-led program.
B. Asset-based community development: Mapping community skills and networks before designing an outside-led program. / Youth voice: Creating safe, accessible ways for youth input to shape a program.
C. Asset-based community development: Mapping community skills and networks before designing an outside-led program. / Youth voice: Agreeing on a common goal, roles, and communication practices across partner organizations.
D. Asset-based community development: Using documented access barriers to recommend a service-system change. / Youth voice: Creating safe, accessible ways for youth input to shape a program.

0591. What is the central meaning of Advocacy ethics?

A. A concise evidence-informed document that defines a policy issue and presents feasible options or recommendations.
B. A community-led approach that builds on existing strengths, relationships, and resources.
C. Balancing empowerment, consent, role boundaries, confidentiality, and potential consequences when advocating.
D. Including affected young people and families meaningfully in decisions that shape services.

0592. In a supervision quiz, how should Service navigation be distinguished from Youth voice?

A. Service navigation: Organizing collaboration among people and groups with aligned interests to pursue shared change. / Youth voice: Meaningful inclusion of young people's perspectives and influence in services and decisions affecting them.
B. Service navigation: Practical assistance that helps people identify, access, and coordinate appropriate services. / Youth voice: Meaningful inclusion of young people's perspectives and influence in services and decisions affecting them.
C. Service navigation: Practical assistance that helps people identify, access, and coordinate appropriate services. / Youth voice: Including affected young people and families meaningfully in decisions that shape services.
D. Service navigation: Meaningful inclusion of young people's perspectives and influence in services and decisions affecting them. / Youth voice: Practical assistance that helps people identify, access, and coordinate appropriate services.

0593. Select the best explanation of Advocacy ethics.

A. A community-led approach that builds on existing strengths, relationships, and resources.
B. Organizing collaboration among people and groups with aligned interests to pursue shared change.
C. Balancing empowerment, consent, role boundaries, confidentiality, and potential consequences when advocating.
D. A concise evidence-informed document that defines a policy issue and presents feasible options or recommendations.

0594. While supporting a young person in the student wellness team, a caregiver working with a counselor adopts this practice: clarifying eligibility, referral steps, and follow-up barriers with a family. Which concept best explains the choice?

A. Self-advocacy
B. Policy brief
C. Systems advocacy
D. Service navigation

0595. Which statement most accurately defines Self-advocacy?

A. Including affected young people and families meaningfully in decisions that shape services.
B. Organizing collaboration among people and groups with aligned interests to pursue shared change.
C. A person's ability and opportunity to communicate needs, preferences, and rights and participate in decisions.
D. Meaningful inclusion of young people's perspectives and influence in services and decisions affecting them.

0596. A support meeting for a adolescent student includes a clinical supervisor in the youth group. The practice under consideration is mapping community skills and networks before designing an outside-led program. Which concept guides it?

A. Youth voice
B. Asset-based community development
C. Systems advocacy
D. Participatory decision-making

0597. At the family session, a clinical supervisor meets with a student aged 15. The practice priority is: using documented access barriers to recommend a service-system change. Which concept best captures that priority?

A. Systems advocacy
B. Participatory decision-making
C. Asset-based community development
D. Self-advocacy

0598. Which paired example correctly applies Individual advocacy first and Service navigation second?

A. Individual advocacy: Supporting a family to navigate a referral barrier with the young person's informed involvement. / Service navigation: Creating safe, accessible ways for youth input to shape a program.
B. Individual advocacy: Summarizing a service gap and actionable recommendations for decision makers. / Service navigation: Clarifying eligibility, referral steps, and follow-up barriers with a family.
C. Individual advocacy: Supporting a family to navigate a referral barrier with the young person's informed involvement. / Service navigation: Clarifying eligibility, referral steps, and follow-up barriers with a family.
D. Individual advocacy: Clarifying eligibility, referral steps, and follow-up barriers with a family. / Service navigation: Supporting a family to navigate a referral barrier with the young person's informed involvement.

0599. Which statement accurately contrasts the course concepts Individual advocacy and Self-advocacy?

A. Individual advocacy: Action taken with or on behalf of a person to secure access, rights, or needed services. / Self-advocacy: A person's ability and opportunity to communicate needs, preferences, and rights and participate in decisions.
B. Individual advocacy: A person's ability and opportunity to communicate needs, preferences, and rights and participate in decisions. / Self-advocacy: Action taken with or on behalf of a person to secure access, rights, or needed services.
C. Individual advocacy: Meaningful inclusion of young people's perspectives and influence in services and decisions affecting them. / Self-advocacy: A person's ability and opportunity to communicate needs, preferences, and rights and participate in decisions.
D. Individual advocacy: Action taken with or on behalf of a person to secure access, rights, or needed services. / Self-advocacy: Practical assistance that helps people identify, access, and coordinate appropriate services.

0600. Which statement shows a sound practice-level distinction between Self-advocacy and Participatory decision-making?

A. Self-advocacy: Seeking youth input early and showing how it influenced a service decision. / Participatory decision-making: Helping a youth prepare to state a support need in a meeting.
B. Self-advocacy: Helping a youth prepare to state a support need in a meeting. / Participatory decision-making: Agreeing on a common goal, roles, and communication practices across partner organizations.
C. Self-advocacy: Helping a youth prepare to state a support need in a meeting. / Participatory decision-making: Seeking youth input early and showing how it influenced a service decision.
D. Self-advocacy: Creating safe, accessible ways for youth input to shape a program. / Participatory decision-making: Seeking youth input early and showing how it influenced a service decision.

0601. Which option correctly matches each concept to its practice focus: Systems advocacy and Coalition building?

A. Systems advocacy: Using documented access barriers to recommend a service-system change. / Coalition building: Mapping community skills and networks before designing an outside-led program.
B. Systems advocacy: Helping a youth prepare to state a support need in a meeting. / Coalition building: Agreeing on a common goal, roles, and communication practices across partner organizations.
C. Systems advocacy: Using documented access barriers to recommend a service-system change. / Coalition building: Agreeing on a common goal, roles, and communication practices across partner organizations.
D. Systems advocacy: Agreeing on a common goal, roles, and communication practices across partner organizations. / Coalition building: Using documented access barriers to recommend a service-system change.

0602. Which statement accurately contrasts the course concepts Asset-based community development and Coalition building?

A. Asset-based community development: A community-led approach that builds on existing strengths, relationships, and resources. / Coalition building: Action taken with or on behalf of a person to secure access, rights, or needed services.
B. Asset-based community development: A community-led approach that builds on existing strengths, relationships, and resources. / Coalition building: Organizing collaboration among people and groups with aligned interests to pursue shared change.
C. Asset-based community development: A person's ability and opportunity to communicate needs, preferences, and rights and participate in decisions. / Coalition building: Organizing collaboration among people and groups with aligned interests to pursue shared change.
D. Asset-based community development: Organizing collaboration among people and groups with aligned interests to pursue shared change. / Coalition building: A community-led approach that builds on existing strengths, relationships, and resources.

0603. Which applied comparison correctly identifies what belongs to Youth voice versus Advocacy ethics?

A. Youth voice: Mapping community skills and networks before designing an outside-led program. / Advocacy ethics: Obtaining permission and discussing foreseeable benefits and risks before speaking on a client's behalf.
B. Youth voice: Creating safe, accessible ways for youth input to shape a program. / Advocacy ethics: Obtaining permission and discussing foreseeable benefits and risks before speaking on a client's behalf.
C. Youth voice: Obtaining permission and discussing foreseeable benefits and risks before speaking on a client's behalf. / Advocacy ethics: Creating safe, accessible ways for youth input to shape a program.
D. Youth voice: Creating safe, accessible ways for youth input to shape a program. / Advocacy ethics: Clarifying eligibility, referral steps, and follow-up barriers with a family.

0604. A trainee must choose a practice that exemplifies Asset-based community development. Which action is the best fit?

A. Helping a youth prepare to state a support need in a meeting.
B. Seeking youth input early and showing how it influenced a service decision.
C. Summarizing a service gap and actionable recommendations for decision makers.
D. Mapping community skills and networks before designing an outside-led program.

0605. How are Participatory decision-making and Service navigation most accurately differentiated in this curriculum?

A. Participatory decision-making: Action taken with or on behalf of a person to secure access, rights, or needed services. / Service navigation: Practical assistance that helps people identify, access, and coordinate appropriate services.
B. Participatory decision-making: Including affected young people and families meaningfully in decisions that shape services. / Service navigation: Meaningful inclusion of young people's perspectives and influence in services and decisions affecting them.
C. Participatory decision-making: Including affected young people and families meaningfully in decisions that shape services. / Service navigation: Practical assistance that helps people identify, access, and coordinate appropriate services.
D. Participatory decision-making: Practical assistance that helps people identify, access, and coordinate appropriate services. / Service navigation: Including affected young people and families meaningfully in decisions that shape services.

0606. Which option preserves the correct meaning of both Participatory decision-making and Youth voice?

A. Participatory decision-making: Including affected young people and families meaningfully in decisions that shape services. / Youth voice: Meaningful inclusion of young people's perspectives and influence in services and decisions affecting them.
B. Participatory decision-making: Practical assistance that helps people identify, access, and coordinate appropriate services. / Youth voice: Meaningful inclusion of young people's perspectives and influence in services and decisions affecting them.
C. Participatory decision-making: Meaningful inclusion of young people's perspectives and influence in services and decisions affecting them. / Youth voice: Including affected young people and families meaningfully in decisions that shape services.
D. Participatory decision-making: Including affected young people and families meaningfully in decisions that shape services. / Youth voice: Action taken with or on behalf of a person to secure access, rights, or needed services.

0607. A student confuses Individual advocacy with Advocacy ethics. Which explanation most accurately separates them?

A. Individual advocacy: Balancing empowerment, consent, role boundaries, confidentiality, and potential consequences when advocating. / Advocacy ethics: Action taken with or on behalf of a person to secure access, rights, or needed services.
B. Individual advocacy: Action taken with or on behalf of a person to secure access, rights, or needed services. / Advocacy ethics: Balancing empowerment, consent, role boundaries, confidentiality, and potential consequences when advocating.
C. Individual advocacy: Action taken with or on behalf of a person to secure access, rights, or needed services. / Advocacy ethics: A concise evidence-informed document that defines a policy issue and presents feasible options or recommendations.
D. Individual advocacy: A person's ability and opportunity to communicate needs, preferences, and rights and participate in decisions. / Advocacy ethics: Balancing empowerment, consent, role boundaries, confidentiality, and potential consequences when advocating.

0608. In the family session, the agreed focus for a therapist working with a child aged 7 is creating safe, accessible ways for youth input to shape a program. Which concept names this focus?

A. Advocacy ethics
B. Youth voice
C. Individual advocacy
D. Participatory decision-making

0609. A youth worker is asked to justify a plan for a child aged 8 in the caregiver consultation. It calls for mapping community skills and networks before designing an outside-led program. Which concept provides the rationale?

A. Participatory decision-making
B. Asset-based community development
C. Self-advocacy
D. Youth voice

0610. Choose the response that best puts Systems advocacy into practice.

A. Seeking youth input early and showing how it influenced a service decision.
B. Helping a youth prepare to state a support need in a meeting.
C. Clarifying eligibility, referral steps, and follow-up barriers with a family.
D. Using documented access barriers to recommend a service-system change.

0611. In a supervision review, a caregiver working with a counselor describes work with a middle-school student in the child guidance clinic: using documented access barriers to recommend a service-system change. What concept is illustrated?

A. Service navigation
B. Systems advocacy
C. Policy brief
D. Individual advocacy

0612. A doctoral student reads the following description. Which concept does it define? Balancing empowerment, consent, role boundaries, confidentiality, and potential consequences when advocating.

A. Self-advocacy
B. Advocacy ethics
C. Coalition building
D. Individual advocacy

0613. At a case-planning meeting, the behavior specialist proposes mapping community skills and networks before designing an outside-led program. for a child aged 11 seen in the multidisciplinary case conference. Which concept does this illustrate?

A. Coalition building
B. Individual advocacy
C. Systems advocacy
D. Asset-based community development

0614. In the outpatient clinic, a youth worker describes the most appropriate support for a young person as summarizing a service gap and actionable recommendations for decision makers. Which framework is being applied?

A. Participatory decision-making
B. Individual advocacy
C. Policy brief
D. Asset-based community development

0615. A research trainee is asked what should shape a young person aged 16’s support in the telehealth session. The proposed focus is clarifying eligibility, referral steps, and follow-up barriers with a family. Which principle does it represent?

A. Individual advocacy
B. Asset-based community development
C. Service navigation
D. Coalition building

0616. Which comparison correctly distinguishes Policy brief from Service navigation?

A. Policy brief: A concise evidence-informed document that defines a policy issue and presents feasible options or recommendations. / Service navigation: Practical assistance that helps people identify, access, and coordinate appropriate services.
B. Policy brief: A concise evidence-informed document that defines a policy issue and presents feasible options or recommendations. / Service navigation: Efforts to change policies, practices, or resource arrangements that affect groups of people.
C. Policy brief: Practical assistance that helps people identify, access, and coordinate appropriate services. / Service navigation: A concise evidence-informed document that defines a policy issue and presents feasible options or recommendations.
D. Policy brief: Balancing empowerment, consent, role boundaries, confidentiality, and potential consequences when advocating. / Service navigation: Practical assistance that helps people identify, access, and coordinate appropriate services.

0617. A supervisor asks for an applied contrast between Self-advocacy and Participatory decision-making. Which option fits?

A. Self-advocacy: Seeking youth input early and showing how it influenced a service decision. / Participatory decision-making: Helping a youth prepare to state a support need in a meeting.
B. Self-advocacy: Helping a youth prepare to state a support need in a meeting. / Participatory decision-making: Agreeing on a common goal, roles, and communication practices across partner organizations.
C. Self-advocacy: Creating safe, accessible ways for youth input to shape a program. / Participatory decision-making: Seeking youth input early and showing how it influenced a service decision.
D. Self-advocacy: Helping a youth prepare to state a support need in a meeting. / Participatory decision-making: Seeking youth input early and showing how it influenced a service decision.

0618. A consultant prepares for a session in the school consultation with a child aged 11. The intended approach is agreeing on a common goal, roles, and communication practices across partner organizations. Which concept is most relevant?

A. Youth voice
B. Coalition building
C. Asset-based community development
D. Advocacy ethics

0619. In the classroom support meeting, the agreed focus for a service navigator working with a client in early adolescence is helping a youth prepare to state a support need in a meeting. Which concept names this focus?

A. Coalition building
B. Self-advocacy
C. Advocacy ethics
D. Service navigation

0620. While consulting in the youth advocacy program, a mental-health professional supports a adolescent student by using this approach: agreeing on a common goal, roles, and communication practices across partner organizations. Which concept is being applied?

A. Advocacy ethics
B. Participatory decision-making
C. Coalition building
D. Youth voice

0621. Which statement most accurately defines Advocacy ethics?

A. Balancing empowerment, consent, role boundaries, confidentiality, and potential consequences when advocating.
B. Organizing collaboration among people and groups with aligned interests to pursue shared change.
C. A person’s ability and opportunity to communicate needs, preferences, and rights and participate in decisions.
D. Action taken with or on behalf of a person to secure access, rights, or needed services.

0622. Which statement accurately contrasts the course concepts Asset-based community development and Advocacy ethics?

A. Asset-based community development: Including affected young people and families meaningfully in decisions that shape services. / Advocacy ethics: Balancing empowerment, consent, role boundaries, confidentiality, and potential consequences when advocating.
B. Asset-based community development: A community-led approach that builds on existing strengths, relationships, and resources. / Advocacy ethics: Meaningful inclusion of young people's perspectives and influence in services and decisions affecting them.
C. Asset-based community development: Balancing empowerment, consent, role boundaries, confidentiality, and potential consequences when advocating. / Advocacy ethics: A community-led approach that builds on existing strengths, relationships, and resources.
D. Asset-based community development: A community-led approach that builds on existing strengths, relationships, and resources. / Advocacy ethics: Balancing empowerment, consent, role boundaries, confidentiality, and potential consequences when advocating.

0623. Which statement accurately contrasts the course concepts Participatory decision-making and Asset-based community development?

A. Participatory decision-making: Including affected young people and families meaningfully in decisions that shape services. / Asset-based community development: A community-led approach that builds on existing strengths, relationships, and resources.
B. Participatory decision-making: Including affected young people and families meaningfully in decisions that shape services. / Asset-based community development: Efforts to change policies, practices, or resource arrangements that affect groups of people.
C. Participatory decision-making: A community-led approach that builds on existing strengths, relationships, and resources. / Asset-based community development: Including affected young people and families meaningfully in decisions that shape services.
D. Participatory decision-making: Action taken with or on behalf of a person to secure access, rights, or needed services. / Asset-based community development: A community-led approach that builds on existing strengths, relationships, and resources.

0624. For a teenage client in the supervision meeting, a school support specialist makes this practice the immediate priority: creating safe, accessible ways for youth input to shape a program. Which concept fits best?

A. Self-advocacy
B. Youth voice
C. Coalition building
D. Participatory decision-making

0625. How are Coalition building and Service navigation most accurately differentiated in this curriculum?

A. Coalition building: Organizing collaboration among people and groups with aligned interests to pursue shared change. / Service navigation: Practical assistance that helps people identify, access, and coordinate appropriate services.
B. Coalition building: Meaningful inclusion of young people's perspectives and influence in services and decisions affecting them. / Service navigation: Practical assistance that helps people identify, access, and coordinate appropriate services.
C. Coalition building: Organizing collaboration among people and groups with aligned interests to pursue shared change. / Service navigation: A person's ability and opportunity to communicate needs, preferences, and rights and participate in decisions.
D. Coalition building: Practical assistance that helps people identify, access, and coordinate appropriate services. / Service navigation: Organizing collaboration among people and groups with aligned interests to pursue shared change.

0626. At a case-planning meeting, the clinical supervisor proposes using documented access barriers to recommend a service-system change. for a student aged 15 seen in the family session. Which concept does this illustrate?

A. Youth voice
B. Advocacy ethics
C. Individual advocacy
D. Systems advocacy

0627. In a professional consultation about a young adolescent client, the mental-health professional describes this response in the caregiver consultation: using documented access barriers to recommend a service-system change. Which term is most apt?

A. Policy brief
B. Advocacy ethics
C. Systems advocacy
D. Self-advocacy

0628. Which description belongs with the term Systems advocacy?

A. Action taken with or on behalf of a person to secure access, rights, or needed services.
B. A community-led approach that builds on existing strengths, relationships, and resources.
C. Meaningful inclusion of young people's perspectives and influence in services and decisions affecting them.
D. Efforts to change policies, practices, or resource arrangements that affect groups of people.

0629. Identify the most precise label for this idea: Meaningful inclusion of young people's perspectives and influence in services and decisions affecting them.

A. Individual advocacy
B. Youth voice
C. Systems advocacy
D. Participatory decision-making

0630. Which statement shows a sound practice-level distinction between Coalition building and Service navigation?

A. Coalition building: Agreeing on a common goal, roles, and communication practices across partner organizations. / Service navigation: Clarifying eligibility, referral steps, and follow-up barriers with a family.
B. Coalition building: Clarifying eligibility, referral steps, and follow-up barriers with a family. / Service navigation: Agreeing on a common goal, roles, and communication practices across partner organizations.
C. Coalition building: Agreeing on a common goal, roles, and communication practices across partner organizations. / Service navigation: Helping a youth prepare to state a support need in a meeting.
D. Coalition building: Creating safe, accessible ways for youth input to shape a program. / Service navigation: Clarifying eligibility, referral steps, and follow-up barriers with a family.

0631. Which description belongs with the term Coalition building?

A. Including affected young people and families meaningfully in decisions that shape services.
B. Organizing collaboration among people and groups with aligned interests to pursue shared change.
C. A community-led approach that builds on existing strengths, relationships, and resources.
D. Meaningful inclusion of young people's perspectives and influence in services and decisions affecting them.

0632. Which applied comparison correctly identifies what belongs to Coalition building versus Advocacy ethics?

A. Coalition building: Seeking youth input early and showing how it influenced a service decision. / Advocacy ethics: Obtaining permission and discussing foreseeable benefits and risks before speaking on a client's behalf.
B. Coalition building: Agreeing on a common goal, roles, and communication practices across partner organizations. / Advocacy ethics: Obtaining permission and discussing foreseeable benefits and risks before speaking on a client's behalf.
C. Coalition building: Agreeing on a common goal, roles, and communication practices across partner organizations. / Advocacy ethics: Mapping community skills and networks before designing an outside-led program.
D. Coalition building: Obtaining permission and discussing foreseeable benefits and risks before speaking on a client's behalf. / Advocacy ethics: Agreeing on a common goal, roles, and communication practices across partner organizations.

0633. In the youth advocacy program, a teacher and counselor describes the most appropriate support for a middle-school student as mapping community skills and networks before designing an outside-led program. Which framework is being applied?

A. Advocacy ethics
B. Asset-based community development
C. Service navigation
D. Self-advocacy

0634. Consider a client in early adolescence receiving help in the child guidance clinic. The school counselor focuses on creating safe, accessible ways for youth input to shape a program. Which term best describes the guiding idea?

A. Systems advocacy
B. Service navigation
C. Youth voice
D. Policy brief

0635. Which option pairs the definitions of Self-advocacy and Coalition building correctly, in that order?

A. Self-advocacy: A person's ability and opportunity to communicate needs, preferences, and rights and participate in decisions. / Coalition building: Including affected young people and families meaningfully in decisions that shape services.
B. Self-advocacy: Organizing collaboration among people and groups with aligned interests to pursue shared change. / Coalition building: A person's ability and opportunity to communicate needs, preferences, and rights and participate in decisions.
C. Self-advocacy: A person's ability and opportunity to communicate needs, preferences, and rights and participate in decisions. / Coalition building: Organizing collaboration among people and groups with aligned interests to pursue shared change.
D. Self-advocacy: A concise evidence-informed document that defines a policy issue and presents feasible options or recommendations. / Coalition building: Organizing collaboration among people and groups with aligned interests to pursue shared change.

0636. How are Systems advocacy and Youth voice most accurately differentiated in this curriculum?

A. Systems advocacy: Efforts to change policies, practices, or resource arrangements that affect groups of people. / Youth voice: Meaningful inclusion of young people's perspectives and influence in services and decisions affecting them.
B. Systems advocacy: Action taken with or on behalf of a person to secure access, rights, or needed services. / Youth voice: Meaningful inclusion of young people's perspectives and influence in services and decisions affecting them.
C. Systems advocacy: Efforts to change policies, practices, or resource arrangements that affect groups of people. / Youth voice: Balancing empowerment, consent, role boundaries, confidentiality, and potential consequences when advocating.
D. Systems advocacy: Meaningful inclusion of young people's perspectives and influence in services and decisions affecting them. / Youth voice: Efforts to change policies, practices, or resource arrangements that affect groups of people.

0637. At the school consultation, a community practitioner reviews whether a plan for a preadolescent child is appropriate. The relevant practice is summarizing a service gap and actionable recommendations for decision makers. Which concept is tested?

A. Policy brief
B. Asset-based community development
C. Youth voice
D. Self-advocacy

0638. Which named construct is captured by this account? Practical assistance that helps people identify, access, and coordinate appropriate services.

A. Coalition building
B. Service navigation
C. Individual advocacy
D. Systems advocacy

0639. A supervised trainee and a young person aged 16 are discussing support in the caregiver consultation. The selected practice is agreeing on a common goal, roles, and communication practices across partner organizations. Which concept does this demonstrate?

A. Asset-based community development
B. Service navigation
C. Coalition building
D. Systems advocacy

0640. What is the central meaning of Coalition building?

A. A concise evidence-informed document that defines a policy issue and presents feasible options or recommendations.
B. A community-led approach that builds on existing strengths, relationships, and resources.
C. Including affected young people and families meaningfully in decisions that shape services.
D. Organizing collaboration among people and groups with aligned interests to pursue shared change.

0641. A student confuses Policy brief with Advocacy ethics. Which explanation most accurately separates them?

A. Policy brief: A concise evidence-informed document that defines a policy issue and presents feasible options or recommendations. / Advocacy ethics: Balancing empowerment, consent, role boundaries, confidentiality, and potential consequences when advocating.
B. Policy brief: A concise evidence-informed document that defines a policy issue and presents feasible options or recommendations. / Advocacy ethics: Organizing collaboration among people and groups with aligned interests to pursue shared change.
C. Policy brief: Balancing empowerment, consent, role boundaries, confidentiality, and potential consequences when advocating. / Advocacy ethics: A concise evidence-informed document that defines a policy issue and presents feasible options or recommendations.
D. Policy brief: Efforts to change policies, practices, or resource arrangements that affect groups of people. / Advocacy ethics: Balancing empowerment, consent, role boundaries, confidentiality, and potential consequences when advocating.

0642. During work in the parent meeting, a group facilitator identifies this need: clarifying eligibility, referral steps, and follow-up barriers with a family. Which idea should guide the response?

A. Coalition building
B. Youth voice
C. Service navigation
D. Advocacy ethics

0643. Which comparison correctly distinguishes Policy brief from Youth voice?

A. Policy brief: A concise evidence-informed document that defines a policy issue and presents feasible options or recommendations. / Youth voice: Efforts to change policies, practices, or resource arrangements that affect groups of people.
B. Policy brief: Meaningful inclusion of young people's perspectives and influence in services and decisions affecting them. / Youth voice: A concise evidence-informed document that defines a policy issue and presents feasible options or recommendations.
C. Policy brief: A concise evidence-informed document that defines a policy issue and presents feasible options or recommendations. / Youth voice: Meaningful inclusion of young people's perspectives and influence in services and decisions affecting them.
D. Policy brief: Practical assistance that helps people identify, access, and coordinate appropriate services. / Youth voice: Meaningful inclusion of young people's perspectives and influence in services and decisions affecting them.

0644. When reviewing a child aged 8's plan in the community youth program, the caregiver working with a counselor notes that the next step is agreeing on a common goal, roles, and communication practices across partner organizations. Which concept guides this step?

A. Coalition building
B. Systems advocacy
C. Service navigation
D. Individual advocacy

0645. At the counseling practicum, a service navigator reviews whether a plan for a teenage client is appropriate. The relevant practice is using documented access barriers to recommend a service-system change. Which concept is tested?

A. Service navigation
B. Systems advocacy
C. Individual advocacy
D. Policy brief

0646. In the family resource center, the agreed focus for a program coordinator working with a student aged 15 is mapping community skills and networks before designing an outside-led program. Which concept names this focus?

A. Policy brief
B. Individual advocacy
C. Participatory decision-making
D. Asset-based community development

0647. A support meeting for a school-age child includes a school support specialist in the learning-support meeting. The practice under consideration is supporting a family to navigate a referral barrier with the young person's informed involvement. Which concept guides it?

A. Policy brief
B. Individual advocacy
C. Youth voice
D. Advocacy ethics

0648. A mental-health professional is supporting a student aged 12 in the after-school program. The key practice is mapping community skills and networks before designing an outside-led program. Which course concept is most relevant?

A. Self-advocacy
B. Systems advocacy
C. Advocacy ethics
D. Asset-based community development

0649. Consider a student aged 12 receiving help in the telehealth session. The group facilitator focuses on agreeing on a common goal, roles, and communication practices across partner organizations. Which term best describes the guiding idea?

A. Service navigation
B. Asset-based community development
C. Coalition building
D. Systems advocacy

0650. A trainee must explain Policy brief. Which answer is accurate?

A. A concise evidence-informed document that defines a policy issue and presents feasible options or recommendations.
B. A community-led approach that builds on existing strengths, relationships, and resources.
C. Action taken with or on behalf of a person to secure access, rights, or needed services.
D. Practical assistance that helps people identify, access, and coordinate appropriate services.

0651. In the multidisciplinary case conference, a caregiver working with a counselor is considering this approach for a client in late adolescence: creating safe, accessible ways for youth input to shape a program. Which framework does it represent?

A. Youth voice
B. Service navigation
C. Policy brief
D. Coalition building

0652. Which comparison correctly distinguishes Individual advocacy from Systems advocacy?

A. Individual advocacy: Efforts to change policies, practices, or resource arrangements that affect groups of people. / Systems advocacy: Action taken with or on behalf of a person to secure access, rights, or needed services.
B. Individual advocacy: Organizing collaboration among people and groups with aligned interests to pursue shared change. / Systems advocacy: Efforts to change policies, practices, or resource arrangements that affect groups of people.
C. Individual advocacy: Action taken with or on behalf of a person to secure access, rights, or needed services. / Systems advocacy: Balancing empowerment, consent, role boundaries, confidentiality, and potential consequences when advocating.
D. Individual advocacy: Action taken with or on behalf of a person to secure access, rights, or needed services. / Systems advocacy: Efforts to change policies, practices, or resource arrangements that affect groups of people.

0653. A school-based clinician presents a support plan for a child aged 14 at the learning-support meeting. Its central feature is obtaining permission and discussing foreseeable benefits and risks before speaking on a client's behalf. Which concept should be named?

A. Advocacy ethics
B. Asset-based community development
C. Systems advocacy
D. Policy brief

0654. Choose the definition pair that correctly explains Systems advocacy first and Coalition building second.

A. Systems advocacy: Efforts to change policies, practices, or resource arrangements that affect groups of people. / Coalition building: A community-led approach that builds on existing strengths, relationships, and resources.
B. Systems advocacy: Efforts to change policies, practices, or resource arrangements that affect groups of people. / Coalition building: Organizing collaboration among people and groups with aligned interests to pursue shared change.
C. Systems advocacy: Organizing collaboration among people and groups with aligned interests to pursue shared change. / Coalition building: Efforts to change policies, practices, or resource arrangements that affect groups of people.
D. Systems advocacy: A person's ability and opportunity to communicate needs, preferences, and rights and participate in decisions. / Coalition building: Organizing collaboration among people and groups with aligned interests to pursue shared change.

0655. A planning meeting about a young adolescent client includes a counselor. The proposed practice in the clinical planning session is mapping community skills and networks before designing an outside-led program. Which idea underlies it?

A. Participatory decision-making
B. Asset-based community development
C. Coalition building
D. Service navigation

0656. A school-age child is receiving support in the caregiver consultation. The group facilitator is guided by this practice: obtaining permission and discussing foreseeable benefits and risks before speaking on a client's behalf. Which principle best fits?

A. Advocacy ethics
B. Systems advocacy
C. Coalition building
D. Asset-based community development

0657. Which option preserves the correct meaning of both Participatory decision-making and Policy brief?

A. Participatory decision-making: Including affected young people and families meaningfully in decisions that shape services. / Policy brief: A person's ability and opportunity to communicate needs, preferences, and rights and participate in decisions.
B. Participatory decision-making: A concise evidence-informed document that defines a policy issue and presents feasible options or recommendations. / Policy brief: Including affected young people and families meaningfully in decisions that shape services.
C. Participatory decision-making: A community-led approach that builds on existing strengths, relationships, and resources. / Policy brief: A concise evidence-informed document that defines a policy issue and presents feasible options or recommendations.
D. Participatory decision-making: Including affected young people and families meaningfully in decisions that shape services. / Policy brief: A concise evidence-informed document that defines a policy issue and presents feasible options or recommendations.

0658. A supervisor asks how Individual advocacy would appear in practice. Which choice should be selected?

A. Mapping community skills and networks before designing an outside-led program.
B. Agreeing on a common goal, roles, and communication practices across partner organizations.
C. Supporting a family to navigate a referral barrier with the young person's informed involvement.
D. Helping a youth prepare to state a support need in a meeting.

0659. Which comparison would correct a trainee's misunderstanding of Systems advocacy versus Policy brief?

A. Systems advocacy: Efforts to change policies, practices, or resource arrangements that affect groups of people. / Policy brief: A concise evidence-informed document that defines a policy issue and presents feasible options or recommendations.
B. Systems advocacy: Efforts to change policies, practices, or resource arrangements that affect groups of people. / Policy brief: A person's ability and opportunity to communicate needs, preferences, and rights and participate in decisions.
C. Systems advocacy: Meaningful inclusion of young people's perspectives and influence in services and decisions affecting them. / Policy brief: A concise evidence-informed document that defines a policy issue and presents feasible options or recommendations.
D. Systems advocacy: A concise evidence-informed document that defines a policy issue and presents feasible options or recommendations. / Policy brief: Efforts to change policies, practices, or resource arrangements that affect groups of people.

0660. A trainee must distinguish how Systems advocacy and Policy brief guide practice. Which comparison is accurate?

A. Systems advocacy: Creating safe, accessible ways for youth input to shape a program. / Policy brief: Summarizing a service gap and actionable recommendations for decision makers.
B. Systems advocacy: Using documented access barriers to recommend a service-system change. / Policy brief: Helping a youth prepare to state a support need in a meeting.
C. Systems advocacy: Summarizing a service gap and actionable recommendations for decision makers. / Policy brief: Using documented access barriers to recommend a service-system change.
D. Systems advocacy: Using documented access barriers to recommend a service-system change. / Policy brief: Summarizing a service gap and actionable recommendations for decision makers.

0661. How should a practitioner distinguish the applications of Individual advocacy and Systems advocacy?

A. Individual advocacy: Agreeing on a common goal, roles, and communication practices across partner organizations. / Systems advocacy: Using documented access barriers to recommend a service-system change.
B. Individual advocacy: Supporting a family to navigate a referral barrier with the young person's informed involvement. / Systems advocacy: Obtaining permission and discussing foreseeable benefits and risks before speaking on a client's behalf.
C. Individual advocacy: Using documented access barriers to recommend a service-system change. / Systems advocacy: Supporting a family to navigate a referral barrier with the young person's informed involvement.
D. Individual advocacy: Supporting a family to navigate a referral barrier with the young person's informed involvement. / Systems advocacy: Using documented access barriers to recommend a service-system change.

0662. A case conference asks for a distinction between Participatory decision-making and Asset-based community development. Which answer is sound?

A. Participatory decision-making: A community-led approach that builds on existing strengths, relationships, and resources. / Asset-based community development: Including affected young people and families meaningfully in decisions that shape services.
B. Participatory decision-making: Including affected young people and families meaningfully in decisions that shape services. / Asset-based community development: Efforts to change policies, practices, or resource arrangements that affect groups of people.
C. Participatory decision-making: Including affected young people and families meaningfully in decisions that shape services. / Asset-based community development: A community-led approach that builds on existing strengths, relationships, and resources.
D. Participatory decision-making: Action taken with or on behalf of a person to secure access, rights, or needed services. / Asset-based community development: A community-led approach that builds on existing strengths, relationships, and resources.

0663. A assessment clinician prepares for a session in the child guidance clinic with a young person aged 18. The intended approach is supporting a family to navigate a referral barrier with the young person's informed involvement. Which concept is most relevant?

A. Systems advocacy
B. Participatory decision-making
C. Self-advocacy
D. Individual advocacy

0664. Which pair of actions illustrates Individual advocacy and Self-advocacy, respectively?

A. Individual advocacy: Supporting a family to navigate a referral barrier with the young person's informed involvement. / Self-advocacy: Clarifying eligibility, referral steps, and follow-up barriers with a family.
B. Individual advocacy: Helping a youth prepare to state a support need in a meeting. / Self-advocacy: Supporting a family to navigate a referral barrier with the young person's informed involvement.
C. Individual advocacy: Supporting a family to navigate a referral barrier with the young person's informed involvement. / Self-advocacy: Helping a youth prepare to state a support need in a meeting.
D. Individual advocacy: Creating safe, accessible ways for youth input to shape a program. / Self-advocacy: Helping a youth prepare to state a support need in a meeting.

0665. A supervisor asks how Policy brief would appear in practice. Which choice should be selected?

A. Using documented access barriers to recommend a service-system change.
B. Summarizing a service gap and actionable recommendations for decision makers.
C. Seeking youth input early and showing how it influenced a service decision.
D. Supporting a family to navigate a referral barrier with the young person's informed involvement.

0666. In the youth group, a team asks how a school counselor can support a young person aged 10. One proposed action is summarizing a service gap and actionable recommendations for decision makers. Which idea does it represent?

A. Asset-based community development
B. Coalition building
C. Policy brief
D. Advocacy ethics

0667. Which statement accurately contrasts the course concepts Self-advocacy and Service navigation?

A. Self-advocacy: A community-led approach that builds on existing strengths, relationships, and resources. / Service navigation: Practical assistance that helps people identify, access, and coordinate appropriate services.
B. Self-advocacy: A person's ability and opportunity to communicate needs, preferences, and rights and participate in decisions. / Service navigation: Practical assistance that helps people identify, access, and coordinate appropriate services.
C. Self-advocacy: A person's ability and opportunity to communicate needs, preferences, and rights and participate in decisions. / Service navigation: A concise evidence-informed document that defines a policy issue and presents feasible options or recommendations.
D. Self-advocacy: Practical assistance that helps people identify, access, and coordinate appropriate services. / Service navigation: A person's ability and opportunity to communicate needs, preferences, and rights and participate in decisions.

0668. A service team discusses a young person in the child guidance clinic. Their proposed next step is obtaining permission and discussing foreseeable benefits and risks before speaking on a client's behalf. Which course concept supports it?

A. Advocacy ethics
B. Policy brief
C. Individual advocacy
D. Youth voice

0669. In the student wellness team, the agreed focus for a research trainee working with a older adolescent client is summarizing a service gap and actionable recommendations for decision makers. Which concept names this focus?

A. Asset-based community development
B. Advocacy ethics
C. Individual advocacy
D. Policy brief

0670. For a young person aged 18 in the youth advocacy program, a school support specialist makes this practice the immediate priority: seeking youth input early and showing how it influenced a service decision. Which concept fits best?

A. Policy brief
B. Individual advocacy
C. Participatory decision-making
D. Asset-based community development

0671. In a professional consultation about a student aged 17, the consultant describes this response in the behavior-support review: mapping community skills and networks before designing an outside-led program. Which term is most apt?

A. Asset-based community development
B. Coalition building
C. Self-advocacy
D. Youth voice

0672. In a case note about a student aged 17, a assessment clinician working in the parent meeting records this priority: obtaining permission and discussing foreseeable benefits and risks before speaking on a client's behalf. What principle is reflected?

A. Participatory decision-making
B. Advocacy ethics
C. Self-advocacy
D. Youth voice

0673. A student confuses Asset-based community development with Policy brief. Which explanation most accurately separates them?

A. Asset-based community development: Organizing collaboration among people and groups with aligned interests to pursue shared change. / Policy brief: A concise evidence-informed document that defines a policy issue and presents feasible options or recommendations.
B. Asset-based community development: A concise evidence-informed document that defines a policy issue and presents feasible options or recommendations. / Policy brief: A community-led approach that builds on existing strengths, relationships, and resources.
C. Asset-based community development: A community-led approach that builds on existing strengths, relationships, and resources. / Policy brief: Practical assistance that helps people identify, access, and coordinate appropriate services.
D. Asset-based community development: A community-led approach that builds on existing strengths, relationships, and resources. / Policy brief: A concise evidence-informed document that defines a policy issue and presents feasible options or recommendations.

0674. Which option pairs the definitions of Systems advocacy and Policy brief correctly, in that order?

A. Systems advocacy: Efforts to change policies, practices, or resource arrangements that affect groups of people. / Policy brief: A concise evidence-informed document that defines a policy issue and presents feasible options or recommendations.
B. Systems advocacy: Efforts to change policies, practices, or resource arrangements that affect groups of people. / Policy brief: A person's ability and opportunity to communicate needs, preferences, and rights and participate in decisions.
C. Systems advocacy: Meaningful inclusion of young people's perspectives and influence in services and decisions affecting them. / Policy brief: A concise evidence-informed document that defines a policy issue and presents feasible options or recommendations.
D. Systems advocacy: A concise evidence-informed document that defines a policy issue and presents feasible options or recommendations. / Policy brief: Efforts to change policies, practices, or resource arrangements that affect groups of people.

0675. Choose the practice comparison that best separates Policy brief from Youth voice.

A. Policy brief: Summarizing a service gap and actionable recommendations for decision makers. / Youth voice: Using documented access barriers to recommend a service-system change.
B. Policy brief: Clarifying eligibility, referral steps, and follow-up barriers with a family. / Youth voice: Creating safe, accessible ways for youth input to shape a program.
C. Policy brief: Creating safe, accessible ways for youth input to shape a program. / Youth voice: Summarizing a service gap and actionable recommendations for decision makers.
D. Policy brief: Summarizing a service gap and actionable recommendations for decision makers. / Youth voice: Creating safe, accessible ways for youth input to shape a program.

0676. Which comparison correctly distinguishes Systems advocacy from Participatory decision-making?

A. Systems advocacy: Efforts to change policies, practices, or resource arrangements that affect groups of people. / Participatory decision-making: Including affected young people and families meaningfully in decisions that shape services.
B. Systems advocacy: Meaningful inclusion of young people's perspectives and influence in services and decisions affecting them. / Participatory decision-making: Including affected young people and families meaningfully in decisions that shape services.
C. Systems advocacy: Including affected young people and families meaningfully in decisions that shape services. / Participatory decision-making: Efforts to change policies, practices, or resource arrangements that affect groups of people.
D. Systems advocacy: Efforts to change policies, practices, or resource arrangements that affect groups of people. / Participatory decision-making: Action taken with or on behalf of a person to secure access, rights, or needed services.

0677. For a student aged 15 in the community mental-health service, a counselor makes this practice the immediate priority: agreeing on a common goal, roles, and communication practices across partner organizations. Which concept fits best?

A. Service navigation
B. Advocacy ethics
C. Coalition building
D. Youth voice

0678. While supporting a client in late adolescence in the youth group, a family therapist adopts this practice: seeking youth input early and showing how it influenced a service decision. Which concept best explains the choice?

A. Advocacy ethics
B. Participatory decision-making
C. Asset-based community development
D. Systems advocacy

0679. In a supervision review, a school-based clinician describes work with a client in early adolescence in the parent meeting: summarizing a service gap and actionable recommendations for decision makers. What concept is illustrated?

A. Advocacy ethics
B. Policy brief
C. Individual advocacy
D. Youth voice

0680. Which statement most accurately defines Coalition building?

A. A community-led approach that builds on existing strengths, relationships, and resources.
B. A person's ability and opportunity to communicate needs, preferences, and rights and participate in decisions.
C. Meaningful inclusion of young people's perspectives and influence in services and decisions affecting them.
D. Organizing collaboration among people and groups with aligned interests to pursue shared change.

0681. While consulting in the outpatient clinic, a supervised trainee supports a young person aged 13 by using this approach: clarifying eligibility, referral steps, and follow-up barriers with a family. Which concept is being applied?

A. Participatory decision-making
B. Service navigation
C. Individual advocacy
D. Self-advocacy

0682. Identify the most precise label for this idea: Action taken with or on behalf of a person to secure access, rights, or needed services.

A. Service navigation
B. Advocacy ethics
C. Asset-based community development
D. Individual advocacy

0683. Consider a client in late adolescence receiving help in the school-based service. The group facilitator focuses on using documented access barriers to recommend a service-system change. Which term best describes the guiding idea?

A. Youth voice
B. Individual advocacy
C. Self-advocacy
D. Systems advocacy

0684. Which paired example correctly applies Systems advocacy first and Service navigation second?

A. Systems advocacy: Clarifying eligibility, referral steps, and follow-up barriers with a family. / Service navigation: Using documented access barriers to recommend a service-system change.
B. Systems advocacy: Mapping community skills and networks before designing an outside-led program. / Service navigation: Clarifying eligibility, referral steps, and follow-up barriers with a family.
C. Systems advocacy: Using documented access barriers to recommend a service-system change. / Service navigation: Creating safe, accessible ways for youth input to shape a program.
D. Systems advocacy: Using documented access barriers to recommend a service-system change. / Service navigation: Clarifying eligibility, referral steps, and follow-up barriers with a family.

0685. While consulting in the behavior-support review, a consultant supports a student aged 17 by using this approach: mapping community skills and networks before designing an outside-led program. Which concept is being applied?

A. Participatory decision-making
B. Self-advocacy
C. Service navigation
D. Asset-based community development

0686. Which statement accurately contrasts the course concepts Youth voice and Advocacy ethics?

A. Youth voice: A community-led approach that builds on existing strengths, relationships, and resources. / Advocacy ethics: Balancing empowerment, consent, role boundaries, confidentiality, and potential consequences when advocating.
B. Youth voice: Balancing empowerment, consent, role boundaries, confidentiality, and potential consequences when advocating. / Advocacy ethics: Meaningful inclusion of young people's perspectives and influence in services and decisions affecting them.
C. Youth voice: Meaningful inclusion of young people's perspectives and influence in services and decisions affecting them. / Advocacy ethics: Practical assistance that helps people identify, access, and coordinate appropriate services.
D. Youth voice: Meaningful inclusion of young people's perspectives and influence in services and decisions affecting them. / Advocacy ethics: Balancing empowerment, consent, role boundaries, confidentiality, and potential consequences when advocating.

0687. Which pair of actions illustrates Coalition building and Service navigation, respectively?

A. Coalition building: Agreeing on a common goal, roles, and communication practices across partner organizations. / Service navigation: Clarifying eligibility, referral steps, and follow-up barriers with a family.
B. Coalition building: Agreeing on a common goal, roles, and communication practices across partner organizations. / Service navigation: Helping a youth prepare to state a support need in a meeting.
C. Coalition building: Clarifying eligibility, referral steps, and follow-up barriers with a family. / Service navigation: Agreeing on a common goal, roles, and communication practices across partner organizations.
D. Coalition building: Creating safe, accessible ways for youth input to shape a program. / Service navigation: Clarifying eligibility, referral steps, and follow-up barriers with a family.

0688. How are Systems advocacy and Self-advocacy most accurately differentiated in this curriculum?

A. Systems advocacy: Including affected young people and families meaningfully in decisions that shape services. / Self-advocacy: A person's ability and opportunity to communicate needs, preferences, and rights and participate in decisions.
B. Systems advocacy: A person's ability and opportunity to communicate needs, preferences, and rights and participate in decisions. / Self-advocacy: Efforts to change policies, practices, or resource arrangements that affect groups of people.
C. Systems advocacy: Efforts to change policies, practices, or resource arrangements that affect groups of people. / Self-advocacy: A person's ability and opportunity to communicate needs, preferences, and rights and participate in decisions.
D. Systems advocacy: Efforts to change policies, practices, or resource arrangements that affect groups of people. / Self-advocacy: A community-led approach that builds on existing strengths, relationships, and resources.

0689. In the school consultation, a school counselor explains why a middle-school student would benefit from obtaining permission and discussing foreseeable benefits and risks before speaking on a client's behalf. Which course concept underpins the explanation?

A. Individual advocacy
B. Advocacy ethics
C. Participatory decision-making
D. Systems advocacy

0690. Which option correctly matches each concept to its practice focus: Policy brief and Coalition building?

A. Policy brief: Agreeing on a common goal, roles, and communication practices across partner organizations. / Coalition building: Summarizing a service gap and actionable recommendations for decision makers.
B. Policy brief: Obtaining permission and discussing foreseeable benefits and risks before speaking on a client's behalf. / Coalition building: Agreeing on a common goal, roles, and communication practices across partner organizations.
C. Policy brief: Summarizing a service gap and actionable recommendations for decision makers. / Coalition building: Agreeing on a common goal, roles, and communication practices across partner organizations.
D. Policy brief: Summarizing a service gap and actionable recommendations for decision makers. / Coalition building: Helping a youth prepare to state a support need in a meeting.

0691. A case conference asks for a distinction between Self-advocacy and Advocacy ethics. Which answer is sound?

A. Self-advocacy: Balancing empowerment, consent, role boundaries, confidentiality, and potential consequences when advocating. / Advocacy ethics: A person's ability and opportunity to communicate needs, preferences, and rights and participate in decisions.
B. Self-advocacy: A person's ability and opportunity to communicate needs, preferences, and rights and participate in decisions. / Advocacy ethics: Balancing empowerment, consent, role boundaries, confidentiality, and potential consequences when advocating.
C. Self-advocacy: Including affected young people and families meaningfully in decisions that shape services. / Advocacy ethics: Balancing empowerment, consent, role boundaries, confidentiality, and potential consequences when advocating.
D. Self-advocacy: A person's ability and opportunity to communicate needs, preferences, and rights and participate in decisions. / Advocacy ethics: A community-led approach that builds on existing strengths, relationships, and resources.

0692. Which paired example correctly applies Asset-based community development first and Advocacy ethics second?

A. Asset-based community development: Mapping community skills and networks before designing an outside-led program. / Advocacy ethics: Creating safe, accessible ways for youth input to shape a program.
B. Asset-based community development: Mapping community skills and networks before designing an outside-led program. / Advocacy ethics: Obtaining permission and discussing foreseeable benefits and risks before speaking on a client's behalf.
C. Asset-based community development: Seeking youth input early and showing how it influenced a service decision. / Advocacy ethics: Obtaining permission and discussing foreseeable benefits and risks before speaking on a client's behalf.
D. Asset-based community development: Obtaining permission and discussing foreseeable benefits and risks before speaking on a client's behalf. / Advocacy ethics: Mapping community skills and networks before designing an outside-led program.

0693. What is the central meaning of Youth voice?

A. Meaningful inclusion of young people's perspectives and influence in services and decisions affecting them.
B. Organizing collaboration among people and groups with aligned interests to pursue shared change.
C. A concise evidence-informed document that defines a policy issue and presents feasible options or recommendations.
D. Efforts to change policies, practices, or resource arrangements that affect groups of people.

0694. Which comparison would correct a trainee's misunderstanding of Individual advocacy versus Participatory decision-making?

A. Individual advocacy: Action taken with or on behalf of a person to secure access, rights, or needed services. / Participatory decision-making: Balancing empowerment, consent, role boundaries, confidentiality, and potential consequences when advocating.
B. Individual advocacy: Action taken with or on behalf of a person to secure access, rights, or needed services. / Participatory decision-making: Including affected young people and families meaningfully in decisions that shape services.
C. Individual advocacy: Including affected young people and families meaningfully in decisions that shape services. / Participatory decision-making: Action taken with or on behalf of a person to secure access, rights, or needed services.
D. Individual advocacy: Meaningful inclusion of young people's perspectives and influence in services and decisions affecting them. / Participatory decision-making: Including affected young people and families meaningfully in decisions that shape services.

0695. Which course concept is defined as follows: Organizing collaboration among people and groups with aligned interests to pursue shared change.

A. Coalition building
B. Youth voice
C. Participatory decision-making
D. Advocacy ethics

0696. Which option preserves the correct meaning of both Participatory decision-making and Asset-based community development?

A. Participatory decision-making: Action taken with or on behalf of a person to secure access, rights, or needed services. / Asset-based community development: A community-led approach that builds on existing strengths, relationships, and resources.
B. Participatory decision-making: Including affected young people and families meaningfully in decisions that shape services. / Asset-based community development: Efforts to change policies, practices, or resource arrangements that affect groups of people.
C. Participatory decision-making: Including affected young people and families meaningfully in decisions that shape services. / Asset-based community development: A community-led approach that builds on existing strengths, relationships, and resources.
D. Participatory decision-making: A community-led approach that builds on existing strengths, relationships, and resources. / Asset-based community development: Including affected young people and families meaningfully in decisions that shape services.

0697. A child aged 11 is receiving support in the family resource center. The youth worker is guided by this practice: seeking youth input early and showing how it influenced a service decision. Which principle best fits?

A. Self-advocacy
B. Youth voice
C. Asset-based community development
D. Participatory decision-making

0698. Which paired example correctly applies Policy brief first and Youth voice second?

A. Policy brief: Clarifying eligibility, referral steps, and follow-up barriers with a family. / Youth voice: Creating safe, accessible ways for youth input to shape a program.
B. Policy brief: Summarizing a service gap and actionable recommendations for decision makers. / Youth voice: Using documented access barriers to recommend a service-system change.
C. Policy brief: Summarizing a service gap and actionable recommendations for decision makers. / Youth voice: Creating safe, accessible ways for youth input to shape a program.
D. Policy brief: Creating safe, accessible ways for youth input to shape a program. / Youth voice: Summarizing a service gap and actionable recommendations for decision makers.

0699. Choose the definition pair that correctly explains Service navigation first and Advocacy ethics second.

A. Service navigation: Balancing empowerment, consent, role boundaries, confidentiality, and potential consequences when advocating. / Advocacy ethics: Practical assistance that helps people identify, access, and coordinate appropriate services.
B. Service navigation: Including affected young people and families meaningfully in decisions that shape services. / Advocacy ethics: Balancing empowerment, consent, role boundaries, confidentiality, and potential consequences when advocating.
C. Service navigation: Practical assistance that helps people identify, access, and coordinate appropriate services. / Advocacy ethics: Meaningful inclusion of young people's perspectives and influence in services and decisions affecting them.
D. Service navigation: Practical assistance that helps people identify, access, and coordinate appropriate services. / Advocacy ethics: Balancing empowerment, consent, role boundaries, confidentiality, and potential consequences when advocating.

0700. Which applied comparison correctly identifies what belongs to Systems advocacy versus Asset-based community development?

A. Systems advocacy: Using documented access barriers to recommend a service-system change. / Asset-based community development: Mapping community skills and networks before designing an outside-led program.
B. Systems advocacy: Mapping community skills and networks before designing an outside-led program. / Asset-based community development: Using documented access barriers to recommend a service-system change.
C. Systems advocacy: Using documented access barriers to recommend a service-system change. / Asset-based community development: Seeking youth input early and showing how it influenced a service decision.
D. Systems advocacy: Helping a youth prepare to state a support need in a meeting. / Asset-based community development: Mapping community skills and networks before designing an outside-led program.

0701. Choose the term that matches this definition: A person’s ability and opportunity to communicate needs, preferences, and rights and participate in decisions.

A. Self-advocacy
B. Systems advocacy
C. Policy brief
D. Asset-based community development

0702. A case conference asks for a distinction between Individual advocacy and Policy brief. Which answer is sound?

A. Individual advocacy: Action taken with or on behalf of a person to secure access, rights, or needed services. / Policy brief: Including affected young people and families meaningfully in decisions that shape services.
B. Individual advocacy: A concise evidence-informed document that defines a policy issue and presents feasible options or recommendations. / Policy brief: Action taken with or on behalf of a person to secure access, rights, or needed services.
C. Individual advocacy: A person’s ability and opportunity to communicate needs, preferences, and rights and participate in decisions. / Policy brief: A concise evidence-informed document that defines a policy issue and presents feasible options or recommendations.
D. Individual advocacy: Action taken with or on behalf of a person to secure access, rights, or needed services. / Policy brief: A concise evidence-informed document that defines a policy issue and presents feasible options or recommendations.

0703. Which paired example correctly applies Self-advocacy first and Advocacy ethics second?

A. Self-advocacy: Obtaining permission and discussing foreseeable benefits and risks before speaking on a client’s behalf. / Advocacy ethics: Helping a youth prepare to state a support need in a meeting.
B. Self-advocacy: Helping a youth prepare to state a support need in a meeting. / Advocacy ethics: Mapping community skills and networks before designing an outside-led program.
C. Self-advocacy: Seeking youth input early and showing how it influenced a service decision. / Advocacy ethics: Obtaining permission and discussing foreseeable benefits and risks before speaking on a client’s behalf.
D. Self-advocacy: Helping a youth prepare to state a support need in a meeting. / Advocacy ethics: Obtaining permission and discussing foreseeable benefits and risks before speaking on a client’s behalf.

0704. In the multidisciplinary case conference, a youth worker describes the most appropriate support for a child aged 6 as supporting a family to navigate a referral barrier with the young person’s informed involvement. Which framework is being applied?

A. Service navigation
B. Individual advocacy
C. Coalition building
D. Youth voice

0705. Which comparison would correct a trainee’s misunderstanding of Participatory decision-making versus Asset-based community development?

A. Participatory decision-making: Including affected young people and families meaningfully in decisions that shape services. / Asset-based community development: A community-led approach that builds on existing strengths, relationships, and resources.
B. Participatory decision-making: A community-led approach that builds on existing strengths, relationships, and resources. / Asset-based community development: Including affected young people and families meaningfully in decisions that shape services.
C. Participatory decision-making: Action taken with or on behalf of a person to secure access, rights, or needed services. / Asset-based community development: A community-led approach that builds on existing strengths, relationships, and resources.
D. Participatory decision-making: Including affected young people and families meaningfully in decisions that shape services. / Asset-based community development: Efforts to change policies, practices, or resource arrangements that affect groups of people.

0706. A play therapist reviews a plan for a middle-school student in the learning-support meeting. The plan emphasizes summarizing a service gap and actionable recommendations for decision makers. Which course idea does this reflect?

A. Systems advocacy
B. Asset-based community development
C. Individual advocacy
D. Policy brief

0707. A supervisor asks for an applied contrast between Participatory decision-making and Youth voice. Which option fits?

A. Participatory decision-making: Seeking youth input early and showing how it influenced a service decision. / Youth voice: Supporting a family to navigate a referral barrier with the young person’s informed involvement.
B. Participatory decision-making: Creating safe, accessible ways for youth input to shape a program. / Youth voice: Seeking youth input early and showing how it influenced a service decision.
C. Participatory decision-making: Clarifying eligibility, referral steps, and follow-up barriers with a family. / Youth voice: Creating safe, accessible ways for youth input to shape a program.
D. Participatory decision-making: Seeking youth input early and showing how it influenced a service decision. / Youth voice: Creating safe, accessible ways for youth input to shape a program.

0708. Which option correctly matches each concept to its practice focus: Self-advocacy and Service navigation?

A. Self-advocacy: Mapping community skills and networks before designing an outside-led program. / Service navigation: Clarifying eligibility, referral steps, and follow-up barriers with a family.
B. Self-advocacy: Helping a youth prepare to state a support need in a meeting. / Service navigation: Clarifying eligibility, referral steps, and follow-up barriers with a family.
C. Self-advocacy: Helping a youth prepare to state a support need in a meeting. / Service navigation: Summarizing a service gap and actionable recommendations for decision makers.
D. Self-advocacy: Clarifying eligibility, referral steps, and follow-up barriers with a family. / Service navigation: Helping a youth prepare to state a support need in a meeting.

0709. Which comparison correctly distinguishes Asset-based community development from Policy brief?

A. Asset-based community development: A community-led approach that builds on existing strengths, relationships, and resources. / Policy brief: Practical assistance that helps people identify, access, and coordinate appropriate services.
B. Asset-based community development: A concise evidence-informed document that defines a policy issue and presents feasible options or recommendations. / Policy brief: A community-led approach that builds on existing strengths, relationships, and resources.
C. Asset-based community development: A community-led approach that builds on existing strengths, relationships, and resources. / Policy brief: A concise evidence-informed document that defines a policy issue and presents feasible options or recommendations.
D. Asset-based community development: Organizing collaboration among people and groups with aligned interests to pursue shared change. / Policy brief: A concise evidence-informed document that defines a policy issue and presents feasible options or recommendations.

0710. A consultant is preparing a follow-up plan for a child aged 11 in the school consultation. The plan calls for agreeing on a common goal, roles, and communication practices across partner organizations. Which concept names this approach?

A. Individual advocacy
B. Coalition building
C. Self-advocacy
D. Asset-based community development

0711. A member of a clinical team is preparing a follow-up plan for a child aged 8 in the counseling practicum. The plan calls for helping a youth prepare to state a support need in a meeting. Which concept names this approach?

A. Advocacy ethics
B. Youth voice
C. Coalition building
D. Self-advocacy

0712. A school support specialist is asked to evaluate a proposed service for a client in early adolescence in the youth group. The defining feature is obtaining permission and discussing foreseeable benefits and risks before speaking on a client's behalf. Which concept fits?

A. Coalition building
B. Youth voice
C. Participatory decision-making
D. Advocacy ethics

0713. At the behavior-support review, a clinical supervisor meets with a child of elementary-school age. The practice priority is: agreeing on a common goal, roles, and communication practices across partner organizations. Which concept best captures that priority?

A. Youth voice
B. Service navigation
C. Coalition building
D. Participatory decision-making

0714. Which option preserves the correct meaning of both Individual advocacy and Youth voice?

A. Individual advocacy: Efforts to change policies, practices, or resource arrangements that affect groups of people. / Youth voice: Meaningful inclusion of young people's perspectives and influence in services and decisions affecting them.
B. Individual advocacy: Action taken with or on behalf of a person to secure access, rights, or needed services. / Youth voice: Meaningful inclusion of young people's perspectives and influence in services and decisions affecting them.
C. Individual advocacy: Meaningful inclusion of young people's perspectives and influence in services and decisions affecting them. / Youth voice: Action taken with or on behalf of a person to secure access, rights, or needed services.
D. Individual advocacy: Action taken with or on behalf of a person to secure access, rights, or needed services. / Youth voice: Practical assistance that helps people identify, access, and coordinate appropriate services.

0715. During service review in the student wellness team, a program coordinator describes supporting a family to navigate a referral barrier with the young person's informed involvement. for a client in late adolescence. Which course idea is most applicable?

A. Self-advocacy
B. Advocacy ethics
C. Individual advocacy
D. Participatory decision-making

0716. A member of a clinical team is supporting a student aged 15 in the school counseling office. The key practice is creating safe, accessible ways for youth input to shape a program. Which course concept is most relevant?

A. Policy brief
B. Service navigation
C. Advocacy ethics
D. Youth voice

0717. Which paired example correctly applies Individual advocacy first and Youth voice second?

A. Individual advocacy: Supporting a family to navigate a referral barrier with the young person's informed involvement. / Youth voice: Creating safe, accessible ways for youth input to shape a program.
B. Individual advocacy: Supporting a family to navigate a referral barrier with the young person's informed involvement. / Youth voice: Clarifying eligibility, referral steps, and follow-up barriers with a family.
C. Individual advocacy: Using documented access barriers to recommend a service-system change. / Youth voice: Creating safe, accessible ways for youth input to shape a program.
D. Individual advocacy: Creating safe, accessible ways for youth input to shape a program. / Youth voice: Supporting a family to navigate a referral barrier with the young person's informed involvement.

0718. Which applied comparison correctly identifies what belongs to Individual advocacy versus Systems advocacy?

A. Individual advocacy: Agreeing on a common goal, roles, and communication practices across partner organizations. / Systems advocacy: Using documented access barriers to recommend a service-system change.
B. Individual advocacy: Supporting a family to navigate a referral barrier with the young person's informed involvement. / Systems advocacy: Obtaining permission and discussing foreseeable benefits and risks before speaking on a client's behalf.
C. Individual advocacy: Supporting a family to navigate a referral barrier with the young person's informed involvement. / Systems advocacy: Using documented access barriers to recommend a service-system change.
D. Individual advocacy: Using documented access barriers to recommend a service-system change. / Systems advocacy: Supporting a family to navigate a referral barrier with the young person's informed involvement.

0719. Which option correctly matches each concept to its practice focus: Coalition building and Advocacy ethics?

A. Coalition building: Obtaining permission and discussing foreseeable benefits and risks before speaking on a client's behalf. / Advocacy ethics: Agreeing on a common goal, roles, and communication practices across partner organizations.
B. Coalition building: Agreeing on a common goal, roles, and communication practices across partner organizations. / Advocacy ethics: Obtaining permission and discussing foreseeable benefits and risks before speaking on a client's behalf.
C. Coalition building: Seeking youth input early and showing how it influenced a service decision. / Advocacy ethics: Obtaining permission and discussing foreseeable benefits and risks before speaking on a client's behalf.
D. Coalition building: Agreeing on a common goal, roles, and communication practices across partner organizations. / Advocacy ethics: Mapping community skills and networks before designing an outside-led program.

0720. An interdisciplinary team reviews a child aged 7's case at the classroom support meeting. The clinical supervisor recommends supporting a family to navigate a referral barrier with the young person's informed involvement. Which course concept best fits?

A. Systems advocacy
B. Individual advocacy
C. Service navigation
D. Youth voice

0721. A school counselor is explaining a choice to a preadolescent child and caregiver in the school counseling office. The choice centers on agreeing on a common goal, roles, and communication practices across partner organizations. Which idea is illustrated?

A. Coalition building
B. Policy brief
C. Service navigation
D. Youth voice

0722. Which option pairs the definitions of Coalition building and Service navigation correctly, in that order?

A. Coalition building: Organizing collaboration among people and groups with aligned interests to pursue shared change. / Service navigation: Practical assistance that helps people identify, access, and coordinate appropriate services.
B. Coalition building: Organizing collaboration among people and groups with aligned interests to pursue shared change. / Service navigation: A person's ability and opportunity to communicate needs, preferences, and rights and participate in decisions.
C. Coalition building: Meaningful inclusion of young people's perspectives and influence in services and decisions affecting them. / Service navigation: Practical assistance that helps people identify, access, and coordinate appropriate services.
D. Coalition building: Practical assistance that helps people identify, access, and coordinate appropriate services. / Service navigation: Organizing collaboration among people and groups with aligned interests to pursue shared change.

0723. A trainee must distinguish how Asset-based community development and Youth voice guide practice. Which comparison is accurate?

A. Asset-based community development: Mapping community skills and networks before designing an outside-led program. / Youth voice: Agreeing on a common goal, roles, and communication practices across partner organizations.
B. Asset-based community development: Creating safe, accessible ways for youth input to shape a program. / Youth voice: Mapping community skills and networks before designing an outside-led program.
C. Asset-based community development: Mapping community skills and networks before designing an outside-led program. / Youth voice: Creating safe, accessible ways for youth input to shape a program.
D. Asset-based community development: Using documented access barriers to recommend a service-system change. / Youth voice: Creating safe, accessible ways for youth input to shape a program.

0724. While supporting a young person aged 16 in the after-school program, a parent educator adopts this practice: summarizing a service gap and actionable recommendations for decision makers. Which concept best explains the choice?

A. Individual advocacy
B. Policy brief
C. Self-advocacy
D. Systems advocacy

0725. A student confuses Policy brief with Youth voice. Which explanation most accurately separates them?

A. Policy brief: A concise evidence-informed document that defines a policy issue and presents feasible options or recommendations. / Youth voice: Efforts to change policies, practices, or resource arrangements that affect groups of people.
B. Policy brief: A concise evidence-informed document that defines a policy issue and presents feasible options or recommendations. / Youth voice: Meaningful inclusion of young people's perspectives and influence in services and decisions affecting them.
C. Policy brief: Practical assistance that helps people identify, access, and coordinate appropriate services. / Youth voice: Meaningful inclusion of young people's perspectives and influence in services and decisions affecting them.
D. Policy brief: Meaningful inclusion of young people's perspectives and influence in services and decisions affecting them. / Youth voice: A concise evidence-informed document that defines a policy issue and presents feasible options or recommendations.

0726. Which pair of actions illustrates Policy brief and Advocacy ethics, respectively?

A. Policy brief: Summarizing a service gap and actionable recommendations for decision makers. / Advocacy ethics: Obtaining permission and discussing foreseeable benefits and risks before speaking on a client's behalf.
B. Policy brief: Obtaining permission and discussing foreseeable benefits and risks before speaking on a client's behalf. / Advocacy ethics: Summarizing a service gap and actionable recommendations for decision makers.
C. Policy brief: Summarizing a service gap and actionable recommendations for decision makers. / Advocacy ethics: Agreeing on a common goal, roles, and communication practices across partner organizations.
D. Policy brief: Using documented access barriers to recommend a service-system change. / Advocacy ethics: Obtaining permission and discussing foreseeable benefits and risks before speaking on a client's behalf.

0727. A therapist describes an intervention for a high-school student in the counseling practicum, centered on agreeing on a common goal, roles, and communication practices across partner organizations. Which named idea is most relevant?

A. Coalition building
B. Participatory decision-making
C. Systems advocacy
D. Youth voice

0728. In a supervision review, a parent educator describes work with a teenage client in the classroom support meeting: obtaining permission and discussing foreseeable benefits and risks before speaking on a client's behalf. What concept is illustrated?

A. Advocacy ethics
B. Youth voice
C. Participatory decision-making
D. Asset-based community development

0729. At the multidisciplinary case conference, a behavior specialist meets with a child aged 11. The practice priority is: mapping community skills and networks before designing an outside-led program. Which concept best captures that priority?

A. Advocacy ethics
B. Policy brief
C. Asset-based community development
D. Participatory decision-making

0730. Which named construct is captured by this account? Meaningful inclusion of young people's perspectives and influence in services and decisions affecting them.

A. Asset-based community development
B. Youth voice
C. Individual advocacy
D. Participatory decision-making

0731. Which pair of actions illustrates Self-advocacy and Service navigation, respectively?

A. Self-advocacy: Mapping community skills and networks before designing an outside-led program. / Service navigation: Clarifying eligibility, referral steps, and follow-up barriers with a family.
B. Self-advocacy: Helping a youth prepare to state a support need in a meeting. / Service navigation: Clarifying eligibility, referral steps, and follow-up barriers with a family.
C. Self-advocacy: Clarifying eligibility, referral steps, and follow-up barriers with a family. / Service navigation: Helping a youth prepare to state a support need in a meeting.
D. Self-advocacy: Helping a youth prepare to state a support need in a meeting. / Service navigation: Summarizing a service gap and actionable recommendations for decision makers.

0732. Which statement accurately contrasts the course concepts Self-advocacy and Advocacy ethics?

A. Self-advocacy: A person's ability and opportunity to communicate needs, preferences, and rights and participate in decisions. / Advocacy ethics: A community-led approach that builds on existing strengths, relationships, and resources.
B. Self-advocacy: Including affected young people and families meaningfully in decisions that shape services. / Advocacy ethics: Balancing empowerment, consent, role boundaries, confidentiality, and potential consequences when advocating.
C. Self-advocacy: A person's ability and opportunity to communicate needs, preferences, and rights and participate in decisions. / Advocacy ethics: Balancing empowerment, consent, role boundaries, confidentiality, and potential consequences when advocating.
D. Self-advocacy: Balancing empowerment, consent, role boundaries, confidentiality, and potential consequences when advocating. / Advocacy ethics: A person's ability and opportunity to communicate needs, preferences, and rights and participate in decisions.

0733. Choose the definition pair that correctly explains Systems advocacy first and Service navigation second.

A. Systems advocacy: Practical assistance that helps people identify, access, and coordinate appropriate services. / Service navigation: Efforts to change policies, practices, or resource arrangements that affect groups of people.
B. Systems advocacy: Efforts to change policies, practices, or resource arrangements that affect groups of people. / Service navigation: Practical assistance that helps people identify, access, and coordinate appropriate services.
C. Systems advocacy: Efforts to change policies, practices, or resource arrangements that affect groups of people. / Service navigation: Meaningful inclusion of young people's perspectives and influence in services and decisions affecting them.
D. Systems advocacy: A community-led approach that builds on existing strengths, relationships, and resources. / Service navigation: Practical assistance that helps people identify, access, and coordinate appropriate services.

0734. A supervised trainee and a adolescent student are discussing support in the student wellness team. The selected practice is using documented access barriers to recommend a service-system change. Which concept does this demonstrate?

A. Youth voice
B. Participatory decision-making
C. Systems advocacy
D. Advocacy ethics

0735. Which professional action most closely applies Service navigation?

A. Using documented access barriers to recommend a service-system change.
B. Summarizing a service gap and actionable recommendations for decision makers.
C. Obtaining permission and discussing foreseeable benefits and risks before speaking on a client's behalf.
D. Clarifying eligibility, referral steps, and follow-up barriers with a family.

0736. For a student aged 12 in the community service agency, a clinical supervisor makes this practice the immediate priority: helping a youth prepare to state a support need in a meeting. Which concept fits best?

A. Individual advocacy
B. Self-advocacy
C. Coalition building
D. Asset-based community development

0737. Which professional action most closely applies Systems advocacy?

A. Using documented access barriers to recommend a service-system change.
B. Helping a youth prepare to state a support need in a meeting.
C. Summarizing a service gap and actionable recommendations for decision makers.
D. Obtaining permission and discussing foreseeable benefits and risks before speaking on a client's behalf.

0738. A planning meeting about a student aged 17 includes a play therapist. The proposed practice in the student-support meeting is clarifying eligibility, referral steps, and follow-up barriers with a family. Which idea underlies it?

A. Service navigation
B. Systems advocacy
C. Participatory decision-making
D. Advocacy ethics

0739. Which option is the clearest practical expression of Self-advocacy?

A. Mapping community skills and networks before designing an outside-led program.
B. Obtaining permission and discussing foreseeable benefits and risks before speaking on a client’s behalf.
C. Summarizing a service gap and actionable recommendations for decision makers.
D. Helping a youth prepare to state a support need in a meeting.

0740. Choose the term that matches this definition: Action taken with or on behalf of a person to secure access, rights, or needed services.

A. Individual advocacy
B. Asset-based community development
C. Participatory decision-making
D. Coalition building

0741. A trainee must choose a practice that exemplifies Coalition building. Which action is the best fit?

A. Agreeing on a common goal, roles, and communication practices across partner organizations.
B. Summarizing a service gap and actionable recommendations for decision makers.
C. Obtaining permission and discussing foreseeable benefits and risks before speaking on a client’s behalf.
D. Using documented access barriers to recommend a service-system change.

0742. Which option correctly matches each concept to its practice focus: Individual advocacy and Coalition building?

A. Individual advocacy: Supporting a family to navigate a referral barrier with the young person’s informed involvement. / Coalition building: Agreeing on a common goal, roles, and communication practices across partner organizations.
B. Individual advocacy: Supporting a family to navigate a referral barrier with the young person’s informed involvement. / Coalition building: Obtaining permission and discussing foreseeable benefits and risks before speaking on a client’s behalf.
C. Individual advocacy: Helping a youth prepare to state a support need in a meeting. / Coalition building: Agreeing on a common goal, roles, and communication practices across partner organizations.
D. Individual advocacy: Agreeing on a common goal, roles, and communication practices across partner organizations. / Coalition building: Supporting a family to navigate a referral barrier with the young person’s informed involvement.

0743. A doctoral student reads the following description. Which concept does it define? A concise evidence-informed document that defines a policy issue and presents feasible options or recommendations.

A. Advocacy ethics
B. Policy brief
C. Coalition building
D. Self-advocacy

0744. Which choice aligns each practice with the correct idea, Asset-based community development or Service navigation?

A. Asset-based community development: Mapping community skills and networks before designing an outside-led program. / Service navigation: Clarifying eligibility, referral steps, and follow-up barriers with a family.
B. Asset-based community development: Mapping community skills and networks before designing an outside-led program. / Service navigation: Using documented access barriers to recommend a service-system change.
C. Asset-based community development: Supporting a family to navigate a referral barrier with the young person’s informed involvement. / Service navigation: Clarifying eligibility, referral steps, and follow-up barriers with a family.
D. Asset-based community development: Clarifying eligibility, referral steps, and follow-up barriers with a family. / Service navigation: Mapping community skills and networks before designing an outside-led program.

0745. A student aged 12 and a mental-health professional are reviewing goals in the after-school program. The agreed action is mapping community skills and networks before designing an outside-led program. Which principle best accounts for it?

A. Policy brief
B. Youth voice
C. Advocacy ethics
D. Asset-based community development

0746. A school counselor is explaining a choice to a older adolescent client and caregiver in the classroom support meeting. The choice centers on using documented access barriers to recommend a service-system change. Which idea is illustrated?

A. Youth voice
B. Asset-based community development
C. Systems advocacy
D. Self-advocacy

0747. In the family resource center, a team asks how a group facilitator can support a adolescent student. One proposed action is creating safe, accessible ways for youth input to shape a program. Which idea does it represent?

A. Policy brief
B. Service navigation
C. Participatory decision-making
D. Youth voice

0748. Which option correctly matches each concept to its practice focus: Self-advocacy and Advocacy ethics?

A. Self-advocacy: Seeking youth input early and showing how it influenced a service decision. / Advocacy ethics: Obtaining permission and discussing foreseeable benefits and risks before speaking on a client’s behalf.
B. Self-advocacy: Helping a youth prepare to state a support need in a meeting. / Advocacy ethics: Mapping community skills and networks before designing an outside-led program.
C. Self-advocacy: Helping a youth prepare to state a support need in a meeting. / Advocacy ethics: Obtaining permission and discussing foreseeable benefits and risks before speaking on a client’s behalf.
D. Self-advocacy: Obtaining permission and discussing foreseeable benefits and risks before speaking on a client’s behalf. / Advocacy ethics: Helping a youth prepare to state a support need in a meeting.

0749. Choose the practice comparison that best separates Systems advocacy from Service navigation.

A. Systems advocacy: Using documented access barriers to recommend a service-system change. / Service navigation: Clarifying eligibility, referral steps, and follow-up barriers with a family.
B. Systems advocacy: Mapping community skills and networks before designing an outside-led program. / Service navigation: Clarifying eligibility, referral steps, and follow-up barriers with a family.
C. Systems advocacy: Using documented access barriers to recommend a service-system change. / Service navigation: Creating safe, accessible ways for youth input to shape a program.
D. Systems advocacy: Clarifying eligibility, referral steps, and follow-up barriers with a family. / Service navigation: Using documented access barriers to recommend a service-system change.

0750. Which comparison would correct a trainee's misunderstanding of Self-advocacy versus Youth voice?

A. Self-advocacy: Meaningful inclusion of young people's perspectives and influence in services and decisions affecting them. / Youth voice: A person's ability and opportunity to communicate needs, preferences, and rights and participate in decisions.
B. Self-advocacy: A person's ability and opportunity to communicate needs, preferences, and rights and participate in decisions. / Youth voice: Meaningful inclusion of young people's perspectives and influence in services and decisions affecting them.
C. Self-advocacy: Practical assistance that helps people identify, access, and coordinate appropriate services. / Youth voice: Meaningful inclusion of young people's perspectives and influence in services and decisions affecting them.
D. Self-advocacy: A person's ability and opportunity to communicate needs, preferences, and rights and participate in decisions. / Youth voice: Including affected young people and families meaningfully in decisions that shape services.

0751. Which option is the clearest practical expression of Youth voice?

A. Seeking youth input early and showing how it influenced a service decision.
B. Creating safe, accessible ways for youth input to shape a program.
C. Clarifying eligibility, referral steps, and follow-up barriers with a family.
D. Helping a youth prepare to state a support need in a meeting.

0752. Select the best explanation of Individual advocacy.

A. A person's ability and opportunity to communicate needs, preferences, and rights and participate in decisions.
B. A concise evidence-informed document that defines a policy issue and presents feasible options or recommendations.
C. Efforts to change policies, practices, or resource arrangements that affect groups of people.
D. Action taken with or on behalf of a person to secure access, rights, or needed services.

0753. In a professional consultation about a young person aged 10, the assessment clinician describes this response in the school-based service: seeking youth input early and showing how it influenced a service decision. Which term is most apt?

A. Youth voice
B. Asset-based community development
C. Participatory decision-making
D. Advocacy ethics

0754. Choose the practice comparison that best separates Participatory decision-making from Coalition building.

A. Participatory decision-making: Seeking youth input early and showing how it influenced a service decision. / Coalition building: Agreeing on a common goal, roles, and communication practices across partner organizations.
B. Participatory decision-making: Agreeing on a common goal, roles, and communication practices across partner organizations. / Coalition building: Seeking youth input early and showing how it influenced a service decision.
C. Participatory decision-making: Creating safe, accessible ways for youth input to shape a program. / Coalition building: Agreeing on a common goal, roles, and communication practices across partner organizations.
D. Participatory decision-making: Seeking youth input early and showing how it influenced a service decision. / Coalition building: Using documented access barriers to recommend a service-system change.

0755. A trainee must distinguish how Systems advocacy and Advocacy ethics guide practice. Which comparison is accurate?

A. Systems advocacy: Obtaining permission and discussing foreseeable benefits and risks before speaking on a client's behalf. / Advocacy ethics: Using documented access barriers to recommend a service-system change.
B. Systems advocacy: Agreeing on a common goal, roles, and communication practices across partner organizations. / Advocacy ethics: Obtaining permission and discussing foreseeable benefits and risks before speaking on a client's behalf.
C. Systems advocacy: Using documented access barriers to recommend a service-system change. / Advocacy ethics: Obtaining permission and discussing foreseeable benefits and risks before speaking on a client's behalf.
D. Systems advocacy: Using documented access barriers to recommend a service-system change. / Advocacy ethics: Mapping community skills and networks before designing an outside-led program.

0756. A support meeting for a young person aged 10 includes a play therapist in the parent meeting. The practice under consideration is using documented access barriers to recommend a service-system change. Which concept guides it?

A. Service navigation
B. Participatory decision-making
C. Coalition building
D. Systems advocacy

0757. For a child aged 8 seen in the after-school program, the therapist recommends a plan built around seeking youth input early and showing how it influenced a service decision. Which concept is reflected?

A. Participatory decision-making
B. Self-advocacy
C. Systems advocacy
D. Coalition building

0758. A supervisor asks for an applied contrast between Individual advocacy and Advocacy ethics. Which option fits?

A. Individual advocacy: Supporting a family to navigate a referral barrier with the young person's informed involvement. / Advocacy ethics: Summarizing a service gap and actionable recommendations for decision makers.
B. Individual advocacy: Supporting a family to navigate a referral barrier with the young person's informed involvement. / Advocacy ethics: Obtaining permission and discussing foreseeable benefits and risks before speaking on a client's behalf.
C. Individual advocacy: Obtaining permission and discussing foreseeable benefits and risks before speaking on a client's behalf. / Advocacy ethics: Supporting a family to navigate a referral barrier with the young person's informed involvement.
D. Individual advocacy: Helping a youth prepare to state a support need in a meeting. / Advocacy ethics: Obtaining permission and discussing foreseeable benefits and risks before speaking on a client's behalf.

0759. Which professional action most closely applies Asset-based community development?

A. Supporting a family to navigate a referral barrier with the young person’s informed involvement.
B. Mapping community skills and networks before designing an outside-led program.
C. Summarizing a service gap and actionable recommendations for decision makers.
D. Agreeing on a common goal, roles, and communication practices across partner organizations.

0760. Which choice aligns each practice with the correct idea, Self-advocacy or Youth voice?

A. Self-advocacy: Helping a youth prepare to state a support need in a meeting. / Youth voice: Seeking youth input early and showing how it influenced a service decision.
B. Self-advocacy: Creating safe, accessible ways for youth input to shape a program. / Youth voice: Helping a youth prepare to state a support need in a meeting.
C. Self-advocacy: Helping a youth prepare to state a support need in a meeting. / Youth voice: Creating safe, accessible ways for youth input to shape a program.
D. Self-advocacy: Clarifying eligibility, referral steps, and follow-up barriers with a family. / Youth voice: Creating safe, accessible ways for youth input to shape a program.

0761. A child aged 14 is receiving support in the family session. The teacher and counselor is guided by this practice: clarifying eligibility, referral steps, and follow-up barriers with a family. Which principle best fits?

A. Youth voice
B. Participatory decision-making
C. Systems advocacy
D. Service navigation

0762. A trainee must distinguish how Individual advocacy and Participatory decision-making guide practice. Which comparison is accurate?

A. Individual advocacy: Supporting a family to navigate a referral barrier with the young person’s informed involvement. / Participatory decision-making: Obtaining permission and discussing foreseeable benefits and risks before speaking on a client’s behalf.
B. Individual advocacy: Seeking youth input early and showing how it influenced a service decision. / Participatory decision-making: Supporting a family to navigate a referral barrier with the young person’s informed involvement.
C. Individual advocacy: Supporting a family to navigate a referral barrier with the young person’s informed involvement. / Participatory decision-making: Seeking youth input early and showing how it influenced a service decision.
D. Individual advocacy: Creating safe, accessible ways for youth input to shape a program. / Participatory decision-making: Seeking youth input early and showing how it influenced a service decision.

0763. A trainee must choose a practice that exemplifies Systems advocacy. Which action is the best fit?

A. Creating safe, accessible ways for youth input to shape a program.
B. Seeking youth input early and showing how it influenced a service decision.
C. Supporting a family to navigate a referral barrier with the young person’s informed involvement.
D. Using documented access barriers to recommend a service-system change.

0764. A consultant is supporting a child aged 8 in the clinical planning session. The key practice is clarifying eligibility, referral steps, and follow-up barriers with a family. Which course concept is most relevant?

A. Systems advocacy
B. Advocacy ethics
C. Service navigation
D. Asset-based community development

0765. A case conference asks for a distinction between Individual advocacy and Service navigation. Which answer is sound?

A. Individual advocacy: Action taken with or on behalf of a person to secure access, rights, or needed services. / Service navigation: Practical assistance that helps people identify, access, and coordinate appropriate services.
B. Individual advocacy: A concise evidence-informed document that defines a policy issue and presents feasible options or recommendations. / Service navigation: Practical assistance that helps people identify, access, and coordinate appropriate services.
C. Individual advocacy: Practical assistance that helps people identify, access, and coordinate appropriate services. / Service navigation: Action taken with or on behalf of a person to secure access, rights, or needed services.
D. Individual advocacy: Action taken with or on behalf of a person to secure access, rights, or needed services. / Service navigation: Meaningful inclusion of young people’s perspectives and influence in services and decisions affecting them.

0766. How are Participatory decision-making and Policy brief most accurately differentiated in this curriculum?

A. Participatory decision-making: Including affected young people and families meaningfully in decisions that shape services. / Policy brief: A concise evidence-informed document that defines a policy issue and presents feasible options or recommendations.
B. Participatory decision-making: A community-led approach that builds on existing strengths, relationships, and resources. / Policy brief: A concise evidence-informed document that defines a policy issue and presents feasible options or recommendations.
C. Participatory decision-making: A concise evidence-informed document that defines a policy issue and presents feasible options or recommendations. / Policy brief: Including affected young people and families meaningfully in decisions that shape services.
D. Participatory decision-making: Including affected young people and families meaningfully in decisions that shape services. / Policy brief: A person’s ability and opportunity to communicate needs, preferences, and rights and participate in decisions.

0767. An interdisciplinary team reviews a adolescent student’s case at the multidisciplinary case conference. The counselor recommends obtaining permission and discussing foreseeable benefits and risks before speaking on a client’s behalf. Which course concept best fits?

A. Individual advocacy
B. Coalition building
C. Systems advocacy
D. Advocacy ethics

0768. Identify the most precise label for this idea: Organizing collaboration among people and groups with aligned interests to pursue shared change.

A. Asset-based community development
B. Advocacy ethics
C. Systems advocacy
D. Coalition building

0769. When reviewing a young person aged 16’s plan in the community mental-health service, the school-based clinician notes that the next step is supporting a family to navigate a referral barrier with the young person’s informed involvement. Which concept guides this step?

A. Systems advocacy
B. Coalition building
C. Individual advocacy
D. Participatory decision-making

0770. A high-school student’s service team meets in the school counseling office. The family therapist recommends a change involving mapping community skills and networks before designing an outside-led program. Which idea best explains it?

A. Asset-based community development
B. Participatory decision-making
C. Individual advocacy
D. Systems advocacy

0771. Which statement accurately contrasts the course concepts Systems advocacy and Participatory decision-making?

A. Systems advocacy: Efforts to change policies, practices, or resource arrangements that affect groups of people. / Participatory decision-making: Including affected young people and families meaningfully in decisions that shape services.
B. Systems advocacy: Efforts to change policies, practices, or resource arrangements that affect groups of people. / Participatory decision-making: Action taken with or on behalf of a person to secure access, rights, or needed services.
C. Systems advocacy: Meaningful inclusion of young people’s perspectives and influence in services and decisions affecting them. / Participatory decision-making: Including affected young people and families meaningfully in decisions that shape services.
D. Systems advocacy: Including affected young people and families meaningfully in decisions that shape services. / Participatory decision-making: Efforts to change policies, practices, or resource arrangements that affect groups of people.

0772. A supervisor asks for an applied contrast between Systems advocacy and Participatory decision-making. Which option fits?

A. Systems advocacy: Using documented access barriers to recommend a service-system change. / Participatory decision-making: Seeking youth input early and showing how it influenced a service decision.
B. Systems advocacy: Using documented access barriers to recommend a service-system change. / Participatory decision-making: Supporting a family to navigate a referral barrier with the young person’s informed involvement.
C. Systems advocacy: Creating safe, accessible ways for youth input to shape a program. / Participatory decision-making: Seeking youth input early and showing how it influenced a service decision.
D. Systems advocacy: Seeking youth input early and showing how it influenced a service decision. / Participatory decision-making: Using documented access barriers to recommend a service-system change.

0773. A planning meeting about a school-age child includes a clinical supervisor. The proposed practice in the school counseling office is summarizing a service gap and actionable recommendations for decision makers. Which idea underlies it?

A. Systems advocacy
B. Youth voice
C. Coalition building
D. Policy brief

0774. When reviewing a client in early adolescence’s plan in the parent meeting, the school-based clinician notes that the next step is summarizing a service gap and actionable recommendations for decision makers. Which concept guides this step?

A. Service navigation
B. Coalition building
C. Advocacy ethics
D. Policy brief

0775. Which description belongs with the term Advocacy ethics?

A. A concise evidence-informed document that defines a policy issue and presents feasible options or recommendations.
B. Balancing empowerment, consent, role boundaries, confidentiality, and potential consequences when advocating.
C. A person’s ability and opportunity to communicate needs, preferences, and rights and participate in decisions.
D. Action taken with or on behalf of a person to secure access, rights, or needed services.

0776. A young person aged 13’s service team meets in the student-support meeting. The parent educator recommends a change involving agreeing on a common goal, roles, and communication practices across partner organizations. Which idea best explains it?

A. Service navigation
B. Policy brief
C. Advocacy ethics
D. Coalition building

0777. Which option preserves the correct meaning of both Individual advocacy and Policy brief?

A. Individual advocacy: A concise evidence-informed document that defines a policy issue and presents feasible options or recommendations. / Policy brief: Action taken with or on behalf of a person to secure access, rights, or needed services.
B. Individual advocacy: Action taken with or on behalf of a person to secure access, rights, or needed services. / Policy brief: A concise evidence-informed document that defines a policy issue and presents feasible options or recommendations.
C. Individual advocacy: A person’s ability and opportunity to communicate needs, preferences, and rights and participate in decisions. / Policy brief: A concise evidence-informed document that defines a policy issue and presents feasible options or recommendations.
D. Individual advocacy: Action taken with or on behalf of a person to secure access, rights, or needed services. / Policy brief: Including affected young people and families meaningfully in decisions that shape services.

0778. A child aged 8 and a consultant are reviewing goals in the clinical planning session. The agreed action is clarifying eligibility, referral steps, and follow-up barriers with a family. Which principle best accounts for it?

A. Policy brief
B. Participatory decision-making
C. Asset-based community development
D. Service navigation

0779. A case conference asks for a distinction between Self-advocacy and Participatory decision-making. Which answer is sound?

A. Self-advocacy: A person's ability and opportunity to communicate needs, preferences, and rights and participate in decisions. / Participatory decision-making: Including affected young people and families meaningfully in decisions that shape services.
B. Self-advocacy: Meaningful inclusion of young people's perspectives and influence in services and decisions affecting them. / Participatory decision-making: Including affected young people and families meaningfully in decisions that shape services.
C. Self-advocacy: A person's ability and opportunity to communicate needs, preferences, and rights and participate in decisions. / Participatory decision-making: Organizing collaboration among people and groups with aligned interests to pursue shared change.
D. Self-advocacy: Including affected young people and families meaningfully in decisions that shape services. / Participatory decision-making: A person's ability and opportunity to communicate needs, preferences, and rights and participate in decisions.

0780. A case conference asks for a distinction between Systems advocacy and Advocacy ethics. Which answer is sound?

A. Systems advocacy: Balancing empowerment, consent, role boundaries, confidentiality, and potential consequences when advocating. / Advocacy ethics: Efforts to change policies, practices, or resource arrangements that affect groups of people.
B. Systems advocacy: Organizing collaboration among people and groups with aligned interests to pursue shared change. / Advocacy ethics: Balancing empowerment, consent, role boundaries, confidentiality, and potential consequences when advocating.
C. Systems advocacy: Efforts to change policies, practices, or resource arrangements that affect groups of people. / Advocacy ethics: Balancing empowerment, consent, role boundaries, confidentiality, and potential consequences when advocating.
D. Systems advocacy: Efforts to change policies, practices, or resource arrangements that affect groups of people. / Advocacy ethics: A community-led approach that builds on existing strengths, relationships, and resources.

0781. In a supervision quiz, how should Systems advocacy be distinguished from Self-advocacy?

A. Systems advocacy: Efforts to change policies, practices, or resource arrangements that affect groups of people. / Self-advocacy: A community-led approach that builds on existing strengths, relationships, and resources.
B. Systems advocacy: A person's ability and opportunity to communicate needs, preferences, and rights and participate in decisions. / Self-advocacy: Efforts to change policies, practices, or resource arrangements that affect groups of people.
C. Systems advocacy: Efforts to change policies, practices, or resource arrangements that affect groups of people. / Self-advocacy: A person's ability and opportunity to communicate needs, preferences, and rights and participate in decisions.
D. Systems advocacy: Including affected young people and families meaningfully in decisions that shape services. / Self-advocacy: A person's ability and opportunity to communicate needs, preferences, and rights and participate in decisions.

0782. A case conference asks for a distinction between Policy brief and Coalition building. Which answer is sound?

A. Policy brief: Balancing empowerment, consent, role boundaries, confidentiality, and potential consequences when advocating. / Coalition building: Organizing collaboration among people and groups with aligned interests to pursue shared change.
B. Policy brief: A concise evidence-informed document that defines a policy issue and presents feasible options or recommendations. / Coalition building: Organizing collaboration among people and groups with aligned interests to pursue shared change.
C. Policy brief: Organizing collaboration among people and groups with aligned interests to pursue shared change. / Coalition building: A concise evidence-informed document that defines a policy issue and presents feasible options or recommendations.
D. Policy brief: A concise evidence-informed document that defines a policy issue and presents feasible options or recommendations. / Coalition building: A person's ability and opportunity to communicate needs, preferences, and rights and participate in decisions.

0783. A service team discusses a student aged 9 in the outpatient clinic. Their proposed next step is agreeing on a common goal, roles, and communication practices across partner organizations. Which course concept supports it?

A. Policy brief
B. Coalition building
C. Systems advocacy
D. Advocacy ethics

0784. A supervised trainee is supporting a young person aged 18 in the family resource center. The key practice is summarizing a service gap and actionable recommendations for decision makers. Which course concept is most relevant?

A. Advocacy ethics
B. Systems advocacy
C. Self-advocacy
D. Policy brief

0785. A supervisor asks for an applied contrast between Asset-based community development and Policy brief. Which option fits?

A. Asset-based community development: Summarizing a service gap and actionable recommendations for decision makers. / Policy brief: Mapping community skills and networks before designing an outside-led program.
B. Asset-based community development: Mapping community skills and networks before designing an outside-led program. / Policy brief: Clarifying eligibility, referral steps, and follow-up barriers with a family.
C. Asset-based community development: Mapping community skills and networks before designing an outside-led program. / Policy brief: Summarizing a service gap and actionable recommendations for decision makers.
D. Asset-based community development: Agreeing on a common goal, roles, and communication practices across partner organizations. / Policy brief: Summarizing a service gap and actionable recommendations for decision makers.

0786. A case coordinator presents a support plan for a student aged 15 at the youth advocacy program. Its central feature is helping a youth prepare to state a support need in a meeting. Which concept should be named?

A. Systems advocacy
B. Advocacy ethics
C. Policy brief
D. Self-advocacy

0787. Which applied comparison correctly identifies what belongs to Asset-based community development versus Policy brief?

A. Asset-based community development: Agreeing on a common goal, roles, and communication practices across partner organizations. / Policy brief: Summarizing a service gap and actionable recommendations for decision makers.
B. Asset-based community development: Summarizing a service gap and actionable recommendations for decision makers. / Policy brief: Mapping community skills and networks before designing an outside-led program.
C. Asset-based community development: Mapping community skills and networks before designing an outside-led program. / Policy brief: Summarizing a service gap and actionable recommendations for decision makers.
D. Asset-based community development: Mapping community skills and networks before designing an outside-led program. / Policy brief: Clarifying eligibility, referral steps, and follow-up barriers with a family.

0788. In a supervision quiz, how should Asset-based community development be distinguished from Youth voice?

A. Asset-based community development: Efforts to change policies, practices, or resource arrangements that affect groups of people. / Youth voice: Meaningful inclusion of young people's perspectives and influence in services and decisions affecting them.
B. Asset-based community development: A community-led approach that builds on existing strengths, relationships, and resources. / Youth voice: Organizing collaboration among people and groups with aligned interests to pursue shared change.
C. Asset-based community development: A community-led approach that builds on existing strengths, relationships, and resources. / Youth voice: Meaningful inclusion of young people's perspectives and influence in services and decisions affecting them.
D. Asset-based community development: Meaningful inclusion of young people's perspectives and influence in services and decisions affecting them. / Youth voice: A community-led approach that builds on existing strengths, relationships, and resources.

0789. Which option preserves the correct meaning of both Systems advocacy and Service navigation?

A. Systems advocacy: A community-led approach that builds on existing strengths, relationships, and resources. / Service navigation: Practical assistance that helps people identify, access, and coordinate appropriate services.
B. Systems advocacy: Efforts to change policies, practices, or resource arrangements that affect groups of people. / Service navigation: Practical assistance that helps people identify, access, and coordinate appropriate services.
C. Systems advocacy: Practical assistance that helps people identify, access, and coordinate appropriate services. / Service navigation: Efforts to change policies, practices, or resource arrangements that affect groups of people.
D. Systems advocacy: Efforts to change policies, practices, or resource arrangements that affect groups of people. / Service navigation: Meaningful inclusion of young people's perspectives and influence in services and decisions affecting them.

0790. Which option is the clearest practical expression of Participatory decision-making?

A. Clarifying eligibility, referral steps, and follow-up barriers with a family.
B. Seeking youth input early and showing how it influenced a service decision.
C. Agreeing on a common goal, roles, and communication practices across partner organizations.
D. Supporting a family to navigate a referral barrier with the young person's informed involvement.

0791. Which option is the clearest practical expression of Systems advocacy?

A. Using documented access barriers to recommend a service-system change.
B. Obtaining permission and discussing foreseeable benefits and risks before speaking on a client's behalf.
C. Clarifying eligibility, referral steps, and follow-up barriers with a family.
D. Mapping community skills and networks before designing an outside-led program.

0792. A support meeting for a high-school student includes a counselor in the school consultation. The practice under consideration is seeking youth input early and showing how it influenced a service decision. Which concept guides it?

A. Service navigation
B. Participatory decision-making
C. Systems advocacy
D. Individual advocacy

0793. In a professional consultation about a client in late adolescence, the consultant describes this response in the community mental-health service: obtaining permission and discussing foreseeable benefits and risks before speaking on a client's behalf. Which term is most apt?

A. Advocacy ethics
B. Coalition building
C. Service navigation
D. Asset-based community development

0794. Choose the definition pair that correctly explains Service navigation first and Youth voice second.

A. Service navigation: Practical assistance that helps people identify, access, and coordinate appropriate services. / Youth voice: Meaningful inclusion of young people's perspectives and influence in services and decisions affecting them.
B. Service navigation: Organizing collaboration among people and groups with aligned interests to pursue shared change. / Youth voice: Meaningful inclusion of young people's perspectives and influence in services and decisions affecting them.
C. Service navigation: Meaningful inclusion of young people's perspectives and influence in services and decisions affecting them. / Youth voice: Practical assistance that helps people identify, access, and coordinate appropriate services.
D. Service navigation: Practical assistance that helps people identify, access, and coordinate appropriate services. / Youth voice: Including affected young people and families meaningfully in decisions that shape services.

0795. A behavior specialist is asked to evaluate a proposed service for a young person in the parent meeting. The defining feature is agreeing on a common goal, roles, and communication practices across partner organizations. Which concept fits?

A. Coalition building
B. Individual advocacy
C. Participatory decision-making
D. Youth voice

0796. Which choice aligns each practice with the correct idea, Self-advocacy or Service navigation?

A. Self-advocacy: Helping a youth prepare to state a support need in a meeting. / Service navigation: Clarifying eligibility, referral steps, and follow-up barriers with a family.
B. Self-advocacy: Mapping community skills and networks before designing an outside-led program. / Service navigation: Clarifying eligibility, referral steps, and follow-up barriers with a family.
C. Self-advocacy: Clarifying eligibility, referral steps, and follow-up barriers with a family. / Service navigation: Helping a youth prepare to state a support need in a meeting.
D. Self-advocacy: Helping a youth prepare to state a support need in a meeting. / Service navigation: Summarizing a service gap and actionable recommendations for decision makers.

0797. A case conference asks for a distinction between Youth voice and Advocacy ethics. Which answer is sound?

A. Youth voice: Meaningful inclusion of young people's perspectives and influence in services and decisions affecting them. / Advocacy ethics: Practical assistance that helps people identify, access, and coordinate appropriate services.
B. Youth voice: A community-led approach that builds on existing strengths, relationships, and resources. / Advocacy ethics: Balancing empowerment, consent, role boundaries, confidentiality, and potential consequences when advocating.
C. Youth voice: Meaningful inclusion of young people's perspectives and influence in services and decisions affecting them. / Advocacy ethics: Balancing empowerment, consent, role boundaries, confidentiality, and potential consequences when advocating.
D. Youth voice: Balancing empowerment, consent, role boundaries, confidentiality, and potential consequences when advocating. / Advocacy ethics: Meaningful inclusion of young people's perspectives and influence in services and decisions affecting them.

0798. A client in early adolescence and a assessment clinician are reviewing goals in the student wellness team. The agreed action is agreeing on a common goal, roles, and communication practices across partner organizations. Which principle best accounts for it?

A. Systems advocacy
B. Coalition building
C. Service navigation
D. Individual advocacy

0799. Which course concept is defined as follows: Balancing empowerment, consent, role boundaries, confidentiality, and potential consequences when advocating.

A. Policy brief
B. Participatory decision-making
C. Individual advocacy
D. Advocacy ethics

0800. A trainee must distinguish how Asset-based community development and Service navigation guide practice. Which comparison is accurate?

A. Asset-based community development: Clarifying eligibility, referral steps, and follow-up barriers with a family. / Service navigation: Mapping community skills and networks before designing an outside-led program.
B. Asset-based community development: Mapping community skills and networks before designing an outside-led program. / Service navigation: Clarifying eligibility, referral steps, and follow-up barriers with a family.
C. Asset-based community development: Mapping community skills and networks before designing an outside-led program. / Service navigation: Using documented access barriers to recommend a service-system change.
D. Asset-based community development: Supporting a family to navigate a referral barrier with the young person's informed involvement. / Service navigation: Clarifying eligibility, referral steps, and follow-up barriers with a family.

0801. Which option preserves the correct meaning of both Asset-based community development and Advocacy ethics?

A. Asset-based community development: A community-led approach that builds on existing strengths, relationships, and resources. / Advocacy ethics: Balancing empowerment, consent, role boundaries, confidentiality, and potential consequences when advocating.
B. Asset-based community development: Balancing empowerment, consent, role boundaries, confidentiality, and potential consequences when advocating. / Advocacy ethics: A community-led approach that builds on existing strengths, relationships, and resources.
C. Asset-based community development: A community-led approach that builds on existing strengths, relationships, and resources. / Advocacy ethics: Meaningful inclusion of young people's perspectives and influence in services and decisions affecting them.
D. Asset-based community development: Including affected young people and families meaningfully in decisions that shape services. / Advocacy ethics: Balancing empowerment, consent, role boundaries, confidentiality, and potential consequences when advocating.

0802. In a supervision quiz, how should Individual advocacy be distinguished from Asset-based community development?

A. Individual advocacy: Action taken with or on behalf of a person to secure access, rights, or needed services. / Asset-based community development: A community-led approach that builds on existing strengths, relationships, and resources.
B. Individual advocacy: Balancing empowerment, consent, role boundaries, confidentiality, and potential consequences when advocating. / Asset-based community development: A community-led approach that builds on existing strengths, relationships, and resources.
C. Individual advocacy: A community-led approach that builds on existing strengths, relationships, and resources. / Asset-based community development: Action taken with or on behalf of a person to secure access, rights, or needed services.
D. Individual advocacy: Action taken with or on behalf of a person to secure access, rights, or needed services. / Asset-based community development: Including affected young people and families meaningfully in decisions that shape services.

0803. Choose the term that matches this definition: Meaningful inclusion of young people's perspectives and influence in services and decisions affecting them.

A. Asset-based community development
B. Systems advocacy
C. Coalition building
D. Youth voice

0804. A trainee must explain Youth voice. Which answer is accurate?

A. Meaningful inclusion of young people's perspectives and influence in services and decisions affecting them.
B. Organizing collaboration among people and groups with aligned interests to pursue shared change.
C. A person's ability and opportunity to communicate needs, preferences, and rights and participate in decisions.
D. Action taken with or on behalf of a person to secure access, rights, or needed services.

0805. In the community youth program, a consulting counselor explains why a young person aged 16 would benefit from creating safe, accessible ways for youth input to shape a program. Which course concept underpins the explanation?

A. Youth voice
B. Service navigation
C. Coalition building
D. Asset-based community development

0806. A student confuses Self-advocacy with Policy brief. Which explanation most accurately separates them?

A. Self-advocacy: A person's ability and opportunity to communicate needs, preferences, and rights and participate in decisions. / Policy brief: A concise evidence-informed document that defines a policy issue and presents feasible options or recommendations.
B. Self-advocacy: A concise evidence-informed document that defines a policy issue and presents feasible options or recommendations. / Policy brief: A person's ability and opportunity to communicate needs, preferences, and rights and participate in decisions.
C. Self-advocacy: A person's ability and opportunity to communicate needs, preferences, and rights and participate in decisions. / Policy brief: Including affected young people and families meaningfully in decisions that shape services.
D. Self-advocacy: Meaningful inclusion of young people's perspectives and influence in services and decisions affecting them. / Policy brief: A concise evidence-informed document that defines a policy issue and presents feasible options or recommendations.

0807. A consulting counselor is explaining a choice to a child of elementary-school age and caregiver in the clinical planning session. The choice centers on summarizing a service gap and actionable recommendations for decision makers. Which idea is illustrated?

A. Asset-based community development
B. Systems advocacy
C. Policy brief
D. Youth voice

0808. A youth worker is explaining a choice to a young adolescent client and caregiver in the student-support meeting. The choice centers on creating safe, accessible ways for youth input to shape a program. Which idea is illustrated?

A. Participatory decision-making
B. Policy brief
C. Service navigation
D. Youth voice

0809. In a supervision review, a family therapist describes work with a young person in the supervision meeting: helping a youth prepare to state a support need in a meeting. What concept is illustrated?

A. Coalition building
B. Self-advocacy
C. Youth voice
D. Participatory decision-making

0810. Choose the practice comparison that best separates Policy brief from Service navigation.

A. Policy brief: Summarizing a service gap and actionable recommendations for decision makers. / Service navigation: Using documented access barriers to recommend a service-system change.
B. Policy brief: Clarifying eligibility, referral steps, and follow-up barriers with a family. / Service navigation: Summarizing a service gap and actionable recommendations for decision makers.
C. Policy brief: Summarizing a service gap and actionable recommendations for decision makers. / Service navigation: Clarifying eligibility, referral steps, and follow-up barriers with a family.
D. Policy brief: Obtaining permission and discussing foreseeable benefits and risks before speaking on a client's behalf. / Service navigation: Clarifying eligibility, referral steps, and follow-up barriers with a family.

0811. Which pair of actions illustrates Asset-based community development and Policy brief, respectively?

A. Asset-based community development: Mapping community skills and networks before designing an outside-led program. / Policy brief: Clarifying eligibility, referral steps, and follow-up barriers with a family.
B. Asset-based community development: Summarizing a service gap and actionable recommendations for decision makers. / Policy brief: Mapping community skills and networks before designing an outside-led program.
C. Asset-based community development: Agreeing on a common goal, roles, and communication practices across partner organizations. / Policy brief: Summarizing a service gap and actionable recommendations for decision makers.
D. Asset-based community development: Mapping community skills and networks before designing an outside-led program. / Policy brief: Summarizing a service gap and actionable recommendations for decision makers.

0812. A team must select a support approach for a high-school student at the telehealth session. The caregiver working with a counselor recommends obtaining permission and discussing foreseeable benefits and risks before speaking on a client's behalf. Which idea is most relevant?

A. Individual advocacy
B. Youth voice
C. Advocacy ethics
D. Service navigation

0813. In a supervision quiz, how should Self-advocacy be distinguished from Service navigation?

A. Self-advocacy: Practical assistance that helps people identify, access, and coordinate appropriate services. / Service navigation: A person's ability and opportunity to communicate needs, preferences, and rights and participate in decisions.
B. Self-advocacy: A community-led approach that builds on existing strengths, relationships, and resources. / Service navigation: Practical assistance that helps people identify, access, and coordinate appropriate services.
C. Self-advocacy: A person's ability and opportunity to communicate needs, preferences, and rights and participate in decisions. / Service navigation: A concise evidence-informed document that defines a policy issue and presents feasible options or recommendations.
D. Self-advocacy: A person's ability and opportunity to communicate needs, preferences, and rights and participate in decisions. / Service navigation: Practical assistance that helps people identify, access, and coordinate appropriate services.

0814. A trainee must explain Participatory decision-making. Which answer is accurate?

A. Practical assistance that helps people identify, access, and coordinate appropriate services.
B. Action taken with or on behalf of a person to secure access, rights, or needed services.
C. A concise evidence-informed document that defines a policy issue and presents feasible options or recommendations.
D. Including affected young people and families meaningfully in decisions that shape services.

0815. Which comparison correctly distinguishes Participatory decision-making from Service navigation?

A. Participatory decision-making: Practical assistance that helps people identify, access, and coordinate appropriate services. / Service navigation: Including affected young people and families meaningfully in decisions that shape services.
B. Participatory decision-making: Action taken with or on behalf of a person to secure access, rights, or needed services. / Service navigation: Practical assistance that helps people identify, access, and coordinate appropriate services.
C. Participatory decision-making: Including affected young people and families meaningfully in decisions that shape services. / Service navigation: Meaningful inclusion of young people's perspectives and influence in services and decisions affecting them.
D. Participatory decision-making: Including affected young people and families meaningfully in decisions that shape services. / Service navigation: Practical assistance that helps people identify, access, and coordinate appropriate services.

0816. In a supervision quiz, how should Service navigation be distinguished from Advocacy ethics?

A. Service navigation: Practical assistance that helps people identify, access, and coordinate appropriate services. / Advocacy ethics: Meaningful inclusion of young people's perspectives and influence in services and decisions affecting them.
B. Service navigation: Practical assistance that helps people identify, access, and coordinate appropriate services. / Advocacy ethics: Balancing empowerment, consent, role boundaries, confidentiality, and potential consequences when advocating.
C. Service navigation: Including affected young people and families meaningfully in decisions that shape services. / Advocacy ethics: Balancing empowerment, consent, role boundaries, confidentiality, and potential consequences when advocating.
D. Service navigation: Balancing empowerment, consent, role boundaries, confidentiality, and potential consequences when advocating. / Advocacy ethics: Practical assistance that helps people identify, access, and coordinate appropriate services.

0817. A parent educator presents a support plan for a preadolescent child at the counseling practicum. Its central feature is creating safe, accessible ways for youth input to shape a program. Which concept should be named?

A. Youth voice
B. Policy brief
C. Advocacy ethics
D. Individual advocacy

0818. A doctoral student reads the following description. Which concept does it define? Organizing collaboration among people and groups with aligned interests to pursue shared change.

A. Coalition building
B. Asset-based community development
C. Policy brief
D. Youth voice

0819. Which paired example correctly applies Systems advocacy first and Youth voice second?

A. Systems advocacy: Using documented access barriers to recommend a service-system change. / Youth voice: Creating safe, accessible ways for youth input to shape a program.
B. Systems advocacy: Using documented access barriers to recommend a service-system change. / Youth voice: Obtaining permission and discussing foreseeable benefits and risks before speaking on a client's behalf.
C. Systems advocacy: Creating safe, accessible ways for youth input to shape a program. / Youth voice: Using documented access barriers to recommend a service-system change.
D. Systems advocacy: Supporting a family to navigate a referral barrier with the young person's informed involvement. / Youth voice: Creating safe, accessible ways for youth input to shape a program.

0820. Which option preserves the correct meaning of both Systems advocacy and Youth voice?

A. Systems advocacy: Efforts to change policies, practices, or resource arrangements that affect groups of people. / Youth voice: Balancing empowerment, consent, role boundaries, confidentiality, and potential consequences when advocating.
B. Systems advocacy: Efforts to change policies, practices, or resource arrangements that affect groups of people. / Youth voice: Meaningful inclusion of young people's perspectives and influence in services and decisions affecting them.
C. Systems advocacy: Meaningful inclusion of young people's perspectives and influence in services and decisions affecting them. / Youth voice: Efforts to change policies, practices, or resource arrangements that affect groups of people.
D. Systems advocacy: Action taken with or on behalf of a person to secure access, rights, or needed services. / Youth voice: Meaningful inclusion of young people's perspectives and influence in services and decisions affecting them.

0821. A young person aged 10's service team meets in the student wellness team. The school-based clinician recommends a change involving helping a youth prepare to state a support need in a meeting. Which idea best explains it?

A. Policy brief
B. Self-advocacy
C. Advocacy ethics
D. Individual advocacy

0822. A trainee must distinguish how Participatory decision-making and Policy brief guide practice. Which comparison is accurate?

A. Participatory decision-making: Summarizing a service gap and actionable recommendations for decision makers. / Policy brief: Seeking youth input early and showing how it influenced a service decision.
B. Participatory decision-making: Seeking youth input early and showing how it influenced a service decision. / Policy brief: Summarizing a service gap and actionable recommendations for decision makers.
C. Participatory decision-making: Seeking youth input early and showing how it influenced a service decision. / Policy brief: Helping a youth prepare to state a support need in a meeting.
D. Participatory decision-making: Mapping community skills and networks before designing an outside-led program. / Policy brief: Summarizing a service gap and actionable recommendations for decision makers.

0823. Which applied comparison correctly identifies what belongs to Individual advocacy versus Self-advocacy?

A. Individual advocacy: Supporting a family to navigate a referral barrier with the young person's informed involvement. / Self-advocacy: Clarifying eligibility, referral steps, and follow-up barriers with a family.
B. Individual advocacy: Creating safe, accessible ways for youth input to shape a program. / Self-advocacy: Helping a youth prepare to state a support need in a meeting.
C. Individual advocacy: Supporting a family to navigate a referral barrier with the young person's informed involvement. / Self-advocacy: Helping a youth prepare to state a support need in a meeting.
D. Individual advocacy: Helping a youth prepare to state a support need in a meeting. / Self-advocacy: Supporting a family to navigate a referral barrier with the young person's informed involvement.

0824. A trainee must distinguish how Systems advocacy and Service navigation guide practice. Which comparison is accurate?

A. Systems advocacy: Clarifying eligibility, referral steps, and follow-up barriers with a family. / Service navigation: Using documented access barriers to recommend a service-system change.
B. Systems advocacy: Mapping community skills and networks before designing an outside-led program. / Service navigation: Clarifying eligibility, referral steps, and follow-up barriers with a family.
C. Systems advocacy: Using documented access barriers to recommend a service-system change. / Service navigation: Clarifying eligibility, referral steps, and follow-up barriers with a family.
D. Systems advocacy: Using documented access barriers to recommend a service-system change. / Service navigation: Creating safe, accessible ways for youth input to shape a program.

0825. A service navigator describes an intervention for a student aged 17 in the supervision meeting, centered on summarizing a service gap and actionable recommendations for decision makers. Which named idea is most relevant?

A. Policy brief
B. Participatory decision-making
C. Systems advocacy
D. Self-advocacy

0826. Which option preserves the correct meaning of both Participatory decision-making and Service navigation?

A. Participatory decision-making: Practical assistance that helps people identify, access, and coordinate appropriate services. / Service navigation: Including affected young people and families meaningfully in decisions that shape services.
B. Participatory decision-making: Action taken with or on behalf of a person to secure access, rights, or needed services. / Service navigation: Practical assistance that helps people identify, access, and coordinate appropriate services.
C. Participatory decision-making: Including affected young people and families meaningfully in decisions that shape services. / Service navigation: Meaningful inclusion of young people's perspectives and influence in services and decisions affecting them.
D. Participatory decision-making: Including affected young people and families meaningfully in decisions that shape services. / Service navigation: Practical assistance that helps people identify, access, and coordinate appropriate services.

0827. How should a practitioner distinguish the applications of Policy brief and Advocacy ethics?

A. Policy brief: Obtaining permission and discussing foreseeable benefits and risks before speaking on a client's behalf. / Advocacy ethics: Summarizing a service gap and actionable recommendations for decision makers.
B. Policy brief: Summarizing a service gap and actionable recommendations for decision makers. / Advocacy ethics: Agreeing on a common goal, roles, and communication practices across partner organizations.
C. Policy brief: Using documented access barriers to recommend a service-system change. / Advocacy ethics: Obtaining permission and discussing foreseeable benefits and risks before speaking on a client's behalf.
D. Policy brief: Summarizing a service gap and actionable recommendations for decision makers. / Advocacy ethics: Obtaining permission and discussing foreseeable benefits and risks before speaking on a client's behalf.

0828. A clinical supervisor reviews a plan for a young person aged 18 in the school consultation. The plan emphasizes creating safe, accessible ways for youth input to shape a program. Which course idea does this reflect?

A. Youth voice
B. Participatory decision-making
C. Policy brief
D. Coalition building

0829. A supervised trainee is preparing a follow-up plan for a older adolescent client in the parent meeting. The plan calls for mapping community skills and networks before designing an outside-led program. Which concept names this approach?

A. Service navigation
B. Asset-based community development
C. Participatory decision-making
D. Coalition building

0830. A mental-health professional is preparing a follow-up plan for a child of elementary-school age in the classroom support meeting. The plan calls for creating safe, accessible ways for youth input to shape a program. Which concept names this approach?

A. Policy brief
B. Youth voice
C. Individual advocacy
D. Systems advocacy

0831. A support meeting for a student aged 9 includes a counselor in the student wellness team. The practice under consideration is creating safe, accessible ways for youth input to shape a program. Which concept guides it?

A. Individual advocacy
B. Systems advocacy
C. Policy brief
D. Youth voice

0832. Choose the practice comparison that best separates Systems advocacy from Youth voice.

A. Systems advocacy: Using documented access barriers to recommend a service-system change. / Youth voice: Creating safe, accessible ways for youth input to shape a program.
B. Systems advocacy: Using documented access barriers to recommend a service-system change. / Youth voice: Obtaining permission and discussing foreseeable benefits and risks before speaking on a client's behalf.
C. Systems advocacy: Creating safe, accessible ways for youth input to shape a program. / Youth voice: Using documented access barriers to recommend a service-system change.
D. Systems advocacy: Supporting a family to navigate a referral barrier with the young person's informed involvement. / Youth voice: Creating safe, accessible ways for youth input to shape a program.

0833. How should a practitioner distinguish the applications of Asset-based community development and Policy brief?

A. Asset-based community development: Mapping community skills and networks before designing an outside-led program. / Policy brief: Summarizing a service gap and actionable recommendations for decision makers.
B. Asset-based community development: Summarizing a service gap and actionable recommendations for decision makers. / Policy brief: Mapping community skills and networks before designing an outside-led program.
C. Asset-based community development: Mapping community skills and networks before designing an outside-led program. / Policy brief: Clarifying eligibility, referral steps, and follow-up barriers with a family.
D. Asset-based community development: Agreeing on a common goal, roles, and communication practices across partner organizations. / Policy brief: Summarizing a service gap and actionable recommendations for decision makers.

0834. Identify the most precise label for this idea: Practical assistance that helps people identify, access, and coordinate appropriate services.

A. Participatory decision-making
B. Coalition building
C. Service navigation
D. Policy brief

0835. In the supervision meeting, a school counselor explains why a young person aged 13 would benefit from mapping community skills and networks before designing an outside-led program. Which course concept underpins the explanation?

A. Advocacy ethics
B. Asset-based community development
C. Youth voice
D. Service navigation

0836. In a case note about a school-age child, a mental-health professional working in the counseling practicum records this priority: clarifying eligibility, referral steps, and follow-up barriers with a family. What principle is reflected?

A. Advocacy ethics
B. Service navigation
C. Asset-based community development
D. Self-advocacy

0837. A student confuses Self-advocacy with Service navigation. Which explanation most accurately separates them?

A. Self-advocacy: Practical assistance that helps people identify, access, and coordinate appropriate services. / Service navigation: A person's ability and opportunity to communicate needs, preferences, and rights and participate in decisions.
B. Self-advocacy: A person's ability and opportunity to communicate needs, preferences, and rights and participate in decisions. / Service navigation: Practical assistance that helps people identify, access, and coordinate appropriate services.
C. Self-advocacy: A community-led approach that builds on existing strengths, relationships, and resources. / Service navigation: Practical assistance that helps people identify, access, and coordinate appropriate services.
D. Self-advocacy: A person's ability and opportunity to communicate needs, preferences, and rights and participate in decisions. / Service navigation: A concise evidence-informed document that defines a policy issue and presents feasible options or recommendations.

0838. Which description belongs with the term Participatory decision-making?

A. Meaningful inclusion of young people's perspectives and influence in services and decisions affecting them.
B. Efforts to change policies, practices, or resource arrangements that affect groups of people.
C. Including affected young people and families meaningfully in decisions that shape services.
D. A person's ability and opportunity to communicate needs, preferences, and rights and participate in decisions.

0839. Choose the definition pair that correctly explains Asset-based community development first and Service navigation second.

A. Asset-based community development: Practical assistance that helps people identify, access, and coordinate appropriate services. / Service navigation: A community-led approach that builds on existing strengths, relationships, and resources.
B. Asset-based community development: A community-led approach that builds on existing strengths, relationships, and resources. / Service navigation: Efforts to change policies, practices, or resource arrangements that affect groups of people.
C. Asset-based community development: A community-led approach that builds on existing strengths, relationships, and resources. / Service navigation: Practical assistance that helps people identify, access, and coordinate appropriate services.
D. Asset-based community development: Action taken with or on behalf of a person to secure access, rights, or needed services. / Service navigation: Practical assistance that helps people identify, access, and coordinate appropriate services.

0840. A clinical supervisor is asked to evaluate a proposed service for a student aged 9 in the supervision meeting. The defining feature is seeking youth input early and showing how it influenced a service decision. Which concept fits?

A. Youth voice
B. Service navigation
C. Participatory decision-making
D. Coalition building

0841. When reviewing a young person aged 18's plan in the learning-support meeting, the parent educator notes that the next step is mapping community skills and networks before designing an outside-led program. Which concept guides this step?

A. Systems advocacy
B. Self-advocacy
C. Asset-based community development
D. Individual advocacy

0842. An interdisciplinary team reviews a school-age child's case at the school counseling office. The clinical supervisor recommends summarizing a service gap and actionable recommendations for decision makers. Which course concept best fits?

A. Asset-based community development
B. Policy brief
C. Service navigation
D. Advocacy ethics

0843. Which description belongs with the term Service navigation?

A. Organizing collaboration among people and groups with aligned interests to pursue shared change.
B. Practical assistance that helps people identify, access, and coordinate appropriate services.
C. Action taken with or on behalf of a person to secure access, rights, or needed services.
D. Meaningful inclusion of young people's perspectives and influence in services and decisions affecting them.

0844. Which professional action most closely applies Self-advocacy?

A. Helping a youth prepare to state a support need in a meeting.
B. Mapping community skills and networks before designing an outside-led program.
C. Using documented access barriers to recommend a service-system change.
D. Clarifying eligibility, referral steps, and follow-up barriers with a family.

0845. A trainee must distinguish how Individual advocacy and Asset-based community development guide practice. Which comparison is accurate?

A. Individual advocacy: Obtaining permission and discussing foreseeable benefits and risks before speaking on a client's behalf. / Asset-based community development: Mapping community skills and networks before designing an outside-led program.
B. Individual advocacy: Supporting a family to navigate a referral barrier with the young person's informed involvement. / Asset-based community development: Seeking youth input early and showing how it influenced a service decision.
C. Individual advocacy: Supporting a family to navigate a referral barrier with the young person's informed involvement. / Asset-based community development: Mapping community skills and networks before designing an outside-led program.
D. Individual advocacy: Mapping community skills and networks before designing an outside-led program. / Asset-based community development: Supporting a family to navigate a referral barrier with the young person's informed involvement.

0846. During work in the telehealth session, a youth worker identifies this need: using documented access barriers to recommend a service-system change. Which idea should guide the response?

A. Systems advocacy
B. Self-advocacy
C. Asset-based community development
D. Coalition building

0847. A student aged 9 and a supervised trainee are reviewing goals in the community youth program. The agreed action is supporting a family to navigate a referral barrier with the young person's informed involvement. Which principle best accounts for it?

A. Advocacy ethics
B. Self-advocacy
C. Participatory decision-making
D. Individual advocacy

0848. Which paired example correctly applies Individual advocacy first and Policy brief second?

A. Individual advocacy: Helping a youth prepare to state a support need in a meeting. / Policy brief: Summarizing a service gap and actionable recommendations for decision makers.
B. Individual advocacy: Supporting a family to navigate a referral barrier with the young person’s informed involvement. / Policy brief: Summarizing a service gap and actionable recommendations for decision makers.
C. Individual advocacy: Summarizing a service gap and actionable recommendations for decision makers. / Policy brief: Supporting a family to navigate a referral barrier with the young person’s informed involvement.
D. Individual advocacy: Supporting a family to navigate a referral barrier with the young person’s informed involvement. / Policy brief: Seeking youth input early and showing how it influenced a service decision.

0849. A case discussion concerns a high-school student and a caregiver working with a counselor in the telehealth session. The practitioner is considering obtaining permission and discussing foreseeable benefits and risks before speaking on a client’s behalf. Which principle is involved?

A. Advocacy ethics
B. Policy brief
C. Self-advocacy
D. Youth voice

0850. Which comparison correctly distinguishes Coalition building from Service navigation?

A. Coalition building: Practical assistance that helps people identify, access, and coordinate appropriate services. / Service navigation: Organizing collaboration among people and groups with aligned interests to pursue shared change.
B. Coalition building: Organizing collaboration among people and groups with aligned interests to pursue shared change. / Service navigation: A person’s ability and opportunity to communicate needs, preferences, and rights and participate in decisions.
C. Coalition building: Organizing collaboration among people and groups with aligned interests to pursue shared change. / Service navigation: Practical assistance that helps people identify, access, and coordinate appropriate services.
D. Coalition building: Meaningful inclusion of young people’s perspectives and influence in services and decisions affecting them. / Service navigation: Practical assistance that helps people identify, access, and coordinate appropriate services.

0851. A counselor is asked to evaluate a proposed service for a client in late adolescence in the child guidance clinic. The defining feature is helping a youth prepare to state a support need in a meeting. Which concept fits?

A. Self-advocacy
B. Coalition building
C. Participatory decision-making
D. Advocacy ethics

0852. Which professional action most closely applies Coalition building?

A. Using documented access barriers to recommend a service-system change.
B. Creating safe, accessible ways for youth input to shape a program.
C. Agreeing on a common goal, roles, and communication practices across partner organizations.
D. Helping a youth prepare to state a support need in a meeting.

0853. A trainee must distinguish how Systems advocacy and Youth voice guide practice. Which comparison is accurate?

A. Systems advocacy: Using documented access barriers to recommend a service-system change. / Youth voice: Creating safe, accessible ways for youth input to shape a program.
B. Systems advocacy: Creating safe, accessible ways for youth input to shape a program. / Youth voice: Using documented access barriers to recommend a service-system change.
C. Systems advocacy: Supporting a family to navigate a referral barrier with the young person’s informed involvement. / Youth voice: Creating safe, accessible ways for youth input to shape a program.
D. Systems advocacy: Using documented access barriers to recommend a service-system change. / Youth voice: Obtaining permission and discussing foreseeable benefits and risks before speaking on a client’s behalf.

0854. A mental-health professional is supporting a older adolescent client in the family session. The key practice is obtaining permission and discussing foreseeable benefits and risks before speaking on a client’s behalf. Which course concept is most relevant?

A. Advocacy ethics
B. Systems advocacy
C. Youth voice
D. Participatory decision-making

0855. A service navigator is asked what should shape a young person’s support in the child guidance clinic. The proposed focus is obtaining permission and discussing foreseeable benefits and risks before speaking on a client’s behalf. Which principle does it represent?

A. Coalition building
B. Individual advocacy
C. Advocacy ethics
D. Self-advocacy

0856. Choose the term that matches this definition: Balancing empowerment, consent, role boundaries, confidentiality, and potential consequences when advocating.

A. Coalition building
B. Individual advocacy
C. Advocacy ethics
D. Asset-based community development

0857. A student confuses Self-advocacy with Coalition building. Which explanation most accurately separates them?

A. Self-advocacy: A person’s ability and opportunity to communicate needs, preferences, and rights and participate in decisions. / Coalition building: Organizing collaboration among people and groups with aligned interests to pursue shared change.
B. Self-advocacy: Organizing collaboration among people and groups with aligned interests to pursue shared change. / Coalition building: A person’s ability and opportunity to communicate needs, preferences, and rights and participate in decisions.
C. Self-advocacy: A person’s ability and opportunity to communicate needs, preferences, and rights and participate in decisions. / Coalition building: Including affected young people and families meaningfully in decisions that shape services.
D. Self-advocacy: A concise evidence-informed document that defines a policy issue and presents feasible options or recommendations. / Coalition building: Organizing collaboration among people and groups with aligned interests to pursue shared change.

0858. How are Individual advocacy and Service navigation most accurately differentiated in this curriculum?

A. Individual advocacy: Practical assistance that helps people identify, access, and coordinate appropriate services. / Service navigation: Action taken with or on behalf of a person to secure access, rights, or needed services.
B. Individual advocacy: Action taken with or on behalf of a person to secure access, rights, or needed services. / Service navigation: Meaningful inclusion of young people's perspectives and influence in services and decisions affecting them.
C. Individual advocacy: A concise evidence-informed document that defines a policy issue and presents feasible options or recommendations. / Service navigation: Practical assistance that helps people identify, access, and coordinate appropriate services.
D. Individual advocacy: Action taken with or on behalf of a person to secure access, rights, or needed services. / Service navigation: Practical assistance that helps people identify, access, and coordinate appropriate services.

0859. For a child aged 11 in the counseling practicum, a play therapist makes this practice the immediate priority: obtaining permission and discussing foreseeable benefits and risks before speaking on a client's behalf. Which concept fits best?

A. Advocacy ethics
B. Participatory decision-making
C. Coalition building
D. Systems advocacy

0860. A child of elementary-school age is receiving support in the clinical planning session. The consulting counselor is guided by this practice: summarizing a service gap and actionable recommendations for decision makers. Which principle best fits?

A. Policy brief
B. Self-advocacy
C. Youth voice
D. Advocacy ethics

0861. Which option preserves the correct meaning of both Self-advocacy and Asset-based community development?

A. Self-advocacy: A person's ability and opportunity to communicate needs, preferences, and rights and participate in decisions. / Asset-based community development: A community-led approach that builds on existing strengths, relationships, and resources.
B. Self-advocacy: A person's ability and opportunity to communicate needs, preferences, and rights and participate in decisions. / Asset-based community development: Efforts to change policies, practices, or resource arrangements that affect groups of people.
C. Self-advocacy: Action taken with or on behalf of a person to secure access, rights, or needed services. / Asset-based community development: A community-led approach that builds on existing strengths, relationships, and resources.
D. Self-advocacy: A community-led approach that builds on existing strengths, relationships, and resources. / Asset-based community development: A person's ability and opportunity to communicate needs, preferences, and rights and participate in decisions.

0862. A student confuses Systems advocacy with Self-advocacy. Which explanation most accurately separates them?

A. Systems advocacy: Efforts to change policies, practices, or resource arrangements that affect groups of people. / Self-advocacy: A person's ability and opportunity to communicate needs, preferences, and rights and participate in decisions.
B. Systems advocacy: Efforts to change policies, practices, or resource arrangements that affect groups of people. / Self-advocacy: A community-led approach that builds on existing strengths, relationships, and resources.
C. Systems advocacy: A person's ability and opportunity to communicate needs, preferences, and rights and participate in decisions. / Self-advocacy: Efforts to change policies, practices, or resource arrangements that affect groups of people.
D. Systems advocacy: Including affected young people and families meaningfully in decisions that shape services. / Self-advocacy: A person's ability and opportunity to communicate needs, preferences, and rights and participate in decisions.

0863. A doctoral student reads the following description. Which concept does it define? Meaningful inclusion of young people's perspectives and influence in services and decisions affecting them.

A. Service navigation
B. Coalition building
C. Youth voice
D. Individual advocacy

0864. A young person aged 16 and a assessment clinician are reviewing goals in the school consultation. The agreed action is using documented access barriers to recommend a service-system change. Which principle best accounts for it?

A. Asset-based community development
B. Self-advocacy
C. Policy brief
D. Systems advocacy

0865. At the youth group, a service navigator reviews whether a plan for a child aged 14 is appropriate. The relevant practice is agreeing on a common goal, roles, and communication practices across partner organizations. Which concept is tested?

A. Policy brief
B. Coalition building
C. Participatory decision-making
D. Systems advocacy

0866. A trainee must choose a practice that exemplifies Youth voice. Which action is the best fit?

A. Summarizing a service gap and actionable recommendations for decision makers.
B. Supporting a family to navigate a referral barrier with the young person's informed involvement.
C. Creating safe, accessible ways for youth input to shape a program.
D. Mapping community skills and networks before designing an outside-led program.

0867. Which applied comparison correctly identifies what belongs to Coalition building versus Youth voice?

A. Coalition building: Agreeing on a common goal, roles, and communication practices across partner organizations. / Youth voice: Creating safe, accessible ways for youth input to shape a program.
B. Coalition building: Agreeing on a common goal, roles, and communication practices across partner organizations. / Youth voice: Supporting a family to navigate a referral barrier with the young person's informed involvement.
C. Coalition building: Creating safe, accessible ways for youth input to shape a program. / Youth voice: Agreeing on a common goal, roles, and communication practices across partner organizations.
D. Coalition building: Clarifying eligibility, referral steps, and follow-up barriers with a family. / Youth voice: Creating safe, accessible ways for youth input to shape a program.

0868. Choose the practice comparison that best separates Self-advocacy from Participatory decision-making.

A. Self-advocacy: Seeking youth input early and showing how it influenced a service decision. / Participatory decision-making: Helping a youth prepare to state a support need in a meeting.
B. Self-advocacy: Creating safe, accessible ways for youth input to shape a program. / Participatory decision-making: Seeking youth input early and showing how it influenced a service decision.
C. Self-advocacy: Helping a youth prepare to state a support need in a meeting. / Participatory decision-making: Seeking youth input early and showing how it influenced a service decision.
D. Self-advocacy: Helping a youth prepare to state a support need in a meeting. / Participatory decision-making: Agreeing on a common goal, roles, and communication practices across partner organizations.

0869. A trainee must choose a practice that exemplifies Individual advocacy. Which action is the best fit?

A. Summarizing a service gap and actionable recommendations for decision makers.
B. Helping a youth prepare to state a support need in a meeting.
C. Seeking youth input early and showing how it influenced a service decision.
D. Supporting a family to navigate a referral barrier with the young person's informed involvement.

0870. How are Participatory decision-making and Coalition building most accurately differentiated in this curriculum?

A. Participatory decision-making: Meaningful inclusion of young people's perspectives and influence in services and decisions affecting them. / Coalition building: Organizing collaboration among people and groups with aligned interests to pursue shared change.
B. Participatory decision-making: Including affected young people and families meaningfully in decisions that shape services. / Coalition building: Efforts to change policies, practices, or resource arrangements that affect groups of people.
C. Participatory decision-making: Organizing collaboration among people and groups with aligned interests to pursue shared change. / Coalition building: Including affected young people and families meaningfully in decisions that shape services.
D. Participatory decision-making: Including affected young people and families meaningfully in decisions that shape services. / Coalition building: Organizing collaboration among people and groups with aligned interests to pursue shared change.

0871. Which course concept is defined as follows: Action taken with or on behalf of a person to secure access, rights, or needed services.

A. Coalition building
B. Individual advocacy
C. Advocacy ethics
D. Policy brief

0872. A case conference reviews a community practitioner's work with a older adolescent client in the supervision meeting: supporting a family to navigate a referral barrier with the young person's informed involvement. Which principle is central?

A. Policy brief
B. Service navigation
C. Coalition building
D. Individual advocacy

0873. A supervisor asks for an applied contrast between Policy brief and Service navigation. Which option fits?

A. Policy brief: Summarizing a service gap and actionable recommendations for decision makers. / Service navigation: Using documented access barriers to recommend a service-system change.
B. Policy brief: Clarifying eligibility, referral steps, and follow-up barriers with a family. / Service navigation: Summarizing a service gap and actionable recommendations for decision makers.
C. Policy brief: Obtaining permission and discussing foreseeable benefits and risks before speaking on a client's behalf. / Service navigation: Clarifying eligibility, referral steps, and follow-up barriers with a family.
D. Policy brief: Summarizing a service gap and actionable recommendations for decision makers. / Service navigation: Clarifying eligibility, referral steps, and follow-up barriers with a family.

0874. Which applied comparison correctly identifies what belongs to Self-advocacy versus Youth voice?

A. Self-advocacy: Clarifying eligibility, referral steps, and follow-up barriers with a family. / Youth voice: Creating safe, accessible ways for youth input to shape a program.
B. Self-advocacy: Helping a youth prepare to state a support need in a meeting. / Youth voice: Creating safe, accessible ways for youth input to shape a program.
C. Self-advocacy: Helping a youth prepare to state a support need in a meeting. / Youth voice: Seeking youth input early and showing how it influenced a service decision.
D. Self-advocacy: Creating safe, accessible ways for youth input to shape a program. / Youth voice: Helping a youth prepare to state a support need in a meeting.

0875. In a supervision quiz, how should Systems advocacy be distinguished from Asset-based community development?

A. Systems advocacy: Efforts to change policies, practices, or resource arrangements that affect groups of people. / Asset-based community development: A community-led approach that builds on existing strengths, relationships, and resources.
B. Systems advocacy: Efforts to change policies, practices, or resource arrangements that affect groups of people. / Asset-based community development: Including affected young people and families meaningfully in decisions that shape services.
C. Systems advocacy: A person's ability and opportunity to communicate needs, preferences, and rights and participate in decisions. / Asset-based community development: A community-led approach that builds on existing strengths, relationships, and resources.
D. Systems advocacy: A community-led approach that builds on existing strengths, relationships, and resources. / Asset-based community development: Efforts to change policies, practices, or resource arrangements that affect groups of people.

0876. In a supervision quiz, how should Self-advocacy be distinguished from Youth voice?

A. Self-advocacy: A person's ability and opportunity to communicate needs, preferences, and rights and participate in decisions. / Youth voice: Meaningful inclusion of young people's perspectives and influence in services and decisions affecting them.
B. Self-advocacy: Practical assistance that helps people identify, access, and coordinate appropriate services. / Youth voice: Meaningful inclusion of young people's perspectives and influence in services and decisions affecting them.
C. Self-advocacy: A person's ability and opportunity to communicate needs, preferences, and rights and participate in decisions. / Youth voice: Including affected young people and families meaningfully in decisions that shape services.
D. Self-advocacy: Meaningful inclusion of young people's perspectives and influence in services and decisions affecting them. / Youth voice: A person's ability and opportunity to communicate needs, preferences, and rights and participate in decisions.

0877. A supervised trainee is supporting a student aged 9 in the community youth program. The key practice is supporting a family to navigate a referral barrier with the young person's informed involvement. Which course concept is most relevant?

A. Youth voice
B. Participatory decision-making
C. Coalition building
D. Individual advocacy

0878. A team must select a support approach for a school-age child at the community service agency. The case coordinator recommends agreeing on a common goal, roles, and communication practices across partner organizations. Which idea is most relevant?

A. Service navigation
B. Advocacy ethics
C. Coalition building
D. Youth voice

0879. Which option pairs the definitions of Systems advocacy and Self-advocacy correctly, in that order?

A. Systems advocacy: A person's ability and opportunity to communicate needs, preferences, and rights and participate in decisions. / Self-advocacy: Efforts to change policies, practices, or resource arrangements that affect groups of people.
B. Systems advocacy: Efforts to change policies, practices, or resource arrangements that affect groups of people. / Self-advocacy: A person's ability and opportunity to communicate needs, preferences, and rights and participate in decisions.
C. Systems advocacy: Efforts to change policies, practices, or resource arrangements that affect groups of people. / Self-advocacy: A community-led approach that builds on existing strengths, relationships, and resources.
D. Systems advocacy: Including affected young people and families meaningfully in decisions that shape services. / Self-advocacy: A person's ability and opportunity to communicate needs, preferences, and rights and participate in decisions.

0880. What is the central meaning of Policy brief?

A. Balancing empowerment, consent, role boundaries, confidentiality, and potential consequences when advocating.
B. A concise evidence-informed document that defines a policy issue and presents feasible options or recommendations.
C. Including affected young people and families meaningfully in decisions that shape services.
D. A community-led approach that builds on existing strengths, relationships, and resources.

0881. Which choice aligns each practice with the correct idea, Self-advocacy or Coalition building?

A. Self-advocacy: Agreeing on a common goal, roles, and communication practices across partner organizations. / Coalition building: Helping a youth prepare to state a support need in a meeting.
B. Self-advocacy: Summarizing a service gap and actionable recommendations for decision makers. / Coalition building: Agreeing on a common goal, roles, and communication practices across partner organizations.
C. Self-advocacy: Helping a youth prepare to state a support need in a meeting. / Coalition building: Agreeing on a common goal, roles, and communication practices across partner organizations.
D. Self-advocacy: Helping a youth prepare to state a support need in a meeting. / Coalition building: Seeking youth input early and showing how it influenced a service decision.

0882. Which comparison correctly distinguishes Individual advocacy from Service navigation?

A. Individual advocacy: A concise evidence-informed document that defines a policy issue and presents feasible options or recommendations. / Service navigation: Practical assistance that helps people identify, access, and coordinate appropriate services.
B. Individual advocacy: Practical assistance that helps people identify, access, and coordinate appropriate services. / Service navigation: Action taken with or on behalf of a person to secure access, rights, or needed services.
C. Individual advocacy: Action taken with or on behalf of a person to secure access, rights, or needed services. / Service navigation: Meaningful inclusion of young people's perspectives and influence in services and decisions affecting them.
D. Individual advocacy: Action taken with or on behalf of a person to secure access, rights, or needed services. / Service navigation: Practical assistance that helps people identify, access, and coordinate appropriate services.

0883. Which option correctly matches each concept to its practice focus: Individual advocacy and Asset-based community development?

A. Individual advocacy: Supporting a family to navigate a referral barrier with the young person's informed involvement. / Asset-based community development: Mapping community skills and networks before designing an outside-led program.
B. Individual advocacy: Mapping community skills and networks before designing an outside-led program. / Asset-based community development: Supporting a family to navigate a referral barrier with the young person's informed involvement.
C. Individual advocacy: Obtaining permission and discussing foreseeable benefits and risks before speaking on a client's behalf. / Asset-based community development: Mapping community skills and networks before designing an outside-led program.
D. Individual advocacy: Supporting a family to navigate a referral barrier with the young person's informed involvement. / Asset-based community development: Seeking youth input early and showing how it influenced a service decision.

0884. A program coordinator is asked what should shape a high-school student's support in the multidisciplinary case conference. The proposed focus is using documented access barriers to recommend a service-system change. Which principle does it represent?

A. Participatory decision-making
B. Systems advocacy
C. Coalition building
D. Policy brief

0885. While supporting a child aged 6 in the school consultation, a caregiver working with a counselor adopts this practice: helping a youth prepare to state a support need in a meeting. Which concept best explains the choice?

A. Self-advocacy
B. Participatory decision-making
C. Asset-based community development
D. Advocacy ethics

0886. Which option pairs the definitions of Coalition building and Advocacy ethics correctly, in that order?

A. Coalition building: Balancing empowerment, consent, role boundaries, confidentiality, and potential consequences when advocating. / Advocacy ethics: Organizing collaboration among people and groups with aligned interests to pursue shared change.
B. Coalition building: Organizing collaboration among people and groups with aligned interests to pursue shared change. / Advocacy ethics: A community-led approach that builds on existing strengths, relationships, and resources.
C. Coalition building: Organizing collaboration among people and groups with aligned interests to pursue shared change. / Advocacy ethics: Balancing empowerment, consent, role boundaries, confidentiality, and potential consequences when advocating.
D. Coalition building: Including affected young people and families meaningfully in decisions that shape services. / Advocacy ethics: Balancing empowerment, consent, role boundaries, confidentiality, and potential consequences when advocating.

0887. Which statement most accurately defines Individual advocacy?

A. Action taken with or on behalf of a person to secure access, rights, or needed services.
B. A person's ability and opportunity to communicate needs, preferences, and rights and participate in decisions.
C. Practical assistance that helps people identify, access, and coordinate appropriate services.
D. A community-led approach that builds on existing strengths, relationships, and resources.

0888. Which choice aligns each practice with the correct idea, Systems advocacy or Policy brief?

A. Systems advocacy: Using documented access barriers to recommend a service-system change. / Policy brief: Helping a youth prepare to state a support need in a meeting.
B. Systems advocacy: Summarizing a service gap and actionable recommendations for decision makers. / Policy brief: Using documented access barriers to recommend a service-system change.
C. Systems advocacy: Using documented access barriers to recommend a service-system change. / Policy brief: Summarizing a service gap and actionable recommendations for decision makers.
D. Systems advocacy: Creating safe, accessible ways for youth input to shape a program. / Policy brief: Summarizing a service gap and actionable recommendations for decision makers.

0889. A trainee must distinguish how Individual advocacy and Coalition building guide practice. Which comparison is accurate?

A. Individual advocacy: Supporting a family to navigate a referral barrier with the young person's informed involvement. / Coalition building: Obtaining permission and discussing foreseeable benefits and risks before speaking on a client's behalf.
B. Individual advocacy: Agreeing on a common goal, roles, and communication practices across partner organizations. / Coalition building: Supporting a family to navigate a referral barrier with the young person's informed involvement.
C. Individual advocacy: Helping a youth prepare to state a support need in a meeting. / Coalition building: Agreeing on a common goal, roles, and communication practices across partner organizations.
D. Individual advocacy: Supporting a family to navigate a referral barrier with the young person's informed involvement. / Coalition building: Agreeing on a common goal, roles, and communication practices across partner organizations.

0890. A team must select a support approach for a child aged 7 at the student-support meeting. The case coordinator recommends using documented access barriers to recommend a service-system change. Which idea is most relevant?

A. Service navigation
B. Individual advocacy
C. Youth voice
D. Systems advocacy

0891. A case conference asks for a distinction between Individual advocacy and Coalition building. Which answer is sound?

A. Individual advocacy: Organizing collaboration among people and groups with aligned interests to pursue shared change. / Coalition building: Action taken with or on behalf of a person to secure access, rights, or needed services.
B. Individual advocacy: Action taken with or on behalf of a person to secure access, rights, or needed services. / Coalition building: Organizing collaboration among people and groups with aligned interests to pursue shared change.
C. Individual advocacy: Action taken with or on behalf of a person to secure access, rights, or needed services. / Coalition building: Balancing empowerment, consent, role boundaries, confidentiality, and potential consequences when advocating.
D. Individual advocacy: A person's ability and opportunity to communicate needs, preferences, and rights and participate in decisions. / Coalition building: Organizing collaboration among people and groups with aligned interests to pursue shared change.

0892. During service review in the school counseling office, a community practitioner describes helping a youth prepare to state a support need in a meeting. for a young person aged 16. Which course idea is most applicable?

A. Participatory decision-making
B. Self-advocacy
C. Systems advocacy
D. Youth voice

0893. A case conference asks for a distinction between Participatory decision-making and Policy brief. Which answer is sound?

A. Participatory decision-making: Including affected young people and families meaningfully in decisions that shape services. / Policy brief: A concise evidence-informed document that defines a policy issue and presents feasible options or recommendations.
B. Participatory decision-making: Including affected young people and families meaningfully in decisions that shape services. / Policy brief: A person's ability and opportunity to communicate needs, preferences, and rights and participate in decisions.
C. Participatory decision-making: A concise evidence-informed document that defines a policy issue and presents feasible options or recommendations. / Policy brief: Including affected young people and families meaningfully in decisions that shape services.
D. Participatory decision-making: A community-led approach that builds on existing strengths, relationships, and resources. / Policy brief: A concise evidence-informed document that defines a policy issue and presents feasible options or recommendations.

0894. While supporting a middle-school student in the family resource center, a school-based clinician adopts this practice: agreeing on a common goal, roles, and communication practices across partner organizations. Which concept best explains the choice?

A. Systems advocacy
B. Policy brief
C. Self-advocacy
D. Coalition building

0895. A community practitioner describes an intervention for a young person aged 10 in the child guidance clinic, centered on mapping community skills and networks before designing an outside-led program. Which named idea is most relevant?

A. Youth voice
B. Participatory decision-making
C. Self-advocacy
D. Asset-based community development

0896. Which applied comparison correctly identifies what belongs to Systems advocacy versus Policy brief?

A. Systems advocacy: Creating safe, accessible ways for youth input to shape a program. / Policy brief: Summarizing a service gap and actionable recommendations for decision makers.
B. Systems advocacy: Using documented access barriers to recommend a service-system change. / Policy brief: Summarizing a service gap and actionable recommendations for decision makers.
C. Systems advocacy: Summarizing a service gap and actionable recommendations for decision makers. / Policy brief: Using documented access barriers to recommend a service-system change.
D. Systems advocacy: Using documented access barriers to recommend a service-system change. / Policy brief: Helping a youth prepare to state a support need in a meeting.

0897. How should a practitioner distinguish the applications of Individual advocacy and Self-advocacy?

A. Individual advocacy: Supporting a family to navigate a referral barrier with the young person’s informed involvement. / Self-advocacy: Helping a youth prepare to state a support need in a meeting.
B. Individual advocacy: Creating safe, accessible ways for youth input to shape a program. / Self-advocacy: Helping a youth prepare to state a support need in a meeting.
C. Individual advocacy: Supporting a family to navigate a referral barrier with the young person’s informed involvement. / Self-advocacy: Clarifying eligibility, referral steps, and follow-up barriers with a family.
D. Individual advocacy: Helping a youth prepare to state a support need in a meeting. / Self-advocacy: Supporting a family to navigate a referral barrier with the young person’s informed involvement.

0898. Consider a student aged 9 receiving help in the behavior-support review. The consulting counselor focuses on helping a youth prepare to state a support need in a meeting. Which term best describes the guiding idea?

A. Service navigation
B. Advocacy ethics
C. Self-advocacy
D. Systems advocacy

0899. How are Policy brief and Coalition building most accurately differentiated in this curriculum?

A. Policy brief: Organizing collaboration among people and groups with aligned interests to pursue shared change. / Coalition building: A concise evidence-informed document that defines a policy issue and presents feasible options or recommendations.
B. Policy brief: Balancing empowerment, consent, role boundaries, confidentiality, and potential consequences when advocating. / Coalition building: Organizing collaboration among people and groups with aligned interests to pursue shared change.
C. Policy brief: A concise evidence-informed document that defines a policy issue and presents feasible options or recommendations. / Coalition building: A person’s ability and opportunity to communicate needs, preferences, and rights and participate in decisions.
D. Policy brief: A concise evidence-informed document that defines a policy issue and presents feasible options or recommendations. / Coalition building: Organizing collaboration among people and groups with aligned interests to pursue shared change.

0900. A service team discusses a student aged 17 in the caregiver consultation. Their proposed next step is supporting a family to navigate a referral barrier with the young person’s informed involvement. Which course concept supports it?

A. Advocacy ethics
B. Asset-based community development
C. Service navigation
D. Individual advocacy

0901. At a case-planning meeting, the clinical supervisor proposes agreeing on a common goal, roles, and communication practices across partner organizations. for a child of elementary-school age seen in the behavior-support review. Which concept does this illustrate?

A. Youth voice
B. Coalition building
C. Service navigation
D. Asset-based community development

0902. At a case-planning meeting, the school support specialist proposes clarifying eligibility, referral steps, and follow-up barriers with a family. for a preadolescent child seen in the community service agency. Which concept does this illustrate?

A. Service navigation
B. Policy brief
C. Asset-based community development
D. Advocacy ethics

0903. Which applied comparison correctly identifies what belongs to Self-advocacy versus Advocacy ethics?

A. Self-advocacy: Helping a youth prepare to state a support need in a meeting. / Advocacy ethics: Obtaining permission and discussing foreseeable benefits and risks before speaking on a client’s behalf.
B. Self-advocacy: Seeking youth input early and showing how it influenced a service decision. / Advocacy ethics: Obtaining permission and discussing foreseeable benefits and risks before speaking on a client’s behalf.
C. Self-advocacy: Helping a youth prepare to state a support need in a meeting. / Advocacy ethics: Mapping community skills and networks before designing an outside-led program.
D. Self-advocacy: Obtaining permission and discussing foreseeable benefits and risks before speaking on a client’s behalf. / Advocacy ethics: Helping a youth prepare to state a support need in a meeting.

0904. Which named construct is captured by this account? Efforts to change policies, practices, or resource arrangements that affect groups of people.

A. Advocacy ethics
B. Systems advocacy
C. Policy brief
D. Service navigation

0905. A doctoral student reads the following description. Which concept does it define? A community-led approach that builds on existing strengths, relationships, and resources.

A. Youth voice
B. Asset-based community development
C. Systems advocacy
D. Advocacy ethics

0906. Which choice aligns each practice with the correct idea, Individual advocacy or Systems advocacy?

A. Individual advocacy: Agreeing on a common goal, roles, and communication practices across partner organizations. / Systems advocacy: Using documented access barriers to recommend a service-system change.
B. Individual advocacy: Supporting a family to navigate a referral barrier with the young person’s informed involvement. / Systems advocacy: Obtaining permission and discussing foreseeable benefits and risks before speaking on a client’s behalf.
C. Individual advocacy: Using documented access barriers to recommend a service-system change. / Systems advocacy: Supporting a family to navigate a referral barrier with the young person’s informed involvement.
D. Individual advocacy: Supporting a family to navigate a referral barrier with the young person’s informed involvement. / Systems advocacy: Using documented access barriers to recommend a service-system change.

0907. Which option correctly matches each concept to its practice focus: Self-advocacy and Youth voice?

A. Self-advocacy: Clarifying eligibility, referral steps, and follow-up barriers with a family. / Youth voice: Creating safe, accessible ways for youth input to shape a program.
B. Self-advocacy: Creating safe, accessible ways for youth input to shape a program. / Youth voice: Helping a youth prepare to state a support need in a meeting.
C. Self-advocacy: Helping a youth prepare to state a support need in a meeting. / Youth voice: Seeking youth input early and showing how it influenced a service decision.
D. Self-advocacy: Helping a youth prepare to state a support need in a meeting. / Youth voice: Creating safe, accessible ways for youth input to shape a program.

0908. A case conference asks for a distinction between Asset-based community development and Advocacy ethics. Which answer is sound?

A. Asset-based community development: A community-led approach that builds on existing strengths, relationships, and resources. / Advocacy ethics: Meaningful inclusion of young people's perspectives and influence in services and decisions affecting them.
B. Asset-based community development: A community-led approach that builds on existing strengths, relationships, and resources. / Advocacy ethics: Balancing empowerment, consent, role boundaries, confidentiality, and potential consequences when advocating.
C. Asset-based community development: Including affected young people and families meaningfully in decisions that shape services. / Advocacy ethics: Balancing empowerment, consent, role boundaries, confidentiality, and potential consequences when advocating.
D. Asset-based community development: Balancing empowerment, consent, role boundaries, confidentiality, and potential consequences when advocating. / Advocacy ethics: A community-led approach that builds on existing strengths, relationships, and resources.

0909. Consider a young person aged 16 receiving help in the community service agency. The school counselor focuses on seeking youth input early and showing how it influenced a service decision. Which term best describes the guiding idea?

A. Self-advocacy
B. Advocacy ethics
C. Policy brief
D. Participatory decision-making

0910. Consider a child aged 8 receiving help in the supervision meeting. The teacher and counselor focuses on obtaining permission and discussing foreseeable benefits and risks before speaking on a client's behalf. Which term best describes the guiding idea?

A. Asset-based community development
B. Self-advocacy
C. Participatory decision-making
D. Advocacy ethics

0911. What is the central meaning of Self-advocacy?

A. A person's ability and opportunity to communicate needs, preferences, and rights and participate in decisions.
B. Balancing empowerment, consent, role boundaries, confidentiality, and potential consequences when advocating.
C. Efforts to change policies, practices, or resource arrangements that affect groups of people.
D. Organizing collaboration among people and groups with aligned interests to pursue shared change.

0912. Which option pairs the definitions of Individual advocacy and Participatory decision-making correctly, in that order?

A. Individual advocacy: Meaningful inclusion of young people's perspectives and influence in services and decisions affecting them. / Participatory decision-making: Including affected young people and families meaningfully in decisions that shape services.
B. Individual advocacy: Including affected young people and families meaningfully in decisions that shape services. / Participatory decision-making: Action taken with or on behalf of a person to secure access, rights, or needed services.
C. Individual advocacy: Action taken with or on behalf of a person to secure access, rights, or needed services. / Participatory decision-making: Balancing empowerment, consent, role boundaries, confidentiality, and potential consequences when advocating.
D. Individual advocacy: Action taken with or on behalf of a person to secure access, rights, or needed services. / Participatory decision-making: Including affected young people and families meaningfully in decisions that shape services.

0913. A consultant and a young person are discussing support in the school-based service. The selected practice is creating safe, accessible ways for youth input to shape a program. Which concept does this demonstrate?

A. Coalition building
B. Youth voice
C. Individual advocacy
D. Systems advocacy

0914. A consulting counselor is asked to justify a plan for a student aged 12 in the school counseling office. It calls for using documented access barriers to recommend a service-system change. Which concept provides the rationale?

A. Advocacy ethics
B. Systems advocacy
C. Policy brief
D. Self-advocacy

0915. Which course concept is defined as follows: A community-led approach that builds on existing strengths, relationships, and resources.

A. Youth voice
B. Asset-based community development
C. Participatory decision-making
D. Advocacy ethics

0916. A community practitioner is asked what should shape a young person aged 13's support in the behavior-support review. The proposed focus is seeking youth input early and showing how it influenced a service decision. Which principle does it represent?

A. Coalition building
B. Asset-based community development
C. Systems advocacy
D. Participatory decision-making

0917. Which applied comparison correctly identifies what belongs to Systems advocacy versus Service navigation?

A. Systems advocacy: Clarifying eligibility, referral steps, and follow-up barriers with a family. / Service navigation: Using documented access barriers to recommend a service-system change.
B. Systems advocacy: Using documented access barriers to recommend a service-system change. / Service navigation: Creating safe, accessible ways for youth input to shape a program.
C. Systems advocacy: Mapping community skills and networks before designing an outside-led program. / Service navigation: Clarifying eligibility, referral steps, and follow-up barriers with a family.
D. Systems advocacy: Using documented access barriers to recommend a service-system change. / Service navigation: Clarifying eligibility, referral steps, and follow-up barriers with a family.

0918. In a supervision quiz, how should Participatory decision-making be distinguished from Advocacy ethics?

A. Participatory decision-making: Balancing empowerment, consent, role boundaries, confidentiality, and potential consequences when advocating. / Advocacy ethics: Including affected young people and families meaningfully in decisions that shape services.
B. Participatory decision-making: Including affected young people and families meaningfully in decisions that shape services. / Advocacy ethics: A concise evidence-informed document that defines a policy issue and presents feasible options or recommendations.
C. Participatory decision-making: Including affected young people and families meaningfully in decisions that shape services. / Advocacy ethics: Balancing empowerment, consent, role boundaries, confidentiality, and potential consequences when advocating.
D. Participatory decision-making: A person's ability and opportunity to communicate needs, preferences, and rights and participate in decisions. / Advocacy ethics: Balancing empowerment, consent, role boundaries, confidentiality, and potential consequences when advocating.

0919. Which option correctly matches each concept to its practice focus: Systems advocacy and Youth voice?

A. Systems advocacy: Using documented access barriers to recommend a service-system change. / Youth voice: Creating safe, accessible ways for youth input to shape a program.
B. Systems advocacy: Supporting a family to navigate a referral barrier with the young person's informed involvement. / Youth voice: Creating safe, accessible ways for youth input to shape a program.
C. Systems advocacy: Creating safe, accessible ways for youth input to shape a program. / Youth voice: Using documented access barriers to recommend a service-system change.
D. Systems advocacy: Using documented access barriers to recommend a service-system change. / Youth voice: Obtaining permission and discussing foreseeable benefits and risks before speaking on a client's behalf.

0920. Which comparison would correct a trainee's misunderstanding of Service navigation versus Advocacy ethics?

A. Service navigation: Practical assistance that helps people identify, access, and coordinate appropriate services. / Advocacy ethics: Balancing empowerment, consent, role boundaries, confidentiality, and potential consequences when advocating.
B. Service navigation: Practical assistance that helps people identify, access, and coordinate appropriate services. / Advocacy ethics: Meaningful inclusion of young people's perspectives and influence in services and decisions affecting them.
C. Service navigation: Balancing empowerment, consent, role boundaries, confidentiality, and potential consequences when advocating. / Advocacy ethics: Practical assistance that helps people identify, access, and coordinate appropriate services.
D. Service navigation: Including affected young people and families meaningfully in decisions that shape services. / Advocacy ethics: Balancing empowerment, consent, role boundaries, confidentiality, and potential consequences when advocating.

0921. A supervisor asks how Youth voice would appear in practice. Which choice should be selected?

A. Creating safe, accessible ways for youth input to shape a program.
B. Helping a youth prepare to state a support need in a meeting.
C. Supporting a family to navigate a referral barrier with the young person's informed involvement.
D. Using documented access barriers to recommend a service-system change.

0922. A planning meeting about a high-school student includes a behavior specialist. The proposed practice in the caregiver consultation is creating safe, accessible ways for youth input to shape a program. Which idea underlies it?

A. Service navigation
B. Individual advocacy
C. Policy brief
D. Youth voice

0923. Which option is the clearest practical expression of Advocacy ethics?

A. Seeking youth input early and showing how it influenced a service decision.
B. Helping a youth prepare to state a support need in a meeting.
C. Obtaining permission and discussing foreseeable benefits and risks before speaking on a client's behalf.
D. Supporting a family to navigate a referral barrier with the young person's informed involvement.

0924. Which statement most accurately defines Asset-based community development?

A. A community-led approach that builds on existing strengths, relationships, and resources.
B. Action taken with or on behalf of a person to secure access, rights, or needed services.
C. Efforts to change policies, practices, or resource arrangements that affect groups of people.
D. Organizing collaboration among people and groups with aligned interests to pursue shared change.

0925. A youth worker is asked to justify a plan for a child aged 7 in the youth advocacy program. It calls for obtaining permission and discussing foreseeable benefits and risks before speaking on a client's behalf. Which concept provides the rationale?

A. Coalition building
B. Individual advocacy
C. Asset-based community development
D. Advocacy ethics

0926. Which option correctly matches each concept to its practice focus: Individual advocacy and Policy brief?

A. Individual advocacy: Summarizing a service gap and actionable recommendations for decision makers. / Policy brief: Supporting a family to navigate a referral barrier with the young person's informed involvement.
B. Individual advocacy: Helping a youth prepare to state a support need in a meeting. / Policy brief: Summarizing a service gap and actionable recommendations for decision makers.
C. Individual advocacy: Supporting a family to navigate a referral barrier with the young person's informed involvement. / Policy brief: Seeking youth input early and showing how it influenced a service decision.
D. Individual advocacy: Supporting a family to navigate a referral barrier with the young person's informed involvement. / Policy brief: Summarizing a service gap and actionable recommendations for decision makers.

0927. In the community youth program, a team asks how a group facilitator can support a young adolescent client. One proposed action is seeking youth input early and showing how it influenced a service decision. Which idea does it represent?

A. Participatory decision-making
B. Advocacy ethics
C. Individual advocacy
D. Youth voice

0928. Which comparison correctly distinguishes Self-advocacy from Coalition building?

A. Self-advocacy: A person's ability and opportunity to communicate needs, preferences, and rights and participate in decisions. / Coalition building: Organizing collaboration among people and groups with aligned interests to pursue shared change.
B. Self-advocacy: Organizing collaboration among people and groups with aligned interests to pursue shared change. / Coalition building: A person's ability and opportunity to communicate needs, preferences, and rights and participate in decisions.
C. Self-advocacy: A person's ability and opportunity to communicate needs, preferences, and rights and participate in decisions. / Coalition building: Including affected young people and families meaningfully in decisions that shape services.
D. Self-advocacy: A concise evidence-informed document that defines a policy issue and presents feasible options or recommendations. / Coalition building: Organizing collaboration among people and groups with aligned interests to pursue shared change.

0929. A student confuses Individual advocacy with Self-advocacy. Which explanation most accurately separates them?

A. Individual advocacy: Action taken with or on behalf of a person to secure access, rights, or needed services. / Self-advocacy: A person's ability and opportunity to communicate needs, preferences, and rights and participate in decisions.
B. Individual advocacy: A person's ability and opportunity to communicate needs, preferences, and rights and participate in decisions. / Self-advocacy: Action taken with or on behalf of a person to secure access, rights, or needed services.
C. Individual advocacy: Action taken with or on behalf of a person to secure access, rights, or needed services. / Self-advocacy: Practical assistance that helps people identify, access, and coordinate appropriate services.
D. Individual advocacy: Meaningful inclusion of young people's perspectives and influence in services and decisions affecting them. / Self-advocacy: A person's ability and opportunity to communicate needs, preferences, and rights and participate in decisions.

0930. During service review in the family session, a service navigator describes seeking youth input early and showing how it influenced a service decision. for a middle-school student. Which course idea is most applicable?

A. Individual advocacy
B. Asset-based community development
C. Participatory decision-making
D. Coalition building

0931. At a case-planning meeting, the play therapist proposes seeking youth input early and showing how it influenced a service decision. for a teenage client seen in the caregiver consultation. Which concept does this illustrate?

A. Self-advocacy
B. Individual advocacy
C. Participatory decision-making
D. Systems advocacy

0932. For a client in early adolescence seen in the classroom support meeting, the service navigator recommends a plan built around helping a youth prepare to state a support need in a meeting. Which concept is reflected?

A. Advocacy ethics
B. Systems advocacy
C. Self-advocacy
D. Service navigation

0933. Which option pairs the definitions of Asset-based community development and Policy brief correctly, in that order?

A. Asset-based community development: A community-led approach that builds on existing strengths, relationships, and resources. / Policy brief: A concise evidence-informed document that defines a policy issue and presents feasible options or recommendations.
B. Asset-based community development: A community-led approach that builds on existing strengths, relationships, and resources. / Policy brief: Practical assistance that helps people identify, access, and coordinate appropriate services.
C. Asset-based community development: A concise evidence-informed document that defines a policy issue and presents feasible options or recommendations. / Policy brief: A community-led approach that builds on existing strengths, relationships, and resources.
D. Asset-based community development: Organizing collaboration among people and groups with aligned interests to pursue shared change. / Policy brief: A concise evidence-informed document that defines a policy issue and presents feasible options or recommendations.

0934. A team must select a support approach for a preadolescent child at the multidisciplinary case conference. The school-based clinician recommends seeking youth input early and showing how it influenced a service decision. Which idea is most relevant?

A. Participatory decision-making
B. Youth voice
C. Individual advocacy
D. Advocacy ethics

0935. Choose the practice comparison that best separates Participatory decision-making from Asset-based community development.

A. Participatory decision-making: Seeking youth input early and showing how it influenced a service decision. / Asset-based community development: Using documented access barriers to recommend a service-system change.
B. Participatory decision-making: Seeking youth input early and showing how it influenced a service decision. / Asset-based community development: Mapping community skills and networks before designing an outside-led program.
C. Participatory decision-making: Mapping community skills and networks before designing an outside-led program. / Asset-based community development: Seeking youth input early and showing how it influenced a service decision.
D. Participatory decision-making: Supporting a family to navigate a referral barrier with the young person's informed involvement. / Asset-based community development: Mapping community skills and networks before designing an outside-led program.

0936. A trainee must choose a practice that exemplifies Self-advocacy. Which action is the best fit?

A. Seeking youth input early and showing how it influenced a service decision.
B. Helping a youth prepare to state a support need in a meeting.
C. Supporting a family to navigate a referral barrier with the young person's informed involvement.
D. Summarizing a service gap and actionable recommendations for decision makers.

0937. A therapist is asked what should shape a student aged 17’s support in the caregiver consultation. The proposed focus is supporting a family to navigate a referral barrier with the young person’s informed involvement. Which principle does it represent?

A. Policy brief
B. Individual advocacy
C. Service navigation
D. Participatory decision-making

0938. In the student wellness team, a team asks how a consulting counselor can support a young person aged 13. One proposed action is obtaining permission and discussing foreseeable benefits and risks before speaking on a client’s behalf. Which idea does it represent?

A. Systems advocacy
B. Self-advocacy
C. Advocacy ethics
D. Policy brief

0939. During work in the school consultation, a school counselor identifies this need: obtaining permission and discussing foreseeable benefits and risks before speaking on a client’s behalf. Which idea should guide the response?

A. Individual advocacy
B. Coalition building
C. Youth voice
D. Advocacy ethics

0940. Which named construct is captured by this account? Including affected young people and families meaningfully in decisions that shape services.

A. Participatory decision-making
B. Asset-based community development
C. Coalition building
D. Systems advocacy

0941. A case conference reviews a program coordinator’s work with a child aged 7 in the parent meeting: seeking youth input early and showing how it influenced a service decision. Which principle is central?

A. Participatory decision-making
B. Policy brief
C. Service navigation
D. Systems advocacy

0942. Which option pairs the definitions of Asset-based community development and Service navigation correctly, in that order?

A. Asset-based community development: Practical assistance that helps people identify, access, and coordinate appropriate services. / Service navigation: A community-led approach that builds on existing strengths, relationships, and resources.
B. Asset-based community development: Action taken with or on behalf of a person to secure access, rights, or needed services. / Service navigation: Practical assistance that helps people identify, access, and coordinate appropriate services.
C. Asset-based community development: A community-led approach that builds on existing strengths, relationships, and resources. / Service navigation: Practical assistance that helps people identify, access, and coordinate appropriate services.
D. Asset-based community development: A community-led approach that builds on existing strengths, relationships, and resources. / Service navigation: Efforts to change policies, practices, or resource arrangements that affect groups of people.

0943. For a middle-school student in the school-based service, a behavior specialist makes this practice the immediate priority: supporting a family to navigate a referral barrier with the young person’s informed involvement. Which concept fits best?

A. Asset-based community development
B. Service navigation
C. Individual advocacy
D. Coalition building

0944. In a case note about a preadolescent child, a assessment clinician working in the community mental-health service records this priority: mapping community skills and networks before designing an outside-led program. What principle is reflected?

A. Individual advocacy
B. Asset-based community development
C. Advocacy ethics
D. Systems advocacy

0945. In the behavior-support review, a consulting counselor describes the most appropriate support for a student aged 9 as helping a youth prepare to state a support need in a meeting. Which framework is being applied?

A. Individual advocacy
B. Self-advocacy
C. Youth voice
D. Service navigation

0946. A student confuses Self-advocacy with Asset-based community development. Which explanation most accurately separates them?

A. Self-advocacy: A person’s ability and opportunity to communicate needs, preferences, and rights and participate in decisions. / Asset-based community development: Efforts to change policies, practices, or resource arrangements that affect groups of people.
B. Self-advocacy: A community-led approach that builds on existing strengths, relationships, and resources. / Asset-based community development: A person’s ability and opportunity to communicate needs, preferences, and rights and participate in decisions.
C. Self-advocacy: Action taken with or on behalf of a person to secure access, rights, or needed services. / Asset-based community development: A community-led approach that builds on existing strengths, relationships, and resources.
D. Self-advocacy: A person’s ability and opportunity to communicate needs, preferences, and rights and participate in decisions. / Asset-based community development: A community-led approach that builds on existing strengths, relationships, and resources.

0947. In the clinical planning session, a caregiver working with a counselor is considering this approach for a student aged 17: seeking youth input early and showing how it influenced a service decision. Which framework does it represent?

A. Advocacy ethics
B. Service navigation
C. Asset-based community development
D. Participatory decision-making

0948. Select the best explanation of Participatory decision-making.

A. A person’s ability and opportunity to communicate needs, preferences, and rights and participate in decisions.
B. Efforts to change policies, practices, or resource arrangements that affect groups of people.
C. Including affected young people and families meaningfully in decisions that shape services.
D. Organizing collaboration among people and groups with aligned interests to pursue shared change.

0949. Which option pairs the definitions of Coalition building and Youth voice correctly, in that order?

A. Coalition building: Practical assistance that helps people identify, access, and coordinate appropriate services. / Youth voice: Meaningful inclusion of young people’s perspectives and influence in services and decisions affecting them.
B. Coalition building: Meaningful inclusion of young people’s perspectives and influence in services and decisions affecting them. / Youth voice: Organizing collaboration among people and groups with aligned interests to pursue shared change.
C. Coalition building: Organizing collaboration among people and groups with aligned interests to pursue shared change. / Youth voice: Meaningful inclusion of young people’s perspectives and influence in services and decisions affecting them.
D. Coalition building: Organizing collaboration among people and groups with aligned interests to pursue shared change. / Youth voice: Action taken with or on behalf of a person to secure access, rights, or needed services.

0950. Which option is the clearest practical expression of Policy brief?

A. Creating safe, accessible ways for youth input to shape a program.
B. Seeking youth input early and showing how it influenced a service decision.
C. Summarizing a service gap and actionable recommendations for decision makers.
D. Supporting a family to navigate a referral barrier with the young person’s informed involvement.

0951. A group facilitator is asked to justify a plan for a student aged 15 in the multidisciplinary case conference. It calls for summarizing a service gap and actionable recommendations for decision makers. Which concept provides the rationale?

A. Systems advocacy
B. Policy brief
C. Self-advocacy
D. Individual advocacy

0952. Choose the definition pair that correctly explains Self-advocacy first and Youth voice second.

A. Self-advocacy: A person’s ability and opportunity to communicate needs, preferences, and rights and participate in decisions. / Youth voice: Meaningful inclusion of young people’s perspectives and influence in services and decisions affecting them.
B. Self-advocacy: A person’s ability and opportunity to communicate needs, preferences, and rights and participate in decisions. / Youth voice: Including affected young people and families meaningfully in decisions that shape services.
C. Self-advocacy: Practical assistance that helps people identify, access, and coordinate appropriate services. / Youth voice: Meaningful inclusion of young people’s perspectives and influence in services and decisions affecting them.
D. Self-advocacy: Meaningful inclusion of young people’s perspectives and influence in services and decisions affecting them. / Youth voice: A person’s ability and opportunity to communicate needs, preferences, and rights and participate in decisions.

0953. For a young person in the behavior-support review, a counselor makes this practice the immediate priority: using documented access barriers to recommend a service-system change. Which concept fits best?

A. Coalition building
B. Service navigation
C. Youth voice
D. Systems advocacy

0954. A team must select a support approach for a child of elementary-school age at the caregiver consultation. The parent educator recommends helping a youth prepare to state a support need in a meeting. Which idea is most relevant?

A. Self-advocacy
B. Policy brief
C. Asset-based community development
D. Systems advocacy

0955. Which option preserves the correct meaning of both Policy brief and Youth voice?

A. Policy brief: Practical assistance that helps people identify, access, and coordinate appropriate services. / Youth voice: Meaningful inclusion of young people’s perspectives and influence in services and decisions affecting them.
B. Policy brief: A concise evidence-informed document that defines a policy issue and presents feasible options or recommendations. / Youth voice: Meaningful inclusion of young people’s perspectives and influence in services and decisions affecting them.
C. Policy brief: Meaningful inclusion of young people’s perspectives and influence in services and decisions affecting them. / Youth voice: A concise evidence-informed document that defines a policy issue and presents feasible options or recommendations.
D. Policy brief: A concise evidence-informed document that defines a policy issue and presents feasible options or recommendations. / Youth voice: Efforts to change policies, practices, or resource arrangements that affect groups of people.

0956. Which comparison correctly distinguishes Self-advocacy from Policy brief?

A. Self-advocacy: A concise evidence-informed document that defines a policy issue and presents feasible options or recommendations. / Policy brief: A person’s ability and opportunity to communicate needs, preferences, and rights and participate in decisions.
B. Self-advocacy: A person’s ability and opportunity to communicate needs, preferences, and rights and participate in decisions. / Policy brief: Including affected young people and families meaningfully in decisions that shape services.
C. Self-advocacy: Meaningful inclusion of young people’s perspectives and influence in services and decisions affecting them. / Policy brief: A concise evidence-informed document that defines a policy issue and presents feasible options or recommendations.
D. Self-advocacy: A person’s ability and opportunity to communicate needs, preferences, and rights and participate in decisions. / Policy brief: A concise evidence-informed document that defines a policy issue and presents feasible options or recommendations.

0957. Choose the definition pair that correctly explains Asset-based community development first and Coalition building second.

A. Asset-based community development: A community-led approach that builds on existing strengths, relationships, and resources. / Coalition building: Action taken with or on behalf of a person to secure access, rights, or needed services.
B. Asset-based community development: A person’s ability and opportunity to communicate needs, preferences, and rights and participate in decisions. / Coalition building: Organizing collaboration among people and groups with aligned interests to pursue shared change.
C. Asset-based community development: A community-led approach that builds on existing strengths, relationships, and resources. / Coalition building: Organizing collaboration among people and groups with aligned interests to pursue shared change.
D. Asset-based community development: Organizing collaboration among people and groups with aligned interests to pursue shared change. / Coalition building: A community-led approach that builds on existing strengths, relationships, and resources.

0958. Which comparison correctly distinguishes Individual advocacy from Advocacy ethics?

A. Individual advocacy: Balancing empowerment, consent, role boundaries, confidentiality, and potential consequences when advocating. / Advocacy ethics: Action taken with or on behalf of a person to secure access, rights, or needed services.
B. Individual advocacy: A person's ability and opportunity to communicate needs, preferences, and rights and participate in decisions. / Advocacy ethics: Balancing empowerment, consent, role boundaries, confidentiality, and potential consequences when advocating.
C. Individual advocacy: Action taken with or on behalf of a person to secure access, rights, or needed services. / Advocacy ethics: A concise evidence-informed document that defines a policy issue and presents feasible options or recommendations.
D. Individual advocacy: Action taken with or on behalf of a person to secure access, rights, or needed services. / Advocacy ethics: Balancing empowerment, consent, role boundaries, confidentiality, and potential consequences when advocating.

0959. Which option correctly matches each concept to its practice focus: Asset-based community development and Service navigation?

A. Asset-based community development: Mapping community skills and networks before designing an outside-led program. / Service navigation: Clarifying eligibility, referral steps, and follow-up barriers with a family.
B. Asset-based community development: Mapping community skills and networks before designing an outside-led program. / Service navigation: Using documented access barriers to recommend a service-system change.
C. Asset-based community development: Clarifying eligibility, referral steps, and follow-up barriers with a family. / Service navigation: Mapping community skills and networks before designing an outside-led program.
D. Asset-based community development: Supporting a family to navigate a referral barrier with the young person's informed involvement. / Service navigation: Clarifying eligibility, referral steps, and follow-up barriers with a family.

0960. Which statement shows a sound practice-level distinction between Systems advocacy and Advocacy ethics?

A. Systems advocacy: Agreeing on a common goal, roles, and communication practices across partner organizations. / Advocacy ethics: Obtaining permission and discussing foreseeable benefits and risks before speaking on a client's behalf.
B. Systems advocacy: Using documented access barriers to recommend a service-system change. / Advocacy ethics: Obtaining permission and discussing foreseeable benefits and risks before speaking on a client's behalf.
C. Systems advocacy: Obtaining permission and discussing foreseeable benefits and risks before speaking on a client's behalf. / Advocacy ethics: Using documented access barriers to recommend a service-system change.
D. Systems advocacy: Using documented access barriers to recommend a service-system change. / Advocacy ethics: Mapping community skills and networks before designing an outside-led program.

0961. Which comparison would correct a trainee's misunderstanding of Participatory decision-making versus Policy brief?

A. Participatory decision-making: Including affected young people and families meaningfully in decisions that shape services. / Policy brief: A person's ability and opportunity to communicate needs, preferences, and rights and participate in decisions.
B. Participatory decision-making: Including affected young people and families meaningfully in decisions that shape services. / Policy brief: A concise evidence-informed document that defines a policy issue and presents feasible options or recommendations.
C. Participatory decision-making: A community-led approach that builds on existing strengths, relationships, and resources. / Policy brief: A concise evidence-informed document that defines a policy issue and presents feasible options or recommendations.
D. Participatory decision-making: A concise evidence-informed document that defines a policy issue and presents feasible options or recommendations. / Policy brief: Including affected young people and families meaningfully in decisions that shape services.

0962. In a professional consultation about a school-age child, the supervised trainee describes this response in the multidisciplinary case conference: helping a youth prepare to state a support need in a meeting. Which term is most apt?

A. Coalition building
B. Self-advocacy
C. Advocacy ethics
D. Youth voice

0963. Choose the practice comparison that best separates Individual advocacy from Youth voice.

A. Individual advocacy: Creating safe, accessible ways for youth input to shape a program. / Youth voice: Supporting a family to navigate a referral barrier with the young person's informed involvement.
B. Individual advocacy: Using documented access barriers to recommend a service-system change. / Youth voice: Creating safe, accessible ways for youth input to shape a program.
C. Individual advocacy: Supporting a family to navigate a referral barrier with the young person's informed involvement. / Youth voice: Clarifying eligibility, referral steps, and follow-up barriers with a family.
D. Individual advocacy: Supporting a family to navigate a referral barrier with the young person's informed involvement. / Youth voice: Creating safe, accessible ways for youth input to shape a program.

0964. Which pair of actions illustrates Participatory decision-making and Advocacy ethics, respectively?

A. Participatory decision-making: Helping a youth prepare to state a support need in a meeting. / Advocacy ethics: Obtaining permission and discussing foreseeable benefits and risks before speaking on a client's behalf.
B. Participatory decision-making: Seeking youth input early and showing how it influenced a service decision. / Advocacy ethics: Summarizing a service gap and actionable recommendations for decision makers.
C. Participatory decision-making: Seeking youth input early and showing how it influenced a service decision. / Advocacy ethics: Obtaining permission and discussing foreseeable benefits and risks before speaking on a client's behalf.
D. Participatory decision-making: Obtaining permission and discussing foreseeable benefits and risks before speaking on a client's behalf. / Advocacy ethics: Seeking youth input early and showing how it influenced a service decision.

0965. Choose the response that best puts Participatory decision-making into practice.

A. Summarizing a service gap and actionable recommendations for decision makers.
B. Using documented access barriers to recommend a service-system change.
C. Seeking youth input early and showing how it influenced a service decision.
D. Helping a youth prepare to state a support need in a meeting.

0966. At a case-planning meeting, the behavior specialist proposes obtaining permission and discussing foreseeable benefits and risks before speaking on a client's behalf. for a young adolescent client seen in the outpatient clinic. Which concept does this illustrate?

A. Advocacy ethics
B. Service navigation
C. Systems advocacy
D. Individual advocacy

0967. During service review in the caregiver consultation, a program coordinator describes summarizing a service gap and actionable recommendations for decision makers. for a student aged 12. Which course idea is most applicable?

A. Participatory decision-making
B. Asset-based community development
C. Systems advocacy
D. Policy brief

0968. For a young person aged 18 seen in the youth group, the community practitioner recommends a plan built around using documented access barriers to recommend a service-system change. Which concept is reflected?

A. Participatory decision-making
B. Coalition building
C. Policy brief
D. Systems advocacy

0969. An interdisciplinary team reviews a high-school student's case at the caregiver consultation. The behavior specialist recommends creating safe, accessible ways for youth input to shape a program. Which course concept best fits?

A. Systems advocacy
B. Youth voice
C. Participatory decision-making
D. Self-advocacy

0970. In a supervision review, a family therapist describes work with a student aged 15 in the school consultation: clarifying eligibility, referral steps, and follow-up barriers with a family. What concept is illustrated?

A. Coalition building
B. Service navigation
C. Individual advocacy
D. Youth voice

0971. In the caregiver consultation, a school-based clinician is considering this approach for a child aged 6: clarifying eligibility, referral steps, and follow-up barriers with a family. Which framework does it represent?

A. Systems advocacy
B. Self-advocacy
C. Service navigation
D. Youth voice

0972. Which applied comparison correctly identifies what belongs to Individual advocacy versus Asset-based community development?

A. Individual advocacy: Supporting a family to navigate a referral barrier with the young person's informed involvement. / Asset-based community development: Seeking youth input early and showing how it influenced a service decision.
B. Individual advocacy: Supporting a family to navigate a referral barrier with the young person's informed involvement. / Asset-based community development: Mapping community skills and networks before designing an outside-led program.
C. Individual advocacy: Obtaining permission and discussing foreseeable benefits and risks before speaking on a client's behalf. / Asset-based community development: Mapping community skills and networks before designing an outside-led program.
D. Individual advocacy: Mapping community skills and networks before designing an outside-led program. / Asset-based community development: Supporting a family to navigate a referral barrier with the young person's informed involvement.

0973. In the outpatient clinic, a teacher and counselor explains why a young person aged 10 would benefit from supporting a family to navigate a referral barrier with the young person's informed involvement. Which course concept underpins the explanation?

A. Coalition building
B. Asset-based community development
C. Youth voice
D. Individual advocacy

0974. In a supervision quiz, how should Coalition building be distinguished from Service navigation?

A. Coalition building: Meaningful inclusion of young people's perspectives and influence in services and decisions affecting them. / Service navigation: Practical assistance that helps people identify, access, and coordinate appropriate services.
B. Coalition building: Organizing collaboration among people and groups with aligned interests to pursue shared change. / Service navigation: A person's ability and opportunity to communicate needs, preferences, and rights and participate in decisions.
C. Coalition building: Practical assistance that helps people identify, access, and coordinate appropriate services. / Service navigation: Organizing collaboration among people and groups with aligned interests to pursue shared change.
D. Coalition building: Organizing collaboration among people and groups with aligned interests to pursue shared change. / Service navigation: Practical assistance that helps people identify, access, and coordinate appropriate services.

0975. Which statement accurately contrasts the course concepts Self-advocacy and Coalition building?

A. Self-advocacy: Organizing collaboration among people and groups with aligned interests to pursue shared change. / Coalition building: A person's ability and opportunity to communicate needs, preferences, and rights and participate in decisions.
B. Self-advocacy: A person's ability and opportunity to communicate needs, preferences, and rights and participate in decisions. / Coalition building: Including affected young people and families meaningfully in decisions that shape services.
C. Self-advocacy: A concise evidence-informed document that defines a policy issue and presents feasible options or recommendations. / Coalition building: Organizing collaboration among people and groups with aligned interests to pursue shared change.
D. Self-advocacy: A person's ability and opportunity to communicate needs, preferences, and rights and participate in decisions. / Coalition building: Organizing collaboration among people and groups with aligned interests to pursue shared change.

0976. Which option pairs the definitions of Service navigation and Youth voice correctly, in that order?

A. Service navigation: Practical assistance that helps people identify, access, and coordinate appropriate services. / Youth voice: Including affected young people and families meaningfully in decisions that shape services.
B. Service navigation: Practical assistance that helps people identify, access, and coordinate appropriate services. / Youth voice: Meaningful inclusion of young people's perspectives and influence in services and decisions affecting them.
C. Service navigation: Organizing collaboration among people and groups with aligned interests to pursue shared change. / Youth voice: Meaningful inclusion of young people's perspectives and influence in services and decisions affecting them.
D. Service navigation: Meaningful inclusion of young people's perspectives and influence in services and decisions affecting them. / Youth voice: Practical assistance that helps people identify, access, and coordinate appropriate services.

0977. Choose the definition pair that correctly explains Individual advocacy first and Self-advocacy second.

A. Individual advocacy: Action taken with or on behalf of a person to secure access, rights, or needed services. / Self-advocacy: A person's ability and opportunity to communicate needs, preferences, and rights and participate in decisions.
B. Individual advocacy: A person's ability and opportunity to communicate needs, preferences, and rights and participate in decisions. / Self-advocacy: Action taken with or on behalf of a person to secure access, rights, or needed services.
C. Individual advocacy: Meaningful inclusion of young people's perspectives and influence in services and decisions affecting them. / Self-advocacy: A person's ability and opportunity to communicate needs, preferences, and rights and participate in decisions.
D. Individual advocacy: Action taken with or on behalf of a person to secure access, rights, or needed services. / Self-advocacy: Practical assistance that helps people identify, access, and coordinate appropriate services.

0978. Which option preserves the correct meaning of both Individual advocacy and Service navigation?

A. Individual advocacy: Action taken with or on behalf of a person to secure access, rights, or needed services. / Service navigation: Meaningful inclusion of young people's perspectives and influence in services and decisions affecting them.
B. Individual advocacy: Practical assistance that helps people identify, access, and coordinate appropriate services. / Service navigation: Action taken with or on behalf of a person to secure access, rights, or needed services.
C. Individual advocacy: Action taken with or on behalf of a person to secure access, rights, or needed services. / Service navigation: Practical assistance that helps people identify, access, and coordinate appropriate services.
D. Individual advocacy: A concise evidence-informed document that defines a policy issue and presents feasible options or recommendations. / Service navigation: Practical assistance that helps people identify, access, and coordinate appropriate services.

0979. Choose the definition pair that correctly explains Participatory decision-making first and Policy brief second.

A. Participatory decision-making: A community-led approach that builds on existing strengths, relationships, and resources. / Policy brief: A concise evidence-informed document that defines a policy issue and presents feasible options or recommendations.
B. Participatory decision-making: Including affected young people and families meaningfully in decisions that shape services. / Policy brief: A person's ability and opportunity to communicate needs, preferences, and rights and participate in decisions.
C. Participatory decision-making: A concise evidence-informed document that defines a policy issue and presents feasible options or recommendations. / Policy brief: Including affected young people and families meaningfully in decisions that shape services.
D. Participatory decision-making: Including affected young people and families meaningfully in decisions that shape services. / Policy brief: A concise evidence-informed document that defines a policy issue and presents feasible options or recommendations.

0980. A service team discusses a middle-school student in the community mental-health service. Their proposed next step is creating safe, accessible ways for youth input to shape a program. Which course concept supports it?

A. Advocacy ethics
B. Asset-based community development
C. Self-advocacy
D. Youth voice

0981. Which paired example correctly applies Systems advocacy first and Coalition building second?

A. Systems advocacy: Agreeing on a common goal, roles, and communication practices across partner organizations. / Coalition building: Using documented access barriers to recommend a service-system change.
B. Systems advocacy: Using documented access barriers to recommend a service-system change. / Coalition building: Mapping community skills and networks before designing an outside-led program.
C. Systems advocacy: Using documented access barriers to recommend a service-system change. / Coalition building: Agreeing on a common goal, roles, and communication practices across partner organizations.
D. Systems advocacy: Helping a youth prepare to state a support need in a meeting. / Coalition building: Agreeing on a common goal, roles, and communication practices across partner organizations.

0982. At the learning-support meeting, a therapist reviews whether a plan for a child aged 11 is appropriate. The relevant practice is helping a youth prepare to state a support need in a meeting. Which concept is tested?

A. Self-advocacy
B. Service navigation
C. Advocacy ethics
D. Coalition building

0983. In a professional consultation about a young person aged 13, the supervised trainee describes this response in the outpatient clinic: clarifying eligibility, referral steps, and follow-up barriers with a family. Which term is most apt?

A. Service navigation
B. Advocacy ethics
C. Youth voice
D. Individual advocacy

0984. Which professional action most closely applies Policy brief?

A. Using documented access barriers to recommend a service-system change.
B. Agreeing on a common goal, roles, and communication practices across partner organizations.
C. Summarizing a service gap and actionable recommendations for decision makers.
D. Seeking youth input early and showing how it influenced a service decision.

0985. Which description belongs with the term Self-advocacy?

A. A community-led approach that builds on existing strengths, relationships, and resources.
B. Action taken with or on behalf of a person to secure access, rights, or needed services.
C. Balancing empowerment, consent, role boundaries, confidentiality, and potential consequences when advocating.
D. A person's ability and opportunity to communicate needs, preferences, and rights and participate in decisions.

0986. In the learning-support meeting, a team asks how a teacher and counselor can support a preadolescent child. One proposed action is using documented access barriers to recommend a service-system change. Which idea does it represent?

A. Asset-based community development
B. Systems advocacy
C. Participatory decision-making
D. Self-advocacy

0987. In the family resource center, a parent educator is considering this approach for a school-age child: using documented access barriers to recommend a service-system change. Which framework does it represent?

A. Youth voice
B. Systems advocacy
C. Service navigation
D. Asset-based community development

0988. A young adolescent client's service team meets in the after-school program. The case coordinator recommends a change involving supporting a family to navigate a referral barrier with the young person's informed involvement. Which idea best explains it?

A. Individual advocacy
B. Coalition building
C. Service navigation
D. Participatory decision-making

0989. Which comparison would correct a trainee's misunderstanding of Youth voice versus Advocacy ethics?

A. Youth voice: A community-led approach that builds on existing strengths, relationships, and resources. / Advocacy ethics: Balancing empowerment, consent, role boundaries, confidentiality, and potential consequences when advocating.
B. Youth voice: Balancing empowerment, consent, role boundaries, confidentiality, and potential consequences when advocating. / Advocacy ethics: Meaningful inclusion of young people's perspectives and influence in services and decisions affecting them.
C. Youth voice: Meaningful inclusion of young people's perspectives and influence in services and decisions affecting them. / Advocacy ethics: Practical assistance that helps people identify, access, and coordinate appropriate services.
D. Youth voice: Meaningful inclusion of young people's perspectives and influence in services and decisions affecting them. / Advocacy ethics: Balancing empowerment, consent, role boundaries, confidentiality, and potential consequences when advocating.

0990. In a supervision quiz, how should Self-advocacy be distinguished from Policy brief?

A. Self-advocacy: A person's ability and opportunity to communicate needs, preferences, and rights and participate in decisions. / Policy brief: Including affected young people and families meaningfully in decisions that shape services.
B. Self-advocacy: A person's ability and opportunity to communicate needs, preferences, and rights and participate in decisions. / Policy brief: A concise evidence-informed document that defines a policy issue and presents feasible options or recommendations.
C. Self-advocacy: Meaningful inclusion of young people's perspectives and influence in services and decisions affecting them. / Policy brief: A concise evidence-informed document that defines a policy issue and presents feasible options or recommendations.
D. Self-advocacy: A concise evidence-informed document that defines a policy issue and presents feasible options or recommendations. / Policy brief: A person's ability and opportunity to communicate needs, preferences, and rights and participate in decisions.

0991. Which comparison would correct a trainee's misunderstanding of Systems advocacy versus Youth voice?

A. Systems advocacy: Action taken with or on behalf of a person to secure access, rights, or needed services. / Youth voice: Meaningful inclusion of young people's perspectives and influence in services and decisions affecting them.
B. Systems advocacy: Efforts to change policies, practices, or resource arrangements that affect groups of people. / Youth voice: Meaningful inclusion of young people's perspectives and influence in services and decisions affecting them.
C. Systems advocacy: Efforts to change policies, practices, or resource arrangements that affect groups of people. / Youth voice: Balancing empowerment, consent, role boundaries, confidentiality, and potential consequences when advocating.
D. Systems advocacy: Meaningful inclusion of young people's perspectives and influence in services and decisions affecting them. / Youth voice: Efforts to change policies, practices, or resource arrangements that affect groups of people.

0992. Which applied comparison correctly identifies what belongs to Service navigation versus Advocacy ethics?

A. Service navigation: Obtaining permission and discussing foreseeable benefits and risks before speaking on a client's behalf. / Advocacy ethics: Clarifying eligibility, referral steps, and follow-up barriers with a family.
B. Service navigation: Clarifying eligibility, referral steps, and follow-up barriers with a family. / Advocacy ethics: Obtaining permission and discussing foreseeable benefits and risks before speaking on a client's behalf.
C. Service navigation: Clarifying eligibility, referral steps, and follow-up barriers with a family. / Advocacy ethics: Creating safe, accessible ways for youth input to shape a program.
D. Service navigation: Seeking youth input early and showing how it influenced a service decision. / Advocacy ethics: Obtaining permission and discussing foreseeable benefits and risks before speaking on a client's behalf.

0993. In a supervision review, a caregiver working with a counselor describes work with a child aged 8 in the community youth program: agreeing on a common goal, roles, and communication practices across partner organizations. What concept is illustrated?

A. Advocacy ethics
B. Systems advocacy
C. Coalition building
D. Youth voice

0994. At the supervision meeting, a community practitioner reviews whether a plan for a older adolescent client is appropriate. The relevant practice is supporting a family to navigate a referral barrier with the young person's informed involvement. Which concept is tested?

A. Participatory decision-making
B. Service navigation
C. Individual advocacy
D. Policy brief

0995. Which description belongs with the term Youth voice?

A. Meaningful inclusion of young people's perspectives and influence in services and decisions affecting them.
B. A community-led approach that builds on existing strengths, relationships, and resources.
C. Action taken with or on behalf of a person to secure access, rights, or needed services.
D. Including affected young people and families meaningfully in decisions that shape services.

0996. Which option correctly matches each concept to its practice focus: Service navigation and Advocacy ethics?

A. Service navigation: Seeking youth input early and showing how it influenced a service decision. / Advocacy ethics: Obtaining permission and discussing foreseeable benefits and risks before speaking on a client's behalf.
B. Service navigation: Clarifying eligibility, referral steps, and follow-up barriers with a family. / Advocacy ethics: Creating safe, accessible ways for youth input to shape a program.
C. Service navigation: Clarifying eligibility, referral steps, and follow-up barriers with a family. / Advocacy ethics: Obtaining permission and discussing foreseeable benefits and risks before speaking on a client's behalf.
D. Service navigation: Obtaining permission and discussing foreseeable benefits and risks before speaking on a client's behalf. / Advocacy ethics: Clarifying eligibility, referral steps, and follow-up barriers with a family.

0997. How are Policy brief and Advocacy ethics most accurately differentiated in this curriculum?

A. Policy brief: Balancing empowerment, consent, role boundaries, confidentiality, and potential consequences when advocating. / Advocacy ethics: A concise evidence-informed document that defines a policy issue and presents feasible options or recommendations.
B. Policy brief: Efforts to change policies, practices, or resource arrangements that affect groups of people. / Advocacy ethics: Balancing empowerment, consent, role boundaries, confidentiality, and potential consequences when advocating.
C. Policy brief: A concise evidence-informed document that defines a policy issue and presents feasible options or recommendations. / Advocacy ethics: Organizing collaboration among people and groups with aligned interests to pursue shared change.
D. Policy brief: A concise evidence-informed document that defines a policy issue and presents feasible options or recommendations. / Advocacy ethics: Balancing empowerment, consent, role boundaries, confidentiality, and potential consequences when advocating.

0998. A supervisor asks how Asset-based community development would appear in practice. Which choice should be selected?

A. Mapping community skills and networks before designing an outside-led program.
B. Clarifying eligibility, referral steps, and follow-up barriers with a family.
C. Agreeing on a common goal, roles, and communication practices across partner organizations.
D. Supporting a family to navigate a referral barrier with the young person’s informed involvement.

0999. Which choice aligns each practice with the correct idea, Coalition building or Service navigation?

A. Coalition building: Clarifying eligibility, referral steps, and follow-up barriers with a family. / Service navigation: Agreeing on a common goal, roles, and communication practices across partner organizations.
B. Coalition building: Agreeing on a common goal, roles, and communication practices across partner organizations. / Service navigation: Helping a youth prepare to state a support need in a meeting.
C. Coalition building: Agreeing on a common goal, roles, and communication practices across partner organizations. / Service navigation: Clarifying eligibility, referral steps, and follow-up barriers with a family.
D. Coalition building: Creating safe, accessible ways for youth input to shape a program. / Service navigation: Clarifying eligibility, referral steps, and follow-up barriers with a family.

1000. Choose the practice comparison that best separates Asset-based community development from Advocacy ethics.

A. Asset-based community development: Mapping community skills and networks before designing an outside-led program. / Advocacy ethics: Creating safe, accessible ways for youth input to shape a program.
B. Asset-based community development: Obtaining permission and discussing foreseeable benefits and risks before speaking on a client’s behalf. / Advocacy ethics: Mapping community skills and networks before designing an outside-led program.
C. Asset-based community development: Seeking youth input early and showing how it influenced a service decision. / Advocacy ethics: Obtaining permission and discussing foreseeable benefits and risks before speaking on a client’s behalf.
D. Asset-based community development: Mapping community skills and networks before designing an outside-led program. / Advocacy ethics: Obtaining permission and discussing foreseeable benefits and risks before speaking on a client’s behalf.

CAC.920 | Social Justice in Counseling

QUESTION BANK | 1,000 ITEMS | ANSWERS AT THE END

0001. Consider a young person aged 18 receiving help in the community mental-health service. The consulting counselor focuses on supporting reflection on social context and agency alongside individual coping. Which term best describes the guiding idea?

A. Liberation psychology
B. Oppression
C. Cultural safety
D. Implicit bias

0002. Which applied comparison correctly identifies what belongs to Equality versus Liberation psychology?

A. Equality: Identifying and removing practical barriers to communication and participation. / Liberation psychology: Supporting reflection on social context and agency alongside individual coping.
B. Equality: Distinguishing identical provision from support tailored to unequal barriers. / Liberation psychology: Identifying who controls access and whose perspective is missing in a service decision.
C. Equality: Supporting reflection on social context and agency alongside individual coping. / Liberation psychology: Distinguishing identical provision from support tailored to unequal barriers.
D. Equality: Distinguishing identical provision from support tailored to unequal barriers. / Liberation psychology: Supporting reflection on social context and agency alongside individual coping.

0003. Which comparison correctly distinguishes Power analysis from Equity?

A. Power analysis: Examination of how authority, resources, and decision-making influence relationships and outcomes. / Equity: Designing environments, communication, and services so people with varied abilities can participate.
B. Power analysis: Fair allocation of support that accounts for differing barriers and needs to enable meaningful opportunity. / Equity: Examination of how authority, resources, and decision-making influence relationships and outcomes.
C. Power analysis: Examination of how authority, resources, and decision-making influence relationships and outcomes. / Equity: Fair allocation of support that accounts for differing barriers and needs to enable meaningful opportunity.
D. Power analysis: Automatic associations that can influence judgment and behavior without conscious intent. / Equity: Fair allocation of support that accounts for differing barriers and needs to enable meaningful opportunity.

0004. At a case-planning meeting, the counselor proposes connecting a client's distress with relevant structural conditions without dismissing personal experience. for a child aged 8 seen in the school counseling office. Which concept does this illustrate?

A. Equality
B. Accessibility
C. Social justice counseling
D. Equity

0005. At the school counseling office, a counselor meets with a child aged 8. The practice priority is: connecting a client's distress with relevant structural conditions without dismissing personal experience. Which concept best captures that priority?

A. Social justice counseling
B. Microaggression
C. Accessibility
D. Oppression

0006. A planning meeting about a school-age child includes a clinical supervisor. The proposed practice in the school counseling office is reflecting on whether assumptions may be affecting an assessment or referral decision. Which idea underlies it?

A. Liberation psychology
B. Microaggression
C. Equality
D. Implicit bias

0007. How should a practitioner distinguish the applications of Equality and Implicit bias?

A. Equality: Inviting client feedback about whether care feels respectful and adapting in response. / Implicit bias: Reflecting on whether assumptions may be affecting an assessment or referral decision.
B. Equality: Distinguishing identical provision from support tailored to unequal barriers. / Implicit bias: Reflecting on whether assumptions may be affecting an assessment or referral decision.
C. Equality: Distinguishing identical provision from support tailored to unequal barriers. / Implicit bias: Providing different supports where needed to make participation meaningfully accessible.
D. Equality: Reflecting on whether assumptions may be affecting an assessment or referral decision. / Implicit bias: Distinguishing identical provision from support tailored to unequal barriers.

0008. A mental-health professional prepares for a session in the learning-support meeting with a student aged 15. The intended approach is providing different supports where needed to make participation meaningfully accessible. Which concept is most relevant?

A. Equity
B. Power analysis
C. Implicit bias
D. Oppression

0009. How should a practitioner distinguish the applications of Oppression and Liberation psychology?

A. Oppression: Distinguishing identical provision from support tailored to unequal barriers. / Liberation psychology: Supporting reflection on social context and agency alongside individual coping.
B. Oppression: Recognizing patterns of exclusion rather than reducing a structural problem to an individual deficit. / Liberation psychology: Supporting reflection on social context and agency alongside individual coping.
C. Oppression: Recognizing patterns of exclusion rather than reducing a structural problem to an individual deficit. / Liberation psychology: Reflecting on whether assumptions may be affecting an assessment or referral decision.
D. Oppression: Supporting reflection on social context and agency alongside individual coping. / Liberation psychology: Recognizing patterns of exclusion rather than reducing a structural problem to an individual deficit.

0010. A middle-school student and a consultant are reviewing goals in the youth group. The agreed action is recognizing patterns of exclusion rather than reducing a structural problem to an individual deficit. Which principle best accounts for it?

A. Social justice counseling
B. Equity
C. Oppression
D. Equality

0011. Which option pairs the definitions of Microaggression and Accessibility correctly, in that order?

A. Microaggression: A commonplace interaction or environmental message that communicates devaluation related to identity. / Accessibility: Automatic associations that can influence judgment and behavior without conscious intent.
B. Microaggression: Designing environments, communication, and services so people with varied abilities can participate. / Accessibility: A commonplace interaction or environmental message that communicates devaluation related to identity.
C. Microaggression: A counseling orientation that addresses individual wellbeing alongside inequitable systems and barriers. / Accessibility: Designing environments, communication, and services so people with varied abilities can participate.
D. Microaggression: A commonplace interaction or environmental message that communicates devaluation related to identity. / Accessibility: Designing environments, communication, and services so people with varied abilities can participate.

0012. A team must select a support approach for a school-age child at the community service agency. The case coordinator recommends listening to the client's account of an identity-related slight and exploring its impact without minimizing it. Which idea is most relevant?

A. Cultural safety
B. Oppression
C. Social justice counseling
D. Microaggression

0013. Which statement shows a sound practice-level distinction between Equity and Implicit bias?

A. Equity: Reflecting on whether assumptions may be affecting an assessment or referral decision. / Implicit bias: Providing different supports where needed to make participation meaningfully accessible.
B. Equity: Recognizing patterns of exclusion rather than reducing a structural problem to an individual deficit. / Implicit bias: Reflecting on whether assumptions may be affecting an assessment or referral decision.
C. Equity: Providing different supports where needed to make participation meaningfully accessible. / Implicit bias: Reflecting on whether assumptions may be affecting an assessment or referral decision.
D. Equity: Providing different supports where needed to make participation meaningfully accessible. / Implicit bias: Identifying and removing practical barriers to communication and participation.

0014. Which statement shows a sound practice-level distinction between Equity and Liberation psychology?

A. Equity: Supporting reflection on social context and agency alongside individual coping. / Liberation psychology: Providing different supports where needed to make participation meaningfully accessible.
B. Equity: Providing different supports where needed to make participation meaningfully accessible. / Liberation psychology: Reflecting on whether assumptions may be affecting an assessment or referral decision.
C. Equity: Providing different supports where needed to make participation meaningfully accessible. / Liberation psychology: Supporting reflection on social context and agency alongside individual coping.
D. Equity: Recognizing patterns of exclusion rather than reducing a structural problem to an individual deficit. / Liberation psychology: Supporting reflection on social context and agency alongside individual coping.

0015. A trainee must distinguish how Social justice counseling and Equality guide practice. Which comparison is accurate?

A. Social justice counseling: Connecting a client's distress with relevant structural conditions without dismissing personal experience. / Equality: Providing different supports where needed to make participation meaningfully accessible.
B. Social justice counseling: Inviting client feedback about whether care feels respectful and adapting in response. / Equality: Distinguishing identical provision from support tailored to unequal barriers.
C. Social justice counseling: Connecting a client's distress with relevant structural conditions without dismissing personal experience. / Equality: Distinguishing identical provision from support tailored to unequal barriers.
D. Social justice counseling: Distinguishing identical provision from support tailored to unequal barriers. / Equality: Connecting a client's distress with relevant structural conditions without dismissing personal experience.

0016. A member of a clinical team is preparing a follow-up plan for a child aged 7 in the youth group. The plan calls for supporting reflection on social context and agency alongside individual coping. Which concept names this approach?

A. Oppression
B. Liberation psychology
C. Cultural safety
D. Accessibility

0017. Which comparison would correct a trainee's misunderstanding of Implicit bias versus Microaggression?

A. Implicit bias: Designing environments, communication, and services so people with varied abilities can participate. / Microaggression: A commonplace interaction or environmental message that communicates devaluation related to identity.
B. Implicit bias: A commonplace interaction or environmental message that communicates devaluation related to identity. / Microaggression: Automatic associations that can influence judgment and behavior without conscious intent.
C. Implicit bias: Automatic associations that can influence judgment and behavior without conscious intent. / Microaggression: A counseling orientation that addresses individual wellbeing alongside inequitable systems and barriers.
D. Implicit bias: Automatic associations that can influence judgment and behavior without conscious intent. / Microaggression: A commonplace interaction or environmental message that communicates devaluation related to identity.

0018. Consider a client in early adolescence receiving help in the child guidance clinic. The school counselor focuses on identifying and removing practical barriers to communication and participation. Which term best describes the guiding idea?

A. Equity
B. Equality
C. Accessibility
D. Social justice counseling

0019. In a professional consultation about a child aged 6, the assessment clinician describes this response in the telehealth session: identifying and removing practical barriers to communication and participation. Which term is most apt?

A. Accessibility
B. Equity
C. Microaggression
D. Social justice counseling

0020. A case conference asks for a distinction between Social justice counseling and Implicit bias. Which answer is sound?

A. Social justice counseling: Automatic associations that can influence judgment and behavior without conscious intent. / Implicit bias: A counseling orientation that addresses individual wellbeing alongside inequitable systems and barriers.
B. Social justice counseling: A counseling orientation that addresses individual wellbeing alongside inequitable systems and barriers. / Implicit bias: Fair allocation of support that accounts for differing barriers and needs to enable meaningful opportunity.
C. Social justice counseling: Designing environments, communication, and services so people with varied abilities can participate. / Implicit bias: Automatic associations that can influence judgment and behavior without conscious intent.
D. Social justice counseling: A counseling orientation that addresses individual wellbeing alongside inequitable systems and barriers. / Implicit bias: Automatic associations that can influence judgment and behavior without conscious intent.

0021. A school-age child is receiving support in the caregiver consultation. The group facilitator is guided by this practice: inviting client feedback about whether care feels respectful and adapting in response. Which principle best fits?

A. Cultural safety
B. Microaggression
C. Social justice counseling
D. Implicit bias

0022. In the learning-support meeting, a youth worker explains why a client in late adolescence would benefit from listening to the client's account of an identity-related slight and exploring its impact without minimizing it. Which course concept underpins the explanation?

A. Equity
B. Cultural safety
C. Microaggression
D. Social justice counseling

0023. Which applied comparison correctly identifies what belongs to Social justice counseling versus Power analysis?

A. Social justice counseling: Identifying who controls access and whose perspective is missing in a service decision. / Power analysis: Connecting a client's distress with relevant structural conditions without dismissing personal experience.
B. Social justice counseling: Recognizing patterns of exclusion rather than reducing a structural problem to an individual deficit. / Power analysis: Identifying who controls access and whose perspective is missing in a service decision.
C. Social justice counseling: Connecting a client's distress with relevant structural conditions without dismissing personal experience. / Power analysis: Providing different supports where needed to make participation meaningfully accessible.
D. Social justice counseling: Connecting a client's distress with relevant structural conditions without dismissing personal experience. / Power analysis: Identifying who controls access and whose perspective is missing in a service decision.

0024. A young adolescent client's service team meets in the after-school program. The case coordinator recommends a change involving connecting a client's distress with relevant structural conditions without dismissing personal experience. Which idea best explains it?

A. Oppression
B. Liberation psychology
C. Equality
D. Social justice counseling

0025. Which option pairs the definitions of Equality and Microaggression correctly, in that order?

A. Equality: Automatic associations that can influence judgment and behavior without conscious intent. / Microaggression: A commonplace interaction or environmental message that communicates devaluation related to identity.
B. Equality: Provision of the same treatment or resource to everyone, regardless of differing circumstances. / Microaggression: Fair allocation of support that accounts for differing barriers and needs to enable meaningful opportunity.
C. Equality: Provision of the same treatment or resource to everyone, regardless of differing circumstances. / Microaggression: A commonplace interaction or environmental message that communicates devaluation related to identity.
D. Equality: A commonplace interaction or environmental message that communicates devaluation related to identity. / Microaggression: Provision of the same treatment or resource to everyone, regardless of differing circumstances.

0026. In a supervision review, a parent educator describes work with a teenage client in the classroom support meeting: inviting client feedback about whether care feels respectful and adapting in response. What concept is illustrated?

A. Liberation psychology
B. Oppression
C. Cultural safety
D. Power analysis

0027. Choose the definition pair that correctly explains Equality first and Liberation psychology second.

A. Equality: Provision of the same treatment or resource to everyone, regardless of differing circumstances. / Liberation psychology: Examination of how authority, resources, and decision-making influence relationships and outcomes.
B. Equality: An approach emphasizing critical awareness and action addressing social conditions that contribute to distress. / Liberation psychology: Provision of the same treatment or resource to everyone, regardless of differing circumstances.
C. Equality: Provision of the same treatment or resource to everyone, regardless of differing circumstances. / Liberation psychology: An approach emphasizing critical awareness and action addressing social conditions that contribute to distress.
D. Equality: Designing environments, communication, and services so people with varied abilities can participate. / Liberation psychology: An approach emphasizing critical awareness and action addressing social conditions that contribute to distress.

0028. Which choice aligns each practice with the correct idea, Social justice counseling or Equality?

A. Social justice counseling: Distinguishing identical provision from support tailored to unequal barriers. / Equality: Connecting a client's distress with relevant structural conditions without dismissing personal experience.
B. Social justice counseling: Connecting a client's distress with relevant structural conditions without dismissing personal experience. / Equality: Providing different supports where needed to make participation meaningfully accessible.
C. Social justice counseling: Inviting client feedback about whether care feels respectful and adapting in response. / Equality: Distinguishing identical provision from support tailored to unequal barriers.
D. Social justice counseling: Connecting a client's distress with relevant structural conditions without dismissing personal experience. / Equality: Distinguishing identical provision from support tailored to unequal barriers.

0029. Which comparison correctly distinguishes Equity from Accessibility?

A. Equity: Fair allocation of support that accounts for differing barriers and needs to enable meaningful opportunity. / Accessibility: A commonplace interaction or environmental message that communicates devaluation related to identity.
B. Equity: Designing environments, communication, and services so people with varied abilities can participate. / Accessibility: Fair allocation of support that accounts for differing barriers and needs to enable meaningful opportunity.
C. Equity: Provision of the same treatment or resource to everyone, regardless of differing circumstances. / Accessibility: Designing environments, communication, and services so people with varied abilities can participate.
D. Equity: Fair allocation of support that accounts for differing barriers and needs to enable meaningful opportunity. / Accessibility: Designing environments, communication, and services so people with varied abilities can participate.

0030. Which pair of actions illustrates Equality and Implicit bias, respectively?

A. Equality: Distinguishing identical provision from support tailored to unequal barriers. / Implicit bias: Reflecting on whether assumptions may be affecting an assessment or referral decision.
B. Equality: Inviting client feedback about whether care feels respectful and adapting in response. / Implicit bias: Reflecting on whether assumptions may be affecting an assessment or referral decision.
C. Equality: Reflecting on whether assumptions may be affecting an assessment or referral decision. / Implicit bias: Distinguishing identical provision from support tailored to unequal barriers.
D. Equality: Distinguishing identical provision from support tailored to unequal barriers. / Implicit bias: Providing different supports where needed to make participation meaningfully accessible.

0031. A case conference asks for a distinction between Oppression and Equity. Which answer is sound?

A. Oppression: Fair allocation of support that accounts for differing barriers and needs to enable meaningful opportunity. / Equity: Systematic, institutional, or interpersonal processes that restrict opportunities and dignity for groups.
B. Oppression: Systematic, institutional, or interpersonal processes that restrict opportunities and dignity for groups. / Equity: A client-defined experience of care in which identity is respected and power imbalances are addressed.
C. Oppression: Systematic, institutional, or interpersonal processes that restrict opportunities and dignity for groups. / Equity: Fair allocation of support that accounts for differing barriers and needs to enable meaningful opportunity.
D. Oppression: A counseling orientation that addresses individual wellbeing alongside inequitable systems and barriers. / Equity: Fair allocation of support that accounts for differing barriers and needs to enable meaningful opportunity.

0032. In a supervision review, a case coordinator describes work with a student aged 12 in the counseling practicum: providing different supports where needed to make participation meaningfully accessible. What concept is illustrated?

A. Implicit bias
B. Oppression
C. Equity
D. Power analysis

0033. How are Oppression and Equity most accurately differentiated in this curriculum?

A. Oppression: A counseling orientation that addresses individual wellbeing alongside inequitable systems and barriers. / Equity: Fair allocation of support that accounts for differing barriers and needs to enable meaningful opportunity.
B. Oppression: Systematic, institutional, or interpersonal processes that restrict opportunities and dignity for groups. / Equity: A client-defined experience of care in which identity is respected and power imbalances are addressed.
C. Oppression: Fair allocation of support that accounts for differing barriers and needs to enable meaningful opportunity. / Equity: Systematic, institutional, or interpersonal processes that restrict opportunities and dignity for groups.
D. Oppression: Systematic, institutional, or interpersonal processes that restrict opportunities and dignity for groups. / Equity: Fair allocation of support that accounts for differing barriers and needs to enable meaningful opportunity.

0034. A trainee must explain Power analysis. Which answer is accurate?

A. Designing environments, communication, and services so people with varied abilities can participate.
B. Examination of how authority, resources, and decision-making influence relationships and outcomes.
C. A client-defined experience of care in which identity is respected and power imbalances are addressed.
D. A commonplace interaction or environmental message that communicates devaluation related to identity.

0035. In the caregiver consultation, a school-based clinician is considering this approach for a child aged 6: supporting reflection on social context and agency alongside individual coping. Which framework does it represent?

A. Power analysis
B. Equity
C. Liberation psychology
D. Implicit bias

0036. Which choice aligns each practice with the correct idea, Power analysis or Implicit bias?

A. Power analysis: Listening to the client's account of an identity-related slight and exploring its impact without minimizing it. / Implicit bias: Reflecting on whether assumptions may be affecting an assessment or referral decision.
B. Power analysis: Identifying who controls access and whose perspective is missing in a service decision. / Implicit bias: Inviting client feedback about whether care feels respectful and adapting in response.
C. Power analysis: Reflecting on whether assumptions may be affecting an assessment or referral decision. / Implicit bias: Identifying who controls access and whose perspective is missing in a service decision.
D. Power analysis: Identifying who controls access and whose perspective is missing in a service decision. / Implicit bias: Reflecting on whether assumptions may be affecting an assessment or referral decision.

0037. How are Implicit bias and Liberation psychology most accurately differentiated in this curriculum?

A. Implicit bias: An approach emphasizing critical awareness and action addressing social conditions that contribute to distress. / Liberation psychology: Automatic associations that can influence judgment and behavior without conscious intent.
B. Implicit bias: Automatic associations that can influence judgment and behavior without conscious intent. / Liberation psychology: Provision of the same treatment or resource to everyone, regardless of differing circumstances.
C. Implicit bias: Fair allocation of support that accounts for differing barriers and needs to enable meaningful opportunity. / Liberation psychology: An approach emphasizing critical awareness and action addressing social conditions that contribute to distress.
D. Implicit bias: Automatic associations that can influence judgment and behavior without conscious intent. / Liberation psychology: An approach emphasizing critical awareness and action addressing social conditions that contribute to distress.

0038. During service review in the student-support meeting, a therapist describes distinguishing identical provision from support tailored to unequal barriers. for a young person. Which course idea is most applicable?

A. Equity
B. Power analysis
C. Oppression
D. Equality

0039. A team must select a support approach for a young person aged 10 at the youth advocacy program. The parent educator recommends supporting reflection on social context and agency alongside individual coping. Which idea is most relevant?

A. Accessibility
B. Liberation psychology
C. Equity
D. Equality

0040. Select the best explanation of Cultural safety.

A. Examination of how authority, resources, and decision-making influence relationships and outcomes.
B. Provision of the same treatment or resource to everyone, regardless of differing circumstances.
C. A client-defined experience of care in which identity is respected and power imbalances are addressed.
D. Systematic, institutional, or interpersonal processes that restrict opportunities and dignity for groups.

0041. A trainee must explain Equity. Which answer is accurate?

A. Provision of the same treatment or resource to everyone, regardless of differing circumstances.
B. Fair allocation of support that accounts for differing barriers and needs to enable meaningful opportunity.
C. A commonplace interaction or environmental message that communicates devaluation related to identity.
D. Examination of how authority, resources, and decision-making influence relationships and outcomes.

0042. When reviewing a young person aged 18’s plan in the learning-support meeting, the parent educator notes that the next step is distinguishing identical provision from support tailored to unequal barriers. Which concept guides this step?

A. Equality
B. Implicit bias
C. Equity
D. Liberation psychology

0043. How should a practitioner distinguish the applications of Oppression and Microaggression?

A. Oppression: Listening to the client’s account of an identity-related slight and exploring its impact without minimizing it. / Microaggression: Recognizing patterns of exclusion rather than reducing a structural problem to an individual deficit.
B. Oppression: Recognizing patterns of exclusion rather than reducing a structural problem to an individual deficit. / Microaggression: Supporting reflection on social context and agency alongside individual coping.
C. Oppression: Providing different supports where needed to make participation meaningfully accessible. / Microaggression: Listening to the client’s account of an identity-related slight and exploring its impact without minimizing it.
D. Oppression: Recognizing patterns of exclusion rather than reducing a structural problem to an individual deficit. / Microaggression: Listening to the client’s account of an identity-related slight and exploring its impact without minimizing it.

0044. A play therapist reviews a plan for a middle-school student in the learning-support meeting. The plan emphasizes reflecting on whether assumptions may be affecting an assessment or referral decision. Which course idea does this reflect?

A. Power analysis
B. Accessibility
C. Implicit bias
D. Social justice counseling

0045. Which option is the clearest practical expression of Equity?

A. Listening to the client’s account of an identity-related slight and exploring its impact without minimizing it.
B. Supporting reflection on social context and agency alongside individual coping.
C. Reflecting on whether assumptions may be affecting an assessment or referral decision.
D. Providing different supports where needed to make participation meaningfully accessible.

0046. Which statement accurately contrasts the course concepts Power analysis and Implicit bias?

A. Power analysis: A commonplace interaction or environmental message that communicates devaluation related to identity. / Implicit bias: Automatic associations that can influence judgment and behavior without conscious intent.
B. Power analysis: Examination of how authority, resources, and decision-making influence relationships and outcomes. / Implicit bias: Automatic associations that can influence judgment and behavior without conscious intent.
C. Power analysis: Examination of how authority, resources, and decision-making influence relationships and outcomes. / Implicit bias: A client-defined experience of care in which identity is respected and power imbalances are addressed.
D. Power analysis: Automatic associations that can influence judgment and behavior without conscious intent. / Implicit bias: Examination of how authority, resources, and decision-making influence relationships and outcomes.

0047. During work in the community mental-health service, a group facilitator identifies this need: recognizing patterns of exclusion rather than reducing a structural problem to an individual deficit. Which idea should guide the response?

A. Equity
B. Implicit bias
C. Equality
D. Oppression

0048. Choose the term that matches this definition: Provision of the same treatment or resource to everyone, regardless of differing circumstances.

A. Social justice counseling
B. Accessibility
C. Equality
D. Implicit bias

0049. Which statement accurately contrasts the course concepts Oppression and Cultural safety?

A. Oppression: Systematic, institutional, or interpersonal processes that restrict opportunities and dignity for groups. / Cultural safety: A commonplace interaction or environmental message that communicates devaluation related to identity.
B. Oppression: Designing environments, communication, and services so people with varied abilities can participate. / Cultural safety: A client-defined experience of care in which identity is respected and power imbalances are addressed.
C. Oppression: A client-defined experience of care in which identity is respected and power imbalances are addressed. / Cultural safety: Systematic, institutional, or interpersonal processes that restrict opportunities and dignity for groups.
D. Oppression: Systematic, institutional, or interpersonal processes that restrict opportunities and dignity for groups. / Cultural safety: A client-defined experience of care in which identity is respected and power imbalances are addressed.

0050. In the family session, the agreed focus for a therapist working with a child aged 7 is identifying and removing practical barriers to communication and participation. Which concept names this focus?

A. Accessibility
B. Microaggression
C. Cultural safety
D. Liberation psychology

0051. Which comparison would correct a trainee's misunderstanding of Oppression versus Cultural safety?

A. Oppression: A client-defined experience of care in which identity is respected and power imbalances are addressed. / Cultural safety: Systematic, institutional, or interpersonal processes that restrict opportunities and dignity for groups.
B. Oppression: Systematic, institutional, or interpersonal processes that restrict opportunities and dignity for groups. / Cultural safety: A client-defined experience of care in which identity is respected and power imbalances are addressed.
C. Oppression: Designing environments, communication, and services so people with varied abilities can participate. / Cultural safety: A client-defined experience of care in which identity is respected and power imbalances are addressed.
D. Oppression: Systematic, institutional, or interpersonal processes that restrict opportunities and dignity for groups. / Cultural safety: A commonplace interaction or environmental message that communicates devaluation related to identity.

0052. A student confuses Oppression with Implicit bias. Which explanation most accurately separates them?

A. Oppression: Systematic, institutional, or interpersonal processes that restrict opportunities and dignity for groups. / Implicit bias: Automatic associations that can influence judgment and behavior without conscious intent.
B. Oppression: Systematic, institutional, or interpersonal processes that restrict opportunities and dignity for groups. / Implicit bias: Designing environments, communication, and services so people with varied abilities can participate.
C. Oppression: Fair allocation of support that accounts for differing barriers and needs to enable meaningful opportunity. / Implicit bias: Automatic associations that can influence judgment and behavior without conscious intent.
D. Oppression: Automatic associations that can influence judgment and behavior without conscious intent. / Implicit bias: Systematic, institutional, or interpersonal processes that restrict opportunities and dignity for groups.

0053. A school-based clinician presents a support plan for a teenage client at the telehealth session. Its central feature is distinguishing identical provision from support tailored to unequal barriers. Which concept should be named?

A. Equality
B. Equity
C. Cultural safety
D. Power analysis

0054. A supervisor asks how Oppression would appear in practice. Which choice should be selected?

A. Listening to the client's account of an identity-related slight and exploring its impact without minimizing it.
B. Inviting client feedback about whether care feels respectful and adapting in response.
C. Recognizing patterns of exclusion rather than reducing a structural problem to an individual deficit.
D. Identifying who controls access and whose perspective is missing in a service decision.

0055. How should a practitioner distinguish the applications of Equality and Liberation psychology?

A. Equality: Distinguishing identical provision from support tailored to unequal barriers. / Liberation psychology: Supporting reflection on social context and agency alongside individual coping.
B. Equality: Distinguishing identical provision from support tailored to unequal barriers. / Liberation psychology: Identifying who controls access and whose perspective is missing in a service decision.
C. Equality: Supporting reflection on social context and agency alongside individual coping. / Liberation psychology: Distinguishing identical provision from support tailored to unequal barriers.
D. Equality: Identifying and removing practical barriers to communication and participation. / Liberation psychology: Supporting reflection on social context and agency alongside individual coping.

0056. Which comparison would correct a trainee's misunderstanding of Power analysis versus Cultural safety?

A. Power analysis: Examination of how authority, resources, and decision-making influence relationships and outcomes. / Cultural safety: A client-defined experience of care in which identity is respected and power imbalances are addressed.
B. Power analysis: A client-defined experience of care in which identity is respected and power imbalances are addressed. / Cultural safety: Examination of how authority, resources, and decision-making influence relationships and outcomes.
C. Power analysis: Examination of how authority, resources, and decision-making influence relationships and outcomes. / Cultural safety: A commonplace interaction or environmental message that communicates devaluation related to identity.
D. Power analysis: Designing environments, communication, and services so people with varied abilities can participate. / Cultural safety: A client-defined experience of care in which identity is respected and power imbalances are addressed.

0057. Which choice aligns each practice with the correct idea, Liberation psychology or Accessibility?

A. Liberation psychology: Supporting reflection on social context and agency alongside individual coping. / Accessibility: Reflecting on whether assumptions may be affecting an assessment or referral decision.
B. Liberation psychology: Listening to the client's account of an identity-related slight and exploring its impact without minimizing it. / Accessibility: Identifying and removing practical barriers to communication and participation.
C. Liberation psychology: Supporting reflection on social context and agency alongside individual coping. / Accessibility: Identifying and removing practical barriers to communication and participation.
D. Liberation psychology: Identifying and removing practical barriers to communication and participation. / Accessibility: Supporting reflection on social context and agency alongside individual coping.

0058. Choose the definition pair that correctly explains Microaggression first and Cultural safety second.

A. Microaggression: Fair allocation of support that accounts for differing barriers and needs to enable meaningful opportunity. / Cultural safety: A client-defined experience of care in which identity is respected and power imbalances are addressed.
B. Microaggression: A client-defined experience of care in which identity is respected and power imbalances are addressed. / Cultural safety: A commonplace interaction or environmental message that communicates devaluation related to identity.
C. Microaggression: A commonplace interaction or environmental message that communicates devaluation related to identity. / Cultural safety: An approach emphasizing critical awareness and action addressing social conditions that contribute to distress.
D. Microaggression: A commonplace interaction or environmental message that communicates devaluation related to identity. / Cultural safety: A client-defined experience of care in which identity is respected and power imbalances are addressed.

0059. A support meeting for a young person aged 10 includes a play therapist in the parent meeting. The practice under consideration is identifying who controls access and whose perspective is missing in a service decision. Which concept guides it?

A. Power analysis
B. Microaggression
C. Oppression
D. Liberation psychology

0060. Choose the response that best puts Power analysis into practice.

A. Listening to the client's account of an identity-related slight and exploring its impact without minimizing it.
B. Supporting reflection on social context and agency alongside individual coping.
C. Identifying who controls access and whose perspective is missing in a service decision.
D. Connecting a client's distress with relevant structural conditions without dismissing personal experience.

0061. Which applied comparison correctly identifies what belongs to Liberation psychology versus Accessibility?

A. Liberation psychology: Identifying and removing practical barriers to communication and participation. / Accessibility: Supporting reflection on social context and agency alongside individual coping.
B. Liberation psychology: Supporting reflection on social context and agency alongside individual coping. / Accessibility: Reflecting on whether assumptions may be affecting an assessment or referral decision.
C. Liberation psychology: Supporting reflection on social context and agency alongside individual coping. / Accessibility: Identifying and removing practical barriers to communication and participation.
D. Liberation psychology: Listening to the client's account of an identity-related slight and exploring its impact without minimizing it. / Accessibility: Identifying and removing practical barriers to communication and participation.

0062. Choose the practice comparison that best separates Social justice counseling from Microaggression.

A. Social justice counseling: Connecting a client's distress with relevant structural conditions without dismissing personal experience. / Microaggression: Identifying who controls access and whose perspective is missing in a service decision.
B. Social justice counseling: Connecting a client's distress with relevant structural conditions without dismissing personal experience. / Microaggression: Listening to the client's account of an identity-related slight and exploring its impact without minimizing it.
C. Social justice counseling: Listening to the client's account of an identity-related slight and exploring its impact without minimizing it. / Microaggression: Connecting a client's distress with relevant structural conditions without dismissing personal experience.
D. Social justice counseling: Distinguishing identical provision from support tailored to unequal barriers. / Microaggression: Listening to the client's account of an identity-related slight and exploring its impact without minimizing it.

0063. A school support specialist is asked to evaluate a proposed service for a client in early adolescence in the youth group. The defining feature is inviting client feedback about whether care feels respectful and adapting in response. Which concept fits?

A. Liberation psychology
B. Oppression
C. Accessibility
D. Cultural safety

0064. Which statement accurately contrasts the course concepts Social justice counseling and Power analysis?

A. Social justice counseling: A counseling orientation that addresses individual wellbeing alongside inequitable systems and barriers. / Power analysis: Fair allocation of support that accounts for differing barriers and needs to enable meaningful opportunity.
B. Social justice counseling: Examination of how authority, resources, and decision-making influence relationships and outcomes. / Power analysis: A counseling orientation that addresses individual wellbeing alongside inequitable systems and barriers.
C. Social justice counseling: A counseling orientation that addresses individual wellbeing alongside inequitable systems and barriers. / Power analysis: Examination of how authority, resources, and decision-making influence relationships and outcomes.
D. Social justice counseling: Systematic, institutional, or interpersonal processes that restrict opportunities and dignity for groups. / Power analysis: Examination of how authority, resources, and decision-making influence relationships and outcomes.

0065. How should a practitioner distinguish the applications of Equality and Microaggression?

A. Equality: Distinguishing identical provision from support tailored to unequal barriers. / Microaggression: Providing different supports where needed to make participation meaningfully accessible.
B. Equality: Listening to the client's account of an identity-related slight and exploring its impact without minimizing it. / Microaggression: Distinguishing identical provision from support tailored to unequal barriers.
C. Equality: Distinguishing identical provision from support tailored to unequal barriers. / Microaggression: Listening to the client's account of an identity-related slight and exploring its impact without minimizing it.
D. Equality: Reflecting on whether assumptions may be affecting an assessment or referral decision. / Microaggression: Listening to the client's account of an identity-related slight and exploring its impact without minimizing it.

0066. While consulting in the youth advocacy program, a mental-health professional supports a adolescent student by using this approach: listening to the client's account of an identity-related slight and exploring its impact without minimizing it. Which concept is being applied?

A. Accessibility
B. Implicit bias
C. Equality
D. Microaggression

0067. Which paired example correctly applies Equity first and Equality second?

A. Equity: Providing different supports where needed to make participation meaningfully accessible. / Equality: Connecting a client's distress with relevant structural conditions without dismissing personal experience.
B. Equity: Inviting client feedback about whether care feels respectful and adapting in response. / Equality: Distinguishing identical provision from support tailored to unequal barriers.
C. Equity: Providing different supports where needed to make participation meaningfully accessible. / Equality: Distinguishing identical provision from support tailored to unequal barriers.
D. Equity: Distinguishing identical provision from support tailored to unequal barriers. / Equality: Providing different supports where needed to make participation meaningfully accessible.

0068. Which option preserves the correct meaning of both Equality and Cultural safety?

A. Equality: Provision of the same treatment or resource to everyone, regardless of differing circumstances. / Cultural safety: Systematic, institutional, or interpersonal processes that restrict opportunities and dignity for groups.
B. Equality: A commonplace interaction or environmental message that communicates devaluation related to identity. / Cultural safety: A client-defined experience of care in which identity is respected and power imbalances are addressed.
C. Equality: Provision of the same treatment or resource to everyone, regardless of differing circumstances. / Cultural safety: A client-defined experience of care in which identity is respected and power imbalances are addressed.
D. Equality: A client-defined experience of care in which identity is respected and power imbalances are addressed. / Cultural safety: Provision of the same treatment or resource to everyone, regardless of differing circumstances.

0069. A trainee must distinguish how Accessibility and Cultural safety guide practice. Which comparison is accurate?

A. Accessibility: Identifying and removing practical barriers to communication and participation. / Cultural safety: Inviting client feedback about whether care feels respectful and adapting in response.
B. Accessibility: Inviting client feedback about whether care feels respectful and adapting in response. / Cultural safety: Identifying and removing practical barriers to communication and participation.
C. Accessibility: Identifying and removing practical barriers to communication and participation. / Cultural safety: Supporting reflection on social context and agency alongside individual coping.
D. Accessibility: Providing different supports where needed to make participation meaningfully accessible. / Cultural safety: Inviting client feedback about whether care feels respectful and adapting in response.

0070. Which option correctly matches each concept to its practice focus: Social justice counseling and Microaggression?

A. Social justice counseling: Connecting a client's distress with relevant structural conditions without dismissing personal experience. / Microaggression: Identifying who controls access and whose perspective is missing in a service decision.
B. Social justice counseling: Distinguishing identical provision from support tailored to unequal barriers. / Microaggression: Listening to the client's account of an identity-related slight and exploring its impact without minimizing it.
C. Social justice counseling: Listening to the client's account of an identity-related slight and exploring its impact without minimizing it. / Microaggression: Connecting a client's distress with relevant structural conditions without dismissing personal experience.
D. Social justice counseling: Connecting a client's distress with relevant structural conditions without dismissing personal experience. / Microaggression: Listening to the client's account of an identity-related slight and exploring its impact without minimizing it.

0071. Which applied comparison correctly identifies what belongs to Equality versus Microaggression?

A. Equality: Listening to the client's account of an identity-related slight and exploring its impact without minimizing it. / Microaggression: Distinguishing identical provision from support tailored to unequal barriers.
B. Equality: Distinguishing identical provision from support tailored to unequal barriers. / Microaggression: Listening to the client's account of an identity-related slight and exploring its impact without minimizing it.
C. Equality: Distinguishing identical provision from support tailored to unequal barriers. / Microaggression: Providing different supports where needed to make participation meaningfully accessible.
D. Equality: Reflecting on whether assumptions may be affecting an assessment or referral decision. / Microaggression: Listening to the client's account of an identity-related slight and exploring its impact without minimizing it.

0072. A case conference asks for a distinction between Power analysis and Liberation psychology. Which answer is sound?

A. Power analysis: An approach emphasizing critical awareness and action addressing social conditions that contribute to distress. / Liberation psychology: Examination of how authority, resources, and decision-making influence relationships and outcomes.
B. Power analysis: Examination of how authority, resources, and decision-making influence relationships and outcomes. / Liberation psychology: Automatic associations that can influence judgment and behavior without conscious intent.
C. Power analysis: Examination of how authority, resources, and decision-making influence relationships and outcomes. / Liberation psychology: An approach emphasizing critical awareness and action addressing social conditions that contribute to distress.
D. Power analysis: Fair allocation of support that accounts for differing barriers and needs to enable meaningful opportunity. / Liberation psychology: An approach emphasizing critical awareness and action addressing social conditions that contribute to distress.

0073. A parent educator presents a support plan for a older adolescent client at the outpatient clinic. Its central feature is providing different supports where needed to make participation meaningfully accessible. Which concept should be named?

A. Liberation psychology
B. Microaggression
C. Social justice counseling
D. Equity

0074. Which option preserves the correct meaning of both Oppression and Equity?

A. Oppression: A counseling orientation that addresses individual wellbeing alongside inequitable systems and barriers. / Equity: Fair allocation of support that accounts for differing barriers and needs to enable meaningful opportunity.
B. Oppression: Systematic, institutional, or interpersonal processes that restrict opportunities and dignity for groups. / Equity: Fair allocation of support that accounts for differing barriers and needs to enable meaningful opportunity.
C. Oppression: Fair allocation of support that accounts for differing barriers and needs to enable meaningful opportunity. / Equity: Systematic, institutional, or interpersonal processes that restrict opportunities and dignity for groups.
D. Oppression: Systematic, institutional, or interpersonal processes that restrict opportunities and dignity for groups. / Equity: A client-defined experience of care in which identity is respected and power imbalances are addressed.

0075. Which pair of actions illustrates Oppression and Liberation psychology, respectively?

A. Oppression: Supporting reflection on social context and agency alongside individual coping. / Liberation psychology: Recognizing patterns of exclusion rather than reducing a structural problem to an individual deficit.
B. Oppression: Distinguishing identical provision from support tailored to unequal barriers. / Liberation psychology: Supporting reflection on social context and agency alongside individual coping.
C. Oppression: Recognizing patterns of exclusion rather than reducing a structural problem to an individual deficit. / Liberation psychology: Supporting reflection on social context and agency alongside individual coping.
D. Oppression: Recognizing patterns of exclusion rather than reducing a structural problem to an individual deficit. / Liberation psychology: Reflecting on whether assumptions may be affecting an assessment or referral decision.

0076. Which professional action most closely applies Power analysis?

A. Providing different supports where needed to make participation meaningfully accessible.
B. Identifying who controls access and whose perspective is missing in a service decision.
C. Listening to the client's account of an identity-related slight and exploring its impact without minimizing it.
D. Reflecting on whether assumptions may be affecting an assessment or referral decision.

0077. Which applied comparison correctly identifies what belongs to Social justice counseling versus Equality?

A. Social justice counseling: Connecting a client's distress with relevant structural conditions without dismissing personal experience. / Equality: Distinguishing identical provision from support tailored to unequal barriers.
B. Social justice counseling: Distinguishing identical provision from support tailored to unequal barriers. / Equality: Connecting a client's distress with relevant structural conditions without dismissing personal experience.
C. Social justice counseling: Inviting client feedback about whether care feels respectful and adapting in response. / Equality: Distinguishing identical provision from support tailored to unequal barriers.
D. Social justice counseling: Connecting a client's distress with relevant structural conditions without dismissing personal experience. / Equality: Providing different supports where needed to make participation meaningfully accessible.

0078. A student confuses Equality with Implicit bias. Which explanation most accurately separates them?

A. Equality: Provision of the same treatment or resource to everyone, regardless of differing circumstances. / Implicit bias: Automatic associations that can influence judgment and behavior without conscious intent.
B. Equality: A client-defined experience of care in which identity is respected and power imbalances are addressed. / Implicit bias: Automatic associations that can influence judgment and behavior without conscious intent.
C. Equality: Automatic associations that can influence judgment and behavior without conscious intent. / Implicit bias: Provision of the same treatment or resource to everyone, regardless of differing circumstances.
D. Equality: Provision of the same treatment or resource to everyone, regardless of differing circumstances. / Implicit bias: Fair allocation of support that accounts for differing barriers and needs to enable meaningful opportunity.

0079. Which choice aligns each practice with the correct idea, Social justice counseling or Power analysis?

A. Social justice counseling: Identifying who controls access and whose perspective is missing in a service decision. / Power analysis: Connecting a client's distress with relevant structural conditions without dismissing personal experience.
B. Social justice counseling: Connecting a client's distress with relevant structural conditions without dismissing personal experience. / Power analysis: Identifying who controls access and whose perspective is missing in a service decision.
C. Social justice counseling: Recognizing patterns of exclusion rather than reducing a structural problem to an individual deficit. / Power analysis: Identifying who controls access and whose perspective is missing in a service decision.
D. Social justice counseling: Connecting a client's distress with relevant structural conditions without dismissing personal experience. / Power analysis: Providing different supports where needed to make participation meaningfully accessible.

0080. In the school counseling office, the agreed focus for a service navigator working with a child aged 11 is supporting reflection on social context and agency alongside individual coping. Which concept names this focus?

A. Liberation psychology
B. Microaggression
C. Power analysis
D. Oppression

0081. What is the central meaning of Accessibility?

A. A commonplace interaction or environmental message that communicates devaluation related to identity.
B. Automatic associations that can influence judgment and behavior without conscious intent.
C. Provision of the same treatment or resource to everyone, regardless of differing circumstances.
D. Designing environments, communication, and services so people with varied abilities can participate.

0082. Which option pairs the definitions of Microaggression and Cultural safety correctly, in that order?

A. Microaggression: Fair allocation of support that accounts for differing barriers and needs to enable meaningful opportunity. / Cultural safety: A client-defined experience of care in which identity is respected and power imbalances are addressed.
B. Microaggression: A commonplace interaction or environmental message that communicates devaluation related to identity. / Cultural safety: A client-defined experience of care in which identity is respected and power imbalances are addressed.
C. Microaggression: A client-defined experience of care in which identity is respected and power imbalances are addressed. / Cultural safety: A commonplace interaction or environmental message that communicates devaluation related to identity.
D. Microaggression: A commonplace interaction or environmental message that communicates devaluation related to identity. / Cultural safety: An approach emphasizing critical awareness and action addressing social conditions that contribute to distress.

0083. While supporting a young person aged 18 in the school counseling office, a case coordinator adopts this practice: inviting client feedback about whether care feels respectful and adapting in response. Which concept best explains the choice?

A. Equality
B. Cultural safety
C. Equity
D. Oppression

0084. How should a practitioner distinguish the applications of Power analysis and Equality?

A. Power analysis: Distinguishing identical provision from support tailored to unequal barriers. / Equality: Identifying who controls access and whose perspective is missing in a service decision.
B. Power analysis: Identifying who controls access and whose perspective is missing in a service decision. / Equality: Distinguishing identical provision from support tailored to unequal barriers.
C. Power analysis: Inviting client feedback about whether care feels respectful and adapting in response. / Equality: Distinguishing identical provision from support tailored to unequal barriers.
D. Power analysis: Identifying who controls access and whose perspective is missing in a service decision. / Equality: Connecting a client's distress with relevant structural conditions without dismissing personal experience.

0085. Choose the practice comparison that best separates Equity from Microaggression.

A. Equity: Listening to the client's account of an identity-related slight and exploring its impact without minimizing it. / Microaggression: Providing different supports where needed to make participation meaningfully accessible.
B. Equity: Providing different supports where needed to make participation meaningfully accessible. / Microaggression: Listening to the client's account of an identity-related slight and exploring its impact without minimizing it.
C. Equity: Distinguishing identical provision from support tailored to unequal barriers. / Microaggression: Listening to the client's account of an identity-related slight and exploring its impact without minimizing it.
D. Equity: Providing different supports where needed to make participation meaningfully accessible. / Microaggression: Identifying and removing practical barriers to communication and participation.

0086. In a supervision quiz, how should Power analysis be distinguished from Microaggression?

A. Power analysis: A commonplace interaction or environmental message that communicates devaluation related to identity. / Microaggression: Examination of how authority, resources, and decision-making influence relationships and outcomes.
B. Power analysis: Examination of how authority, resources, and decision-making influence relationships and outcomes. / Microaggression: A counseling orientation that addresses individual wellbeing alongside inequitable systems and barriers.
C. Power analysis: Examination of how authority, resources, and decision-making influence relationships and outcomes. / Microaggression: A commonplace interaction or environmental message that communicates devaluation related to identity.
D. Power analysis: Designing environments, communication, and services so people with varied abilities can participate. / Microaggression: A commonplace interaction or environmental message that communicates devaluation related to identity.

0087. At the classroom support meeting, a therapist reviews whether a plan for a young adolescent client is appropriate. The relevant practice is supporting reflection on social context and agency alongside individual coping. Which concept is tested?

A. Power analysis
B. Equity
C. Implicit bias
D. Liberation psychology

0088. Which option pairs the definitions of Power analysis and Equality correctly, in that order?

A. Power analysis: A client-defined experience of care in which identity is respected and power imbalances are addressed. / Equality: Provision of the same treatment or resource to everyone, regardless of differing circumstances.
B. Power analysis: Provision of the same treatment or resource to everyone, regardless of differing circumstances. / Equality: Examination of how authority, resources, and decision-making influence relationships and outcomes.
C. Power analysis: Examination of how authority, resources, and decision-making influence relationships and outcomes. / Equality: A counseling orientation that addresses individual wellbeing alongside inequitable systems and barriers.
D. Power analysis: Examination of how authority, resources, and decision-making influence relationships and outcomes. / Equality: Provision of the same treatment or resource to everyone, regardless of differing circumstances.

0089. Choose the practice comparison that best separates Equity from Liberation psychology.

A. Equity: Providing different supports where needed to make participation meaningfully accessible. / Liberation psychology: Supporting reflection on social context and agency alongside individual coping.
B. Equity: Providing different supports where needed to make participation meaningfully accessible. / Liberation psychology: Reflecting on whether assumptions may be affecting an assessment or referral decision.
C. Equity: Supporting reflection on social context and agency alongside individual coping. / Liberation psychology: Providing different supports where needed to make participation meaningfully accessible.
D. Equity: Recognizing patterns of exclusion rather than reducing a structural problem to an individual deficit. / Liberation psychology: Supporting reflection on social context and agency alongside individual coping.

0090. How should a practitioner distinguish the applications of Microaggression and Cultural safety?

A. Microaggression: Listening to the client's account of an identity-related slight and exploring its impact without minimizing it. / Cultural safety: Supporting reflection on social context and agency alongside individual coping.
B. Microaggression: Inviting client feedback about whether care feels respectful and adapting in response. / Cultural safety: Listening to the client's account of an identity-related slight and exploring its impact without minimizing it.
C. Microaggression: Listening to the client's account of an identity-related slight and exploring its impact without minimizing it. / Cultural safety: Inviting client feedback about whether care feels respectful and adapting in response.
D. Microaggression: Providing different supports where needed to make participation meaningfully accessible. / Cultural safety: Inviting client feedback about whether care feels respectful and adapting in response.

0091. A trainee must distinguish how Oppression and Cultural safety guide practice. Which comparison is accurate?

A. Oppression: Recognizing patterns of exclusion rather than reducing a structural problem to an individual deficit. / Cultural safety: Listening to the client's account of an identity-related slight and exploring its impact without minimizing it.
B. Oppression: Identifying and removing practical barriers to communication and participation. / Cultural safety: Inviting client feedback about whether care feels respectful and adapting in response.
C. Oppression: Inviting client feedback about whether care feels respectful and adapting in response. / Cultural safety: Recognizing patterns of exclusion rather than reducing a structural problem to an individual deficit.
D. Oppression: Recognizing patterns of exclusion rather than reducing a structural problem to an individual deficit. / Cultural safety: Inviting client feedback about whether care feels respectful and adapting in response.

0092. Which option correctly matches each concept to its practice focus: Oppression and Liberation psychology?

A. Oppression: Supporting reflection on social context and agency alongside individual coping. / Liberation psychology: Recognizing patterns of exclusion rather than reducing a structural problem to an individual deficit.
B. Oppression: Distinguishing identical provision from support tailored to unequal barriers. / Liberation psychology: Supporting reflection on social context and agency alongside individual coping.
C. Oppression: Recognizing patterns of exclusion rather than reducing a structural problem to an individual deficit. / Liberation psychology: Supporting reflection on social context and agency alongside individual coping.
D. Oppression: Recognizing patterns of exclusion rather than reducing a structural problem to an individual deficit. / Liberation psychology: Reflecting on whether assumptions may be affecting an assessment or referral decision.

0093. How should a practitioner distinguish the applications of Oppression and Equality?

A. Oppression: Recognizing patterns of exclusion rather than reducing a structural problem to an individual deficit. / Equality: Distinguishing identical provision from support tailored to unequal barriers.
B. Oppression: Distinguishing identical provision from support tailored to unequal barriers. / Equality: Recognizing patterns of exclusion rather than reducing a structural problem to an individual deficit.
C. Oppression: Inviting client feedback about whether care feels respectful and adapting in response. / Equality: Distinguishing identical provision from support tailored to unequal barriers.
D. Oppression: Recognizing patterns of exclusion rather than reducing a structural problem to an individual deficit. / Equality: Identifying and removing practical barriers to communication and participation.

0094. Choose the practice comparison that best separates Oppression from Equity.

A. Oppression: Recognizing patterns of exclusion rather than reducing a structural problem to an individual deficit. / Equity: Inviting client feedback about whether care feels respectful and adapting in response.
B. Oppression: Connecting a client's distress with relevant structural conditions without dismissing personal experience. / Equity: Providing different supports where needed to make participation meaningfully accessible.
C. Oppression: Providing different supports where needed to make participation meaningfully accessible. / Equity: Recognizing patterns of exclusion rather than reducing a structural problem to an individual deficit.
D. Oppression: Recognizing patterns of exclusion rather than reducing a structural problem to an individual deficit. / Equity: Providing different supports where needed to make participation meaningfully accessible.

0095. A behavior specialist is asked to evaluate a proposed service for a young person in the parent meeting. The defining feature is listening to the client's account of an identity-related slight and exploring its impact without minimizing it. Which concept fits?

A. Cultural safety
B. Microaggression
C. Accessibility
D. Social justice counseling

0096. Which statement shows a sound practice-level distinction between Implicit bias and Microaggression?

A. Implicit bias: Reflecting on whether assumptions may be affecting an assessment or referral decision. / Microaggression: Connecting a client's distress with relevant structural conditions without dismissing personal experience.
B. Implicit bias: Reflecting on whether assumptions may be affecting an assessment or referral decision. / Microaggression: Listening to the client's account of an identity-related slight and exploring its impact without minimizing it.
C. Implicit bias: Listening to the client's account of an identity-related slight and exploring its impact without minimizing it. / Microaggression: Reflecting on whether assumptions may be affecting an assessment or referral decision.
D. Implicit bias: Identifying and removing practical barriers to communication and participation. / Microaggression: Listening to the client's account of an identity-related slight and exploring its impact without minimizing it.

0097. Which option is the clearest practical expression of Microaggression?

A. Listening to the client's account of an identity-related slight and exploring its impact without minimizing it.
B. Supporting reflection on social context and agency alongside individual coping.
C. Reflecting on whether assumptions may be affecting an assessment or referral decision.
D. Recognizing patterns of exclusion rather than reducing a structural problem to an individual deficit.

0098. Which comparison would correct a trainee's misunderstanding of Power analysis versus Accessibility?

A. Power analysis: A counseling orientation that addresses individual wellbeing alongside inequitable systems and barriers. / Accessibility: Designing environments, communication, and services so people with varied abilities can participate.
B. Power analysis: Examination of how authority, resources, and decision-making influence relationships and outcomes. / Accessibility: A commonplace interaction or environmental message that communicates devaluation related to identity.
C. Power analysis: Examination of how authority, resources, and decision-making influence relationships and outcomes. / Accessibility: Designing environments, communication, and services so people with varied abilities can participate.
D. Power analysis: Designing environments, communication, and services so people with varied abilities can participate. / Accessibility: Examination of how authority, resources, and decision-making influence relationships and outcomes.

0099. For a young person aged 18 in the youth advocacy program, a school support specialist makes this practice the immediate priority: providing different supports where needed to make participation meaningfully accessible. Which concept fits best?

A. Oppression
B. Equity
C. Accessibility
D. Implicit bias

0100. Which statement accurately contrasts the course concepts Equality and Liberation psychology?

A. Equality: Designing environments, communication, and services so people with varied abilities can participate. / Liberation psychology: An approach emphasizing critical awareness and action addressing social conditions that contribute to distress.
B. Equality: Provision of the same treatment or resource to everyone, regardless of differing circumstances. / Liberation psychology: Examination of how authority, resources, and decision-making influence relationships and outcomes.
C. Equality: An approach emphasizing critical awareness and action addressing social conditions that contribute to distress. / Liberation psychology: Provision of the same treatment or resource to everyone, regardless of differing circumstances.
D. Equality: Provision of the same treatment or resource to everyone, regardless of differing circumstances. / Liberation psychology: An approach emphasizing critical awareness and action addressing social conditions that contribute to distress.

0101. In the school consultation, a school counselor explains why a middle-school student would benefit from inviting client feedback about whether care feels respectful and adapting in response. Which course concept underpins the explanation?

A. Power analysis
B. Microaggression
C. Cultural safety
D. Oppression

0102. Which description belongs with the term Equality?

A. Automatic associations that can influence judgment and behavior without conscious intent.
B. An approach emphasizing critical awareness and action addressing social conditions that contribute to distress.
C. Fair allocation of support that accounts for differing barriers and needs to enable meaningful opportunity.
D. Provision of the same treatment or resource to everyone, regardless of differing circumstances.

0103. A supervisor asks for an applied contrast between Oppression and Implicit bias. Which option fits?

A. Oppression: Recognizing patterns of exclusion rather than reducing a structural problem to an individual deficit. / Implicit bias: Reflecting on whether assumptions may be affecting an assessment or referral decision.
B. Oppression: Providing different supports where needed to make participation meaningfully accessible. / Implicit bias: Reflecting on whether assumptions may be affecting an assessment or referral decision.
C. Oppression: Recognizing patterns of exclusion rather than reducing a structural problem to an individual deficit. / Implicit bias: Identifying and removing practical barriers to communication and participation.
D. Oppression: Reflecting on whether assumptions may be affecting an assessment or referral decision. / Implicit bias: Recognizing patterns of exclusion rather than reducing a structural problem to an individual deficit.

0104. A trainee must distinguish how Oppression and Accessibility guide practice. Which comparison is accurate?

A. Oppression: Recognizing patterns of exclusion rather than reducing a structural problem to an individual deficit. / Accessibility: Listening to the client's account of an identity-related slight and exploring its impact without minimizing it.
B. Oppression: Recognizing patterns of exclusion rather than reducing a structural problem to an individual deficit. / Accessibility: Identifying and removing practical barriers to communication and participation.
C. Oppression: Supporting reflection on social context and agency alongside individual coping. / Accessibility: Identifying and removing practical barriers to communication and participation.
D. Oppression: Identifying and removing practical barriers to communication and participation. / Accessibility: Recognizing patterns of exclusion rather than reducing a structural problem to an individual deficit.

0105. During work in the parent meeting, a group facilitator identifies this need: supporting reflection on social context and agency alongside individual coping. Which idea should guide the response?

A. Liberation psychology
B. Microaggression
C. Implicit bias
D. Equality

0106. Which pair of actions illustrates Oppression and Implicit bias, respectively?

A. Oppression: Recognizing patterns of exclusion rather than reducing a structural problem to an individual deficit. / Implicit bias: Reflecting on whether assumptions may be affecting an assessment or referral decision.
B. Oppression: Providing different supports where needed to make participation meaningfully accessible. / Implicit bias: Reflecting on whether assumptions may be affecting an assessment or referral decision.
C. Oppression: Recognizing patterns of exclusion rather than reducing a structural problem to an individual deficit. / Implicit bias: Identifying and removing practical barriers to communication and participation.
D. Oppression: Reflecting on whether assumptions may be affecting an assessment or referral decision. / Implicit bias: Recognizing patterns of exclusion rather than reducing a structural problem to an individual deficit.

0107. Choose the practice comparison that best separates Equity from Equality.

A. Equity: Inviting client feedback about whether care feels respectful and adapting in response. / Equality: Distinguishing identical provision from support tailored to unequal barriers.
B. Equity: Distinguishing identical provision from support tailored to unequal barriers. / Equality: Providing different supports where needed to make participation meaningfully accessible.
C. Equity: Providing different supports where needed to make participation meaningfully accessible. / Equality: Distinguishing identical provision from support tailored to unequal barriers.
D. Equity: Providing different supports where needed to make participation meaningfully accessible. / Equality: Connecting a client's distress with relevant structural conditions without dismissing personal experience.

0108. Which option correctly matches each concept to its practice focus: Microaggression and Cultural safety?

A. Microaggression: Listening to the client's account of an identity-related slight and exploring its impact without minimizing it. / Cultural safety: Inviting client feedback about whether care feels respectful and adapting in response.
B. Microaggression: Listening to the client's account of an identity-related slight and exploring its impact without minimizing it. / Cultural safety: Supporting reflection on social context and agency alongside individual coping.
C. Microaggression: Inviting client feedback about whether care feels respectful and adapting in response. / Cultural safety: Listening to the client's account of an identity-related slight and exploring its impact without minimizing it.
D. Microaggression: Providing different supports where needed to make participation meaningfully accessible. / Cultural safety: Inviting client feedback about whether care feels respectful and adapting in response.

0109. A supervisor asks how Liberation psychology would appear in practice. Which choice should be selected?

A. Supporting reflection on social context and agency alongside individual coping.
B. Recognizing patterns of exclusion rather than reducing a structural problem to an individual deficit.
C. Inviting client feedback about whether care feels respectful and adapting in response.
D. Distinguishing identical provision from support tailored to unequal barriers.

0110. For a child aged 8 in the telehealth session, a behavior specialist makes this practice the immediate priority: reflecting on whether assumptions may be affecting an assessment or referral decision. Which concept fits best?

A. Accessibility
B. Microaggression
C. Implicit bias
D. Social justice counseling

0111. A supervisor asks for an applied contrast between Implicit bias and Accessibility. Which option fits?

A. Implicit bias: Identifying and removing practical barriers to communication and participation. / Accessibility: Reflecting on whether assumptions may be affecting an assessment or referral decision.
B. Implicit bias: Reflecting on whether assumptions may be affecting an assessment or referral decision. / Accessibility: Identifying and removing practical barriers to communication and participation.
C. Implicit bias: Reflecting on whether assumptions may be affecting an assessment or referral decision. / Accessibility: Listening to the client's account of an identity-related slight and exploring its impact without minimizing it.
D. Implicit bias: Recognizing patterns of exclusion rather than reducing a structural problem to an individual deficit. / Accessibility: Identifying and removing practical barriers to communication and participation.

0112. Choose the definition pair that correctly explains Power analysis first and Microaggression second.

A. Power analysis: A commonplace interaction or environmental message that communicates devaluation related to identity. / Microaggression: Examination of how authority, resources, and decision-making influence relationships and outcomes.
B. Power analysis: Designing environments, communication, and services so people with varied abilities can participate. / Microaggression: A commonplace interaction or environmental message that communicates devaluation related to identity.
C. Power analysis: Examination of how authority, resources, and decision-making influence relationships and outcomes. / Microaggression: A counseling orientation that addresses individual wellbeing alongside inequitable systems and barriers.
D. Power analysis: Examination of how authority, resources, and decision-making influence relationships and outcomes. / Microaggression: A commonplace interaction or environmental message that communicates devaluation related to identity.

0113. A case conference asks for a distinction between Equity and Implicit bias. Which answer is sound?

A. Equity: Fair allocation of support that accounts for differing barriers and needs to enable meaningful opportunity. / Implicit bias: Automatic associations that can influence judgment and behavior without conscious intent.
B. Equity: Automatic associations that can influence judgment and behavior without conscious intent. / Implicit bias: Fair allocation of support that accounts for differing barriers and needs to enable meaningful opportunity.
C. Equity: Systematic, institutional, or interpersonal processes that restrict opportunities and dignity for groups. / Implicit bias: Automatic associations that can influence judgment and behavior without conscious intent.
D. Equity: Fair allocation of support that accounts for differing barriers and needs to enable meaningful opportunity. / Implicit bias: Designing environments, communication, and services so people with varied abilities can participate.

0114. A member of a clinical team prepares for a session in the counseling practicum with a child aged 8. The intended approach is recognizing patterns of exclusion rather than reducing a structural problem to an individual deficit. Which concept is most relevant?

A. Equality
B. Cultural safety
C. Oppression
D. Social justice counseling

0115. Which option pairs the definitions of Power analysis and Oppression correctly, in that order?

A. Power analysis: Provision of the same treatment or resource to everyone, regardless of differing circumstances. / Oppression: Systematic, institutional, or interpersonal processes that restrict opportunities and dignity for groups.
B. Power analysis: Examination of how authority, resources, and decision-making influence relationships and outcomes. / Oppression: Fair allocation of support that accounts for differing barriers and needs to enable meaningful opportunity.
C. Power analysis: Examination of how authority, resources, and decision-making influence relationships and outcomes. / Oppression: Systematic, institutional, or interpersonal processes that restrict opportunities and dignity for groups.
D. Power analysis: Systematic, institutional, or interpersonal processes that restrict opportunities and dignity for groups. / Oppression: Examination of how authority, resources, and decision-making influence relationships and outcomes.

0116. In a supervision review, a school-based clinician describes work with a client in early adolescence in the parent meeting: reflecting on whether assumptions may be affecting an assessment or referral decision. What concept is illustrated?

A. Power analysis
B. Social justice counseling
C. Microaggression
D. Implicit bias

0117. A trainee must explain Cultural safety. Which answer is accurate?

A. A counseling orientation that addresses individual wellbeing alongside inequitable systems and barriers.
B. An approach emphasizing critical awareness and action addressing social conditions that contribute to distress.
C. Designing environments, communication, and services so people with varied abilities can participate.
D. A client-defined experience of care in which identity is respected and power imbalances are addressed.

0118. A trainee must explain Microaggression. Which answer is accurate?

A. A counseling orientation that addresses individual wellbeing alongside inequitable systems and barriers.
B. Provision of the same treatment or resource to everyone, regardless of differing circumstances.
C. A commonplace interaction or environmental message that communicates devaluation related to identity.
D. An approach emphasizing critical awareness and action addressing social conditions that contribute to distress.

0119. Choose the practice comparison that best separates Social justice counseling from Implicit bias.

A. Social justice counseling: Reflecting on whether assumptions may be affecting an assessment or referral decision. / Implicit bias: Connecting a client's distress with relevant structural conditions without dismissing personal experience.
B. Social justice counseling: Connecting a client's distress with relevant structural conditions without dismissing personal experience. / Implicit bias: Reflecting on whether assumptions may be affecting an assessment or referral decision.
C. Social justice counseling: Connecting a client's distress with relevant structural conditions without dismissing personal experience. / Implicit bias: Providing different supports where needed to make participation meaningfully accessible.
D. Social justice counseling: Identifying and removing practical barriers to communication and participation. / Implicit bias: Reflecting on whether assumptions may be affecting an assessment or referral decision.

0120. While supporting a middle-school student in the family resource center, a school-based clinician adopts this practice: listening to the client's account of an identity-related slight and exploring its impact without minimizing it. Which concept best explains the choice?

A. Implicit bias
B. Microaggression
C. Equity
D. Equality

0121. A trainee must choose a practice that exemplifies Liberation psychology. Which action is the best fit?

A. Recognizing patterns of exclusion rather than reducing a structural problem to an individual deficit.
B. Listening to the client's account of an identity-related slight and exploring its impact without minimizing it.
C. Reflecting on whether assumptions may be affecting an assessment or referral decision.
D. Supporting reflection on social context and agency alongside individual coping.

0122. Which option preserves the correct meaning of both Social justice counseling and Microaggression?

A. Social justice counseling: A commonplace interaction or environmental message that communicates devaluation related to identity. / Microaggression: A counseling orientation that addresses individual wellbeing alongside inequitable systems and barriers.
B. Social justice counseling: A counseling orientation that addresses individual wellbeing alongside inequitable systems and barriers. / Microaggression: A commonplace interaction or environmental message that communicates devaluation related to identity.
C. Social justice counseling: A counseling orientation that addresses individual wellbeing alongside inequitable systems and barriers. / Microaggression: Examination of how authority, resources, and decision-making influence relationships and outcomes.
D. Social justice counseling: Provision of the same treatment or resource to everyone, regardless of differing circumstances. / Microaggression: A commonplace interaction or environmental message that communicates devaluation related to identity.

0123. In a supervision quiz, how should Oppression be distinguished from Liberation psychology?

A. Oppression: An approach emphasizing critical awareness and action addressing social conditions that contribute to distress. / Liberation psychology: Systematic, institutional, or interpersonal processes that restrict opportunities and dignity for groups.
B. Oppression: Provision of the same treatment or resource to everyone, regardless of differing circumstances. / Liberation psychology: An approach emphasizing critical awareness and action addressing social conditions that contribute to distress.
C. Oppression: Systematic, institutional, or interpersonal processes that restrict opportunities and dignity for groups. / Liberation psychology: Automatic associations that can influence judgment and behavior without conscious intent.
D. Oppression: Systematic, institutional, or interpersonal processes that restrict opportunities and dignity for groups. / Liberation psychology: An approach emphasizing critical awareness and action addressing social conditions that contribute to distress.

0124. For a client in early adolescence in the outpatient clinic, a play therapist makes this practice the immediate priority: distinguishing identical provision from support tailored to unequal barriers. Which concept fits best?

A. Cultural safety
B. Accessibility
C. Equality
D. Microaggression

0125. Which option is the clearest practical expression of Accessibility?

A. Recognizing patterns of exclusion rather than reducing a structural problem to an individual deficit.
B. Providing different supports where needed to make participation meaningfully accessible.
C. Distinguishing identical provision from support tailored to unequal barriers.
D. Identifying and removing practical barriers to communication and participation.

0126. Which pair of actions illustrates Equity and Liberation psychology, respectively?

A. Equity: Recognizing patterns of exclusion rather than reducing a structural problem to an individual deficit. / Liberation psychology: Supporting reflection on social context and agency alongside individual coping.
B. Equity: Providing different supports where needed to make participation meaningfully accessible. / Liberation psychology: Supporting reflection on social context and agency alongside individual coping.
C. Equity: Supporting reflection on social context and agency alongside individual coping. / Liberation psychology: Providing different supports where needed to make participation meaningfully accessible.
D. Equity: Providing different supports where needed to make participation meaningfully accessible. / Liberation psychology: Reflecting on whether assumptions may be affecting an assessment or referral decision.

0127. In a supervision quiz, how should Social justice counseling be distinguished from Oppression?

A. Social justice counseling: A counseling orientation that addresses individual wellbeing alongside inequitable systems and barriers. / Oppression: Examination of how authority, resources, and decision-making influence relationships and outcomes.
B. Social justice counseling: Automatic associations that can influence judgment and behavior without conscious intent. / Oppression: Systematic, institutional, or interpersonal processes that restrict opportunities and dignity for groups.
C. Social justice counseling: A counseling orientation that addresses individual wellbeing alongside inequitable systems and barriers. / Oppression: Systematic, institutional, or interpersonal processes that restrict opportunities and dignity for groups.
D. Social justice counseling: Systematic, institutional, or interpersonal processes that restrict opportunities and dignity for groups. / Oppression: A counseling orientation that addresses individual wellbeing alongside inequitable systems and barriers.

0128. A trainee must distinguish how Implicit bias and Liberation psychology guide practice. Which comparison is accurate?

A. Implicit bias: Reflecting on whether assumptions may be affecting an assessment or referral decision. / Liberation psychology: Supporting reflection on social context and agency alongside individual coping.
B. Implicit bias: Supporting reflection on social context and agency alongside individual coping. / Liberation psychology: Reflecting on whether assumptions may be affecting an assessment or referral decision.
C. Implicit bias: Reflecting on whether assumptions may be affecting an assessment or referral decision. / Liberation psychology: Distinguishing identical provision from support tailored to unequal barriers.
D. Implicit bias: Providing different supports where needed to make participation meaningfully accessible. / Liberation psychology: Supporting reflection on social context and agency alongside individual coping.

0129. Which description belongs with the term Implicit bias?

A. Automatic associations that can influence judgment and behavior without conscious intent.
B. Designing environments, communication, and services so people with varied abilities can participate.
C. A commonplace interaction or environmental message that communicates devaluation related to identity.
D. Fair allocation of support that accounts for differing barriers and needs to enable meaningful opportunity.

0130. Which course concept is defined as follows: Examination of how authority, resources, and decision-making influence relationships and outcomes.

A. Accessibility
B. Microaggression
C. Power analysis
D. Cultural safety

0131. Choose the practice comparison that best separates Implicit bias from Liberation psychology.

A. Implicit bias: Reflecting on whether assumptions may be affecting an assessment or referral decision. / Liberation psychology: Distinguishing identical provision from support tailored to unequal barriers.
B. Implicit bias: Reflecting on whether assumptions may be affecting an assessment or referral decision. / Liberation psychology: Supporting reflection on social context and agency alongside individual coping.
C. Implicit bias: Providing different supports where needed to make participation meaningfully accessible. / Liberation psychology: Supporting reflection on social context and agency alongside individual coping.
D. Implicit bias: Supporting reflection on social context and agency alongside individual coping. / Liberation psychology: Reflecting on whether assumptions may be affecting an assessment or referral decision.

0132. A young adolescent client is receiving support in the student-support meeting. The youth worker is guided by this practice: identifying and removing practical barriers to communication and participation. Which principle best fits?

A. Power analysis
B. Accessibility
C. Equality
D. Equity

0133. A counselor reviews a plan for a client in late adolescence in the child guidance clinic. The plan emphasizes recognizing patterns of exclusion rather than reducing a structural problem to an individual deficit. Which course idea does this reflect?

A. Implicit bias
B. Equality
C. Equity
D. Oppression

0134. During service review in the clinical planning session, a research trainee describes identifying who controls access and whose perspective is missing in a service decision. for a student aged 9. Which course idea is most applicable?

A. Accessibility
B. Power analysis
C. Equality
D. Equity

0135. Which option correctly matches each concept to its practice focus: Oppression and Accessibility?

A. Oppression: Recognizing patterns of exclusion rather than reducing a structural problem to an individual deficit. / Accessibility: Listening to the client's account of an identity-related slight and exploring its impact without minimizing it.
B. Oppression: Identifying and removing practical barriers to communication and participation. / Accessibility: Recognizing patterns of exclusion rather than reducing a structural problem to an individual deficit.
C. Oppression: Recognizing patterns of exclusion rather than reducing a structural problem to an individual deficit. / Accessibility: Identifying and removing practical barriers to communication and participation.
D. Oppression: Supporting reflection on social context and agency alongside individual coping. / Accessibility: Identifying and removing practical barriers to communication and participation.

0136. A student confuses Power analysis with Oppression. Which explanation most accurately separates them?

A. Power analysis: Systematic, institutional, or interpersonal processes that restrict opportunities and dignity for groups. / Oppression: Examination of how authority, resources, and decision-making influence relationships and outcomes.
B. Power analysis: Examination of how authority, resources, and decision-making influence relationships and outcomes. / Oppression: Fair allocation of support that accounts for differing barriers and needs to enable meaningful opportunity.
C. Power analysis: Provision of the same treatment or resource to everyone, regardless of differing circumstances. / Oppression: Systematic, institutional, or interpersonal processes that restrict opportunities and dignity for groups.
D. Power analysis: Examination of how authority, resources, and decision-making influence relationships and outcomes. / Oppression: Systematic, institutional, or interpersonal processes that restrict opportunities and dignity for groups.

0137. A behavior specialist is asked to evaluate a proposed service for a child aged 6 in the community mental-health service. The defining feature is identifying who controls access and whose perspective is missing in a service decision. Which concept fits?

A. Cultural safety
B. Equity
C. Power analysis
D. Implicit bias

0138. A older adolescent client is receiving support in the classroom support meeting. The school counselor is guided by this practice: identifying who controls access and whose perspective is missing in a service decision. Which principle best fits?

A. Equity
B. Accessibility
C. Power analysis
D. Social justice counseling

0139. Which comparison would correct a trainee's misunderstanding of Liberation psychology versus Cultural safety?

A. Liberation psychology: Automatic associations that can influence judgment and behavior without conscious intent. / Cultural safety: A client-defined experience of care in which identity is respected and power imbalances are addressed.
B. Liberation psychology: An approach emphasizing critical awareness and action addressing social conditions that contribute to distress. / Cultural safety: Designing environments, communication, and services so people with varied abilities can participate.
C. Liberation psychology: A client-defined experience of care in which identity is respected and power imbalances are addressed. / Cultural safety: An approach emphasizing critical awareness and action addressing social conditions that contribute to distress.
D. Liberation psychology: An approach emphasizing critical awareness and action addressing social conditions that contribute to distress. / Cultural safety: A client-defined experience of care in which identity is respected and power imbalances are addressed.

0140. Which professional action most closely applies Oppression?

A. Reflecting on whether assumptions may be affecting an assessment or referral decision.
B. Recognizing patterns of exclusion rather than reducing a structural problem to an individual deficit.
C. Listening to the client's account of an identity-related slight and exploring its impact without minimizing it.
D. Providing different supports where needed to make participation meaningfully accessible.

0141. A case conference reviews a community practitioner’s work with a older adolescent client in the supervision meeting: connecting a client’s distress with relevant structural conditions without dismissing personal experience. Which principle is central?

A. Implicit bias
B. Cultural safety
C. Microaggression
D. Social justice counseling

0142. A trainee must choose a practice that exemplifies Implicit bias. Which action is the best fit?

A. Reflecting on whether assumptions may be affecting an assessment or referral decision.
B. Supporting reflection on social context and agency alongside individual coping.
C. Inviting client feedback about whether care feels respectful and adapting in response.
D. Distinguishing identical provision from support tailored to unequal barriers.

0143. A program coordinator describes an intervention for a adolescent student in the learning-support meeting, centered on supporting reflection on social context and agency alongside individual coping. Which named idea is most relevant?

A. Social justice counseling
B. Oppression
C. Liberation psychology
D. Cultural safety

0144. Identify the most precise label for this idea: Provision of the same treatment or resource to everyone, regardless of differing circumstances.

A. Implicit bias
B. Equity
C. Equality
D. Liberation psychology

0145. At the outpatient clinic, a behavior specialist meets with a young adolescent client. The practice priority is: inviting client feedback about whether care feels respectful and adapting in response. Which concept best captures that priority?

A. Equality
B. Equity
C. Social justice counseling
D. Cultural safety

0146. A trainee must distinguish how Implicit bias and Microaggression guide practice. Which comparison is accurate?

A. Implicit bias: Listening to the client’s account of an identity-related slight and exploring its impact without minimizing it. / Microaggression: Reflecting on whether assumptions may be affecting an assessment or referral decision.
B. Implicit bias: Reflecting on whether assumptions may be affecting an assessment or referral decision. / Microaggression: Listening to the client’s account of an identity-related slight and exploring its impact without minimizing it.
C. Implicit bias: Reflecting on whether assumptions may be affecting an assessment or referral decision. / Microaggression: Connecting a client’s distress with relevant structural conditions without dismissing personal experience.
D. Implicit bias: Identifying and removing practical barriers to communication and participation. / Microaggression: Listening to the client’s account of an identity-related slight and exploring its impact without minimizing it.

0147. A play therapist is asked to evaluate a proposed service for a middle-school student in the learning-support meeting. The defining feature is reflecting on whether assumptions may be affecting an assessment or referral decision. Which concept fits?

A. Liberation psychology
B. Microaggression
C. Oppression
D. Implicit bias

0148. Which option preserves the correct meaning of both Equity and Liberation psychology?

A. Equity: Fair allocation of support that accounts for differing barriers and needs to enable meaningful opportunity. / Liberation psychology: Automatic associations that can influence judgment and behavior without conscious intent.
B. Equity: Fair allocation of support that accounts for differing barriers and needs to enable meaningful opportunity. / Liberation psychology: An approach emphasizing critical awareness and action addressing social conditions that contribute to distress.
C. Equity: An approach emphasizing critical awareness and action addressing social conditions that contribute to distress. / Liberation psychology: Fair allocation of support that accounts for differing barriers and needs to enable meaningful opportunity.
D. Equity: Systematic, institutional, or interpersonal processes that restrict opportunities and dignity for groups. / Liberation psychology: An approach emphasizing critical awareness and action addressing social conditions that contribute to distress.

0149. Consider a child aged 6 receiving help in the multidisciplinary case conference. The youth worker focuses on connecting a client’s distress with relevant structural conditions without dismissing personal experience. Which term best describes the guiding idea?

A. Liberation psychology
B. Cultural safety
C. Equality
D. Social justice counseling

0150. In the after-school program, a team asks how a youth worker can support a high-school student. One proposed action is supporting reflection on social context and agency alongside individual coping. Which idea does it represent?

A. Microaggression
B. Social justice counseling
C. Equity
D. Liberation psychology

0151. A school support specialist reviews a plan for a client in early adolescence in the youth group. The plan emphasizes inviting client feedback about whether care feels respectful and adapting in response. Which course idea does this reflect?

A. Equality
B. Cultural safety
C. Accessibility
D. Liberation psychology

0152. Which choice aligns each practice with the correct idea, Equality or Accessibility?

A. Equality: Distinguishing identical provision from support tailored to unequal barriers. / Accessibility: Identifying and removing practical barriers to communication and participation.
B. Equality: Recognizing patterns of exclusion rather than reducing a structural problem to an individual deficit. / Accessibility: Identifying and removing practical barriers to communication and participation.
C. Equality: Identifying and removing practical barriers to communication and participation. / Accessibility: Distinguishing identical provision from support tailored to unequal barriers.
D. Equality: Distinguishing identical provision from support tailored to unequal barriers. / Accessibility: Providing different supports where needed to make participation meaningfully accessible.

0153. For a young person aged 18 seen in the youth group, the community practitioner recommends a plan built around identifying who controls access and whose perspective is missing in a service decision. Which concept is reflected?

A. Accessibility
B. Implicit bias
C. Microaggression
D. Power analysis

0154. A trainee must choose a practice that exemplifies Microaggression. Which action is the best fit?

A. Recognizing patterns of exclusion rather than reducing a structural problem to an individual deficit.
B. Listening to the client's account of an identity-related slight and exploring its impact without minimizing it.
C. Supporting reflection on social context and agency alongside individual coping.
D. Identifying who controls access and whose perspective is missing in a service decision.

0155. In the behavior-support review, a consulting counselor describes the most appropriate support for a student aged 9 as recognizing patterns of exclusion rather than reducing a structural problem to an individual deficit. Which framework is being applied?

A. Cultural safety
B. Equity
C. Implicit bias
D. Oppression

0156. A case conference asks for a distinction between Implicit bias and Liberation psychology. Which answer is sound?

A. Implicit bias: An approach emphasizing critical awareness and action addressing social conditions that contribute to distress. / Liberation psychology: Automatic associations that can influence judgment and behavior without conscious intent.
B. Implicit bias: Automatic associations that can influence judgment and behavior without conscious intent. / Liberation psychology: An approach emphasizing critical awareness and action addressing social conditions that contribute to distress.
C. Implicit bias: Automatic associations that can influence judgment and behavior without conscious intent. / Liberation psychology: Provision of the same treatment or resource to everyone, regardless of differing circumstances.
D. Implicit bias: Fair allocation of support that accounts for differing barriers and needs to enable meaningful opportunity. / Liberation psychology: An approach emphasizing critical awareness and action addressing social conditions that contribute to distress.

0157. Which pair of actions illustrates Social justice counseling and Cultural safety, respectively?

A. Social justice counseling: Inviting client feedback about whether care feels respectful and adapting in response. / Cultural safety: Connecting a client's distress with relevant structural conditions without dismissing personal experience.
B. Social justice counseling: Connecting a client's distress with relevant structural conditions without dismissing personal experience. / Cultural safety: Inviting client feedback about whether care feels respectful and adapting in response.
C. Social justice counseling: Connecting a client's distress with relevant structural conditions without dismissing personal experience. / Cultural safety: Reflecting on whether assumptions may be affecting an assessment or referral decision.
D. Social justice counseling: Identifying and removing practical barriers to communication and participation. / Cultural safety: Inviting client feedback about whether care feels respectful and adapting in response.

0158. Which pair of actions illustrates Microaggression and Liberation psychology, respectively?

A. Microaggression: Listening to the client's account of an identity-related slight and exploring its impact without minimizing it. / Liberation psychology: Supporting reflection on social context and agency alongside individual coping.
B. Microaggression: Connecting a client's distress with relevant structural conditions without dismissing personal experience. / Liberation psychology: Supporting reflection on social context and agency alongside individual coping.
C. Microaggression: Listening to the client's account of an identity-related slight and exploring its impact without minimizing it. / Liberation psychology: Reflecting on whether assumptions may be affecting an assessment or referral decision.
D. Microaggression: Supporting reflection on social context and agency alongside individual coping. / Liberation psychology: Listening to the client's account of an identity-related slight and exploring its impact without minimizing it.

0159. A supervisor asks for an applied contrast between Microaggression and Liberation psychology. Which option fits?

A. Microaggression: Listening to the client's account of an identity-related slight and exploring its impact without minimizing it. / Liberation psychology: Reflecting on whether assumptions may be affecting an assessment or referral decision.
B. Microaggression: Connecting a client's distress with relevant structural conditions without dismissing personal experience. / Liberation psychology: Supporting reflection on social context and agency alongside individual coping.
C. Microaggression: Supporting reflection on social context and agency alongside individual coping. / Liberation psychology: Listening to the client's account of an identity-related slight and exploring its impact without minimizing it.
D. Microaggression: Listening to the client's account of an identity-related slight and exploring its impact without minimizing it. / Liberation psychology: Supporting reflection on social context and agency alongside individual coping.

0160. Which applied comparison correctly identifies what belongs to Microaggression versus Cultural safety?

A. Microaggression: Providing different supports where needed to make participation meaningfully accessible. / Cultural safety: Inviting client feedback about whether care feels respectful and adapting in response.
B. Microaggression: Listening to the client's account of an identity-related slight and exploring its impact without minimizing it. / Cultural safety: Inviting client feedback about whether care feels respectful and adapting in response.
C. Microaggression: Inviting client feedback about whether care feels respectful and adapting in response. / Cultural safety: Listening to the client's account of an identity-related slight and exploring its impact without minimizing it.
D. Microaggression: Listening to the client's account of an identity-related slight and exploring its impact without minimizing it. / Cultural safety: Supporting reflection on social context and agency alongside individual coping.

0161. A student confuses Microaggression with Liberation psychology. Which explanation most accurately separates them?

A. Microaggression: An approach emphasizing critical awareness and action addressing social conditions that contribute to distress. / Liberation psychology: A commonplace interaction or environmental message that communicates devaluation related to identity.
B. Microaggression: A counseling orientation that addresses individual wellbeing alongside inequitable systems and barriers. / Liberation psychology: An approach emphasizing critical awareness and action addressing social conditions that contribute to distress.
C. Microaggression: A commonplace interaction or environmental message that communicates devaluation related to identity. / Liberation psychology: Automatic associations that can influence judgment and behavior without conscious intent.
D. Microaggression: A commonplace interaction or environmental message that communicates devaluation related to identity. / Liberation psychology: An approach emphasizing critical awareness and action addressing social conditions that contribute to distress.

0162. Which statement accurately contrasts the course concepts Equity and Equality?

A. Equity: Fair allocation of support that accounts for differing barriers and needs to enable meaningful opportunity. / Equality: Provision of the same treatment or resource to everyone, regardless of differing circumstances.
B. Equity: Provision of the same treatment or resource to everyone, regardless of differing circumstances. / Equality: Fair allocation of support that accounts for differing barriers and needs to enable meaningful opportunity.
C. Equity: A client-defined experience of care in which identity is respected and power imbalances are addressed. / Equality: Provision of the same treatment or resource to everyone, regardless of differing circumstances.
D. Equity: Fair allocation of support that accounts for differing barriers and needs to enable meaningful opportunity. / Equality: A counseling orientation that addresses individual wellbeing alongside inequitable systems and barriers.

0163. Which statement accurately contrasts the course concepts Equality and Cultural safety?

A. Equality: Provision of the same treatment or resource to everyone, regardless of differing circumstances. / Cultural safety: Systematic, institutional, or interpersonal processes that restrict opportunities and dignity for groups.
B. Equality: A client-defined experience of care in which identity is respected and power imbalances are addressed. / Cultural safety: Provision of the same treatment or resource to everyone, regardless of differing circumstances.
C. Equality: Provision of the same treatment or resource to everyone, regardless of differing circumstances. / Cultural safety: A client-defined experience of care in which identity is respected and power imbalances are addressed.
D. Equality: A commonplace interaction or environmental message that communicates devaluation related to identity. / Cultural safety: A client-defined experience of care in which identity is respected and power imbalances are addressed.

0164. In the school consultation, the agreed focus for a research trainee working with a student aged 12 is connecting a client's distress with relevant structural conditions without dismissing personal experience. Which concept names this focus?

A. Implicit bias
B. Accessibility
C. Power analysis
D. Social justice counseling

0165. A young person and a member of a clinical team are reviewing goals in the classroom support meeting. The agreed action is providing different supports where needed to make participation meaningfully accessible. Which principle best accounts for it?

A. Accessibility
B. Social justice counseling
C. Equity
D. Equality

0166. Which applied comparison correctly identifies what belongs to Oppression versus Accessibility?

A. Oppression: Recognizing patterns of exclusion rather than reducing a structural problem to an individual deficit. / Accessibility: Listening to the client's account of an identity-related slight and exploring its impact without minimizing it.
B. Oppression: Recognizing patterns of exclusion rather than reducing a structural problem to an individual deficit. / Accessibility: Identifying and removing practical barriers to communication and participation.
C. Oppression: Identifying and removing practical barriers to communication and participation. / Accessibility: Recognizing patterns of exclusion rather than reducing a structural problem to an individual deficit.
D. Oppression: Supporting reflection on social context and agency alongside individual coping. / Accessibility: Identifying and removing practical barriers to communication and participation.

0167. Which option correctly matches each concept to its practice focus: Liberation psychology and Accessibility?

A. Liberation psychology: Supporting reflection on social context and agency alongside individual coping. / Accessibility: Identifying and removing practical barriers to communication and participation.
B. Liberation psychology: Identifying and removing practical barriers to communication and participation. / Accessibility: Supporting reflection on social context and agency alongside individual coping.
C. Liberation psychology: Listening to the client's account of an identity-related slight and exploring its impact without minimizing it. / Accessibility: Identifying and removing practical barriers to communication and participation.
D. Liberation psychology: Supporting reflection on social context and agency alongside individual coping. / Accessibility: Reflecting on whether assumptions may be affecting an assessment or referral decision.

0168. How should a practitioner distinguish the applications of Implicit bias and Cultural safety?

A. Implicit bias: Supporting reflection on social context and agency alongside individual coping. / Cultural safety: Inviting client feedback about whether care feels respectful and adapting in response.
B. Implicit bias: Inviting client feedback about whether care feels respectful and adapting in response. / Cultural safety: Reflecting on whether assumptions may be affecting an assessment or referral decision.
C. Implicit bias: Reflecting on whether assumptions may be affecting an assessment or referral decision. / Cultural safety: Providing different supports where needed to make participation meaningfully accessible.
D. Implicit bias: Reflecting on whether assumptions may be affecting an assessment or referral decision. / Cultural safety: Inviting client feedback about whether care feels respectful and adapting in response.

0169. Consider a child aged 8 receiving help in the supervision meeting. The teacher and counselor focuses on inviting client feedback about whether care feels respectful and adapting in response. Which term best describes the guiding idea?

A. Equality
B. Power analysis
C. Social justice counseling
D. Cultural safety

0170. What is the central meaning of Equity?

A. Examination of how authority, resources, and decision-making influence relationships and outcomes.
B. Fair allocation of support that accounts for differing barriers and needs to enable meaningful opportunity.
C. A counseling orientation that addresses individual wellbeing alongside inequitable systems and barriers.
D. Provision of the same treatment or resource to everyone, regardless of differing circumstances.

0171. Which statement shows a sound practice-level distinction between Power analysis and Oppression?

A. Power analysis: Identifying who controls access and whose perspective is missing in a service decision. / Oppression: Providing different supports where needed to make participation meaningfully accessible.
B. Power analysis: Identifying who controls access and whose perspective is missing in a service decision. / Oppression: Recognizing patterns of exclusion rather than reducing a structural problem to an individual deficit.
C. Power analysis: Recognizing patterns of exclusion rather than reducing a structural problem to an individual deficit. / Oppression: Identifying who controls access and whose perspective is missing in a service decision.
D. Power analysis: Distinguishing identical provision from support tailored to unequal barriers. / Oppression: Recognizing patterns of exclusion rather than reducing a structural problem to an individual deficit.

0172. Which paired example correctly applies Equality first and Cultural safety second?

A. Equality: Distinguishing identical provision from support tailored to unequal barriers. / Cultural safety: Inviting client feedback about whether care feels respectful and adapting in response.
B. Equality: Inviting client feedback about whether care feels respectful and adapting in response. / Cultural safety: Distinguishing identical provision from support tailored to unequal barriers.
C. Equality: Listening to the client's account of an identity-related slight and exploring its impact without minimizing it. / Cultural safety: Inviting client feedback about whether care feels respectful and adapting in response.
D. Equality: Distinguishing identical provision from support tailored to unequal barriers. / Cultural safety: Recognizing patterns of exclusion rather than reducing a structural problem to an individual deficit.

0173. Which paired example correctly applies Power analysis first and Liberation psychology second?

A. Power analysis: Providing different supports where needed to make participation meaningfully accessible. / Liberation psychology: Supporting reflection on social context and agency alongside individual coping.
B. Power analysis: Identifying who controls access and whose perspective is missing in a service decision. / Liberation psychology: Reflecting on whether assumptions may be affecting an assessment or referral decision.
C. Power analysis: Supporting reflection on social context and agency alongside individual coping. / Liberation psychology: Identifying who controls access and whose perspective is missing in a service decision.
D. Power analysis: Identifying who controls access and whose perspective is missing in a service decision. / Liberation psychology: Supporting reflection on social context and agency alongside individual coping.

0174. A youth worker is asked to justify a plan for a child aged 7 in the youth advocacy program. It calls for inviting client feedback about whether care feels respectful and adapting in response. Which concept provides the rationale?

A. Cultural safety
B. Equity
C. Implicit bias
D. Power analysis

0175. In a case note about a child of elementary-school age, a supervised trainee working in the telehealth session records this priority: providing different supports where needed to make participation meaningfully accessible. What principle is reflected?

A. Equality
B. Liberation psychology
C. Equity
D. Microaggression

0176. A consultant is supporting a middle-school student in the youth group. The key practice is recognizing patterns of exclusion rather than reducing a structural problem to an individual deficit. Which course concept is most relevant?

A. Oppression
B. Social justice counseling
C. Liberation psychology
D. Equity

0177. A assessment clinician is supporting a young person aged 16 in the school consultation. The key practice is identifying who controls access and whose perspective is missing in a service decision. Which course concept is most relevant?

A. Power analysis
B. Implicit bias
C. Liberation psychology
D. Oppression

0178. A doctoral student reads the following description. Which concept does it define? Fair allocation of support that accounts for differing barriers and needs to enable meaningful opportunity.

A. Power analysis
B. Microaggression
C. Equity
D. Accessibility

0179. A consultant prepares for a session in the supervision meeting with a client in early adolescence. The intended approach is identifying who controls access and whose perspective is missing in a service decision. Which concept is most relevant?

A. Implicit bias
B. Equality
C. Power analysis
D. Liberation psychology

0180. When reviewing a client in early adolescence’s plan in the parent meeting, the school-based clinician notes that the next step is reflecting on whether assumptions may be affecting an assessment or referral decision. Which concept guides this step?

A. Equality
B. Equity
C. Implicit bias
D. Accessibility

0181. A support meeting for a student aged 9 includes a counselor in the student wellness team. The practice under consideration is identifying and removing practical barriers to communication and participation. Which concept guides it?

A. Equality
B. Power analysis
C. Accessibility
D. Microaggression

0182. Which option preserves the correct meaning of both Equity and Accessibility?

A. Equity: Fair allocation of support that accounts for differing barriers and needs to enable meaningful opportunity. / Accessibility: A commonplace interaction or environmental message that communicates devaluation related to identity.
B. Equity: Designing environments, communication, and services so people with varied abilities can participate. / Accessibility: Fair allocation of support that accounts for differing barriers and needs to enable meaningful opportunity.
C. Equity: Provision of the same treatment or resource to everyone, regardless of differing circumstances. / Accessibility: Designing environments, communication, and services so people with varied abilities can participate.
D. Equity: Fair allocation of support that accounts for differing barriers and needs to enable meaningful opportunity. / Accessibility: Designing environments, communication, and services so people with varied abilities can participate.

0183. How are Oppression and Implicit bias most accurately differentiated in this curriculum?

A. Oppression: Systematic, institutional, or interpersonal processes that restrict opportunities and dignity for groups. / Implicit bias: Designing environments, communication, and services so people with varied abilities can participate.
B. Oppression: Fair allocation of support that accounts for differing barriers and needs to enable meaningful opportunity. / Implicit bias: Automatic associations that can influence judgment and behavior without conscious intent.
C. Oppression: Systematic, institutional, or interpersonal processes that restrict opportunities and dignity for groups. / Implicit bias: Automatic associations that can influence judgment and behavior without conscious intent.
D. Oppression: Automatic associations that can influence judgment and behavior without conscious intent. / Implicit bias: Systematic, institutional, or interpersonal processes that restrict opportunities and dignity for groups.

0184. Select the best explanation of Equality.

A. Fair allocation of support that accounts for differing barriers and needs to enable meaningful opportunity.
B. Systematic, institutional, or interpersonal processes that restrict opportunities and dignity for groups.
C. Designing environments, communication, and services so people with varied abilities can participate.
D. Provision of the same treatment or resource to everyone, regardless of differing circumstances.

0185. Choose the definition pair that correctly explains Equality first and Accessibility second.

A. Equality: Provision of the same treatment or resource to everyone, regardless of differing circumstances. / Accessibility: Designing environments, communication, and services so people with varied abilities can participate.
B. Equality: Designing environments, communication, and services so people with varied abilities can participate. / Accessibility: Provision of the same treatment or resource to everyone, regardless of differing circumstances.
C. Equality: Systematic, institutional, or interpersonal processes that restrict opportunities and dignity for groups. / Accessibility: Designing environments, communication, and services so people with varied abilities can participate.
D. Equality: Provision of the same treatment or resource to everyone, regardless of differing circumstances. / Accessibility: Fair allocation of support that accounts for differing barriers and needs to enable meaningful opportunity.

0186. A trainee must explain Equality. Which answer is accurate?

A. A counseling orientation that addresses individual wellbeing alongside inequitable systems and barriers.
B. Provision of the same treatment or resource to everyone, regardless of differing circumstances.
C. Automatic associations that can influence judgment and behavior without conscious intent.
D. An approach emphasizing critical awareness and action addressing social conditions that contribute to distress.

0187. Which option pairs the definitions of Oppression and Accessibility correctly, in that order?

A. Oppression: Systematic, institutional, or interpersonal processes that restrict opportunities and dignity for groups. / Accessibility: A commonplace interaction or environmental message that communicates devaluation related to identity.
B. Oppression: Systematic, institutional, or interpersonal processes that restrict opportunities and dignity for groups. / Accessibility: Designing environments, communication, and services so people with varied abilities can participate.
C. Oppression: Designing environments, communication, and services so people with varied abilities can participate. / Accessibility: Systematic, institutional, or interpersonal processes that restrict opportunities and dignity for groups.
D. Oppression: An approach emphasizing critical awareness and action addressing social conditions that contribute to distress. / Accessibility: Designing environments, communication, and services so people with varied abilities can participate.

0188. Which statement accurately contrasts the course concepts Social justice counseling and Implicit bias?

A. Social justice counseling: Designing environments, communication, and services so people with varied abilities can participate. / Implicit bias: Automatic associations that can influence judgment and behavior without conscious intent.
B. Social justice counseling: A counseling orientation that addresses individual wellbeing alongside inequitable systems and barriers. / Implicit bias: Fair allocation of support that accounts for differing barriers and needs to enable meaningful opportunity.
C. Social justice counseling: A counseling orientation that addresses individual wellbeing alongside inequitable systems and barriers. / Implicit bias: Automatic associations that can influence judgment and behavior without conscious intent.
D. Social justice counseling: Automatic associations that can influence judgment and behavior without conscious intent. / Implicit bias: A counseling orientation that addresses individual wellbeing alongside inequitable systems and barriers.

0189. A supervisor asks how Equality would appear in practice. Which choice should be selected?

A. Distinguishing identical provision from support tailored to unequal barriers.
B. Inviting client feedback about whether care feels respectful and adapting in response.
C. Providing different supports where needed to make participation meaningfully accessible.
D. Supporting reflection on social context and agency alongside individual coping.

0190. Which comparison correctly distinguishes Oppression from Implicit bias?

A. Oppression: Systematic, institutional, or interpersonal processes that restrict opportunities and dignity for groups. / Implicit bias: Designing environments, communication, and services so people with varied abilities can participate.
B. Oppression: Fair allocation of support that accounts for differing barriers and needs to enable meaningful opportunity. / Implicit bias: Automatic associations that can influence judgment and behavior without conscious intent.
C. Oppression: Automatic associations that can influence judgment and behavior without conscious intent. / Implicit bias: Systematic, institutional, or interpersonal processes that restrict opportunities and dignity for groups.
D. Oppression: Systematic, institutional, or interpersonal processes that restrict opportunities and dignity for groups. / Implicit bias: Automatic associations that can influence judgment and behavior without conscious intent.

0191. Which named construct is captured by this account? Provision of the same treatment or resource to everyone, regardless of differing circumstances.

A. Equity
B. Cultural safety
C. Implicit bias
D. Equality

0192. A planning meeting about a adolescent student includes a counselor. The proposed practice in the multidisciplinary case conference is inviting client feedback about whether care feels respectful and adapting in response. Which idea underlies it?

A. Cultural safety
B. Implicit bias
C. Power analysis
D. Accessibility

0193. A case conference asks for a distinction between Social justice counseling and Microaggression. Which answer is sound?

A. Social justice counseling: A counseling orientation that addresses individual wellbeing alongside inequitable systems and barriers. / Microaggression: Examination of how authority, resources, and decision-making influence relationships and outcomes.
B. Social justice counseling: A commonplace interaction or environmental message that communicates devaluation related to identity. / Microaggression: A counseling orientation that addresses individual wellbeing alongside inequitable systems and barriers.
C. Social justice counseling: A counseling orientation that addresses individual wellbeing alongside inequitable systems and barriers. / Microaggression: A commonplace interaction or environmental message that communicates devaluation related to identity.
D. Social justice counseling: Provision of the same treatment or resource to everyone, regardless of differing circumstances. / Microaggression: A commonplace interaction or environmental message that communicates devaluation related to identity.

0194. At the youth group, a service navigator reviews whether a plan for a child aged 14 is appropriate. The relevant practice is listening to the client's account of an identity-related slight and exploring its impact without minimizing it. Which concept is tested?

A. Liberation psychology
B. Equality
C. Cultural safety
D. Microaggression

0195. Which option preserves the correct meaning of both Social justice counseling and Accessibility?

A. Social justice counseling: A counseling orientation that addresses individual wellbeing alongside inequitable systems and barriers. / Accessibility: Designing environments, communication, and services so people with varied abilities can participate.
B. Social justice counseling: Automatic associations that can influence judgment and behavior without conscious intent. / Accessibility: Designing environments, communication, and services so people with varied abilities can participate.
C. Social justice counseling: A counseling orientation that addresses individual wellbeing alongside inequitable systems and barriers. / Accessibility: A client-defined experience of care in which identity is respected and power imbalances are addressed.
D. Social justice counseling: Designing environments, communication, and services so people with varied abilities can participate. / Accessibility: A counseling orientation that addresses individual wellbeing alongside inequitable systems and barriers.

0196. Choose the term that matches this definition: Fair allocation of support that accounts for differing barriers and needs to enable meaningful opportunity.

A. Social justice counseling
B. Power analysis
C. Equity
D. Accessibility

0197. A trainee must choose a practice that exemplifies Equality. Which action is the best fit?

A. Inviting client feedback about whether care feels respectful and adapting in response.
B. Connecting a client's distress with relevant structural conditions without dismissing personal experience.
C. Reflecting on whether assumptions may be affecting an assessment or referral decision.
D. Distinguishing identical provision from support tailored to unequal barriers.

0198. When reviewing a middle-school student's plan in the child guidance clinic, the caregiver working with a counselor notes that the next step is identifying who controls access and whose perspective is missing in a service decision. Which concept guides this step?

A. Implicit bias
B. Cultural safety
C. Power analysis
D. Equity

0199. Which pair of actions illustrates Equality and Microaggression, respectively?

A. Equality: Reflecting on whether assumptions may be affecting an assessment or referral decision. / Microaggression: Listening to the client's account of an identity-related slight and exploring its impact without minimizing it.
B. Equality: Distinguishing identical provision from support tailored to unequal barriers. / Microaggression: Providing different supports where needed to make participation meaningfully accessible.
C. Equality: Listening to the client's account of an identity-related slight and exploring its impact without minimizing it. / Microaggression: Distinguishing identical provision from support tailored to unequal barriers.
D. Equality: Distinguishing identical provision from support tailored to unequal barriers. / Microaggression: Listening to the client's account of an identity-related slight and exploring its impact without minimizing it.

0200. Choose the definition pair that correctly explains Power analysis first and Liberation psychology second.

A. Power analysis: Examination of how authority, resources, and decision-making influence relationships and outcomes. / Liberation psychology: An approach emphasizing critical awareness and action addressing social conditions that contribute to distress.
B. Power analysis: An approach emphasizing critical awareness and action addressing social conditions that contribute to distress. / Liberation psychology: Examination of how authority, resources, and decision-making influence relationships and outcomes.
C. Power analysis: Examination of how authority, resources, and decision-making influence relationships and outcomes. / Liberation psychology: Automatic associations that can influence judgment and behavior without conscious intent.
D. Power analysis: Fair allocation of support that accounts for differing barriers and needs to enable meaningful opportunity. / Liberation psychology: An approach emphasizing critical awareness and action addressing social conditions that contribute to distress.

0201. A family therapist presents a support plan for a child aged 7 at the child guidance clinic. Its central feature is listening to the client's account of an identity-related slight and exploring its impact without minimizing it. Which concept should be named?

A. Power analysis
B. Liberation psychology
C. Equity
D. Microaggression

0202. How are Power analysis and Oppression most accurately differentiated in this curriculum?

A. Power analysis: Provision of the same treatment or resource to everyone, regardless of differing circumstances. / Oppression: Systematic, institutional, or interpersonal processes that restrict opportunities and dignity for groups.
B. Power analysis: Examination of how authority, resources, and decision-making influence relationships and outcomes. / Oppression: Systematic, institutional, or interpersonal processes that restrict opportunities and dignity for groups.
C. Power analysis: Examination of how authority, resources, and decision-making influence relationships and outcomes. / Oppression: Fair allocation of support that accounts for differing barriers and needs to enable meaningful opportunity.
D. Power analysis: Systematic, institutional, or interpersonal processes that restrict opportunities and dignity for groups. / Oppression: Examination of how authority, resources, and decision-making influence relationships and outcomes.

0203. A doctoral student reads the following description. Which concept does it define? A commonplace interaction or environmental message that communicates devaluation related to identity.

A. Microaggression
B. Power analysis
C. Social justice counseling
D. Equality

0204. A supervisor asks for an applied contrast between Power analysis and Oppression. Which option fits?

A. Power analysis: Distinguishing identical provision from support tailored to unequal barriers. / Oppression: Recognizing patterns of exclusion rather than reducing a structural problem to an individual deficit.
B. Power analysis: Identifying who controls access and whose perspective is missing in a service decision. / Oppression: Recognizing patterns of exclusion rather than reducing a structural problem to an individual deficit.
C. Power analysis: Recognizing patterns of exclusion rather than reducing a structural problem to an individual deficit. / Oppression: Identifying who controls access and whose perspective is missing in a service decision.
D. Power analysis: Identifying who controls access and whose perspective is missing in a service decision. / Oppression: Providing different supports where needed to make participation meaningfully accessible.

0205. An interdisciplinary team reviews a child of elementary-school age's case at the after-school program. The school support specialist recommends identifying who controls access and whose perspective is missing in a service decision. Which course concept best fits?

A. Power analysis
B. Cultural safety
C. Microaggression
D. Accessibility

0206. In the counseling practicum, a team asks how a school counselor can support a child of elementary-school age. One proposed action is connecting a client's distress with relevant structural conditions without dismissing personal experience. Which idea does it represent?

A. Social justice counseling
B. Equality
C. Power analysis
D. Cultural safety

0207. During work in the school consultation, a school counselor identifies this need: inviting client feedback about whether care feels respectful and adapting in response. Which idea should guide the response?

A. Cultural safety
B. Oppression
C. Accessibility
D. Social justice counseling

0208. A child aged 11 is receiving support in the family resource center. The youth worker is guided by this practice: providing different supports where needed to make participation meaningfully accessible. Which principle best fits?

A. Social justice counseling
B. Liberation psychology
C. Implicit bias
D. Equity

0209. Which choice aligns each practice with the correct idea, Equality or Implicit bias?

A. Equality: Distinguishing identical provision from support tailored to unequal barriers. / Implicit bias: Providing different supports where needed to make participation meaningfully accessible.
B. Equality: Reflecting on whether assumptions may be affecting an assessment or referral decision. / Implicit bias: Distinguishing identical provision from support tailored to unequal barriers.
C. Equality: Inviting client feedback about whether care feels respectful and adapting in response. / Implicit bias: Reflecting on whether assumptions may be affecting an assessment or referral decision.
D. Equality: Distinguishing identical provision from support tailored to unequal barriers. / Implicit bias: Reflecting on whether assumptions may be affecting an assessment or referral decision.

0210. Which comparison would correct a trainee’s misunderstanding of Implicit bias versus Liberation psychology?

A. Implicit bias: An approach emphasizing critical awareness and action addressing social conditions that contribute to distress. / Liberation psychology: Automatic associations that can influence judgment and behavior without conscious intent.
B. Implicit bias: Automatic associations that can influence judgment and behavior without conscious intent. / Liberation psychology: Provision of the same treatment or resource to everyone, regardless of differing circumstances.
C. Implicit bias: Automatic associations that can influence judgment and behavior without conscious intent. / Liberation psychology: An approach emphasizing critical awareness and action addressing social conditions that contribute to distress.
D. Implicit bias: Fair allocation of support that accounts for differing barriers and needs to enable meaningful opportunity. / Liberation psychology: An approach emphasizing critical awareness and action addressing social conditions that contribute to distress.

0211. Which statement shows a sound practice-level distinction between Power analysis and Cultural safety?

A. Power analysis: Inviting client feedback about whether care feels respectful and adapting in response. / Cultural safety: Identifying who controls access and whose perspective is missing in a service decision.
B. Power analysis: Identifying who controls access and whose perspective is missing in a service decision. / Cultural safety: Inviting client feedback about whether care feels respectful and adapting in response.
C. Power analysis: Identifying who controls access and whose perspective is missing in a service decision. / Cultural safety: Listening to the client’s account of an identity-related slight and exploring its impact without minimizing it.
D. Power analysis: Identifying and removing practical barriers to communication and participation. / Cultural safety: Inviting client feedback about whether care feels respectful and adapting in response.

0212. A preadolescent child is receiving support in the school counseling office. The school counselor is guided by this practice: listening to the client’s account of an identity-related slight and exploring its impact without minimizing it. Which principle best fits?

A. Cultural safety
B. Social justice counseling
C. Equity
D. Microaggression

0213. A community practitioner describes an intervention for a child aged 6 in the community youth program, centered on inviting client feedback about whether care feels respectful and adapting in response. Which named idea is most relevant?

A. Social justice counseling
B. Cultural safety
C. Microaggression
D. Implicit bias

0214. A case conference asks for a distinction between Oppression and Cultural safety. Which answer is sound?

A. Oppression: Designing environments, communication, and services so people with varied abilities can participate. / Cultural safety: A client-defined experience of care in which identity is respected and power imbalances are addressed.
B. Oppression: Systematic, institutional, or interpersonal processes that restrict opportunities and dignity for groups. / Cultural safety: A client-defined experience of care in which identity is respected and power imbalances are addressed.
C. Oppression: Systematic, institutional, or interpersonal processes that restrict opportunities and dignity for groups. / Cultural safety: A commonplace interaction or environmental message that communicates devaluation related to identity.
D. Oppression: A client-defined experience of care in which identity is respected and power imbalances are addressed. / Cultural safety: Systematic, institutional, or interpersonal processes that restrict opportunities and dignity for groups.

0215. Which statement shows a sound practice-level distinction between Social justice counseling and Accessibility?

A. Social justice counseling: Connecting a client’s distress with relevant structural conditions without dismissing personal experience. / Accessibility: Identifying and removing practical barriers to communication and participation.
B. Social justice counseling: Reflecting on whether assumptions may be affecting an assessment or referral decision. / Accessibility: Identifying and removing practical barriers to communication and participation.
C. Social justice counseling: Identifying and removing practical barriers to communication and participation. / Accessibility: Connecting a client’s distress with relevant structural conditions without dismissing personal experience.
D. Social justice counseling: Connecting a client’s distress with relevant structural conditions without dismissing personal experience. / Accessibility: Inviting client feedback about whether care feels respectful and adapting in response.

0216. During service review in the multidisciplinary case conference, a research trainee describes listening to the client’s account of an identity-related slight and exploring its impact without minimizing it. for a young person aged 18. Which course idea is most applicable?

A. Accessibility
B. Microaggression
C. Cultural safety
D. Social justice counseling

0217. A member of a clinical team is supporting a student aged 15 in the school counseling office. The key practice is identifying and removing practical barriers to communication and participation. Which course concept is most relevant?

A. Equality
B. Oppression
C. Accessibility
D. Microaggression

0218. Choose the practice comparison that best separates Social justice counseling from Cultural safety.

A. Social justice counseling: Inviting client feedback about whether care feels respectful and adapting in response. / Cultural safety: Connecting a client’s distress with relevant structural conditions without dismissing personal experience.
B. Social justice counseling: Identifying and removing practical barriers to communication and participation. / Cultural safety: Inviting client feedback about whether care feels respectful and adapting in response.
C. Social justice counseling: Connecting a client’s distress with relevant structural conditions without dismissing personal experience. / Cultural safety: Reflecting on whether assumptions may be affecting an assessment or referral decision.
D. Social justice counseling: Connecting a client’s distress with relevant structural conditions without dismissing personal experience. / Cultural safety: Inviting client feedback about whether care feels respectful and adapting in response.

0219. Which option correctly matches each concept to its practice focus: Social justice counseling and Implicit bias?

A. Social justice counseling: Connecting a client's distress with relevant structural conditions without dismissing personal experience. / Implicit bias: Providing different supports where needed to make participation meaningfully accessible.
B. Social justice counseling: Identifying and removing practical barriers to communication and participation. / Implicit bias: Reflecting on whether assumptions may be affecting an assessment or referral decision.
C. Social justice counseling: Reflecting on whether assumptions may be affecting an assessment or referral decision. / Implicit bias: Connecting a client's distress with relevant structural conditions without dismissing personal experience.
D. Social justice counseling: Connecting a client's distress with relevant structural conditions without dismissing personal experience. / Implicit bias: Reflecting on whether assumptions may be affecting an assessment or referral decision.

0220. Which choice aligns each practice with the correct idea, Oppression or Liberation psychology?

A. Oppression: Distinguishing identical provision from support tailored to unequal barriers. / Liberation psychology: Supporting reflection on social context and agency alongside individual coping.
B. Oppression: Supporting reflection on social context and agency alongside individual coping. / Liberation psychology: Recognizing patterns of exclusion rather than reducing a structural problem to an individual deficit.
C. Oppression: Recognizing patterns of exclusion rather than reducing a structural problem to an individual deficit. / Liberation psychology: Supporting reflection on social context and agency alongside individual coping.
D. Oppression: Recognizing patterns of exclusion rather than reducing a structural problem to an individual deficit. / Liberation psychology: Reflecting on whether assumptions may be affecting an assessment or referral decision.

0221. In the school counseling office, a family therapist is considering this approach for a high-school student: distinguishing identical provision from support tailored to unequal barriers. Which framework does it represent?

A. Equality
B. Accessibility
C. Oppression
D. Social justice counseling

0222. A support meeting for a student aged 17 includes a behavior specialist in the community youth program. The practice under consideration is recognizing patterns of exclusion rather than reducing a structural problem to an individual deficit. Which concept guides it?

A. Oppression
B. Cultural safety
C. Microaggression
D. Liberation psychology

0223. Which paired example correctly applies Social justice counseling first and Liberation psychology second?

A. Social justice counseling: Identifying and removing practical barriers to communication and participation. / Liberation psychology: Supporting reflection on social context and agency alongside individual coping.
B. Social justice counseling: Connecting a client's distress with relevant structural conditions without dismissing personal experience. / Liberation psychology: Supporting reflection on social context and agency alongside individual coping.
C. Social justice counseling: Connecting a client's distress with relevant structural conditions without dismissing personal experience. / Liberation psychology: Identifying who controls access and whose perspective is missing in a service decision.
D. Social justice counseling: Supporting reflection on social context and agency alongside individual coping. / Liberation psychology: Connecting a client's distress with relevant structural conditions without dismissing personal experience.

0224. A student confuses Implicit bias with Accessibility. Which explanation most accurately separates them?

A. Implicit bias: Systematic, institutional, or interpersonal processes that restrict opportunities and dignity for groups. / Accessibility: Designing environments, communication, and services so people with varied abilities can participate.
B. Implicit bias: Automatic associations that can influence judgment and behavior without conscious intent. / Accessibility: Designing environments, communication, and services so people with varied abilities can participate.
C. Implicit bias: Automatic associations that can influence judgment and behavior without conscious intent. / Accessibility: A commonplace interaction or environmental message that communicates devaluation related to identity.
D. Implicit bias: Designing environments, communication, and services so people with varied abilities can participate. / Accessibility: Automatic associations that can influence judgment and behavior without conscious intent.

0225. Which option is the clearest practical expression of Cultural safety?

A. Inviting client feedback about whether care feels respectful and adapting in response.
B. Recognizing patterns of exclusion rather than reducing a structural problem to an individual deficit.
C. Identifying and removing practical barriers to communication and participation.
D. Providing different supports where needed to make participation meaningfully accessible.

0226. For a child of elementary-school age seen in the student-support meeting, the program coordinator recommends a plan built around inviting client feedback about whether care feels respectful and adapting in response. Which concept is reflected?

A. Liberation psychology
B. Power analysis
C. Cultural safety
D. Oppression

0227. A supervisor asks how Implicit bias would appear in practice. Which choice should be selected?

A. Identifying and removing practical barriers to communication and participation.
B. Reflecting on whether assumptions may be affecting an assessment or referral decision.
C. Identifying who controls access and whose perspective is missing in a service decision.
D. Inviting client feedback about whether care feels respectful and adapting in response.

0228. In a supervision quiz, how should Oppression be distinguished from Cultural safety?

A. Oppression: Systematic, institutional, or interpersonal processes that restrict opportunities and dignity for groups. / Cultural safety: A commonplace interaction or environmental message that communicates devaluation related to identity.
B. Oppression: A client-defined experience of care in which identity is respected and power imbalances are addressed. / Cultural safety: Systematic, institutional, or interpersonal processes that restrict opportunities and dignity for groups.
C. Oppression: Designing environments, communication, and services so people with varied abilities can participate. / Cultural safety: A client-defined experience of care in which identity is respected and power imbalances are addressed.
D. Oppression: Systematic, institutional, or interpersonal processes that restrict opportunities and dignity for groups. / Cultural safety: A client-defined experience of care in which identity is respected and power imbalances are addressed.

0229. Which named construct is captured by this account? A client-defined experience of care in which identity is respected and power imbalances are addressed.

A. Cultural safety
B. Equality
C. Equity
D. Microaggression

0230. At a case-planning meeting, the school support specialist proposes supporting reflection on social context and agency alongside individual coping. for a preadolescent child seen in the community service agency. Which concept does this illustrate?

A. Equality
B. Equity
C. Liberation psychology
D. Social justice counseling

0231. In the supervision meeting, a school counselor explains why a young person aged 13 would benefit from distinguishing identical provision from support tailored to unequal barriers. Which course concept underpins the explanation?

A. Equality
B. Equity
C. Oppression
D. Accessibility

0232. A student confuses Social justice counseling with Accessibility. Which explanation most accurately separates them?

A. Social justice counseling: A counseling orientation that addresses individual wellbeing alongside inequitable systems and barriers. / Accessibility: A client-defined experience of care in which identity is respected and power imbalances are addressed.
B. Social justice counseling: Designing environments, communication, and services so people with varied abilities can participate. / Accessibility: A counseling orientation that addresses individual wellbeing alongside inequitable systems and barriers.
C. Social justice counseling: Automatic associations that can influence judgment and behavior without conscious intent. / Accessibility: Designing environments, communication, and services so people with varied abilities can participate.
D. Social justice counseling: A counseling orientation that addresses individual wellbeing alongside inequitable systems and barriers. / Accessibility: Designing environments, communication, and services so people with varied abilities can participate.

0233. Which applied comparison correctly identifies what belongs to Oppression versus Liberation psychology?

A. Oppression: Supporting reflection on social context and agency alongside individual coping. / Liberation psychology: Recognizing patterns of exclusion rather than reducing a structural problem to an individual deficit.
B. Oppression: Distinguishing identical provision from support tailored to unequal barriers. / Liberation psychology: Supporting reflection on social context and agency alongside individual coping.
C. Oppression: Recognizing patterns of exclusion rather than reducing a structural problem to an individual deficit. / Liberation psychology: Supporting reflection on social context and agency alongside individual coping.
D. Oppression: Recognizing patterns of exclusion rather than reducing a structural problem to an individual deficit. / Liberation psychology: Reflecting on whether assumptions may be affecting an assessment or referral decision.

0234. A young person aged 10’s service team meets in the student wellness team. The school-based clinician recommends a change involving recognizing patterns of exclusion rather than reducing a structural problem to an individual deficit. Which idea best explains it?

A. Oppression
B. Implicit bias
C. Cultural safety
D. Equity

0235. Which applied comparison correctly identifies what belongs to Power analysis versus Implicit bias?

A. Power analysis: Identifying who controls access and whose perspective is missing in a service decision. / Implicit bias: Inviting client feedback about whether care feels respectful and adapting in response.
B. Power analysis: Listening to the client’s account of an identity-related slight and exploring its impact without minimizing it. / Implicit bias: Reflecting on whether assumptions may be affecting an assessment or referral decision.
C. Power analysis: Identifying who controls access and whose perspective is missing in a service decision. / Implicit bias: Reflecting on whether assumptions may be affecting an assessment or referral decision.
D. Power analysis: Reflecting on whether assumptions may be affecting an assessment or referral decision. / Implicit bias: Identifying who controls access and whose perspective is missing in a service decision.

0236. Consider a middle-school student receiving help in the youth advocacy program. The teacher and counselor focuses on distinguishing identical provision from support tailored to unequal barriers. Which term best describes the guiding idea?

A. Equality
B. Oppression
C. Microaggression
D. Equity

0237. Which statement accurately contrasts the course concepts Oppression and Accessibility?

A. Oppression: An approach emphasizing critical awareness and action addressing social conditions that contribute to distress. / Accessibility: Designing environments, communication, and services so people with varied abilities can participate.
B. Oppression: Systematic, institutional, or interpersonal processes that restrict opportunities and dignity for groups. / Accessibility: Designing environments, communication, and services so people with varied abilities can participate.
C. Oppression: Designing environments, communication, and services so people with varied abilities can participate. / Accessibility: Systematic, institutional, or interpersonal processes that restrict opportunities and dignity for groups.
D. Oppression: Systematic, institutional, or interpersonal processes that restrict opportunities and dignity for groups. / Accessibility: A commonplace interaction or environmental message that communicates devaluation related to identity.

0238. Which comparison would correct a trainee’s misunderstanding of Power analysis versus Implicit bias?

A. Power analysis: A commonplace interaction or environmental message that communicates devaluation related to identity. / Implicit bias: Automatic associations that can influence judgment and behavior without conscious intent.
B. Power analysis: Examination of how authority, resources, and decision-making influence relationships and outcomes. / Implicit bias: Automatic associations that can influence judgment and behavior without conscious intent.
C. Power analysis: Automatic associations that can influence judgment and behavior without conscious intent. / Implicit bias: Examination of how authority, resources, and decision-making influence relationships and outcomes.
D. Power analysis: Examination of how authority, resources, and decision-making influence relationships and outcomes. / Implicit bias: A client-defined experience of care in which identity is respected and power imbalances are addressed.

0239. At the student-support meeting, a school support specialist meets with a older adolescent client. The practice priority is: recognizing patterns of exclusion rather than reducing a structural problem to an individual deficit. Which concept best captures that priority?

A. Power analysis
B. Accessibility
C. Equality
D. Oppression

0240. A trainee must distinguish how Equality and Cultural safety guide practice. Which comparison is accurate?

A. Equality: Inviting client feedback about whether care feels respectful and adapting in response. / Cultural safety: Distinguishing identical provision from support tailored to unequal barriers.
B. Equality: Distinguishing identical provision from support tailored to unequal barriers. / Cultural safety: Inviting client feedback about whether care feels respectful and adapting in response.
C. Equality: Listening to the client’s account of an identity-related slight and exploring its impact without minimizing it. / Cultural safety: Inviting client feedback about whether care feels respectful and adapting in response.
D. Equality: Distinguishing identical provision from support tailored to unequal barriers. / Cultural safety: Recognizing patterns of exclusion rather than reducing a structural problem to an individual deficit.

0241. How are Oppression and Equality most accurately differentiated in this curriculum?

A. Oppression: Systematic, institutional, or interpersonal processes that restrict opportunities and dignity for groups. / Equality: Provision of the same treatment or resource to everyone, regardless of differing circumstances.
B. Oppression: Systematic, institutional, or interpersonal processes that restrict opportunities and dignity for groups. / Equality: Designing environments, communication, and services so people with varied abilities can participate.
C. Oppression: A client-defined experience of care in which identity is respected and power imbalances are addressed. / Equality: Provision of the same treatment or resource to everyone, regardless of differing circumstances.
D. Oppression: Provision of the same treatment or resource to everyone, regardless of differing circumstances. / Equality: Systematic, institutional, or interpersonal processes that restrict opportunities and dignity for groups.

0242. Which statement shows a sound practice-level distinction between Implicit bias and Accessibility?

A. Implicit bias: Reflecting on whether assumptions may be affecting an assessment or referral decision. / Accessibility: Identifying and removing practical barriers to communication and participation.
B. Implicit bias: Reflecting on whether assumptions may be affecting an assessment or referral decision. / Accessibility: Listening to the client’s account of an identity-related slight and exploring its impact without minimizing it.
C. Implicit bias: Recognizing patterns of exclusion rather than reducing a structural problem to an individual deficit. / Accessibility: Identifying and removing practical barriers to communication and participation.
D. Implicit bias: Identifying and removing practical barriers to communication and participation. / Accessibility: Reflecting on whether assumptions may be affecting an assessment or referral decision.

0243. Which named construct is captured by this account? Systematic, institutional, or interpersonal processes that restrict opportunities and dignity for groups.

A. Equality
B. Accessibility
C. Social justice counseling
D. Oppression

0244. Choose the definition pair that correctly explains Power analysis first and Accessibility second.

A. Power analysis: Examination of how authority, resources, and decision-making influence relationships and outcomes. / Accessibility: A commonplace interaction or environmental message that communicates devaluation related to identity.
B. Power analysis: Designing environments, communication, and services so people with varied abilities can participate. / Accessibility: Examination of how authority, resources, and decision-making influence relationships and outcomes.
C. Power analysis: Examination of how authority, resources, and decision-making influence relationships and outcomes. / Accessibility: Designing environments, communication, and services so people with varied abilities can participate.
D. Power analysis: A counseling orientation that addresses individual wellbeing alongside inequitable systems and barriers. / Accessibility: Designing environments, communication, and services so people with varied abilities can participate.

0245. A planning meeting about a child aged 14 includes a behavior specialist. The proposed practice in the student wellness team is providing different supports where needed to make participation meaningfully accessible. Which idea underlies it?

A. Equity
B. Accessibility
C. Microaggression
D. Oppression

0246. How should a practitioner distinguish the applications of Oppression and Accessibility?

A. Oppression: Recognizing patterns of exclusion rather than reducing a structural problem to an individual deficit. / Accessibility: Listening to the client’s account of an identity-related slight and exploring its impact without minimizing it.
B. Oppression: Supporting reflection on social context and agency alongside individual coping. / Accessibility: Identifying and removing practical barriers to communication and participation.
C. Oppression: Identifying and removing practical barriers to communication and participation. / Accessibility: Recognizing patterns of exclusion rather than reducing a structural problem to an individual deficit.
D. Oppression: Recognizing patterns of exclusion rather than reducing a structural problem to an individual deficit. / Accessibility: Identifying and removing practical barriers to communication and participation.

0247. When reviewing a older adolescent client’s plan in the youth group, the case coordinator notes that the next step is identifying and removing practical barriers to communication and participation. Which concept guides this step?

A. Accessibility
B. Implicit bias
C. Power analysis
D. Oppression

0248. A assessment clinician prepares for a session in the child guidance clinic with a young person aged 18. The intended approach is connecting a client’s distress with relevant structural conditions without dismissing personal experience. Which concept is most relevant?

A. Equity
B. Power analysis
C. Social justice counseling
D. Cultural safety

0249. Choose the practice comparison that best separates Accessibility from Cultural safety.

A. Accessibility: Inviting client feedback about whether care feels respectful and adapting in response. / Cultural safety: Identifying and removing practical barriers to communication and participation.
B. Accessibility: Identifying and removing practical barriers to communication and participation. / Cultural safety: Supporting reflection on social context and agency alongside individual coping.
C. Accessibility: Providing different supports where needed to make participation meaningfully accessible. / Cultural safety: Inviting client feedback about whether care feels respectful and adapting in response.
D. Accessibility: Identifying and removing practical barriers to communication and participation. / Cultural safety: Inviting client feedback about whether care feels respectful and adapting in response.

0250. A parent educator presents a support plan for a preadolescent child at the counseling practicum. Its central feature is identifying and removing practical barriers to communication and participation. Which concept should be named?

A. Accessibility
B. Implicit bias
C. Equity
D. Oppression

0251. Which pair of actions illustrates Implicit bias and Cultural safety, respectively?

A. Implicit bias: Reflecting on whether assumptions may be affecting an assessment or referral decision. / Cultural safety: Inviting client feedback about whether care feels respectful and adapting in response.
B. Implicit bias: Supporting reflection on social context and agency alongside individual coping. / Cultural safety: Inviting client feedback about whether care feels respectful and adapting in response.
C. Implicit bias: Reflecting on whether assumptions may be affecting an assessment or referral decision. / Cultural safety: Providing different supports where needed to make participation meaningfully accessible.
D. Implicit bias: Inviting client feedback about whether care feels respectful and adapting in response. / Cultural safety: Reflecting on whether assumptions may be affecting an assessment or referral decision.

0252. A consultant and a child aged 6 are discussing support in the school counseling office. The selected practice is providing different supports where needed to make participation meaningfully accessible. Which concept does this demonstrate?

A. Liberation psychology
B. Implicit bias
C. Equity
D. Equality

0253. How should a practitioner distinguish the applications of Power analysis and Oppression?

A. Power analysis: Identifying who controls access and whose perspective is missing in a service decision. / Oppression: Recognizing patterns of exclusion rather than reducing a structural problem to an individual deficit.
B. Power analysis: Identifying who controls access and whose perspective is missing in a service decision. / Oppression: Providing different supports where needed to make participation meaningfully accessible.
C. Power analysis: Distinguishing identical provision from support tailored to unequal barriers. / Oppression: Recognizing patterns of exclusion rather than reducing a structural problem to an individual deficit.
D. Power analysis: Recognizing patterns of exclusion rather than reducing a structural problem to an individual deficit. / Oppression: Identifying who controls access and whose perspective is missing in a service decision.

0254. A student confuses Power analysis with Equality. Which explanation most accurately separates them?

A. Power analysis: Examination of how authority, resources, and decision-making influence relationships and outcomes. / Equality: A counseling orientation that addresses individual wellbeing alongside inequitable systems and barriers.
B. Power analysis: A client-defined experience of care in which identity is respected and power imbalances are addressed. / Equality: Provision of the same treatment or resource to everyone, regardless of differing circumstances.
C. Power analysis: Provision of the same treatment or resource to everyone, regardless of differing circumstances. / Equality: Examination of how authority, resources, and decision-making influence relationships and outcomes.
D. Power analysis: Examination of how authority, resources, and decision-making influence relationships and outcomes. / Equality: Provision of the same treatment or resource to everyone, regardless of differing circumstances.

0255. During service review in the family session, a service navigator describes providing different supports where needed to make participation meaningfully accessible. for a middle-school student. Which course idea is most applicable?

A. Cultural safety
B. Liberation psychology
C. Equity
D. Power analysis

0256. A student confuses Implicit bias with Cultural safety. Which explanation most accurately separates them?

A. Implicit bias: An approach emphasizing critical awareness and action addressing social conditions that contribute to distress. / Cultural safety: A client-defined experience of care in which identity is respected and power imbalances are addressed.
B. Implicit bias: A client-defined experience of care in which identity is respected and power imbalances are addressed. / Cultural safety: Automatic associations that can influence judgment and behavior without conscious intent.
C. Implicit bias: Automatic associations that can influence judgment and behavior without conscious intent. / Cultural safety: Fair allocation of support that accounts for differing barriers and needs to enable meaningful opportunity.
D. Implicit bias: Automatic associations that can influence judgment and behavior without conscious intent. / Cultural safety: A client-defined experience of care in which identity is respected and power imbalances are addressed.

0257. Which comparison would correct a trainee's misunderstanding of Equity versus Equality?

A. Equity: Provision of the same treatment or resource to everyone, regardless of differing circumstances. / Equality: Fair allocation of support that accounts for differing barriers and needs to enable meaningful opportunity.
B. Equity: A client-defined experience of care in which identity is respected and power imbalances are addressed. / Equality: Provision of the same treatment or resource to everyone, regardless of differing circumstances.
C. Equity: Fair allocation of support that accounts for differing barriers and needs to enable meaningful opportunity. / Equality: A counseling orientation that addresses individual wellbeing alongside inequitable systems and barriers.
D. Equity: Fair allocation of support that accounts for differing barriers and needs to enable meaningful opportunity. / Equality: Provision of the same treatment or resource to everyone, regardless of differing circumstances.

0258. Which pair of actions illustrates Microaggression and Cultural safety, respectively?

A. Microaggression: Inviting client feedback about whether care feels respectful and adapting in response. / Cultural safety: Listening to the client's account of an identity-related slight and exploring its impact without minimizing it.
B. Microaggression: Providing different supports where needed to make participation meaningfully accessible. / Cultural safety: Inviting client feedback about whether care feels respectful and adapting in response.
C. Microaggression: Listening to the client's account of an identity-related slight and exploring its impact without minimizing it. / Cultural safety: Supporting reflection on social context and agency alongside individual coping.
D. Microaggression: Listening to the client's account of an identity-related slight and exploring its impact without minimizing it. / Cultural safety: Inviting client feedback about whether care feels respectful and adapting in response.

0259. Which choice aligns each practice with the correct idea, Oppression or Accessibility?

A. Oppression: Recognizing patterns of exclusion rather than reducing a structural problem to an individual deficit. / Accessibility: Identifying and removing practical barriers to communication and participation.
B. Oppression: Identifying and removing practical barriers to communication and participation. / Accessibility: Recognizing patterns of exclusion rather than reducing a structural problem to an individual deficit.
C. Oppression: Supporting reflection on social context and agency alongside individual coping. / Accessibility: Identifying and removing practical barriers to communication and participation.
D. Oppression: Recognizing patterns of exclusion rather than reducing a structural problem to an individual deficit. / Accessibility: Listening to the client's account of an identity-related slight and exploring its impact without minimizing it.

0260. A case conference reviews a service navigator's work with a child aged 14 in the youth group: listening to the client's account of an identity-related slight and exploring its impact without minimizing it. Which principle is central?

A. Microaggression
B. Implicit bias
C. Equality
D. Cultural safety

0261. At the community youth program, a research trainee reviews whether a plan for a child of elementary-school age is appropriate. The relevant practice is distinguishing identical provision from support tailored to unequal barriers. Which concept is tested?

A. Equity
B. Equality
C. Oppression
D. Liberation psychology

0262. A planning meeting about a student aged 17 includes a play therapist. The proposed practice in the student-support meeting is supporting reflection on social context and agency alongside individual coping. Which idea underlies it?

A. Equality
B. Liberation psychology
C. Social justice counseling
D. Power analysis

0263. A team must select a support approach for a preadolescent child at the multidisciplinary case conference. The school-based clinician recommends providing different supports where needed to make participation meaningfully accessible. Which idea is most relevant?

A. Oppression
B. Equity
C. Equality
D. Social justice counseling

0264. How are Power analysis and Accessibility most accurately differentiated in this curriculum?

A. Power analysis: A counseling orientation that addresses individual wellbeing alongside inequitable systems and barriers. / Accessibility: Designing environments, communication, and services so people with varied abilities can participate.
B. Power analysis: Designing environments, communication, and services so people with varied abilities can participate. / Accessibility: Examination of how authority, resources, and decision-making influence relationships and outcomes.
C. Power analysis: Examination of how authority, resources, and decision-making influence relationships and outcomes. / Accessibility: A commonplace interaction or environmental message that communicates devaluation related to identity.
D. Power analysis: Examination of how authority, resources, and decision-making influence relationships and outcomes. / Accessibility: Designing environments, communication, and services so people with varied abilities can participate.

0265. During work in the supervision meeting, a school counselor identifies this need: distinguishing identical provision from support tailored to unequal barriers. Which idea should guide the response?

A. Cultural safety
B. Equity
C. Liberation psychology
D. Equality

0266. Choose the practice comparison that best separates Implicit bias from Cultural safety.

A. Implicit bias: Reflecting on whether assumptions may be affecting an assessment or referral decision. / Cultural safety: Inviting client feedback about whether care feels respectful and adapting in response.
B. Implicit bias: Supporting reflection on social context and agency alongside individual coping. / Cultural safety: Inviting client feedback about whether care feels respectful and adapting in response.
C. Implicit bias: Reflecting on whether assumptions may be affecting an assessment or referral decision. / Cultural safety: Providing different supports where needed to make participation meaningfully accessible.
D. Implicit bias: Inviting client feedback about whether care feels respectful and adapting in response. / Cultural safety: Reflecting on whether assumptions may be affecting an assessment or referral decision.

0267. A young person aged 18 and a supervised trainee are reviewing goals in the family resource center. The agreed action is reflecting on whether assumptions may be affecting an assessment or referral decision. Which principle best accounts for it?

A. Cultural safety
B. Implicit bias
C. Equity
D. Equality

0268. A youth worker is explaining a choice to a young adolescent client and caregiver in the student-support meeting. The choice centers on identifying and removing practical barriers to communication and participation. Which idea is illustrated?

A. Power analysis
B. Accessibility
C. Oppression
D. Implicit bias

0269. A student aged 9's service team meets in the school-based service. The family therapist recommends a change involving inviting client feedback about whether care feels respectful and adapting in response. Which idea best explains it?

A. Accessibility
B. Power analysis
C. Equity
D. Cultural safety

0270. While supporting a client in late adolescence in the youth group, a family therapist adopts this practice: providing different supports where needed to make participation meaningfully accessible. Which concept best explains the choice?

A. Social justice counseling
B. Equity
C. Microaggression
D. Oppression

0271. A supervised trainee prepares for a session in the parent meeting with a older adolescent client. The intended approach is distinguishing identical provision from support tailored to unequal barriers. Which concept is most relevant?

A. Equity
B. Cultural safety
C. Equality
D. Accessibility

0272. A trainee must distinguish how Power analysis and Accessibility guide practice. Which comparison is accurate?

A. Power analysis: Connecting a client's distress with relevant structural conditions without dismissing personal experience. / Accessibility: Identifying and removing practical barriers to communication and participation.
B. Power analysis: Identifying who controls access and whose perspective is missing in a service decision. / Accessibility: Listening to the client's account of an identity-related slight and exploring its impact without minimizing it.
C. Power analysis: Identifying and removing practical barriers to communication and participation. / Accessibility: Identifying who controls access and whose perspective is missing in a service decision.
D. Power analysis: Identifying who controls access and whose perspective is missing in a service decision. / Accessibility: Identifying and removing practical barriers to communication and participation.

0273. Which comparison correctly distinguishes Power analysis from Cultural safety?

A. Power analysis: A client-defined experience of care in which identity is respected and power imbalances are addressed. / Cultural safety: Examination of how authority, resources, and decision-making influence relationships and outcomes.
B. Power analysis: Examination of how authority, resources, and decision-making influence relationships and outcomes. / Cultural safety: A client-defined experience of care in which identity is respected and power imbalances are addressed.
C. Power analysis: Examination of how authority, resources, and decision-making influence relationships and outcomes. / Cultural safety: A commonplace interaction or environmental message that communicates devaluation related to identity.
D. Power analysis: Designing environments, communication, and services so people with varied abilities can participate. / Cultural safety: A client-defined experience of care in which identity is respected and power imbalances are addressed.

0274. Choose the definition pair that correctly explains Social justice counseling first and Equality second.

A. Social justice counseling: Provision of the same treatment or resource to everyone, regardless of differing circumstances. / Equality: A counseling orientation that addresses individual wellbeing alongside inequitable systems and barriers.
B. Social justice counseling: A counseling orientation that addresses individual wellbeing alongside inequitable systems and barriers. / Equality: Provision of the same treatment or resource to everyone, regardless of differing circumstances.
C. Social justice counseling: A counseling orientation that addresses individual wellbeing alongside inequitable systems and barriers. / Equality: Fair allocation of support that accounts for differing barriers and needs to enable meaningful opportunity.
D. Social justice counseling: A client-defined experience of care in which identity is respected and power imbalances are addressed. / Equality: Provision of the same treatment or resource to everyone, regardless of differing circumstances.

0275. A teenage client is receiving support in the after-school program. The teacher and counselor is guided by this practice: recognizing patterns of exclusion rather than reducing a structural problem to an individual deficit. Which principle best fits?

A. Equality
B. Oppression
C. Liberation psychology
D. Microaggression

0276. A doctoral student reads the following description. Which concept does it define? An approach emphasizing critical awareness and action addressing social conditions that contribute to distress.

A. Equity
B. Social justice counseling
C. Liberation psychology
D. Power analysis

0277. An interdisciplinary team reviews a child aged 14’s case at the student wellness team. The behavior specialist recommends providing different supports where needed to make participation meaningfully accessible. Which course concept best fits?

A. Equity
B. Oppression
C. Equality
D. Cultural safety

0278. A student aged 12 and a mental-health professional are reviewing goals in the after-school program. The agreed action is distinguishing identical provision from support tailored to unequal barriers. Which principle best accounts for it?

A. Implicit bias
B. Liberation psychology
C. Equality
D. Microaggression

0279. Choose the term that matches this definition: Examination of how authority, resources, and decision-making influence relationships and outcomes.

A. Power analysis
B. Cultural safety
C. Oppression
D. Liberation psychology

0280. In a supervision review, a family therapist describes work with a young person in the supervision meeting: recognizing patterns of exclusion rather than reducing a structural problem to an individual deficit. What concept is illustrated?

A. Implicit bias
B. Cultural safety
C. Oppression
D. Equality

0281. A trainee must explain Implicit bias. Which answer is accurate?

A. Automatic associations that can influence judgment and behavior without conscious intent.
B. Fair allocation of support that accounts for differing barriers and needs to enable meaningful opportunity.
C. Examination of how authority, resources, and decision-making influence relationships and outcomes.
D. Systematic, institutional, or interpersonal processes that restrict opportunities and dignity for groups.

0282. Choose the practice comparison that best separates Implicit bias from Accessibility.

A. Implicit bias: Identifying and removing practical barriers to communication and participation. / Accessibility: Reflecting on whether assumptions may be affecting an assessment or referral decision.
B. Implicit bias: Reflecting on whether assumptions may be affecting an assessment or referral decision. / Accessibility: Listening to the client’s account of an identity-related slight and exploring its impact without minimizing it.
C. Implicit bias: Recognizing patterns of exclusion rather than reducing a structural problem to an individual deficit. / Accessibility: Identifying and removing practical barriers to communication and participation.
D. Implicit bias: Reflecting on whether assumptions may be affecting an assessment or referral decision. / Accessibility: Identifying and removing practical barriers to communication and participation.

0283. Which option correctly matches each concept to its practice focus: Implicit bias and Microaggression?

A. Implicit bias: Listening to the client’s account of an identity-related slight and exploring its impact without minimizing it. / Microaggression: Reflecting on whether assumptions may be affecting an assessment or referral decision.
B. Implicit bias: Reflecting on whether assumptions may be affecting an assessment or referral decision. / Microaggression: Connecting a client’s distress with relevant structural conditions without dismissing personal experience.
C. Implicit bias: Reflecting on whether assumptions may be affecting an assessment or referral decision. / Microaggression: Listening to the client’s account of an identity-related slight and exploring its impact without minimizing it.
D. Implicit bias: Identifying and removing practical barriers to communication and participation. / Microaggression: Listening to the client’s account of an identity-related slight and exploring its impact without minimizing it.

0284. An interdisciplinary team reviews a young person aged 10’s case at the family session. The school support specialist recommends listening to the client’s account of an identity-related slight and exploring its impact without minimizing it. Which course concept best fits?

A. Equity
B. Cultural safety
C. Equality
D. Microaggression

0285. A planning meeting about a child aged 7 includes a clinical supervisor. The proposed practice in the classroom support meeting is connecting a client’s distress with relevant structural conditions without dismissing personal experience. Which idea underlies it?

A. Power analysis
B. Social justice counseling
C. Equity
D. Oppression

0286. Which comparison correctly distinguishes Equity from Cultural safety?

A. Equity: Fair allocation of support that accounts for differing barriers and needs to enable meaningful opportunity. / Cultural safety: A client-defined experience of care in which identity is respected and power imbalances are addressed.
B. Equity: Fair allocation of support that accounts for differing barriers and needs to enable meaningful opportunity. / Cultural safety: A commonplace interaction or environmental message that communicates devaluation related to identity.
C. Equity: Provision of the same treatment or resource to everyone, regardless of differing circumstances. / Cultural safety: A client-defined experience of care in which identity is respected and power imbalances are addressed.
D. Equity: A client-defined experience of care in which identity is respected and power imbalances are addressed. / Cultural safety: Fair allocation of support that accounts for differing barriers and needs to enable meaningful opportunity.

0287. Which option preserves the correct meaning of both Equity and Equality?

A. Equity: A client-defined experience of care in which identity is respected and power imbalances are addressed. / Equality: Provision of the same treatment or resource to everyone, regardless of differing circumstances.
B. Equity: Fair allocation of support that accounts for differing barriers and needs to enable meaningful opportunity. / Equality: Provision of the same treatment or resource to everyone, regardless of differing circumstances.
C. Equity: Fair allocation of support that accounts for differing barriers and needs to enable meaningful opportunity. / Equality: A counseling orientation that addresses individual wellbeing alongside inequitable systems and barriers.
D. Equity: Provision of the same treatment or resource to everyone, regardless of differing circumstances. / Equality: Fair allocation of support that accounts for differing barriers and needs to enable meaningful opportunity.

0288. During work in the counseling practicum, a teacher and counselor identifies this need: reflecting on whether assumptions may be affecting an assessment or referral decision. Which idea should guide the response?

A. Equality
B. Implicit bias
C. Power analysis
D. Social justice counseling

0289. Which description belongs with the term Equity?

A. A client-defined experience of care in which identity is respected and power imbalances are addressed.
B. A counseling orientation that addresses individual wellbeing alongside inequitable systems and barriers.
C. Fair allocation of support that accounts for differing barriers and needs to enable meaningful opportunity.
D. Examination of how authority, resources, and decision-making influence relationships and outcomes.

0290. A consultant is supporting a child aged 8 in the clinical planning session. The key practice is supporting reflection on social context and agency alongside individual coping. Which course concept is most relevant?

A. Equality
B. Accessibility
C. Liberation psychology
D. Equity

0291. In the learning-support meeting, a team asks how a teacher and counselor can support a preadolescent child. One proposed action is identifying who controls access and whose perspective is missing in a service decision. Which idea does it represent?

A. Liberation psychology
B. Power analysis
C. Equality
D. Microaggression

0292. Which choice aligns each practice with the correct idea, Oppression or Implicit bias?

A. Oppression: Recognizing patterns of exclusion rather than reducing a structural problem to an individual deficit. / Implicit bias: Reflecting on whether assumptions may be affecting an assessment or referral decision.
B. Oppression: Providing different supports where needed to make participation meaningfully accessible. / Implicit bias: Reflecting on whether assumptions may be affecting an assessment or referral decision.
C. Oppression: Reflecting on whether assumptions may be affecting an assessment or referral decision. / Implicit bias: Recognizing patterns of exclusion rather than reducing a structural problem to an individual deficit.
D. Oppression: Recognizing patterns of exclusion rather than reducing a structural problem to an individual deficit. / Implicit bias: Identifying and removing practical barriers to communication and participation.

0293. Which option pairs the definitions of Power analysis and Implicit bias correctly, in that order?

A. Power analysis: A commonplace interaction or environmental message that communicates devaluation related to identity. / Implicit bias: Automatic associations that can influence judgment and behavior without conscious intent.
B. Power analysis: Examination of how authority, resources, and decision-making influence relationships and outcomes. / Implicit bias: Automatic associations that can influence judgment and behavior without conscious intent.
C. Power analysis: Automatic associations that can influence judgment and behavior without conscious intent. / Implicit bias: Examination of how authority, resources, and decision-making influence relationships and outcomes.
D. Power analysis: Examination of how authority, resources, and decision-making influence relationships and outcomes. / Implicit bias: A client-defined experience of care in which identity is respected and power imbalances are addressed.

0294. A support meeting for a young person aged 16 includes a clinical supervisor in the clinical planning session. The practice under consideration is inviting client feedback about whether care feels respectful and adapting in response. Which concept guides it?

A. Oppression
B. Social justice counseling
C. Microaggression
D. Cultural safety

0295. Choose the response that best puts Implicit bias into practice.

A. Supporting reflection on social context and agency alongside individual coping.
B. Listening to the client's account of an identity-related slight and exploring its impact without minimizing it.
C. Reflecting on whether assumptions may be affecting an assessment or referral decision.
D. Distinguishing identical provision from support tailored to unequal barriers.

0296. A school counselor is explaining a choice to a preadolescent child and caregiver in the school counseling office. The choice centers on listening to the client's account of an identity-related slight and exploring its impact without minimizing it. Which idea is illustrated?

A. Implicit bias
B. Equality
C. Microaggression
D. Accessibility

0297. Which option pairs the definitions of Social justice counseling and Oppression correctly, in that order?

A. Social justice counseling: Systematic, institutional, or interpersonal processes that restrict opportunities and dignity for groups. / Oppression: A counseling orientation that addresses individual wellbeing alongside inequitable systems and barriers.
B. Social justice counseling: A counseling orientation that addresses individual wellbeing alongside inequitable systems and barriers. / Oppression: Systematic, institutional, or interpersonal processes that restrict opportunities and dignity for groups.
C. Social justice counseling: Automatic associations that can influence judgment and behavior without conscious intent. / Oppression: Systematic, institutional, or interpersonal processes that restrict opportunities and dignity for groups.
D. Social justice counseling: A counseling orientation that addresses individual wellbeing alongside inequitable systems and barriers. / Oppression: Examination of how authority, resources, and decision-making influence relationships and outcomes.

0298. During work in the outpatient clinic, a teacher and counselor identifies this need: connecting a client's distress with relevant structural conditions without dismissing personal experience. Which idea should guide the response?

A. Social justice counseling
B. Equality
C. Equity
D. Oppression

0299. A supervised trainee is supporting a young person aged 18 in the family resource center. The key practice is reflecting on whether assumptions may be affecting an assessment or referral decision. Which course concept is most relevant?

A. Equity
B. Equality
C. Social justice counseling
D. Implicit bias

0300. Which description belongs with the term Social justice counseling?

A. A counseling orientation that addresses individual wellbeing alongside inequitable systems and barriers.
B. A commonplace interaction or environmental message that communicates devaluation related to identity.
C. Systematic, institutional, or interpersonal processes that restrict opportunities and dignity for groups.
D. Designing environments, communication, and services so people with varied abilities can participate.

0301. A service navigator is asked what should shape a young person's support in the child guidance clinic. The proposed focus is inviting client feedback about whether care feels respectful and adapting in response. Which principle does it represent?

A. Accessibility
B. Social justice counseling
C. Oppression
D. Cultural safety

0302. When reviewing a child aged 8's plan in the community youth program, the caregiver working with a counselor notes that the next step is listening to the client's account of an identity-related slight and exploring its impact without minimizing it. Which concept guides this step?

A. Accessibility
B. Implicit bias
C. Social justice counseling
D. Microaggression

0303. A therapist is asked what should shape a student aged 17's support in the caregiver consultation. The proposed focus is connecting a client's distress with relevant structural conditions without dismissing personal experience. Which principle does it represent?

A. Cultural safety
B. Social justice counseling
C. Microaggression
D. Implicit bias

0304. At the school consultation, a community practitioner reviews whether a plan for a preadolescent child is appropriate. The relevant practice is reflecting on whether assumptions may be affecting an assessment or referral decision. Which concept is tested?

A. Equality
B. Implicit bias
C. Accessibility
D. Power analysis

0305. Which pair of actions illustrates Power analysis and Equity, respectively?

A. Power analysis: Identifying who controls access and whose perspective is missing in a service decision. / Equity: Identifying and removing practical barriers to communication and participation.
B. Power analysis: Identifying who controls access and whose perspective is missing in a service decision. / Equity: Providing different supports where needed to make participation meaningfully accessible.
C. Power analysis: Providing different supports where needed to make participation meaningfully accessible. / Equity: Identifying who controls access and whose perspective is missing in a service decision.
D. Power analysis: Reflecting on whether assumptions may be affecting an assessment or referral decision. / Equity: Providing different supports where needed to make participation meaningfully accessible.

0306. Which statement accurately contrasts the course concepts Oppression and Microaggression?

A. Oppression: A commonplace interaction or environmental message that communicates devaluation related to identity. / Microaggression: Systematic, institutional, or interpersonal processes that restrict opportunities and dignity for groups.
B. Oppression: Fair allocation of support that accounts for differing barriers and needs to enable meaningful opportunity. / Microaggression: A commonplace interaction or environmental message that communicates devaluation related to identity.
C. Oppression: Systematic, institutional, or interpersonal processes that restrict opportunities and dignity for groups. / Microaggression: A commonplace interaction or environmental message that communicates devaluation related to identity.
D. Oppression: Systematic, institutional, or interpersonal processes that restrict opportunities and dignity for groups. / Microaggression: An approach emphasizing critical awareness and action addressing social conditions that contribute to distress.

0307. A trainee must explain Accessibility. Which answer is accurate?

A. Designing environments, communication, and services so people with varied abilities can participate.
B. A client-defined experience of care in which identity is respected and power imbalances are addressed.
C. Automatic associations that can influence judgment and behavior without conscious intent.
D. Fair allocation of support that accounts for differing barriers and needs to enable meaningful opportunity.

0308. A teacher and counselor is asked to justify a plan for a client in early adolescence in the student-support meeting. It calls for providing different supports where needed to make participation meaningfully accessible. Which concept provides the rationale?

A. Microaggression
B. Social justice counseling
C. Equity
D. Accessibility

0309. A supervised trainee and a adolescent student are discussing support in the student wellness team. The selected practice is identifying who controls access and whose perspective is missing in a service decision. Which concept does this demonstrate?

A. Cultural safety
B. Power analysis
C. Accessibility
D. Equity

0310. In a professional consultation about a young adolescent client, the mental-health professional describes this response in the caregiver consultation: identifying who controls access and whose perspective is missing in a service decision. Which term is most apt?

A. Microaggression
B. Equality
C. Implicit bias
D. Power analysis

0311. A doctoral student reads the following description. Which concept does it define? Automatic associations that can influence judgment and behavior without conscious intent.

A. Implicit bias
B. Equality
C. Power analysis
D. Liberation psychology

0312. Choose the practice comparison that best separates Power analysis from Cultural safety.

A. Power analysis: Identifying and removing practical barriers to communication and participation. / Cultural safety: Inviting client feedback about whether care feels respectful and adapting in response.
B. Power analysis: Identifying who controls access and whose perspective is missing in a service decision. / Cultural safety: Inviting client feedback about whether care feels respectful and adapting in response.
C. Power analysis: Identifying who controls access and whose perspective is missing in a service decision. / Cultural safety: Listening to the client's account of an identity-related slight and exploring its impact without minimizing it.
D. Power analysis: Inviting client feedback about whether care feels respectful and adapting in response. / Cultural safety: Identifying who controls access and whose perspective is missing in a service decision.

0313. Which option is the clearest practical expression of Liberation psychology?

A. Connecting a client's distress with relevant structural conditions without dismissing personal experience.
B. Providing different supports where needed to make participation meaningfully accessible.
C. Reflecting on whether assumptions may be affecting an assessment or referral decision.
D. Supporting reflection on social context and agency alongside individual coping.

0314. In a case note about a child aged 11, a member of a clinical team working in the youth advocacy program records this priority: identifying who controls access and whose perspective is missing in a service decision. What principle is reflected?

A. Accessibility
B. Liberation psychology
C. Implicit bias
D. Power analysis

0315. At the caregiver consultation, a play therapist meets with a teenage client. The practice priority is: providing different supports where needed to make participation meaningfully accessible. Which concept best captures that priority?

A. Power analysis
B. Equity
C. Equality
D. Liberation psychology

0316. In a case note about a student aged 17, a assessment clinician working in the parent meeting records this priority: inviting client feedback about whether care feels respectful and adapting in response. What principle is reflected?

A. Cultural safety
B. Equality
C. Equity
D. Implicit bias

0317. How are Equity and Microaggression most accurately differentiated in this curriculum?

A. Equity: Provision of the same treatment or resource to everyone, regardless of differing circumstances. / Microaggression: A commonplace interaction or environmental message that communicates devaluation related to identity.
B. Equity: Fair allocation of support that accounts for differing barriers and needs to enable meaningful opportunity. / Microaggression: Designing environments, communication, and services so people with varied abilities can participate.
C. Equity: A commonplace interaction or environmental message that communicates devaluation related to identity. / Microaggression: Fair allocation of support that accounts for differing barriers and needs to enable meaningful opportunity.
D. Equity: Fair allocation of support that accounts for differing barriers and needs to enable meaningful opportunity. / Microaggression: A commonplace interaction or environmental message that communicates devaluation related to identity.

0318. Choose the definition pair that correctly explains Equality first and Cultural safety second.

A. Equality: A client-defined experience of care in which identity is respected and power imbalances are addressed. / Cultural safety: Provision of the same treatment or resource to everyone, regardless of differing circumstances.
B. Equality: Provision of the same treatment or resource to everyone, regardless of differing circumstances. / Cultural safety: Systematic, institutional, or interpersonal processes that restrict opportunities and dignity for groups.
C. Equality: A commonplace interaction or environmental message that communicates devaluation related to identity. / Cultural safety: A client-defined experience of care in which identity is respected and power imbalances are addressed.
D. Equality: Provision of the same treatment or resource to everyone, regardless of differing circumstances. / Cultural safety: A client-defined experience of care in which identity is respected and power imbalances are addressed.

0319. In the youth advocacy program, a teacher and counselor describes the most appropriate support for a middle-school student as distinguishing identical provision from support tailored to unequal barriers. Which framework is being applied?

A. Equality
B. Cultural safety
C. Microaggression
D. Oppression

0320. A trainee must explain Liberation psychology. Which answer is accurate?

A. An approach emphasizing critical awareness and action addressing social conditions that contribute to distress.
B. Fair allocation of support that accounts for differing barriers and needs to enable meaningful opportunity.
C. Designing environments, communication, and services so people with varied abilities can participate.
D. A client-defined experience of care in which identity is respected and power imbalances are addressed.

0321. In a case note about a young adolescent client, a member of a clinical team working in the supervision meeting records this priority: listening to the client's account of an identity-related slight and exploring its impact without minimizing it. What principle is reflected?

A. Oppression
B. Liberation psychology
C. Microaggression
D. Equity

0322. A therapist is asked what should shape a client in late adolescence's support in the youth advocacy program. The proposed focus is reflecting on whether assumptions may be affecting an assessment or referral decision. Which principle does it represent?

A. Equality
B. Implicit bias
C. Oppression
D. Equity

0323. Which applied comparison correctly identifies what belongs to Social justice counseling versus Implicit bias?

A. Social justice counseling: Connecting a client's distress with relevant structural conditions without dismissing personal experience. / Implicit bias: Reflecting on whether assumptions may be affecting an assessment or referral decision.
B. Social justice counseling: Reflecting on whether assumptions may be affecting an assessment or referral decision. / Implicit bias: Connecting a client's distress with relevant structural conditions without dismissing personal experience.
C. Social justice counseling: Identifying and removing practical barriers to communication and participation. / Implicit bias: Reflecting on whether assumptions may be affecting an assessment or referral decision.
D. Social justice counseling: Connecting a client's distress with relevant structural conditions without dismissing personal experience. / Implicit bias: Providing different supports where needed to make participation meaningfully accessible.

0324. Which comparison correctly distinguishes Social justice counseling from Liberation psychology?

A. Social justice counseling: A counseling orientation that addresses individual wellbeing alongside inequitable systems and barriers. / Liberation psychology: An approach emphasizing critical awareness and action addressing social conditions that contribute to distress.
B. Social justice counseling: An approach emphasizing critical awareness and action addressing social conditions that contribute to distress. / Liberation psychology: A counseling orientation that addresses individual wellbeing alongside inequitable systems and barriers.
C. Social justice counseling: A counseling orientation that addresses individual wellbeing alongside inequitable systems and barriers. / Liberation psychology: Examination of how authority, resources, and decision-making influence relationships and outcomes.
D. Social justice counseling: Designing environments, communication, and services so people with varied abilities can participate. / Liberation psychology: An approach emphasizing critical awareness and action addressing social conditions that contribute to distress.

0325. In the parent meeting, a team asks how a youth worker can support a child aged 14. One proposed action is recognizing patterns of exclusion rather than reducing a structural problem to an individual deficit. Which idea does it represent?

A. Equality
B. Social justice counseling
C. Cultural safety
D. Oppression

0326. A service team discusses a adolescent student in the school-based service. Their proposed next step is recognizing patterns of exclusion rather than reducing a structural problem to an individual deficit. Which course concept supports it?

A. Power analysis
B. Accessibility
C. Oppression
D. Liberation psychology

0327. A case conference reviews a community practitioner’s work with a preadolescent child in the school consultation: reflecting on whether assumptions may be affecting an assessment or referral decision. Which principle is central?

A. Implicit bias
B. Cultural safety
C. Liberation psychology
D. Power analysis

0328. Which paired example correctly applies Equity first and Implicit bias second?

A. Equity: Reflecting on whether assumptions may be affecting an assessment or referral decision. / Implicit bias: Providing different supports where needed to make participation meaningfully accessible.
B. Equity: Providing different supports where needed to make participation meaningfully accessible. / Implicit bias: Reflecting on whether assumptions may be affecting an assessment or referral decision.
C. Equity: Recognizing patterns of exclusion rather than reducing a structural problem to an individual deficit. / Implicit bias: Reflecting on whether assumptions may be affecting an assessment or referral decision.
D. Equity: Providing different supports where needed to make participation meaningfully accessible. / Implicit bias: Identifying and removing practical barriers to communication and participation.

0329. Which statement accurately contrasts the course concepts Social justice counseling and Equity?

A. Social justice counseling: A counseling orientation that addresses individual wellbeing alongside inequitable systems and barriers. / Equity: Fair allocation of support that accounts for differing barriers and needs to enable meaningful opportunity.
B. Social justice counseling: A counseling orientation that addresses individual wellbeing alongside inequitable systems and barriers. / Equity: An approach emphasizing critical awareness and action addressing social conditions that contribute to distress.
C. Social justice counseling: Automatic associations that can influence judgment and behavior without conscious intent. / Equity: Fair allocation of support that accounts for differing barriers and needs to enable meaningful opportunity.
D. Social justice counseling: Fair allocation of support that accounts for differing barriers and needs to enable meaningful opportunity. / Equity: A counseling orientation that addresses individual wellbeing alongside inequitable systems and barriers.

0330. Which professional action most closely applies Accessibility?

A. Identifying and removing practical barriers to communication and participation.
B. Inviting client feedback about whether care feels respectful and adapting in response.
C. Providing different supports where needed to make participation meaningfully accessible.
D. Reflecting on whether assumptions may be affecting an assessment or referral decision.

0331. A support meeting for a adolescent student includes a clinical supervisor in the youth group. The practice under consideration is distinguishing identical provision from support tailored to unequal barriers. Which concept guides it?

A. Implicit bias
B. Equality
C. Power analysis
D. Social justice counseling

0332. Which paired example correctly applies Implicit bias first and Microaggression second?

A. Implicit bias: Identifying and removing practical barriers to communication and participation. / Microaggression: Listening to the client’s account of an identity-related slight and exploring its impact without minimizing it.
B. Implicit bias: Reflecting on whether assumptions may be affecting an assessment or referral decision. / Microaggression: Connecting a client’s distress with relevant structural conditions without dismissing personal experience.
C. Implicit bias: Listening to the client’s account of an identity-related slight and exploring its impact without minimizing it. / Microaggression: Reflecting on whether assumptions may be affecting an assessment or referral decision.
D. Implicit bias: Reflecting on whether assumptions may be affecting an assessment or referral decision. / Microaggression: Listening to the client’s account of an identity-related slight and exploring its impact without minimizing it.

0333. A case conference reviews a program coordinator’s work with a child aged 7 in the parent meeting: providing different supports where needed to make participation meaningfully accessible. Which principle is central?

A. Equity
B. Oppression
C. Power analysis
D. Implicit bias

0334. A teacher and counselor is asked to justify a plan for a child aged 11 in the community service agency. It calls for identifying and removing practical barriers to communication and participation. Which concept provides the rationale?

A. Cultural safety
B. Microaggression
C. Accessibility
D. Power analysis

0335. A trainee must explain Oppression. Which answer is accurate?

A. Designing environments, communication, and services so people with varied abilities can participate.
B. Fair allocation of support that accounts for differing barriers and needs to enable meaningful opportunity.
C. Systematic, institutional, or interpersonal processes that restrict opportunities and dignity for groups.
D. Automatic associations that can influence judgment and behavior without conscious intent.

0336. Which option pairs the definitions of Equality and Liberation psychology correctly, in that order?

A. Equality: Provision of the same treatment or resource to everyone, regardless of differing circumstances. / Liberation psychology: Examination of how authority, resources, and decision-making influence relationships and outcomes.
B. Equality: An approach emphasizing critical awareness and action addressing social conditions that contribute to distress. / Liberation psychology: Provision of the same treatment or resource to everyone, regardless of differing circumstances.
C. Equality: Provision of the same treatment or resource to everyone, regardless of differing circumstances. / Liberation psychology: An approach emphasizing critical awareness and action addressing social conditions that contribute to distress.
D. Equality: Designing environments, communication, and services so people with varied abilities can participate. / Liberation psychology: An approach emphasizing critical awareness and action addressing social conditions that contribute to distress.

0337. A trainee must distinguish how Power analysis and Liberation psychology guide practice. Which comparison is accurate?

A. Power analysis: Supporting reflection on social context and agency alongside individual coping. / Liberation psychology: Identifying who controls access and whose perspective is missing in a service decision.
B. Power analysis: Identifying who controls access and whose perspective is missing in a service decision. / Liberation psychology: Supporting reflection on social context and agency alongside individual coping.
C. Power analysis: Providing different supports where needed to make participation meaningfully accessible. / Liberation psychology: Supporting reflection on social context and agency alongside individual coping.
D. Power analysis: Identifying who controls access and whose perspective is missing in a service decision. / Liberation psychology: Reflecting on whether assumptions may be affecting an assessment or referral decision.

0338. Which statement shows a sound practice-level distinction between Equity and Microaggression?

A. Equity: Listening to the client's account of an identity-related slight and exploring its impact without minimizing it. / Microaggression: Providing different supports where needed to make participation meaningfully accessible.
B. Equity: Distinguishing identical provision from support tailored to unequal barriers. / Microaggression: Listening to the client's account of an identity-related slight and exploring its impact without minimizing it.
C. Equity: Providing different supports where needed to make participation meaningfully accessible. / Microaggression: Listening to the client's account of an identity-related slight and exploring its impact without minimizing it.
D. Equity: Providing different supports where needed to make participation meaningfully accessible. / Microaggression: Identifying and removing practical barriers to communication and participation.

0339. Which statement accurately contrasts the course concepts Social justice counseling and Equality?

A. Social justice counseling: A counseling orientation that addresses individual wellbeing alongside inequitable systems and barriers. / Equality: Provision of the same treatment or resource to everyone, regardless of differing circumstances.
B. Social justice counseling: Provision of the same treatment or resource to everyone, regardless of differing circumstances. / Equality: A counseling orientation that addresses individual wellbeing alongside inequitable systems and barriers.
C. Social justice counseling: A client-defined experience of care in which identity is respected and power imbalances are addressed. / Equality: Provision of the same treatment or resource to everyone, regardless of differing circumstances.
D. Social justice counseling: A counseling orientation that addresses individual wellbeing alongside inequitable systems and barriers. / Equality: Fair allocation of support that accounts for differing barriers and needs to enable meaningful opportunity.

0340. Choose the response that best puts Cultural safety into practice.

A. Identifying and removing practical barriers to communication and participation.
B. Inviting client feedback about whether care feels respectful and adapting in response.
C. Distinguishing identical provision from support tailored to unequal barriers.
D. Providing different supports where needed to make participation meaningfully accessible.

0341. Which option correctly matches each concept to its practice focus: Equality and Cultural safety?

A. Equality: Distinguishing identical provision from support tailored to unequal barriers. / Cultural safety: Inviting client feedback about whether care feels respectful and adapting in response.
B. Equality: Inviting client feedback about whether care feels respectful and adapting in response. / Cultural safety: Distinguishing identical provision from support tailored to unequal barriers.
C. Equality: Distinguishing identical provision from support tailored to unequal barriers. / Cultural safety: Recognizing patterns of exclusion rather than reducing a structural problem to an individual deficit.
D. Equality: Listening to the client's account of an identity-related slight and exploring its impact without minimizing it. / Cultural safety: Inviting client feedback about whether care feels respectful and adapting in response.

0342. A assessment clinician is preparing a follow-up plan for a teenage client in the community youth program. The plan calls for reflecting on whether assumptions may be affecting an assessment or referral decision. Which concept names this approach?

A. Accessibility
B. Microaggression
C. Implicit bias
D. Equality

0343. A teacher and counselor is explaining a choice to a teenage client and caregiver in the after-school program. The choice centers on recognizing patterns of exclusion rather than reducing a structural problem to an individual deficit. Which idea is illustrated?

A. Cultural safety
B. Power analysis
C. Oppression
D. Equity

0344. Which statement accurately contrasts the course concepts Liberation psychology and Cultural safety?

A. Liberation psychology: An approach emphasizing critical awareness and action addressing social conditions that contribute to distress. / Cultural safety: A client-defined experience of care in which identity is respected and power imbalances are addressed.
B. Liberation psychology: A client-defined experience of care in which identity is respected and power imbalances are addressed. / Cultural safety: An approach emphasizing critical awareness and action addressing social conditions that contribute to distress.
C. Liberation psychology: An approach emphasizing critical awareness and action addressing social conditions that contribute to distress. / Cultural safety: Designing environments, communication, and services so people with varied abilities can participate.
D. Liberation psychology: Automatic associations that can influence judgment and behavior without conscious intent. / Cultural safety: A client-defined experience of care in which identity is respected and power imbalances are addressed.

0345. Which paired example correctly applies Power analysis first and Accessibility second?

A. Power analysis: Identifying who controls access and whose perspective is missing in a service decision. / Accessibility: Listening to the client's account of an identity-related slight and exploring its impact without minimizing it.
B. Power analysis: Connecting a client's distress with relevant structural conditions without dismissing personal experience. / Accessibility: Identifying and removing practical barriers to communication and participation.
C. Power analysis: Identifying and removing practical barriers to communication and participation. / Accessibility: Identifying who controls access and whose perspective is missing in a service decision.
D. Power analysis: Identifying who controls access and whose perspective is missing in a service decision. / Accessibility: Identifying and removing practical barriers to communication and participation.

0346. A consultant is preparing a follow-up plan for a child aged 11 in the school consultation. The plan calls for listening to the client's account of an identity-related slight and exploring its impact without minimizing it. Which concept names this approach?

A. Cultural safety
B. Power analysis
C. Microaggression
D. Social justice counseling

0347. In a supervision quiz, how should Equality be distinguished from Implicit bias?

A. Equality: Provision of the same treatment or resource to everyone, regardless of differing circumstances. / Implicit bias: Automatic associations that can influence judgment and behavior without conscious intent.
B. Equality: A client-defined experience of care in which identity is respected and power imbalances are addressed. / Implicit bias: Automatic associations that can influence judgment and behavior without conscious intent.
C. Equality: Automatic associations that can influence judgment and behavior without conscious intent. / Implicit bias: Provision of the same treatment or resource to everyone, regardless of differing circumstances.
D. Equality: Provision of the same treatment or resource to everyone, regardless of differing circumstances. / Implicit bias: Fair allocation of support that accounts for differing barriers and needs to enable meaningful opportunity.

0348. Which statement most accurately defines Cultural safety?

A. Examination of how authority, resources, and decision-making influence relationships and outcomes.
B. A client-defined experience of care in which identity is respected and power imbalances are addressed.
C. A counseling orientation that addresses individual wellbeing alongside inequitable systems and barriers.
D. Automatic associations that can influence judgment and behavior without conscious intent.

0349. Which pair of actions illustrates Oppression and Equality, respectively?

A. Oppression: Distinguishing identical provision from support tailored to unequal barriers. / Equality: Recognizing patterns of exclusion rather than reducing a structural problem to an individual deficit.
B. Oppression: Inviting client feedback about whether care feels respectful and adapting in response. / Equality: Distinguishing identical provision from support tailored to unequal barriers.
C. Oppression: Recognizing patterns of exclusion rather than reducing a structural problem to an individual deficit. / Equality: Distinguishing identical provision from support tailored to unequal barriers.
D. Oppression: Recognizing patterns of exclusion rather than reducing a structural problem to an individual deficit. / Equality: Identifying and removing practical barriers to communication and participation.

0350. Which applied comparison correctly identifies what belongs to Equity versus Equality?

A. Equity: Providing different supports where needed to make participation meaningfully accessible. / Equality: Distinguishing identical provision from support tailored to unequal barriers.
B. Equity: Inviting client feedback about whether care feels respectful and adapting in response. / Equality: Distinguishing identical provision from support tailored to unequal barriers.
C. Equity: Distinguishing identical provision from support tailored to unequal barriers. / Equality: Providing different supports where needed to make participation meaningfully accessible.
D. Equity: Providing different supports where needed to make participation meaningfully accessible. / Equality: Connecting a client's distress with relevant structural conditions without dismissing personal experience.

0351. A therapist describes an intervention for a high-school student in the counseling practicum, centered on listening to the client's account of an identity-related slight and exploring its impact without minimizing it. Which named idea is most relevant?

A. Power analysis
B. Microaggression
C. Equality
D. Equity

0352. Which applied comparison correctly identifies what belongs to Equality versus Accessibility?

A. Equality: Distinguishing identical provision from support tailored to unequal barriers. / Accessibility: Identifying and removing practical barriers to communication and participation.
B. Equality: Identifying and removing practical barriers to communication and participation. / Accessibility: Distinguishing identical provision from support tailored to unequal barriers.
C. Equality: Recognizing patterns of exclusion rather than reducing a structural problem to an individual deficit. / Accessibility: Identifying and removing practical barriers to communication and participation.
D. Equality: Distinguishing identical provision from support tailored to unequal barriers. / Accessibility: Providing different supports where needed to make participation meaningfully accessible.

0353. How should a practitioner distinguish the applications of Equity and Cultural safety?

A. Equity: Providing different supports where needed to make participation meaningfully accessible. / Cultural safety: Listening to the client's account of an identity-related slight and exploring its impact without minimizing it.
B. Equity: Distinguishing identical provision from support tailored to unequal barriers. / Cultural safety: Inviting client feedback about whether care feels respectful and adapting in response.
C. Equity: Inviting client feedback about whether care feels respectful and adapting in response. / Cultural safety: Providing different supports where needed to make participation meaningfully accessible.
D. Equity: Providing different supports where needed to make participation meaningfully accessible. / Cultural safety: Inviting client feedback about whether care feels respectful and adapting in response.

0354. A trainee must choose a practice that exemplifies Equity. Which action is the best fit?

A. Distinguishing identical provision from support tailored to unequal barriers.
B. Providing different supports where needed to make participation meaningfully accessible.
C. Identifying and removing practical barriers to communication and participation.
D. Listening to the client's account of an identity-related slight and exploring its impact without minimizing it.

0355. A service navigator describes an intervention for a student aged 17 in the supervision meeting, centered on reflecting on whether assumptions may be affecting an assessment or referral decision. Which named idea is most relevant?

A. Liberation psychology
B. Equality
C. Implicit bias
D. Accessibility

0356. A consulting counselor is asked to justify a plan for a older adolescent client in the school-based service. It calls for listening to the client's account of an identity-related slight and exploring its impact without minimizing it. Which concept provides the rationale?

A. Cultural safety
B. Microaggression
C. Equity
D. Liberation psychology

0357. A case coordinator presents a support plan for a student aged 15 at the youth advocacy program. Its central feature is recognizing patterns of exclusion rather than reducing a structural problem to an individual deficit. Which concept should be named?

A. Oppression
B. Cultural safety
C. Accessibility
D. Liberation psychology

0358. A supervisor asks how Social justice counseling would appear in practice. Which choice should be selected?

A. Inviting client feedback about whether care feels respectful and adapting in response.
B. Reflecting on whether assumptions may be affecting an assessment or referral decision.
C. Connecting a client's distress with relevant structural conditions without dismissing personal experience.
D. Distinguishing identical provision from support tailored to unequal barriers.

0359. In the community youth program, a consulting counselor explains why a young person aged 16 would benefit from identifying and removing practical barriers to communication and participation. Which course concept underpins the explanation?

A. Social justice counseling
B. Cultural safety
C. Liberation psychology
D. Accessibility

0360. In the child guidance clinic, a consulting counselor explains why a adolescent student would benefit from providing different supports where needed to make participation meaningfully accessible. Which course concept underpins the explanation?

A. Microaggression
B. Implicit bias
C. Equality
D. Equity

0361. A case conference asks for a distinction between Equity and Microaggression. Which answer is sound?

A. Equity: Provision of the same treatment or resource to everyone, regardless of differing circumstances. / Microaggression: A commonplace interaction or environmental message that communicates devaluation related to identity.
B. Equity: Fair allocation of support that accounts for differing barriers and needs to enable meaningful opportunity. / Microaggression: Designing environments, communication, and services so people with varied abilities can participate.
C. Equity: A commonplace interaction or environmental message that communicates devaluation related to identity. / Microaggression: Fair allocation of support that accounts for differing barriers and needs to enable meaningful opportunity.
D. Equity: Fair allocation of support that accounts for differing barriers and needs to enable meaningful opportunity. / Microaggression: A commonplace interaction or environmental message that communicates devaluation related to identity.

0362. At the community service agency, a school support specialist meets with a preadolescent child. The practice priority is: supporting reflection on social context and agency alongside individual coping. Which concept best captures that priority?

A. Equality
B. Cultural safety
C. Liberation psychology
D. Power analysis

0363. Which option preserves the correct meaning of both Implicit bias and Accessibility?

A. Implicit bias: Designing environments, communication, and services so people with varied abilities can participate. / Accessibility: Automatic associations that can influence judgment and behavior without conscious intent.
B. Implicit bias: Automatic associations that can influence judgment and behavior without conscious intent. / Accessibility: Designing environments, communication, and services so people with varied abilities can participate.
C. Implicit bias: Automatic associations that can influence judgment and behavior without conscious intent. / Accessibility: A commonplace interaction or environmental message that communicates devaluation related to identity.
D. Implicit bias: Systematic, institutional, or interpersonal processes that restrict opportunities and dignity for groups. / Accessibility: Designing environments, communication, and services so people with varied abilities can participate.

0364. During service review in the school counseling office, a community practitioner describes recognizing patterns of exclusion rather than reducing a structural problem to an individual deficit. for a young person aged 16. Which course idea is most applicable?

A. Equity
B. Microaggression
C. Implicit bias
D. Oppression

0365. Which option is the clearest practical expression of Power analysis?

A. Supporting reflection on social context and agency alongside individual coping.
B. Identifying who controls access and whose perspective is missing in a service decision.
C. Connecting a client's distress with relevant structural conditions without dismissing personal experience.
D. Listening to the client's account of an identity-related slight and exploring its impact without minimizing it.

0366. Which option correctly matches each concept to its practice focus: Equity and Implicit bias?

A. Equity: Reflecting on whether assumptions may be affecting an assessment or referral decision. / Implicit bias: Providing different supports where needed to make participation meaningfully accessible.
B. Equity: Providing different supports where needed to make participation meaningfully accessible. / Implicit bias: Reflecting on whether assumptions may be affecting an assessment or referral decision.
C. Equity: Providing different supports where needed to make participation meaningfully accessible. / Implicit bias: Identifying and removing practical barriers to communication and participation.
D. Equity: Recognizing patterns of exclusion rather than reducing a structural problem to an individual deficit. / Implicit bias: Reflecting on whether assumptions may be affecting an assessment or referral decision.

0367. Select the best explanation of Implicit bias.

A. An approach emphasizing critical awareness and action addressing social conditions that contribute to distress.
B. Automatic associations that can influence judgment and behavior without conscious intent.
C. Designing environments, communication, and services so people with varied abilities can participate.
D. Provision of the same treatment or resource to everyone, regardless of differing circumstances.

0368. A service team discusses a child aged 6 in the community service agency. Their proposed next step is distinguishing identical provision from support tailored to unequal barriers. Which course concept supports it?

A. Cultural safety
B. Liberation psychology
C. Social justice counseling
D. Equality

0369. While supporting a young person aged 13 in the community youth program, a school-based clinician adopts this practice: identifying who controls access and whose perspective is missing in a service decision. Which concept best explains the choice?

A. Cultural safety
B. Microaggression
C. Equality
D. Power analysis

0370. Which option preserves the correct meaning of both Power analysis and Accessibility?

A. Power analysis: Examination of how authority, resources, and decision-making influence relationships and outcomes. / Accessibility: Designing environments, communication, and services so people with varied abilities can participate.
B. Power analysis: Examination of how authority, resources, and decision-making influence relationships and outcomes. / Accessibility: A commonplace interaction or environmental message that communicates devaluation related to identity.
C. Power analysis: Designing environments, communication, and services so people with varied abilities can participate. / Accessibility: Examination of how authority, resources, and decision-making influence relationships and outcomes.
D. Power analysis: A counseling orientation that addresses individual wellbeing alongside inequitable systems and barriers. / Accessibility: Designing environments, communication, and services so people with varied abilities can participate.

0371. Which option correctly matches each concept to its practice focus: Power analysis and Microaggression?

A. Power analysis: Identifying and removing practical barriers to communication and participation. / Microaggression: Listening to the client's account of an identity-related slight and exploring its impact without minimizing it.
B. Power analysis: Identifying who controls access and whose perspective is missing in a service decision. / Microaggression: Connecting a client's distress with relevant structural conditions without dismissing personal experience.
C. Power analysis: Identifying who controls access and whose perspective is missing in a service decision. / Microaggression: Listening to the client's account of an identity-related slight and exploring its impact without minimizing it.
D. Power analysis: Listening to the client's account of an identity-related slight and exploring its impact without minimizing it. / Microaggression: Identifying who controls access and whose perspective is missing in a service decision.

0372. A planning meeting about a young person aged 10 includes a school support specialist. The proposed practice in the family session is listening to the client's account of an identity-related slight and exploring its impact without minimizing it. Which idea underlies it?

A. Equality
B. Power analysis
C. Accessibility
D. Microaggression

0373. When reviewing a teenage client's plan in the classroom support meeting, the parent educator notes that the next step is inviting client feedback about whether care feels respectful and adapting in response. Which concept guides this step?

A. Equality
B. Cultural safety
C. Oppression
D. Social justice counseling

0374. In the clinical planning session, the agreed focus for a community practitioner working with a teenage client is listening to the client's account of an identity-related slight and exploring its impact without minimizing it. Which concept names this focus?

A. Equality
B. Liberation psychology
C. Microaggression
D. Social justice counseling

0375. Which applied comparison correctly identifies what belongs to Liberation psychology versus Cultural safety?

A. Liberation psychology: Supporting reflection on social context and agency alongside individual coping. / Cultural safety: Identifying and removing practical barriers to communication and participation.
B. Liberation psychology: Reflecting on whether assumptions may be affecting an assessment or referral decision. / Cultural safety: Inviting client feedback about whether care feels respectful and adapting in response.
C. Liberation psychology: Supporting reflection on social context and agency alongside individual coping. / Cultural safety: Inviting client feedback about whether care feels respectful and adapting in response.
D. Liberation psychology: Inviting client feedback about whether care feels respectful and adapting in response. / Cultural safety: Supporting reflection on social context and agency alongside individual coping.

0376. At a case-planning meeting, the counselor proposes reflecting on whether assumptions may be affecting an assessment or referral decision. for a child aged 7 seen in the school-based service. Which concept does this illustrate?

A. Implicit bias
B. Oppression
C. Equality
D. Microaggression

0377. At a case-planning meeting, the behavior specialist proposes distinguishing identical provision from support tailored to unequal barriers. for a child aged 11 seen in the multidisciplinary case conference. Which concept does this illustrate?

A. Microaggression
B. Equality
C. Social justice counseling
D. Cultural safety

0378. A supervisor asks for an applied contrast between Equity and Liberation psychology. Which option fits?

A. Equity: Recognizing patterns of exclusion rather than reducing a structural problem to an individual deficit. / Liberation psychology: Supporting reflection on social context and agency alongside individual coping.
B. Equity: Supporting reflection on social context and agency alongside individual coping. / Liberation psychology: Providing different supports where needed to make participation meaningfully accessible.
C. Equity: Providing different supports where needed to make participation meaningfully accessible. / Liberation psychology: Supporting reflection on social context and agency alongside individual coping.
D. Equity: Providing different supports where needed to make participation meaningfully accessible. / Liberation psychology: Reflecting on whether assumptions may be affecting an assessment or referral decision.

0379. Which comparison correctly distinguishes Microaggression from Accessibility?

A. Microaggression: Designing environments, communication, and services so people with varied abilities can participate. / Accessibility: A commonplace interaction or environmental message that communicates devaluation related to identity.
B. Microaggression: A counseling orientation that addresses individual wellbeing alongside inequitable systems and barriers. / Accessibility: Designing environments, communication, and services so people with varied abilities can participate.
C. Microaggression: A commonplace interaction or environmental message that communicates devaluation related to identity. / Accessibility: Designing environments, communication, and services so people with varied abilities can participate.
D. Microaggression: A commonplace interaction or environmental message that communicates devaluation related to identity. / Accessibility: Automatic associations that can influence judgment and behavior without conscious intent.

0380. A supervisor asks for an applied contrast between Power analysis and Equity. Which option fits?

A. Power analysis: Providing different supports where needed to make participation meaningfully accessible. / Equity: Identifying who controls access and whose perspective is missing in a service decision.
B. Power analysis: Identifying who controls access and whose perspective is missing in a service decision. / Equity: Identifying and removing practical barriers to communication and participation.
C. Power analysis: Reflecting on whether assumptions may be affecting an assessment or referral decision. / Equity: Providing different supports where needed to make participation meaningfully accessible.
D. Power analysis: Identifying who controls access and whose perspective is missing in a service decision. / Equity: Providing different supports where needed to make participation meaningfully accessible.

0381. Choose the practice comparison that best separates Social justice counseling from Liberation psychology.

A. Social justice counseling: Connecting a client's distress with relevant structural conditions without dismissing personal experience. / Liberation psychology: Supporting reflection on social context and agency alongside individual coping.
B. Social justice counseling: Connecting a client's distress with relevant structural conditions without dismissing personal experience. / Liberation psychology: Identifying who controls access and whose perspective is missing in a service decision.
C. Social justice counseling: Supporting reflection on social context and agency alongside individual coping. / Liberation psychology: Connecting a client's distress with relevant structural conditions without dismissing personal experience.
D. Social justice counseling: Identifying and removing practical barriers to communication and participation. / Liberation psychology: Supporting reflection on social context and agency alongside individual coping.

0382. A case discussion concerns a child of elementary-school age and a parent educator in the caregiver consultation. The practitioner is considering recognizing patterns of exclusion rather than reducing a structural problem to an individual deficit. Which principle is involved?

A. Accessibility
B. Oppression
C. Equality
D. Microaggression

0383. A school counselor is explaining a choice to a older adolescent client and caregiver in the classroom support meeting. The choice centers on identifying who controls access and whose perspective is missing in a service decision. Which idea is illustrated?

A. Power analysis
B. Implicit bias
C. Accessibility
D. Equity

0384. In the counseling practicum, a teacher and counselor explains why a child aged 6 would benefit from reflecting on whether assumptions may be affecting an assessment or referral decision. Which course concept underpins the explanation?

A. Power analysis
B. Cultural safety
C. Implicit bias
D. Accessibility

0385. For a student aged 12 in the community service agency, a clinical supervisor makes this practice the immediate priority: recognizing patterns of exclusion rather than reducing a structural problem to an individual deficit. Which concept fits best?

A. Oppression
B. Liberation psychology
C. Social justice counseling
D. Cultural safety

0386. An interdisciplinary team reviews a preadolescent child's case at the family resource center. The play therapist recommends recognizing patterns of exclusion rather than reducing a structural problem to an individual deficit. Which course concept best fits?

A. Social justice counseling
B. Liberation psychology
C. Oppression
D. Cultural safety

0387. During service review in the student wellness team, a program coordinator describes connecting a client's distress with relevant structural conditions without dismissing personal experience. for a client in late adolescence. Which course idea is most applicable?

A. Equality
B. Equity
C. Power analysis
D. Social justice counseling

0388. Choose the definition pair that correctly explains Liberation psychology first and Cultural safety second.

A. Liberation psychology: A client-defined experience of care in which identity is respected and power imbalances are addressed. / Cultural safety: An approach emphasizing critical awareness and action addressing social conditions that contribute to distress.
B. Liberation psychology: An approach emphasizing critical awareness and action addressing social conditions that contribute to distress. / Cultural safety: A client-defined experience of care in which identity is respected and power imbalances are addressed.
C. Liberation psychology: An approach emphasizing critical awareness and action addressing social conditions that contribute to distress. / Cultural safety: Designing environments, communication, and services so people with varied abilities can participate.
D. Liberation psychology: Automatic associations that can influence judgment and behavior without conscious intent. / Cultural safety: A client-defined experience of care in which identity is respected and power imbalances are addressed.

0389. In a supervision review, a case coordinator describes work with a older adolescent client in the youth group: identifying and removing practical barriers to communication and participation. What concept is illustrated?

A. Accessibility
B. Oppression
C. Cultural safety
D. Implicit bias

0390. Consider a client in late adolescence receiving help in the school-based service. The group facilitator focuses on identifying who controls access and whose perspective is missing in a service decision. Which term best describes the guiding idea?

A. Implicit bias
B. Microaggression
C. Equity
D. Power analysis

0391. While consulting in the multidisciplinary case conference, a supervised trainee supports a school-age child by using this approach: recognizing patterns of exclusion rather than reducing a structural problem to an individual deficit. Which concept is being applied?

A. Implicit bias
B. Oppression
C. Liberation psychology
D. Equity

0392. Consider a student aged 12 receiving help in the telehealth session. The group facilitator focuses on listening to the client's account of an identity-related slight and exploring its impact without minimizing it. Which term best describes the guiding idea?

A. Power analysis
B. Oppression
C. Microaggression
D. Liberation psychology

0393. Which paired example correctly applies Liberation psychology first and Cultural safety second?

A. Liberation psychology: Reflecting on whether assumptions may be affecting an assessment or referral decision. / Cultural safety: Inviting client feedback about whether care feels respectful and adapting in response.
B. Liberation psychology: Supporting reflection on social context and agency alongside individual coping. / Cultural safety: Inviting client feedback about whether care feels respectful and adapting in response.
C. Liberation psychology: Inviting client feedback about whether care feels respectful and adapting in response. / Cultural safety: Supporting reflection on social context and agency alongside individual coping.
D. Liberation psychology: Supporting reflection on social context and agency alongside individual coping. / Cultural safety: Identifying and removing practical barriers to communication and participation.

0394. Which statement accurately contrasts the course concepts Microaggression and Cultural safety?

A. Microaggression: A commonplace interaction or environmental message that communicates devaluation related to identity. / Cultural safety: An approach emphasizing critical awareness and action addressing social conditions that contribute to distress.
B. Microaggression: A client-defined experience of care in which identity is respected and power imbalances are addressed. / Cultural safety: A commonplace interaction or environmental message that communicates devaluation related to identity.
C. Microaggression: Fair allocation of support that accounts for differing barriers and needs to enable meaningful opportunity. / Cultural safety: A client-defined experience of care in which identity is respected and power imbalances are addressed.
D. Microaggression: A commonplace interaction or environmental message that communicates devaluation related to identity. / Cultural safety: A client-defined experience of care in which identity is respected and power imbalances are addressed.

0395. Which named construct is captured by this account? A counseling orientation that addresses individual wellbeing alongside inequitable systems and barriers.

A. Microaggression
B. Equity
C. Power analysis
D. Social justice counseling

0396. In a supervision quiz, how should Social justice counseling be distinguished from Equality?

A. Social justice counseling: A counseling orientation that addresses individual wellbeing alongside inequitable systems and barriers. / Equality: Provision of the same treatment or resource to everyone, regardless of differing circumstances.
B. Social justice counseling: A client-defined experience of care in which identity is respected and power imbalances are addressed. / Equality: Provision of the same treatment or resource to everyone, regardless of differing circumstances.
C. Social justice counseling: Provision of the same treatment or resource to everyone, regardless of differing circumstances. / Equality: A counseling orientation that addresses individual wellbeing alongside inequitable systems and barriers.
D. Social justice counseling: A counseling orientation that addresses individual wellbeing alongside inequitable systems and barriers. / Equality: Fair allocation of support that accounts for differing barriers and needs to enable meaningful opportunity.

0397. Which statement accurately contrasts the course concepts Power analysis and Liberation psychology?

A. Power analysis: Examination of how authority, resources, and decision-making influence relationships and outcomes. / Liberation psychology: An approach emphasizing critical awareness and action addressing social conditions that contribute to distress.
B. Power analysis: Examination of how authority, resources, and decision-making influence relationships and outcomes. / Liberation psychology: Automatic associations that can influence judgment and behavior without conscious intent.
C. Power analysis: Fair allocation of support that accounts for differing barriers and needs to enable meaningful opportunity. / Liberation psychology: An approach emphasizing critical awareness and action addressing social conditions that contribute to distress.
D. Power analysis: An approach emphasizing critical awareness and action addressing social conditions that contribute to distress. / Liberation psychology: Examination of how authority, resources, and decision-making influence relationships and outcomes.

0398. Which named construct is captured by this account? Designing environments, communication, and services so people with varied abilities can participate.

A. Microaggression
B. Accessibility
C. Social justice counseling
D. Liberation psychology

0399. During work in the child guidance clinic, a consulting counselor identifies this need: providing different supports where needed to make participation meaningfully accessible. Which idea should guide the response?

A. Equity
B. Microaggression
C. Cultural safety
D. Oppression

0400. Identify the most precise label for this idea: A commonplace interaction or environmental message that communicates devaluation related to identity.

A. Implicit bias
B. Social justice counseling
C. Oppression
D. Microaggression

0401. Identify the most precise label for this idea: Systematic, institutional, or interpersonal processes that restrict opportunities and dignity for groups.

A. Oppression
B. Microaggression
C. Accessibility
D. Liberation psychology

0402. A program coordinator is asked what should shape a student aged 9’s support in the outpatient clinic. The proposed focus is listening to the client’s account of an identity-related slight and exploring its impact without minimizing it. Which principle does it represent?

A. Social justice counseling
B. Oppression
C. Microaggression
D. Accessibility

0403. At a case-planning meeting, the clinical supervisor proposes identifying who controls access and whose perspective is missing in a service decision. for a student aged 15 seen in the family session. Which concept does this illustrate?

A. Social justice counseling
B. Power analysis
C. Oppression
D. Liberation psychology

0404. An interdisciplinary team reviews a adolescent student’s case at the multidisciplinary case conference. The counselor recommends inviting client feedback about whether care feels respectful and adapting in response. Which course concept best fits?

A. Liberation psychology
B. Cultural safety
C. Oppression
D. Microaggression

0405. A student confuses Oppression with Liberation psychology. Which explanation most accurately separates them?

A. Oppression: Systematic, institutional, or interpersonal processes that restrict opportunities and dignity for groups. / Liberation psychology: Automatic associations that can influence judgment and behavior without conscious intent.
B. Oppression: Systematic, institutional, or interpersonal processes that restrict opportunities and dignity for groups. / Liberation psychology: An approach emphasizing critical awareness and action addressing social conditions that contribute to distress.
C. Oppression: An approach emphasizing critical awareness and action addressing social conditions that contribute to distress. / Liberation psychology: Systematic, institutional, or interpersonal processes that restrict opportunities and dignity for groups.
D. Oppression: Provision of the same treatment or resource to everyone, regardless of differing circumstances. / Liberation psychology: An approach emphasizing critical awareness and action addressing social conditions that contribute to distress.

0406. At the supervision meeting, a community practitioner reviews whether a plan for a older adolescent client is appropriate. The relevant practice is connecting a client’s distress with relevant structural conditions without dismissing personal experience. Which concept is tested?

A. Implicit bias
B. Social justice counseling
C. Oppression
D. Liberation psychology

0407. Which option preserves the correct meaning of both Implicit bias and Cultural safety?

A. Implicit bias: An approach emphasizing critical awareness and action addressing social conditions that contribute to distress. / Cultural safety: A client-defined experience of care in which identity is respected and power imbalances are addressed.
B. Implicit bias: A client-defined experience of care in which identity is respected and power imbalances are addressed. / Cultural safety: Automatic associations that can influence judgment and behavior without conscious intent.
C. Implicit bias: Automatic associations that can influence judgment and behavior without conscious intent. / Cultural safety: A client-defined experience of care in which identity is respected and power imbalances are addressed.
D. Implicit bias: Automatic associations that can influence judgment and behavior without conscious intent. / Cultural safety: Fair allocation of support that accounts for differing barriers and needs to enable meaningful opportunity.

0408. A clinical supervisor reviews a plan for a student aged 9 in the supervision meeting. The plan emphasizes providing different supports where needed to make participation meaningfully accessible. Which course idea does this reflect?

A. Microaggression
B. Social justice counseling
C. Implicit bias
D. Equity

0409. Which comparison correctly distinguishes Social justice counseling from Cultural safety?

A. Social justice counseling: A client-defined experience of care in which identity is respected and power imbalances are addressed. / Cultural safety: A counseling orientation that addresses individual wellbeing alongside inequitable systems and barriers.
B. Social justice counseling: A counseling orientation that addresses individual wellbeing alongside inequitable systems and barriers. / Cultural safety: Automatic associations that can influence judgment and behavior without conscious intent.
C. Social justice counseling: Designing environments, communication, and services so people with varied abilities can participate. / Cultural safety: A client-defined experience of care in which identity is respected and power imbalances are addressed.
D. Social justice counseling: A counseling orientation that addresses individual wellbeing alongside inequitable systems and barriers. / Cultural safety: A client-defined experience of care in which identity is respected and power imbalances are addressed.

0410. How should a practitioner distinguish the applications of Microaggression and Accessibility?

A. Microaggression: Listening to the client's account of an identity-related slight and exploring its impact without minimizing it. / Accessibility: Reflecting on whether assumptions may be affecting an assessment or referral decision.
B. Microaggression: Listening to the client's account of an identity-related slight and exploring its impact without minimizing it. / Accessibility: Identifying and removing practical barriers to communication and participation.
C. Microaggression: Identifying and removing practical barriers to communication and participation. / Accessibility: Listening to the client's account of an identity-related slight and exploring its impact without minimizing it.
D. Microaggression: Connecting a client's distress with relevant structural conditions without dismissing personal experience. / Accessibility: Identifying and removing practical barriers to communication and participation.

0411. In the student wellness team, a team asks how a consulting counselor can support a young person aged 13. One proposed action is inviting client feedback about whether care feels respectful and adapting in response. Which idea does it represent?

A. Cultural safety
B. Microaggression
C. Equality
D. Equity

0412. Which choice aligns each practice with the correct idea, Power analysis or Equality?

A. Power analysis: Inviting client feedback about whether care feels respectful and adapting in response. / Equality: Distinguishing identical provision from support tailored to unequal barriers.
B. Power analysis: Distinguishing identical provision from support tailored to unequal barriers. / Equality: Identifying who controls access and whose perspective is missing in a service decision.
C. Power analysis: Identifying who controls access and whose perspective is missing in a service decision. / Equality: Distinguishing identical provision from support tailored to unequal barriers.
D. Power analysis: Identifying who controls access and whose perspective is missing in a service decision. / Equality: Connecting a client's distress with relevant structural conditions without dismissing personal experience.

0413. A member of a clinical team and a client in late adolescence are discussing support in the family session. The selected practice is distinguishing identical provision from support tailored to unequal barriers. Which concept does this demonstrate?

A. Microaggression
B. Accessibility
C. Equity
D. Equality

0414. A youth worker is explaining a choice to a child aged 11 and caregiver in the family resource center. The choice centers on providing different supports where needed to make participation meaningfully accessible. Which idea is illustrated?

A. Equity
B. Social justice counseling
C. Cultural safety
D. Oppression

0415. Which option pairs the definitions of Oppression and Equality correctly, in that order?

A. Oppression: A client-defined experience of care in which identity is respected and power imbalances are addressed. / Equality: Provision of the same treatment or resource to everyone, regardless of differing circumstances.
B. Oppression: Provision of the same treatment or resource to everyone, regardless of differing circumstances. / Equality: Systematic, institutional, or interpersonal processes that restrict opportunities and dignity for groups.
C. Oppression: Systematic, institutional, or interpersonal processes that restrict opportunities and dignity for groups. / Equality: Provision of the same treatment or resource to everyone, regardless of differing circumstances.
D. Oppression: Systematic, institutional, or interpersonal processes that restrict opportunities and dignity for groups. / Equality: Designing environments, communication, and services so people with varied abilities can participate.

0416. A trainee must distinguish how Liberation psychology and Cultural safety guide practice. Which comparison is accurate?

A. Liberation psychology: Reflecting on whether assumptions may be affecting an assessment or referral decision. / Cultural safety: Inviting client feedback about whether care feels respectful and adapting in response.
B. Liberation psychology: Supporting reflection on social context and agency alongside individual coping. / Cultural safety: Inviting client feedback about whether care feels respectful and adapting in response.
C. Liberation psychology: Inviting client feedback about whether care feels respectful and adapting in response. / Cultural safety: Supporting reflection on social context and agency alongside individual coping.
D. Liberation psychology: Supporting reflection on social context and agency alongside individual coping. / Cultural safety: Identifying and removing practical barriers to communication and participation.

0417. A supervisor asks for an applied contrast between Oppression and Equity. Which option fits?

A. Oppression: Recognizing patterns of exclusion rather than reducing a structural problem to an individual deficit. / Equity: Inviting client feedback about whether care feels respectful and adapting in response.
B. Oppression: Recognizing patterns of exclusion rather than reducing a structural problem to an individual deficit. / Equity: Providing different supports where needed to make participation meaningfully accessible.
C. Oppression: Connecting a client's distress with relevant structural conditions without dismissing personal experience. / Equity: Providing different supports where needed to make participation meaningfully accessible.
D. Oppression: Providing different supports where needed to make participation meaningfully accessible. / Equity: Recognizing patterns of exclusion rather than reducing a structural problem to an individual deficit.

0418. A group facilitator is explaining a choice to a child aged 7 and caregiver in the student wellness team. The choice centers on distinguishing identical provision from support tailored to unequal barriers. Which idea is illustrated?

A. Social justice counseling
B. Accessibility
C. Liberation psychology
D. Equality

0419. While supporting a adolescent student in the parent meeting, a parent educator adopts this practice: connecting a client's distress with relevant structural conditions without dismissing personal experience. Which concept best explains the choice?

A. Implicit bias
B. Power analysis
C. Social justice counseling
D. Oppression

0420. Which choice aligns each practice with the correct idea, Equality or Microaggression?

A. Equality: Reflecting on whether assumptions may be affecting an assessment or referral decision. / Microaggression: Listening to the client's account of an identity-related slight and exploring its impact without minimizing it.
B. Equality: Distinguishing identical provision from support tailored to unequal barriers. / Microaggression: Providing different supports where needed to make participation meaningfully accessible.
C. Equality: Listening to the client's account of an identity-related slight and exploring its impact without minimizing it. / Microaggression: Distinguishing identical provision from support tailored to unequal barriers.
D. Equality: Distinguishing identical provision from support tailored to unequal barriers. / Microaggression: Listening to the client's account of an identity-related slight and exploring its impact without minimizing it.

0421. At the youth advocacy program, a play therapist meets with a child aged 14. The practice priority is: identifying and removing practical barriers to communication and participation. Which concept best captures that priority?

A. Equity
B. Accessibility
C. Liberation psychology
D. Cultural safety

0422. Which comparison would correct a trainee's misunderstanding of Power analysis versus Microaggression?

A. Power analysis: Examination of how authority, resources, and decision-making influence relationships and outcomes. / Microaggression: A counseling orientation that addresses individual wellbeing alongside inequitable systems and barriers.
B. Power analysis: A commonplace interaction or environmental message that communicates devaluation related to identity. / Microaggression: Examination of how authority, resources, and decision-making influence relationships and outcomes.
C. Power analysis: Examination of how authority, resources, and decision-making influence relationships and outcomes. / Microaggression: A commonplace interaction or environmental message that communicates devaluation related to identity.
D. Power analysis: Designing environments, communication, and services so people with varied abilities can participate. / Microaggression: A commonplace interaction or environmental message that communicates devaluation related to identity.

0423. Choose the definition pair that correctly explains Social justice counseling first and Microaggression second.

A. Social justice counseling: Provision of the same treatment or resource to everyone, regardless of differing circumstances. / Microaggression: A commonplace interaction or environmental message that communicates devaluation related to identity.
B. Social justice counseling: A counseling orientation that addresses individual wellbeing alongside inequitable systems and barriers. / Microaggression: Examination of how authority, resources, and decision-making influence relationships and outcomes.
C. Social justice counseling: A counseling orientation that addresses individual wellbeing alongside inequitable systems and barriers. / Microaggression: A commonplace interaction or environmental message that communicates devaluation related to identity.
D. Social justice counseling: A commonplace interaction or environmental message that communicates devaluation related to identity. / Microaggression: A counseling orientation that addresses individual wellbeing alongside inequitable systems and barriers.

0424. A student confuses Social justice counseling with Oppression. Which explanation most accurately separates them?

A. Social justice counseling: Automatic associations that can influence judgment and behavior without conscious intent. / Oppression: Systematic, institutional, or interpersonal processes that restrict opportunities and dignity for groups.
B. Social justice counseling: Systematic, institutional, or interpersonal processes that restrict opportunities and dignity for groups. / Oppression: A counseling orientation that addresses individual wellbeing alongside inequitable systems and barriers.
C. Social justice counseling: A counseling orientation that addresses individual wellbeing alongside inequitable systems and barriers. / Oppression: Examination of how authority, resources, and decision-making influence relationships and outcomes.
D. Social justice counseling: A counseling orientation that addresses individual wellbeing alongside inequitable systems and barriers. / Oppression: Systematic, institutional, or interpersonal processes that restrict opportunities and dignity for groups.

0425. Which comparison correctly distinguishes Microaggression from Liberation psychology?

A. Microaggression: A counseling orientation that addresses individual wellbeing alongside inequitable systems and barriers. / Liberation psychology: An approach emphasizing critical awareness and action addressing social conditions that contribute to distress.
B. Microaggression: A commonplace interaction or environmental message that communicates devaluation related to identity. / Liberation psychology: Automatic associations that can influence judgment and behavior without conscious intent.
C. Microaggression: A commonplace interaction or environmental message that communicates devaluation related to identity. / Liberation psychology: An approach emphasizing critical awareness and action addressing social conditions that contribute to distress.
D. Microaggression: An approach emphasizing critical awareness and action addressing social conditions that contribute to distress. / Liberation psychology: A commonplace interaction or environmental message that communicates devaluation related to identity.

0426. A student aged 15 is receiving support in the youth group. The consulting counselor is guided by this practice: connecting a client's distress with relevant structural conditions without dismissing personal experience. Which principle best fits?

A. Implicit bias
B. Social justice counseling
C. Power analysis
D. Cultural safety

0427. Which option preserves the correct meaning of both Oppression and Equality?

A. Oppression: Provision of the same treatment or resource to everyone, regardless of differing circumstances. / Equality: Systematic, institutional, or interpersonal processes that restrict opportunities and dignity for groups.
B. Oppression: Systematic, institutional, or interpersonal processes that restrict opportunities and dignity for groups. / Equality: Provision of the same treatment or resource to everyone, regardless of differing circumstances.
C. Oppression: Systematic, institutional, or interpersonal processes that restrict opportunities and dignity for groups. / Equality: Designing environments, communication, and services so people with varied abilities can participate.
D. Oppression: A client-defined experience of care in which identity is respected and power imbalances are addressed. / Equality: Provision of the same treatment or resource to everyone, regardless of differing circumstances.

0428. A assessment clinician and a young person aged 13 are discussing support in the clinical planning session. The selected practice is recognizing patterns of exclusion rather than reducing a structural problem to an individual deficit. Which concept does this demonstrate?

A. Equality
B. Power analysis
C. Microaggression
D. Oppression

0429. Which statement shows a sound practice-level distinction between Social justice counseling and Microaggression?

A. Social justice counseling: Distinguishing identical provision from support tailored to unequal barriers. / Microaggression: Listening to the client's account of an identity-related slight and exploring its impact without minimizing it.
B. Social justice counseling: Connecting a client's distress with relevant structural conditions without dismissing personal experience. / Microaggression: Listening to the client's account of an identity-related slight and exploring its impact without minimizing it.
C. Social justice counseling: Listening to the client's account of an identity-related slight and exploring its impact without minimizing it. / Microaggression: Connecting a client's distress with relevant structural conditions without dismissing personal experience.
D. Social justice counseling: Connecting a client's distress with relevant structural conditions without dismissing personal experience. / Microaggression: Identifying who controls access and whose perspective is missing in a service decision.

0430. Which named construct is captured by this account? Examination of how authority, resources, and decision-making influence relationships and outcomes.

A. Accessibility
B. Equality
C. Power analysis
D. Oppression

0431. Which option pairs the definitions of Implicit bias and Cultural safety correctly, in that order?

A. Implicit bias: Automatic associations that can influence judgment and behavior without conscious intent. / Cultural safety: A client-defined experience of care in which identity is respected and power imbalances are addressed.
B. Implicit bias: An approach emphasizing critical awareness and action addressing social conditions that contribute to distress. / Cultural safety: A client-defined experience of care in which identity is respected and power imbalances are addressed.
C. Implicit bias: A client-defined experience of care in which identity is respected and power imbalances are addressed. / Cultural safety: Automatic associations that can influence judgment and behavior without conscious intent.
D. Implicit bias: Automatic associations that can influence judgment and behavior without conscious intent. / Cultural safety: Fair allocation of support that accounts for differing barriers and needs to enable meaningful opportunity.

0432. A team must select a support approach for a high-school student at the telehealth session. The caregiver working with a counselor recommends inviting client feedback about whether care feels respectful and adapting in response. Which idea is most relevant?

A. Cultural safety
B. Social justice counseling
C. Equality
D. Liberation psychology

0433. A school-age child's service team meets in the family resource center. The parent educator recommends a change involving identifying who controls access and whose perspective is missing in a service decision. Which idea best explains it?

A. Cultural safety
B. Equity
C. Power analysis
D. Accessibility

0434. In a supervision quiz, how should Oppression be distinguished from Microaggression?

A. Oppression: A commonplace interaction or environmental message that communicates devaluation related to identity. / Microaggression: Systematic, institutional, or interpersonal processes that restrict opportunities and dignity for groups.
B. Oppression: Systematic, institutional, or interpersonal processes that restrict opportunities and dignity for groups. / Microaggression: A commonplace interaction or environmental message that communicates devaluation related to identity.
C. Oppression: Fair allocation of support that accounts for differing barriers and needs to enable meaningful opportunity. / Microaggression: A commonplace interaction or environmental message that communicates devaluation related to identity.
D. Oppression: Systematic, institutional, or interpersonal processes that restrict opportunities and dignity for groups. / Microaggression: An approach emphasizing critical awareness and action addressing social conditions that contribute to distress.

0435. Which pair of actions illustrates Oppression and Microaggression, respectively?

A. Oppression: Listening to the client's account of an identity-related slight and exploring its impact without minimizing it. / Microaggression: Recognizing patterns of exclusion rather than reducing a structural problem to an individual deficit.
B. Oppression: Recognizing patterns of exclusion rather than reducing a structural problem to an individual deficit. / Microaggression: Listening to the client's account of an identity-related slight and exploring its impact without minimizing it.
C. Oppression: Providing different supports where needed to make participation meaningfully accessible. / Microaggression: Listening to the client's account of an identity-related slight and exploring its impact without minimizing it.
D. Oppression: Recognizing patterns of exclusion rather than reducing a structural problem to an individual deficit. / Microaggression: Supporting reflection on social context and agency alongside individual coping.

0436. Choose the term that matches this definition: A client-defined experience of care in which identity is respected and power imbalances are addressed.

A. Oppression
B. Implicit bias
C. Accessibility
D. Cultural safety

0437. In a supervision review, a school-based clinician describes work with a young person aged 16 in the community mental-health service: connecting a client's distress with relevant structural conditions without dismissing personal experience. What concept is illustrated?

A. Social justice counseling
B. Accessibility
C. Equality
D. Liberation psychology

0438. Which pair of actions illustrates Equity and Accessibility, respectively?

A. Equity: Identifying and removing practical barriers to communication and participation. / Accessibility: Providing different supports where needed to make participation meaningfully accessible.
B. Equity: Distinguishing identical provision from support tailored to unequal barriers. / Accessibility: Identifying and removing practical barriers to communication and participation.
C. Equity: Providing different supports where needed to make participation meaningfully accessible. / Accessibility: Identifying and removing practical barriers to communication and participation.
D. Equity: Providing different supports where needed to make participation meaningfully accessible. / Accessibility: Listening to the client's account of an identity-related slight and exploring its impact without minimizing it.

0439. A supervisor asks how Accessibility would appear in practice. Which choice should be selected?

A. Distinguishing identical provision from support tailored to unequal barriers.
B. Identifying and removing practical barriers to communication and participation.
C. Reflecting on whether assumptions may be affecting an assessment or referral decision.
D. Recognizing patterns of exclusion rather than reducing a structural problem to an individual deficit.

0440. Choose the term that matches this definition: Automatic associations that can influence judgment and behavior without conscious intent.

A. Cultural safety
B. Microaggression
C. Implicit bias
D. Accessibility

0441. Which option correctly matches each concept to its practice focus: Power analysis and Implicit bias?

A. Power analysis: Reflecting on whether assumptions may be affecting an assessment or referral decision. / Implicit bias: Identifying who controls access and whose perspective is missing in a service decision.
B. Power analysis: Listening to the client's account of an identity-related slight and exploring its impact without minimizing it. / Implicit bias: Reflecting on whether assumptions may be affecting an assessment or referral decision.
C. Power analysis: Identifying who controls access and whose perspective is missing in a service decision. / Implicit bias: Reflecting on whether assumptions may be affecting an assessment or referral decision.
D. Power analysis: Identifying who controls access and whose perspective is missing in a service decision. / Implicit bias: Inviting client feedback about whether care feels respectful and adapting in response.

0442. How are Equity and Implicit bias most accurately differentiated in this curriculum?

A. Equity: Fair allocation of support that accounts for differing barriers and needs to enable meaningful opportunity. / Implicit bias: Designing environments, communication, and services so people with varied abilities can participate.
B. Equity: Systematic, institutional, or interpersonal processes that restrict opportunities and dignity for groups. / Implicit bias: Automatic associations that can influence judgment and behavior without conscious intent.
C. Equity: Fair allocation of support that accounts for differing barriers and needs to enable meaningful opportunity. / Implicit bias: Automatic associations that can influence judgment and behavior without conscious intent.
D. Equity: Automatic associations that can influence judgment and behavior without conscious intent. / Implicit bias: Fair allocation of support that accounts for differing barriers and needs to enable meaningful opportunity.

0443. A case conference asks for a distinction between Liberation psychology and Cultural safety. Which answer is sound?

A. Liberation psychology: An approach emphasizing critical awareness and action addressing social conditions that contribute to distress. / Cultural safety: Designing environments, communication, and services so people with varied abilities can participate.
B. Liberation psychology: An approach emphasizing critical awareness and action addressing social conditions that contribute to distress. / Cultural safety: A client-defined experience of care in which identity is respected and power imbalances are addressed.
C. Liberation psychology: A client-defined experience of care in which identity is respected and power imbalances are addressed. / Cultural safety: An approach emphasizing critical awareness and action addressing social conditions that contribute to distress.
D. Liberation psychology: Automatic associations that can influence judgment and behavior without conscious intent. / Cultural safety: A client-defined experience of care in which identity is respected and power imbalances are addressed.

0444. A trainee must choose a practice that exemplifies Accessibility. Which action is the best fit?

A. Identifying who controls access and whose perspective is missing in a service decision.
B. Reflecting on whether assumptions may be affecting an assessment or referral decision.
C. Identifying and removing practical barriers to communication and participation.
D. Recognizing patterns of exclusion rather than reducing a structural problem to an individual deficit.

0445. What is the central meaning of Liberation psychology?

A. A client-defined experience of care in which identity is respected and power imbalances are addressed.
B. Systematic, institutional, or interpersonal processes that restrict opportunities and dignity for groups.
C. A commonplace interaction or environmental message that communicates devaluation related to identity.
D. An approach emphasizing critical awareness and action addressing social conditions that contribute to distress.

0446. In a supervision quiz, how should Oppression be distinguished from Implicit bias?

A. Oppression: Systematic, institutional, or interpersonal processes that restrict opportunities and dignity for groups. / Implicit bias: Automatic associations that can influence judgment and behavior without conscious intent.
B. Oppression: Fair allocation of support that accounts for differing barriers and needs to enable meaningful opportunity. / Implicit bias: Automatic associations that can influence judgment and behavior without conscious intent.
C. Oppression: Systematic, institutional, or interpersonal processes that restrict opportunities and dignity for groups. / Implicit bias: Designing environments, communication, and services so people with varied abilities can participate.
D. Oppression: Automatic associations that can influence judgment and behavior without conscious intent. / Implicit bias: Systematic, institutional, or interpersonal processes that restrict opportunities and dignity for groups.

0447. Which statement shows a sound practice-level distinction between Social justice counseling and Cultural safety?

A. Social justice counseling: Connecting a client's distress with relevant structural conditions without dismissing personal experience. / Cultural safety: Inviting client feedback about whether care feels respectful and adapting in response.
B. Social justice counseling: Inviting client feedback about whether care feels respectful and adapting in response. / Cultural safety: Connecting a client's distress with relevant structural conditions without dismissing personal experience.
C. Social justice counseling: Identifying and removing practical barriers to communication and participation. / Cultural safety: Inviting client feedback about whether care feels respectful and adapting in response.
D. Social justice counseling: Connecting a client's distress with relevant structural conditions without dismissing personal experience. / Cultural safety: Reflecting on whether assumptions may be affecting an assessment or referral decision.

0448. Identify the most precise label for this idea: An approach emphasizing critical awareness and action addressing social conditions that contribute to distress.

A. Power analysis
B. Implicit bias
C. Liberation psychology
D. Oppression

0449. A case conference asks for a distinction between Power analysis and Microaggression. Which answer is sound?

A. Power analysis: Designing environments, communication, and services so people with varied abilities can participate. / Microaggression: A commonplace interaction or environmental message that communicates devaluation related to identity.
B. Power analysis: Examination of how authority, resources, and decision-making influence relationships and outcomes. / Microaggression: A commonplace interaction or environmental message that communicates devaluation related to identity.
C. Power analysis: A commonplace interaction or environmental message that communicates devaluation related to identity. / Microaggression: Examination of how authority, resources, and decision-making influence relationships and outcomes.
D. Power analysis: Examination of how authority, resources, and decision-making influence relationships and outcomes. / Microaggression: A counseling orientation that addresses individual wellbeing alongside inequitable systems and barriers.

0450. In a supervision review, a family therapist describes work with a student aged 15 in the school consultation: supporting reflection on social context and agency alongside individual coping. What concept is illustrated?

A. Microaggression
B. Equity
C. Implicit bias
D. Liberation psychology

0451. Which paired example correctly applies Social justice counseling first and Microaggression second?

A. Social justice counseling: Connecting a client's distress with relevant structural conditions without dismissing personal experience. / Microaggression: Listening to the client's account of an identity-related slight and exploring its impact without minimizing it.
B. Social justice counseling: Listening to the client's account of an identity-related slight and exploring its impact without minimizing it. / Microaggression: Connecting a client's distress with relevant structural conditions without dismissing personal experience.
C. Social justice counseling: Connecting a client's distress with relevant structural conditions without dismissing personal experience. / Microaggression: Identifying who controls access and whose perspective is missing in a service decision.
D. Social justice counseling: Distinguishing identical provision from support tailored to unequal barriers. / Microaggression: Listening to the client's account of an identity-related slight and exploring its impact without minimizing it.

0452. How are Microaggression and Liberation psychology most accurately differentiated in this curriculum?

A. Microaggression: A commonplace interaction or environmental message that communicates devaluation related to identity. / Liberation psychology: Automatic associations that can influence judgment and behavior without conscious intent.
B. Microaggression: An approach emphasizing critical awareness and action addressing social conditions that contribute to distress. / Liberation psychology: A commonplace interaction or environmental message that communicates devaluation related to identity.
C. Microaggression: A counseling orientation that addresses individual wellbeing alongside inequitable systems and barriers. / Liberation psychology: An approach emphasizing critical awareness and action addressing social conditions that contribute to distress.
D. Microaggression: A commonplace interaction or environmental message that communicates devaluation related to identity. / Liberation psychology: An approach emphasizing critical awareness and action addressing social conditions that contribute to distress.

0453. A child aged 6's service team meets in the caregiver consultation. The school-based clinician recommends a change involving supporting reflection on social context and agency alongside individual coping. Which idea best explains it?

A. Liberation psychology
B. Implicit bias
C. Equality
D. Equity

0454. For a young person in the behavior-support review, a counselor makes this practice the immediate priority: identifying who controls access and whose perspective is missing in a service decision. Which concept fits best?

A. Cultural safety
B. Equity
C. Oppression
D. Power analysis

0455. Which statement shows a sound practice-level distinction between Equity and Accessibility?

A. Equity: Identifying and removing practical barriers to communication and participation. / Accessibility: Providing different supports where needed to make participation meaningfully accessible.
B. Equity: Providing different supports where needed to make participation meaningfully accessible. / Accessibility: Listening to the client's account of an identity-related slight and exploring its impact without minimizing it.
C. Equity: Distinguishing identical provision from support tailored to unequal barriers. / Accessibility: Identifying and removing practical barriers to communication and participation.
D. Equity: Providing different supports where needed to make participation meaningfully accessible. / Accessibility: Identifying and removing practical barriers to communication and participation.

0456. For a teenage client seen in the clinical planning session, the community practitioner recommends a plan built around listening to the client's account of an identity-related slight and exploring its impact without minimizing it. Which concept is reflected?

A. Equity
B. Cultural safety
C. Liberation psychology
D. Microaggression

0457. How should a practitioner distinguish the applications of Liberation psychology and Accessibility?

A. Liberation psychology: Identifying and removing practical barriers to communication and participation. / Accessibility: Supporting reflection on social context and agency alongside individual coping.
B. Liberation psychology: Supporting reflection on social context and agency alongside individual coping. / Accessibility: Identifying and removing practical barriers to communication and participation.
C. Liberation psychology: Supporting reflection on social context and agency alongside individual coping. / Accessibility: Reflecting on whether assumptions may be affecting an assessment or referral decision.
D. Liberation psychology: Listening to the client's account of an identity-related slight and exploring its impact without minimizing it. / Accessibility: Identifying and removing practical barriers to communication and participation.

0458. Choose the practice comparison that best separates Implicit bias from Microaggression.

A. Implicit bias: Reflecting on whether assumptions may be affecting an assessment or referral decision. / Microaggression: Listening to the client's account of an identity-related slight and exploring its impact without minimizing it.
B. Implicit bias: Listening to the client's account of an identity-related slight and exploring its impact without minimizing it. / Microaggression: Reflecting on whether assumptions may be affecting an assessment or referral decision.
C. Implicit bias: Reflecting on whether assumptions may be affecting an assessment or referral decision. / Microaggression: Connecting a client's distress with relevant structural conditions without dismissing personal experience.
D. Implicit bias: Identifying and removing practical barriers to communication and participation. / Microaggression: Listening to the client's account of an identity-related slight and exploring its impact without minimizing it.

0459. Choose the response that best puts Microaggression into practice.

A. Supporting reflection on social context and agency alongside individual coping.
B. Listening to the client's account of an identity-related slight and exploring its impact without minimizing it.
C. Recognizing patterns of exclusion rather than reducing a structural problem to an individual deficit.
D. Reflecting on whether assumptions may be affecting an assessment or referral decision.

0460. Which pair of actions illustrates Social justice counseling and Accessibility, respectively?

A. Social justice counseling: Connecting a client's distress with relevant structural conditions without dismissing personal experience. / Accessibility: Identifying and removing practical barriers to communication and participation.
B. Social justice counseling: Reflecting on whether assumptions may be affecting an assessment or referral decision. / Accessibility: Identifying and removing practical barriers to communication and participation.
C. Social justice counseling: Connecting a client's distress with relevant structural conditions without dismissing personal experience. / Accessibility: Inviting client feedback about whether care feels respectful and adapting in response.
D. Social justice counseling: Identifying and removing practical barriers to communication and participation. / Accessibility: Connecting a client's distress with relevant structural conditions without dismissing personal experience.

0461. A supervisor asks for an applied contrast between Equity and Cultural safety. Which option fits?

A. Equity: Inviting client feedback about whether care feels respectful and adapting in response. / Cultural safety: Providing different supports where needed to make participation meaningfully accessible.
B. Equity: Distinguishing identical provision from support tailored to unequal barriers. / Cultural safety: Inviting client feedback about whether care feels respectful and adapting in response.
C. Equity: Providing different supports where needed to make participation meaningfully accessible. / Cultural safety: Listening to the client's account of an identity-related slight and exploring its impact without minimizing it.
D. Equity: Providing different supports where needed to make participation meaningfully accessible. / Cultural safety: Inviting client feedback about whether care feels respectful and adapting in response.

0462. Which option correctly matches each concept to its practice focus: Equality and Accessibility?

A. Equality: Distinguishing identical provision from support tailored to unequal barriers. / Accessibility: Providing different supports where needed to make participation meaningfully accessible.
B. Equality: Recognizing patterns of exclusion rather than reducing a structural problem to an individual deficit. / Accessibility: Identifying and removing practical barriers to communication and participation.
C. Equality: Identifying and removing practical barriers to communication and participation. / Accessibility: Distinguishing identical provision from support tailored to unequal barriers.
D. Equality: Distinguishing identical provision from support tailored to unequal barriers. / Accessibility: Identifying and removing practical barriers to communication and participation.

0463. In a supervision quiz, how should Social justice counseling be distinguished from Power analysis?

A. Social justice counseling: Examination of how authority, resources, and decision-making influence relationships and outcomes. / Power analysis: A counseling orientation that addresses individual wellbeing alongside inequitable systems and barriers.
B. Social justice counseling: Systematic, institutional, or interpersonal processes that restrict opportunities and dignity for groups. / Power analysis: Examination of how authority, resources, and decision-making influence relationships and outcomes.
C. Social justice counseling: A counseling orientation that addresses individual wellbeing alongside inequitable systems and barriers. / Power analysis: Fair allocation of support that accounts for differing barriers and needs to enable meaningful opportunity.
D. Social justice counseling: A counseling orientation that addresses individual wellbeing alongside inequitable systems and barriers. / Power analysis: Examination of how authority, resources, and decision-making influence relationships and outcomes.

0464. A supervisor asks for an applied contrast between Power analysis and Cultural safety. Which option fits?

A. Power analysis: Identifying and removing practical barriers to communication and participation. / Cultural safety: Inviting client feedback about whether care feels respectful and adapting in response.
B. Power analysis: Inviting client feedback about whether care feels respectful and adapting in response. / Cultural safety: Identifying who controls access and whose perspective is missing in a service decision.
C. Power analysis: Identifying who controls access and whose perspective is missing in a service decision. / Cultural safety: Listening to the client's account of an identity-related slight and exploring its impact without minimizing it.
D. Power analysis: Identifying who controls access and whose perspective is missing in a service decision. / Cultural safety: Inviting client feedback about whether care feels respectful and adapting in response.

0465. How are Social justice counseling and Accessibility most accurately differentiated in this curriculum?

A. Social justice counseling: A counseling orientation that addresses individual wellbeing alongside inequitable systems and barriers. / Accessibility: A client-defined experience of care in which identity is respected and power imbalances are addressed.
B. Social justice counseling: A counseling orientation that addresses individual wellbeing alongside inequitable systems and barriers. / Accessibility: Designing environments, communication, and services so people with varied abilities can participate.
C. Social justice counseling: Automatic associations that can influence judgment and behavior without conscious intent. / Accessibility: Designing environments, communication, and services so people with varied abilities can participate.
D. Social justice counseling: Designing environments, communication, and services so people with varied abilities can participate. / Accessibility: A counseling orientation that addresses individual wellbeing alongside inequitable systems and barriers.

0466. In the clinical planning session, a caregiver working with a counselor is considering this approach for a student aged 17: providing different supports where needed to make participation meaningfully accessible. Which framework does it represent?

A. Liberation psychology
B. Oppression
C. Equity
D. Social justice counseling

0467. In the outpatient clinic, a teacher and counselor explains why a young person aged 10 would benefit from connecting a client's distress with relevant structural conditions without dismissing personal experience. Which course concept underpins the explanation?

A. Power analysis
B. Social justice counseling
C. Microaggression
D. Liberation psychology

0468. Which option correctly matches each concept to its practice focus: Liberation psychology and Cultural safety?

A. Liberation psychology: Supporting reflection on social context and agency alongside individual coping. / Cultural safety: Identifying and removing practical barriers to communication and participation.
B. Liberation psychology: Supporting reflection on social context and agency alongside individual coping. / Cultural safety: Inviting client feedback about whether care feels respectful and adapting in response.
C. Liberation psychology: Reflecting on whether assumptions may be affecting an assessment or referral decision. / Cultural safety: Inviting client feedback about whether care feels respectful and adapting in response.
D. Liberation psychology: Inviting client feedback about whether care feels respectful and adapting in response. / Cultural safety: Supporting reflection on social context and agency alongside individual coping.

0469. A supervisor asks for an applied contrast between Implicit bias and Liberation psychology. Which option fits?

A. Implicit bias: Reflecting on whether assumptions may be affecting an assessment or referral decision. / Liberation psychology: Supporting reflection on social context and agency alongside individual coping.
B. Implicit bias: Reflecting on whether assumptions may be affecting an assessment or referral decision. / Liberation psychology: Distinguishing identical provision from support tailored to unequal barriers.
C. Implicit bias: Providing different supports where needed to make participation meaningfully accessible. / Liberation psychology: Supporting reflection on social context and agency alongside individual coping.
D. Implicit bias: Supporting reflection on social context and agency alongside individual coping. / Liberation psychology: Reflecting on whether assumptions may be affecting an assessment or referral decision.

0470. Choose the definition pair that correctly explains Liberation psychology first and Accessibility second.

A. Liberation psychology: An approach emphasizing critical awareness and action addressing social conditions that contribute to distress. / Accessibility: Designing environments, communication, and services so people with varied abilities can participate.
B. Liberation psychology: A commonplace interaction or environmental message that communicates devaluation related to identity. / Accessibility: Designing environments, communication, and services so people with varied abilities can participate.
C. Liberation psychology: Designing environments, communication, and services so people with varied abilities can participate. / Accessibility: An approach emphasizing critical awareness and action addressing social conditions that contribute to distress.
D. Liberation psychology: An approach emphasizing critical awareness and action addressing social conditions that contribute to distress. / Accessibility: Automatic associations that can influence judgment and behavior without conscious intent.

0471. A research trainee is asked what should shape a adolescent student's support in the school-based service. The proposed focus is recognizing patterns of exclusion rather than reducing a structural problem to an individual deficit. Which principle does it represent?

A. Equity
B. Liberation psychology
C. Microaggression
D. Oppression

0472. A service navigator is asked what should shape a child aged 6's support in the community service agency. The proposed focus is distinguishing identical provision from support tailored to unequal barriers. Which principle does it represent?

A. Cultural safety
B. Equality
C. Social justice counseling
D. Equity

0473. In a case note about a child aged 7, a mental-health professional working in the outpatient clinic records this priority: recognizing patterns of exclusion rather than reducing a structural problem to an individual deficit. What principle is reflected?

A. Cultural safety
B. Accessibility
C. Equity
D. Oppression

0474. Which option correctly matches each concept to its practice focus: Power analysis and Equality?

A. Power analysis: Inviting client feedback about whether care feels respectful and adapting in response. / Equality: Distinguishing identical provision from support tailored to unequal barriers.
B. Power analysis: Identifying who controls access and whose perspective is missing in a service decision. / Equality: Distinguishing identical provision from support tailored to unequal barriers.
C. Power analysis: Identifying who controls access and whose perspective is missing in a service decision. / Equality: Connecting a client's distress with relevant structural conditions without dismissing personal experience.
D. Power analysis: Distinguishing identical provision from support tailored to unequal barriers. / Equality: Identifying who controls access and whose perspective is missing in a service decision.

0475. A planning meeting about a young adolescent client includes a counselor. The proposed practice in the clinical planning session is distinguishing identical provision from support tailored to unequal barriers. Which idea underlies it?

A. Equality
B. Microaggression
C. Equity
D. Implicit bias

0476. Which option is the clearest practical expression of Implicit bias?

A. Distinguishing identical provision from support tailored to unequal barriers.
B. Inviting client feedback about whether care feels respectful and adapting in response.
C. Reflecting on whether assumptions may be affecting an assessment or referral decision.
D. Recognizing patterns of exclusion rather than reducing a structural problem to an individual deficit.

0477. Which statement shows a sound practice-level distinction between Social justice counseling and Liberation psychology?

A. Social justice counseling: Connecting a client's distress with relevant structural conditions without dismissing personal experience. / Liberation psychology: Identifying who controls access and whose perspective is missing in a service decision.
B. Social justice counseling: Connecting a client's distress with relevant structural conditions without dismissing personal experience. / Liberation psychology: Supporting reflection on social context and agency alongside individual coping.
C. Social justice counseling: Supporting reflection on social context and agency alongside individual coping. / Liberation psychology: Connecting a client's distress with relevant structural conditions without dismissing personal experience.
D. Social justice counseling: Identifying and removing practical barriers to communication and participation. / Liberation psychology: Supporting reflection on social context and agency alongside individual coping.

0478. Which professional action most closely applies Equity?

A. Reflecting on whether assumptions may be affecting an assessment or referral decision.
B. Providing different supports where needed to make participation meaningfully accessible.
C. Identifying who controls access and whose perspective is missing in a service decision.
D. Supporting reflection on social context and agency alongside individual coping.

0479. Choose the term that matches this definition: Systematic, institutional, or interpersonal processes that restrict opportunities and dignity for groups.

A. Cultural safety
B. Liberation psychology
C. Social justice counseling
D. Oppression

0480. What is the central meaning of Cultural safety?

A. An approach emphasizing critical awareness and action addressing social conditions that contribute to distress.
B. Fair allocation of support that accounts for differing barriers and needs to enable meaningful opportunity.
C. A client-defined experience of care in which identity is respected and power imbalances are addressed.
D. Provision of the same treatment or resource to everyone, regardless of differing circumstances.

0481. A team must select a support approach for a child aged 14 at the school-based service. The caregiver working with a counselor recommends distinguishing identical provision from support tailored to unequal barriers. Which idea is most relevant?

A. Equality
B. Implicit bias
C. Liberation psychology
D. Microaggression

0482. A trainee must choose a practice that exemplifies Social justice counseling. Which action is the best fit?

A. Recognizing patterns of exclusion rather than reducing a structural problem to an individual deficit.
B. Inviting client feedback about whether care feels respectful and adapting in response.
C. Connecting a client's distress with relevant structural conditions without dismissing personal experience.
D. Distinguishing identical provision from support tailored to unequal barriers.

0483. Which paired example correctly applies Equality first and Accessibility second?

A. Equality: Identifying and removing practical barriers to communication and participation. / Accessibility: Distinguishing identical provision from support tailored to unequal barriers.
B. Equality: Distinguishing identical provision from support tailored to unequal barriers. / Accessibility: Providing different supports where needed to make participation meaningfully accessible.
C. Equality: Recognizing patterns of exclusion rather than reducing a structural problem to an individual deficit. / Accessibility: Identifying and removing practical barriers to communication and participation.
D. Equality: Distinguishing identical provision from support tailored to unequal barriers. / Accessibility: Identifying and removing practical barriers to communication and participation.

0484. Which option pairs the definitions of Oppression and Liberation psychology correctly, in that order?

A. Oppression: Provision of the same treatment or resource to everyone, regardless of differing circumstances. / Liberation psychology: An approach emphasizing critical awareness and action addressing social conditions that contribute to distress.
B. Oppression: An approach emphasizing critical awareness and action addressing social conditions that contribute to distress. / Liberation psychology: Systematic, institutional, or interpersonal processes that restrict opportunities and dignity for groups.
C. Oppression: Systematic, institutional, or interpersonal processes that restrict opportunities and dignity for groups. / Liberation psychology: Automatic associations that can influence judgment and behavior without conscious intent.
D. Oppression: Systematic, institutional, or interpersonal processes that restrict opportunities and dignity for groups. / Liberation psychology: An approach emphasizing critical awareness and action addressing social conditions that contribute to distress.

0485. Which comparison correctly distinguishes Implicit bias from Accessibility?

A. Implicit bias: Systematic, institutional, or interpersonal processes that restrict opportunities and dignity for groups. / Accessibility: Designing environments, communication, and services so people with varied abilities can participate.
B. Implicit bias: Designing environments, communication, and services so people with varied abilities can participate. / Accessibility: Automatic associations that can influence judgment and behavior without conscious intent.
C. Implicit bias: Automatic associations that can influence judgment and behavior without conscious intent. / Accessibility: A commonplace interaction or environmental message that communicates devaluation related to identity.
D. Implicit bias: Automatic associations that can influence judgment and behavior without conscious intent. / Accessibility: Designing environments, communication, and services so people with varied abilities can participate.

0486. Which applied comparison correctly identifies what belongs to Oppression versus Microaggression?

A. Oppression: Recognizing patterns of exclusion rather than reducing a structural problem to an individual deficit. / Microaggression: Supporting reflection on social context and agency alongside individual coping.
B. Oppression: Listening to the client's account of an identity-related slight and exploring its impact without minimizing it. / Microaggression: Recognizing patterns of exclusion rather than reducing a structural problem to an individual deficit.
C. Oppression: Recognizing patterns of exclusion rather than reducing a structural problem to an individual deficit. / Microaggression: Listening to the client's account of an identity-related slight and exploring its impact without minimizing it.
D. Oppression: Providing different supports where needed to make participation meaningfully accessible. / Microaggression: Listening to the client's account of an identity-related slight and exploring its impact without minimizing it.

0487. In a supervision quiz, how should Oppression be distinguished from Accessibility?

A. Oppression: An approach emphasizing critical awareness and action addressing social conditions that contribute to distress. / Accessibility: Designing environments, communication, and services so people with varied abilities can participate.
B. Oppression: Designing environments, communication, and services so people with varied abilities can participate. / Accessibility: Systematic, institutional, or interpersonal processes that restrict opportunities and dignity for groups.
C. Oppression: Systematic, institutional, or interpersonal processes that restrict opportunities and dignity for groups. / Accessibility: A commonplace interaction or environmental message that communicates devaluation related to identity.
D. Oppression: Systematic, institutional, or interpersonal processes that restrict opportunities and dignity for groups. / Accessibility: Designing environments, communication, and services so people with varied abilities can participate.

0488. Which named construct is captured by this account? An approach emphasizing critical awareness and action addressing social conditions that contribute to distress.

A. Microaggression
B. Liberation psychology
C. Cultural safety
D. Equality

0489. A mental-health professional is supporting a older adolescent client in the family session. The key practice is inviting client feedback about whether care feels respectful and adapting in response. Which course concept is most relevant?

A. Power analysis
B. Social justice counseling
C. Cultural safety
D. Accessibility

0490. Which option correctly matches each concept to its practice focus: Social justice counseling and Equity?

A. Social justice counseling: Reflecting on whether assumptions may be affecting an assessment or referral decision. / Equity: Providing different supports where needed to make participation meaningfully accessible.
B. Social justice counseling: Connecting a client's distress with relevant structural conditions without dismissing personal experience. / Equity: Supporting reflection on social context and agency alongside individual coping.
C. Social justice counseling: Providing different supports where needed to make participation meaningfully accessible. / Equity: Connecting a client's distress with relevant structural conditions without dismissing personal experience.
D. Social justice counseling: Connecting a client's distress with relevant structural conditions without dismissing personal experience. / Equity: Providing different supports where needed to make participation meaningfully accessible.

0491. A school counselor is asked to justify a plan for a teenage client in the behavior-support review. It calls for supporting reflection on social context and agency alongside individual coping. Which concept provides the rationale?

A. Implicit bias
B. Cultural safety
C. Liberation psychology
D. Oppression

0492. A supervisor asks for an applied contrast between Social justice counseling and Cultural safety. Which option fits?

A. Social justice counseling: Connecting a client's distress with relevant structural conditions without dismissing personal experience. / Cultural safety: Inviting client feedback about whether care feels respectful and adapting in response.
B. Social justice counseling: Inviting client feedback about whether care feels respectful and adapting in response. / Cultural safety: Connecting a client's distress with relevant structural conditions without dismissing personal experience.
C. Social justice counseling: Identifying and removing practical barriers to communication and participation. / Cultural safety: Inviting client feedback about whether care feels respectful and adapting in response.
D. Social justice counseling: Connecting a client's distress with relevant structural conditions without dismissing personal experience. / Cultural safety: Reflecting on whether assumptions may be affecting an assessment or referral decision.

0493. While supporting a child aged 6 in the school consultation, a caregiver working with a counselor adopts this practice: recognizing patterns of exclusion rather than reducing a structural problem to an individual deficit. Which concept best explains the choice?

A. Power analysis
B. Equity
C. Oppression
D. Equality

0494. Which professional action most closely applies Equality?

A. Distinguishing identical provision from support tailored to unequal barriers.
B. Connecting a client's distress with relevant structural conditions without dismissing personal experience.
C. Reflecting on whether assumptions may be affecting an assessment or referral decision.
D. Identifying and removing practical barriers to communication and participation.

0495. A student aged 17's service team meets in the clinical planning session. The caregiver working with a counselor recommends a change involving providing different supports where needed to make participation meaningfully accessible. Which idea best explains it?

A. Liberation psychology
B. Power analysis
C. Accessibility
D. Equity

0496. Which choice aligns each practice with the correct idea, Microaggression or Cultural safety?

A. Microaggression: Providing different supports where needed to make participation meaningfully accessible. / Cultural safety: Inviting client feedback about whether care feels respectful and adapting in response.
B. Microaggression: Inviting client feedback about whether care feels respectful and adapting in response. / Cultural safety: Listening to the client's account of an identity-related slight and exploring its impact without minimizing it.
C. Microaggression: Listening to the client's account of an identity-related slight and exploring its impact without minimizing it. / Cultural safety: Supporting reflection on social context and agency alongside individual coping.
D. Microaggression: Listening to the client's account of an identity-related slight and exploring its impact without minimizing it. / Cultural safety: Inviting client feedback about whether care feels respectful and adapting in response.

0497. A adolescent student's service team meets in the family session. The case coordinator recommends a change involving reflecting on whether assumptions may be affecting an assessment or referral decision. Which idea best explains it?

A. Equality
B. Equity
C. Implicit bias
D. Microaggression

0498. A counselor is asked to evaluate a proposed service for a client in late adolescence in the child guidance clinic. The defining feature is recognizing patterns of exclusion rather than reducing a structural problem to an individual deficit. Which concept fits?

A. Microaggression
B. Cultural safety
C. Oppression
D. Social justice counseling

0499. In a supervision quiz, how should Equity be distinguished from Cultural safety?

A. Equity: Fair allocation of support that accounts for differing barriers and needs to enable meaningful opportunity. / Cultural safety: A commonplace interaction or environmental message that communicates devaluation related to identity.
B. Equity: Provision of the same treatment or resource to everyone, regardless of differing circumstances. / Cultural safety: A client-defined experience of care in which identity is respected and power imbalances are addressed.
C. Equity: Fair allocation of support that accounts for differing barriers and needs to enable meaningful opportunity. / Cultural safety: A client-defined experience of care in which identity is respected and power imbalances are addressed.
D. Equity: A client-defined experience of care in which identity is respected and power imbalances are addressed. / Cultural safety: Fair allocation of support that accounts for differing barriers and needs to enable meaningful opportunity.

0500. Which comparison correctly distinguishes Social justice counseling from Power analysis?

A. Social justice counseling: A counseling orientation that addresses individual wellbeing alongside inequitable systems and barriers. / Power analysis: Examination of how authority, resources, and decision-making influence relationships and outcomes.
B. Social justice counseling: Systematic, institutional, or interpersonal processes that restrict opportunities and dignity for groups. / Power analysis: Examination of how authority, resources, and decision-making influence relationships and outcomes.
C. Social justice counseling: A counseling orientation that addresses individual wellbeing alongside inequitable systems and barriers. / Power analysis: Fair allocation of support that accounts for differing barriers and needs to enable meaningful opportunity.
D. Social justice counseling: Examination of how authority, resources, and decision-making influence relationships and outcomes. / Power analysis: A counseling orientation that addresses individual wellbeing alongside inequitable systems and barriers.

0501. A support meeting for a child aged 6 includes a play therapist in the after-school program. The practice under consideration is listening to the client's account of an identity-related slight and exploring its impact without minimizing it. Which concept guides it?

A. Equity
B. Social justice counseling
C. Power analysis
D. Microaggression

0502. At a case-planning meeting, the school support specialist proposes recognizing patterns of exclusion rather than reducing a structural problem to an individual deficit. for a older adolescent client seen in the student-support meeting. Which concept does this illustrate?

A. Implicit bias
B. Equity
C. Oppression
D. Liberation psychology

0503. Choose the definition pair that correctly explains Oppression first and Liberation psychology second.
